Construction Standards

- Kiln-dried hardwood frames, double-dowelled joinery, and solid-wood corner blocking.
- High-resilience foam cushion cores: standard seat cushion rating is 2.5 density with 30-pound compression; standard for seat backs is 1.8 density with 25-pound compression.
- Nail heads applied by hand, instead of cheaper strip nail heads.
- Standard upholstery materials adhere to California flame retardance Technical Bulletin (TB) 117; upon request we offer TB 133 compliance with applied fire stop fabric.
- Rigorous stock selection process to insure the removal of all defects.
- Standard veneer thickness set at .6mm, twice the industry standard thickness.
- We insist on the use of MDF substrates instead of particleboard in primary case construction for its superior machinability, fastener hold, resistance to impact damage, and dimensional consistency and stability.
- Use of MDF with low formaldehyde EN2. (EN1, EN0, or 0 VOC are available if specified.)
- Case interiors = solid-wood frame dust panels at case bottom and between drawers.
- Case backs are a minimum of 8mm in thickness, but for larger cases use of 10mm or thicker panels; back panels always screwed in place rather than stapled to reduce the risk of fastener failure.
- Use Tongue-and-groove joinery in frame-and-panel assemblies in locations such as doors, case sides, fully captured backs and tabletops.
- Standard drawer boxes = dovetail joinery with a non-integral face fastened in place with cleanly countersunk screws (also referred to as a “five-sided drawer box”).
- Standard drawer slide = self-return, soft-close under mount $\frac{3}{4}$ extension.
- Heavy-duty leveling glides.
