TABLE OF CONTENTS

SECTION 003132 - GEOTECHNICAL DATA

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes description of geotechnical engineering investigation report (soils report) at the Site, and use of data resulting from that investigation.

1.3 RECORDS OF INVESTIGATIONS

A. The records of soil and subsurface investigations are available as a reference to the Contractor.

1.4 GEOTECHNICAL ENGINERING INVESTIGATION REPORT

A. A geotechnical engineering investigation report has been prepared for this Project by Construction Testing & Engineering, Inc. dated December 8, 2016 and supplemental letter (addendum) dated May 1, 2017.

B. The report shall be used by the Contractor as a guide for all earthwork, trenching, installation of foundations, and all other below-grade work. The Contractor is cautioned that while the report (investigation) may be used for assistance, all responsibility for subsurface conditions and execution of the documents based on recommendations in the report shall remain with the Contractor. When conditions revealed by the Contractor's excavation are at variance with the geotechnical report, the changed conditions must be evaluated by the Owner's geotechnical engineer, with additional recommendations made if required. Applicable recommendations shall be followed, but specific requirements shown on the drawings and in each of the Division 2 through 33 Sections shall take precedence over the general recommendations in the report.

C. Use of Data.

1. The geotechnical report was obtained only for the Architect's and Engineer's use in design and is not a part of the Contract Documents.
2. The report is available for the Contractor's information, but is not a warranty of subsurface conditions.
3. Contractor shall visit the site and become familiar with existing conditions.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

A. The Contractor may take additional soil borings or make other explorations, without additional cost to the Owner, to make further determinations of site soil or subsurface conditions. Coordinate additional exploratory Work with Architect and Owner so as not to interfere with Owner's use of the site.

B. Upon completion of additional exploratory Work, backfill the test holes and pits using removed material. If removed material is not sufficient, provide additional compactable material of similar character to the native soil. Compact the backfill to same density as adjacent soil.

C. The Contractor shall be fully responsible for any deductions or conclusions made on the basis of any information or data collected from this additional exploratory Work.

3.2 GENERAL

A. A geotechnical engineer will be retained by the Owner to observe performance of Work in connection with all earthwork, excavating, trenching, filling, backfilling, and grading, and to perform compaction tests.

B. Re-adjust Work performed that does not meet technical or design requirements, but make no deviation from the Contract Documents without specific and written approval from the Architect.

C. In addition to complying with the requirements of the authorities having jurisdiction, comply with the recommendations of the geotechnical engineer at the jobsite during earthwork operations. Notify Architect and/or Engineer of any discrepancies between the Contract Documents and the actual site conditions.

END OF SECTION 003132

SECTION 012100 - ALLOWANCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements governing allowances.

B. Types of allowances include the following:

1. Lump-sum allowances.

C. Related Requirements:

1. Section 014000 "Quality Requirements" for procedures governing the use of allowances for testing and inspecting.

1.3 DEFINITIONS

A. Allowance is a quantity of work or dollar amount established in lieu of additional requirements, used to defer selection of actual materials and equipment to a later date when direction will be provided to Contractor. If necessary, additional requirements will be issued by Change Order.

1.4 SELECTION AND PURCHASE

A. At the earliest practical date after award of the Contract, advise Architect of the date when final selection and purchase of each product or system described by an allowance must be completed to avoid delaying the Work.

B. At Architect's request, obtain proposals for each allowance for use in making final selections. Include recommendations that are relevant to performing the Work.

C. Purchase products and systems selected by Architect from the designated supplier.

1.5 ACTION SUBMITTALS

A. Submit proposals for purchase of products or systems included in allowances, in the form specified for Change Orders.

1.6 INFORMATIONAL SUBMITTALS

A. Submit invoices or delivery slips to show actual quantities of materials delivered to the site for use in fulfillment of each allowance.

B. Submit time sheets and other documentation to show labor time and cost for installation of allowance items that include installation as part of the allowance.

C. Coordinate and process submittals for allowance items in same manner as for other portions of the Work.

1.7 COORDINATION

A. Coordinate allowance items with other portions of the Work. Furnish templates as required to coordinate installation.

1.8 LUMP-SUM, UNIT-COST, AND QUANTITY ALLOWANCES

A. Allowance shall include cost to Contractor of specific products and materials ordered by Owner or selected by Architect under allowance and shall include taxes, freight, and delivery to Project site.

B. Unless otherwise indicated, Contractor's costs for receiving and handling at Project site, labor, installation, overhead and profit, and similar costs related to products and materials under allowance shall be included as part of the Contract Sum and not part of the allowance.

C. Unused Materials: Return unused materials purchased under an allowance to manufacturer or supplier for credit to Owner, after installation has been completed and accepted.

1. If requested by Architect, retain and prepare unused material for storage by Owner. Deliver unused material to Owner's storage space as directed.

1.9 ADJUSTMENT OF ALLOWANCES

A. Allowance Adjustment: To adjust allowance amounts, prepare a Change Order proposal based on the difference between purchase amount and the allowance, multiplied by final measurement of work-in-place where applicable. If applicable, include reasonable allowances for cutting losses, tolerances, mixing wastes, normal product imperfections, and similar margins.

1. Include installation costs in purchase amount only where indicated as part of the allowance.
2. If requested, prepare explanation and documentation to substantiate distribution of overhead costs and other margins claimed.
3. Submit substantiation of a change in scope of work, if any, claimed in Change Orders related to unit-cost allowances.
4. Owner reserves the right to establish the quantity of work-in-place by independent quantity survey, measure, or count.

B. Submit claims for increased costs because of a change in scope or nature of the allowance described in the Contract Documents, whether for the purchase order amount or Contractor's handling, labor, installation, overhead, and profit.

1. Do not include Contractor's or subcontractor's indirect expense in the Change Order cost amount unless it is clearly shown that the nature or extent of work has changed from what could have been foreseen from information in the Contract Documents.
2. No change to Contractor's indirect expense is permitted for selection of higher- or lower-priced materials or systems of the same scope and nature as originally indicated.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine products covered by an allowance promptly on delivery for damage or defects. Return damaged or defective products to manufacturer for replacement.

3.2 PREPARATION

A. Coordinate materials and their installation for each allowance with related materials and installations to ensure that each allowance item is completely integrated and interfaced with related work.

3.3 SCHEDULE OF ALLOWANCES

A. Allowance No. 1: Gypsum / Hydraulic Cement Underlayment Lump-Sum Allowance: Include in the sum an allowance for floating floor substrates with gypsum cement underlayment (at wood floors) and hydraulic cement underlayment (at concrete floors) which are not in compliance with specified tolerances and finish flooring manufacturer's written limitations.

B. Allowance No. 2: Moisture Vapor Emission Control Lump-Sum Allowance: Include in the sum an allowance for application of moisture vapor emission control system that controls the moisture-vapor-emission rate of high-moisture interior concrete floor slabs which are not in compliance with finish flooring manufacturer's written limitations.

END OF SECTION 012100

SECTION 012500 - SUBSTITUTION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for the following:

1. Substitutions for cause.
2. Substitutions for convenience.

a. Architect will consider substitution for convenience requests if written request and all of the supporting action submittals are received by the Architect within the time limitations established by the General Conditions for substitutions. If no time limit is established in the General Conditions for substitutions, Architect will consider substitution for convenience requests if received prior to bid due date. Requests received after that time may be considered or rejected at discretion of Architect.

3. Refer to Section 016000 “Product Requirements” (NOT this Section) for comparable products being submitted for consideration as one of the following:

a. “Or Equal.”
b. “Or Comparable Equal.”

B. Related Requirements:

1. Section 012100 "Allowances" for products selected under an allowance.
2. Section 016000 "Product Requirements" for requirements related to comparable products being submitted for consideration via "Or Equal" or via "Or Comparable Equal."

1.3 DEFINITIONS

A. Day: The term “day” as used in this Section shall mean calendar day, including weekends and legal holidays.

B. Business Day: The term “business day” shall mean working day, excluding weekends and legal holidays.

C. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor.

1. Substitutions for Cause: Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product*, regulatory changes, or unavailability of required warranty terms.

* The Contractor's failure to obtain in a timely manner one of the specified products (e.g. a contractor-caused submittal delay, contractor did not take into consideration for long-lead time, etc.) is NOT considered a justifiable substitution request for cause.

2. Substitutions for Convenience: Changes proposed by Contractor or Owner that are not required in order to meet other Project requirements but may offer advantage to Contractor or Owner.

1.4 ACTION SUBMITTALS

A. Substitution Requests: Submit three copies of each request for consideration. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.

1. Substitution Request Form: Use CSI Form 13.1A “Substitution Request for Cause” following this Section.
2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:

a. Executive Summary: In addition to the requirements noted above and below, provide an executive summary, which compares the significant technical properties and characteristics between the original product specified and the proposed substitution. Such summary shall be limited to two pages, and shall be presented in a matrix or bullet format. Where visual or aesthetic criteria are a component of the comparison, provide samples of both the original product specified and the proposed substitution.
b. Statement indicating why specified product or fabrication or installation cannot be provided, if applicable.
c. Coordination information, including a list of changes or revisions needed to other parts of the Work and to construction performed by Owner and separate contractors, that will be necessary to accommodate proposed substitution.
d. Detailed comparison of significant qualities of proposed substitution with those of the Work specified. Include annotated copy of applicable Specification Section. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.
e. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
f. Samples, where applicable or requested.
g. Certificates and qualification data, where applicable or requested.
h. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners.
i. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
j. Research reports evidencing compliance with building code in effect for Project, from ICC-ES.
k. Sustainable design characteristics equal to or better than product(s) specified.
l. Detailed comparison of Contractor's construction schedule using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.
m. Cost information, including a proposal of change, if any, in the Contract Sum.
n. Contractor's certification that proposed substitution complies with requirements in the Contract Documents except as indicated in substitution request, is compatible with related materials, and is appropriate for applications indicated.
o. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.

3. Architect's Action: If necessary, Architect will request additional information or documentation for evaluation within five (5) business days of receipt of a request for substitution. Architect will notify Contractor of acceptance or rejection of proposed substitution within 10 business days of receipt of request, or 5 business days of receipt of additional information or documentation, whichever is later.

a. Forms of Acceptance: Change Order.
b. Requests for substitution must be approved in writing by Owner, Architect, and as applicable Authorities Having Jurisdiction.
c. Use product specified if Architect does not issue a decision on use of a proposed substitution within time allocated.
d. Provide specified product(s) when request for substitution has been rejected.

1.5 QUALITY ASSURANCE

A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to perform compatibility tests recommended by manufacturers.

1.6 PROCEDURES

A. Coordination: Revise or adjust affected work as necessary to integrate work of the approved substitutions.

1.7 SPECIAL WARRANTY

A. Special Contractor Warranty for Substitutions for Convenience: Contractor warrants that substituted material or system will perform same as original specified material or system would have performed. Should accepted substitution fail to perform as required, Contractor shall replace substituted material or system with that specified and bear costs incurred thereby.

PART 2 - PRODUCTS

2.1 SUBSTITUTIONS

A. Substitutions for Cause: Submit requests and action submittals for substitution immediately on discovery of need for change, but not later than 15 days prior to time required for preparation and review of related submittals.

1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

a. Requested substitution is consistent with the Contract Documents and will produce indicated results.
b. Requested substitution provides sustainable design characteristics that specified product provided.
c. Substitution request is fully documented and properly submitted.
d. Requested substitution will not adversely affect Contractor's construction schedule.
e. Requested substitution has received necessary approvals of authorities having jurisdiction.
f. Requested substitution is compatible with other portions of the Work.
g. Requested substitution has been coordinated with other portions of the Work.
h. Requested substitution provides specified warranty.
i. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.
j. Requested substitution meets or exceeds the specified requirements and salient performance characteristics of the specified product or system.

B. Substitutions for Convenience: Architect will consider requests for substitution if written request and all of the supporting action submittal are received by the Architect within the time frame established by the General Conditions. If no time limit is established in the General Conditions for substitutions, Architect will consider substitution for convenience requests if received prior to bid due date. Requests received after that time may be considered or rejected at discretion of Architect.

1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

a. Requested substitution offers Owner a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities Owner must assume. Owner's additional responsibilities may include compensation to Architect for redesign and evaluation services, increased cost of other construction by Owner, and similar considerations.
b. Requested substitution does not require extensive revisions to the Contract Documents.
c. Requested substitution is consistent with the Contract Documents and will produce indicated results.
d. Requested substitution provides sustainable design characteristics that specified product provided.
e. Substitution request is fully documented and properly submitted.
f. Requested substitution will not adversely affect Contractor's construction schedule.
g. Requested substitution has received necessary approvals of authorities having jurisdiction.
h. Requested substitution is compatible with other portions of the Work.
i. Requested substitution has been coordinated with other portions of the Work.
j. Requested substitution provides specified warranty.
k. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.
l. Requested substitution meets or exceeds the specified requirements and salient performance characteristics of the specified product or system. Include detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.
m. Requested substitution will be executed by installer(s) that are certified by manufacturer of substituted product.
n. Samples of requested substitution are submitted, if requested.
o. The Owner shall be entitled to reimbursement from the Contractor for amounts paid to the Architect for reviewing the Contractor’s proposed substitutions for convenience and making agreed-upon changes in the Drawings and Specifications resulting from such substitutions.

SUBSTITUTION REQUEST FOR CAUSE

Project: _____ Substitution Request Number: _____

_____ From: _____

To: _____ Date: _____

_____ A/E Project Number: _____

Re: _____ Contract For: _____

Specification Title: _____ Description: _____

Section: _____ Page: _____ Article/Paragraph: _____

Proposed Substitution: _____

Manufacturer: _____ Address: _____ Phone: _____

Trade Name: _____ Model No.: _____

Installer: _____ Address: _____ Phone: _____

History: ☐ New product ☐ 1-4 years old ☐ 5-10 years old ☐ More than 10 years old

Differences between proposed substitution and specified product: _____

_____

_____

☐ Point-by-point comparative data attached — REQUIRED BY A/E

Reason for not providing specified item: _____

_____

Similar Installation:

Project: _____ Architect: _____

Address: _____ Owner: _____

_____ Date Installed: _____

Proposed substitution affects other parts of Work: ☐ No ☐ Yes; explain _____

_____

Savings to Owner for accepting substitution: _____ ($ _____).

Proposed substitution changes Contract Time: ☐ No ☐ Yes [Add] [Deduct] _____ days.

Supporting Data Attached: ☐ Drawings ☐ Product Data ☐ Samples ☐ Tests ☐ Reports ☐ _____

SUBSTITUTION
REQUEST FOR CAUSE
(Continued)

The Undersigned certifies:

- Proposed substitution has been fully investigated and determined to be equal or superior in all respects to specified product.
- Same warranty will be furnished for proposed substitution as for specified product.
- Same maintenance service and source of replacement parts, as applicable, is available.
- Proposed substitution will have no adverse effect on other trades and will not affect or delay progress schedule.
- Cost data as stated above is complete. Claims for additional costs related to accepted substitution which may subsequently become apparent are to be waived.
- Proposed substitution does not affect dimensions and functional clearances.
- Payment will be made for changes to building design, including A/E design, detailing, and construction costs caused by the substitution.
- Coordination, installation, and changes in the Work as necessary for accepted substitution will be complete in all respects.

SECTION 012600 - CONTRACT MODIFICATION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for handling and processing Contract modifications.

B. Related Requirements:

1. Section 012500 "Substitution Procedures" for administrative procedures for handling requests for substitutions made after the Contract award.

1.3 DEFINITIONS

A. Day: The term "day" as used in this Section shall mean calendar day, including weekends and legal holidays.

B. Business Day: The term “business day” shall mean working day, excluding weekends and legal holidays.

1.4 MINOR CHANGES IN THE WORK

A. Architect will issue supplemental instructions authorizing minor changes in the Work, not involving adjustment to the Contract Sum or the Contract Time, on AIA Document G710, "Architect's Supplemental Instructions."

1.5 PROPOSAL REQUESTS

A. Owner-Initiated Proposal Requests: Architect will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or the Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications.

1. Work Change Proposal Requests issued by Architect are not instructions either to stop work in progress or to execute the proposed change.
2. Within 15 business days after receipt of Proposal Request, submit a quotation estimating cost adjustments to the Contract Sum and the Contract Time necessary to execute the change.

a. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
b. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
c. Include costs of labor and supervision directly attributable to the change.
d. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.

B. Contractor-Initiated Proposals: If latent or changed conditions require modifications to the Contract, Contractor may initiate a claim by submitting a request for a change to Architect.

1. Include a statement outlining reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.
2. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
3. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
4. Include costs of labor and supervision directly attributable to the change.
5. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
6. Comply with requirements in Section 012500 "Substitution Procedures" if the proposed change requires substitution of one product or system for product or system specified.
7. Proposal Request Form: Use form mutually acceptable to Owner, Architect, and Contractor.

1.6 ADMINISTRATIVE CHANGE ORDERS

A. Allowance Adjustment: See Section 012100 "Allowances" for administrative procedures for preparation of Change Order Proposal for adjusting the Contract Sum to reflect actual costs of allowances.

1.7 CHANGE ORDER PROCEDURES

A. On Owner's approval of a Work Changes Proposal Request, Contractor will issue a Change Order for signatures of Owner and Contractor on AIA Document G701.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 012600

SECTION 012900 - PAYMENT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements necessary to prepare and process Applications for Payment.

B. Related Requirements:

1. Section 012100 "Allowances" for procedural requirements governing the handling and processing of allowances.
2. Section 012600 "Contract Modification Procedures" for administrative procedures for handling changes to the Contract.
3. Section 013200 "Construction Progress Documentation" for administrative requirements governing the preparation and submittal of the Contractor's construction schedule.

1.3 DEFINITIONS

A. Schedule of Values: A statement furnished by Contractor allocating portions of the Contract Sum to various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment.

1.4 SCHEDULE OF VALUES

A. Coordination: Coordinate preparation of the schedule of values with preparation of Contractor's construction schedule.

1. Coordinate line items in the schedule of values with items required to be indicated as separate activities in Contractor's construction schedule.
2. Submit the schedule of values to Architect at earliest possible date, but no later than seven days before the date scheduled for submittal of initial Applications for Payment.
3. Subschedules for Phased Work: Where the Work is separated into phases requiring separately phased payments, provide subschedules showing values coordinated with each phase of payment.
4. Subschedules for Separate Elements of Work: Where the Contractor's construction schedule defines separate elements of the Work, provide subschedules showing values coordinated with each element.

B. Format and Content: Use Project Manual table of contents as a guide to establish line items for the schedule of values. Provide at least one line item for each Specification Section.

1. Identification: Include the following Project identification on the schedule of values:

a. Project name and location.
b. Name of Architect.
c. Architect's project number.
d. Contractor's name and address.
e. Date of submittal.

2. Arrange schedule of values consistent with format of AIA Document G703.
3. Arrange the schedule of values in tabular form with separate columns to indicate the following for each item listed:

    a. Related Specification Section or Division.
    b. Description of the Work.
    c. Name of subcontractor.
    d. Name of manufacturer or fabricator.
    e. Name of supplier.
    f. Change Orders (numbers) that affect value.
    g. Dollar value of the following, as a percentage of the Contract Sum to nearest one-hundredth percent, adjusted to total 100 percent.

        1) Labor.
        2) Materials.
        3) Equipment.

4. Provide a breakdown of the Contract Sum in enough detail to facilitate continued evaluation of Applications for Payment and progress reports. Coordinate with Project Manual table of contents. Provide multiple line items for principal subcontract amounts in excess of five percent of the Contract Sum.
5. Round amounts to nearest whole dollar; total shall equal the Contract Sum.
6. Provide a separate line item in the schedule of values for each part of the Work where Applications for Payment may include materials or equipment purchased or fabricated and stored, but not yet installed.

    a. Differentiate between items stored on-site and items stored off-site.

7. Allowances: Provide a separate line item in the schedule of values for each allowance. Show line-item value of unit-cost allowances, as a product of the unit cost, multiplied by measured quantity. Use information indicated in the Contract Documents to determine quantities.
8. Overhead Costs: Include total cost and proportionate share of general overhead and profit for each line item.
9. Overhead Costs: Show cost of temporary facilities and other major cost items that are not direct cost of actual work-in-place as separate line items.
10. Schedule of Values Revisions: Revise the schedule of values when Change Orders result in a change in the Contract Sum. Include at least one separate line item for each Change Order.

1.5 APPLICATIONS FOR PAYMENT

A. Each Application for Payment following the initial Application for Payment shall be consistent with previous applications and payments as certified by Architect and paid for by Owner.

B. Payment Application Times: The date for each progress payment is indicated in the Agreement between Owner and Contractor. The period of construction work covered by each Application for Payment is the period indicated in the Agreement.

C. Application for Payment Forms: Use AIA Document G702 and AIA Document G703 as form for Applications for Payment.

D. Application Preparation: Complete every entry on form. Notarize and execute by a person authorized to sign legal documents on behalf of Contractor. Architect will return incomplete applications without action.

1. Entries shall match data on the schedule of values and Contractor's construction schedule. Use updated schedules if revisions were made.
2. Include amounts for work completed following previous Application for Payment, whether or not payment has been received. Include only amounts for work completed at time of Application for Payment.
3. Include amounts of Change Orders issued before last day of construction period covered by application.

E. Stored Materials: Include in Application for Payment amounts applied for materials or equipment purchased or fabricated and stored, but not yet installed. Differentiate between items stored on-site and items stored off-site.

1. Provide certificate of insurance, evidence of transfer of title to Owner, and consent of surety to payment, for stored materials.
2. Provide supporting documentation that verifies amount requested, such as paid invoices. Match amount requested with amounts indicated on documentation; do not include overhead and profit on stored materials.
3. Provide summary documentation for stored materials indicating the following:

    a. Value of materials previously stored and remaining stored as of date of previous Applications for Payment.
    b. Value of previously stored materials put in place after date of previous Application for Payment and on or before date of current Application for Payment.
    c. Value of materials stored since date of previous Application for Payment and remaining stored as of date of current Application for Payment.

F. Transmittal: Submit minimum three signed and notarized original copies of each Application for Payment to Architect by a method ensuring receipt within 24 hours. One copy shall include waivers of lien and similar attachments if required.

1. Transmit each copy with a transmittal form listing attachments and recording appropriate information about application.

G. Waivers of Mechanic's Lien: With each Application for Payment, submit waivers of mechanic's lien from entities lawfully entitled to file a mechanic's lien arising out of the Contract and related to the Work covered by the payment.

1. Submit partial waivers on each item for amount requested in previous application, after deduction for retainage, on each item.
2. When an application shows completion of an item, submit conditional final or full waivers.
3. Owner reserves the right to designate which entities involved in the Work must submit waivers.
4. Submit final Application for Payment with or preceded by conditional final waivers from every entity involved with performance of the Work covered by the application who is lawfully entitled to a lien.
5. Waiver Forms: Submit executed waivers of lien on forms acceptable to Owner.

H. Waivers of Mechanic's Lien: With each Application for Payment, submit waivers of mechanic's liens from subcontractors, sub-subcontractors, and suppliers for construction period covered by the previous application.

1. Submit partial waivers on each item for amount requested in previous application, after deduction for retainage, on each item.
2. When an application shows completion of an item, submit conditional final or full waivers.
3. Owner reserves the right to designate which entities involved in the Work must submit waivers.
4. Submit final Application for Payment with or preceded by conditional final waivers from every entity involved with performance of the Work covered by the application who is lawfully entitled to a lien.
5. Waiver Forms: Submit executed waivers of lien on forms, acceptable to Owner.

I. Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of Application for Payment include the following:

1. List of subcontractors.
2. Schedule of values.
3. Contractor's construction schedule (preliminary if not final).
4. Products list (preliminary if not final).
5. Sustainable design action plans, including preliminary project materials cost data.
6. Schedule of unit prices.
7. Submittal schedule (preliminary if not final).
8. List of Contractor's staff assignments.
9. List of Contractor's principal consultants.
10. Copies of authorizations and licenses from authorities having jurisdiction for performance of the Work.
11. Initial progress report.
12. Report of preconstruction conference.
13. Certificates of insurance and insurance policies.
14. Performance and payment bonds.
15. Data needed to acquire Owner's insurance.

J. Application for Payment at Substantial Completion: After Architect issues the Certificate of Substantial Completion, submit an Application for Payment showing 100 percent completion for portion of the Work claimed as substantially complete.

1. Include documentation supporting claim that the Work is substantially complete and a statement showing an accounting of changes to the Contract Sum.
2. This application shall reflect Certificate(s) of Substantial Completion issued previously for Owner occupancy of designated portions of the Work.

K. Final Payment Application: After completing Project closeout requirements, submit final Application for Payment with releases and supporting documentation not previously submitted and accepted, including, but not limited, to the following:

1. Evidence of completion of Project closeout requirements.
2. Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.
3. Updated final statement, accounting for final changes to the Contract Sum.
4. AIA Document G706.
5. AIA Document G706.
6. AIA Document G707.
7. Evidence that claims have been settled.
8. Final meter readings for utilities, a measured record of stored fuel, and similar data as of date of Substantial Completion or when Owner took possession of and assumed responsibility for corresponding elements of the Work.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 012900

SECTION 013100 - PROJECT MANAGEMENT AND COORDINATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative provisions for coordinating construction operations on Project including, but not limited to, the following:

1. General coordination procedures.
2. Coordination drawings.
3. Requests for Information (RFIs).
4. Digital project management procedures.
5. Project meetings.

B. Each contractor shall participate in coordination requirements. Certain areas of responsibility are assigned to a specific contractor.

C. Related Requirements:

1. Section 013200 "Construction Progress Documentation" for preparing and submitting Contractor's construction schedule.
2. Section 017300 "Execution" for procedures for coordinating general installation and field-engineering services, including establishment of benchmarks and control points.
3. Section 017700 "Closeout Procedures" for coordinating closeout of the Contract.
4. Section 019113 "General Commissioning Requirements" for coordinating the Work with Owner's Commissioning Authority.

1.3 DEFINITIONS

A. Day: The term "day" as used in this Section shall mean calendar day, including weekends and legal holidays.

B. BIM: Building Information Modeling.

C. Business Day: The term "business day" as used in this Section shall mean working day, excluding weekends and legal holidays.

D. RFI: Request for information from Owner, Architect, or Contractor seeking information required by or clarifications of the Contract Documents.

1.4 INFORMATIONAL SUBMITTALS

A. Subcontract List: Prepare a written summary identifying individuals or firms proposed for each portion of the Work, including those who are to furnish products or equipment fabricated to a special design. Include the following information in tabular form:

1. Name, address, and telephone number of entity performing subcontract or supplying products.
2. Number and title of related Specification Section(s) covered by subcontract.
3. Drawing number and detail references, as appropriate, covered by subcontract.

B. Key Personnel Names: Within 15 days of starting construction operations, submit a list of key personnel assignments, including superintendent and other personnel in attendance at Project site. Identify individuals and their duties and responsibilities; list addresses and telephone numbers, including office, and cellular telephone numbers and e-mail addresses. Provide names, addresses, and telephone numbers of individuals assigned as alternates in the absence of individuals assigned to Project.

1. Post copies of list in project meeting room, in temporary field office, and by each temporary telephone. Keep list current at all times.

1.5 GENERAL COORDINATION PROCEDURES

A. Coordination: Coordinate construction operations included in different Sections of the Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations, included in different Sections, that depend on each other for proper installation, connection, and operation.

1. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
2. Coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair.
3. Make adequate provisions to accommodate items scheduled for later installation.

B. Coordination: Each contractor shall coordinate its construction operations with those of other contractors and entities to ensure efficient and orderly installation of each part of the Work. Each contractor shall coordinate its operations with operations, included in different Sections, that depend on each other for proper installation, connection, and operation.

1. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
2. Coordinate installation of different components with other contractors to ensure maximum performance and accessibility for required maintenance, service, and repair.
3. Make adequate provisions to accommodate items scheduled for later installation.

C. Prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and list of attendees at meetings.

1. Prepare similar memoranda for Owner and separate contractors if coordination of their Work is required.

D. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:

1. Preparation of Contractor's construction schedule.
2. Preparation of the schedule of values.
3. Installation and removal of temporary facilities and controls.
4. Delivery and processing of submittals.
5. Progress meetings.
6. Preinstallation conferences.
7. Project closeout activities.
8. Startup and adjustment of systems.

1.6 COORDINATION DRAWINGS

A. Coordination Drawings, General: Prepare coordination drawings according to requirements in individual Sections, and additionally where installation is not completely shown on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one entity.

1. Content: Project-specific information, drawn accurately to a scale large enough to indicate and resolve conflicts. Do not base coordination drawings on standard printed data. Include the following information, as applicable:

a. Use applicable Drawings as a basis for preparation of coordination drawings. Prepare sections, elevations, and details as needed to describe relationship of various systems and components.
b. Coordinate the addition of trade-specific information to the coordination drawings by multiple contractors in a sequence that best provides for coordination of the information and resolution of conflicts between installed components before submitting for review.
c. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
d. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
e. Show location and size of access doors required for access to concealed dampers, valves, and other controls.
f. Indicate required installation sequences.
g. Indicate dimensions shown on the Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Architect indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.

B. Coordination Drawing Organization: Organize coordination drawings as follows:

1. Floor Plans and Reflected Ceiling Plans: Show architectural and structural elements, and mechanical, plumbing, fire-protection, fire-alarm, and electrical Work. Show locations of visible ceiling-mounted devices relative to acoustical ceiling grid. Supplement plan drawings with section drawings where required to adequately represent the Work.
2. Plenum Space: Indicate subframing for support of ceiling and wall systems, mechanical and electrical equipment, and related Work. Locate components within ceiling plenum to accommodate layout of light fixtures indicated on Drawings. Indicate areas of conflict between light fixtures and other components.
3. Mechanical Rooms: Provide coordination drawings for mechanical rooms showing plans and elevations of mechanical, plumbing, fire-protection, fire-alarm, and electrical equipment.
4. Structural Penetrations: Indicate penetrations and openings required for all disciplines.
5. Slab Edge and Embedded Items: Indicate slab edge locations and sizes and locations of embedded items for metal fabrications, sleeves, anchor bolts, bearing plates, angles, door floor closers, slab depressions for floor finishes, curbs and housekeeping pads, and similar items.
6. Mechanical and Plumbing Work: Show the following:

a. Sizes and bottom elevations of ductwork, piping, and conduit runs, including insulation, bracing, flanges, and support systems.
b. Dimensions of major components, such as dampers, valves, diffusers, access doors, cleanouts and electrical distribution equipment.
c. Fire-rated enclosures around ductwork.

7. Electrical Work: Show the following:

a. Runs of vertical and horizontal conduit 1-1/4 inches in diameter and larger.
b. Light fixture, exit light, emergency battery pack, smoke detector, and other fire-alarm locations.
c. Panel board, switch board, switchgear, transformer, busway, generator, and motor control center locations.
d. Location of pull boxes and junction boxes, dimensioned from column center lines.

8. Fire-Protection System: Show the following:

a. Locations of standpipes, mains piping, branch lines, pipe drops, and sprinkler heads.

9. Review: Architect will review coordination drawings to confirm that the Work is being coordinated, but not for the details of the coordination, which are Contractor's responsibility. If Architect determines that coordination drawings are not being prepared in sufficient scope or detail, or are otherwise deficient, Architect will so inform Contractor, who shall make changes as directed and resubmit.
10. Coordination Drawing Prints: Prepare coordination drawing prints according to requirements in Section 013300 "Submittal Procedures."

C. Mechanical, Electrical, Plumbing, Fire Protection Coordination Digital Data Files: In additional to coordination drawing requirements above, prepare coordination digital data files according to the following requirements:

1. File Preparation Format: Same digital data software program, version, and operating system as original Drawings.

    a. Subcontractors shall be responsible for converting the digital data files received from design team into the format required for the overall subcontractor coordinated building information model.

2. BIM File Incorporation: Develop and incorporate coordination drawing files into Building Information Model established for Project.

    a. Perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts prior to submittal. Indicate where conflict resolution requires modification of design requirements by Architect.

1.7 REQUESTS FOR INFORMATION (RFIs)

A. General Contractor and Trade Contractors providing preconstruction services shall not submit RFI's to Architect during the preconstruction phases of the Work. RFI's received by the Architect prior to obtaining formal approval(s) by authorities having jurisdiction will be returned without action.

B. General: Immediately on discovery of the need for additional information or interpretation of the Contract Documents, Contractor shall prepare and submit an RFI in the form specified.

1. Architect will return RFIs submitted to Architect by other entities controlled by Contractor with no response.
2. Coordinate and submit RFIs in a prompt manner so as to avoid delays in Contractor's work or work of subcontractors.
3. Prior to submission of the RFI to the Architect, the General Contractor and Trade Contractor(s) shall evaluate and validate that the request seeking information or clarification is not available after a reasonable and appropriate review of the Contract Documents, filed conditions, other Owner-provided information, Contractor-prepared coordination drawings, or prior Project correspondence or documentation.

    a. The Owner is entitled to reimbursement from the Contractor for amounts paid to the Architect for evaluating and responding to the Contractor's requests for information that are not prepared in accordance with the Contract Documents or where the requested information is available to the Contractor from a careful study and comparison of the Contract Documents, field conditions, other Owner-provided information, Contractor-prepared coordination drawings, or prior Project correspondence or documentation.

4. When submitting ten or more concurrent RFI's related to a specific portion of the Work, regardless of whether the RFI's are submitted individually or combined, the General Contractor and Trade Contractor submitting the RFI's shall conduct a special coordination meeting.

    a. Include the following attendees: Entity originating the RFI's, Trade Contractor(s), General Contractor, Architect, Architect's Consultant (as required), Owner (as required), and other subcontractors, suppliers, etc. as required for coordination.

C. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following:

1. Project name.
2. Project number.
3. Date.
4. Name of Contractor.
5. Name of Architect.
6. RFI number, numbered sequentially.
7. RFI subject.
8. Specification Section number and title and related paragraphs, as appropriate.
9. Drawing number and detail references, as appropriate.
10. Field dimensions and conditions, as appropriate.
11. Contractor's suggested resolution. If Contractor's suggested resolution impacts the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.
12. Contractor's signature.
13. Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.

    a. Include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments on attached sketches.

D. RFI Forms: AIA Document G716 or form mutually acceptable to Owner, Architect, and Contractor.

1. Attachments shall be electronic files in Adobe Acrobat PDF format.

E. Architect's Action: Architect will review each RFI, determine action required, and respond. Allow 5 business days for Architect's response for each RFI. RFIs received by Architect after 1:00 P.M. will be considered as received the following working day.

1. The following Contractor-generated RFIs will be returned without action:

    a. Requests for approval of submittals.
    b. Requests for approval of substitutions.
    c. Requests for approval of Contractor's means and methods.
    d. Requests for coordination information already indicated in the Contract Documents.
    e. Requests for adjustments in the Contract Time or the Contract Sum.
    f. Requests for interpretation of Architect's actions on submittals.
    g. Incomplete RFIs or inaccurately prepared RFIs.
    h. Requests during the preconstruction phases of Work.

2. Architect's action may include a request for additional information, in which case Architect's time for response will date from time of receipt of additional information.
3. Architect's action on RFIs that may result in a change to the Contract Time or the Contract Sum may be eligible for Contractor to submit Change Proposal according to Section 012600 "Contract Modification Procedures."

    a. If Contractor believes the RFI response warrants change in the Contract Time or the Contract Sum, notify Architect in writing within 10 business days of receipt of the RFI response.

F. RFI Log: Prepare, maintain, and submit a tabular log of RFIs organized by the RFI number. Submit log weekly. Include the following:

1. Project name.
2. Name and address of Contractor.
3. Name and address of Architect.
4. RFI number including RFIs that were returned without action or withdrawn.
5. RFI description.
6. Date the RFI was submitted.
7. Date Architect's response was received.
8. Identification of related Architect’s Supplemental Information, Proposal Request, or Change Order.

G. On receipt of Architect’s action, Contractor shall update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify Architect within five business days if Contractor disagrees with response.

1.8 DIGITAL PROJECT MANAGEMENT PROCEDURES

A. Architect's Digital Data Files: At Contractor's written request and unless the provisions of the Owner/Architect Agreement provide otherwise, an electronic copy of Architect's Instruments of Services may be provided for appropriate Project purposes upon the execution by Owner and Contractor of Architect's "Electronic Document Release" form (a copy of which may be obtained from Architect).

1. Architect makes no representations as to the accuracy or completeness of digital data files as they relate to Drawings.
2. Digital Data Software Program: Drawings are available in Revit format.
3. Contractor shall execute a data licensing agreement in the form of Agreement form acceptable to Owner and Architect.

B. Web-Based Project Software: Provide, administer, and use web-based Project software for purposes of hosting and managing Project communication and documentation until Final Completion.

1. Web-based Project software site includes, at a minimum, the following features:

a. Compilation of Project data, including Contractor, subcontractors, Architect, architect's consultants, Owner, and other entities involved in Project. Include names of individuals and contact information.
b. Access control for each entity for each workflow process, to determine entity's digital rights to create, modify, view, and print documents.
c. Document workflow planning, allowing customization of workflow between project entities.
d. Creation, logging, tracking, and notification for Project communications required in other Specification Sections, including, but not limited to, RFIs, submittals, Minor Changes in the Work, Construction Change Directives, and Change Orders.
e. Track status of each Project communication in real time, and log time and date when responses are provided.
f. Procedures for handling PDFs or similar file formats, allowing markups by each entity. Provide security features to lock markups against changes once submitted.
g. Processing and tracking of payment applications.
h. Processing and tracking of contract modifications.
i. Creating and distributing meeting minutes.
j. Document management for Drawings, Specifications, and coordination drawings, including revision control.
k. Management of construction progress photographs.
l. Mobile device compatibility, including smartphones and tablets.

2. Provide web-based Project software user licenses for use of Owner, Owner's Commissioning Authority , Construction Manager, Architect, and Architect's consultants. Provide software training at Architect's office for web-based Project software users.
3. At completion of Project, provide digital archive in format that is readable by common desktop software applications in format acceptable to Architect. Provide data in locked format to prevent further changes.

C. PDF Document Preparation: Where PDFs are required to be submitted to Architect, prepare as follows:

1. Assemble complete submittal package into a single indexed file incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
2. Name file with submittal number or other unique identifier, including revision identifier.
3. Certifications: Where digitally submitted certificates and certifications are required, provide a digital signature with digital certificate on where indicated.

1.9 PROJECT MEETINGS

A. General: Schedule and conduct meetings and conferences at Project site unless otherwise indicated.

1. Attendees: Inform participants and others involved, and individuals whose presence is required, of date and time of each meeting. Notify Owner and Architect of scheduled meeting dates and times.
2. Agenda: Prepare the meeting agenda. Distribute the agenda to all invited attendees.
3. Minutes: Contractor will record significant discussions and agreements achieved and will author meeting minutes. Distribute the meeting minutes to everyone concerned, including Owner and Architect, within three days of the meeting.

B. Preconstruction Conference: Schedule and conduct a preconstruction conference before starting construction, at a time convenient to Owner and Architect, but no later than 15 days after execution of the Agreement.

1. Conduct the conference to review responsibilities and personnel assignments.
2. Attendees: Authorized representatives of Owner, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.

3. Agenda: Discuss items of significance that could affect progress, including the following:

a. Responsibilities and personnel assignments
b. Tentative construction schedule.
c. Phasing.
d. Critical work sequencing and long-lead items.
e. Designation of key personnel and their duties.
f. Lines of communications.
g. Use of web-based Project software.
h. Procedures for processing field decisions and Change Orders.
i. Procedures for RFIs.
j. Procedures for testing and inspecting.
k. Procedures for processing Applications for Payment.
l. Distribution of the Contract Documents.
m. Submittal procedures.
n. Sustainable design requirements.
o. Preparation of record documents.
p. Use of the premises and existing building.
q. Work restrictions.
r. Working hours.
s. Owner's occupancy requirements.
t. Responsibility for temporary facilities and controls.
u. Procedures for moisture and mold control.
v. Procedures for disruptions and shutdowns.
w. Construction waste management and recycling.
x. Parking availability.
y. Office, work, and storage areas.
z. Equipment deliveries and priorities.
aa. First aid.
bb. Security.
cc. Progress cleaning.

4. Minutes: Contractor will record and distribute meeting minutes.

C. Preinstallation Conferences: Conduct a preinstallation conference at Project site before each construction activity that requires coordination with other construction.

1. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise Architect of scheduled meeting dates.
2. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:

    a. Contract Documents.
    b. Options.
    c. Related RFIs.
    d. Related Change Orders.
    e. Purchases.
    f. Deliveries.
    g. Submittals.
    h. Sustainable design requirements.
    i. Review of mockups.
    j. Possible conflicts.
    k. Compatibility requirements.
    l. Time schedules.
    m. Weather limitations.
    n. Manufacturer's written instructions.
    o. Warranty requirements.
    p. Compatibility of materials.
    q. Acceptability of substrates.
    r. Temporary facilities and controls.
    s. Space and access limitations.
    t. Regulations of authorities having jurisdiction.
    u. Testing and inspecting requirements.
    v. Installation procedures.
    w. Coordination with other work.
    x. Required performance results.
    y. Protection of adjacent work.
    z. Protection of construction and personnel.

3. Record significant conference discussions, agreements, and disagreements, including required corrective measures and actions.
4. Reporting: Contractor shall record and distribute minutes of the meeting to each party present and to other parties requiring information.
5. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.

D. Project Closeout Conference: Schedule and conduct a project closeout conference, at a time convenient to Owner and Architect, but no later than 90 days prior to the scheduled date of Substantial Completion.

1. Conduct the conference to review requirements and responsibilities related to Project closeout.
2. Attendees: Authorized representatives of Owner, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the meeting. Participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
3. Agenda: Discuss items of significance that could affect or delay Project closeout, including the following:

    a. Preparation of Record Documents.
    b. Procedures required prior to inspection for Substantial Completion and for final inspection for acceptance.
    c. Procedures for completing and archiving web-based Project software site data files.
    d. Submittal of written warranties.
    e. Requirements for completing sustainable design documentation.
    f. Requirements for preparing operations and maintenance data.

g. Requirements for delivery of material samples, attic stock, and spare parts.
h. Requirements for demonstration and training.
i. Preparation of Contractor's punch list.
j. Procedures for processing Applications for Payment at Substantial Completion and for final payment.
k. Submittal procedures.
l. Coordination of separate contracts.
m. Owner's partial occupancy requirements.
n. Installation of Owner's furniture, fixtures, and equipment.
o. Responsibility for removing temporary facilities and controls.

4. Minutes: Contractor will record and distribute meeting minutes.

E. Progress Meetings: Conduct progress meetings at weekly intervals.

1. Coordinate dates of meetings with preparation of payment requests.
2. Attendees: In addition to representatives of Owner and Architect, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
3. Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.

a. Contractor's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.

1) Review schedule for next period.

b. Review present and future needs of each entity present, including the following:

1) Interface requirements.
2) Sequence of operations.
3) Resolution of BIM component conflicts.
4) Status of submittals.
5) Status of sustainable design documentation.
6) Deliveries.
7) Off-site fabrication.
8) Access.
9) Site utilization.
10) Temporary facilities and controls.
11) Progress cleaning.
12) Quality and work standards.
13) Status of correction of deficient items.
14) Field observations.
15) Status of RFIs.
16) Status of proposal requests.
17) Pending changes.
18) Status of Change Orders.
19) Pending claims and disputes.
20) Documentation of information for payment requests.

4. Minutes: Contractor will record and distribute the meeting minutes to each party present and to parties requiring information.

a. Schedule Updating: Revise Contractor's construction schedule monthly where revisions to the schedule have been made or recognized.

F. Coordination Meetings: Conduct Project coordination meetings at intervals appropriate to the state of construciton. Project coordination meetings are in addition to specific meetings held for other purposes, such as progress meetings and preinstallation conferences.

1. Attendees: In addition to representatives of Owner, Owner's Commissioning Authority and Architect, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meetings shall be familiar with Project and authorized to conclude matters relating to the Work.
2. Agenda: Review and correct or approve minutes of the previous coordination meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.

    a. Combined Contractor's Construction Schedule: Review progress since the last coordination meeting. Determine whether each contract is on time, ahead of schedule, or behind schedule, in relation to combined Contractor's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
    b. Schedule Updating: Revise combined Contractor's construction schedule after each coordination meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with report of each meeting.
    c. Review present and future needs of each contractor present, including the following:

        1) Interface requirements.
        2) Sequence of operations.
        3) Resolution of BIM component conflicts.
        4) Status of submittals.
        5) Deliveries.
        6) Off-site fabrication.
        7) Access.
        8) Site use.
        9) Temporary facilities and controls.
        10) Work hours.
        11) Hazards and risks.
        12) Progress cleaning.
        13) Quality and work standards.
        14) Status of RFIs.
        15) Proposal Requests.
        16) Change Orders.
        17) Pending changes.

3. Reporting: Record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 013100

SECTION 013200 - CONSTRUCTION PROGRESS DOCUMENTATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for documenting the progress of construction during performance of the Work, including the following:

1. Contractor's construction schedule.

B. Related Requirements:

1. Section 013300 "Submittal Procedures" for submitting schedules and reports.
2. Section 014000 "Quality Requirements" for submitting a schedule of tests and inspections.

1.3 DEFINITIONS

A. Activity: A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction project. Activities included in a construction schedule consume time and resources.

1. Critical Activity: An activity on the critical path that must start and finish on the planned early start and finish times.
2. Predecessor Activity: An activity that precedes another activity in the network.
3. Successor Activity: An activity that follows another activity in the network.

B. CPM: Critical path method, which is a method of planning and scheduling a construction project where activities are arranged based on activity relationships. Network calculations determine when activities can be performed and the critical path of Project.

C. Critical Path: The longest connected chain of interdependent activities through the network schedule that establishes the minimum overall Project duration and contains no float.

D. Event: The starting or ending point of an activity.

E. Float: The measure of leeway in starting and completing an activity.

1. Float time is not for the exclusive use or benefit of either Owner or Contractor, but is a jointly owned, expiring Project resource available to both parties as needed to meet schedule milestones and Contract completion date.
2. Free float is the amount of time an activity can be delayed without adversely affecting the early start of the successor activity.
3. Total float is the measure of leeway in starting or completing an activity without adversely affecting the planned Project completion date.

F. Resource Loading: The allocation of manpower and equipment necessary for the completion of an activity as scheduled.

1.4 INFORMATIONAL SUBMITTALS

A. Format for Submittals: Submit required submittals in the following format:

1. Electronic copy of schedule file, where indicated.
2. PDF electronic file.

B. Contractor's Construction Schedule: Initial schedule, of size required to display entire schedule for entire construction period.

1. Submit an electronic copy of schedule, using software indicated, and labeled to comply with requirements for submittals. Include type of schedule (initial or updated) and date on label.

1.5 QUALITY ASSURANCE

A. Prescheduling Conference: Conduct conference at Project site to comply with requirements in Section 013100 "Project Management and Coordination." Review methods and procedures related to the preliminary construction schedule and Contractor's construction schedule, including, but not limited to, the following:

1. Review software limitations and content and format for reports.
2. Verify availability of qualified personnel needed to develop and update schedule.
3. Discuss constraints, including phasing, area separations, interim milestones and partial Owner occupancy.
4. Review delivery dates for Owner-furnished products.
5. Review schedule for work of Owner's separate contracts.
6. Review submittal requirements and procedures.
7. Review time required for review of submittals and resubmittals.
8. Review requirements for tests and inspections by independent testing and inspecting agencies.
9. Review time required for Project closeout and Owner startup procedures, including commissioning activities.
10. Review and finalize list of construction activities to be included in schedule.
11. Review procedures for updating schedule.

1.6 COORDINATION

A. Coordinate Contractor's construction schedule with the schedule of values, list of subcontracts, submittal schedule, progress reports, payment requests, and other required schedules and reports.

1. Secure time commitments for performing critical elements of the Work from entities involved.
2. Coordinate each construction activity in the network with other activities and schedule them in proper sequence.

1.7 CONTRACTOR'S CONSTRUCTION SCHEDULE, GENERAL

A. Time Frame: Extend schedule from date established for commencement of the Work to date of Substantial Completion and final completion.

1. Contract completion date shall not be changed by submission of a schedule that shows an early completion date, unless specifically authorized by Change Order.

B. Activities: Treat each floor or separate area as a separate numbered activity for each main element of the Work. Comply with the following:

1. Activity Duration: Define duration of discrete activities.
2. Procurement Activities: Include procurement process activities for the following long lead items and major items, as separate activities in schedule. Procurement cycle activities include, but are not limited to, submittals, approvals, purchasing, fabrication, and delivery.
3. Submittal Review Time: Include review and resubmittal times indicated in Section 013300 "Submittal Procedures" in schedule. Coordinate submittal review times in Contractor's construction schedule with submittal schedule.
4. Startup and Testing Time: Include no fewer than 15 business days for startup and testing.
5. Commissioning Time: Include no fewer than 15 business days for commissioning.
6. Substantial Completion: Indicate completion in advance of date established for Substantial Completion, and allow time for Architect's administrative procedures necessary for certification of Substantial Completion.
7. Punch List and Final Completion: Include not more than 60 days for completion of punch list items and final completion.

C. Constraints: Include constraints and work restrictions indicated in the Contract Documents and as follows in schedule, and show how the sequence of the Work is affected.

1. Phasing: Arrange list of activities on schedule by phase.
2. Work under More Than One Contract: Include a separate activity for each contract.
3. Work by Owner: Include a separate activity for each portion of the Work performed by Owner.
4. Products Ordered in Advance: Include a separate activity for each product. Include delivery date indicated in Section 011000 "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
5. Owner-Furnished Products: Include a separate activity for each product. Include delivery date indicated in Section 011000 "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
6. Work Restrictions: Show the effect of the following items on the schedule:

    a. Coordination with existing construction.
    b. Limitations of continued occupancies.
    c. Uninterruptible services.
    d. Partial occupancy before Substantial Completion.
    e. Use of premises restrictions.
    f. Provisions for future construction.
    g. Seasonal variations.
    h. Environmental control.

7. Work Stages: Indicate important stages of construction for each major portion of the Work, including, but not limited to, the following:

    a. Subcontract awards.
    b. Submittals.
    c. Purchases.
    d. Mockups.
    e. Fabrication.
    f. Sample testing.
    g. Deliveries.
    h. Installation.
    i. Tests and inspections.
    j. Adjusting.
    k. Curing.
    l. Building flush-out.
    m. Startup and placement into final use and operation.
    n. Commissioning.

8. Construction Areas: Identify each major area of construction for each major portion of the Work. Indicate where each construction activity within a major area must be sequenced or integrated with other construction activities to provide for the following:

    a. Structural completion.
    b. Temporary enclosure and space conditioning.
    c. Permanent space enclosure.
    d. Completion of mechanical installation.
    e. Completion of electrical installation.
    f. Substantial Completeion.

D. Milestones: Include milestones indicated in the Contract Documents in schedule, including, but not limited to, the Notice to Proceed, Substantial Completion, and final completion.

E. Upcoming Work Summary: Prepare summary report indicating activities scheduled to occur or commence prior to submittal of next schedule update. Summarize the following issues:

1. Unresolved issues.
2. Unanswered Requests for Information.
3. Rejected or unreturned submittals.
4. Notations on returned submittals.
5. Pending modifications affecting the Work and Contract Time

F. Contractor's Construction Schedule Updating: At intervals appropriate to the stage of construction, but no less than monthly, update schedule to reflect actual construction progress and activities. Issue schedule one week before each regularly scheduled progress meeting.

1. Revise schedule immediately after each meeting or other activity where revisions have been recognized or made. Issue updated schedule concurrently with the report of each such meeting.
2. Include a report with updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
3. As the Work progresses, indicate final completion percentage for each activity.

G. Recovery Schedule: When periodic update indicates the Work is 14 or more calendar days behind the current approved schedule, submit a separate recovery schedule indicating means by which Contractor intends to regain compliance with the schedule. Indicate changes to working hours, working days, crew sizes, and equipment required to achieve compliance, and date by which recovery will be accomplished.

H. Distribution: Distribute copies of approved schedule to Architect Owner, separate contractors, testing and inspecting agencies, and other parties identified by Contractor with a need-to-know schedule responsibility.

1. Post copies in Project meeting rooms and temporary field offices.
2. When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in performance of construction activities.

1.8 CONTRACTOR'S CONSTRUCTION SCHEDULE (CPM SCHEDULE)

A. CPM Schedule: Prepare Contractor's construction schedule using a time-scaled CPM network analysis diagram for the Work.

1. Develop network diagram in sufficient time to submit CPM schedule so it can be accepted for use no later than 60 days after date established for commencement of the Work.

    a. Failure to include any work item required for performance of this Contract shall not excuse Contractor from completing all work within applicable completion dates, regardless of Architect's approval of the schedule.

2. Conduct educational workshops to train and inform key Project personnel, including subcontractors' personnel, in proper methods of providing data and using CPM schedule information.
3. Establish procedures for monitoring and updating CPM schedule and for reporting progress. Coordinate procedures with progress meeting and payment request dates.
4. Use "one workday" as the unit of time for individual activities. Indicate nonworking days and holidays incorporated into the schedule in order to coordinate with the Contract Time.

B. CPM Schedule Preparation: Prepare a list of all activities required to complete the Work.

1. Activities: Indicate the estimated time duration, sequence requirements, and relationship of each activity in relation to other activities. Include estimated time frames for the following activities:

    a. Preparation and processing of submittals.
    b. Mobilization and demobilization.
    c. Purchase of materials.
    d. Delivery.
    e. Fabrication.
    f. Utility interruptions.
    g. Installation.
    h. Work by Owner that may affect or be affected by Contractor's activities.
    i. Testing and inspection.
    j. Commissioning.
    k. Punch list and final completion.
    l. Activities occurring following final completion.

2. Critical Path Activities: Identify critical path activities, including those for interim completion dates. Scheduled start and completion dates shall be consistent with Contract milestone dates.
3. Processing: Process data to produce output data on a computer-drawn, time-scaled network. Revise data, reorganize activity sequences, and reproduce as often as necessary to produce the CPM schedule within the limitations of the Contract Time.
4. Format: Mark the critical path. Locate the critical path near center of network; locate paths with most float near the edges.

    a. Subnetworks on separate sheets are permissible for activities clearly off the critical path.

C. Contract Modifications: For each proposed contract modification and concurrent with its submission, prepare a time-impact analysis using a network fragment to demonstrate the effect of the proposed change on the overall project schedule.

D. Initial Issue of Schedule: Prepare initial network diagram from a sorted activity list indicating straight "early start-total float." Identify critical activities. Prepare tabulated reports showing the following:

1. Contractor or subcontractor and the Work or activity.
2. Description of activity.
3. Main events of activity.
4. Immediate preceding and succeeding activities.
5. Early and late start dates.
6. Early and late finish dates.
7. Activity duration in workdays.
8. Total float or slack time.
9. Average size of workforce.
10. Dollar value of activity (coordinated with the schedule of values).

E. Schedule Updating: Concurrent with making revisions to schedule, prepare tabulated reports showing the following:

1. Identification of activities that have changed.
2. Changes in early and late start dates.
3. Changes in early and late finish dates.
4. Changes in activity durations in workdays.
5. Changes in the critical path.
6. Changes in total float or slack time.
7. Changes in the Contract Time.

1.9 REPORTS

A. Site Condition Reports: Immediately on discovery of a difference between site conditions and the Contract Documents, prepare and submit a detailed report. Submit with a Request for Information. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION 013200

SECTION 013300 - SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Submittal schedule requirements.
2. Administrative and procedural requirements for submittals.

B. Related Requirements:

1. Section 012900 "Payment Procedures" for submitting Applications for Payment and the schedule of values.
2. Section 013100 "Project Management and Coordination" for submitting coordination drawings and subcontract list and for requirements for web-based Project software.
3. Section 013200 "Construction Progress Documentation" for submitting schedules and reports, including Contractor's construction schedule.
4. Section 014000 "Quality Requirements" for submitting test and inspection reports, and schedule of tests and inspections.
5. Section 017700 "Closeout Procedures" for submitting closeout submittals and maintenance material submittals.
6. Section 017823 "Operation and Maintenance Data" for submitting operation and maintenance manuals.
7. Section 017839 "Project Record Documents" for submitting record Drawings, record Specifications, and record Product Data.
8. Section 017900 "Demonstration and Training" for submitting video recordings of demonstration of equipment and training of Owner's personnel.
9. Section 018113 “Sustainable Design Requirements” for submitting sustainable design data.

1.3 DEFINITIONS

A. Action Submittals: Written and graphic information and physical samples that require Architect's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

B. Business Day: The term “business day” shall mean working day, excluding weekends and legal holidays.

C. Day: The term "day" as used in this Section shall mean calendar day, including weekends and legal holidays.

D. Informational Submittals: Written and graphic information and physical samples that do not require Architect's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

1.4 SUBMITTAL PERFORMANCE REQUIREMENTS

A. Submittal Schedule: The General Contractor and Trade Contractors shall prepare a submittal schedule, promptly after being awarded the Contract and thereafter as necessary to maintain a current submittal schedule, and shall submit the schedule(s) for the Architect's approval. The submittal schedule shall be Coordinated with the Contractor's construction schedule and shall allow the Architect reasonable time to review submittals. If the Contractor fails to submit a submittal schedule, the Contractor shall not be entitled to any increase in Contract Sum or extension of Contract Time based on the time required for review of submittals.

B. Submittal Review: The General Contractor and Trade Contractors shall review for compliance with the Contract Documents, approve and submit to the Architect Shop Drawings, Product Data, Samples, and similar submittals required by the Contract Documents in accordance with the submittal schedule approved by the Architect, or, in the absence of an approved submittal schedule, with reasonable promptness and in such sequence as to cause no delay in the Work while allowing sufficient time in the Architect's professional judgment to permit adequate review.

C. By submitting Shop Drawings, Product Data, Samples, and similar submittals, the General Contractor and Trade Contractors represent to the Owner and Architect that the General Contractor and Trade Contractors have:

1. Reviewed and approved them,
2. Determined and verified materials, field measurements and field conditions criteria related thereto, or will do so, and
3. Checked and coordinated the information contained within such submittals with the requirements of the Work and of the Contract Documents.

D. Deviations: The Work shall be in accordance with the approved submittals except that the Contractor shall not be relieved of responsibility for deviations from requirements of the Contract Documents by the Architect’s review of Shop Drawings, Product Data, Samples, or other similar submittals unless the Contractor has specifically informed the Architect in writing of such deviation at the time of the submittal and (1) the Architect has given written approval to the specific deviation as a minor change in the Work, or (2) a Change Order has been issued authorizing the deviation. The Contractor shall not be relieved of responsibility for errors or omissions in Shop Drawings, Product Data, Samples or similar submittals by the Architect’s review thereof.

1.5 SUBMITTAL SCHEDULE

A. Submittal Schedule: Submit, as an action submittal, a list of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or revisions to submittals noted by Architect and additional time for handling and reviewing submittals required by those corrections.

1. Coordinate submittal schedule with list of subcontracts, the schedule of values, and Contractor's construction schedule.
2. Initial Submittal: Submit concurrently with startup construction schedule. Include submittals required during the first 60 days of construction. List those submittals required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.
3. Final Submittal: Submit concurrently with the first complete submittal of Contractor's construction schedule.

    a. Submit revised submittal schedule to reflect changes in current status and timing for submittals.

4. Format: Arrange the following information in a tabular format:

    a. Scheduled date for first submittal.
    b. Specification Section number and title.
    c. Submittal Category: Action; informational.
    d. Name of subcontractor.
    e. Description of the Work covered.
    f. Scheduled date for Architect's final release or approval.
    g. Scheduled dates for purchasing.
    h. Scheduled date of fabrication.
    i. Scheduled dates for installation.
    j. Activity or event number.

1.6 SUBMITTAL FORMATS

A. Submittal Information: Include the following information in each submittal:

1. Project name.
2. Date.
3. Name of Architect.
4. Name of Construction Manager.
5. Name of Contractor.
6. Name of firm or entity that prepared submittal.
7. Names of subcontractor, manufacturer, and supplier.
8. Unique submittal number, including revision identifier. Include Specification Section number with sequential alphanumeric identifier; and alphanumeric suffix for resubmittals.
9. Category and type of submittal.
10. Submittal purpose and description.
11. Number and title of Specification Section, with paragraph number and generic name for each of multiple items.
12. Drawing number and detail references, as appropriate.
13. Indication of full or partial submittal.
14. Location(s) where product is to be installed, as appropriate.
15. Other necessary identification.
16. Remarks.
17. Signature of transmitter.

B. Options: Identify options requiring selection by Architect.

C. Deviations and Additional Information: On each submittal, clearly indicate deviations from requirements in the Contract Documents, including minor variations and limitations; include relevant additional information and revisions, other than those requested by Architect on previous submittals. Indicate by highlighting on each submittal or noting on attached separate sheet.

D. Paper Submittals:

1. Provide paper copies of submittals to Owner upon request.
2. Submit no less than four paper copies of the following submittals to the Architect for review:

a. Coordination drawings per Section 013100 “Project Management and Coordination.”
b. Structural steel shop drawings.
c. When requested by Architect/Engineer.

E. PDF Submittals: Unless otherwise indicated, provide submittals in PDF format. Prepare submittals as PDF package, incorporating complete information into each PDF file. Name PDF file with submittal number.

F. Submittals for Web-Based Project Software: Prepare submittals as PDF files, or other format indicated by Project software website.

1.7 SUBMITTAL PROCEDURES

A. Prepare and submit submittals required by individual Specification Sections. Types of submittals are indicated in individual Specification Sections.

1. Email: Prepare submittals as PDF package, and transmit to Architect by sending via email. Include PDF transmittal form. Include information in email subject line as requested by Architect.

a. Architect will return annotated file. Annotate and retain one copy of file as a digital Project Record Document file.

2. Web-Based Project Software: Prepare submittals in PDF form, and upload to web-based Project software website. Enter required data in web-based software site to fully identify submittal.

B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.

1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
4. Coordinate transmittal of submittals for related parts of the Work specified in different Sections so processing will not be delayed because of need to review submittals concurrently for coordination.

    a. Architect reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

C. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.

1. Initial Review: Allow 10 business days for initial review of each submittal. Allow additional time if coordination with subsequent submittals is required. Architect will advise Contractor when a submittal being processed must be delayed for coordination.
2. Intermediate Review: If intermediate submittal is necessary, process it in same manner as initial submittal.
3. Resubmittal Review: Allow 10 business days for review of each resubmittal.
4. Sequential Review: Where sequential review of submittals by Architect's consultants, Owner, or other parties is indicated, allow 15 business days for initial review of each submittal.
5. Concurrent Consultant Review: Where the Contract Documents indicate that submittals may be transmitted simultaneously to Architect and to Architect's consultants, allow 15 business days for review of each submittal. Submittal will be returned to Architect before being returned to Contractor.
6. Expedited Review: Subject to Architect’s agreement to Contractor’s request to expedite a submittal review, Contractor shall allow no less than 5 business days for such expedited review.

D. Resubmittals: Make resubmittals in same form and number of copies as initial submittal.

1. Note date and content of previous submittal.
2. Note date and content of revision in label or title block and clearly indicate extent of revision.
3. Resubmit submittals until they are marked with approval notation from Architect's action stamp.

E. Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, installers, authorities having jurisdiction, and others as necessary for performance of construction activities. Show distribution on transmittal forms.

F. Use for Construction: Retain complete copies of submittals on Project site. Use only final action submittals that are marked with approval notation from Architect's action stamp.

1.8 SUBMITTAL REQUIREMENTS

A. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.

1. If information must be specially prepared for submittal because standard published data are unsuitable for use, submit as Shop Drawings, not as Product Data.
2. Mark each copy of each submittal to show which products and options are applicable.

3. Include the following information, as applicable:

    a. Manufacturer's catalog cuts.
    b. Manufacturer's product specifications.
    c. Standard color charts.
    d. Statement of compliance with specified referenced standards.
    e. Testing by recognized testing agency.
    f. Application of testing agency labels and seals.
    g. Notation of coordination requirements.
    h. Availability and delivery time information.

4. For equipment, include the following in addition to the above, as applicable:

    a. Wiring diagrams that show factory-installed wiring.
    b. Printed performance curves.
    c. Operational range diagrams.
    d. Clearances required to other construction, if not indicated on accompanying Shop Drawings.

5. Submit Product Data before Shop Drawings, and before or concurrent with Samples.

B. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data.

1. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:

    a. Identification of products.
    b. Schedules.
    c. Compliance with specified standards.
    d. Notation of coordination requirements.
    e. Notation of dimensions established by field measurement.
    f. Relationship and attachment to adjoining construction clearly indicated.
    g. Seal and signature of professional engineer if specified.

2. Paper Sheet Size: Except for templates, patterns, and similar full-size Drawings, submit Shop Drawings on sheets at least 8-1/2 by 11 inches, but no larger than 30 by 42 inches.

3. Submit Shop Drawings in the following format unless otherwise indicated:

    a. PDF electronic file, either through web-based project software or email.

4. BIM Incorporation: For Trade Contractors engaged as part of a design/build component of the Work and/or a component of the Work that is part of a Deferred Approval, develop and incorporate Shop Drawings into Building Information Model established for Project.

    a. Prepare Shop Drawings in the following format: Same digital data software program, version, and operating system as Architect's original Drawings.
    b. Refer to Section 013100 "Project Management and Coordination" for requirements for coordination drawings.

C. Samples: Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other materials.

1. Transmit Samples that contain multiple, related components such as accessories together in one submittal package.
2. Identification: Permanently attach label on unexposed side of Samples that includes the following:

    a. Project name and submittal number.
    b. Generic description of Sample.

c. Product name and name of manufacturer.
d. Sample source.
e. Number and title of applicable Specification Section.
f. Specification paragraph number and generic name of each item.

3. Email Transmittal: Provide PDF transmittal. Include digital image file illustrating Sample characteristics, and identification information for record.
4. Web-Based Project Software: Prepare submittals in PDF form, and upload to web-based Project software website. Enter required data in web-based software site to fully identify submittal.
5. Paper Transmittal: Include paper transmittal including complete submittal information indicated.
6. Disposition: Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.

    a. Samples that may be incorporated into the Work are indicated in individual Specification Sections. Such Samples must be in an undamaged condition at time of use.
    b. Samples not incorporated into the Work, or otherwise designated as Owner's property, are the property of Contractor.

7. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available.

    a. Number of Samples: Submit no less than three (3) full set(s) of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Architect will return submittal with options selected.

8. Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.

    a. Number of Samples: Submit no less than three (3) sets of Samples. Architect will retain one Sample sets; remainder will be returned. Mark up and retain one returned Sample set as a project record Sample.

        1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.
        2) If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least three sets of paired units that show approximate limits of variations.

D. Product Schedule: As required in individual Specification Sections, prepare a written summary indicating types of products required for the Work and their intended location. Include the following information in tabular form:

1. Type of product. Include unique identifier for each product indicated in the Contract Documents or assigned by Contractor if none is indicated.
2. Manufacturer and product name, and model number if applicable.
3. Number and name of room or space.
4. Location within room or space.
5. Submit product schedule in the following format:

    a. PDF electronic format.

E. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of architects and owners, and other information specified.

F. Design Data: Prepare and submit written and graphic information indicating compliance with indicated performance and design criteria in individual Specification Sections. Include list of assumptions and summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Number each page of submittal.

G. Certificates:

1. Certificates and Certifications Submittals: Submit a statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity. Provide a notarized signature where indicated.
2. Installer Certificates: Submit written statements on manufacturer's letterhead certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.
3. Manufacturer Certificates: Submit written statements on manufacturer's letterhead certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.
4. Material Certificates: Submit written statements on manufacturer's letterhead certifying that material complies with requirements in the Contract Documents.
5. Product Certificates: Submit written statements on manufacturer's letterhead certifying that product complies with requirements in the Contract Documents.
6. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of Welding Procedure Specification and Procedure Qualification Record on AWS forms. Include names of firms and personnel certified.

H. Test and Research Reports:

1. Compatibility Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.
2. Field Test Reports: Submit written reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.
3. Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.
4. Preconstruction Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.
5. Product Test Reports: Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.
6. Research Reports: Submit written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:

    a. Name of evaluation organization.
    b. Date of evaluation.
    c. Time period when report is in effect.
    d. Product and manufacturers' names.
    e. Description of product.
    f. Test procedures and results.
    g. Limitations of use.

1.9 DELEGATED-DESIGN SERVICES – “DEFERRED APPROVALS”

A. General: Deferred submittals of required building permit application materials: Before issuing a Building Permit, the Building Official may allow deferral of submittal documents relating to a specific portion of the design. The Building Official shall specify a maximum time period for submittal of the deferred documents. The Building Permit for non-deferred portion may be issued and construction may start on the non-deferred portion of the Work, before the deferred submittals are submitted. The deferred submittal items shall not be installed until their design and submittal documents have been approved by the Building Official:

1. Comply with the requirements of all Authorities Having Jurisdiction. See the title sheet of the Drawings for additional information.
2. Submittal documents for deferred approval items shall be transmitted to the Building Official for review only after the Architect (and Architect’s consultant) action stamp(s) indicate “No Exceptions Taken.”

B. Submittal documents for deferred approval items shall be stamped and signed by a design professional licensed in the State of California. Submittal documents which have not been stamped and signed by a licensed design professional will be automatically returned to the Contractor with the Architect’s action stamp indicating “Revise and Resubmit.”

C. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for information to Architect.

D. Delegated-Design Services: In addition to Shop Drawings, Product Data, and other required submittals, submit copies of a statement, signed and sealed by the responsible design professional, for each portion and system specifically assigned to Contractor to be designed or certified by a design professional.

1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.
2. The responsible design professional shall be licensed in the State of California.

E. BIM Incorporation: Incorporate delegated-design drawing and data files into BIM established for Project.

1. Prepare delegated-design drawings in the following format: Same digital data software program, version, and operating system as original Drawings.

1.10 CONTRACTOR'S REVIEW

A. Action Submittals and Informational Submittals: Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Architect.

B. Contractor's Approval: Indicate Contractor's approval for each submittal with a uniform approval stamp indication in web-based Project software. Include name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

1. Architect will not review submittals received from Contractor that do not have Contractor's review and approval.

1.11 ARCHITECT'S REVIEW

A. Action Submittals: Architect will review each submittal, indicate corrections or revisions required, and return it. Architect will stamp each submittal with an action stamp and will mark stamp appropriately to indicate action, as follows:

1. Work covered by the submittal may proceed provided it complies with the Architect and Engineer's notations, corrections, and the Contract Documents. Final acceptance will depend on that compliance. Actions are as follows:

a. No Exceptions Taken.
b. Note Markings / Confirm.

2. Work covered by the submittal may NOT proceed. Revise or prepare a new submittal according to Architect or Engineer's notations and corrections and that complies with the Contract Documents. Actions are as follows:

a. Revise and Resubmit.
b. Incomplete – Resubmit.
c. Rejected.

3. Received for Record.
4. Submittal Not Required – Returned without Review.

B. Informational Submittals: Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.

C. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.

D. Incomplete submittals are unacceptable, will be considered nonresponsive, and will be returned for resubmittal without review.

E. Architect will discard submittals received from sources other than Contractor.

F. The Architect's review of Contractor's submittals will be limited to examination of an initial submittal and one (1) resubmittal. The Owner is entitled to obtain reimbursement from the Contractor for amounts paid to the Architect for evaluation of additional resubmittals.

G. Submittals not required by the Contract Documents will be returned by Architect without action.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 013300

CONTRACTOR SUBMITTAL CHECKLIST

This Contractor Submittal Checklist must be acknowledged and signed by the General Contractor and Subcontractor and submitted with every submittal (located behind the Subcontractor transmittal). Submittals without this Submittal Checklist may be returned to the Contractor for completion and not forwarded for review. Check each box and provide information where requested.

SPEC SECTION	SUBMITTAL TITLE	COMPANY NAME

REVIEW AND PACKAGING:

- ☐ I have read the Contract Documents, including the associated specification section for this submittal.
- ☐ I have included in this submittal a marked up copy of the associated specification section. See following items for instructions.
- ☐ This submittal only includes product(s) from the associated specification section (One submittal per specification section).
- ☐ I have indicated in the attached specification by circling, which items are included in this submittal.
- ☐ I have indicated in the attached specification by notation, which items will be included in a future submittal by noting: "future submittal", "Will submit with Closeout Documents" or the like.
- ☐ I have indicated in the attached specification by crossing out, items which will not be included and notated as such as "by others", "not in project", etc.
- ☐ I have indicated in the attached specification by circling, the manufacturer submitted (if applicable).
- ☐ I have indicated in the attached specification by crossing out, manufactures not submitted.
- ☐ If the submittal is being made for consideration as an "or equal" / "or comparable equal" where permitted, I have complied with the additional requirements in Section 016000 "Product Requirements" and included this information in the submittal.
- ☐ If the submittal is being made as a "substitution for cause" where permitted, I have complied with the additional requirements of Section 012500 "Substitution Procedures" and included this information in the submittal. (Substitutions for convenience will not be considered.)
- ☐ I have added comments (if needed) to clarify expected execution of the work (acknowledge, cross out, or comment as applicable).
- ☐ All deviations, if any, from the Contract Documents are clearly identified in the submittal package.
- ☐ Product data submittal is organized in accordance with the specification section numbering. Associated specification section is referenced in the upper right hand corner of each product data sheet.
- ☐ If product data sheet contains several items, the specific items proposed for use on this project are notated by circling or arrows. (Do not use yellow/color highlighter; submittals must maintain clarity when copied in black and white.)
- ☐ Product literature submitted is clean and legible. Do not submit "copies of copies of copies" that will not maintain clarity when copied.
- ☐ I have reviewed the plans and the associated details specific to this submittal. Submittal and/or Shop Drawings included in this submittal are project specific and reference applicable Contract Document details.
- ☐ I have provided and electronic submittal in pdf format, with all submittal contents packaged in one file. Multiple files are not acceptable.
- ☐ Where required per the Contract Documents, I have provided a complete hard copy submittal, loosely bound and ready for scanning. Notebooks and specialty binds are not required.
- ☐ All samples are labeled or identified by stickers, labels or other means.

COORDINATION:

- ☐ On Contractor transmittal, identify activities (if any) that must take place prior to fabrication or purchase of items submitted (approval of samples, coordination with other trades or products, field measuring, etc.).

OTHER CONCERNS:

- ☐ On Contractor transmittal identify any other concerns or comments needing addressing by CM, Architect, Owner or others.

DEFERRED APPROVALS:

- ☐ Where portions of the Work are identified as being a "Deferred Approval," I have complied with the "Deferred Approval" requirements indicated in the Contract Documents, including, but not limited to, having a qualified California-licensed professional engineer stamp and sign the submittal documents.

The Contractor has reviewed and approved not only the field dimensions (when applicable) but the construction criteria and has also made written notation regarding any information in the submittal/shop drawings that does not conform to the Project Documents. This submittal/shop drawing has been coordinated with all other submittals/shop drawings received today by Contractor and this duty of coordination has not been delegated to sub-tier contractors, material suppliers, the ARCHITECT, or the engineers on this project.

Authorized Signature of Subcontractor and Company Name	Date
General Contractor	Date

SECTION 013516 - ALTERATION PROJECT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes special procedures for alteration work at existing building(s).

1.3 DEFINITIONS

A. Alteration Work: This term includes remodeling, renovation, repair, and maintenance work performed within existing spaces or on existing surfaces as part of the Project.

B. Consolidate: To strengthen loose or deteriorated materials in place.

C. Design Reference Sample: A sample that represents the Architect's prebid selection of work to be matched; it may be existing work or work specially produced for the Project.

D. Dismantle: To remove by disassembling or detaching an item from a surface, using gentle methods and equipment to prevent damage to the item and surfaces; disposing of items unless indicated to be salvaged or reinstalled.

E. Match: To blend with adjacent construction and manifest no apparent difference in material type, species, cut, form, detail, color, grain, texture, or finish; as approved by Architect.

F. Refinish: To remove existing finishes to base material and apply new finish to match original, or as otherwise indicated.

G. Repair: To correct damage and defects, retaining existing materials, features, and finishes. This includes patching, piecing-in, splicing, consolidating, or otherwise reinforcing or upgrading materials.

H. Replace: To remove, duplicate, and reinstall entire item with new material. The original item is the pattern for creating duplicates unless otherwise indicated.

I. Replicate: To reproduce in exact detail, materials, and finish unless otherwise indicated.

J. Reproduce: To fabricate a new item, accurate in detail to the original, and from either the same or a similar material as the original, unless otherwise indicated.

K. Retain: To keep existing items that are not to be removed or dismantled.

L. Strip: To remove existing finish down to base material unless otherwise indicated.

1.4 COORDINATION

A. Alteration Work Subschedule: A construction schedule coordinating the sequencing and scheduling of alteration work for entire Project, including each activity to be performed, and based on Contractor's Construction Schedule. Secure time commitments for performing critical construction activities from separate entities responsible for alteration work.

1. Schedule construction operations in sequence required to obtain best Work results.
2. Coordinate sequence of alteration work activities to accommodate the following:

    a. Owner's partial occupancy of completed Work.
    b. Other known work in progress.
    c. Tests and inspections.

3. Detail sequence of alteration work, with start and end dates.
4. Utility Services: Indicate how long utility services will be interrupted. Coordinate shutoff, capping, and continuation of utility services.
5. Use of elevator and stairs.
6. Equipment Data: List gross loaded weight, axle-load distribution, and wheel-base dimension data for mobile and heavy equipment proposed for use in existing structure. Do not use such equipment without certification from Contractor's professional engineer that the structure can support the imposed loadings without damage.

B. Pedestrian and Vehicular Circulation: Coordinate alteration work with circulation patterns within Project building(s) and site. Some work is near circulation patterns outside of the limits of work and/or restricted areas. Circulation patterns cannot be closed off entirely and in places can be only temporarily redirected around small areas of work. Access to restricted areas may not be obstructed. Plan and execute the Work accordingly.

1.5 PROJECT MEETINGS FOR ALTERATION WORK

A. Preliminary Conference for Alteration Work: Before starting alteration work, conduct conference at Project site.
1. Agenda: Discuss items of significance that could affect progress of alteration work, including review of the following:

    a. Alteration Work Subschedule: Discuss and finalize; verify availability of materials, specialists' personnel, equipment, and facilities needed to make progress and avoid delays.
    b. Fire-prevention plan.
    c. Governing regulations.
    d. Areas where existing construction is to remain and the required protection.
    e. Hauling routes.
    f. Sequence of alteration work operations.
    g. Storage, protection, and accounting for salvaged and specially fabricated items.
    h. Existing conditions, staging, and structural loading limitations of areas where materials are stored.
    i. Qualifications of personnel assigned to alteration work and assigned duties.
    j. Requirements for extent and quality of work, tolerances, and required clearances.
    k. Embedded work such as flashings and lintels, special details, collection of waste, protection of occupants and the public, and condition of other construction that affects the Work or will affect the work.

2. Reporting: Contractor shall record conference results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from conference.

B. Coordination Meetings: Conduct coordination meetings specifically for alteration work at intervals appropriate to the stage of construction. Coordination meetings are in addition to specific meetings held for other purposes, such as progress meetings and preinstallation conferences.

1. Attendees: In addition to representatives of Owner, Construction Manager, Architect, and Contractor, each specialist, supplier, installer, and other entity concerned with progress or involved in planning, coordination, or performance of alteration work activities shall be represented at these meetings. All participants at conference shall be familiar with Project and authorized to conclude matters relating to alteration work.
2. Agenda: Review and correct or approve minutes of previous coordination meeting. Review other items of significance that could affect progress of alteration work. Include topics for discussion as appropriate to status of Project.

    a. Alteration Work Subschedule: Review progress since last coordination meeting. Determine whether each schedule item is on time, ahead of schedule, or behind schedule. Determine how construction behind schedule will be expedited with retention of quality; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities are completed within the Contract Time.
    b. Schedule Updating: Revise Contractor's Alteration Work Subschedule after each coordination meeting where revisions to schedule have been made or recognized. Issue revised schedule concurrently with report of each meeting.
    c. Review present and future needs of each entity present, including review items listed in the "Preliminary Conference for Alteration Work" Paragraph in this article and the following:

        1) Interface requirements of alteration work with other Project Work.
        2) Status of submittals for alteration work.
        3) Access to alteration work locations.
        4) Effectiveness of fire-prevention plan.
        5) Quality and work standards of alteration work.
        6) Change Orders for alteration work.

3. Reporting: Contractor shall record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting.

1.6 INFORMATIONAL SUBMITTALS

A. Alteration Work Subschedule:

1. Submit alteration work subschedule within 30 days of date established for commencement of alteration work.

B. Preconstruction Documentation: Show preexisting conditions of adjoining construction and site improvements that are to remain, including finish surfaces, that might be misconstrued as damage caused by Contractor's alteration work operations.

C. Alteration Work Program: Submit 30 days before work begins.

D. Fire-Prevention Plan: Submit 30 days before work begins.

1.7 QUALITY ASSURANCE

A. Field Supervisor Qualifications: Full-time supervisors with minimum 10 years' experienced with alteration work similar in nature, material, design, and extent to that indicated for this Project. Supervisors shall be on-site when alteration work begins and during its progress. Supervisors shall not be changed during Project except for causes beyond the control of the Contractor.

B. Alteration Work Program: Prepare a written plan for alteration work for whole Project, including each phase or process and protection of surrounding materials during operations. Show compliance with indicated methods and procedures specified in this and other Sections. Coordinate this whole-Project alteration work program with specific requirements of programs required in other alteration work Sections.

1. Dust and Noise Control: Include locations of proposed temporary dust- and noise-control partitions and means of egress from occupied areas coordinated with continuing on-site operations and other known work in progress.
2. Debris Hauling: Include plans clearly marked to show debris hauling routes, turning radii, and locations and details of temporary protective barriers.

C. Fire-Prevention Plan: Prepare a written plan for preventing fires during the Work, including placement of fire extinguishers, fire blankets, rag buckets, and other fire-control devices during each phase or process. Coordinate plan with Owner's fire-protection equipment and requirements. Include fire-watch personnel's training, duties, and authority to enforce fire safety.

D. Safety and Health Standard: Comply with ANSI/ASSE A10.6.

1.8 STORAGE AND HANDLING OF SALVAGED MATERIALS

A. Salvaged Materials:

1. Clean loose dirt and debris from salvaged items unless more extensive cleaning is indicated.
2. Pack or crate items after cleaning; cushion against damage during handling. Label contents of containers.
3. Store items in a secure area until delivery to Owner.
4. Transport items to Owner's storage area designated by Owner.
5. Protect items from damage during transport and storage.

B. Salvaged Materials for Reinstallation:

1. Repair and clean items for reuse as indicated.
2. Pack or crate items after cleaning and repairing; cushion against damage during handling. Label contents of containers.
3. Protect items from damage during transport and storage.
4. Reinstall items in locations indicated. Comply with installation requirements for new materials and equipment unless otherwise indicated. Provide connections, supports, and miscellaneous materials to make items functional for use indicated.

C. Existing Materials to Remain: Protect construction indicated to remain against damage and soiling from construction work. Where permitted by Architect, items may be dismantled and taken to a suitable, protected storage location during construction work and reinstalled in their original locations after alteration and other construction work in the vicinity is complete.

D. Storage: Catalog and store items within a weathertight enclosure where they are protected from moisture, weather, condensation, and freezing temperatures.

1. Identify each item for reinstallation with a nonpermanent mark to document its original location. Indicate original locations on plans, elevations, sections, or photographs by annotating the identifying marks.
2. Secure stored materials to protect from theft.
3. Control humidity so that it does not exceed 85 percent. Maintain temperatures 5 deg F or more above the dew point.

E. Storage Space:

1. Owner will arrange for limited on-site location(s) for free storage of salvaged material.
2. Arrange for off-site locations for storage and protection of salvaged material that cannot be stored and protected on-site.

1.9 FIELD CONDITIONS

A. Survey of Existing Conditions: Record existing conditions that affect the Work by use of measured drawings, preconstruction photographs, and preconstruction videotapes.

B. Discrepancies: Notify Architect of discrepancies between existing conditions and Drawings before proceeding with removal and dismantling work.

C. Owner's Removals: Before beginning alteration work, verify in correspondence with Owner that Owner's items and items indicated to be salvaged have been removed:

D. Size Limitations in Existing Spaces: Materials, products, and equipment used for performing the Work and for transporting debris, materials, and products shall be of sizes that clear surfaces within existing spaces, areas, rooms, and openings, including temporary protection, by 12 inches or more.

PART 2 - PRODUCTS - (Not Used)

PART 3 - EXECUTION

3.1 PROTECTION

A. Protect persons, motor vehicles, surrounding surfaces of building, building site, plants, and surrounding buildings from harm resulting from alteration work.

1. Use only proven protection methods, appropriate to each area and surface being protected.
2. Provide temporary barricades, barriers, and directional signage to exclude the public from areas where alteration work is being performed.
3. Erect temporary barriers to form and maintain fire-egress routes.
4. Erect temporary protective covers over walkways and at points of pedestrian and vehicular entrance and exit that must remain in service during alteration work.
5. Contain dust and debris generated by alteration work, and prevent it from reaching the public or adjacent surfaces.
6. Provide shoring, bracing, and supports as necessary. Do not overload structural elements.
7. Protect floors and other surfaces along hauling routes from damage, wear, and staining.
8. Provide supplemental sound-control treatment to isolate demolition work from other areas of the building.

B. Temporary Protection of Materials to Remain:

1. Protect existing materials with temporary protections and construction. Do not remove existing materials unless otherwise indicated.
2. Do not attach temporary protection to existing surfaces except as indicated as part of the alteration work program.

C. Comply with each product manufacturer's written instructions for protections and precautions. Protect against adverse effects of products and procedures on people and adjacent materials, components, and vegetation.

D. Utility and Communications Services:

1. Notify Owner, Architect, authorities having jurisdiction, and entities owning or controlling wires, conduits, pipes, and other services affected by alteration work before commencing operations.
2. Disconnect and cap pipes and services as required by authorities having jurisdiction, as required for alteration work.
3. Maintain existing services unless otherwise indicated; keep in service, and protect against damage during operations. Provide temporary services during interruptions to existing utilities.

E. Existing Drains: Prior to the start of work in an area, test drainage system to ensure that it is functioning properly. Notify Architect immediately of inadequate drainage or blockage. Do not begin work in an area until the drainage system is functioning properly.

1. Prevent solids such as adhesive or mortar residue or other debris from entering the drainage system. Clean out drains and drain lines that become sluggish or blocked by sand or other materials resulting from alteration work.
2. Protect drains from pollutants. Block drains or filter out sediments, allowing only clean water to pass.

F. Existing Roofing: Prior to the start of work in an area, install roofing protection.

3.2 PROTECTION FROM FIRE

A. General: Follow fire-prevention plan and the following:

1. Comply with NFPA 241 requirements unless otherwise indicated.
2. Remove and keep area free of combustibles, including rubbish, paper, waste, and chemicals, unless necessary for the immediate work.

B. Heat-Generating Equipment and Combustible Materials: Comply with the following procedures while performing work with heat-generating equipment or combustible materials, including welding, torch-cutting, soldering, brazing, removing paint with heat, or other operations where open flames or implements using high heat or combustible solvents and chemicals are anticipated:

1. Obtain Owner's approval for operations involving use of welding or other high-heat equipment. Notify Owner at least 72 hours before each occurrence, indicating location of such work.
2. As far as practicable, restrict heat-generating equipment to shop areas or outside the building.
3. Do not perform work with heat-generating equipment in or near rooms or in areas where flammable liquids or explosive vapors are present or thought to be present. Use a combustible gas indicator test to ensure that the area is safe.
4. Use fireproof baffles to prevent flames, sparks, hot gases, or other high-temperature material from reaching surrounding combustible material.
5. Prevent the spread of sparks and particles of hot metal through open windows, doors, holes, and cracks in floors, walls, ceilings, roofs, and other openings.
6. Fire Watch: Before working with heat-generating equipment or combustible materials, station personnel to serve as a fire watch at each location where such work is performed. Fire-watch personnel shall have the authority to enforce fire safety. Station fire watch according to NFPA 51B, NFPA 241, and as follows:

    a. Train each fire watch in the proper operation of fire-control equipment and alarms.
    b. Prohibit fire-watch personnel from other work that would be a distraction from fire-watch duties.
    c. Cease work with heat-generating equipment whenever fire-watch personnel are not present.
    d. Have fire-watch personnel perform final fire-safety inspection each day beginning no sooner than 30 minutes after conclusion of work in each area to detect hidden or smoldering fires and to ensure that proper fire prevention is maintained.
    e. Maintain fire-watch personnel at each area of Project site until 60 minutes after conclusion of daily work.
    f. If fire alarm system is in an inoperable condition, or if a floor is not being monitored due to construction, whether it is smoke detection or fire suppression, Contractor shall provide a fire watch for the construction area.

C. Fire-Control Devices: Provide and maintain fire extinguishers, fire blankets, and rag buckets for disposal of rags with combustible liquids. Maintain each as suitable for the type of fire risk in each work area. Ensure that nearby personnel and the fire-watch personnel are trained in fire-extinguisher and blanket use.

D. Sprinklers: Where sprinkler protection exists and is functional, maintain it without interruption while operations are being performed. If operations are performed close to sprinklers, shield them temporarily with guards.

1. Remove temporary guards at the end of work shifts, whenever operations are paused, and when nearby work is complete.

3.3 PROTECTION DURING APPLICATION OF CHEMICALS

A. Protect motor vehicles, surrounding surfaces of building, building site, plants, and surrounding buildings from harm or spillage resulting from applications of chemicals and adhesives.

B. Cover adjacent surfaces with protective materials that are proven to resist chemicals selected for Project unless chemicals being used will not damage adjacent surfaces as indicated in alteration work program. Use covering materials and masking agents that are waterproof and UV resistant and that will not stain or leave residue on surfaces to which they are applied. Apply protective materials according to manufacturer's written instructions. Do not apply liquid masking agents or adhesives to painted or porous surfaces. When no longer needed, promptly remove protective materials.

C. Do not apply chemicals during winds of sufficient force to spread them to unprotected surfaces.

D. Neutralize alkaline and acid wastes and legally dispose of off Owner's property.

E. Collect and dispose of runoff from chemical operations by legal means and in a manner that prevents soil contamination, soil erosion, undermining of paving and foundations, damage to landscaping, or water penetration into building interior.

3.4 GENERAL ALTERATION WORK

A. Ensure that supervisory personnel are present when work begins and during its progress.

B. Record existing work before each procedure (preconstruction), and record progress during the work. Use digital preconstruction documentation photographs.

C. Perform surveys of Project site as the Work progresses to detect hazards resulting from alterations.

D. Notify Architect of visible changes in the integrity of material or components whether from environmental causes including biological attack, UV degradation, freezing, or thawing or from structural defects including cracks, movement, or distortion.

1. Do not proceed with the work in question until directed by Architect.

END OF SECTION 013516

SECTION 014000 - QUALITY REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for quality assurance and quality control.

B. Testing and inspecting services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.

1. Specific quality-assurance and -control requirements for individual construction activities are specified in the Sections that specify those activities. Requirements in those Sections may also cover production of standard products.
2. Specified tests, inspections, and related actions do not limit Contractor's other quality-assurance and -control procedures that facilitate compliance with the Contract Document requirements.
3. Requirements for Contractor to provide quality-assurance and -control services required by Architect, Owner, or authorities having jurisdiction are not limited by provisions of this Section.
4. Specific test and inspection requirements are not specified in this Section.

C. Related Requirements:

1. Divisions 2 through 33 Sections for specific test and inspection requirements.

1.3 DEFINITIONS

A. Experienced: When used with an entity or individual, "experienced" unless otherwise further described means having successfully completed a minimum of five previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

B. Field Quality-Control Tests: Tests and inspections that are performed on-site for installation of the Work and for completed Work.

C. Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an employee, Subcontractor, or Sub-subcontractor, to perform a particular construction operation, including installation, erection, application, assembly, and similar operations.

1. Use of trade-specific terminology in referring to a trade or entity does not require that certain construction activities be performed by accredited or unionized individuals, or that requirements specified apply exclusively to specific trade(s).

D. Mockups: Full-size physical assemblies that are constructed on-site either as freestanding temporary built elements or as part of permanent construction. Mockups are constructed to verify selections made under Sample submittals; to demonstrate aesthetic effects and qualities of materials and execution; to review coordination, testing, or operation; to show interface between dissimilar materials; and to demonstrate compliance with specified installation tolerances. Mockups are not Samples. Unless otherwise indicated, approved mockups establish the standard by which the Work will be judged.

1. Laboratory Mockups: Full-size physical assemblies constructed and tested at testing facility to verify performance characteristics.
2. Integrated Exterior Mockups: Mockups of the exterior envelope constructed on-site as freestanding temporary built elements, consisting of multiple products, assemblies, and subassemblies.

E. Preconstruction Testing: Tests and inspections performed specifically for Project before products and materials are incorporated into the Work, to verify performance or compliance with specified criteria.

F. Product Tests: Tests and inspections that are performed by a nationally recognized testing laboratory (NRTL) according to 29 CFR 1910.7, by a testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program (NVLAP), or by a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with specified requirements.

G. Source Quality-Control Tests: Tests and inspections that are performed at the source; for example, plant, mill, factory, or shop.

H. Testing Agency: An entity engaged to perform specific tests, inspections, or both. Testing laboratory shall mean the same as testing agency.

I. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.

J. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the Work and completed construction comply with requirements. Contractor's quality-control services do not include contract administration activities performed by Architect.

1.4 DELEGATED-DESIGN SERVICES (“DEFERRED APPROVALS”)

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.

1.5 CONFLICTING REQUIREMENTS

A. Conflicting Standards and Other Requirements: If compliance with two or more standards or requirements are specified and the standards or requirements establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer conflicting requirements that are different, but apparently equal, to Architect for direction before proceeding.

B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to Architect for a decision before proceeding.

C. Conflicts: All conflicts in the Contract Documents shall be reported to the Architect in writing before proceeding with the Work affected thereby. Notwithstanding the order of precedence provisions set forth in the General Conditions, in the event of conflict between any of the Contract Documents, the provisions placing a more stringent requirement or greater burden on the Contractor or requiring the greater quantity or higher quality material or workmanship shall prevail, unless otherwise directed by the Architect in writing. In no event shall the Contract Documents relieve the Contractor from compliance with applicable laws and codes.

1.6 ACTION SUBMITTALS

A. Shop Drawings: For integrated exterior mockups.

1. Include plans, sections, and elevations, indicating materials and size of mockup construction.
2. Indicate manufacturer and model number of individual components.
3. Provide axonometric drawings for conditions difficult to illustrate in two dimensions.

B. Delegated-Design Services Submittal: In addition to Shop Drawings, Product Data, and other required submittals, submit a statement signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional, indicating that the products and systems are in compliance with performance and design criteria indicated. Include list of codes, loads, and other factors used in performing these services.

1.7 INFORMATIONAL SUBMITTALS

A. Contractor's Quality-Control Plan: For quality-assurance and quality-control activities and responsibilities.

B. Qualification Data: For Contractor's quality-control personnel.

C. Contractor's Statement of Responsibility: When required by authorities having jurisdiction, submit copy of written statement of responsibility sent to authorities having jurisdiction before starting work on the following systems:

1. Seismic-force-resisting system, designated seismic system, or component listed in the designated seismic system quality-assurance plan prepared by Architect.
2. Main wind-force-resisting system or a wind-resisting component listed in the wind-force-resisting system quality-assurance plan prepared by Architect.

D. Testing Agency Qualifications: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.

E. Schedule of Tests and Inspections: Prepare in tabular form and include the following:

1. Specification Section number and title.
2. Entity responsible for performing tests and inspections.
3. Description of test and inspection.
4. Identification of applicable standards.
5. Identification of test and inspection methods.
6. Number of tests and inspections required.
7. Time schedule or time span for tests and inspections.
8. Requirements for obtaining samples.
9. Unique characteristics of each quality-control service.

1.8 CONTRACTOR'S QUALITY-CONTROL PLAN

A. Quality-Control Plan, General: Submit quality-control plan within 10 days of Notice to Proceed, and not less than five days prior to preconstruction conference. Submit in format acceptable to Architect. Identify personnel, procedures, controls, instructions, tests, records, and forms to be used to carry out Contractor's quality-assurance and quality-control responsibilities. Coordinate with Contractor's construction schedule.

B. Quality-Control Personnel Qualifications: Engage qualified full-time personnel trained and experienced in managing and executing quality-assurance and quality-control procedures similar in nature and extent to those required for Project.

1. Project quality-control manager may also serve as Project superintendent.

C. Submittal Procedure: Describe procedures for ensuring compliance with requirements through review and management of submittal process. Indicate qualifications of personnel responsible for submittal review.

D. Testing and Inspection: In quality-control plan, include a comprehensive schedule of Work requiring testing or inspection, including the following:

1. Contractor-performed tests and inspections including subcontractor-performed tests and inspections. Include required tests and inspections and Contractor-elected tests and inspections.
2. Special inspections required by authorities having jurisdiction and indicated on the "Statement of Special Inspections."
3. Owner-performed tests and inspections indicated in the Contract Documents, including tests and inspections indicated to be performed by the Commissioning Authority.

E. Continuous Inspection of Workmanship: Describe process for continuous inspection during construction to identify and correct deficiencies in workmanship in addition to testing and inspection specified. Indicate types of corrective actions to be required to bring work into compliance with standards of workmanship established by Contract requirements and approved mockups.

F. Monitoring and Documentation: Maintain testing and inspection reports including log of approved and rejected results. Include work Architect has indicated as nonconforming or defective. Indicate corrective actions taken to bring nonconforming work into compliance with requirements. Comply with requirements of authorities having jurisdiction.

1.9 REPORTS AND DOCUMENTS

A. Test and Inspection Reports: Prepare and submit certified written reports specified in other Sections. Include the following:

1. Date of issue.
2. Project title and number.
3. Name, address, and telephone number of testing agency.
4. Dates and locations of samples and tests or inspections.
5. Names of individuals making tests and inspections.
6. Description of the Work and test and inspection method.
7. Identification of product and Specification Section.
8. Complete test or inspection data.
9. Test and inspection results and an interpretation of test results.
10. Record of temperature and weather conditions at time of sample taking and testing and inspecting.
11. Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
12. Name and signature of laboratory inspector.
13. Recommendations on retesting and reinspecting.

B. Manufacturer's Technical Representative's Field Reports: Prepare written information documenting manufacturer's technical representative's tests and inspections specified in other Sections. Include the following:

1. Name, address, and telephone number of technical representative making report.
2. Statement on condition of substrates and their acceptability for installation of product.
3. Statement that products at Project site comply with requirements.
4. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
5. Results of operational and other tests and a statement of whether observed performance complies with requirements.
6. Statement whether conditions, products, and installation will affect warranty.
7. Other required items indicated in individual Specification Sections.

C. Factory-Authorized Service Representative's Reports: Prepare written information documenting manufacturer's factory-authorized service representative's tests and inspections specified in other Sections. Include the following:

1. Name, address, and telephone number of factory-authorized service representative making report.
2. Statement that equipment complies with requirements.
3. Results of operational and other tests and a statement of whether observed performance complies with requirements.
4. Statement whether conditions, products, and installation will affect warranty.
5. Other required items indicated in individual Specification Sections.

1.10 QUALITY ASSURANCE

A. General: Qualifications paragraphs in this article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.

B. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units. As applicable, procure products from manufacturers able to meet qualification requirements, warranty requirements, and technical or factory-authorized service representative requirements. See Division 2 through 34 Sections for additional qualification requirements.

C. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units. See Division 2 through 34 Sections for additional qualification requirements.

D. Installer Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance. See Division 2 through 34 Sections for additional qualification requirements.

E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that are similar in material, design, and extent to those indicated for this Project.

F. Specialists: Certain Specification Sections require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.

1. Requirements of authorities having jurisdiction shall supersede requirements for specialists.

G. Testing Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspection indicated, as documented according to ASTM E 329; and with additional qualifications specified in individual Sections; and, where required by authorities having jurisdiction, that is acceptable to authorities

H. Manufacturer's Technical Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to observe and inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

I. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

J. Preconstruction Testing: Where testing agency is indicated to perform preconstruction testing for compliance with specified requirements for performance and test methods, comply with the following:

1. Contractor responsibilities include the following:

a. Provide test specimens representative of proposed products and construction.
b. Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.
c. Provide sizes and configurations of test assemblies, and mockups to adequately demonstrate capability of products to comply with performance requirements.
d. Build site-assembled test assemblies and mockups using installers who will perform same tasks for Project.
e. Build laboratory mockups at testing facility using personnel, products, and methods of construction indicated for the completed Work.
f. When testing is complete, remove test specimens, assemblies, and mockups; do not reuse products on Project.

2. Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to Architect, with copy to Contractor. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.

K. Mockups: Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:

1. Build mockups in location and of size indicated or, if not indicated, as directed by Architect.
2. Notify Architect at least five (5) business days in advance of dates and times when mockups will be constructed.
3. Employ supervisory personnel who will oversee mockup construction. Employ workers that will be employed during the construction at Project.
4. Demonstrate the proposed range of aesthetic effects and workmanship.
5. Obtain Architect's approval of mockups before starting work, fabrication, or construction.

    a. Allow five (5) business days for initial review and each re-review of each mockup.

6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
7. Demolish and remove mockups when directed unless otherwise indicated.

L. Integrated Exterior Mockups: Construct integrated exterior mockup as indicated on Drawings, or if not indicated, in accordance with approved Shop Drawings. Coordinate installation of exterior envelope materials and products for which mockups are required in individual Specification Sections, along with supporting materials. Comply with requirements in "Mockups" Paragraph.

M. Laboratory Mockups: Comply with requirements of preconstruction testing and those specified in individual Specification Sections.

N. First Installation of Repetitive Building Materials: For repetitive building materials that do not require formal mockups, notify Architect no less than seven (7) calendar days in advance of the first installation of such building material.

1.11 QUALITY CONTROL

A. Owner Responsibilities: Where quality-control services are indicated as Owner's responsibility, Owner will engage a qualified testing agency to perform these services.

1. Owner will furnish Contractor with names, addresses, and telephone numbers of testing agencies engaged and a description of types of testing and inspecting they are engaged to perform.
2. Payment for these services will be made from testing and inspecting allowances, as authorized by Change Orders.
3. Costs for retesting and reinspecting construction that replaces or is necessitated by work that failed to comply with the Contract Documents will be charged to Contractor, and the Contract Sum will be adjusted by Change Order.

B. Contractor Responsibilities: Tests and inspections not explicitly assigned to Owner are Contractor's responsibility. Perform additional quality-control activities required to verify that the Work complies with requirements, whether specified or not.

1. Unless otherwise indicated, provide quality-control services specified and those required by authorities having jurisdiction. Perform quality-control services required of Contractor by authorities having jurisdiction, whether specified or not.
2. Where services are indicated as Contractor's responsibility, engage a qualified testing agency to perform these quality-control services.

    a. Contractor shall not employ same entity engaged by Owner, unless agreed to in writing by Owner.

3. Notify testing agencies at least 24 hours in advance of time when Work that requires testing or inspecting will be performed.
4. Where quality-control services are indicated as Contractor's responsibility, submit a certified written report, in duplicate, of each quality-control service.
5. Testing and inspecting requested by Contractor and not required by the Contract Documents are Contractor's responsibility.
6. Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.

C. Retesting/Reinspecting: Regardless of whether original tests or inspections were Contractor's responsibility, provide quality-control services, including retesting and reinspecting, for construction that replaced Work that failed to comply with the Contract Documents.

D. Testing Agency Responsibilities: Cooperate with Architect and Contractor in performance of duties. Provide qualified personnel to perform required tests and inspections.

1. Notify Architect and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
2. Determine the location from which test samples will be taken and in which in-situ tests are conducted.
3. Conduct and interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from requirements.
4. Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Contractor.
5. Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.
6. Do not perform any duties of Contractor.

E. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Section 013300 "Submittal Procedures."

F. Manufacturer's Technical Services: Where indicated, engage a manufacturer's technical representative to observe and inspect the Work. Manufacturer's technical representative's services include participation in preinstallation conferences, examination of substrates and conditions, verification of materials, observation of Installer activities, inspection of completed portions of the Work, and submittal of written reports.

G. Associated Services: Cooperate with agencies performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:

1. Access to the Work.
2. Incidental labor and facilities necessary to facilitate tests and inspections.
3. Adequate quantities of representative samples of materials that require testing and inspecting. Assist agency in obtaining samples.
4. Facilities for storage and field curing of test samples.
5. Delivery of samples to testing agencies.
6. Preliminary design mix proposed for use for material mixes that require control by testing agency.
7. Security and protection for samples and for testing and inspecting equipment at Project site.

H. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and -control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.

1. Schedule times for tests, inspections, obtaining samples, and similar activities.

I. Schedule of Tests and Inspections: Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents as a component of Contractor's quality-control plan. Coordinate and submit concurrently with Contractor's construction schedule. Update as the Work progresses.

1. Distribution: Distribute schedule to Owner, Architect, testing agencies, and each party involved in performance of portions of the Work where tests and inspections are required.

1.12 SPECIAL TESTS AND INSPECTIONS

A. Special Tests and Inspections: Owner will engage a qualified testing agency to conduct special tests and inspections required by authorities having jurisdiction as the responsibility of Owner, as indicated in Statement of Special Inspections indicated on the Drawings, and as follows:

1. Verifying that manufacturer maintains detailed fabrication and quality-control procedures and reviews the completeness and adequacy of those procedures to perform the Work.
2. Notifying Architect and Contractor promptly of irregularities and deficiencies observed in the Work during performance of its services.
3. Submitting a certified written report of each test, inspection, and similar quality-control service to Architect with copy to Contractor and to authorities having jurisdiction.
4. Submitting a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.
5. Interpreting tests and inspections and stating in each report whether tested and inspected work complies with or deviates from the Contract Documents.
6. Retesting and reinspecting corrected work.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 TEST AND INSPECTION LOG

A. Test and Inspection Log: Prepare a record of tests and inspections. Include the following:

1. Date test or inspection was conducted.
2. Description of the Work tested or inspected.
3. Date test or inspection results were transmitted to Architect.
4. Identification of testing agency or special inspector conducting test or inspection.

B. Maintain log at Project site. Post changes and revisions as they occur. Provide access to test and inspection log for Architect's reference during normal working hours.

3.2 REPAIR AND PROTECTION

A. General: On completion of testing, inspecting, sample taking, and similar services, repair damaged construction and restore substrates and finishes.

1. Provide materials and comply with installation requirements specified in other Specification Sections or matching existing substrates and finishes. Restore patched areas and extend restoration into adjoining areas with durable seams that are as invisible as possible. Comply with the Contract Document requirements for cutting and patching in Section 017300 "Execution."

B. Protect construction exposed by or for quality-control service activities.

C. Repair and protection are Contractor's responsibility, regardless of the assignment of responsibility for quality-control services.

3.3 SCHEDULE OF TESTING AND INSPECTIONS

A. A. In conjunction with the “Summary of Special Inspection” and “Special Inspection Program” indicated on the drawings and other special inspections required by authorities having jurisdiction, coordinate with testing and inspection for the following:

Number	Description	Testing by:
1	Inspection of Fabricators: Where fabrication of structural load-bearing members and assemblies is being performed on the premises of a fabricator’s shop, special inspection of the fabricated items shall be required by CBC Section 1704.2.5	By Owner-retained testing agency
2	Steel Construction: Per CBC Section 1705.2, CBC Table 1705.2.3, and as indicated on the Drawings.	By Owner-retained testing agency
3	Concrete and Shotcrete Construction: Per CBC Section 1705.3, CBC Table 1705.3, and as indicated on the Drawings.	By Owner-retained testing agency
4	Masonry Construction: Per CBC Section 1705.4 and as indicated on the Drawings.	By Owner-retained testing agency
5	Wood Construction Per CBC Section 1705.5 and as indicated on the Drawings.	By Owner-retained testing agency
6	Soils: Per CBC Section 1705.6 and Table 1705.6 and as indicated on the Drawings.	By Owner-retained testing agency
7	Cast-in-Place Deep Foundations: Per CBC Section 1705.8 and Table 1705.8 and as indicated on the Drawings.	By Owner-retained testing agency
8	Sprayed Fire-Resistant Materials: Per CBC Section 1704.14.	By Owner-retained testing agency
9	Mastic and Intumescent Fire-Resistant Coatings: Per CBC Section1704.15	By Owner-retained testing agency
10	Exterior Insulation and Finish Systems (EIFS) Per CBC 1705.16 and as required by manufacturer’s ICC evaluation report.)	Not Applicable
11	Seismic Resistance: Per CBC 1705.12, the statement of special inspections shall include seismic requirements for the following cases and as indicated: a. The seismic-force-resisting systems in structures in accordance with CBC Sections 1705.12.1 through 1705.12.3 as applicable. b. Structural steel per CBC Section 1705.12.1 c. Structural wood per CBC Section 1705.12.2. d. Cold-formed steel framing per CBC Section 1705.12.3 e. Designated seismic systems per CBC Section 1705.12.4 f. Storage racks per CBC 1705.12.7. g. Architectural components: Per CBC 1705.12.5. See item 12 below. h. Mechanical and electrical components: Per CBC 1705.12.6. See item 13 below.	 By Owner-retained testing agency By Owner-retained testing agency By Owner-retained testing agency By Owner-retained testing agency By Owner-retained testing agency By Owner-retained testing agency By Owner-retained testing agency See Below See Below

12	Architectural Components: Periodic special inspection is required during the erection and fastening of: a. Exterior cladding (> 30 feet above grade) b. Interior and exterior nonbearing walls (>15 psf) c. Interior and exterior veneer (> 5psf) d. Acoustic ceiling suspension system, as required by manufacturer's ICC evaluation report e. Post-installed anchors (per CBC 1705.3 and/or applicable ICC evaluation reports. f. Exterior insulation and finish systems (per CBC 1408.6) g. Below-grade waterproofing (full-time inspection)	 By Owner-retained testing agency By Owner-retained testing agency By Owner-retained testing agency By Owner-retained testing agency By Owner-retained testing agency Not Applicable By Owner-retained testing agency
13	Mechanical and Electrical Components: Periodic special inspection of plumbing, mechanical, and electrical components shall be required for the following: a. Anchorage of electrical equipment for emergency and standby power systems in structures assigned to Seismic Design Category C, D, E, or F. b. Anchorage of other electrical equipment in structures assigned to Seismic Design Category E or F. c. Installation and anchorage of piping systems designed to carry hazardous materials and their associated mechanical units in structures assigned to Seismic Design Category C, D, E, or F. d. Installation and anchorage of ductwork designed to carry hazardous materials in structures assigned to Seismic Design Category C, D, E, or F. e. Installation and anchorage of vibration isolation systems in structures designed to Seismic Design Category C, D, E, or F where the approved construction documents require a nominal clearance of 1/4 inch or less between the equipment support frame and restraint.	 By Owner-retained testing agency By Owner-retained testing agency By Owner-retained testing agency By Owner-retained testing agency

END OF SECTION 014000

SECTION 014200 - REFERENCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 DEFINITIONS

A. General: Basic Contract definitions are included in the Conditions of the Contract.

B. "Directed": A command or instruction by Architect. Other terms including "requested," "authorized," "selected," "required," and "permitted" have the same meaning as "directed."

C. "Indicated": Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms including "shown," "noted," "scheduled," and "specified" have the same meaning as "indicated."

D. "Regulations": Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules, conventions, and agreements within the construction industry that control performance of the Work.

E. "Reviewed": When used to convey Architect's action on Contractor's submittals, applications, and requests, "reviewed" is limited to Architect's duties and responsibilities as stated in the Conditions of the Contract.

F. "Furnish": Supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, and similar operations.

G. "Install": Unload, temporarily store, unpack, assemble, erect, place, anchor, apply, work to dimension, finish, cure, protect, clean, and similar operations at Project site.

H. "Provide": Furnish and install, complete and ready for the intended use.

I. "Project Site": Space available for performing construction activities. The extent of Project site is shown on Drawings and may or may not be identical with the description of the land on which Project is to be built.

1.3 INDUSTRY STANDARDS

A. Applicability of Standards: Unless the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.

B. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.

C. Copies of Standards: Each entity engaged in construction on Project should be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.

1. Where copies of standards are needed to perform a required construction activity, obtain copies directly from publication source.

1.4 ABBREVIATIONS AND ACRONYMS

A. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities indicated in Gale's "Encyclopedia of Associations: National Organizations of the U.S." or in Columbia Books' "National Trade & Professional Associations of the United States."

B. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities in the following list. This information is subject to change and is believed to be accurate as of the date of the Contract Documents.

1. AABC - Associated Air Balance Council; www.aabc.com.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 014200

SECTION 015000 - TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes requirements for temporary utilities, support facilities, and security and protection facilities.

B. Related Requirements:

1. Section 011000 "Summary" for work restrictions and limitations on utility interruptions.
2. Section 321216 "Asphalt Paving" for construction and maintenance of asphalt pavement for temporary roads and paved areas.
3. Section 321313 "Concrete Paving" for construction and maintenance of cement concrete pavement for temporary roads and paved areas.

1.3 USE CHARGES

A. General: Installation and removal of and use charges for temporary facilities shall be included in the Contract Sum unless otherwise indicated. Allow other entities to use temporary services and facilities without cost, including, but not limited to, Owner, Owner's Agents, Owner's Consultants, Architect, Architect's Consultants, occupants of Project, testing agencies, and authorities having jurisdiction.

B. Water and Sewer Service from Existing System: Water from Owner's existing water system is available for use without metering and without payment of use charges. Provide connections and extensions of services as required for construction operations.

C. Electric Power Service from Existing System: Electric power from Owner's existing system is available for use without metering and without payment of use charges. Provide connections and extensions of services as required for construction operations.

1.4 INFORMATIONAL SUBMITTALS

A. Site Utilization Plan: Show temporary facilities, temporary utility lines and connections, staging areas, construction site entrances, vehicle circulation, and parking areas for construction personnel.

B. Erosion- and Sedimentation-Control Plan: Show compliance with requirements of environmental evaluation and/or authorities having jurisdiction, whichever is more stringent. Also comply with erosion and sediment control requirements defined on the civil engineering drawings.

C. Fire-Safety Program: Show compliance with requirements of NFPA 241 and authorities having jurisdiction. Indicate Contractor personnel responsible for management of fire-prevention program.

D. Moisture- and Mold-Protection Plan: Describe procedures and controls for protecting materials and construction from water absorption and damage and mold.

E. Dust- and HVAC-Control Plan: Submit coordination drawing and narrative that indicates the dust- and HVAC-control measures proposed for use, proposed locations, and proposed time frame for their operation. Identify further options if proposed measures are later determined to be inadequate. Include the following:

1. Locations of dust-control partitions at each phase of work.
2. HVAC system isolation schematic drawing.
3. Location of proposed air-filtration system discharge.
4. Waste handling procedures.
5. Other dust-control measures.

1.5 QUALITY ASSURANCE

A. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.

B. Moisture-Protection: Protect materials and construction from water absorption and damage. Protect during delivery, handling, and storage. Discard water-damaged materials, mitigate water intrusion into completed Work, and replace water damaged Work.

C. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.

D. Accessible Temporary Egress: Comply with applicable provisions in the 2010 ADA Standards for Accessible Design and the accessibility requirements of the 2016 California Building Code.

E. Construction Support Facilities: Comply with applicable provisions in the 2016 California Building Code, including, but not limited to, Section 11B-201.4.

1.6 PROJECT CONDITIONS

A. Temporary Use of Permanent Facilities: Engage Installer of each permanent service to assume responsibility for operation, maintenance, and protection of each permanent service during its use as a construction facility before Owner's acceptance, regardless of previously assigned responsibilities.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Pavement: Comply with applicable Division 32 Section(s).

B. Chain-Link Fencing: Minimum 2-inch, 0.148-inch-thick, galvanized-steel, chain-link fabric fencing; minimum 6 feet high with galvanized-steel pipe posts; minimum 2-3/8-inch-OD line posts and 2-7/8-inch-OD corner and pull posts, with 1-5/8-inch-OD top rails.

C. Portable Chain-Link Fencing: Minimum 2-inch, 0.148-inch-thick, galvanized-steel, chain-link fabric fencing; minimum 6 feet high with galvanized-steel pipe posts; minimum 2-3/8-inch-OD line posts and 2-7/8-inch-OD corner and pull posts, with 1-5/8-inch-OD top and bottom rails. Provide concrete or galvanized-steel bases for supporting posts.

D. Polyethylene Sheet: Reinforced, fire-resistive sheet, 10-mil minimum thickness, with flame-spread rating of 15 or less per ASTM E 84 and passing NFPA 701 Test Method 2.

E. Dust-Control Adhesive-Surface Walk-off Mats: Provide mats minimum 36 by 60 inches.

F. Insulation: Unfaced mineral-fiber blanket, manufactured from glass, slag wool, or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.

2.2 TEMPORARY FACILITIES

A. Field Offices, General: Prefabricated or mobile units with serviceable finishes, temperature controls, and foundations adequate for normal loading.

B. Common-Use Field Office: Of sufficient size to accommodate needs of Owner, Architect, Construction Manager, and construction personnel office activities and to accommodate Project meetings specified in other Division 01 Sections. Keep office clean and orderly. Furnish and equip offices as follows:

1. Furniture required for Project-site documents including file cabinets, plan tables, plan racks, and bookcases.
2. Conference room of sufficient size to accommodate meetings of no less than 12 individuals. Provide electrical power service and 120-V ac duplex receptacles, with no fewer than one receptacle on each wall. Furnish room with conference table, chairs, and 4-foot-square tack and marker boards.
3. Drinking water and private toilet.
4. Heating and cooling equipment necessary to maintain a uniform indoor temperature of 68 to 72 deg F.
5. Lighting fixtures capable of maintaining average illumination of 20 fc at desk height.

2.3 EQUIPMENT

A. Fire Extinguishers: Portable, UL rated; with class and extinguishing agent as required by locations and classes of fire exposures.

B. HVAC Equipment: Unless Owner authorizes use of permanent HVAC system, provide vented, self-contained, liquid-propane-gas or fuel-oil heaters with individual space thermostatic control.

1. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
2. Heating Units: Listed and labeled for type of fuel being consumed, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
3. Permanent HVAC System: If Owner authorizes use of permanent HVAC system for temporary use during construction, provide filter with MERV of 8 at each return-air grille in system and remove at end of construction and clean HVAC systems as required in Section 017700 “Closeout Procedures.”

C. Air-Filtration Units: Primary and secondary HEPA-filter-equipped portable units with four-stage filtration. Provide single switch for emergency shutoff. Configure to run continuously.

PART 3 - EXECUTION

3.1 TEMPORARY FACILITIES, GENERAL

A. Conservation: Coordinate construction and use of temporary facilities with consideration given to conservation of energy, water, and materials. Coordinate use of temporary utilities to minimize waste.

1. Salvage materials and equipment involved in performance of, but not actually incorporated into, the Work. See other Sections for disposition of salvaged materials that are designated as Owner's property.

3.2 INSTALLATION, GENERAL

A. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required by progress of the Work.

1. Locate facilities to limit site disturbance as specified in Section 011000 "Summary."

B. Provide each facility ready for use when needed to avoid delay. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

3.3 TEMPORARY UTILITY INSTALLATION

A. General: Install temporary service.

1. Arrange with utility company for time when service can be interrupted, if necessary, to make connections for temporary services.

B. Sewers and Drainage: Provide temporary utilities to remove effluent lawfully.

1. Connect temporary sewers to municipal system as directed by authorities having jurisdiction.

C. Water Service: Install water service and distribution piping in sizes and pressures adequate for construction.

D. Sanitary Facilities: Provide temporary toilets, wash facilities, and drinking water for use of construction personnel. Comply with requirements of authorities having jurisdiction for type, number, location, operation, and maintenance of fixtures and facilities.

E. Temporary Heating and Cooling: Provide temporary heating and cooling required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of low temperatures or high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed.

1. Provide temporary dehumidification systems when required to reduce ambient and substrate moisture levels to level required to allow installation or application of finishes and their proper curing or drying.

F. Isolation of Work Areas in Occupied Facilities: Prevent dust, fumes, and odors from entering occupied areas.

1. Prior to commencing work, isolate the HVAC system in area where work is to be performed.

a. Disconnect supply and return ductwork in work area from HVAC systems servicing occupied areas.
b. Maintain negative air pressure within work area using HEPA-equipped air-filtration units, starting with commencement of temporary partition construction, and continuing until removal of temporary partitions is complete.

2. Maintain dust partitions during the Work. Use vacuum collection attachments on dust-producing equipment. Isolate limited work within occupied areas using portable dust-containment devices.
3. Perform daily construction cleanup and final cleanup using approved, HEPA-filter-equipped vacuum equipment.

G. Electric Power Service: Provide electric power service and distribution system of sufficient size, capacity, and power characteristics required for construction operations.

1. Install electric power service overhead unless otherwise indicated.
2. Connect temporary service to Owner's existing power source, as directed by Owner.

H. Lighting: Provide temporary lighting with local switching that provides adequate illumination for construction operations, observations, inspections, and traffic conditions.

1. Install and operate temporary lighting that fulfills security and protection requirements without operating entire system.

I. Telephone and Internet Service: Provide temporary telephone and Internet service in common-use facilities for use by all construction personnel. Install a minimum of one telephone line and one high-speed Internet service connection for each field office.

1. Provide field supervision with cellular telephone for use when away from field office.

3.4 SUPPORT FACILITIES INSTALLATION

A. General: Comply with the following:

1. Provide construction for temporary offices, shops, and sheds located within construction area or within 30 feet of building lines that is noncombustible according to ASTM E 136. Comply with NFPA 241.
2. Maintain support facilities until time of Substantial Completion. Personnel remaining after Substantial Completion will be permitted to use permanent facilities, under conditions acceptable to Owner.

B. Temporary Roads and Paved Areas: Construct and maintain temporary roads and paved areas adequate for construction operations. Locate temporary roads and paved areas within construction limits indicated on Drawings.

1. Provide dust-control treatment that is nonpolluting and nontracking. Reapply treatment as required to minimize dust.

C. Temporary Use of Permanent Roads and Paved Areas: Locate temporary roads and paved areas in same location as permanent roads and paved areas. Construct and maintain temporary roads and paved areas adequate for construction operations. Extend temporary roads and paved areas, within construction limits indicated, as necessary for construction operations.

1. Coordinate elevations of temporary roads and paved areas with permanent roads and paved areas.
2. Prepare subgrade and install subbase and base for temporary roads and paved areas according to Section 312000 "Earth Moving."
3. Recondition base after temporary use, including removing contaminated material, regrading, proofrolling, compacting, and testing.
4. Delay installation of final course of permanent hot-mix asphalt pavement until immediately before Substantial Completion. Repair hot-mix asphalt base-course pavement before installation of final course according to Section 321216 "Asphalt Paving."

D. Traffic Controls: Comply with requirements of authorities having jurisdiction.

1. Protect existing site improvements to remain including curbs, pavement, and utilities.
2. Maintain access for fire-fighting equipment and access to fire hydrants.

E. Parking Areas for Construction Personnel: Subject to Owner/Contractor agreement.

F. Dewatering Facilities and Drains: Comply with requirements of authorities having jurisdiction. Maintain Project site, excavations, and construction free of water.

1. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining properties or endanger permanent Work or temporary facilities.
2. Remove snow and ice as required to minimize accumulations.

G. Project Signs: Provide Project signs as directed by Owner. Unauthorized signs are not permitted.

1. Identification Signs: Provide Project identification signs as directed by Owner.
2. Temporary Signs: Provide other signs as indicated and as required to inform public and individuals seeking entrance to Project.

    a. Provide temporary, directional signs for construction personnel and visitors.

3. Maintain and touchup signs so they are legible at all times.

H. Waste Disposal Facilities: Provide waste-collection containers in sizes adequate to handle waste from construction operations. Comply with requirements of authorities having jurisdiction. Comply with progress cleaning requirements in Section 017300 "Execution." Comply with requirements specified in Section 017419 "Construction Waste Management and Disposal."

I. Lifts and Hoists: Provide facilities necessary for hoisting materials and personnel.

1. Truck cranes and similar devices used for hoisting materials are considered "tools and equipment" and not temporary facilities.

J. Temporary Elevator Use: Use of existing elevators is not permitted for construction operations. Refer to Division 14 Section(s) for temporary use of new elevators.

K. Temporary Stairs: Until permanent stairs are available, provide temporary stairs where ladders are not adequate.

L. Temporary Use of Permanent Stairs: Use of new stairs for construction traffic will be permitted, provided stairs are protected and finishes restored to new condition at time of Substantial Completion.

3.5 SECURITY AND PROTECTION FACILITIES INSTALLATION

A. Protection of Existing Facilities: Protect existing vegetation, equipment, structures, utilities, and other improvements at Project site and on adjacent properties, except those indicated to be removed or altered. Repair damage to existing facilities.

1. Where access to adjacent properties is required in order to affect protection of existing facilities, obtain written permission from adjacent property owner to access property for that purpose.

B. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction as required to comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects.

1. Comply with work restrictions specified in Section 011000 "Summary."

C. Temporary Erosion and Sedimentation Control: Comply with authorities having jurisdiction, other Section(s), and as indicated on the Drawings, whichever is more stringent.

D. Stormwater Control: Comply with requirements of authorities having jurisdiction. Provide barriers in and around excavations and subgrade construction to prevent flooding by runoff of stormwater from heavy rains.

E. Pest Control: Engage pest-control service to recommend practices to minimize attraction and harboring of rodents, roaches, and other pests and to perform extermination and control procedures at regular intervals so Project will be free of pests and their residues at Substantial Completion. Perform control operations lawfully, using environmentally safe materials.

F. Site Enclosure Fence: Before construction operations begin, furnish and install site enclosure fence in a manner that will prevent people and animals from easily entering site except by entrance gates.

1. Extent of Fence: As required to enclose entire Project site or portion determined sufficient to accommodate construction operations.
2. Maintain security by limiting number of keys and restricting distribution to authorized personnel. Furnish one set of keys to Owner.

G. Security Enclosure and Lockup: Install temporary enclosure around partially completed areas of construction. Provide lockable entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security. Lock entrances at end of each work day.

H. Barricades, Warning Signs, and Lights: Comply with requirements of authorities having jurisdiction for erecting structurally adequate barricades, including warning signs and lighting.

I. Temporary Egress: Maintain temporary egress from existing occupied facilities as indicated and as required by authorities having jurisdiction.

J. Covered Walkway: Where required by authorities having jurisdiction, erect protective, covered walkway for passage of individuals through or adjacent to Project site. Coordinate with entrance gates, other facilities, and obstructions.

1. Construct covered walkways using scaffold or shoring framing.
2. Provide overhead decking, protective enclosure walls, handrails, barricades, warning signs, exit signs, lights, safe and well-drained walkways, and similar provisions for protection and safe passage.
3. Paint and maintain appearance of walkway for duration of the Work.

K. Temporary Enclosures: Provide temporary enclosures for protection of construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weathertight enclosure for building exterior.

1. Where heating or cooling is needed and permanent enclosure is incomplete, insulate temporary enclosures.

L. Temporary Partitions: Provide floor-to-ceiling dustproof partitions to limit dust and dirt migration and to separate finished and unfinished areas.

1. Construct dustproof partitions with gypsum wallboard with joints taped on occupied side, and fire-retardant-treated plywood on construction operations side.
2. Construct dustproof partitions with two layers of 6-mil polyethylene sheet on each side. Cover floor with two layers of 6-mil polyethylene sheet, extending sheets 18 inches up the sidewalls. Overlap and tape full length of joints. Cover floor with fire-retardant-treated plywood.

    a. Construct vestibule and airlock at each entrance through temporary partition with not less than 48 inches between doors. Maintain water-dampened foot mats in vestibule.

3. Where fire-resistance-rated temporary partitions are indicated or are required by authorities having jurisdiction, construct partitions according to the rated assemblies.
4. Insulate partitions to control noise transmission to occupied areas.
5. Seal joints and perimeter. Equip partitions with gasketed dustproof doors and security locks where openings are required.
6. Protect air-handling equipment.
7. Provide walk-off mats at each entrance through temporary partition.

M. Temporary Fire Protection: Install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241; manage fire-prevention program.

1. Prohibit smoking in construction areas.
2. Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition according to requirements of authorities having jurisdiction.
3. Develop and supervise an overall fire-prevention and -protection program for personnel at Project site. Review needs with local fire department and establish procedures to be followed. Instruct personnel in methods and procedures. Post warnings and information.
4. Provide temporary standpipes and hoses for fire protection. Hang hoses with a warning sign stating that hoses are for fire-protection purposes only and are not to be removed. Match hose size with outlet size and equip with suitable nozzles.

3.6 MOISTURE AND MOLD CONTROL

A. Contractor's Moisture-Protection Plan: Describe delivery, handling, storage, installation, and protection provisions for materials subject to water absorption or water damage.

1. Indicate procedures for discarding water-damaged materials, protocols for mitigating water intrusion into completed Work, and replacing water-damaged Work.
2. Indicate sequencing of work that requires water, such as sprayed fire-resistive materials, plastering, and gypsum board, and describe plans for dealing with water from these operations. Show procedures for verifying that wet construction has dried sufficiently to permit installation of finish materials.
3. Indicate methods to be used to avoid trapping water in finished work.

B. Exposed Construction Phase: Before installation of weather barriers, when materials are subject to wetting and exposure and to airborne mold spores, protect as follows:

1. Protect porous materials from water damage.
2. Protect stored and installed material from flowing or standing water.
3. Keep porous and organic materials from coming into prolonged contact with concrete.
4. Remove standing water from decks.
5. Keep deck openings covered or dammed.

C. Partially Enclosed Construction Phase: After installation of weather barriers but before full enclosure and conditioning of building, when installed materials are still subject to infiltration of moisture and ambient mold spores, protect as follows:

1. Do not load or install drywall or other porous materials or components, or items with high organic content, into partially enclosed building.
2. Keep interior spaces reasonably clean and protected from water damage.
3. Periodically collect and remove waste containing cellulose or other organic matter.
4. Discard or replace water-damaged material.
5. Do not install material that is wet.
6. Discard, replace, or clean stored or installed material that begins to grow mold.
7. Perform work in a sequence that allows any wet materials adequate time to dry before enclosing the material in drywall or other interior finishes.

D. Controlled Construction Phase of Construction: After completing and sealing of the building enclosure but prior to the full operation of permanent HVAC systems, maintain as follows:

1. Control moisture and humidity inside building by maintaining effective dry-in conditions.
2. Use permanent HVAC system to control humidity.
3. Comply with manufacturer's written instructions for temperature, relative humidity, and exposure to water limits.

    a. Hygroscopic materials that may support mold growth, including wood and gypsum-based products, that become wet during the course of construction and remain wet for 48 hours are considered defective.
    b. Measure moisture content of materials that have been exposed to moisture during construction operations or after installation. Record readings beginning at time of exposure and continuing daily for 48 hours. Identify materials containing moisture levels higher than allowed. Report findings in writing to Architect.
    c. Remove materials that cannot be completely restored to their manufactured moisture level within 48 hours.

3.7 OPERATION, TERMINATION, AND REMOVAL

A. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.

B. Maintenance: Maintain facilities in good operating condition until removal.

1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.

C. Temporary Facility Changeover: Do not change over from using temporary security and protection facilities to permanent facilities until Substantial Completion.

D. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.

1. Materials and facilities that constitute temporary facilities are property of Contractor. Owner reserves right to take possession of Project identification signs.
2. Remove temporary roads and paved areas not intended for or acceptable for integration into permanent construction. Where area is intended for landscape development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil. Remove materials contaminated with road oil, asphalt and other petrochemical compounds, and other substances that might impair growth of plant materials or lawns. Repair or replace street paving, curbs, and sidewalks at temporary entrances, as required by authorities having jurisdiction.
3. At Substantial Completion, repair, renovate, and clean permanent facilities used during construction period. Comply with final cleaning requirements specified in Section 017700 "Closeout Procedures."

END OF SECTION 015000

SECTION 016000 - PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for the following:

1. Selection of products for use in Project.
2. Product delivery, storage, and handling.
3. Manufacturer’s standard warranties on products.
4. Special warranties.
5. Comparable products, being submitted for consideration as one of the following:

a. “Or Equal”
b. “Or Comparable Equal”

c. Complete "Request for Comparable Product" at end of this Section. Include documentation to indicate compliance with requirements specified in "Comparable Products" Article.

1) Architect will consider requests for comparable products if written request form and all of the supporting documentation and action submittals are complete and received by the Architect in a timely manner.
2) Requests for comparable products are subject to Owner and Architect approval. If comparable product request(s) are found to be not equivalent by the Owner and Architect, the request(s) may be rejected and the Contractor shall provide the specified product at no additional cost.
3) The Contractor's failure to obtain in a timely manner one of the specified products (e.g. a contractor-caused submittal delay, contractor did not take into consideration for long-lead time, etc.) is NOT considered a justifiable request for comparable product.

B. Related Requirements:

1. Section 012500 "Substitution Procedures" for requests for substitutions.

a. Substitutions for cause.
b. Substitutions for convenience.

2. Section 014200 "References" for applicable industry standards for products specified.

1.3 DEFINITIONS

A. Day: The term "day" as used in this Section shall mean calendar day, including weekends and holidays.

B. Business Day: The term “business day” shall mean working day, excluding weekends and legal holidays.

C. Products: Items obtained for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.

1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature, that is current as of date of the Contract Documents.
2. New Products: Items that have not previously been incorporated into another project or facility. Products salvaged or recycled from other projects are not considered new products.
3. Comparable Product: Product that is demonstrated and approved through submittal process to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.
4. "Or Equal:" Term via which an unnamed product is being submitted for consideration as a comparable product. Comply with the requirements of this Section. Determination of whether or not the unnamed product meets the definition of comparable product will be made by the Owner and Architect.
5. "Or Comparable Equal:" Term via which an unnamed product is being submitted for consideration as a comparable product. Comply with requirements of this Section. Determination of whether or not the unnamed product meets the definition of comparable product will be made by the Owner and Architect.
6. Use of product(s) under the "Or Equal" / "Or Comparable Equal" provision shall not result in any delay in completion of the Work, including completion of portions of the Work for use by Owner or for work under separate contract by Owner.
7. Use of product(s) under the "or equal" / "or comparable equal" provision shall not result in change in Contract Sum and Contract Time. Should additional costs be incurred, including costs for redesign and for fees for plan check review and permit, costs shall be paid by Contractor with no change in Contract Sum and Contract Time.

D. Basis-of-Design Product Specification: A specification in which a specific manufacturer's product is named and accompanied by the words "basis-of-design product," including make or model number or other designation, to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics.

E. Subject to Compliance with Requirements: Where the phrase "Subject to compliance with requirements" introduces a product selection procedure in an individual Specification Section, provide products qualified under the specified product procedure. In the event that a named product or product by a named manufacturer does not meet the other requirements of the specifications, select another named product or product from another named manufacturer that does meet the requirements of the specifications. Submit a comparable product request, if applicable.

1.4 ACTION SUBMITTALS

A. Comparable Product Request Submittal: Submit request for consideration of each comparable product. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.

1. Request for Comparable Product Form: Use "Request for Comparable Product" following this Section.
2. Documentation: Show compliance with the requirements in "Comparable Products" Article.
3. Architect's Action: If necessary, Architect will request additional information or documentation for evaluation within 5 business days of receipt of a comparable product request. Architect will notify Contractor of approval or rejection of proposed comparable product request within 10 business days of receipt of request, or 5 business days of receipt of additional information or documentation, whichever is later.

    a. Form of Approval: As specified in Section 013300 "Submittal Procedures."
    b. Comparable product requests must be approved in writing by the Owner, Architect, and as applicable Authorities Having Jurisdiction.
    c. Use product specified if Architect does not issue a decision on use of a comparable product request within time allocated.
    d. Provide specified product(s) when request for comparable product has been rejected.

B. Basis-of-Design Product Specification Submittal: Comply with requirements in Section 013300 "Submittal Procedures." Show compliance with requirements.

1.5 QUALITY ASSURANCE

A. Compatibility of Options: If Contractor is given option of selecting between two or more products for use on Project, select product compatible with products previously selected, even if previously selected products were also options.

1. Each contractor is responsible for providing products and construction methods compatible with products and construction methods of other contractors.
2. If a dispute arises between contractors over concurrently selectable but incompatible products, Architect will determine which products shall be used.

B. Identification of Products: Except for required labels and operating data, do not attach or imprint manufacturer or product names or trademarks on exposed surfaces of products or equipment that will be exposed to view in occupied spaces or on the exterior.

1. Labels: Locate required product labels and stamps on a concealed surface, or, where required for observation following installation, on a visually accessible surface that is not conspicuous.
2. Equipment Nameplates: Provide a permanent nameplate on each item of service-connected or power-operated equipment. Locate on a visually accessible but inconspicuous surface. Include information essential for operation, including the following:

    a. Name of product and manufacturer.
    b. Model and serial number.
    c. Capacity.
    d. Speed.
    e. Ratings.

3. See individual identification sections in Divisions 21, 22, 23, and 26 for additional identification requirements.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle products using means and methods that will prevent damage, deterioration, and loss, including theft and vandalism. Comply with manufacturer's written instructions.

B. Delivery and Handling:

1. Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.
2. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
3. Deliver products to Project site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
4. Inspect products on delivery to determine compliance with the Contract Documents and to determine that products are undamaged and properly protected.

C. Storage:

1. Store products to allow for inspection and measurement of quantity or counting of units.
2. Store materials in a manner that will not endanger Project structure.
3. Store products that are subject to damage by the elements, under cover in a weathertight enclosure above ground, with ventilation adequate to prevent condensation.
4. Protect foam plastic from exposure to sunlight, except to extent necessary for period of installation and concealment.
5. Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather-protection requirements for storage.
6. Protect stored products from damage and liquids from freezing.
7. Provide a secure location and enclosure at Project site for storage of materials and equipment by Owner's construction forces. Coordinate location with Owner.

1.7 PRODUCT WARRANTIES

A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.

1. Manufacturer's Warranty: Written warranty furnished by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.
2. Special Warranty: Written warranty required by the Contract Documents to provide specific rights for Owner.

B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution.

1. Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.
2. Specified Form: When specified forms are included with the Specifications, prepare a written document using indicated form properly executed.
3. See other Sections for specific content requirements and particular requirements for submitting special warranties.

C. Special Contractor Warranty for Comparable Products: Contractor warrants that comparable product or system will perform same as original specified material or system would have performed. Should accepted comparable product fail to perform as required, Contractor shall replace comparable product or system with that specified and bear costs incurred thereby.

D. Submittal Time: Comply with requirements in Section 017700 "Closeout Procedures."

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION PROCEDURES

A. General Product Requirements: Provide products that comply with the Contract Documents, are undamaged and, unless otherwise indicated, are new at time of installation.

1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
2. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.
3. Owner reserves the right to limit selection to products with warranties not in conflict with requirements of the Contract Documents.
4. Where products are accompanied by the term "as selected," Architect will make selection.
5. Descriptive, performance, and reference standard requirements in the Specifications establish salient characteristics of products.
6. Or Equal: For products specified by name and accompanied by the term "or equal," or "or approved equal," or "or approved," comply with requirements in "Comparable Products" Article to obtain approval for use of an unnamed product.
7. Or Comparable Equal: For basis-of-design product specified by name and accompanied by the term “or comparable equal,” comply with “Comparable Products” Article to obtain approval for use of any of the other named products or for use of an unnamed product in lieu of the basis-of-design system.

B. Product Selection Procedures:

1. Sole-Source:

a. Sole Product: Where Specifications name a single manufacturer and product, provide the named product that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.
b. Sole Manufacturer/Source: Where Specifications name a single manufacturer or source, provide a product by the named manufacturer or source that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.
c. Sole-source is indicated by the phrase: "Subject to compliance with requirements, provide the following: …"

2. With a Basis-of-Design Product:

a. Basis-of-Design with Limited List of Manufacturers: Where Specifications name a basis-of-design product, or refer to a basis-of-design product indicated on Drawings, and include a limited list of manufacturers, provide the specified or indicated product or a comparable product by one of the other named manufacturers. Drawings and Specifications indicate sizes, profiles, dimensions, performance requirements, and other characteristics that are based on the product named. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product by one of the other listed manufacturers. Comparable products by unlisted manufacturers will not be considered. Substitutions from unlisted manufacturers for Contractor convenience will not be considered.

1) Limited list of manufacturers is indicated by the phrase: "Basis-of-Design Product: Subject to compliance with requirements, provide the following … or a comparable product by one of the following…"

b. Basis-of-Design with Non-Limited List of Manufacturers: Where Specifications name a basis-of-design product, or refer to a basis-of-design product indicated on Drawings, and include a non-limited list of manufacturers, provide the specified or indicated product or a comparable product by one of the listed or unlisted manufacturers. Drawings and Specifications indicate sizes, profiles, dimensions, performance requirements, and other characteristics that are based on the product named. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product by one of the other listed or unlisted manufacturers.

1) Non-limited list of manufacturers is indicated by the phrase: "Basis-of-Design Product: Subject to compliance with requirements, provide the following… or Comparable Equal."

c. Subject to the Architect's and/or Owner's review, requests for comparable products that do not meet the performance requirements and/or are not equivalent to the salient characteristics of the basis-of-design product may be rejected.

3. Without a Basis-of-Design Product:

a. Limited List:

1) Limited List of Products: Where Specifications include a list of names of both manufacturers and products, provide one of the products listed that complies with requirements. Requests for comparable products by unlisted manufacturers or substitutions for Contractor's convenience will not be considered.

2) Limited List of Manufacturers: Where Specifications include a list of manufacturers' names, provide a product by one of the manufacturers listed that complies with requirements. Requests for comparable products by unlisted manufacturers or substitutions for Contractor's convenience will not be considered.

3) Limited list is indicated by the phrase: "Subject to compliance with requirements, provide one of the following: …"

b. Non-Limited List:

1) Non-Limited List of Products: Where Specifications include a list of names of both available manufacturers and products, provide one of the products listed, or an unnamed product, which complies with requirements. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product by an unnamed manufacturer.

2) Non-Limited List of Manufacturers: Where Specifications include a list of available manufacturers, provide a product by one of the manufacturers listed, or a product by an unnamed manufacturer, which complies with requirements. Comply with requirements in “Comparable Products” Article for consideration of an unnamed product by an unnamed manufacturer.

3) Non-limited list is indicated by one of the following:

a) The phrase "Subject to compliance with requirements, available manufacturers whose products may be incorporated into the Work, include, but are not limited to, the following: …"
b) The phrase "Subject to compliance with requirements, available products that may be incorporated in the Work include, but are not limited to, the following: …"
c) "Or Equal."

4) Subject to the Architect's and/or Owner's review, unlisted products or products by unlisted manufacturers that do not meet the performance requirements and/or are not equivalent to the listed manufacturers / listed products may be rejected.

C. Visual Matching Specification: Where Specifications require "match Architect's sample", provide a product that complies with requirements and matches Architect's sample. Architect's decision will be final on whether a proposed product matches.

1. If no product available within specified category matches and complies with other specified requirements, comply with requirements in Section 012500 "Substitution Procedures" for proposal of product.

D. Visual Selection Specification: Where Specifications include the phrase "as selected by Architect from manufacturer's full range" or similar phrase, select a product that complies with requirements. Architect will select color, gloss, pattern, density, or texture from manufacturer's product line that includes both standard and premium items.

2.2 COMPARABLE PRODUCTS

A. Conditions for Consideration: Use "Request for Comparable Product" form following this Section. Architect will consider Contractor's request for comparable product when the following conditions are satisfied. If the following conditions are not satisfied, Architect may return requests without action, except to record noncompliance with these requirements:

1. Documentation: Show compliance with requirements for comparable products and the following as applicable:

a. Executive Summary: In addition to the requirements noted above and below, provide an executive summary, which compares the significant technical properties and characteristics between the specified product(s) and the proposed comparable product(s). Such summary shall be limited to two pages, and shall be presented in a matrix or bullet format. Where visual or aesthetic criteria are a component of the comparison, provide samples of both the original product specified and the proposed comparable product.
b. Statement indicating why specified product or fabrication or installation cannot be provided, if applicable.
c. Coordination information, including a list of changes or revisions needed to other parts of the Work and to construction performed by Owner and separate contractors, that will be necessary to accommodate proposed comparable product. If proposed product involves more than one contractor, confirmation that proposed product has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

d. Evidence that the proposed product does not require revisions to the Contract Documents; that it is consistent with the Contract Documents and will produce the indicated results; and that it is compatible and will be coordinated with other portions of the Work
e. Detailed comparison of significant qualities of proposed comparable product with those of the Work specified. Include annotated copy of applicable Specification Section. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.

    1) Include evidence that proposed product meets or exceeds the specified requirements and salient performance characteristics of the specified product or system. Include detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.

f. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
g. Warranty, provide evidence that comparable product provides specified warranty.
h. Evidence that proposed product is available in color(s) and finish(es) the same as specified product where product remains exposed to view.
i. Samples, where applicable or requested.
j. Certificates and qualification data, where applicable or requested.
k. If proposed product is part of a “Deferred Approval,” contractor shall maintain sole responsibility for obtaining professional design services; preparation of Submittals for such item(s) in a timely manner so as to not delay or hinder the completion of the Work within the Contract Time; and obtain necessary approval(s).
l. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners.
m. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
n. Research reports evidencing compliance with building code in effect for Project, from ICC-ES.
o. Sustainable design characteristics equal to or better than product(s) specified.
p. Detailed comparison of Contractor's construction schedule using proposed comparable product with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.
q. Contractor's certification that proposed comparable product complies with requirements in the Contract Documents except as indicated in comparable product request, is compatible with related materials, and is appropriate for applications indicated.
r. The Owner shall be entitled to reimbursement from the Contractor for amounts paid to the Architect for reviewing the Contractor’s request for comparable products and making agreed-upon changes in the Drawings and Specifications resulting from such comparable products.
s. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed comparable product to produce indicated results

B. Review: Requests for comparable products are subject to Owner and Architect review and approval.

1. Proposed unnamed products that are being submitted for consideration as an “Or Equal” shall meet the requirements above and shall be equivalent in performance to the salient characteristics of the other listed products.
2. Proposed unnamed products that are being submitted for consideration as an “Or Comparable Equal” in lieu of a basis-of-design product shall meet the requirements above and shall be equivalent in performance to the salient characteristics of the basis-of-design system.

If comparable product request(s) are found by the Owner and Architect to be not equivalent to the specified product(s), the request(s) for consideration may be rejected and the Contractor shall provide the specified product(s) at no additional cost.

C. Submittal Requirements: Approval by the Architect of Contractor's request for use of comparable product is not intended to satisfy other submittal requirements. Comply with specified submittal requirements.

PART 3 - EXECUTION (Not Used)

END OF SECTION 016000

REQUEST FOR COMPARABLE PRODUCT

Project: _____ Comparable Product Request Number: _____

_____ From: _____

To: _____ Date: _____

_____ A/E Project Number: _____

Re: _____ Contract For: _____

Specification Title: _____ Description: _____

Section: _____ Page: _____ Article/Paragraph: _____

Proposed Comparable Product: _____

Manufacturer: _____ Address: _____ Phone: _____

Trade Name: _____ Model No.: _____

Installer: _____ Address: _____ Phone: _____

History: ☐ New product ☐ 1-4 years old ☐ 5-10 years old ☐ More than 10 years old

Differences between proposed comparable product and specified product: _____

_____

_____

☐ Point-by-point comparative data attached — REQUIRED BY A/E

Reason for not providing specified item: _____

_____

Similar Installation: _____

_____ Architect: _____

Address: _____ Owner: _____

_____ Date Installed: _____

Proposed comparable product affects other parts of Work: ☐ No ☐ Yes; explain _____

_____

Savings to Owner for accepting comparable product: _____ ($).

Proposed comparable product changes Contract Time: ☐ No ☐ Yes [Add] [Deduct] _____ days.

Supporting Data Attached: ☐ Drawings ☐ Product Data ☐ Samples ☐ Tests ☐ Reports ☐ _____

REQUEST FOR COMPARABLE PRODUCT

(Continued)

The Undersigned certifies:

- Proposed request for comparable product has been fully investigated and determined to be equal or superior in all respects to specified product.
- Same warranty will be furnished for proposed comparable product as for specified product.
- Same maintenance service and source of replacement parts, as applicable, is available.
- Proposed comparable product will have no adverse effect on other trades and will not affect or delay progress schedule.
- Cost data as stated above is complete. Claims for additional costs related to accepted comparable product which may subsequently become apparent are to be waived.
- Proposed comparable product does not affect dimensions and functional clearances.
- The Owner shall be entitled to reimbursement from the Contractor for amounts paid to Architect for reviewing the Contractor's request for comparable products and making agreed-upon changes in the Drawings and Specifications resulting from such comparable products.
- Coordination, installation, and changes in the Work as necessary for accepted comparable product will be complete in all respects.

Submitted by: _____

SECTION 017300 - EXECUTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes general administrative and procedural requirements governing execution of the Work including, but not limited to, the following:

1. Construction layout.
2. Field engineering and surveying.
3. Installation of the Work.
4. Cutting and patching.
5. Coordination of Owner-installed products.
6. Progress cleaning.
7. Starting and adjusting.
8. Protection of installed construction.

B. Related Requirements:

1. Section 011000 "Summary" for limits on use of Project site.
2. Section 013300 "Submittal Procedures" for submitting surveys.
3. Section 017700 "Closeout Procedures" for submitting final property survey with Project Record Documents, recording of Owner-accepted deviations from indicated lines and levels, and final cleaning.
4. Section 024119 "Selective Demolition" for demolition and removal of selected portions of the building.
5. Section 078413 "Penetration Firestopping" for patching penetrations in fire-rated construction.

1.3 DEFINITIONS

A. Cutting: Removal of in-place construction necessary to permit installation or performance of other work.

B. Patching: Fitting and repair work required to restore construction to original conditions after installation of other work.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For land surveyor or professional engineer.

B. Certificates: Submit certificate signed by land surveyor or professional engineer certifying that location and elevation of improvements comply with requirements.

C. Cutting and Patching Plan: Submit plan describing procedures at least 10 days prior to the time cutting and patching will be performed. Include the following information:

1. Extent: Describe reason for and extent of each occurrence of cutting and patching.
2. Changes to In-Place Construction: Describe anticipated results. Include changes to structural elements and operating components as well as changes in building appearance and other significant visual elements.
3. Products: List products to be used for patching and firms or entities that will perform patching work.
4. Dates: Indicate when cutting and patching will be performed.

5. Utilities and Mechanical and Electrical Systems: List services and systems that cutting and patching procedures will disturb or affect. List services and systems that will be relocated and those that will be temporarily out of service. Indicate length of time permanent services and systems will be disrupted.

    a. Include description of provisions for temporary services and systems during interruption of permanent services and systems.

D. Landfill Receipts: Submit copy of receipts issued by a landfill facility, licensed to accept hazardous materials, for hazardous waste disposal.

E. Certified Surveys: Submit two copies signed by land surveyor or professional engineer.

F. Final Property Survey: Submit 10 copies showing the Work performed and record survey data.

1.5 QUALITY ASSURANCE

A. Land Surveyor Qualifications: A professional land surveyor who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing land-surveying services of the kind indicated.

B. Cutting and Patching: Comply with requirements for and limitations on cutting and patching of construction elements.

1. Structural Elements: When cutting and patching structural elements, notify Architect of locations and details of cutting and await directions from Architect before proceeding. Shore, brace, and support structural elements during cutting and patching. Do not cut and patch structural elements in a manner that could change their load-carrying capacity or increase deflection

2. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety. Operational elements include the following:

    a. Primary operational systems and equipment.
    b. Fire separation assemblies.
    c. Air or smoke barriers.
    d. Fire-suppression systems.
    e. Plumbing piping systems.
    f. Mechanical systems piping and ducts.
    g. Control systems.
    h. Communication systems.
    i. Fire-detection and -alarm systems.
    j. Conveying systems.
    k. Electrical wiring systems.
    l. Operating systems of special construction.

3. Other Construction Elements: Do not cut and patch other construction elements or components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety. Other construction elements include but are not limited to the following:

    a. Water, moisture, or vapor barriers.
    b. Membranes and flashings.
    c. Exterior curtain-wall construction.
    d. Sprayed fire-resistive material.
    e. Equipment supports.
    f. Piping, ductwork, vessels, and equipment.
    g. Noise- and vibration-control elements and systems.

4. Visual Elements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch exposed construction in a manner that would, in Architect's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.

C. Manufacturer's Installation Instructions: Obtain and maintain on-site manufacturer's written recommendations and instructions for installation of products and equipment.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Comply with requirements specified in other Sections.

1. For projects requiring compliance with sustainable design and construction practices and procedures, use products for patching that comply with sustainable design requirements.

B. In-Place Materials: Use materials for patching identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible.

1. If identical materials are unavailable or cannot be used, use materials that, when installed, will provide a match acceptable to Architect for the visual and functional performance of in-place materials.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Existing Conditions: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities, mechanical and electrical systems, and other construction affecting the Work.

1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, and water-service piping; underground electrical services, and other utilities.
2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.

B. Examination and Acceptance of Conditions: Before proceeding with each component of the Work, examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.

1. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.
2. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
3. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

C. Written Report: Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:

1. Description of the Work.
2. List of detrimental conditions, including substrates.
3. List of unacceptable installation tolerances.
4. Recommended corrections.

D. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Existing Utility Information: Furnish information to local utility and Owner that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with authorities having jurisdiction.

B. Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

C. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.

D. Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents caused by differing field conditions outside the control of Contractor, submit a request for information to Architect according to requirements in Section 013100 "Project Management and Coordination."

3.3 CONSTRUCTION LAYOUT

A. Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to the property survey and existing benchmarks. If discrepancies are discovered, notify Architect promptly.

B. General: Engage a land surveyor or professional engineer to lay out the Work using accepted surveying practices.

1. Establish benchmarks and control points to set lines and levels at each story of construction and elsewhere as needed to locate each element of Project.
2. Establish limits on use of Project site.
3. Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.
4. Inform installers of lines and levels to which they must comply.
5. Check the location, level and plumb, of every major element as the Work progresses.
6. Notify Architect when deviations from required lines and levels exceed allowable tolerances.
7. Close site surveys with an error of closure equal to or less than the standard established by authorities having jurisdiction.

C. Site Improvements: Locate and lay out site improvements, including pavements, grading, fill and topsoil placement, utility slopes, and rim and invert elevations.

D. Building Lines and Levels: Locate and lay out control lines and levels for structures, building foundations, column grids, and floor levels, including those required for mechanical and electrical work. Transfer survey markings and elevations for use with control lines and levels. Level foundations and piers from two or more locations.

E. Record Log: Maintain a log of layout control work. Record deviations from required lines and levels. Include beginning and ending dates and times of surveys, weather conditions, name and duty of each survey party member, and types of instruments and tapes used. Make the log available for reference by Architect.

3.4 FIELD ENGINEERING

A. Identification: Owner will identify existing benchmarks, control points, and property corners.

B. Reference Points: Locate existing permanent benchmarks, control points, and similar reference points before beginning the Work. Preserve and protect permanent benchmarks and control points during construction operations.

1. Do not change or relocate existing benchmarks or control points without prior written approval of Architect. Report lost or destroyed permanent benchmarks or control points promptly. Report the need to relocate permanent benchmarks or control points to Architect before proceeding.
2. Replace lost or destroyed permanent benchmarks and control points promptly. Base replacements on the original survey control points.

C. Benchmarks: Establish and maintain a minimum of two permanent benchmarks on Project site, referenced to data established by survey control points. Comply with authorities having jurisdiction for type and size of benchmark.

1. Record benchmark locations, with horizontal and vertical data, on Project Record Documents.
2. Where the actual location or elevation of layout points cannot be marked, provide temporary reference points sufficient to locate the Work.
3. Remove temporary reference points when no longer needed. Restore marked construction to its original condition.

D. Certified Survey: On completion of foundation walls, major site improvements, and other work requiring field-engineering services, prepare a certified survey showing dimensions, locations, angles, and elevations of construction and sitework.

E. Final Property Survey: Engage a land surveyor or professional engineer to prepare a final property survey showing significant features (real property) for Project. Include on the survey a certification, signed by land surveyor or professional engineer, that principal metes, bounds, lines, and levels of Project are accurately positioned as shown on the survey.

1. Show boundary lines, monuments, streets, site improvements and utilities, existing improvements and significant vegetation, adjoining properties, acreage, grade contours, and the distance and bearing from a site corner to a legal point.
2. Recording: At Substantial Completion, have the final property survey recorded by or with authorities having jurisdiction as the official "property survey."

3.5 INSTALLATION

A. General: Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.

1. Make vertical work plumb and make horizontal work level.
2. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.
3. Conceal pipes, ducts, and wiring in finished areas unless otherwise indicated.
4. Maintain minimum headroom clearance of 96 inches in occupied spaces and 90 inches in unoccupied spaces.

B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.

C. Install products at the time and under conditions that will ensure the best possible results. Maintain conditions required for product performance until Substantial Completion.

D. Conduct construction operations so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy.

E. Sequence the Work and allow adequate clearances to accommodate movement of construction items on site and placement in permanent locations.

F. Tools and Equipment: Do not use tools or equipment that produce harmful noise levels.

G. Templates: Obtain and distribute to the parties involved templates for work specified to be factory prepared and field installed. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.

H. Attachment: Provide blocking and attachment plates and anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions.

1. Mounting Heights: Where mounting heights are not indicated, mount components at heights directed by Architect.
2. Allow for building movement, including thermal expansion and contraction.
3. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

I. Joints: Make joints of uniform width. Where joint locations in exposed work are not indicated, arrange joints for the best visual effect. Fit exposed connections together to form hairline joints.

J. Repair or remove and replace damaged, defective, or nonconforming Work.

1. Comply with Section 017700 "Closeout Procedures" for repairing or removing and replacing defective Work.

3.6 CUTTING AND PATCHING

A. Cutting and Patching, General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.

1. Cut in-place construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.

B. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during installation or cutting and patching operations, by methods and with materials so as not to void existing warranties.

C. Temporary Support: Provide temporary support of work to be cut.

D. Protection: Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.

E. Adjacent Occupied Areas: Where interference with use of adjoining areas or interruption of free passage to adjoining areas is unavoidable, coordinate cutting and patching according to requirements in Section 011000 "Summary."

F. Existing Utility Services and Mechanical/Electrical Systems: Where existing services/systems are required to be removed, relocated, or abandoned, bypass such services/systems before cutting to prevent interruption to occupied areas.

G. Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.

1. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots neatly to minimum size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
2. Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.
3. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill.
4. Excavating and Backfilling: Comply with requirements in applicable Sections where required by cutting and patching operations.
5. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.
6. Proceed with patching after construction operations requiring cutting are complete.

H. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other work. Patch with durable seams that are as invisible as practicable. Provide materials and comply with installation requirements specified in other Sections, where applicable.

1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate physical integrity of installation.
2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will minimize evidence of patching and refinishing.

    a. Clean piping, conduit, and similar features before applying paint or other finishing materials.
    b. Restore damaged pipe covering to its original condition.

3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove in-place floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.

    a. Where patching occurs in a painted surface, prepare substrate and apply primer and intermediate paint coats appropriate for substrate over the patch, and apply final paint coat over entire unbroken surface containing the patch. Provide additional coats until patch blends with adjacent surfaces.

4. Ceilings: Patch, repair, or rehang in-place ceilings as necessary to provide an even-plane surface of uniform appearance.
5. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition and ensures thermal and moisture integrity of building enclosure.

I. Cleaning: Clean areas and spaces where cutting and patching are performed. Remove paint, mortar, oils, putty, and similar materials from adjacent finished surfaces.

3.7 OWNER-INSTALLED PRODUCTS

A. Site Access: Provide access to Project site for Owner's construction personnel.

B. Coordination: Coordinate construction and operations of the Work with work performed by Owner's construction personnel.

1. Construction Schedule: Inform Owner of Contractor's preferred construction schedule for Owner's portion of the Work. Adjust construction schedule based on a mutually agreeable timetable. Notify Owner if changes to schedule are required due to differences in actual construction progress.
2. Preinstallation Conferences: Include Owner's construction personnel at preinstallation conferences covering portions of the Work that are to receive Owner's work. Attend preinstallation conferences conducted by Owner's construction personnel if portions of the Work depend on Owner's construction.

3.8 PROGRESS CLEANING

A. General: Clean Project site and work areas daily, including common areas. Enforce requirements strictly. Dispose of materials lawfully.

1. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.
2. Do not hold waste materials more than seven days during normal weather or three days if the temperature is expected to rise above 80 deg F.
3. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.

    a. Use containers intended for holding waste materials of type to be stored.

4. Coordinate progress cleaning for joint-use areas where Contractor and other contractors are working concurrently.

B. Site: Maintain Project site free of waste materials and debris.

C. Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the Work.

1. Remove liquid spills promptly.
2. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.

D. Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.

E. Concealed Spaces: Remove debris from concealed spaces before enclosing the space.

F. Exposed Surfaces in Finished Areas: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.

G. Waste Disposal: Do not bury or burn waste materials on-site. Do not wash waste materials down sewers or into waterways. Comply with waste disposal requirements in Section 015000 "Temporary Facilities and Controls" and Section 017419 "Construction Waste Management and Disposal."

H. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.

I. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

J. Limiting Exposures: Supervise construction operations to assure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

3.9 STARTING AND ADJUSTING

A. Coordinate startup and adjusting of equipment and operating components with requirements in Section 019113 "General Commissioning Requirements."

B. Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.

C. Adjust equipment for proper operation. Adjust operating components for proper operation without binding.

D. Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Manufacturer's Field Service: Comply with qualification requirements in Section 014000 "Quality Requirements."

3.10 PROTECTION OF INSTALLED CONSTRUCTION

A. Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.

B. Protection of Existing Items: Provide protection and ensure that existing items to remain undisturbed by construction are maintained in condition that existed at commencement of the Work.

C. Comply with manufacturer's written instructions for temperature and relative humidity.

END OF SECTION 017300

SECTION 017419 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for the following:

1. Salvaging nonhazardous demolition and construction waste.
2. Recycling nonhazardous demolition and construction waste.
3. Disposing of nonhazardous demolition and construction waste.
4. Include recycling and disposing of Owner's FF&E construction waste.

B. Related Requirements:

1. Section 018113 "Sustainable Design Requirements" for additional sustainable design requirements.
2. Section 024116 "Structure Demolition" for disposition of waste resulting from structure demolition.
3. Section 024119 "Selective Demolition" for disposition of waste resulting from partial demolition of buildings.

1.3 DEFINITIONS

A. CALGreen: 2016 California Green Building Standards Code.

B. Construction Waste: Building and site improvement materials and other solid waste resulting from construction, remodeling, renovation, or repair operations. Construction waste includes packaging.

C. Demolition Waste: Building and site improvement materials resulting from demolition or selective demolition operations.

D. Disposal: Removal off-site of demolition and construction waste and subsequent sale, recycling, reuse, or deposit in landfill or incinerator acceptable to authorities having jurisdiction.

E. Recycle: Recovery of demolition or construction waste for subsequent processing in preparation for reuse.

F. Salvage: Recovery of demolition or construction waste and subsequent sale or reuse in another facility.

G. Salvage and Reuse: Recovery of demolition or construction waste and subsequent incorporation into the Work.

1.4 PERFORMANCE REQUIREMENTS

A. Construction Waste Diversion: Recycle and/or salvage for reuse a minimum 65 percent of the nonhazardous construction and demolition waste in accordance with CALGReen Sections 5.408.1.1, 5.408.1.2, or 5.408.1.3, or meet a local construction and demolition waste management ordinance, whichever is more stringent. Practice efficient waste management in the use of materials in the course of the Work. Use all reasonable means to divert construction and demolition waste from landfills and incinerators. Facilitate recycling and salvage of materials, including the following:

1. Demolition Waste:

    a. Concrete.
    b. Concrete reinforcing steel.
    c. Concrete masonry units.
    d. Wood studs.
    e. Wood joists.
    f. Plywood and oriented strand board.
    g. Wood paneling.
    h. Wood trim.
    i. Structural and miscellaneous steel.
    j. Rough hardware.
    k. Roofing.
    l. Insulation.
    m. Doors and frames.
    n. Door hardware.
    o. Metal studs.
    p. Gypsum board.
    q. Acoustical tile and panels.
    r. Carpet.
    s. Carpet pad.
    t. Equipment.
    u. Cabinets.
    v. Plumbing fixtures.
    w. Piping.
    x. Supports and hangers.
    y. Valves.
    z. Sprinklers.
    aa. Mechanical equipment.
    bb. Refrigerants.
    cc. Electrical conduit.
    dd. Copper wiring.
    ee. Lighting fixtures.
    ff. Lamps.
    gg. Ballasts.
    hh. Electrical devices.
    ii. Switchgear and panelboards.
    jj. Transformers.

2. Construction Waste:

    a. Masonry and CMU.
    b. Lumber.
    c. Wood sheet materials.
    d. Wood trim.
    e. Metals.
    f. Insulation.
    g. Carpet and pad.
    h. Gypsum board.
    i. Piping.
    j. Electrical conduit.
    k. Packaging: Regardless of salvage/recycle goal indicated in "General" Paragraph above, salvage or recycle 100 percent of the following uncontaminated packaging materials:

        1) Paper.
        2) Cardboard.
        3) Boxes.
        4) Plastic sheet and film.
        5) Polystyrene packaging.
        6) Wood crates.
        7) Plastic pails.

1.5 ACTION SUBMITTALS

A. Waste Management Plan: Submit plan within 10 business days of date established for the Notice to Proceed.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For waste management company.

B. Waste Reduction Progress Reports: Concurrent with each Application for Payment, submit report. Include the following information:

1. Material category.
2. Generation point of waste.
3. Total quantity of waste in tons.
4. Quantity of waste salvaged, both estimated and actual in tons.
5. Quantity of waste recycled, both estimated and actual in tons.
6. Total quantity of waste recovered (salvaged plus recycled) in tons.
7. Total quantity of waste recovered (salvaged plus recycled) as a percentage of total waste.

C. Waste Reduction Calculations: Before request for Substantial Completion, submit calculated end-of-Project rates for salvage, recycling, and disposal as a percentage of total waste generated by the Work.

D. Recycling and Processing Facility Records: Indicate receipt and acceptance of recyclable waste by recycling and processing facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.

E. Landfill and Incinerator Disposal Records: Indicate receipt and acceptance of waste by landfills and incinerator facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.

F. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.

G. Documentation: Documentation shall be provided to the enforcing agency which demonstrates compliance with CALGreen Sections 5.408.1.1 through 5.408.1.3. The waste management plans shall be updated as necessary and shall be accessible during construction for examination by the enforcing agency.

1.7 QUALITY ASSURANCE

A. Waste Management Company Qualifications: Utilize a waste management company that can provide verifiable documentation that the percentage of construction and demolition waste materials diverted from the landfill complies with CALGreen.

B. Refrigerant Recovery Technician Qualifications: Certified by EPA-approved certification program.

C. Regulatory Requirements: Comply with hauling and disposal regulations of authorities having jurisdiction.

D. Waste Management Conference: Conduct conference at Project site to comply with requirements in Section 013100 "Project Management and Coordination." Review methods and procedures related to waste management including, but not limited to, the following:

1. Review and discuss waste management plan including responsibilities of waste management coordinator.
2. Review requirements for documenting quantities of each type of waste and its disposition.
3. Review and finalize procedures for materials separation and verify availability of containers and bins needed to avoid delays.
4. Review procedures for periodic waste collection and transportation to recycling and disposal facilities.
5. Review waste management requirements for each trade.

1.8 WASTE MANAGEMENT PLAN

A. General: Where a local jurisdiction does not have a construction and demolition waste management ordinance that is more stringent, submit a construction waste management plan that:

1. Identifies the construction and demolition waste materials to be diverted from disposal by efficient usage, recycling, reuse on the project or salvage for future use or sale.
2. Determines if construction and demolition waste materials will be sorted on-site (source-separated) or bulk mixed (single stream).
3. Identifies diversion facilities where construction and demolition waste material collected will be taken.
4. Specifies that the amount of construction waste and demolition materials diverted shall be calculated by weight or volume, but not by both.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 PLAN IMPLEMENTATION

A. General: Implement approved waste management plan. Provide handling, containers, storage, signage, transportation, and other items as required to implement waste management plan during the entire duration of the Contract.

1. Comply with operation, termination, and removal requirements in Section 015000 "Temporary Facilities and Controls."

B. Waste Management Company: Utilize a waste management company that can provide verifiable documentation that the percentage of construction waste material diverted from the landfill complies with CALGreen.

C. Training: Train workers, subcontractors, and suppliers on proper waste management procedures, as appropriate for the Work.

1. Distribute waste management plan to entities when they first begin work on-site. Review plan procedures and locations established for salvage, recycling, and disposal.

D. Site Access and Temporary Controls: Conduct waste management operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.

1. Designate and label specific areas on Project site necessary for separating materials that are to be salvaged, recycled, reused, donated, and sold.
2. Comply with Section 015000 "Temporary Facilities and Controls" for controlling dust and dirt, environmental protection, and noise control.

3.2 SALVAGING DEMOLITION WASTE

A. Salvaged Items for Reuse in the Work: Salvage items for reuse and handle as follows:

1. Clean salvaged items.
2. Pack or crate items after cleaning. Identify contents of containers with label indicating elements, date of removal, quantity, and location where removed.
3. Store items in a secure area until installation.
4. Protect items from damage during transport and storage.
5. Install salvaged items to comply with installation requirements for new materials and equipment. Provide connections, supports, and miscellaneous materials necessary to make items functional for use indicated.

B. Salvaged Items for Owner's Use: Salvage items for Owner's use and handle as follows:

1. Clean salvaged items.
2. Pack or crate items after cleaning. Identify contents of containers with label indicating elements, date of removal, quantity, and location where removed.
3. Store items in a secure area until delivery to Owner.
4. Transport items to Owner's designated storage area.
5. Protect items from damage during transport and storage.

C. Doors and Hardware: Brace open end of door frames. Except for removing door closers, leave door hardware attached to doors.

D. Equipment: Drain tanks, piping, and fixtures. Seal openings with caps or plugs. Protect equipment from exposure to weather.

E. Plumbing Fixtures: Separate by type and size.

F. Lighting Fixtures: Separate lamps by type and protect from breakage.

G. Electrical Devices: Separate switches, receptacles, switchgear, transformers, meters, panelboards, circuit breakers, and other devices by type.

3.3 RECYCLING DEMOLITION AND CONSTRUCTION WASTE, GENERAL

A. General: Recycle paper and beverage containers used by on-site workers.

B. Recycling Incentives: Revenues, savings, rebates, tax credits, and other incentives received for recycling waste materials shall be per Owner/Contractor agreement.

C. Preparation of Waste: Prepare and maintain recyclable waste materials according to recycling or reuse facility requirements. Maintain materials free of dirt, adhesives, solvents, petroleum contamination, and other substances deleterious to the recycling process.

D. Procedures: Separate recyclable waste from other waste materials, trash, and debris. Separate recyclable waste by type at Project site to the maximum extent practical according to approved construction waste management plan.

1. Provide appropriately marked containers or bins for controlling recyclable waste until removed from Project site. Include list of acceptable and unacceptable materials at each container and bin.

    a. Inspect containers and bins for contamination and remove contaminated materials if found.

2. Stockpile processed materials on-site without intermixing with other materials. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
3. Stockpile materials away from construction area. Do not store within drip line of remaining trees.
4. Store components off the ground and protect from the weather.
5. Remove recyclable waste from Owner's property and transport to recycling receiver or processor.

3.4 RECYCLING DEMOLITION WASTE

A. Concrete: Remove reinforcement and other metals from concrete and sort with other metals.

1. Pulverize concrete to maximum 1-1/2-inch size.

B. Masonry: Remove metal reinforcement, anchors, and ties from masonry and sort with other metals.

1. Pulverize masonry to maximum 1-1/2-inch size.
2. Clean and stack undamaged, whole masonry units on wood pallets.

C. Wood Materials: Sort and stack members according to size, type, and length. Separate lumber, engineered wood products, panel products, and treated wood materials.

D. Metals: Separate metals by type.

1. Structural Steel: Stack members according to size, type of member, and length.
2. Remove and dispose of bolts, nuts, washers, and other rough hardware.

E. Gypsum Board: Stack large clean pieces on wood pallets or in container and store in a dry location. Remove edge trim and sort with other metals. Remove and dispose of fasteners.

F. Acoustical Ceiling Panels and Tile: Stack large clean pieces on wood pallets and store in a dry location.

G. Metal Suspension System: Separate metal members including trim, and other metals from acoustical panels and tile and sort with other metals.

H. Carpet and Pad: Roll large pieces tightly after removing debris, trash, adhesive, and tack strips.

1. Store clean, dry carpet and pad in a closed container or trailer provided by Carpet Reclamation Agency or carpet recycler.

I. Carpet Tile: Remove debris, trash, and adhesive.

1. Stack tile on pallet and store clean, dry carpet in a closed container or trailer provided by Carpet Reclamation Agency or carpet recycler.

J. Piping: Reduce piping to straight lengths and store by type and size. Separate supports, hangers, valves, sprinklers, and other components by type and size.

K. Conduit: Reduce conduit to straight lengths and store by type and size.

3.5 RECYCLING CONSTRUCTION WASTE

A. Packaging:

1. Cardboard and Boxes: Break down packaging into flat sheets. Bundle and store in a dry location.
2. Polystyrene Packaging: Separate and bag materials.
3. Pallets: As much as possible, require deliveries using pallets to remove pallets from Project site. For pallets that remain on-site, break down pallets into component wood pieces and comply with requirements for recycling wood.
4. Crates: Break down crates into component wood pieces and comply with requirements for recycling wood.

B. Wood Materials:

1. Clean Cut-Offs of Lumber: Grind or chip into small pieces.
2. Clean Sawdust: Bag sawdust that does not contain painted or treated wood.

a. Comply with requirements in Section 329300 "Plants" for use of clean sawdust as organic mulch.

C. Gypsum Board: Stack large clean pieces on wood pallets or in container and store in a dry location.

1. Clean Gypsum Board: Grind scraps of clean gypsum board using small mobile chipper or hammer mill. Screen out paper after grinding.

a. Comply with requirements in Section 329300 "Plants" for use of clean ground gypsum board as inorganic soil amendment.

3.6 DISPOSAL OF WASTE

A. General: Except for items or materials to be salvaged, recycled, or otherwise reused, remove waste materials from Project site and legally dispose of them in a landfill or incinerator acceptable to authorities having jurisdiction.

1. Except as otherwise specified, do not allow waste materials that are to be disposed of accumulate on-site.
2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.

B. Burning: Do not burn waste materials.

C. Disposal: Remove waste materials from Owner's property and legally dispose of them.

3.7 ATTACHMENTS

A. City of GeneThe Waste Management Form.

END OF SECTION 017419

Waste Management Form – Part I
Construction & Demolition (C&D) Debris Deposit Program

Required for projects described in Municipal Code §66.0601-66.0610.

Deposit will be fully refunded if debris generated from the project is recycled at the required rate.* If the minimum required recycling rate is not met, the deposit refund will be prorated. **Refund request must be submitted within 180 days from final inspection** and must be accompanied by weigh tickets for ALL debris generated, including all trash, reuse and recycling.

Complete Part I before obtaining a building, combination or demolition permit.
Submit this form and your deposit to the Development Services Department staff at permit issuance.

Refundable Party Contact Information:

SECTION 017700 - CLOSEOUT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for contract closeout, including, but not limited to, the following:

1. Substantial Completion procedures.
2. Final completion procedures.
3. Warranties.
4. Final cleaning.
5. Repair of the Work.

B. Related Requirements:

1. Section 017823 "Operation and Maintenance Data" for additional operation and maintenance manual requirements.
2. Section 017839 "Project Record Documents" for submitting Record Drawings, Record Specifications, and Record Product Data.
3. Section 017900 "Demonstration and Training" for requirements to train the Owner's maintenance personnel to adjust, operate, and maintain products, equipment, and systems.

1.3 ACTION SUBMITTALS

A. Product Data: For cleaning agents.

B. Contractor's List of Incomplete Items: Initial submittal at Substantial Completion.

C. Certified List of Incomplete Items: Final submittal at Final Completion.

1.4 CLOSEOUT SUBMITTALS

A. Certificates of Release: From authorities having jurisdiction.

B. Certificate of Insurance: For continuing coverage.

C. Certificate of Construction Phase Commissioning Completion: From commissioning agent.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Schedule of Maintenance Material Items: For maintenance material submittal items specified in other Sections.

1.6 SUBSTANTIAL COMPLETION PROCEDURES

A. Contractor's List of Incomplete Items: Prepare and submit a list of items to be completed and corrected (Contractor's punch list), indicating the value of each item on the list and reasons why the Work is incomplete.

B. Submittals Prior to Substantial Completion: Complete the following a minimum of 10 business days prior to requesting observation for determining date of Substantial Completion. List items below that are incomplete at time of request.

1. Certificates of Release: Obtain and submit releases from authorities having jurisdiction permitting Owner unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.
2. Submit closeout submittals specified in other Division 01 Sections, including project record documents, operation and maintenance manuals, final completion construction photographic documentation, damage or settlement surveys, property surveys, and similar final record information.
3. Submit closeout submittals specified in individual Sections, including specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.
4. Submit maintenance material submittals specified in individual Sections, including tools, spare parts, extra materials, and similar items, and deliver to location designated by Architect. Label with manufacturer's name and model number where applicable.
5. Submit test/adjust/balance records.
6. Submit changeover information related to Owner's occupancy, use, operation, and maintenance.

C. Procedures Prior to Substantial Completion: Complete the following a minimum of 10 business days prior to requesting observation for determining date of Substantial Completion. List items below that are incomplete at time of request.

1. Advise Owner of pending insurance changeover requirements.
2. Make final changeover of permanent locks and deliver keys to Owner. Advise Owner's personnel of changeover in security provisions.
3. Complete startup and testing of systems and equipment.
4. Perform preventive maintenance on equipment used prior to Substantial Completion.
5. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems. Submit demonstration and training video recordings specified in Section 017900 "Demonstration and Training."
6. Advise Owner of changeover in heat and other utilities.
7. Participate with Owner in conducting inspection and walkthrough with local emergency responders.
8. Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.
9. Complete final cleaning requirements, including touchup painting.
10. Touch up and otherwise repair and restore marred exposed finishes to eliminate visual defects.

D. Observation: Submit a written request for observation to determine Substantial Completion a minimum of 10 business days prior to date the work will be completed and ready for final observation and tests. On receipt of request, Architect will either proceed with observation or notify Contractor of unfulfilled requirements. Architect will prepare the Certificate of Substantial Completion after observation or will notify Contractor of items, either on Contractor's list or additional items identified by Architect, that must be completed or corrected before certificate will be issued.

1. Re-observation: Request re-observation when the Work identified in previous observations as incomplete is completed or corrected.
2. Results of completed observation will form the basis of requirements for final completion.

1.7 FINAL COMPLETION PROCEDURES

A. Submittals Prior to Final Completion: Before requesting final observation for determining final completion, complete the following:

1. Submit a final Application for Payment according to Section 012900 "Payment Procedures."
2. Certified List of Incomplete Items: Submit certified copy of Architect's Substantial Completion observation list of items to be completed or corrected (punch list), endorsed and dated by Architect. Certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
3. Certificate of Insurance: Submit evidence of final, continuing insurance coverage complying with insurance requirements.

B. Final Observation: Submit a written request for final observation to determine acceptance a minimum of 10 business days prior to date the work will be completed and ready for final observation and tests. On receipt of request, Architect will either proceed with observation or notify Contractor of unfulfilled requirements. Architect will prepare a final Certificate for Payment after observation or will notify Contractor of construction that must be completed or corrected before certificate will be issued.

1. Re-observation: Request re-observation when the Work identified in previous observations as incomplete is completed or corrected.

1.8 LIST OF INCOMPLETE ITEMS (PUNCH LIST)

A. Organization of List: Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of construction. Use form mutually agreeable to Owner, Architect, and General Contractor.

1. Organize list of spaces in sequential order, starting with exterior areas first and proceeding from lowest floor to highest floor.
2. Organize items applying to each space by major element, including categories for ceiling, individual walls, floors, equipment, and building systems.
3. Include the following information at the top of each page:

a. Project name.
b. Date.
c. Name of Architect.
d. Name of Contractor.
e. Page number.

4. Submit list of incomplete items in the following format:

a. MS Excel electronic file. Architect will return annotated file.
b. PDF electronic file. Architect will return annotated file.

1.9 SUBMITTAL OF PROJECT WARRANTIES

A. Time of Submittal: Submit written warranties on request of Architect for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated, or when delay in submittal of warranties might limit Owner's rights under warranty.

B. Partial Occupancy: Submit properly executed warranties within 15 days of completion of designated portions of the Work that are completed and occupied or used by Owner during construction period by separate agreement with Contractor.

C. Organize warranty documents into an orderly sequence based on the table of contents of Project Manual.

1. Submit on digital media acceptable to Architect and email to Architect.

D. Provide additional copies of each warranty to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

1. Use cleaning products that comply with Green Seal's GS-37, or if GS-37 is not applicable, use products that comply with the 2016 California Green Building Standards Code.

PART 3 - EXECUTION

3.1 FINAL CLEANING

A. General: Perform final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.

B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.

1. Complete the following cleaning operations before requesting observation for certification of Substantial Completion for entire Project or for a designated portion of Project:

a. Clean Project site, yard, and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste material, litter, and other foreign substances.
b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
c. Rake grounds that are neither planted nor paved to a smooth, even-textured surface.
d. Remove tools, construction equipment, machinery, and surplus material from Project site.
e. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
f. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
g. Sweep concrete floors broom clean in unoccupied spaces.
h. Vacuum carpet and similar soft surfaces, removing debris and excess nap; clean according to manufacturer's recommendations if visible soil or stains remain.
i. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Polish mirrors and glass, taking care not to scratch surfaces.
j. Remove labels that are not permanent.
k. Wipe surfaces of mechanical and electrical equipment, elevator equipment, and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
l. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.
m. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.
n. Clean ducts, blowers, and coils if units were operated without filters during construction or that display contamination with particulate matter on inspection.

1) Clean HVAC system in compliance with Division 23 Section “HVAC Air-Distribution System Cleaning” or if section is not provided, in compliance with NADCA ACR. Provide written report on completion of cleaning.

o. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency.
p. Leave Project clean and ready for occupancy.

C. Construction Waste Disposal: Comply with waste disposal requirements in Section 017419 "Construction Waste Management and Disposal."

3.2 REPAIR OF THE WORK

A. Complete repair and restoration operations before requesting observation for determination of Substantial Completion.

B. Repair or remove and replace defective construction. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment. Where damaged or worn items cannot be repaired or restored, provide replacements. Remove and replace operating components that cannot be repaired. Restore damaged construction and permanent facilities used during construction to specified condition.

1. Remove and replace chipped, scratched, and broken glass, reflective surfaces, and other damaged transparent materials.
2. Touch up and otherwise repair and restore marred or exposed finishes and surfaces. Replace finishes and surfaces that that already show evidence of repair or restoration.

    a. Do not paint over "UL" and other required labels and identification, including mechanical and electrical nameplates. Remove paint applied to required labels and identification.

3. Replace parts subject to operating conditions during construction that may impede operation or reduce longevity.
4. Replace burned-out bulbs, bulbs noticeably dimmed by hours of use, and defective and noisy starters in fluorescent and mercury vapor fixtures to comply with requirements for new fixtures.

END OF SECTION 017700

SECTION 017823 - OPERATION AND MAINTENANCE DATA

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for preparing operation and maintenance manuals, including the following:

1. Operation and maintenance documentation directory manuals.
2. Emergency manuals.
3. Systems and equipment operation manuals.
4. Systems and equipment maintenance manuals.
5. Product maintenance manuals.

B. Related Requirements:

1. Section 013300 "Submittal Procedures" for submitting copies of submittals for operation and maintenance manuals.
2. Section 019113 "General Commissioning Requirements" for verification and compilation of data into operation and maintenance manuals.

1.3 DEFINITIONS

A. System: An organized collection of parts, equipment, or subsystems united by regular interaction.

B. Subsystem: A portion of a system with characteristics similar to a system.

1.4 CLOSEOUT SUBMITTALS

A. Submit operation and maintenance manuals indicated. Provide content for each manual as specified in individual Specification Sections, and as reviewed and approved at the time of Section submittals. Submit reviewed manual content formatted and organized as required by this Section.

1. Architect and Commissioning Authority will comment on whether content of operation and maintenance submittals is acceptable.
2. Where applicable, clarify and update reviewed manual content to correspond to revisions and field conditions.

B. Format: Submit operation and maintenance manuals in the following format:

1. Submit in pdf format on digital media acceptable to Owner. Enable reviewer comments on draft submittals.

C. Initial Manual Submittal: Submit draft copy of each manual at least 30 days before commencing demonstration and training. Architect and Commissioning Authority will comment on whether general scope and content of manual are acceptable.

D. Final Manual Submittal: Submit each manual in final form prior to requesting inspection for Substantial Completion and at least 15 days before commencing demonstration and training. Architect and Commissioning Authority will return copy with comments.

1. Correct or revise each manual to comply with Architect's and Commissioning Authority's comments. Submit copies of each corrected manual within 15 business days of receipt of Architect's and Commissioning Authority's comments and prior to commencing demonstration and training.

E. Comply with Section 017700 "Closeout Procedures" for schedule for submitting operation and maintenance documentation.

1.5 FORMAT OF OPERATION AND MAINTENANCE MANUALS

A. Manuals, Electronic Files: Submit manuals in the form of a multiple file composite electronic PDF file for each manual type required.

1. Electronic Files: Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size.
2. File Names and Bookmarks: Bookmark individual documents based on file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a readily navigated file tree. Configure electronic manual to display bookmark panel on opening file.

1.6 REQUIREMENTS FOR EMERGENCY, OPERATION, AND MAINTENANCE MANUALS

A. Organization of Manuals: Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:

1. Title page.
2. Table of contents.
3. Manual contents.

B. Title Page: Include the following information:

1. Subject matter included in manual.
2. Name and address of Project.
3. Name and address of Owner.
4. Date of submittal.
5. Name and contact information for Contractor.
6. Name and contact information for Construction Manager.
7. Name and contact information for Architect.
8. Name and contact information for Commissioning Authority.
9. Names and contact information for major consultants to the Architect that designed the systems contained in the manuals.
10. Cross-reference to related systems in other operation and maintenance manuals.

C. Table of Contents: List each product included in manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.

1. If operation or maintenance documentation requires more than one volume to accommodate data, include comprehensive table of contents for all volumes in each volume of the set.

D. Manual Contents: Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.

E. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with same designation used in the Contract Documents. If no designation exists, assign a designation according to ASHRAE Guideline 4, "Preparation of Operating and Maintenance Documentation for Building Systems."

1.7 OPERATION AND MAINTENANCE DOCUMENTATION DIRECTORY MANUAL

A. Operation and Maintenance Documentation Directory: Prepare a separate manual that provides an organized reference to emergency, operation, and maintenance manuals. List items and their location to facilitate ready access to desired information. Include the following:

1. List of Systems and Subsystems: List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.
2. List of Equipment: List equipment for each system, organized alphabetically by system. For pieces of equipment not part of system, list alphabetically in separate list.
3. Tables of Contents: Include a table of contents for each emergency, operation, and maintenance manual.

1.8 EMERGENCY MANUALS

A. Emergency Manual: Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Owner's operating personnel for types of emergencies indicated.

B. Content: Organize manual into a separate section for each of the following:

1. Type of emergency.
2. Emergency instructions.
3. Emergency procedures.

C. Type of Emergency: Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, piece of equipment, and component:

1. Fire.
2. Flood.
3. Gas leak.
4. Water leak.
5. Power failure.
6. Water outage.
7. System, subsystem, or equipment failure.
8. Chemical release or spill.

D. Emergency Instructions: Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of Owner's operating personnel for notification of Installer, supplier, and manufacturer to maintain warranties.

E. Emergency Procedures: Include the following, as applicable:

1. Instructions on stopping.
2. Shutdown instructions for each type of emergency.
3. Operating instructions for conditions outside normal operating limits.
4. Required sequences for electric or electronic systems.
5. Special operating instructions and procedures.

1.9 SYSTEMS AND EQUIPMENT OPERATION MANUALS

A. Systems and Equipment Operation Manual: Assemble a complete set of data indicating operation of each system, subsystem, and piece of equipment not part of a system. Include information required for daily operation and management, operating standards, and routine and special operating procedures.

1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.

B. Content: In addition to requirements in this Section, include operation data required in individual Specification Sections and the following information:

1. System, subsystem, and equipment descriptions. Use designations for systems and equipment indicated on Contract Documents.
2. Performance and design criteria if Contractor has delegated design responsibility.
3. Operating standards.
4. Operating procedures.
5. Operating logs.
6. Wiring diagrams.
7. Control diagrams.
8. Piped system diagrams.
9. Precautions against improper use.
10. License requirements including inspection and renewal dates.

C. Descriptions: Include the following:

1. Product name and model number. Use designations for products indicated on Contract Documents.
2. Manufacturer's name.
3. Equipment identification with serial number of each component.
4. Equipment function.
5. Operating characteristics.
6. Limiting conditions.
7. Performance curves.
8. Engineering data and tests.
9. Complete nomenclature and number of replacement parts.

D. Operating Procedures: Include the following, as applicable:

1. Startup procedures.
2. Equipment or system break-in procedures.
3. Routine and normal operating instructions.
4. Regulation and control procedures.
5. Instructions on stopping.
6. Normal shutdown instructions.
7. Seasonal and weekend operating instructions.
8. Required sequences for electric or electronic systems.
9. Special operating instructions and procedures.

E. Systems and Equipment Controls: Describe the sequence of operation, and diagram controls as installed.

F. Piped Systems: Diagram piping as installed, and identify color coding where required for identification.

1.10 SYSTEMS AND EQUIPMENT MAINTENANCE MANUALS

A. Systems and Equipment Maintenance Manuals: Assemble a complete set of data indicating maintenance of each system, subsystem, and piece of equipment not part of a system. Include manufacturers' maintenance documentation, preventive maintenance procedures and frequency, repair procedures, wiring and systems diagrams, lists of spare parts, and warranty information.

1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.

B. Content: For each system, subsystem, and piece of equipment not part of a system, include source information, manufacturers' maintenance documentation, maintenance procedures, maintenance and service schedules, spare parts list and source information, maintenance service contracts, and warranties and bonds as described below.

C. Source Information: List each system, subsystem, and piece of equipment included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.

D. Manufacturers' Maintenance Documentation: Include the following information for each component part or piece of equipment:

1. Standard maintenance instructions and bulletins; include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.

a. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.

2. Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly.
3. Identification and nomenclature of parts and components.
4. List of items recommended to be stocked as spare parts.

E. Maintenance Procedures: Include the following information and items that detail essential maintenance procedures:

1. Test and inspection instructions.
2. Troubleshooting guide.
3. Precautions against improper maintenance.
4. Disassembly; component removal, repair, and replacement; and reassembly instructions.
5. Aligning, adjusting, and checking instructions.
6. Demonstration and training video recording, if available.

F. Maintenance and Service Schedules: Include service and lubrication requirements, list of required lubricants for equipment, and separate schedules for preventive and routine maintenance and service with standard time allotment.

1. Scheduled Maintenance and Service: Tabulate actions for daily, weekly, monthly, quarterly, semiannual, and annual frequencies.
2. Maintenance and Service Record: Include manufacturers' forms for recording maintenance.

G. Spare Parts List and Source Information: Include lists of replacement and repair parts, with parts identified and cross-referenced to manufacturers' maintenance documentation and local sources of maintenance materials and related services.

H. Maintenance Service Contracts: Include copies of maintenance agreements with name and telephone number of service agent.

I. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1. Include procedures to follow and required notifications for warranty claims.

J. Drawings: Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in record Drawings to ensure correct illustration of completed installation.

1. Do not use original project record documents as part of maintenance manuals.

1.11 PRODUCT MAINTENANCE MANUALS

A. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.

B. Content: Organize manual into a separate section for each product, material, and finish. Include source information, product information, maintenance procedures, repair materials and sources, and warranties and bonds, as described below.

C. Source Information: List each product included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.

D. Product Information: Include the following, as applicable:

1. Product name and model number.
2. Manufacturer's name.
3. Color, pattern, and texture.
4. Material and chemical composition.
5. Reordering information for specially manufactured products.

E. Maintenance Procedures: Include manufacturer's written recommendations and the following:

1. Inspection procedures.
2. Types of cleaning agents to be used and methods of cleaning.
3. List of cleaning agents and methods of cleaning detrimental to product.
4. Schedule for routine cleaning and maintenance.
5. Repair instructions.

F. Repair Materials and Sources: Include lists of materials and local sources of materials and related services.

G. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1. Include procedures to follow and required notifications for warranty claims.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 017823

SECTION 017839 - PROJECT RECORD DOCUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for the Contractor's preparation of project record documents, including the following:

1. Construction Record Drawings (formerly designated "As-Built Drawings").
2. Construction Record Specifications.
3. Construction Record Product Data.
4. Miscellaneous record submittals.

B. Related Requirements:

1. Section 017300 "Execution" for final property survey.
2. Section 017700 "Closeout Procedures" for general closeout procedures.
3. Section 017823 "Operation and Maintenance Data" for operation and maintenance manual requirements.

1.3 CLOSEOUT SUBMITTALS

A. Construction Record Drawings: Submit one set of marked-up record prints scanned in PDF electronic file format.

B. Construction Record Specifications: Submit one set of marked-up Project Specifications, including addenda and contract modifications, scanned in PDF electronic file format.

C. Construction Record Product Data: Submit annotated PDF electronic files and directories of each submittal.

D. Miscellaneous Record Submittals: See other Specification Sections for miscellaneous record-keeping requirements and submittals in connection with various construction activities. Submit annotated PDF electronic files and directories of each submittal.

E. Reports: Submit written report indicating items incorporated into project record documents concurrent with progress of the Work, including revisions, concealed conditions, field changes, product selections, and other notations incorporated.

1.4 CONSTRUCTION RECORD DRAWINGS

A. Record Prints: The Contractor shall maintain one set of marked-up paper copies of the Contract Drawings and Shop Drawings, incorporating new and revised drawings as modifications are issued.

1. Preparation: Mark record prints to show the actual installation where installation varies from that shown originally. Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to provide information for preparation of corresponding marked-up record prints.

a. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later.
b. Accurately record information in an acceptable drawing technique.
c. Record data as soon as possible after obtaining it.
d. Record and check the markup before enclosing concealed installations.
e. Cross-reference record prints to corresponding archive photographic documentation.

2. Content: Types of items requiring marking include, but are not limited to, the following:

a. Dimensional changes to Drawings.
b. Revisions to details shown on Drawings.
c. Depths of foundations.
d. Locations and depths of underground utilities.
e. Revisions to routing of piping and conduits.
f. Revisions to electrical circuitry.
g. Actual equipment locations.
h. Duct size and routing.
i. Locations of concealed internal utilities.
j. Changes made by Change Order or Architect's Supplemental Instructions (ASI).
k. Details not on the original Contract Drawings.
l. Field records for variable and concealed conditions.
m. Record information on the Work that is shown only schematically.

3. Mark the Contract Drawings and Shop Drawings completely and accurately. Use personnel proficient at recording graphic information in production of marked-up record prints.
4. Mark record sets with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at same location.
5. Mark important additional information that was either shown schematically or omitted from original Drawings.
6. Note Construction Change Directive numbers, alternate numbers, Change Order numbers, and similar identification, where applicable.
7. Format: Submit construction record drawings as scanned PDF electronic files(s) of marked-up paper copy of drawings.

B. Record Digital Data Files: Immediately before inspection for Certificate of Substantial Completion, review marked-up record prints with Architect. When authorized, prepare a full set of corrected digital data files of the Contract Drawings, as follows:

1. Format: Annotated PDF electronic file.
2. Incorporate changes and additional information previously marked on record prints. Delete, redraw, and add details and notations where applicable.
3. Refer instances of uncertainty to Architect for resolution.

1.5 CONSTRUCTION RECORD SPECIFICATIONS

A. Preparation: The Contractor shall mark Specifications to indicate the actual product installation where installation varies from that indicated in Specifications, addenda, and contract modifications.

1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
2. Mark copy with the proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.
3. Record the name of manufacturer, supplier, Installer, and other information necessary to provide a record of selections made.
4. For each principal product, indicate whether record Product Data has been submitted in operation and maintenance manuals instead of submitted as record Product Data.
5. Note related Change Orders, record Product Data, and record Drawings where applicable.

B. Format: Submit record specifications as annotated PDF electronic file.

1.6 CONSTRUCTION RECORD PRODUCT DATA

A. Preparation: The Contractor shall mark Product Data to indicate the actual product installation where installation varies substantially from that indicated in Product Data submittal.

1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
2. Include significant changes in the product delivered to Project site and changes in manufacturer's written instructions for installation.
3. Note related Change Orders, record Specifications, and record Drawings where applicable.

B. Format: Submit record Product Data as annotated PDF electronic file.

1. Include record Product Data directory organized by Specification Section number and title, electronically linked to each item of record Product Data.

1.7 MISCELLANEOUS RECORD SUBMITTALS

A. The Contractor shall assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.

B. Format: Submit miscellaneous record submittals as PDF electronic file.

1. Include miscellaneous record submittals directory organized by Specification Section number and title, electronically linked to each item of miscellaneous record submittals.

1.8 MAINTENANCE OF RECORD DOCUMENTS

A. Maintenance of Record Documents: Store record documents in the field office apart from the Contract Documents used for construction. Do not use project record documents for construction purposes. Maintain record documents in good order and in a clean, dry, legible condition, protected from deterioration and loss. Provide access to project record documents for Architect's reference during normal working hours.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION 017839

SECTION 017900 - DEMONSTRATION AND TRAINING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for instructing Owner's personnel, including the following:

1. Instruction in operation and maintenance of systems, subsystems, and equipment.
2. Demonstration and training video recordings.

1.3 INFORMATIONAL SUBMITTALS

A. Instruction Program: Submit outline of instructional program for demonstration and training, including a list of training modules and a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include learning objective and outline for each training module.

1. Indicate proposed training modules using manufacturer-produced demonstration and training video recordings for systems, equipment, and products in lieu of video recording of live instructional module.

B. Qualification Data: For instructor.

C. Attendance Record: For each training module, submit list of participants and length of instruction time.

D. Evaluations: For each participant and for each training module, submit results and documentation of performance-based test.

1.4 CLOSEOUT SUBMITTALS

A. Demonstration and Training Video Recordings: Submit two copies within seven days of end of each training module.

1. Identification: On each copy, provide an applied label with the following information:

a. Name of Project.
b. Name and address of videographer.
c. Name of Architect.
d. Name of Construction Manager.
e. Name of Contractor.
f. Date of video recording.

2. Transcript: Prepared and bound in format matching operation and maintenance manuals. Mark appropriate identification on front and spine of each binder. Include a cover sheet with same label information as the corresponding video recording. Include name of Project and date of video recording on each page.

3. Transcript: Prepared in PDF electronic format. Include a cover sheet with same label information as the corresponding video recording and a table of contents with links to corresponding training components. Include name of Project and date of video recording on each page.
4. At completion of training, submit complete training manual(s) for Owner's use prepared in same PDF file format required for operation and maintenance manuals specified in Section 017823 "Operation and Maintenance Data."

1.5 QUALITY ASSURANCE

A. Instructor Qualifications: A factory-authorized service representative, complying with requirements in Section 014000 "Quality Requirements," experienced in operation and maintenance procedures and training.

B. Preinstruction Conference: Conduct conference at Project site to comply with requirements in Section 013100 "Project Management and Coordination." Review methods and procedures related to demonstration and training including, but not limited to, the following:

1. Inspect and discuss locations and other facilities required for instruction.
2. Review and finalize instruction schedule and verify availability of educational materials, instructors' personnel, audiovisual equipment, and facilities needed to avoid delays.
3. Review required content of instruction.
4. For instruction that must occur outside, review weather and forecasted weather conditions and procedures to follow if conditions are unfavorable.

1.6 COORDINATION

A. Coordinate instruction schedule with Owner's operations. Adjust schedule as required to minimize disrupting Owner's operations and to ensure availability of Owner's personnel.

B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.

C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data have been reviewed and approved by Architect.

1.7 INSTRUCTION PROGRAM

A. Program Structure: Develop an instruction program that includes individual training modules for each system and for equipment not part of a system, as required by individual Specification Sections.

B. Training Modules: Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following as applicable to the system, equipment, or component:

1. Basis of System Design, Operational Requirements, and Criteria: Include the following:

a. System, subsystem, and equipment descriptions.
b. Performance and design criteria if Contractor is delegated design responsibility.
c. Operating standards.
d. Regulatory requirements.
e. Equipment function.
f. Operating characteristics.
g. Limiting conditions.
h. Performance curves.

2. Documentation: Review the following items in detail:

    a. Emergency manuals.
    b. Systems and equipment operation manuals.
    c. Systems and equipment maintenance manuals.
    d. Product maintenance manuals.
    e. Project Record Documents.
    f. Identification systems.
    g. Warranties and bonds.
    h. Maintenance service agreements and similar continuing commitments.

3. Emergencies: Include the following, as applicable:

    a. Instructions on meaning of warnings, trouble indications, and error messages.
    b. Instructions on stopping.
    c. Shutdown instructions for each type of emergency.
    d. Operating instructions for conditions outside of normal operating limits.
    e. Sequences for electric or electronic systems.
    f. Special operating instructions and procedures.

4. Operations: Include the following, as applicable:

    a. Startup procedures.
    b. Equipment or system break-in procedures.
    c. Routine and normal operating instructions.
    d. Regulation and control procedures.
    e. Control sequences.
    f. Safety procedures.
    g. Instructions on stopping.
    h. Normal shutdown instructions.
    i. Operating procedures for emergencies.
    j. Operating procedures for system, subsystem, or equipment failure.
    k. Seasonal and weekend operating instructions.
    l. Required sequences for electric or electronic systems.
    m. Special operating instructions and procedures.

5. Adjustments: Include the following:

    a. Alignments.
    b. Checking adjustments.
    c. Noise and vibration adjustments.
    d. Economy and efficiency adjustments.

6. Troubleshooting: Include the following:

    a. Diagnostic instructions.
    b. Test and inspection procedures.

7. Maintenance: Include the following:

    a. Inspection procedures.
    b. Types of cleaning agents to be used and methods of cleaning.
    c. List of cleaning agents and methods of cleaning detrimental to product.
    d. Procedures for routine cleaning.
    e. Procedures for preventive maintenance.
    f. Procedures for routine maintenance.
    g. Instruction on use of special tools.

8. Repairs: Include the following:

    a. Diagnosis instructions.
    b. Repair instructions.
    c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
    d. Instructions for identifying parts and components.
    e. Review of spare parts needed for operation and maintenance.

1.8 PREPARATION

A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a training manual organized in coordination with requirements in Section 017823 "Operation and Maintenance Data."

B. Set up instructional equipment at instruction location.

1.9 INSTRUCTION

A. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.

1. Architect will furnish an instructor to describe basis of system design, operational requirements, criteria, and regulatory requirements.
2. Owner will furnish an instructor to describe Owner's operational philosophy.
3. Owner will furnish Contractor with names and positions of participants.

B. Scheduling: Provide instruction at mutually agreed-on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.

1. Schedule training with Owner with at least seven days' advance notice.

C. Training Location and Reference Material: Conduct training on-site in the completed and fully operational facility using the actual equipment in-place. Conduct training using final operation and maintenance data submittals.

D. Evaluation: At conclusion of each training module, assess and document each participant's mastery of module by use of a performance-based test.

E. Cleanup: Collect used and leftover educational materials and give to Owner. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

1.10 DEMONSTRATION AND TRAINING VIDEO RECORDINGS

A. Digital Video Recordings: Provide high-resolution, digital video in MPEG format, produced by a digital camera with minimum sensor resolution of 12 megapixels and capable of recording in full HD mode.

1. Submit video recordings on CD/DVD or thumb drive.
2. File Hierarchy: Organize folder structure and file locations according to Project Manual table of contents. Provide complete screen-based menu.
3. File Names: Utilize file names based on name of equipment generally described in video segment, as identified in Project specifications.
4. Contractor and Installer Contact File: Using appropriate software, create a file for inclusion on the equipment demonstration and training recording that describes the following for each Contractor involved on the Project, arranged according to Project Manual table of contents:

a. Name of Contractor/Installer.
b. Business address.
c. Business phone number.
d. Point of contact.
e. Email address.

B. Narration: Include description of items being viewed.

C. Transcript: Provide a transcript of the narration. Display images and running time captured from videotape opposite the corresponding narration segment.

D. Preproduced Video Recordings: Provide video recordings used as a component of training modules in same format as recordings of live training.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION 017900

SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS - CALGREEN

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes general requirements and procedures for compliance with CALGreen Mandatory Requirements for new construction based on the 2016 “California Green Building Standards Code (CALGreen).”

1. Compliance with CALGreen Mandatory Measures may be used as one criterion to evaluate substitution requests and comparable product requests.

B. Related Requirements:

1. Section 017419 “Construction Waste Management” for additional construction waste management requirements.
2. Section 019113 "General Commissioning Requirements" and other Division 23 and 26 Section(s) for commissioning requirements.
3. Division 23 Section(s) for testing, adjusting, and balancing of mechanical systems and controls.
4. Division 26 Section(s) for testing and adjusting of indoor lighting and controls.
5. Specific requirements for CALGreen are included in greater detail in other Sections.

1.3 DEFINITIONS

A. CALGreen: California Code of Regulations, Title 24, Part 11, “California Green Building Standards Code,” 2016 edition.

B. Refer to CALGreen for definition of terms not given herein.

1.4 PERFORMANCE REQUIREMENTS

A. New Construction: Comply with the 2016 California Green Building Standards Code, including, but not limited to, Chapter 5 “Non-Residential Mandatory Measures,” Section 702.1 “Installer Training,” and Section 703 “Verifications.”

B. Alterations: Comply with the 2016 California Green Building Standards Code, including, but not limited to, Chapter 5 “Non-Residential Mandatory Measures,” Section 702.1 “Installer Training,” and Section 703 “Verifications.”

1.5 ADMINISTRATIVE REQUIREMENTS

A. Respond to questions and requests from Architect and the Enforcing Agency regarding CALGreen credits that are the responsibility of the Contractor, that depend on product selection or product qualities, or that depend on Contractor's procedures until the Enforcing Agency has made its determination on the project's CALGreen certification. Document responses as informational submittals.

1.6 ACTION SUBMITTALS

A. General: Submit additional CALGreen submittals required by other Specification Sections.

B. CALGreen submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated CALGreen requirements.

C. CALGreen Documentation Submittals:

1. CALGreen Section 5.408 Construction Waste Reduction, Disposal, and Recycling: Comply with Section 017419 "Construction Waste Management and Disposal."
2. CALGreen Section 5.410.2 Commissioning: A report of commissioning process activities undertaken through the design and construction phases of the project shall be completed and submitted.
3. CALGreen Section 5.410.4 Testing and Adjusting: After completion of testing, adjusting, and balancing, provide a final report of testing, signed by the individual responsible for performing these services, for the following:

    a. HVAC system and controls.
    b. Indoor lighting and controls.

4. CALGreen Section 5.410.4.5 Operation and maintenance (O&M) manual: Comply with Section 017823 “Operation and Maintenance Data.” Include a copy of all inspection verifications and reports required by the enforcing agency.
5. CALGreen Section 5.504.4.1 Adhesive, Sealants and Caulks: Product data for adhesives, sealants and caulks, indicating VOC content of each product used.
6. CALGreen Section 5.404.4.3 Paints and Coatings: Product data for paints and coatings indicating VOC content of each product used.
7. CALGreen Section 5.504.4.4 Carpet Systems: Product data for carpet systems indicating compliance with referenced standard(s).
8. CALGreen Section 5.504.4.5 Composite Wood Products: Product data for composite wood products indicating compliant formaldehyde levels.
9. CALGreen Section 5.504.4.6 Resilient Floor Systems: Product data for resilient flooring systems indicating VOC content of each product used.
10. CALGreen Section 5.508.1 Outdoor Air Quality: Product data for HVAC system, indicating refrigerant complies with referenced standards.

1.7 INFORMATIONAL SUBMITTALS

A. Action Plans: Provide preliminary submittals within 30 business days of date established for the Notice to Proceed indicating how the following requirements will be met:

1. Waste management plan complying with Section 017419 "Construction Waste Management and Disposal."
2. Material Emissions and Pollutant Control Plan: List of proposed products. Indicate each product that complies with criteria, each product that does not, and anticipated quantities of each that will be used. Include calculations showing that percentage of noncompliant products will not exceed allowable limit.

B. CALGreen Progress Reports: Concurrent with each Application for Payment, submit reports comparing actual construction and purchasing activities with CALGreen action plans for the following:

1. CALGreen Sections 5.408.1.4: Waste reduction progress reports complying with Section 017419 "Construction Waste Management and Disposal."

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Provide products and procedures necessary to comply with requirements in this Section for material selection and for material emissions and pollutant control. Although other Sections may specify some requirements for material selection and for material emissions and pollutant control, the Contractor shall provide additional materials and procedures necessary to comply with requirements.

2.2 LOW-EMITTING MATERIALS

A. CALGreen Section 5.504.4.1 Adhesives, Sealants, and Caulks:

1. Adhesives, adhesive bonding primers adhesive primers, sealants, sealant primers and caulks shall comply with local or regional air pollution control or air quality management district rules where applicable, or SCAQMD Rule 1168VOC limits, as shown in Tables 5.504.4.1 and 5.504.4.2. Such products also shall comply with the Rule 1168 prohibition on the use of certain toxic compounds (chloroform, ethylene dichloride, methylene chloride, perchloroethylene and trichloroethylene), except for aerosol products as specified below.
2. Aerosol adhesives, and smaller unit sizes of adhesives, and sealant or caulking compounds (in units of product, less packaging, which do not weigh more than one pound and do not consist of more than 16 fluid ounces) shall comply with statewide VOC standards and other requirements, including prohibitions on use of certain toxic compounds, of California Code of Regulations, Title 17, commencing with Section 94507.

B. CALGreen Section 5.404.4.3: Paints and Coatings:

1. Architectural paints and coatings shall comply with VOC limits in Table 1 of the ARB Architectural Coatings Suggested Control Measure, as shown in Table 5.504.4.3, unless more stringent local limits apply. The VOC content limit for coatings that do not meet the definitions for the specialty coatings categories listed in Table 5.504.4.3 shall be determined by classifying the coating as a Flat, Nonflat or Nonflat-High Gloss coating, based on its gloss, as defined in Subsections 4.21, 4.36 and 4.37 of the 2007 California Air Resources Board, Suggested Control Measure, and the corresponding Flat, Nonflat or Nonflat-High Gloss VOC limit in Table 5.504.4.3 shall apply.
2. Aerosol paints and coatings. Aerosol paints and coatings shall meet the PWMIR Limits for ROC in Section 94522(a)(3) and other requirements, including prohibitions on use of certain toxic compounds and ozone depleting substances, in Sections 94522(c)(2) and (d)(2) of California Code of Regulations, Title 17, commencing with Section 94520; and in areas under the jurisdiction of the Bay Area Air Quality Management District additionally comply with the percent VOC by weight of product limits of Regulation 8 Rule 49.

C. CALGreen Section 5.504.4.4 Carpet Systems:

1. All carpet installed in the building interior shall meet at least one of the following testing and product requirements:
    a. Carpet and Rug Institute's Green Label Plus Program.
    b. Compliant with the VOC-emission limits and testing requirements specified in the California Department of Public Health Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers, Version 1.1, February 2010 (also known as CDPH Standard Method VI.I or Specification 01350).
    c. NSF/ANSI 140 at the Gold level or higher.
    d. Scientific Certifications Systems Sustainable Choice.
    e. Compliant with the California Collaborative for High Performance Schools (CA-CHPS) Criteria Interpretation for EQ 2.2 dated July 2012 and listed in the CHPS High Performance Product Database.
2. All carpet cushion installed in the building interior shall meet the requirements of the Carpet and Rug Institute's Green Label program.
3. All carpet adhesive shall meet the requirements of Table 5.504.4.1.

D. CALGreen Section 5.504.4.5: Composite Wood Products:

1. Hardwood plywood, particleboard and medium density fiberboard composite wood products used on the interior or exterior of the building shall meet the requirements for formaldehyde as specified in ARB's Air Toxics Control Measure for Composite Wood (17 CCR 93120 et seq.), by or before the dates specified in those sections, as shown in CALGreen Table 5.504.4.5 in Division 5.5.

E. CALGreen Section 5.504.4.6: Resilient Flooring Systems:

1. For 80 percent of floor area receiving resilient flooring, installed resilient flooring shall meet at least one of the following:

   a. Certified under the Resilient Floor Covering Institute (RFCI) FloorScore program.
   b. Compliant with the VOC-emission limits and testing requirements specified in the California Department of Public Health's 2010 Standard Method for the Testing and Evaluation Chambers, Version 1.1, February 2010.
   c. Compliant with the California Collaborative for High Performance Schools (CA-CHPS) Criteria Interpretation for EQ 2.2 dated July 2012 and listed in the CHPS High Performance Product Database.
   d. Compliant with CDPH criteria as certified under the Greenguard Children's & Schools Program.

2. Verification of Compliance: Documentation shall be provided verifying that resilient flooring materials meet the pollutant emission limits.

PART 3 - EXECUTION

3.1 Smoking is not permitted within the building or within 25 feet of entrances, operable windows, or outdoor-air intakes.

3.2 TESTING AND ADJUSTING

A. CALGreen Section 5.410.4: Conduct testing and adjusting in compliance with Division 23 Section(s) for mechanical systems and controls and with Division 26 Section(s) for lighting systems and controls. After completion of testing, adjusting, and balancing, provide a final report of testing, signed by the individual responsible for performing these services. Submit reports to Architect/Engineer and to Authorities Having Jurisdiction.

3.3 CONSTRUCTION WASTE MANAGEMENT

A. CALGreen Sections 5.408: Comply with Section 017419 "Construction Waste Management and Disposal."

3.4 CONSTRUCTION INDOOR-AIR-QUALITY MANAGEMENT

A. CALGreen Section 5.504.1 Temporary Ventilation: The permanent HVAC system shall only be used during construction if necessary to condition additions or areas of alteration within the required temperature range for material and equipment installation. If the HVAC system is used during construction, use return air filters with a Minimum Efficiency Reporting Value (MERV) of 8, based on ASHRAE ASHRAE 52-1-1992. Replace all filters immediately prior to occupancy, or, if the building is occupied during alteration, at the conclusion of construction.

B. CALGreen Section 5.504.3 Covering of duct openings of mechanical equipment during construction: At time of rough installation and during storage on the construction site until final startup of the heating, cooling and ventilation equipment, all duct and other related air distribution component openings shall be covered with tape, plastic, sheet metal or other methods acceptable to the enforcing agency to reduce the amount of dust, water and debris which may enter the system.

END OF SECTION 018113

SECTION 024116 - STRUCTURE DEMOLITION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Demolition and removal of buildings and site work.
2. Removing below-grade construction.
3. Disconnecting, capping or sealing, and removing site utilities.
4. Salvaging items for reuse by Owner.

B. Related Requirements:

1. Section 011000 "Summary" for use of the premises and phasing requirements.
2. Section 013200 "Construction Progress Documentation" for preconstruction photographs taken before building demolition.
3. Section 017419 "Construction Waste Management and Disposal" for salvaging and recycling of materials from structure demolition.
4. Section 024119 "Selective Demolition" for partial demolition of buildings, structures, and site improvements.
5. Section 311000 "Site Clearing" for site clearing and removal of above- and below-grade site improvements not part of building demolition.

1.3 DEFINITIONS

A. Remove: Detach items from existing construction and dispose of them off-site.

B. Salvage: Salvaged items shall be removed by Owner.

1.4 MATERIALS OWNERSHIP

A. Unless otherwise indicated, demolition waste becomes property of Contractor.

1.5 PRE-DEMOLITION MEETINGS

A. Pre-Demolition Conference: Conduct conference at Project site.

1. Inspect and discuss condition of construction to be demolished.
2. Review structural load limitations of existing structures.
3. Review and finalize building demolition schedule and verify availability of demolition personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review and finalize protection requirements.
5. Review procedures for noise control and dust control.
6. Review procedures for protection of adjacent buildings.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For demolition contractor and refrigerant recovery technician.

B. Proposed Protection Measures: Submit report, including Drawings, that indicates the measures proposed for protecting individuals and property, for dust control and, for noise control. Indicate proposed locations and construction of barriers.

1. Adjacent Buildings: Detail special measures proposed to protect adjacent buildings to remain, including means of egress from those buildings.

C. Schedule of Building Demolition Activities: Indicate the following:

1. Detailed sequence of demolition work, with starting and ending dates for each activity.
2. Temporary interruption of utility services.
3. Shutoff and capping or re-routing of utility services.

D. Pre-Demolition Photographs or Video: Show existing conditions of adjoining construction and site improvements, including finish surfaces, that might be misconstrued as damage caused by demolition operations. Submit before the Work begins.

E. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.

1.7 QUALITY ASSURANCE

A. Demolition Contractor: A firm with not less than 10 years' successful experience in structure demolition similar to extent of that indicated for this Project.

B. Refrigerant Recovery Technician Qualifications: Certified by EPA-approved certification program.

1.8 FIELD CONDITIONS

A. Buildings to be demolished will be vacated and their use discontinued before start of the Work.

B. Buildings adjacent to demolition area will be occupied. Conduct building demolition so operations of occupied buildings will not be disrupted.

1. Provide not less than 72 hours' notice of activities that will affect operations of adjacent occupied buildings.
2. Maintain access to existing walkways, exits, and other facilities used by occupants of adjacent buildings.

a. Do not close or obstruct walkways, exits, or other facilities used by occupants of adjacent buildings without written permission from authorities having jurisdiction.

C. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.

D. Hazardous Materials: It is not expected that hazardous materials will be encountered in the Work.

E. On-site storage or sale of removed items or materials is not permitted.

1.9 COORDINATION

A. Arrange demolition schedule so as not to interfere with Owner's on-site operations or operations of adjacent occupied buildings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with governing federal (EPA), state, and local notification regulations before beginning demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.

B. Standards: Comply with ASSE A10.6 and NFPA 241.

2.2 SOIL MATERIALS

A. Satisfactory Soils: Comply with requirements in Section 312000 "Earth Moving."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that utilities have been disconnected and capped before starting demolition operations.

B. Review Project Record Documents of existing construction or other existing condition and hazardous material information provided by Owner. Owner does not guarantee that existing conditions are same as those indicated in Project Record Documents.

C. Perform an engineering survey of condition of building to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of structure or adjacent structures during building demolition operations.

3.2 PREPARATION

A. Refrigerant: Before starting demolition, remove refrigerant from mechanical equipment according to 40 CFR 82 and regulations of authorities having jurisdiction.

3.3 UTILITY SERVICES AND MECHANICAL/ELECTRICAL SYSTEMS

A. Existing Utilities to be Disconnected: Locate, identify, disconnect, and seal or cap off utilities serving buildings and structures to be demolished.

1. Owner will arrange to shut off utilities when requested by Contractor.
2. Arrange to shut off utilities with utility companies.
3. If removal, relocation, or abandonment of utility services will affect adjacent occupied buildings, then provide temporary utilities that bypass buildings and structures to be demolished and that maintain continuity of service to other buildings and structures.
4. Cut off pipe or conduit at a depth of at least 24 inches below depth of new improvements, but no less than minimum 24 inches below grade. Cap, valve, or plug and seal remaining portion of pipe or conduit after bypassing according to requirements of authorities having jurisdiction.
5. Do not start demolition work until utility disconnecting and sealing have been completed and verified in writing.

3.4 PROTECTION

A. Existing Facilities: Protect existing adjacent facilities indicated to remain during demolition operations. Maintain exits from existing buildings.

B. Temporary Shoring: Provide and maintain interior and exterior shoring, bracing, or structural support to preserve stability and prevent unexpected movement or collapse of construction being demolished.

1. Strengthen or add new supports when required during progress of demolition.

C. Existing Utilities to Remain: Maintain utility services to remain and protect from damage during demolition operations.

1. Do not interrupt existing utilities serving adjacent occupied or operating facilities unless authorized in writing by Owner and authorities having jurisdiction.
2. Provide temporary services during interruptions to existing utilities, as acceptable to Owner and authorities having jurisdiction.

a. Provide at least 72 hours' notice to occupants of affected buildings if shutdown of service is required during changeover.

D. Temporary Protection: Erect temporary protection, such as walks, fences, railings, canopies, and covered passageways, where required by authorities having jurisdiction and as indicated. Comply with requirements in Section 015000 "Temporary Facilities and Controls."

1. Protect adjacent buildings and facilities from damage due to demolition activities.
2. Protect existing site improvements, appurtenances, and landscaping to remain.
3. Erect a plainly visible fence around drip line of individual trees or around perimeter drip line of groups of trees to remain.
4. Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.
5. Provide protection to ensure safe passage of people around building demolition area and to and from occupied portions of adjacent buildings and structures.
6. Protect walls, windows, roofs, and other adjacent exterior construction that are to remain and that are exposed to building demolition operations.
7. Erect and maintain dustproof partitions and temporary enclosures to limit dust, noise, and dirt migration to occupied portions of adjacent buildings.

E. Remove temporary barriers and protections where hazards no longer exist. Where open excavations or other hazardous conditions remain, leave temporary barriers and protections in place.

3.5 DEMOLITION, GENERAL

A. General: Demolish indicated buildings and site improvements completely. Use methods required to complete the Work within limitations of governing regulations and as follows:

1. Do not use cutting torches until work area is cleared of flammable materials. Maintain portable fire-suppression devices during flame-cutting operations.
2. Maintain fire watch personnel during and after flame-cutting operations.
3. Maintain adequate ventilation when using cutting torches.
4. Locate building demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.

B. Site Access and Temporary Controls: Conduct building demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.

1. Do not close or obstruct streets, walks, walkways, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed trafficways if required by authorities having jurisdiction.
2. Use water mist and other suitable methods to limit spread of dust and dirt. Comply with governing environmental-protection regulations. Do not use water when it may damage adjacent construction or create hazardous or objectionable conditions, such as ice, flooding, and pollution.

C. Explosives: Use of explosives is not permitted.

3.6 DEMOLITION BY MECHANICAL MEANS

A. Proceed with demolition of structural framing members systematically, from higher to lower level. Complete building demolition operations above each floor or tier before disturbing supporting members on the next lower level.

B. Remove debris from elevated portions of the building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.

1. Remove structural framing members and lower to ground by method suitable to minimize ground impact and dust generation.

C. Below-Grade Construction: Unless otherwise indicated, demolish foundation walls and other below-grade construction in accordance with the following:

1. Within footprint of new construction and extending 5 feet outside footprint indicated for new construction:

a. Remove completely all below-grade construction, including foundation walls, grade beams, footings, and conduits/pipes.

2. Elsewhere:

a. Remove all below-grade construction, including foundation walls, grade beams, and footings to depths indicated, or if not indicated, to a depth of at least 12 inches below new construction, but no less than 12 inches below grade.

D. Existing Utilities: Unless otherwise indicated, demolish and completely remove existing utilities and below-grade utility structures no longer proposed for use.

E. Hydraulic Elevator Systems: Demolish and remove elevator system, including cylinder, plunger, well assembly, steel well casing and liner, oil supply lines, and tanks.

3.7 SITE RESTORATION

A. Below-Grade Areas: Completely fill below-grade areas and voids resulting from building demolition operations with satisfactory soil materials according to backfill requirements in Section 312000 "Earth Moving."

B. Site Grading: Uniformly rough grade area of demolished construction to a smooth surface, free from irregular surface changes. Provide a smooth transition between adjacent existing grades and new grades.

3.8 REPAIRS

A. Promptly repair damage to adjacent buildings caused by demolition operations.

3.9 DISPOSAL OF DEMOLISHED MATERIALS

A. Remove demolition waste materials from Project site and dispose of them in an EPA-approved construction and demolition waste landfill acceptable to authorities having jurisdiction. and recycle or dispose of them according to Section 017419 "Construction Waste Management and Disposal."

1. Do not allow demolished materials to accumulate on-site.
2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.

B. Do not burn demolished materials.

3.10 CLEANING

A. Clean adjacent structures and improvements of dust, dirt, and debris caused by building demolition operations. Return adjacent areas to condition existing before building demolition operations began.

1. Clean roadways of debris caused by debris transport.

END OF SECTION 024116

SECTION 024119 - SELECTIVE DEMOLITION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Demolition and removal of selected portions of building or structure.
2. Demolition and removal of selected site elements.

B. Related Requirements:

1. Section 011000 "Summary" for restrictions on use of the premises, Owner-occupancy requirements, and phasing requirements.
2. Section 017300 "Execution" for cutting and patching procedures.
3. Section 017419 "Construction Waste Management and Disposal" for salvaging and recycling selective demolition material.
4. Section 013516 "Alteration Project Procedures" for general protection and work procedures for alteration projects.
5. Section 024116 "Structure Demolition" for demolition of existing buildings, structures, and associated site improvements.
6. Section 311000 "Site Clearing" for site clearing and removal of above- and below-grade improvements not part of selective demolition.

1.3 DEFINITIONS

A. Remove: Detach items from existing construction and dispose of them off-site unless indicated to be reinstalled.

B. Remove and Reinstall: Detach items from existing construction, in a manner to prevent damage, prepare for reuse, and reinstall where indicated.

C. Existing to Remain: Leave existing items that are not to be removed and that are not otherwise indicated to be reinstalled.

D. Dismantle: To remove by disassembling or detaching an item from a surface, using gentle methods and equipment to prevent damage to the item and surfaces; disposing of items unless indicated to be reinstalled.

E. Salvage: Salvaged items shall be removed by Owner.

1.4 MATERIALS OWNERSHIP

A. Unless otherwise indicated, demolition waste becomes property of Contractor.

1.5 PRE-DEMOLITION MEETINGS

A. Pre-Demolition Conference: Conduct conference at Project site.

1. Inspect and discuss condition of construction to be selectively demolished.
2. Review structural load limitations of existing structure.
3. Review and finalize selective demolition schedule and verify availability of materials, demolition personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review requirements of work performed by other trades that rely on substrates exposed by selective demolition operations.
5. Review areas where existing construction is to remain and requires protection.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For demolition contractor and refrigerant recovery technician.

B. Proposed Protection Measures: Submit report, including Drawings, that indicates the measures proposed for protecting individuals and property, for environmental protection, for dust control and, for noise control. Indicate proposed locations and construction of barriers.

C. Schedule of Selective Demolition Activities: Indicate the following:

1. Detailed sequence of selective demolition and removal work, with starting and ending dates for each activity. Ensure Owner's on-site operations are uninterrupted.
2. Interruption of utility services. Indicate how long utility services will be interrupted.
3. Coordination for shutoff, capping, and continuation of utility services.
4. Coordination of Owner's continuing occupancy of portions of existing building and of Owner's partial occupancy of completed Work.

D. Pre-Demolition Photographs or Video: Show existing conditions of adjoining construction, including finish surfaces, that might be misconstrued as damage caused by demolition operations. Submit before Work begins.

E. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.

F. Warranties: Documentation indicating that existing warranties are still in effect after completion of selective demolition.

1.7 QUALITY ASSURANCE

A. Demolition Contractor: A firm with not less than 10 years' successful experience in selective demolition similar to extent of that indicated for this Project.

B. Refrigerant Recovery Technician Qualifications: Certified by an EPA-approved certification program.

1.8 FIELD CONDITIONS

A. Owner will occupy portions of building immediately adjacent to selective demolition area. Conduct selective demolition so Owner's operations will not be disrupted.

B. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.

C. Notify Architect of discrepancies between existing conditions and Drawings before proceeding with selective demolition.

D. Hazardous Materials: It is not expected that hazardous materials will be encountered in the Work.

E. Storage or sale of removed items or materials on-site is not permitted.

F. Utility Service: Maintain existing utilities indicated to remain in service and protect them against damage during selective demolition operations.

1. Maintain fire-protection facilities in service during selective demolition operations.

1.9 WARRANTY

A. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during selective demolition, by methods and with materials and using approved contractors so as not to void existing warranties. Notify warrantor before proceeding. Existing warranties include the following:

B. Notify warrantor on completion of selective demolition, and obtain documentation verifying that existing system has been inspected and warranty remains in effect. Submit documentation at Project closeout.

1.10 COORDINATION

A. Arrange selective demolition schedule so as not to interfere with Owner's operations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with governing EPA notification regulations before beginning selective demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.

B. Standards: Comply with ASSE A10.6 and NFPA 241.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that utilities have been disconnected and capped before starting selective demolition operations.

B. Review Project Record Documents of existing construction or other existing condition and hazardous material information provided by Owner. Owner does not guarantee that existing conditions are same as those indicated in Project Record Documents.

C. Engage a professional engineer to perform an engineering survey of condition of building to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of structure or adjacent structures during selective building demolition operations.

1. Perform surveys as the Work progresses to detect hazards resulting from selective demolition activities.

D. Survey of Existing Conditions: Record existing conditions by use of measured drawings and preconstruction photographs or video.

1. Before selective demolition or removal of existing building elements that will be reproduced or duplicated in final Work, make permanent record of measurements, materials, and construction details required to make exact reproduction.

3.2 PREPARATION

A. Refrigerant: Before starting demolition, remove refrigerant from mechanical equipment according to 40 CFR 82 and regulations of authorities having jurisdiction.

3.3 UTILITY SERVICES AND MECHANICAL/ELECTRICAL SYSTEMS

A. Existing Services/Systems to Remain: Maintain services/systems indicated to remain and protect them against damage.

B. Existing Services/Systems to Be Removed, Relocated, or Abandoned: Locate, identify, disconnect, and seal or cap off utility services and mechanical/electrical systems serving areas to be selectively demolished.

1. Owner will arrange to shut off indicated services/systems when requested by Contractor.
2. Arrange to shut off utilities with utility companies.
3. If services/systems are required to be removed, relocated, or abandoned, provide temporary services/systems that bypass area of selective demolition and that maintain continuity of services/systems to other parts of building.
4. Disconnect, demolish, and remove fire-suppression systems, plumbing, and HVAC systems, equipment, and components indicated on Drawings to be removed.

    a. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
    b. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material and leave in place.
    c. Equipment to Be Removed: Disconnect and cap services and remove equipment.
    d. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
    e. Ducts to Be Removed: Remove portion of ducts indicated to be removed and plug remaining ducts with same or compatible ductwork material.
    f. Ducts to Be Abandoned in Place: Cap or plug ducts with same or compatible ductwork material and leave in place.

3.4 PROTECTION

A. Temporary Protection: Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.

1. Provide protection to ensure safe passage of people around selective demolition area and to and from occupied portions of building.
2. Provide temporary weather protection, during interval between selective demolition of existing construction on exterior surfaces and new construction, to prevent water leakage and damage to structure and interior areas.
3. Protect walls, ceilings, floors, and other existing finish work that are to remain or that are exposed during selective demolition operations.
4. Cover and protect furniture, furnishings, and equipment that have not been removed.
5. Comply with requirements for temporary enclosures, dust control, heating, and cooling specified in Section 015000 "Temporary Facilities and Controls."

B. Temporary Shoring: Design, provide, and maintain shoring, bracing, and structural supports as required to preserve stability and prevent movement, settlement, or collapse of construction and finishes to remain, and to prevent unexpected or uncontrolled movement or collapse of construction being demolished.

1. Strengthen or add new supports when required during progress of selective demolition.

C. Remove temporary barricades and protections where hazards no longer exist.

3.5 SELECTIVE DEMOLITION, GENERAL

A. General: Demolish and remove existing construction only to the extent required by new construction and as indicated. Use methods required to complete the Work within limitations of governing regulations and as follows:

1. Proceed with selective demolition systematically, from higher to lower level. Complete selective demolition operations above each floor or tier before disturbing supporting members on the next lower level.
2. Neatly cut openings and holes plumb, square, and true to dimensions required. Use cutting methods least likely to damage construction to remain or adjoining construction. Use hand tools or small power tools designed for sawing or grinding, not hammering and chopping. Temporarily cover openings to remain.
3. Cut or drill from the exposed or finished side into concealed surfaces to avoid marring existing finished surfaces.
4. Do not use cutting torches until work area is cleared of flammable materials. At concealed spaces, such as duct and pipe interiors, verify condition and contents of hidden space before starting flame-cutting operations. Maintain portable fire-suppression devices during flame-cutting operations.
5. Maintain fire watch during and after flame-cutting operations.
6. Maintain adequate ventilation when using cutting torches.
7. Remove decayed, vermin-infested, or otherwise dangerous or unsuitable materials and promptly dispose of off-site.
8. Remove structural framing members and lower to ground by method suitable to avoid free fall and to prevent ground impact or dust generation.
9. Locate selective demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.
10. Dispose of demolished items and materials promptly. Comply with requirements in Section 017419 "Construction Waste Management and Disposal."

B. Site Access and Temporary Controls: Conduct selective demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.

C. Removed and Reinstalled Items:

1. Clean and repair items to functional condition adequate for intended reuse.
2. Pack or crate items after cleaning and repairing. Identify contents of containers.
3. Protect items from damage during transport and storage.
4. Reinstall items in locations indicated. Comply with installation requirements for new materials and equipment. Provide connections, supports, and miscellaneous materials necessary to make item functional for use indicated.

D. Existing Items to Remain: Protect construction indicated to remain against damage and soiling during selective demolition. When permitted by Architect, items may be removed to a suitable, protected storage location during selective demolition and cleaned and reinstalled in their original locations after selective demolition operations are complete.

3.6 SELECTIVE DEMOLITION PROCEDURES FOR SPECIFIC MATERIALS

A. Concrete: Demolish in small sections. Using power-driven saw, cut concrete to a depth of at least 3/4 inch at junctures with construction to remain. Dislodge concrete from reinforcement at perimeter of areas being demolished, cut reinforcement, and then remove remainder of concrete. Neatly trim openings to dimensions indicated.

B. Masonry: Demolish in small sections. Cut masonry at junctures with construction to remain, using power-driven saw, and then remove masonry between saw cuts.

C. Concrete Slabs-on-Grade: Saw-cut perimeter of area to be demolished, and then break up and remove.

D. Resilient Floor Coverings: Remove floor coverings and adhesive according to recommendations in RFCI's "Recommended Work Practices for the Removal of Resilient Floor Coverings." Do not use methods requiring solvent-based adhesive strippers.

E. Roofing: Remove no more existing roofing than what can be covered in one day by new roofing and so that building interior remains watertight and weathertight.

1. Remove existing roof membrane, flashings, copings, and roof accessories.
2. Remove existing roofing system down to substrate.

3.7 DISPOSAL OF DEMOLISHED MATERIALS

A. Remove demolition waste materials from Project site and recycle or dispose of them according to Section 017419 "Construction Waste Management and Disposal."

1. Do not allow demolished materials to accumulate on-site.
2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
3. Remove debris from elevated portions of building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.
4. Comply with requirements specified in Section 017419 "Construction Waste Management and Disposal."

B. Burning: Do not burn demolished materials.

3.8 CLEANING

A. Clean adjacent structures and improvements of dust, dirt, and debris caused by selective demolition operations. Return adjacent areas to condition existing before selective demolition operations began.

END OF SECTION 024119

SECTION 033000 - CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes cast-in-place concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures, and finishes.

B. Related Requirements:

1. Section 033300 "Architectural Concrete" for general building applications of specially finished formed concrete.
2. Section 312000 "Earth Moving" for drainage fill under slabs-on-grade.
3. Section 321313 "Concrete Paving" for concrete pavement and walks.
4. Section 321316 "Decorative Concrete Paving" for decorative concrete pavement and walks.

1.3 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash, slag cement, other pozzolans, and silica fume; materials subject to compliance with requirements.

B. W/C Ratio: The ratio by weight of water to cementitious materials.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:

a. Contractor's superintendent.
b. Independent testing agency responsible for concrete design mixtures.
c. Ready-mix concrete manufacturer.
d. Concrete Subcontractor.
e. Special concrete finish Subcontractor.

2. Review special inspection and testing and inspecting agency procedures for field quality control, concrete finishes and finishing, cold- and hot-weather concreting procedures, curing procedures, construction contraction and isolation joints, and joint-filler strips, semirigid joint fillers, forms and form removal limitations, vapor-retarder installation, anchor rod and anchorage device installation tolerances, steel reinforcement installation, methods for achieving specified floor and slab flatness, concrete repair procedures, and concrete protection.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: For liquid floor treatments, statement of VOC content.

C. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

1. Indicate amounts of mixing water to be withheld for later addition at Project site.

D. Steel Reinforcement Shop Drawings: Placing Drawings that detail fabrication, bending, and placement. Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hoop spacing, and supports for concrete reinforcement.

E. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.

1. Location of construction joints is subject to approval of the Architect.
2. Coordinate construction joint locations with drain locations.
3. Coordinate construction joint locations with ceramic tile control joint locations.

F. Samples: For waterstops, vapor barrier, and vapor barrier accessories.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer and manufacturer.

B. Welding certificates.

C. Material Certificates: For each of the following, signed by manufacturers:

1. Cementitious materials.
2. Admixtures.
3. Form materials and form-release agents.
4. Steel reinforcement and accessories.
5. Fiber reinforcement.
6. Waterstops.
7. Curing compounds.
8. Floor and slab treatments.
9. Bonding agents.
10. Adhesives.
11. Vapor retarders.
12. Semirigid joint filler.
13. Joint-filler strips.
14. Repair materials.

D. Material Test Reports: For the following, from a qualified testing agency:

1. Aggregates: Include service record data indicating absence of deleterious expansion of concrete due to alkali aggregate reactivity.

E. Formwork Shop Drawings: Prepared by or under the supervision of a qualified professional engineer, detailing fabrication, assembly, and support of formwork.

1. Shoring and Reshoring: Indicate proposed schedule and sequence of stripping formwork, shoring removal, and reshoring installation and removal.

F. Floor surface flatness and levelness measurements indicating compliance with specified tolerances.

G. Field quality-control reports.

H. Minutes of preinstallation conference.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs on Project personnel qualified as ACI-certified Flatwork Technician and Finisher and a supervisor who is an ACI-certified Concrete Flatwork Technician.

B. Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

C. Welding Qualifications: Qualify procedures and personnel according to AWS D1.4.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage.

B. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

1.9 FIELD CONDITIONS

A. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.

1. When average high and low temperature is expected to fall below 40 deg F for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.

B. Hot-Weather Placement: Comply with ACI 301 and as follows:

1. Maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

1.10 SEQUENCING

A. Coordinate layout of cold construction joints with the following:

1. Atrium: No cold construction joints in field of atrium floor.
2. Ceramic Tile Floors: Coordinated layout of cold construction joints with ceramic tile control joints.
3. Elsewhere: Coordinate with finished flooring requirements to minimize visual impact of seams in floor areas exposed to view.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:

1. ACI 301.
2. ACI 117.

2.2 FORM-FACING MATERIALS

A. Source Limitations: Obtain each type form-facing material from single source from single manufacturer.

B. Form-Facing Panels (For Cast-In-Place Concrete Exposed to View): Steel- and glass-fiber-reinforced plastic, or other approved nonabsorptive panel materials that provide continuous, true, and smooth concrete surfaces matching design reference sample and approved mockups. Furnish in largest practicable sizes to minimize number of joints.

1. Form Liners: Units of face design, texture, arrangement, and configuration to match design reference sample and approved mockups. Furnish with manufacturer's recommended liquid-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent surface treatments of concrete.

C. Smooth-Formed Finished Concrete (For Concrete Not Exposed to View): Form-facing panels that provide continuous, true, and smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.

1. Plywood, metal, or other approved panel materials.
2. Exterior-grade plywood panels, suitable for concrete forms, complying with DOC PS 1, and as follows:

a. High-density overlay, Class 1 or better.
b. Medium-density overlay, Class 1 or better; mill-release agent treated and edge sealed.
c. Structural 1, B-B or better; mill oiled and edge sealed.
d. B-B (Concrete Form), Class 1 or better; mill oiled and edge sealed.

3. Overlaid Finnish birch plywood.

D. Rough-Formed Finished Concrete: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.

E. Forms for Cylindrical Columns, Pedestals, and Supports: Metal, glass-fiber-reinforced plastic, paper, or fiber tubes that produce surfaces with gradual or abrupt irregularities not exceeding specified formwork surface class. Provide units with sufficient wall thickness to resist plastic concrete loads without detrimental deformation.

F. Pan-Type Forms: Glass-fiber-reinforced plastic or formed steel, stiffened to resist plastic concrete loads without detrimental deformation.

G. Void Forms: Biodegradable paper surface, treated for moisture resistance, structurally sufficient to support weight of plastic concrete and other superimposed loads.

H. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4 by 3/4 inch, minimum.

I. Rustication Strips: Wood, metal, PVC, or rubber strips, kerfed for ease of form removal.

J. Form-Release Agent: Commercially formulated form-release agent that does not bond with, stain, or adversely affect concrete surfaces and does not impair subsequent treatments of concrete surfaces.

1. Formulate form-release agent with rust inhibitor for steel form-facing materials.

K. Form Ties: Factory-fabricated, removable or snap-off glass-fiber-reinforced plastic or metal form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

1. Furnish units that leave no corrodible metal closer than 1 inch to the plane of exposed concrete surface.
2. Furnish ties that, when removed, leave holes no larger than 1 inch in diameter in concrete surface.
3. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

2.3 STEEL REINFORCEMENT

A. Reinforcing Bars: ASTM A 615, Grade 60, deformed.

B. Low-Alloy-Steel Reinforcing Bars: ASTM A 706, deformed.

C. Deformed-Steel Wire: ASTM A 1064.

D. Plain-Steel Welded-Wire Reinforcement: ASTM A 1064, plain, fabricated from as-drawn steel wire into flat sheets.

E. Deformed-Steel Welded-Wire Reinforcement: ASTM A 1064, flat sheet.

2.4 REINFORCEMENT ACCESSORIES

A. Joint Dowel Bars: ASTM A 615/A 615M, Grade 60, plain-steel bars, cut true to length with ends square and free of burrs.

B. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire reinforcement in place. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete and as follows:

1. For concrete surfaces exposed to view, where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.

2.5 CONCRETE MATERIALS

A. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.

B. Cementitious Materials:

1. Portland Cement: ASTM C 150, Type I/II.
2. Fly Ash: ASTM C 618, Class F.
3. Blended Hydraulic Cement: ASTM C 595, Type IP, portland-pozzolan cement.

C. Normal-Weight Aggregates: ASTM C 33.

1. Maximum Coarse-Aggregate Size: 1 inch nominal.
2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

D. Lightweight Aggregate: ASTM C 330, 1-inch nominal maximum aggregate size.

E. Air-Entraining Admixture: ASTM C 260.

F. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and that do not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.

1. Water-Reducing Admixture: ASTM C 494, Type A.
2. Retarding Admixture: ASTM C 494, Type B.
3. Water-Reducing and Retarding Admixture: ASTM C 494, Type D.
4. High-Range, Water-Reducing Admixture: ASTM C 494, Type F.
5. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494, Type G.
6. Plasticizing and Retarding Admixture: ASTM C 1017, Type II.
7. Shrinking Reducing Admixture: ASTM C 494, Type S.

G. Water: ASTM C 94 and potable.

2.6 FIBER REINFORCEMENT

A. Synthetic Micro-Fiber: Micro-fibers engineered and designed for use in concrete, complying with ASTM C 1116, Type III, 1/2 inches long.

1. Basis-of-Design Products: Subject to compliance with requirements, provide the following:

a. Propex Concrete Systems: “Fibermesh 150.”
b. Or Comparable Equal.

2.7 WATERSTOPS

A. Self-Expanding Butyl Strip Waterstops: Manufactured rectangular or trapezoidal strip, butyl rubber with sodium bentonite or other hydrophilic polymers, for adhesive bonding to concrete, 3/4 by 1 inch.

2.8 VAPOR RETARDERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

1. Stego Industries, LLC; Stego Wrap, 15 mils.

Or a comparable product by the following:

2. Reef Industries, Inc.; Griffolyn 15 mil Green.

B. Sheet Vapor Barrier Performance Requirements:

1. Permeance: Less than 0.01 perms per ASTM E 1745.
2. Strength: Class A per ASTM E 1745.
3. Thickness: 15 mils minimum.
4. Include manufacturer’s accessories, including, but not limited to, adhesives, pressure-sensitive tape, mastic, termination bars, and double-sided tape.

2.9 DRAINAGE COURSE

A. As recommended in project geotechnical report.

2.10 LIQUID FLOOR TREATMENTS

A. Penetrating Liquid Floor Treatment: Clear, chemically reactive, waterborne solution of inorganic silicate or siliconate materials and proprietary components; odorless; that penetrates, hardens, and densifies concrete surfaces.

1. Products: Subject to compliance with requirements, available product that shall be incorporated into the Work include, but are not limited to, the following:

a. Meadows, W. R., Inc.; LIQUI-HARD.
b. Dayton Superior Corporation; Day-Chem Sure Hard (J-17).
c. Euclid Chemical Company (The), an RPM company; Euco Diamond Hard.
d. Or Equal.

2. Sealers shall have a VOC content of 100 g/L or less.

2.11 CURING MATERIALS

A. Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.

B. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry.

C. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.

D. Water: Potable.

E. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B, dissipating.

2.12 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber or ASTM D 1752, cork or self-expanding cork.

B. Bonding Agent: ASTM C 1059, Type II, nonredispersible, acrylic emulsion or styrene butadiene.

C. Epoxy Bonding Adhesive: ASTM C 881, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements, and as follows:

1. Types I and II, nonload bearing and Types IV and V, load bearing, for bonding hardened or freshly mixed concrete to hardened concrete.

2.13 REPAIR MATERIALS

A. Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 inch and that can be feathered at edges to match adjacent floor elevations.

1. Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
2. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by underlayment manufacturer.
4. Compressive Strength: Not less than 4100 psi at 28 days when tested according to ASTM C 109.

B. Repair Overlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/4 inch and that can be filled in over a scarified surface to match adjacent floor elevations.

1. Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
2. Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by topping manufacturer.
4. Compressive Strength: Not less than 5000 psi at 28 days when tested according to ASTM C 109.

2.14 CONCRETE MIXTURES, GENERAL

A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.

1. Use a qualified independent testing agency for preparing and reporting proposed mixture designs based on laboratory trial mixtures.

B. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than portland cement in concrete as indicated.

C. Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use water-reducing, high-range water-reducing, or plasticizing admixture in concrete, as required, for placement and workability.
2. Use water-reducing and -retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.
3. Use water-reducing admixture in pumped concrete, concrete for heavy-use industrial slabs and parking structure slabs, concrete required to be watertight, and concrete with a w/c ratio as indicated.
4. Use corrosion-inhibiting admixture in concrete mixtures where indicated.

2.15 CONCRETE MIXTURES FOR BUILDING ELEMENTS

A. Footings: Normal-weight concrete.

1. Minimum Compressive Strength: As indicated at 28 days.
2. Maximum W/C Ratio: As indicated.
3. Slump Limit: As indicated.

B. Foundation Walls: Normal-weight concrete.

1. Minimum Compressive Strength: As indicated at 28 days.
2. Maximum W/C Ratio: As indicated.
3. Slump Limit: As indicated.
4. Air Content: As indicated

C. Slabs-on-Grade: Normal-weight concrete.

1. Minimum Compressive Strength: As indicated at 28 days.
2. Maximum W/C Ratio: As indicated.
3. Slump Limit: As indicated.
4. Air Content: As indicated.
5. Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.

D. Suspended Slabs: Normal-weight concrete.

1. Minimum Compressive Strength: As indicated at 28 days.
2. Maximum W/C Ratio: As indicated.
3. Slump Limit: As indicated.
4. Air Content: As indicated.
5. Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.
6. Synthetic Micro-Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than a rate of 1.5 lb/cu. yd.

E. Concrete Toppings: Normal-weight concrete.

1. Minimum Compressive Strength: As indicated at 28 days.
2. Slump Limit: As indicated.
3. Air Content: As indicated.
4. Air Content: Do not allow air content of trowel-finished toppings to exceed 3 percent.

F. Building Frame Members: Normal-weight concrete.

1. Minimum Compressive Strength: As indicated at 28 days.
2. Maximum W/C Ratio: As indicated.
3. Slump Limit: As indicated. 8 inches for concrete with verified slump of 4 inches before adding high-range water-reducing admixture or plasticizing admixture.
4. Air Content: As indicated.

G. Building Walls: Normal-weight concrete.

1. Minimum Compressive Strength: As indicated at 28 days.
2. Maximum W/C Ratio: As indicated.
3. Slump Limit: As indicated.
4. Air Content: As indicated.

2.16 FABRICATING REINFORCEMENT

A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

2.17 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94, and furnish batch ticket information.

1. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

B. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C 94. Mix concrete materials in appropriate drum-type batch machine mixer.

1. For mixer capacity of 1 cu. yd. or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
2. For mixer capacity larger than 1 cu. yd., increase mixing time by 15 seconds for each additional 1 cu. yd..
3. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixture time, quantity, and amount of water added. Record approximate location of final deposit in structure.

PART 3 - EXECUTION

3.1 FORMWORK INSTALLATION

A. Design, erect, shore, brace, and maintain formwork, according to ACI 301, to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads.

B. Construct formwork so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117.

C. Limit concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:

1. Class A, 1/8 inch for smooth-formed finished surfaces.
2. Class B, 1/4 inch for rough-formed finished surfaces.

D. Construct forms tight enough to prevent loss of concrete mortar.

E. Construct forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast-concrete surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.

1. Install keyways, reglets, recesses, and the like, for easy removal.
2. Do not use rust-stained steel form-facing material.

F. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces. Provide and secure units to support screed strips; use strike-off templates or compacting-type screeds.

G. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.

H. Chamfer exterior corners and edges of permanently exposed concrete, unless otherwise noted in the structural or architectural drawings.

I. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.

J. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

K. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

L. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.

M. For Concrete Exposed to View:

1. Place form-facing materials and form liners accurately to provide finished surface texture indicated. Provide solid backing and attach securely to prevent deflection and maintain stability of liners during concreting. Prevent form liners from sagging and stretching in hot weather. Seal joints of form liners and form-liner accessories to prevent mortar leaks. Coat form liner with form-release agent.

3.2 EMBEDDED ITEM INSTALLATION

A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

1. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC 303.
2. Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.
3. Install dovetail anchor slots in concrete structures as indicated.

3.3 REMOVING AND REUSING FORMS

A. Leave formwork for beam soffits, joists, slabs, and other structural elements that support weight of concrete in place until concrete has achieved at least 75 percent of its 28-day design compressive strength.

B. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.

C. Clean and repair surfaces of forms to be reused in the Work. Split, frayed, delaminated, or otherwise damaged form-facing material are not acceptable for exposed surfaces. Apply new form-release agent.

D. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for exposed concrete surfaces unless approved by Architect.

3.4 SHORING AND RESHORING INSTALLATION

A. Comply with ACI 318 and ACI 301 for design, installation, and removal of shoring and reshoring.

1. Do not remove shoring or reshoring until measurement of slab tolerances is complete.

B. In multistory construction, extend shoring or reshoring over a sufficient number of stories to distribute loads in such a manner that no floor or member will be excessively loaded or will induce tensile stress in concrete members without sufficient steel reinforcement.

C. Plan sequence of removal of shores and reshore to avoid damage to concrete. Locate and provide adequate reshoring to support construction without excessive stress or deflection.

3.5 VAPOR-RETARDER INSTALLATION

A. Sheet Vapor Retarders: Place, protect, and repair sheet vapor retarder according to ASTM E 1643 and manufacturer's written instructions.

1. Lap joints 6 inches and seal with manufacturer's recommended tape.
2. Seal all penetrations per manufacturer’s written instructions.
3. Extend vapor barrier to the perimeter of the slab. Seal vapor barrier to entire perimeter wall of footing/grade beam in accordance with manufacturer’s written instructions.
4. Repair damaged areas with vapor barrier material and seal.

3.6 STEEL REINFORCEMENT INSTALLATION

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

1. Do not cut or puncture vapor retarder. Repair damage and reseal vapor retarder before placing concrete.

B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that reduce bond to concrete.

C. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcement with bar supports to maintain minimum concrete cover. Do not tack weld crossing reinforcing bars.

1. Weld reinforcing bars according to AWS D1.4, where indicated.

D. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

E. Install welded-wire reinforcement in longest practicable lengths on bar supports spaced to minimize sagging. Lap edges and ends of adjoining sheets at least one mesh spacing. Offset laps of adjoining sheet widths to prevent continuous laps in either direction. Lace overlaps with wire.

3.7 JOINTS

A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.

B. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.

1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of strip placements of floors and slabs.
2. Form keyed joints as indicated. Embed keys at least 1-1/2 inches into concrete.
3. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
4. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
5. Space vertical joints in walls as indicated. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
6. Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
7. Use epoxy-bonding adhesive at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.

C. Contraction Joints in Slabs-on-Grade: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fifth of concrete thickness as follows:

1. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint to a radius of 1/8 inch. Repeat grooving of contraction joints after applying surface finishes. Eliminate groover tool marks on concrete surfaces.
2. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch-wide joints into concrete when cutting action does not tear, abrade, or otherwise damage surface and before concrete develops random contraction cracks.
3. Coordinate joint locations with drains and other exposed systems placed/formed in concrete.

D. Isolation Joints in Slabs-on-Grade: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.

1. Extend joint-filler strips full width and depth of joint, terminating flush with finished concrete surface unless otherwise indicated.
2. Terminate full-width joint-filler strips not less than 1/2 inch or more than 1 inch below finished concrete surface where joint sealants, specified in Section 079200 "Joint Sealants," are indicated.
3. Install joint-filler strips in lengths as long as practicable. Where more than one length is required, lace or clip sections together.

E. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of dowel length to prevent concrete bonding to one side of joint.

3.8 WATERSTOP INSTALLATION

A. Self-Expanding Strip Waterstops: Install in construction joints and at other locations indicated, according to manufacturer's written instructions, adhesive bonding, mechanically fastening, and firmly pressing into place. Install in longest lengths practicable.

3.9 CONCRETE PLACEMENT

A. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections are completed.

B. Do not add water to concrete during delivery, at Project site, or during placement unless approved by Architect.

C. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.

1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

D. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete is placed on concrete that has hardened enough to cause seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as indicated. Deposit concrete to avoid segregation.

1. Deposit concrete in horizontal layers of depth not to exceed formwork design pressures and in a manner to avoid inclined construction joints.
2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 301.
3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

E. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.

1. Consolidate concrete during placement operations, so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
2. Maintain reinforcement in position on chairs during concrete placement.
3. Screed slab surfaces with a straightedge and strike off to correct elevations.
4. Slope surfaces uniformly to drains where required.
5. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.

3.10 FINISHING FORMED SURFACES

A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces not exposed to public view.

B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces exposed to public view.

C. Rubbed Finish: Apply the following to smooth-formed-finished as-cast concrete where indicated:

1. Smooth-Rubbed Finish: Not later than one day after form removal, moisten concrete surfaces and rub with carborundum brick or another abrasive until producing a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.
2. Grout-Cleaned Finish: Wet concrete surfaces and apply grout of a consistency of thick paint to coat surfaces and fill small holes. Mix 1 part portland cement to 1-1/2 parts fine sand with a 1:1 mixture of bonding admixture and water. Add white portland cement in amounts determined by trial patches, so color of dry grout matches adjacent surfaces. Scrub grout into voids and remove excess grout. When grout whitens, rub surface with clean burlap and keep surface damp by fog spray for at least 36 hours.

D. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.11 FINISHING FLOORS AND SLABS

A. General: Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Float Finish: Consolidate surface with power-driven floats or by hand floating if area is small or inaccessible to power-driven floats. Restraighten, cut down high spots, and fill low spots. Repeat float passes and restraightening until surface is left with a uniform, smooth, granular texture.

1. Apply float finish to surfaces indicated to receive trowel finish and to be covered with fluid-applied or sheet waterproofing, or membrane roofing. Surfaces shall be formed true in plane, and without honeycombs, voids, dips, or sharp protrusions. For surfaces to receive fluid-applied waterproofing, and while concrete is still plastic, slightly scarify surface with a fine broom.

C. Trowel Finish: After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.

1. Apply a trowel finish to surfaces indicated, exposed to view, or to be covered with resilient flooring, carpet, ceramic or quarry tile set over a cleavage membrane, paint, or another thin-film-finish coating system.
2. Finish and measure surface, so gap at any point between concrete surface and an unleveled, freestanding, 10-ft.- long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/4 inch.

D. Trowel and Fine-Broom Finish: Apply a first trowel finish to surfaces indicated and where ceramic or quarry tile is to be installed by either thickset or thinset method. While concrete is still plastic, slightly scarify surface with a fine broom.

1. Comply with flatness and levelness tolerances for trowel-finished floor surfaces.

3.12 MISCELLANEOUS CONCRETE ITEM INSTALLATION

A. Filling In: Fill in holes and openings left in concrete structures after work of other trades is in place unless otherwise indicated. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work.

B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.

C. Equipment Bases and Foundations:

1. Coordinate sizes and locations of concrete bases with actual equipment provided.
2. Construct concrete bases as indicated.
3. Minimum Compressive Strength: As indicated at 28 days.
4. Install dowel rods to connect concrete base to concrete floor as indicated.
5. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete substrate.
6. Prior to pouring concrete, place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
7. Cast anchor-bolt insert into bases. Install anchor bolts to elevations required for proper attachment to supported equipment.

D. Steel Pan Stairs: Provide concrete fill for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as shown on Drawings. Screed, tamp, and trowel finish concrete surfaces.

3.13 CONCRETE PROTECTING AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 301 for hot-weather protection during curing.

B. Evaporation Retarder: Apply evaporation retarder to unformed concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.

C. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for remainder of curing period.

D. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces.

E. Cure concrete according to ACI 308.1, by one or a combination of the following methods:

1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:

   a. Water.
   b. Continuous water-fog spray.
   c. Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.

2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period, using cover material and waterproof tape.

   a. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive floor coverings.
   b. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive penetrating liquid floor treatments.
   c. Cure concrete surfaces to receive floor coverings with either a moisture-retaining cover or a curing compound that the manufacturer certifies does not interfere with bonding of floor covering used on Project.

3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

   a. Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer.

4. Curing and Sealing Compound: Apply uniformly to floors and slabs indicated in a continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.

3.14 LIQUID FLOOR TREATMENT APPLICATION

A. Penetrating Liquid Floor Treatment: Prepare, apply, and finish penetrating liquid floor treatment according to manufacturer's written instructions.

   1. Remove curing compounds, sealers, oil, dirt, laitance, and other contaminants and complete surface repairs.
   2. Do not apply to concrete that is less than 28 days' old.
   3. Apply liquid until surface is saturated, scrubbing into surface until a gel forms; rewet; and repeat brooming or scrubbing. Rinse with water; remove excess material until surface is dry. Apply a second coat in a similar manner if surface is rough or porous.

B. Sealing Coat: Uniformly apply a continuous sealing coat of curing and sealing compound to hardened concrete by power spray or roller according to manufacturer's written instructions.

3.15 JOINT FILLING

A. Prepare, clean, and install joint filler according to manufacturer's written instructions.

   1. Defer joint filling until concrete has aged at least one month. Do not fill joints until construction traffic has permanently ceased.

B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joints clean and dry.

C. Install semirigid joint filler full depth in saw-cut joints and at least 2 inches deep in formed joints. Overfill joint and trim joint filler flush with top of joint after hardening.

3.16 CONCRETE SURFACE REPAIRS

A. Defective Concrete: Repair and patch defective areas when approved by Architect. Remove and replace concrete that cannot be repaired and patched to Architect's approval.

B. Patching Mortar: Mix dry-pack patching mortar, consisting of 1 part portland cement to 2-1/2 parts fine aggregate passing a No. 16 sieve, using only enough water for handling and placing.

C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.

   1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2 inch in any dimension to solid concrete. Limit cut depth to 3/4 inch. Make edges of cuts perpendicular to concrete surface. Clean, dampen with water, and brush-coat holes and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.

2. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement so that, when dry, patching mortar matches surrounding color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.
3. Repair defects on concealed formed surfaces that affect concrete's durability and structural performance as determined by Architect.

D. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.

1. Repair finished surfaces containing defects. Surface defects include spalls, popouts, honeycombs, rock pockets, crazing and cracks in excess of 0.01 inch wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.
2. After concrete has cured at least 14 days, correct high areas by grinding.
3. Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching mortar. Finish repaired areas to blend into adjacent concrete.
4. Correct other low areas scheduled to receive floor coverings with a repair underlayment. Prepare, mix, and apply repair underlayment and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface. Feather edges to match adjacent floor elevations.
5. Correct other low areas scheduled to remain exposed with a repair topping. Cut out low areas to ensure a minimum repair topping depth of 1/4 inch to match adjacent floor elevations. Prepare, mix, and apply repair topping and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.
6. Repair defective areas, except random cracks and single holes 1 inch or less in diameter, by cutting out and replacing with fresh concrete. Remove defective areas with clean, square cuts and expose steel reinforcement with at least a 3/4-inch clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials and mixture as original concrete, except without coarse aggregate. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.
7. Repair random cracks and single holes 1 inch or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.

E. Perform structural repairs of concrete, subject to Architect's approval, using epoxy adhesive and patching mortar.

F. Repair materials and installation not specified above may be used, subject to Architect's approval.

3.17 FIELD QUALITY CONTROL (BY OWNER)

A. Special Inspections: Owner will engage a special inspector and qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Testing Agency: Engage a qualified testing and inspecting agency to perform tests and inspections and to submit reports.

C. Inspections:

1. Steel reinforcement placement.
2. Steel reinforcement welding.
3. Headed bolts and studs.
4. Verification of use of required design mixture.
5. Concrete placement, including conveying and depositing.
6. Curing procedures and maintenance of curing temperature.
7. Verification of concrete strength before removal of shores and forms from beams and slabs.

D. Concrete Tests: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:

1. Testing Frequency: Obtain at least one composite sample for each 150 cu. yd. or fraction thereof of each concrete mixture placed each day.

    a. When frequency of testing provides fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

2. Slump: ASTM C 143; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
3. Concrete Temperature: ASTM C 1064; one test hourly when air temperature is 40 deg F and below or 80 deg F and above, and one test for each composite sample.
4. Unit Weight: ASTM C 56, fresh unit weight of structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
5. Compression Test Specimens: ASTM C 31.

    a. Cast and laboratory cure one set of four standard cylinder specimens (minimum) for each composite sample.

6. Compressive-Strength Tests: ASTM C 39; test one set of two laboratory-cured specimens at 7 days and one set of two specimens at 28 days.

    a. A compressive-strength test shall be the average compressive strength from a set of two specimens obtained from same composite sample and tested at age indicated.

7. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.
8. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.
9. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
10. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42 or by other methods as directed by Architect.
11. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
12. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.

E. Measure floor and slab flatness and levelness according to ACI 117-10 Section 4.8.6 within 72 hours of finishing.

3.18 PROTECTION OF LIQUID FLOOR TREATMENTS

A. Protect liquid floor treatment from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by liquid floor treatments installer.

END OF SECTION 033000

SECTION 033300 - ARCHITECTURAL CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes cast-in-place architectural concrete, including form facings, reinforcement and accessories, concrete materials, concrete mixture design, placement procedures, and finishes.

1. Requirements in Section 033000 "Cast-in-Place Concrete" apply to architectural concrete.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for concrete not designated as architectural concrete. Section also contains additional requirements for polished concrete finishing.

1.3 DEFINITIONS

A. Cast-in-Place Architectural Concrete: Formed concrete that is exposed to view on surfaces of completed structure or building and that requires special concrete materials, formwork, placement, or finishes to obtain specified architectural appearance.

B. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash, slag cement, other pozzolans, and silica fume; materials subject to compliance with requirements.

C. Design Reference Sample: Sample designated by Architect in the Contract Documents that reflects acceptable surface quality and appearance of cast-in-place architectural concrete.

D. Reveal: Projection of coarse aggregate from matrix or mortar after completion of exposure operations.

E. W/C Ratio: The ratio by weight of water to cementitious materials.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Require representatives of each entity directly concerned with cast-in-place architectural concrete to attend, including the following:

a. Contractor's superintendent.
b. Independent testing agency responsible for concrete design mixtures.
c. Ready-mix concrete manufacturer.
d. Cast-in-place architectural concrete Subcontractor.

2. Review concrete finishes and finishing, crack control, cold- and hot-weather concreting procedures, curing procedures, construction joints, forms and form-removal limitations, reinforcement accessory installation, concrete repair procedures, and protection of cast-in-place architectural concrete.
3. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

1. Indicate amounts of mixing water to be withheld for later addition at Project site.

C. Formwork Shop Drawings: Show formwork construction, including form-facing joints, rustications, construction and contraction joints, form joint-sealant details, form tie locations and patterns, inserts and embedments, cutouts, cleanout panels, and other items that visually affect cast-in-place architectural concrete.

D. Placement Schedule: Submit concrete placement schedule before start of placement operations. Include locations of all joints, including construction joints.

E. Samples: For each of the following materials:

1. Form-facing panels.
2. Form ties.
3. Form liners.
4. Exposed aggregates.
5. Coarse- and fine-aggregate gradations.
6. Chamfers and rustications.

F. Samples for Verification: Architectural concrete Samples, cast vertically, approximately 12 by 12 by 2 inches, of finishes, colors, and textures to match Architect's design reference sample. Include Sample sets showing the full range of variations expected in these characteristics.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Material Certificates: For each of the following, signed by manufacturers:

1. Cementitious materials.
2. Admixtures.
3. Form materials and form-release agents.
4. Repair materials.

C. Material Test Reports: For the following, by a qualified testing agency:

1. Aggregates. Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94 requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's "NRMCA Quality Control Manual - Section 3, Certification of Ready Mixed Concrete Production Facilities."

B. Installer Qualifications: A firm with not less than 10 years' experience installing architectural concrete similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who also meet the qualifications in Section 033000 "Cast-In-Place Concrete." Experience in only installing conventional concrete work is insufficient experience for architectural concrete work.

C. Field Sample Panels (For Architectural Concrete Cast Horizontally): After approval of verification sample and before casting architectural concrete, produce field sample panels to demonstrate the approved range of selections made under Sample submittals. Produce a minimum of three sets of full-scale panels, approximately 48 by 48 inches minimum, to demonstrate the expected range of finish, color, and texture variations.

1. Locate panels as indicated or, if not indicated, as directed by Architect.
2. Demonstrate methods of curing, aggregate exposure, sealers, and coatings, as applicable.
3. In presence of Architect, damage part of an exposed-face surface for each finish, color, and texture, and demonstrate materials and techniques proposed for repair of tie holes and surface blemishes to match adjacent undamaged surfaces.
4. Maintain field sample panels during construction in an undisturbed condition as a standard for judging the completed Work.
5. Demolish and remove field sample panels when directed.

D. Mockups (For Architectural Concrete Cast Vertically): Before casting architectural concrete, build mockups to verify selections made under Sample submittals and to demonstrate typical joints, surface finish, texture, tolerances, and standard of workmanship. Build mockups to comply with the following requirements, using materials indicated for the completed Work:

1. Build mockups in the location and of the size indicated or, if not indicated, as directed by Architect.
2. Build mockups of typical exterior wall of cast-in-place architectural concrete as shown on Drawings.
3. Demonstrate curing, cleaning, and protecting of cast-in-place architectural concrete, finishes, and contraction joints, as applicable.
4. In presence of Architect, damage part of the exposed-face surface for each finish, color, and texture, and demonstrate materials and techniques proposed for repair of tie holes and surface blemishes to match adjacent undamaged surfaces.
5. Obtain Architect's approval of mockups before casting architectural concrete.
6. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 FIELD CONDITIONS

A. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.

1. When average high and low temperature is expected to fall below 40 deg F for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents.
4. Do not use chemical accelerators unless otherwise specified and approved in design mixtures.

B. Hot-Weather Placement: Comply with ACI 301 and as follows:

1. Maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:

1. ACI 301.
2. ACI 303.1.

2.2 FORM-FACING MATERIALS

A. General:

1. Comply with Section 033000 "Cast-in-Place Concrete" for formwork and other form-facing material requirements.
2. Provide form-facing materials from the available types listed below, whether indicated on Drawings or not, as required to achieve finish matching Architect's design reference sample, approved samples, and approved mockups.

B. Source Limitations: Obtain each type form-facing material from single source from single manufacturer.

C. Form-Facing Panels: Steel- and glass-fiber-reinforced plastic, or other approved nonabsorptive panel materials that provide continuous, true, and smooth architectural concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.

D. Pan-Type Forms: Glass-fiber-reinforced plastic or formed steel, stiffened to resist plastic concrete loads without detrimental deformation.

E. Form Liners: Units of face design, texture, arrangement, and configuration to match design reference sample. Furnish with manufacturer's recommended liquid-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent surface treatments of concrete.

F. Rustication Strips: Metal or rigid plastic, or with sides beveled and back kerfed; nonstaining; in longest practicable lengths.

G. Chamfer Strips: Metal, rigid plastic, elastomeric rubber, or dressed wood, 3/4 by 3/4 inch, minimum; nonstaining; in longest practicable lengths.

H. Form Joint Tape: Compressible foam tape; pressure sensitive; AAMA 800; minimum 1/4 inch thick.

I. Form Joint Sealant: Elastomeric sealant complying with ASTM C 920, Type M or Type S, Grade NS, that adheres to form joint substrates.

J. Sealer: Penetrating, clear, polyurethane wood form sealer formulated to reduce absorption of bleed water and prevent migration of set-retarding chemicals from wood.

K. Form-Release Agent: Commercially formulated, colorless form-release agent that will not bond with, stain, or adversely affect architectural concrete surfaces and will not impair subsequent treatments of those surfaces.

1. Formulate form-release agent with rust inhibitor for steel form-facing materials.

L. Surface Retarder: Chemical liquid set retarder, for application on form-facing materials, capable of temporarily delaying final hardening of newly placed concrete surface to depth of reveal specified.

M. Form Ties: Factory-fabricated, internally disconnecting or removable ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

2.3 STEEL REINFORCEMENT AND ACCESSORIES

A. General: Comply with Section 033000 "Cast-in-Place Concrete" for steel reinforcement and other requirements for reinforcement accessories.

B. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire fabric in place; manufactured according to CRSI's "Manual of Standard Practice."

2.4 CONCRETE MATERIALS

A. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.

B. Cementitious Materials:

1. Portland Cement: ASTM C 150, Type I.
2. Fly Ash: ASTM C 618, Class C or F.

C. Normal-Weight Aggregates: ASTM C 33, Class 1N coarse aggregate or better, graded. Provide aggregates from single source with documented service-record data of at least 10 years' satisfactory service in similar applications and service conditions using similar aggregates and cementitious materials.

1. Maximum Coarse-Aggregate Size: 3/4 inch.
2. Gradation: Uniformly graded.

D. Normal-Weight Fine Aggregate: ASTM C 33, manufactured or natural sand, from same source for entire Project.

E. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and that does not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.

1. High-Range Water-Reducing Admixture: ASTM C 494, Type A and F.
2. Accelerating Admixture: ASTM C 494 Type C.
3. Shrinking Reducing Admixture: ASTM C 494, Type S:

F. Color Pigment: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, free of carbon black, nonfading, and resistant to lime and other alkalis.

1. Color: As selected by Architect from manufacturer's full range.

G. Water: Potable, complying with ASTM C 94, except free of wash water from mixer washout operations.

2.5 CURING MATERIALS

A. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry.

B. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.

C. Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B.

1. For integrally colored concrete, curing compound shall be pigmented type approved by color pigment manufacturer.
2. For concrete indicated to be sealed, curing compound shall be compatible with sealer.

2.6 REPAIR MATERIALS

A. Bonding Agent: ASTM C 1059, Type II, nonredispersible, acrylic emulsion or styrene butadiene.

B. Epoxy Bonding Adhesive: ASTM C 881 two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements.

1. Types I and II, nonload bearing, for bonding hardened or freshly mixed concrete to hardened concrete.

2.7 CONCRETE MIXTURES

A. Obtain each color, size, type, and variety of concrete mixture from single manufacturer with resources to provide cast-in-place architectural concrete of consistent quality in appearance and physical properties.

B. Prepare design mixtures for each type and strength of cast-in-place architectural concrete proportioned on basis of laboratory trial mixture or field test data, or both, according to ACI 301.

1. Use a qualified independent testing agency for preparing and reporting proposed design mixtures based on laboratory trial mixtures.

C. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

D. Admixtures: Use admixtures according to manufacturer's written instructions.

E. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

F. Concrete Mixtures:

1. Compressive Strength (28 Days): As indicated on Structural Drawings for conventional concrete, but no less than 5000 psi.
2. Maximum W/C Ratio: As indicated on Structural Drawings, but no greater than 0.40.
3. Slump Limit: As indicated on Structural Drawings.

2.8 CONCRETE MIXING

A. Ready-Mixed or Site-Mixed Architectural Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94 and furnish batch ticket information.

1. Clean equipment used to mix and deliver cast-in-place architectural concrete to prevent contamination from other concrete.
2. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.1 FORMWORK INSTALLATION

A. General: Comply with Section 033000 "Cast-in-Place Concrete" for formwork, embedded items, and shoring and reshoring.

B. Limit deflection of form-facing panels to not exceed ACI 303.1 requirements.

C. In addition to ACI 303.1 limits on form-facing panel deflection, limit cast-in-place architectural concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:

1. Class A, 1/8 inch.

D. Construct forms to result in cast-in-place architectural concrete that complies with ACI 117.

E. Construct forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast-in-place surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical. Kerf wood rustications, keyways, reglets, recesses, and the like, for easy removal.

1. Seal form joints and penetrations at form ties with form joint tape or form joint sealant to prevent cement paste leakage.
2. Do not use rust-stained steel form-facing material.

F. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.

G. Chamfer exterior corners and edges of cast-in-place architectural concrete.

H. Coat contact surfaces of wood rustications and chamfer strips with sealer before placing reinforcement, anchoring devices, and embedded items.

I. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.

J. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

K. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

L. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.

M. Coat contact surfaces of forms with surface retarder, according to manufacturer's written instructions, before placing reinforcement.

N. Place form liners accurately to provide finished surface texture indicated. Provide solid backing and attach securely to prevent deflection and maintain stability of liners during concreting. Prevent form liners from sagging and stretching in hot weather. Seal joints of form liners and form-liner accessories to prevent mortar leaks. Coat form liner with form-release agent.

3.2 REINFORCEMENT AND INSERT INSTALLATION

A. General: Comply with Section 033000 "Cast-in-Place Concrete" for fabricating and installing steel reinforcement. Securely fasten steel reinforcement and wire ties against shifting during concrete placement.

B. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

3.3 REMOVING AND REUSING FORMS

A. Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 deg F for 24 hours after placing concrete if concrete is hard enough to not be damaged by form-removal operations and curing and protection operations are maintained.

1. Schedule form removal to maintain surface appearance that matches approved field sample panels and/or mockups.
2. Cut off and grind glass-fiber-reinforced plastic form ties flush with surface of concrete.

B. Leave formwork for beam soffits, joists, slabs, and other structural elements that support weight of concrete in place until concrete has achieved 28-day design compressive strength. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.

C. Clean and repair surfaces of forms to be reused in the Work. Do not use split, frayed, delaminated, or otherwise damaged form-facing material. Apply new form-release agent.

D. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for cast-in-place architectural concrete surfaces.

3.4 JOINTS

A. Construction Joints: Install construction joints true to line, with faces perpendicular to surface plane of cast-in-place architectural concrete, so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.

1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated.
2. Form keyed joints as indicated. Embed keys at least 1-1/2 inches into concrete. Align construction joint within rustications attached to form-facing material.
3. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
4. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
5. Space vertical joints in walls as indicated or if not indicated, such that joints are equally spaces along length of wall in segments not exceeding 5’-0”. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
6. Use bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.

B. Contraction Joints: Form weakened-plane contraction joints true to line, with faces perpendicular to surface plane of cast-in-place architectural concrete, so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.

3.5 CONCRETE PLACEMENT

A. Before placing concrete, verify that installation of formwork, form-release agent, reinforcement, and embedded items is complete and that required inspections have been performed.

B. Do not add water to concrete during delivery, at Project site, or during placement unless approved by Architect.

C. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.

D. Deposit concrete continuously between construction joints. Deposit concrete to avoid segregation.

1. Deposit concrete in horizontal layers of depth to not exceed formwork design pressures and in a manner to avoid inclined construction joints.
2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 303.1.
3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. Do not permit vibrators to contact forms.

3.6 FINISHES, GENERAL

A. Architectural Concrete Finish: Match Architect's design reference sample, identified and described as indicated, to satisfaction of Architect.

B. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces.

1. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

C. Maintain uniformity of special finishes over construction joints unless otherwise indicated.

3.7 AS-CAST FORMED FINISHES

A. Finish to match approved mock-up and Architect’s reference sample.

B. Form-Liner Finish: Produce a textured surface free of pockets, streaks, and honeycombs, and of uniform appearance, color, and texture.

3.8 CONCRETE PROTECTING AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and with ACI 301 for hot-weather protection during curing.

B. Begin curing cast-in-place architectural concrete immediately after removing forms from or applying as-cast formed finishes to concrete. Cure according to ACI 308.1, by one or a combination of the following methods that will not mottle, discolor, or stain concrete:

1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:

a. Water.
b. Continuous water-fog spray.
c. Absorptive cover, water saturated and kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.

2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period, using cover material and waterproof tape.

3.9 FIELD QUALITY CONTROL

A. General: Comply with field quality-control requirements in Section 033000 "Cast-in-Place Concrete."

3.10 REPAIR, PROTECTION, AND CLEANING

A. Repair and cure damaged finished surfaces of cast-in-place architectural concrete when approved by Architect. Match repairs to color, texture, and uniformity of surrounding surfaces and to repairs on approved mockups.

1. Remove and replace cast-in-place architectural concrete that cannot be repaired and cured to Architect's approval.

B. Protect corners, edges, and surfaces of cast-in-place architectural concrete from damage; use guards and barricades.

C. Protect cast-in-place architectural concrete from staining, laitance, and contamination during remainder of construction period.

D. Clean cast-in-place architectural concrete surfaces after finish treatment to remove stains, markings, dust, and debris.

E. Wash and rinse surfaces according to concrete finish applicator's written instructions. Protect other Work from staining or damage due to cleaning operations.

1. Do not use cleaning materials or processes that could change the appearance of cast-in-place architectural concrete finishes.

END OF SECTION 033300

SECTION 035413 - GYPSUM CEMENT UNDERLAYMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Self-leveling, gypsum cement underlayment for application below interior floor coverings at wood floor substrates.

B. Related Requirements:

1. Section 012100 "Allowances" for gypsum cement underlayment allowance.
2. Section 035416 “Hydraulic Cement Underlayment” for underlayment material at concrete substrates.
3. Division 09 Sections for patching and leveling compounds applied with floor coverings if not provided under this Section.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: Product data for coatings and primers, indicating VOC content.

C. Shop Drawings: Include plans indicating substrates, locations, and average depths of underlayment based on survey of substrate conditions.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Letter signed and executed by gypsum cement underlayment manufacturer’s technical representative indicating manufacturer’s acceptance of substrate prior to application of hydraulic cement underlayment.

C. Letter from finished flooring manufacturer(s) indicating intent to warrant finished flooring system with application of gypsum cement underlayment provided under this Section.

D. Field quality control reports.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of gypsum cement underlayment has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 5 years' experience installing gypsum cement underlayment similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Product Compatibility: Manufacturers of underlayment and floor-covering systems certify in writing that products are compatible.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ventilation, ambient temperature and humidity, and other conditions affecting underlayment performance.

1. Place gypsum cement underlayments only when ambient temperature and temperature of substrates are between 50 and 80 deg F.

1.8 COORDINATION

A. Coordinate application of underlayment with requirements of floor-covering products and adhesives, specified in Division 09 Sections, to ensure compatibility of products.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated, according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.

B. IIC-Rated Assemblies: For IIC-rated assemblies, provide materials and construction identical to those tested in assembly indicated, according to ASTM E 492 and classified according to ASTM E 989 by an independent testing agency.

C. Floor Flatness Tolerances: Comply with the following unless Division 09 flooring manufacturers' requirements are more stringent:

1. Finish and measure surface, so gap at any point between concrete surface and an unleveled, freestanding, 10-ft-long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/4 inch for the following flooring applications:

a. Ceramic tile with all edges less than 15 inches.

2. Finish and measure surface, so gap at any point between concrete surface and an unleveled, freestanding, 10-ft-long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/8 inch for the following flooring applications:

a. Carpet.
b. Resilient flooring.
c. Ceramic tile with at least one edge 15 inches in length or longer.
d. Resinous flooring systems.
e. Sill conditions.
f. Threshold conditions.
g. Other surface applied flooring.

D. Sustainable Design Requirements: Gypsum cement underlayment, including primers and coatings, shall have a VOC content of 50 g/L or less.

2.2 GYPSUM CEMENT UNDERLAYMENTS

A. Gypsum Cement Underlayment: Self-leveling, gypsum cement product that can be applied in minimum uniform thickness of 1/8 inch and that can be feathered at edges to match adjacent floor elevations.

1. Manufacturers: Subject to compliance with requirements, provide gypsum cement underlayment by one of the following:

a. Ardex Americas.
b. Euclid Chemical Company.
c. MAPEI Corporation.
d. United States Gypsum Company.

2. Cement Binder: Gypsum or blended gypsum cement as defined by ASTM C 219.
3. Compressive Strength: Not less than 4000 psi at 28 days when tested according to ASTM C 109.
4. Underlayment Additive: Resilient-emulsion product of underlayment manufacturer, formulated for use with underlayment when applied to substrate and conditions indicated.

B. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch; or coarse sand as recommended by underlayment manufacturer.

1. Provide aggregate when recommended in writing by underlayment manufacturer for underlayment thickness required.

C. Water: Potable and at a temperature of not more than 70 deg F.

D. Reinforcement: For underlayment applied to wood substrates, provide galvanized metal lath or other corrosion-resistant reinforcement recommended in writing by underlayment manufacturer.

E. Primer: Product of underlayment manufacturer recommended in writing for substrate, conditions, and application indicated.

F. Corrosion-Resistant Coating: Recommended in writing by underlayment manufacturer for metal substrates.

G. Surface Sealer: Designed to reduce porosity as recommended by manufacturer for type of floor covering to be applied to underlayment.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Measure floor substrate flatness in accordance with ACI 117 using 10-foot straightedge method.

1. Identify areas that are not in compliance with “Performance Requirements” article.

B. Examine substrates, with Installer present, for conditions affecting performance of the Work.

C. Proceed with application only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. General: Prepare and clean substrate according to manufacturer's written instructions.

1. Treat nonmoving substrate cracks according to manufacturer's written instructions to prevent cracks from telegraphing (reflecting) through underlayment.
2. Fill substrate voids to prevent underlayment from leaking.

B. Concrete Substrates: Use hydraulic cement underlayment in accordance with Section 035416 “Hydraulic Cement Underlayment.”

C. Wood Substrates: Mechanically fasten loose boards and panels to eliminate substrate movement and squeaks. Sand to remove coatings that might impair underlayment bond and remove sanding dust.

1. Install underlayment reinforcement recommended in writing by manufacturer.

D. Metal Substrates: Mechanically remove, according to manufacturer's written instructions, rust, foreign matter, and other contaminants that might impair underlayment bond. Apply corrosion-resistant coating compatible with underlayment if recommended in writing by underlayment manufacturer.

E. Adhesion Tests: After substrate preparation, test substrate for adhesion with underlayment according to manufacturer's written instructions.

F. Sound Control Mat: Install sound control materials according to manufacturer's written instructions.

1. Do not install mechanical fasteners that penetrate through the sound control materials.

3.3 APPLICATION

A. General: Mix and apply underlayment components according to manufacturer's written instructions.

1. Close areas to traffic during underlayment application and for time period after application recommended in writing by manufacturer.
2. Coordinate application of components to provide optimum adhesion to substrate and between coats.
3. At substrate expansion, isolation, and other moving joints, allow joint of same width to continue through underlayment.

B. Apply primer over prepared substrate at manufacturer's recommended spreading rate.

C. Apply underlayment to produce uniform, level surface.

1. Apply a final layer without aggregate to product surface.
2. Feather edges to match adjacent floor elevations.

D. Cure underlayment according to manufacturer's written instructions. Prevent contamination during application and curing processes.

E. Do not install floor coverings over underlayment until after time period recommended in writing by underlayment manufacturer.

F. Apply surface sealer at rate recommended by manufacturer.

G. Remove and replace underlayment areas that evidence lack of bond with substrate, including areas that emit a "hollow" sound when tapped.

3.4 FIELD QUALITY CONTROL

A. Measure gypsum cement underlayment flatness according to ACI 117 upon conclusion of curing period for underlayments. Repair or replace areas that are not in compliance with “Performance Requirements” article.

3.5 PROTECTION

A. Protect underlayment from concentrated and rolling loads for remainder of construction period.

END OF SECTION 035413

SECTION 035416 - HYDRAULIC CEMENT UNDERLAYMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Hydraulic-cement-based, polymer-modified, self-leveling underlayment for application at the following locations:

a. Where existing cast-in-place concrete does not meet finished floor surface tolerances specified herein and/or in other Section(s).
b. Where existing cast-in-place concrete is not level at sill and threshold conditions.
c. At transition locations between adjacent floor coverings that have different thicknesses.
d. Where indicated.

2. Testing and application of systems for the reduction of moisture vapor transmission and alkalinity control for interior concrete slabs that are not in compliance with hydraulic cement manufacturer's written requirements.

B. Related Requirements:

1. Section 035413 "Gypsum Cement Underlayment" for underlayment material at wood substrates.
2. Division 09 Sections for patching and leveling compounds applied with floor coverings if not provided under this Section.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: Product data for coatings, indicating VOC content.

C. Shop Drawings: Include plans indicating substrates, locations, and average depths of underlayment based on survey of substrate conditions.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Letter signed and executed by hydraulic cement underlayment manufacturer's technical representative indicating manufacturer's acceptance of substrate prior to application of hydraulic cement underlayment.

C. Letter from finished flooring manufacturer(s) indicating intent to warrant finished flooring system with application of hydraulic cement underlayment provided under this Section.

D. Field quality control reports.

E. Sample Warranty: For special warranty.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of hydraulic cement underlayment that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 5 years' experience installing hydraulic cement underlayment similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Product Compatibility: Manufacturers of underlayment and floor-covering systems certify in writing that products are compatible.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ventilation, ambient temperature and humidity, and other conditions affecting underlayment performance.

1. Place hydraulic cement underlayments only when ambient temperature and temperature of substrates are between 50 and 80 deg F.

1.8 COORDINATION

A. Coordinate application of underlayment with requirements of floor-covering products and adhesives, specified in Division 09 Sections, to ensure compatibility of products.

1.9 WARRANTY

A. Special Warranty for Moisture/Alkalinity Control System: Manufacturer's standard or customized form in which manufacturer and installer agree to repair or replace materials that fail to control water vapor transmission or fail to control alkalinity within specified warranty period.

1. This warranty includes, but is not limited to, the following:

a. Moisture control system.
b. Underlayments.
c. Floor covering system
d. Labor.

2. Warranty Period: Ten (10) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Floor Flatness Tolerances: Comply with the following unless Division 09 flooring manufacturers' requirements are more stringent:

1. Finish and measure surface, so gap at any point between concrete surface and an unleveled, freestanding, 10-ft-long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/4 inch for the following flooring applications:

a. Ceramic tile with all edges less than 15 inches.

2. Finish and measure surface, so gap at any point between concrete surface and an unleveled, freestanding, 10-ft-long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/8 inch for the following flooring applications:

a. Carpet.
b. Resilient flooring.
c. Ceramic tile with at least one edge 15 inches in length or longer.
d. Resilient athletic flooring.
e. Resinous flooring systems (i.e. epoxy, urethane, etc.).
f. Sill conditions.
g. Threshold conditions.
h. Other surface-applied flooring material.

B. Fire-Resistance Ratings (Where hydraulic cement underlayment is part of a fire-resistant rated assembly): Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

C. Sustainable Design Requirements: Hydraulic cement underlayment shall have a VOC content of 50 or less.

2.2 HYDRAULIC CEMENT UNDERLAYMENTS

A. Hydraulic Cement Underlayment: Polymer-modified, self-leveling, hydraulic cement product that can be applied in minimum uniform thickness of 1/4 inch and that can be feathered at edges to match adjacent floor elevations.

1. Manufacturers: Subject to compliance with requirements, and Division 09 flooring manufacturer's written approval, provide product(s) by one of the following:

a. ARDEX GmbH.
b. Custom Building Products.
c. MAPEI Corporation.
d. Or Equal.

2. Cement Binder: ASTM C 150/C 150M, portland cement, or hydraulic or blended hydraulic cement as defined by ASTM C 219.
3. Compressive Strength: Not less than 4000 psi at 28 days when tested according to ASTM C 109/C 109M.
4. Underlayment Additive: Resilient-emulsion product of underlayment manufacturer, formulated for use with underlayment when applied to substrate and conditions indicated.

B. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch; or coarse sand as recommended by underlayment manufacturer.

1. Provide aggregate when recommended in writing by underlayment manufacturer for underlayment thickness required.

C. Water: Potable and at a temperature of not more than 70 deg F.

D. Primer: Product of underlayment manufacturer recommended in writing for substrate, conditions, and application indicated.

1. VOC Content: Provide primer with VOC content of 100 g/L or less.

E. Corrosion-Resistant Coating: Recommended in writing by underlayment manufacturer for metal substrates.

F. Surface Sealer: Designed to reduce porosity as recommended by manufacturer for type of floor covering to be applied to underlayment.

G. Moisture and Alkalinity Control System: As recommended by hydraulic cement underlayment manufacturer for mitigation of concrete slabs with moisture emissions and/or alkalinity measurements that are not within hydraulic cement underlayment manufacturer's written limitations.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Measure floor substrate flatness in accordance with ACI 117 using 10-foot straightedge method.

1. Identify areas that are not in compliance with "Performance Requirements" article.

B. Examine substrates, with Installer and manufacturer's representative present, for conditions affecting performance of the Work.

C. Proceed with application only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. General: Prepare substrates according to manufacturer's written instructions, and with oversight of hydraulic cement underlayment manufacturer's representative, to ensure adhesion of cement underlayment.

B. Concrete Substrates: Prepare according to hydraulic cement underlayment manufacturer's written instructions.

1. Mechanically remove, according to manufacturer's written instructions, laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants that might impair underlayment bond.

2. Moisture, Alkalinity, and Bond Testing: Determine the suitability of the concrete subfloor for receiving the hydraulic cement underlayment with regard to moisture content and pH level by moisture and alkalinity tests. Conduct moisture testing in accordance with ASTM F 1869 (calcium chloride) and ASTM F 2170 (relative humidity) unless otherwise recommended by the hydraulic cement underlayment manufacturer. Conduct alkalinity testing as recommended by the hydraulic cement underlayment manufacturer. Determine the compatibility of the hydraulic cement underlayment to the concrete floors by a bond test in accordance with the hydraulic cement underlayment manufacturer's recommendations. Submit copy of test reports for moisture and alkalinity content of concrete slab, and bond test, stating date of test, person conducting the test, and the area tested.

a. Apply moisture and alkalinity control system as recommended by hydraulic cement underlayment manufacturer. Proceed with installation only after substrates pass testing.

C. Treat nonmoving substrate cracks according to manufacturer's written instructions to prevent cracks from telegraphing (reflecting) through underlayment.

D. Fill substrate voids to prevent underlayment from leaking.

E. Nonporous Substrates: For ceramic tile, quarry tile, and terrazzo substrates, remove waxes, sealants, and other contaminants that might impair underlayment bond, and prepare surfaces according to manufacturer's written instructions.

F. Adhesion Tests: After substrate preparation, test substrate for adhesion with underlayment according to manufacturer's written instructions.

G. Scrape, sand, sweep and vacuum clean substrates to be covered by hydraulic cement underlayments immediately before installation. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 APPLICATION

A. General: Grind high spots (of concrete prior to application of any vapor control system) and fill low spots to produce level substrate in accordance with “Performance Requirements” article. Mix and apply underlayment components according to manufacturer's written instructions.

1. Close areas to traffic during underlayment application and for time period after application recommended in writing by manufacturer.
2. Coordinate application of components to provide optimum adhesion to substrate and between coats.
3. At substrate expansion, isolation, and other moving joints, allow joint of same width to continue through underlayment.

B. Apply primer over prepared substrate at manufacturer's recommended spreading rate.

C. Apply underlayment to produce uniform, level surface. Comply with “Performance Requirements” article for hydraulic cement underlayment finish tolerances.

1. Apply a final layer without aggregate to product surface.
2. Feather edges to match adjacent floor elevations.

D. Cure underlayment according to manufacturer's written instructions. Prevent contamination during application and curing processes.

E. Do not install floor coverings over underlayment until after time period recommended in writing by underlayment manufacturer.

F. Remove and replace underlayment areas that evidence lack of bond with substrate, including areas that emit a "hollow" sound when tapped.

3.4 FIELD QUALITY CONTROL

A. Measure hydraulic cement underlayment flatness according to ACI 117 upon conclusion of curing period for underlayments. Repair or replace areas that are not in compliance with “Performance Requirements” article.

3.5 PROTECTION

A. Protect underlayment from concentrated and rolling loads for remainder of construction period.

END OF SECTION 035416

SECTION 042200 - CONCRETE UNIT MASONRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Concrete masonry units.
2. Mortar and grout.
3. Steel reinforcing bars.
4. Miscellaneous masonry accessories.

B. Related Requirements:

1. Section 051200 "Structural Steel Framing" for installing anchor sections of adjustable masonry anchors for connecting to structural steel frame.
2. Section 078443 "Joint Firestopping" for head-of-wall firestopping at CMU walls.

1.3 DEFINITIONS

A. CMU(s): Concrete masonry unit(s).

B. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For the following:

1. Masonry Units: Show sizes, profiles, coursing, and locations of special shapes.
2. Reinforcing Steel: Detail bending, lap lengths, and placement of unit masonry reinforcing bars. Comply with ACI 315.
3. Fabricated Flashing: Detail corner units, end-dam units, and other special applications.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Material Certificates: For each type and size of the following:

1. Masonry units.

a. Include data on material properties including material test reports substantiating compliance with requirements.
b. For masonry units used in structural masonry, include data and calculations establishing average net-area compressive strength of units.

2. Integral water repellant used in CMUs.
3. Cementitious materials. Include name of manufacturer, brand name, and type.
4. Mortar admixtures.
5. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.
6. Grout mixes. Include description of type and proportions of ingredients.
7. Reinforcing bars.
8. Joint reinforcement.
9. Anchors, ties, and metal accessories.

C. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.

1. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C 109 for compressive strength, ASTM C 1506 for water retention, and ASTM C 91 for air content.
2. Include test reports, according to ASTM C 1019, for grout mixes required to comply with compressive strength requirement.

D. Statement of Compressive Strength of Masonry: For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units, mortar type, and resulting net-area compressive strength of masonry determined according to TMS 602/ACI 530.1/ASCE 6.

E. Cold-Weather and Hot-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of concrete unit masonry which has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 10 years' experience installing concrete unit masonry similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.

B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.

D. Deliver preblended, dry mortar mix in moisture-resistant containers. Store preblended, dry mortar mix in delivery containers on elevated platforms in a dry location or in covered weatherproof dispensing silos.

E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.9 FIELD CONDITIONS

A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.

1. Extend cover a minimum of 24 inches down both sides of walls, and hold cover securely in place.

B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.

C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.

1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
2. Protect sills, ledges, and projections from mortar droppings.
3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.

1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.

E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.

B. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.

2.2 PERFORMANCE REQUIREMENTS

A. Provide structural unit masonry that develops indicated net-area compressive strengths at 28 days.

1. Determine net-area compressive strength of masonry from average net-area compressive strengths of masonry units and mortar types (unit-strength method) according to TMS 602/ACI 530.1/ASCE 6.
2. Determine net-area compressive strength of masonry by testing masonry prisms according to ASTM C 1314.

B. Fire-Resistance Ratings: Comply with requirements for fire-resistance-rated assembly designs indicated.

1. Where fire-resistance-rated construction is indicated, units shall be listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction.

2.3 UNIT MASONRY, GENERAL

A. Masonry Standard: Comply with TMS 602/ACI 530.1/ASCE 6 except as modified by requirements in the Contract Documents.

B. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated. Do not use units where such defects are exposed in the completed Work or will be within 20 feet vertically and horizontally of a walking surface.

2.4 CONCRETE MASONRY UNITS

A. Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.

1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
2. Provide square-edged units for outside corners unless otherwise indicated.

B. CMUs: ASTM C 90.

1. Unit Compressive Strength: Provide units with minimum average net-area compressive strength as indicated in the structural drawings.
2. Density Classification: Medium weight.
3. Size (Width): Manufactured to dimensions 3/8 inch less-than-nominal dimensions.
4. Exposed Faces: Provide color and texture matching the range represented by Architect's sample.
5. Faces to Receive Plaster: Where units are indicated to receive a direct application of plaster, provide textured-face units made with gap-graded aggregates.

2.5 CONCRETE UNIT MASONRY LINTELS

A. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam CMUs matching adjacent CMUs in color, texture, and density classification, with reinforcing bars placed as indicated and filled with coarse grout. Cure precast lintels before handling and installing. Temporarily support built-in-place lintels until cured.

2.6 MORTAR AND GROUT MATERIALS

A. Portland Cement: ASTM C 150, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.

1. Alkali content shall not be more than 0.1 percent when tested according to ASTM C 114.

B. Hydrated Lime: ASTM C 207, Type S.

C. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.

D. Masonry Cement: ASTM C 91.

E. Mortar Cement: ASTM C 1329.

F. Aggregate for Mortar: ASTM C 144.

1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
2. For joints less than 1/4 inch thick, use aggregate graded with 100 percent passing the No. 16 sieve.

G. Aggregate for Grout: ASTM C 404.

H. Epoxy Pointing Mortar: ASTM C 395, epoxy-resin-based material formulated for use as pointing mortar for glazed or pre-faced masonry units (and approved for such use by manufacturer of units); in color indicated or, if not otherwise indicated, as selected by Architect from manufacturer's colors.

I. Cold-Weather Admixture: Nonchloride, noncorrosive, accelerating admixture complying with ASTM C 494/C 494M, Type C, and recommended by manufacturer for use in masonry mortar of composition indicated.

J. Water: Potable.

2.7 REINFORCEMENT

A. Uncoated Steel Reinforcing Bars: ASTM A 615 or ASTM A 996, Grade 60.

B. Reinforcing Bar Positioners: Wire units designed to fit into mortar bed joints spanning masonry unit cells and to hold reinforcing bars in center of cells. Units are formed from 0.148-inch steel wire, hot-dip galvanized after fabrication. Provide units designed for number of bars indicated.

2.8 TIES AND ANCHORS

A. General: Anchors shall be placed in CMU walls as indicated.

B. Materials: Anchors specified in this article that are made from materials that comply with the following unless otherwise indicated:
1. Steel Plates, Shapes, and Bars: ASTM A 36.

C. Partition Top Anchors as indicated.

2.9 MISCELLANEOUS MASONRY ACCESSORIES

A. Compressible Filler: Premolded filler strips complying with ASTM D 1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene.

B. Preformed Control-Joint Gaskets: Made from styrene-butadiene-rubber compound, complying with ASTM D 2000, Designation M2AA-805 and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.

C. Bond-Breaker Strips: Asphalt-saturated felt complying with ASTM D 226, Type I (No. 15 asphalt felt).

2.10 MORTAR AND GROUT MIXES

A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated.

1. Do not use calcium chloride in mortar or grout.
2. Use portland cement-lime, masonry cement or mortar cement mortar unless otherwise indicated.
3. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.

B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.

C. Mortar for Unit Masonry: Comply with ASTM C 270, Property Specification. Provide the following types of mortar for applications stated unless another type is indicated or needed to provide required compressive strength of masonry.

1. For masonry below grade or in contact with earth, use Type S.
2. For reinforced masonry, use Type S.
3. For mortar parge coats, use Type S.

D. Grout for Unit Masonry: Comply with ASTM C 476.

1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with TMS 602/ACI 530.1/ASCE 6 for dimensions of grout spaces and pour height.
2. Proportion grout in accordance with ASTM C 476, Table 1 or paragraph 4.2.2 for specified 28-day compressive strength indicated, but not less than 2000 psi.
3. Provide grout with a slump of 10 to 11 inches as measured according to ASTM C 143.

E. Epoxy Pointing Mortar: Mix epoxy pointing mortar to comply with mortar manufacturer's written instructions.

1. Application: Use epoxy pointing mortar for exposed mortar joints with pre-faced CMUs.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
2. Verify that foundations are within tolerances specified.
3. Verify that reinforcing dowels are properly placed.
4. Verify that substrates are free of substances that would impair mortar bond.

B. Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Build chases and recesses to accommodate items specified in this and other Sections.

B. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match construction immediately adjacent to opening.

C. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.

3.3 TOLERANCES

A. Dimensions and Locations of Elements:

1. For dimensions in cross section or elevation, do not vary by more than plus 1/2 inch or minus 1/4 inch.
2. For location of elements in plan, do not vary from that indicated by more than plus or minus 1/2 inch.
3. For location of elements in elevation, do not vary from that indicated by more than plus or minus 1/4 inch in a story height or 1/2 inch total.

B. Lines and Levels:

1. For bed joints and top surfaces of bearing walls, do not vary from level by more than 1/4 inch in 10 feet, or 1/2-inch maximum.
2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2-inch maximum.
3. For vertical lines and surfaces do not vary from plumb by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2-inch maximum.
4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2-inch maximum.
5. For lines and surfaces, do not vary from straight by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2-inch maximum.
6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 feet, or 1/2-inch maximum.
7. For faces of adjacent exposed masonry units, do not vary from flush alignment by more than 1/16 inch.

C. Joints:

1. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch, with a maximum thickness limited to 1/2 inch.
2. For exposed bed joints, do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch.
3. For head and collar joints, do not vary from thickness indicated by more than plus 3/8 inch or minus 1/4 inch.
4. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch.

3.4 LAYING MASONRY WALLS

A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.

B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in running bond; do not use units with less-than-nominal 4-inch horizontal face dimensions at corners or jambs.

C. Lay concealed masonry with all units in a wythe in running bond or bonded by lapping not less than 4 inches. Bond and interlock each course of each wythe at corners. Do not use units with less-than-nominal 4-inch horizontal face dimensions at corners or jambs.

D. Stopping and Resuming Work: Stop work by stepping back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.

E. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.

F. Fill space between steel frames and masonry solidly with mortar unless otherwise indicated.

G. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below, and rod mortar or grout into core.

H. Fill cores in hollow CMUs with grout 24 inches under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.

I. Build nonload-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated.

1. Install compressible filler in joint between top of partition and underside of structure above.
2. Fasten partition top anchors to structure above and build into top of partition. Grout cells of CMUs solidly around plastic tubes of anchors and push tubes down into grout to provide 1/2-inch clearance between end of anchor rod and end of tube. Space anchors as indicated.
3. Wedge nonload-bearing partitions against structure above with small pieces of tile, slate, or metal. Fill joint with mortar after dead-load deflection of structure above approaches final position.
4. At fire-rated partitions, treat joint between top of partition and underside of structure above to comply with Section 078443 "Joint Firestopping."

3.5 MORTAR BEDDING AND JOINTING

A. Lay hollow CMUs as follows:

1. Bed face shells in mortar and make head joints of depth equal to bed joints.
2. Bed webs in mortar in all courses of piers, columns, and pilasters.
3. Bed webs in mortar in grouted masonry, including starting course on footings.
4. Fully bed entire units, including areas under cells, at starting course on footings where cells are not grouted.

B. Lay solid CMUs with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.

C. Set cast-stone trim units in full bed of mortar with full vertical joints. Fill dowel, anchor, and similar holes.

1. Clean soiled surfaces with fiber brush and soap powder and rinse thoroughly with clear water.
2. Wet joint surfaces thoroughly before applying mortar.
3. Rake out mortar joints for pointing with sealant.

D. Rake out mortar joints at pre-faced CMUs to a uniform depth of 1/4 inch and point with epoxy mortar to comply with epoxy-mortar manufacturer's written instructions.

E. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.

F. Cut joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint) unless otherwise indicated.

G. Cut joints flush where indicated to receive waterproofing unless otherwise indicated.

3.6 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

A. Anchor masonry to structural steel and concrete, where masonry abuts or faces structural steel or concrete, to comply with the following:

1. Provide an open space as indicated between masonry and structural steel or concrete. Keep open space free of mortar and other rigid materials.
2. Anchor masonry with anchors embedded in masonry joints and attached to structure.
3. Space anchors as indicated, but not more than 24 inches o.c. vertically and 36 inches o.c. horizontally.

3.7 CONTROL AND EXPANSION JOINTS

A. General: Install control- and expansion-joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.

B. Form control joints in concrete masonry as indicated.

3.8 LINTELS

A. Provide concrete unit masonry lintels where shown and where openings of more than 12 inches for brick-size units and 24 inches for block-size units are shown without structural steel or other supporting lintels.

B. Provide minimum bearing of 8 inches at each jamb unless otherwise indicated.

3.9 REINFORCED UNIT MASONRY INSTALLATION

A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.

1. Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.
2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and other loads that may be placed on them during construction.

B. Placing Reinforcement: Comply with requirements in TMS 602/ACI 530.1/ASCE 6.

C. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.

1. Comply with requirements in TMS 602/ACI 530.1/ASCE 6 for cleanouts and for grout placement, including minimum grout space and maximum pour height as indicated.
2. Limit height of vertical grout pours to not more than 12.67 ft.

3.10 FIELD QUALITY CONTROL (BY OWNER)

A. Testing and Inspecting: Owner will engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.

B. Inspections: Special inspections according to Level B in TMS 402/ACI 530/ASCE 5.

1. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.
2. Place grout only after inspectors have verified compliance of grout spaces and of grades, sizes, and locations of reinforcement.
3. Place grout only after inspectors have verified proportions of site-prepared grout.

C. Testing Prior to Construction: One set of tests.

D. Testing Frequency: One set of tests for each 5000 sq. ft. of wall area or portion thereof.

E. Concrete Masonry Unit Test: For each type of unit provided, according to ASTM C 140 for compressive strength.

F. Mortar Aggregate Ratio Test (Proportion Specification): For each mix provided, according to ASTM C 780.

G. Mortar Test (Property Specification): For each mix provided, according to ASTM C 780. Test mortar for compressive strength.

H. Grout Test (Compressive Strength): For each mix provided, according to ASTM C 1019.

I. Prism Test: For each type of construction provided, according to ASTM C 1314 at 28 days.

3.11 REPAIRING, POINTING, AND CLEANING

A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.

B. Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.

C. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.

D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:

1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of masonry.
3. Protect adjacent stone and nonmasonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
5. Clean concrete masonry by applicable cleaning methods indicated in NCMA TEK 8-4A.

3.12 MASONRY WASTE DISPOSAL

A. Salvageable Materials: Unless otherwise indicated, excess masonry materials are Contractor's property. At completion of unit masonry work, remove from Project site.

B. Excess Masonry Waste: Remove excess clean masonry waste that cannot be used as fill, as described above or recycled, and other masonry waste, and legally dispose of off Owner's property.

END OF SECTION 042200

SECTION 051200 - STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Structural steel.

a. Surface Preparation and Finishing of Structural Steel Framing:

1) Steel Framing Exposed to View: Interior and exterior steel exposed to public / employee view shall be designated AESS, whether indicated or not on the Drawings. Coordinate with Section 051213 "Architecturally Exposed Structural Steel Framing."

2) Steel Framing Concealed from View with a Fire-Resistance Rating:

a) For structural steel framing required to have a fire-resistance rating, prepare steel in compliance with Section 078100 "Applied Fireproofing" manufacturer's written instructions.

3) Steel Framing Concealed from View without a Fire-Resistance Rating:

a) Exterior structural steel framing outside of the conditioned building envelope shall be galvanized, whether indicated or not on the Drawings. Prepare steel in accordance with galvanizing manufacturer's written instructions and galvanize.

b) Interior structural steel framing shall be shop primed. Prepare steel in accordance with Section 099123 "Interior Painting" manufacturer's written instructions and shop prime.

2. Field-installed shear connectors.
3. Grout.

B. Related Requirements:

1. Section 051213 "Architecturally Exposed Structural Steel Framing" for additional requirements for architecturally exposed structural steel.
2. Section 053100 "Steel Decking" for field installation of shear connectors through deck.
3. Section 055000 "Metal Fabrications" for steel lintels and shelf angles not attached to structural-steel frame, miscellaneous steel fabrications, and other steel items not defined as structural steel.
4. Section 055113 "Metal Pan Stairs" for metal pan stairs.
5. Section 099113 "Exterior Painting" and Section 099123 "Interior Painting" for surface-preparation and priming requirements.

1.3 DEFINITIONS

A. Structural Steel: Elements of the structural frame indicated on Drawings and as described in AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."

B. Seismic-Load-Resisting System: Elements of structural-steel frame designated as "SLRS" or along grid lines designated as "SLRS" on Drawings, including columns, beams, and braces and their connections.

C. Heavy Sections: Rolled and built-up sections as follows:

1. Shapes included in ASTM A 6 with flanges thicker than 1-1/2 inches.
2. Welded built-up members with plates thicker than 2 inches.
3. Column base plates thicker than 2 inches.

D. Protected Zone: Structural members or portions of structural members indicated as "Protected Zone" on Drawings. Connections of structural and nonstructural elements to protected zones are limited.

E. Demand Critical Welds: Those welds, the failure of which would result in significant degradation of the strength and stiffness of the Seismic-Load-Resisting System and which are indicated as "Demand Critical" or "Seismic Critical" on Drawings.

1.4 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Show fabrication of structural-steel components.

1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
2. Include embedment Drawings.
3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
4. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical, high-strength bolted connections.
5. Identify members and connections of the Seismic-Load-Resisting System.
6. Indicate locations and dimensions of protected zones.
7. Identify demand critical welds.

C. Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs): Provide according to AWS D1.1, "Structural Welding Code - Steel," for each welded joint whether prequalified or qualified by testing, including the following:

1. Power source (constant current or constant voltage).
2. Electrode manufacturer and trade name, for demand critical welds.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For installer and fabricator.

B. Welding certificates.

C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

D. Mill test reports for structural steel, including chemical and physical properties.

E. Product Test Reports: For the following:

1. Bolts, nuts, and washers including mechanical properties and chemical analysis.
2. Direct-tension indicators.
3. Tension-control, high-strength, bolt-nut-washer assemblies.
4. Shear stud connectors.
5. Shop primers.
6. Nonshrink grout.

F. Survey of existing conditions.

G. Source quality-control reports.

H. Field quality-control and special inspection reports.

1.8 QUALITY ASSURANCE

A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category STD or is an approved fabricator with the Authority Having Jurisdiction.

B. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category CSE.

C. Shop-Painting Applicators: Qualified according to AISC's Sophisticated Paint or to SSPC-QP 3, "Standard Procedure for Evaluating Qualifications of Shop Painting Applicators."

D. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code - Steel."

1. Welders and welding operators performing work on bottom-flange, demand-critical welds shall pass the supplemental welder qualification testing, as required by AWS D1.8. FCAW-S and FCAW-G shall be considered separate processes for welding personnel qualification.

E. Comply with applicable provisions of the following specifications and documents:

1. AISC 303.
2. AISC 341 and AISC 341s1.
3. AISC 360.
4. RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."

1.9 DELIVERY, STORAGE, AND HANDLING

A. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

B. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.

1. Fasteners may be repackaged provided Owner's testing and inspecting agency observes repackaging and seals containers.
2. Clean and relubricate bolts and nuts that become dry or rusty before use.
3. Comply with manufacturers' written recommendations for cleaning and lubricating ASTM F 1852 fasteners and for retesting fasteners after lubrication.

PART 2 - PRODUCTS

2.1 STRUCTURAL-STEEL MATERIALS

A. W-Shapes: ASTM A 992.

B. Channels, Angles**,** Other Shapes: ASTM A 36.

C. Plate and Bar: ASTM A 36 or ASTM A 572, Grade 50, as indicated.

D. Cold-Formed Hollow Structural Sections: ASTM A 500, Grade B , structural tubing.

E. Steel Pipe: ASTM A 53, Type E or Type S, Grade B.

1. Weight Class: As indicated
2. Finish: Black except where indicated to be galvanized.

F. Welding Electrodes: Comply with AWS requirements.

2.2 BOLTS, CONNECTORS, AND ANCHORS

A. High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy-hex steel structural bolts; ASTM A 563, Grade C, heavy-hex carbon-steel nuts; and ASTM F 436, Type 1, hardened carbon-steel washers; all with plain finish.

1. Direct-Tension Indicators: ASTM F 959, Type 325, compressible-washer type with plain finish.

B. High-Strength Bolts, Nuts, and Washers: ASTM A 490, Type 1, heavy-hex steel structural bolts or tension-control, bolt-nut-washer assemblies with splined ends; ASTM A 563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F 436, Type 1, hardened carbon-steel washers with plain finish.

1. Direct-Tension Indicators: ASTM F 959, Type 490, compressible-washer type with plain finish.

C. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 1, heavy-hex or round head assemblies consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.

1. Finish: Plain

D. Shear Connectors: ASTM A 108, Grades 1015 through 1020, headed-stud type, cold-finished carbon steel; AWS D1.1, Type B.

E. Unheaded Anchor Rods: ASTM F 1554, Grade as indicated

1. Configuration: Straight.
2. Nuts: ASTM A 563 heavy-hex carbon steel.
3. Plate Washers: ASTM A 36 carbon steel.
4. Washers: ASTM F 436, Type 1, hardened carbon steel.
5. Finish: Plain

F. Headed Anchor Rods: ASTM F 1554, Grade as indicated, straight.

1. Nuts: ASTM A 563 heavy-hex carbon steel.
2. Plate Washers: ASTM A 36 carbon steel.
3. Washers: ASTM F 436, Type 1, hardened carbon steel.
4. Finish: Plain.

G. Threaded Rods: ASTM A 36 unless otherwise noted**.**

1. Nuts: ASTM A 563 heavy-hex carbon steel.
2. Washers: ASTM F 436, Type 1, hardened carbon steel.
3. Finish: Plain.

H. Clevises and Turnbuckles: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1035.

I. Eye Bolts and Nuts: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1030.

J. Sleeve Nuts: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1018.

2.3 PRIMER

A. Primer: As specified in Section 099123 "Interior Painting" for interior structural steel framing.

B. Galvanizing Repair Paint: ASTM A 780.

2.4 GROUT

A. Metallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, metallic aggregate grout, mixed with water to consistency suitable for application and a 30-minute working time.

B. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive and nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

2.5 FABRICATION

A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate according to AISC 303, "Code of Standard Practice for Steel Buildings and Bridges," and to AISC 360.

1. Camber structural-steel members where indicated.
2. Fabricate beams with rolling camber up.
3. Identify high-strength structural steel according to ASTM A 6 and maintain markings until structural steel has been erected.
4. Mark and match-mark materials for field assembly.
5. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.

B. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.

1. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1.

C. Bolt Holes: Cut, drill, mechanically thermal cut, or punch standard bolt holes perpendicular to metal surfaces.

D. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.

E. Cleaning: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 2, "Hand Tool Cleaning."

F. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1 and manufacturer's written instructions.

G. Steel Wall-Opening Framing: Select true and straight members for fabricating steel wall-opening framing to be attached to structural-steel frame. Straighten as required to provide uniform, square, and true members in completed wall framing. Build up welded framing, weld exposed joints continuously, and grind smooth.

H. Welded Door Frames: Build up welded door frames attached to structural-steel frame. Weld exposed joints continuously and grind smooth. Plug-weld fixed steel bar stops to frames. Secure removable stops to frames with countersunk machine screws, uniformly spaced not more than 10 inches o.c. unless otherwise indicated.

I. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel members.

1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.6 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

1. Joint Type: As indicated..

B. Weld Connections: Comply with AWS D1.1 and AWS D1.8 for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in AISC 303 for mill material.

2.7 SHOP PRIMING

A. Shop prime steel surfaces except the following:

1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
2. Surfaces to be field welded.
3. Surfaces of high-strength bolted, slip-critical connections.
4. Surfaces to receive sprayed fire-resistive materials (applied fireproofing).
5. Galvanized surfaces.
6. Surfaces enclosed in interior construction.

B. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:

1. In accordance with "Summary" Article above.

C. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 1.5 mils. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

2.8 GALVANIZING

A. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the galvanizing manufacturer’s written instructions.

B. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A 123.

1. Fill vent and drain holes that are exposed in the finished Work unless they function as weep holes, by plugging with zinc solder and filing off smooth.
2. Galvanize lintels and other miscellaneous steel framing attached to structural-steel frame and located in exterior walls.

2.9 SOURCE QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform shop tests and inspections.

1. Provide testing agency with access to places where structural-steel work is being fabricated or produced to perform tests and inspections.

B. Bolted Connections: Inspect and test shop-bolted connections according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."

C. Welded Connections: Visually inspect shop-welded connections according to AWS D1.1 and the following inspection procedures, at testing agency's option:

1. Liquid Penetrant Inspection: ASTM E 165.
2. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
3. Ultrasonic Inspection: ASTM E 164.
4. Radiographic Inspection: ASTM E 94.

D. In addition to visual inspection, test and inspect shop-welded shear connectors according to requirements in AWS D1.1 for stud welding and as follows:

1. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
2. Conduct tests according to requirements in AWS D1.1 on additional shear connectors if weld fracture occurs on shear connectors already tested.

E. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify, with certified steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.

1. Prepare a certified survey of existing conditions. Include bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.

1. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

3.3 ERECTION

A. Set structural steel accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.

B. Baseplates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.

1. Set plates for structural members on wedges, shims, or setting nuts as required.
2. Weld plate washers to top of baseplate.
3. Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
4. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.

C. Maintain erection tolerances of structural steel within AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."

D. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that are in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

1. Level and plumb individual members of structure.
2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.

E. Splice members only where indicated.

F. Do not use thermal cutting during erection unless approved by Architect. Finish thermally cut sections within smoothness limits in AWS D1.1.

G. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

H. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1 and manufacturer's written instructions.

3.4 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

1. Joint Type: As indicated

B. Weld Connections: Comply with AWS D1.1 and AWS D1.8 for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
2. Remove backing bars or runoff tabs where indicated, back gouge, and grind steel smooth.
3. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in AISC 303, "Code of Standard Practice for Steel Buildings and Bridges," for mill material.

3.5 FIELD QUALITY CONTROL (BY OWNER)

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Verify structural-steel materials and inspect steel frame joint details.
2. Verify weld materials and inspect welds.
3. Verify connection materials and inspect high-strength bolted connections.

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

C. Bolted Connections: Inspect and test bolted connections according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."

D. Welded Connections: Visually inspect field welds according to AWS D1.1.

1. In addition to visual inspection, test and inspect field welds according to AWS D1.1 and the following inspection procedures, at testing agency's option:

a. Liquid Penetrant Inspection: ASTM E 165.
b. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
c. Ultrasonic Inspection: ASTM E 164.
d. Radiographic Inspection: ASTM E 94.

E. In addition to visual inspection, test and inspect field-welded shear connectors according to requirements in AWS D1.1 for stud welding and as follows:

1. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
2. Conduct tests according to requirements in AWS D1.1 on additional shear connectors if weld fracture occurs on shear connectors already tested.

3.6 REPAIRS AND PROTECTION

A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and repair galvanizing to comply with ASTM A 780.

B. Touchup Priming: Cleaning and touchup priming are specified in Section 099123 "Interior Painting."

END OF SECTION 051200

SECTION 051213 - ARCHITECTURALLY EXPOSED STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes architecturally exposed structural-steel (AESS). AESS includes structural steel exposed to public/employee view, whether or not indicated on the Drawings.

1. Requirements in Section 051200 "Structural Steel Framing" also apply to AESS.
2. Surface preparation and finishing of AESS:

a. For AESS required to have a fire-resistance rating:

1) Prepare steel in compliance with Section 078123 "Intumescent Fireproofing" manufacturer's written instructions.

b. For AESS not required to have a fire-resistance rating:

1) Prepare steel in compliance with Section 099113 "Exterior Painting" or Section 099123 "Interior Painting" manufacturer's written instructions and prime.

B. Related Requirements:

1. Section 051200 "Structural Steel Framing" for additional requirements applicable to AESS.
2. Section 055000 "Metal Fabrications" for miscellaneous steel fabrications and other metal items not defined as structural steel.
3. Section 078123 "Intumescent Fireproofing" for surface preparation requirements for AESS indicated to receive intumescent fireproofing.
4. Section 099113 "Exterior Painting" for surface preparation and priming requirements of exterior AESS indicated to be painted.
5. Section 099123 "Interior Painting" for surface preparation and priming requirements of interior AESS indicated to be painted.

1.3 DEFINITIONS

A. AESS: Structural steel designated as "architecturally exposed structural steel" or "AESS" in the Contract Documents.

1. AESS includes structural steel exposed to public/employee view, whether or not indicated on the Drawings.

B. AESS Category: This specification section does not separately classify AESS by categories. As such, all AESS is defined as Category 1 and shall comply with all of the requirements of this Section.

1.4 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

A. Shop Drawings: Show fabrication of AESS components. Shop Drawings for structural steel may be used for AESS provided items of AESS are specifically identified and requirements below are met for AESS.

1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
2. Include embedment Drawings.
3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain. Indicate grinding, finish, and profile of welds.
4. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical, high-strength bolted connections. Indicate orientation of bolt heads.
5. Indicate exposed surfaces and edges and surface preparation being used.
6. Indicate special tolerances and erection requirements.

B. Samples: Submit Samples of AESS to set quality standards for exposed welds.

1. Two steel plates, 3/8 by 8 by 4 inches, with long edges joined by a groove weld and with weld ground smooth.
2. Steel plate, 3/8 by 8 by 8 inches, with one end of a short length of rectangular steel tube, 4 by 6 by 3/8 inches, welded to plate with a continuous fillet weld and with weld ground smooth and blended.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator and installer.

B. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

C. Field quality control and special inspection reports.

1.8 QUALITY ASSURANCE

A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category STD, or is accredited by the IAS Fabricator Inspection Program for Structural Steel (AC 172).

B. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category ACSE.

C. Mockups: Build mockups of AESS to set quality standards for fabrication and installation.

1. Build mockup of typical portion of AESS as shown on Drawings.
2. Coordinate intumescent mastic fireproofing requirements with Section 078123 "Intumescent Fireproofing."
3. Coordinate painting requirements with Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Use special care in handling to prevent twisting, warping, nicking, and other damage. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

1.10 FIELD CONDITIONS

A. Field Measurements: Where AESS is indicated to fit against other construction, verify actual dimensions by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 BOLTS, CONNECTORS, AND ANCHORS

A. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 1, round-head assemblies, consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.

1. Finish: Plain.

B. Corrosion-Resisting (Weathering Steel), Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 3, round-head assemblies, consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.

2.2 FILLER

A. Filler: Polyester filler intended for use in repairing dents in automobile bodies.

2.3 PRIMER

A. Primer: Comply with Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

2.4 FABRICATION

A. Shop fabricate and assemble AESS to the maximum extent possible. Locate field joints at concealed locations if possible. Detail assemblies to minimize handling and to expedite erection.

B. In addition to special care used to handle and fabricate AESS, comply with the following:

1. Fabricate with exposed surfaces smooth, square, and free of surface blemishes including pitting, rust, scale, and roughness.
2. Grind sheared, punched, and flame-cut edges of AESS to remove burrs and provide smooth surfaces and edges.
3. Fabricate AESS with exposed surfaces free of mill marks, including rolled trade names and stamped or raised identification.
4. Fabricate AESS with exposed surfaces free of seams to maximum extent possible.
5. Remove blemishes by filling or grinding or by welding and grinding, before cleaning, treating, and shop priming.
6. Fabricate with piece marks fully hidden in the completed structure or made with media that permits full removal after erection.
7. Fabricate AESS to the tolerances specified in AISC 303 for steel that is designated AESS.
8. Seal-weld open ends of hollow structural sections with 3/8-inch closure plates for AESS.

C. Curved Members: Fabricate indicated members to curved shape by rolling to final shape in fabrication shop.

1. Distortion of webs, stems, outstanding flanges, and legs of angles shall not be visible from a distance of 20 feet under any lighting conditions.
2. Tolerances for walls of hollow steel sections after rolling shall be approximately 1/2 inch.

D. Coping, Blocking, and Joint Gaps: Maintain uniform gaps of 1/8 inch with a tolerance of 1/32 inch for AESS.

E. Bolt Holes: Cut, drill, or punch standard bolt holes perpendicular to metal surfaces.

F. Cleaning Corrosion-Resisting Structural Steel: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

G. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel members.

1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.5 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

1. Joint Type: Comply with Section 051200 "Structural Steel Framing."

B. Weld Connections: Comply with AWS D1.1 and AWS D1.8 for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work, and comply with the following:

1. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding specified tolerances.
2. Use weld sizes, fabrication sequence, and equipment for AESS that limit distortions to allowable tolerances.
3. Provide continuous, sealed welds at angle to gusset-plate connections and similar locations where AESS is exposed to weather.
4. Provide continuous welds of uniform size and profile where AESS is welded.
5. Grind butt and groove welds flush to adjacent surfaces within tolerance of plus 1/16 inch, minus zero inch for AESS.
6. Make butt and groove welds flush to adjacent surfaces within tolerance of plus 1/16 inch, minus zero inch for AESS. Do not grind unless required for clearances or for fitting other components, or unless directed to correct unacceptable work.
7. Remove backing bars or runoff tabs; back-gouge and grind steel smooth for AESS.
8. At locations where welding on the far side of an exposed connection of AESS occurs, grind distortions and marking of the steel to a smooth profile aligned with adjacent material.
9. Make fillet welds for AESS oversize and grind to uniform profile with smooth face and transition.
10. Make fillet welds for AESS of uniform size and profile with exposed face smooth and slightly concave. Do not grind unless directed to correct unacceptable work.

2.6 GALVANIZING

A. General: Prior to the galvanizing operation, the Contractor shall identify to the galvanizer the specific assemblies and surfaces receiving a paint or coating system after galvanizing, to ensure that the galvanizing method used on these assemblies is compatible with subsequent application of the paint or coating system. Specifically, such assemblies shall neither be water-quenched, nor receive a chromate conversion coating, as part of the galvanizing operation. For galvanized surfaces to remain exposed to view, the Contractor shall identify to the galvanizer the specific assemblies and surfaces to ensure that the galvanized surfaces are consistent in appearance, finish, and reflectivity.

B. Galvanized Surface Cleaning and Preparation:

1. Galvanized surfaces receiving a paint or coating system shall be cleaned and prepared for coating in accordance with ASTM D 6386 and the written instructions of the painting or coating system manufacturer.
2. Assemblies conforming to the ASTM D 6386 definition for newly galvanized steel shall receive surface smoothing and surface cleaning in accordance with ASTM D 6386 Section 5, and surface preparation in accordance with ASTM D 6386 Section 5.4.1.
3. Assemblies conforming to the ASTM D 6386 definition for partially weathered galvanized steel shall be checked and prepared in accordance with ASTM D 6386 Section 6, before then receiving surface smoothing and surface cleaning in accordance with ASTM D 6386 Section 5, and surface preparation in accordance with ASTM D 6386 Section 5.4.1.
4. Assemblies conforming to the ASTM D 6386 definition for weathered galvanized steel shall be checked and prepared in accordance with ASTM D 6386 Section 7, before then receiving surface smoothing and surface cleaning in accordance with ASTM D 6386 Section 5, and surface preparation in accordance with ASTM D 6386 Section 5.4.1.

C. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A 123.

1. Fill vent holes and grind smooth after galvanizing.

2.7 SHOP PRIMING

A. Shop prime steel surfaces except the following:

1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
2. Surfaces to be field welded.
3. Surfaces to be high-strength bolted with slip-critical connections.
4. Surfaces to receive intumescent fire-resistive materials.
5. Galvanized surfaces.

B. Surface Preparation for AESS: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to Section 099113 “Exterior Painting” and Section 099123 “Interior Painting” manufacturer’s written instructions.

C. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 1.5 mils. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify, with steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.

1. Prepare a certified survey of bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.

B. Examine AESS for twists, kinks, warping, gouges, and other imperfections before erecting.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep AESS secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.

1. If possible, locate welded tabs for attaching temporary bracing and safety cabling where they will be concealed from view in the completed Work.
2. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

3.3 ERECTION

A. Set AESS accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.

1. Erect AESS to the tolerances specified in AISC 303 for steel that is designated AESS.

B. Do not use thermal cutting during erection.

3.4 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

1. Joint Type: Per Section 051200 “Structural Steel Framing.”
2. Orient bolt heads in same direction for each connection and to maximum extent possible in same direction for similar connections.

B. Weld Connections: Comply with requirements in "Weld Connections" Paragraph in "Shop Connections" Article.

1. Remove backing bars or runoff tabs; back-gouge and grind steel smooth for AESS.
2. Remove erection bolts in AESS, fill holes, and grind smooth.
3. Fill weld access holes in AESS and grind smooth.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to inspect AESS as specified in Section 051200 "Structural Steel Framing." The testing agency is not responsible for enforcing requirements relating to aesthetic effect.

B. Architect will observe AESS in place to determine acceptability relating to aesthetic effect.

3.6 REPAIRS AND PROTECTION

A. Remove welded tabs that were used for attaching temporary bracing and safety cabling and that are exposed to view in the completed Work. Grind steel smooth.

B. Touchup Painting: Cleaning and touchup painting are specified in Section 099113 “Exterior Painting” and Section 099123 “Interior Painting.”

END OF SECTION 051213

SECTION 053100 - STEEL DECKING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Composite deck.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for normal-weight and lightweight structural concrete fill over steel deck.
2. Section 051200 "Structural Steel Framing" for shop- and field-welded shear connectors.
3. Section 055000 "Metal Fabrications" for framing deck openings with miscellaneous steel shapes.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of deck, accessory, and product indicated.

B. Shop Drawings:

1. Include layout and types of deck panels, anchorage details, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator and installer.

B. Welding certificates.

C. Product Certificates: For each type of steel deck.

D. Product Test Reports: For tests performed by a qualified testing agency, indicating that each of the following complies with requirements:

1. Power-actuated mechanical fasteners.

E. Evaluation Reports: For steel deck, from ICC-ES.

F. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Fabricator Qualifications: An experienced fabricator with a minimum 10-year record of successful in-service performance, capable of fabricating steel decking that meet or exceed performance requirements indicated and of documenting this performance by test reports and evaluation reports from ICC-ES. Fabricator shall also be a member of Steel Deck Institute.

B. Installer Qualifications: Engaged an experienced erector who has completed steel deck erection similar in material, design, and extent to that indicated for this Project, and with a minimum 5-year record of successful in-service performance.

C. Welding Qualifications: Qualify procedures and personnel according to AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.

1. Protect and ventilate acoustical cellular roof deck with factory-installed insulation to maintain insulation free of moisture.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide composite deck by one of the following:

1. ASC.
2. Canam.
3. Nucor.
4. Verco.

B. Source limitations: Obtain steel decking from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."

B. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.3 COMPOSITE DECK

A. Composite Deck: Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with "SDI Specifications and Commentary for Composite Steel Floor Deck," in SDI Publication No. 31, with the minimum section properties indicated, and with the following:

1. Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade 33, G60 zinc coating.
2. Profile Depth: As indicated.
3. Design Uncoated-Steel Thickness: As indicated.
4. Span Condition: As indicated.

2.4 ACCESSORIES

A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.

B. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.

C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 minimum diameter.

D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.

E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 33,000 psi, not less than 0.0359-inch design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.

F. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of 33,000 psi, of same material and finish as deck, and of thickness and profile indicated.

G. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck unless otherwise indicated.

H. Piercing Hanger Tabs: Piercing steel sheet hanger attachment devices for use with floor deck.

I. Weld Washers: Uncoated steel sheet, shaped to fit deck rib, 0.0747 inch thick, with factory-punched hole of 3/8-inch minimum diameter.

J. Flat Sump Plates: Single-piece steel sheet, 0.0747 inch thick, of same material and finish as deck. For drains, cut holes in the field.

K. Recessed Sump Pans: Single-piece steel sheet, 0.0747 inch thick, of same material and finish as deck, with 3-inch-wide flanges and sloped recessed pans of 1-1/2-inch minimum depth. For drains, cut holes in the field.

L. Galvanizing Repair Paint: SSPC-Paint 20 or MIL-P-21035B, with dry film containing a minimum of 94 percent zinc dust by weight.

M. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Install deck panels and accessories according to applicable specifications and commentary in SDI Publication No. 31, manufacturer's written instructions, and requirements in this Section.

B. Install temporary shoring before placing deck panels if required to meet deflection limitations.

C. Locate deck bundles to prevent overloading of supporting members.

D. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.

1. Align cellular deck panels over full length of cell runs and align cells at ends of abutting panels.

E. Place deck panels flat and square and fasten to supporting frame without warp or deflection.

F. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.

G. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work.

H. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.

I. Mechanical fasteners may be used in lieu of welding to fasten deck. Locate mechanical fasteners and install according to deck manufacturer's written instructions.

3.3 COMPOSITE DECK INSTALLATION

A. Fasten floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:

1. Weld Diameter: As indicated.
2. Weld Spacing: Space and locate welds as indicated.

B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports as indicated.

C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 2 inches, with end joints as follows:

1. End Joints: Lapped 2 inches minimum where indicated; otherwise lapped 2 inches minimum or butted at Contractor’s option.

D. Pour Stops and Girder Fillers: Weld steel sheet pour stops and girder fillers to supporting structure according to SDI recommendations unless otherwise indicated.

E. Floor-Deck Closures: Weld steel sheet column closures, cell closures, and Z-closures to deck, according to SDI recommendations, to provide tight-fitting closures at open ends of ribs and sides of deck.

F. Install piercing hanger tabs at 14 inches apart in both directions, within 9 inches of walls at ends, and not more than 12 inches from walls at sides unless otherwise indicated.

3.4 FIELD QUALITY CONTROL (BY OWNER)

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Field welds will be subject to inspection.

C. Prepare test and inspection reports.

3.5 PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.

B. Provide final protection and maintain conditions to ensure that steel deck is without damage or deterioration at time of Substantial Completion.

END OF SECTION 053100

SECTION 054000 - COLD-FORMED METAL FRAMING (DEFERRED APPROVAL)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Exterior non-load-bearing wall framing, galvanized.
2. Exterior ceiling joist and soffit framing, galvanized.
3. Interior non-load-bearing wall, ceiling joist, soffit, and opening framing, where not provided under Section 092216 "Non-Structural Metal Framing."
4. Framing accessories, including, but not limited to: supplementary framing, bracing, bridging, solid blocking, backing, anchor clips, end clips, foundation clips, kickers, hole-reinforcing plates, backer plates, and custom-formed shapes as indicated or as required to provide suitable framing attachments for substrate materials.

B. Exterior cold-formed metal framing is part of a "Deferred Approval." Coordinate with the requirements of Section 013300 "Submittal Procedures" and with the requirements for deferred approvals indicated on the title sheet of the drawings.

C. Related Requirements:

1. Section 061600 "Sheathing" for gypsum sheathing materials to be applied over cold-formed metal framing.
2. Section 092116 "Gypsum Board Shaft Wall Assemblies" for interior non-load-bearing, metal-stud-framed, shaft-wall assemblies.
3. Section 092216 "Non-Structural Metal Framing" for interior non-load-bearing, metal-stud framing and ceiling-suspension assemblies.

1.3 DEFINITIONS

A. CBC: 2016 California Building Code.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Include project-specific shop drawings indicating layout, spacings, sizes, thicknesses, and types of cold-formed steel framing; fabrication; and fastening and anchorage details, including mechanical fasteners.
2. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.
3. Shop Drawings shall be signed and sealed by the qualified California-licensed professional engineer responsible for their preparation.

C. Deferred-Approval Submittal: For exterior cold-formed steel framing, including analysis data and shop drawings, signed and sealed by the qualified California-licensed professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer, installer, and professional engineer.

B. Welding certificates.

C. Product Test Reports: For each listed product, for tests performed by a qualified testing agency.

1. Steel sheet.
2. Expansion anchors.
3. Power-actuated anchors.
4. Mechanical fasteners.
5. Vertical deflection clips.
6. Horizontal drift deflection clips
7. Miscellaneous structural clips and accessories.

D. Research Reports: For non-standard cold-formed steel framing, post-installed anchors, and power-actuated fasteners, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

E. Special inspection reports.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of cold-formed metal framing that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports and evaluation reports.

B. Installer Qualifications: A firm with not less than 10 years' experience installing cold-formed metal framing similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section. Installer shall also be a member of the Western Wall and Ceiling Contractor's Association.

C. Engineering Responsibility: Preparation of Shop Drawings, design calculations, deferred-approval submittal, and other structural data by a qualified professional engineer.

D. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the State of California and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of cold-formed metal framing that are similar to those indicated for this Project in material, design, and extent.

E. Product Tests: Mill certificates or data from a qualified independent testing agency indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.

F. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Steel Stud Manufacturers Association.

G. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1, "Structural Welding Code - Steel."
2. AWS D1.3, "Structural Welding Code - Sheet Steel."

1.8 DELIVERY, STORAGE, AND HANDLING

A. Protect cold-formed steel framing from corrosion, moisture staining, deformation, and other damage during delivery, storage, and handling.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Deferred Approval: Engage a qualified California-licensed professional engineer to design exterior cold-formed steel framing.

B. Structural Performance: Provide cold-formed steel framing capable of withstanding design loads within limits and under conditions indicated.

1. Design Loads: As indicated on Structural Drawings.

a. Wind Loads: Per the 2016 CBC, based upon criteria indicated on Structural Drawings.
b. Seismic Loads: Cold-formed metal framing shall withstand the effects of earthquake motions as determined according to the 2016 CBC.
c. Story Drift: Accommodate design displacement of adjacent stories as indicated.

1) Amplified (Inelastic) Story Drift Displacement: As indicated on Structural Drawings.

a) Accommodate seismic movement of cold-formed metal framing to prevent component failure.

2. Deflection Limits: Design framing systems to withstand design loads without deflections greater than the following:

a. Non-Load-Bearing Framing: Horizontal deflection of:

1) 1/360 of the wall height for walls clad with gypsum board or plaster.
2) 1/300 of the wall height for walls clad with fiber cement siding.

.

b. Ceiling and Soffit Framing: Vertical deflection of:

1) 1/360 of the span for ceilings and soffits of gypsum board or plaster.

3. Thermal Movements: Design framing systems to provide for movement of framing members located outside the insulated building envelope without damage or overstressing, sheathing failure, connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of 120 deg F.
4. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows:

a. Upward and downward movement of 1/2 inch live load deflection.

5. Design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.

C. Cold-Formed Steel Framing Standards: Unless more stringent requirements are indicated, framing shall comply with AISI S100, AISI S200, and the following:

1. Wall Studs: AISI S211.
2. Headers: AISI S212.
3. Lateral Design: AISI S213.

D. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.2 COLD-FORMED STEEL FRAMING, GENERAL

A. Steel Sheet: ASTM A 1003, Structural Grade, Type H, metallic coated, of grade and coating weight as follows:

1. Grade: As required by structural performance.
2. Coating: G90 or equivalent.

B. Steel Sheet for Vertical Deflection Clips: ASTM A 653, structural steel, zinc coated, of grade and coating as follows:

1. Grade: As required by structural performance.
2. Coating: G90.

2.3 NON-LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness:

a. Exterior walls: As required by structural design, but not less than 0.054 inch.
b. Interior walls: As indicated on Drawings, but not less than 0.033 inch.

2. Flange Depth:

a. Exterior walls: As required by structural design, and not exceed 6 inches except where indicated.
b. Interior walls: As indicated on Drawings.

3. Flange Width:

a. Exterior walls: As required by structural design, but not less than 1-3/8 inch.
b. Interior walls: As indicated on Drawings, but not less than 1-3/8 inch.

4. Section Properties:

a. Exterior walls: As required by structural design.
b. Interior walls: As indicated on Drawings.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: Matching steel studs, unless otherwise indicated.
2. Flange Width:

a. Exterior Walls: As required by structural design.
b. Interior Walls: As indicated on Drawings.

C. Vertical Deflection Clips: Manufacturer's standard clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.

D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:

1. Minimum Base-Metal Thickness: Matching steel studs, unless otherwise indicated on Drawings.
2. Flange Width: 1 inch plus twice the design gap.

E. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure through positive mechanical attachment to stud web and structure.

F. Z-Shaped Furring: With nonslotted web, minimum face flange of 1-1/4 inches, wall attachment flange of minimum 7/8 inch, minimum uncoated-metal thickness of 0.054 inch, and depth required to fit insulation thickness indicated.

2.4 CEILING AND SOFFIT FRAMING

A. Steel Ceiling and Soffit Framing: Manufacturer's standard C-shaped steel sections, of web depths indicated, punched with standard holes, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness:

a. Exterior Ceilings and Soffits: As required by Structural design, but not less than 0.033 inch.
b. Interior Ceilings and Soffits: As indicated on Drawings, but not less than 0.033 inch.

2. Flange Width:

a. Exterior Ceilings and Soffits: As required by Structural design, but not less than 1-3/8 inches.
b. Interior Ceilings and Soffits: As indicated on Drawings, but not less than 1-3/8 inches.

3. Section Properties:

a. Exterior Ceilings and Soffits: As required by Structural design.
b. Interior Ceilings and Soffits: As indicated on Drawings.

2.5 FRAMING ACCESSORIES

A. Fabricate steel-framing accessories from steel sheet, ASTM A 1003, Structural Grade, Type H, metallic coated, of same grade and coating weight used for framing members.

B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:

1. Supplementary framing.
2. Bracing, bridging, and solid blocking.
3. Anchor clips.
4. End clips.
5. Foundation clips.
6. Stud kickers and knee braces.
7. Hole reinforcing plates.
8. Backer plates and pre-notched backing tracks.

2.6 ANCHORS, CLIPS, AND FASTENERS

A. Steel Shapes and Clips: ASTM A 36, zinc coated by hot-dip process according to ASTM A 123.

B. Anchor Bolts: ASTM F 1554, Grade 36, threaded carbon-steel hex-headed bolts and carbon-steel nuts; and flat, hardened-steel washers; zinc coated by mechanically deposition according to ASTM B 695, Class 50.

C. Post-Installed Concrete Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E 488 conducted by a qualified testing agency. Special inspection of post-installed concrete anchors shall be in compliance with CBC Table 1705.3 and the evaluation report for the anchor.

D. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E 1190 conducted by a qualified testing agency.

E. Mechanical Fasteners: ASTM C 1513, corrosion-resistant-coated, self-drilling, self-tapping, steel drill screws.

1. Head Type: Low-profile head beneath sheathing, manufacturer's standard elsewhere.

F. Welding Electrodes: Comply with AWS standards.

2.7 MISCELLANEOUS MATERIALS

A. Galvanizing Repair Paint: ASTM A 780.

B. Cement Grout: Portland cement, ASTM C 150, Type I; and clean, natural sand, ASTM C 404. Mix at ratio of 1 part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.

C. Nonmetallic, Nonshrink Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, portland cement, shrinkage-compensating agents, and plasticizing and water-reducing agents, complying with ASTM C 1107, with fluid consistency and 30-minute working time.

D. Shims: Load bearing, high-density multimonomer plastic, and nonleaching; or of cold-formed steel of same grade and coating as framing members supported by shims.

E. Sealer Gaskets: Closed-cell neoprene foam, 1/4 inch thick, selected from manufacturer's standard widths to match width of bottom track or rim track members.

2.8 FABRICATION

A. Fabricate cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, manufacturer's written instructions, and requirements in this Section.

1. Fabricate framing assemblies using jigs or templates.
2. Cut framing members by sawing or shearing; do not torch cut.
3. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, pneumatic pin fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.

    a. Comply with AWS D1.3 requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
    b. Locate mechanical fasteners and install according to Shop Drawings, with screw penetrating joined members by no fewer than three exposed screw threads.

4. Fasten other materials to cold-formed steel framing by welding, bolting, pneumatic pin fastening, or screw fastening, according to Shop Drawings.

B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies to prevent damage or permanent distortion.

C. Fabrication Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:

1. Spacing: Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
2. Squareness: Fabricate each cold-formed steel framing assembly to a maximum out-of-square tolerance of 1/8 inch.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting substrates and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Before sprayed fire-resistive materials are applied, attach continuous angles, supplementary framing, or tracks to structural members indicated to receive sprayed fire-resistive materials.

B. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed framing without reducing thickness of fire-resistive materials below that are required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

C. Install sealer gaskets at the underside of wall bottom track or rim track and at the top of foundation wall or slab at stud or joist locations.

3.3 INSTALLATION, GENERAL

A. Cold-formed steel framing may be shop or field fabricated for installation, or it may be field assembled.

B. Install cold-formed steel framing according to AISI S200 and to manufacturer's written instructions unless more stringent requirements are indicated.

C. Install shop- or field-fabricated, cold-formed framing and securely anchor to supporting structure.

1. Screw, bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16 inch.

D. Install cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened.

1. Cut framing members by sawing or shearing; do not torch cut.
2. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.

a. Comply with AWS D1.3 requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
b. Locate mechanical fasteners and install according to Shop Drawings, and complying with requirements for spacing, edge distances, and screw penetration.

E. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.

F. Install temporary bracing and supports to secure framing and support loads comparable in intensity to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.

G. Do not bridge building expansion joints with cold-formed steel framing. Independently frame both sides of joints.

H. Install insulation, specified in Section 072100 "Thermal Insulation," in built-up exterior framing members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.

I. Fasten hole reinforcing plate over web penetrations that exceed size of manufacturer's approved or standard punched openings.

3.4 NON-LOAD-BEARING WALL INSTALLATION

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure as indicated.

B. Fasten both flanges of studs to bottom track unless otherwise indicated. Space studs as follows:

1. Exterior Stud Spacing: As required by structural design, and shall not exceed 16 inches on center.
2. Interior Stud Spacing: As indicated on Drawings.

C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.

D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.

1. Install single deep-leg deflection tracks and anchor to building structure.
2. Connect vertical deflection clips to studs and anchor to building structure.
3. Connect drift clips to cold-formed metal framing and anchor to building structure.

E. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection.

1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs.
2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
3. Bar Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.

F. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.

G. Door and Window Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install runner track section (for cripple studs) at head and secure to jamb studs.

1. Install single king-post stud with 3 inch flange, or two interconnected studs at each jamb, unless otherwise indicated.
2. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.

H. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.5 ERECTION TOLERANCES

A. Install cold-formed steel framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:

1. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

3.6 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform field tests and inspections and prepare test reports.

1. Compliance of seismic design.
2. Verify weld materials and inspect welds.
3. Verify installation of post-installed concrete anchors.

B. Cold-formed metal framing will be considered defective if it does not pass tests and inspections.

C. Repair or remove work if test results and inspections indicate that it does not comply with specified requirements.

D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.7 REPAIRS AND PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed steel framing with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and installer, that ensure that cold-formed steel framing is without damage or deterioration at time of Substantial Completion.

END OF SECTION 054000

SECTION 055000 - METAL FABRICATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Steel framing and supports for operable partitions.
2. Steel framing and supports for overhead doors and grilles.
3. Steel framing and supports for countertops.
4. Steel tube reinforcement for low partitions.
5. Steel framing and supports for mechanical and electrical equipment.
6. Steel framing and supports for applications where framing and supports are not specified in other Sections.
7. Elevator machine beams, hoist beams, and divider beams if not provided as part of Section 051200 "Structural Steel Framing."
8. Guards between adjacent elevator pits.
9. Steel shapes for supporting elevator door sills.
10. Metal ladders.
11. Miscellaneous steel trim including loading-dock edge angles.
12. Metal bollards.

B. Products furnished, but not installed, under this Section include the following:

1. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge-type inserts indicated to be cast into concrete or built into unit masonry.
2. Steel weld plates and angles for casting into concrete for applications where they are not specified in other Sections.

C. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for installing anchor bolts, steel pipe sleeves, slotted-channel inserts, wedge-type inserts, and other items cast into concrete.
2. Section 042200 "Concrete Unit Masonry" for installing anchor bolts, and other items built into unit masonry.
3. Section 051200 "Structural Steel Framing."

1.3 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of metal fabrications that are anchored to or that receive other work. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.4 ACTION SUBMITTALS

A. Product Data: For primer products and grout.

B. Shop Drawings: Show fabrication and installation details. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items. Provide project-specific Shop Drawings for the scope of metal fabrications indicated in the “Summary” Article above.

1.5 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

C. Research/Evaluation Reports: For post-installed anchors, from ICC-ES.

1.6 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code - Steel."

1.7 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.2 METALS

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

B. Channels, Angles: ASTM A 36.

C. Cold-Formed Hollow Structural Sections (HSS): ASTM A 500, Grade B, structural tubing.

D. Steel Pipe: ASTM A 53, Grade B, in weight class as indicated on Drawings.

E. Slotted Channel Framing: Cold-formed metal box channels (struts) complying with MFMA-4.

2.3 FASTENERS

A. General: Unless otherwise indicated, provide Type 316 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.

B. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A 307, Grade A; with hex nuts, ASTM A 563; and, where indicated, flat washers.

C. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A 325, Type 3; with hex nuts, ASTM A 563, Grade C3; and, where indicated, flat washers.

D. Stainless-Steel Bolts and Nuts: Regular hexagon-head annealed stainless-steel bolts, ASTM F 593; with hex nuts, ASTM F 594; and, where indicated, flat washers.

E. Anchor Bolts: ASTM F 1554, Grade 36, of dimensions indicated; with nuts, ASTM A 563; and, where indicated, flat washers.

1. Hot-dip galvanize or provide mechanically deposited, zinc coating where item being fastened is indicated to be galvanized.

F. Post-Installed Concrete Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E 488 conducted by a qualified testing agency. Special inspection of post-installed concrete anchors shall be in compliance with CBC Table 1705.3 and the evaluation report for the anchor.

1. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B 633, Class Fe/Zn 5.
2. Material for Exterior Locations and Where Stainless Steel is Indicated: Stainless-steel bolts, ASTM F 593, and nuts, ASTM F 594.

G. Slotted-Channel Inserts: Cold-formed, hot-dip galvanized-steel box channels (struts) complying with MFMA-4, 1-5/8 by 7/8 inches by length indicated with anchor straps or studs not less than 3 inches long at not more than 8 inches o.c. Provide with temporary filler and tee-head bolts, complete with washers and nuts, all zinc-plated to comply with ASTM B 633, Class Fe/Zn 5, as needed for fastening to inserts.

2.4 MISCELLANEOUS MATERIALS

A. Shop Primers: Provide primers that comply with Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

B. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

C. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

D. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

E. Concrete: Comply with requirements in Section 033000 "Cast-In-Place Concrete" for normal-weight, air-entrained, concrete with a minimum 28-day compressive strength of 3000 psi.

2.5 FABRICATION, GENERAL

A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

D. Form exposed work with accurate angles and surfaces and straight edges.

E. Weld corners and seams continuously to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.

G. Fabricate seams and other connections that are exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.

I. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.

J. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, 1/8 by 1-1/2 inches, with a minimum 6-inch embedment and 2-inch hook, not less than 8 inches from ends and corners of units and 24 inches o.c., unless otherwise indicated.

2.6 MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Provide steel framing and supports not specified in other Sections as needed to complete the Work.

B. Fabricate units from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.

1. Fabricate units from slotted channel framing where indicated.
2. Furnish inserts for units installed after concrete is placed.

C. Fabricate supports for operable partitions from continuous steel beams of sizes indicated, or if not indicated, in size recommended by partition manufacturer with attached bearing plates, anchors, and braces as indicated, or if not indicated, in size recommended by partition manufacturer. Drill or punch bottom flanges of beams to receive partition track hanger rods; locate holes where indicated on operable partition Shop Drawings.

D. Galvanize exterior miscellaneous framing and supports, and prime interior miscellaneous framing and supports with primer specified in Section 099123 "Interior Painting."

2.7 METAL LADDERS

A. General:

1. Comply with ANSI A14.3 unless otherwise indicated.
2. For elevator pit ladders, comply with ASME A17.1/CSA B44.
3. Space siderails 18 inches apart for roof ladders, 16 inches apart for elevator ladders, unless otherwise indicated.
4. Support each ladder at top and bottom and not more than 48 inches o.c. with welded or bolted brackets, made from same metal as ladder.

B. Steel Ladders:

1. Siderails: Continuous, steel flat bars, with eased edges.
2. Rungs: Minimum 3/4" diameter solid steel rods.
3. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
4. Provide nonslip surfaces on top of each rung by coating with abrasive material metallically bonded to rung by a proprietary process.
5. Galvanize and prime interior and exterior ladders, including brackets and fasteners.
6. Elevator pit ladders shall comply with ASME A17.1.

2.8 MISCELLANEOUS STEEL TRIM

A. Unless otherwise indicated, fabricate units from steel shapes, plates, and bars of profiles shown with continuously welded joints and smooth exposed edges. Miter corners and use concealed field splices where possible.

B. Provide cutouts, fittings, and anchorages as needed to coordinate assembly and installation with other work.

1. Provide with integrally welded steel strap anchors for embedding in concrete or masonry construction.

C. Galvanize and prime miscellaneous steel trim.

2.9 METAL BOLLARDS

A. Fabricate metal bollards from steel shapes as indicated on Drawings, or if not indicated, from minimum Schedule 40 steel pipe.

1. Cap bollards with 1/4-inch-thick steel plate.
2. Where bollards are indicated to receive controls for door operators, provide cutouts for controls and holes for wire.

B. Fabricate bollards with 3/8-inch-thick steel baseplates for bolting to concrete slab. Drill baseplates at all four corners for 3/4-inch anchor bolts.

1. Where bollards are to be anchored to sloping concrete slabs, angle baseplates for plumb alignment of bollards.

C. Galvanize and prime bollards with primer specified in Section 099113 “Exterior Painting.”

2.10 STEEL WELD PLATES AND ANGLES

A. Provide steel weld plates and angles not specified in other Sections, for items supported from concrete construction as needed to complete the Work. Provide each unit with no fewer than two integrally welded steel strap anchors for embedding in concrete.

2.11 GUARDS BETWEEN ADJACENT ELEVATOR PITS

A. Performance Requirements: Screen enclosure, minimum 6’-0” high from pit floor, with openings sized to reject a 2-inch diameter ball. Where access ladders are located at screen enclosure between adjacent pits, extend enclosure 6’-0” above top rung of ladder and 12 inches each side of side rails of ladder.

B. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

1. McNichols Company.

a. Material: Galvanized steel wire cloth.
b. Width and length: As indicated, or if not indicated, as required to comply with performance requirements.
c. Wire Opening: Nominal one wire per inch.
d. Wire Diameter: 0.120 inch.
e. Construction: Welded.

2. Or Comparable Equal.

C. Fittings and Anchors: Provide fittings and anchors to connect steel wire cloth into perimeter framing members to comply with performance requirements indicated.

2.12 FINISHES, GENERAL

A. Finish metal fabrications after assembly.

B. Finish exposed surfaces to remove tool and die marks and stretch lines, and to blend into surrounding surface.

2.13 STEEL AND IRON FINISHES

A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A 153 for steel and iron hardware and with ASTM A 123 for other steel and iron products.

1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
2. Fill vent holes and grind smooth after galvanizing.
3. Galvanize metal fabrications as indicated above, where indicated on Drawings, and all metal fabrications outside the building envelope, whether indicated or not.

B. Preparation for Shop Priming: Prepare surfaces to comply with requirements indicated below:

1. Galvanized Items: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with metallic phosphate process.
2. Non-Galvanized Items: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

C. Shop Priming: Shop prime steel items unless they are to be embedded in concrete, masonry, or unless otherwise indicated.

1. Shop prime with primers specified in Section 099113 “Exterior Painting” for exterior metal substrates and Section 099123 "Interior Painting" for interior metal substrates, unless otherwise indicated.
2. Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

a. Stripe paint corners, crevices, bolts, welds, and sharp edges.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

C. Field Welding: Comply with the following requirements:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.

E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

3.2 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.

B. Anchor supports for operable partitions, overhead doors, and overhead grilles securely to, and rigidly brace from, building structure.

3.3 INSTALLING METAL BOLLARDS

A. Fill metal-capped bollards solidly with concrete and allow concrete to cure seven days before installing.

B. Anchor bollards in place with concrete footings. Center and align bollards in holes 3 inches above bottom of excavation. Place concrete and vibrate or tamp for consolidation. Support and brace bollards in position until concrete has cured.

3.4 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Verify weld materials and inspect welds.
2. Verify installation of post-installed concrete anchors.

B. Special inspector will report results promptly and in writing to Contractor and Architect

C. Remove and replace work where test results indicate that it does not comply with specified requirements.

D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.5 ADJUSTING AND CLEANING

A. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

END OF SECTION 055000

SECTION 055113 - METAL PAN STAIRS (DEFERRED APPROVAL)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes interior metal pan stair systems consisting of the following:

1. Preassembled steel stairs with concrete-filled treads.
2. Steel tube railings attached to metal stairs.
3. Steel tube handrails attached to walls adjacent to metal stairs.
4. Surface preparation and shop priming metal pan stairs and railings.

B. Work under this Section is part of a “Deferred Approval.” Coordinate with the deferred approval requirements in Section 013000 “Submittal Procedures” and with the requirements indicated on the Drawings.

C. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for concrete fill for stair treads and platforms.
2. Section 057100 "Decorative Metal Stairs" for decorative metal stairs.
3. Section 099123 “Interior Painting’ for field painting interior metal pan stairs and railings.

1.3 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorages for metal stairs. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

C. Coordinate locations of hanger rods and struts with other work so that they do not encroach on required stair width and are within the fire-resistance-rated stair enclosure.

1.4 ACTION SUBMITTALS

A. Product Data: For metal pan stairs and paint products.

B. Shop Drawings: Include project-specific plans, elevations, sections, details, and attachments to other work.

1. Shop drawings, including analysis data, shall be signed and sealed by the California-licensed professional engineer responsible for their preparation.

C. Samples for Verification: For each type of railing component and fitting.

D. Deferred Approval Submittal: For metal pan stairs and railing systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified California-licensed professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer, installer, and professional engineer.

B. Welding certificates.

C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

D. Research/Evaluation Reports: For post-installed anchors, from ICC-ES.

E. Special inspection reports.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of metal pan stairs that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports and calculations. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 5 years' experience installing metal pan stairs similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the State of California and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of metal pan stair and railing systems that are similar to those indicated for this Project in material, design, and extent.

D. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1, "Structural Welding Code - Steel."
2. AWS D1.3, "Structural Welding Code - Sheet Steel."

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with requirements, provide metal pan stair and railing system by one of the following:

1. Pacific Stair Corporation.
2. Or Comparable Equal.

2.2 PERFORMANCE REQUIREMENTS

A. General: Stairs and railings shall be design, engineered, and fabricated to comply with the 2016 California Building Code (CBC).

B. Structural Performance of Stairs: Metal stairs shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

1. Uniform Load: 100 lbf/sq. ft..
2. Concentrated Load: 300 lbf applied on an area of 4 sq. in..
3. Uniform and concentrated loads need not be assumed to act concurrently.
4. Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
5. Limit deflection of treads, platforms, and framing members to L/360 or 1/4 inch, whichever is less.

C. Structural Performance of Railings: Railings shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

1. Handrails and Top Rails of Guards:

a. Uniform load of 50 lbf/ft. applied in any direction.
b. Concentrated load of 200 lbf applied in any direction.
c. Uniform and concentrated loads need not be assumed to act concurrently.

2. Infill of Guards:

a. Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft..
b. Infill load and other loads need not be assumed to act concurrently.

3. Limit deflection of handrails and top rails of guards to L/360 or 1/4 inch, whichever is less.

D. Seismic Performance of Stairs: Metal stairs shall withstand the effects of earthquake motions determined according to the 2016 CBC.

1. Component Importance Factor: 1.5.

E. Story Drift: Accommodate design displacement of adjacent stories as indicated.

1. Amplified (Inelastic) Story Drift Displacement: As indicated on Structural Drawings.

a. Accommodate seismic movement of metal pan stairs to prevent component failure.

F. Accessibility Requirements: Comply with applicable provisions in the 2010 ADA Standards for Accessible Design and the accessibility requirements of the 2016 CBC, including, but not limited to the following:

1. The top of handrail grasping surface shall be mounted as indicated on the Drawings, and shall be mounted between 34 inches to 38 inches above the nosing of the treads surface.
2. The handgrip portion of handrails for stairs and ramps shall not be less than 1-1/4 inches nor more than 1-1/2 inches in cross-sectional dimension and shall be mounted 1-1/2 inches clear from side walls.
3. All surfaces and welded joints of the grip portion of handrails shall be ground smooth with no sharp corners. Gripping surfaces shall be uninterrupted by newel posts, other construction elements or obstructions. Edges shall have a minimum radius of 1/8 inch.
4. Any wall or other surface adjacent to handrail shall be free of sharp or abrasive elements.
5. Provide minimum 2-inch wide contrasting stripe at the upper approach and lower tread of all interior stairs, and at the upper approach and all treads of all exterior treads per CBC 11B-504.4.1.

G. Slip Resistance: Concrete or precast concrete treads shall be slip resistant equivalent to a medium broom finish, applied perpendicular to the path of travel.

H. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

I. For railings that penetrate a waterproofing or roofing system, provide railing systems that are fully watertight to prevent moisture migration from penetrating the membrane.

2.3 METALS

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

B. Steel Plates, Shapes, and Bars: ASTM A 36.

C. Steel Tubing: ASTM A 500 (cold formed) or ASTM A 513.

D. Uncoated, Cold-Rolled Steel Sheet: ASTM A 1008, structural steel, Grade 25, unless another grade is required by design loads; exposed.

E. Uncoated, Hot-Rolled Steel Sheet: ASTM A 1011, structural steel, Grade 30, unless another grade is required by design loads.

2.4 FASTENERS

A. General: Provide zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941, Class Fe/Zn 12 for exterior use, and Class Fe/Zn 5 where built into exterior walls. Select fasteners for type, grade, and class required.

B. Bolts and Nuts: Regular hexagon-head bolts, ASTM A 307, Grade A; with hex nuts, ASTM A 563; and, where indicated, flat washers.

C. Anchor Bolts: ASTM F 1554, Grade 36, of dimensions indicated; with nuts, ASTM A 563; and, where indicated, flat washers.

D. Post-Installed Concrete Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E 488 conducted by a qualified testing agency. Special inspection of post-installed concrete anchors shall be in compliance with CBC Table 1705.3 and the evaluation report for the anchor.

2.5 MISCELLANEOUS MATERIALS

A. Shop Primers for Interior Stairs and Railings: Provide primers that comply with Section 099123 "Interior Painting."

B. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

C. Concrete Materials and Properties: Comply with requirements in Section 033000 "Cast-In-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with a minimum 28-day compressive strength of 3000 psi unless otherwise indicated.

D. Nonslip-Aggregate Concrete Finish: Factory-packaged abrasive aggregate made from fused, aluminum-oxide grits or crushed emery; rustproof and nonglazing; unaffected by freezing, moisture, or cleaning materials.

E. Welded Wire Reinforcement: ASTM A 185, 6 by 6 inches, W1.4 by W1.4, unless otherwise indicated.

2.6 FABRICATION, GENERAL

A. Provide complete stair assemblies, including metal framing, hangers, struts, railings, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.

1. Join components by welding unless otherwise indicated.
2. Use connections that maintain structural value of joined pieces.

B. Preassembled Stairs: Assemble stairs in shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

E. Form exposed work with accurate angles and surfaces and straight edges.

F. Weld connections to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. Weld exposed corners and seams continuously unless otherwise indicated.
5. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for the following:

    a. Railings: Type 1 welds: no evidence of a welded joint.
    b. Stairs (Excluding Railings): Type 3 welds: partially dressed weld with spatter removed.

G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated. Locate joints where least conspicuous.

2.7 STEEL-FRAMED STAIRS

A. NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," Commercial Class, unless more stringent requirements are indicated.

B. Stair Framing:

1. Fabricate stringers as indicated on Drawings, or if not indicated, of steel plates or channels.

    a. Provide closures for exposed ends of channel stringers.

2. Construct platforms of steel plate or channel headers and miscellaneous framing members as needed to comply with performance requirements indicated.
3. Weld stringers to headers; weld framing members to stringers and headers.
4. Where stairs are enclosed by gypsum board assemblies, provide hanger rods or struts to support landings from floor construction above or below. Locate hanger rods and struts where they do not encroach on required stair width and are within the fire-resistance-rated stair enclosure.
5. Where masonry walls support metal stairs, provide temporary supporting struts designed for erecting steel stair components before installing masonry.

C. Metal Pan Stairs: Form risers, subtread pans, and subplatforms to configurations shown from steel sheet of thickness needed to comply with performance requirements, but not less than 0.067 inch.

1. Steel Sheet for Interior Stairs: Uncoated cold or hot-rolled steel sheet unless otherwise indicated.
2. Directly weld metal pans to stringers; locate welds on top of subtreads where they are concealed by concrete fill. Do not weld risers to stringers.
3. Attach risers and subtreads to stringers with brackets made of steel angles or bars. Weld brackets to stringers and attach metal pans to brackets by welding, riveting, or bolting.
4. Shape metal pans to include nosing integral with riser.
5. Attach abrasive nosings to risers.
6. At Contractor's option, provide stair assemblies with metal pan subtreads filled with reinforced concrete during fabrication.
   Provide subplatforms of configuration indicated or, if not indicated, the same as subtreads. Weld subplatforms to platform framing.

2.8 STAIR RAILINGS

A. Stair Railings, General:

1. Fabricate newels of steel tubing and provide newel caps.
2. Rails may be bent at corners, rail returns, and wall returns, instead of using prefabricated fittings.
3. Connect posts to stair framing by direct welding unless otherwise indicated.

B. Steel Tube Railings: Fabricate railings to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of tube, post spacings, and anchorage, but not less than that needed to withstand indicated loads.

1. Rails and Posts: As indicated on Drawings, or if not indicated, 1-1/4 to 1-1/2 inch diameter top and bottom rails and 1-1/2-inch-square posts.
2. Infill: As indicated on Drawings, or if not indicated, 1/2-inch- round or square pickets spaced less than 4 inches clear.

C. Welded Connections: Fabricate railings with welded connections. Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.

1. Finish welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 1 welds: no evidence of a welded joint as shown in NAAMM AMP 521.

D. Form changes in direction of railings by any of the following:

1. As detailed.
2. By flush bends or by inserting prefabricated flush-elbow fittings.
3. By radius bends of radius indicated or by inserting prefabricated elbow fittings of radius indicated.

E. For changes in direction made by bending, use jigs to produce uniform curvature for each repetitive configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.

F. Close exposed ends of railing members with prefabricated end fittings.

G. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is 1/4 inch or less.

H. Connect posts to stair framing by direct welding unless otherwise indicated.

I. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, end closures, flanges, miscellaneous fittings, and anchors for interconnecting components and for attaching to other work. Furnish inserts and other anchorage devices for connecting to concrete or masonry work.

1. Provide metal fittings, brackets, fasteners, and sleeves, except galvanize anchors embedded in exterior masonry and concrete construction.
2. Provide type of bracket with flange tapped for concealed anchorage to threaded hanger bolt and that provides 1-1/2-inch clearance from inside face of handrail to finished wall surface.

J. Fillers: Provide fillers made from steel plate, or other suitably crush-resistant material, where needed to transfer wall bracket loads through wall finishes to structural supports. Size fillers to suit wall finish thicknesses and to produce adequate bearing area to prevent bracket rotation and overstressing of substrate.

2.9 STEEL FINISHES

A. Finish metal stairs after assembly.

B. Preparation for Shop Priming: Prepare surfaces to comply with the following:

1. Interior Stairs and Railings: Prepare in accordance with Section 099123 “Interior Painting” manufacturer’s written instructions.

C. Shop Priming: Shop prime steel items unless they are to be embedded in concrete, masonry, or unless otherwise indicated.

1. Shop prime with primers specified in Section 099123 "Interior Painting" for interior stairs and railings unless otherwise indicated.
2. Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

a. Stripe paint corners, crevices, bolts, welds, and sharp edges.

PART 3 - EXECUTION

3.1 INSTALLING METAL PAN STAIRS

A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.

B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.

C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.

D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

E. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.

F. Field Welding: Comply with requirements for welding in "Fabrication, General" Article.

G. Place and finish concrete fill for treads and platforms to comply with Section 033000 "Cast-in-Place Concrete."

1. Install abrasive nosings with anchors fully embedded in concrete. Center nosings on tread width.

3.2 INSTALLING RAILINGS

A. Adjust railing systems before anchoring to ensure matching alignment at abutting joints. Space posts at spacing indicated or, if not indicated, as required by design loads. Plumb posts in each direction. Secure posts and rail ends to building construction as follows:

1. Anchor posts to steel by welding to steel supporting members.
2. Anchor handrail ends to concrete and masonry with steel round flanges welded to rail ends and anchored with postinstalled anchors and bolts.

B. Attach handrails to wall with wall brackets. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads. Secure wall brackets to building construction as required to comply with performance requirements and as follows:

1. For concrete and solid masonry anchorage, use post-installed anchors.
2. For steel-framed partitions, use self-tapping screws fastened to steel framing or to concealed steel reinforcements.

3.3 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Verify weld materials and inspect welds.
2. Verify installation of post-installed concrete anchors.

B. Special inspector will report results promptly and in writing to Contractor and Architect.

C. Remove and replace work where test results indicate that it does not comply with specified requirements.

D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.4 ADJUSTING AND CLEANING

A. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section Section 099123 "Interior Painting."

END OF SECTION 055113

SECTION 055813 - COLUMN COVERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes snap-together metal column covers.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product, including finishing materials.

B. Shop Drawings: Show fabrication and installation details for column covers.

C. Samples for Verification: For each type of exposed finish required, prepared on 6-inch-square Samples of metal of same thickness and material indicated for the Work.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer

B. Mill Certificates: Signed by stainless-steel manufacturers certifying that products furnished comply with requirements.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of column cover systems that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports and labels.

B. Installer Qualifications: A firm with not less than 10 years' experience installing column cover systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Build mockups of typical column covers.
2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver column covers wrapped in protective coverings and strapped together in suitable packs or in heavy-duty cartons. Remove protective coverings before they stain or bond to finished surfaces.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Products: Subject to compliance with requirements, provide column covers by the following:

1. Exterior Column Covers:

a. Petersen Aluminum, Inc.; "PAC-1000R" column cover.

2. Interior Column Covers:

a. Fry Reglet Corporation; "Series E - Economical Butt Joint."

B. Source Limitations:

1. Provide exterior column covers from single source, from single manufacturer.
2. Provide interior column covers from single source, from single manufacture.

2.2 EXTERIOR SNAP-TOGETHER COLUMN COVERS

A. Form column covers to shapes indicated from metal of type and minimum thickness indicated below. Return vertical edges and bend to form hook that engages continuous mounting clips.

1. Aluminum Sheet: ASTM B 209, with not less than strength and durability properties of Alloy 5005-H32, 0.125 inch thick.

a. Finish: High-performance organic coating.

2. Increase metal thickness or reinforce with concealed stiffeners, backing materials, or both, as needed to provide flat surfaces where indicated.
3. Support joints with concealed stiffeners as needed to hold exposed faces of adjoining sheets in flush alignment.
4. Form returns at vertical joints to provide 5/8-inch- wide reveal at joints. Provide snap-in metal filler strips at reveals that leave reveals flush.
5. Fabricate column covers without horizontal joints.
6. Fabricate base and ceiling rings to match column covers.
7. Where available as a manufacturer's option, apply manufacturer's recommended sound-deadening insulation or mastic to backs of column covers.

2.3 SNAP-TOGETHER COLUMN COVERS

A. Form column covers to shapes indicated from metal of type and minimum thickness indicated below. Return vertical edges and bend to form hook that engages continuous mounting clips.

1. Stainless-Steel Sheet: ASTM A 240 or ASTM A 666, Type 304, 14 gage thick.

a. Finish: No. 4.

2. Increase metal thickness or reinforce with concealed stiffeners, backing materials, or both, as needed to provide flat surfaces where indicated.
3. Support joints with concealed stiffeners as needed to hold exposed faces of adjoining sheets in flush alignment.
4. Form returns at vertical joints to provide hairline V-joints.
5. Fabricate column covers without horizontal joints.
6. Fabricate base and ceiling rings to match column covers.
7. Where available as a manufacturer's option, apply manufacturer's recommended sound-deadening insulation or mastic to backs of column covers.

2.4 MISCELLANEOUS MATERIALS

A. Fasteners: Fabricated from same basic metal and alloy as fastened metal unless otherwise indicated. Do not use metals that are incompatible with materials joined.

1. Provide concealed fasteners for interconnecting column covers and for attaching them to other work.

B. Sound-Deadening Materials:

1. Insulation: Unfaced, mineral-fiber blanket insulation complying with ASTM C 665, Type I, and passing ASTM E 136 test.
2. Mastic: Cold-applied asphalt emulsion complying with ASTM D 1187.

C. Backing Materials: Provided or recommended by column cover manufacturer.

2.5 FABRICATION, GENERAL

A. Coordinate dimensions and attachment methods of column covers with those of adjoining construction to produce integrated assemblies with closely fitting joints and with edges and surfaces aligned unless otherwise indicated.

B. Form metal to profiles indicated, in maximum lengths to minimize joints. Produce flat, flush surfaces without cracking or grain separation at bends.

2.6 GENERAL FINISH REQUIREMENTS

A. Complete mechanical finishes of flat sheet metal surfaces before fabrication where possible. After fabrication, finish all joints, bends, abrasions, and other surface blemishes to match sheet finish.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.

D. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 ALUMINUM FINISHES

A. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: Custom color to match Architect's sample.

2.8 STAINLESS-STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.
2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

C. Directional Satin Finish: No. 4.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of column covers.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Locate and place column covers plumb and in alignment with adjacent construction. Perform cutting, drilling, and fitting required to install column covers.

1. Do not cut or abrade finishes that cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.

B. Use concealed anchorages where possible.

C. Form tight joints with exposed connections accurately fitted together. Provide reveals and openings for sealants and joint fillers as indicated.

D. Corrosion Protection: Apply bituminous paint or other permanent separation materials on concealed surfaces where metals would otherwise be in direct contact with substrate materials that are incompatible or could result in corrosion or deterioration of either material or finish.

3.3 ADJUSTING AND CLEANING

A. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit or provide new units.

3.4 PROTECTION

A. Protect finishes from damage during construction period. Remove temporary protective coverings at time of Substantial Completion.

END OF SECTION 055813

SECTION 057000 - DECORATIVE METAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Decorative metal fabrications as indicated on Drawings.

B. Related Requirements:

1. Section 057300 "Decorative Metal Railings" for decorative metal railings.
2. Section 057500 "Decorative Formed Metal" for decorative metal items made from sheet metal.
3. Section 099113 "Exterior Painting" for surface preparation and priming requirements for exterior decorative metal fabricated from ferrous steel.
4. Section 099123 "Interior Painting" for surface preparation and priming requirements for interior decorative metal fabricated from ferrous steel.

1.3 COORDINATION

A. Coordinate installation of anchorages for decorative metal items. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product, including finishing materials.

B. Shop Drawings: Show fabrication and installation details for decorative metal.

1. Include plans, elevations, component details, and attachment details.
2. Indicate materials and profiles of each decorative metal member, fittings, joinery, finishes, fasteners, anchorages, and accessory items.

C. Samples for Verification: For each type of exposed finish.

1. Sections of linear shapes.
2. Full-size Samples of castings and forgings.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator.

B. Mill Certificates: Signed by manufacturers of stainless-steel certifying that products furnished comply with requirements.

C. Welding certificates.

1.7 QUALITY ASSURANCE

A. Fabricator Qualifications: A firm experienced in producing decorative metal similar to that indicated for this Project and with a minimum 10 year record of successful in-service performance, as well as sufficient production capacity to produce required units.

B. Installer Qualifications: Fabricator of products.

C. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.2, "Structural Welding Code - Aluminum."
2. AWS D1.3, "Structural Welding Code - Sheet Steel."
3. AWS D1.6, "Structural Welding Code - Stainless Steel."

D. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Build mockups for the following types of decorative metal:

a. First installation of repetitive decorative metal materials. For each repetitive decorative metal materials, build mockup of first installation of such decorative metal component.

2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store decorative metal in a well-ventilated area, away from uncured concrete and masonry, and protected from weather, moisture, soiling, abrasion, extreme temperatures, and humidity.

B. Deliver and store cast-metal products in wooden crates surrounded by enough packing material to ensure that products are not cracked or otherwise damaged.

1.9 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with decorative metal by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.

B. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.2 METALS, GENERAL

A. Metal Surfaces, General: Use materials with smooth, flat surfaces unless otherwise indicated. Use materials without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

2.3 ALUMINUM

A. Fabricate products from alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties for each aluminum form required not less than that of alloy and temper designated below.

B. Bars and Shapes: ASTM B 221, Alloy 6063-T5/T52.

C. Round Tubing: ASTM B 429, Alloy 6063-T6.

D. Tubing: ASTM B 210, Alloy 6063-T832.

E. Plate and Sheet: ASTM B 209, Alloy 3003-H14, Alloy 5005-H32, or Alloy 6061-T6.

F. Forgings: ASTM B 247, Alloy 6061-T6.

G. Castings: ASTM B 26, Alloy A356.0-T6.

2.4 STAINLESS STEEL

A. General: Use grade type 304 for interior use and type 316 for exterior use.

B. Tubing: ASTM A 554.

C. Pipe: ASTM A 312.

D. Castings: ASTM A 743.

E. Sheet, Strip, Plate, and Flat Bar: ASTM A 666.

F. Bars and Shapes: ASTM A 276.

2.5 STEEL AND IRON

A. Tubing: ASTM A 500 (cold formed).

B. Bars: Hot-rolled, carbon steel complying with ASTM A 29, Grade 1010.

C. Plates, Shapes, and Bars: ASTM A 36.

D. Cast Iron: Either gray iron, ASTM A 48, or malleable iron, ASTM A 47 unless otherwise indicated.

E. Steel Sheet, Cold Rolled: ASTM A 1008, either commercial steel or structural steel, exposed.

2.6 FASTENERS

A. Fastener Materials: Unless otherwise indicated, provide the following:

1. General: Where stainless steel fasteners are indicated below, provide Type 304 for interior use and Type 316 for exterior use.
2. Aluminum Items: Aluminum fasteners.
3. Stainless-Steel Items: Stainless-steel fasteners.
4. Dissimilar Metals: Stainless-steel fasteners.

B. Fasteners for Anchoring to Other Construction: Unless otherwise indicated, select fasteners of type, grade, and class required to produce connections suitable for anchoring indicated items to other types of construction indicated.

C. Provide concealed fasteners for interconnecting components and for attaching decorative metal items to other work unless otherwise indicated or unless exposed fasteners are unavoidable.

1. Provide tamper-resistant flat-head machine screws for exposed fasteners unless otherwise indicated.

D. Post-Installed Concrete Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, with strength capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load as determined by testing per ASTM E 488 conducted by a qualified testing agency.

1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5 unless otherwise indicated.
2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy stainless-steel bolts, ASTM F 738, and nuts, ASTM F 836.

2.7 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

1. For aluminum, provide type and alloy as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.

B. Shop Primers for Steel and Iron: Provide primers that comply with Section 099113 "Exterior Painting" for exterior decorative steel, and Section 099123 "Interior Painting" for interior decorative steel.

C. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.8 FABRICATION, GENERAL

A. Assemble items in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.

B. Form decorative metal to required shapes and sizes, true to line and level with true curves and accurate angles and surfaces. Finish exposed surfaces to smooth, sharp, well-defined lines and arris.

C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing the Work.

D. Form simple and compound curves in bars, pipe, tubing, and extruded shapes by bending members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces.

E. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1 mm unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

F. Mill joints to a tight, hairline fit. Cope or miter corner joints. Fabricate connections that will be exposed to weather in a manner to exclude water.

G. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.

H. Provide necessary rebates, lugs, and brackets to assemble units and to attach to other work. Cut, reinforce, drill, and tap as needed to receive finish hardware, screws, and similar items unless otherwise indicated.

I. Provide castings that are sound and free of warp, cracks, blowholes, or other defects that impair strength or appearance. Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks.

J. Comply with AWS for recommended practices in shop welding. Weld behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded joints of flux, and dress exposed and contact surfaces.

1. Where welding cannot be concealed behind finished surfaces, finish joints to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 1 Welds: no evidence of a welded joint.

2.9 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

2.10 ALUMINUM FINISHES

A. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: Custom color to match Architect's sample.

2.11 STAINLESS-STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.

C. Directional Satin Finish: No. 4.

D. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

2.12 STEEL FINISHES

A. Finish decorative metal after assembly.

B. Preparation for Shop Priming: Prepare surfaces in accordance with Section 099113 "Exterior Painting" for exterior decorative metal, and in accordance with Section 099123 “Interior Painting” for interior decorative metal, and not less than the following:

a. SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

C. Shop Priming: Shop prime steel items unless they are to be embedded in concrete, masonry, or unless otherwise indicated.

1. Shop prime with primers specified in Section 099113 “Exterior Painting” for exterior steel substrates and Section 099123 "Interior Painting" for interior steel substrates, unless otherwise indicated.
2. Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

a. Stripe paint corners, crevices, bolts, welds, and sharp edges.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of decorative metal.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Provide anchorage devices and fasteners where needed to secure decorative metal to in-place construction.

B. Perform cutting, drilling, and fitting required to install decorative metal. Set products accurately in location, alignment, and elevation, measured from established lines and levels. Provide temporary bracing or anchors in formwork for items to be built into concrete, masonry, or similar construction.

C. Fit exposed connections accurately together to form tight, hairline joints or, where indicated, uniform reveals and spaces for sealants and joint fillers. Where cutting, welding, and grinding are required for proper shop fitting and jointing of decorative metal, restore finishes to eliminate evidence of such corrective work.

D. Do not cut or abrade finishes that cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.

E. Install concealed gaskets, joint fillers, insulation, and flashings as work progresses.

F. Restore protective coverings that have been damaged during shipment or installation. Remove protective coverings only when there is no possibility of damage from other work yet to be performed at same location.

1. Retain protective coverings intact; remove coverings simultaneously from similarly finished items to preclude nonuniform oxidation and discoloration.

G. Field Welding: Comply with applicable AWS specification for procedures of manual shielded metal arc welding and requirements for welding and for finishing welded connections in "Fabrication, General" Article. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.

1. Field finish weld areas to match finish of metal surfaces being joined.

H. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

1. Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

3.3 CLEANING

A. Unless otherwise indicated, clean metals by washing thoroughly with clean water and soap, rinsing with clean water, and drying with soft cloths.

B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

C. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

D. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

3.4 PROTECTION

A. Protect finishes of decorative metal from damage during construction period with temporary protective coverings approved by decorative metal fabricator. Remove protective covering at time of Substantial Completion.

END OF SECTION 057000

SECTION 057100 - DECORATIVE METAL STAIRS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes custom-fabricated steel-framed decorative metal stairs.

B. Related Requirements:

1. Section 055113 "Metal Pan Stairs" for metal stairs not designated as decorative.
2. Section 057300 "Decorative Metal Railings" for decorative metal railings.
3. Section 099123 "Interior Painting" for field painting decorative metal stairs.

1.3 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorages for metal stairs. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.4 ACTION SUBMITTALS

A. Product Data: For metal stairs and the following:

1. Paint products.
2. Grout.

B. Shop Drawings: Include project-specific shop drawings, including plans, elevations, sections, details, and attachments to other work.

C. Samples for Verification: For each type of exposed finish required.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator.

B. Welding certificates.

C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

D. Research/Evaluation Reports: For post-installed anchors, from ICC-ES.

E. Special inspection reports.

1.6 QUALITY ASSURANCE

A. Fabricator Qualifications: A firm with not less than 10 years' experience regularly engaged in the fabrication of custom-fabricated decorative metal stairs that have been used for similar applications with successful results, and that meet or exceed performance requirements indicated.

B. Installer Qualifications: Fabricator of products.

C. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1, "Structural Welding Code - Steel."
2. AWS D1.3, "Structural Welding Code - Sheet Steel."

D. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Building mockups for each form and finish of decorative metal stair consisting of stringer, tread, and riser assembly that are full size and not less than 24 inches in length.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Use special care in handling to prevent twisting, warping, nicking, and other damage. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

1.8 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with decorative metal stairs by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 METAL STAIRS, GENERAL

A. NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," Architectural class, unless more stringent requirements are indicated.

2.2 METALS

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

B. Steel Plates, Shapes, and Bars: ASTM A 36.

C. Steel Tubing: ASTM A 500 (cold formed) or ASTM A 513.

D. Uncoated, Cold-Rolled Steel Sheet: ASTM A 1008, structural steel, Grade 25, unless another grade is required by design loads; exposed.

2.3 FASTENERS

A. General: Provide zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941. Select fasteners for type, grade, and class required.

B. Bolts and Nuts: Regular hexagon-head bolts, ASTM A 307, Grade A; with hex nuts, ASTM A 563; and, where indicated, flat washers.

C. Anchor Bolts: ASTM F 1554, Grade 36, of dimensions indicated; with nuts, ASTM A 563; and, where indicated, flat washers.

D. Post-Installed Concrete Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E 488 conducted by a qualified testing agency. Special inspection of post-installed concrete anchors shall be in compliance with CBC Table 1705.3 and the evaluation report for the anchor

1. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B 633, Class Fe/Zn 5.

2.4 MISCELLANEOUS MATERIALS

A. Shop Primers: Provide primers that comply with Section 099123 "Interior Painting."

B. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

C. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

2.5 FABRICATION, GENERAL

A. Provide complete stair assemblies, including metal framing, hangers, struts, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.

1. Join components by welding unless otherwise indicated.
2. Use connections that maintain structural value of joined pieces.

B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

D. Form exposed work with accurate angles and surfaces and straight edges.

E. Weld connections to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. Weld exposed corners and seams continuously unless otherwise indicated.
5. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 1 welds: no evidence of a welded joint.
6. Remove backing bars or runoff tabs; back-gouge and grind steel smooth.
7. Remove erection bolts, fill holes, and grind smooth.
8. Fill weld access holes and grind smooth.

F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated. Locate joints where least conspicuous.

2.6 STEEL-FRAMED STAIRS

A. Stair Framing:

1. Fabricate stringers of steel shapes as indicated on Drawings.

a. Provide closures for open ends of structural steel stringer shapes.

2. Weld stringers to headers; weld framing members to stringers and headers.

B. Subtreads, Risers, and Subplatforms:

1. Fabricate subtreads and subplatforms of steel shapes indicated on Drawings.
2. Weld substreads to stringers. Locate welds on top of subtreads where they will be concealed by finished treads.
3. Provide subplatforms of configuration indicated or, if not indicated, the same as subtreads. Weld subplatforms to platform framing.

a. Smooth Soffit Construction: Construct subplatforms with flat metal under surfaces to produce smooth soffits.

2.7 STAIR RAILINGS

A. Comply with applicable requirements in Section 057300 "Decorative Metal Railings."

1. Connect posts to stair framing by direct welding unless otherwise indicated.

2.8 FINISHES

A. Finish metal stairs after assembly.

B. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with Section 099123 “Interior Painting” manufacturer’s written requirements, but no less than the following:

1. SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

C. Apply shop primer to uncoated surfaces of metal stair components, except those with galvanized finishes and those to be embedded in concrete or masonry unless otherwise indicated. Comply with SSPC-PA 1, "Shop, Field, and Maintenance Painting of Steel," for shop painting.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.

B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.

C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.

D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete or masonry.

E. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

F. Field Welding: Comply with requirements for welding in "Fabrication, General" Article.

3.2 INSTALLING METAL STAIRS

A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of baseplates.

B. Set steel stair baseplates on wedges, shims, or leveling nuts. After stairs have been positioned and aligned, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with grout.

1. Use nonmetallic, nonshrink grout unless otherwise indicated.
2. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.3 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Verify weld materials and inspect welds.
2. Verify installation of post-installed concrete anchors

B. Special inspector will report results promptly and in writing to Contractor and Architect

C. Architect will observe decorative metal stairs in place to determine acceptability relating to aesthetic effect.

D. Remove and replace work where test results indicate that it does not comply with specified requirements.

E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.4 PROTECTION

A. Protect finishes of decorative metal stairs from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

B. Restore finishes damaged during installation and construction period so no evidence remains of correction work.

3.5 ADJUSTING AND CLEANING

A. Touchup Painting: Cleaning and touchup painting of field welds, connections, and abraded areas of shop paint are specified in Section 099123 "Interior Painting."

END OF SECTION 057100

SECTION 057300 - DECORATIVE METAL RAILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes stainless-steel decorative railings with stainless-steel wire-rope guard infill.

B. Related Requirements:

1. Section 055113 "Metal Pan Stairs" for steel tube railings for back-of-house stairs and railings.
2. Section 057100 "Decorative Metal Stairs" for decorative metal stairs to receive decorative metal railings provided under this Section.
3. Section 092216 "Non-Structural Metal Framing" for concealed metal backing for anchoring railings.

1.3 DEFINITIONS

A. Railings: Guards, handrails, and similar devices used for protection of occupants at open-sided floor areas and for pedestrian guidance and support, visual separation, or wall protection.

1.4 COORDINATION AND SCHEDULING

A. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver items to Project site in time for installation.

B. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not meet structural performance requirements.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

A. Product Data: For grout and anchoring cement.

B. Shop Drawings: Provide project-specific shop drawings, including plans, elevations, sections, and attachment details.

C. Samples for Verification: For each type of exposed finish required.

1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters.
2. Fittings and brackets.
3. Welded connections.
4. Assembled Samples of railing systems, made from full-size components, including top rail, post, handrail, and infill. Show method of finishing members at intersections. Samples need not be full height.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator.

B. Mill Certificates: Signed by manufacturers of stainless-steel products certifying that products furnished comply with requirements.

C. Welding certificates.

D. Evaluation Reports: For post-installed anchors, from ICC-ES.

1.8 QUALITY ASSURANCE

A. Fabricator Qualifications: A firm with not less than 10 years' experience regularly engaged in the fabrication of custom-fabricated decorative metal railings that have been used for similar applications with successful results, and that meet or exceed performance requirements indicated.

B. Installer Qualifications: Fabricator of products.

C. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.6, "Structural Welding Code - Stainless Steel."

1.9 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 FABRICATOR

A. Source Limitations: Obtain railings from single source from single fabricator.

2.2 PERFORMANCE REQUIREMENTS

A. Structural Performance: Railings, including attachment to building construction, shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

1. Handrails and Top Rails of Guards:

a. Uniform load of 50 lbf/ft. applied in any direction.
b. Concentrated load of 200 lbf applied in any direction.
c. Uniform and concentrated loads need not be assumed to act concurrently.

2. Infill of Guards:

a. Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft..
b. Infill load and other loads need not be assumed to act concurrently.

B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior railings by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

C. Product Options: Information on Drawings and in Specifications establishes requirements for system's aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods, including structural analysis, preconstruction testing, field testing, and in-service performance.

1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.

2.3 METALS, GENERAL

A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

B. Brackets, Flanges, and Anchors: Same metal and finish as supported rails unless otherwise indicated.

1. Provide cast-metal brackets with flange tapped for concealed anchorage to threaded hanger bolt.
2. Provide either formed- or cast-metal brackets with predrilled hole for exposed bolt anchorage.
3. Provide formed-steel brackets with predrilled hole for bolted anchorage and with snap-on cover that matches rail finish and conceals bracket base and bolt head.

2.4 STAINLESS STEEL

A. General: Provide Type 304 stainless steel for interior use, and Type 316 for exterior use.

B. Tubing: ASTM A 554.

C. Pipe: ASTM A 312.

D. Sheet, Strip, Plate, and Flat Bar: ASTM A 666.

E. Bars and Shapes: ASTM A 276.

F. Wire Rope and Fittings:

1. Wire Rope: Stainless steel wire rope made from wire complying with ASTM A 492, Type 316 for exterior use, Type 304 for interior use, of size to comply with performance requirements.
2. Wire-Rope Fittings: Connectors of types indicated, fabricated from stainless steel, and with capability to sustain, without failure, a load equal to minimum breaking strength of wire rope with which they are used.

2.5 FASTENERS

A. Fastener Materials: Unless otherwise indicated, provide the following:

1. Stainless-Steel Components: Stainless-steel fasteners, Type 304 for interior use, Type 316 for exterior use.

B. Fasteners for Anchoring to Other Construction: Select stainless steel fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated.

C. Provide concealed fasteners for interconnecting railing components and for attaching railings to other work unless otherwise indicated.

2.6 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

C. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

2.7 FABRICATION

A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage.

B. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.

C. Make up wire-rope assemblies in the shop to field-measured dimensions with fittings machine swaged. Minimize amount of turnbuckle take-up used for dimensional adjustment so maximum amount is available for tensioning wire ropes. Tag wire-rope assemblies and fittings to identify installation locations and orientations for coordinated installation.

D. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

E. Form work true to line and level with accurate angles and surfaces.

F. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.

G. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.

H. Connections: Fabricate railings with welded connections unless otherwise indicated.

I. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove flux immediately.
4. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 1 welds; no evidence of a welded joint.

J. Mechanical Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.

1. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.

K. Form changes in direction as follows:

1. As detailed, or if not detailed, by bending to smallest radius that will not result in distortion of railing member.

L. Bend members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.

M. Close exposed ends of hollow railing members with prefabricated end fittings.

N. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns, unless clearance between end of rail and wall is 1/4 inch or less.

O. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.

1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers, or other means to transfer loads through wall finishes to structural supports and to prevent bracket or fitting rotation and crushing of substrate.

P. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.

Q. Toe Boards: Where indicated and/or required per Code, provide toe boards at railings around openings and at edge of open-sided floors and platforms. Fabricate to dimensions and details indicated.

2.8 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.9 STAINLESS-STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.

C. Directional Satin Finish: No. 4.

D. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine plaster and gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements have been clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.2 INSTALLATION, GENERAL

A. Fit exposed connections together to form tight, hairline joints.

B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.

1. Do not weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
2. Set posts plumb within a tolerance of 1/16 inch in 3 feet.
3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet.

C. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

D. Adjust railings before anchoring to ensure matching alignment at abutting joints.

E. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.3 RAILING CONNECTIONS

A. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Use wood blocks and padding to prevent damage to railing members and fittings. Seal recessed holes of exposed locking screws using plastic cement filler colored to match finish of railings.

B. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article whether welding is performed in the shop or in the field.

C. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending 2 inches beyond joint on either side, fasten internal sleeve securely to one side, and locate joint within 6 inches of post.

3.4 ANCHORING POSTS

A. Anchor posts to substrate below as indicated on Drawings.

B. At exposed welds, fill and grind smooth to create a weld uniform in appearance.

3.5 ATTACHING RAILINGS

A. Anchor railing ends to concrete and masonry with brackets on underside of rails connected to railing ends and anchored to wall construction with anchors and bolts.

B. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and connected to railing ends using nonwelded connections.

C. Attach handrails to walls with wall brackets. Provide brackets with 1-1/2-inch clearance from inside face of handrail and finished wall surface. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.

1. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.

D. Secure wall brackets and railing end flanges to building construction as follows:

1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
2. For steel-framed partitions, fasten brackets directly to steel framing or concealed steel reinforcements using self-tapping screws of size and type required to support structural loads.

E. Install stainless steel wire rope guards at locations and spacings indicated. Secure wire ropes to posts and tighten to remove slack.

3.6 FIELD QUALITY CONTROL (BY OWNER)

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections and to prepare test reports.

1. Verify weld materials and inspect welds.
2. Verify installation of post-installed concrete anchors.

B. Remove and replace railings where test results indicate that they do not comply with specified requirements unless they can be repaired in a manner satisfactory to Architect and comply with specified requirements.

C. Perform additional testing and inspecting, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.

3.7 CLEANING

A. Clean stainless steel by washing thoroughly with clean water and soap, rinsing with clean water, and wiping dry.

3.8 PROTECTION

A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION 057300

SECTION 057500 - DECORATIVE FORMED METAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Decorative formed metal fabrications as indicated on Drawings.

B. Related Requirements:

1. Section 057000 "Decorative Metal" for decorative items made primarily from plate, bars, extrusions, tubes, castings, and other forms of metal, but which may include sheet metal components.
2. Section 076000 “Sheet Metal Flashing and Trim” for items made of formed metal for flashings and trim.
3. Section 077101 "Manufactured Copings” for items made of formed metal for parapets and copings.

1.3 COORDINATION

A. Coordinate installation of anchorages for decorative formed metal items. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver items to Project site in time for installation.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product, including finishing materials.

B. Shop Drawings: Show fabrication and installation details for decorative formed metal.

1. Include plans, elevations, component details, and attachment details.
2. Indicate materials and profiles of each decorative formed metal member, fittings, joinery, finishes, fasteners, anchorages, and accessory items.

C. Samples for Verification: For each type of exposed finish required, prepared on 6-inch-square Samples of metal of same thickness and material indicated for the Work.

1.6 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: For decorative formed metal elements that house items specified in other Sections. Show dimensions of housed items, including locations of housing penetrations and attachments, and necessary clearances.

B. Qualification Data: For fabricator.

C. Mill Certificates: Signed by stainless-steel manufacturers certifying that products furnished comply with requirements.

1.7 QUALITY ASSURANCE

A. Fabricator Qualifications: A shop with not less than 10 years' experience regularly engaged in the fabrication of decorative formed metal that employs skilled workers who custom fabricate products similar to those indicated for this Project and whose products have a record of successful in-service performance.

B. Installer Qualifications: Fabricator of products.

C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Build mockups for the following types of decorative formed metal:

a. First installation of repetitive decorative formed metal materials. For each repetitive decorative formed metal materials, build mockup of first installation of such decorative metal component.

2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver decorative formed metal products wrapped in protective coverings and strapped together in suitable packs or in heavy-duty cartons. Remove protective coverings before they stain or bond to finished surfaces.

B. Store products on elevated platforms in a dry location.

1.9 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls, columns, beams, and other construction contiguous with decorative formed metal by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Thermal Movements: For decorative formed metal outside of the conditioned building envelope, and/or interior decorative formed metal in direct sun, allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.2 SHEET METAL

A. General: Fabricate products from sheet metal without pitting, seam marks, roller marks, stains, discolorations, or other imperfections where exposed to view on finished units.

B. Aluminum Sheet: Flat sheet complying with ASTM B 209, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties of not less than Alloy 5005-H32.

1. Minimum Thickness: 0.063 inches, unless otherwise indicated.

C. Stainless-Steel Sheet: ASTM A 240 or ASTM A 666, Type 304 (for interior use), Type 316 (for exterior use), stretcher-leveled standard of flatness.

1. Minimum Thickness: 0.050 inches, unless otherwise indicated.

2.3 MISCELLANEOUS MATERIALS

A. Gaskets: As required to seal joints in decorative formed metal and remain weathertight; as recommended in writing by decorative formed metal manufacturer.

1. ASTM D 1056, Type 1, Class A, grade as recommended by gasket manufacturer to obtain seal for application indicated.
2. Closed-cell polyurethane foam, adhesive on two sides, release paper protected.

B. Sealants, Exterior: Elastomeric sealant complying with Section 079200 "Joint Sealants" and as recommended in writing by decorative formed metal manufacturer.

C. Sealants, Interior: Nonsag, paintable sealant complying with Section 079200 "Joint Sealants" and as recommended in writing by decorative formed metal manufacturer.

D. Filler Metal and Electrodes: Provide type and alloy of filler metal and electrodes as recommended by producer of metal to be welded or brazed and as necessary for strength, corrosion resistance, and compatibility in fabricated items.

1. Use filler metals that will match the color of metal being joined and will not cause discoloration.

E. Fasteners: Fabricated from same basic metal and alloy as fastened metal unless otherwise indicated. Do not use metals that are incompatible with materials joined.

1. Provide concealed fasteners for interconnecting decorative formed metal items and for attaching them to other work unless otherwise indicated or unless exposed fasteners are unavoidable or are the standard fastening method.
2. Provide tamper-resistant flat-head machine screws for exposed fasteners unless otherwise indicated.

F. Fasteners for Anchoring to Other Construction: Unless otherwise indicated, select fasteners of type, grade, and class required to produce connections suitable for anchoring indicated items to other types of construction indicated.

G. Sound-Deadening Materials:

1. Insulation: Unfaced, mineral-fiber blanket insulation complying with ASTM C 665, Type I, and passing ASTM E 136 test.
2. Mastic: Cold-applied asphalt emulsion complying with ASTM D 1187.

H. Backing Materials: Provided or recommended by decorative formed metal manufacturer.

I. Laminating Adhesive: Adhesive recommended by metal fabricator that will fully bond metal to metal, will prevent telegraphing and oil-canning, and is compatible with substrate and noncombustible after curing.

J. Isolation Coating: Manufacturer's standard bituminous paint.

2.4 MISCELLANEOUS MATERIALS

A. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.5 FABRICATION, GENERAL

A. Shop Assembly: Preassemble decorative formed metal items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

B. Coordinate dimensions and attachment methods of decorative formed metal items with those of adjoining construction to produce integrated assemblies with closely fitting joints and with edges and surfaces aligned unless otherwise indicated.

C. Form metal to profiles indicated, in maximum lengths to minimize joints. Produce flat, flush surfaces without cracking or grain separation at bends. Fold back exposed edges of unsupported sheet metal to form a 1/2-inch-wide hem on the concealed side, or ease edges to a radius of approximately 1/32 inch and support with concealed stiffeners.

D. Increase metal thickness or reinforce with concealed stiffeners, backing materials, or both, as needed to provide surface flatness equivalent to stretcher-leveled standard of flatness and sufficient strength for indicated use.

1. Support joints with concealed stiffeners as needed to hold exposed faces of adjoining sheets in flush alignment.

E. Build in straps, plates, and brackets as needed to support and anchor fabricated items to adjoining construction. Reinforce decorative formed metal items as needed to attach and support other construction.

F. Provide support framing, mounting and attachment clips, splice sleeves, fasteners, and accessories needed to install decorative formed metal items.

G. Where welding is indicated, weld joints and seams continuously. Grind, fill, and dress to produce smooth, flush, exposed surfaces in which joints are not visible after finishing is completed.

1. Use welding procedures that will blend with and not cause discoloration of metal being joined.

2.6 GENERAL FINISH REQUIREMENTS

A. Complete mechanical finishes of flat sheet metal surfaces before fabrication where possible. After fabrication, finish all joints, bends, abrasions, and other surface blemishes to match sheet finish.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.

D. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 ALUMINUM FINISHES

A. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: Custom color as indicated on Drawings, or if not indicated, to math Architect’s design reference sample.

2.8 STAINLESS-STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.

C. Directional Satin Finish: No. 4.

D. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of decorative formed metal.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Locate and place decorative formed metal items level and plumb and in alignment with adjacent construction. Perform cutting, drilling, and fitting required to install decorative formed metal.

1. Do not cut or abrade finishes that cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.

B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where needed to protect metal surfaces and to make a weathertight connection.

C. Form tight joints with exposed connections accurately fitted together. Provide reveals and openings for sealants and joint fillers as indicated.

D. Exterior Decorative Formed Metal: Install concealed gaskets, joint fillers, insulation, sealants, and flashings, as the Work progresses, to make exterior decorative formed metal items weatherproof.

E. Interior Decorative Formed Metal: Install concealed gaskets, joint fillers, sealants, and insulation, as the Work progresses, to make interior decorative formed metal items soundproof or lightproof as applicable to type of fabrication indicated.

F. Corrosion Protection: Apply bituminous paint or other permanent separation materials on concealed surfaces where metals would otherwise be in direct contact with substrate materials that are incompatible or could result in corrosion or deterioration of either material or finish.

3.3 CLEANING

A. Unless otherwise indicated, clean metals by washing thoroughly with water and soap, rinsing with clean water, and drying with soft cloths.

B. Clean copper alloys according to metal finisher's written instructions in a manner that leaves an undamaged and uniform finish matching approved Sample.

C. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit or provide new units.

3.4 PROTECTION

A. Protect finishes of decorative formed metal items from damage during construction period. Remove temporary protective coverings at time of Substantial Completion.

END OF SECTION 057500

SECTION 061000 - ROUGH CARPENTRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Framing with dimension lumber.
2. Framing with timber.
3. Framing with engineered wood products.
4. Shear wall panels.
5. Rooftop equipment bases and support curbs.
6. Wood blocking, cants, and nailers.
7. Wood furring and grounds.
8. Wood sleepers.
9. Utility shelving.
10. Plywood backing panels.

B. Related Requirements:

1. Section 061600 "Sheathing" for sheathing, subflooring, and underlayment.

1.3 DEFINITIONS

A. Boards or Strips: Lumber of less than 2 inches nominal size in least dimension.

B. Dimension Lumber: Lumber of 2 inches nominal size or greater but less than 5 inches nominal size in least dimension.

C. Exposed Framing: Framing not concealed by other construction.

D. OSB: Oriented strand board.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.
2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
3. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency according to ASTM D 5664.
4. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.

B. Sustainable Design Submittals:

1. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
2. Product Data: For composite wood products, indicating that product contains no urea formaldehyde.
3. Product Data: For installation adhesives, indicating VOC content.
4. Laboratory Test Reports: For installation adhesives, indicating compliance with requirements for low-emitting materials.

C. Fastener Patterns: Full-size templates for fasteners in exposed framing.

1.5 INFORMATIONAL SUBMITTALS

A. Material Certificates: For dimension lumber specified to comply with minimum allowable unit stresses. Indicate species and grade selected for each use and design values approved by the ALSC Board of Review.

B. Evaluation Reports: For the following, from ICC-ES:

1. Wood-preservative-treated wood.
2. Fire-retardant-treated wood.
3. Engineered wood products.
4. Shear panels.
5. Power-driven fasteners.
6. Post-installed anchors.
7. Metal framing anchors.

1.6 QUALITY ASSURANCE

A. Framer Qualifications: A firm with not less than 10 years' experience framing rough carpentry similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance

B. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.

C. Inspection Agencies: Inspection agencies, and the reference abbreviations include the following:

1. WCLIB: West Coast Lumber Inspection Bureau.
2. WWPA: Western Woods Products Association.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Stack wood products flat with spacers beneath and between each bundle to provide air circulation. Protect wood products from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 WOOD PRODUCTS, GENERAL

A. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, comply with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Grade lumber by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.

1. Factory mark each piece of lumber with grade stamp of grading agency.
2. For exposed lumber indicated to receive a stained or natural finish, mark grade stamp on end or back of each piece.
3. Dress lumber, S4S, unless otherwise indicated.

B. Maximum Moisture Content of Lumber: 19 percent unless otherwise indicated.

C. Engineered Wood Products: Acceptable to authorities having jurisdiction and for which current model code research or evaluation reports exist that show compliance with building code in effect for Project.

1. Allowable design stresses, as published by manufacturer, shall meet or exceed those indicated. Manufacturer's published values shall be determined from empirical data or by rational engineering analysis and demonstrated by comprehensive testing performed by a qualified independent testing agency.

2.2 WOOD-PRESERVATIVE-TREATED LUMBER

A. Preservative Treatment by Pressure Process: AWPA U1; Use Category UC2 for interior construction not in contact with ground, Use Category UC3b for exterior construction not in contact with ground, and Use Category UC4a for items in contact with ground.

1. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium. Do not use inorganic boron (SBX) for sill plates.
2. For exposed items indicated to receive a stained or natural finish, chemical formulations shall not require incising, contain colorants, bleed through, or otherwise adversely affect finishes.

B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or that does not comply with requirements for untreated material.

C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.

1. For exposed lumber indicated to receive a stained or natural finish, mark end or back of each piece or omit marking and provide certificates of treatment compliance issued by inspection agency.

D. Application: Treat items indicated on Drawings, and the following:

1. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
2. Wood sills, sleepers, blocking, furring, stripping, and similar concealed members in contact with masonry or concrete.
3. Framing for exterior walls and roofs.
4. Wood floor plates that are installed over concrete slabs-on-grade.

2.3 FIRE-RETARDANT-TREATED MATERIALS

A. General: Where fire-retardant-treated materials are indicated, materials shall comply with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.

B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested according to ASTM E 84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet beyond the centerline of the burners at any time during the test.

1. Treatment shall not promote corrosion of metal fasteners.
2. Exterior Type: Treated materials shall comply with requirements specified above for fire-retardant-treated lumber and plywood by pressure process after being subjected to accelerated weathering according to ASTM D 2898. Use for exterior locations and where indicated.
3. Interior Type A: Treated materials shall have a moisture content of 28 percent or less when tested according to ASTM D 3201 at 92 percent relative humidity. Use where exterior type is not indicated.
4. Design Value Adjustment Factors: Treated lumber shall be tested according to ASTM D 5664 and design value adjustment factors shall be calculated according to ASTM D 6841. For enclosed roof framing, framing in attic spaces, and where high temperature fire-retardant treatment is indicated, provide material with adjustment factors of not less than 0.85 modulus of elasticity and 0.75 for extreme fiber in bending for Project's climatological zone.
5. Fire-retardant-treated lumber and plywood shall implement a treatment process that is also resistant to termite attack and decay when used in weather protected above ground applications.
6. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide fire-retardant-treated wood by the following:

    a. Hoover Treated Wood Products, Inc.; "Pyro-Guard plus."
    b. Or Comparable Equal.

C. Kiln-dry lumber after treatment to maximum moisture content of 19 percent.

D. Identify fire-retardant-treated wood with appropriate classification marking of qualified testing agency.

1. For exposed lumber indicated to receive a stained or natural finish, mark end or back of each piece.

E. For exposed items indicated to receive a stained or natural finish, chemical formulations shall not bleed through, contain colorants, or otherwise adversely affect finishes.

F. Application: Treat items indicated on Drawings, and the following:

1. Framing for raised platforms.
2. Framing for stages.
3. Concealed blocking.
4. Framing for non-load-bearing partitions.
5. Framing for non-load-bearing exterior walls.
6. Roof construction.
7. Plywood backing panels.
8. Framing within a plenum.
9. In locations indicated and in compliance with the requirements of authorities having jurisdiction.

2.4 DIMENSION LUMBER FRAMING

A. Joists, Rafters, and Other Framing: Grade as specified.

1. Species: Douglas fir-larch; WCLIB or WWPA.

2.5 ENGINEERED WOOD PRODUCTS

A. Composite Wood Products: Products shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

B. Source Limitations: Obtain each type of engineered wood product from single source from a single manufacturer.

C. Wood I-Joists: Prefabricated units, I-shaped in cross section, made with solid or structural composite lumber flanges and wood-based structural panel webs, let into and bonded to flanges. Comply with material requirements of and with structural capacities established and monitored according to ASTM D 5055.

1. Web Material: Either OSB or plywood, complying with DOC PS 1 or DOC PS 2, Exposure 1.
2. Structural Properties: Depths and design values not less than those indicated.
3. Comply with APA PRI-400. Factory mark I-joists with APA-EWS trademark indicating nominal joist depth, joist class, span ratings, mill identification, and compliance with APA-EWS standard.

D. Rim Boards: Product designed to be used as a load-bearing member and to brace wood I-joists at bearing ends, complying with research or evaluation report for I-joists.

1. Manufacturer: Provide products by same manufacturer as I-joists.
2. Material: All-veneer product, glued-laminated wood, or product made from any combination solid lumber, wood strands, and veneers.
3. Thickness: As indicated
4. Comply with APA PRR-401, rim board grade. Factory mark rim boards with APA-EWS trademark indicating thickness, grade, and compliance with APA-EWS standard.

2.6 MISCELLANEOUS LUMBER

A. General: Provide miscellaneous lumber indicated and lumber for support or attachment of other construction, including the following:

1. Blocking.
2. Nailers.
3. Rooftop equipment bases and support curbs.
4. Cants.
5. Furring.
6. Utility shelving.

B. Dimension Lumber Items: any of the following species:

1. Western woods; WCLIB or WWPA.

C. Utility Shelving: Lumber with 19 percent maximum moisture content.

D. Concealed Boards: 19 percent maximum moisture content.

E. For blocking not used for attachment of other construction, Utility, Stud, or No. 3 grade lumber of any species may be used provided that it is cut and selected to eliminate defects that will interfere with its attachment and purpose.

F. For blocking and nailers used for attachment of other construction, select and cut lumber to eliminate knots and other defects that will interfere with attachment of other work.

G. For furring strips for installing plywood or hardboard paneling, select boards with no knots capable of producing bent-over nails and damage to paneling.

2.7 PLYWOOD BACKING PANELS

A. Equipment Backing Panels: Plywood, DOC PS 1, Exterior, A-C, fire-retardant treated, in thickness indicated or, if not indicated, not less than 3/4-inch nominal thickness.

2.8 FASTENERS

A. General: Fasteners shall be of size and type indicated and shall comply with requirements specified in this article for material and manufacture.

1. Where rough carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity, provide fasteners with hot-dip zinc coating complying with ASTM A 153/A 153M.

B. Nails, Brads, and Staples: ASTM F 1667.

C. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

D. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC01, ICC-ES AC58, ICC-ES AC193 or ICC-ES AC308 as appropriate for the substrate.

1. Material: Carbon-steel components, zinc plated to comply with ASTM B 633, Class Fe/Zn 5.
2. Material: Stainless steel with bolts and nuts complying with ASTM F 593 and ASTM F 594, Alloy Group 1 or 2.

2.9 METAL FRAMING ANCHORS

A. Allowable design loads, as published by manufacturer, shall meet or exceed those indicated. Manufacturer's published values shall be determined from empirical data or by rational engineering analysis and demonstrated by comprehensive testing performed by a qualified independent testing agency. Framing anchors shall be punched for fasteners adequate to withstand same loads as framing anchors.

B. Galvanized-Steel Sheet: Hot-dip, zinc-coated steel sheet complying with ASTM A 653/A 653M, G60 coating designation.

1. Use for interior locations unless otherwise indicated.

C. Hot-Dip, Heavy-Galvanized Steel Sheet: ASTM A 653/A 653M; structural steel (SS), high-strength low-alloy steel Type A (HSLAS Type A), or high-strength low-alloy steel Type B (HSLAS Type B); G185 coating designation; and not less than 0.036 inch thick.

1. Use for wood-preservative-treated lumber and where indicated.

D. Stainless-Steel Sheet: ASTM A 666, Type 304.

1. Use for exterior locations and where indicated.

E. Joist Hangers: U-shaped joist hangers with 2-inch-long seat and 1-1/4-inch-wide nailing flanges at least 85 percent of joist depth.

1. Thickness: As indicated.

F. I-Joist Hangers: U-shaped joist hangers with 2-inch-long seat and 1-1/4-inch-wide nailing flanges full depth of joist. Nailing flanges provide lateral support at joist top chord.

1. Thickness: As indicated.

G. Top Flange Hangers: U-shaped joist hangers, full depth of joist, formed from metal strap with tabs bent to extend over and be fastened to supporting member.

1. Strap Width: As indicated.
2. Thickness: As indicated.

H. Bridging: Rigid, V-section, nailless type, 0.050 inch thick, length to suit joist size and spacing.

I. Joist Ties: Flat straps, with holes for fasteners, for tying joists together over supports.

1. Width: As indicated.
2. Thickness: As indicated.
3. Length: As indicated.

2.10 MISCELLANEOUS MATERIALS

A. Sill-Sealer Gaskets: Closed-cell neoprene foam, 1/4 inch thick, selected from manufacturer's standard widths to suit width of sill members indicated.

B. Water-Repellent Preservative: NWWDA-tested and -accepted formulation containing 3-iodo-2-propynyl butyl carbamate, combined with an insecticide containing chloropyrifos as its active ingredient.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Framing Standard: Comply with AF&PA's WCD 1, "Details for Conventional Wood Frame Construction," unless otherwise indicated.

B. Framing with Engineered Wood Products: Install engineered wood products to comply with manufacturer's written instructions.

C. Set rough carpentry to required levels and lines, with members plumb, true to line, cut, and fitted. Fit rough carpentry accurately to other construction. Locate furring, nailers, blocking, grounds, and similar supports to comply with requirements for attaching other construction.

D. Install plywood backing panels by fastening to studs; coordinate locations with utilities requiring backing panels. Install fire-retardant-treated plywood backing panels with classification marking of testing agency exposed to view.

E. Install metal framing anchors to comply with manufacturer's written instructions. Install fasteners through each fastener hole.

F. Do not splice structural members between supports unless otherwise indicated.

G. Provide blocking and framing as indicated and as required to support facing materials, fixtures, specialty items, and trim.

1. Provide metal clips for fastening gypsum board or lath at corners and intersections where framing or blocking does not provide a surface for fastening edges of panels. Space clips not more than 16 inches o.c.

H. Provide fire blocking in furred spaces, stud spaces, and other concealed cavities as indicated and as follows:

1. Fire block furred spaces of walls, at each floor level, at ceiling, and at not more than 96 inches o.c. with solid wood blocking or noncombustible materials accurately fitted to close furred spaces.
2. Fire block concealed spaces of wood-framed walls and partitions at each floor level, at ceiling line of top story, and at not more than 96 inches o.c. Where fire blocking is not inherent in framing system used, provide closely fitted solid wood blocks of same width as framing members and 2-inch nominal thickness.
3. Fire block concealed spaces between floor sleepers with same material as sleepers to limit concealed spaces to not more than 100 sq. ft. and to solidly fill space below partitions.
4. Fire block concealed spaces behind combustible cornices and exterior trim at not more than 20 feet o.c.

I. Sort and select lumber so that natural characteristics do not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of member or pieces that are too small to use with minimum number of joints or optimum joint arrangement.

J. Comply with AWPA M4 for applying field treatment to cut surfaces of preservative-treated lumber.

1. Use inorganic boron for items that are continuously protected from liquid water.
2. Use copper naphthenate for items not continuously protected from liquid water.

K. Securely attach rough carpentry work to substrate by anchoring and fastening as indicated, complying with the following:

1. Table 2304.9.1, "Fastening Schedule," in ICC's International Building Code (IBC).
2. ICC-ES evaluation report for fastener.

L. Use steel common nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood. Drive nails snug but do not countersink nail heads unless otherwise indicated.

M. For exposed work, arrange fasteners in straight rows parallel with edges of members, with fasteners evenly spaced, and with adjacent rows staggered.

1. Comply with indicated fastener patterns where applicable.
2. Use finishing nails unless otherwise indicated. Countersink nail heads and fill holes with wood filler.
3. Use common nails unless otherwise indicated. Drive nails snug but do not countersink nail heads.

3.2 WOOD BLOCKING, AND NAILER INSTALLATION

A. Install where indicated and where required for attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.

B. Attach items to substrates to support applied loading. Recess bolts and nuts flush with surfaces unless otherwise indicated.

C. Provide permanent grounds of dressed, pressure-preservative-treated, key-beveled lumber not less than 1-1/2 inches wide and of thickness required to bring face of ground to exact thickness of finish material. Remove temporary grounds when no longer required.

3.3 FLOOR JOIST FRAMING INSTALLATION

A. General: Install floor joists with crown edge up and support ends of each member with not less than 1-1/2 inches of bearing on wood or metal. Attach floor joists as follows:

1. Where supported on wood members, by using metal framing anchors.
2. Where framed into wood supporting members, by using wood ledgers as indicated or, if not indicated, by using metal joist hangers.

B. Fire Cuts: At joists built into masonry, bevel cut ends 3 inches and do not embed more than 4 inches.

C. Frame openings with headers and trimmers supported by metal joist hangers; double headers and trimmers where span of header exceeds 48 inches.

D. Do not notch in middle third of joists; limit notches to one-sixth depth of joist, one-third at ends. Do not bore holes larger than one-third depth of joist; do not locate closer than 2 inches from top or bottom.

E. Provide solid blocking of 2-inch nominal thickness by depth of joist at ends of joists unless nailed to header or band.

F. Lap members framing from opposite sides of beams, girders, or partitions not less than 4 inches or securely tie opposing members together. Provide solid blocking of 2-inch nominal thickness by depth of joist over supports.

G. Provide solid blocking between joists under jamb studs for openings.

H. Under non-load-bearing partitions, provide double joists separated by solid blocking equal to depth of studs above.

1. Provide triple joists separated as above, under partitions receiving ceramic tile and similar heavy finishes or fixtures.

I. Provide bridging of type indicated below, at intervals of 96 inches o.c., between joists.

1. Diagonal wood bridging formed from bevel-cut, 1-by-3-inch nominal-size lumber, double-crossed and nailed at both ends to joists.
2. Steel bridging installed to comply with bridging manufacturer's written instructions.

3.4 ERECTION TOLERANCES

A. Framing members which will be covered by finishes such as wallboard, plaster, or ceramic tile in a thick-set mortar setting bed, shall be within the following limits:

1. Layout of Walls and Partitions: 1/4 inch from intended position.
2. Plates and Runners: 1/4 inch in 10 feet from a straight line.
3. Studs: 1/4 inch in 10 feet out of plumb, non-cumulative, and
4. Face of Framing Members: 1/4 inch in 10 feet from a true plane.

B. Framing members which will be covered by ceramic tile set in thin-set mortar or organic adhesive shall be within the following limits:

1. Layout of Walls and Partitions: 1/4 inch from intended position.
2. Plates and Runners: 1/8 inch in 10 feet from a straight line.
3. Studs: 1/8 inch in 10 feet out of plumb, non-cumulative, and
4. Face of Framing Members: 1/8 inch in 10 feet from a true plane.

3.5 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector and qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Testing:

1. Moisture Content of Building Materials: Building materials with visible signs of water damage shall not be installed. Wall and floor framing shall not be enclosed when the framing members exceed 19-percent moisture content. Moisture content shall be verified in compliance with the following:

   a. Moisture content shall be determined with either a probe-type or contact-type moisture meter. Equivalent moisture verification methods may be approved by the enforcing agency and shall satisfy requirements found in Section 101.8 of this code.
   b. Moisture readings shall be taken at a point 2 feet to 4 feet from the grade stamped end of each piece to be verified.
   c. At least three random moisture readings shall be performed on wall and floor framing with documentation acceptable to the enforcing agency provided at the time of approval to enclose the wall and floor framing.

C. If test results or inspections show sheathing does not comply with requirements:

1. Provide additional drying time to rough carpentry until rough carpentry installation passes, and/or
2. Remove and replace rough carpentry until rough carpentry installation passes.

D. Proceed with installation of adjacent construction (cladding, building wraps, gypsum board, etc.) only after unsatisfactory conditions have been corrected.

E. Prepare test and inspection reports.

3.6 PROTECTION

A. Protect wood that has been treated with inorganic boron (SBX) from weather. If, despite protection, inorganic boron-treated wood becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

B. Protect rough carpentry from weather. If, despite protection, rough carpentry becomes wet enough that moisture content exceeds that specified, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

END OF SECTION 061000

SECTION 061600 - SHEATHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Wall sheathing.
2. Roof sheathing.
3. Parapet sheathing.
4. Subflooring.
5. Underlayment.
6. Sheathing joint and penetration treatment.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for plywood backing panels.
2. Section 071326 "Self-Adhering Sheet Waterproofing" for air and waterproofing barrier applied over wall sheathing.

1.3 COORDINATION, SEQUENCING, AND SCHEDULING

A. Coordinate, sequence, and schedule sheathing installation with installation of materials installed over sheathing (waterproofing, roofing systems, flashing, etc.) so sheathing products are kept dry and are not exposed to precipitation or left exposed at end of the workday when rain is forecast.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated plywood complies with requirements. Indicate type of preservative used and net amount of preservative retained.
2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated plywood complies with requirements. Include physical properties of treated materials.
3. For fire-retardant treatments, include physical properties of treated plywood both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency according to ASTM D 5516.
4. For products receiving waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.

B. Sustainable Design Submittals:

1. Product Data: For composite wood products, indicating that product contains no urea formaldehyde.
2. Product Data: For installation adhesives, indicating VOC content.

1.5 INFORMATIONAL SUBMITTALS

A. Evaluation Reports: For the following, from ICC-ES:

1. Wood-preservative-treated plywood.
2. Fire-retardant-treated plywood.

1.6 QUALITY ASSURANCE

A. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

B. Do not install panels that are defective, moisture damaged, mold damaged, and/or are excessively warped and would result work exceeding the installation tolerances specified in Section 061000 "Rough Carpentry."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance Ratings: As tested according to ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

B. Sustainable Design (CALGreen): Adhesives and composite wood products shall comply with the following:

1. Adhesives: Adhesives, adhesive bonding primers, adhesive primers, sealants, sealant primers and caulks shall comply with local or regional air pollution control or air quality management district rules where applicable, or SCAQMD Rule 1168 VOC limits, as shown in 2016 CALGreen Tables 5.504.4.1 and 5.504.4.2. Such products also shall comply with the Rule 1168 prohibition on the use of certain toxic compounds (chloroform, ethylene dichloride methylene chloride, perchloroethylene and trichloroethylene). Adhesives shall have no added formaldehyde resins.
2. Composite Wood Products: Hardwood plywood and medium density fiberboard composite wood products used on the interior or exterior of the building shall meet the requirements for formaldehyde as specified in ARB's Air Toxics Control Measure (ATCM) for Composite Wood (17 CCR 93120 et seq.) Those materials not exempted under the ATCM must meet the specified emission limits, as shown in 2016 CALGreen Table 5.504.4.5.

2.2 WOOD PANEL PRODUCTS

A. Thickness: As needed to comply with requirements specified, but not less than thickness indicated.

B. Factory mark panels to indicate compliance with applicable standard.

2.3 WALL SHEATHING

A. Glass-Mat Gypsum Sheathing: ASTM C 1177.

1. Basis-of-Design Product: Subject to compliance with requirements, provide glass-mat gypsum sheathing by the following:

a. Georgia Pacific, Inc.; "DensGlass Sheathing."

2. Type and Thickness: Type X, 5/8 inch thick.
3. Size: 48 by 96 inches for vertical installation.

B. Cementitious Backer Units: ANSI A118.9 or ASTM C 1325, Type A, in maximum lengths available to minimize end-to-end butt joints.

1. Thickness: 5/8 inch, unless otherwise indicated.
2. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.
3. Approved for exterior use in accordance with ICC-ES AC 376.
4. Shear Bond Strength: greater than or equal to 200 psi, when tested in accordance with ANSI 118.4.
5. Core consisting of cement, polystyrene beads and aggregates. Both faces to have embedded fiberglass mesh.
6. Moisture absorption of less than 8 percent when tested in accordance with ASTM C 473.
7. Face Finish:

a. Exposed Face: Cementitious finish.
b. Unexposed Face: Smooth finish.

2.4 ROOF SHEATHING

A. Plywood Sheathing: As indicated.

1. Span Rating: As indicated.
2. Nominal Thickness: As indicated.

2.5 PARAPET SHEATHING

A. Glass-Mat Gypsum Sheathing: ASTM C 1177.

1. Type and Thickness: Type X, 5/8 inch thick.
2. Size: 48 by 96 inches for vertical installation.

2.6 SUBFLOORING AND UNDERLAYMENT

A. Plywood Subflooring: As indicated.

1. Span Rating: As indicated.
2. Nominal Thickness: As indicated.

B. Underlayment: Provide underlayment in nominal thicknesses indicated or, if not indicated, not less than 3/8-inch thickness over subfloors.

1. Plywood Underlayment for Resilient Flooring: DOC PS 1, Exterior, C-C Plugged with fully sanded face.
2. Underlayment for Ceramic Tile: Cementitious backer units per Section 092900 "Gypsum Board."
3. Plywood Underlayment for Carpet: DOC PS 1, Exterior, C-C Plugged Exposure 1, Underlayment.

2.7 FASTENERS

A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.

1. For roof and parapet sheathing, provide fasteners with hot-dip zinc coating complying with ASTM A 153.

B. Nails, Brads, and Staples: ASTM F 1667.

C. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

D. Screws for Fastening Sheathing to Wood Framing: ASTM C 1002.

E. Screws for Fastening Wood Structural Panels to Cold-Formed Metal Framing: ASTM C 954, except with wafer heads and reamer wings, length as recommended by screw manufacturer for material being fastened.

F. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached.

1. For steel framing less than 0.0329 inch thick, use screws that comply with ASTM C 1002.
2. For steel framing from 0.033 to 0.112 inch thick, use screws that comply with ASTM C 954.

G. Screws for Fastening Composite Nail Base Insulated Roof Sheathing to Metal Roof Deck: Steel drill screws, in type and length recommended by sheathing manufacturer for thickness of sheathing to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B 117. Provide washers or plates if recommended by sheathing manufacturer.

2.8 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIALS

A. Sealant for Glass-Mat Gypsum Sheathing: Silicone emulsion sealant complying with ASTM C 834, compatible with sheathing tape and sheathing and recommended by tape and sheathing manufacturers for use with glass-fiber sheathing tape and for covering exposed fasteners.

1. Sheathing Tape: Self-adhering glass-fiber tape, minimum 2 inches wide, 10 by 10 or 10 by 20 threads/inch, of type recommended by sheathing and tape manufacturers for use with silicone emulsion sealant in sealing joints in glass-mat gypsum sheathing and with a history of successful in-service use.

2.9 MISCELLANEOUS MATERIALS

A. Adhesives for Field Gluing Panels to Wood Framing: Formulation complying with ASTM D 3498 that is approved for use with type of construction panel indicated by manufacturers of both adhesives and panels.

1. Adhesive shall have a VOC content of 50 g/L or less.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.

B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.

C. Securely attach to substrate by fastening as indicated, complying with the following:

1. Table 2304.9.1, "Fastening Schedule," in the ICC's International Building Code.
2. ICC-ES evaluation report for fastener.

D. Use common wire nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections. Install fasteners without splitting wood.

E. Coordinate wall, parapet, and roof sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.

F. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.

G. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

3.2 WOOD STRUCTURAL PANEL INSTALLATION

A. General: Comply with applicable recommendations in APA Form No. E30, "Engineered Wood Construction Guide," for types of structural-use panels and applications indicated.

B. Fastening Methods: Fasten panels as indicated below:

1. Roof Sheathing:

a. Nail to wood framing.
b. Space panels 1/8 inch apart at edges and ends.
c. At roof sheathing, all joints between plywood shall be blocked with wood framing.
d. Comply with additional requirements in Division 07 Roofing Section(s).

2. Subflooring:

a. Glue and mechanically fasten (screw or nail with deformed shank nails) to wood framing.
b. Space panels 1/8 inch apart at edges and ends.

3. Underlayment:

a. Nail (with deformed shank nails) to subflooring.
b. Space panels 1/32 inch apart at edges and ends.
c. Fill and sand edge joints of underlayment receiving resilient flooring immediately before installing flooring.

3.3 GYPSUM SHEATHING INSTALLATION

A. Comply with GA-253 and with manufacturer's written instructions.

1. Fasten gypsum sheathing to wood framing with screws.
2. Fasten gypsum sheathing to cold-formed metal framing with screws.
3. Install panels with a 3/8-inch gap where non-load-bearing construction abuts structural elements.
4. Install panels with a 1/4-inch gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.

B. Apply fasteners so heads bear tightly against face of sheathing, but do not cut into facing.

C. Horizontal Installation: Install sheathing with V-grooved edge down and tongue edge up. Interlock tongue with groove to bring long edges in contact with edges of adjacent panels without forcing. Abut ends over centers of studs, and stagger end joints of adjacent panels not less than one stud spacing. Attach at perimeter and within field of panel to each stud.

1. Space fasteners approximately 8 inches o.c. and set back a minimum of 3/8 inch from edges and ends of panels.
2. For sheathing under stucco cladding, panels may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.

D. Vertical Installation: Install vertical edges centered over studs. Abut ends and edges with those of adjacent panels. Attach at perimeter and within field of panel to each stud.

1. Space fasteners approximately 8 inches o.c. and set back a minimum of 3/8 inch from edges and ends of panels.
2. For sheathing under stucco cladding, panels may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.

E. Seal sheathing joints according to sheathing manufacturer's written instructions.

1. Apply elastomeric sealant to joints and fasteners and trowel flat. Apply sufficient amount of sealant to completely cover joints and fasteners after troweling. Seal other penetrations and openings.
2. Apply glass-fiber sheathing tape to glass-mat gypsum sheathing joints and apply and trowel sealant to embed entire face of tape in sealant. Apply sealant to exposed fasteners with a trowel so fasteners are completely covered. Seal other penetrations and openings.

3.4 CEMENTITIOUS BACKER SHEATHING INSTALLATION

A. Fasten cementitious backer boards horizontally or vertically through sheathing into framing.

1. Penetrate steel studs a minimum of 3/8 inch with fastener.
2. Space fasteners 8 inches on center maximum along perimeter and in field of cement board unless noted otherwise.
3. Place fasteners a minimum of 3/8 inch and a maximum of 5/8 inch from the cement board edge.
4. Drive fastener heads flush with the face of the cement board.

B. Stagger vertical joints of the cement board. Locate joints over framing members.

C. Offset horizontal joints in cement board a minimum of 12 inches from horizontal joints in sheathing.

D. Offset vertical joints in cement board a minimum of one stud space from vertical joints in sheathing.

E. Offset joints in cement board a minimum of 8 inches from the corners of openings by "L" cutting cement board around openings.

F. Treat cement board joints and corners with 4” wide alkali-resistant fiberglass mesh tape imbedded in mortar specified in Section 044313 "Exterior Adhered Tile Veneer." Allow the taping treatment to cure for 12 to 24 hours at 70-deg F.

3.5 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector and qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Testing:

1. Moisture Content of Building Materials: Building materials with visible signs of water damage shall not be installed. Wall and floor framing shall not be enclosed when the framing members exceed 19-percent moisture content. Moisture content shall be verified in compliance with the following:

a. Moisture content shall be determined with either a probe-type or contact-type moisture meter. Equivalent moisture verification methods may be approved by the enforcing agency and shall satisfy requirements found in Section 101.8 of this code.
b. Moisture readings shall be taken at a point 2 feet to 4 feet from the grade stamped end of each piece to be verified.
c. At least three random moisture readings shall be performed on wall and floor framing with documentation acceptable to the enforcing agency provided at the time of approval to enclose the wall and floor framing.

C. If test results or inspections show sheathing does not comply with requirements:

1. Provide additional drying time to sheathing until sheathing installation passes, and/or
2. Remove and replace sheathing until sheathing installation passes.

D. Proceed with installation of adjacent construction (cladding, building wraps, gypsum board, etc.) only after unsatisfactory conditions have been corrected.

E. Prepare test and inspection reports.

3.6 PROTECTION

A. Where sheathing acts as a substrate for a roofing system or air/weather barrier system, protect sheathing from climatic conditions to prevent moisture / weather damage until the installation of the roof or air/ weather barrier system.

B. Remove and replace sheathing panels that are defective, moisture damaged, mold damaged, and/or panels that are excessively warped and would result in work exceeding the installation tolerances specified in Section 061000 "Rough Carpentry."

END OF SECTION 061600

SECTION 064023 - INTERIOR ARCHITECTURAL WOODWORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Wood-veneer-faced architectural cabinets for transparent finish.
2. Plastic-laminate-faced architectural cabinets.
3. Flush wood paneling for transparent finish.
4. Interior standing and running trim for transparent finish.
5. Interior architectural woodwork for transparent finish.
6. Wood furring, blocking, shims, and hanging strips for installing woodwork items unless concealed within other construction before woodwork installation.
7. Shop finishing of interior woodwork.

B. Related Requirements:

1. Section 057000 “Decorative Metals” for decorative metals to be incorporated into interior architectural woodwork.
2. Section 061000 “Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing woodwork and concealed within other construction before woodwork installation.
3. Section 088000 “Glazing” for glazing products to be incorporated in woodwork.
4. Division 12 Section(s) for countertops.

1.3 DEFINITIONS

A. AWS: Architectural Woodwork Standards.

B. BHMA: Builder’s Hardware Manufacturer’s Association.

C. WI: Woodwork Institute.

1.4 COORDINATION

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that woodwork can be supported and installed as indicated.

B. Hardware Coordination: Distribute copies of approved hardware schedule specified in Section 087100 “Door Hardware” to fabricator of interior architectural woodwork; coordinate Shop Drawings and fabrication with hardware requirements.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product, including panel products and finishing materials and processes.

B. Sustainable Design Submittals: Include documentation that adhesives and composite wood products are in compliance with “Performance Requirements” article.

C. Shop Drawings: Provide project-specific shop drawings for interior architectural woodwork.

1. Include plans, elevators, sections, and attachment details.
2. Show large-scale details.
3. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
4. Show locations and sizes of cutouts for holes for items installed in interior architectural woodwork.
5. Show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
6. Apply WI Certified Compliance Program label to Shop Drawings.

D. Samples for Verification:

1. Lumber for transparent finish, not less than 5 inches wide by 12 inches long, for each species and cut, finished on one side and one edge.
2. Veneer leaves representative of and selected from flitches to be used for transparent finished woodwork.
3. Veneer-faced panel products with or for transparent finish, 8 by 10 inches, for each species and cut.
4. Plastic laminates, 8 by 10 inches, for each type, color, pattern, and surface finish, with one sample applied to core material and specified edge material applied to one edge.
5. Exposed cabinet hardware and accessories, one unit for each type and finish.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator.

B. Product Certificates: For the following:

1. High-pressure decorative laminate.
2. Composite wood products.
3. Adhesives.

C. Woodwork Quality Standard Compliance Certificates: WI Certified Compliance Program certificates.

D. At Substantial Completion, provide WI Certificate of Compliance for all casework and materials installed.

E. Field quality control reports.

1.8 QUALITY ASSURANCE

A. Fabricator/Installer Qualifications: A shop with not less than 10 years’ experience regularly engaged in the fabrication of interior architectural woodwork that employs skilled workers who custom fabricate products similar to those indicated for this Project and whose products have a record of successful in-service performance. Shop is also a certified participant in WI’s Quality Certification Program.

B. Certified Compliance:

1. Provide a WI Certificate of Compliance indicating that all casework meets the requirements of the AWS, the plans and specifications.
2. Apply a WI Certificate of Compliance Label to each section of casework.
3. On completion of installation, provide a WI Certified Compliance Certificate for the installation.
4. All WI Certified Compliance fees are the responsibility of the casework manufacturer.

C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockups of each typical type cabinet as shown on Drawings.
2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver interior woodwork until painting and similar operations that could damage woodwork have been completed in installation areas. If woodwork must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.10 FIELD CONDITIONS

A. Environmental Limitations for Interior Work: Do not deliver or install interior woodwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Field Measurements: Where woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being enclosed, and indicate measurements on Shop Drawings.

C. Established Dimensions: Where woodwork is indicated to fit to other construction, establish dimensions for areas where woodwork is to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of woodwork indicated for construction, finishes, installation, and other requirements.

1. Provide labels and certificates from WI certification program indicating that woodwork, including installation, complies with requirements of grades specified.
2. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with those selections and requirements in addition to the quality standard.
3. System Structural Performance: Cabinets and support framing shall withstand the effects of gravity loads and stresses without permanent deformation, excessive deflection, or binding of doors.
4. Seismic Performance: Comply with the Woodwork Institute's Certified Seismic Installation Program:

a. All wood or metal frame wall construction shall be constructed with continuous in-wall blocking of either 3x6 Douglas Fir or 16-gauge by 6-inch wide, 50 KSI sheet metal provided in accordance with the location requirements included on the cabinet fabricator/installer's shop drawings.
b. All casework installation shall be certified by the Woodwork Institute in accordance with their Certified Seismic Installation Program (CSIP), including:

1) CSIP certificate indicating that all of the casework installation fully meets the requirements of the AWS, CSIP and WI's preapprovals.

c. It is the responsibility of the installer to include with their bid, any and all costs for WI's CSIP certification. Certification is a prerequisite for final acceptance.

B. Grade of Woodwork:

1. Plastic Laminate Cabinets: Custom.
2. All Other Woodwork: Premium.

C. Sustainable Design: Adhesives and composite wood products shall comply with 2016 CALGreen mandatory measures:

1. Adhesives: Adhesives, adhesive bonding primers, adhesive primers, sealants, sealant primers and caulks shall comply with local or regional air pollution control or air quality management district rules where applicable, or SCAQMD Rule 1168 VOC limits, as shown in 2016 CALGreen Tables 5.504.4.1 and 5.504.4.2. Such products also shall comply with the Rule 1168 prohibition on the use of certain toxic compounds (chloroform, ethylene dichloride methylene chloride, perchloroethylene and trichloroethylene). Adhesives shall have no added formaldehyde resins.
2. Composite Wood Products: Hardwood plywood and medium density fiberboard composite wood products used on the interior or exterior of the building shall meet the requirements for formaldehyde as specified in ARB's Air Toxics Control Measure (ATCM) for Composite Wood (17 CCR 93120 et seq.) Those materials not exempted under the ATCM must meet the specified emission limits, as shown in 2016 CALGreen Table 5.504.4.5.

D. Fire-Test-Response Characteristics (Plastic Laminates): As determined by testing identical plastic laminate applied with identical adhesives to substrates according to test method indicated below by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

a. Flame-Spread Index: 75 or less.
b. Smoke-Developed Index: 450 or less.

2.2 FABRICATOR

A. Fabricator: Subject to compliance with requirements, fabricator shall be a licensee of the Woodwork Institute Certified Compliance Program and Certified Seismic Installation Program.

B. Source Limitations: Engage a qualified woodworking firm to assume undivided responsibility for production of work specified herein.

2.3 WOOD-VENEER-FACED ARCHITECTURAL CABINETS FOR TRANSPARENT FINISH

A. Type of Construction: As indicated on Drawings, or if not indicated, frameless.

B. Cabinet and Door and Drawer Interface Style: As indicated, or if not indicated, flush overlay.

C. Wood for Exposed Surfaces:

1. Species: As indicated on Drawings.
2. Cut: As indicated on Drawings, or if not indicated, quarter cut/quarter sawn.
3. Grain Direction: As indicated, or if not indicated, vertically for drawer fronts, doors, and fixed panels.
4. Matching of Veneer Leaves: Book.

D. Semiexposed Surfaces: Provide surface materials indicated below:

1. Surfaces Other than Drawer Bodies: Same species and cut indicated for exposed surfaces.
2. Drawer Subfronts, Backs, Sides: Solid-hardwood lumber, same species indicated for exposed surfaces.
3. Drawer Bottoms: Hardwood plywood.

E. Dust Panels: 1/4-inch plywood or tempered hardboard above compartments and drawers, unless located directly under tops.

F. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.

2.4 PLASTIC-LAMINATE-FACED ARCHITECTURAL CABINETS

A. Type of Construction: As indicated on Drawings, or if not indicated, frameless.

B. Cabinet, Door, and Drawer Interface Style: As indicated, or if not indicated, flush overlay.

C. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated or if not indicated, as required by woodwork quality standard.

1. Basis-of-Design Products: As indicated on Drawings.

D. Laminate Cladding for Exposed Surfaces:

1. Horizontal Surfaces: Grade HGS.
2. Vertical Surfaces: Grade HGS.
3. Edges: Grade HGS.
4. Pattern Direction: Vertically for doors and fixed panels.

E. Materials for Semiexposed Surfaces:

1. Surfaces Other Than Drawer Bodies: High-pressure decorative laminate, Grade VGS.

a. Edges of Plastic-Laminate Shelves: PVC tape, 0.018-inch minimum thickness, matching laminate in color, pattern, and finish.
b. For semiexposed backs of panels with exposed plastic-laminate surfaces, provide surface of high-pressure decorative laminate, NEMA LD 3, Grade VGS.

1. Drawer Sides and Backs: Solid-hardwood lumber.
2. Drawer Bottoms: Hardwood plywood.

F. Dust Panels: 1/4-inch plywood or tempered hardboard above compartments and drawers unless located directly under tops.

G. Concealed Backs of Panels with Exposed Plastic-Laminate Surfaces: High-pressure decorative laminate, NEMA LD 3, Grade BKL.

H. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.

I. Plastic-Laminate Shelves: Plastic laminate shop bonded to both faces and all edges of 1-inch-thick core. Sand surfaces to which plastic laminate is to be bonded.

1. Shelf Core: Exterior plywood.
2. Plastic-Laminate Grade for Shelves: HGL.

2.5 FLUSH WOOD PANELING FOR TRANSPARENT FINISH

A. Wood Species: As indicated on Drawings.

B. Cut: As indicated on Drawings, or if not indicated, quarter cut/quarter sawn.

C. Matching of Adjacent Veneer Leaves: Book match.

D. Matching within Panel Face: Running.

E. Panel Core Construction: Hardwood veneer-core plywood.

F. Assemble panels by gluing and concealed mechanical fastening.

2.6 INTERIOR STANDING AND RUNNING TRIM FOR TRANSPARENT FINISH

A. Interior standing and running trim for transparent finish includes the following:

1. Wood base.
2. As indicated on Drawings.

B. Wood Species: As indicated on Drawings.

C. Cut: As indicated on Drawings, or if not indicated, quarter cut/quarter sawn.

D. For trim items other than base wider than available lumber, use veneered construction. Do not glue for width.

1. For veneered base, use hardwood lumber core, glued for width.

E. For base wider than available lumber, glue for width. Do not use veneered construction.

F. For rails thicker than available lumber, use veneered construction. Do not glue for thickness.

2.7 INTERIOR ARCHITECTURAL WOODWORK FOR TRANSPARENT FINISH

A. Interior architectural woodwork for transparent finish includes the following:

1. As indicated on Drawings.

B. Wood Species and Cut:

1. Species: As indicated.
2. Cut: As indicated, or if not indicated, quarter cut/quarter sawn.

2.8 WOOD MATERIALS

A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.

1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than 3 inches wide.
2. Wood Moisture Content for Interior Materials: 8 to 13 percent.

B. Composite Wood Products: Provide materials that comply with “Performance Requirements” article and with requirements of referenced quality standard below for each type of woodwork and quality grade specified unless otherwise indicated.

1. Medium-Density Fiberboard: ANSI A208.2, Grade 130.
2. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1.

2.9 CABINET HARDWARE AND ACCESSORIES

A. General: Provide cabinet hardware and accessory materials associated with WI grade architectural cabinets.

B. Frameless Concealed Hinges (European Type): BHMA A156.9, B01602. Provide three for doors more than 48 inches high.

C. Pulls: As indicated on Drawings, or if not indicated, back-mounted, solid metal wire pulls, 4 inches long, 5/16 in diameter.

D. Catches: Roller catches, BHMA A156.9, B03071.

E. Adjustable Shelf Standards and Supports: BHMA A156.9, B04071; with shelf rests, B04081.

F. Drawer Slides: BHMA A156.9.

G. Locks: Cam type complying with BHMA A156.11 Type E07281.

1. Provide locks on all cabinets and drawers, whether indicated or not.
2. Quantity: Minimum of ten keys per lock and two master keys.
3. Unless otherwise indicated, all locks shall be keyed alike.

H. Door and Drawer Silencers: BHMA A156.16, L03011.

I. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with BHMA A156.18 for BHMA finish number indicated.

1. As indicated on Drawings, or if not indicated, stainless steel.

J. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in BHMA A156.9.

2.10 MISCELLANEOUS MATERIALS

A. Furring, Blocking, Shims, and Hanging Strips: Softwood or hardwood lumber, kiln dried to less than 15 percent moisture content.

B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. .Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.

C. Installation Adhesive: Product recommended by fabricator for each substrate for secure anchorage.

2.11 FABRICATION

A. Fabrication shall comply with AWS requirements.

B. Fabricate woodwork to dimensions, profiles, and details indicated. Ease edges and corners to 1/16-inch radius unless otherwise indicated.

C. Complete fabrication, including assembly and finishing, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

1. Notify Architect seven days in advance of the dates and times woodwork fabrication will be complete.
2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.

D. Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

E. Backout or groove backs of flat trim members and kerf backs of other wide, flat members except for members with ends exposed in finished work.

F. Form decorative metal to required shapes and sizes, true to line and level with true curves and accurate angles and surfaces. Finish exposed surfaces to smooth, sharp, well-defined lines. Mill joints to a tight, hairline fit. Cope or miter corners.

G. Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

2.12 SHOP FINISHING

A. General: Finish woodwork at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.

B. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing woodwork, as applicable to each unit of work.

1. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of cabinets.

C. Transparent Finish for Interior Items:

1. Grade: Premium.
2. Finish: System - 11, catalyzed polyurethane.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with Fabricator present, for compliance with requirements for installation tolerances, location of reinforcements, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Before installation, condition woodwork to average prevailing humidity conditions in installation areas for not less than 72 hours.

B. Before installing woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.3 INSTALLATION

A. Grade: Install woodwork to comply with same grade as item to be installed.

B. Assemble woodwork and complete fabrication at Project site to the extent that it was not completed in the shop.

C. Install woodwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb to a tolerance of 1/8 inch in 96 inches.

D. Scribe and cut woodwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.

E. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with woodwork.

1. For shop-finished items, use filler matching finish of items being installed.

F. Standing and Running Trim: Install with minimum number of joints possible, using full-length pieces (from maximum length of lumber available) to greatest extent possible. Do not use pieces less than 36 inches long except where shorter single-length pieces are necessary. Scarf running joints and stagger in adjacent and related members.

1. Fill gaps, if any, between top of base and wall with latex sealant, painted to match wall.
2. Install standing and running trim with no more variation from a straight line than 1/8 inch in 96 inches.

G. Anchor cabinets to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners.

1. Use filler matching finish of items being installed.

H. Install cabinets level, plumb, and true in line to a tolerance of 1/8 inch in 96 inches using concealed shims.

1. Scribe and cut cabinets to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
2. Install cabinets without distortion so doors and drawers fit openings and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
3. Maintain veneer sequence matching of cabinets with transparent finish.
4. Fasten wall cabinets to structure in accordance with “Performance Requirements” article, but no less than the following:

a. Fasten wall cabinets through back, near top and bottom, and at ends not more than 16 inches o.c. with minimum No. 14 wafer-head sheet metal screws through metal backing or metal framing behind wall finish.

I. Shop Finishes: Touch up finishing after installation of architectural cabinets. Fill nail holes with matching filler.

1. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are applied in shop.

3.4 FIELD QUALITY CONTROL

A. Provide Woodwork Institute Certified Seismic Installation Program inspection reports and certification.

3.5 REPAIR, CLEANING, AND PROTECTION

A. Repair damaged and defective woodwork, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.

B. Clean, lubricate, and adjust hardware.

C. Clean woodwork on exposed and semiexposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

D. Protection: Protect woodwork during remainder of construction period so that woodwork is without damage or deterioration at time of Substantial Completion.

END OF SECTION 064023

SECTION 070150 - PARTIAL ROOF REMOVAL AND REPLACEMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Removal of existing roofing system and replacement with new roofing system at the following locations:

a. At juncture of new exterior wall improvements and existing roof.
b. Where indicated.

2. Transition from new roofing system to existing roofing.
3. Temporary roofing and protection of existing roofing to remain.

B. Related Requirements:

1. Section 011000 "Summary" for use of the premises, general work restrictions, and Owner work restrictions.
2. Section 015000 "Temporary Facilities and Controls" for temporary construction and environmental-protection measures for reroofing preparation.
3. Section 017300 “Execution” for cutting and patching procedures.
4. Section 076200 "Sheet Metal Flashing and Trim" for roof flashing to the extent not provided as part of this Section.

1.3 DEFINITIONS

A. Roofing Terminology: Definitions in ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" apply to work of this Section.

B. New Roofing System: New roofing system is defined to include the following, whether indicated or not on the Drawings, and complying with specified performance requirements:

1. New roof membrane to match existing roof membrane.

a. Where existing roofing is no longer under warranty and product(s) are no longer available, provide new roofing of same general type and construction as existing roof system.

2. New insulation to match existing insulation, in type, thickness, and R-value.
3. New substrate and cover boards.
4. New flashings, adhesives, fasteners, and accessories.

1.4 PREINSTALLATION MEETINGS

A. Roof Removal and Replacement Conference: Conduct conference at Project site.

1. Meet with General Contractor; Architect; Owner representative and Owner’s insurer if applicable; roofing system manufacturer's representative; roofing Installer, including project manager, superintendent, and foreman; and installers whose work interfaces with or affects reroofing, including installers of roofing membrane and flashings, roof accessories, and roof-mounted equipment.

2. Review methods and procedures related to roofing system tear-off and replacement, including, but not limited to, the following:

    a. Reroofing preparation, including roofing system manufacturer's written instructions.
    b. Temporary protection requirements for existing roofing system components that are to remain.
    c. Existing roof drains and roof drainage during each stage of reroofing, and roof-drain plugging and plug removal.
    d. Construction schedule and availability of materials, Installer's personnel, equipment, and facilities needed to avoid delays.
    e. Existing roof deck conditions requiring notification of Architect.
    f. Existing roof deck removal procedures and Owner notifications.
    g. Condition and acceptance of existing roof deck and base flashing substrate for reuse.
    h. Structural loading limitations of roof deck during reroofing.
    i. Base flashings, special roofing details, drainage, penetrations, equipment curbs, and condition of other construction that affect reroofing.
    j. HVAC shutdown and sealing of air intakes.
    k. Shutdown of fire-suppression, -protection, and -alarm and -detection systems.
    l. Governing regulations and requirements for insurance and certificates if applicable.
    m. Existing conditions that may require notification of Owner and Architect before proceeding.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Temporary Roofing Submittal: Product data and description of temporary roofing system.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

1. Include certificate that Installer is approved by warrantor of existing roofing system, or if not applicable, by manufacturer of new roofing system.

B. Field Test Reports: Fastener pull-out test report.

C. Photographs: Show existing conditions of adjoining construction and site improvements, including exterior and interior finish surfaces that might be misconstrued as having been damaged by reroofing operations. Submit before Work begins.

D. Field quality control reports.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 20 years' experience regularly engaged in the production and sales of new roofing systems which match the existing roofing system, that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 10 years' experience installing new roofing systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section. If existing roof membrane is under warranty, installer shall be licensed and eligible to receive manufacturer's special warranty.

C. Regulatory Requirements: Comply with hauling and disposal regulations of authorities having jurisdiction.

1.8 FIELD CONDITIONS

A. Survey of Existing Roof Conditions: Record existing conditions that affect the Work by use of measured drawings, preconstruction photographs. Conduct survey with Architect and Owner's representative in field prior to any new work.

1. Confirm if existing roofing system is under warranty.

B. Protect building to be reroofed, adjacent buildings, walkways, site improvements, exterior plantings, and landscaping from damage or soiling from reroofing operations.

C. Maintain access to existing walkways, corridors, and other adjacent occupied or used facilities.

D. Confirm construction loads imposed on roof with Structural Engineer, and no greater than the following: 300 pounds for rooftop equipment wheel loads and 20 pounds per square foot for uniformly distributed loads.

E. Weather Limitations: Proceed with reroofing preparation only when existing and forecasted weather conditions permit Work to proceed without water entering existing roofing system or building.

1. Remove only as much roofing in one day as can be made watertight in the same day.

F. All components used in roofing system must be protected from exposure to moisture before, during, and after installation.

G. Do not install roofing materials that are wet, moisture damaged, and/or mold damaged.

H. Hazardous Materials: Hazardous materials are not expected to be encountered in the Work.

1. If materials suspected of containing hazardous materials are encountered, do not disturb; immediately notify Owner who will have materials tested. Allow three days when no work will be allowed while suspected hazardous materials are being tested.

I. Termite Infestation: It is not expected that active termite infestations will be encountered in the Work.

1. If active termite infestations are encountered, do not disturb; immediately notify the Owner who will have the infestations investigated. Allow three days when no work will be allowed on those portions of the Work suspected of having active termite infestations.

1.9 WARRANTY

A. Existing Warranties: Confirm with Owner if existing roof is under warranty. Upon confirmation, remove, replace, patch, and repair materials and surfaces cut or damaged during reroofing, by methods and with materials so as not to void existing roofing system warranty.

1. Notify warrantor before proceeding with the Work.
2. Notify warrantor of existing roofing system on completion of reroofing, and obtain documentation verifying that existing roofing system has been inspected and warranty remains in effect. Submit documentation at Project closeout.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General Performance: New roofing system, including installed roofing membranes, base flashings, and accessories shall withstand minimum code-prescribed uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roofing and base flashings shall remain watertight.

B. Material Compatibility: Roofing materials shall be compatible with one another and under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.

C. New Roofing System Design: Provide roofing membrane system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to comply with the requirements of the 2016 California Building Code.

2.2 TEMPORARY PROTECTION MATERIALS

A. Design and selection of materials for temporary roofing are Contractor's responsibility.

B. Sheathing Paper: Red-rosin type, minimum 3 lb/100 sq. ft..

C. Base Sheet: ASTM D 4601, Type II, nonperforated, asphalt-impregnated and -coated, glass-fiber sheet.

D. Glass-Fiber Felts: ASTM D 2178, Type IV, asphalt-impregnated, glass-fiber felt.

E. Asphalt Primer: ASTM D 41.

F. Roofing Asphalt: ASTM D 312, Type III or IV.

G. Base Sheet Fasteners: Capped head, factory-coated steel fasteners, listed in FM Approvals' RoofNav.

2.3 REPLACEMENT MATERIALS

A. Use replacement materials matching existing roofing system materials unless otherwise indicated.

1. Where existing roofing is no longer under warranty and product(s) are no longer available, provide new roofing of same general type and construction as existing roof system.
2. For built-up roofing system, comply with ASTM D 4897, ASTM D 2178, and ASTM D 6164 as applicable.
3. Vapor Barrier: Matching existing, as applicable.

B. Wood Blocking, Curbs, and Nailers: Pressure-preservative treated.

C. Plywood: Pressure-preservative-treated plywood roof sheathing complying with Section 061600 "Sheathing."

D. Substrate Board: ASTM C 1278, cellulosic-fiber-reinforced, water-resistant gypsum substrate, minimum 1/2 inch thickness.

E. Miscellaneous Rough Carpentry: Pressure-preservative-treated lumber as specified in Section 061000 "Rough Carpentry."

F. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 2.

1. Provide in thickness indicated, or if not indicated, in thickness matching existing insulation. Where insulation thickness exceeds 2 inches, provide in multiple layers not exceeding 2 inch thick each.
2. Maximum Size: 4 feet by 4 feet.

G. Tapered Insulation: Provide factory-tapered insulation boards fabricated to a slope of no less than 1/4 inch per foot unless otherwise indicated.

H. Cover Board: ASTM C 1278, cellulosic-fiber-reinforced, water-resistant gypsum substrate, in thickness recommended by roofing manufacturer.

I. Miscellaneous Accessories: Provide sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, lap sealants, termination reglets, and other accessories.

J. Metallic-Coated Steel Sheet (Galvanized) Flashing: Provide zinc-coated (galvanized) steel sheet in accordance with ASTM A 653, G90 coating designation.

1. Surface: Smooth, flat.
2. Thickness: Minimum 0.028 inch thick.
3. Galvanized sheet steel shall be limited to rooftop applications only, that are not in contact with concrete, and that are not visible from any vantage point on the site, nor visible from any public or guest vantage point from within the building or site.
4. Round Flashings Only: Provide roofing manufacturer's prefabricated pipe boot penetration flashings compatible with base membrane.
5. Pitch pans are not acceptable for use as penetration flashings for this Project.

K. Provide preformed saddles, crickets, tapered edge strips, tapered insulation, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated, or if not indicated, to confirm to existing slopes with a minimum slope of 1/4 inch per foot.

L. Adhesives: As recommended by manufacturer and complying with performance requirements.

M. Fasteners: Factory-coated steel fasteners with metal or plastic plates listed in FM Approvals' RoofNav, and acceptable to new roofing system manufacturer.

2.4 AUXILIARY ROOFING MATERIALS

A. General: Use auxiliary reroofing preparation materials recommended by roofing system manufacturer for intended use and compatible with components of existing and new roofing system.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protection of In-Place Conditions:

1. Protect existing roofing system that is not to be reroofed.
2. Loosely lay 1-inch-minimum thick, EPS insulation over existing roofing in areas not to be reroofed.

    a. Loosely lay 15/32-inch plywood over EPS. Extend EPS past edges of plywood panels a minimum of 1 inch.

3. Limit traffic and material storage to areas of existing roofing that have been protected.
4. Maintain temporary protection and leave in place until replacement roofing has been completed. Remove temporary protection on completion of reroofing.
5. Comply with requirements of existing roof system manufacturer's warranty requirements.

B. Seal or isolate windows that may be exposed to airborne substances created in removal of existing materials.

C. Subject to Owner approval, shut off rooftop utilities and service piping before beginning the Work.

D. Test existing roof drains to verify that they are not blocked or restricted.

1. Immediately notify the Owner of any blockages or restrictions.

E. Protect existing roofing system that is not to be reroofed.

1. Loosely lay 1-inch-minimum thick, expanded polystyrene (EPS) insulation over existing roofing in areas indicated. Loosely lay 15/32-inch plywood panels over EPS. Extend EPS past edges of plywood panels a minimum of 1 inch.
2. Limit traffic and material storage to areas of existing roofing that have been protected.
3. Maintain temporary protection and leave in place until replacement roofing has been completed. Remove temporary protection on completion of reroofing.

F. Coordinate with Owner to shut down air-intake equipment in the vicinity of the Work.

1. Cover air-intake louvers before proceeding with reroofing work that could affect indoor air quality or activate smoke detectors in the ductwork.

G. During removal operations, have sufficient and suitable materials on-site to facilitate rapid installation of temporary protection in the event of unexpected rain.

H. Maintain roof drains in functioning condition to ensure roof drainage at end of each workday.

1. Prevent debris from entering or blocking roof drains and conductors.

a. Use roof-drain plugs specifically designed for this purpose.
b. Remove roof-drain plugs at end of each workday, when no work is taking place, or when rain is forecast.

2. If roof drains are temporarily blocked or unserviceable due to roofing system removal or partial installation of new roofing system, provide alternative drainage method to remove water and eliminate ponding.

a. Do not permit water to enter into or under existing roofing system components that are to remain.

3.2 PARTIAL ROOF TEAR-OFF

A. Partial Roof Tear-Off: Where indicated, and where required for new construction, remove existing roofing and insulation and immediately check for presence of moisture by visually observing substrate that is to remain.

1. Remove wet or damp materials below existing roofing and above deck.
2. Inspect wood blocking, curbs, and nailers for deterioration and damage. If wood blocking, curbs, or nailers have deteriorated, immediately notify Owner and Architect.
3. Bitumen and felts that are firmly bonded to concrete decks are permitted to remain if felts are dry. Remove unadhered bitumen, unadhered felts, and wet felts.
4. Remove excess asphalt from deck that is exposed by removal of wet or damp materials.
5. Remove fasteners from deck.

3.3 DECK PREPARATION

A. Inspect deck after tear-off of roofing system.

B. Verify that roof substrate is visibly dry and free of moisture. Test for moisture by method recommended by roofing manufacturer. Do not proceed with roofing work if moisture content does not comply with manufacturer's written instructions.

C. If broken or loose fasteners that secure deck panels to one another or to structure are observed, or if deck appears or feels inadequately attached, immediately notify Owner and Architect. Do not proceed with installation until directed by Architect and Construction Manager.

D. If deck surface is unsuitable for receiving new roofing or if structural integrity of deck is suspect, immediately notify the Owner. Do not proceed with installation until directed by the Owner.

3.4 TEMPORARY ROOFING

A. Install temporary roofing over area to be reroofed.

B. Remove temporary roofing before installing new roofing.

3.5 NEW ROOFING SYSTEM INSTALLATION

A. Immediately after roof tear-off, fill in tear-off areas with new roofing system, including new roofing membrane, flashings, and all accessories to create a watertight system.

B. Install new roofing infill material to match existing adjacent roofing and tie into existing roofing. Comply with manufacturer's written instructions.

1. Where existing roofing is no longer under warranty and product(s) are no longer available, provide new roofing of same general type and construction as existing roof system. Install replacement roofing in accordance with manufacturer's written instructions.

C. New roofing system shall be installed to confirm to slopes indicated, or if not indicated, to conform to existing slopes with a minimum slope of 1/4 inch per foot. Install saddles, crickets, and tapered insulation in accordance with manufacturer's written installation instructions.

3.6 ROOF FLASHING INSTALLATION

A. General: Install sheet metal flashing and trim to comply with performance requirements, sheet metal manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, set units true to line, and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.

B. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof.

3.7 FASTENER PULL-OUT TESTING

A. Perform fastener pull-out tests according to SPRI FX-1, and submit test report to Owner and Architect before installing new roofing system.

3.8 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer's Field Services: Manufacturer's technical representative shall provide technical assistance and guidance for preparation and application of new roofing system. At a minimum, arrange for manufacturer's technical representative to observe roofing removal, inspect substrate conditions, surface preparation, and initial installation of new roofing system; at mid-point of the installation; and at completion. Provide additional field observations as required by manufacturer and when requested by Architect or Owner. After each field visit, submit manufacturer's written report of observations within 3 working days. The report shall note overall quality of work, deficiencies, any other concerns, and recommended corrective action.

B. Flood Testing: Flood test each roof replacement area for leaks, according to recommendations in ASTM D 5957, after completing roofing and flashing but before placing overlying construction. Install temporary containment assemblies, plug or dam drains, and flood with potable water.

1. Flood to an average depth of 2-1/2 inches with a minimum depth of 1 inch and not exceeding a depth of 4 inches. Maintain 2 inches of clearance from top of base flashing.

a. Obtain Structural Engineer's written approval for each proposed test area and water depth prior to testing. If proposed test area is not structurally acceptable, perform flood testing on multiple smaller areas that are acceptable to structural engineer.

2. Flood each area for duration as required per ASTM D 5957, but no less than 24 hours.
3. After flood testing, repair leaks, repeat flood tests, and make further repairs until roofing and flashing installations are watertight.

C. Repair or remove and replace components of built-up roofing system where test results or inspections indicate that they do not comply with specified requirements.

1. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

D. Prepare test and inspection reports.

3.9 DISPOSAL

A. Collect demolished materials and place in containers. Promptly dispose of demolished materials. Do not allow demolished materials to accumulate on-site.

1. Storage or sale of demolished items or materials on-site is not permitted.
2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
3. Remove debris from elevated portions of building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.
4. Comply with requirements specified in Section 017419 "Construction Waste Management and Disposal."

B. Transport and legally dispose of demolished materials off Owner's property.

END OF SECTION 070150

SECTION 071326 - SELF-ADHERING SHEET WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Self-adhering sheet waterproofing for below-grade applications [WP-1].
2. Molded-sheet drainage panels.

B. Related Requirements:

1. Section 033000 "Cast-In-Place Concrete" for concrete substrates to receive self-adhering waterproofing.
2. Sections 071413 "Hot Fluid-Applied Rubberized Asphalt Waterproofing" and 071416 "Cold Fluid-Applied Waterproofing" for source limitation coordination with this Section.

1.3 COORDINATION

A. Coordination installation of molded sheet drainage panels with foundation drainage system and backfill installation.

B. Coordinate compatibility and tie-in to other waterproofing systems where those tie-ins occur.

1. The below-grade self-adhering sheet waterproofing system at the foundation shall continue to grade and shall transition and integrate into the above-grade waterproofing system as specified in Section 071416 "Cold Fluid-Applied Waterproofing."

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Construction Manager, Architect, envelope consultant, inspection agency, self-adhering sheet waterproofing installer, self-adhering sheet waterproofing technical manufacturer's representative, and installers whose work interfaces with or affects self-adhering sheet waterproofing, including installers of adjacent construction that penetrates waterproofing system.
2. Review waterproofing requirements including, but not limited to, the following:

a. Surface preparation.
b. Substrate condition and pretreatment.
c. Minimum curing period.
d. Forecasted weather conditions.
e. Special details and sheet flashings.
f. Installation procedures.
g. Testing and inspection procedures.
h. Protection and repairs.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.

B. Sustainable Design Submittals:

1. Documentation for primers, indicating emissions are within specified limits.

C. Shop Drawings:

1. Provide project-specific shop drawings showing locations and extent of waterproofing.
2. Include details of substrate joints and cracks, expansion joints, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.

D. Samples:

1. Self-Adhering Sheet Waterproofing: 8 inches square.
2. Drainage Panels: 4 inches square.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Certification in the form of a letter, on the self-adhering sheet waterproofing manufacturer's letterhead and signed by a technical representative of the manufacturer, confirming the following:

1. Acceptance of substrate.
2. Acceptance of any adjacent waterproofing and/or air/weather barrier system(s), that such systems and interface details are compatible, and will not void warranties.

C. Field quality-control reports.

D. Sample Warranties: For special warranties.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 20 years' experience regularly engaged in the production and sales of self-adhering sheet waterproofing that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 10 years' experience installing self-adhering sheet waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Mockups: Build mockups to verify selections made under Sample submittals and to set quality standards for installation.

1. Build mockup of installation on typical vertical surface of 100 sq. ft. of wall area.
2. Mock-ups shall be constructed in presence of manufacturer's technical representative.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials and products in labeled packages. Store and handle in compliance with manufacturer's instructions, recommendations and material safety data sheets. Protect from damage from sunlight, weather, excessive temperatures and construction operations. Remove damaged products.

1. Do not double-stack pallets of waterproofing material on the job site. Provide cover on top and all sides, allowing for adequate ventilation.
2. Store drainage composite or protection board flat and off the ground. Provide cover on top and all sides.

1.9 FIELD CONDITIONS

A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.

1. Do not apply waterproofing in snow, rain, fog, or mist.

B. Maintain adequate ventilation during preparation and application of waterproofing materials.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard or customized warranty, in which manufacturer and installer agree to repair or replace components of waterproofing system that do not comply with requirements or that fail to remain watertight within specified warranty period.

1. Warranty includes removing and reinstalling cladding components, flashings, accessories, substrates, and overburdens.
2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Below-Grade Waterproofing System: Obtain self-adhering sheet waterproofing materials and accessories (including molded-sheet drainage panels) provided under this Section, in conjunction with waterproofing materials provided under Sections 071413 "Hot Fluid-Applied Rubberized Asphalt Waterproofing" and 071416 "Cold Fluid-Applied Waterproofing," from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Provide a complete waterproofing system that prevents the passage of water, including all applicable sealants, transitions, joints, termination assemblies, and accessories whether indicated or not.

2.3 SELF-ADHERING SHEET WATERPROOFING (BELOW GRADE) [WP-1]

A. Composite Sheet Waterproofing: Minimum 60-mil nominal thickness, self-adhering composite sheet consisting of 40 mils of HDPE special-weave saturated with a fluid LDPE laminated to a 20-mils of high-performance butyl, polyethylene-film reinforcement, and with release liner on adhesive side.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Tremco, Inc., "TREMproof 560."

2. Physical Properties:

a. Type: 20-mil high-performance butyl laminated to 40 mils of HDPE special-weave fabric.
b. Color: Black.
c. Solids: 100 percent.
d. Weight: 0.30 lbs sq ft.
e. Puncture Resistance: Exceeds 500 lb.
f. Hydrostatic Resistance: 685 psi.
g. Application Temperature; Temperatures above 20°F.

2.4 MOLDED-SHEET DRAINAGE PANELS

A. Drainage/Protection Board: A two-part prefabricated drainage material and protection board consisting of a formed polystyrene core covered on one side with a woven polypropylene filter fabric. The fabric allows water to pass into the drainage core while restricting the movement of soil particles. The plastic core provides compressive strength and allows high capacity flow. Where indicated, coordinate with Division 22 Section(s) for connection of drainage board to plumbing drain.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Vertical Surfaces: Tremco International; TREMDrain 1000.
b. Horizontal Surfaces: Tremco International; TREMDrain 2000.
c. Water Collection: Tremco International; TREMDrain Total Drain.

2.5 AUXILIARY MATERIALS

A. General: Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.

B. Primer: Liquid waterborne primer recommended for substrate by sheet-waterproofing material manufacturer.

1. Primer shall have a maximum VOC content of 100g/L.

C. Joint Sealant: Elastomeric, single-component, silicone sealant, ASTM C 920 - Class 50, Type S, Grade NS, Use NT, M, A, O, G.

D. Termination Mastic: Air barrier manufacturer’s standard cold fluid-applied elastomeric liquid; trowel grade, with recommended glass-fiber mesh tape.

E. Termination Bar: Formed-stainless-steel bars with upper flange to receive sealant.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of waterproofing.

1. Verify that concrete has cured and aged for minimum time period recommended in writing by waterproofing manufacturer.
2. Verify that substrate is visibly dry and within the moisture limits recommended in writing by manufacturer. Test for moisture by method recommended by manufacturer.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.

B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.

C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.

E. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D 4258.

F. Bridge and cover isolation joints, expansion joints, and discontinuous deck-to-wall and deck-to-deck joints with overlapping sheet strips of widths according to manufacturer's written instructions.

G. Corners: Prepare, prime, and treat inside and outside corners according to ASTM D 6135.

H. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing according to ASTM D 6135.

3.3 SELF-ADHERING SHEET-WATERPROOFING APPLICATION

A. Install waterproofing sheets according to waterproofing manufacturer's written instructions and recommendations in ASTM D 6135.

B. When required per manufacturer’s written instructions, apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Reprime areas exposed for more than 24 hours.

C. Apply and firmly adhere sheets over area to receive waterproofing. Accurately align sheets and maintain uniform 2-1/2-inch- minimum lap widths and end laps. Overlap and seal seams, and stagger end laps to ensure watertight installation.

1. Firmly roll field, edges, seams, and overlaps of self-adhering sheet waterproofing to substrate below to ensure full adhesion and no blistering.

D. Horizontal Application: Apply sheets from low to high points of decks to ensure that laps shed water.

E. Apply continuous sheets over already-installed sheet strips, bridging substrate cracks, construction, and contraction joints.

F. Seal edges of sheet-waterproofing terminations per manufacturer’s written instructions.

G. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending 6 inches beyond repaired areas in all directions.

H. For below grade applications, immediately install protection course with butted joints over waterproofing membrane.

1. Molded-sheet drainage panels may be used in place of a separate protection course to vertical applications when approved by waterproofing manufacturer and installed immediately.

3.4 MOLDED-SHEET DRAINAGE PANEL INSTALLATION

A. Place and secure molded-sheet drainage panels according to manufacturer's written instructions. Use adhesives or another method that does not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.

B. Molded-Sheet Collector-Panel System: Install according to manufacturer's written instructions. Connect to piped subdrainage system specified in Section 334600 "Subdrainage."

3.5 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer’s Field Service: Contractor shall engage a manufacturer’s technical representative for technical assistance and guidance for preparation and application of self-adhering waterproofing. At a minimum, arrange for manufacturer’s technical representative to observe installation of system during mock-ups, initial installation, at mid-point of the installation, and at completion. Provide additional field observation as required to obtain specified warranty and when requested by Architect or Owner. After each visit, submit manufacturer’s written report of observations within 3 business days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective action.

B. Final Inspection: Arrange for manufacturer’s technical personnel to inspect self-adhering sheet waterproofing upon completion of application.

C. If test results or inspections show self-adhering sheet waterproofing does not comply with requirements, remove and replace or repair the self-adhering sheet waterproofing system as recommended in writing by the manufacturer, and make further repairs after retesting and inspecting until system installation passes. Repair damage to self-adhering sheet waterproofing caused by testing; follow manufacturer's written instructions.

D. Prepare test and inspection reports.

3.6 PROTECTION, REPAIR, AND CLEANING

A. Protect waterproofing from damage and wear during remainder of construction period.

B. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.

C. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

END OF SECTION 071326

SECTION 071413 - HOT FLUID-APPLIED RUBBERIZED ASPHALT WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Rubberized-asphalt waterproofing membrane, reinforced [WP-2].
2. Molded-sheet drainage panels.

B. Related Requirements:

1. Section 033000 "Cast-In-Place Concrete" for coordination with concrete surface finishing and curing methods required by hot fluid-applied waterproofing manufacturer.
2. Sections 071326 "Self-Adhering Sheet Waterproofing" and 071416 "Cold Fluid-Applied Waterproofing for source limitation coordination with this Section.
3. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
4. Section 093013 "Ceramic Tiling" for waterproofing below interior ceramic tile.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Construction Manager, Architect, envelope consultant, inspection agency, hot fluid-applied waterproofing installer, hot fluid-applied waterproofing manufacturer's technical representative, and installers whose work interfaces with or affects hot fluid-applied waterproofing, including installers of adjacent construction that penetrates waterproofing system.
2. Review waterproofing requirements including, but not limited to, the following:

a. Cast-in-place concrete surface finishing and restrictions on using curing compounds.
b. Surface preparation.
c. Substrate condition and pretreatment.
d. Minimum curing period.
e. Forecasted weather conditions.
f. Special details and sheet flashings.
g. Installation procedures.
h. Testing and inspection procedures.
i. Protection and repairs.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.

B. Sustainable Design Submittals: For waterproofing and primers, product data for VOC content.

C. Shop Drawings:

1. Provide project-specific shop drawings showing locations and extent of waterproofing.
2. Include details for substrate joints and cracks, penetrations, inside and outside corners, tie-ins with adjoining waterproofing systems, and other termination conditions.

D. Samples: For drainage panels, 4 by 4 inches.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Certification in the form of a letter, on the hot waterproofing manufacturer's letterhead and signed by a technical representative of the manufacturer, confirming the following:

1. Acceptance of substrate.
2. Acceptance of any adjacent waterproofing and/or air/weather barrier system(s), that such systems and interface details are compatible, and will not void warranties.

C. Inspection Report: Copy of cold fluid-applied waterproofing manufacturer’s inspection of completed waterproofing installation.

D. Research/Evaluation Reports: For single-component polyurethane waterproofing, from ICC-ES or City of Los Angeles research report (COLA-RR).

E. Field quality-control reports.

F. Sample Warranties: For special warranties.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years’ experience regularly engaged in the production and sales of hot fluid-applied waterproofing that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance. Manufacturer shall also have a valid research/evaluation report for single-component polyurethane waterproofing system indicating compliance with the International Building Code / California Building Code.

B. Installer Qualifications: A firm with not less than 10 years’ experience installing hot fluid-applied waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Mockups: Install waterproofing to 100 sq. ft. of horizontal surface to demonstrate surface preparation, crack and joint treatment, corner treatment, thickness, texture, and execution quality.

1. Commence mockup installation in presence of manufacturer's technical representative.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by waterproofing manufacturer.

B. Remove and replace liquid materials that cannot be applied within their stated shelf life.

C. Protect stored materials from direct sunlight.

1.8 FIELD CONDITIONS

A. Weather Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate, or when temperature is below zero deg F.

1. Do not apply waterproofing in snow, rain, fog, or mist.

B. Maintain adequate ventilation during application and curing of waterproofing materials.

1.9 WARRANTY

A. Special Warranty: Manufacturer's standard or customized warranty, in which manufacturer and installer agree to repair or replace components of waterproofing system that do not comply with requirements or that fail to remain watertight within specified warranty period.

1. Warranty includes removing and reinstalling drainage panels, flashings, accessories, substrates and overburdens.
2. Warranty is based upon minimum application of waterproofing in thickness as specified below.
3. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide hot fluid-applied rubberized asphalt waterproofing by the following:

1. Tremco Incorporated; "TREMproof 6100."

B. Source Limitations: Obtain waterproofing materials and drainage panels provided under this Section and Sections 071326 "Self-Adhering Sheet Waterproofing" and 071416 "Cold Fluid-Applied Waterproofing from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Provide a complete waterproofing system that prevents the passage of water, including all applicable sealants, transitions, joints, termination assemblies, and accessories whether indicated or not.

B. Waterproofing components shall have a maximum VOC content of 250 g/L.

2.3 WATERPROOFING MEMBRANE

A. Hot Fluid-Applied, Rubberized-Asphalt Waterproofing Membrane: Single component; 100 percent solids; hot fluid-applied, rubberized asphalt.

1. Thickness: As required to attain specified warranty, but no less than the following:

a. Applied in two lifts of 90-125 mils each, with reinforcing fabric applied after the first lift, for a total overall nominal thickness of 215 mils.

2. Water Vapor Permeance: 1.7 ng.Pa*s*m^2 maximum; ASTM C836; ASTM E 96 Dry Cup.
3. Toughness: 14.9 J at 77 deg F; CAN/CGSB 37.50-M89; Section 4.4.
4. Adhesion Rating: Pass; CAN/CGSB 37.50-M89; Section 4.6.
5. Water Absorption: 0.007 oz; CAN/CGSB 37.50-M89; Section 4.8.
6. Pinholing: 0; CAN/CGSB 37.50-M89; Section 4.9.
7. Low Temperature Flexibility: Pass; CAN/CGSB 37.50-M89; Section 4.10.
8. Low Temperature Crack Bridging: Pass; CAN/CGSB 37.50-M89; Section 4.11.

2.4 MOLDED-SHEET DRAINAGE PANELS

A. Drainage/Protection Board: A two-part prefabricated drainage material and protection board consisting of a formed polystyrene core covered on one side with a woven polypropylene filter fabric. The fabric allows water to pass into the drainage core while restricting the movement of soil particles. The plastic core provides compressive strength and allows high capacity flow. Where indicated, coordinate with Division 22 Section(s) for connection of drainage board to plumbing drain.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Horizontal Surfaces: Tremco International; TREMDrain 2000.

2.5 AUXILIARY MATERIALS

A. General: Auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with waterproofing.

B. Primer: ASTM D 41, asphaltic primer.

C. Elastomeric Sheet: 50-mil-minimum, uncured sheet neoprene with manufacturer's recommended contact adhesives as follows:

1. Tensile Strength: 1400 psi minimum; ASTM D 412, Die C.
2. Elongation: 300 percent minimum; ASTM D 412.
3. Tear Resistance: 125 psi minimum; ASTM D 624, Die C.
4. Brittleness: Does not break at minus 30 deg F; ASTM D 2137.

D. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel termination bars; approximately 1 by 1/8 inch thick; with stainless-steel anchors.

E. Sealants and Accessories: Manufacturer's recommended sealants and accessories.

F. Reinforcing Fabric: Manufacturer's recommended, spun-bonded polyester fabric.

G. Other Accessories: Provide other materials, not specifically described, but required for a complete and proper installation, as selected by the Contractor and approve by the membrane system manufacturer as compatible, subject to review of the Architect.

H. Membrane Leak-Detection System: Conductor cable, placed on top of membrane, delivering direct current tension to membrane surface, enabling inspection and isolation of points of moisture infiltration through membrane to conductive substrate under membrane.

1. Measurement Grid: Highly conductive stainless steel wire measurement grid located under membrane and above non-conductive membrane substrate, connected through contact plate and cable to connection box accepting low-voltage charge from portable pulse generator. Include conductor cable, measurement grid, connection box, and accessories for a complete membrane leak-detection system.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. Verify that concrete has cured and aged for minimum time period recommended by waterproofing manufacturer.

2. Verify that substrate is visibly dry and free of moisture.

   a. Moisture Testing: Test for moisture using the methods indicated below or as recommended by hot fluid-applied waterproofing manufacturer.

      1) Anhydrous Calcium Chloride Test: ASTM F 1869.
      2) Internal Relative Humidity Test: Using in situ probes, ASTM F 2170.

   b. Where moisture levels exceed manufacturer's written limitations, implement remedial action(s) recommended by hot fluid-applied waterproofing manufacturer.

3. Engage hot fluid-applied waterproofing manufacturer’s technical representative to inspect substrate conditions prior to application of waterproofing membrane. Obtain manufacturer’s written acceptance of substrate conditions and submit to Architect.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean and prepare substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for waterproofing application.

B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.

C. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.

D. Remove foreign material to provide a sound surface free of all dirt, dust, oil, grease, wax, tar, asphalt, mildew, mold, paint sealers, coatings, curing agents, loose particles, laitance, glaze, efflorescence, concrete hardeners, form-release agents, or any other deleterious material which may interfere with the adhesion of the membrane. Remove remaining loose material and clean surfaces according to ASTM D 4258.

E. Remove fins, ridges, and other projections, and fill honeycomb, aggregate pockets, and other voids.

3.3 JOINTS, CRACKS, AND TERMINATIONS

A. Prepare and treat substrates to receive waterproofing membrane, including joints and cracks, deck drains, corners, and penetrations according to manufacturer's written instructions.

1. Rout and fill joints and cracks in substrate. Before filling, remove dust and dirt according to ASTM D 4258.
2. Adhere strip of elastomeric sheet to substrate in a layer of hot rubberized asphalt. Extend elastomeric sheet a minimum of 6 inches on each side of moving joints and cracks or joints and cracks exceeding 1/8 inch thick, and beyond deck drains and penetrations. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric sheet.
3. Embed strip of reinforcing fabric into a layer of hot rubberized asphalt. Extend reinforcing fabric a minimum of 6 inches on each side of nonmoving joints and cracks not exceeding 1/8 inch thick, and beyond roof drains and penetrations.

   a. Apply second layer of hot fluid-applied, rubberized asphalt over reinforcing fabric.

B. At expansion joints and discontinuous deck-to-wall or deck-to-deck joints, bridge joints with elastomeric sheet extended a minimum of 6 inches on each side of joints and adhere to substrates in a layer of hot rubberized asphalt. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric sheet.

3.4 ELECTRONIC LEAK DETECTION GRID INSTALLATION

A. Measurement Grid: Install measurement on membrane substrate immediately under membrane and immediately prior to installation of membrane.

1. Verify that location of measurement grid fasteners does not interfere with or cause damage to membrane.
2. Fasten measurement grid in accordance with leak detection system manufacturer's requirements.
3. Do not place measurement grid where it will be in continuous direct contact with structural components.
4. Provide minimum 2 inch overlap where adjacent sheets meet, including side laps and end laps.
5. Cut measurement grid as close as possible to the perpendicular strand at both end and side edges

B. Conductor Wire: Install conductor wire on top of membrane at spacing and layout indicated on approved shop drawings.

C. Secure conductor wire using method recommended by manufacturer.

3.5 FLASHING INSTALLATION

A. Install elastomeric sheets at terminations of waterproofing membrane according to manufacturer's written instructions.

B. Prime substrate with asphalt primer.

C. Install elastomeric sheet and adhere to deck and wall substrates in a layer of hot rubberized asphalt.

D. Extend elastomeric sheet up walls or parapets a minimum of 8 inches above deck and 6 inches onto deck to be waterproofed.

E. Install termination bars and mechanically fasten to top of elastomeric flashing sheet at terminations and perimeter of waterproofing.

3.6 MEMBRANE APPLICATION

A. Apply primer, at manufacturer's recommended rate, over prepared substrate and allow it to dry.

B. Heat and apply rubberized asphalt according to manufacturer's written instructions.

1. Heat rubberized asphalt in an oil- or air-jacketed melter with mechanical agitator specifically designed for heating rubberized asphalt.

C. Start application with manufacturer's authorized representative present.

D. Reinforced Membrane: Apply hot rubberized asphalt to substrates and adjoining surfaces indicated. Spread to a thickness of 90 to 125 mils; embed reinforcing fabric, overlapping sheets 2 inches; spread another 90 to 125-mil-thick layer to provide a uniform, reinforced, seamless membrane 215 mils thick.

E. Apply waterproofing over prepared joints and up wall terminations and vertical surfaces to heights indicated or required by manufacturer.

F. Cure waterproofing, taking care to prevent contamination and damage during application and curing.

G. Cover waterproofing with protection course with overlapped joints before membrane is subject to construction traffic.

3.7 MOLDED-SHEET DRAINAGE PANEL INSTALLATION

A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate according to manufacturer's written instructions. Use methods that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.

3.8 FIELD QUALITY CONTROL (BY OWNER)

A. Testing Agency: Owner will engage a qualified testing agency to perform testing and inspections and to prepare test reports.

1. Electronic Leak-Detection Testing: Testing agency shall test each deck area for leaks using electronic leak detection method that locates discontinuities in the membrane.

a. Testing agency shall perform tests on abutting or overlapping smaller areas as necessary to cover entire test area.
b. Testing agency shall create a conductive electronic field over the area of membrane to be tested and electronically determine locations of discontinuities or leaks, if any, in the roofing membrane.
c. Testing agency shall provide survey report indicating locations of discontinuities, if any.

B. If test results or inspections show waterproofing does not comply with requirements, remove and replace or repair the waterproofing as recommended in writing by manufacturer, and make further repairs after retesting and inspecting until waterproofing installation passes.

3.9 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer's Field Service: Contractor shall engage a manufacturer’s technical representative for technical assistance and guidance for preparation and application of cold fluid-applied waterproofing. At a minimum, arrange for manufacturer’s technical representative to observe installation of hot fluid-applied waterproofing system during mock-up, first 100 square feet of initial installation, at mid-point of the installation, and at completion. Provide additional field observation as required to obtain warranty specified and when requested by Architect or Owner. After each field visit, submit manufacturer’s written report of observations within 3 working days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective action.

1. Site representative shall measure membrane thickness with pin tester or other suitable device at least once for every 100 sq. ft. and include measurements in reports.

B. Final Waterproofing Inspection: Arrange for cold fluid-applied waterproofing manufacturer’s technical personnel to inspect waterproofing installation upon completion of application, and for those areas that remain visible to view, again at time of project’s overall Substantial Completion.

C. If test results or inspections show waterproofing does not comply with requirements, remove and replace or repair the waterproofing as recommended in writing by manufacturer, and make further repairs after retesting and inspecting until waterproofing installation passes.

D. Prepare test and inspection reports.

3.10 CLEANING AND PROTECTION

A. Do not permit construction traffic or backfill on unprotected membrane.

B. Protect waterproofing from damage and wear during remainder of construction period.

C. Protect installed board insulation and drainage panels from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

D. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.

E. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 071413

SECTION 071416 - COLD FLUID-APPLIED WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Single-component modified polyurethane waterproofing [WP-3].
2. Composite liquid polyurethane U.V.-stable waterproofing, custom colored [WP-4].
3. Molded-sheet drainage/protection panels.

B. Related Requirements:

1. Section 033000 "Cast-In-Place Concrete" for coordination with concrete surface finishing and curing methods required by cold fluid-applied waterproofing manufacturer.
2. Sections 071326 "Self-Adhering Sheet Waterproofing" and 071413 "Hot Fluid-Applied Rubberized Asphalt Waterproofing" for source limitations coordinated with this Section.
3. Section 079200 “Joint Sealants” for joint-sealants if not provided as part of this Section.
4. Section 093013 "Ceramic Tiling" for waterproofing below interior ceramic tile.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Construction Manager, Architect, envelope consultant, inspection agency, cp;d fluid-applied waterproofing installer, cold fluid-applied waterproofing manufacturer's technical representative, and installers whose work interfaces with or affects cold fluid-applied waterproofing, including installers of adjacent construction that penetrates waterproofing system.
2. Review waterproofing requirements including, but not limited to, the following:

a. Cast--in-place concrete surface finishing and restrictions on using curing compounds.
b. Surface preparation.
c. Substrate condition and pretreatment.
d. Minimum curing period.
e. Forecasted weather conditions.
f. Special details and sheet flashings.
g. Installation procedures.
h. Testing and inspection procedures.
i. Protection and repairs.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.

B. Sustainable Design Submittals: For waterproofing and primers, product data for VOC content.

C. Shop Drawings:

1. Show locations and extent of waterproofing.
2. Include details for substrate joints and cracks, penetrations, inside and outside corners, tie-ins with adjoining waterproofing systems, and other termination conditions.

D. Samples: For each exposed product and for each color and texture specified, including the following products:

1. Color samples for exposed waterproofing, on rigid backing, 8 inches square.
2. Drainage panels, 4 by 4 inches.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Substrate Acceptance: Letter signed and executed by manufacturer's technical representative indicating manufacturer's acceptance of substrate prior to application of cold fluid-applied waterproofing.

C. Inspection Report: Copy of cold fluid-applied waterproofing manufacturer's inspection of completed waterproofing installation.

D. Research/Evaluation Reports: For single-component polyurethane waterproofing, from ICC-ES or City of Los Angeles research report (COLA-RR).

E. Field quality-control reports.

F. Sample Warranties: For special warranties.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of cold fluid-applied waterproofing that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance. Manufacturer shall also have a valid research/evaluation report for single-component polyurethane waterproofing system indicating compliance with the International Building Code / California Building Code.

B. Installer Qualifications: A firm with not less than 10 years' experience installing cold fluid-applied waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Mockups: Build mockups to verify selections made under Sample submittals and to set quality standards for installation.

1. Build mockup for each typical waterproofing installation including accessories to demonstrate surface preparation, crack and joint treatments, inside and outside corner treatments, color, and protection.

    a. Commence mockup installation in presence of manufacturer's technical representative.
    b. Description: First 100 square feet of installation.
    c. Bond Test: Determine the compatibility of the cold fluid-applied waterproofing to the concrete by a bond test in accordance with the cold fluid-applied waterproofing manufacturer's recommendations. Submit copy of test reports to Owner and Architect.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by waterproofing manufacturer.

B. Remove and replace liquid materials that cannot be applied within their stated shelf life.

C. Protect stored materials from direct sunlight.

1.8 FIELD CONDITIONS

A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer.

1. Do not apply waterproofing to a damp or wet substrate, when relative humidity exceeds 85 percent, or when temperatures are less than 5 deg F above dew point.
2. Do not apply waterproofing in snow, rain, fog or mist, or when such weather conditions are imminent during application and curing period.

B. Maintain adequate ventilation during application and curing of waterproofing materials.

1.9 WARRANTY

A. Special Warranty: Manufacturer's standard or customized warranty, in which manufacturer and installer agree to repair or replace components of waterproofing system that do not comply with requirements or that fail to remain watertight within specified warranty period.

1. Warranty includes removing and reinstalling drainage panels, flashings, accessories, substrates and overburdens.
2. Warranty is based upon minimum application of waterproofing in thickness as specified below.
3. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide cold fluid-applied waterproofing products by the following:

1. Tremco Incorporated. See below for specific products.

B. Source Limitations: Obtain waterproofing materials and drainage panels provided under this Section and Sections 071326 "Self-Adhering Sheet Waterproofing" and 071413 "Hot Fluid-Applied Rubberized Asphalt Waterproofing from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Provide a complete waterproofing system that prevents the passage of water, including all applicable sealants, transitions, joints, termination assemblies, and accessories whether indicated or not.

B. Single-component, reinforced, modified polyurethane waterproofing system shall be compatible with composite liquid polyurethane U.V.-stable waterproofing, so as to allow the U.V.-stable waterproofing system to flash with the primary waterproofing system as part of an overall system warranty.

C. Waterproofing components shall have a maximum VOC content of 250 g/L.

2.3 SINGLE-COMPONENT POLYURETHANE WATERPROOFING [WP-3]

A. Single-Component, Modified Polyurethane Waterproofing: ASTM C 836.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Tremco Incorporated; TREMproof 250GC.

2. Thickness: As required to attain specified warranty, and no less than 120 wet mils.
3. Solids Content: Minimum 80 percent in accordance with ASTM C 1250.
4. Substrate Conditions: Suitable for application over green concrete.
5. Compatible with composite liquid polyurethane U.V.-stable waterproofing as transition flashing.

2.4 COMPOSITE LIQUID POLYURETHANE U.V.-STABLE WATERPROOFING [WP-4]

A. Composite Liquid Polyurethane U.V.-Stable Waterproofing: Comply with ASTM C 957 and manufacturer's written requirements.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Tremco Incorporated; Vulkem 350NF base coat and 951NF intermediate and top coats.

2. Base Coat Thickness: As recommended in writing by manufacturer for substrate and service conditions indicated, and as required to attain warranty duration indicated, but no less than 40 mils.
3. Intermediate Coat Thickness: As recommended in writing by manufacturer for substrate and service conditions indicated, and as required to attain warranty duration indicated, but no less than 12 mils.
4. Top Coat Thickness: As recommended in writing by manufacturer for substrate and service conditions indicated, and as required to attain warranty duration indicated, but no less than 12 mils.
5. Solids Content: Minimum 90 percent in accordance with ASTM C 792.
6. Compatible as flashing for single-component, reinforced, modified polyurethane waterproofing.
7. Custom Color: Match Architect's sample.

2.5 MOLDED-SHEET DRAINAGE PANELS

A. Drainage/Protection Board: A two-part prefabricated drainage material and protection board consisting of a formed polystyrene core covered on one side with a woven polypropylene filter fabric. The fabric allows water to pass into the drainage core while restricting the movement of soil particles. The plastic core provides compressive strength and allows high capacity flow. Where indicated, coordinate with Division 22 Section(s) for connection of drainage board to plumbing drain.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Vertical Surfaces: Tremco International; TREMDrain 1000.
b. Horizontal Surfaces: Tremco International; TREMDrain 2000.
c. Water Collection: Tremco International; TREMDrain Total Drain.

2.6 AUXILIARY MATERIALS

A. General: Provide auxiliary materials recommended in writing by waterproofing manufacturer for intended use and compatible with one another and with waterproofing.

B. Primer: Manufacturer's standard factory-formulated polyurethane or epoxy primer.

C. Joint Reinforcing Strip: Manufacturer's recommended fiberglass mesh or polyester fabric.

D. Joint Sealant: As specified in Section 079200 "Joint Sealants" and as recommended by manufacturer for substrate and joint conditions.

1. Backer Rod: Open-cell polyethylene foam.

E. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

F. Other Accessories: Provide other materials, not specifically described, but required for a complete and proper installation, as selected by the Contractor and approve by the membrane system manufacturer as compatible, subject to review of the Architect.

G. Membrane Leak-Detection System: Conductor cable, placed on top of membrane, delivering direct current tension to membrane surface, enabling inspection and isolation of points of moisture infiltration through membrane to conductive substrate under membrane.

1. Measurement Grid: Highly conductive stainless steel wire measurement grid located under membrane and above non-conductive membrane substrate, connected through contact plate and cable to connection box accepting low-voltage charge from portable pulse generator. Include conductor cable, measurement grid, connection box, and accessories for a complete membrane leak-detection system.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

1. Verify that concrete has cured and aged for minimum time period recommended in writing by waterproofing manufacturer.
2. Verify that substrate is visibly dry and free of moisture.

a. Moisture Testing: Test for moisture using the methods indicated below or as recommended by cold fluid-applied waterproofing manufacturer.

1) Anhydrous Calcium Chloride Test: ASTM F 1869.
2) Internal Relative Humidity Test: Using in situ probes, ASTM F 2170.

b. Where moisture levels exceed manufacturer's written limitations, implement remedial action(s) recommended by cold fluid-applied waterproofing manufacturer.

3. Engage cold fluid-applied waterproofing manufacturer’s technical representative to inspect substrate conditions prior to application of waterproofing membrane. Obtain manufacturer’s written acceptance of substrate conditions and submit to Architect.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.

B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.

C. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.

D. Remove foreign material to provide a sound surface free of all dirt, dust, oil, grease, wax, tar, asphalt, mildew, mold, paint sealers, coatings, curing agents, loose particles, laitance, glaze, efflorescence, concrete hardeners, form-release agents, or any other deleterious material which may interfere with the adhesion of the membrane. Remove remaining loose material and clean surfaces according to ASTM D 4258.

E. Remove fins, ridges, and other projections, and fill honeycomb, aggregate pockets, holes, and other voids.

3.3 PREPARATION AT TERMINATIONS, PENETRATIONS, AND CORNERS

A. Prepare surfaces at terminations and penetrations through waterproofing and at expansion joints, sleeves, and corners according to waterproofing manufacturer's written instructions and to recommendations in ASTM C 898 and ASTM C 1471.

B. Prime substrate, unless otherwise instructed by waterproofing manufacturer.

C. Apply waterproofing in two separate applications, and embed a joint reinforcing strip in the first preparation coat when recommended by waterproofing manufacturer.

1. Provide sealant cants around penetrations and at inside corners of deck-to-wall butt joints when recommended by waterproofing manufacturer.

3.4 JOINT AND CRACK TREATMENT

A. Prepare, treat, rout, and fill joints and cracks in substrate according to waterproofing manufacturer's written instructions and to recommendations in ASTM C 898 and ASTM C 1471. Before coating surfaces, remove dust and dirt from joints and cracks according to ASTM D 4258.

1. Comply with ASTM C 1193 for joint-sealant installation.
2. Apply bond breaker on sealant surface, beneath preparation strip.
3. Prime substrate along each side of joint and apply a single thickness of preparation strip at least 6 inches wide along each side of joint. Apply waterproofing in two separate applications and embed a joint reinforcing strip in the first preparation coat.

3.5 ELECTRONIC LEAK DETECTION GRID INSTALLATION

A. Measurement Grid: Install measurement on membrane substrate immediately under membrane and immediately prior to installation of membrane.

1. Verify that location of measurement grid fasteners does not interfere with or cause damage to membrane.
2. Fasten measurement grid in accordance with leak detection system manufacturer's requirements.
3. Do not place measurement grid where it will be in continuous direct contact with structural components.
4. Provide minimum 2 inch overlap where adjacent sheets meet, including side laps and end laps.
5. Cut measurement grid as close as possible to the perpendicular strand at both end and side edges

B. Conductor Wire: Install conductor wire on top of membrane at spacing and layout indicated on approved shop drawings.

C. Secure conductor wire using method recommended by manufacturer.

3.6 WATERPROOFING APPLICATION

A. Apply waterproofing according to manufacturer's written instructions and to recommendations in ASTM C 898 and ASTM C 1471.

B. Start installing waterproofing in presence of manufacturer's technical representative.

C. Apply primer over prepared substrate unless otherwise instructed in writing by waterproofing manufacturer.

D. Unreinforced Waterproofing Applications: Mix materials and apply waterproofing by spray, roller, notched squeegee, trowel, or other application method suitable to slope of substrate.

1. Apply first coat of waterproofing and cure per manufacturer’s written instructions. Apply second coat of waterproofing to obtain a seamless membrane free of entrapped gases. Provide in thickness specified in “Single Component Polyurethane Waterproofing” Article above.
2. Apply waterproofing to prepared wall terminations and vertical surfaces.
3. Verify manufacturer's recommended wet film thickness of waterproofing every 100 sq. ft..

E. Cure waterproofing, taking care to prevent contamination and damage during application and curing.

3.7 MOLDED-SHEET DRAINAGE PANEL INSTALLATION

A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, according to manufacturer's written instructions. Use adhesive or another method that does not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.

B. Molded-Sheet Collector-Panel System: Install according to manufacturer's written instructions.

3.8 FIELD QUALITY CONTROL (BY OWNER)

A. Testing Agency: Owner will engage a qualified testing agency to perform testing and inspections and to prepare test reports.

1. Electronic Leak-Detection Testing: Testing agency shall test each deck area for leaks using electronic leak detection method that locates discontinuities in the membrane.

a. Testing agency shall perform tests on abutting or overlapping smaller areas as necessary to cover entire test area.
b. Testing agency shall create a conductive electronic field over the area of membrane to be tested and electronically determine locations of discontinuities or leaks, if any, in the roofing membrane.
c. Testing agency shall provide survey report indicating locations of discontinuities, if any.

B. If test results or inspections show waterproofing does not comply with requirements, remove and replace or repair the waterproofing as recommended in writing by manufacturer, and make further repairs after retesting and inspecting until waterproofing installation passes.

3.9 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer's Field Service: Contractor shall engage a manufacturer’s technical representative for technical assistance and guidance for preparation and application of cold fluid-applied waterproofing. At a minimum, arrange for manufacturer’s technical representative to observe installation of cold fluid-applied waterproofing system during mock-up (first 100 square feet of initial installation), at mid-point of the installation, and at completion. Provide additional field observation as required to obtain warranty specified and when requested by Architect or Owner. After each field visit, submit manufacturer’s written report of observations within 3 working days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective action.

B. Final Waterproofing Inspection: Arrange for cold fluid-applied waterproofing manufacturer’s technical personnel to inspect waterproofing installation upon completion of application, and for those areas that remain visible to view, again at time of project’s overall Substantial Completion.

C. If test results or inspections show waterproofing does not comply with requirements, remove and replace or repair the waterproofing as recommended in writing by manufacturer, and make further repairs after retesting and inspecting until waterproofing installation passes.

D. Prepare test and inspection reports.

3.10 CLEANING AND PROTECTION

A. Do not permit traffic or backfill on unprotected membrane.

B. Protect waterproofing from damage and wear during remainder of construction period.

C. Protect installed drainage panels from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

D. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.

E. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

END OF SECTION 071416

SECTION 071616 - CRYSTALLINE WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes crystalline waterproofing system [WP-5].

1. Crystalline admixture (batch mix) and crystalline cementitious slurry coats for the following concrete surfaces:

a. At elevator pits, including walls, slab, and sump pits.
b. Where indicated.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for admixture for integral crystalline waterproofing and the finishing of concrete walls and slabs to receive waterproofing.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, and installation instructions.

B. Sustainable Design Submittals: For fluid-applied products, product data for VOC content.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and applicator.

B. Product Certificates: For each type of waterproofing, patching, and plugging material.

C. Product Test Reports: For each product formulation, for tests performed by manufacturer and witnessed by a qualified testing agency.

D. Batch tickets from concrete plant, confirming inclusion of crystalline waterproofing admixture into concrete mix.

E. Field quality-control reports.

F. Warranty: Sample of special warranty.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of crystalline waterproofing that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Applicator Qualifications: A firm with not less than 10 years' experience installing crystalline waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1.7 FIELD CONDITIONS

A. Weather Limitations: Proceed with application only when existing and forecasted weather conditions permit crystalline waterproofing to be performed according to manufacturer's written instructions.

B. Proceed with waterproofing work only after pipe sleeves, vents, curbs, inserts, drains, and other projections through the substrate to be waterproofed have been completed. Proceed only after substrate defects, including honeycombs, voids, and cracks, have been repaired to provide a sound substrate free of forming materials, including reveal inserts.

C. Ambient Conditions: Proceed with waterproofing work only if temperature is maintained at 40 deg F or above during work and cure period, and space is well ventilated and kept free of water.

1.8 WARRANTY

A. Special Warranty: Manufacturer's standard or customized warranty, in which manufacturer and installer agree to repair or replace components of crystalline waterproofing that fail in materials or workmanship within specified warranty period.

1. Failures, include, but are not limited to, the following:

a. Failure to maintain watertight conditions within specified warranty period.

2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide crystalline waterproofing products by the following:

1. Xypex Chemical Corporation. See below for specific products.

B. Source Limitations: Provide crystalline waterproofing products from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Provide a complete waterproofing system that prevents the passage of water in elevator pits and where indicated.

B. Waterproofing components shall have a maximum VOC content of 250 g/L.

2.3 CRYSTALLINE WATERPROOFING SYSTEM [WP-5]

A. Crystalline Waterproofing Admixture: Proprietary crystalline waterproofing admixture, when included in the concrete mix at the time of batching, reacts chemically with the byproducts of cement hydration in the presence of water to develop crystalline growth within substrate capillaries to produce an impervious, dense, waterproof substrate; that has VOC content complying with limits of authorities having jurisdiction; with properties meeting or exceeding the criteria specified below.

1. Basis-of-Design Products: Subject to compliance with requirements, provide the following:

a. Xypex Chemical Corporation; Xypex Admix.
b. Or Comparable Equal.

2. Water Permeability: Maximum zero for water at 30 feet when tested according to CE CRD-C 48.
3. Compressive Strength: Refer to minimum compressive strength requirements on Structural Drawings when tested according to ASTM C 109.

B. Crystaline Waterproofing Slurry Coat: Factory-premixed cementitious slurry coat applied to above-grade or below-grade concrete. Also mixed in dry-pac form for sealing strips at construction joints, or for the repair of cracks, construction joints, or for the repair of cracks; compatible with substrate and other materials indicated; and VOC content complying with limits of authorities having jurisdiction.

1. Basis-of-Design Product:

a. Xypex Chemical Corporation; Xypex Concentrate.
b. Or Comparable Equal.

2.4 ACCESSORY MATERIALS

A. Portland Cement: ASTM C 150, Type I.

B. Sand: ASTM C 144.

C. Water: Potable.

2.5 MIXES

A. Crystalline Waterproofing: Add prepackaged dry ingredients to water according to manufacturer's written instructions. Mix together with mechanical mixer or by hand to required consistency.

B. Crystalline Waterproofing Slurry Coat: Measure, batch, and mix Portland cement and sand according to manufacturer’s written instructions. Blend together with mechanical mixer to required consistency.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Applicator present, for suitable conditions where waterproofing is to be applied.

B. Proceed with application only after unsatisfactory conditions have been corrected.

C. Notify Architect in writing of active leaks or defects that would affect system performance.

3.2 PREPARATION

A. Comply with manufacturer's written instructions.

B. Protect other work from damage caused by cleaning, preparation, and application of waterproofing. Provide temporary enclosure to confine spraying operation and to ensure adequate ambient temperatures and ventilation conditions for application.

C. Do not allow waterproofing, patching, and plugging materials to enter reveals or annular spaces intended for resilient sealants or gaskets, such as joint spaces between pipes and pipe sleeves.

D. Stop active water leaks with plugging compound.

E. Repair damaged or unsatisfactory substrate with patching compound.

1. At holes and cracks 1/16 inch wide or larger in substrate, remove loosened chips and cut reveal with sides perpendicular to surface, not tapered, and minimum 1 inch deep. Fill reveal with patching compound flush with surface.

F. Surface Preparation: Remove efflorescence, chalk, dust, dirt, mortar spatter, grease, oils, paint, curing compounds, and form-release agents to ensure that waterproofing bonds to surfaces.

1. Clean concrete surfaces according to ASTM D 4258.

a. Scratch- and Float-Finished Concrete: Etch with 10 percent muriatic acid solution according to ASTM D 4260.
b. Smooth-Formed and Trowel-Finished Concrete: Prepare by mechanical abrading or abrasive-blast cleaning according to ASTM D 4259.

2. Concrete Joints: Clean reveals.

3.3 APPLICATION

A. General: Comply with waterproofing manufacturer's written instructions for application and curing.

B. Admixture Application: Include crystalline waterproofing admixture to the concrete mix at the time of batching. Thoroughly blend admixture throughout the concrete mix. Comply with manufacturer’s written instructions.

1. Include in all cast-in-place concrete forming elevator hoistway (walls, slabs, sump pit, etc.) and where indicated.

C. Slurry Coat Application: Apply crystalline waterproofing to joint surfaces between concrete pours. Moisten surfaces prior to slurry application. Where joint surfaces are not accessible prior to pouring new concrete, consult manufacturer for application procedure.

1. Include on hoistway side of all cast-in-place concrete forming elevator hoistway (walls, slabs, sump pit, etc.) and where indicated.

D. Curing: Moist-cure waterproofing for three days immediately after final coat has set, followed by air drying, unless otherwise recommended in writing by manufacturer.

E. Waterproofing Treatment Extensions: Extend waterproofing treatment as follows:

1. Onto every substrate in areas indicated for treatment, including pipe trenches, pipe chases, pits sumps, and similar offsets and features.

3.4 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed application of waterproofing.

B. Prepare test and inspection reports.

END OF SECTION 071616

SECTION 071900 - WATER REPELLENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes penetrating water-repellent treatments for the following exposed vertical and horizontal surfaces:

1. Concrete unit masonry.

B. Related Requirements:

1. Section 042200 "Concrete Unit Masonry" for concrete unit masonry assemblies to receive water repellents.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include manufacturer's printed statement of VOC content.
2. Include manufacturer's recommended number of coats for each type of substrate and spreading rate for each separate coat.

B. Samples: For each type of water repellent and substrate indicated, 12 by 12 inches in size, with specified water-repellent treatment applied to half of each Sample.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and applicator.

B. Product Certificates: For each type of water repellent.

C. Preconstruction Test Reports: For water-repellent-treated substrates.

D. Field quality-control reports.

E. Sample Warranty: For special warranty.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of water repellents that have been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Applicator Qualifications: A firm with not less than 5 years' experience applying water repellents similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Mockups: Prepare mockups of each required water repellent on each type of substrate required to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Coordinate application of water repellent mockup with sample panels specified in Section 042200 "Concrete Unit Masonry."
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.7 FIELD CONDITIONS

A. Limitations: Proceed with application only when the following existing and forecasted weather and substrate conditions permit water repellents to be applied according to manufacturers' written instructions and warranty requirements:

1. Concrete surfaces and mortar have cured for not less than 28 days.
2. Building has been closed in for not less than 30 days before treating wall assemblies.
3. Ambient temperature is above 40 deg F and below 100 deg F and will remain so for 24 hours.
4. Substrate surface temperature is above 40 deg F and below 100 deg F.
5. Rain is not predicted within 24 hours.
6. Not less than seven days have passed since surfaces were last wet.
7. Windy conditions do not exist that might cause water repellent to be blown onto vegetation or surfaces not intended to be treated.

1.8 WARRANTY

A. Special Warranty: Manufacturer's standard or customized warranty in which manufacturer and installer agree to repair or replace materials that fail to maintain water repellency specified in "Performance Requirements" Article within specified warranty period.

1. Warranty Period: Ten years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Performance: Water repellents shall meet the following performance requirements as determined by testing on manufacturer's standard substrates representing those indicated for this Project.

B. Water Absorption: Minimum 89 percent reduction of water absorption after 24 hours for treated compared to untreated specimens when tested according to ASTM C 97.

C. Water-Vapor Transmission: Maximum 10 percent reduction water-vapor transmission of treated compared to untreated specimens, according to ASTM E 96.

D. Surface Deterioration / Discoloration: None.

E. Surface Appearance After Application: No change; no staining.

2.2 PENETRATING WATER REPELLENTS

A. Siloxane Penetrating Water Repellent: Clear, non-staining, breathable, water-based siloxane water repellent for CMU substrates; with a maximum VOC content of 100 g/L.

1. Basis-of-Design Product: Subject to compliance with requirements, and approval of mock-up, provide the following:

a. PROSOCO, Inc.; Siloxane WB Concentrate.
b. Or comparable equal.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements and conditions affecting performance of the Work.

1. Verify that surfaces are clean and dry according to water-repellent manufacturer's requirements. Check moisture content in three representative locations by method recommended by manufacturer.
2. Inspect for previously applied treatments that may inhibit penetration or performance of water repellents.
3. Verify that there is no efflorescence or other removable residues that would be trapped beneath the application of water repellent.
4. Verify that required repairs are complete, cured, and dry before applying water repellent.

B. Test pH level according to water-repellent manufacturer's written instructions to ensure chemical bond to silica-containing or siliceous minerals.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. New Construction and Repairs: Allow concrete and other cementitious materials to age before application of water repellent, according to repellent manufacturer's written instructions.

B. Cleaning: Before application of water repellent, clean substrate of substances that could impair penetration or performance of product according to water-repellent manufacturer's written instructions and as follows:

1. Cast-in-Place Concrete and Concrete Unit Masonry: Remove oil, curing compounds, laitance, and other substances that inhibit penetration or performance of water repellents according to ASTM E 1857.

C. Protect adjoining work, including mortar and sealant bond surfaces, from spillage or blow-over of water repellent. Cover adjoining and nearby surfaces of aluminum and glass if there is the possibility of water repellent being deposited on surfaces. Cover live vegetation.

D. Coordination with Mortar Joints: Do not apply water repellent until pointing mortar for joints adjacent to surfaces receiving water-repellent treatment has been installed and cured.

E. Coordination with Sealant Joints: Do not apply water repellent until sealants for joints adjacent to surfaces receiving water-repellent treatment have been installed and cured.

1. Water-repellent work may precede sealant application only if sealant adhesion and compatibility have been tested and verified using substrate, water repellent, and sealant materials identical to those required.

3.3 APPLICATION

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect the substrate before application of water repellent and to instruct Applicator on the product and application method to be used.

B. Apply a heavy-saturation coating of water repellent, on surfaces indicated for treatment, to the point of saturation. Apply coating in dual passes of uniform, overlapping strokes. Remove excess material; do not allow material to puddle beyond saturation. Comply with manufacturer's written instructions for application procedure unless otherwise indicated.

C. Apply a second saturation coating, repeating first application. Comply with manufacturer's written instructions for limitations on drying time between coats and after rainstorm wetting of surfaces between coats. Consult manufacturer's technical representative if written instructions are not applicable to Project conditions.

3.4 FIELD QUALITY CONTROL

A. Testing of Water-Repellent Material: Owner reserves the right to invoke the following procedure at any time and as often as Owner deems necessary during the period when water repellent is being applied:

1. Owner will engage the services of a qualified testing agency to sample water-repellent material being used. Samples of material delivered to Project site will be taken, identified, sealed, and certified in presence of Contractor.
2. Testing agency will perform tests for compliance of water-repellent material with product requirements.
3. Owner may direct Contractor to stop applying water repellents if test results show material being used does not comply with product requirements. Contractor shall remove noncomplying material from Project site, pay for testing, and correct deficiency of surfaces treated with rejected materials, as approved by Architect.

B. Coverage Test: In the presence of Architect, hose down a dry, repellent-treated surface to verify complete and uniform product application. A change in surface color will indicate incomplete application.

1. Notify Architect seven days in advance of the dates and times when surfaces will be tested.
2. Reapply water repellent until coverage test indicates complete coverage.

3.5 CLEANING

A. Immediately clean water repellent from adjoining surfaces and surfaces soiled or damaged by water-repellent application as work progresses. Correct damage to work of other trades caused by water-repellent application, as approved by Architect.

B. Comply with manufacturer's written cleaning instructions.

END OF SECTION 071900

SECTION 072100 - THERMAL INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Perimeter fire containment insulation system.
2. Extruded polystyrene foam-plastic board insulation [I-1]:

    a. At exterior plaza decks over conditioned spaces only, excluding roofs and vegetated roofs.

3. Mineral-wool board insulation [I-2]:

    a. Continuous insulation in exterior walls.

4. Glass-fiber blanket insulation, noncombustible only [I-3]:

    a. Between studs / joists in exterior walls / floors / soffits.

5. This section does not include insulation for:

    a. Roofing insulation.
    b. Vegetated roof (green roof) systems.
    c. Sound attenuation blankets for interior partitions.

B. Related Requirements:

1. Section 075419 "Polyvinyl-Chloride (PVC) Roofing" for insulation installed as part of a roofing assembly.
2. Section 077273 "Vegetated Roof Systems" for insulation installed as part of a green roof assembly.
3. Section 092116.23 "Gypsum Board Shaft Wall Assemblies" and Section 092900 “Gypsum Board” for insulation installed in metal-framed gypsum board assemblies.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Sustainable Design Submittals: Product data indicating compliance with sustainable design performance requirements.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: For each product, for tests performed by a qualified testing agency.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of thermal insulation has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 5 years' experience installing thermal insulation similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

B. Protect foam-plastic board insulation as follows:

1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site until just before installation time.
3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide thermal insulation products by the following:

1. See below for specific manufacturers and products.

B. Source Limitations: Obtain each insulation type/system from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. General: Thermal insulation shall comply with the 2016 California Building Code (CBC), 2016 California Energy Code (CEC), and 2016 California Green Building Standards Code (CALGreen) mandatory measures.

B. Fire Propagation Characteristics for Insulation in Exterior Walls: Comply with one of the following:

1. Product shall be noncombustible passing ASTM E 136 for combustion characteristics.
2. Passes NFPA 285 testing as part of an approved assembly. Manufacturer shall have NFPA 285 test data conducted on configurations for exterior wall systems designs exactly matching those proposed for Project.

C. Provide insulation in thicknesses complying with the following:

1. As indicated on the Drawings, in compliance with the Project's ENV forms, and no less than the following:

	New Building	Tenant Improvement	Parking Structure
Walls (metal framed, between studs)	R-11		
Walls (metal framed, between studs, tile only)	R-19		
Walls (metal framed, continuous)	R-8		
Mass walls	R-11		
Spandrel Walls	R-13		
Floors / soffits (continuous)	R-8		
Green Roof (continuous)*	N/A	N/A	N/A
Roof (continuous)**	N/A	N/A	N/A

* As specified in Section 077273 "Vegetated Roof Systems"
** As specified in Section 075419 "Polyvinyl-Chloride (PVC) Roofing"

D. Sustainable Design Requirements: Products shall be GreenGuard certified.

2.3 PERIMETER FIRE CONTAINMENT INSULATION SYSTEM

A. Performance Criteria: Provide fire-resistive joint systems that are produced and installed to resist spread of fire, resist the passage of smoke and other gasses, and maintain original fire-resistance rating of assemblies in or between which fire-resistive joint system is installed. Fire-resistive joint system shall accommodate building movements without impairing their ability to resist the passage of fire and hot gasses. Provide with rating determined by ASTM E 119 based on testing at a positive pressure differential of 0.01-inch wg or ASTM E 2307. At perimeter of edge of fire-resistant-rated floor assemblies and non-fire-rated exterior curtain walls, provide a fire-containment system with fire test response characteristics indicated, as determined by testing identical systems per the Underwriters Laboratories or Intertek (OPL) Laboratories, or another testing and inspecting agency acceptable to authorities having jurisdiction. If no tested system exists, provide an engineering judgment as specified by the International Firestop Council that accompanies the design.

1. Fire-Resistance Rating: In accordance with 2016 CBC 715.5.

B. Curtain Wall (Spandrel) Insulation:

1. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide the following:

a. Roxul, Inc.; "CurtainRock 40."

2. Thickness: Minimum thickness as listed in fire-tested assembly, but not less than thickness required to comply with “Performance Requirements” article above.
3. Type: Mineral Wool.

a. R-Value: Minimum 4.2 per inch.
b. Facing: Foil Faced.
c. Density: 4 lbs per cubic foot according to ASTM C 612.
d. Combustion Characteristics: Noncombustible according to ASTM E 136.

C. Safing Insulation:

1. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide the following:

a. Roxul, Inc.; "Roxul Safe."

2. Type: Mineral Wool Safing.

a. R-Value: Minimum 4.2 per inch.
b. Facing: Unfaced or foil faced, as listed in fire-tested assembly.
c. Density: 4.5 lbs per cubic foot.
d. Combustion Characteristics: Noncombustible according to ASTM E 136.

D. Safing Clips: Z-Shaped galvanized steel clips formed from 1 inch wide strips of 20-gauge galvanized steel: 3-inch high with 2-inch and 3-inch upper and lower horizontal legs.

E. Hardware:

1. Manufacturer's standard and listed hardware for attaching curtain wall insulation.
2. Mechanical fasteners: Provide per manufacturer's written instructions and per tested assembly.

F. Mullion Covers:

1. Manufacturer's standard mullion cover insulation product for protection of mullions.

a. Size: 1 inch or 2 inch, as required per tested assembly.

G. Backer / Reinforcement Member: Manufacturer's standard and listed reinforcing components or other light gauge steel channel or angle approved by the primary manufacturer. Place horizontally at the safe-off line to support curtain wall insulation to prevent bowing of curtain wall insulation caused by compression fitting of safing insulation.

H. Smoke Barrier: Smoke sealant as listed in the appropriate fire tested assembly and in compliance with perimeter fire containment manufacturer's written instructions.

I. Vaper Retarder Tape: Compatible with specified facer and comparable perm rating. Provide for taping insulation joints and repairing tears.

J. Accessories: Provide components of fire-resistive joint system, that are needed to install fill materials and to maintain ratings required. Use only components specified by fire-resistive joint system manufacturer and approved by the qualified testing agency for systems indicated.

2.4 EXTRUDED POLYSTYRENE FOAM-PLASTIC BOARD [I-1] (Exterior decks over conditioned spaces only)

A. Extruded polystyrene boards in this article are also called "XPS boards." Roman numeral designators in ASTM C 578 are assigned in a fixed random sequence, and their numeric order does not reflect increasing strength or other characteristics.

B. Extruded-Polystyrene Board Insulation, Type VII: ASTM C 578, Type VII, 60-psi minimum compressive strength, maximum flame-spread and smoke-developed indexes of 25 and 450, respectively, per ASTM E 84.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Dow Chemical Company (The).
b. Owens Corning.
c. Or Equal.

C. Adhesive for Bonding Insulation: Product with demonstrated capability to bond insulation securely to substrates without damaging insulation and substrates.

2.5 MINERAL-WOOL BOARD [I-2] (Continuous insulation in exterior walls)

A. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

1. Roxul, Inc.; "CavityRock MD."

2. Substitutions and Comparable Products will NOT be accepted. Specified manufacturer and product is only product compliant with NFPA 285 testing for fiber-cement siding system specified in Section 074646 "Fiber-Cement Siding."

B. Mineral-Wool Board, Types IVB, Unfaced: ASTM C 612, Types IVB; with maximum flame-spread and smoke-developed indexes of 0 and 0, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics. Nominal density of 4.4lb/cu. ft.

1. Thermal Resistance: Provide in thickness to comply with "Performance Requirements" article.

2.6 GLASS-FIBER BLANKET [I-3] (Between studs / joists/ in exterior walls / floors / soffits)

A. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

1. Johns Manville; "Formaldehyde-Free Fiberglass Insulation, Unfaced" (passing ASTM E 136).

B. Glass-Fiber Blanket, Unfaced: ASTM C 665, Type I; with maximum flame-spread and smoke-developed indexes of 25 and 450, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.

1. Thermal Resistance: Provide in thickness as indicated on Drawings and complying with "Performance Requirements" article.

2.7 INSULATION FASTENERS

A. As recommended by insulation manufacturer, for permanent mechanical attachment of insulation to substrate.

1. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide the following:

a. As recommended by primary insulation manufacturer.
b. For exterior wall continuous insulation systems:

1) Rodenhouse Inc.; http://rodenhouse-inc.com/brand/roxul/

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean substrates of substances that are harmful to insulation, including removing projections capable of puncturing insulation or vapor retarders, or that interfere with insulation attachment.

B. Proceed with installation only after unsatisfactory conditions have been corrected

3.2 INSTALLATION, GENERAL

A. Comply with insulation manufacturer's written instructions applicable to products and applications indicated.

B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.

C. Extend insulation to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.

D. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.

3.3 INSTALLATION OF PERIMETER FIRE CONTAINMENT SYSTEM

A. Install insulation and accessories in accordance with Underwriters Laboratories / Intertek (OPL) Laboratories listed system and manufacturer’s instructions.

B. Retain insulation in place with mechanical fasteners within the mullions and transoms (spandrel area), spaced at intervals recommended by tested assembly to hold insulation securely in place without touching the exterior wall. Maintain cavity width of dimension indicated between insulation and exterior wall.

C. Comply with execution requirements in Section 078443 “Joint Firestopping.”

3.4 INSTALLATION OF EXTERIOR WALL INSULATION

A. Apply insulation units to substrates by mechanical attachment, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with mechanical anchorage to provide permanent placement and support of units.

3.5 INSTALLATION OF INSULATION FOR FRAMED CONSTRUCTION

A. Apply insulation units to substrates by method indicated, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.

B. Continuous Insulation Installation:

1. Comply with manufacturer's written instruction and the following:

a. Attach insulation boards to open framing with mechanical fasteners per manufacturer's recommendation.
b. Attach in courses with vertical joints staggered.
c. Cut insulation board in an "L" shape around openings. Tightly abut insulation board joints and interlock inside and outside corners. Trim or rasp board flush for square corners.
d. Seal gaps or open joints.
e. Do not allow insulation board to be exposed to weather for a duration exceeding manufacturer's written limitations.

C. Blanket Insulation: Install in cavities formed by framing members according to the following requirements:

1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
3. Maintain 3-inch clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.
4. For metal-framed wall cavities where cavity heights exceed 96 inches, support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.

D. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials:

1. Loose-Fill Insulation: Compact to approximately 40 percent of normal maximum volume equaling a density of approximately 2.5 lb/cu. ft..
2. Spray Polyurethane Insulation: Apply according to manufacturer's written instructions.

3.6 INSTALLATION OF CURTAIN-WALL INSULATION

A. Install board insulation in curtain-wall construction where indicated on Drawings according to curtain-wall manufacturer's written instructions.

1. Hold insulation in place by securing metal clips and straps or integral pockets within window frames, spaced at intervals recommended in writing by insulation manufacturer to hold insulation securely in place without touching spandrel glass. Maintain cavity width of dimension indicated between insulation and glass.
2. Install insulation where it contacts perimeter fire-containment system to prevent insulation from bowing under pressure from perimeter fire-containment system.

3.7 FIELD QUALITY CONTROL

A. Inspecting Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Where deficiencies are found or systems are damaged or removed due to testing, repair or replace fire-resistive joint systems so they comply with requirements.

C. Proceed with enclosing systems with other construction only after inspection reports are issued and installations comply with requirements.

3.8 PROTECTION

A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION 072100

SECTION 072713 - MODIFIED BITUMINOUS SHEET AIR BARRIERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes high-temperature-rated, NFPA-285-compliant, self-adhering, vapor-retarding, modified bituminous sheet air barriers [AB-1], and accessories.

B. Related Requirements:

1. Section 042200 "Concrete Unit Masonry (CMU)" for CMU substrates.
2. Section 061600 "Sheathing" for wall sheathings and wall sheathing joint-and-penetration treatments.

1.3 DEFINITIONS

A. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.

B. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.

C. Air-Barrier Assembly: The collection of air-barrier materials and accessories applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

1.4 COORDINATION

A. Coordinate installation of modified bituminous sheet air barriers with fenestration, doors, and other exterior wall openings, penetrations, and flashings to provide an air- and weather-tight barrier assembly.

B. Schedule and coordinate installation of air barrier and exterior cladding materials to minimize air barrier's direct exposure to UV and weather. Comply with air barrier manufacture's published limitations for exposure.

C. Coordinate CMU installations indicated to receive modified bituminous sheet air barriers such that CMU mortar joints are struck flush with the face of block.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Construction Manager, Architect, envelope consultant, inspection agency, air barrier installer, air barrier manufacturer's technical representative, and installers whose work interfaces with or affects modified bituminous sheet air barriers, including installers of adjacent construction that penetrates waterproofing system.
2. Review air-barrier requirements, including, but not limited to, the following:

a. Installation.
b. Special details.
c. Mockups.
d. Air-leakage and bond testing.
e. Air barrier protection.
f. Work scheduling of product(s) that cover air barriers.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include manufacturer's written instructions for evaluating, preparing, and treating each substrate; technical data; and tested physical and performance properties of products.

B. Sustainable Design Submittals: For primers, product data indicating VOC content.

C. Shop Drawings: For air-barrier assemblies.

1. Provide project-specific shop drawings showing locations and extent of air barrier materials, accessories, and assemblies specific to Project conditions.
2. Include details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
3. Include details of interfaces with other materials that form part of air barrier.

D. Samples:

1. Sheet air barrier, 8 inches square.
2. Accessories, full size.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

1. Include list of ABAA-certified installers and supervisors employed by Installer, who work on Project.

B. Product Certificates: From air-barrier manufacturer, certifying compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with air barrier.

C. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.

D. Inspection Report: Copy of air barrier manufacturer’s inspection of completed air barrier system installation.

E. Field quality-control reports.

F. Sample Warranties: For special warranties.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years’ experience regularly engaged in the production and sales of modified bituminous sheet air barriers that have been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

1. Manufacturer shall have NFPA 285 test data conducted on configurations for exterior wall systems designs matching those proposed for Project, and shall have a valid research/evaluation report permitting sheet air barrier system in exterior walls of construction types I, II, III, and IV over 40 feet in height. Manufacturer shall also be listed by the Air Barrier Association of America (www.airbarrier.org).

B. Installer Qualifications: A firm with not less than 10 years’ experience installing modified bituminous sheet air barriers similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1. Installer shall be licensed by ABAA according to ABAA's Quality Assurance Program and shall employ ABAA-certified installers and supervisors on Project.
2. Installer or sheet air barrier shall also be same installer as for overburden/cladding material in order to be eligible for special weathertightness warranty specified.

C. Mockups: Build mockups to set quality standards for materials and execution.

1. Build integrated mockups of exterior wall assembly as indicated on Drawings, incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, and sealing of gaps, terminations, and penetrations of air-barrier assembly.

   a. Coordinate construction of mockups to permit inspection and testing of air barrier before external insulation and cladding are installed.
   b. Include junction with roofing membrane, building corner condition, and foundation wall intersection.
   c. If Architect determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Remove and replace liquid materials that cannot be applied within their stated shelf life.

B. Protect stored materials from direct sunlight.

1.10 FIELD CONDITIONS

A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended in writing by air-barrier manufacturer.

1. Protect substrates from environmental conditions that affect air-barrier performance.
2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

1.11 WARRANTY

A. Special Weathertightness Warranty: Sheet air barrier mmanufacturer's standard or customized warranty, in which sheet air barrier manufacturer and overburden/cladding installer agree to repair or replace components of modified bituminous sheet air barrier system, including sheet air barrier, flashings, sealants, and associated accessories, that do not comply with requirements or that fail to remain air and/or watertight within specified warranty period.

1. Warranty includes removing and reinstalling air barriers, flashing, accessories, substrates and overburdens.
2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide the following:

1. Carlisle Coatings & Waterproofing Inc.; CCW-705 HT.

2. Substitutions and Comparable Products will NOT be accepted. Specified manufacturer and product is only product compliant with NFPA 285 testing for fiber-cement siding system specified in Section 074646 "Fiber-Cement Siding."

B. Source Limitations: Obtain primary air-barrier materials and air-barrier accessories from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Air-Barrier Performance: Air-barrier assembly and seals with adjacent construction shall be capable of performing as a continuous air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air-barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, tie-ins to installed waterproofing, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

B. Air-Barrier Assembly Air Leakage: Maximum 0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft., when tested according to ASTM E 283 and ASTM E 2357.

C. Product shall be listed as an air barrier per the Air Barrier Association of America (www.airbarrier.org).

D. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.

1. Manufacturer shall have NFPA 285 test data conducted on configurations for exterior wall systems designs matching those proposed for Project.

E. High-Temperature-Rated Service Temperature: Stable up to minimum 180 degrees F per ASTM D1204.

2.3 SELF-ADHERING SHEET AIR BARRIER

A. Modified Bituminous Sheet: 40-mil-thick, self-adhering sheet consisting of 36 mils of rubberized asphalt laminated to a 4-mil-thick, cross-laminated polyethylene film with release liner on adhesive side and formulated for application with primer that complies with VOC limits.

1. Physical and Performance Properties:

a. Air Permeance: Maximum 0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. pressure difference; ASTM E 2178.
b. Tensile Strength: Minimum 250 psi; ASTM D 412, Die C.
c. Ultimate Elongation: Minimum 200 percent; ASTM D 412, Die C.
d. Puncture Resistance: Minimum 40 lbf; ASTM E 154.
e. Water Absorption: Maximum 0.15 percent weight gain after 48-hour immersion at 70 deg F; ASTM D 570.
f. Vapor Permeance: Maximum 0.1 perm; ASTM E 96, Desiccant Method.
g. Adhesion to Substrate: Minimum 16 lbf/sq. in. when tested according to ASTM D 4541 as modified by ABAA.
h. UV Resistance: Can be exposed to sunlight for 30 days according to manufacturer's written instructions.
i. Service Temperatures: Resists temperatures up to 240 deg F without degradation or flow of adhesive.

2.4 ACCESSORY MATERIALS

A. Requirement: Provide primers, transition strips, termination strips, joint sealants, counterflashing strips, flashing sheets and metal termination bars, termination mastic, substrate patching materials, adhesives, tapes, foam sealants, lap sealants, and other accessory materials that are recommended in writing by air-barrier manufacturer to produce a complete air-barrier assembly and that are compatible with primary air-barrier material and adjacent construction to which they may seal.

B. Primer: Liquid waterborne primer recommended for substrate by air-barrier material manufacturer.

1. Primer shall have a maximum VOC content of 100 g/L.

C. Stainless-Steel Sheet: ASTM A 240, Type 304, 0.0187 inch thick, and Series 300 stainless-steel fasteners.

D. Preformed Silicone Extrusion: Manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
2. Engage air barrier manufacturer’s technical representative to inspect substrate conditions prior to application of air barrier system. Obtain manufacturer’s written acceptance of substrate conditions and submit to Architect.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

A. Clean, prepare, treat, fill, and seal substrate and joints and cracks in substrate according to manufacturer's written instructions and details. Provide clean, dust-free, and dry substrate for air-barrier application.

B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.

C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching membrane.

E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.

F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.

G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

H. Bridge isolation joints, expansion joints, and discontinuous wall-to-wall, deck-to-wall, and deck-to-deck joints with air-barrier accessory material that accommodates joint movement according to manufacturer's written instructions and details.

3.3 INSTALLATION

A. Install materials according to air-barrier manufacturer's written instructions and details and according to recommendations in ASTM D 6135 to form a seal with adjacent construction and ensure continuity of air and water barrier.

1. When ambient and substrate temperatures range between 25 and 40 deg F, install self-adhering, modified bituminous air-barrier sheet produced for low-temperature application.
2. Unless manufacturer recommends in writing against priming, apply primer to substrates at required rate and allow it to dry.

B. Prepare, treat, and seal inside and outside corners and vertical and horizontal surfaces at terminations and penetrations with termination mastic and according to ASTM D 6135.

C. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by air-barrier sheet on same day. Reprime areas exposed for more than 24 hours.

D. Apply and firmly adhere air-barrier sheets over area to receive air barrier. Accurately align sheets and maintain uniform 2-1/2-inch-minimum lap widths and end laps. Overlap and seal seams, and stagger end laps to ensure airtight installation.

1. Apply sheets in a shingled manner to shed water.
2. Roll sheets firmly to enhance adhesion to substrate.

E. Apply continuous air-barrier sheets over accessory strips bridging substrate cracks, construction, and contraction joints.

F. CMU: Install air-barrier sheet horizontally against the CMU beginning at base of wall. Align top edge of air-barrier sheet immediately below protruding masonry ties or joint reinforcement or ties, and firmly adhere in place.

1. Overlap horizontally adjacent sheets a minimum of 2 inches and roll seams.
2. Apply overlapping sheets with bottom edge slit to fit around masonry reinforcing or ties. Roll firmly into place.
3. Seal around masonry reinforcing or ties and penetrations with termination mastic.
4. Continue the sheet into all openings in the wall, such as doors and windows, and terminate at points to maintain an airtight barrier that is not visible from interior.

G. Weatherlap through-wall flashings with sheet air barriers to create an air and watertight envelope.

H. Seal exposed edges of sheet at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.

I. Install air-barrier sheet and accessory materials to form a seal with adjacent construction and to maintain a continuous air barrier.

1. Coordinate air-barrier installation with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
2. Install transition strip on roofing membrane or base flashing so that a minimum of 3 inches of coverage is achieved over each substrate.

J. Connect and seal exterior wall air-barrier sheet continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.

K. At end of each working day, seal top edge of air-barrier material to substrate with termination mastic.

L. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.

M. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply transition strip so that a minimum of 3 inches of coverage is achieved over each substrate. Maintain 3 inches of contact over firm bearing to perimeter frames, with not less than 1 inch of full contact.

1. Transition Strip: Roll firmly to enhance adhesion.
2. Preformed Silicone Extrusion: Set in full bed of silicone sealant applied to walls, frame, and air-barrier material.

N. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, doors, and miscellaneous penetrations of air-barrier material with foam sealant.

O. Repair punctures, voids, and deficient lapped seams in air barrier. Slit and flatten fishmouths and blisters. Patch with air-barrier sheet extending 6 inches beyond repaired areas in all directions.

P. Do not cover air barrier until it has been tested and inspected by testing agency.

Q. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.4 FIELD QUALITY CONTROL (BY OWNER)

A. Testing Agency: Owner may engage a qualified testing agency to perform tests and inspections.

B. Inspections: Air-barrier materials, accessories, and installation are subject to inspection for compliance with requirements. Inspections may include the following:

1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
2. Continuous structural support of air-barrier system has been provided.
3. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
4. Site conditions for application temperature and dryness of substrates have been maintained.
5. Maximum exposure time of materials to UV deterioration has not been exceeded.
6. Surfaces have been primed.
7. Laps in sheet materials have complied with the minimum requirements and have been shingled in the correct direction (or mastic applied on exposed edges), with no fishmouths.
8. Termination mastic has been applied on cut edges.
9. Air barrier has been firmly adhered to substrate.
10. Compatible materials have been used.
11. Transitions at changes in direction and structural support at gaps have been provided.
12. Connections between assemblies (air barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
13. All penetrations have been sealed.

C. Air barriers will be considered defective if they do not pass tests and inspections.

1. Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
2. Remove and replace deficient air-barrier components for retesting as specified above.

D. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.

3.5 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer's Field Service: Contractor shall engage a manufacturer’s technical representative for technical assistance and guidance for installation of modified bituminous sheet air barriers. At a minimum, arrange for manufacturer’s technical representative to observe installation of modified bituminous sheet air barriers during mock-up, initial installation, at mid-point of the installation, and at completion. Provide additional field observation as required to obtain warranty specified and when requested by Architect or Owner. After each field visit, submit manufacturer’s written report of observations within 3 working days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective action.

B. ABAA Quality Assurance Program: Perform examinations, preparation, installation, testing, and inspections under ABAA's Quality Assurance Program.

C. Tests: In addition to conducting field quality control tests specified in other Division 08 Sections, conduct the following field quality control tests:

1. Water Penetration: Air-barrier assemblies will be tested for water penetration according to ASTM E 1105.
2. Air-Leakage-Volume Testing: Air-barrier assemblies will be tested for air-leakage rate according to ASTM E 783.
3. Adhesion Testing: Air-barrier assemblies will be tested for required adhesion to substrate according to ASTM D 4541 for each 600 sq. ft. of installed air barrier or part thereof.
4. Perform a minimum of three tests in areas as directed by Envelope Consultant.
5. Perform tests in each test area as directed by Envelope Consultant. Perform at least three tests prior to 10, 35, and 70 percent completion.

D. Air barriers will be considered defective if they do not pass tests and inspections.

1. Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
2. Remove and replace deficient air-barrier components for retesting as specified above.

E. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.

F. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

A. Protect air-barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.

1. Protect air barrier from exposure to UV light and harmful weather exposure as recommended in writing by manufacturer. If exposed to these conditions for longer than recommended, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed materials according to air-barrier manufacturer's written instructions.
2. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.

B. Clean spills, stains, and soiling from construction that would be exposed in the completed Work, using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

END OF SECTION 072713

SECTION 074646 - FIBER-CEMENT SIDING (DEFERRED APPROVAL)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes fiber-cement siding system.

1. System consists of fiber-cement siding panels, soffits, trim, attachment system components, miscellaneous metal framing, and accessories, whether indicated or not. Fiber-cement siding is part of a rain-screen system. System also includes application of sheet air barrier system. Coordinate with related requirements below to ensure an air- and watertight rain-screen system.

B. Work under this Section is part of a “Deferred Approval.” Coordinate with the deferred approval requirements in Section 013300 “Submittal Procedures” and with the requirements indicated on the Drawings.

C. Related Requirements:

1. Section 054000 "Cold-Formed Metal Framing" for cold-formed metal framing for exterior walls and for cold-formed metal accessories to the extent not provided as part of this Section.
2. Section 055000 "Metal Fabrications" for miscellaneous steel framing to the extent not provided as part of this Section.
3. Section 072713 "Modified Bituminous Sheet Air Barriers" for air and weather barriers below fiber cement siding systems. Installer of fiber-cement siding system provided under this Section shall be same installer as for sheet air barriers in order to be eligible for specified special weathertightness warranty.
4. Section 076200 “Sheet Metal Flashing and Trim” for flashing to the extent not provided as part of this Section.
5. Section 079200 “Joint Sealants” for joint sealants to the extent not provided as part of this Section.

1.3 COORDINATION

A. Coordinate siding installation with flashings and other adjoining construction to ensure proper sequencing.

B. Coordinate installation of anchorages for fiber-cement siding system. Furnish setting drawings, templates, and directions for installing anchorages, including miscellaneous metal subframing, backing, blocking, and furring components that are to be embedded or attached to supporting construction. Deliver such items to Project site in time for installation.

C. Coordinate with sheet air barrier installer to ensure that all penetrations through air/weather barrier are sealed to create an air and water-tight barrier system.

D. Pre-Installation Field Measurements: Coordinate exact hardware and anchorage locations with other Trade Contractors before permanently attaching to other construction.

E. Post-Installed Field Measurements: Field verify and examine actual installed locations of connection hardware and anchorage items prior to installation of Work provided under this Section. Notify General Contractor and Architect immediately of any discrepancies in writing. Provide letter from fiber-cement siding installer indicating acceptance of connection hardware and anchorage items.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Construction Manager, Architect, envelope consultant, inspection agency, fiber-cement siding installer, fiber-cement siding manufacturer's representative, structural-support installer, and installers whose work interfaces with or affects fiber-cement siding, including installers of entrances and curtain wall systems.
2. Review the following:

a. Finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
b. Methods and procedures related to fiber-cement siding installation, including manufacturer's written instructions.
c. Support conditions for compliance with requirements, including alignment between and attachment to structural members.
d. Continuity of air- and weather barrier system, flashings, special siding details, wall penetrations, openings, and condition of other construction that affect fiber-cement siding system.
e. Governing regulations and requirements for tests and inspections.
f. Temporary protection requirements for fiber-cement siding assembly during and after installation.
g. Procedures for repair of panels damaged after installation.

3. Contractor shall document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.5 ACTION SUBMITTALS

A. Transmit all action and informational submittal items together in one single complete submittal package for review.

B. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
2. Include manufacturer's printed installation instructions.

C. Shop Drawings: Provide project-specific shop drawings for each type of fiber cement siding type and soffits.

1. Include fabrication and installation layouts of siding and soffits, details of edge conditions, joints, profiles, corners, anchorages, attachment assembly, closures, accessories, and special details.
2. Include interfaces with adjoining and adjacent systems.
3. Shop Drawings shall be stamped and signed by the qualified California-licensed professional engineer responsible for their preparation, including calculations, indicating compliance with performance requirements.

D. Samples for Initial Selection: For fiber-cement siding and soffit including related accessories.

E. Samples for Verification: For each type, color, texture, and pattern required.

1. 12-inch-long-by-actual-width Sample of siding.
2. 24-inch-wide-by-36-inch-high Sample panel of siding assembled on plywood backing.
3. 12-inch-long-by-actual-width Sample of soffit panels, trim, and accessories.

F. Deferred-Approval Submittal: For fiber-cement siding system indicated to comply with performance requirements and design criteria, including shop drawings, calculations, and analysis data stamped and signed by the qualified California-licensed professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Exterior elevations, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Wall panels and attachments.
2. Stud framing.
3. Wall-mounted items including curtain wall system components, entrances, and lighting fixtures.
4. Penetrations of wall by pipes and utilities.
5. Air/weather barrier, sealants, roofing, and sheet metal flashing and trim.

B. Qualification Data: For manufacturer and installer.

C. Product Certificates: For each type of fiber-cement siding and soffit.

D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for fiber-cement siding.

E. Fastener and Anchor Test Reports: Certified reports of last completed set of mechanical tests for each device.

F. Research/Evaluation Reports: For fire-cement siding system, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

G. Welding certificates.

H. Field quality-control reports.

I. Sample Warranty: For special warranty.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of product, including related accessories, to include in maintenance manuals.

1.8 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Furnish full lengths of fiber-cement siding and soffit including related accessories, in a quantity equal to 2 percent of amount installed.

1.9 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of fiber-cement siding that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance. Manufacturer shall have a current research/evaluation report from ICC-ES or equivalent.

B. Installer Qualifications: A firm with not less than 10 years' experience installing fiber-cement siding similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1. Installer of fiber-cement siding system shall also be same installer as for sheet air barrier system specified in Section 072713 "Modified Bituminous Sheet Air Barriers" in order to be eligible for special weathertightness warranty.

C. Engineering Responsibility: Prepare data for fiber-cement siding system, including Shop Drawings, based on testing and engineering analysis for manufacturer's standard units in systems similar to those indicated for the Project and submission of reports of tests performed on manufacturer's standard assemblies, stamped and signed by the qualified California-licensed professional engineer responsible for their preparation.

D. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1, "Structural Welding Code - Steel."

E. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and to set quality standards for fabrication and installation.

1. Description: Incorporate fiber-cement siding mockup into integrated exterior mockup per Section 014000 "Quality Requirements."
2. Construct mockup in presence of manufacturer's technical representative.
3. Testing shall be performed on mockups according to requirements specified in other Sections.
4. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store packaged materials in original containers with labels intact until time of use.

B. Store materials on elevated platforms, under cover, and in a dry location.

1.11 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit siding system to be installed according to manufacturer's written instructions and warranty requirements.

B. All components used in siding system must be protected from exposure to moisture before, during, and after installation.

C. Do not install siding materials that are wet, moisture damaged, and/or mold damaged.

1.12 WARRANTY

A. Special Product and Finish Warranty: Manufacturer agrees to repair or replace products that fail in materials, finish, or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures including cracking and deforming.
b. Deterioration of materials beyond normal weathering.
c. Damage from hail, termite attacks, and/or rot.
d. Failure to remain non-combustible.
e. Peeling, cracking, flaking, or yellowing.
f. Discoloration or stains due to chalking on back or other surfaces below coating.
g. Surface erosion.

2. Warranty Period: 15 years from date of Substantial Completion.

B. Special Weathertightness Warranty: Sheet air barrier mmanufacturer's standard or customized warranty in which sheet air barrier manufacturer and installer of fiber-cement siding system agree to repair or replace components of fiber-cement siding system, including sheet air barriers, flashings, sealants, and associated accessories that do not comply with requirements or that fail to remain air and/or watertight within specified warranty period.

1. Warranty includes removing and reinstalling fiber-cement siding system, air barriers, flashings, accessories, substrates and overburdens.
2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

1. Equitone Inc.; 1731 Fred Lawson Drive, Maryville, TN 37801 (865-268-2705).

a. Equitone "Tectiva."

B. Source Limitations: Obtain fiber-cement siding products, including related accessories, from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. General: Fiber-cement siding system shall comply with the 2016 California Building Code.

B. Structural Performance: Provide fiber-cement siding systems capable of withstanding the effects of the following loads, based on testing according to ASTM E 330:

1. Wind Loads: As indicated on Drawings.
2. Seismic Loads: As indicated on Drawings.
3. Frame Deflection Limits: For wind loads, normal to the plane of the wall between supports, deflection of the secured perimeter framing members shall not exceed 1/175 of the span or 3/4 inch, whichever is less.
4. Panel Deflection Limits: For wind loads, normal to the plane of the wall, the maximum panel deflection shall not exceed 1/100 of the span.

C. Pressure Equalized Rain Screen System: Comply with AAMA 508-05 “Voluntary Test Method and Specification for Pressure Equalized Rain Screen Wall Cladding Systems.”

D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

E. Fire-Test-Response Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame Spread Index: 0.
2. Smoke Developed Index: 10 or less.
3. Combustion Characteristics:

a. Noncombustible when tested according to ASTM E 136, or
b. Vertical and Lateral Flame Propagation: Comply with 2016 CBC Section 1403.5, including testing in accordance with and compliance with the acceptance criteria of NFPA 285.

1) If test data is not provided, manufacturer shall have a valid evaluation report indicating compliance with the 2015 IBC (2016 CBC).

F. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

2.3 FIBER-CEMENT SIDING

A. General: ASTM C 1186, Type A, Grade IV, fiber-cement board.

1. Color: As indicated on Drawings, or if not indicated, as selected from manufacturer's full range of standard and optional colors.

B. Labeling: Provide fiber-cement siding that is tested and labeled according to ASTM C 1186 by a qualified testing agency acceptable to authorities having jurisdiction.

C. Nominal Thickness: Not less than 5/16 inch.

D. Panel Texture: Rough orange-peel texture.

E. Factory Coating: Manufacturer's standard double acrylic coating.

F. Panel Height and Width: As indicated on Drawings.

2.4 FIBER-CEMENT SOFFIT

A. General: ASTM C 1186, Type A, Grade IV, fiber-cement board.

1. Basis-of-Design Product: Subject to compliance with requirements, provide fiber-cement soffits by same manufacturer as fiber-cement siding.

B. Nominal Thickness: Not less than 5/16 inch.

C. Panel Texture: Matching fiber-cement siding.

D. Factory Priming: Matching fiber-cement siding.

E. Panel Height and Width: As indicated on Drawings.

2.5 ACCESSORIES

A. Siding Accessories, General: Provide starter strips, edge trim, outside and inside corner caps, and other items as recommended by siding manufacturer for building configuration.

1. Provide accessories matching color and texture of adjacent siding unless otherwise indicated.

B. Decorative Accessories: Provide fiber-cement decorative accessories as indicated.

C. Miscellaneous Metal Subframing and Furring: ASTM C 645, cold-formed, metallic-coated steel sheet ASTM A 653, G90 coating designation or ASTM A 792, Class AZ50 aluminum-zinc-alloy coating designation unless otherwise indicated. Provide manufacturer's standard sections for support and alignment of fiber-cement siding system in accordance with performance requirements and approved Shop Drawings.

D. Air and Weather Barrier: As specified in Section 072713 "Modified Bituminous Sheet Air Barriers."

E. Z-Shaped Furring: As specified in Section 054000 "Cold-Formed Metal Framing."

F. Continuous Insulation: As specified in Section 054000 "Thermal Insulation."

G. Flashing: Provide aluminum flashing complying with Section 076200 "Sheet Metal Flashing and Trim" at heads of fenestration, entrances, and where indicated.

1. Finish for Aluminum Flashing:

a. Three-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
b. Color: As indicated on Drawings, of if not indicated, custom color to match Architect's sample.

H. Fasteners:

1. For concealed metal-to-metal connections, use ribbed bugle-head screws of sufficient length to penetrate a minimum of 1/4 inch, or three screw-threads, into substrate, and complying with performance requirements, from the following materials:

    a. Stainless steel.
    b. Galvanized steel, coated with Elco Stalgard corrosion resistant protective coating.

2. For exposed fasteners for anchoring fiber cement panels, use manufacturer's stainless steel blind rivets with colored heads to match panels.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, fiber-cement siding supports, and other conditions affecting performance of the Work.

1. Examine wall framing to verify that studs and other structural panel support members and anchorage have been installed within alignment tolerances required by fiber-cement siding manufacturer.
2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by fiber-cement siding manufacturer.

    a. Verify that sheet air barriers have been installed over sheathing or backing substrate to prevent air infiltration and water penetration.

B. Examine roughing-in for components and assemblies penetrating fiber-cement siding to verify actual locations of penetrations relative to seam locations of fiber-cement siding before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrates of projections and substances detrimental to application.

B. Confirm application of weather barrier has been successfully completed and inspected in accordance with Section 072713 "Modified Bituminous Sheet Air Barriers." Ensure that drainage plane is intact, all penetrations are sealed, and air barrier assembly has passed all tests and inspections.

C. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C 754 and fiber-cement siding manufacturer's written recommendations.

D. Do not begin installation until unacceptable conditions have been corrected.

3.3 INSTALLING AIR AND WEATHER BARRIER

A. Install air and weather barrier as specified in Section 072713 "Modified Bituminous Sheet Air Barriers."

3.4 INSTALLING Z-FURRING SHAPES AND CONTINUOUS INSULATION

A. Erect insulation, specified in Section 072100 "Thermal Insulation," vertically and hold in place with Z-shaped furring members spaced 16 inches o.c.

B. Except at exterior corners, securely attach narrow flanges of furring members to wall framing with screws not exceeding 16 inches on center.

C. At exterior corners, attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw-attach short flange of furring channel to web of adjacent channel. At interior corners, space second member no more than 12 inches from corner and cut insulation to fit.

3.5 INSTALLATION

A. General: Install fiber-cement siding system according the manufacturer's written installation instructions and approved test assemblies, in orientations, sizes, and locations indicated on Drawings. Install siding perpendicular to supports unless otherwise indicated. Anchor fiber-cement siding panels and other components of the Work securely in place, with provisions for thermal and structural movement.

1. Commence initial installation in presence of manufacturer’s technical support representative.
2. Shim or otherwise plumb substrates receiving fiber-cement siding.
3. Rain Screen-Principle Installation: Air space inlets and outlets are required at top and bottom of building or wall termination and shall be equivalent to a continuous 1/2 to 3/4 inch to facilitate airflow behind the panels. Do not block vertical airflow at fenestration, entrances, eaves, or at the base of the building. Airflow shall be continuous from bottom to top so there is air movement behind each panel. The minimum cavity width should be at least 25/32 inch for facades up to 33 feet high. For facades between 66-165 feet, the cavity width shall be increase to 1-3/16 inch. Air flow behind the fiber cement panels is critical to the performance of the rain screen construction.
4. Fasteners in profile shall accommodate thermal expansion/contraction of metal and not interfere with panel application.
5. Install panels starting from top of building and work down the facade.
6. For straight walls, start panel installation in center and work outward.
7. For walls with inside corners, start installation at corner and work across wall.

3.6 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align fiber-cement siding units within installed tolerance of 1/4 inch in 20 feet, non-accumulative, on level, plumb, and location lines as indicated, and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.7 FIELD QUALITY CONTROL (BY OWNER)

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Field and shop welds in compliance with CBC 1705.2.
2. Post-installed concrete anchors in compliance with CBC 1705.3.

B. Repair or remove work if test results and inspections indicate that it does not comply with specified requirements.

C. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

D. Fiber-cement siding system will be considered defective if it does not pass tests and inspections.

3.8 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer's Field Service: Contractor shall engage a manufacturer’s technical representative for technical assistance and guidance for installation of fiber-cement siding system. At a minimum, arrange for manufacturer’s technical representative to observe installation of system during mockup, initial installation, at mid-point of the installation, and at completion. Provide additional field observation as required to obtain warranty specified and when requested by Architect or Owner. After each field visit, submit manufacturer’s written report of observations within 3 working days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective action.

1. Final Inspection: Arrange for manufacturer’s technical personnel to inspect fiber-cement siding system upon completion of installation.

B. If test results or inspections show fiber-cement siding system does not comply with requirements, remove and replace or repair the fiber-cement siding system as recommended in writing by the manufacturer, and make further repairs after retesting and inspecting until system installation passes. Repair damage caused by testing; follow manufacturer's written instructions.

C. Prepare test and inspection reports.

3.9 ADJUSTING AND CLEANING

A. Remove damaged, improperly installed, or otherwise defective materials and replace with new materials complying with specified requirements.

B. Clean finished surfaces according to manufacturer's written instructions and maintain in a clean condition during construction.

END OF SECTION 074646

SECTION 075419 - POLYVINYL-CHLORIDE (PVC) ROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Fully-adhered polyvinyl-chloride (PVC) roofing system.
2. Cover boards.
3. Rigid insulation [I-6].
4. Substrate boards.
5. Vapor retarder.
6. Flexible walkways rolls.
7. Fasteners, adhesives and other accessories required for a complete roofing installation, whether indicated or not.
8. Prefabricated flashings, corners, parapets, stacks, vents and related details.

B. Related Requirements:

1. Section 054000 "Cold-Formed Metal Framing" for galvanized steel framing and accessories.
2. Section 077101 "Manufactured Copings" for source limitations for manufactured copings warranted by roofing system manufacturer provided under this Section.
3. Section 076200 "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
4. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
5. Section 221423 "Storm Drainage Piping Specialties" for roof drains.

1.3 DEFINITIONS

A. Roofing Terminology: Definitions in ASTM D 1079 and glossary in NRCA's "The NRCA Roofing and Waterproofing Manual" apply to work of this Section.

1.4 PREINSTALLATION MEETINGS

A. Preliminary Roofing Conference: Before starting roof deck construction, conduct conference at Project site.

1. Meet with Owner, Construction Manager, Architect, envelope consultant, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review roofing requirements, including, but not limited to, the following:

a. Methods and procedures related to roofing installation, including manufacturer's written instructions.
b. Finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
c. Deck substrate requirements for conditions and finishes, including flatness and fastening.
d. Structural loading limitations of roof deck during and after roofing.
e. Base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
f. Governing regulations and requirements for insurance and certificates if applicable.
g. Temporary protection requirements for roofing system during and after installation.
h. Roof observation and repair procedures after roofing installation.

1.5 ACTION SUBMITTALS

A. Transmit all action and informational submittal items together in one single complete submittal package for review.

B. Product Data: For each type of product.

C. Sustainable Design Submittals: For adhesives and sealants, product data for VOC content.

D. Shop Drawings: Provide project-specific shop drawings for roofing system. Include plans, elevations, sections, details, and attachments to other work, including:

1. Base flashings and membrane terminations.
2. Tapered insulation, including slopes. Include insulation adhesive bead sizing and spacing in the field, perimeter, and corner zones.
3. Roof plan showing orientation of roof deck and orientation of roofing, fastening spacings, and patterns for mechanically fastened roofing.
4. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.

E. Samples for Verification: For the following products:

1. Sheet roofing, of color required.
2. Walkway pads or rolls, of color required.
3. Roof insulation.
4. Cover board.
5. Metal termination bars.
6. Fasteners for insulation.
7. Fasteners for barrier boards.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer and manufacturer.

B. Manufacturer Certificates: Signed by roofing manufacturer certifying that :

1. Roofing system complies with requirements specified in "Performance Requirements" Article.

a. Submit evidence of compliance with performance requirements.

2. Roofing materials are compatible with one another and with adjacent construction materials interfacing with PVC roofing system.

C. Product Test Reports: For components of roofing system, for tests performed by manufacturer and witnessed by a qualified testing agency.

1. Test reports shall be preferably less than 5 years old, and shall not exceed 10 years old.

D. Research/Evaluation Reports: For components of roofing system, from ICC and Miami Dade.

E. Field quality-control reports.

F. Sample Warranties: For manufacturer's special warranties.

G. Letter from manufacturer and installer indicating acceptance of substrate prior to installation of roofing system.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: For roofing system to include in maintenance manuals.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 20 years' experience regularly engaged in the production and sales of fully-adhered polyvinyl-chloride roofing systems that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance. Manufacturer shall also be UL listed and FM Global approved for roofing systems identical to that used for this Project.

B. Installer Qualifications: A firm with not less than 10 years' experience installing polyvinyl-chloride roofing systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section. Installer shall be licensed and eligible to receive manufacturer's special warranty.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

B. Examine materials that may have been damaged during transport. Reject materials that are wet, moisture damaged, and/or mold damaged.

C. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.

1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

D. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protect prior to, during, and after installation.

E. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.10 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

B. All components used in roofing system, including, but not limited to, roof boards, must be protected from exposure to moisture before, during, and after installation.

C. Do not install roofing materials that are wet, moisture damage, and/or mold damaged.

1.11 COORDINATION

A. Coordinate roofing installation with air/weather barriers, flashing, trim, wall and glazing construction, and other adjoining work to provide a watertight, airtight, secure, and noncorrosive installation.

1.12 WARRANTY

A. Special Warranty: Manufacturer's standard or customized form, without monetary limitation, in which manufacturer and installer agree to repair or replace components of membrane roofing system that fail in materials or workmanship within specified warranty period. Warranty shall not exclude the condition of ponding water and no time limit shall be assigned to any such ponding water during the warranty period. Warranty shall provide for maximum wind speed as indicated on the Structural Drawings.

1. Special warranty includes membrane roofing, flashings, roof insulation, fasteners, substrate boards, cover boards, vapor retarders, drainage boards, roofing accessories, and other components of membrane roofing system, including coping system as specified in Section 077101 "Manufactured Copings" and provided by same manufacturer as PVC roofing system.
2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide the following:

1. Sika Sarnafil, Inc.

B. Source Limitations: Obtain components including roof membrane, insulation, fasteners, adhesives, cover and barrier boards for roofing system from same manufacturer as membrane roofing.

2.2 PERFORMANCE REQUIREMENTS

A. General Performance: Installed roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roofing and base flashings shall remain watertight.

1. Accelerated Weathering: Roofing system shall withstand 2000 hours of exposure when tested according to ASTM G 152, ASTM G 154, or ASTM G 155.
2. Impact Resistance: Roofing system shall resist impact damage when tested according to ASTM D 3746 or ASTM D 4272.

B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roofing manufacturer based on testing and field experience.

C. Roofing System Design: Tested by a qualified testing agency to resist the following uplift pressures:

1. Design Pressure: Per the 2016 California Building Code based upon maximum wind speed criteria indicated on the Structural Drawings.

D. Aged Solar Reflectance: Not less than 0.63 in accordance with the 2016 California Energy Code.

E. Thermal Emittance: Not less than 0.75 in accordance with the 2016 California Energy Code.

F. Exterior Fire-Test Exposure: ASTM E 108 or UL 790, Class A; for application and roof slopes indicated; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

G. Fire-Resistance Ratings: Comply with fire-resistance-rated assembly designs indicated. Identify products with appropriate markings of applicable testing agency.

H. Visual Criteria: Subject to compliance with performance criteria above, provide roof membrane in colors indicated on Drawings, or if not indicated, as selected by Architect from manufacturer’s full range.

2.3 PVC ROOFING

A. PVC Sheet: ASTM D 4434, Type II, Grade I, fiberglass reinforced 9 oz. felt-backed PVC membrane.

1. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide the following:

a. Sika Sarnafil, Inc.; Sarnafil G410 fully-adhered feltbacked membrane.

2. Thickness: As required to meet performance requirements and warranty duration indicated, but no less than 60 mils.
3. Exposed Face Colors: As indicated on Drawings.
4. Physical Properties:

Parameters	ASTM Test Method	Required Physical Properties
Reinforcing Material	-	Fiberglass
Overall Thickness, min., inches (mm)	D638	0.058 inches
Tensile Strength, min., psi (MPa)	D638	1600 (11.1)
Elongation at Break, min. (machine x tranverse)	D638	270% / 250%
Seam strength*, min. (% of tensile strength)	D638	80
Retention of Properties After Heat Aging	D3045	-
Tensile Strength, min., (% of original)	D638	95
Elongation, min., (% of original)	D638	90
Tearing Resistance, min., lbf (N)	D1004	14 (63.0)
Low Temperature Bend, -40º F (-40º C)	D2136	Pass
Accelerated Weathering Test (Xenon Arc)	D2565	10,000 Hours
Cracking (7x magnification)	-	None
Discoloration (by observation)	-	Negligible
Crazing (7 x magnification)	-	None
Linear Dimensional Change	D1204	0.02%
Weight Change After Immersion in Water	D570	2.5%
Static Puncture Resistance, 33 lbf (15 kg)	D5602	Pass
Dynamic Puncture Resistance, 7.3 ft-lbf (10 J)	D5635	Pass

*Failure occurs through membrane rupture not seam failure.

2.4 AUXILIARY ROOFING MATERIALS

A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with roofing.

1. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
2. Adhesives and sealants shall comply with the following limits for VOC content:

a. Plastic Foam Adhesives: 50 g/L.
b. Gypsum Board and Panel Adhesives: 50 g/L.
c. Multipurpose Construction Adhesives: 70 g/L.
d. Fiberglass Adhesives: 80 g/L.
e. Contact Adhesives: 80 g/L.
f. PVC Welding Compounds: 510 g/L.
g. Other Adhesives: 250 g/L.
h. Single-Ply Roof Membrane Sealants: 450 g/L.
i. Nonmembrane Roof Sealants: 300 g/L.
j. Sealant Primers for Nonporous Substrates: 250 g/L.
k. Sealant Primers for Porous Substrates: 775 g/L.

B. Sheet Flashing: Manufacturer's standard sheet flashing of same material, type, reinforcement, thickness, and color as PVC sheet.

C. PVC Coated Metal Flashing: Flexible, non-reinforced PVC membrane laminated to hot-dipped galvanized steel.

D. Bonding Adhesive: Manufacturer's standard, water based.

E. Slip Sheet: Manufacturer's standard, of thickness required for application.

F. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel bars, approximately 1 by 1/8 inch thick; with anchors.

G. Fasteners and Insulation Plates: Factory-coated steel fasteners and corrosion-resistant metal or plastic plates, designed for fastening roofing to substrate, and acceptable to roofing system manufacturer as required to withstand roof wind uplift pressures for field, perimeter, and corner zones.

H. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, lap sealants, termination reglets, and other accessories.

1. Pitch pans are not acceptable for use as penetration flashings for this Project.

2.5 VAPOR RETARDER

A. Self-Adhering-Sheet Vapor Retarder: ASTM D 1970, polyethylene film laminated to layer of rubberized asphalt adhesive, minimum 30-mil-total thickness; maximum permeance rating of 0.1 perm; cold applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor-retarder manufacturer.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Sarnafil Inc.; Sarnavap - Self Adhered.

2. Source Limitation: Vapor retarder shall be provided and warranted by the primary roofing manufacturer.

B. Vapor retarder shall be applied over all decks, whether indicated or not.

1. On steel decks, use a minimum 22-gauge galvanized steel plate to support the vapor retarder end lap between metal flutes ensuring a complete end lap seal.

2.6 SUBSTRATE BOARDS

A. Substrate Boards: Fire-tested, substrate boards, supplied by PVC membrane roofing manufacturer, compatible with membrane application specified, of thickness indicated, and are listed in evaluation report(s) and/or test data.

1. Substrate Board: ASTM C 1278, gypsum-fiber-reinforced, water-resistant gypsum substrate.
2. Source Limitation: Substrate board shall be provided and warranted by the primary roofing manufacturer.

B. Adhesive: Roofing manufacturer’s proprietary two-component polyurethane-based low rise foam adhesive used in attaching insulation boards to the roof deck and cover boards.

C. Fasteners: Factory-coated corrosion-resistant steel fasteners and corrosion-resistant metal plates, designed for fastening insulation and cover boards to substrate, and acceptable to roofing system manufacture.

2.7 ROOF INSULATION

A. General: Preformed roof insulation boards manufactured by PVC roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated and that are listed in evaluation report(s) and/or test data.

B. Polyisocyanurate Board Insulation [I-6]: ASTM C 1289, Type II, Class 1, Grade 2.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Sarnfail, Inc.; Sarnatherm.

1) Thickness: Provide in thickness indicated on Drawings, but no less that thickness required to achieve a minimum thermal resistance of R-25 per the project energy model.
2) Maximum Flame Spread: Not greater than 75 per ASTM E 84, at the maximum thickness intended for use.

2. Source Limitation: Insulation shall be provided and warranted by the primary roofing manufacturer.

C. Tapered Insulation: Provide factory-tapered insulation boards fabricated to minimum slope of 1/4 inch per 12 inches unless otherwise indicated.

D. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

2.8 INSULATION ACCESSORIES

A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with roofing.

B. Fasteners: Factory-coated corrosion-resistant steel fasteners and metal or plastic plates, designed for fastening roof insulation and cover boards to substrate, and acceptable to roofing system manufacturer.

C. Insulation Adhesive: As required by roofing manufacturer to meet the performance requirements and warranty duration indicated. Roofing manufacturer’s proprietary two-component polyurethane-based low rise foam adhesive used in attaching insulation boards to the roof deck and cover boards.

2.9 COVER BOARDS

A. Cover Board: Factory-primed fire-tested cover boards, supplied by PVC membrane roofing manufacturer, compatible with membrane application specified, of thickness indicated, and that are listed in evaluation report(s) and/or test data.

1. Substrate Board: ASTM C 1278, gypsum-fiber-reinforced, water-resistant gypsum substrate.
2. Source Limitation: Cover boards shall be provided and warranted by the primary roofing manufacturer.

B. Adhesive: Roofing manufacturer’s proprietary two-component polyurethane-based low rise foam adhesive used in attaching insulation boards to the roof deck and cover boards.

C. Fasteners: Factory-coated corrosion-resistant steel fasteners and corrosion-resistant metal plates, designed for fastening insulation and cover boards to substrate, and acceptable to roofing system manufacture.

2.10 WALKWAYS

A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, slip-resisting, surface-textured walkway pads or rolls, approximately 3/16 inch thick and acceptable to roofing system manufacturer.

2.11 ACCESSORIES

A. Provide separator felts where required to separate roofing membrane from contact with asphalt, coal tar pitch or any petroleum based product.

B. Membrane Leak-Detection System: Conductor cable, placed on top of membrane, delivering direct current tension to membrane surface, enabling inspection and isolation of points of moisture infiltration through membrane to conductive substrate under membrane.

1. Measurement Grid: Highly conductive stainless steel wire measurement grid located under membrane and above non-conductive membrane substrate, connected through contact plate and cable to connection box accepting low-voltage charge from portable pulse generator. Include conductor cable, measurement grid, connection box, and accessories for a complete membrane leak-detection system.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work:

1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
2. Verify that blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Section 053100 "Steel Decking."
4. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
5. Verify that concrete substrate is visibly dry and free of moisture.

a. Moisture Testing: Test for moisture using the methods indicated below or as recommended by PVC roofing manufacturer.

1) Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method: ASTM D 4263.
2) Anhydrous Calcium Chloride Test: ASTM F 1869.
3) Internal Relative Humidity Test: Using in situ probes, ASTM F 2170.

b. Where moisture levels exceed manufacturer's written limitations, implement remedial action(s) recommended by PVC roofing manufacturer. Proceed with installation only after substrates pass testing.

6. Verify that concrete-curing compounds that will impair adhesion of roofing components to roof deck have been removed.
7. Verify that curbs, pipes, conduits, and other roof penetrations are of adequate height to allow a minimum 8 inches of flashing height.
8. Prior to installation of vapor retarder, verify that steel deck and substrate boards are not damaged, substrate tolerance comply with manufacturer’s written requirements, and substrates are suitable to receive vapor retarder.

B. Examine stored materials before installation. Reject materials that are wet, moisture damaged, and/or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.

B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.

C. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.

D. Sharp ridges or other projections above the surface of the roof shall be removed before roofing. A concrete surface profile of CSP 3 to CSP 6 is required. Achieve concrete surface profile in accordance with the ICRI Technical Guideline No. 310.2R-2013.

3.3 VAPOR RETARDER

A. Over Structural Concrete and Steel Deck Substrates: Install self-adhered vapor retarder over a clean and dry substrate. In concrete applications, allow concrete to cure for a least 7 days. Do not install when it is raining, snowing, or on wet / humid surfaces. Install in temperatures 32 degrees F and above. The use of a primer is required on the following substrates: concrete, lightweight concrete, gypsum boards and decks, and Dens Deck boards.

B. Over Other Deck Substrates: Install self-adhered vapor retarder over a clean and dry deck. Do not install when it is raining, or on wet / humid surfaces. Install in temperatures 32 degrees F and above. Prime decks in accordance with manufacturer’s written instructions.

C. Install vapor retarder in accordance with manufacturer’s written instructions.

D. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into roofing system.

E. Prior to covering vapor retarder, inspect the surface for damage. Repair all damage to maintain continuous vapor retarder.

3.4 SUBSTRATE BOARD INSTALLATION

A. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.

1. Fasten substrate board to deck to resist uplift pressure at corners, perimeter, and field of roof according to roofing system manufacturers' written instructions and test reports.

3.5 INSULATION INSTALLATION

A. Coordinate installing roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.

B. Comply with roofing system and insulation manufacturer's written instructions for installing roof insulation.

C. Install tapered insulation under area of roofing to conform to slopes indicated. Coordinate insulation valley locations with roof penetrations; relocate valley slightly upslope to prevent penetrations within 12 inches of valley centerline.

D. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.5 inches or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches in each direction. Staggered joints shall be maintained at daily terminations. Joints in subsequent layers shall not align.

E. At roof drains, do not trim insulation. Use insulation sumps, minimum 4-foot square, so completed surface is flush and does not restrict flow of water.

F. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch with insulation.

1. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.

G. Adhered Insulation Over Vapor Barrier Over Structural Concrete Deck: Install each layer of insulation and adhere to substrate as follows:

1. Adhere insulation according to manufacturer's written installation instructions and test reports.
2. Adhere insulation to comply with performance requirements at corner, perimeter, and field of roof.

H. Mechanically Fastened Insulation Over Vapor Retarder Over Structural Concrete Deck: Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.

1. Adhere insulation according to manufacturer's written installation instructions and test reports.
2. Fasten insulation to resist uplift pressure at corners, perimeter, and field of roof.

3.6 COVER BOARD

A. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches in each direction.

1. Structural Concrete Substrates: Adhere cover boards to insulation according to manufacturer's written installation instructions and test reports. Adhere cover boards to insulation to comply with performance requirements at corners, perimeter, and field of roof.
2. Steel Deck Substrates: Fasten cover boards to insulation and steel deck according to manufacturer's written installation instructions and test reports. Fasten cover boards to insulation and steel deck to comply with performance requirements at corners, perimeter, and field of roof.
3. Cut cover board along valley lines to preserve valley slope. Trim sheets for tight fit or gap as required by cover board manufacturer.

3.7 ROOFING INSTALLATION, GENERAL

A. Install roofing system according to roofing system manufacturer's written instructions, unless more stringent requirements apply based upon tested assemblies representative of that indicated for this Project.

B. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at end of workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.

C. Coordinate installation of roofing materials so that substrate boards, insulation, cover boards, and other similar roofing materials are not exposed to precipitation or left exposed at the end of the workday.

3.8 FULLY-ADHERED ROOFING MEMBRANE INSTALLATION

A. Adhere roofing over area to receive roofing according to roofing system manufacturer's written instructions. Unroll roofing and allow to relax before retaining.

1. Install sheet according to ASTM D 5036.

B. Start installation of roofing in presence of roofing system manufacturer's technical personnel.

C. Accurately align roofing, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.

D. Bonding Adhesive: Apply to substrate and underside of roofing at rate required by manufacturer, and allow to partially dry before installing roofing. Do not apply to splice area of roofing. Where recommended by the roofing manufacturer, roll membrane with proper roller to gain full adhesion and eliminate wrinkles, blisters, and other unadhered portions of roofing membrane.

E. In addition to adhering, mechanically fasten roofing securely at terminations, penetrations, and perimeter of roofing as required by roof membrane manufacturer.

F. Apply membrane roofing with side laps shingled with slope of roof deck where possible.

G. Seams: Clean seam areas, overlap roofing, and hot-air weld side and end laps of roofing and sheet flashings according to manufacturer's written instructions, to ensure a watertight seam installation.

1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet.
2. Verify field strength of seams a minimum of twice daily, and repair seam sample areas.
3. Repair tears, voids, and lapped seams in roofing that do not comply with requirements.

H. Spread sealant bed over deck-drain flange at roof drains, and securely seal roofing in place with clamping ring.

I. Install perimeter bar at 4-feet and 8-feet spacing with cover strip throughout building perimeter only as required to satisfy wind speed warranty requirement.

3.9 BASE FLASHING INSTALLATION

A. Install sheet flashings and preformed flashing accessories, and adhere to substrates according to roofing system manufacturer's written instructions.

B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate, and allow to partially dry. Do not apply to seam area of flashing. Where recommended by the roofing manufacturer, roll membrane flashing with proper roller to gain full adhesion and eliminate wrinkles, blisters, and other unadhered portions of roofing membrane.

C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.

1. Use prefabricated membrane boots to the greatest extent possible, with field-wrapped flashings only as a last option when no other flashing is adequate.

D. Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive. Hot-air weld side and end laps to ensure a watertight seam installation.

E. Terminate and seal top of sheet flashings and mechanically anchor to substrate at 8 inches on center maximum through termination bars.

F. Coordinate flashing installation with adjoining air/weather barrier, sealant, etc. to ensure that system is fully and continuously air and water tight.

3.10 WALKWAY INSTALLATION

A. Flexible Walkways: Install walkway products in locations indicated. Heat weld to substrate or adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.

1. Do not install walkways in a manner or location that will impede drainage.

3.11 ELECTRONIC LEAK DETECTION GRID INSTALLATION

A. Measurement Grid: Install measurement grid on membrane substrate immediately under membrane and immediately prior to installation of membrane.

1. Verify that location of measurement grid fasteners does not interfere with or cause damage to membrane.
2. Fasten measurement grid in accordance with leak detection system manufacturer's requirements.
3. Do not place measurement grid where it will be in continuous direct contact with structural components.
4. Provide minimum 2 inch overlap where adjacent sheets meet, including side laps and end laps.
5. Cut measurement grid as close as possible to the perpendicular strand at both end and side edges

B. Conductor Wire: Install conductor wire on top of membrane at spacing and layout indicated on approved shop drawings.

C. Secure conductor wire using method recommended by manufacturer.

3.12 FIELD QUALITY CONTROL (BY OWNER)

A. Testing Agency: Owner will engage a qualified testing agency to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components, and to furnish reports to Architect.

1. Electric Field Vector Mapping (EFVM): Testing agency shall survey entire roof area for potential leaks using electric field vector mapping (EFVM).
2. Other testing protocols may be implemented at the discretion of the testing agency to evaluate installed conditions.

B. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.

C. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.13 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer's Field Services: Manufacturer's technical representative shall provide technical assistance and guidance for preparation and application of PVC roofing system. At a minimum, arrange for manufacturer's technical representative to observe PVC roofing system during mockup, first 20 squares of membrane and flashing installation, at mid-point of the installation, and at completion. Provide additional field observations as required to obtain warranty specified and when requested by Architect or Construction Manager. After each field visit, submit manufacturer's written report of observations within 3 working days. The report shall note overall quality of work, deficiencies, any other concerns, and recommended corrective action.

B. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.

C. Roof Drain Test: After completing roofing, but prior to Substantial Completion, perform the following test for watertightness. Plug roof drains and fill with water to edge of drain sump for 8 hours. Do not plug secondary overflow drains at the same time as adjacent primary drain. To ensure some drainage from roof, do not test all drains at the same time. Measure water at beginning and end of the test period. When precipitation occurs during test period, repeat test. When water level falls, remove water, thoroughly dry, and inspect installation; repair or replace roofing at drain to provide for a properly installed watertight flashing seal. Repeat test until there is no water leakage.

1. When testing overflow drains, confirm that overflow drains are operating as intended.
2. Owner will engage an independent testing agency to observe roof drain test and examine underside of decks and terminations for evidence of leaks during roof drain testing.

D. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.

E. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.14 PROTECTING AND CLEANING

A. Protect roofing system from damage and wear during remainder of construction period. When remaining construction does not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.

B. Coordinate with trades that will be working on or near the completed roof assembly. If areas if roofing are damaged despite protection, identify and mark damaged areas for temporary and permanent repair.

C. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

D. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 075419

SECTION 076200 - SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Formed Products:

a. Formed low-slope roof sheet metal fabrications.
b. Formed wall sheet metal fabrications.
c. Formed equipment support flashing.

B. Related Requirements:

1. Section 072713 "Modified Bituminous Sheet Air Barriers" for flashing material provided as part of air and weather barrier systems.
2. Section 074646 "Fiber-Cement Siding" for flashing material provided as part of fiber-cement siding systems.
3. Section 075419 "Polyvinyl-Chloride (PVC) Roofing" for coordination with roofing system and accessories.
4. Section 077101 "Manufacturer Copings" for prefabricated manufactured copings.
5. Section 077273 "Vegetated Roofing Systems" for coordination with vegetated roofing system and accessories.
6. Section 079200 "Joint Sealants" for coordination with joint sealants.
7. Division 08 Section(s) for coordination with fenestration and door openings.
8. Section 092400 "Cement Plastering" for coordination of sheet metal flashing and trim with exterior cement plastering systems.

1.3 DEFINITIONS

A. ANSI: American National Standards Institute.

1. ANSI SPRI ES-1: Wind Design Standard for Edge Systems Used with Low Slope Roofing Systems.

B. NRCA: National Roofing Contractors' Association.

1. NRCA Roofing Manual - 2017 Edition.

C. SMACNA: Sheet Metal and Air Conditioning Contractors' National Association.

1. SMACNA Architectural Sheet Metal Manual, 7th Edition.

1.4 COORDINATION

A. Coordinate sheet metal flashing and trim layout and seams with sizes and location of penetrations to be flashed, and joints and seams in adjacent materials.

B. Coordinate sheet metal flashing and trim installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, noncorrosive, and warrantable (where part of another warrantied system) installation.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct at Project site.

1. Meet with Owner, Construction Manager, Architect, envelope consultant, sheet metal foreman and other adjoining trades and conduct a building envelope coordination meeting.
2. Review the following:

a. Construction schedule.
b. Verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
c. Special roof details, roof drainage, roof-penetration flashing, equipment curbs, and condition of other construction that affect sheet metal flashing and trim.
d. Approved sheet metal submittals and Shop Drawings.
e. Requirements for insurance and certificates if applicable.
f. Sheet metal flashing observation and repair procedures after flashing installation.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each manufactured product and accessory.

B. Shop Drawings: Provide project-specific shop drawings for sheet metal flashing and trim.

1. Include plans, elevations, sections, and attachment details.
2. Detail fabrication and installation layouts, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled work.
3. Include identification of material, thickness, weight, and finish for each item and location in Project.
4. Include details for forming, including profiles, shapes, seams, and dimensions.
5. Include details for joining, supporting, and securing, including layout of fasteners, cleats, clips, and other attachments. Include pattern of seams.
6. Include details of termination points and assemblies.
7. Include details of roof-penetration flashing.
8. Include details of edge conditions, including crickets and counterflashings as applicable.
9. Include details of special conditions.
10. Include details of connections to adjoining work.
11. Detail formed flashing and trim at a scale of not less than 3 inches per foot.

C. Samples: For each type of exposed finish required, prepared on Samples of size indicated below:

1. Sheet Metal Flashing: 12 inches long by actual width of unit, including finished seam and in required profile. Include fasteners, cleats, clips, closures, and other attachments.
2. Trim, Metal Closures, Expansion Joints, Joint Intersections, and Miscellaneous Fabrications: 12 inches long and in required profile. Include fasteners and other exposed accessories.
3. Accessories and Miscellaneous Materials: Full-size Sample.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified fabricator.

B. Product Certificates: For each type of roof edge flashing that is SPRI ES-1 tested as part of roof edge securement.

C. Sample Warranty: For special warranty.

1.8 CLOSEOUT SUBMITTALS

A. Maintenance Data: For sheet metal flashing, trim, and accessories to include in maintenance manuals.

1.9 QUALITY ASSURANCE

A. Fabricator Qualifications: An architectural sheet metal flashing and trim installation firm with not less than 10 years' experience with work similar in material, design, and extent to that indicated for this Project, and whose work has resulted in installations with a record of successful in-service performance.

1. For copings and roof edge flashings that are SPRI ES-1 tested, shop shall be listed as able to fabricate required details as tested and approved.

B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Description: Incorporate sheet metal flashing and trim into integrated exterior mockup per Section 014000 "Quality Requirements."
2. Testing shall be performed on mockups according to requirements specified in other Sections.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

C. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage. Store sheet metal flashing and trim materials away from uncured concrete and masonry.

B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to the extent necessary for the period of sheet metal flashing and trim installation.

1.11 WARRANTY

A. Special Warranty on Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace sheet metal flashing and trim that shows evidence of deterioration of factory-applied finishes within specified warranty period.

1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General: Sheet metal flashing and trim assemblies shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight and prevent water intrusion into building interior.

B. Sheet Metal Standard for Flashing and Trim: Comply with NRCA's "The NRCA Roofing Manual" and SMACNA's "Architectural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.

C. SPRI Wind Design Standard: Where part of roof edge securement, manufacture and install sheet metal flashing and trim tested according to SPRI ES-1 and capable of resisting the following design pressures:

1. Design Pressure: Per the 2016 California Building Code based upon maximum wind speed criteria indicated on the Structural Drawings.

D. Thermal Movements: Provide sheet metal flashing and trim that allows for thermal movements from ambient and surface temperature changes.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F material surfaces.

2.2 SHEET METALS

A. General: Protect mechanical and other finishes on exposed surfaces from damage by applying a strippable, temporary protective film before shipping.

B. Sheet Metal Selection: Provide sheet metals as indicated on Drawings and as specified. Where not indicated on Drawings, select sheet metal based on the performance requirements and limitations specified herein.

C. Aluminum Sheet: ASTM B 209, alloy as standard with manufacturer for finish required, with temper as required to suit forming operations and performance required.

1. Exposed Coil-Coated Finishes:

a. Three-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
b. Color: Custom color to match Architect's sample.

2. Aluminum flashing shall be used in areas exposed to view, but shall not be used in any below-grade applications, nor shall it be used in any locations subject to contact with concrete surfaces.

D. Stainless-Steel Sheet: ASTM A 240, Type 304 (where concealed from view), Type 316 (where exposed to view), dead soft, fully annealed.

1. Exposed to View Finish: No. 4 (polished directional satin).
2. Concealed from View Finish: No. 2B or 2D.
3. Stainless steel sheet shall be used in concealed applications, in below-grade conditions, and in areas subject to contact with concrete.

E. Metallic-Coated Steel Sheet (Galvanized): Provide zinc-coated (galvanized) steel sheet: ASTM A 653, G90 coating designation.

1. Surface: Smooth, flat.
2. Galvanized sheet steel shall be limited to rooftop applications only, and that are not visible from any vantage point on the site, nor visible from any vantage point from within the building.
3. Galvanized sheet steel shall not be installed:
   a. In locations subject to contact with concrete.
   b. In locations subject to soil (i.e. vegetated/green roof systems).
   c. In any below-grade conditions.

2.3 UNDERLAYMENT MATERIALS

A. In Conjunction with Roofing: As specified in Section 075419 "Polyvinyl Chloride (PVC) Roofing."

B. In Conjunction with Waterproofing: As specified in other Division 07 waterproofing sections.

C. In Conjunction with Vegetated Roof: As specified in Section 077273 "Vegetated Roof Systems."

D. In Conjunction with Exterior Walls: As specified in Section 072713 "Modified Bituminous Sheet Air Barriers."

2.4 MISCELLANEOUS MATERIALS

A. General: Provide materials and types of fasteners, solder, protective coatings, separators, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and recommended by manufacturer of primary sheet metal unless otherwise indicated.

B. Fasteners: Screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal.

1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.

a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating.
b. Blind Fasteners: High-strength aluminum or stainless-steel rivets suitable for metal being fastened.

2. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
3. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.
4. Fasteners for Zinc-Coated (Galvanized) Steel Sheet: Hot-dip galvanized steel according to ASTM A 153 or ASTM F 2329 or Series 300 stainless steel. Coat with Elco Stalgard corrosion resistant protective coating or similar product.

C. Solder: Provide soldered metal flashing at all pan-type flashing applications and non-moving seams required to be watertight.

1. For Stainless Steel: ASTM B 32, Grade Sn60, with an acid flux of type recommended by stainless-steel sheet manufacturer.
2. For Zinc-Coated (Galvanized) Steel: ASTM B 32, Grade Sn50, 50 percent tin and 50 percent lead or Grade Sn60, 60 percent tin and 40 percent lead.

D. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.

E. Elastomeric Sealant: ASTM C 920, elastomeric polymer sealant; low modulus; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

F. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.

G. Epoxy Seam Sealer: Two-part, noncorrosive, aluminum seam-cementing compound, recommended by aluminum manufacturer for exterior nonmoving joints, including riveted joints.

H. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.5 FABRICATION, GENERAL

A. General: Custom fabricate sheet metal flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, geometry, metal thickness, and other characteristics of item indicated. Fabricate items at the shop to greatest extent possible.

1. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
2. Obtain field measurements for accurate fit before shop fabrication.
3. Form sheet metal flashing and trim without excessive oil canning, buckling, and tool marks and true to line and levels indicated, with exposed edges folded back to form hems.
4. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces exposed to view.

B. Fabrication Tolerances: Fabricate sheet metal flashing and trim that is capable of installation to a tolerance of 1/4 inch in 20 feet on slope and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

C. Expansion Provisions: Form metal for thermal expansion of exposed flashing and trim.

1. Form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with butyl sealant concealed within joints.

D. Sealant Joints: Where moveable, nonexpansion-type joints are required, form metal to provide for proper installation of elastomeric sealant according to cited sheet metal standard.

E. Fabricate cleats and attachment devices from same sheet metal material as accessory being anchored or from compatible, noncorrosive metal.

1. Thickness: Unless otherwise indicated, cleats shall be one gauge heavier that the materials being anchored.

a. Roof Edge Securement: For cleats that are part of a roof edge securement system, cleat thickness shall be determined in accordance with ANSI/SPRI performance requirement.

F. Fabricate cleats and attachment devices of sizes as recommended by SMACNA's "Architectural Sheet Metal Manual," but not less than thickness of metal being secured.

G. Seams: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with elastomeric sealant unless otherwise recommended by sealant manufacturer for intended use

H. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer**.**

I. Do not use graphite pencils to mark metal surfaces.

2.6 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

A. Base Flashing: Fabricate from materials indicated on Drawings, or if not indicated, in compliance with “Sheet Metals” Article above:

1. Aluminum: Minimum 0.040 inch thick.
2. Stainless Steel: Minimum 0.019 inch thick.
3. Galvanized Steel: Minimum 0.028 inch thick.

B. Counter Flashing: Fabricate from materials indicated on Drawings, or if not indicated, in compliance with “Sheet Metals” Article above:

1. Aluminum: Minimum 0.032 inch thick.
2. Stainless Steel: Minimum 0.025 inch thick.
3. Galvanized Steel: Minimum 0.022 inch thick.

C. Flashing Receivers and Reglets: Fabricate from materials indicated on Drawings, or if not indicated, in compliance with “Sheet Metals” Article above:

1. Aluminum: Minimum 0.032 inch thick.
2. Stainless Steel: Minimum 0.019 inch thick.
3. Galvanized Steel: Minimum 0.022 thick.

D. Roof Penetration Flashing: Fabricate from materials indicated on Drawings, or if not indicated, in compliance with “Sheet Metals” Article above:

1. Stainless Steel: Minimum 0.019 inch thick.
2. Galvanized Steel: Minimum 0.028 thick.
3. Round Flashings Only: Coordinate with Section 075419 "Polyvinyl-Chloride (PVC) Roofing" for prefabricated PVC penetration flashings and for PVC-clad metal flashings.
4. Pitch pans are not acceptable for use as penetration flashings for this Project.

E. Roof Drain Flashing: Coordinate with Section 075419 "Polyvinyl-Chloride (PVC) Roofing."

2.7 WALL SHEET METAL FABRICATIONS

A. Opening Flashings: Fabricate head, sill, jamb, and similar flashings to extend 4 inches beyond wall openings. Form head and sill flashing with 2-inch- high, end dams. Fabricate from the following materials:

1. Aluminum: 0.032 inch thick, where exposed to view and not in contact with concrete or soil.
2. Stainless Steel: Minimum 0.018 inch thick, where indicated, and where in contact with concrete or soil.

2.8 TRIM

A. Break Metal Enclosures: Fabricate from the following materials:

1. Aluminum: Minimum 0.050 inch thick.
2. Profile: As indicated on Drawings.

2.9 MISCELLANEOUS SHEET METAL FABRICATIONS

A. Equipment Support Flashing: Fabricate from the following materials:

1. Stainless Steel: Minimum 0.019 inch thick.
2. Galvanized Steel: Minimum 0.028 thick.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions and other conditions affecting performance of the Work.

1. Verify compliance with requirements for installation tolerances of substrates.
2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
3. Verify that air- or water-resistant barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 UNDERLAYMENT INSTALLATION

A. In Conjunction with Roofing: As specified in Section 075419 "Polyvinyl Chloride (PVC) Roofing."

B. In Conjunction with Waterproofing: As specified in other Division 07 waterproofing sections.

C. In Conjunction with Vegetated Roof: As specified in Section 077273 "Vegetated Roof Systems."

D. In Conjunction with Exterior Walls: As specified in Section 072713 "Modified Bituminous Sheet Air Barriers."

3.3 INSTALLATION, GENERAL

A. General: Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.

1. Install sheet metal flashing and trim true to line and levels indicated. Provide uniform, neat seams with minimum exposure of solder, welds, and sealant.
2. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.
3. Space cleats not more than 12 inches apart. Anchor each cleat with two fasteners. Bend tabs over fasteners.
4. Install exposed sheet metal flashing and trim without excessive oil canning, buckling, and tool marks.
5. Install sealant tape where indicated.
6. Torch cutting of sheet metal flashing and trim is not permitted.
7. Do not use graphite pencils to mark metal surfaces.

B. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by SMACNA.

1. Coat back side of uncoated aluminum and stainless-steel sheet metal flashing and trim with bituminous coating where flashing and trim will contact wood, ferrous metal, or cementitious construction.
2. Underlayment: Where installing metal flashing directly on cementitious or wood substrates, install high-temperature-rated self-adhering sheet underlayment.

C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently watertight, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with sealant concealed within joints.

D. Fasteners: Use fasteners of sizes that will penetrate metal framing not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.

E. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.

F. Seal joints as shown and as required for watertight construction.

1. Where sealant-filled joints are used, embed hooked flanges of joint members not less than 1 inch into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is moderate, between 40 and 70 deg F, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F.
2. Prepare joints and apply sealants to comply with requirements in Division 7 Section "Joint Sealants."

G. Soldered Joints (At Sill Pan Metal Flashings and Where Indicated): Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets to be soldered to a width of 1-1/2 inches, except reduce pre-tinning where pre-tinned surface would show in completed Work.

1. Do not solder metallic-coated steel and aluminum sheet.
2. Do not use torches for soldering.
3. Heat surfaces to receive solder and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.
4. Stainless-Steel Soldering: Tin edges of uncoated sheets using solder recommended for stainless steel and acid flux. Promptly remove acid flux residue from metal after tinning and soldering. Comply with solder manufacturer's recommended methods for cleaning and neutralization.

3.4 ROOF FLASHING INSTALLATION

A. General: Install sheet metal flashing and trim to comply with performance requirements, sheet metal manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, set units true to line, and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.

B. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof.

3.5 WALL FLASHING INSTALLATION

A. General: Install sheet metal wall flashing to intercept and exclude penetrating moisture according to cited sheet metal standard unless otherwise indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.

3.6 MISCELLANEOUS FLASHING INSTALLATION

A. Equipment Support Flashing: Coordinate installation of equipment support flashing with installation of roofing and equipment. Weld or seal flashing with elastomeric sealant to equipment support member.

B. Overhead-Piping Safety Pans: Suspend pans from structure above, independent of other overhead items such as equipment, piping, and conduit, unless otherwise indicated on Drawings. Pipe and install drain line to plumbing waste or drainage system.

3.7 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feet on slope and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.8 CLEANING AND PROTECTION

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.

B. Clean and neutralize flux materials. Clean off excess solder.

C. Clean off excess sealants.

D. Promptly clean all metal shavings, slivers, excess fasteners including rivet mandrils, from the roof surface to prevent puncture of roof membrane. Identify any holes and mark for permanent repair by roofing installer.

E. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of installation, remove unused materials and clean finished surfaces. Maintain in a clean condition during construction.

F. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 076200

SECTION 077101 - MANUFACTURED COPINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes pre-engineered manufactured copings.

B. Related Requirements:

1. Section 054000 "Cold-Formed Metal Framing" for cold-formed metal blocking and curbs.
2. Section 075419 "Polyvinyl-Chloride (PVC) Roofing" for source limitations for manufactured copings provided under this Section and warranted by roofing system manufacturer.
3. Section 076200 "Sheet Metal Flashing and Trim" for custom- and site-fabricated sheet metal flashing and trim.
4. Section 077200 "Roof Accessories" for set-on-type curbs, equipment supports, roof hatches, vents, and other manufactured roof accessory units.
5. Section 079200 "Joint Sealants" for field-applied sealants between copings and adjacent materials.

C. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Construction Manager, Architect, envelope consultant, roofing-system testing and inspecting agency representative, roofing Installer, roofing-system manufacturer's representative, Installer, structural-support Installer, and installers whose work interfaces with or affects manufactured copings, including installers of roofing materials and accessories.
2. Examine substrate conditions for compliance with requirements, including flatness and attachment to structural members.
3. Review special roof details, roof drainage, and condition of other construction that will affect manufactured copings.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: Provide project-specific shop drawings for manufactured copings.

1. Include plans, elevations, expansion-joint locations, keyed details, and attachments to other work. Distinguish between plant- and field-assembled work.
2. Include details for expansion and contraction; locations of expansion joints, including direction of expansion and contraction.
3. Indicate profile and pattern of seams and layout of fasteners, cleats, clips, and other attachments.
4. Detail termination points and assemblies, including fixed points.
5. Include details of special conditions.
6. If manufacturer’s coping system is not pre-engineered to meet performance requirements, provide shop drawings and analysis data stamped and signed by the qualified California-licensed professional engineer responsible for their preparation.

C. Samples for Initial Selection: For each type of roof specialty indicated with factory-applied color finishes.

D. Samples for Verification:

1. Include Samples of each type of roof specialty to verify finish and color selection, in manufacturer's standard sizes.
2. Include copings made from 12-inch lengths of full-size components in specified material, and including fasteners, cover joints, accessories, and attachments.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Certificates: For each type of manufactured coping that is SPRI ES-1 tested.

C. Product Test Reports: For copings, for tests performed by a qualified testing agency.

D. Sample Warranty: For manufacturer's special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For roofing specialties to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of manufactured copings that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall offer products meeting requirements that are and SPRI ES-1 tested to specified design pressure.

B. Installer Qualifications: A firm with not less than 10 years' experience installing manufactured copings similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and set quality standards for fabrication and installation.

1. Build mockup of typical roof edge as part of Integrated Exterior Mockup specified in Section 014000 "Quality Requirements"
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Do not store manufactured copings in contact with other materials that might cause staining, denting, or other surface damage. Store manufactured copings away from uncured concrete and masonry.

B. Protect strippable protective covering on manufactured copings from exposure to sunlight and high humidity, except to extent necessary for the period of roof-specialty installation.

1.8 FIELD CONDITIONS

A. Field Measurements: Verify profiles and tolerances of roof-specialty substrates by field measurements before fabrication, and indicate measurements on Shop Drawings.

B. Coordination: Coordinate manufactured copings with flashing, trim, and construction of parapets, roof deck, roof and wall panels, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.9 WARRANTY

A. Roofing-System Warranty: Manufactured copings are included in warranty provisions in Section 075419 “Polyvinyl-Chloride (PVC) Roofing.”

B. Special Warranty on Painted Finishes: Manufacturer agrees to repair finish or replace manufactured copings that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

1. Sika Sanrafil, Inc. “Wall Grip Coping Plus.”

B. Source Limitations: Obtain manufactured copings approved by manufacturer providing roofing-system warranty specified in Section 075419 “Polyvinyl-Chloride (PVC) Roofing.”

2.2 PERFORMANCE REQUIREMENTS

A. General Performance: Manufactured copings shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.

B. SPRI Wind Design Standard: Manufacture and install copings and roof-edge specialties tested according to SPRI ES-1 and capable of resisting the following design pressures:

1. Design Pressure: Per the 2016 California Building Code based upon maximum wind speed criteria indicated on the Structural Drawings.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Provide clips that resist rotation and avoid shear stress as a result of thermal movements. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

2.3 COPINGS

A. Metal Copings: Manufactured coping system consisting of metal coping cap in section lengths not exceeding 12 feet, concealed anchorage; with corner units, end cap units, and concealed splice plates with finish matching coping caps.

1. Formed Aluminum Sheet Coping Caps: Aluminum sheet, minimum 0.050 inch thick.

a. Surface: Smooth, flat finish.
b. Finish: Three-coat fluoropolymer.
c. Color: Custom color to match Architect's sample.

2. Corners: Factory mitered and sealed watertight.
3. Coping-Cap Attachment Method: Snap-on, fabricated from coping-cap material.

a. Snap-on Coping Anchor Plates: Concealed, galvanized-steel sheet, 12 inches wide, with integral cleats.

1) Thickness: As required to meet performance requirements, but no less than nominal 16 gauge.

2.4 MATERIALS

A. Aluminum Sheet: ASTM B 209, alloy as standard with manufacturer for finish required, with temper to suit forming operations and performance required.

B. Aluminum Extrusions: ASTM B 221, alloy and temper recommended by manufacturer for type of use and finish indicated, finished as follows:

2.5 UNDERLAYMENT MATERIALS

A. At Roofing Locations: Extend roof membrane material up and over parapet wall to form underlayment below coping. Coordinate with Section 075419 “Polyvinyl-Chloride (PVC) Roofing.”

B. At Non-Roof Locations: As specified in Section 072713 "Modified Bituminous Sheet Air Barriers."

2.6 MISCELLANEOUS MATERIALS

A. Fasteners: Manufacturer's recommended fasteners, suitable for application and designed to meet performance requirements. Furnish the following unless otherwise indicated:

1. Exposed Penetrating Fasteners: Gasketed screws with hex washer heads matching color of sheet metal.
2. Fasteners for Aluminum: Aluminum or Series 300 stainless steel.

B. Elastomeric Sealant: ASTM C 920, elastomeric silicone polymer sealant of type, grade, class, and use classifications required by roofing-specialty manufacturer for each application.

C. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type joints with limited movement.

D. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.7 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

D. Coil-Coated Aluminum Sheet Finishes:

1. High-Performance Organic Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

a. Three-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1) Color: Custom color to match Architect’s sample.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.

B. Examine walls, roof edges, and parapets for suitable conditions for manufactured copings.

C. Verify that substrate is sound, dry, smooth, clean, sloped for drainage where applicable, and securely anchored.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 UNDERLAYMENT INSTALLATION

A. At Roof Locations: Extend roof flashing membrane up and over parapet wall forming underlayment for coping. Comply with Section 075419 “Polyvinyl-Chloride (PVC) Roofing.”

B. At Non-Roof Locations: As specified in Section 072713 "Modified Bituminous Sheet Air Barriers."

3.3 INSTALLATION, GENERAL

A. General: Install manufactured copings according to manufacturer's written instructions. Anchor manufactured copings securely in place, with provisions for thermal and structural movement. Use fasteners, solder, protective coatings, separators, underlayments, sealants, and other miscellaneous items as required to complete roof-specialty systems.

1. Install manufactured copings level, plumb, true to line and elevation; with limited oil-canning and without warping, jogs in alignment, buckling, or tool marks.
2. Provide uniform, neat seams with minimum exposure of solder and sealant.
3. Install manufactured copings to fit substrates and to result in weathertight performance. Verify shapes and dimensions of surfaces to be covered before manufacture.
4. Torch cutting of manufactured copings is not permitted.
5. Do not use graphite pencils to mark metal surfaces.

B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.

1. Coat concealed side of uncoated aluminum manufactured copings with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
2. Bed flanges in thick coat of asphalt roofing cement where required by manufacturers of manufactured copings for waterproof performance.

C. Expansion Provisions: Allow for thermal expansion of exposed manufactured copings.

1. Space movement joints at a maximum of 12 feet with no joints within 18 inches of corners or intersections unless otherwise indicated on Drawings.
2. When ambient temperature at time of installation is between 40 and 70 deg F, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures.

D. Fastener Sizes: Use fasteners of sizes that penetrate substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance and complying with performance requriements.

E. Seal concealed joints with butyl sealant as required by roofing-specialty manufacturer.

F. Seal joints as required for weathertight construction. Place sealant to be completely concealed in joint. Do not install sealants at temperatures below 40 deg F.

3.4 COPING INSTALLATION

A. Install manufactured coping system in accordance with manufacturer’s written installation instructions.

B. Install cleated anchor plates, and other anchoring and attachment accessories and devices with concealed fasteners.

C. Anchor copings with manufacturer's required devices, fasteners, and fastener spacing to meet performance requirements.

1. Interlock face and back leg drip edges of snap-on coping cap into cleated anchor plates anchored to substrate at manufacturer's required spacing that meets performance requirements.

3.5 CLEANING AND PROTECTION

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.

B. Clean off excess sealants.

C. Remove temporary protective coverings and strippable films as manufactured copings are installed. On completion of installation, clean finished surfaces, including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain manufactured copings in a clean condition during construction.

D. Replace manufactured copings that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

END OF SECTION 077101

SECTION 077200 - ROOF ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Roof hatches.
2. Roof hatch guards.

B. Related Requirements:

1. Section 055000 "Metal Fabrications" for metal vertical ladders.
2. Section 076000 "Sheet Metal Flashing and Trim" for shop- and field-fabricated metal flashing and counterflashing, and miscellaneous sheet metal trim and accessories.

1.3 COORDINATION

A. Coordinate layout and installation of roof accessories with roofing membrane and base flashing and interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.

B. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of roof accessory.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: Provide project-specific shop drawings for roof accessories.

1. Include plans, elevations, keyed details, and attachments to other work. Indicate dimensions, loadings, and special conditions. Distinguish between plant- and field-assembled work.

C. Samples: For each exposed product and for each color and texture specified, prepared on Samples of size to adequately show color.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Coordination Drawings: Roof plans, drawn to scale, and coordinating penetrations and roof-mounted items. Show the following:

1. Size and location of roof accessories specified in this Section.
2. Method of attaching roof accessories to roof or building structure.
3. Other roof-mounted items including mechanical and electrical equipment, ductwork, piping, and conduit.
4. Required clearances.

C. Sample Warranty: For manufacturer’s special warranties.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of roof accessories (including roof hatches) that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports.

B. Installer Qualifications: A firm with not less than 5 years' experience installing roof accessories similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1.7 CLOSEOUT SUBMITTALS

A. Operations and Maintenance Data: For roof accessories to include in operation and maintenance manuals.

1.8 WARRANTY

A. Special Warranty on Painted Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace roof accessories that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General Performance: Roof accessories shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.

B. Sheet Metal Standard: Comply with SMACNA's "Architectural Sheet Metal Manual" details for fabrication of units, including flanges and cap flashing to coordinate with type of roofing indicated.

C. Roof hatches, associated accessories, and hatch guard railing systems shall meet or exceed OSHA and CALOSHA regulations.

2.2 ROOF HATCHES

A. Roof Hatches: Fabricate roof hatches with insulated double-wall lids and insulated wall frame with integral deck mounting flange and lid frame counterflashing. Fabricate with welded or mechanically fastened and sealed corner joints. Provide continuous weathertight perimeter gasketing and equip with corrosion-resistant or hot-dip galvanized hardware.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Bilco Company (The): Type S-50-TB Roof Hatch.

Or a comparable product by one of the following, subject to compliance with requirements herein and with Division 1 Section "Product Requirements:"

b. J.L. Industries, Inc.
c. Nystrom.

2. Type and Size: Single-leaf lid, 30 by 36 inches.
3. Performance characteristics:

    a. Cover and curb shall be thermally broken to prevent heat transfer between interior and exterior surfaces.
    b. Cover shall be reinforced to support a minimum live load of 40 psf with a maximum deflection of 1/150th of the span or 20 psf wind uplift.
    c. Operation of the cover shall be smooth and easy with controlled operation throughout the entire arc of opening and closing.
    d. Operation of the cover shall not be affected by temperature.
    e. Entire hatch shall be weather tight with fully welded corner joints on cover and curb.

4. Cover: Shall be 11 gauge aluminum with a 5" beaded flange with formed reinforcing members. Interior and exterior surfaces shall be thermally broken to minimize heat transfer and to resist condensation. Cover shall have a heavy extruded EPDM rubber gasket bonded to the cover interior to assure a continuous seal when compressed to the top surface of the curb.
5. Curb: Shall be 12" in height and of 11 gauge aluminum. Interior and exterior surfaces shall be thermally broken to minimize heat transfer and to resist condensation. The curb shall be formed with a 5-1/2" flange with 7/16" holes provided for securing to the roof deck. The curb shall be equipped with an integral metal capflashing of the same gauge and material as the curb, fully welded at the corners, that features the Bil-Clip® flashing system, including stamped tabs, 6" on center, to be bent inward to hold single ply roofing membrane securely in place.
6. Curb insulation: Shall be 3" thick polyisocyanurate with an R-value = 18.
7. Lifting mechanisms: Manufacturer shall provide compression spring operators enclosed in telescopic tubes to provide, smooth, easy, and controlled cover operation throughout the entire arc of opening and closing. The upper tube shall be the outer tube to prevent accumulation of moisture, grit, and debris inside the lower tube assembly. The lower tube shall interlock with a flanged support shoe welded to the curb assembly.
8. Hardware

    a. Heavy stainless steel pintle hinges shall be provided
    b. Cover shall be equipped with a spring latch with interior and exterior turn handles
    c. Roof hatch shall be equipped with interior and exterior padlock hasps.
    d. The latch strike shall be a stamped component bolted to the curb assembly.
    e. Cover shall automatically lock in the open position with a rigid hold open arm equipped with a 1" diameter red vinyl grip handle to permit easy release for closing.
    f. Compression spring tubes shall be an anti-corrosive composite material and all other hardware shall be type 316 stainless steel.
    g. Cover hardware shall be bolted into heavy gauge channel reinforcing welded to the underside of the cover and concealed within the insulation space.

9. Finish: Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

    a. Color and Gloss: Custom color to match Architect's sample.

B. Ladder Safety Post: Manufacturer's standard ladder safety post. Post to lock in place on full extension. Provide release mechanism to return post to closed position.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

    a. Bilco Company (The): "LadderUP Safety Post."

    Or a comparable product by one of the following:

    b. J.L. Industries, Inc.
    c. Nystrom.
    d. Or Comparable Equal.

2.3 ROOF HATCH GUARDS

A. Safety Railing System: Manufacturer's standard complete system including rails, clamps, fasteners, safety barrier at railing opening, and all accessories required for a complete installation.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Bilco Company (The): "Bil-Guard Hatch Railing System."

Or a comparable product by one of the following:

b. J.L. Industries, Inc.
c. Nystrom.
d. Or Comparable Equal.

2. Height: 42" inches above finished roof deck.

2.4 METAL MATERIALS

A. Galvanized Steel Sheet: ASTM A 653, G90 coated.

1. Factory Prime Coating: Where field painting is indicated, apply pretreatment and white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum dry film thickness of 0.2 mil.

B. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792, AZ50 coated.

C. Prepainted, Metallic-Coated Steel Sheet: Steel sheet metallic coated by hot-dip process and prepainted by coil-coating process to comply with ASTM A 755.

1. Galvanized Steel Sheet: ASTM A 653, G90 coated.
2. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792, Class AZ50 coated.

D. Aluminum Sheet: ASTM B 209, alloy and temper recommended by manufacturer for type of use and finish.

E. Aluminum Extrusions and Tubes: ASTM B 221, alloy and temper recommended by manufacturer for type of use, mill finished.

F. Stainless-Steel Shapes or Sheet: ASTM A 240 or ASTM A 666, Type 304 or Type 316, No. 2D finish.

G. Steel Shapes: ASTM A 36, hot-dip galvanized to comply with ASTM A 123, unless otherwise indicated.

H. Steel Tube: ASTM A 500, round tube, baked-enamel finished.

I. Galvanized Steel Tube: ASTM A 500, round tube, hot-dip galvanized to comply with ASTM A 123.

J. Galvanized Steel Pipe: ASTM A 53.

2.5 MISCELLANEOUS MATERIALS

A. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil (0.4-mm) dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

B. Glass-Fiber Board Insulation: ASTM C 726, thickness as indicated.

C. Polyisocyanurate Board Insulation: ASTM C 1289, thickness as indicated.

D. Felt: ASTM D 226, Type II (No. 30), asphalt-saturated organic felt, nonperforated.

1. Slip Sheet: Rosin-sized paper, minimum 3 lb/100 sq. ft

E. Fasteners: Same metal as metals being fastened, or nonmagnetic stainless steel or other noncorrosive metal as recommended by roof accessory manufacturer. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners.

F. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, or PVC; or flat design of foam rubber, sponge neoprene, or cork.

G. Elastomeric Sealant: ASTM C 920, silicone sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

H. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant, polyisobutylene plasticized, and heavy bodied for hooked-type expansion joints with limited movement.

I. Roofing Cement: ASTM D 4586, nonasbestos, fibrated asphalt cement designed for trowel application or other adhesive compatible with roofing system.

2.6 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of Work.

B. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored and is ready to receive roof accessories.

C. Verify dimensions of roof openings for roof accessories.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install roof accessories according to manufacturer's written instructions.

1. Anchor roof accessories securely in place so they are capable of withstanding indicated loads.
2. Use fasteners, separators, sealants, and other miscellaneous items as required to complete installation of roof accessories and fit them to substrates.
3. Install roof accessories to resist exposure to weather without failing, rattling, leaking, or loosening of fasteners and seals.

B. Install roof accessories to fit substrates and to result in watertight performance.

C. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.

1. Coat concealed side of uncoated aluminum or stainless-steel roof accessories with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
2. Underlayment: Where installing exposed-to-view components of roof accessories directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip sheet, or install a course of polyethylene underlayment.
3. Bed flanges in thick coat of asphalt roofing cement where required by roof accessory manufacturers for waterproof performance.

D. Install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks.

E. Prefabricated Roof Curb Installation: Install each roof curb so top surface is level.

F. Equipment Support Installation: Install equipment supports to stop surfaces are level with each other.

G. Roof Hatch Installation:

1. Install roof hatch so top surface of hatch curb is level.
2. Verify that roof hatch operates properly. Clean, lubricate, and adjust operating mechanism and hardware.
3. Attach safety railing system to roof hatch curb.
4. Attach ladder safety post according to manufacturer's written instructions.

H. Seal joints with elastomeric or butyl sealant as required by manufacturer of roof accessories.

3.3 REPAIR AND CLEANING.

A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing according to ASTM A 780.

B. Touch up factory-finished surfaces per manufacturer's written instructions.

C. Clean exposed surfaces according to manufacturer's written instructions.

D. Clean off excess sealants.

E. Replace roof accessories that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

END OF SECTION 077200

SECTION 077273 - VEGETATED ROOF SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes vegetated roof system, including, but not limited to, the following:

1. Vegetation, including monitoring the installation of the vegetative cover.
2. Growth medium system.
3. Plaza deck pavers.
4. Drainage panels.
5. Insulation [I-7].
6. Hot fluid-applied waterproofing system [WP-2GR], including membrane, flashings, sealants, and accessories.
7. Substrate preparation.
8. Additional accessories, whether indicated or not, for a complete, watertight, vegetated roof system.

B. Related Requirements:

1. Section 033000 "Cast-In-Place Concrete" for coordination with concrete surface finishing, tolerances, and other characteristics impacting vegetated roof system membrane.
2. Section 071413 "Hot Fluid-Applied Rubberized Asphalt Waterproofing" for hot fluid-applied waterproofing [WP-2] to the extent not provided under this Section.
3. Section 071616 "Cold Fluid-Applied Waterproofing" for transition of hot fluid-applied waterproofing [WP-2GR] below grade to composite liquid polyurethane U.V.-stable fluid-applied waterproofing [WP-4] above grade.
4. Section 072713 "Modified Bituminous Sheet Air Barriers" for coordination and interface with adjacent air and weather barriers.
5. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
6. Section 129300 "Site Furnishings" for exterior unit planters.

1.4 DEFINITIONS

A. Vegetated Roof; Green Roof; Roof Garden: An area of planting/landscaping, built up on a waterproofed substrate at any level that is separated from the natural ground by a man-made structure.

1. Semi-Intensive and Intensive Vegetated Roof: Deeper landscape built using an assembly consisting of 6 inches or more of engineered growing media or more, with a wider variety of plant species including shrubs and trees.

B. Vegetated Roof Assembly; Green Roof Assembly; Roof Garden Assembly: Multi-layered landscaped assembly composed of single-media system, designed to grow plants and to retain and retard rainwater runoff from the roof.

1. Semi-Intensive and Intensive Vegetated Roof Assemblies consist of the following fully integrated living and manufactured components:

a. Waterproofing membrane.
b. Electronic leak detection.
c. Root barrier protection.
d. Technical seam tapes.
e. Drainage course.
f. Horizontal insulation.
g. Air layer.
h. Moisture retention mat.
i. Ballast reducing scrim sheet.
j. Drain inspection box.
k. Drainage/water retention component
l. Filter fabric.
m. Engineered growing media.
n. Vegetation.
o. Edging restraint.
p. Pre-cast concrete pavers.
q. Erosion control netting.
r. Irrigation.

C. Captured Water: Water that is retained in the drainage layer of a vegetated roof assembly after new water additions have ceased and that cannot escape the roof except through evaporation or plant transpiration.

D. Steep Slope Green Roof: Defined as a slope exceeding 3:12 pitch.

E. “C” Factor: The runoff coefficient used in the Rational Method, where “C” is the ratio of runoff to precipitation received over a given area.

F. Curve Number (CN): A number used to predict direct runoff or infiltration from rainfall, developed by USDA Natural Resource Conservation Service, taking into account a site’s soil type, land use, site conditions, drainage patterns, and pervious and impervious coverage.

G. Planted Area; Vegetated Area: Areas to be planted.

H. Vegetation-Free Zone: Areas without plantings.

I. Plant; Plants; Plant Material: Vegetation in general, including trees, shrubs, vines, ground covers, ornamental grasses, bulbs, corms, tubers, or herbaceous vegetation.

J. Alive: Displaying horticultural viability consisting of vigorous, hardy, and sustainable growth characteristics.

K. Retained Water: Water that is held for a period of hours or days but would eventually drain out given enough time in the absence of evaporation or plant transpiration.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Construction Manager, Architect, envelope consultant, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review the following:

a. Coordinate: Requirements and procedures related to roof deck and roofing system construction, including curing and surface preparation.
b. Vegetated Roof Assembly: Review methods and procedures, including Manufacturer’s written installation instructions.
c. Construction Schedule: Review and confirm availability of products, Subcontractor personnel, equipment, and facilities.
d. Conformance: Review roofing membrane type and vegetated roof assembly criteria.
e. Structural Load: Review limitations of roof deck, identifying loading areas for storage. Obtain structural report from Consultant certifying dead load weight restrictions for entire assembly.
f. Roof Details: Review flashing, drains, penetrations, equipment curbs, and other conditions.
g. Regulations: Review, including necessary insurance and/or certificates.
h. Safety: Review requirements, including Fall Protection requirements.
i. Quality Control: Review procedures and policy.
j. EFVM: Obtain report certifying roof is watertight.
k. Coordinate: related work specified in other Sections.
l. Inspection: Review Manufacturer’s procedure for warranty.
m. On-site traffic: Review limits by other trades on vegetated roof assembly and procedures for compensation due to damage.
n. Meeting minutes: Taken by representative of Consultant and distributed to all parties within 24 hours of meeting date.
o. Photographic records: Taken by Contractor prior to commencement of Work.

3. Contractor shall prepare minutes of preinstallation conference and distribute to participants.

1.6 COORDINATION

A. Coordinate vegetated roof systems installation with air/weather barriers, flashing, trim, wall and glazing construction, and other adjoining work to provide a watertight, airtight, secure, and noncorrosive installation.

1.7 ACTION SUBMITTALS

A. General: Transmit all action and informational submittal items together in one single complete submittal package for review.

B. Product Data: For each component of the vegetated roof assembly.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
2. Include material descriptions for each growing medium.

C. Shop Drawings: Provide project-specific shop drawings for each vegetated roof assembly. Include the following:

1. Include plans, sections, slopes, and drain locations.
2. Indicate dimensions, weights, and loads.
3. Detail field assembly of components, depth of growing media, and attachments to other work.
4. Indicate walkway pavers, geofoam fill, locations of irrigation, coordination with lighting and accessories.

D. Samples for Verification: For each of the following components of vegetated roof assembly, in 12 by 12 inch samples size unless otherwise indicated:

1. Insulation.
2. Separation layer.
3. Waterproof membrane and flashings.
4. Root barrier: 12 inch x 12 inch.
5. Drainage course: 12 inch x 12 inch.
6. Moisture retention mat: 12 inch x 12 inch].
7. Drainage/water retention component: 12 inch x 12 inch.
8. Filter fabric: 12 inch x 12 inch.
9. Growing media: 1-quart volume of each growing media, in sealed plastic bags labeled with content and source. Each Sample shall be typical of the lots of growing media to be furnished. Provide an accurate representation of texture and composition.

1.8 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer**.**

B. Product Certificates: For each type of manufactured product.

1. Manufacturer's certified analysis of standard products.
2. Analysis of other materials by a recognized laboratory, according to methods established by the Association of Official Analytical Chemists, where applicable.

C. Product Test Reports: For complete analysis of each growing medium, for tests performed by manufacturer and witnessed by a qualified testing agency or by a qualified testing agency.

D. Certifications for Waterproofing:

1. Certification from an approved independent testing laboratory experienced in testing waterproofing membranes for applicable ASTM procedures.
2. Certification showing full time quality control of production facilities responsible for the manufacture of the waterproofing membrane and that each batch of material is tested to ensure conformance with the manufacturer’s published physical properties.
3. The plant manufacturing the material shall have ISO 9001-2000 approval as evidenced by a copy of the official certificate.
4. Evidence that the roof membrane assembly is currently Class A listed with Underwriters Laboratories.

E. Letter from manufacturer and installer indicating acceptance of substrate prior to installation of waterproofing system.

F. Stormwater Performance Data: Predicted performance of the specific green roof assembly for the project shall be provided and include:

1. Composite Curve Number (CN)
2. Composite C-factor
3. Calculations shall be based on actual testing of suppliers green roof components to be used for the project including but not limited to the regionally specific growing media formulation and water retention/drainage materials.
4. Calculations shall account for vegetated and un-vegetated portions of the roof as well as local climatic conditions including rainfall depth, intensity, duration, and timing.

G. Field quality-control reports.

H. Sample Warranty: For special warranties.

1.9 CLOSEOUT SUBMITTALS

A. Maintenance Data: For vegetated roof assembly and plants, including a recommended maintenance plan with procedures for inspection and care during a calendar year. Submit before start of required warranty and maintenance periods.

B. Continuing Maintenance Proposal: From vegetated roof assembly Installer and approved by roofing-membrane manufacturer to Owner, in the form of a standard one-year maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1.10 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 20 years' experience regularly engaged in the production and sales of hot fluid-applied rubberized asphalt waterproofing and vegetated roof systems that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

1. Manufacturer of vegetated roof system shall be same manufacturer as specified for Section 071413 "Hot Fluid-Applied Rubberized Asphalt Waterproofing" and for Section 071416 "Cold Fluid-Applied Waterproofing."

B. Installer Qualifications: A firm with not less than 10 years' experience installing vegetated roof assemblies similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section. Installer shall be licensed and eligible to receive manufacturer's special warranty. Also comply with installer qualifications as specified in Section 071413 "Hot Fluid-Applied Rubberized Asphalt Waterproofing" for waterproofing to the extent not provided under this Section.

1. Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when vegetated roof assembly work is in progress.

C. Mock-Up: Build mock-ups to set quality standards for materials and executions.

1. Build mock-up of vegetated roof assembly and associated components and accessories.
2. Size: 100 sq. ft. to demonstrate assembly installation and standard of workmanship.
3. Subject to compliance with requirements, approved mock-ups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.11 DELIVERY, STORAGE, AND HANDLING

A. Product Handling: Deliver and store products in original packaging with Manufacturer's labels and materials list intact and signed off, elevated from ground and protected from environmental damage within designated weather protected areas. Avoid storage of products on site to prevent contamination.

B. Apply waterproofing within the range of ambient and substrate temperatures recommended by a waterproofing manufacturer.

1. Protect substrates from environmental conditions that affect waterproofing performance.
2. Do no apply waterproofing to a wet substrate or during snow, rain, fog, or mist.
3. Ensure waterproofing materials are cured before covering with other materials.

C. Vegetation Handling: Install vegetation immediately upon delivery to site.

D. Installation:

1. Vegetation: According to optimal conditions, conducive to plant establishment and survival based upon local hardiness zone as defined by USDA.
2. All other components of vegetated roof assembly: At any time, adequate protection should be provided to prevent damage and erosion

E. Foot Traffic: Prohibited on vegetated roof assembly during vegetation establishment period and thereafter except for vegetated roof maintenance purposes.

1.12 FIELD CONDITIONS

A. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions and warranty requirements.

B. Do not install materials that are wet, moisture damage, and/or mold damaged.

1.13 WARRANTY

A. Special Warranty for Vegetated Roof System: Manufacturer’s standard or customized form, without monetary limitation, in which manufacturer and installer agree to repair or replace components of vegetated roof system that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, defective waterproofing membrane, failure of the waterproof membrane to stop the passage of water, ponding water or prolonged wetness of growing medium caused as a result of failure of the assembly to properly drain.
2. Warranty Period: 20 years from date of Substantial Completion.

B. Special Warranty for Plant Growth: Installer agrees to repair or replace plantings and accessories that fail in materials, workmanship, or growth within specified warranty period.

1. Foliage Cover: Planted materials shall grow to achieve and maintain at least 80 percent foliage cover over planting area commencing 24 months after planting, through the duration of this warranty.
2. Failures include, but are not limited to, death and unsatisfactory growth except for defects resulting from abuse, lack of adequate maintenance, neglect by Owner, or incidents that are beyond Contractor's control.
3. Warranty Period: From date of Substantial Completion as follows:

    a. Trees and Shrubs: Five years.
    b. Ground Covers, Perennials, Vines, and Ornamental Grasses: Five years.

4. Include the following remedial actions as a minimum:

    a. Immediately remove dead plants and replace unless required to plant in the succeeding planting season.
    b. Replace plants that are more than 25 percent dead or in an unhealthy condition at end of warranty period.
    c. A limit of one replacement of each plant will be required except for losses or replacements due to failure to comply with requirements.

5. Provide extended warranty for period equal to original warranty period, for replaced plant material.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide vegetated roof system by the following:

1. Membrane Assembly: TREMproof 6100 Hot Fluid-Applied Waterproofing by Tremco Inc., www.tremcosealants.com
2. Intensive Vegetated Roof Assembly: VR MAX + Vegetated Roof Assembly System by Tremco Inc., www.tremcosealants.com with depth of system as indicated on Drawings.

B. Source Limitations: Obtain vegetated roof assembly components, growing medium, walkway pavers and setting bed or supports, geofoam fill and separation geotextile, and accessories from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Waterproofing Membrane: Waterproofing system shall be capable of performing as a continuous watertight installation and as a moisture drainage plane transitioned to adjacent flashings and discharging water to the building exterior. Waterproofing shall accommodate normal substrate movement, construction material transitions, opening transitions, penetrations, and perimeter conditions without resultant moisture deterioration.

1. Compatibility: Provide waterproofing system materials that are compatible with one another and with adjacent materials under conditions of service and application required, as demonstrated by waterproofing manufacturer based on testing and field experience.

B. Vegetated Roof Assembly: Provide vegetated roof assembly that will support vegetation, reaching an average coverage of not less than 85 percent coverage of the growing media within 24 months of Substantial Completion.

C. Water Capacity: Provide vegetated roof assembly with water retention capacity of a minimum of 4.5 gal/cu. ft. of water. Calculations include the combined water retention capacity of growing media and drainage panel. For growing media, the water retention capacity is calculated by using the difference between dry and saturated weight as per ASTM E 2399. For the drainage panel, the water retention capacity is found when measured in accordance with ASTM E 2398.

D. Drainage: Provide vegetated roof assembly with rainfall drainage capacity not less than 5 in./hr. Rainfall drainage capacity based on saturated hydraulic conductivity of growing media in accordance with ASTM E 2399.

E. Structural Design Load: Provide vegetated roof assembly with superimposed dead load not exceeding load indicated on Drawings. Calculations must be based on saturated weight of all components of vegetated roof assembly and maximum media density at saturation of growing media in accordance with ASTM E 2399.

F. Engineered growing Media: Provide engineered growing media that meets the following characteristics:

1. Depth: As indicated on Drawings.
2. Bulk Density: Not more than 75 lb./cu. ft. Calculations must be based on maximum media density at saturation of growing media in accordance with ASTM E 2399.
3. Dry Weight: Not less than 20 lb./cu. ft. Calculations must be based on dry weight of growing media in accordance with ASTM E 2399.
4. Source Material: Recycled products.
5. Source Location: Locally to project site, within 500 mile radius.

G. Vegetation:

1. Source Location: Locally to project site, within 500 mile radius.
2. Sustainability: Components shall be made from 100% recycled materials and sourced within 500 mile radius of project site when possible.

2.3 WATERPROOFING MEMBRANE

A. Hot Fluid-Applied Rubberized Asphalt Waterproofing: Single component, 100 percent solids; hot fluid-applied, rubberized asphalt formulated for application of not less than 215 mils wet, applied in two applications in conjunction with an interlayer of reinforcing fabric.

1. Basis of Design Product: Subject to compliance with requirements, provide waterproofing membrane by the following:

a. Tremco, Inc., TREMproof 6100.

2. Vapor Permeance, ASTM E 96: Maximum 0.03 perms.
3. VOC Content: 0 g/L.

2.4 AUXILIARY MATERIALS

A. General: Auxiliary materials as described in manufacturer's written installation instructions, recommended to produce complete waterproofing system meeting performance requirements, and compatible with waterproofing material and adjacent materials.

B. Substrate Patching Material: Waterproofing manufacturer's standard trowel-grade filler material.

C. Primer: Tremco approved primer meeting VOC limitations and recommended for substrate by waterproofing manufacturer.

D. Reinforcing Fabric: Waterproofing manufacturer's standard spun-bonded polyester fabric

1. Basis of Design Product: Tremco, Inc., Reinforcing Fabric.

E. Elastomeric Sheet: Thermoset neoprene rubber sheet not less than 60 mil.

1. Basis of Design Product: Tremco, Inc., Elastomeric Sheeting.

F. Elastomeric Detail Sheet: Blended thermoset elastomeric sheet reinforced with polyester woven scrim.

1. Basis of Design Product: Tremco, Inc., TRA Elastomeric Sheeting.

G. Composite Elastomeric Sheet: Waterproofing manufacturer's standard consisting of a SEBS rubber faced on two sides with absorbent non-woven felt.

1. Basis of Design Product: Tremco, Inc., DualFlex.

H. Metal Termination Bars: Waterproofing manufacturer's standard aluminum or stainless steel termination bar, with stainless steel fasteners.

I. Joint Sealant: ASTM C 920, single-component urethane, approved by waterproofing manufacturer for adhesion and compatibility with waterproofing and accessories.

J. Membrane Leak-Detection System: Conductor cable, placed on top of membrane, delivering direct current tension to membrane surface, enabling inspection and isolation of points of moisture infiltration through membrane to conductive substrate under membrane.

1. Measurement Grid: Highly conductive stainless steel wire measurement grid located under membrane and above non-conductive membrane substrate, connected through contact plate and cable to connection box accepting low-voltage charge from portable pulse generator. Include conductor cable, measurement grid, connection box, and accessories for a complete membrane leak-detection system.

2.5 VEGETATED ROOF ASSEMBLY COMPONENTS

A. Root Barrier: Heavy-duty 4-ply laminate polymer film, re-inforced with a layer of high strength cord grid, flame-retardant. Use with Manufacturer’s recommended technical seam tape.

1. Basis of Design Product: Tremco, Inc., VR RootBloc 10.
2. Physical Properties:

a. Thickness: 10 mil.

3. Mechanical Properties:

a. Elongation at break, ASTM D 7003: 500%.
b. 1” Tensile Strength, ASTM D 7003: 60 lbf/in.
c. Grab Tensile Strength , ASTM D 7004: 80 lbf.
d. Trapezoid Tear , ASTM D 4533: 52 lbf.
e. Hydrostatic Resistance, ASTM D 751: 74 psi.
f. Mullen Burst, ASTM D 751: 90 psi.

4. Flame Spread Index – Class “A”, ASTM E 84: 5.

B. Root Barrier: Heavy-duty blended linear polyethylene membrane, infused with carbon black additive for UV resistance. Use with Manufacturer's recommended 4-inch technical seam tape. Heat welding is an option.

1. Basis of Design Product: Tremco, Inc., VR RootBloc 40.
2. Physical Properties:

    a. Thickness: 40 mil.

3. Mechanical Properties:

    a. Elongation at break, ASTM D 6693: 800%.
    b. 1" Tensile Strength, ASTM D 6693: 154 lbf.
    c. Tear Resistance, ASTM D 1004: 22 lbf.
    d. Puncture Resistance, ASTM D 4833: 60 lbf.
    e. Mullen Burst, ASTM D 751: 220 psi.

C. Prefabricated Drainage Course: Composite drainage system consisting of a three-dimensional, crush-proof drainage core with filter fabric bonded to one side.

1. Basis of Design Product: Tremco, Inc., VR TremDrain 22F.
2. Physical Properties:

    a. Thickness: 0.275 in.

3. Drainage Core Properties:

    a. Tensile Strength: 50 lb/in.
    b. Transmissivity, ASTM D 4716: 14.50 gal/min/ft.

4. Fabric Properties:

    a. Grab Tensile: 90 lb.
    b. Water Flow Rate, ASTM D 4491: 150 gpm/sq. ft..
    c. Apparent Opening Size (AOS), ASTM D 4751: 50 US Sieve.
    d. UV Resistance, ASTM D 4355: 70%.

D. Prefabricated Drainage Course: Composite drainage system consisting of a three-dimensional, polypropylene dimple-type drainage sheet with filter fabric bonded to one side.

1. Basis of Design Product: Tremco, Inc., VR TremDrain 40FD.
2. Physical Properties:

    a. Thickness: 0.47 in.

3. Drainage Core Properties:

    a. Compressive Strength: 15,000 psf.
    b. Recycled Content: 77%.

4. Fabric Properties:

    a. Grab Tensile: 90 lb.
    b. Water Flow Rate, ASTM D 4491: 150 gpm/sq. ft.
    c. Apparent Opening Size (AOS), ASTM D 4751: 50 US Sieve.
    d. UV Resistance, ASTM D 4355: 70%.

E. Horizontal Insulation [I-7]: Extruded-polystyrene board insulation, ASTM C 578, of type and minimum compressive strength indicated below, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84, unfaced; fabricated with shiplap or channel edges and with side facing Protection sheet having grooved drainage channels.

1. Type and Compressive Strength: As indicated on Drawings, but no less than Type VII, 60 psi.
2. Thickness: As indicated on Drawings.
3. R value: 5 per inch.
4. Product shall be free of CFC's.

F. Air Layer: Required air space over styrofoam insulation, consisting of crush-proof high-density polypropylene core, bonded with non-woven filter fabric.

1. Basis of Design Product: Tremco, Inc., VR TremDrain 22F.
2. Physical Properties:

    a. Thickness: 0.275 in.

3. Drainage Core Properties:

    a. Tensile Strength: 50 lb/in.
    b. Transmissivity, ASTM D 4716: 14.50 gal/min/ft.

4. Fabric Properties:

    a. Grab Tensile: 90 lb.
    b. Water Flow Rate, ASTM D 4491: 150 gpm/sq. ft.
    c. Apparent Opening Size (AOS), ASTM D 4751: 50 US Sieve.
    d. UV Resistance, ASTM D 4355: 70%.

G. Moisture Retention Mat: Non-woven synthetic fiber mat capable of retaining additional moisture for potential use by vegetation.

1. Basis of Design Product: Tremco, Inc., VR MoistureMat.
2. Physical Properties:

    a. Thickness: 0.395 in.
    b. Dry Weight: 50 oz./sq. yd.
    c. Saturated Weight: 434 oz./sq. yd.

3. Mechanical Properties:

    a. Maximum Tensile Strength: Longitudinal: 100%, Lateral: 140%.
    b. Maximum Tensile Elongation: Longitudinal: 8 kN/m, Lateral: 4 kN/m.

4. Hydraulic Properties:

    a. Water Retention Capacity: 0.22 gal/sq. ft.

H. Drainage/Water Retention Component: High-density polypropylene, molded into a three-dimensional panel with positive-locking clips, drainage channels, and water retention reservoirs to form an integrated water retention and drainage system, consisting of 100% recycled content. Option to be filled with lightweight aggregate.

1. Basis of Design Product: Tremco Inc., VR HydraPanel 1.25.
2. Physical Properties:
3. Thickness: 1.25 in.

    a. Panel Dimensions: 2 ft x 2 ft.
    b. Weight, dry: 0.6 lb./sq. ft.
    c. Weight, with water: 1.93 lb./sq. ft.

4. Hydraulic Properties:

    a. Water Retention Capacity: 0.165 gal/sq. ft..

I. Drainage/Water Retention Component: High-density polypropylene, molded into a three-dimensional panel with positive-locking clips, drainage channels, and water retention reservoirs to form an integrated water retention and drainage system, consisting of 100% recycled content. Option to be filled with lightweight aggregate.

1. Basis of Design Product: Tremco Inc., VR HydraPanel 2.
2. Physical Properties:

    a. Thickness: 2.125 in.
    b. Panel Dimensions: 2 ft x 2 ft.
    c. Weight, dry: 0.86 lb./sq. ft.
    d. Weight, with water: 3.79 lb./sq. ft.

3. Mechanical Properties:

    a. Compressive Strength, ASTM A 370-11: 7,782 psf.

4. Hydraulic Properties:

    a. Water Retention Capacity: 0.352 gal/sq. ft. (14.35 L/sq. m).

J. Lightweight Aggregate: Expanded lightweight aggregate for use as fill material for drainage/water retention component as required.

1. Physical Properties:

    a. Size: 5/16 - 3/8 in expanded, lightweight aggregate.

K. Filter Fabric: Highly permeable non-woven polypropylene filter fabric, needle punched geo-textile manufactured, used to contain soil particles within soil profile at termination edges.

1. Basis of Design Product: Tremco Inc., VR Filter Fabric, VR Filter Fabric 1, VR Filter Fabric 2.
2. Physical Properties:

    a. Thickness: 45 mil.
    b. Weight: 3.2 oz./sq. yd.

3. Mechanical Properties:

    a. Grab Elongation, ASTM D 4632: 50%.
    b. Grab Tensile Strength, ASTM D 4632: 80 lbf.
    c. Trapezoid Tear, ASTM D 4533: 30 lbf
    d. Puncture Strength, ASTM D 6241: 210 lbf.

4. Endurance Properties:

    a. UV Stability, ASTM D 4355: 70%.

5. Hydraulic Properties:

    a. Permittivity, ASTM D 4491: 2.2 sec^-1.
    b. Water Flow Rate, ASTM D 4491: 160 gpm/sq. ft.
    c. Apparent Opening Size (AOS), ASTM D 4751: 70 US Sieve.

L. Technical Seam Tape: Self-adhered, waterproof membrane with acrylic pressure sensitive adhesive.

1. Basis of Design Product: Tremco Inc., VR TecTape 2.
2. Physical Properties:

    a. Thickness: 9.9 mil.

3. Mechanical Properties:

    a. Nail Sealability, ASTM E 331/547 (per AAMA 711-07, Annex 1): Pass both before and after thermal cycling.

M. Edging Restraint: Manufacturer's standard L-shaped edging with top lip, formed from extruded aluminum. Solid at growing layer to prevent rooting and plant growth through the edging. Perforated at drainage course level to allow for free drainage. Use with Manufacturer's edge connectors, edge corners, and edge leveling strips.

1. Basis of Design: Tremco, Inc., VR EdgeGuard.
2. Physical Properties:

    a. Thickness: 80 mil.
    b. Height: As indicated on Drawings.
    c. Flange Length: 4 in .
    d. Length: 8 ft.
    e. Lip: 3/8 in..
    f. Perforations, diameter: 3/4 in.

N. Drain Inspection Box: Manufacturer's standard drain inspection box formed from aluminum, with lockable lid and perforated at drainage course level.

1. Basis of Design: Tremco Inc, VR DrainGuard.
2. Physical Properties:

    a. Thickness: 60 mil.
    b. Dimensions: 15 in x 15 in.
    c. Height: As indicated on Drawings.
    d. Perforations, diameter: 3/4 inch.

O. Erosion Control Netting: Polypropylene quadrangular mesh netting for establishment of seed and plugs.

1. Basis of Design: Tremco Inc., VR TerraHold.
2. Physical Properties:

    a. Thickness: 0.32 in.
    b. Mesh Shape: Quadrangular.
    c. Unit Weight: 0.033 oz./sq. ft.

3. Mechanical Properties:

    a. Tensile Strength, MD: 0.145 psi.
    b. Tensile Strength, TD: 0.116 psi.

2.6 VEGETATED ROOF GROWING MEDIA

A. Growing Media: Vegetated roof assembly manufacturer's lightweight, biologically populated, engineered growing media mixture incorporating regional inorganic and organic materials that will support the vigorous growth of a wide variety of vegetation growth and retain and remediate storm water run-off.

1. Basis of Design: Tremco, Inc., VR HydraMix Intensive.
2. Depth: As indicated on Drawings.
3. Semi-Intensive and Intensive Blend Maximum Media Density, ASTM E 2399:

    a. Initial Dry-Weight Media Density: Minimum 20 lb/cu. ft.
    b. Maximum Saturated Media Density : Maximum 70 lb/cu. ft.

4. Water/Air Management, ASTM E2399:

    a. Maximum Water Holding Capacity: 60 percent, minimum.
    b. Air-Filled Porosity at Maximum Water Capacity: 10 percent, minimum.
    c. Total Pore Space: 70 percent, minimum.

5. Water Permeability, ASTM E 2399:

    a. Hydraulic Conductivity: Minimum 5 in./hr.

6. Chemical Properties:

    a. Growing Media pH: Value within 6.0 - 7.5.
    b. Macro- and micro- nutrients: Incorporate in initial proportions as required to support specified planting.

7. Organic Matter Content: as required to meet plant requirements.

B. Growing Media: Vegetated roof assembly manufacturer's lightweight, biologically populated, engineered growing media mixture incorporating regional inorganic and organic materials that will support the vigorous growth of a wide variety of vegetation growth and retain and remediate storm water run-off.

1. Basis of Design: Tremco, Inc., VR PlanterMix.
2. Depth: As per plans and specifications.
3. Semi-Intensive and Intensive Blend Maximum Media Density, ASTM E 2399:

    a. Initial Dry-Weight Media Density: Minimum 25 lb/cu. ft.
    b. Maximum Saturated Media Density : Maximum 75 lb/cu. ft.

4. Water/Air Management, ASTM E2399:

    a. Maximum Water Holding Capacity: 35 percent, minimum.
    b. Air-Filled Porosity at Maximum Water Capacity: 10 percent, minimum.
    c. Total Pore Space: 70 percent, minimum.

5. Water Permeability, ASTM E 2399:

    a. Hydraulic Conductivity: Minimum 5 in./hr.

6. Chemical Properties:

    a. Growing Media pH: Value within 6.0 - 7.5.
    b. Macro- and micro- nutrients: Incorporate in initial proportions as required to support specified planting.

7. Organic Matter Content: as required to meet plant requirements.

2.7 VEGETATED ROOF PLANTING MATERIALS

A. Planting Materials, General: Provide plant materials of types indicated.

B. Semi-Intensive and Intensive Planting Materials:

1. Seed: A minimum of 90% purity, in dry form and without litter. Seed mix to be provided via injection into Blower Truck’s Supplemental Injection System.

    a. Spread Rate: 5 lb/1000 sq. ft.

2. Perennial Plugs: Healthy, vigorous, well-rooted specimens, provided in 50-plug tray with well-established rooting.

    a. Depth: 2 in minimum.
    b. Spacing: 6 in on center.

3. Perennial Pots: Healthy, vigorous, well-rooted specimens, with well-established rooting. Root bound plants will not be accepted.

   a. Depth: 3.5 in, minimum.
   b. Spacing: 12 in on center.

4. Shrubs, Trees: As per plans and specifications.

2.8 VEGETATION-FREE ZONE MATERIALS

A. Walkway Roof Pavers: pre-cast concrete pavers with pedestals.

1. Basis of Design: Armtec, Pedslab.
2. Physical Properties:

   a. Size: 24 in x 24 in.
   b. Thickness: 2-1/4 in.
   c. Weight: 11 lb/sq. ft., minimum.
   d. Colors and Textures: natural color with shot blast finish.

3. Mechanical Properties:

   a. Compressive Strength: 8000 psi, minimum.
   b. Absorption: 5%, maximum.
   c. Freeze-thaw Resistance: 1.0% loss in weight after 40 cycles, maximum.

4. Paver Supports: Paver manufacturer's standard SBR rubber, high-density polyethylene, or polyurethane paver support assembly, including adjustable pedestals, shims, and spacer tabs for joint spacing of 1/8 to 3/16 inch.

B. Aggregate Ballast: ASTM D 1863, No. 6 or No. 67, clean, dry, opaque, water-worn gravel, free of sharp edges.

1. Size: ASTM D 448, Size 4, 3/4 to 1-1/2 in.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Surface Condition for Waterproofing: Before applying waterproofing materials, examine substrate and conditions to ensure substrates are fully cured, smooth, clean, dry, and free from high spots, depressions, loose and foreign particles and other deterrents to adhesion, and conditions comply with manufacturer's written recommendations.

1. Verify concrete and masonry surfaces are visibly dry, have cured for time period recommended by waterproofing manufacturer, are free from release agents, curing agents, laitance, and other contaminates, and have adequate profile for adhesion of product.
2. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
3. Test for waterproofing adhesion per manufacturer's recommended method.
4. Verify masonry joints are filled with mortar and struck flush.
5. Verify drains have suitable flanges at membrane level flush with deck surface.
6. Verify deck penetrations including pipes, conduits, and vents are rigidly installed and flashed and ready to receive waterproofing application.
7. Notify Architect of unsatisfactory conditions.

B. Surface Condition for Vegetated Roof: Examine surfaces and report any adverse conditions which may negatively impact appearance or performance of vegetated roof system. Ensure all unacceptable conditions are corrected before proceeding. Coordinate sequencing of waterproofing work and vegetated roofing work with work of other sections.

1. Verify that roof insulation over membrane roofing is in place, secure, and flush along all seams.
2. Verify that perimeter and other flashings are in place and secure along entire lengths where they will be covered by vegetated roof assembly.

C. Ensure adequate provisions have been made for loading, unloading, storage, parking and access to roof site.

D. Execute work in accordance with the specification, drawings and details.

E. Report any imbedded object or obvious damage to Consultant.

F. Ensure all equipment is in good working order. Protect all equipment which comes into contact with roofing membrane, flashings and related work.

G. Ensure adequate safety equipment has been obtained for all operations.

H. Proceed with installation of vegetated roof assembly only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. General: Protect structures, utilities, sidewalks, pavements, and other facilities and areas from damage caused by installation.

B. Protect waterproofing according to the following written recommendations to prevent damage and wear during examination, testing, installation, and remainder of construction period:

1. Clean, prepare, and treat substrates in accordance with waterproofing manufacturer's written instructions including published details.

    a. Mask adjacent finished surfaces.
    b. Remove contaminants and film-forming coatings from substrates.
    c. Remove projections and excess materials and fill voids with substrate patching material.
    d. Prepare and treat joints and cracks in substrate per ASTM D 4258 and waterproofing manufacturer's written instructions.
    e. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.

2. Metal Flashings: Where metal flashings are substrate to waterproofing membrane, set the flashings in continuous bedding bead of urethane sealant; install sealant S-bead between metal laps and mechanically fasten to substrate along leading edges at every 4" on center, staggered linearly, to lay flat without fishmouths.
3. Detail Preparation: Prepare non-moving shrinkage cracks, large cracks, construction joints, expansion joints, projections and protrusions, penetrations, drains, and changes in plane in accordance with waterproofing manufacturer's written instructions and details, using accessory materials specified.

    a. Prime substrates as required.
    b. Adhere strips of elastomeric sheet to moving joints and large cracks by embedding in a layer of hot rubberized asphalt and overlay with coat of hot rubberized asphalt.

4. Transitions to Adjacent Materials: Install elastomeric and composite reinforced flashing to form connect and seal waterproofing material to adjacent components of building waterproofing system, including, but not limited to, roofing system waterproofing, exterior fenestration systems, door framing, and other openings

    a. Seal top of through-wall flashings to waterproofing with continuous transition strips of type recommended by waterproofing manufacturer for application.
    b. Install elastomeric sheets at terminations of waterproofing membrane according to manufacturer's written instructions.
    c. Install termination bars and mechanically fasten to top of elastomeric flashing sheet at terminations and perimeter of waterproofing.

3.3 WATERPROOFING INSTALLATION

A. General: Apply waterproofing material to form a seal with strips and transition strips and to achieve a continuous waterproofing according to waterproofing manufacturer's written instructions. Apply waterproofing material within manufacturer's recommended application temperature ranges.

B. Primer:

1. Apply primer to substrates at required rate, using roller, brush, or airless spray. Allow to dry.
2. Reprime areas not covered within 24 hours.

C. Membrane:

1. Install membrane according to manufacturer's written instructions.
2. Heat rubberized asphalt in an oil- or –air-jacketed melter with mechanical agitator specifically designed for heating rubberized asphalt.
3. Start application with manufacturer's authorized representative present.
4. Apply waterproofing in total wet film thickness recommended in writing by waterproofing manufacturer, but not less than 215-mil wet film thickness, applied in two or more equal coats applied using methods recommended by waterproofing manufacturer, as follows:

    a. Apply first coat at minimum thickness of 90 mils.
    b. Thoroughly embed reinforcing fabric in first coat while still liquid, with slight overlap of fabric edges.
    c. Apply second coat at not less than 125 mils and as required to achieve total thickness of not less than 215 mils.

D. Terminations:

1. Install terminations of waterproofing membrane in accordance with ASTM C 898 and ASTM C 1471, as application to application, at not less than minimum height recommended by waterproofing manufacturer.
2. Overlap waterproofing on to intersecting construction a minimum of 24 inches.

E. Coordination of Testing:

1. Coordinate application of waterproofing membrane with installation of membrane leak detection system.
2. Do not cover waterproofing until it has been tested and inspected by Owner's testing agency.

F. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates and reapply waterproofing components.

G. Separation/Protection Course Installation

1. Install protection course as per manufacturer's written instructions.

3.4 ELECTRONIC LEAK DETECTION GRID INSTALLATION

A. Measurement Grid: Install measurement on membrane substrate immediately under membrane and immediately prior to installation of membrane.

1. Verify that location of measurement grid fasteners does not interfere with or cause damage to membrane.
2. Fasten measurement grid in accordance with leak detection system manufacturer's requirements.
3. Do not place measurement grid where it will be in continuous direct contact with structural components.
4. Provide minimum 2 inch overlap where adjacent sheets meet, including side laps and end laps.
5. Cut measurement grid as close as possible to the perpendicular strand at both end and side edges

B. Conductor Wire: Install conductor wire on top of membrane at spacing and layout indicated on approved shop drawings.

C. Secure conductor wire using method recommended by manufacturer.

3.5 VEGETATED ROOF ASSEMBLY INSTALLATION

A. Installation, General: Install vegetated roof assembly components according to Manufacturer's written instructions and approved shop drawings.

B. Root Barrier:

1. Place root barrier continuously over finished membrane surface, including all vertical surfaces and projections.
2. Overlap all side and end laps a minimum of 4 inches and heat weld all seams watertight per Manufacturer’s specifications. Allow for root barrier to reach up all verticals 1-inch above the intended growing media line and secure below perimeter counter flashing with continuous termination bar per Manufacturer’s approved details.

C. Prefabricated Drainage Course:

1. Place prefabricated drainage course over root barrier layer, with filter fabric side facing up, over the entire surface of the roof area. Abut edges and ends between rolls.
2. Cut at edges, drains, and projections.

D. Horizontal Insulation:

1. Loosely lay insulation in parallel courses, staggering end laps and side laps. Abut edges and ends between units.
2. Cut insulation to fit neatly at projections and terminations with less that 1-inch tolerance.

E. Air Layer:

1. Place air layer over horizontal insulation over the surface of the vegetated area. Abut edges and ends between rolls.
2. Cut at edges, drains, and projections.

F. Moisture Retention Layer:

1. Place moisture retention layer over air layer, over the surface of the vegetated area. Abut edges and ends between rolls.
2. Cut at edges, drains, and projections.

G. Edging Restraint:

1. Install edging along perimeter border between vegetation-free area and vegetated area, according to Manufacturer’s instructions and approved shop drawings.
2. When joining two sections together, ensure a tight fit at all joints. Place edge connector piece on top so it overlaps both ends of joints. Secure with self-tapping screws.
3. At corners, cut and bend as required for clean, mitered finish. Finish with edge corner piece and secure with self-tapping screws.
4. Along slopes, use edge leveling strip as needed to create level, clean edging lengths. Install on outside of edging restraint, making sure to overlap the bottom of the leveling strip with the top of the edging restraint by a minimum of 2-inch. Secure with self-tapping screws.
5. Ensure base flange is pointed towards the vegetated areas.
6. Along the top of the edging restraint, on the vegetated side, install a 2-inch strip of Manufacturer’s double-coated technical tape below lip to accept filter fabric.
7. Secure edge of filter fabric trim roll to edging surface.

H. Drainage/Water Retention Component: Install panels with retention cup openings facing up, drainage holes at the top.

1. Lay drainage/water retention component panels over insulation up to vertical edging.
2. Cut tightly around any projections, drains, etc.
3. Work from top to bottom, left to right, securing panel edges together with built-in locking clips.
4. Fill retention cups with lightweight aggregate in line with the top of the drainage/water retention component.

I. Drain Inspection Box:

1. Install inspection box centered over drains directly on top of drainage/water retention component layer. Ensure the bottom inner edge of the inspection box is outside of the outer edge of the drain flange.
2. Wrap filter fabric trim roll along perimeter edge of inspection box wall. Adhere edge of filter fabric over lip, to top of inside edge with manufacturer's technical tape.
3. At locking pins, cut slits in fabric to fit around locking pins. Adhere to top inside edge with manufacturer's technical tape.
4. Insert retaining pin into locking pin to lock lid of inspection box.

J. Filter Fabric:

1. Lay a layer of filter fabric over drainage/water retention component layer, allowing for minimum 4 inches overlap between rolls.
2. Bond all seams between rolls with Manufacturer's technical tape.
3. Cut tightly around any projections, drains, etc.
4. At drains, projections, and perimeters of vegetated area, bond filter fabric trim roll pieces to the surface of filter fabric layer with Manufacturer's technical tape. Provide sufficient slack in fabric and allow 4 inches overlap for excess filter fabric.
5. Install growing media immediately following installation or provide temporary ballast.

K. Continuous Growing Media Handling and Placement: Place growing media for continuous growing planted areas with equipment and methods approved by Manufacturer.

1. Deliver and handle growing media in accordance with Manufacturer's requirements and the following:

    a. Do not deliver or place growing media in frozen, wet, or muddy conditions. Place material at optimum compaction moisture content as determined by AASHTO T 99 (ASTM D 698). Do not place materials in excessively moist condition.
    b. Protect structure from excess stockpiling loads. Consult structural engineer regarding safe loading of structure.
    c. Deliver growing media to be hand placed packaged in protective bags.
    d. Protect growing media from contamination and compaction.
    e. Protect stockpiled growing media from absorbing excess water, from erosion, and from exposure to airborne weed seeds. Protect stockpiled and placed growing media from compaction.

2. Final determination of growing media composition, depth, and supplements shall be by vegetated roof assembly Manufacturer based upon approved plant types and layout, subject to approval of Architect.

    a. Place growing media using truck-mounted, integrated, pneumatic blower unit, designed for this application, or by hand-placement. In order to ensure accuracy, the unit should be powered by its own separate diesel power unit, not PTO driven, and equipped with at least one computer-controlled supplemental granular injection system.
    b. The unit must be capable of uniformly applying materials and injected products at a rate greater than 15 cu. yd./hr at least to a vertical limit of 150 foot and must also be equipped with an application hose capable of extending 300 foot from the blower truck.
    c. Place growing media to within 1-inch above specified soil depth.
    d. Preset placed growing media by compacting with a landscape roller or by thoroughly watering planting area to achieve optimal compaction.
    e. Fill settled low areas with additional media and repeat compaction and filling process until settlement ceases and growing media is placed in uniform layer.
    f. Maintain proper moisture level of finish-graded growing media during vegetation placement.

L. Erosion Control Netting:

1. Erosion control netting to be installed as indicated on drawings and details. After growing media and seed mix are installed, stretch netting over growing media and fasten at edges with soil staple at 1-foot intervals. Fasten all seams with tie wrap fasteners at 8-foot intervals.

M. Vegetation:

1. Seed Mix:

a. In the event of a seeding application, the seed mix should be calibrated with the supplemental injection at the recommended seeding rate and applied in the top 1-inch of growing media prior to erosion netting being installed.

2. Perennial Plugs, Perennial Pots:

a. Where perennial plugs or pots are used, dig a hole in excess of the size of the root ball after extracting it from the pot. Lightly cover root ball, ensure plants are planted to their full root depth and gently tamp in place.
b. If netting is used, cut holes sufficient in size to plant through.

3. Shrubs, Trees:

a. Where shrubs or trees are used, dig a hole in excess of the size of the root ball. Lightly cover root ball, ensure plants are planted to their full root depth and gently tamp in place.
b. Stake as required.

3.6 VEGETATION-FREE ZONE INSTALLATION

A. Roof Pavers: To roofed area, place roof pavers and cut to fit. Push pavers against edging and ensure there is a tight fit between parapet wall and edging.

1. Install roof pavers on paver supports set according to Manufacturer's written instructions.
2. Tolerances:

a. Install pavers to vary not more than 1/16 inch in elevation between adjacent pavers and not more than 1/16 inch from surface plane elevation of individual paver.
b. Maintain tolerances of paving installation within 1/4 inch in 10 feet of surface plane in any direction.

B. To roofed area, apply aggregate ballast uniformly at rate required by manufacturer, but not less than the following, carefully spreading aggregate to not damage roofing membrane and base flashings. Apply ballast as insulation is installed, leaving roofing membrane insulated and ballasted at end of workday.

1. Ballast: 15 lb/sq. ft., aggregate within 102 inches of roof perimeter and corners and of roof penetrations; 10 lb/sq. ft. aggregate elsewhere.

a. Install two rows of walkway roof pavers in lieu of aggregate ballast at roof perimeter, corners, and penetrations, unless otherwise indicated on Drawings.

3.7 FIELD QUALITY CONTROL (BY OWNER)

A. Testing Agency: Owner will engage a qualified testing agency to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components, and to furnish reports to Architect.

1. Electric Field Vector Mapping (EFVM): Testing agency shall survey entire roof area for potential leaks using electric field vector mapping (EFVM).
2. Other testing protocols may be implemented at the discretion of the testing agency to evaluate installed conditions.

B. Vegetated roof system will be considered defective if it does not pass tests and inspections.

C. Repair or remove and replace components of vegetated roof system where inspections indicate that they do not comply with specified requirements.

D. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.8 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer's Field Service: Contractor shall engage a manufacturer’s technical representative for technical assistance and guidance for preparation and application of vegetated roof system. At a minimum, arrange for manufacturer’s technical representative to observe installation of vegetated roof system during initial installation, at mid-point of the installation, and at completion. Provide additional field observation as required to obtain warranty specified and when requested by Architect or Owner. After each field visit, submit manufacturer’s written report of observations within 3 working days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective action.

B. Final Roof Inspection: Arrange for vegetated roof system manufacturer's technical personnel to inspect waterproofing installation upon completion.

C. Roof Drain Test: After completing roofing, but prior to Substantial Completion, perform the following test for watertightness. Plug deck drains and fill with water to edge of drain sump for 8 hours. Do not plug secondary overflow drains at the same time as adjacent primary drain. To ensure some drainage from roof, do not test all drains at the same time. Measure water at beginning and end of the test period. When precipitation occurs during test period, repeat test. When water level falls, remove water, thoroughly dry, and inspect installation; repair or replace roofing at drain to provide for a properly installed watertight flashing seal. Repeat test until there is no water leakage.

1. When testing overflow drains, confirm that overflow drains are operating as intended.
2. Owner will engage an independent testing agency to observe roof drain test and examine underside of decks and terminations for evidence of leaks during roof drain testing.

D. Vegetated roof system will be considered defective if it does not pass tests and inspections.

E. Repair or remove and replace components of vegetated roof system where inspections indicate that they do not comply with specified requirements.

F. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

G. Prepare test and inspection reports.

3.9 PROTECTION

A. Do not permit foot or vehicular traffic on unprotected membrane.

B. Protect waterproofing from damage and wear during remainder of construction period.

C. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.

D. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

E. Protect vegetated roof assemblies from damage, including growing-medium contamination, due to operations of other contractors and trades. Repair or replace damaged vegetated roof assemblies.

3.10 MAINTENANCE SERVICE

A. Maintenance Service: Provide maintenance by skilled employees of vegetated roof assembly Installer approved by roofing-membrane manufacturer. Begin maintenance immediately after plants are installed and continue until plantings are acceptably healthy and well established but for not less than the specified maintenance period.

1. Assembly and Plant Maintenance: During maintenance period, maintain plantings by pruning, cultivating, watering, weeding, fertilizing, mulching, restoring planting saucers, adjusting and repairing devices, resetting plants to proper elevations or vertical position, and performing other operations as required to establish healthy, viable plantings. Spray or treat as required to keep trees and shrubs free of insects and disease.

    a. Replace growing medium that becomes displaced or eroded because of settling or other processes.
    b. Apply treatments as required to keep plant materials, planted areas, and growing medium free of pests and pathogens or disease. Use integrated past management practices whenever possible to minimize the use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage, mechanical controls such as traps, and biological control agents.
    c. Use only products and methods acceptable to roofing-membrane manufacturer.

2. Maintenance Period: 12 months from date of Substantial Completion.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Furnish and install a complete Architectural Pavers and Adjustable Pedestals deck support system with a maximum cavity height of up to 22 inches.

B. Related Requirements:

1. Division 02 - Section 02780 Unit Pavers
2. Division 03 - Section 03300 Cast-in-Place Concrete.
3. Division 06 - Section 06100 Rough Carpentry.
4. Division 07 - Section 07760 Roof Pavers.
5. Division 07 - Section 07620 Roof related Metal Work.
6. Division 07 - Section 07540 Fluid Applied Waterproofing.
7. Division 07 - Section 07540 Bituminous Sheet Waterproofing.
8. Division 07 - Section 07760 Roof Pavers.

1.3 REFERENCES

A. American Society for Testing and Materials (ASTM)

1. ASTM D 638 - Tensile Properties of Plastics
2. ASTM D 790 - Flexural Properties of Unreinforced and Reinforced Plastics Insulating
3. ASTM D 1525 -Vicat Softening Temperature of Plastics

1.4 SUBMITTALS

A. Submit under provisions of Section 01300.

B. Samples:

1. Architectural Pavers: Submit samples for type, color and texture required.
2. Pedestals: Submit sample of each pedestal component.
3. PVC Pipe: Submit 12-inch long sample of PVC pipe.

C. Shop Drawings: Submitted by contractor showing all components required for the paver & pedestal requirements. Shop drawings shall include plan drawings showing layout of all paver areas and detail drawings showing how the various components of the system fit together. Include manufacturer's literature completely describing all components of the paver pedestal systems and giving detailed installation recommendations and instructions. Also included detailed installation drawings for all precast pavers.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: All products covered under this Section shall be produced by a single manufacturer unless otherwise specified with a minimum of fifteen (15) years proven production experience.

B. Installer Qualifications: Installer shall have a minimum of three (3) years proven construction experience and be capable of estimating & building from blueprint plans and details, determining elevations, in addition to proper material handling. All Work must comply with Tile Tech Pavers installation application procedures for pedestal mounted pavers as specified herein.

C. Special Consideration: The installer and or subcontractor must assume the responsibility for and take into consideration (1) the structural capability and adequacy of the structure to carry the dead and live load weight(s) involved, and (2) that the density of any insulation is satisfactory to resist crushing and damaging the waterproofing membrane.

1.6 DELIVERY, STORAGE, AND HANDLING

A. In accordance with provisions of Section 01300.

B. Protect Concrete Pavers and Pedestal System during shipment, storage and construction against damage. Store a minimum of 4 inches off the ground in a dry location and cover with polyethylene to protect from contact with materials which would cause staining or discoloration.

1.7 PROJECT CONDITIONS

A. Tile Tech Pedestal System specified are to be used with pedestrian traffic only & all four (4) sides of a deck system must restrain and contain the decking panels with perimeter blocking or walls. Decking panels must not be allowed to move laterally.

B. All membrane waterproofing and protection board surfaces to receive pedestals must be broom clean, frost free, and free of dirt, oil or any rough foreign matter, which may impair the waterproofing / roofing manufacturers guarantee or protection requirements.

C. The substrate that is to receive pedestals must have slope and provide positive and adequate drainage in accordance with good building practice and applicable building codes

D. Decks over Roofing and Waterproofing:

1. If high density closed cell extruded 60psi polystyrene insulation is installed on top of the membrane in a protected membrane system, Tile Tech Pedestals may be installed directly on top of this type of insulation.
2. Do not use Tile Tech Pedestals over any insulation less than 60psi or with low density polystyrene (bead board) insulation.

E. Installation or anticipated installation of additional items on top of the deck such as planters, hot tubs, sculptures, or industrial equipment must be supported directly by additional pedestals that are in addition to the main deck paver/tile pedestal system. Failure to adequately support the additional weight of any such features or items may cause significant damage to the deck, underlying structure, or waterproofing.

1.8 WARRANTIES / GUARANTEES

A. Tile Tech Pedestal System (pavers and pedestals) shall remain free from defects for a period of ten (10) years. The contractor shall warrant that his work will remain free from defects of labor and materials used in conjunction with his work in accordance with the general conditions for this project or a maximum of three (3) years.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. The Paver Pedestal Systems specified herein are based upon products manufactured by:

Tile Tech Inc., 888-380-5575 Phone: (213) 380-5560 Fax: (213) 380-5561

E-mail: sales@tiletechpavers.com Website: www.tiletechpavers.com

B. Paver Pedestal Systems equal in appearance and function and meeting these specifications, will be acceptable when the specified submittals are approved in writing by the Architect prior to bid.

2.2 MATERIALS

A. IPE WOOD DECK TILES:

1. Type: IPE Wood Deck Tiles.
2. Color: Natural State.
3. Size: 24”x24”x1-5/8”
4. Finish: Smooth finished.
5. Weight: 6lb per Sqft.

B. CONCRETE PAVERS:

1. Type: Cool-Roof™
2. Color: Penny Lane.
3. Size: 12”x24”x1-1/2” nominal
4. Finish: Shot-blasted with 3/16” bevel on all four (4) sides of finished surface.
5. Weight: 11 to 22 lbs per square foot depending on paver size & thickness.

C. PEDESTALS:

1. Stak-Cap™ Pedestals: PVC Pipe & Stack Adjustable

a. Stack or use SDR35 PVC pipe to accommodate various HEIGHT adjustments of ½” to 2”.
b. Each cap provides maximum of ½” of HEIGHT and 1% SLOPE. Rotate and stack one cap relative to another to accommodate SLOPE adjustments from 0% to 5%.
c. Base diameter of 6-inch and top diameter of 5-¼-inch and is ½-inch high.
d. Made of high impact and flame resistant ABS plastic.
e. Use of Buffer Pads under Stak-Cap™ Pedestals is MANDATORY.

2. Uni-Just™ Pedestals: PVC Pipe & Screw Adjustable

a. Assembly consist of 5 parts: Uni-Base™, Uni-Collar™, Uni-Insert™, Uni-Cap™ & Buffer Pads.
b. Use SDR35 PVC pipe to accommodate various HEIGHT adjustments from 2-½" to 24". Additional precise height adjustment of up to 1-½" with the use of Uni-Insert™ which can screw up or down while loaded. Additional heights beyond 24" can be accomplished subject to consultation with manufacturer and approval by manufacturer.
c. Self-leveling and can tilt in any direction to a level plane to accommodate SLOPE adjustments from 0% to 6%.
d. Base diameter of 7.25-inch with bearing surface area of thirty eight (42) square inches.
e. Made of 100% recycled and flame resistant High Density Polypropylene.
f. Use of Buffer Pads under Uni-Just™ Pedestals is MANDATORY.

3. Uni-Shims™: 1/8-inch & 1/16-inch Thick

a. Can be used whole or broken into halves or quarters and can be stacked up to 2 high.
b. Used on top or under Stak-Cap™ or Uni-Just™ Pedestals for fine leveling of pedestals and or individual pavers.
c. Made of high impact and flame resistant ABS plastic.

D. OTHER COMPONENTS: INSTALLER OR USER SUPPLIED

1. Pedestal Pipe: 4-inch diameter SDR35 PVC Sewer Pipe

a. Used with either Stak-Cap™ or Uni-Just™ Pedestals and is cut to required height.
b. Dimensions: 4.215-inch outside diameter & 3.890-inch inside diameter.
c. Meet ASTM D-3034 and F-679.
d. NOT supplied with pedestal components by Tile Tech Pavers.

2. Protection Course:

a. Protection board (required over insulated BUR systems, and when specified for use over bituminous asphalt-based waterproofing): W.R. Meadows "Vibraflex" or equal, minimum 3/8- inch thick asphaltic composition protection board.
b. Insulation (when specified): Dow Styrofoam "Highload 100" or equal, minimum compressive strength of 100psi recommended for foam plastic insulation placed beneath Pedestal System to prevent damage to the waterproofing membrane.
c. NOT supplied with pedestal components by Tile Tech Pavers.

2.3 PERIMETER CONTAINMENT AND SUPPORT

A. The complete assembly of insulation (if used), protection board (if used), drainage mat (if used), pedestals and pavers must be restrained at the perimeter of the deck area.

B. Perimeter parapet walls, concrete dividers or other perimeter restraint must be capable of resisting lateral forces (including seismic and wind). Cumulative movement in excess of 1/8 inch will void the Tile Tech Pavers Pedestal System warranty.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Prior to starting work inspect the substrate to ensure that it has been properly prepared to accept the Tile Tech Pedestal System. The substrate and or surface shall be clean and free of any projections and debris which may impair the performance of the pedestal and or the deck system. Verify all elevations, required pedestal heights and deck dimensions. Commencement of work shall imply acceptance of surfaces & deck conditions.

B. If preparation is the responsibility of another installer, notify Architect in writing of deviations from manufacturer's recommended installation tolerances and conditions.

3.2 PREPARATION

A. The substrate surface that will receive the Pedestal System must be well compacted (on Grade) or structurally capable of carrying the dead and live loads anticipated.

1. Insulation OVER the membrane: (Option 1) Insulation and/or protection board (if specified) must be applied over the waterproofing substrate and/or specified drainage mat. Install the system according to the membrane manufacturer's recommendations and specifications.
2. Insulation UNDER membrane: (Option 2) Insulation required to be installed within a roofing system below deck supports must meet the roofing membrane manufacturers' specifications and must have a minimum core density of 60psi.
3. Protection Board: (for asphalt type systems used over waterproofing) Full coverage 1/8-inch asphaltic composition protection board is recommended. When protection is specified only under the pedestal cut protection board pads to extend beyond the outside perimeter of the pedestal system base or buffer pad by a minimum of TWO (2) inch.
4. Drainage Mat: (when desired or specified) Install drainage mat according to the manufacturers recommendations to avoid crushing.

3.3 INSTALLATION

A. Install in accordance with Tile Tech Pavers and other contributing manufacturer's instructions. Installation requirements vary for each individual project site. Decking paver or tile used, pattern, grid layout, starting point, and finished elevation should be shown on plan view shop drawings, which have been prepared and approved by the designer, installing contractor and/or owner.

B. GRID LAYOUT AND ELEVATIONS:

5. Once the starting point and the finished elevation of the deck surface have been determined, the "Top of Pedestal Elevation" (finished elevation less decking paver or tile thickness) is established and marked around the perimeter using a transit water level or laser leveling device.
6. Precise measurements should be taken and deck area should be accurately defined. Mark off and 'square up' all outside edges with control lines using "snapped" chalk lines. Mark two (2) lines that are perpendicular to each other across the deck area. Continue to mark a grid of lines in both directions marking the location of each pedestal. Use the control lines as references to periodically check and assure a square layout during installation.
7. Next, a pedestal must be placed where each measured grid line meets the perimeter. Remove two (2) spacer tabs in line with one another atop each pedestal system placed around the perimeter. Remove all four (4) spacer tabs at corners.

8. Adjust each pedestal height to the “Top of Pedestal Elevation” marked on the perimeter. Position the pedestal as close to the edge of the perimeter as possible, with the two remaining spacer tabs aligned with the grid line. Using the elevation marked on the perimeter, stretch a mason’s line along and slightly ahead of the second row of pedestals. A laser leveling device may also be used for this purpose.
9. On larger decks, it is recommended that Tile Tech Pedestal System be pre-assembled and pre-set to the proper elevation and placed in position prior to the installation of decking paver or tile.
10. As the pedestals located along the grid lines are loaded with pavers or tiles, fine vertical height adjustment can be made by inserting and rotating, from the top, a T-handle Hex Key in to the Uni-Insert™ of the Pedestal assembly. Clockwise rotation of the Uni-Insert™ will raise the bearing surface and the deck. Counter-clockwise rotation will lower the top bearing surface and deck.
11. Always maintain adequate thread engagement. Tile Tech Pedestal Uni-Insert™ contains a locking tab that will not allow the screw to extend past its maximum extension. Never use if the locking tab is broken. If the height required goes beyond the Uni-Insert™ limit re-cut PVC pipe to the correct height and re-assemble the pedestal using the correct size pipe.
12. Slight irregularities in decking paver or tile thickness can be compensated for by using one (1) to two (2) shim segments. Place on top of the pedestal, under the corner(s) of the decking paver or tile. Use no more than two (2) shims on top of the pedestal and always adhere quartered (1/4) wedges with construction adhesive.
13. Stak-Cap™ Pedestal can be used for limited and or fixed height requirements. Complete deck and grid layout as instructed above. Stack no more than five (5) fixed height Stak-Cap™ Pedestals together and place in lieu of Uni-Just™ Pedestals where needed. Stak-Cap™ Pedestal can also be used with PVC pipe to reduce cost. Spacer tabs can be removed to accommodate perimeter and corner support locations.

C. SLOPE AND HEIGHT COMPENSATION:

1. Stak-Cap™ Pedestals can provide limited slope and height compensation to maintain a level decking surface over sloping substrates and is accomplished using a combination of the following:

    a. Rotate and stack one cap in relation to another to change slope and add height. Each cap will add ½-inch of height and provide 1% slope. Stack no more than 5 caps.
    b. Can also be used with PVC Pipe cut to required height of maximum of 6-inches.

2. Uni-Just™ Pedestals can provide both slope and height compensation to maintain a level decking surface over sloping substrates and is accomplished using a combination of the following:

    a. PVC Pipe cut to varying lengths to compensate for GENERAL height requirements.
    b. SCREW extension for PRECISE height adjustment.
    c. Self-Leveling cap that pivots and tilts in any direction for slope compensation from 0% to 6%.

3. Tile Tech Pedestals are designed to be rotated for final precise adjustment when they are fully loaded. Pedestals should be leveled in each succeeding row as the installation proceeds. Final height adjustment or maintenance is easily made by simply using a T-handle Hex Key that allows you to adjust the pedestals without removing the pavers. T-handle Hex Key is inserted between the four paver corners to engage Uni-Insert™ portion and is adjusted clockwise or counter clockwise to level as needed.

4. Uni-Shims™ may be used in multiples, whole or quarters, and placed under the pedestal base or on top the pedestal cap to level pedestals. Use a small amount of construction adhesive to adhere sections of shims and/or whole shims to each other or to the pedestal. DO NOT use construction adhesive to adhere pedestal or shims to insulation, roofing or waterproofing membrane. Additional sections of shims may be used and should be available for regular maintenance.

3.4 PERIMETER CONTAINMENT

A. Any area of the pedestal deck that is not restrained by a parapet or foundation wall must be 'boxed-in' and contained. The deck panels will move if all sides are not adequately restrained. Perimeter framing and edging boards located at the outside of the deck perimeter must be installed to provide restraint. No movement should be allowed at the perimeter of the deck system greater than one tab width.

3.5 FIELD QUALITY CONTROL

A. Inspect often during installation to assure that grid spacer lines are being maintained in a straight and consistent pattern and that deck pavers or tiles are level and not rocking. Unless otherwise specified in writing to allow for expansion, inspect to assure that all paver spacing between tiles and at perimeter walls does not exceed a tab width. Particular attention should be made to assure that all pedestrian entry or access points to the deck are level and that the deck surface tiles are not randomly raised or uneven creating a tripping or safety hazard. Confirm that deck pedestal height excess of sixteen (16) inches have been braced in accordance with Tile Tech Pavers written instructions.

3.6 ROUTINE MAINTENANCE AND CARE

A. The deck owner must perform routine maintenance of the deck. Check for rocking pavers and adjust using T-Handle Hex Key or shim immediately. Pedestals can settle and may have to be realigned. Failure to do so can cause a tripping hazard. Periodically check spacer tabs and immediately replace broken tabs to limit deck movement. Make sure the edge restraint stays intact and structurally sound.

B. Extra Materials: Deliver supply of maintenance materials to the owner. Furnish not less than 1 percent maintenance materials from same lot as materials installed, and enclosed in protective packaging with appropriate identifying labels.

END OF SECTION 077616

SECTION 078100 - APPLIED FIREPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes sprayed fire-resistive materials.

B. Related Requirements:

1. Section 051200 "Structural Steel Framing" for coordination of steel surface preparation with this Section.
2. Section 078123 "Intumescent Fireproofing" for mastic and intumescent fire-resistive coatings.

1.3 DEFINITIONS

A. CBC: 2016 California Building Code.

B. SFRM: Sprayed fire-resistive materials.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review products, design ratings, restrained and unrestrained conditions, densities, thicknesses, bond strengths, and other performance requirements.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: Product data indicating VOC content of each product used.

C. Shop Drawings: Framing plans and schedules, indicating the following:

1. Extent of fireproofing for each construction and fire-resistance rating.
2. Applicable fire-resistance design designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction.
3. Minimum fireproofing thicknesses needed to achieve required fire-resistance rating of each structural component and assembly.
4. Treatment of fireproofing after application.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Certificates: For each type of fireproofing.

C. Research / Evaluation Reports: For fireproofing, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

D. Field quality-control reports.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of applied fireproofing that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports and ICC evaluation reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 5 years' experience installing applied fireproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1.8 FIELD CONDITIONS

A. Environmental Limitations: Do not apply fireproofing when ambient or substrate temperature is 44 deg F or lower unless temporary protection and heat are provided to maintain temperature at or above this level for 24 hours before, during, and for 24 hours after product application.

B. Ventilation: Ventilate building spaces during and after application of fireproofing, providing complete air exchanges according to manufacturer's written instructions. Use natural means or, if they are inadequate, forced-air circulation until fireproofing dries thoroughly.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Assemblies: Provide fireproofing, including auxiliary materials, according to requirements of each fire-resistance design and manufacturer's written instructions.

B. Fire-Resistance Design: Indicated on Drawings, tested according to ASTM E 119 or UL 263; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Steel members are to be considered unrestrained unless specifically noted otherwise.

C. VOC Content: Products shall comply with VOC content limits of authorities having jurisdiction.

1. SFRM: 0 g/L.

D. Asbestos: Provide products containing no detectable asbestos.

2.2 SPRAYED FIRE-RESISTIVE MATERIALS

A. Sprayed Fire-Resistive Material UL D916: Manufacturer's standard, factory-mixed, lightweight, dry formulation, complying with indicated fire-resistance design, and mixed with water at Project site to form a slurry or mortar before conveyance and application.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Isolatek International.

1) Type I: Cafco 300.
2) Type II: Fendolite M-II.

b. Or comparable equal, subject to compliance with requirements herein and with Section 016000 "Product Requirements."

2. Source Limitations: Obtain applied fireproofing products from single source from single manufacturer.

3. Application:

    a. Provide Type II SFRM in the following locations:

        1) Where Type I is not permitted per manufacturer's written evaluation report:
        2) Areas outside of the conditioned building envelope.
        3) Where exposed to elevator hoistway or elevator machine room.
        4) Non-ducted ventilation shafts.
        5) Interior spaces and rooms, where exposed and subject to contact, including, but not limited to, the following:

            a) Exposed columns in warehouse area.

        6) In other locations required by Authorities Having Jurisdictions and where indicated.

    b. Provide Type I SFRM in all other locations.
    c. Where outside of the building envelope, applied fireproofing shall be designated for exterior use by a qualified testing agency acceptable to authorities having jurisdiction.

4. Bond Strength: Provide the following minimum cohesive and adhesive strength based on field testing according to ASTM E 736.

    a. Type I: 150-lbf/sq. ft.
    b. Type II: 1,000-lbf/sq. ft.

5. Density: Not less than density specified in the approved fire-resistance design, according to ASTM E 605.

    a. Type I: 15 lb./cu. ft.
    b. Type II: 40 lb./cu. ft.

6. Thickness: As required for fire-resistance design indicated, measured according to requirements of fire-resistance design or ASTM E 605, whichever is thicker, but not less than 0.375 inch.
7. Combustion Characteristics: ASTM E 136.
8. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

    a. Flame-Spread Index: 10 or less.
    b. Smoke-Developed Index: 10 or less.

9. Compressive Strength: Provide the following minimum compressive strengths according to ASTM E 761:

    a. Type I: 20 lbf/sq. in.
    b. Type II: 300 lbf/sq. in.

10. Corrosion Resistance: No evidence of corrosion according to ASTM E 937.
11. Deflection: No cracking, spalling, or delamination according to ASTM E 759.
12. Effect of Impact on Bonding: No cracking, spalling, or delamination according to ASTM E 760.
13. Air Erosion: No weight loss in 24 hours according to ASTM E 859.
14. Fungal Resistance: Treat products with manufacturer's standard antimicrobial formulation to result in no growth on specimens per ASTM G 21 or rating of 10 according to ASTM D 3274 when tested according to ASTM D 3273.
15. Material shall have been evaluated and reported by Underwriters Laboratory or International Code Council Evaluation Services (ICC-ES). A valid Evaluation Service Report Number shall be provided ensuring code compliance.

2.3 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that are compatible with fireproofing and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance designs indicated.

B. Substrate Primers: Primers approved by fireproofing manufacturer and complying with one or both of the following requirements:

1. Primer and substrate are identical to those tested in required fire-resistance design by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
2. Primer's bond strength in required fire-resistance design complies with specified bond strength for fireproofing and with requirements in UL's "Fire Resistance Directory" or in the listings of another qualified testing agency acceptable to authorities having jurisdiction, based on a series of bond tests according to ASTM E 736.

C. Bonding Agent: Product approved by fireproofing manufacturer and complying with requirements in UL's "Fire Resistance Directory" or in the listings of another qualified testing agency acceptable to authorities having jurisdiction.

D. Metal Lath: Expanded metal lath fabricated from material of weight, configuration, and finish required, according to fire-resistance designs indicated and fireproofing manufacturer's written instructions. Include clips, lathing accessories, corner beads, and other anchorage devices required to attach lath to substrates and to receive fireproofing.

E. Reinforcing Fabric: Glass- or carbon-fiber fabric of type, weight, and form required to comply with fire-resistance designs indicated; approved and provided by fireproofing manufacturer.

F. Reinforcing Mesh: Metallic mesh reinforcement of type, weight, and form required to comply with fire-resistance design indicated; approved and provided by fireproofing manufacturer. Include pins and attachment.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrates and other conditions affecting performance of the Work and according to each fire-resistance design.

1. Verify that substrates are free of dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, incompatible primers, paints, and encapsulants, or other foreign substances capable of impairing bond of fireproofing with substrates under conditions of normal use or fire exposure.
2. Verify that objects penetrating fireproofing, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
3. Verify that substrates receiving fireproofing are not obstructed by ducts, piping, equipment, or other suspended construction that will interfere with fireproofing application.

B. Verify that concrete work on steel deck is complete before beginning fireproofing work.

C. Verify that roof construction, installation of rooftop HVAC equipment, and other related work are complete before beginning fireproofing work.

D. Conduct tests according to fireproofing manufacturer's written instructions to verify that substrates are free of substances capable of interfering with bond.

E. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Cover other work subject to damage from fallout or overspray of fireproofing materials during application.

B. Clean substrates of substances that could impair bond of fireproofing.

C. Prime substrates where included in fire-resistance design and where recommended in writing by fireproofing manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive fireproofing.

D. For applications visible on completion of Project, repair substrates to remove surface imperfections that could affect uniformity of texture and thickness in finished surface of fireproofing. Remove minor projections and fill voids that would telegraph through fire-resistive products after application.

3.3 APPLICATION

A. Construct fireproofing assemblies that are identical to fire-resistance design indicated and products as specified, tested, and substantiated by test reports; for thickness, primers, sealers, topcoats, finishing, and other materials and procedures affecting fireproofing work.

B. Comply with fireproofing manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to mix, convey, and apply fireproofing; as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.

C. Coordinate application of fireproofing with other construction to minimize need to cut or remove fireproofing.

1. Do not begin applying fireproofing until clips, hangers, supports, sleeves, and other items penetrating fireproofing are in place.
2. Defer installing ducts, piping, and other items that would interfere with applying fireproofing until application of fireproofing is completed.

D. Metal Decks:

1. Do not apply fireproofing to underside of metal deck substrates until concrete topping, if any, is completed.
2. Do not apply fireproofing to underside of metal roof deck until roofing is completed; prohibit roof traffic during application and drying of fireproofing.

E. Install auxiliary materials as required, as detailed, and according to fire-resistance design and fireproofing manufacturer's written instructions for conditions of exposure and intended use. For auxiliary materials, use attachment and anchorage devices of type recommended in writing by fireproofing manufacturer.

F. Spray apply fireproofing to maximum extent possible. After the spraying operation in each area, complete the coverage by trowel application or other placement method recommended in writing by fireproofing manufacturer.

G. Extend fireproofing in full thickness over entire area of each substrate to be protected.

H. Install body of fireproofing in a single course unless otherwise recommended in writing by fireproofing manufacturer.

I. Cure fireproofing according to fireproofing manufacturer's written instructions.

J. Do not install enclosing or concealing construction until after fireproofing has been applied, inspected, and tested and corrections have been made to deficient applications.

3.4 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Test and inspect as required by the CBC Section 1705.14, “Sprayed Fire-Resistant Materials."

B. Perform the tests and inspections of completed Work in successive stages. Do not proceed with application of fireproofing for the next area until test results for previously completed applications of fireproofing show compliance with requirements. Tested values must equal or exceed values as specified and as indicated and required for approved fire-resistance design.

C. Fireproofing will be considered defective if it does not pass tests and inspections.

1. Remove and replace fireproofing that does not pass tests and inspections, and retest.
2. Apply additional fireproofing, per manufacturer's written instructions, where test results indicate insufficient thickness, and retest.

D. Prepare test and inspection reports.

3.5 CLEANING, PROTECTING, AND REPAIRING

A. Cleaning: Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.

B. Protect fireproofing, according to advice of manufacturer and Installer, from damage resulting from construction operations or other causes, so fireproofing is without damage or deterioration at time of Substantial Completion.

C. As installation of other construction proceeds, inspect fireproofing and repair damaged areas and fireproofing removed due to work of other trades.

D. Repair fireproofing damaged by other work before concealing it with other construction.

E. Repair fireproofing by reapplying it using same method as original installation or using manufacturer's recommended trowel-applied product.

END OF SECTION 078100

SECTION 078123 - INTUMESCENT FIREPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes mastic and intumescent fire-resistive coatings.

B. Related Requirements:

1. Section 051200 "Structural Steel Framing" for coordination of steel surface preparation with this Section.
2. Section 078100 "Applied Fireproofing" for sprayed fire-resistive materials (SFRM).

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review products, design ratings, restrained and unrestrained conditions, thicknesses, and other performance requirements.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: Product data for intumescent fireproofing, indicating VOC content.

C. Shop Drawings: Framing plans and schedules, indicating the following:

1. Extent of fireproofing for each construction and fire-resistance rating.
2. Applicable fire-resistance design designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction.
3. Minimum fireproofing thicknesses needed to achieve required fire-resistance rating of each structural component and assembly.
4. Treatment of fireproofing after application.

D. Samples: For each exposed product and for each color and texture specified, 4 inches square in size.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Manufacturer and Installer.

B. Product Certificates: For each type of fireproofing.

C. Evaluation Reports: For fireproofing, from ICC-ES.

D. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of intumescent fireproofing that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports and ICC evaluation reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 5 years' experience installing intumescent fireproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and to set quality standards for materials and execution.

1. Build mockup of each type of fireproofing and different substrate and each required finish as shown on Drawings.
2. Subject to acceptance by manufacturer and compliance with test data, apply in multiple lifts if required to match Architect's design reference sample and approved samples.
3. If preliminary intumescent fireproofing mockups are not approved by Architect, provide additional mockups as requested by Architect until mockups have been approved. Additional mockups shall be provided at no added cost to Owner.
4. Obtain Architect's approval of mockups before application of intumescent fireproofing.
5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Do not apply fireproofing when ambient or substrate temperature is 50 deg F or lower unless temporary protection and heat are provided to maintain temperature at or above this level for 24 hours before, during, and for 24 hours after product application.

B. Ventilation: Ventilate building spaces during and after application of fireproofing, providing complete air exchanges according to manufacturer's written instructions. Use natural means or, if they are inadequate, forced-air circulation until fireproofing dries thoroughly.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Assemblies: Provide fireproofing, including auxiliary materials, according to requirements of each fire-resistance design and manufacturer's written instructions.

B. Source Limitations: Obtain fireproofing from single source.

C. Fire-Resistance Design: Indicated on Drawings, tested according to ASTM E 119 or UL 263; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Steel members are to be considered unrestrained unless specifically noted otherwise.

D. VOC Content: Applied topcoat products shall comply with VOC content limits of authorities having jurisdiction.

1. Coatings: 50 g/L.

E. Asbestos: Provide products containing no detectable asbestos.

2.2 MASTIC AND INTUMESCENT FIRE-RESISTIVE COATINGS

A. Mastic and Intumescent Fire-Resistive Coating: Manufacturer's standard, factory-mixed formulation or factory-mixed, multicomponent system consisting of intumescent base coat and topcoat, and complying with indicated fire-resistance design.

1. Subject to compliance with requirements, provide intumescent fireproofing by one of the following:

a. Albi Manufacturing; Albi Clad TF.
b. Carboline Company; A/D Firefilm III.
c. Isolatek International; Cafco Sprayfilm.

2. Application: Designated for "exterior," "interior general purpose," and "conditioned interior space purpose" use by a qualified testing agency acceptable to authorities having jurisdiction.
3. Thickness: As required for fire-resistance design indicated, measured according to requirements of fire-resistance design.
4. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

a. Flame-Spread Index: 25 or less.
b. Smoke-Developed Index: 50 or less.

5. Finish: Match approved mockup.

a. Color and Gloss: Custom, to match Architect’s sample.

2.3 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that are compatible with fireproofing and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance designs indicated.

B. Substrate Primers: Primers approved by fireproofing manufacturer and complying with required fire-resistance design by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

C. Reinforcing Fabric: Glass- or carbon-fiber fabric of type, weight, and form required to comply with fire-resistance designs indicated; approved and provided by fireproofing manufacturer.

D. Reinforcing Mesh: Metallic mesh reinforcement of type, weight, and form required to comply with fire-resistance design indicated; approved and provided by fireproofing manufacturer. Include pins and attachment.

E. Topcoat: Suitable for application over applied fireproofing; of type recommended in writing by fireproofing manufacturer for each fire-resistance design.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrates and other conditions affecting performance of the Work and according to each fire-resistance design.

1. Verify that substrates are free of dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, incompatible primers, paints, and encapsulants, or other foreign substances capable of impairing bond of fireproofing with substrates under conditions of normal use or fire exposure.
2. Verify that objects penetrating fireproofing, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
3. Verify that substrates receiving fireproofing are not obstructed by ducts, piping, equipment, or other suspended construction that will interfere with fireproofing application.

B. Conduct tests according to fireproofing manufacturer's written instructions to verify that substrates are free of substances capable of interfering with bond.

C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Cover other work subject to damage from fallout or overspray of fireproofing materials during application.

B. Clean substrates of substances that could impair bond of fireproofing.

C. Prime substrates where included in fire-resistance design and where recommended in writing by fireproofing manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive fireproofing.

D. For applications visible on completion of Project, repair substrates to remove surface imperfections that could affect uniformity of texture and thickness in finished surface of fireproofing. Remove minor projections and fill voids that would telegraph through fire-resistive products after application.

3.3 APPLICATION

A. Construct fireproofing assemblies that are identical to fire-resistance design indicated and products as specified, tested, and substantiated by test reports; for thickness, primers, topcoats, finishing, and other materials and procedures affecting fireproofing work.

B. Comply with fireproofing manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to mix, convey, and apply fireproofing; as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.

C. Coordinate application of fireproofing with other construction to minimize need to cut or remove fireproofing.

1. Do not begin applying fireproofing until clips, hangers, supports, sleeves, and other items penetrating fireproofing are in place.
2. Defer installing ducts, piping, and other items that would interfere with applying fireproofing until application of fireproofing is completed.

D. Install auxiliary materials as required, as detailed, and according to fire-resistance design and fireproofing manufacturer's written instructions for conditions of exposure and intended use. For auxiliary materials, use attachment and anchorage devices of type recommended in writing by fireproofing manufacturer.

E. Spray apply fireproofing to maximum extent possible. After the spraying operation in each area, complete the coverage by trowel application or other placement method recommended in writing by fireproofing manufacturer.

1. Subject to acceptance by manufacturer and compliance with test data, apply in multiple thin coats to achieve finish to match approved samples and approved mockup.

F. Extend fireproofing in full thickness over entire area of each substrate to be protected.

G. Install body of fireproofing in a single course unless otherwise recommended in writing by fireproofing manufacturer.

H. Provide a uniform finish complying with description indicated for each type of fireproofing material and matching finish approved for required mockups.

I. Cure fireproofing according to fireproofing manufacturer's written instructions.

J. Do not install enclosing or concealing construction until after fireproofing has been applied, inspected, and tested and corrections have been made to deficient applications.

3.4 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Test and inspect as required by the 2016 California Building Code, Section 1705.15, the manufacture's ICC ES evaluation report, and authorities having jurisdiction.

B. Perform the tests and inspections of completed Work in successive stages. Do not proceed with application of fireproofing for the next area until test results for previously completed applications of fireproofing show compliance with requirements. Tested values must equal or exceed values as specified and as indicated and required for approved fire-resistance design.

C. Fireproofing will be considered defective if it does not pass tests and inspections.

1. Remove and replace fireproofing that does not pass tests and inspections, and retest.
2. Apply additional fireproofing, per manufacturer's written instructions, where test results indicate insufficient thickness, and retest.

D. Prepare test and inspection reports.

3.5 CLEANING, PROTECTING, AND REPAIRING

A. Cleaning: Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.

B. Protect fireproofing, according to advice of manufacturer and Installer, from damage resulting from construction operations or other causes, so fireproofing is without damage or deterioration at time of Substantial Completion.

C. As installation of other construction proceeds, inspect fireproofing and repair damaged areas and fireproofing removed due to work of other trades.

D. Repair fireproofing damaged by other work before concealing it with other construction.

E. Repair fireproofing by reapplying it using same method as original installation or using manufacturer's recommended trowel-applied product.

END OF SECTION 078123

SECTION 078413 - PENETRATION FIRESTOPPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Penetrations in fire-resistance-rated walls.
2. Penetrations in horizontal assemblies.
3. Penetrations in smoke barriers.

B. Related Requirements:

1. Section 078443 "Joint Firestopping" for joints in or between fire-resistance-rated construction and in smoke barriers.

1.3 PREINSTALLATION MEETING

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For sealants, indicating VOC content.

C. Product Schedule: For each penetration firestopping system. Include location, illustration of firestopping system, and design designation of qualified testing and inspecting agency.

1. Engineering Judgments: Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping system, submit illustration, with modifications marked, approved by penetration firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly. Obtain approval of authorities having jurisdiction prior to submittal.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Manufacturer and installer.

B. Product Test Reports: For each penetration firestopping system, for tests performed by a qualified testing agency.

C. Field quality control reports and special inspection reports.

1.6 CLOSEOUT SUBMITTALS

A. Installer Certificates: From Installer indicating that penetration firestopping systems have been installed in compliance with requirements and manufacturer's written instructions.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of penetration firestopping systems that have been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports and/or Engineering Judgements. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications:

1. A firm that has been approved by FM Global according to FM Global 4991, "Approval of Firestop Contractors," or been evaluated by UL and found to comply with its "Qualified Firestop Contractor Program Requirements."
2. Engage an experienced installer who is certified, licensed or otherwise qualified by the firestopping manufacturer as having been provided the necessary training to install penetration firestopping per specified requirements. Manufacturer's willingness to sell its penetration firestopping products to Contractor or to Installer engaged by Contractor does not in itself confer qualifications on buyer.

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Do not install penetration firestopping system when ambient or substrate temperatures are outside limits permitted by penetration firestopping system manufacturers or when substrates are wet because of rain, frost, condensation, or other causes.

B. Install and cure penetration firestopping materials per manufacturer's written instructions using natural means of ventilations or, where this is inadequate, forced-air circulation.

1.9 COORDINATION

A. Coordinate construction of openings and penetrating items to ensure that penetration firestopping systems can be installed according to specified firestopping system design.

B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate penetration firestopping systems.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Penetration Firestopping Systems: Systems shall resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated. Penetration firestopping systems shall be compatible with one another, with the substrates forming openings, and with penetrating items if any.

1. Penetration firestopping shall comply with the requirements of the 2016 California Building Code (CBC).

B. Fire-Test-Response Characteristics:

1. Perform penetration firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.
2. Test per testing standards referenced in "Penetration Firestopping Systems" Article. Provide rated systems complying with the following requirements:

a. Penetration firestopping systems shall bear classification marking of a qualified testing agency.

1) UL in its "Fire Resistance Directory."
2) Intertek Group in its "Directory of Listed Building Products."
3) FM Global in its "Building Materials Approval Guide."

C. Sustainable Design Requirements: Penetration firestopping sealants and sealant primers shall comply with the following:

1. Sealants shall have a VOC content of 250 g/L or less.

D. Mold Resistance: Provide penetration firestopping and sealing with mold and mildew resistance rating of zero (0) as determined by ASTM G 21.

2.2 MANUFACTURERS

A. Subject to compliance with requirements, provide penetration firestopping by one of the following:

1. 3M Fire Protection Products.
2. Hilti, Inc.
3. Specified Technologies, Inc.

B. Obtain penetration firestopping systems from a single manufacturer.

2.3 PENETRATION FIRESTOPPING SYSTEMS

A. Penetrations in Fire-Resistance-Rated Walls: Penetration firestopping systems with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.

1. F-Rating: Not less than the fire-resistance rating of constructions penetrated.

B. Penetrations in Horizontal Assemblies: Penetration firestopping systems with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.

1. F-Rating: At least one hour, but not less than the fire-resistance rating of constructions penetrated.
2. T-Rating: At least one hour, but not less than the fire-resistance rating of constructions penetrated except for floor penetrations within the cavity of a wall.
3. W-Rating: Provide penetration firestopping systems showing no evidence of water leakage when tested according to UL 1479.

C. Penetrations in Smoke Barriers: Penetration firestopping systems with ratings determined per UL 1479, based on testing at a positive pressure differential of 0.30-inch wg.

1. L-Rating: Not exceeding 5.0 cfm/sq. ft. of penetration opening at and no more than 50-cfm cumulative total for any 100 sq. ft. at both ambient and elevated temperatures.

D. Exposed Penetration Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, per ASTM E 84.

E. Data, Video, and Communication Cable Penetrations: Bundle shall utilize an enclosed fire-resistant rated pathway device where cables penetrated a fire-resistant rated wall or smoke barrier. The fire-rated pathway shall contain a built-in fire sealing system sufficient to maintain the hourly fire resistance rating being penetrated. The self-contained sealing system shall automatically adjust to the installed cable loading and shall permit cables to be installed, removed, or retrofitted without the need to adjust, remove or reinstall firestop material. The pathway shall be UL Classified and/or PF Systems Approved and tested to the requirements of ASTM E 814 (UL 1479).

1. Subject to compliance with requirements, provide the following:

a. Specified Technologies, Inc., “EZ Path System.”
b. Or Equal.

F. Accessories: Provide components for each penetration firestopping system that are needed to install fill materials and to maintain ratings required. Use only those components specified by penetration firestopping system manufacturer and approved by qualified testing and inspecting agency for conditions indicated.

1. Permanent forming/damming/backing materials.
2. Substrate primers.
3. Collars.
4. Steel sleeves.

2.4 FILL MATERIALS

A. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer sleeve lined with an intumescent strip, a flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.

B. Latex Sealants: Single-component latex formulations that do not re-emulsify after cure during exposure to moisture.

C. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.

D. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced intumescent elastomeric sheet bonded to galvanized-steel sheet.

E. Intumescent Putties: Nonhardening, water-resistant, intumescent putties containing no solvents or inorganic fibers.

F. Intumescent Wrap Strips: Single-component intumescent elastomeric sheets with aluminum foil on one side.

G. Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.

H. Pillows/Bags: Reusable heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents, and fire-retardant additives. Where exposed, cover openings with steel-reinforcing wire mesh to protect pillows/bags from being easily removed.

I. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

J. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants.

2.5 MIXING

A. Penetration Firestopping Materials: For those products requiring mixing before application, comply with penetration firestopping system manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning: Before installing penetration firestopping systems, clean out openings immediately to comply with manufacturer's written instructions and with the following requirements:

1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of penetration firestopping materials.
2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with penetration firestopping materials. Remove loose particles remaining from cleaning operation.
3. Remove laitance and form-release agents from concrete.

B. Prime substrates where recommended in writing by manufacturer. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. Masking Tape: Use masking tape to prevent penetration firestopping from contacting adjoining surfaces that will remain exposed on completion of the Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove stains. Remove tape as soon as possible without disturbing firestopping's seal with substrates.

3.3 INSTALLATION

A. General: Install penetration firestopping systems to comply with manufacturer's written installation instructions and published drawings for products and applications.

B. Install forming materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings.

1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not forming permanent components of firestopping.

C. Install fill materials by proven techniques to produce the following results:

1. Fill voids and cavities formed by openings, forming materials, accessories and penetrating items to achieve required fire-resistance ratings.
2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 IDENTIFICATION

A. Wall Identification: Permanently label walls containing penetration firestopping systems with the words "FIRE AND/OR SMOKE BARRIER - PROTECT ALL OPENINGS," using lettering not less than 3 inches high and with minimum 0.375-inch strokes.

1. Locate in accessible concealed floor, floor-ceiling, or attic space at 15 feet from end of wall and at intervals not exceeding 30 feet.

3.5 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer’s Field Services: Engage manufacturer’s representative for technical assistance and guidance for surface preparation and installation of penetration firestopping system. At a minimum, arrange for manufacturer’s representative to observe initial installation of each type of penetration firestopping system, at midpoint of installation, and at completion. Provide additional field observation when requested by Owner, Architect, or General Contractor. After each field visit, submit manufacturer’s written report of observations within 3 business days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective actions.

B. If test results or inspections show penetration firestopping systems do not comply with requirements, repair or replace as recommended in writing by manufacturer, until penetration firestopping systems installation passes.

C. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

A. Clean off excess fill materials adjacent to openings as the Work progresses by methods and with cleaning materials that are approved in writing by penetration firestopping system manufacturers and that do not damage materials in which openings occur.

B. Provide final protection and maintain conditions during and after installation that ensure that penetration firestopping systems are without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, immediately cut out and remove damaged or deteriorated penetration firestopping material and install new materials to produce systems complying with specified requirements.

3.7 PENETRATION FIRESTOPPING SYSTEM SCHEDULE

A. Where UL-classified systems are indicated, they refer to system numbers in UL's "Fire Resistance Directory" under product Category XHEZ.

B. Where Intertek Group-listed systems are indicated, they refer to design numbers in Intertek Group's "Directory of Listed Building Products" under "Firestop Systems."

C. Where FM Global-approved systems are indicated, they refer to design numbers listed in FM Global's "Building Materials Approval Guide" under "Wall and Floor Penetration Fire Stops."

D. Note: This schedule is schematic only. Contractor shall verify and submit final product list for approval. All firestop products shall be from a single manufacturer.

E. Firestop Systems with No Penetrating Items FS-1:

1. UL-Classified Systems: C-AJ-0001-0999, C-BJ-0001-0999, W-L-0001-0999.
2. Type of Fill Materials: One or more of the following:
   a. Latex sealant.
   b. Silicone sealant.
   c. Intumescent putty.
   d. Mortar.

F. Firestop Systems for Metallic Pipes, Conduit, or Tubing FS-2:

1. UL-Classified Systems: C-AJ-1001-1999, C-BJ-1001-1999, C-K-1001-1999, W-L- 1001-1999 .
2. Type of Fill Materials: One or more of the following:
   a. Latex sealant.
   b. Silicone sealant.
   c. Intumescent putty.
   d. Mortar.

G. Firestop Systems for Nonmetallic Pipe, Conduit, or Tubing FS-3:

1. UL-Classified Systems: C-AJ-2001-2999, C-BJ-2001-2999, W-L-2001-2999 .
2. Type of Fill Materials: One or more of the following:
   a. Latex sealant.
   b. Silicone sealant.
   c. Intumescent putty.
   d. Intumescent wrap strips.
   e. Firestop device.

H. Firestop Systems for Electrical Cables FS-4:

1. UL-Classified Systems: C-AJ-3001-3999, C-BJ-3001-3999, W-L-3001-3999..
2. Type of Fill Materials: One or more of the following:
   a. Latex sealant.
   b. Silicone sealant.
   c. Intumescent putty.
   d. Silicone foam.
   e. Pillows/bags.

I. Firestop Systems for Cable Trays FS-5:

1. UL-Classified Systems: C-AJ-4001-4999, C-BJ-4001-4999, W-K-4001-4999, W-L-4001-4999.
2. Type of Fill Materials: One or more of the following:
   a. Latex sealant.
   b. Intumescent putty.
   c. Silicone foam.
   d. Pillows/bags.
   e. Mortar.

J. Firestop Systems for Insulated Pipes FS-6:

1. UL-Classified Systems: C-AJ-5001-5999, C-BJ-5001-5999, W-L-5001-5999.
2. Type of Fill Materials: One or more of the following:
   a. Latex sealant.
   b. Intumescent putty.
   c. Silicone foam.
   d. Intumescent wrap strips.

K. Firestop Systems for Miscellaneous Electrical Penetrants FS-7:

1. UL-Classified Systems: C-AJ-6001-6999, F-A-6001-6999, W-L-6001-6999.
2. Type of Fill Materials: One or more of the following:
   a. Latex sealant.
   b. Intumescent putty.
   c. Mortar.

L. Firestop Systems for Miscellaneous Mechanical Penetrants FS-8:

1. UL-Classified Systems: C-AJ-7001-7999, F-C-7001-7999, W-J-7001-7999, W-L-7001-7999.
2. Type of Fill Materials: One or both of the following:
   a. Latex sealant.
   b. Mortar.

M. Firestop Systems for Groupings of Penetrants FS-9:

1. UL-Classified Systems: C-AJ-8001-8999, C-BJ-8001-8999, W-L-8001-8999.
2. Type of Fill Materials: One or more of the following:
   a. Latex sealant.
   b. Mortar.
   c. Intumescent wrap strips.
   d. Firestop device.
   e. Intumescent composite sheet.

END OF SECTION 078413

SECTION 078443 - JOINT FIRESTOPPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Joints in or between fire-resistance-rated constructions.
2. Joints in smoke barriers.

B. Related Requirements:

1. Section 078413 "Penetration Firestopping" for penetrations in fire-resistance-rated walls, horizontal assemblies, and smoke barriers and for wall identification.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For sealants, indicating VOC content.

C. Product Schedule: For each joint firestopping system. Include location, illustration of firestopping system, and design designation of qualified testing agency.

1. Engineering Judgments: Where Project conditions require modification to a qualified testing agency's illustration for a particular joint firestopping system condition, submit illustration, with modifications marked, approved by joint firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: For each joint firestopping system, for tests performed by a qualified testing agency.

C. Field quality control and special inspection reports.

1.6 CLOSEOUT SUBMITTALS

A. Installer Certificates: From Installer indicating that joint firestopping systems have been installed in compliance with requirements and manufacturer's written instructions.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of joint firestopping systems that have been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports and/or Engineering Judgements. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications:

1. A firm that has been approved by FM Global according to FM Global 4991, "Approval of Firestop Contractors," or been evaluated by UL and found to comply with UL's "Qualified Firestop Contractor Program Requirements."
2. Engage an experienced installer who is certified, licensed or otherwise qualified by the firestopping manufacturer as having been provided the necessary training to install fire-resistive joint systems per specified requirements. Manufacturer's willingness to sell its fire-resistive joint system products to Contractor or to Installer engaged by Contractor does not in itself confer qualifications on buyer.

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Do not install joint firestopping systems when ambient or substrate temperatures are outside limits permitted by joint firestopping system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.

B. Install and cure joint firestopping systems per manufacturer's written instructions using natural means of ventilation or, where this is inadequate, forced-air circulation.

1.9 COORDINATION

A. Coordinate construction of joints to ensure that joint firestopping systems can be installed according to specified firestopping system design.

B. Coordinate sizing of joints to accommodate joint firestopping systems.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Joint Firestopping Systems: Systems that resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of assemblies in or between which joint firestopping systems are installed. Joint firestopping systems shall accommodate building movements without impairing their ability to resist the passage of fire and hot gases.

1. Joint firestopping systems shall comply with the 2016 California Building Code (CBC).

B. Fire-Test-Response Characteristics:

1. Perform joint firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.
2. Test per testing standards referenced in "Joint Firestopping Systems" Article. Provide rated systems complying with the following requirements:

a. Joint firestopping systems shall bear classification marking of a qualified testing agency.

1) UL in its "Fire Resistance Directory."
2) Intertek Group in its "Directory of Listed Building Products."

C. Sustainable Design Requirements: Fire-resistive joint system sealants shall comply with the following:

1. Sealants shall have a VOC content of 250 g/L or less.

D. Mold Resistance: Provide penetration firestopping and sealing with mold and mildew resistance rating of zero (0) as determined by ASTM G 21.

2.2 MANUFACTURERS

A. Subject to compliance with requirements, provide joint firestopping systems by one of the following:

1. 3M Fire Protection Products.
2. Hilti, Inc.
3. Specified Technologies Inc.

B. Obtain fire-resistive joint systems from a single manufacturer.

2.3 JOINT FIRESTOPPING SYSTEMS

A. Joints in or between Fire-Resistance-Rated Construction: Provide joint firestopping systems with ratings determined per ASTM E 1966 or UL 2079.

1. Fire-Resistance Rating: Equal to or exceeding the fire-resistance rating of the wall, floor, or roof in or between which it is installed.

B. Joints in Smoke Barriers: Provide fire-resistive joint systems with ratings determined per UL 2079 based on testing at a positive pressure differential of 0.30-inch wg.

1. L-Rating: Not exceeding 5.0 cfm/ft. of joint at both ambient and elevated temperatures.

C. Exposed Joint Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

D. Accessories: Provide components of fire-resistive joint systems, including primers and forming materials, that are needed to install elastomeric fill materials and to maintain ratings required. Use only components specified by joint firestopping system manufacturer and approved by the qualified testing agency for conditions indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configurations, substrates, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning: Before installing fire-resistive joint systems, clean joints immediately to comply with fire-resistive joint system manufacturer's written instructions and the following requirements:

1. Remove from surfaces of joint substrates foreign materials that could interfere with adhesion of elastomeric fill materials or compromise fire-resistive rating.
2. Clean joint substrates to produce clean, sound surfaces capable of developing optimum bond with elastomeric fill materials. Remove loose particles remaining from cleaning operation.
3. Remove laitance and form-release agents from concrete.

B. Prime substrates where recommended in writing by joint firestopping system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. Masking Tape: Use masking tape to prevent fill materials of fire-resistive joint system from contacting adjoining surfaces that will remain exposed on completion of the Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove stains. Remove tape as soon as possible without disturbing fire-resistive joint system's seal with substrates.

3.3 INSTALLATION

A. General: Install fire-resistive joint systems to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.

B. Install forming materials and other accessories of types required to support elastomeric fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.

1. After installing elastomeric fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of fire-resistive joint system.

C. Install elastomeric fill materials for fire-resistive joint systems by proven techniques to produce the following results:

1. Elastomeric fill voids and cavities formed by joints and forming materials as required to achieve fire-resistance ratings indicated.
2. Apply elastomeric fill materials so they contact and adhere to substrates formed by joints.
3. For elastomeric fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 IDENTIFICATION

A. Refer to “Identification” Article in Section 078413 “Penetration Firestopping” for wall identification.

3.5 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer’s Field Services: Engage manufacturer’s representative for technical assistance and guidance for surface preparation and installation of joint firestopping systems. At a minimum, arrange for manufacturer’s representative to observe initial installation of each type of joint firestopping system, at midpoint of installation, and at completion. Provide additional field observation when requested by Owner, Architect, or General Contractor. After each field visit, submit manufacturer’s written report of observations within 3 business days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective actions.

B. If test results or inspections show joint firestopping systems do not comply with requirements, repair or replace as recommended in writing by manufacturer, until joint firestopping systems installation passes.

C. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

A. Clean off excess elastomeric fill materials adjacent to joints as the Work progresses by methods and with cleaning materials that are approved in writing by joint firestopping system manufacturers and that do not damage materials in which joints occur.

B. Provide final protection and maintain conditions during and after installation that ensure joint firestopping systems are without damage or deterioration at time of Substantial Completion. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated fire-resistive joint systems immediately and install new materials to produce fire-resistive joint systems complying with specified requirements.

3.7 JOINT FIRESTOPPING SCHEDULE

A. Where UL-classified systems are indicated, they refer to system numbers in UL's "Fire Resistance Directory" under product Category XHBN or Category XHDG.

B. Where Intertek ETL SEMKO-listed systems are indicated, they refer to design numbers in Intertek ETL SEMKO's "Directory of Listed Building Products" under product category Firestop Systems.

C. General: This schedule is schematic. Contractor shall verify and submit final product list for approval. All firestop products shall be from a single manufacturer.

D. Floor-to-Wall Fire-Resistive Joint Systems:

1. UL-Classified Systems: FW-S-0000-0999
2. Assembly Rating: 1 or 2 hours as indicated.
3. Nominal Joint Width: As indicated.

E. Head-of-Wall Fire-Resistive Joint Systems

1. UL-Classified Systems: HW-D-0001-0999.
2. Assembly Rating: 1 or 2 hours as indicated.
3. Nominal Joint Width: As indicated.
4. Movement Capabilities: Class II and III – maximum 50 percent compression or extension.

F. Bottom-of-Wall, Fire Resistive Joint Systems

1. UL-Classified Systems: BW-S-0001-0999
2. Assembly Rating: 1 or 2 hours as indicated.
3. Nominal Joint Width: As indicated.

G. Wall-to-Wall Fire-Resistive Joint Systems:

1. UL-Classified Systems: WW-S-0000-0999.
2. Assembly Rating: 1 or 2 hours as indicated.
3. Nominal Joint Width: As indicated.

END OF SECTION 078443

SECTION 079100 - PREFORMED JOINT SEALS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes preformed, foam joint with an extruded-silicone joint sealant face.

B. Related Requirements:

1. Section 079200 "Joint Sealants" for liquid sealants applied over preformed seals in dual seal systems.
2. Section 079513 "Exterior Expansion Joint Cover Assemblies" for exterior seismic joint cover assemblies.

1.3 ACTION SUBMITTALS

A. Product Data: For each preformed joint seal product.

B. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors available for each product exposed to view.

C. Samples for Verification: For each type and color of preformed joint seal required, provide Samples with joint seals in 1/2-inch-wide joints formed between two 6-inch-long strips of material matching the appearance of exposed surfaces adjacent to joint seals.

D. Preformed Joint Seal Schedule: Include the following information:

1. Joint seal location and designation.
2. Joint width and movement capability.
3. Joint seal manufacturer and product name.
4. Joint seal color.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: For each preformed joint seal for tests performed by a qualified testing agency.

C. Warranties: For special warranties.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of preformed joint seals that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports and calculations. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 5 years' experience installing preformed joint seals similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Mockups: Install mockups of assemblies specified in other Sections that are indicated to receive preformed joint seals specified in this Section. Use materials and installation methods specified in this Section.

1.6 PROJECT CONDITIONS

A. Do not proceed with installation of preformed joint seals under the following conditions:

a. When ambient and substrate temperatures conditions are outside limits permitted by preformed joint seals manufacturer.
b. When joint substrates are wet.
c. When joint widths are less than those allowed by expansion control manufacturer for applications indicated.
d. Where contaminants capable of interfering with installation have not yet been removed from joint substrates.

1.7 WARRANTY

A. Special Manufacturer's Warranty: Manufacturer agrees to furnish preformed joint seals to repair or replace those that do not comply with performance and other requirements specified and/or fail to stop the passage of water within the specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PREFORMED, FOAM JOINT SEALS

A. Preformed, Foam Joint Seals: Manufacturer's standard joint seal manufactured from urethane or EVA (ethylene vinyl acetate) foam with minimum density of 10 lb/cu. ft. and impregnated with a nondrying, water-repellent agent. Factory produce in precompressed sizes in roll or stick form to fit joint widths based on design criteria indicated, with factory- or field-applied adhesive for bonding to substrates, with an extruded-silicone joint sealant face.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. CS-Group, Inc. VF Series.

2. Design Criteria:

a. Nominal Joint Width: As indicated on Drawings.
b. Minimum Joint Width: As indicated on Drawings.
c. Maximum Joint Width: As indicated on Drawings.
d. Movement Capability: As indicated on Drawings.

3. Joint Seal Color: As selected by Architect from full range of industry colors.

2.2 MISCELLANEOUS MATERIALS

A. Primer: Material recommended by preformed-joint-seal manufacturer for joint substrates indicated.

B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to preformed joint seal manufacturer, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces, and formulated to promote best adhesion to joint substrates.

C. Masking Tape: Nonstaining, nonabsorbent material compatible with preformed joint seals and surfaces adjacent to joints.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine joints indicated to receive preformed joint seals, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting preformed-joint seal performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing preformed joint seals to comply with preformed joint seal manufacturer's written instructions and the following requirements:

1. Remove all foreign material from joint substrates that could interfere with adhesion of preformed joint seal, including dust, paints (except for permanent protective coatings tested and approved for seal adhesion and compatibility by seal manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimal bond with preformed joint seals. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:

    a. Concrete.
    b. Masonry.
    c. Unglazed surfaces of ceramic tile.
    d. Exterior insulation and finish systems.

3. Remove laitance and form-release agents from concrete.
4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint seals. Nonporous joint substrates include the following:

    a. Metal.
    b. Glass.
    c. Porcelain enamel.
    d. Glazed surfaces of ceramic tile.

B. Joint Priming: Prime joint substrates where recommended by preformed joint seal manufacturer or as indicated by tests or prior experience. Apply primer to comply with joint seal manufacturer's written instructions. Confine primers to areas of joint seal bond; do not allow spillage or migration onto adjoining surfaces.

C. Masking Tape: Use masking tape where required to prevent contact of adhesive or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION

A. General: Comply with preformed joint seal manufacturer's written installation instructions for products and applications indicated unless more stringent requirements apply.

B. Installation of Preformed, Foam Joint Seals:

1. Install each length of seal immediately after removing protective wrapping.
2. Firmly secure compressed joint seals to joint gap side to obtain full bond using exposed pressure-sensitive adhesive or field-applied adhesive as recommended by manufacturer.
3. Do not pull or stretch material. Produce seal continuity at splices, ends, turns, and intersections of joints.
4. For applications at low ambient temperatures, heat foam joint seal material in compliance with manufacturer's written instructions.
5. Apply masking tape to each side of joint, outside of area to be covered by seal system.
6. Apply silicone sealant to each side of joint to produce a bead of size complying with preformed silicone seal system manufacturer's written instructions and covering a bonding area of not less than 3/8 inch. Hold edge of sealant bead 1/4 inch inside masking tape.
7. Complete installation of seal system in horizontal joints before installing in vertical joints. Lap vertical joints over horizontal joints. At ends of joints, cut silicone extrusion with a razor knife.

3.4 PROTECTION

A. Protect preformed joint seals from damage resulting from construction operations or other causes so seals are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated seals immediately so installations with repaired areas are indistinguishable from original work.

END OF SECTION 079100

SECTION 079200 - JOINT SEALANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Silicone joint sealants.
2. Urethane joint sealants.
3. Latex joint sealants.
4. Acoustical joint sealants.

B. Related Requirements:

1. Section 078443 "Joint Firestopping" for sealing joints in fire-resistant rated construction.
2. Section 092900 "Gypsum Board" for sealing perimeter joints.
3. Section 321373 "Concrete Paving Joint Sealants" for sealing joints in paved roads, parking lots, walkways, and curbing.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Transmit all action and informational submittal items together in one single complete submittal package for review.

B. Product Data: For each joint-sealant product, provide product data and identify substrates being joined.

C. Sustainable Design Submittals:

1. Product Data: For sealants, indicating VOC content.

D. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view. Identify substrates being joined.

E. Samples for Verification: For each kind and color of joint sealant required, provide Samples with joint sealants in 1/2-inch-wide joints formed between two 6-inch-long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

F. Joint-Sealant Schedule: Include the following information:

1. Joint-sealant application, joint location, and designation.
2. Joint-sealant manufacturer and product name.
3. Joint-sealant formulation.
4. Joint-sealant color.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer, installer, and testing agency.

B. Product Test Reports: For each kind of joint sealant, for tests performed by a qualified testing agency.

C. Preconstruction Laboratory Test Schedule: Include the following information for each joint sealant and substrate material to be tested:

1. Joint-sealant location and designation.
2. Manufacturer and product name.
3. Type of substrate material.
4. Proposed test.
5. Number of samples required.

D. Preconstruction Laboratory Test Reports: From sealant manufacturer, indicating the following:

1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
2. Interpretation of test results and written recommendations for primers and substrate preparation are needed for adhesion.

E. Preconstruction Field-Adhesion-Test Reports: Indicate which sealants and joint preparation methods resulted in optimum adhesion to joint substrates based on testing specified in "Preconstruction Testing" Article.

F. Field-Adhesion-Test Reports: For each sealant application tested.

G. Sample Warranties: For special warranties.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of joint sealants that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance

B. Installer Qualifications: A firm with not less than 10 years' experience installing joint sealants similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Product Testing: Test joint sealants using a qualified testing agency.

1. Testing Agency Qualifications: Qualified according to ASTM C 1021 to conduct the testing indicated.

D. Mockups: Install sealant in mockups of assemblies specified in other Sections that are indicated to receive joint sealants specified in this Section. Use materials and installation methods specified in this Section.

1.7 PRECONSTRUCTION TESTING

A. Preconstruction Laboratory Testing: Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.

1. Use manufacturer's standard test method to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
2. Submit not fewer than required by sealant manufacturer for testing for each kind of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
3. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
4. For materials failing tests, obtain joint-sealant manufacturer's written instructions for corrective measures, including use of specially formulated primers.
5. Testing will not be required if joint-sealant manufacturers submit data that are based on previous testing, not older than 24 months, of sealant products for adhesion to, staining of, and compatibility with joint substrates and other materials matching those submitted.

B. Preconstruction Field-Adhesion Testing: Before installing sealants, field test their adhesion to Project joint substrates as follows:

1. Locate test joints where indicated on Project or, if not indicated, as directed by Architect.
2. Conduct field tests for each kind of sealant and joint substrate.
3. Notify Architect seven days in advance of dates and times when test joints will be erected.
4. Arrange for tests to take place with joint-sealant manufacturer's technical representative present.

    a. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1.1 in ASTM C 1193 or Method A, Tail Procedure, in ASTM C 1521.

        1) For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.

5. Report whether sealant failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. For sealants that fail adhesively, retest until satisfactory adhesion is obtained.
6. Evaluation of Preconstruction Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.
7. Field testing will not be required if joint-sealant manufacturers submit joint preparation data that are based on previous testing, not older than 24 months, of sealant products for adhesion to, and compatibility with, joint substrates and other materials matching those submitted.

1.8 FIELD CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer. In no event shall sealants be installed when substrate and ambient temperatures are below 60 deg F or are above 85 deg F.
2. When joint substrates are wet.
3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.9 WARRANTY

A. Special Manufacturer's Warranty: Manufacturer’s standard or customized material and labor form in which manufacturer agrees to repair or replace joint sealants that do not comply with requirements or that fail to stop the passage of air and/or water within specified warranty period.

1. Warranty Period: 20 years from date of Substantial Completion.

B. Special Installer's Warranty: Installer agrees to repair or replace joint sealants that do not comply with requirements or that fail to stop the passage of air and/or water within specified warranty period.

1. Warranty Period: 10 years from date of Substantial Completion.

C. Defects, faulty work, and failures include, but are not limited to the following:

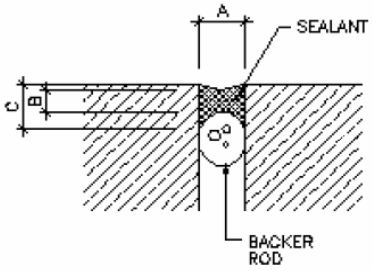
1. Adhesive or cohesive failure of sealant.
2. Abrasion-resistance failure.
3. Lack of resistance to migration.
4. Staining of substrates from sealant or primers.
5. Durability of specified performance.
6. Failure to maintain continuous airtight and watertight seal.
7. Crazing on outside of non-structural sealant.
8. Non-structural sealant hardening beyond Shore A durometer 50 or softening below 20.

D. Special warranties specified in this article exclude deterioration or failure of joint sealants from the following:

1. Movement of the structure caused by stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
2. Disintegration of joint substrates from causes exceeding design specifications.
3. Mechanical damage caused by individuals, tools, or other outside agents.
4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS



1. Dimension A shall be at least 1/4 inch.
2. Dimension B shall be at least 1/8 inch.
3. Dimension C shall be at least 1/4 inch.
4. Ratio of dimension A to dimension B shall be 2:1 minimum.
5. Joint surface shall be tooled.
6. Dimension B shall not exceed 1/2 inch.
7. Dimension A shall not exceed 1 inch.
8. Joints with Dimension A in excess of 1 inch shall:
   a. Implement another jointing system as recommended by the substrate material manufacturer that does not require the use of a sealant joint over 1 inch in width.

2.2 JOINT SEALANTS, GENERAL

A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint sealant manufacturer, based on testing and field experience.

B. Sustainable Design Requirements: Joint sealants, sealant primers, and caulks shall comply with the following:

1. Architectural sealants shall have a VOC content of 250 g/L or less.
2. Sealants and sealant primers for nonporous substrates shall have a VOC content of 250 g/L or less.
3. Sealants and sealant primers for porous substrates shall have a VOC content of 775 g/L or less.

C. Stain-Test-Response Characteristics: At porous substrates, provide products that have undergone testing according to ASTM C 1248 and have not stained porous joint substrates indicated for Project.

D. Suitability for Contact with Food: Where sealants are indicated for joints that will come in repeated contact with food, provide products that comply with 21 CFR 177.2600.

E. Colors of Exposed Joint Sealants: As selected by Architect from manufacturer's full range.

2.3 SILICONE JOINT SEALANTS

A. SJ-1: Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 100/50, for Use NT

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Dow Corning Corporation; 790.
b. Or Comparable Equal.

B. SJ-2: Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 50, for Use NT.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Dow Corning Corporation; 795.
b. Or Comparable Equal.

C. SJ-3: Neutral, one-part silicone sealant, designed for adhering to low energy surfaces common in sheet or peel-and-stick weather-resistant barriers: ASTM C 920, Type S, Grade NS, Class 25.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Dow Corning Corporation, 758.

D. SJ-4: Silicone, Non-staining, S, NS, 50, NT: Non-staining, single-component, non-sag, plus 50 percent and minus 50 percent movement capability, non-traffic-use, neutral-curing silicone joint sealant; ASTM C 920, Type S, Grade NS, Class 50, Use NT, with no staining of substrates when tested according to ASTM C 1248.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Dow Corning Corporation; 756 SMS.

2.4 MILDEW-RESISTANT JOINT SEALANTS

A. Mildew-Resistant Joint Sealants: Formulated for prolonged exposure to humidity with fungicide to prevent mold and mildew growth.

B. MRJ-1: Mildew-Resistant, Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Pecora Corporation; 898 NST.
b. Or Comparable Equal.

2.5 URETHANE JOINT SEALANTS

A. UJ-1: Single-Component, Nonsag, Urethane Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. BASF Building Systems; MasterSeal NP1.
b. Or Comparable Equal.

2.6 LATEX JOINT SEALANTS

A. LJ-1: Acrylic Latex: Acrylic latex or siliconized acrylic latex, ASTM C 834, Type OP, Grade NF.

1. Subject to compliance with requirements, provide one of the following:

a. Pecora Corporation; AC-20+.
b. Or Comparable Equal.

2.7 ACOUSTICAL JOINT SEALANTS

A. AJ-1: Acoustical Joint Sealant: Manufacturer's standard nonsag, paintable, nonstaining acrylic sealant complying with ASTM C 834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.

1. Basis of Design Product: Subject to compliance with requirements, provide the following:

a. USG Corporation; SHEETROCK Acoustical Sealant.
b. Or Comparable Equal.

2.8 JOINT-SEALANT BACKING

A. Sealant Backing Material, General: Nonstaining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.

B. Cylindrical Sealant Backings: ASTM C 1330, Type C (closed-cell material with a surface skin) Type B (bicellular material with a surface skin) or any of the preceding types, as approved in writing by joint-sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.

C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

2.9 MISCELLANEOUS MATERIALS

A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.

B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.

C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:

    a. Concrete.
    b. Masonry.
    c. Unglazed surfaces of ceramic tile.

3. Remove laitance and form-release agents from concrete.
4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:

    a. Metal.
    b. Glass.
    c. Porcelain enamel.
    d. Glazed surfaces of ceramic tile.

B. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION OF JOINT SEALANTS

A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.

B. Sealant Installation Standard: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.

C. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

1. Do not leave gaps between ends of sealant backings.
2. Do not stretch, twist, puncture, or tear sealant backings.
3. Remove absorbent sealant backings that have become wet before sealant application, and replace them with dry materials.

D. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.

E. Install sealants using proven techniques that comply with the following and at the same time backings are installed:

1. Place sealants so they directly contact and fully wet joint substrates.
2. Completely fill recesses in each joint configuration.
3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

F. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.

1. Remove excess sealant from surfaces adjacent to joints.
2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
3. Provide concave joint profile per Figure 8A in ASTM C 1193 unless otherwise indicated.
4. Provide flush joint profile where indicated according to Figure 8B in ASTM C 1193.
5. Provide recessed joint configuration of recess depth and at locations indicated according to Figure 8C in ASTM C 1193.

    a. Use masking tape to protect surfaces adjacent to recessed tooled joints.

G. Acoustical Sealant Installation: At sound-rated assemblies, at all full-height walls/partitions, and elsewhere as indicated, seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C 919, ASTM C 1193, and with manufacturer's written recommendations for closing off sound-flanking paths around or through assemblies, including sealing partitions to underside of floor slab and above acoustical ceilings.

H. Acoustical Ceiling Areas: Apply acoustical joint sealant at perimeter edge of molding of acoustical ceiling areas in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.

3.4 FIELD QUALITY CONTROL

A. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:

1. Extent of Testing: Test completed and cured sealant joints as required by manufacturer to obtain warranty specified.
2. Test Method: Test joint sealants according to manufacturer’s written instructions and latest industry standard test method per ASTM C 1193 or ASTM C 1521.

    a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.

3. Inspect tested joints and report on the following:

    a. Whether sealants filled joint cavities and are free of voids.
    b. Whether sealant dimensions and configurations comply with specified requirements.
    c. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion complies with sealant manufacturer's field-adhesion hand-pull test criteria.

4. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant material, sealant configuration, and sealant dimensions.
5. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.

B. Evaluation of Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

3.5 CLEANING

A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.6 PROTECTION

A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

3.7 JOINT SEALANT SCHEDULE

A. Exterior joints in horizontal traffic surfaces.

1. Urethane Joint Sealant: UJ-1.

a. Joint Locations:
1) Isolation and contraction joints in cast-in-place concrete slabs.
2) Joints in stone paving units.
3) Tile control and expansion joints.
4) Joints between different materials listed above.
5) Other joints as indicated.

B. Exterior joints in vertical surfaces and horizontal nontraffic surfaces:

1. Silicone Joint Sealant: SJ-1

a. Joint Locations:
1) Construction joints in cast-in-place concrete.
2) Control and expansion joints in concrete unit masonry.

2. Silicone Joint Sealant: SJ-2.

a. Joint Locations:
1) Perimeter joints of exterior openings at frames of doors, windows, and louvers.
2) Control and expansion joints in ceilings and other overhead surfaces.
3) Joints between metal panels.
4) Joints between different materials listed above.
5) Other joints as indicated.

3. Silicone Joint Sealant: SJ-3.

a. Joint Locations:
1) Where in direct contact with fluid-applied, sheet, or peel-and-stick weather-resistant barriers,

4. Silicone Joint Sealant: SJ-4.

a. Joint Locations:
1) Stone, sensitive porous or cementitious substrates subject to staining, metal substrates subject to residue rundown, and where indicated.

C. Interior joints in horizontal traffic surfaces:

1. Urethane Joint Sealant: UJ-1.

a. Joint Locations:
1) Isolation joints in cast-in-place concrete slabs.
2) Control and expansion joints in stone flooring.
3) Control and expansion joints in tile flooring.
4) Other joints as indicated.

D. Interior joints in vertical surfaces in horizontal nontraffic surfaces:

1. Latex Joint Sealant: LJ-1.

a. Joint Locations:
1) Control and expansion joints on exposed interior surfaces of exterior walls.
2) Perimeter joints on interior side of exterior openings where indicated.
3) Tile control and expansion joints.
4) Vertical joints on exposed surfaces of interior unit masonry, concrete walls, and partitions.
5) Perimeter joints between interior wall surfaces and frames of interior doors, windows, and elevator entrances.
6) Other joints as indicated.

E. Mildew-resistant interior joints in vertical surfaces and horizontal nontraffic surfaces.

1. Mildew-Resistant Joint Sealant: MRJ-1.

a. Joint Locations:
1) Joints between plumbing fixtures and adjoining walls, floors, and counters.
2) Joints between locker room lockers and adjacent materials.
3) Other interior joints in wet areas where needed to limit mold and mildew growth.
4) Other joints as indicated.

F. Interior acoustical joints in vertical surfaces and horizontal nontraffic surfaces.

1. Acoustical Joint Sealant: AJ-1.

a. Joint Location:
1) Joints and penetrations in gypsum board surfaces.
2) Other joints as indicated.

END OF SECTION 079200

SECTION 079513 - EXTERIOR EXPANSION JOINT COVER ASSEMBLIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes exterior building expansion joint cover assemblies.

B. Related Requirements:

1. Section 033000 "Cast-In-Place Concrete" for cast-in exterior expansion joint frames furnished, but not installed, in this Section.
2. Section 076200 "Sheet Metal Flashing and Trim" for sheet metal flashing to the extent not provided as part of this Section.
3. Section 079100 "Preformed Joint Seals" for preformed foam and extruded-silicone joint seals.

1.3 DEFINITIONS

A. Maximum Joint Width: Widest linear gap a joint system tolerates and in which it performs its designed function without damaging its functional capabilities.

B. Minimum Joint Width: Narrowest linear gap a joint system tolerates and in which it performs its designed function without damaging its functional capabilities.

C. Movement Capability: Value obtained from the difference between widest and narrowest widths of a joint.

D. Nominal Joint Width: The width of the linear opening specified in practice and in which the joint system is installed.

1.4 COORDINATION

A. Coordinate installation of exterior expansion joint cover assemblies that are anchored to other work. Furnish setting drawings, templates, and directions for installing anchorages that are to be embedded in concrete. Deliver such items to Project site in time for installation.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for expansion joint cover assemblies.

B. Shop Drawings: Provide project-specific shop drawings for each expansion joint cover assembly.

1. Include plans, elevations, sections, details, splices, block-out requirement, attachments to other work, and line diagrams showing entire route of each expansion joint.
2. Where expansion joint cover assemblies change planes, provide isometric or clearly detailed drawing depicting how components interconnect.

C. Samples for Verification: For each type of expansion joint cover assembly, full width by 6 inches long in size.

D. Expansion Joint Cover Assembly Schedule: Prepared by or under the supervision of the supplier. Include the following information in tabular form:

1. Manufacturer and model number for each expansion joint cover assembly.
2. Expansion joint cover assembly location cross-referenced to Drawings.
3. Nominal, minimum, and maximum joint width.
4. Movement direction.
5. Materials, colors, and finishes.
6. Product options.
7. Fire-resistance ratings.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: For each joint cover assembly, for tests performed by a qualified testing agency.

C. Warranties: For special warranties.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of exterior expansion joint cover assemblies that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports and calculations. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 5 years' experience installing exterior expansion joint cover assemblies similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1.8 PROJECT CONDITIONS

A. Do not proceed with installation of expansion control systems under the following conditions:

a. When ambient and substrate temperatures conditions are outside limits permitted by expansion control system manufacturer.
b. When joint substrates are wet.
c. When joint widths are less than those allowed by expansion control manufacturer for applications indicated.
d. Where contaminants capable of interfering with installation have not yet been removed from joint substrates.

1.9 WARRANTY

A. Special Warranty for Exterior Expansion Control Systems: Manufacturer's standard or customized warranty in which manufacturer and installer agree to repair or replace expansion control systems that do not comply with performance requirements and/or fail to stop the passage of water within specified warranty period.

1. Warranty Period: Five (5) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide exterior expansion joint cover assemblies by the following:

1. CS-Group, Inc. See below for specific models.

B. Source Limitations: Obtain exterior expansion joint cover assemblies from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. General: Expansion control systems shall resist the movement indicated without failure, rattling, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction. In addition to the above requirements, exterior joints shall also withstand exposure to weather, and remain watertight without leaking.

B. Seismic Performance: Expansion joint cover assemblies shall withstand the effects of earthquake motions determined according to the 2016 California Building Code (CBC) and ASCE/SEI 7.

1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified. The system shall remain fully operational after elastic seismic events."
2. Component Importance Factor is per the 2016 CBC.

C. Story Drift: Accommodate design displacement of adjacent stories indicated.

1. Amplified (Inelastic) Story Drift Displacement: As indicated on Structural Drawings.

a. The expansion control system may experience localized material failures, sealant may tear, framing elements may warp and buckle, however no anchor shall fail nor shall any portion of the expansion control system experience catastrophic failure by falling from the building.

2. Elastic Story Drift Displacement: As indicated on Structural Drawings.

a. The expansion control system shall not experience any failure in materials, sealants, anchorage of any kind. The expansion control system shall remain fully operational. Exterior expansion control systems shall remain air and water tight.
b. Floor-to-floor seismic cover assemblies:

1) Shall include concealed lifting device to allow full elastic movement without damage to cover. Center plate shall be held in place and kept centered throughout movement cycle.
2) Shall accommodate wind elastic drift displacements with no vertical movement of lifting device.

3. Expansion Joint Design Criteria:

a. Type of Movement: Seismic.

1) Nominal Joint Width: As indicated on Drawings.
2) Maximum Joint Width: As indicated on Drawings.
3) Minimum Joint Width: As indicated on Drawings.
4) Lateral Shear Movement Capability: As indicated on Drawings.

D. Fire-Resistance Ratings: Provide expansion control systems with fire barriers identical to those of systems tested for fire resistance per UL 2079 or ASTM E 1966 by a testing and inspecting agency acceptable to authorities having jurisdiction.

1. Match fire-resistance rating of floor or wall assembly into which expansion control system is being installed.

E. Accessibility Requirements: Comply with the 2010 ADA Standards for Accessible Design and the accessibility requirements of the 2016 CBC.

1. Bevel raised floor covers with a slope of not more than 1:2. Provide floor covers not more than 1/2 inch high.

F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.3 ASSEMBLY DESCRIPTION

A. Furnish units in longest practicable lengths to minimize field splicing.

B. Include factory-fabricated closure materials and transition pieces, T-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous expansion joint cover assemblies.

2.4 EXTERIOR EXPANSION JOINT COVERS

A. Exterior Metal-Plate Joint Cover: Assembly consisting of self-centering stainless steel center plate that remains flush during thermal and wind movement events, but temporarily displaces and slides over floor surface during seismic movement.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. CS-Group, Inc. Models SJ-HD-S and SJW-HD-S Series (stainless steel finish).

2. Application: Floor-to-floor and floor-to-wall.
3. Installation: Recessed, cast into adjacent concrete.
4. Type of Movement: Seismic; refer to performance requirements above.
5. Fire-Resistance Rating: Not less than of adjacent construction.
6. Moisture Barrier: Manufacturer's standard moisture barrier consisting of a continuous, waterproof membrane within joint and attached to substrate on sides of joint below the primary cover.

a. Drain-Tube Assemblies: Equip moisture barrier with drain tubes and seals to direct collected moisture to drain to nearest plumbing drain assembly.

7. Exposed Metal:

a. Directional textured finish, slip resistant.

2.5 MATERIALS

A. Aluminum: ASTM B 221, Alloy 6063-T5 for extrusions; ASTM B 209, Alloy 6061-T6 for sheet and plate.

1. Apply manufacturer's standard protective coating on aluminum surfaces to be placed in contact with cementitious materials.

B. Stainless Steel: ASTM A 240 or ASTM A 666, Type 304 for plates, sheet, and strips.

C. Elastomeric Seals: Manufacturer's standard preformed elastomeric membranes or extrusions to be installed in metal frames.

D. Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist the passage of flame and hot gases through a movement joint and to meet performance criteria for required fire-resistance rating.

E. Moisture Barrier: Flexible elastomeric material, PVC, minimum 30 mils thick; Santoprene.

F. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

G. Accessories: Manufacturer's stainless-steel attachment devices. Include anchors, clips, fasteners, set screws, spacers, and other accessories compatible with material in contact, as indicated or required for complete installations.

2.6 ALUMINUM FINISHES

A. Mill finish.

2.7 STAINLESS-STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.
2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
3. Directional Satin Finish: No. 4.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine surfaces where expansion joint cover assemblies will be installed for installation tolerances and other conditions affecting performance of the Work.

B. Notify Architect where discrepancies occur that will affect proper expansion joint cover assembly installation and performance.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to expansion joint cover assembly manufacturer's written instructions.

B. Coordinate and furnish anchorages, setting drawings, and instructions for installing expansion joint cover assemblies. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of expansion joint cover assemblies.

3.3 INSTALLATION

A. Comply with manufacturer's written instructions for storing, handling, and installing expansion joint cover assemblies and materials unless more stringent requirements are indicated.

B. Metal Frames: Perform cutting, drilling, and fitting required to install expansion joint cover assemblies.

1. Install in true alignment and proper relationship to joints and adjoining finished surfaces measured from established lines and levels.
2. Adjust for differences between actual structural gap and nominal design gap due to ambient temperature at time of installation.
3. Cut and fit ends to accommodate thermal expansion and contraction of metal without buckling of frames.
4. Install frames in continuous contact with adjacent surfaces.

a. Shimming is not permitted.

5. Locate anchors at interval recommended by manufacturer, but not less than 3 inches from each end and not more than 24 inches o.c.

C. Seals: Install elastomeric seals and membranes in frames to comply with manufacturer's written instructions. Install with minimum number of end joints.

1. Provide in continuous lengths for straight sections.
2. Seal transitions. Vulcanize or heat-weld field-spliced joints as recommended by manufacturer.
3. Installation: Mechanically lock seals into frames or adhere to frames with adhesive or pressure-sensitive tape as recommended by manufacturer.

D. Install with hairline mitered corners where expansion joint cover assemblies change direction or abut other materials.

E. Terminate exposed ends of expansion joint cover assemblies with field- or factory-fabricated termination devices.

F. Fire-Resistance-Rated Assemblies: Coordinate installation of expansion joint cover assembly materials and associated work so complete assemblies comply with performance requirements.

1. Fire Barriers: Install fire barriers to provide continuous, uninterrupted fire resistance throughout length of joint, including transitions and field splices.

G. Moisture Barrier Drainage: If indicated, provide drainage fitting and connect to drains.

3.4 PROTECTION

A. Do not remove protective covering until finish work in adjacent areas is complete. When protective covering is removed, clean exposed metal surfaces to comply with manufacturer's written instructions.

B. Protect the installation from damage by work of other Sections.

1. Where necessary due to heavy construction traffic, remove and properly store cover plates or seals and install temporary protection over expansion control systems. Reinstall cover plates or seals prior to Substantial Completion of the Work.

END OF SECTION 079513

SECTION 081113 - HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes hollow-metal work.

B. Related Requirements:

1. Section 042200 "Concrete Unit Masonry" for embedding anchors for hollow metal work into concrete unit masonry.
2. Section 081416 "Flush Wood Doors" for wood doors to receive hollow metal frames.
3. Section 087100 "Door Hardware" for door hardware for hollow-metal doors.
4. Section 088000 "Glazing" for glass within borrowed lites and doors.
5. Sections 099113 "Exterior Painting" and 099123 "Interior Painting" for field painting hollow metal doors and frames.
6. Division 26 Section(s) for electrical connections including conduit and wiring for door controls and operators.
7. Division 28 Section(s) for low voltage connections, including conduit and wiring for door contacts and controls for intrusion detection.

1.3 DEFINITIONS

A. Minimum Thickness: Minimum thickness of base metal without coatings according to NAAMM-HMMA 803 or SDI A250.8.

1.4 COORDINATION

A. Coordinate anchorage installation for hollow-metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

B. Coordinate requirements for installation of door hardware, electrified door hardware, and access control and security systems.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, core descriptions, fire-resistance ratings, and finishes.

B. Shop Drawings: Include the following:

1. Elevations of each door type.
2. Details of doors, including vertical- and horizontal-edge details and metal thicknesses.
3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
4. Locations of reinforcement and preparations for hardware.
5. Details of each different wall opening condition.
6. Details of anchorages, joints, field splices, and connections.
7. Details of accessories.
8. Details of moldings, removable stops, and glazing.
9. Details of conduit and preparations for power, signal, and control systems.

C. Product Schedule: For hollow-metal doors and frames, prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final door hardware schedule.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: For each type of hollow-metal door and frame assembly, for tests performed by a qualified testing agency.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of hollow metal doors and frames that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports and labels. Manufacturer shall also be a member of the Steel Door Institute.

B. Installer Qualifications: A firm with not less than 10 years' experience installing hollow metal doors and frames similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver hollow-metal work palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.

1. Provide additional protection to prevent damage to factory-finished units.

B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.

C. Store hollow-metal work vertically under cover at Project site with head up. Place on minimum 4-inch-high wood blocking. Provide minimum 1/4-inch space between each stacked door to permit air circulation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ceco Door; ASSA ABLOY.
2. Curries Company; ASSA ABLOY.
3. Security Metal Products; ASSA ABLOY.
4. Or Comparable Equal, subject to compliance with Quality Assurance article above and with Section 016000 "Product Requirements."

B. Source Limitations: Obtain hollow-metal work from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Fire-Rated Assemblies: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.

1. Smoke- and Draft-Control Assemblies: Provide an assembly with gaskets listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing according to UL 1784 and installed in compliance with NFPA 105.

B. Fire-Rated, Borrowed-Lite Assemblies: Complying with NFPA 80 and listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction for fire-protection ratings indicated, based on testing according to NFPA 257 or UL 9.

2.3 INTERIOR DOORS AND FRAMES

A. Construct interior doors and frames to comply with the standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.

B. Maximum-Duty Doors and Frames: SDI A250.8, Level 4; SDI A250.4, Level A.

1. Doors:

a. Type: As indicated in the Door and Frame Schedule.
b. Thickness: 1-3/4 inches
c. Face: Cold-rolled steel sheet, minimum thickness of 0.067 inch, metallic-coated at wet locations with minimum A40 coating.
d. Edge Construction: Model 2, Seamless.
e. Core: Vertical steel stiffener with UL-listed fire door core board, complying with manufacturer's tested assembly.

2. Frames:

a. Materials: Steel sheet, minimum thickness of 0.067 inch, metallic-coated at wet locations with minimum A40 coating.
b. Sidelite and Transom Frames: Fabricated from same thickness material as adjacent door frame.
c. Construction: Full profile welded.

3. Exposed Finish: Prime.

2.4 EXTERIOR HOLLOW-METAL DOORS AND FRAMES

A. Construct exterior doors and frames to comply with the standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.

B. Maximum-Duty Doors and Frames: SDI A250.8, Level 4; SDI A250.4, Level A.

1. Doors:

a. Type: As indicated in the Door and Frame Schedule.
b. Thickness: 1-3/4 inches.
c. Face: Metallic-coated steel sheet, minimum thickness of 0.067 inch, with minimum A40 coating.
d. Edge Construction: Model 2, Seamless.
e. Core: Vertical steel stiffener with minimum 0.75 lb density insulation between stiffeners.

1) Thermal-Rated Doors: Provide doors fabricated with thermal-resistance value (R-value) of not less than 1.5 when tested according to ASTM C 1363.

2. Frames:

a. Materials: Metallic-coated steel sheet, minimum thickness of 0.067 inch, with minimum A40 coating.
b. Construction: Full profile welded.

3. Exposed Finish: Prime.

2.5 BORROWED LITES

A. Hollow-metal frames of steel sheet, minimum thickness of 0.053 inch, with minimum A40 metallic coating at exterior and wet interior locations.

B. Construction: Full profile welded.

C. Fabricate in one piece except where handling and shipping limitations require multiple sections. Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of metal of same or greater thickness as metal as frames.

D. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.

2.6 FRAME ANCHORS

A. Jamb Anchors:

1. Type: Anchors of minimum size and type required by applicable door and frame standard, and suitable for performance level indicated.
2. Quantity: Minimum of three anchors per jamb, with one additional anchor for frames with no floor anchor. Provide one additional anchor for each 24 inches of frame height above 7 feet.
3. Postinstalled Expansion Anchor: Minimum 3/8-inch-diameter bolts with expansion shields or inserts, with manufacturer's standard pipe spacer.

B. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor.

C. Floor Anchors for Concrete Slabs with Underlayment: Adjustable-type anchors with extension clips, allowing not less than 2-inch height adjustment. Terminate bottom of frames at top of underlayment.

D. Material: ASTM A 879, Commercial Steel (CS), 04Z (12G) coating designation; mill phosphatized.

1. For anchors built into exterior walls, steel sheet complying with ASTM A 1008 or ASTM A 1011; hot-dip galvanized according to ASTM A 153, Class B.

2.7 MATERIALS

A. Cold-Rolled Steel Sheet: ASTM A 1008, Commercial Steel (CS), Type B; suitable for exposed applications.

B. Hot-Rolled Steel Sheet: ASTM A 1011, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.

C. Metallic-Coated Steel Sheet: ASTM A 653, Commercial Steel (CS), Type B.

D. Inserts, Bolts, and Fasteners: Hot-dip galvanized according to ASTM A 153.

E. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hollow-metal frames of type indicated.

F. Grout: ASTM C 476, except with a maximum slump of 4 inches, as measured according to ASTM C 143.

G. Mineral-Fiber Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics.

H. Glazing: Comply with requirements in Section 088000 "Glazing."

2.8 FABRICATION

A. Fabricate hollow-metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for metal thickness. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.

B. Hollow-Metal Frames: Fabricate in one piece except where handling and shipping limitations require multiple sections. Where frames are fabricated in sections, provide alignment plates or angles at each joint, fabricated of metal of same or greater thickness as frames.

1. Sidelite and Transom Bar Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by welding.
2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
3. Door Silencers: Except on weather-stripped frames, drill stops to receive door silencers as follows. Keep holes clear during construction.

    a. Single-Door Frames: Drill stop in strike jamb to receive three door silencers.
    b. Double-Door Frames: Drill stop in head jamb to receive two door silencers.

C. Hardware Preparation: Factory prepare hollow-metal doors and frames to receive templated mortised hardware, and electrical wiring; include cutouts, reinforcement, mortising, drilling, and tapping according to SDI A250.6, the Door Hardware Schedule, and templates.

1. Reinforce doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.
2. Comply with BHMA A156.115 for preparing hollow-metal doors and frames for hardware.

D. Glazed Lites: Provide stops and moldings around glazed lites where indicated. Form corners of stops and moldings with mitered hairline joints.

1. Provide stops and moldings flush with face of door, and with square stops unless otherwise indicated.
2. Multiple Glazed Lites: Provide fixed and removable stops and moldings so that each glazed lite is capable of being removed independently.
3. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames. Provide loose stops and moldings on inside of hollow-metal doors and frames.
4. Coordinate rabbet width between fixed and removable stops with glazing and installation types indicated.
5. Provide stops for installation with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches o.c. and not more than 2 inches o.c. from each corner.

2.9 STEEL FINISHES

A. Prime Finish: Clean, pretreat, and apply manufacturer's standard primer.

1. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with SDI A250.10; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.

2.10 LOUVERS

A. Provide louvers for interior doors, where indicated, which comply with SDI 111, with blades or baffles formed of 0.020-inch-thick, cold-rolled steel sheet set into 0.032-inch-thick steel frame.

1. Exterior Louvers: Storm-resistant, sightproof, and drainable.
2. Interior Louvers: Sightproof louvers constructed with inverted-V or inverted-Y blades.
3. Fire-Rated Automatic Louvers: Louvers constructed with movable blades closed by actuating fusible link, and listed and labeled for use in fire-rated door assemblies of type and fire-resistance rating indicated by same qualified testing and inspecting agency that established fire-resistance rating of door assembly.

B. Form corners of moldings with hairline joints. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for embedded and built-in anchors to verify actual locations before frame installation.

C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.

B. Drill and tap doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.

3.3 INSTALLATION

A. General: Install hollow-metal work plumb, rigid, properly aligned, and securely fastened in place. Comply with Drawings and manufacturer's written instructions.

1. Hollow metal doors and frames shall be properly installed such that without closer attached, door opening force is 1 lbf or less.

B. Hollow-Metal Frames: Install hollow-metal frames for doors, transoms, sidelites, borrowed lites, and other openings, of size and profile indicated. Comply with SDI A250.11 or NAAMM-HMMA 840 as required by standards specified.

1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces without damage to completed Work.

    a. Where frames are fabricated in sections, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces. Touch-up finishes.
    b. Install frames with removable stops located on secure side of opening.

2. Fire-Rated Openings: Install frames according to NFPA 80.
3. Floor Anchors: Secure with postinstalled expansion anchors.

    a. Floor anchors may be set with power-actuated fasteners instead of postinstalled expansion anchors if so indicated and approved on Shop Drawings.

4. Solidly pack mineral-fiber insulation inside frames.
5. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with grout or mortar.
6. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
7. Installation Tolerances: Adjust hollow-metal frames to the following tolerances:

    a. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
    b. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
    c. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
    d. Plumbness: Plus or minus 1/16 inch, measured at jambs at floor.

C. Hollow-Metal Doors: Fit hollow-metal doors accurately in frames, within clearances specified below. Shim as necessary.

1. Non-Fire-Rated Steel Doors: Comply with SDI A250.8.

a. Between Door and Frame Jambs and Head: 1/8 inch plus or minus 1/32 inch.
b. Between Edges of Pairs of Doors: 1/8 inch to 1/4 inch plus or minus 1/32 inch.
c. Between Bottom of Door and Top of Threshold: Maximum 3/8 inch.
d. Between Bottom of Door and Top of Finish Floor (No Threshold): Maximum 3/4 inch.

2. Fire-Rated Doors: Install doors with clearances according to NFPA 80.
3. Smoke-Control Doors: Install doors and gaskets according to NFPA 105.

D. Glazing: Comply with installation requirements in Section 088000 "Glazing" and with hollow-metal manufacturer's written instructions.

3.4 ADJUSTING AND CLEANING

A. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust-inhibitive primer.

B. Metallic-Coated Surface Touchup: Clean abraded areas and repair with galvanizing repair paint according to manufacturer's written instructions.

END OF SECTION 081113

SECTION 081216 - ALUMINUM FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes interior aluminum frames for doors installed in gypsum board partitions.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles,and finishes.

B. Shop Drawings: For aluminum frames:

1. Include elevations, sections, and installation details for each wall-opening condition.
2. Include details for each frame type, including dimensioned profiles and metal thicknesses.
3. Include locations of reinforcements and preparations for hardware.
4. Include details of anchorages, joints, field splices, connections, and accessories.

C. Samples for Verification: For each type of the following products:

1. Framing Member and Finish: 12 inches long. Include trim.
2. Corner Fabrication and Finish: 12-by-12-inch-long, full-size window corner, including full-size sections of extrusions with factory-applied color finish.

D. Product Schedule: For aluminum frames. Use same designations indicated on Drawings. Coordinate with door hardware schedule.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: For each type of hollow-metal door and frame assembly, for tests performed by a qualified testing agency.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of aluminum frames that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports and labels. Manufacturer shall also be a member of the Steel Door Institute.

B. Installer Qualifications: A firm with not less than 10 years' experience installing aluminum frames similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For aluminum frames to include in maintenance manuals.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

1. Fry Reglet Corporation; "Minimalist" aluminum door frames.

B. Source Limitations: Obtain aluminum frames from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Test Procedures and Performance: Provide independent lab test report based on ANSI/SDI A250.4 Test Procedure and Acceptance Criteria for Physical Endurance for Steel Doors, Frames, and Frame Anchors indicating that frame has been tested and achieved a count of at least 35,000 cycles when subjected to a shutting force of 7 pounds per cycle, showing no visible cracking in abutting drywall finishing.

2.3 COMPONENTS

A. Aluminum Framing: ASTM B 221, with alloy and temper required to suit structural and finish requirements, and not less than 0.078 inch thick.

B. Door Frames: Extruded aluminum, reinforced for hinges, strikes, and closers.

C. Construction: Extruded aluminum hinge jamb, strike jamb and header section factory mitered to install with hair-line seams.

D. Provide continuous door silencer of Thermoplastic Vulcanizate (TPV) material.

E. Frame sections shall be extruded to include continuous, punched, taping flanges along each exposed section for application of tape, mid, primer, and paint.

F. Hardware Installation: Hinge jamb to be factory assembled with concealed hinges.

G. Reinforcements: Include integral hinge and strike reinforcements designed to position hinge and strike plates flush with face of frame.

H. Frame and Trim Finish: Factory-applied, baked-enamel or powder-coat finish.

1. Color: As indicated on Drawings, or if not indicated, in custom color to match Architect's sample.

2.4 ACCESSORIES

A. Fasteners: Aluminum, nonmagnetic, stainless-steel or other noncorrosive metal fasteners compatible with frames, stops, panels, reinforcement plates, hardware, anchors, and other items being fastened.

B. Door Hardware: As specified in Section 087100 "Door Hardware."

2.5 FABRICATION

A. Provide concealed corner reinforcements and alignment clips for accurately fitted hairline joints at butted and mitered connections.

B. Factory prepare aluminum frames to receive templated mortised hardware; include cutouts, reinforcements, mortising, drilling, and tapping, according to the Door Hardware Schedule and templates furnished as specified in Section 087100 "Door Hardware."

C. Fabricate components to allow secure installation without exposed fasteners.

2.6 GENERAL FINISH REQUIREMENTS

A. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 ALUMINUM FINISHES

A. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Verify that wall thickness does not exceed standard tolerances allowed by throat size of indicated aluminum frame.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install aluminum frames plumb, rigid, properly aligned, and securely fastened in place; according to manufacturer's written instructions.

1. Doors and aluminum frames shall be properly installed such that without closer attached, door opening force is 1 lbf or less.

B. Install frame components in the longest possible lengths with no piece less than 48 inches; components 96 inches or shorter shall be one piece.

1. Use concealed installation clips to produce tightly fitted and aligned splices and connections.
2. Secure clips to extruded main-frame components and not to snap-in or trim members.
3. Do not leave screws or other fasteners exposed to view when installation is complete.

C. Doors: Install doors aligned with frames and fitted with required hardware.

D. Door Hardware: Install according to Section 087100 "Door Hardware" and aluminum-frame manufacturer's written instructions.

3.3 ADJUSTING

A. Inspect installation, correct misalignments, and tighten loose connections.

B. Doors: Adjust doors to operate smoothly and easily, without binding or warping. Adjust hardware to function smoothly, and lubricate as recommended by manufacturer.

C. Clean exposed frame surfaces promptly after installation, using cleaning methods recommended in writing by frame manufacturer and according to AAMA 609 & 610.

D. Touch Up: Repair marred frame surfaces to blend inconspicuously with adjacent unrepaired surface so touchup is not visible from a distance of 48 inches as viewed by Architect. Remove and replace frames with damaged finish that cannot be satisfactorily repaired.

END OF SECTION 081216

SECTION 081416 - FLUSH WOOD DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Interior solid-core doors with wood-veneer faces.
2. Factory finishing flush wood doors.
3. Fitting wood doors to frames and factory machining for hardware.

B. Related Requirements:

1. Section 081113 “Hollow Metal Doors and Frames” for hollow metal frames for wood doors.
2. Section 081433 “Stile and Rail Wood Doors” for requirements from the same flitches for both flush wood doors and stile and rail wood doors.
3. Section 087100 "Door Hardware" for door hardware for wood doors.
4. Section 088000 “Glazing” for glass view panels in flush wood doors.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct at Project site

1.4 ACTION SUBMITTALS

A. Product Data: For each type of door indicated. Include details of core and edge construction, and trim for openings. Include factory-finishing specifications.

B. Sustainable Design Submittals: Product data for adhesives, composite wood products, and stains documenting that products comply with sustainable design performance requirements.

C. Shop Drawings: Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data; and the following:

1. Dimensions and locations of blocking.
2. Dimensions and locations of mortises and holes for hardware.
3. Dimensions and locations of cutouts.
4. Undercuts.
5. Requirements for veneer matching.
6. Doors to be factory finished and finish requirements.
7. Fire-protection ratings for fire-rated doors.

D. Samples for Initial Selection: For factory-finished doors.

E. Samples for Verification:

1. Factory finishes applied to actual door face materials, approximately 8 by 10 inches, for each material and finish. Provide set of three samples showing typical range of color and grain to be expected in the finished work.
2. Frames for light openings, 6 inches long, for each material, type, and finish required.
3. Corner sections of doors, approximately 8 by 10 inches, with door faces and edges representing actual materials to be used.

a. Finish veneer-faced door samples with same materials proposed for factory-finished doors.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: For each type of fire-resistant rated and/or STC-rated flush wood door assembly, for tests performed by a qualified testing agency.

C. Sample Warranty: For special warranty.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of flush wood doors that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports and labels. Manufacturer shall also be qualified to produce doors that meet the current WDMA I.S. 1A Industry Standard for Architectural Wood Flush Doors.

B. Installer Qualifications: A firm with not less than 10 years' experience installing flush wood doors similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Comply with requirements of referenced standard and manufacturer's written instructions.

B. Package doors individually in plastic bags or cardboard cartons.

C. Mark each door on top and bottom rail with opening number used on Shop Drawings.

1.8 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1. Doors shall be allowed to reach average prevailing temperature and humidity conditions within the area of installation for not less than 48 hours prior to installation.

1.9 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Warping (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section.
b. Telegraphing of core construction in face veneers exceeding 0.01 inch in a 3-inch span.

2. Warranty shall also include installation and finishing that may be required due to repair or replacement of defective doors.
3. Warranty Period for Solid-Core Interior Wood Doors: Life of installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide flush wood door products by one of the following:

1. Graham Wood Doors; ASSA ABLOY.
2. Oregon Door.
3. VT Industries, Inc.

B. Source Limitations: Obtain flush wood doors from single manufacturer.

2.2 FLUSH WOOD DOORS, GENERAL

A. Quality Standard: In addition to requirements specified, comply with WDMA I.S. 1A, “Architectural Wood Flush Doors.”

1. Contract Documents may contain selections chosen from options in quality standard and additional requirements beyond those of quality standard. Comply with those selections and requirements in addition to quality standard.

B. Sustainable Design Requirements: Adhesives and composite wood products shall comply with 2016 CALGreen mandatory measures:

1. Adhesives: Adhesives, adhesive bonding primers, adhesive primers, sealants, sealant primers and caulks shall comply with local or regional air pollution control or air quality management district rules where applicable, or SCAQMD Rule 1168 VOC limits, as shown in 2016 CALGreen Tables 5.504.4.1 and 5.504.4.2. Such products also shall comply with the Rule 1168 prohibition on the use of certain toxic compounds (chloroform, ethylene dichloride methylene chloride, perchloroethylene and trichloroethylene). Adhesives shall have no added formaldehyde resins.
2. Composite Wood Products: Hardwood plywood, particleboard and medium density fiberboard composite wood products used on the interior or exterior of the building shall meet the requirements for formaldehyde as specified in ARB's Air Toxics Control Measure (ATCM) for Composite Wood (17 CCR 93120 et seq.) Those materials not exempted under the ATCM must meet the specified emission limits, as shown in 2016 CALGreen Table 5.504.4.5.

C. WDMA I.S.1-A Performance Grade: Extra Heavy Duty.

D. Fire-Rated Wood Doors (Greater than 20-minute fire rating): Doors complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.

1. Cores: Provide core specified or mineral core as needed to provide fire-protection rating indicated.
2. Edge Construction: Provide edge construction with intumescent seals concealed by outer stile. Comply with specified requirements for exposed edges.
3. Pairs: Provide fire-retardant stiles that are listed and labeled for applications indicated without formed steel edges and astragals. Provide stiles with concealed intumescent seals. Comply with specified requirements for exposed edges.
4. Blocking: Provide composite blocks with improved screw-holding capability approved for use in doors of fire-protection ratings indicated and as needed to eliminate thought-bolting hardware.

E. Smoke- and Draft-Control Door Assemblies: Listed and labeled for smoke and draft control, based on testing according to UL 1784.

F. Non-Fire-Rated and 20-Minute-Rated Wood Doors:

1. Structural Composite Lumber: Solid structural composite lumber core conforming to WDMA I.S.10 and containing no urea-formaldehyde resin.

a. Screw Withdrawal, Face: 700 lbf.
b. Screw Withdrawal, Edge: 400 lbf.

G. Fire-Rated Doors (Greater than 20 Minutes):

1. Mineral-Core Doors:

a. Core: Noncombustible mineral product complying with requirements of referenced quality standard and testing and inspecting agency for fire-protection rating indicated.
b. Blocking: Provide composite blocking with improved screw-holding capability approved for use in doors of fire-protection ratings indicated as needed to eliminate through-bolting hardware.

2. Edge Construction: At hinge stiles, provide laminated-edge construction with improved screw-holding capability and split resistance. Comply with specified requirements for exposed edges.

a. Screw-Holding Capability: Per WDMA T.M.-10.

2.3 VENEERED-FACED DOORS FOR TRANSPARENT FINISH

A. Interior Flush Solid-Core Doors:

1. Grade: Premium, with Grade A faces.
2. Species: As indicated on Drawings.
3. Cut: As indicated on Drawings, or if not indicated, quarter sliced.
4. Match Between Veneer Leaves: Book.
5. Assembly of Veneer Leaves on Door Faces: Center-balance.
6. Pair and Set Match: Provide for doors hung in same opening.
7. Room Match: Match door faces within each separate room or area of building.
8. Exposed Vertical Edges: Same species as faces, edge Type A.
9. Construction: Five plies. Stiles and rails are bonded to core, then entire unit abrasive planed before veneering.
10. Thickness: 1-3/4 inches.
11. Custom Transparent Finish: Match Architect’s sample.
12. Core:

a. Solid Structural Composite Lumber: Non-fire-rated and 20-minute-rated doors.
b. Mineral Core: Fire-rated doors with a fire rating greater than 20 minutes.

2.4 LIGHT FRAMES

A. Wood Beads for Light Openings in Wood Doors: Provide manufacturer's standard wood beads unless otherwise indicated.

1. Wood Species: Same species as door faces.
2. Profile: Flush rectangular beads.
3. At wood-core doors with 20-minute fire-protection ratings, provide wood beads and metal glazing clips approved for such use.

B. Wood-Veneered Beads for Light Openings in Fire-Rated Doors: Manufacturer's standard wood-veneered noncombustible beads matching veneer species of door faces and approved for use in doors of fire-protection rating indicated. Include concealed metal glazing clips where required for opening size and fire-protection rating indicated.

2.5 FABRICATION

A. Factory fit doors to suit frame-opening sizes indicated. Comply with clearance requirements of referenced quality standard for fitting unless otherwise indicated.

1. Comply with requirements in NFPA 80 for fire-rated doors.

B. Factory machine doors for hardware that is not surface applied. Locate hardware to comply with DHI-WDHS-3. Comply with final hardware schedules, door frame Shop Drawings, DHI A115-W series standards, and hardware templates.

1. Coordinate with hardware mortises in metal frames to verify dimensions and alignment before factory machining.

C. Side Panels: Fabricate matching panels with same construction, exposed surfaces, and finish as specified for associated doors. Finish bottom edges of transoms and top edges of rabbeted doors same as door stiles.

1. Fabricate door and side light panels with full-width, solid-lumber, rabbeted**,** meeting rails. Provide factory-installed spring bolts for concealed attachment into jambs of metal door frames.

D. Openings: Factory cut and trim opening though doors.

1. Light Openings: Trim openings with moldings of material and profile indicated.
2. Glazing: Factory install glazing in doors indicated to be factory finished. Comply with applicable requirements in Section 088000 “Glazing.”

2.6 FACTORY FINISHING

A. General: Comply with referenced quality standard for factory finishing. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.

1. Finish faces, all four edges, edges of cutouts, and mortises. Fillers may be omitted on top and bottom edges, edges of cutouts, and mortises.

B. Factory finish doors.

C. Transparent Finish:

1. Grade: Premium.
1. Finish: WDMA TR-6, catalyzed polyurethane.
2. Staining: Custom to match Architect’s sample.
3. Sheen: Satin.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine doors and installed door frames before hanging doors.

1. Verify that frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
2. Reject doors with defects.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install flush wood doors level, plumb, square, true to line; without distortion, warp, or rack, and without impeding movement; anchored securely in place. Comply with Drawings and manufacturer's written instructions.

1. Flush wood doors shall be properly installed such that without closer attached, door opening force is 1 lbf or less.

B. Hardware: For installation, see Section 087100 "Door Hardware."

C. Installation Instructions: Install doors to comply with manufacturer's written instructions and the referenced quality standard, and as indicated.

1. Install fire-rated doors in corresponding fire-rated frames according to NFPA 80.
2. Install smoke- and draft-control doors according to NFPA 105.

D. Job-Fitted Doors: Align and fit doors in frames with uniform clearances and bevels as indicated below; do not trim stiles and rails in excess of limits set by manufacturer or permitted for fire-rated doors. Machine doors for hardware. Seal edges of doors, edges of cutouts, and mortises after fitting and machining.

1. Clearances: Provide 1/8 inch at heads, jambs, and between pairs of doors. Provide 1/8 inch from bottom of door to top of decorative floor finish or covering unless otherwise indicated. Where threshold is shown or scheduled, provide 1/4 inch from bottom of door to top of threshold unless otherwise indicated.

a. Comply with NFPA 80 for fire-rated doors.

2. Bevel non-fire rate doors 1/8 inch in 2 inches at lock and hinge edges.
3. Bevel fire-rated doors 1/8 inch in 2 inches at lock edge; trim stiles and rails only to extent permitted by labeling agency.

E. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.

F. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.3 ADJUSTING

A. Operation: Rehang or replace doors that do not swing or operate freely.

B. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.

C. Adjust door hinges to provide uniform clearances at heads, jambs, and floor as indicated below and to contact frame silencers or stops uniformly. Perform these alterations only if doors are not factory pre-fit and pre-machined, or not fire-rated.

1. Fit doors to width by planning equally from both sides.
2. Bevel lock and hinge edges 1/8-inch in 2 inches.
3. Side and top clearance: 1/8-inch.
4. Floor clearance: 3/4-inch.

D. Re-adjust door heights after carpet installation.

END OF SECTION 081416

SECTION 081433 - STILE AND RAIL WOOD DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Interior stile and rail wood doors with wood-veneer faces.
2. Factory finishing of stile and rail wood doors.
3. Fitting stile and rail wood doors to frames and factory machining for hardware.

B. Related Requirements:

1. Section 081113 "Hollow Metal Doors and Frames" for hollow metal frames for stile and rail wood doors.
2. Section 081416 "Flush Wood Doors" for requirements for veneers from the same flitches for both flush wood doors and stile and rail wood doors.
3. Section 087100 "Door Hardware" for door hardware to be installed in stile and rail wood doors.
4. Section 088000 "Glazing" for glazing to be installed in stile and rail wood doors.

1.3 PREINSTALLATION MEETING

A. Preinstallation Conference: Conduct at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include details of construction.
2. Include factory-finishing specifications.

B. Sustainable Design Submittals: Product data for adhesives, composite wood products, and stains documenting that products comply with sustainable design performance requirements.

C. Shop Drawings: For stile and rail wood doors. Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data, including those for stiles, rails, panels, and moldings (sticking); and other pertinent data, including the following:

1. Dimensions and locations of blocking.
2. Dimensions and locations of mortises and holes for hardware.
3. Dimensions and locations of cutouts.
4. Undercuts.
5. Requirements for veneer matching.
6. Doors to be factory finished and finish requirements.
7. Fire-protection ratings for fire-rated doors.

D. Samples for Initial Selection: For factory-finished doors.

E. Samples for Verification: Corner sections of doors, approximately 8 by 10 inches, with door faces and edgings representing typical range of color and grain for each species of veneer and solid lumber required. Finish Sample with same materials proposed for factory-finished doors.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Sample Warranty: For special warranty.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of stile and rail wood doors that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports and labels. Manufacturer shall also meet the current WDMA I.S. 1A Industry Standard for Wood Stile and Rail Doors.

B. Installer Qualifications: A firm with not less than 10 years' experience installing stile and rail wood doors similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Comply with requirements of referenced standard and manufacturer's written instructions.

B. Package doors individually in opaque plastic bags or cardboard cartons.

C. Mark each door on top and bottom rail with opening number used on Shop Drawings.

1.8 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during remainder of construction period.

1.9 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Warping (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section.

2. Warranty shall also include installation and finishing that may be required due to repair or replacement of defective doors.
3. Warranty Period for Solid-Core Interior Stile and Rail Wood Doors: Life of installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide products by the following:

1. Eggers Industries.

Or a comparable product by one of the following, subject to compliance with requirements herein and with Section 016000 "Product Requirements:"

2. Algoma Hardwoods, Inc.
3. Marshfield Door Systems, Inc.

B. Source Limitations: Obtain stile and rail wood doors from single manufacturer.

2.2 STILE AND RAIL WOOD DOORS, GENERAL

A. Quality Standard: In addition to requirements specified, comply with WDMA I.S.6, "Industry Standard for Wood Stile and Rail Doors," and with other requirements specified.

1. The Contract Documents may contain selections chosen from options in quality standard and additional requirements beyond those of quality standard. Comply with those selections and requirements in addition to quality standard.
2. Assemble interior doors, including components, with either dry-use or wet-use adhesives complying with ASTM D 5572 for finger joints and with ASTM D 5751 for joints other than finger joints.

B. Sustainable Design Requirements: Adhesives and composite wood products shall comply with 2016 CALGreen mandatory measures:

1. Adhesives: Adhesives, adhesive bonding primers, adhesive primers, sealants, sealant primers and caulks shall comply with local or regional air pollution control or air quality management district rules where applicable, or SCAQMD Rule 1168 VOC limits, as shown in 2016 CALGreen Tables 5.504.4.1 and 5.504.4.2. Such products also shall comply with the Rule 1168 prohibition on the use of certain toxic compounds (chloroform, ethylene dichloride methylene chloride, perchloroethylene and trichloroethylene). Adhesives shall have no added formaldehyde resins.
2. Composite Wood Products: Hardwood plywood, particleboard and medium density fiberboard composite wood products used on the interior or exterior of the building shall meet the requirements for formaldehyde as specified in ARB's Air Toxics Control Measure (ATCM) for Composite Wood (17 CCR 93120 et seq.) Those materials not exempted under the ATCM must meet the specified emission limits, as shown in 2016 CALGreen Table 5.504.4.5.

C. Panel Products: Any of the following unless otherwise indicated:

1. Medium-density fiberboard made from wood fiber, with binder containing no urea-formaldehyde, complying with ANSI A208.2, Grade 130.
2. Hardboard complying with ANSI A135.4.
3. Veneer-core plywood, made with adhesive containing no urea-formaldehyde.

D. Fire-Rated Wood Doors (Greater than 20-minute fire rating): Doors complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.

1. Cores: Provide core specified or mineral core as needed to provide fire-protection rating indicated.
2. Edge Construction: Provide edge construction with intumescent seals concealed by outer stile. Comply with specified requirements for exposed edges.
3. Pairs: Provide fire-retardant stiles that are listed and labeled for applications indicated without formed steel edges and astragals. Provide stiles with concealed intumescent seals. Comply with specified requirements for exposed edges.
4. Blocking: Provide composite blocks with improved screw-holding capability approved for use in doors of fire-protection ratings indicated and as needed to eliminate thought-bolting hardware.

E. Smoke- and Draft-Control Door Assemblies: Listed and labeled for smoke and draft control, based on testing according to UL 1784.

F. Non-Fire-Rated and 20-Minute-Rated Wood Doors:

1. Structural Composite Lumber: Solid structural composite lumber core conforming to WDMA I.S.10 and containing no urea-formaldehyde resin.

a. Screw Withdrawal, Face: 700 lbf.
b. Screw Withdrawal, Edge: 400 lbf.

G. Safety Glass: Provide products complying with testing requirements in 16 CFR 1201, for Category II materials, unless those of Category I are expressly indicated and permitted.

2.3 INTERIOR STILE AND RAIL WOOD DOORS

A. Interior Stile and Rail Wood Doors: Interior doors complying with WDMA I.S.6, "Industry Standard for Wood Stile and Rail Doors," and with other requirements specified.

1. Panel Designs: Indicated on Drawings. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.
2. Grade: Premium.
3. Finish: Transparent.
4. Wood Species and Cut: As indicated on Drawings, or if not indicated, matching same species and cut as indicated in Section 081416 “Flush Wood Doors.”
5. Door Construction for Transparent Finish:

    a. Stile and Rail Construction: Veneered, structural composite lumber. Select veneers for similarity of grain and color, and arrange for optimum match between adjacent pieces. Use veneers not less than 1/16 inch thick.

6. Stile and Rail Widths: As indicated on Drawings, with bottom rail no less than 10 inches.
7. Stile and Rail Thickness: 1-3/4 inches.
8. Glass: Complying with Section 088000 "Glazing."
9. Door Construction for Transparent Finish::

    a. Non-fire-rated doors: Veneered, structural composite lumber. Select veneers for similarity of grain and color, and arrange for optimum match between adjacent pieces. Use veneers not less than 1/16 inch thick.
    b. Fire rated doors: Edged and veneered mineral-core stiles and rails. Where raised panels are used, provide veneered mineral-core raised panels.

2.4 STILE AND RAIL WOOD DOOR FABRICATION

A. Fabricate stile and rail wood doors in sizes indicated for field fitting.

B. Factory fit doors to suit frame-opening sizes indicated, with the following uniform clearances and bevels unless otherwise indicated:

1. Clearances: Provide 1/8 inch at heads, jambs, and between pairs of doors. Provide 1/2 inch from bottom of door to top of decorative floor finish or covering. Where threshold is shown or scheduled, provide not more than 3/8 inch from bottom of door to top of threshold.

    a. Comply with NFPA 80 for fire-rated doors.

2. Bevel non-fire-rated doors 1/8 inch in 2 inches at lock and hinge edges.
3. Bevel fire-rated doors 1/8 inch in 2 inches on lock edge; trim stiles and rails only to extent permitted by labeling agency.

C. Factory machine doors for hardware that is not surface applied. Locate hardware to comply with DHI-WDHS-3. Comply with final hardware schedules, door frame Shop Drawings, BHMA-156.115-W, and hardware templates.

1. Coordinate measurements of hardware mortises in metal frames to verify dimensions and alignment before factory machining.

D. Glazed Openings: Factory install glazing in doors, complying with Section 088000 "Glazing." Install glass using manufacturer's standard elastomeric glazing sealant complying with ASTM C 920. Secure glass in place with removable wood moldings. Miter wood moldings at corner joints.

2.5 FACTORY FINISHING

A. General: Comply with referenced quality standard for factory finishing. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.

B. Finish faces, all four edges, edges of cutouts, and mortises. Fillers may be omitted on top and bottom edges, edges of cutouts, and mortises.

C. Factory finish doors.

D. Transparent Finish:

1. Grade: Premium.
2. Finish: WDMA TR-6, catalyzed polyurethane.
3. Staining: Custom to match Architect's sample.
4. Sheen: Satin.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine doors and installed door frames, with Installer present, before hanging doors.

1. Verify that installed frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
2. Reject doors with defects.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install stile and rail wood doors level, plumb, square, true to line; without distortion, warp, or rack, and without impeding movement; anchored securely in place. Comply with Drawings and manufacturer’s written instructions.

1. Stile and rail wood doors shall be properly installed such that without closer attached, door opening force is 1 lbf or less.

B. Hardware: For installation, see Section 087100 "Door Hardware."

C. Installation Instructions: Install doors to comply with manufacturer's written instructions and referenced quality standard, and as indicated.

1. Install fire-rated doors according to NFPA 80.
2. Install smoke- and draft-control doors according to NFPA 105.

D. Job-Fitted Doors: Align and fit doors in frames with uniform clearances and bevels as indicated below; do not trim stiles and rails in excess of limits set by manufacturer or permitted with fire-rated doors. Machine doors for hardware. Seal edges of doors, edges of cutouts, and mortises after fitting and machining.

1. Clearances: Provide 1/8 inch at heads, jambs, and between pairs of doors. Provide 1/8 inch from bottom of door to top of decorative floor finish or covering unless otherwise indicated. Where threshold is shown or scheduled, provide 1/4 inch from bottom of door to top of threshold unless otherwise indicated.

a. Comply with NFPA 80 for fire-rated doors.

2. Bevel non-fire-rated doors 1/8 inch in 2 inches at lock and hinge edges.
3. Bevel fire-rated doors 1/8 inch in 2 inches on lock edge; trim stiles and rails only to extent permitted by labeling agency.

E. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.

F. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.3 ADJUSTING

A. Operation: Rehang or replace doors that do not swing or operate freely.

B. Finished Doors: Replace doors that are damaged or do not comply with requirements. Doors may be repaired or refinished if Work complies with requirements and shows no evidence of repair or refinishing.

END OF SECTION 081433

SECTION 083113 - ACCESS DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes access doors and frames for walls and ceilings, fire-resistant rated where installed in fire-resistant rated construction.

B. Related Requirements:

1. Section 013000 “Project Management and Coordination” for coordination drawings indicating locations of access doors and frames.
2. Section 233300 "Air Duct Accessories" for heating and air-conditioning duct access doors.

1.3 COORDINATION

A. Coordinate locations of all wall and ceiling access panels with mechanical, plumbing, fire-protection and electrical trades. Provide access panels, whether indicated or not, to permit proper operation of equipment within walls or above inaccessible ceilings. Access panels shall be fire-resistant rated when constructed in a fire-resistant rated assembly. Final location of access panels shall be subject to Architect/Engineer review, per the submittals required below, and prior to installation.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, fire ratings, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings:

1. In addition to coordination drawings required per Section 013000 “Project Management and Coordination,” include plans, elevations, sections, details, and attachments to other work.
2. Detail fabrication and installation of access doors and frames for each type of substrate.

C. Samples: For each type of access door and frame and for each finish specified, complete assembly minimum 6 by 6 inches in size.

D. Product Schedule: For access doors and frames.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of access doors and frames that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports and labels.

B. Installer Qualifications: A firm with not less than 5 years' experience installing access doors and frames similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Rated Access Doors and Frames: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, according to NFPA 252 or UL 10B.

B. s and Other Air-Tight Rooms/Spaces:

1. Air Infiltration: Test according to ASTM E 283 for air infiltration as follows:

a. Maximum air leakage of 0.01 cfm/sq. ft at a static air pressure differential of 6.24 lbf/sq. ft.

2. Water Penetration under Static Pressure: Test according to ASTM E 331 as follows:

a. No leakage when tested at a static pressure differential of 15.05 lbf/sq. ft.

C. Size Variations: Obtain Architect's acceptance of manufacturer's standard-size units, which may vary slightly from sizes indicated.

2.2 ACCESS DOORS AND FRAMES FOR WALLS AND CEILINGS

A. Manufacturers: Subject to compliance with requirements, provide access doors and frames by one of the following:

1. Elmdor / Stoneman Manufacturing Company.
   a. Ceilings: Recessed steel, Model CFR. Infill recessed door with matching ceiling material and finish flush with the adjacent wall or ceiling surface.
   b. Walls:
      1) Acoustic-Rated Walls: Flush steel, Model ED.
      2) Toilet Room Walls: Flush stainless steel: Model DW in stainless steel finish.
      3) Other Walls: Flush steel, Model DW.
   c. Fire-Resistant Rated: Flush steel, Model FR.

2. Nystrom, Inc.
   a. Ceilings: Recessed steel, Model R. Infill recessed door with matching ceiling material and finish flush with the surrounding ceiling surface.
   b. Walls:
      1) Acoustic-Rated Walls: Flush steel, Model XT.
      2) Toilet Room Walls: Flush Stainless Steel: Model PT.
      3) Other Walls: Flush steel: Model N.
   c. Fire-Resistant Rated: Flush steel, Model U.

3. Milcor Inc.
   a. Ceilings: Recessed steel, Model DWR. Infill recessed door with matching ceiling material and finish flush with the surrounding ceiling surface.
   b. Walls:
      1) Acoustic-Rated Walls: Flush steel, Model UFR.
      2) Toilet Room Walls: Flush Stainless Steel: Model M in stainless steel finish.
      3) Other Walls: Flush steel: Model M.
   c. Fire-Resistant Rated: Flush steel, Model UFR.

4. Acudor Products, Inc.
   a. Walls and Ceilings of s and other rooms/spaces indicated to have an air-tight seal: Model ADWT with stainless steel finish.

5. Source Limitations: Obtain each type of access door and frame through one source from a single manufacturer.

B. Recessed Access Doors with Concealed Flanges:

1. Description: Door face recessed for gypsum board infill; with concealed flange for gypsum board installation and concealed hinge.
2. Locations: Ceiling.
3. Door Size: In accordance with "Coordination" Article above, minimum size required for equipment access.
4. Steel Sheet for Door: Nominal 16 gage; factory primed.
5. Latch and Lock (Ceilings): Cam latch, screwdriver operated, unless otherwise indicated.

C. Flush Access Doors with Exposed Flanges:

1. Description: Face of door flush with frame, with exposed flange and concealed hinge.
2. Locations: Walls.
3. Door Size: In accordance with "Coordination" Article above, minimum size required for equipment access.
4. Steel Sheet for Door: Nominal 16 gage galvanized and factory primed, except provide stainless steel No. 4 finish at toilet room walls.
5. Insulation and Gasketing: Minimum 1-inch-thick insulation and gasketing at access doors in acoustic-rated walls.
6. Frame Material: Same material, thickness, and finish as door.
7. Latch and Lock (Walls): Cam latch, key operated, unless otherwise indicated.

D. Fire-Resistant Rated Doors: Provide in fire-resistant rated walls and ceilings.

2.3 MATERIALS

A. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

B. Steel Sheet: Uncoated or electrolytic zinc coated, ASTM A 879/A 879M, with cold-rolled steel sheet substrate complying with ASTM A 1008/A 1008M, Commercial Steel (CS), exposed.

C. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum G60 or A60 metallic coating.

D. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666, Type 304. Remove tool and die marks and stretch lines, or blend into finish.

E. Frame Anchors: Same material as door face.

F. Inserts, Bolts, and Anchor Fasteners: Hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.

G. Drywall Beads: Edge trim formed from 0.0299-inch zinc-coated steel sheet formed to receive joint compound and in size to suit thickness of gypsum board.

2.4 FABRICATION

A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.

B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.

C. Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish mounting holes, attachment devices and fasteners of type required to secure access doors to types of supports indicated.

1. For concealed flanges with drywall bead, provide edge trim for gypsum panels securely attached to perimeter of frames.
2. For concealed flanges with plaster bead for full-bed plaster applications, provide zinc-coated expanded-metal lath and exposed casing bead welded to perimeter of frames.

D. Recessed Access Doors: Form face of panel to provide recess for application of applied finish. Reinforce panel as required to prevent buckling. Provide access sleeves for each latch operator and install in holes cut through finish.

E. Latching Mechanism: Furnish number required to hold doors in flush, smooth plane when closed.

1. For recessed panel doors, provide access sleeves for each locking device. Furnish plastic grommets and install in holes cut through finish

2.5 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

D. Painted Finishes: Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

1. Factory Finished: Apply manufacturer's standard baked-enamel or powder-coat finish immediately after cleaning and pretreating, with minimum dry-film thickness of 1 mil for topcoat.

a. Color: Match Architect's sample.

E. Stainless-Steel Finishes:

1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
2. Polished Finish: No. 4 finish. Grind and polish surfaces to produce uniform finish, free of cross scratches.

a. Run grain of directional finishes with long dimension of each piece.
b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with manufacturer's written instructions for installing access doors and frames.

B. Install doors flush with adjacent finish surfaces or recessed to receive finish material.

3.3 ADJUSTING

A. Adjust doors and hardware, after installation, for proper operation.

B. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

END OF SECTION 083113

SECTION 083323 - OVERHEAD COILING DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes motorized insulated service doors.

B. Related Requirements:

1. Section 055000 "Metal Fabrications" for miscellaneous steel supports.
2. Division 26 Section(s) for wiring of connections and accessories.

1.3 ACTION SUBMITTALS

A. Product Data: For each type and size of overhead coiling door and accessory.

1. Include construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
3. Include description of automatic closing device and testing and resetting instructions.

B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.

1. Include plans, elevations, sections, and mounting details.
2. Include details of equipment assemblies, and indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
4. For exterior components, include details of provisions for assembly expansion and contraction and for excluding and draining moisture to the exterior.
5. Show locations of controls, locking devices, and other accessories.
6. Include diagrams for power, signal, and control wiring.

C. Samples for Initial Selection: Manufacturer's finish charts showing full range of colors and textures available for units with factory-applied finishes.

1. Include similar Samples of accessories involving color selection.

D. Samples for Verification: For each type of exposed finish on the following components, in manufacturer's standard sizes:

1. Curtain slats.
2. Bottom bar with sensor edge.
3. Guides.
4. Brackets.
5. Hood.
6. Locking device(s).
7. Include similar Samples of accessories involving color selection.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For overhead coiling doors to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of overhead coiling doors that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports and labels. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 10 years' experience installing overhead coiling doors similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

1. Overhead Door Corporation:

a. Exterior Locations: "Stormtite AP Model 627," motorized, with options as needed to comply with specified requirements.

2. Or Comparable Product by one of the following:

a. McKeon Door Company.
b. Wayne-Dalton Corp.

B. Source Limitations: Obtain overhead coiling doors from single source from single manufacturer.

1. Obtain operators and controls from overhead coiling door manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. General: Overhead coiling doors shall be in compliance with the 2016 California Building Code.

B. Structural Performance, Exterior Doors: Capable of withstanding the design wind loads.

1. Design Wind Load: Based on criteria indicated on the Structural Drawings.
2. Testing: According to ASTM E 330.
3. Deflection Limits: Design overhead coiling doors to withstand design wind load without evidencing permanent deformation or disengagement of door components.

C. Seismic Performance: Overhead coiling doors shall withstand the effects of earthquake motions determined according to the 2016 California Building Code.

1. Component Importance Factor: 1.0.

D. Operation Cycles: Door components and operators capable of operating for not less than 20,000 cycles. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.

E. Air Infiltration: Maximum rate of 1.0 CFM per square foot at 1.57 psf when tested according to ASTM E 283, and in compliance with Section 110.6 (a) 1 of the 2016 California Energy Code.

F. Curtain R-Value for Exterior Doors: Insulated slats complying with the following:

1. Maximum U 1.45 in compliance with Table 140.3-B of the 2016 California Energy Code.

G. Slats and insulation shall have a maximum flame spread index of 75 and a maximum smoke developed index of 450 when tested according to ASTM E 84.

2.3 DOOR ASSEMBLY

A. Insulated Service Door: Overhead coiling door formed with curtain of interlocking metal slats.

B. Door Curtain Material: Galvanized steel, in thickness required to meet performance requirements, but no less than the following:

1. Minimum 22 gauge front panel and 24 gauge back panel.

C. Door Curtain Slats: Flat profile slats, in manufacturer's standard size and thickness complying with performance requirements.

1. Insulated-Slat Interior Facing: Metal.
2. Gasket Seal. Manufacturer's standard continuous gaskets between slats.

D. Bottom Bar: Two angles, each not less than 1-1/2 by 1-1/2 by 1/8 inch thick; fabricated from hot-dip galvanized steel and finished to match door.

E. Curtain Jamb Guides: Galvanized steel with exposed finish matching curtain slats.

F. Hood (where exposed to view): Match curtain material and finish.

1. Shape: As shown on Drawings, or if not indicated, square.
2. Mounting: As shown on Drawings, or if not indicated, face of wall.

G. Locking Device Assembly: Equip door with locking device assembly.

1. Locking Device Assembly: Single-jamb side locking bars, operable from inside and outside, with cylinders.

H. Electric Door Operator:

1. Operation Classification (Door and Operator System): Heavy duty, minimum 20,000 cycles.
2. Operator Location: As indicated on Drawings, or if not indicated, provide either top-of-hood or front-of-hood, depending on ceiling height restrictions.
3. Safety: Listed according to UL 325 by a qualified testing agency for commercial or industrial use.
4. Motor Exposure: Interior.
5. Emergency Manual Operation: Chain type.
6. Control Station(s): Interior mounted, in location indicated on Drawings, or if not indicated, as directed by Architect.
7. Obstruction-Detection Device: Automatic, manufacturer’s standard.

a. Sensor Edge Bulb Color: As selected by Architect from manufacturer's full range.

I. Curtain Accessories: Equip door with weatherseals and automatic closing device.

J. Door Finish:

1. Baked-Enamel or Powder-Coated Finish: Color as selected by Architect from manufacturer's full range.
2. Interior Curtain-Slat Facing: Match finish of exterior curtain-slat face.

2.4 MATERIALS, GENERAL

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.5 DOOR CURTAIN MATERIALS AND CONSTRUCTION

A. Door Curtains: Fabricate overhead coiling-door curtain of interlocking metal slats, designed to withstand wind loading indicated, in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:

1. Steel Door Curtain Slats: Zinc-coated (galvanized), cold-rolled structural steel sheet; complying with ASTM A 653, with G90 zinc coating.
2. Insulation: Fill slats for insulated doors with manufacturer's standard thermal insulation complying with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E 84 or UL 723. Enclose insulation completely within slat faces.
3. Metal Interior Curtain-Slat Facing: Match metal of exterior curtain-slat face, minimum 24 gauge.
4. Gasket Seal: Provide insulated slats with manufacturer's standard continuous gaskets between slats.

B. Curtain Jamb Guides: Manufacturer's standard angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain, and a continuous bar for holding windlocks.

2.6 HOODS

A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.

1. Galvanized Steel: Nominal 22 gauge, hot-dip galvanized steel sheet with G90 zinc coating, complying with ASTM A 653.

B. Removable Metal Soffit: Formed or extruded from same metal and with same finish as curtain if hood is mounted above ceiling unless otherwise indicated.

2.7 LOCKING DEVICES

A. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on both left and right jamb sides, operable from coil side.

B. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.

1. Lock Cylinders: As specified in Section 087100 "Door Hardware".

C. Chain Lock Keeper: Suitable for padlock.

D. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

2.8 CURTAIN ACCESSORIES

A. Weatherseals for Exterior Doors: Equip each exterior door with weather-stripping gaskets fitted to entire exterior perimeter of door for a weather-resistant installation unless otherwise indicated.

1. At door head, use 1/8-inch-thick, replaceable, continuous-sheet baffle secured to inside of hood or field- installed on the header.
2. At door jambs, use replaceable, adjustable, continuous, flexible, 1/8-inch-thick seals of flexible vinyl, rubber, or neoprene.

2.9 COUNTERBALANCING MECHANISM

A. General: Counterbalance doors by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.

B. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, seamless or welded carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of slats and to limit barrel deflection to not more than 0.03 in./ft. of span under full load.

C. Counterbalance Spring: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.

D. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.

E. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.

2.10 ELECTRIC DOOR OPERATORS

A. General: Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operation-cycles requirement specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, control stations, control devices, integral gearing for locking door, and accessories required for proper operation.

1. Comply with NFPA 70.
2. Control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V ac or dc.

B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each door.

C. Door Operator Location(s): As indicated on Drawings, or if not indicated, provide either top-of-hood or front-of-hood mounting, subject to ceiling height limitations.

1. Top-of-Hood Mounted: Operator is mounted to the right or left door head plate with the operator on top of the door-hood assembly and connected to the door drive shaft with drive chain and sprockets. Headroom is required for this type of mounting.
2. Front-of-Hood Mounted (unless otherwise indicated): Operator is mounted to the right or left door head plate with the operator on coil side of the door-hood assembly and connected to the door drive shaft with drive chain and sprockets. Front clearance is required for this type of mounting.

D. Motors: Reversible-type motor with controller (disconnect switch) for motor exposure indicated.

1. Electrical Characteristics:

a. Phase and Voltage: As indicated on electrical Drawings, or if not indicated, of a phase/voltage that operates on house power without the need of a supplemental transformer.
b. Hertz: 60.

2. Operating Controls, Controllers, Disconnect Switches, Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
3. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.

E. Limit Switches: Equip each motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.

F. Obstruction Detection Devices: External entrapment protection consisting of indicated automatic safety sensor capable of protecting full width of door opening. For non-fire-rated doors, activation of device immediately stops and reverses downward door travel. Provide one of the following:

1. Photoelectric Sensor: Manufacturer's standard system designed to detect an obstruction in door opening without contact between door and obstruction.

a. Self-Monitoring Type: Designed to interface with door operator control circuit to detect damage to or disconnection of sensing device. When self-monitoring feature is activated, door closes only with sustained or constant pressure on close button.

2. Electric Sensor Edge: Automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor activates device. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.

a. Self-Monitoring Type: Four-wire configured device designed to interface with door operator control circuit to detect damage to or disconnection of sensor edge.

G. Control Station: Three-button control station in fixed location with momentary-contact push-button controls labeled "Open" and "Stop" and sustained- or constant-pressure push-button control labeled "Close."

1. Interior-Mounted Units: Full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.

H. Emergency Manual Operation: Equip each electrically powered door with capability for emergency manual operation.

I. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.

J. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.

K. Audible and Visual Signals: Audible alarm and visual indicator lights in compliance with regulatory requirements for accessibility.

2.11 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM/NOMMA's "Metal Finishes Manual for Architectural and Metal Products (AMP 500-06)" for recommendations for applying and designating finishes.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.12 STEEL AND GALVANIZED-STEEL FINISHES

A. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.

B. Examine locations of electrical connections.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.

B. Install overhead coiling doors, hoods, controls, and operators at the mounting locations indicated for each door.

C. Accessibility: Install overhead coiling doors, switches, and controls along accessible routes in compliance with regulatory requirements for accessibility.

D. Power-Operated Doors: Install according to UL 325.

3.3 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
3. Test door closing when activated by detector or alarm-connected automatic-closing system. Reset door-closing mechanism after successful test.

3.4 ADJUSTING

A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.

1. Adjust exterior doors and components to be weather-resistant.

B. Lubricate bearings and sliding parts as recommended by manufacturer.

C. Adjust seals to provide tight fit around entire perimeter.

3.5 MAINTENANCE SERVICE

A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of coiling-grille Installer. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for grille operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

1. Perform maintenance, including emergency callback service, during normal working hours.
2. Include 24-hour-per-day, 7-day-per-week, emergency callback service.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling doors.

END OF SECTION 083323

SECTION 083483 - ELEVATOR DOOR SMOKE CONTAINMENT SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Smoke detector-activated hoistway door smoke containment screen and control system designed to provide a tight-fitting, smoke- and draft-control assembly.

B. Related Requirements:

1. Section 083113 "Access Doors and Frames."
2. Section 092216 "Non-Structural Metal Framing" for metal backing in housing mounting area.
3. Section 099123 "Interior Painting" for field painting of specified components.
4. Division 14 Section(s) for elevators.
5. Division 26 Section(s) for 120v and control circuit power, including conduit, boxes, conductors, wiring devices, and emergency power.
6. Division 28 Section(s) for detection and alarm systems.

1.3 REFERENCES

A. ASTM A240: Standard Specification for Heat Resisting Chromium and Chromium-Nickel Stainless Steel Plate, Sheet and Strip for Pressure Vessels.

B. ICC Evaluation Service ES-AC77: Acceptance Criteria for Smoke-Containment Systems Used With Fire-Resistive Elevator Hoistway Doors and Frames.

C. ICC Evaluation Service report ESR-1136.

D. NFPA Codes and Standards:

1. 70 – National Electrical Code.
2. 72 – National Fire Alarm Code -2007, 2010 and 2013.

E. ASTM E 84: Test Method for Surface Burning Characteristics of Building Materials.

F. UL Standards:

1. 268 – Smoke Detectors for Fire Protective Signaling Systems.
2. 864 – Control Units for Fire Protective Signaling Systems.
3. 1784 – Air Leakage Tests for Door Assemblies.

1.4 COORDINATION

A. Coordinate elevator door smoke containment system with installation of adjacent construction, including, but not limited to, elevator, wall and ceiling/soffit height. Review during preconstruction meeting.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

A. Product Data: Include operation, safety features, finishes, and similar information.

B. Shop Drawings: For elevator smoke containment system.

1. Show plans, elevations, sections, and large-scale details indicating operation at each landing, coordination with building structure and with ceiling/soffit, and relationships with other construction and locations of equipment and signals.

C. Samples for Initial Selection: For finishes involving color selection.

D. Samples for Verification: For exposed finishes.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: For each type of hollow-metal door and frame assembly, for tests performed by a qualified testing agency.

C. Research / Evaluation Report: From ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

D. Sample warranty.

1.8 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For smoke containment door to include in emergency, operation, and maintenance manuals.

1.9 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of elevator door smoke containment system that has been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports and labels. Manufacturer shall have a current research / evaluation report from ICC-ES or equivalent.

B. Installer Qualifications: A firm with not less than 5 years' experience installing elevator door smoke containment system similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1.10 DELIVERY, STORAGE AND HANDLING

A. Comply with manufacturer's written instructions.

1.11 WARRANTY

A. Special Manufacturer's Warranty: Manufacturer's standard or customized form in which manufacturer agrees to repair or replace components of elevator door smoke containment system that fail in material or workmanship within the specified warranty period.

1. Warranty Period: Four (4) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with the performance requirements, provide the following:

1. Smoke Guard. 287 N. Maple Grove, Boise, Idaho 83704; 800-574-0330; www.smokeguard.com

a. Model: 600.
b. Painting: Paint auxiliary rails in accordance with manufacturer's written instructions.

2. Or a Comparable Product by one of the following:

a. Door Systems Inc.; DSI 600.

B. Source Limitations: Obtain elevator doors smoke containment system from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Elevator door smoke containment system shall be in compliance with the 2015 International Building Code (IBC) and 2016 California Building Code (CBC).

B. Air Leakage: Not to exceed 3 cfm per sf of door opening at 0.1 in water pressure differential at ambient temperature and 400 degrees F (204 degrees C) tested per IBC.

2.3 MATERIALS

A. Screen.

1. Film: Minimum 1-mil thick transparent polyimide film reinforced with 100-denier nomex yarn at 0.25-in each way.
2. Magnetic Strips: Flexible multi-pole strips attached to longitudinal edges of film with low modulus silicone adhesive.

B. Housing: 20-gage, powder coated, cold rolled or stainless steel container and door with concealed hinges, and latch.

C. Auxiliary Rails:

1. Material: 16 gage ASTM A 240, Type 430, ferritic stainless steel.
2. Size: 2 in wide by depth as required to project beyond face of elevator door frame.

D. Cove Bases (required for hoistway openings wider than 60 inches): 16 gage ASTM A 240/240M, Type 430, ferritic stainless steel.

E. Rewind Motor: Top or side mount, as required to meet ceiling/soffit clearances , NFPA 70.

F. Release Mechanism: IAS (IAS is a trademark of International Accreditation Service) Accredited Testing Laboratory Labels for UL Standard 864.

G. Control Station: Metal box with battery backup, power disconnect with integral circuit breaker, step down power transformer (120v AC to 12v DC), and controller circuit board.

1. Emergency Power Supply: 12v DC battery with charger.

H. Wall Switch: Include switch to rewind screen into housing, system status indicators, keyed screen deployment switch, and keyed-to-silence function.

I. Screen Rewind Switch: Include switch to rewind screen into housing.

2.4 IDENTIFICATION

A. Label each smoke containment system with following information:

1. Manufacturer’s name.
2. Maximum leakage rating at specified pressure and temperature conditions.
3. Label of quality control agency.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance.

1. Verify related work performed under other sections is complete and in accordance with Shop Drawings.
2. Verify wall surfaces and elevator door frames are acceptable for installation of smoke containment system components.
3. Verify existing field painted elevator door frames to be used for screen adherence have been repainted in accordance with smoke containment system manufacturer’s instructions or they have the original factory paint.
4. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Commencement of work by installer is acceptance of conditions.

3.2 INSTALLATION

A. Install elevator door smoke containment system in accordance with manufacturer's written installation instructions.

3.3 FIELD QUALITY CONTROL

A. Field Test: Follow manufacturer's cycle test procedures:

1. Notify Owner's Representative, local Fire Marshal, alarm sub-contractor, and elevator sub-contractor minimum one week in advance of scheduled testing.
2. Complete maintenance service record.

3.4 DEMONSTRATION AND CLEANING

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate, adjust, and maintain elevator door smoke containment system.

B. Clean in accordance with manufacturer's written instructions.

3.5 MAINTENANCE SERVICE

A. Maintenance and Testing:

1. Perform minimum and semi-annual maintenance and testing one each smoke containment system as required by the manufacturer's warranty, code agency evaluation reports, and as required by Authorities Having Jurisdiction.
2. Battery Backup: Test semi-annually and replace every three years minimum.
3. Retain permanent record of tests.

END OF SECTION 083483

SECTION 083800 - TRAFFIC DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes medium-impact traffic doors.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of traffic door.

1. Include construction details, material descriptions, fabrication methods, dimensions of individual components and profiles, hardware, finishes, and operating instructions.

B. Shop Drawings: For traffic doors.

1. Include plans, elevations, sections, and details.
2. Detail attachments to other work, and between units, if any.
3. Include hardware and required clearances.

C. Samples: For doors with factory-applied color finishes.

1. Include Samples of hardware and accessories involving color selection.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Sample Warranty: For special warranty.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An installer acceptable to traffic door manufacturer for installation of units required for this Project.

1.6 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace traffic doors that fail in materials or workmanship within specified warranty period.

1. Warranty Period:

a. Traffic Door: Four years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide traffic doors by the following:

1. Eliason Corporation; "EHH-3 Stainless Steel Traffic Door"

B. Source Limitations: Obtain traffic doors from single source from single manufacturer.

2.2 TRAFFIC DOORS

A. Medium Impact Traffic Doors: 3/4 inch exterior grade solid wood core; 1 inch total thickness.

1. Facing: Reinforced metal plates.

a. Top Panels: Decorative laminate both sides.
b. Base Plates: 48 inches high, 18 gauge stainless steel, both sides; stainless steel edge trim and top hinge covers.

2. Window Size: 9 inches wide by 14 inches high.
3. Window Molding: Black rubber molding.
4. Glazing: Manufacturer’s standard acrylic or polycarbonate safety glazing.

a. Safety Glazing Labeling: Permanently mark safety glazing with certification label of the SGCC. Label shall indicate manufacturer's name, type of glazing, thickness, and safety glazing standard with which glazing complies.

5. Finish: Stainless steel, 20 gauge.

2.3 HARDWARE

A. General: Provide manufacturer's standard hardware, fabricated from a corrosion-resistant material designed to smoothly operate and sized to accommodate panel weight and dimensions.

B. Hinges: Double action easy swing hinges.

1. Finish: Stainless steel.

2.4 FABRICATION

A. Fabricate traffic doors in sizes indicated. Include a complete system for assembling components and anchoring doors.

B. Factory machine traffic doors for openings and hardware that is not surface applied.

C. Complete fabrication, assembly, finishing, hardware application, and other work in the factory to greatest extent possible. Disassemble components only as necessary for shipment and installation. Allow for scribing, trimming, and fitting at Project site.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine openings, substrates, structural support, anchorage, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of Work.

B. Verify rough opening dimensions, levelness of threshold substrate, and operational clearances.

C. Examine wall flashings, vapor retarders, water and weather barriers, and other built-in components to ensure a coordinated, hinged traffic door installation.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with Drawings, Shop Drawings, and manufacturer's written instructions for installing hinged doors, hardware, accessories, and other components.

B. Install traffic doors level, plumb, square, true to line; without distortion, warp, or rack of frames and panels, and without impeding thermal movement; anchored securely in place to structural support; and in proper relation to adjacent construction.

3.3 ADJUSTING, CLEANING, AND PROTECTION

A. Lubricate hardware and moving parts.

B. Adjust operating panels and screens to provide smooth operation without binding.

C. Adjust hardware for proper alignment, smooth operation without unnecessary force or excessive clearance.

D. Clean exposed surfaces immediately after installing traffic doors. Avoid damaging protective coatings and finishes. Remove nonpermanent labels, excess sealants, glazing materials, dirt, and other substances.

E. Remove and replace glazing that has been broken, chipped, cracked, abraded, or damaged during construction period.

F. Protect traffic door surfaces from contact with contaminating substances resulting from construction operations. If contaminating substances contact traffic door surfaces, remove contaminants immediately according to manufacturer's written instructions.

G. Refinish or replace traffic doors with damaged finishes.

H. Replace damaged components.

END OF SECTION 083800

SECTION 084113 - INTERIOR ALUMINUM-FRAMED STOREFRONTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Interior storefront framing.
2. Interior manual-swing entrance doors and door-frame units.

B. Engineering Responsibility: If manufacturer's system is not pre-engineered to meet performance requirements, contractor's responsibility includes providing professional engineering services needed to assume engineering responsibility for interior aluminum-framed storefronts.

C. Related Requirements:

1. Section 055000 "Metal Fabrications" for steel not provided as part of this Section.
2. Section 079200 "Joint Sealants" for installation of joint sealants installed with aluminum-framed storefronts and for sealants to the extent not specified in this Section.
3. Section 087100 "Door Hardware" for door hardware to be installed in aluminum-framed entrances.
4. Section 088000 "Glazing" for glazing within aluminum-framed entrances and storefronts.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. General: Transmit all action and informational submittal items together in one single complete submittal package for review.

B. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

C. Sustainable Design Submittals: Product data for sealants, indicating VOC content.

D. Shop Drawings: For aluminum-framed entrances and storefronts. Provide project-specific shop drawings including plans, elevations, sections, full-size details, and attachments to other work.

1. Include full-size isometric details of each vertical-to-horizontal intersection of aluminum-framed entrances and storefronts, showing the following:

a. Joinery, including concealed welds.
b. Anchorage.
c. Expansion provisions.
d. Glazing.

2. If manufacturer's interior aluminum-framed storefront system is not pre-engineered to meet performance requirements, provide shop drawings and analysis data stamped and signed by the qualified California-licensed professional engineer responsible for their preparation.

E. Samples for Initial Selection: For units with factory-applied color finishes.

F. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.

G. Samples for Glazing: For each type of glass, 12 inch square.

H. Entrance Door Hardware Schedule: Prepared by or under supervision of supplier, detailing fabrication and assembly of entrance door hardware, as well as procedures and diagrams. Coordinate final entrance door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of entrance door hardware.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer, installer, and professional engineer.

B. Product Test Reports: For aluminum-framed entrances and storefronts, for tests performed by manufacturer and witnessed by a qualified testing agency.

C. Welding certificates.

D. Sample Warranties: For special warranties.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For aluminum-framed entrances and storefronts to include in maintenance manuals.

B. Maintenance Data for Structural Sealant: For structural-sealant-glazed storefronts to include in maintenance manuals. Include ASTM C 1401 recommendations for post-installation-phase quality-control program.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of aluminum-framed storefronts that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports, labels, and calculations. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 10 years' experience installing interior aluminum-framed storefronts similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Engineering Responsibility: If manufacturer's system is not pre-engineered to meet performance requirements, Contractor's responsibility includes providing professional engineering services needed to assume engineering responsibility for interior aluminum-framed storefronts.

1. Prepare data for interior aluminum-framed storefronts, including Shop Drawings, based on testing and engineering analysis for manufacturer's standard units in systems similar to those indicated for the Project and submission of reports of tests performed on manufacturer's standard assemblies, signed and sealed by the qualified California-licensed professional engineer responsible for their preparation.

D. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

E. Welding Standards: Comply with applicable provisions of AWS D1.2, "Structural Welding Code – Aluminum".

1.8 COORDINATION

A. Coordinate installation of miscellaneous metal sub-framing, anchorage items, or other items to be embedded in or attached to other construction before starting that Work. Provide locations, setting diagrams, templates, instructions, and directions for installation. Deliver such items to Project site in time for installation.

B. Pre-Installation Field Measurements: Coordinate exact hardware and anchorage locations with other Trade Contractors before permanently attaching to other construction.

C. Post-Installed Field Measurements: Field verify and examine actual installed locations of connection hardware and anchorage items prior to installation of Work provided under this Section. Notify General Contractor and Architect immediately of any discrepancies in writing. Provide letter from curtain wall installer indicating acceptance of connection hardware and anchorage items.

1.9 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of aluminum-framed entrances and storefronts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures including, but not limited to, excessive deflection.
b. Noise or vibration created by thermal or structural movements.
c. Deterioration of metals, metal finishes, and other materials beyond normal use.
d. Sealant failure.
e. Failure of operating components.

2. Warranty Period: 10 years from date of Substantial Completion.

B. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.

1. Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide aluminum-framed entrances and storefronts by the following:

1. Kawneer Company, Inc.:

a. SF-1: "Trifab VG 450," retained mechanically with gaskets (mullions) on four sides.
b. SF-2: "Trifab VG 450," retained mechanically with gaskets (mullions) on two sides and structural silicone glazed (SSG) on the other two sides.

2. Or Comparable Equal, by one of the following:

a. Arcadia Inc.

B. Source Limitations: Obtain all components of aluminum-framed entrance and storefront system, including framing and accessories, from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. General Performance: Comply with performance requirements specified, as determined by testing of aluminum-framed entrances and storefronts representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.

1. Aluminum-framed entrances and storefronts shall withstand movements of supporting structure including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
2. Failure also includes the following:

a. Thermal stresses transferring to building structure.
b. Glass breakage.
c. Noise or vibration created by thermal or structural movements.
d. Loosening or weakening of fasteners, attachments, and other components.
e. Sealant failure.
f. Failure of operating units.

3. Aluminum-framed storefronts and entrances shall accommodate tolerance in construction, including, but not limited to, those from structural frame tolerances, manufacturing tolerances, and field installation tolerances.
4. Aluminum-framed storefronts and entrances shall comply with the 2016 California Building Code.

B. Interstory Drift: Accommodate design displacement of adjacent stories indicated.

1. Design Displacement: As indicated on Drawings.

C. Seismic Performance: Aluminum-framed entrances and storefronts shall withstand the effects of earthquake motions determined according to the 2016 California Building Code.

1. Seismic Drift Causing Glass Fallout: Complying with criteria for passing based on building occupancy type when tested according to AAMA 501.6 at design displacement.

D. Glazing: Physically isolate glazing from framing members.

E. Structural-Sealant Joints: Designed to produce tensile or shear stress of less than 20 psi.

F. Structural Sealant: Capable of withstanding tensile and shear stresses imposed by structural-sealant-glazed curtain walls without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.

1. Adhesive failure occurs when sealant pulls away from substrate cleanly, leaving no sealant material behind.
2. Cohesive failure occurs when sealant breaks or tears within itself but does not separate from each substrate because sealant-to-substrate bond strength exceeds sealant's internal strength.

G. Dimensional Tolerances: Provide entrance and storefront systems that accommodate dimensional tolerances of building frame and other adjacent construction.

H. Accessibility Requirements: Comply with applicable provisions in the 2010 ADA Standards for Accessible Design and the accessibility requirements of the 2016 CBC for door hardware on doors in an accessible route.

1. Provide operating devices that do not require tight grasping, pinching, or twisting of the wrist and that operate with a force of not more than 5 lbf.
2. Comply with the following maximum opening-force requirements:

a. Interior, Non-Fire-Rated Hinged Doors: 5 lbf applied perpendicular to door.

3. Provide thresholds not more than 1/2 inch high. Changes in level between 1/4 inch high minimum and 1/2 inch high maximum shall be beveled with a slope not steeper than 1:2.
4. Adjust door closer sweep periods so that, from an open position of 90 degrees, the door will take at least 5 seconds to move to a position of 12 degrees from the latch.
5. Door closers and stops shall not reduce headroom to less than 78 inches.
6. Floor-mounted door stops and other similar obstructions shall be installed 4 inches maximum from the face of the wall or partition. Floor stops shall not be located in the path of travel.
7. Panic hardware shall be mounted between 36 inches and 44 inches above finished floor such that the clear width of the exitway is not less than 32 inches measured between the face of the door and the opposite stop. The unlatching force of panic hardware shall not exceed 5 lbs, applied in the direction of travel.
8. Swinging door surfaces within 10 inches of the finish floor or ground surface measured vertically shall have a smooth surface on the push side extending the full width of the door.

2.3 FRAMING

A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.

1. Construction: Nonthermal.
2. Glazing System:

a. SF-1: Retained mechanically with gaskets on four sides.
b. SF-2: Retained mechanically with gaskets on two sides and structural silicone glazed on the other two sides.

3. Glazing Plane:

a. SF-1: As indicated on Drawings.
b. SF-2: Flush glazed.

4. Finish: High-performance organic finish.
5. Fabrication Method: Field-fabricated stick system.

B. Backer Plates: Manufacturer's standard, continuous backer plates for framing members, if not integral, where framing abuts adjacent construction.

C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

D. Materials:

1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

a. Sheet and Plate: ASTM B 209.
b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
c. Extruded Structural Pipe and Tubes: ASTM B 429.
d. Structural Profiles: ASTM B 308.

2. Steel Reinforcement: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM, and prepare surfaces according to applicable SSPC standard.

a. Structural Shapes, Plates, and Bars: ASTM A 36.
b. Cold-Rolled Sheet and Strip: ASTM A 1008.
c. Hot-Rolled Sheet and Strip: ASTM A 1011.

2.4 ENTRANCE DOOR SYSTEMS

A. Entrance Doors: Manufacturer's heavy-duty glazed entrance doors for manual-swing operation.

1. Door Construction: 1-3/4-inch overall thickness, with minimum 0.188-inch-thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.
2. Door Design: As indicated, or if not indicated, manufacture's medium stile; 3-1/2-inch nominal head and side rails, with a minimum 10-inch bottom rail.
3. Glazing Stops and Gaskets: Square Insert description, snap-on, extruded-aluminum stops and preformed gaskets.

    a. Provide nonremovable glazing stops on outside of door.

4. Finish: High-performance organic finish.

2.5 ENTRANCE DOOR HARDWARE

A. Entrance Door Hardware: Hardware not specified in this Section is specified in Section 087100 "Door Hardware."

2.6 GLAZING

A. Glazing: Comply with Section 088000 "Glazing."

B. Glazing Gaskets: Manufacturer's standard sealed-corner pressure-glazing system of black, resilient elastomeric glazing gaskets, setting blocks, and shims or spacers, fabricated from an elastomer of type and in hardness recommended by system and gasket manufacturer to comply with system performance requirements.

C. Glazing Sealants: As recommended by manufacturer.

D. Sealants used inside the building envelope shall have a maximum VOC content of 250 g/L.

E. Structural Glazing Sealants: ASTM C 1184, chemically curing silicone formulation that is compatible with system components with which it comes in contact, specifically formulated and tested for use as structural sealant and approved by structural-sealant manufacturer for use in storefront assembly indicated.

1. Color: Black.

F. Sealants: ASTM C 920 for Type S; Grade NS; Class 25; Uses NT, G, A, and O; chemically curing silicone formulation that is compatible with structural sealant and other system components with which it comes in contact; recommended by structural-sealant and structural-sealant-glazed storefront manufacturers for this use.

1. Color: As indicated on Drawings, or if not indicated, as selected by Architect from manufacturer's full range of sealant colors.

2.7 ACCESSORIES

A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, or vibration.
2. Reinforce members as required to receive fastener threads.
3. Use exposed fasteners with countersunk Phillips screw heads, finished to match framing system.

B. Anchors: Three-way adjustable anchors with minimum adjustment of 1 inch that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.

1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123 or ASTM A 153 requirements.

C. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

2.8 FABRICATION

A. Form or extrude aluminum shapes before finishing.

B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

C. Fabricate components that, when assembled, have the following characteristics:

1. Profiles that are sharp, straight, and free of defects or deformations.
2. Accurately fitted joints with ends coped or mitered.
3. Physical and thermal isolation of glazing from framing members.
4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
5. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.

D. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.

E. Storefront Framing: Provide subframes and reinforcing of types indicated or, as required for a complete system. Factory assemble components to greatest extent possible. Disassemble components only as necessary for shipment and installation.

F. Entrance Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.

1. At interior doors, provide silencers at stops to prevent metal-to-metal contact. Install three silencers on strike jamb of single-door frames and two silencers on head of frames for pairs of doors.

G. Entrance Doors: Reinforce doors as required for installing entrance door hardware.

H. Entrance Door Hardware Installation: Factory install entrance door hardware to the greatest extent possible. Cut, drill, and tap for factory-installed entrance door hardware before applying finishes.

I. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.9 ALUMINUM FINISHES

A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations relative to applying and designating finishes.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: Custom color to match Architect's sample.

2.10 SOURCE QUALITY CONTROL

A. Structural Sealant: Perform quality-control procedures complying with ASTM C 1401 recommendations including, but not limited to, assembly material qualification procedures, sealant testing, and assembly fabrication reviews and checks.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare surfaces that are in contact with sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

3.3 INSTALLATION

A. General:

1. Comply with manufacturer's written instructions.
2. Do not install damaged components.
3. Fit joints to produce hairline joints free of burrs and distortion.
4. Rigidly secure nonmovement joints.
5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
6. Seal perimeter and other joints unless otherwise indicated.

B. Metal Protection:

1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with materials recommended by manufacturer for this purpose or by installing nonconductive spacers.
2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

C. Set continuous sill members and flashing in full sealant bed as specified in Section 079200 "Joint Sealants."

D. Install components plumb and true in alignment with established lines and grades.

E. Install operable units level and plumb, securely anchored, and without distortion. Adjust seals and hardware movement to produce proper operation.

F. Install glazing as specified in Section 088000 "Glazing."

G. Entrance Doors: Install doors to produce smooth operation and tight fit at contact points.

1. Field-Installed Entrance Door Hardware: Install surface-mounted entrance door hardware according to entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.
2. Aluminum framed entrance doors shall be properly installed such that without closer attached, opening force is 1 lbf or less.

3.4 ERECTION TOLERANCES

A. Erection Tolerances: Install aluminum-framed entrances and storefronts to comply with the following maximum tolerances:

1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
3. Alignment:

    a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
    b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
    c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4 inch.

4. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.5 FIELD QUALITY CONTROL (BY OWNER)

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Field and shop welds in compliance with CBC 1705.2.
2. Post-installed concrete anchors in compliance with CBC 1705.3.

B. Aluminum-framed storefronts will be considered defective if they do not pass tests and inspections.

C. Repair or remove work if test results and inspections indicate that it does not comply with specified requirements.

D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

E. Prepare test and inspection reports.

3.6 MAINTENANCE SERVICE

A. Entrance Door Hardware:

1. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of entrance door hardware.
2. Initial Maintenance Service: Beginning at Substantial Completion, provide six months' full maintenance by skilled employees of entrance door hardware Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper entrance door hardware operation at rated speed and capacity. Use parts and supplies that are the same as those used in the manufacture and installation of original equipment.

3.7 ADJUSTING

A. Adjust entrance doors and hardware to produce smooth operation and tight fit at contact points.

1. For aluminum-framed entrance doors accessible to people with disabilities:

    a. Adjust closers to provide a 3-second closer sweep period for doors to move from a 70-degree open position to 3 inches from the latch measured to the leading door edge.
    b. Adjust door hardware to comply with the accessibility portion of the “Performance Requirements” Article in Part 2.

3.8 CLEANING AND PROTECTION

A. Provide final protection and maintain conditions in a manner acceptable to manufacturer and Installer that ensure entrance and storefront systems are without damage or deterioration at the time of Substantial Completion.

B. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.

C. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

END OF SECTION 084113

SECTION 084126 - ALL-GLASS ENTRANCES AND STOREFRONTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Interior and exterior swinging all-glass entrances.
2. All-glass sidelights.
3. Interior all-glass storefronts.

B. Engineering Responsibility: If manufacturer's system is not pre-engineered to meet performance requirements, contractor's responsibility includes providing professional engineering services needed to assume engineering responsibility for all-glass entrances and storefronts.

C. Related Requirements:

1. Section 035416 "Hydraulic Cement Underlayment" for leveling concrete slab substrates below all-glass entrances and sidelights.
2. Section 055000 "Metal Fabrications" for overhead-steel support for all-glass systems.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for all-glass system.

B. Shop Drawings: For all-glass entrances.

1. Include plans, elevations, and sections.
2. Include details of fittings and glazing, including isometric drawings of fittings and extrusions.
3. Door hardware locations, mounting heights, and installation requirements.
4. If manufacturer's all-glass entrances and storefronts are not pre-engineered to meet performance requirements, Contractor's responsibility includes providing professional engineering services needed to assume engineering responsibility for all-glass entrances and storefronts.

a. Shop Drawings shall be signed and sealed by a California-licensed professional engineer responsible for their preparation, indicating compliance with performance requirements.

C. Samples:

1. For each type of exposed finish indicated.
2. Glazing Samples: For each type of glazing type, 12 inches square.
3. Door Hardware: For exposed door hardware of each type, in specified finish, full size.

D. Entrance Door Hardware Schedule: Prepared by or under supervision of supplier, detailing fabrication and assembly of entrance door hardware, as well as procedures and diagrams. Coordinate final entrance door hardware schedule with doors sidelights, and related work to ensure proper size, thickness, hand, function, and finish of entrance door hardware.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: For all-glass systems, for tests performed by a qualified testing agency.

C. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For all-glass systems to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of all-glass entrances and storefronts that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports and labels.

B. Installer Qualifications: A firm with not less than 5 years' experience installing all-glass entrances and storefronts similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Engineering Responsibility: If manufacturer's all-glass entrances and storefronts are not pre-engineered to meet performance requirements, Contractor's responsibility includes providing professional engineering services needed to assume engineering responsibility for all-glass entrances and storefronts.

1. Prepare data for all-glass entrances and storefronts, including Shop Drawings, based on testing and engineering analysis for manufacturer's standard units in systems similar to those indicated for the Project and submission of reports of tests performed on manufacturer's standard assemblies, signed and sealed by the qualified California-licensed professional engineer responsible for their preparation.

D. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

1.8 WARRANTY

A. Special Warranty: Manufacturer's standard or customized form in which manufacturer and installer agree to repair or replace components of all-glass entrance and storefront systems that do not comply with requirements or that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
b. Failure of operating components.

2. Warranty Period: Four years from date of Substantial Completion, except as follows:

a. Concealed Floor Closers: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide all-glass entrances and storefronts by the following:

1. Blumcraft of Pittsburgh; C.R. Laurence Co., Inc.; Series 1301.

B. Source Limitations: Obtain all-glass entrance and storefronts from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. General Performance: Comply with performance requirements specified, as determined by testing of all-glass entrances representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.

1. All-glass entrances and storefronts shall comply with the 2016 California Building Code.

B. Engineering Responsibility: If manufacturer's all-glass entrances and storefronts are not pre-engineered to meet performance requirements, Contractor's responsibility includes providing professional engineering services needed to assume engineering responsibility for all-glass entrances and storefronts to meet specified performance requirements.

C. Structural Loads:

1. Exterior Wind Loads: As indicated on Drawings.
2. Interior Lateral Load: 5 lbf per square foot.
3. Other Design Loads: As indicated on Drawings.
4. Deflection Limits: Deflection normal to glazing plane is limited to 1/175 of clear span or 3/4 inch, whichever is smaller.

D. Seismic Performance: All-glass entrances shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

E. Story Drift: Accommodate displacement of adjacent stories indicated.

F. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

G. Safety Glazing: Provide safety glazing for locations subject to human impact as required per the 2016 California Building Code.

H. Accessibility Requirements: Comply with applicable provisions in the 2010 ADA Standards for Accessible Design and the accessibility requirements of the 2016 California Building Code for door hardware on doors in an accessible route.

1. Provide operating devices that do not require tight grasping, pinching, or twisting of the wrist and that operate with a force of not more than 5 lbf.
2. Comply with the following maximum opening-force requirements:

a. Interior and Exterior, Non-Fire-Rated Hinged Doors: 5 lbf applied perpendicular to door.

3. Provide thresholds not more than 1/2 inch high. Changes in level between 1/4 inch high minimum and 1/2 inch high maximum shall be beveled with a slope not steeper than 1:2.
4. Adjust door closer sweep periods so that, from an open position of 90 degrees, the door will take at least 5 seconds to move to a position of 12 degrees from the latch.

5. Door closers and stops shall not reduce headroom to less than 78 inches.
6. Floor-mounted door stops and other similar obstructions shall be installed 4 inches maximum from the face of the wall or partition. Floor stops shall not be located in the path of travel.
7. Panic hardware shall be mounted between 36 inches and 44 inches above finished floor such that the clear width of the exitway is not less than 32 inches measured between the face of the door and the opposite stop. The unlatching force of panic hardware shall not exceed 5 lbs, applied in the direction of travel.
8. Swinging door surfaces within 10 inches of the finish floor or ground surface measured vertically shall have a smooth surface on the push side extending the full width of the door.

2.3 METAL COMPONENTS

A. Fitting Configuration:

1. Manual-Swinging, All-Glass Entrance Doors and Sidelights: Continuous rail fitting at top and bottom.
2. All-Glass Storefronts: Continuous rail fitting at top and bottom.

B. Aluminum Extrusions: ASTM B 221, with strength and durability characteristics of not less than Alloy 6063-T5.

1. Stainless Steel Cladding: ASTM A 666, Type 304.

C. Anchors and Fastenings: Concealed.

D. Weather Stripping: Pile type; replaceable without removing all-glass entrance doors from pivots.

2.4 GLASS

A. Glass: ASTM C 1048, Kind FT (fully tempered), Condition A (uncoated surfaces), Type I (transparent), tested for surface and edge compression per ASTM C 1048 and for impact strength per 16 CFR 1201 for Category II materials.

1. Class 1: Clear monolithic.

a. Thickness: Per manufacturer's published recommendations for height of door and storefront system, but no less than 1/2 inch.

2. Exposed Edges: Machine ground and flat polished.
3. Butt Edges: Flat ground.

2.5 ENTRANCE DOOR HARDWARE

A. General: Heavy-duty entrance door hardware units in sizes, quantities, and types recommended by manufacturer for all-glass entrance systems indicated. For exposed parts, match metal and finish of rail fittings.

B. Concealed Floor Closers and Top Pivots: Center hung; BHMA A156.4, Grade 1; including cases, bottom arms, top walking beam pivots, plates, and accessories required for complete installation.

1. Swing: Double acting.

a. Positive Dead Stop: Coordinated with hold-open angle if any, or at angle selected.

2. Hold Open: Automatic, at angle selected.

C. Concealed Overhead Holder: BHMA A156.8, Grade 1, with dead-stop setting coordinated with concealed floor closer.

D. Push-Pull Set: As selected from manufacturer's full range, stainless steel finish.

E. Cylinders: As specified in Section 087100 "Door Hardware."

F. Exit Devices: UL 305.

1. Basis-of-Design: Blumcraft "Panic Device H-100-D" with key cylinder.
2. Function: Operation by push-pull when inside operator is locked down (dogged).
3. Latching: At head.
4. Style: Exposed vertical/horizontal stainless steel rod.
5. Provide exit devices on both leaves of pairs of doors.

G. Threshold: ADA-compliant, not more than 1/2 inch high.

2.6 BUTT-GLAZING SEALANTS

A. Single-Component, Nonsag, Acid-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Uses NT, G, and A.

2.7 FABRICATION

A. Provide holes and cutouts in glass to receive hardware, fittings, and accessory fittings before tempering glass. Do not cut, drill, or make other alterations to glass after tempering.

1. Fully temper glass using horizontal (roller-hearth) process, and fabricate so that when glass is installed, roll-wave distortion is parallel with bottom edge of door or lite.

B. Factory assemble components and factory install hardware and fittings to greatest extent possible.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install all-glass systems and associated components according to manufacturer's written instructions.

1. All-glass entrance system shall be properly installed such that without closer attached, door operating force is 1 lbf or less.

B. Set units level, plumb, and true to line, with uniform joints.

C. Maintain uniform clearances between adjacent components.

D. Lubricate hardware and other moving parts according to manufacturer's written instructions.

E. Set, seal, and grout floor closer cases as required to suit hardware and substrate indicated.

F. Install butt-joint sealants according to manufacturer's instructions and as specified in Section 079200 "Joint Sealants" to produce weathertight installation.

3.3 ADJUSTING AND CLEANING

A. Adjust all-glass entrance doors and hardware to produce smooth operation and tight fit at contact points and weather stripping.

1. For all-glass entrance doors accessible to people with disabilities, adjust closers to provide a three-second closer sweep period for doors to move from a 70-degree open position to 3 inches from the latch measured to the leading door edge.

B. Remove excess sealant and glazing compounds and dirt from surfaces.

END OF SECTION 084126

SECTION 084229 - INTERIOR SLIDING AUTOMATIC ENTRANCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes interior all-glass power-operated sliding automatic entrances.

B. Engineering Responsibility: If manufacturer's system is not pre-engineered to meet performance requirements, contractor's responsibility includes providing professional engineering services needed to assume engineering responsibility for sliding automatic entrances.

C. Related Requirements:

1. Section 055000 "Metal Fabrications" for steel not provided as part of this Section.
2. Section 079200 "Joint Sealants" for installation of joint sealants installed with sliding automatic entrances.
3. Section 087100 "Door Hardware" for door hardware to be installed in sliding automatic entrances.
4. Divisions 26, 27, and/or 28 for electronic connections of sliding automatic entrance systems to electrical, security/access controls, and/or fire alarm system.

1.3 DEFINITIONS

A. AAADM: American Association of Automatic Door Manufacturers.

B. Activation Device: A control that, when actuated, sends an electrical signal to the door operator to open the door.

C. CBC: 2016 California Building Code.

D. Safety Device: A control that, to avoid injury, prevents a door from opening or closing.

E. For automatic door terminology, refer to BHMA A156.10 for definitions of terms.

1.4 COORDINATION

A. Templates: Distribute for doors, frames, and other work specified to be factory prepared for installing automatic entrances.

B. Coordinate hardware with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish. Coordinate hardware for automatic entrances with hardware required for rest of Project.

C. Electrical System Roughing-in: Coordinate layout and installation of automatic entrances with connections to power supplies and access-control system.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

A. Transmit all action and informational submittal items together in one single complete submittal package for review.

B. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for automatic entrances.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

C. Sustainable Design Submittals: Product data for sealants, indicating VOC content.

D. Shop Drawings: For automatic entrances, include project-specific shop drawings.

1. Include plans, elevations, sections, hardware mounting heights, and attachment details.
2. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.
4. Indicate locations of activation and safety devices.
5. Include hardware schedule and indicate hardware types, functions, quantities, and locations.
6. If manufacturer's sliding automatic entrances are not pre-engineered to meet performance requirements, Contractor's responsibility includes providing professional engineering services needed to assume engineering responsibility for sliding automatic entrances.

    a. Shop Drawings shall be signed and sealed by a California-licensed professional engineer responsible for their preparation, indicating compliance with performance requirements.

E. Aluminum Finish Samples: For each type of exposed finish required, in a representative section of each sliding automatic entrance, in manufacturer's standard size.

F. Glazing Samples: For each type of glazing indicated, 12 inches square and of same thickness indicated for the final Work.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For installer, manufacturer, and professional engineer.

B. Product Test Reports: For each type of automatic entrance, for tests performed by a qualified testing agency.

C. Field quality-control reports.

D. Sample Warranties: For manufacturer's special warranties.

1.8 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For automatic entrances, safety devices, and control systems to include in operation and maintenance manuals.

1.9 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of sliding automatic entrances that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports, labels, and calculations. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 10 years' experience installing sliding automatic entrances similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1. Maintenance Proximity: Not more than two hours' normal travel time from Installer's place of business to Project site.

C. Certified Inspector Qualifications: Certified by AAADM.

D. Engineering Responsibility: If manufacturer's sliding automatic entrances are not pre-engineered to meet performance requirements, Contractor's responsibility includes providing professional engineering services needed to assume engineering responsibility for sliding automatic entrances.

1. Prepare data for sliding automatic entrances, including Shop Drawings, based on testing and engineering analysis for manufacturer's standard units in systems similar to those indicated for the Project and submission of reports of tests performed on manufacturer's standard assemblies, signed and sealed by the qualified California-licensed professional engineer responsible for their preparation.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard or customized warranty in which manufacturer and installer agrees to repair or replace components of automatic entrances that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures including, but not limited to, excessive deflection.
b. Faulty operation of operators, controls, and hardware.
c. Deterioration of metals, metal finishes, and other materials beyond normal use.

2. Warranty Period: Four years from date of Substantial Completion.

B. Special Finish Warranty: Manufacturer agrees to repair or replace components on which finishes fail in materials or workmanship within specified warranty period.

1. Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide sliding automatic entrances by the following:

1. Stanley Access Technologies, LLC; Division of Stanley Security Solutions.

a. All Glass Units: "Dura-Glide All Glass Sliding Door System."

Or a Comparable Product by one of the following:

2. Besam Entrance Solutions; Subsidiary of ASSA ABLOY Entrance Systems.
3. Horton Automatics; a division of Overhead Door Corporation.

B. Source Limitations: Obtain sliding automatic entrances from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. General: Provide sliding automatic entrances capable of complying with performance requirements indicated based on testing manufacturers' sliding doors that are representative of those specified.

1. Comply with the requirements of the 2016 CBC.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Power-Operated Door Standard: BHMA A156.10.

D. Drawings and Specifications: This Section provides a performance-based type of specification for the design, fabrication, and installation of the sliding automatic entrance system, including the glass and glazing. If the sliding automatic entrance system is not pre-engineered to meet the performance requirements, the Contractor is responsible for the engineering and design of all components and materials, as well as the fabrication, installation and performance of the system.

1. Drawings are diagrammatic. The details indicated are intended as a guide for the aesthetic and interfacing requirements of the sliding automatic entrance system with other Work. The details are intended to establish basic dimensions, locations, and different glass types. The Contractor is responsible for the system, including glass and glazing, within these aesthetic parameters. The drawings for the sliding automatic entrance system are not construed as being engineered, nor necessarily adequate to meet the engineering design requirements.
2. The design details do not cover all conditions which may be required for successful completion of the Work. Conditions not detailed shall be developed though the Contractor’s shop drawings, to the same level of aesthetics, and in compliance with the performance criteria, as indicated for detailed areas and as stipulated in these specifications. The Contractor, by accepting a contract for the Work, acknowledges this and agrees that the Architect and Owner’s representative shall have the final say as to all matters whether detailed or not on the design details.
3. For sliding automatic entrances that are not pre-engineered, comply with the following:

    a. Delegated Design: Design sliding automatic entrance system, including comprehensive engineering analysis data signed and sealed by a California-registered structural engineer, using performance requirements and design criteria indicated. Comply with requirements in Division 01 Section “Submittal Procedures” and as indicated on the Drawings.

E. Safety Glazing Standard: 16 CFR 1201 for heat treated and laminated glass, permanently marked with Safety Glazing Certification Council label. Comply with the 2016 CBC.

F. Structural Performance: Automatic entrances shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to the 2016 CBC.

1. Seismic Loads: Based on criteria indicated on the Structural Drawings.
2. Interior Lateral Loads: 5 lbf per square foot.

G. Operation: In compliance with Section 1010.1.4.3 of the 2016 CBC:

1. The door shall be power operated and shall be capable of being operated manually in the event of power failure.
2. The door shall be openable by a simple method from both sides without special knowledge or effort.
3. The force required to open the door shall not exceed 30 pounds to set the door in motion and 15 pounds to close the door or open it to the minimum required width.
4. The door shall be openable with a force not to exceed 15 pounds when a force of 250 pounds is applied perpendicular to the door adjacent to the operating device.
5. The door assembly shall have an integrated standyby power supply.
6. The doors assembly power supply shall be electronically supervised.
7. The door shall open to the minimum required width within 10 seconds after activation of the operating device.

H. Entrapment-Prevention Force:

1. Power-Operated Sliding Doors: Not more than 30 lbf required to prevent stopped door from closing.

2.3 SLIDING AUTOMATIC ENTRANCES

A. General: Provide manufacturer's standard automatic entrances including doors, sidelites, framing, headers, carrier assemblies, roller tracks, door operators, controls, and accessories required for a complete installation.

B. Configuration: Single-sliding doors with one sliding leaf and one fixed sidelite.

1. Traffic Pattern: Two way.
2. Emergency Breakaway Capability: As indicated on Drawings.
3. Mounting: Between jambs.

C. Operator Features:

1. Power opening and closing.
2. Drive System: Chain or belt.
3. Adjustable opening and closing speeds.
4. Adjustable hold-open time between zero and 30 seconds.
5. Obstruction recycle.
6. On-off/hold-open switch to control electric power to operator, key operated.

D. Sliding-Door Carrier Assemblies and Overhead Roller Tracks: Carrier assembly that allows vertical adjustment; consisting of nylon- or delrin-covered, ball-bearing-center steel wheels operating on a continuous roller track, or ball-bearing-center steel wheels operating on a nylon- or delrin-covered, continuous roller track. Support doors from carrier assembly by cantilever and pivot assembly.

1. Rollers: Minimum of two ball-bearing roller wheels and two antirise rollers for each active leaf.

E. Controls: Activation and safety devices according to BHMA standards.

1. Activation Device: Motion sensor mounted on each side of door header to detect pedestrians in activating zone and to open door. Provide optional push-plate switch and key switch on each side of door to activate door operator.
2. Safety Device: Presence sensor mounted to underside of door header and two photoelectric beams mounted in sidelite jambs on one side of the door to detect pedestrians in presence zone and to prevent door from closing.

F. Finish: Finish framing, door(s), and header with high-performance organic finish.

1. Color: Custom color to match Architect’s sample.

2.4 ENTRANCE COMPONENTS

A. Framing Members: Extruded aluminum, minimum 0.125 inch thick and reinforced as required to support imposed loads.

1. Nominal Size: In manufacturer’s standard size, engineered to meet performance requirements.
2. Extruded Glazing Stops and Applied Trim: Minimum 0.062-inch wall thickness.

B. All-Glass Sliding Doors: Fabricated from 13-mm-thick tempered glass, with polished vertical edges and minimum 0.125-inch-thick, extruded-aluminum top and bottom rails.

1. Rail Design: Manufacturer’s standard rail design, engineered to meet performance requirements.

a. Bottom Rail Design: 10-inch nominal height.

C. Sidelite(s): 1-3/4-inch-deep sidelite(s) with minimum 0.125-inch-thick, extruded-aluminum tubular rail members matching door design.

1. Glazing Stops and Gaskets: Same materials and design as for stile and rail door.

D. Headers: Fabricated from minimum 0.125-inch-thick extruded aluminum and extending full width of automatic entrance units to conceal door operators and controls. Provide hinged or removable access panels for service and adjustment of door operators and controls. Secure panels to prevent unauthorized access.

1. Mounting: Concealed, with one side of header flush with framing.
2. Capacity: Capable of supporting doors as indicated without intermediate supports.

E. Brackets and Reinforcements: High-strength aluminum with nonstaining, nonferrous shims for aligning system components.

F. Signage: As required by cited BHMA standard.

1. Application Process: Silk-screened.
2. Provide sign materials with instructions for field application after glazing is installed.

2.5 MATERIALS

A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

1. Extrusions: ASTM B 221.
2. Sheet: ASTM B 209.

B. Steel Reinforcement: Reinforcement with corrosion-resistant primer complying with SSPC-PS Guide No. 12.00 applied immediately after surface preparation and pretreatment. Use surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.

C. Fully Tempered Float Glass: ASTM C 1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.

1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
2. Minimum Thickness: As required to meet performance requirements, but no less than 13 mm (nominal 1/2 inch).
3. Grind smooth and polish exposed glass edges and corners.

D. Sealants and Joint Fillers: As specified in Section 079100 "Exterior Wall Joint Sealants."

E. Nonmetallic, Shrinkage-Resistant Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout; complying with ASTM C 1107; of consistency suitable for application.

F. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.

G. Fasteners and Accessories: Corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

2.6 DOOR OPERATORS AND CONTROLS

A. General: Provide operators and controls, which include activation and safety devices, according to BHMA standards, for condition of exposure, and for long-term, maintenance-free operation under normal traffic load for type of occupancy indicated.

B. Door Operators: Provide door operators of size recommended by manufacturer for door size, weight, and movement.

1. Door Operator Performance: Door operators shall open and close doors and maintain them in fully closed position when subjected to Project's design wind loads.
2. Electromechanical Operators: Concealed, self-contained, overhead unit powered by fractional-horsepower, permanent-magnet dc motor; with closing speed controlled mechanically by gear train and dynamically by braking action of electric motor; with solid-state microprocessor controller; UL 325; and with manual operation with power off.

C. Motion Sensors: Self-contained, K-band-frequency, microwave-scanner units; fully enclosed by its plastic housing; adjustable to provide detection-field sizes and functions required by BHMA A156.10.

1. Provide capability for switching between bidirectional and unidirectional detection.
2. For one-way traffic, sensor on egress side shall not be active when doors are fully closed.

D. Presence Sensors: Self-contained, active-infrared scanner units; adjustable to provide detection-field sizes and functions required by BHMA A156.10. Sensors shall remain active at all times.

E. Photoelectric Beams: Pulsed infrared, sender-receiver assembly for recessed mounting. Beams shall not be active when doors are fully closed.

F. Push-Plate Switch: Momentary-contact door-control switch with flat push-plate actuator with contrasting-colored, engraved message.

1. Configuration: Square push plate with 4-by-4-inch junction box.

a. Mounting: As indicated on Drawings, or if not indicated, recessed mounted, semiflush in wall.

2. Push-Plate Material: Stainless steel as selected by Architect from manufacturer's full range.
3. Message: International symbol of accessibility.

G. Key Switch: Recess-mounted, door-control switch with key-controlled actuator; enclosed in 2-by-4-inch junction box. Provide faceplate engraved with letters indicating switch functions.

1. Face-Plate Material: Stainless steel as selected by Architect from manufacturer's full range.
2. Functions: Two-way automatic, hold open, one-way exit, and off.
3. Mounting: As indicated on Drawings, or if not indicated, recess mounted, semiflush in wall.

H. Electrical Interlocks: Unless units are equipped with self-protecting devices or circuits, provide electrical interlocks to prevent activation of operator when door is locked, latched, or bolted.

I. Electrical Supervision: The door assembly power supply shall be electrically supervised in compliance with the 2016 CBC.

J. Standby Power Supply: Provide uninterruptible standby power supply with extended operation in compliance with the 2016 CBC.

2.7 HARDWARE

A. General: Provide units in sizes and types recommended by automatic entrance and hardware manufacturers for entrances and uses indicated. Finish exposed parts to match door finish.

B. Breakaway Device for Power-Operated Doors: Device that allows door to swing out in direction of egress to full 90 degrees from any operating position. Maximum force to open door shall be as stipulated in "Performance Requirements" Article. Interrupt powered operation of door operator while in breakaway mode.

C. Deadlocks: Deadbolt operated by exterior cylinder and interior thumb turn, with minimum 1-inch-long throw bolt; BHMA A156.5, Grade 1.

1. Deadbolts: Laminated-steel hook, mortise type, BHMA A156.5, Grade 1.
2. Cylinders: As specified in Section 087100 "Door Hardware."

a. Keying: Integrate into building master key system.

D. Dustproof Strikes for All-Glass Sliding Doors: Recessed, floor-type, BHMA A156.16, Grade 1, to receive deadbolt.

E. Stripping: Replaceable components.

1. Sliding Type: AAMA 701, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.

F. Sweeps: Manufacturer’s standard adjustable nylon brush sweep mounted to underside of door bottom.

2.8 FABRICATION

A. General: Factory fabricate automatic entrance components to designs, sizes, and thicknesses indicated and to comply with indicated standards.

1. Form aluminum shapes before finishing.
2. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
3. Use concealed fasteners to greatest extent possible. Where exposed fasteners are required, use countersunk Phillips flat-head machine screws, finished to match framing.

a. Where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
b. Reinforce members as required to receive fastener threads.

4. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.

B. Framing: Provide automatic entrances as prefabricated assemblies. Complete fabrication, assembly, finishing, hardware application, and other work before shipment to Project site.

1. Fabricate tubular and channel frame assemblies with welded or mechanical joints. Provide subframes and reinforcement as required for a complete system to support required loads.
2. Perform fabrication operations in manner that prevents damage to exposed finish surfaces.
3. Form profiles that are sharp, straight, and free of defects or deformations.
4. Provide components with concealed fasteners and anchor and connection devices.
5. Fabricate components with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion.
6. Fabricate exterior components to drain condensation and water passing joints within system to the exterior.
7. Provide anchorage and alignment brackets for concealed support of assembly from building structure.
8. Allow for thermal expansion of exterior units.

C. Doors: Factory fabricated and assembled in profiles indicated. Reinforce as required to support imposed loads and for installing hardware.

D. Metal Cladding: Factory-fabricated and installed metal cladding, completely covering all visible surfaces as part of prefabricated entrance assembly before shipment to Project site.

1. Perform fabrication operations in manner that prevents damage to exposed finish surfaces.
2. Form profiles that are sharp, straight, and free of defects or deformations.
3. Provide components with concealed fasteners and anchor and connection devices.
4. Fabricate components with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion.
5. Fabricate exterior components to drain water passing joints and condensation and moisture occurring or migrating within system to the exterior.
6. Allow for thermal expansion at exterior entrances.

E. Door Operators: Factory fabricated and installed in headers, including adjusting and testing.

F. Glazing: Fabricate framing with minimum glazing edge clearances for thickness and type of glazing indicated, according to GANA's "Glazing Manual."

G. Hardware: Factory install hardware to greatest extent possible; remove only as required for final finishing operation and for delivery to and installation at Project site. Cut, drill, and tap for factory-installed hardware before applying finishes.

1. Provide sliding-type stripping, mortised into door, at perimeter of doors.

H. Controls:

1. General: Factory install activation and safety devices in doors and headers as required by BHMA A156.10 for type of door and direction of travel.
2. Install photoelectric beams in vertical jambs of sidelites, with dimension above finished floor as follows:

a. Top Beam: 48 inches.
b. Bottom Beam: 24 inches.

2.9 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.10 ALUMINUM FINISHES

A. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Finish: Custom to match Architect’s sample.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances, header support, and other conditions affecting performance of automatic entrances.

B. Examine roughing-in for electrical systems to verify actual locations of power connections before automatic entrance installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install automatic entrances according to manufacturer's written instructions and cited BHMA standard for direction of pedestrian travel, including signage, controls, wiring, and connection to the building's power supply.

1. Do not install damaged components. Fit frame joints to produce hairline joints free of burrs and distortion. Rigidly secure nonmovement joints. Seal joints.
2. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.
3. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous coating.

B. Entrances: Install automatic entrances plumb and true in alignment with established lines and grades without warp or rack of framing members and doors. Anchor securely in place.

1. Install surface-mounted hardware using concealed fasteners to greatest extent possible.
2. Set headers, carrier assemblies, tracks, operating brackets, and guides level and true to location with anchorage for permanent support.
3. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within system to exterior.
4. Level recesses for recessed thresholds using nonshrink grout.

C. Door Operators: Connect door operators to electrical power distribution system.

D. Access-Control Devices: Connect access-control devices to access-control system as specified in Section 281300 "Access Control."

E. Controls: Install and adjust activation and safety devices according to manufacturer's written instructions and cited BHMA standard for direction of pedestrian travel. Connect control wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

F. Guide Rails: Install rails according to BHMA A156.10, including Appendix A, and manufacturer's written instructions unless otherwise indicated.

G. Glazing: Install glazing for all-glass units in accordance with manufacturer’s written instructions.

H. Sealants: Comply with requirements specified in Section 079200 "Joint Sealants."

1. Seal perimeter of framing members with sealant.

I. Signage: Apply signage on both sides of each door as required by cited BHMA standard for direction of pedestrian travel.

J. Wiring within Automatic Entrance Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's written limitations on bending radii. Provide and use lacing bars and distribution spools.

3.3 FIELD QUALITY CONTROL

A. Certified Inspector: Engage a Certified Inspector to test and inspect components, assemblies, and installations, including connections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Test and inspect each automatic entrance, using AAADM inspection forms, to determine compliance of installed systems with applicable BHMA standards.

C. Automatic entrances will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.4 ADJUSTING

A. Adjust hardware, moving parts, door operators, and controls to function smoothly, and lubricate as recommended by manufacturer; comply with requirements of applicable BHMA standards.

B. Readjust door operators and controls after repeated operation of completed installation equivalent to three days' use by normal traffic (100 to 300 cycles).

C. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.5 CLEANING

A. Clean glass and metal surfaces promptly after installation. Remove excess glazing and sealant compounds, dirt, and other substances. Repair damaged finish to match original finish.

1. Comply with requirements in Section 088000 "Glazing" for cleaning and maintaining glass.

3.6 MAINTENANCE SERVICE

A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of automatic entrance Installer. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper automatic entrance operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

1. Engage a Certified Inspector to perform safety inspection after each adjustment or repair and at end of maintenance period. Furnish completed inspection reports to Owner.
2. Perform maintenance, including emergency callback service, during normal working hours.
3. Include 24-hour-per-day, 7-day-per-week, emergency callback service.

3.7 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain automatic entrances.

END OF SECTION 084229

SECTION 084329 - SLIDING GLASS STOREFRONTS (DEFERRED APPROVAL)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes exterior sliding glass storefronts.

B. Work under this Section is part of a “Deferred Approval.” Coordinate with the deferred approval requirements in Section 013300 “Submittal Procedures” and with the requirements indicated on the Drawings.

1. Contract Drawings are Diagrammatic: The details shown are intended as a guide for the aesthetic and interfacing requirements other various components of the exterior wall to and with other work; details are intended to establish basic dimensions of the module and the sight lines, jointing and profiles of members. Contractor is responsible for the design and engineering of the system within these aesthetic parameters. The drawings are not to be construed as engineering design, or adequate to meet the engineering design requirements.
2. Design conditions not included in Contract Drawings shall be developed through the Contractor's shop drawings in compliance with these specifications. Architect shall have the final say as to all matters whether detailed or not on the architectural design details.

C. Related Requirements:

1. Section 055000 "Metal Fabrications" for steel not provided as part of this Section.
2. Section 072713 "Modified Bituminous Sheet Air Barriers" for coordination and continuity of air/weather barrier with sliding glass storefronts provided under this Section.
3. Section 079200 "Joint Sealants" for installation of joint sealants installed with aluminum-framed entrances and storefronts.
4. Section 084413 "Glazed Aluminum Curtain Walls and Entrances" for coordinating finish among aluminum fenestration units on the building exterior.
5. Section 087100 "Door Hardware" for hardware to the extent not specified herein.
6. Section 088000 "Glazing" for glass to be installed in sliding glass storefronts.
7. Division 22 Section(s) and/or Division 32 Section(s) for connections to weep systems from ADA-compliant thresholds.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Construction Manager, Architect, envelope consultant, inspection agency, installer, manufacturer's technical representative, and other installers whose work interfaces with sliding glass storefronts.
2. Review the following:

a. Contract Document requirements.
b. Reviewed submittals.
c. Installation procedures.
d. Inspection and testing.
e. Forecasted weather conditions and procedures for coping with unfavorable conditions.
f. Tour representative areas of required work, discuss and evaluate for compliance with Contract Documents and approved submittals, including substrate conditions, surface preparations, sequence of installation and other preparatory work performed by other installers.

3. Contractor shall prepare minutes of preinstallation conference and distribute to participants.

1.4 ACTION SUBMITTALS

A. Transmit all action and informational submittal items together in one single complete submittal package for review.

B. Product Data: For each type of product.

1. Include construction details, material descriptions, fabrication methods, dimensions of individual components and profiles, hardware, finishes, and operating instructions.

C. Sustainable Design Submittals: Product data for sealants, indicating VOC content.

D. Shop Drawings: For sliding glass storefronts.

1. Include plans, elevations, sections, and details.
2. Detail attachments to other work, and between units, if any.
3. Indicate sealant joints, including locations, sizes, and types.
4. Include hardware and required clearances.
5. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
6. Shop Drawings shall be stamped and signed by the California-licensed professional engineer responsible for their preparation, including analysis data, indicating compliance with performance requirements.

E. Samples for Initial Selection: For units with factory-applied finishes.

F. Samples for Verification: For sliding glass storefronts and components required, prepared on Samples of size indicated below:

1. Main Framing Member: 12-inch-long section with weather stripping, glazing bead, and factory-applied color finish.
2. Hardware: Full-size units with factory-applied finish.
3. Exposed Finishes: For each exposed product and for each color specified, 2 by 4 inches in size.
4. Glazing: For each type of glass, 12 inch square.

G. Deferred-Approval Submittal: For sliding glass storefronts indicated to comply with performance requirements and design criteria, including shop drawings, calculations, and analysis data stamped and signed by the qualified California-licensed professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer, manufacturer, field testing agency, and professional engineer.

B. Energy Performance Certificates: For sliding glass storefronts, accessories, and components from manufacturer.

1. Basis for Certification: NFRC-certified energy performance values for each glazed aluminum curtain wall. Provide evidence that proposed systems meets “Envelope Mandatory Measures” (ENV-1).

C. Product Test Reports: For each sliding glass storefront, for tests performed by a qualified testing agency.

D. Welding certificates.

E. Field quality-control reports.

F. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For finishes, weather stripping, operable panels, and operating hardware to include in maintenance manuals.

B. Record Shop Drawings: Record actual installation that varies from that shown originally, giving particular attention to concealed components that would be difficult to identify later; comply with Section 017839 "Project Record Documents."

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of sliding glass storefronts that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports, labels, and calculations. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 10 years' experience installing sliding glass storefronts similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Engineering Responsibility: Prepare data for sliding glass storefronts, including Shop Drawings, based on testing and engineering analysis for manufacturer's standard units in systems similar to those indicated for the Project and submission of reports of tests performed on manufacturer's standard assemblies, signed and sealed by the qualified California-licensed professional engineer responsible for their preparation.

D. Testing Agency Qualifications: Qualified according to ASTM E 699 for testing indicated.

E. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1, "Structural Welding Code - Steel."
2. AWS D1.2, "Structural Welding Code - Aluminum."

F. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Build mockup for sliding glass storefront system, as shown on Drawings, or if not shown for first module of sliding glass storefront system.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

G. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.
2. Performance characteristics are indicated by criteria subject to verification by one or more methods, including preconstruction testing, field testing, and in-service performance.

1.8 COORDINATION

A. Coordinate sliding glass storefront installation with flashing, trim, curtain walls, metal composite material wall panels, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1. Coordinate installation of weep system associated with the ADA-compliant threshold, whether indicated or not, with Division 22 Section(s) and/or Division 32 Section(s) to comply with performance requirements.

B. Coordinate installation of miscellaneous metal sub-framing, anchorage items, or other items to be embedded in or attached to other construction before starting that Work. Provide locations, setting diagrams, templates, instructions, and directions for installation. Deliver such items to Project site in time for installation.

C. Pre-Installation Field Measurements: Coordinate exact hardware and anchorage locations with other Trade Contractors before permanently attaching to other construction.

D. Post-Installed Field Measurements: Field verify and examine actual installed locations of connection hardware and anchorage items prior to installation of Work provided under this Section. Notify General Contractor and Architect immediately of any discrepancies in writing. Provide letter from sliding glass storefront installer indicating acceptance of connection hardware and anchorage items.

1.9 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer’s standard or customized form in which manufacturer and installer agree to repair or replace components of sliding glass storefronts that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Failure to meet performance requirements.
b. Structural failures including excessive deflection.
c. Excessive water leakage or air infiltration.
d. Faulty operation of movable panels and hardware.
e. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
f. Failure of insulating glass.

2. Warranty Period:

a. Sliding Door: 10 years from date of Substantial Completion.
b. Insulating-Glass Units: 10 years from date of Substantial Completion.
c. Aluminum Finish: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide sliding glass storefronts by the following:

1. Nana Wall Systems, Inc.; HSW 60 with ADA-compliant low-profile saddle sill.

Or a Comparable Equal by one of the following:

2. Panda Windows and Doors; "Lift and Slide" All Aluminum (IS.14).

B. Source Limitations: Obtain sliding glass storefronts from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Deferred-Approval Engineering Responsibility: Engage a qualified California-licensed professional engineer, as defined in Section 014000 "Quality Requirements," to engineer sliding glass storefronts.

B. General Performance: Comply with performance requirements specified, as determined by testing of sliding glass storefronts representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.

1. Sliding glass storefronts shall withstand movements of supporting structure including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads, wind and seismic loads.
2. Sliding glass storefronts shall accommodate tolerance in construction, including, but not limited to, those from structural frame tolerances, manufacturing tolerances, and field installation tolerances.
3. Failure also includes the following:

a. Structural failures including, but not limited to, deflection exceeding specified limits.
b. Thermal stresses transferring to building structure.
c. Glass breakage.
d. Noise or vibration created by wind and thermal and structural movements.
e. Loosening or weakening of fasteners, attachments, and other components.
f. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
g. Water penetration through fixed glazing and framing areas.
h. Glazing to glazing contact.
i. Sealant failures.
j. Framing members transferring stresses to glazing, including those caused by thermal and structural movements.

4. Sliding glass storefronts shall comply with the 2016 California Building Code (CBC) and the 2016 California Energy Code (CEC)

C. Structural Performance (Exterior Units): Provide sliding glass storefront system capable of withstanding the effects of the following loads and stresses within limits and under conditions indicated, based on testing units representative of those indicated for Project that pass ASTM E 330:

1. Wind Loads: As indicated on Drawings.
2. Seismic Loads: As indicated on Drawings.
3. Deflection Limits: Design glass framing system to limit lateral deflections of glass edges to less than 1/175 of glass-edge length or 3/4 inch, whichever is less, at design pressure based on testing performed according to AAMA/WDMA/CSA 101/I.S.2/A440, Uniform Load Deflection Test, or structural computations.

D. Interstory Drift: Accommodate design displacement of adjacent stories indicated.

1. Elastic and Inelastic Displacements: As indicated on Structural Drawings.
2. Test Performance: Complying with criteria for passing based on building occupancy type when tested according to AAMA 501.4 at elastic displacement and inelastic displacement.

E. Seismic Performance: Sliding glass storefronts shall withstand the effects of earthquake motions determined according to the 2016 California Building Code.

1. Seismic Drift Causing Glass Fallout: Complying with criteria for passing based on building occupancy type at elastic displacement and inelastic displacement when tested according to AAMA 501.6 or by engineering analysis.

F. Air Infiltration: Test according to ASTM E 283: Maximum air leakage of 0.30 cfm/sq. ft. at a static-air-pressure differential of 1.57 lbf/sq. ft.

G. Water Penetration under Static Pressure): Test according to ASTM E 331, ASTM E 547: No uncontrolled water leakage at a static test pressure of 6.00 lbf/sq. ft.

H. Energy Performance: Certify and label energy performance according to NFRC as follows:

1. Thermal Transmittance of Sliding Glass Storefronts: In compliance with project's "Envelope Mandatory Measures" (ENV-1).
2. Solar Heat Gain Coefficient: In compliance with project's "Envelope Mandatory Measures" (ENV-1).
3. Condensation Resistance: Fixed glazing and framing areas shall have an NFRC-certified condensation resistance rating of no less than 45 as determined according to NFRC 500.
4. Continuity of Air Barrier: Provide a complete and uninterrupted air barrier separate from or combined with the other wall barrier systems.

I. Thermal Movements: Provide sliding glass storefronts, including anchorage, that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

J. Accessibility Requirements: Comply with applicable provisions in the 2010 ADA Standards for Accessible Design and the accessibility requirements of the 2016 CBC for door hardware on doors in an accessible route.

1. Provide operating devices that do not require tight grasping, pinching, or twisting of the wrist and that operate with a force of not more than 5 lbf.
2. Comply with the following maximum opening-force requirements:

    a. Exterior and Interior, Non-Fire-Rated Hinged Doors: 5 lbf applied perpendicular to door.

3. Provide thresholds not more than 1/2 inch high. Changes in level between 1/4 inch high minimum and 1/2 inch high maximum shall be beveled with a slope not steeper than 1:2.
4. Adjust door closer sweep periods so that, from an open position of 90 degrees, the door will take at least 5 seconds to move to a position of 12 degrees from the latch.
5. Door closers and stops shall not reduce headroom to less than 78 inches.
6. Floor-mounted door stops and other similar obstructions shall be installed 4 inches maximum from the face of the wall or partition. Floor stops shall not be located in the path of travel.
7. Panic hardware shall be mounted between 36 inches and 44 inches above finished floor such that the clear width of the exitway is not less than 32 inches measured between the face of the door and the opposite stop. The unlatching force of panic hardware shall not exceed 5 lbs, applied in the direction of travel.
8. Swinging door surfaces within 10 inches of the finish floor or ground surface measured vertically shall have a smooth surface on the push side extending the full width of the door.

2.3 SLIDING GLASS STOREFRONTS

A. Thermally-Broken Aluminum-Framed Sliding Glass Storefront Description: 2-3/8 inch wide narrow-stile frame, with ADA-compliant low-profile saddle sill threshold. Manufacturer’s standard or post reinforced frame and panel profiles, with head track, side jambs and panels with dimensions as shown on Drawings.

B. Frames and Door Panels: Fabricated from aluminum extrusions complying with 6063-T5.

1. Thermally Broken Construction: Fabricate frames and door panels with an integral, concealed, low-conductance thermal barrier located between exterior and interior surfaces in a manner that eliminates direct metal-to-metal contact.
2. Aluminum Extrusion Thickness: Minimum 0.078 inch nominal.

C. Low-Profile Saddle Sill Threshold: Provide ADA-compliant extruded-aluminum threshold and track of thickness, dimensions, and profile indicated; designed to comply with performance requirements. Provide in finish closest match to finish of frame and panels. At exterior units, threshold shall be weather resistant and shall drain to the exterior. See "Coordination" Article above.

2.4 GLAZING

A. Exterior Units: Low-E-coated, fully-tempered and heat soaked, insulated glass, nominal 1-inch thick, as indicated on Drawings and as specified in Section 088000 "Glazing."

2.5 HARDWARE

A. General: Provide manufacturer's standard hardware, fabricated from a corrosion-resistant material compatible with aluminum complying with AAMA 907 and designed to smoothly operate, tightly close, and securely lock sliding glass storefronts.

B. Sliding and Swinging Hardware: Provide manufacturer's standard hardware.

1. For each sliding panel, provide 2 two-three wheeled, sintered bronze (oil impregnated) unidirectional sliding panel carriers that are attached to the panels with stainless steel rods. Maximum carrying capacity of two carriers on a panel to be 330 lbs.
2. Main Entry Panels for Models with a Swing Panel and Exit Device: Provide manufacturer's standard exterior pull handles in a brushed stainless steel finish, and other hardware as specified in Section 087100 "Door Hardware," including, but not limited to, exit devices (with concealed rods to top and bottom), cylinders, closers. Exit devices with face-applied vertical rods are not acceptable.
3. Sliding Panel to be Opened First for Models WITHOUT a Swing Panel: Provide manufacturer's standard L-shaped handle on the inside, flat handle on the outside and lock set with profile cylinder. Operation of lockset is by turn of key from the outside and with a thumb-turn from the inside with a two point locking hardware operated by 180º turn of the handle.
4. Secondary Panels: Provide manufacturer's standard flat handles and concealed two-point locking hardware operated by 180º turn of the handle. Face-applied flush bolt locking is not acceptable.
5. Adjustment: Provide system capable of specified amount of adjustments without removing panels from tracks.

C. Threshold: Low-profile ADA-compliant thresholds; self-draining and weather-resistant at exterior locations. Provide in finish closest match to finish of frame and panels.

D. Weatherstripping (Exterior Units): Provide manufacturer's standard double layer APTK at both the inner and outer edge of door panels or on frame for vertical sealing between panels and between panels and frame. Provide brush seals with flexible plastic web for all horizontal sealing. Single layer weather stripping will not be allowed.

E. Fasteners: Stainless steel machine screws for connecting frame components.

F. Hardware Finish: As indicated on Drawings, or if not indicated, as selected by Architect from manufacturer's full range of standard and optional finishes.

2.6 ACCESSORIES

A. Fasteners: Noncorrosive and compatible with door members, trim, hardware, anchors, and other components.

1. Exposed Fasteners: Do not use exposed fasteners to the greatest extent possible. For application of hardware, use fasteners that match finish hardware being fastened.

B. Anchors, Clips, and Accessories: Provide anchors, clips, and accessories of aluminum, nonmagnetic stainless steel, or zinc-coated steel or iron for sliding glass storefronts, complying with ASTM B 456 or ASTM B 633 for SC 3 severe service conditions; provide sufficient strength to withstand design pressure indicated.

2.7 FABRICATION

A. Fabricate sliding glass storefronts in sizes indicated. Include a complete system for assembling components and anchoring doors.

B. Fabricate sliding glass storefronts that are reglazable without dismantling panel framing.

C. Fabricate components that, when assembled, have the following characteristics:

1. Profiles that are sharp, straight, and free of defects or deformations.
2. Accurately fitted joints with ends coped or mitered.
3. Physical and thermal isolation of glazing from framing members.
4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
5. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
6. All exposed surfaces shall be finished.

D. Weather Stripping: Provide full-perimeter weather stripping for each sliding panel.

E. Weep Holes: Provide weep holes and internal drainage passages to conduct infiltrating water to exterior.

F. Complete fabrication, assembly, finishing, hardware application, and other work in the factory to greatest extent possible. Disassemble components only as necessary for shipment and installation.

G. Factory-Glazed Fabrication: Glaze sliding glass storefronts in the factory where practical and possible for applications indicated. Comply with requirements in Section 088000 "Glazing" and with AAMA/WDMA/CSA 101/I.S.2/A440.

2.8 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.9 ALUMINUM FINISHES

A. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: Custom color to match Architect's sample.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine openings, substrates, structural support, anchorage, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Verify rough opening dimensions, levelness of threshold substrate, and operational clearances.

C. Examine wall flashings, vapor retarders, water and weather barriers, and other built-in components to ensure a coordinated, weathertight sliding glass storefront installation.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with Drawings, Shop Drawings, and manufacturer's written instructions for installing sliding storefront system, hardware, accessories, and other components. Commence installation in presence of manufacturer’s technical representative.

B. Install sliding glass storefronts level, plumb, square, true to line, without distortion, without warp or rack of frames and panels, and without impeding thermal movement; anchored securely in place to structural support; and in proper relation to wall flashing, vapor retarders, air barriers, water/weather barriers, and other adjacent construction.

C. Set sill members in bed of sealant or with gaskets, as indicated, to provide weathertight construction. Provide connections to allow for drainage.

D. Install sliding glass storefronts and components to drain condensation, water penetrating joints, and moisture migrating within doors to the exterior.

E. Separate aluminum and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials.

F. Install glazing as specified in Section 088000 “Glazing.”

G. Install panels, handles, lock sets, weather-stripping, and other accessories in accordance with manufacturer’s written instructions.

3.3 FIELD QUALITY CONTROL (BY OWNER)

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Field and shop welds in compliance with CBC 1705.2.
2. Post-installed concrete anchors in compliance with CBC 1705.3.
3. Exterior cladding in compliance with CBC 1705.12.5.

B. Sliding glass storefronts will be considered defective if they do not pass tests and inspections.

C. Repair or remove work if test results and inspections indicate that it does not comply with specified requirements.

D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

E. Prepare test and inspection reports.

3.4 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer's Field Service: Contractor shall engage a manufacturer's technical representative for technical assistance and guidance for installation of sliding glass storefronts. At a minimum, arrange for manufacturer's technical representative to observe installation of storefront system during initial installation, at mid-point of the installation, and at completion. Provide additional field observation as required to obtain warranty specified and when requested by Architect or Owner. After each field visit, submit manufacturer's written report of observations within 3 working days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective action.

B. Testing Agency: Engage a qualified testing agency to perform test and inspections.

C. Field Quality-Control Testing (Exterior Units): Perform the following test on representative areas of sliding glass storefronts.

1. Water Penetration Test (Chamber Test): Before installation of interior finishes has begun, conduct tests in accordance with ASTM E 1105. No uncontrolled water leakage is permitted when tested at a static test pressure of two-thirds the specified water penetration pressure, but not less than 12 psf for fixed glazing and reduced pressure applicable for door performance.

    a. Test Areas and Locations: As determined by Envelope Consultant.
    b. Frequency: At 10 and 35 percent completion.

D. Sliding glass storefronts will be considered defective if they do not pass tests and inspections.

E. Repair or remove work if test results and inspections indicate that it does not comply with specified requirements.

F. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

G. Prepare test and inspection reports.

3.5 MAINTENANCE SERVICE

A. Hardware:

1. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of sliding glass storefront.
2. Initial Maintenance Service: Beginning at Substantial Completion, provide twelve (12) months' full maintenance by skilled employees of entrance door hardware Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper entrance door hardware operation at rated speed and capacity. Use parts and supplies that are the same as those used in the manufacture and installation of original equipment.

3.6 ADJUSTING, CLEANING, AND PROTECTION

A. Lubricate hardware and moving parts.

B. Adjust operating panels to provide a tight fit at contact points and weather stripping for smooth operation, without binding, and a weathertight closure. Adjust hardware for proper alignment, smooth operation, and proper latching without unnecessary force or excessive clearance.

1. Adjust hardware to comply with accessibility requirements in "Performance Requirements" Article.

C. Clean exposed surfaces immediately after installing sliding glass storefronts. Avoid damaging protective coatings and finishes. Remove nonpermanent labels, excess sealants, glazing materials, dirt, and other substances.

D. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during construction period.

E. Protect sliding glass storefront surfaces from contact with contaminating substances resulting from construction operations. If contaminating substances contact sliding glass storefront surfaces, remove contaminants immediately according to manufacturer's written instructions.

F. Refinish or replace sliding glass storefronts with damaged finishes.

G. Replace damaged components.

H. Wash glass on both exposed surfaces not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

END OF SECTION 084329

SECTION 084413 - **GLAZED ALUMINUM CURTAIN WALLS AND ENTRANCES (DEFERRED APPROVAL)**

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Glazed aluminum curtain walls.
2. Exterior manual-swing entrance doors.
3. Sun control systems and mullion extensions.
4. Anchorages provided per this Section and installed under other Section(s).
5. Field testing.

B. Work under this Section is part of a "Deferred Approval." Coordinate with the deferred approval requirements in Section 013300 "Submittal Procedures" and with the requirements indicated on the Drawings.

1. Contract Drawings are Diagrammatic: The details shown are intended as a guide for the aesthetic and interfacing requirements other various components of the exterior wall to and with other work; details are intended to establish basic dimensions of the module and the sight lines, jointing and profiles of members. Contractor is responsible for the design and engineering of the system within these aesthetic parameters. The drawings are not to be construed as engineering design, or adequate to meet the engineering design requirements.
2. Design conditions not included in Contract Drawings shall be developed through the Contractor's shop drawings in compliance with these specifications. Architect shall have the final say as to all matters whether detailed or not on the architectural design details.
3. The curtain wall systems and interface details between the curtain wall systems and adjacent envelope components shall be designed utilizing rainscreen principles.

    a. Two distinct lines of protection against water ingress shall be provided, with the interior line of protection providing the primary air barrier of the system.

        1) The air and water seal shall extend from the curtain wall frame to appropriate air and water barrier of the adjacent system.
        2) The exterior weather seal or flashing shall extend from the exterior of the curtain wall system to the exterior cladding or similar water shedding surface of the adjacent construction.

    b. Provide weeps to allow drainage to the exterior of water, which enters the space between the interior and exterior seals. Where feasible, provide drainage to the exterior at horizontal mullions below each glazing unit, or at stack joints. Unless otherwise indicated or approved by the Architect, drainage paths shall be concealed or similarly protected from direct exposure to wind-driven rain.

C. Related Requirements:

1. Section 033000 "Cast-In-Place Concrete" for embedment of anchorage embeds or clips.
2. Section 055000 "Metal Fabrications" for steel not provided as part of this Section.
3. Section 072100 "Thermal Insulation" for perimeter fire containment insulation and insulation behind spandrel glazing and panels.
4. Section 072713 "Modified Bituminous Sheet Air Barriers" for coordination and continuity of air/weather barrier with curtain walls and entrances provided under this Section.
5. Section 079200 "Joint Sealants" for installation of joint sealants installed with glazed aluminum curtain walls and for sealants to the extent not specified in this Section.

6. Section 084426 "Point-Supported Glazing Systems" for point-supported glazing assemblies.
7. Section 087100 "Door Hardware" for door hardware other than that provided under this Section.
8. Section 088000 "Glazing" for glass to be installed in aluminum curtain walls and entrances.
9. Division 26 and/or 28 Section(s) for wiring of aluminum-framed storefronts.

1.3 DEFINITIONS

A. AAMA: Architectural Aluminum Manufacturers Association

1. AAMA 501.2, Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems
2. AAMA 503, Voluntary Specification for Field Testing of Storefronts, Curtain Walls and Sloped Glazing Systems. No pressure reduction allowed. Design pressures as specified herein.
3. AAMA 609 & 610, Voluntary Guide Specification for Cleaning and Maintenance of Painted Aluminum Extrusions and Curtain Wall Panels

B. ASTM: American Society for Testing and Materials

1. ASTM E 331: Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.
2. ASTM E 1105: Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference.
3. ASTM A570 / A611, Specifications for Steel and Structural Steel.
4. ASTM A743, Specification for Castings, Iron Chromium, Iron-Chromium-Nickel, Corrosion Resistant, for General Application.

C. CBC: 2016 California Building Code

D. CEC: 2016 California Energy Code.

E. GANA - Glass Association of North America.

1. GANA (GM) - GANA Glazing Manual.
2. GANA (SM) - FGMA Sealant Manual.

F. Water Penetration:

1. Uncontrolled: Infiltrated water that is not captured, controlled or managed to drain to exterior; water that wets perimeter containment system, wall insulation, or normally exposed interior surfaces.
2. Controlled: Infiltrated water that is captured, controlled or managed by flashings, gutters, and sills to drain to exterior; water that does not wet perimeter containment system, wall insulation, or normally exposed interior surfaces.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Construction Manager, Architect, envelope consultant, inspection agency, installer, manufacturer's technical representative, and other installers whose work interfaces with glazed aluminum curtain walls and entrances.
2. Review the following:

a. Contract Document requirements.
b. Reviewed submittals.
c. Installation procedures.
d. Inspection and testing.
e. Forecasted weather conditions and procedures for coping with unfavorable conditions.
f. Tour representative areas of required work, discuss and evaluate for compliance with Contract Documents and approved submittals, including substrate conditions, surface preparations, sequence of installation and other preparatory work performed by other installers.

3. Contractor shall prepare minutes of preinstallation conference and distribute to participants.

1.5 ACTION SUBMITTALS

A. Transmit all action and informational submittal items together in one single complete submittal package for review.

B. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
2. Include manufacturer's printed installation instructions.

C. Sustainable Design Submittals: Product data for sealants, indicating VOC content.

D. Shop Drawings: Provide project-specific shop drawings for glazed aluminum curtain walls and entrances consisting of plans, elevations, sections, full-size details, and attachments to other work.

1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
2. Include full-size isometric details of each vertical-to-horizontal intersection of glazed aluminum curtain walls, showing the following:

a. Joinery, including concealed welds.
b. Anchorage.
c. Embeds and Clips: Contractor shall be responsible for design, engineering, coordination, layout, and checking embeds and clips. Embedded anchors shall be installed in accordance with approved curtain wall Contractor's embedment drawings and shall comply with the drawings indicated in the Contract Documents. Steel clips, angles, tubes, or other window wall attachments devices shall be furnished by the curtain wall Contractor.
d. Expansion provisions.
e. Indicate sealant joints, including locations, sizes, and types.
f. Glazing.
g. Flashing and drainage.

3. Show connection to and continuity with adjacent air/weather/waterproofing barriers.
4. For entrance doors, include hardware schedule and indicate operating hardware types, functions, quantities, and locations. Coordinate with Section 087000 "Door Hardware."
5. Shop drawings shall be stamped and signed by the California-licensed professional engineer responsible for their preparation, including analysis data, indicating compliance with performance requirements.

E. Samples for Initial Selection: For units with factory-applied color finishes.

F. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.

G. Samples for Glazing: For each type of glass, 12 inch square.

H. Entrance Door Hardware Schedule: Prepared by or under supervision of supplier, detailing fabrication and assembly of entrance door hardware, as well as procedures and diagrams. Coordinate final entrance door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of entrance door hardware.

I. Deferred-Approval Submittal: For glazed aluminum curtain walls and entrances indicated to comply with performance requirements and design criteria, including shop drawings, calculations, and analysis data stamped and signed by the qualified California-licensed professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer, installer, professional engineer, and field testing agency.

1. Provide statement from manufacturer indicating installer is certified to install specified products.

B. Energy Performance Certificates: For glazed aluminum curtain walls, accessories, and components from manufacturer.

1. Basis for Certification: NFRC-certified energy performance values for each glazed aluminum curtain wall. Provide evidence that proposed systems meets “Envelope Mandatory Measures” (ENV-1).

C. Product Test Reports: For glazed aluminum curtain walls, for tests performed by a qualified testing agency.

1. If test reports are not available, system shall be laboratory tested.
2. Proposed deviations without test reports will not be considered.
3. Material products provided by overseas manufacturers shall be domestically tested and approved by local governing bodies. Contractor shall provide evidence of tests and certifications performed.

D. Fastener and Anchor Test Reports: Certified reports of last completed set of mechanical test for each device.

E. Welding certificates.

F. Field quality-control reports.

G. Sample Warranties: For special warranties.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: For glazed aluminum curtain walls to include in maintenance manuals.

B. Maintenance Data for Structural Sealant: For structural-sealant-glazed curtain walls to include in maintenance manuals. Include ASTM C 1401 recommendations for post-installation-phase quality-control program.

C. Record Shop Drawings: Record actual installation that varies from that shown originally, giving particular attention to concealed components that would be difficult to identify later; comply with Section 017839 "Project Record Documents."

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 20 years’ experience regularly engaged in the production and sales of glazed aluminum curtain walls and entrances that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports, labels, and calculations. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 10 years’ experience installing glazed aluminum curtain walls and entrances similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Engineering Responsibility: Prepare data for glazed aluminum curtain walls and entrances, including Shop Drawings, based on testing and engineering analysis for manufacturer's standard units in systems similar to those indicated for the Project and submission of reports of tests performed on manufacturer's standard assemblies, signed and sealed by the qualified California-licensed professional engineer responsible for their preparation.

D. Testing Agency Qualifications: Qualified according to ASTM E 699 for testing indicated.

E. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1, "Structural Welding Code - Steel."
2. AWS D1.2, "Structural Welding Code - Aluminum."

F. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.
2. Performance characteristics are indicated by criteria subject to verification by one or more methods, including preconstruction testing, field testing, and in-service performance.
3. Sealant joints over 1 inch wide, within or adjacent to curtain wall assemblies, are not acceptable. Refer to performance requirements in Section 079200 "Joint Sealants."
4. Glazed aluminum curtain wall system shall be so designed that defective or damaged glass, panels, and/or other components can be easily dismantled and replaced without causing damage to other parts of the building.

G. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Description: Incorporate glazed aluminum curtain wall mockup into integrated exterior mockup per Section 014000 "Quality Requirements."
2. Construct mockup in presence of manufacturer's technical representative.
3. Testing shall be performed on mockups according to requirements in "Field Quality Control" Article.
4. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.9 COORDINATION

A. Coordinate glazed aluminum curtain wall and entrance installation with flashing, trim, parapets, storefronts, wall panels, louvers, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

B. Coordinate installation of miscellaneous metal sub-framing, anchorage items, or other items to be embedded in or attached to other construction before starting that Work. Provide locations, setting diagrams, templates, instructions, and directions for installation. Deliver such items to Project site in time for installation.

C. Pre-Installation Field Measurements: Coordinate exact hardware and anchorage locations with other Trade Contractors before permanently attaching to other construction.

D. Post-Installed Field Measurements: Field verify and examine actual installed locations of connection hardware and anchorage items prior to installation of Work provided under this Section. Notify General Contractor and Architect immediately of any discrepancies in writing. Provide letter from curtain wall installer indicating acceptance of connection hardware and anchorage items.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard or customized form in which manufacturer and installer agree to repair or replace components of glazed aluminum curtain wall and entrances that do not comply with requirements or that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures including, but not limited to, deflection exceeding specified limits.
b. Thermal stresses transferring to building structure.
c. Glass breakage.
d. Noise or vibration created by wind and thermal and structural movements.
e. Loosening or weakening of fasteners, attachments, and other components.
f. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
g. Water penetration through fixed glazing and framing areas.
h. Excessive air infiltration.
i. Excessive condensation.
j. Glazing to glazing contact.
k. Sealant failures.
l. Framing members transferring stresses to glazing, including those caused by thermal and structural movements.
m. Failure of operating components.

2. Warranty Period: 10 years from date of Substantial Completion.

B. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.

1. Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide the following:

1. Kawneer Company, Inc.

a. Type CW-1: Series 1600 Wall System 1.
b. Type CW-2: Series 1600 SS.

2. Or Comparable Equal, subject to compliance with performance requirements herein, and with Section 016000 "Product Requirements."

B. Source Limitations: Obtain all components of curtain wall system, including framing, spandrel panels, and accessories, from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Deferred-Approval Engineering Responsibility: Engage a qualified California-licensed professional engineer, as defined in Section 014000 "Quality Requirements," to engineer glazed aluminum curtain walls and entrances.

B. General Performance: Comply with performance requirements specified, as determined by testing of glazed aluminum curtain walls and entrances representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.

1. Glazed aluminum curtain walls and entrances shall withstand movements of supporting structure including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads, wind and seismic loads.
2. Glazed aluminum curtain walls and entrances shall accommodate tolerances in construction, including, but not limited to, those from: structural frame tolerances, manufacturing tolerances, and field installation tolerances.
3. Failure also includes the following:

    a. Structural failures including, but not limited to, deflection exceeding specified limits.
    b. Thermal stresses transferring to building structure.
    c. Glass breakage.
    d. Noise or vibration created by wind and thermal and structural movements.
    e. Loosening or weakening of fasteners, attachments, and other components.
    f. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
    g. Water penetration through fixed glazing and framing areas.
    h. Excessive air infiltration.
    i. Excessive condensation.
    j. Glazing to glazing contact.
    k. Sealant failures.
    l. Framing members transferring stresses to glazing, including those caused by thermal and structural movements.

4. Glazed aluminum curtain walls and entrances shall comply with the 2016 CBC and the 2016 CEC.

C. Rainscreen: The curtain wall systems and interface details between the curtain wall systems and adjacent envelope components shall be designed utilizing rainscreen principles.

1. Two distinct lines of protection against water ingress shall be provided, with the interior line of protection providing the primary air barrier of the system.

    a. The air and water seal shall extend from the curtain wall frame to appropriate air and water barrier of the adjacent system.
    b. The exterior weather seal or flashing shall extend from the exterior of the curtain wall system to the exterior cladding or similar water shedding surface of the adjacent construction.

2. Provide weeps to allow drainage to the exterior of water, which enters the space between the interior and exterior seals. Where feasible, provide drainage to the exterior at horizontal mullions below each glazing unit, or at stack joints. Unless otherwise indicated or approved by the Architect, drainage paths shall be concealed or similarly protected from direct exposure to wind-driven rain.

D. Structural Loads:

1. Wind Loads: As indicated on Drawings.

E. Deflection of Framing Members: At design wind pressure, as follows:

1. Deflection Normal to Wall Plane: Limited to the stricter of the following:

   a. Edge of glass in a direction perpendicular to glass plane not exceeding 1/175 of the glass edge length for each individual glazing lite.
   b. 1/175 of clear span for spans up to 13 feet 6 inches and to 1/240 of clear span plus 1/4 inch for spans greater than 13 feet 6 inches.
   c. 1/360 of clear span for spans adjacent to interior gypsum board.
   d. Or an amount that restricts edge deflection of individual glazing lites to 3/4 inch, whichever is less.

2. Deflection Parallel to Glazing Plane: Limited to the stricter of the following:

   a. 1/360 of clear span or 1/8 inch, whichever is smaller.
   b. Amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch.
   c. Operable Units: Provide a minimum 1/16-inch clearance between framing members and operable units.

3. Cantilever Deflection: Where framing members overhang an anchor point, limit deflection to two times the length of cantilevered member, divided by 175.

F. Structural: Test according to ASTM E 330 as follows:

1. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.
2. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding 0.2 percent of span.
3. Test Durations: As required by design wind velocity, but not less than 10 seconds.

G. Interstory Drift: Accommodate design displacement of adjacent stories indicated.

1. Elastic and Inelastic Displacements: As indicated on Structural Drawings.
2. Test Performance: Complying with criteria for passing based on building occupancy type when tested according to AAMA 501.4 at elastic displacement and inelastic displacement.

H. Seismic Performance: Glazed aluminum curtain walls and entrances shall withstand the effects of earthquake motions determined according to the 2016 CBC.

1. Seismic Drift Causing Glass Fallout: Complying with criteria for passing based on building occupancy type at elastic displacement and inelastic displacement when tested according to AAMA 501.6 or by engineering analysis.

I. Air Infiltration: Test according to ASTM E 283 for infiltration as follows:

1. Fixed Framing and Glass Area:

   a. Maximum air leakage of 0.06 cfm/sq. ft. at a static-air-pressure differential of 6.24 lbf/sq. ft.

2. Commercially Glazed Swinging Entrance Doors:

   a. Maximum air leakage at a static-air-pressure differential of 1.57 lbf/sq. ft. in accordance with CEC Section 110.6 (a) 1.:

      1) Single swinging doors: 0.3 cfm/sq. ft.
      2) Double swinging doors: 1.0 cfm/sq. ft.

J. Water Penetration under Static Pressure: Test according to ASTM E 331 as follows:

1. No evidence of water penetration through fixed glazing and framing areas when tested according to a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 12 lbf/sq. ft.

K. Water Penetration under Dynamic Pressure: Test according to AAMA 501.1 as follows:

1. No evidence of water penetration through fixed glazing and framing areas when tested at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 12 lbf/sq. ft.
2. Maximum Water Leakage: No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.

L. Energy Performance: Certify and label energy performance according to NFRC as follows:

1. Thermal Transmittance (U-factor): In compliance with project's "Envelope Mandatory Measures" (ENV-1).
2. Thermal Transmittance of Entrance Doors: In compliance with project's "Envelope Mandatory Measures" (ENV-1).
3. Solar Heat Gain Coefficient: In compliance with project's "Envelope Mandatory Measures" (ENV-1).
4. Condensation Resistance: Fixed glazing and framing areas shall have an NFRC-certified condensation resistance rating of no less than 71 (frame) and 71 (glass) as determined according to AAMA Specification 1503.
5. Continuity of Air Barrier: Provide a complete and uninterrupted air barrier integrated with the other wall barrier systems.
6. Continuity of Vapor Barrier: Provide a complete and uninterrupted vapor barrier integrated with the other vapor barrier systems.

M. Structural-Sealant Joints: Designed to produce tensile or shear stress of less than 20 psi.

N. Structural Sealant: Capable of withstanding tensile and shear stresses imposed by structural-sealant-glazed curtain walls without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.

1. Adhesive failure occurs when sealant pulls away from substrate cleanly, leaving no sealant material behind.
2. Cohesive failure occurs when sealant breaks or tears within itself but does not separate from each substrate because sealant-to-substrate bond strength exceeds sealant's internal strength.

O. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes:

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.
2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.

    a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of 180 deg F.
    b. Low Exterior Ambient-Air Temperature: 10 deg F.
    c. Interior Ambient-Air Temperature: 75 deg F.

P. Insulation Barrier: Design, fabricate and install glazed aluminum curtain wall to work as an integral continuous insulation and air barrier to provide an insulated glazed aluminum curtain wall system.

1. In an effort to achieve the thermal resistance indicated herein and in other Sections as determined by the Energy Modeler/Mechanical Consultant, provide additional insulation thickness to compensate for losses insulation value due to wall supports, configuration, gaps and tolerances between wall panels, and other wall assembly component requirements.

Q. Accessibility Requirements: Comply with applicable provisions in the 2010 ADA Standards for Accessible Design and the accessibility requirements of the 2016 CBC for door hardware on doors in an accessible route.

1. Provide operating devices that do not require tight grasping, pinching, or twisting of the wrist and that operate with a force of not more than 5 lbf.
2. Comply with the following maximum opening-force requirements:

    a. Exterior, Non-Fire-Rated Hinged Doors: 5 lbf applied perpendicular to door.

3. Provide thresholds not more than 1/2 inch high. Changes in level between 1/4 inch high minimum and 1/2 inch high maximum shall be beveled with a slope not steeper than 1:2.
4. Adjust door closer sweep periods so that, from an open position of 90 degrees, the door will take at least 5 seconds to move to a position of 12 degrees from the latch.
5. Door closers and stops shall not reduce headroom to less than 78 inches.
6. Floor-mounted door stops and other similar obstructions shall be installed 4 inches maximum from the face of the wall or partition. Floor stops shall not be located in the path of travel.
7. Panic hardware shall be mounted between 36 inches and 44 inches above finished floor such that the clear width of the exitway is not less than 32 inches measured between the face of the door and the opposite stop. The unlatching force of panic hardware shall not exceed 5 lbs, applied in the direction of travel.
8. Swinging door surfaces within 10 inches of the finish floor or ground surface measured vertically shall have a smooth surface on the push side extending the full width of the door.

2.3 FRAMING

A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.

1. Construction: Thermally broken.
2. Glazing System:

    a. Type CW-1: Retained mechanically with gaskets on four sides.
    b. Type CW-2: Retained mechanically with gaskets on two sides (horizontally) and structural silicone glazed (vertically) on the other two sides.

3. Glazing Plane: Front.
4. Glazing Direction:

    a. Type CW-1: Outside glazed.
    b. Type CW-2: Outside glazed.

5. Finish: High-performance organic finish.
6. Fabrication Method: Field-fabricated stick system.

    a. Type CW-1: Shear block.
    b. Type CW-2: Screw spline.

7. Frame Depth: No less than the following, subject to compliance with performance requirements:

    a. Type CW-1: 6 inches.
    b. Type CW-2: 6 or 7-1/2 inches, as indicated on Drawings, and also subject to compliance with performance requirements.

B. Pressure Caps: Manufacturer's standard aluminum components that mechanically retain glazing.

1. Include snap-on aluminum trim that conceals fasteners.
2. See "Sun Control and Mullion Covers" Article below.

C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

D. Materials:

1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

   a. Sheet and Plate: ASTM B 209.
   b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
   c. Extruded Structural Pipe and Tubes: ASTM B 429.
   d. Structural Profiles: ASTM B 308.

2. Steel Reinforcement: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM, and prepare surfaces according to applicable SSPC standard.

   a. Structural Shapes, Plates, and Bars: ASTM A 36.
   b. Cold-Rolled Sheet and Strip: ASTM A 1008.
   c. Hot-Rolled Sheet and Strip: ASTM A 1011.

2.4 ENTRANCE DOOR SYSTEMS

A. Basis-of-Design Entrance System: Subject to compliance with requirements, provide the following:

1. Kawneer Company, Inc.; Series 350 Heavy Wall Entrances.

B. Entrance Doors: Manufacturer's heavy duty glazed entrance doors for manual-swing operation.

1. Door Construction: 2-inch overall thickness, with minimum 0.188-inch-thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.
2. Door Design:

   a. Rail Sightline: 3-1/2 inch.
   b. Bottom Rail: Provide with 10 inch bottom rail in compliance with the accessibility requirements of the 2016 CBC.

3. Glazing: As indicated on Drawings and as specified in Section 088000 "Glazing."
4. Glazing Stops and Gaskets: Square, snap-on, extruded-aluminum stops and preformed gaskets.

   a. Provide nonremovable glazing stops on outside of door.
   b. Provide optional square glazing stops to accommodate 1-inch insulated glazing as specified in Section 088000 “Glazing.”

5. Finish: High-performance organic finish.

   a. Color: Custom color to match adjacent curtain wall system.

2.5 ENTRANCE DOOR HARDWARE

A. Entrance Door Hardware: Hardware not specified in this Section is specified in Section 087100 "Door Hardware."

2.6 SUN CONTROL AND MULLION COVERS

A. Sunshades: Assemblies consisting of manufacturer's standard outrigger brackets, louvers, and fascia, designed for attachment to curtain wall with mechanical fasteners.

1. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide the following:

a. Kawneer Company, Inc.; “Versoleil Sunshade System:”

2. Vertical Units: “Single Blade System.”

a. Orientation: Vertical.
b. Projection from Wall: As indicated on Drawings.
c. Outriggers: Straight with square edges.
d. Louvers:

1) Number: Single.
2) Shape: As indicated on Drawings.
3) Width: As indicated on Drawings.
4) Mounting Angle: As indicated on Drawings.

3. Finish: Match adjacent glazed aluminum curtain wall.

B. Mullion Caps/Covers: Assemblies consisting of manufacturer's standard optional or custom mullion caps designed for attachment to curtain wall with mechanical fasteners.

1. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide the following:

a. Kawneer Company, Inc.

2. Profile: As indicated on Drawings.
3. Finish: Match adjacent glazed aluminum curtain wall.

C. Materials:

1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

a. Sheet and Plate: ASTM B 209.
b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
c. Extruded Structural Pipe and Tubes: ASTM B 429.
d. Structural Profiles: ASTM B 308.

2.7 GLAZING

A. Glazing: Comply with Section 088000 "Glazing."

B. Glazing Gaskets: Manufacturer's standard sealed-corner pressure-glazing system of black, resilient elastomeric glazing gaskets, setting blocks, and shims or spacers.

C. Glazing Sealants: As recommended by manufacturer.

1. Sealant shall have a VOC content of 250 g/L or less.

D. Structural Glazing Sealants: ASTM C 1184, chemically curing silicone formulation that is compatible with system components with which it comes in contact, specifically formulated and tested for use as structural sealant and approved by structural-sealant manufacturer for use in curtain-wall assembly indicated.

1. Color: Black.

E. Weatherseal Sealants: ASTM C 920 for Type S; Grade NS; Class 25; Uses NT, G, A, and O; chemically curing silicone formulation that is compatible with structural sealant and other system components with which it comes in contact; recommended by structural-sealant, weatherseal-sealant, and structural-sealant-glazed curtain-wall manufacturers for this use.

1. Color: As indicated on Drawings, or if not indicated, as selected by Architect from manufacturer's full range of sealant colors.

2.8 ACCESSORIES

A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
2. Reinforce members as required to receive fastener threads.
3. Use exposed fasteners with countersunk Phillips screw heads, finished to match framing system.

B. Anchors: Three-way adjustable anchors with minimum adjustment of 1 inch that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.

1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123 or ASTM A 153 requirements.

C. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.

D. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

2.9 FABRICATION

A. Form or extrude aluminum shapes before finishing.

B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

C. Fabricate components that, when assembled, have the following characteristics:

1. Profiles that are sharp, straight, and free of defects or deformations.
2. Accurately fitted joints with ends coped or mitered.
3. Physical and thermal isolation of glazing from framing members.
4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
5. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
6. Provisions for field replacement of glazing:

    a. Type CW-1: From exterior for vision glass and spandrel glazing.
    b. Type CW-2: From exterior for vision glass and spandrel glazing.

7. Unless otherwise required per the performance criteria, mullions and mullion caps shall be continuous, with no breaks or seams.

D. Fabricate components to resist water penetration as follows:

1. Internal guttering system or other means to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.
2. Pressure-equalized system or double barrier design with primary air and vapor barrier at interior side of glazed aluminum curtain wall and secondary seal weeped and vented to exterior.

E. Curtain-Wall Framing: Fabricate components for assembly using manufacturer's standard assembly method.

F. Entrance Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.

1. At exterior doors, provide compression weather stripping at fixed stops.

G. Entrance Doors: Reinforce doors as required for installing entrance door hardware.

1. At pairs of exterior doors, provide sliding-type weather stripping retained in adjustable strip and mortised into door edge.
2. At exterior doors, provide weather sweeps applied to door bottoms.

H. Entrance Door Hardware Installation: Factory install entrance door hardware to the greatest extent possible. Cut, drill, and tap for factory-installed entrance door hardware before applying finishes.

I. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.10 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.11 ALUMINUM FINISHES

A. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: Custom color to match Architect’s sample.
2. Orientation: For components with metallic- or mica-coated finishes, fabricate and install units in a consistent direction to avoid shading differences between adjacent components. Components exhibiting this type of shading difference will be rejected and either reoriented or replaced.

2.12 SOURCE QUALITY CONTROL

A. Structural Sealant: Perform quality-control procedures complying with ASTM C 1401 recommendations including, but not limited to, assembly material qualification procedures, sealant testing, and assembly fabrication reviews and checks.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare surfaces that will contact structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

3.3 INSTALLATION

A. General:

1. Commence initial installation of curtain wall in presence of manufacturer’s technical representative.
2. Comply with manufacturer's written instructions.
3. Do not install damaged components.
4. Fit joints to produce hairline joints free of burrs and distortion.
5. Rigidly secure nonmovement joints.
6. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
7. Where welding is required, weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
8. Seal joints watertight unless otherwise indicated.
9. Attachment devices for work exposed to view shall be concealed unless otherwise indicated. Where fasteners are permitted by Architect to be exposed to view, finish to match adjacent surface.
10. Install all aluminum components (mullions, caps, trim, metal panels, etc.) with the same orientation of the fluoropolymer finish to ensure running/directional consistent appearance between adjacent pieces of the same material.

B. Metal Protection:

1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with primer, applying sealant or tape, or installing nonconductive spacers as recommended by manufacturer for this purpose.
2. Where aluminum is in contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

C. Set continuous sill members and flashing in full sealant bed as specified in Section 079200 "Joint Sealants" to produce weathertight installation.

D. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.

E. Install components plumb and true in alignment with established lines and grades.

F. Install glazing as specified in Section 088000 "Glazing."

1. Prepare surfaces that will contact structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

G. Install weatherseal sealant according to Section 079200 "Joint Sealants" and according to sealant manufacturer's written instructions to produce weatherproof joints. Install joint filler behind sealant as recommended by sealant manufacturer.

H. Entrance Doors: Install doors to produce smooth operation and tight fit at contact points.

1. Exterior Doors: Install to produce weathertight enclosure and tight fit at weather stripping.
2. Field-Installed Entrance Door Hardware: Install surface-mounted entrance door hardware according to entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.
3. Aluminum framed entrance doors shall be properly installed such that without closer attached, opening force is 1 lbf or less.

3.4 ERECTION TOLERANCES

A. Erection Tolerances: Install glazed aluminum curtain walls to comply with the following maximum tolerances:

1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
3. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.
4. Alignment:

    a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
    b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
    c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4 inch.

3.5 FIELD QUALITY CONTROL (BY OWNER)

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Field and shop welds in compliance with CBC 1705.2.
2. Post-installed concrete anchors in compliance with CBC 1705.3.
3. Exterior cladding in compliance with CBC 1705.12.5.

B. Repair or remove work if test results and inspections indicate that it does not comply with specified requirements.

C. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

D. Glazed aluminum curtain walls and entrances will be considered defective if they do not pass tests and inspections.

3.6 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer's Field Service: Contractor shall engage a manufacturer’s technical representative for technical assistance and guidance for installation of glazed aluminum curtain walls and entrances. At a minimum, arrange for manufacturer’s technical representative to observe installation of glazed aluminum curtain wall and entrances during mock-up, initial installation, at mid-point of the installation, and at completion. Provide additional field observation as required to obtain warranty specified and when requested by Architect or Owner. After each field visit, submit manufacturer’s written report of observations within 3 working days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective action.

B. Testing Agency: Contractor shall engage a qualified testing agency to perform tests and inspections.

C. Field Quality-Control Testing: Perform the following test on representative areas of glazed aluminum curtain walls.

1. Water Penetration Test (Chamber Test): Before installation of interior finishes has begun, conduct tests in accordance with ASTM E 1105. No uncontrolled water leakage is permitted when tested at a static test pressure of two-thirds the specified water penetration pressure, but not less than 12 psf for fixed glazing and reduced pressure applicable for door performance.

    a. Test Area Locations and Size: As determined by Envelope Consultant.
    b. Frequency:

        1) CW-1: At 10 percent completion.
        2) CW-2: At 10 percent completion.
        3) Entrances: At 10 percent completion.

2. Water-Spray Test: Before installation of interior finishes has begun, areas designated by Envelope Consultant shall be tested according to AAMA 501.2 and shall not evidence water penetration.

    a. Test Area Locations and Size: As determined by Envelope Consultant.
    b. Frequency:

        1) CW-1: At 10, 30, and 70 percent completion.
        2) CW-2: At 10, 30, and 70 percent completion.

3. Structural-Sealant Adhesion: Test structural sealant according to recommendations in ASTM C 1401, Destructive Test Method A, "Hand Pull Tab (Destructive)," Appendix X2.

    a. Test a minimum of six areas on each building façade utilizing curtain wall system CW-2.
    b. Repair installation areas damaged by testing.

4. Reports: Record testing and inspection results and prepare certified reports according to ASTM E 575 format.

D. Deferred Approval Field Inspection: Inspect work, including connection and attachment to building structural frame, for compliance with deferred-approval engineering, and direct deficiencies to be corrected.

1. Certification: Upon resolution of deficiencies, certify work complies with delegated engineering, authorities having jurisdiction, applicable local building codes, specified requirements, and is in keeping with generally accepted engineering practices.
2. Manufacturers Field Inspection: Manufacturers technical representative shall inspect first days' work and periodically inspect work to ensure installation is proceeding in accordance with manufacturer’s designs, recommendations, instructions and warranty requirements. Representative shall submit written reports of each visit indicating observations, findings and conclusions of inspection.

E. Glazed aluminum curtain walls and entrances will be considered defective if they do not pass tests and inspections.

F. Repair or remove work if test results and inspections indicate that it does not comply with specified requirements.

G. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

H. Prepare test and inspection reports.

3.7 MAINTENANCE SERVICE

A. Entrance Door Hardware:

1. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of entrance door hardware.
2. Initial Maintenance Service: Beginning at Substantial Completion, provide twelve (12) months' full maintenance by skilled employees of entrance door hardware Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper entrance door hardware operation at rated speed and capacity. Use parts and supplies that are the same as those used in the manufacture and installation of original equipment.

3.8 ADJUSTING

A. Adjust entrance doors and hardware to produce smooth operation and tight fit at contact points.

1. For aluminum-framed entrance doors accessible to people with disabilities:

    a. Adjust closers to provide a 3-second closer sweep period for doors to move from a 70-degree open position to 3 inches from the latch measured to the leading door edge.
    b. Adjust door hardware to comply with the accessibility portion of the “Performance Requirements” Article in Part 2.

3.9 CLEANING AND PROTECTION

A. Protect glazed aluminum curtain walls, entrances, and glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels and clean surfaces.

B. Protect glazed aluminum curtain walls, entrances, and glass from contact with contaminating substances resulting from construction operations. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.

C. Examine glass surfaces adjacent to exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.

D. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.

E. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

END OF SECTION 084413

SECTION 084426 - POINT-SUPPORTED GLAZING SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Point-supported (spider type) glazing assemblies, including, but not limited to, the following components:

a. Spider-type fittings.
b. Perimeter glazing channels.
c. Stainless steel components.
d. Architecturally exposed structural steel support system and anchorage of above components.
e. Glazing.
f. Sealants, caulking, joint fillers and gaskets.
g. Flashings, gutters, weep mechanisms, and closures, shown or as required in conjunction with system or to join systems to adjacent construction.
h. Anchorages provided per this Section and installed under other Section(s).

2. Field testing.

B. Permit Submittal Package: Contractor's responsibilities include providing preconstruction permit submittal package, coordinated with and formatted to match the design team documents, including drawings, calculations, and other analysis data, stamped and signed by the qualified California-licensed professional engineer responsible for their preparation. Contractor's responsibilities also include addressing/ correcting/responding to City of ƷeneThe plan examiners comments.

1. Contract Drawings are Diagrammatic: The details shown are intended as a guide for the aesthetic and interfacing requirements other various components of the exterior wall to and with other work; details are intended to establish basic dimensions of the module and the sight lines, jointing and profiles of members. Contractor is responsible for the design and engineering of the system within these aesthetic parameters. The drawings are not to be construed as engineering design, or adequate to meet the engineering design requirements.

2. Design conditions not included in Contract Drawings shall be developed through the Contractor's shop drawings in compliance with these specifications. Architect shall have the final say as to all matters whether detailed or not on the architectural design details.

C. Related Requirements:

1. Section 033000 “Cast-In-Place Concrete” for embedment of anchorage embeds or clips.
2. Section 051213 "Architecturally Exposed Structural Steel (AESS)" for AESS to the extent not provided as part of this Section.
3. Section 055000 “Metal Fabrications” for steel to the extent not provided as part of this Section.
4. Section 079200 “Joint Sealants” for joint sealants to the extent not specified in this Section.
5. Section 084226 "All-Glass Entrances" for all-glass entrances to be installed within point-supported glazing system.
6. Section 084413 "Glazed Aluminum Curtain Walls and Entrances" for entrances within point-supported glazing systems.
7. Section 088000 "Glazing" for glass to be installed in point-supported glazing systems.

1.3 DEFINITIONS

A. AAMA: Architectural Aluminum Manufacturers Association

1. AAMA 501.2, Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems
2. AAMA 503, Voluntary Specification for Field Testing of Storefronts, Curtain Walls and Sloped Glazing Systems. No pressure reduction allowed. Design pressures as specified herein.
3. AAMA 609 & 610, Voluntary Guide Specification for Cleaning and Maintenance of Painted Aluminum Extrusions and Curtain Wall Panels

B. ASTM: American Society for Testing and Materials

1. ASTM E 331: Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.
2. ASTM E 1105: Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference.
3. ASTM A570 / A611, Specifications for Steel and Structural Steel
4. ASTM A743, Specification for Castings, Iron Chromium, Iron-Chromium-Nickel, Corrosion Resistant, for General Application.

C. CBC: 2016 California Building Code

D. CEC: 2016 California Energy Code.

E. GANA - Glass Association of North America.

1. GANA (GM) - GANA Glazing Manual.
2. GANA (SM) - FGMA Sealant Manual.

F. Water Penetration:

1. Uncontrolled: Infiltrated water that is not captured, controlled or managed to drain to exterior; water that wets perimeter containment system, wall insulation, or normally exposed interior surfaces.
2. Controlled: Infiltrated water that is captured, controlled or managed by flashings, gutters, and sills to drain to exterior; water that does not wet perimeter containment system, wall insulation, or normally exposed interior surfaces.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Construction Manager, Architect, envelope consultant, inspection agency, installer, manufacturer's technical representative, and other installers whose work interfaces with point-supported glazing systems.
2. Review the following:

a. Contract Document requirements.
b. Reviewed submittals.
c. Installation procedures.
d. Inspection and testing.
e. Forecasted weather conditions and procedures for coping with unfavorable conditions.
f. Tour representative areas of required work, discuss and evaluate for compliance with Contract Documents and approved submittals, including substrate conditions, surface preparations, sequence of installation and other preparatory work performed by other installers.

3. Contractor shall prepare minutes of preinstallation conference and distribute to participants.

1.5 ACTION SUBMITTALS

A. Transmit all action and informational submittal items together in one single complete submittal package for review.

B. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

C. Sustainable Design Submittals: Product data for sealants, indicating VOC content.

D. Shop Drawings for Preliminary Purposes: Prior to submission of shop drawings, submit plans, elevations, and large-scale details showing an abbreviated overview of products that will subsequently be explained in greater detail in shop drawings. Include preliminary structural calculations.

E. Shop Drawings: Provide project-specific shop drawings for point-supported glazing systems. Include plans, elevations, sections, full-size details, and attachments to other work. Include the following:

1. Descriptions, types, sizes, and profiles of products; including those concealed.
2. Glazing material identification
3. Manufacturers, products, types, sizes, lengths, spacings, embedment, and edge distances of anchors, fasteners, cables, bolts, castings, fittings and attachment devices. Include torque on fastener assemblies.
4. Support framing, reinforcement, and connections to building structure.
5. Types of welded connections using AWS welding symbols.
6. Loose, cast-in, and field-set hardware, inserts, and connections.
7. Manufacturers, products, types, thicknesses, and layers of finishes.
8. Material, thicknesses, profiles, and other details for flashings, gutters, and drainage troughs.
9. Provisions for expansion and contraction, including dimension limits of movement for moving joints.
10. Fabrication, assembly and installation tolerances.
11. Maximum and minimum joint sizes, including sealants and backer rods.
12. Material descriptions, types, sizes, and profiles for isolation between dissimilar surfaces.
13. Isometric details as requested by Architect.
14. Adjacent and adjoining exterior walls and building structural frame, including work by other trades.
15. Shop drawings shall be stamped and signed by the California-licensed professional engineer responsible for their preparation, including analysis data, indicating compliance with performance requirements.

F. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.

1. Full-size samples of each fitting, casting, bolt, glazing channel, attachment devices, anchors and fasteners.
2. Finish Samples: For each type of exposed finish required, prepared on 6-inch square Samples of metal of same thickness and material indicated for the Work. Include the following metal types:

a. Aluminum plate.
b. Stainless steel plate.
c. Steel plate.

3. Glass Samples: For each type of glass product; 12 inches square.
4. Joint Sealant and Backers: For each kind of color and joint sealant required, provide Samples with joint sealants representative of actual conditions formed between two 6-inch long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

G. Permit Submittal Package: Contractor's responsibilities include providing preconstruction permit submittal package, coordinated with and formatted to match the design team documents, including drawings, calculations, and other analysis data, stamped and signed by the qualified California-licensed professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer, installer, professional engineer, and field testing agency.

1. Provide statement from manufacturer indicating installer is certified to install specified products.

B. Energy Performance Certificates: For point-supported glazing systems, accessories, and components from manufacturer.

1. Basis for Certification: NFRC-certified energy performance values for each point-supported glazing system. Provide evidence that proposed systems meets “Envelope Mandatory Measures” (ENV-1).

C. Product Test Reports: For point-supported glazing systems, for tests performed by a qualified testing agency.

1. If test reports are not available, system shall be laboratory tested.
2. Proposed deviations without test reports will not be considered.
3. Material products provided by overseas manufacturers shall be domestically tested and approved by local governing bodies. Contractor shall provide evidence of tests and certifications performed.

D. Fastener and Anchor Test Reports: Certified reports of last completed set of mechanical tests for each device.

E. Welding certificates.

F. Field quality-control reports.

G. Sample Warranties: For special warranties.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: For point-supported glazing systems to include in maintenance manuals.

1. Include glass replacement procedures.

B. Record Shop Drawings: Record actual installation that varies from that shown originally, giving particular attention to concealed components that would be difficult to identify later; comply with Section 017839 "Project Record Documents."

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 20 years’ experience regularly engaged in the production and sales of point-supported glazing systems that have been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports and calculations. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 10 years’ experience installing point-supported glazing systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Engineering Responsibility: Prepare data for point-supported glazing systems, including Shop Drawings and calculations, based on testing and engineering analysis for manufacturer’s standard units in systems similar to those indicated for the Project and submission of reports of tests performed on manufacturer’s standard assemblies, signed and sealed by the qualified California-licensed professional engineer responsible for their preparation.

D. Testing Agency Qualifications: Qualified according to ASTM E 699 for testing indicated.

E. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1, "Structural Welding Code - Steel."
2. AWS D1.2, "Structural Welding Code - Aluminum."
3. AWS D1.6, "Structural Welding Code - Stainless Steel."

F. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.
2. Performance characteristics are indicated by criteria subject to verification by one or more methods, including preconstruction testing, field testing, and in-service performance.
3. Point-supported glazing system shall be so designed that defective or damaged glass, panels, and/or other components can be easily dismantled and replaced without causing damage to other parts of the building.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Comply with AAMA CW-10.

1.10 COORDINATION

A. Coordinate point-supported glazing system installation with flashing, trim, parapets, entrances, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

B. Coordinate installation of miscellaneous metal sub-framing, anchorage items, or other items to be embedded in or attached to other construction before starting that Work. Provide locations, setting diagrams, templates, instructions, and directions for installation. Deliver such items to Project site in time for installation.

C. Pre-Installation Field Measurements: Coordinate exact hardware and anchorage locations with other Trade Contractors before permanently attaching to other construction.

D. Post-Installed Field Measurements: Field verify and examine actual installed locations of connection hardware and anchorage items prior to installation of Work provided under this Section. Notify General Contractor and Architect immediately of any discrepancies in writing. Provide letter from point-supported glazing system installer indicating acceptance of connection hardware and anchorage items.

1.11 WARRANTY

A. Special Warranty: Manufacturer's standard or customized form in which manufacturer and installer agree to repair or replace components of point-supported glazing system that do not comply with requirements or that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures including, but not limited to, deflection exceeding specified limits.
b. Thermal stresses transferring to building structure.
c. Glass breakage.
d. Noise or vibration created by wind and thermal and structural movements.
e. Loosening or weakening of fasteners, attachments, and other components.
f. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
g. Water penetration through fixed glazing and framing areas.
h. Excessive air infiltration.
i. Excessive condensation.
j. Glazing to glazing contact.
k. Sealant failures.
l. Framing members transferring stresses to glazing, including those caused by thermal and structural movements.
m. Failure to comply with specified performance requirements.

2. Warranty Period: 10 years from date of Substantial Completion.

B. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.

1. Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. System Description: The system is comprised of glass panels which are attached to the steel support structure and have drilled holes such that the glass can be mechanically attached using stainless steel fasteners to the support structure. Joints are comprised of uninterrupted wet silicone with an extruded silicone profile inner compression seal. Stainless steel tension rods are used to brace the structure. General arrangement and profiles for the support structure as indicated on the drawings but the Specialty Glazed Structure Contractor shall be responsible for all engineering of the structural support system. All of these elements shall be provided by the Specialty Glazed Structure Contractor as a single source.

B. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide point-supported glazing system by the following:

1. Novum Structures.

C. Source Limitations: Obtain all components of point-supported glazing system, including framing, spider fittings, anchors, fasteners, glazing, and accessories, from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Permit Submittal Package: Engage a qualified California-licensed professional engineer, as defined in Section 014000 "Quality Requirements," to design point-supported glazing systems.

1. Changes to Building Structural Frame Subsequent to Receipt of Permit: If required by point-supported glazing system professional engineer, submit request for changes to building structural frame to Architect. Construction cost associated with changes shall be at no additional cost to Owner.

B. General Performance: Comply with performance requirements specified, as determined by testing of point-supported glazing systems representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.

1. Point-supported glazing systems shall withstand movements of supporting structure including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads, wind and seismic loads.
2. Point-supported glazing systems shall accommodate tolerances in construction, including, but not limited to, those from: structural frame tolerances, manufacturing tolerances, and field installation tolerances.
3. Failure also includes the following:

a. Structural failures including, but not limited to, deflection exceeding specified limits.
b. Thermal stresses transferring to building structure.
c. Glass breakage.
d. Noise or vibration created by wind and thermal and structural movements.
e. Loosening or weakening of fasteners, attachments, and other components.
f. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
g. Water penetration through fixed glazing and framing areas.
h. Excessive air infiltration.
i. Excessive condensation.
j. Glazing to glazing contact.
k. Sealant failures.
l. Framing members transferring stresses to glazing, including those caused by thermal and structural movements.

4. Point-supported glazing systems shall comply with the 2016 CBC and CEC.

C. Structural Loads:

1. Wind Loads: As indicated on Drawings.

D. Deflection of Framing Members: At design wind pressure, as follows:

1. Deflection Normal to Wall Plane: Limited to the stricter of the following:

a. Edge of glass in a direction perpendicular to glass plane not exceeding 1/175 of the glass edge length for each individual glazing lite.
b. 1/175 of clear span for spans up to 13 feet 6 inches and to 1/240 of clear span plus 1/4 inch for spans greater than 13 feet 6 inches.
c. 1/360 of clear span for spans adjacent to interior gypsum board.
d. Or an amount that restricts edge deflection of individual glazing lites to 3/4 inch, whichever is less.

2. Deflection Parallel to Glazing Plane: Limited to the stricter of the following:

a. 1/360 of clear span or 1/8 inch, whichever is smaller.
b. Amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch.
c. Operable Units: Provide a minimum 1/16-inch clearance between framing members and operable units.

3. Cantilever Deflection: Where framing members overhang an anchor point, limit deflection to two times the length of cantilevered member, divided by 175.
4. Anchor Movement: Withstand not more than 1/8 inch in any direction for combined movement of anchor relative to building structural frame and framing member relative to anchor.

E. Structural: Test according to ASTM E 330 as follows:

1. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.
2. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding 0.2 percent of span.
3. Test Durations: As required by design wind velocity, but not less than 10 seconds.

F. Interstory Drift: Accommodate design displacement of adjacent stories indicated.

1. Elastic and Inelastic Displacements: As indicated on Structural Drawings.
2. Test Performance: Complying with criteria for passing based on building occupancy type when tested according to AAMA 501.4 at elastic displacement and inelastic displacement.

G. Seismic Performance: Point-supported glazing systems shall withstand the effects of earthquake motions determined according to the 2016 CBC.

1. Seismic Drift Causing Glass Fallout: Complying with criteria for passing based on building occupancy type at elastic displacement and inelastic displacement when tested according to AAMA 501.6 or by engineering analysis.

H. Air Infiltration: Test according to ASTM E 283 for infiltration as follows:

1. Fixed Framing and Glass Area:

a. Maximum air leakage of 0.06 cfm/sq. ft. at a static-air-pressure differential of 6.24 lbf/sq. ft.

I. Water Penetration under Static Pressure: Test according to ASTM E 331 as follows:

1. No evidence of water penetration through fixed glazing and framing areas when tested according to a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 12 lbf/sq. ft.

J. Water Penetration under Dynamic Pressure: Test according to AAMA 501.1 as follows:

1. No evidence of water penetration through fixed glazing and framing areas when tested at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 12 lbf/sq. ft.
2. Maximum Water Leakage: No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.

K. Energy Performance: Certify and label energy performance according to NFRC as follows:

1. Thermal Transmittance (U-factor): In compliance with project's "Envelope Mandatory Measures" (ENV-1).
2. Solar Heat Gain Coefficient: In compliance with project's "Envelope Mandatory Measures" (ENV-1).
3. Condensation Resistance: Prevent condensation on the interior face of the system, with the heating and ventilating system in operation and under the following conditions:

    a. Outdoor: Ambient temperature of 29 deg F; 15 miles per hour wind.
    b. Indoor: Ambient temperature of 70-72 deg F; Relative humidity of 50 percent during working hours.
    c. Confirm with Mechanical Engineer.

4. Continuity of Air Barrier: Provide a complete and uninterrupted air barrier integrated with the other wall barrier systems.

L. Structural-Sealant Joints: Designed to produce tensile or shear stress of less than 20 psi.

M. Structural Sealant: Capable of withstanding tensile and shear stresses imposed by structural-sealant-glazed curtain walls without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.

1. Adhesive failure occurs when sealant pulls away from substrate cleanly, leaving no sealant material behind.
2. Cohesive failure occurs when sealant breaks or tears within itself but does not separate from each substrate because sealant-to-substrate bond strength exceeds sealant's internal strength.

N. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes:

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.
2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.

    a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of 180 deg F.
    b. Low Exterior Ambient-Air Temperature: 10 deg F.
    c. Interior Ambient-Air Temperature: 75 deg F.

2.3 MATERIALS

A. Stainless Steel:

1. AISI Types 201 and 202, Plate, Sheet and Strip: ASTM A 666.
2. AISI Type 301, Tempered and Similar: ASTM A 666.
3. AISI Type 304, Annealed: ASTM A 167.
4. AISI Type 304, Tubing: ASTM A 269.
5. AISI Type 304, 316: ASTM A240, ASTM A666
6. AISI Type 430: ASTM A 176.
7. AISI Type 430, Tubing: ASTM A 268.
8. Hot Rolled and Cold Finished Bars: ASTM A 276.
9. Rolled Shapes, Plates and Bars: ASTM A 572.
10. Rolled Sheet and Strip: ASTM A 606.

B. Spider-Type Fittings

1. Material: 300 series type; for exterior applications, 316 Type.
2. Finish: per Architect's schedule.
3. Channels for glass retention: Minimum thickness 1/4 in.
4. The system shall provide for unitized pre-fixing of all items to glass prior to erection.
5. Fittings with tolerance capability for full range of movements as required per this specification and the Structural Engineer.
6. Articulated or axial adjustment mounting fittings will be in accordance with the design criteria and the approved shop drawings.
7. Use elastomer pads in the single point fixings under load (deformation / expansion / contraction) to significantly reduce residual stress peaks in the glass façade.
8. Movement diaphragms of stainless steel and durable flexible discs shall be incorporated in connections to accommodate oversize holes which allow for thermal movement and glass manufacturing tolerances.
9. Stress induced in the glass by these fittings must be compatible with the strength of the glass and the needs of the performance section of this specification.

C. Aluminum:

1. Alloy and temper recommended by manufacturer for type of use and finish indicated and with strength and durability properties required to fulfill delegated engineering and performance requirements, but no less than 22,000 psi ultimate tensile strength. Conform to the following product quality standards:

    a. Extruded Bars, Tubes and Shapes: ASTM B 221, thickness as required by delegated engineering, but not less than 1/8 in at any location for main frame and sash members.
    b. Sheet and Plate: ASTM B 209, thickness as required by delegated engineering, but not less than 3/16 in.

2. Perimeter channels for glass retention:

    a. Match profile on approved shop drawings. Size as required.

3. Channels for glass retention: Minimum thickness 1/4 in
4. Interior covers and trim: Minimum thickness 1/16 inch, with all exposed edges rolled round.

D. Architecturally Exposed Structural Steel: As specified in Section 051213 "Architecturally Exposed Structural Steel" and in compliance with the following:

1. Structural Shapes, Plates, and Bars: ASTM A 36.
2. Cold Rolled Sheet and Strip: ASTM A 1008.
3. Hot Rolled Sheet and Strip: ASTM 1011.
4. Tubing: ASTM A 500
5. Pipe: ASTM A 53.
6. Uncoated, Cold-Rolled Sheet: ASTM A 1008.
7. Uncoated, Hot-Rolled Sheet: ASTM A 1011.
8. Galvanized Sheet: ASTM A 653, G90.

2.4 FASTENERS AND ANCHORS

A. Selection Criteria:

1. Only domestically manufactured anchors and fasteners are acceptable.
2. Grade 8.0 or higher fasteners not acceptable.
3. Grade A fasteners that are zinc plated shall not be used.
4. Diameter, material thicknesses, and lengths as determined by delegated engineering, and as indicated below, sufficient to attach or anchor item to substrate indicated without failure.
5. Include separators and isolators as required to prevent metal corrosion and electrolytic deterioration.
6. Include separators and isolators as required to prevent impeding movement of moving joints.
7. Fasteners in wet or exposed areas of the wall shall be series 300, non-magnetic stainless steel.
8. Finish exposed fasteners to match adjacent stainless steel or aluminum.
9. Use nuts with positive means of preventing disengagement at expansion or moving connections. Stacking of bolts, use of lock washers, or deforming threads are not allowed.
10. Use matched bolts, washers, and nuts at friction connections.
11. Comply with AAMA TIR-A9 Metal Curtain Wall Fasteners

B. Cap Screws/Bolts/Threaded Rods, Nuts, and Washers: Match material and finish when bolts, washers and nuts are used together.

1. Wet Areas – Stainless Steel Product Quality Standards:

a. Bolts: ASTM F 593, Group 2, Alloy 316 / Group 1, Alloy 304 (ASTM F 738M, Property Class A4, Alloy 316 / Class A1, Alloy 304).
b. Washers: ASTM A 240 or ASTM A 480, Type 316 / 304, dimensions and permissible variations according to ASTM F 436 or ASME B18.22.1, Type A, flat; lock washers not acceptable.
c. Nuts: ASTM F 594, Group 2 / 1, Alloy 316 / 304 (ASTM F 836M, Property Class A4, Alloy 316 / Property Class A1, Alloy 304), nylon inserts.

C. Wet Areas - Self-drilling fasteners used in wet areas shall include Elco's Stal-Guard finish.

D. Dry Areas – Coated Carbon Steel Product Quality Standards:

1. Bolts: One of following:

a. SAE J429, Grade 2 or ASTM A 307, Grade A.
b. SAE J429, Grade 5 or ASTM A 449, Type 1.

2. Washers: ASTM F 436, Type 1, flat; spring lock washers not acceptable.
3. Nuts: ASTM A 563, Type 1.

a. Nylock nuts, Unitorque nuts or other locking device with nylon inserts to prevent disengagement at moving connections.

4. Finish: Mechanically deposited ASTM B695 or hot-dip zinc coating ASTM A153. Thickness not less than 0.002 in (2 mils)

E. Post-Installed Expansion Anchors:

1. Product Quality Standards: ACI 318, D.1 and ICC-ES AC193; approved for cracked concrete conditions when used in concrete that is cracked or may become cracked under connected load, as required by Code.
2. Finish: Stainless steel, mechanically deposited ASTM B695 or hot-dip zinc coating ASTM A153. Thickness not less than 0.002 in (2 mils).
3. Property Class A1, Alloy 304, Property Class A1, Alloy 316
4. Acceptable Manufacturers and Products:

a. ITW; Redhead Truebolt Wedge Anchor.
b. Powers; Bull Wedge Anchor.
c. Simpson; Strong-Bolt Wedge Anchor.

5. Not Acceptable: Chemical type anchors for overhead dead load connections.

F. Threaded Concrete Anchors:

1. Condition of Use: Can only be used under shear load.
2. Material and Finish: Carbon steel with corrosion resistant coating with not less than 2000 hours of salt-spray resistance according to ASTM B 117.
3. Basis of Design: Elco Industries, Inc.; Aggre-Gator with Silver Stalgard finish.
4. Not Acceptable: Self-drilling self-threading fasteners, screw in plugs, and powder actuated fasteners are not permitted in concrete.

G. Self-Drilling and Self-Tapping Drill Screws:

1. Product Quality Standard: SAE J429, Grade 5 and ASTM A 449.
2. Material and Finish: Carbon steel with corrosion resistant coating with not less than 2000 hours of salt-spray resistance according to ASTM B 117.
3. Approved Manufacturers and Products (no substitutions accepted):

a. Elco Industries, Inc.; Dril-Flex Structural Fasteners with Silver Stalgard finish; Alumi-Flex 302 S.S. Drill Screw
b. Hilti, Inc.; Kwik-Flex Self-Drilling Fasteners with Kwik-Cote finish.
c. ITWBuildex; Teks Select with Climaseal ACR finish.

2.5 GLAZING

A. Glazing: Comply with Section 088000 "Glazing."

B. Glass shall be in compliance with ASTM C 1048.

C. Edge finish (Exposed): Beveled and polished, unless otherwise indicated.

D. Edge finish (Not exposed): Ground flat with frosted appearance, unless noted otherwise.

E. Edgework, holes and notches in the glass main plates will be completed before any heat tempering or heat strengthening. Edges and cuts shall be accurate, clean, sharp, square, smooth and free of burrs.

F. Glass Replacement Requirements: Glass replacement of same nominal size unit after initial construction, reusing original gaskets and fittings, without cutting of structural or support members or removal of interior finishes.

G. Glass replacement of same nominal size unit after initial construction, reusing original gaskets and fittings, without cutting of structural or support members or removal of interior finishes.

2.6 SEALANTS

A. Sealants, General: As specified in Section 079200 "Joint Sealants."

B. All exterior sealants and interior joinery sealants (glass pockets, end dams and gutters) shall be silicone. All exterior and interior sealants to be compatible.

C. Splice details to be designed using silicone or a combination of silicone and a non-curing, non-hardening, non-skimming butyl.

2.7 ACCESSORIES

A. Brushings: Nylatron Polyamide.

B. Gaskets / Weatherstripping

1. As specified in Section 088000 "Glazing."
2. Dense extruded silicone, neoprene (silicone-compatible if in contact with silicone) or EPDM, in compliance with ASTM C1115, C864 and C509.

C. Flashing: Required within the system or to join the system to adjacent construction, one of following:

1. ASTM A 240 stainless steel, dead-soft, not less than 0.040 in (19 ga) thick.
2. Aluminum Sheet (anodized / painted), not less than 1/16 in thick. Finish to match framing members when exposed.
3. Neoprene sheet is not acceptable for primary gutters.

D. Baffle Material: PVC coated open cell reticulated urethane foam, 30 to 40 ppi

1. Size and length to meet water and air infiltration design requirements.
2. Mechanically restrained and compressed 30% - 50% in their final position.

E. Shim Material:

1. For Structural Connections: 300 series stainless steel or ASTM A 36 or ASTM A 283 hot-dipped galvanized steel

a. Set in a staggered pattern and fillet welded to each other and to the adjacent steel surfaces.
b. Shims in contact with aluminum shall receive protective coatings to separate dissimilar metals.
c. For Dynamic Connections: Molybdenum disulfide filled nylon (Nylatron) lubricated pads or washers

2. For Static, Non-load transfer Connections: Korolath high impact polysterene pads.

   a. Do not use polystyrene in close proximity to field welds.

3. For Non-Structural Connections: U-shape polystyrene
4. Not Acceptable: Fiber shims or wood shims.

F. Lubricated Sliding pads:

1. Extruded lubrication strips shall be Teflon, or 1/16 inch thick Nylatron.

   a. Pads to permit movement, resist wear, positively stay in position and not be subjected to heat damage from welding or cutting.
   b. Open ended slots are not acceptable.

G. Control of Corrosion and Staining:

1. Prevent galvanic, and other forms of corrosion as well as staining by isolating metals from direct contact with incompatible surfaces. Comply with SSPC-SP COM, rust inhibitive enamel or paint, either air dried or baked.
2. Items of carbon steel, unless galvanized or scheduled for other finish, shall be thoroughly cleaned and painted with zinc chromate primer.
3. Materials:

   a. Zinc Chromate Primer: Specification FS TT-P-645, SSPC- SP COM. Minimum dry film thickness of 3 mil for each coat.
   b. Sealant, tape or approved galvanic isolator
   c. Fluoropolymer paint for aluminum in contact with stainless steel

H. Bituminous Paint: SSPC-Paint 12 and ASTM D1187, cold applied asphalt mastic paint formulated for 30 mil thickness for each coat.

2.8 FABRICATION

A. Assembly/Fabrication Methods shall be at the discretion of the Exterior Wall Contractor (subject to acceptance by the Owner, Architect and Exterior Wall Consultant) provided that the visible architectural effect is not changed, the work of other Contractors is not affected, and the performance is not reduced.

B. Follow conclusions and recommendations from Consultants, Delegated Engineering, Manufacturer's written fabrication instructions, Contract Documents and Approved Submittals.

C. General Requirements:

1. Fabricate and finish at shop to maximum extent possible before shipping to Project.
2. Comply with requirements indicated for materials, thicknesses, finishes, colors, designs, shapes, sizes, and details.
3. Fabricate to dimensions, profiles and details indicated.
4. Fabricated free of burrs, pitting, cutting edges, sharp corners, nicks, dents, and scratches.
5. Fabricate components and assemble units to comply with fire and performance requirements specified.
6. Painted surfaces shall be properly prepared. Comply with "FINISHES" Section.
7. Fabricate components to allow for thermal expansion and contraction, and field adjustments.
8. Provide minimum clearances and depth of glazing pockets as recommended by glass manufacturer for thickness and type of glass indicated.
9. Make provisions to drain water entering at joints and perimeter channels.
10. Covers and trim: Minimum thickness 1/16 inch, with all exposed edges rolled round.
11. Weld before finishing components. Welding shall be done with methods recommended by the suppliers of the metals being welded.
12. Welds behind finished surfaces shall be done as to minimize distortion and/or discoloration on the finished side. Telegraphing of welds through a finished surface will not be accepted. Weld splatter and welding oxides on finished surfaces shall be removed by descaling and/or grinding.
13. Welds shall be of adequate strength and durability, with jointing tight, flush, smooth and clean.
14. Design anchorage to accommodate 1 in three-dimensional maximum variation in the building structure.

2.9 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.10 ALUMINUM FINISHES

A. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: Custom color to match Architect’s sample.
2. Orientation: For components with metallic- or mica-coated finishes, fabricate and install units in a consistent direction to avoid shading differences between adjacent components. Components exhibiting this type of shading difference will be rejected and either reoriented or replaced.

2.11 STAINLESS STEEL FINISHES

A. Stainless-Steel Finishes: Remove tool and die marks and stretch lines, or blend into finish. Grind and polish surfaces to produce uniform finish, free of cross scratches. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.

C. Directional Satin Finish: No. 4, unless otherwise indicated.

2.12 HOT-DIP GALVANIZED STEEL FINISHES

A. Iron and Steel Hardware (Fasteners): ASTM A 153, Class C, coating thickness not less than 0.002 inch (2 mils).

B. Fabricated and Unfabricated Assemblies (Shapes, plates, bar and stip): ASTM A 123, coating thickness not less than 0.002 inch (2 mils).

C. Steel components to be galvanized, unless scheduled for other finish.

2.13 SOURCE QUALITY CONTROL

A. Structural Sealant: Perform quality-control procedures complying with ASTM C 1401 recommendations including, but not limited to, assembly material qualification procedures, sealant testing, and assembly fabrication reviews and checks.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Verify locations of structural supports.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

1. Commencement of installation indicates acceptance of conditions.

3.2 PREPARATION

A. General: Surfaces shall have no conditions which would cause faulty work or failures, or result in potentially defective installation.

B. Isolate and prevent any degree of incompatibility between all sealants used under this section and those sealants used by other trades that may be in direct contact with or adjacent to sealants in this work.

C. Examine a sample installation of the wall which has been prepared and determine and record whether everyone present is in agreement that the proposed installation is acceptable. Accepted control section shall be standard to which other work must confirm.

D. Prepare surfaces that will contact structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

E. Paint steel supporting member prior to installation of structural glass curtain wall system components.

3.3 INSTALLATION

A. Installation Quality Standards: In addition to standards specified elsewhere, perform work according to following, unless otherwise specified:

1. Deferred-Approval documents and calculations..
2. Respective manufacturer’s written instructions, specifications, and recommendations.
3. Approved submittals.
4. Contract Documents.
5. AAMA CWG-1.
6. ASTM E 2112.

B. General:

1. Commence initial installation of curtain wall in presence of manufacturer’s technical representative.
2. Comply with manufacturer's written instructions.
3. Do not install damaged components.
4. Fit joints to produce hairline joints free of burrs and distortion.
5. Rigidly secure nonmovement joints.
6. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
7. Where welding is required, weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
8. Seal joints watertight unless otherwise indicated.
9. Attachment devices for work exposed to view shall be concealed unless otherwise indicated. Where fasteners are permitted by Architect to be exposed to view, finish to match adjacent surface.

C. Point-Supported Assembly Installation:

1. Install structural glass curtain wall plumb, level, true, located and aligned with established column lines and reference levels.
2. Do not cut, trim, weld, or braze in a manner that will damage finishes, decrease strength, cause visual imperfection, or performance failure.
3. Do not field cut or alter building structural framing without written approval from General Contractor.
4. Finish seams, joints and splices on exposed surfaces shall be imperceptible in finished work.
5. Allow for free and noiseless expansion and contraction movement.
6. Prevent galvanic action and other forms of corrosion by isolating metals from direct contact with incompatible surfaces.
7. Match exposed work to produce continuity of line and finish.
8. Minimize distortion and/or discoloration of welds behind finished surfaces. Telegraphing not accepted. Remove weld splatter and welding oxides on finished surfaces by descaling and/or grinding.
9. Assemble components into a complete weathertight system.

D. Structural Glass Wall Installation:

1. Lap and seal flashing splices minimum 6 in. Seal, not weld, end dams and gutter transitions.
2. Install head, sill and perimeter channels. Shim as required for level and plumbness.
3. Set flashings, channels and all penetrating fasteners in full bed of non-skinning sealant. Install end caps and seal joinery.
4. Seal welds in areas intended to retain and channel water.
5. Drain moisture entering joints and glazing spaces; weep holes must not contribute to staining, streaking or marking on the glass, metal framing or trim, or other exterior cladding components.

E. Glazing:

1. Follow GANA Manual Guidelines and Glass Manufacturer's recommendations.
2. Inspect each piece of glass immediately before installation. Do not install glass or component parts that are defective.
3. Clean glazing channel before setting glass with compatible solvents.
4. Set main glass plates and fixings in sequence shown on approved shop drawings. Adjust glass for level and plumb.
5. Set glass on setting blocks; retain setting blocks and edge blocks in position.
6. Check glass to be certain vertical edges are plumb and edge bite is as specified.
7. Secure glass in place as indicated.
8. Provide a minimum nominal glass bite of 1/2 in. Where joint movement will result in variable glass bite, increase nominal bite as required and provide 1/2 in minimum edge clearance or greater.
9. Mechanically join glass mullions/fins to main plate panels with connector fittings to provide stabilization and support.

F. Attachments and Anchors:

1. Attachment of the Structural Glass Wall to the support structure shall occur inboard of the weather line.
2. Welds shall be of adequate strength and durability, with jointing tight, flush, smooth and clean, following methods recommended by the suppliers of the metals being welded. Protect adjacent materials from weld spatter.
3. Aluminum field welding is prohibited.
4. When installing stainless steel components prevent threads from galling.
5. Anchor components securely and permanently in place, shimming and using attachment methods and devices that permit three-dimensional 1 in adjustment for construction tolerances, irregularities, and alignment.
6. Once wall is properly positioned, all connections shall be rigidly fixed by bolting, welding or other positive mechanical means.
7. Secure glass panels to fittings with bolts. Torque bolt to amount specified using calibrated tool. Lock torqued bolt into position to prevent backoff.
8. Reset calibrations regularly to ensure accurate torquing.
9. Install fastener caps for all bolts when required by manufacturer or design.

10. Deforming or mechanically staking fastener threads outside of nuts or welding nuts to washers or threads is not acceptable. Lock washers are not acceptable.
11. Molybdenum-disulfide filled nylon ("nylatron") slip pads or washers shall be used at all thermal or dynamic anchors.
12. Exposed bolt heads shall be oriented as indicated on the approved shop drawings. Where bolt head alignment is specified, the orientation shall be noted for each connection on the installation drawings. Where not noted, the bolt heads in a given connection shall be oriented to one side.

G. Sealant:

1. Cleaning, priming and sealant installation as specified in Section 079100 – Exterior Wall Joint Sealants.
2. After glass has been retained in final position, install seal as indicated by architectural details.
3. Prevent silicone contact with the PVB interlayer. Sealant shall be shown to be compatible with PVB interlayer and shall show no evidence of fluid migration into the laminated layer.
4. Plate to plate joints shall be sealed with silicone sealant. Joint size to be design to accommodate for movement of the structure and specified loads.

3.4 ERECTION TOLERANCES

A. Erection Tolerances: Install point-supported glazing systems to comply with the following maximum tolerances:

1. Variation for Vertical Members: One of following:

   a. Not more than 1/8 in in 26 ft.
   b. Not more than 1/4 in in 52 ft.

2. Variation for Horizontal Members: Not more than 1/8 in in 25 ft in any direction.
3. Offset from Alignment of Members End to End: Not more than 1/32 in.
4. Offset from Alignment Between Adjacent Main Plates: Not more than 1/32 in.
5. Variation in Plane: One of following:

   a. Not more than 1/16 in in 10 ft at any location.
   b. Not more than 1/8 in over entire face or area.

6. Sealant joint width between Mullions and adjacent construction: minimum of 1/4 in. Maximum variation 1/8 in.

3.5 FIELD QUALITY CONTROL (BY OWNER)

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Field and shop welds in compliance with CBC 1705.2.
2. Post-installed concrete anchors in compliance with CBC 1705.3.
3. Exterior cladding in compliance with CBC 1705.12.5.

B. Repair or remove work if test results and inspections indicate that it does not comply with specified requirements.

C. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

D. Point-supported glazing systems will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.6 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer's Field Service: Contractor shall engage a manufacturer's technical representative for technical assistance and guidance for installation of point-supported glazing systems. At a minimum, arrange for manufacturer's technical representative to observe initial installation of point-supported glazing system, at mid-point of the installation, and at completion. Provide additional field observation as required to obtain warranty specified and when requested by Owner, Architect, Envelope Consultant, and/or General Contractor. After each field visit, submit manufacturer's written report of observations within 3 working days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective action.

B. Testing Agency: Contractor shall engage a qualified testing agency to perform tests and inspections.

C. Field Quality-Control Testing: Perform the following test on representative areas of point-supported glazing systems.

1. Water-Spray Test: Before installation of interior finishes has begun, areas designated by Envelope Consultant shall be tested according to AAMA 501.2 and shall not evidence water penetration.

    a. Test Area Locations and Size: At locations determined by Envelope Consultant.
    b. Frequency: At 10, 30, and 70 percent completion.

2. Structural-Sealant Adhesion: Test structural sealant according to recommendations in ASTM C 1401, Destructive Test Method A, "Hand Pull Tab (Destructive)," Appendix X2.

    a. Test a minimum of six areas on each building facade.
    b. Repair installation areas damaged by testing.

3. Reports: Record testing and inspection results and prepare certified reports according to ASTM E 575 format.

D. Deferred Approval Field Inspection: Inspect work, including connection and attachment to building structural frame, for compliance with deferred-approval engineering, and direct deficiencies to be corrected.

1. Certification: Upon resolution of deficiencies, certify work complies with delegated engineering, authorities having jurisdiction, applicable local building codes, specified requirements, and is in keeping with generally accepted engineering practices.
2. Manufacturers Field Inspection: Manufacturers technical representative shall inspect first days' work and periodically inspect work to ensure installation is proceeding in accordance with manufacturer's designs, recommendations, instructions and warranty requirements. Representative shall submit written reports of each visit indicating observations, findings and conclusions of inspection.

E. Repair or remove work if test results and inspections indicate that it does not comply with specified requirements.

F. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

G. Point-supported glazing systems will be considered defective if they do not pass tests and inspections.

H. Prepare test and inspection reports.

3.7 CLEANING AND PROTECTION

A. Protect point-supported glazing systems and glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels and clean surfaces.

B. Protect point-supported glazing systems and glass from contact with contaminating substances resulting from construction operations. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.

C. Examine glass surfaces adjacent to exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.

D. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.

E. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

END OF SECTION 084426

SECTION 086200 - TUBULAR UNIT SKYLIGHTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes self-flashing tubular unit skylights with integral curb.

B. Related Sections:

1. Section 075419 "Polyvinyl-Chloride (PVC) Roofing" for coordination of roofing membrane with tubular unit skylights.
2. Section 076000 "Sheet Metal Flashing and Trim" for flashing to the extent not provided as part of this Section.

1.3 PREINSTALLATION MEETING

A. Preinstallation Conference: Conduct at project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of unit skylight indicated.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for unit skylights.

B. Shop Drawings: For unit skylight work.

1. Provide project specific shop drawings, including plans, elevations, sections, details, and connections to supporting structure and other adjoining work.

C. Aluminum Finish Samples: For each type of exposed finish required, in a representative section of each unit skylight in manufacturer's standard size.

D. Glazing Samples: For each color and finish of glazing indicated, 12 inches square and of same thickness indicated for the final Work.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: Independent testing agency or evaluation service reports verifying compliance with performance requirements.

C. Evaluation Reports: For tubular unit skylights, from ICC-ES.

D. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For unit skylights to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of tubular unit skylights that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports, labels, and calculations.

B. Installer Qualifications: A firm with not less than 5 years' experience installing tubular unit skylights similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1.8 COORDINATION

A. Coordinate unit skylight flashing requirements with roofing system to form a leak-proof, airtight, watertight, and noncorrosive installation.

B. Coordinate sizes and locations of prefabricated curbs with actual unit skylights provided.

C. Provide anchors and inserts to be placed in adjacent construction in proper sequence so as not to delay the Work.

1.9 WARRANTY

A. Special Warranty: Manufacturer's standard or customized form in which manufacturer and installer agree to repair or replace components of tubular unit skylights that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Uncontrolled water leakage.
b. Excessive air infiltration.
c. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
d. Yellowing of glazing.
e. Breakage of glazing.
f. Deterioration of seals.

2. Warranty Period: Ten (10) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

1. Solatube International, Inc.; Solatube 330 DS Closed Ceiling.

Or comparable product by one of the following, subject to compliance with requirements herein and with Division 1 Section "Product Requirements:"

2. VELUX America; SunTunnel.
3. Or Comparable Equal.

B. Source Limitations: Obtain unit skylights from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Test Performance Criteria: Provide unit skylights capable of complying with performance requirements indicated, based on testing manufacturer's unit skylights that are representative of those specified.

1. Structural Performance: Provide unit skylights, including glazing and anchorage, capable of withstanding the effects of the following uniform load test:

a. No breakage, permanent damage to fasteners, hardware parts, or damage to making system inoperable or cause excessive permanent deflection of any section when tested at a positive load of 150 psf or negative load of 70 psf.
b. All units shall be tested with a safety factor of three (3) for positive pressure and two (2) for negative pressure, acting normal to plane of roof in accordance with ASTM E 330.

2. Air Infiltration: Provide unit skylights with maximum air leakage through assembly of 0.3 cfm/sq. ft. when tested according to ASTM E 283 at a minimum static-air-pressure difference of 1.57 lbf/sq. ft..
3. Water Penetration: Provide unit skylights that do not evidence water penetration through assembly when tested according to ASTM E 547 with 10.5 psf pressure differential with water rate of 5 gallons/hour/sf.
4. Fire Testing: Unit shall comply with the fire-resistance rating requirements to comply with the 2016 California Building Code (CBC).

B. Surface-Burning Characteristics of Plastic Glazing: Provide plastic glazing sheets identical to those tested for fire-exposure behavior per test method indicated below by a testing and inspecting agency acceptable to authorities having jurisdiction. Identify materials with appropriate markings of applicable testing and inspecting agency.

1. Self-Ignition Temperature: 650 deg F or more for plastic sheets in thickness indicated when tested per ASTM D 1929.
2. Smoke-Production Characteristics: Comply with either requirement below:

a. Smoke-Developed Index: 450 or less when tested per ASTM E 84 on plastic sheets in manner indicated for use.
b. Smoke Density: 75 or less when tested per ASTM D 2843 on plastic sheets in thickness indicated for use.

3. Burning Characteristics: Tested per ASTM D 635.

a. Acrylic Glazing: Class CC2, burning rate of 2-1/2 inches per minute or less for nominal thickness of 0.060 inch or thickness indicated for use.
b. Polycarbonate Glazing: Class CC1, burning extent of 1 inch or less for nominal thickness of 0.060 inch or thickness indicated for use.
c. Polycarbonate-Insulating-Panel Glazing: Class CC2, burning rate of 2-1/2 inches per minute or less for nominal thickness of 0.060 inch or thickness indicated for use.

2.3 MATERIALS

A. Aluminum Components:

1. Sheets: ASTM B 209, alloy and temper to suit forming operations and finish requirements but with not less than the strength and durability of alclad Alloy 3005-H25.
2. Extruded Shapes: ASTM B 221, alloy and temper to suit structural and finish requirements but with not less than the strength and durability of Alloy 6063-T52.

B. Fasteners: Same metal as metal being fastened, nonmagnetic stainless steel, or other noncorrosive metal as recommended by manufacturer. Finish exposed fasteners to match material being fastened.

1. Where removal of exterior exposed fasteners might allow access to building, provide nonremovable fastener heads.

2.4 GLAZING

A. Acrylic Glazing: ASTM D 4802, thermoformable, monolithic sheet, category as standard with manufacturer, Finish 1 (smooth or polished), Type UVF (formulated with UV absorber).

1. Outer Dome Glazing: Type DA, 0.143 inch minimum thickness injection molded acrylic classified as CC2 materials; UV inhibited, impact modified acrylic blend.

B. Glazing Gaskets: Manufacturer's standard.

2.5 INSTALLATION MATERIALS

A. Fasteners: Same material as metals being fastened, non-magnetic steel, non-corrosive metal of type recommended by unit skylight manufacturer, or injection molded nylon.

B. Bituminous Coating: SSPC-Paint 12, solvent-type, bituminous mastic, nominally free of sulfur and containing no asbestos fibers, formulated for 15-mil dry film thickness per coating.

C. Sealant: Polyurethane or copolymer based elastomeric sealant as provided or recommended by unit skylight manufacturer.

D. Suspension Wire: Steel, annealed, galvanized finish, size and type for application and ceiling system requirement.

E. Mastic Sealant: Polyisobutylene; nonhardening, nonskinning, nondrying, nonmigrating sealant.

F. Roofing Cement: ASTM D 4586, asbestos free, designed for trowel application or other adhesive compatible with roofing system.

2.6 UNIT SKYLIGHTS

A. General: Provide factory-assembled unit skylights that include glazing, extruded-aluminum glazing retainers, gaskets, and inner frames and that are capable of withstanding performance requirements indicated.

B. Roof Flashing Base: One piece, seamless, leak-proof flashing functioning as base support for dome and top of tube.

1. Base Material: Sheet steel, corrosion resistant, conforming to ASTM A 653 or ASTM A 463, 0.028 inch thick.
2. Base Style: Type FCM, Curb cap, with inside dimensions of 27 inches by 27 inches to cover prefabricated curb as indicated.
3. Dome Edge Protection Band: Type PB, for fire-rated roofs. Provide galvanized steel, nominal thickness of 0.039 inches.

C. Tube Ring: Attached to tope of base section; 0.090 inch nominal thickness injection molded high impact PVD; to prevent thermal bridging between base flashing and tubing and channel condensation moisture out of tubing.

D. Dome Seal: Adhesive-backed weatherstrip, 0.63 inch tall by 0.28 inch.

E. Reflective Tubes: Aluminum sheet, thickness 0.018 inch.

1. General:

a. Interior Finish: Spectralight Infinity high reflectance specular finish on exposed reflective surface. Specular reflectance for visible spectrum (400 nm to 760 nm) greater than 99 percent. Total solar spectrum reflectance (400 nm to 2500 nm) less than 93 percent.

b. Extension Tube:

1) Provide manufacturer’s standard reflective extension tube.

c. Reflective 90-degree Adjustable Tube:

1) Extension Tube Angle Adapter: Provide manufacturer’s standard adapters for applications requiring bends.

F. Diffuser Assemblies for Tubes Penetrating Ceilings: Provide manufacturer’s standard ceiling mounted box transitioning from round tube to square ceiling assembly, supporting light-transmitting surface at bottom termination of tube, to fit standard suspended ceiling grids.

1. Diffuser: Optiview diffuser, Class A polycarbonate material with a flame spread index not exceeding 25 and a smoke developed index not exceeding 450, when tested in accordance with ASTM E 84.

G. Wire Suspension: Secure unit to structure.

H. Unit Shape and Size: As indicated on Drawings, or if not indicated, circular, 21-inch diameter.

2.7 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.8 ALUMINUM FINISHES

A. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

1. Color and Gloss: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine openings, substrates, structural support, anchorage, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with unit skylight installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Coordinate installation of unit skylight with installation of substrates, vapor retarders, roof insulation, roofing membrane, and flashing as required to ensure that each element of the Work performs properly and that combined elements are waterproof and weathertight.

B. Comply with recommendations in AAMA 1607 and with manufacturer's written instructions for installing unit skylights.

C. Install unit skylights level, plumb, and true to line, without distortion.

D. Anchor unit skylights securely to supporting substrates.

E. Where metal surfaces of unit skylights will contact incompatible metal or corrosive substrates, including preservative-treated wood, apply bituminous coating on concealed metal surfaces, or provide other permanent separation recommended in writing by unit skylight manufacturer.

F. Set unit skylight flanges in thick bed of roofing cement to form a seal unless otherwise indicated.

G. Where cap flashing is indicated, install to produce waterproof overlap with roofing or roof flashing. Seal with thick bead of mastic sealant except where overlap is indicated to be left open for ventilation.

3.3 FIELD QUALITY CONTROL

A. After completion of installation and nominal curing of sealant and glazing compounds but before installation of interior finishes, test for water leaks according to AAMA 501.2.

B. Perform test for total area of each unit skylight.

C. Work will be considered defective if it does not pass tests and inspections.

D. Additional testing and inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.4 CLEANING

A. Clean exposed unit skylight surfaces according to manufacturer's written instructions. Touch up damaged metal coatings and finishes.

B. Remove excess sealants, glazing materials, dirt, and other substances.

C. Remove and replace glazing that has been broken, chipped, cracked, abraded, or damaged during construction period.

D. Protect unit skylight surfaces from contact with contaminating substances resulting from construction operations.

E. Unit Skylight Operating System: Clean and lubricate joints and hardware. Adjust for proper operation.

END OF SECTION 086200

SECTION 087100 - DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Mechanical door hardware for the following:

a. Swinging doors.
b. Sliding doors.
c. Folding doors.

2. Cylinders for door hardware specified in other Sections.
3. Electrified door hardware.

B. Related Sections:

1. Section 064023 "Interior Architectural Woodwork" for cabinet door hardware provided with cabinets.
2. Section 081113 "Hollow Metal Doors and Frames" for coordination of door hardware with metal doors and frames, and for door silencers provided as part of hollow metal frames.
3. Section 081416 "Flush Wood Doors" for integral intumescent seals provided as part of labeled fire-rated assemblies, and for coordination with flush wood door assemblies.
4. Section 081433 "Stile and Rail Wood Doors" for coordination with stile and rail wood doors.
5. Section 083323 "Overhead Coiling Doors" for door hardware provided as part of overhead coiling door assemblies.
6. Section 084113 "Interior Aluminum-Framed Storefronts" for door hardware provided as part of interior aluminum-framed storefronts.
7. Section 084413 "Glazed Aluminum Curtain Walls and Entrances" for door hardware provided as part of glazed aluminum entrances.
8. Division 28 Section(s) for coordination with:

a. Access control, for access control devices installed at door openings and provided as part of a security system.
b. Intrusion detection systems, for detection devices installed at door openings and provided as part of an intrusion-detection system.
c. Digital, addressable fire-alarm system for connection to building fire alarm system.

1.3 COORDINATION

A. Coordinate layout and installation of floor-recessed door hardware with floor construction. Cast anchoring inserts into concrete.

B. Installation Templates: Distribute for doors, frames, and other work specified to be factory prepared. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing door hardware to comply with indicated requirements.

C. Security: Coordinate installation of door hardware, keying, and access control with electronic door hardware provided by Owner.

D. Coordinate layout and installation of floor-recessed door hardware with floor construction. Cast anchoring inserts into concrete.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Conference participants shall include Installer's Architectural Hardware Consultant and Owner's security consultant.

B. Keying Conference: Conduct conference at Project site.

1. Conference participants shall include Installer's Architectural Hardware Consultant and Owner's security consultant.
2. Incorporate conference decisions into keying schedule after reviewing door hardware keying system including, but not limited to, the following:

a. Flow of traffic and degree of security required.
b. Preliminary key system schematic diagram.
c. Requirements for key control system.
d. Requirements for access control.
e. Address for delivery of keys.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction and installation details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: Details of electrified door hardware.

C. Samples for Verification: For exposed door hardware of each type required, in each finish specified, prepared on Samples of size indicated below. Tag Samples with full description for coordination with the door hardware schedule. Submit Samples before, or concurrent with, submission of door hardware schedule.

1. One sample of lever and rose/escutcheon design, (pair).
2. One sample of closer, including custom finish.
3. Three samples of metal finishes, in minimum 2-by-4-inch samples for sheet and 4-inch long samples for other products.

D. Door Hardware Schedule: Prepared by or under the supervision of Installer's Architectural Hardware Consultant. Coordinate door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

1. Submittal Sequence: Submit door hardware schedule after or concurrent with submissions of Product Data, Samples, and Shop Drawings. Coordinate submission of door hardware schedule with scheduling requirements of other work to facilitate the fabrication of other work that is critical in Project construction schedule.
2. Format: Use same scheduling sequence and format and use same door numbers as in door hardware schedule in the Contract Documents.
3. Content: Include the following information:

a. Identification number, location, hand, fire rating, size, and material of each door and frame.
b. Locations of each door hardware set, cross-referenced to Drawings on floor plans and to door and frame schedule.
c. Complete designations, including name and manufacturer, type, style, function, size, quantity, function, and finish of each door hardware product.
d. Description of electrified door hardware sequences of operation and interfaces with other building control systems.
e. Fastenings and other installation information.
f. Explanation of abbreviations, symbols, and designations contained in door hardware schedule.
g. Mounting locations for door hardware.
h. List of related door devices specified in other Sections for each door and frame.

E. Keying Schedule: Prepared by or under the supervision of Installer's Architectural Hardware Consultant, detailing Owner's final keying instructions for locks. Include schematic keying diagram and index each key set to unique door designations that are coordinated with the Contract Documents.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Certificates: Certify that door hardware approved for use on types and sizes of labeled fire-rated doors complies with listed fire-rated door assemblies.

C. Product Test Reports: For compliance with accessibility requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency.

D. Warranty: Special warranty specified in this Section.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of door hardware to include in maintenance manuals.

B. Schedules: Final door hardware and keying schedule.

1.8 QUALITY ASSURANCE

A. Installer Qualifications: Supplier of products and an employer of workers trained and approved by product manufacturers and of an Architectural Hardware Consultant who is available during the course of the Work to consult Contractor, Architect, and Owner about door hardware and keying.

1. Warehousing Facilities: In Project's vicinity.
2. Scheduling Responsibility: Preparation of door hardware and keying schedule.
3. Engineering Responsibility: Preparation of data for electrified door hardware, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.

B. Architectural Hardware Consultant Qualifications: A person who is experienced in providing consulting services for door hardware installations that are comparable in material, design, and extent to that indicated for this Project and who is currently certified by DHI as an Architectural Hardware Consultant (AHC).

1.9 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up for door hardware delivered to Project site.

B. Tag each item or package separately with identification coordinated with the final door hardware schedule, and include installation instructions, templates, and necessary fasteners with each item or package.

C. Deliver keys to manufacturer of key control system for subsequent delivery to Owner.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard or customized form in which manufacturer agrees to repair or replace components of door hardware that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures including excessive deflection, cracking, or breakage.
b. Faulty operation of doors and door hardware.
c. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.

2. Warranty Period: Four years from date of Substantial Completion, unless otherwise indicated.

a. Exit Devices: 5 years from date of Substantial Completion.
b. Manual Closers: 10 years from date of Substantial Completion.
c. Concealed Floor Closers: 10 years from date of Substantial Completion.

1.11 MAINTENANCE SERVICE

A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

B. Maintenance Service: Beginning at Substantial Completion, provide six months' full maintenance by skilled employees of door hardware Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door and door hardware operation. Provide parts and supplies that are the same as those used in the manufacture and installation of original products.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Rated Door Assemblies: Where fire-rated door assemblies are indicated, provide door hardware rated for use in assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C, unless otherwise indicated.

B. Smoke- and Draft-Control Door Assemblies: Where smoke- and draft-control door assemblies are required, provide door hardware that meet requirements of assemblies tested according to UL 1784 and installed in compliance with NFPA 105.

1. Air Leakage Rate: Maximum air leakage of 0.3 cfm/sq. ft. at the tested pressure differential of 0.3-inch wg of water.

C. Electrified Door Hardware: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.

D. Fire Doors: Latches do not require more than 15 lbf to release the latch. Locks do not require use of a key, tool, or special knowledge for operation.

E. Accessibility Requirements: For door hardware on doors in an accessible route, comply with the DOJ's "2010 ADA Standards for Accessible Design" and the accessibility requirements of the 2016 California Building Code.

1. Provide operating devices that do not require tight grasping, pinching, or twisting of the wrist and that operate with a force of not more than 5 lbf.
2. Comply with the following maximum opening-force requirements:

    a. Interior, Non-Fire-Rated Hinged Doors: 5 lbf applied perpendicular to door.
    b. Exterior, Non-Fire-Rated Hinged Doors: 5 lbf applied perpendicular to door.
    c. Sliding or Folding Doors: 5 lbf applied parallel to door at latch.
    d. Fire Doors: Minimum opening force allowable by authorities having jurisdiction, not to exceed 15 lbf.

3. Provide thresholds not more than 1/2 inch high. Changes in level between 1/4 inch high minimum and 1/2 inch high maximum shall be beveled with a slope not steeper than 1:2.
4. Adjust door closer sweep periods so that, from an open position of 90 degrees, the door will take at least 5 seconds to move to a position of 12 degrees from the latch.
5. Door closers and stops shall not reduce headroom to less than 78 inches.
6. Floor-mounted door stops and similar obstructions shall be installed 4 inches maximum from the face of the wall or partition. Floor stops shall not be located in the path of travel.
7. Handles, pulls, latches, locks, and other operable parts on doors shall be 34 inches minimum and 44 inches maximum above finish floor or ground.
8. The lever of lever actuated latches or locks shall be curved with a return to within 1/2 inch of the door to prevent catching on the clothing of persons during egress.
9. Panic hardware shall be mounted between 36 inches and 44 inches above finished floor, such that the clear width of the exitway is not less than 32 inches measured between the face of the door and the opposite stop. The unlatching force of panic hardware shall not exceed 5 lbf applied in the direction of travel.

2.2 SCHEDULED DOOR HARDWARE

A. Provide door hardware for each door as scheduled in Part 3 "Door Hardware Schedule" Article to comply with requirements in this Section.

1. Door Hardware Sets: Provide quantity, item, size, finish or color indicated, and named manufacturers' products.
2. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.

B. Designations: Requirements for design, grade, function, finish, size, and other distinctive qualities of each type of door hardware are indicated in Part 3 "Door Hardware Schedule" Article. Products are identified by using door hardware designations, as follows:

1. Named Manufacturers' Products: Manufacturer and product designation are listed for each door hardware type required for the purpose of establishing minimum requirements. Manufacturers' names are abbreviated in Part 3 "Door Hardware Schedule" Article.

2.3 MANUFACTURER

A. Source Limitations: Obtain each type of door hardware from single manufacturer.

1. Provide electrified door hardware from same manufacturer as mechanical door hardware unless otherwise indicated. Manufacturers that perform electrical modifications and that are listed by a testing and inspecting agency acceptable to authorities having jurisdiction are acceptable.

B. Subject to compliance with requirements, provide door hardware from the following:

Item:	Manufacturer:
Hinges	Stanley
Continuous Hinge	Stanley
Locksets	Best
Cylinders	Best
Exit Devices	Precision
Closers	Stanley
Door Stops	Trimco
Flush Bolts	Trimco
Flat Goods	Trimco
Threshold & Gasketing	National Guard Products

2.4 MATERIALS

A. Fasteners:

1. Provide door hardware manufactured to comply with published templates prepared for machine, wood, and sheet metal screws. Provide screws that comply with commercially recognized industry standards for application intended, except aluminum fasteners are not permitted. Provide Phillips flat-head screws with finished heads to match surface of door hardware, unless otherwise indicated. Provide surface-concealed fasteners where additional overlapping hardware is required.
2. Combination machine screws and expansion shields shall be used for attaching hardware to concrete or masonry
3. Fasteners exposed to the weather or corrosive environments in the finished work shall be completely non-ferrous.

B. Hinges:

1. Template screw hole locations
2. Minimum of 2 permanently lubricated non-detachable bearings
3. Equip with easily seated, non-rising pins
4. Sufficient size to allow 180-degree swing of door

5. Furnish hinges with five knuckles and flush concealed bearings
6. Provide hinge type as listed in schedule.
7. Furnish 3 hinges per leaf to 7 foot 6 inch height. Add one for each additional 30 inches in height or fraction thereof.
8. Tested and approved by BHMA for all applicable ANSI Standards for type, size, function and finish
9. UL10C listed for Fire
10. Provide electric hinge wires with junction box (JB-2R series) to protect wires from mortar filled frames as required.

C. Geared Continuous Hinges:

1. Tested and approved by BHMA for ANSI A156.26-1996 Grade 1
2. Anti-spinning through fastener
3. UL10C listed for 3 hour Fire rating
4. Non-handed
5. Lifetime warranty
6. Provide Fire Pins for 3-hour fire ratings
7. Sufficient size to permit door to swing 180 degrees

D. Mortise Type Locks and Latches:

1. Tested and approved by BHMA for ANSI A156.13, Series 1000, Operational Grade 1, Extra-Heavy Duty, Security Grade 2 and be UL10C
2. Fit ANSI A115.1 door preparation
3. Functions and design as indicated in the hardware groups
4. Solid, one-piece, 3/4-inch (19mm) throw, anti-friction latchbolt made of self-lubricating stainless steel
5. Deadbolt functions shall have 1 inch (25mm) throw bolt made of hardened stainless steel
6. Latchbolt and Deadbolt are to extend into the case a minimum of 3/8 inch (9.5mm) when fully extended
7. Auxiliary deadlatch to be made of one piece stainless steel, permanently lubricated
8. Provide curved-lip strike with dust box for each latch or lock bolt, with lip extended to protect frame, finished to match door hardware set, unless otherwise indicated.
9. Lever handles must be of forged or cast brass, bronze or stainless steel construction and conform to ANSI A117.1. Levers that contain a hollow cavity are not acceptable
10. Lock shall have self-aligning, thru-bolted trim
11. Levers to operate a roller bearing spindle hub mechanism
12. Mortise cylinders of lock shall have a concealed internal setscrew for securing the cylinder to the lockset. The internal setscrew will be accessible only by removing the core, with the control key, from the cylinder body.
13. Spindle to be designed to prevent forced entry from attacking of lever
14. Provide locksets with 7-pin removable and interchangeable core cylinders
15. Each lever to have independent spring mechanism controlling it
16. Core face must be the same finish as the lockset

E. Exit Devices shall:

1. Tested and approved by BHMA for ANSI 156.3, Grade 1
2. Provide 9001-Quality Management and 14001-Environmental Management.
3. Furnish UL or recognized independent laboratory certified mechanical operational testing to 9 million cycles minimum.
4. Provide a deadlocking latchbolt
5. Non-fire rated exit devices shall have cylinder dogging.
6. Touchpad shall be “T” style with beveled end caps - no overhang to catch clothing
7. Exposed components shall be of true architectural metals and finishes.
8. Lever design shall match lockset lever design
9. Provide strikes as required by application.
10. Fire exit devices to be listed for UL10C
11. UL listed for Accident Hazard
12. Shall consist of a cross bar or push pad, the actuating portion of which extends across, shall not be less than one half the width of the door leaf.
13. Provide vandal resistant or breakaway trim
14. Sex bolts only at fire doors unless specified for non-rated doors.
15. Full cover end caps with robust end cap mounting bracket

F. Cylinders:

1. Provide cylinder housings, collars, rings & springs as recommended by the manufacturer for proper installation.
2. Provide cylinder cams or tail piece as required to operate all locksets and other keyed hardware items listed in the hardware sets.
3. Provide cylinder guards for all exposed cylinders at exterior perimeter doors.
4. Coordinate and provide as required for related sections.

G. Door Closers shall:

1. Tested and approved by BHMA for ANSI 156.4, Grade 1
2. UL10C certified
3. Closer shall have extra-duty arms and knuckles where required
4. Conform to ANSI 117.1
5. Maximum 2 7/16 inch case projection with non-ferrous cover
6. Separate adjusting valves for closing and latching speed, and backcheck
7. Provide adapter plates, shim spacers and blade stop spacers as required by frame and door conditions
8. Full rack and pinion type closer with 1½“ minimum bore
9. Mount closers on non-public side of door, unless otherwise noted in specification
10. Closers shall be non-handed, non-sized and multi-sized 1 through 6
11. Provide BF or barrier free at non rated doors as required per code

H. Electronic Hold-Open Closers:

1. Integrate with UL listed fire/life safety alarm systems
2. UL Listed for smoke barrier or labeled fire doors
3. UL Listed for self-closing doors without hold-open
4. ANSI 156.15
5. Field adjustable degree of hold-open
6. Non-handed
7. Safe manual engagement/disengagement
8. Convenient system check switch
9. Field adjustable hold-open force
10. Up to 150 degrees hold open pull side mount
11. Up to 129 degrees hold open push side mount

G. Overhead Stops: Non-ferrous base material. Non-plastic mechanisms and finished metal end caps. Field-changeable hold-open, friction and stop-only functions.

H. Auxiliary Power Supply: Specifically designed to support electric locks and access controls.

1. 115VAC input
2. Fire Alarm/Life Safety emergency release included in power supply.
3. Multiple door options four or more control stations, Adjustable Time delay relay,
4. Filtered and regulated
5. Field selectable 12VDC or 24VDC output
6. Provide as specified unless provided by access control provider.

I. Door Stops:

1. Wall stop and floor stop shall be wrought bronze, brass or stainless steel.
2. Provide fastener suitable for wall construction.
3. Coordinate reinforcement of walls where wall stop is specified.
4. Provide dome stops where wall stops are not practical. Provide spacers or carpet riser for floor conditions encountered

J. Flush Bolts:

1. Automatic flush bolts shall meet ANSI/BHMA A156.3
2. Manual flush bolts shall meet BHMA A156.16 requirements.
3. Bottom bolt shall have 12 inch (305 mm) long operating rod. Top bolt operating rod shall be determined by door height, assuring the operator is located less than 72 inches (183 cm) above the floor.
4. Manual Flush Bolts are not to be utilized except where a pair of non-rated doors serving a room not normally occupied is needed for the movement of equipment.
5. Provide dust proof strikes for bottom bolts. Dust proof strikes shall meet BHMA A156.16.

K. Coordinator and Brackets:

1. Coordinator shall comply with ANSI/BHMA A1156.3 Type 21A full width of the opening.
2. Provide mounting brackets for soffit applied hardware.
3. Provide hardware preparation (cutouts) for latches as necessary.

L. Push Plates: Provide with four beveled edges, .050 thickness, size as indicated in hardware set. Furnish oval-head countersunk screws to match finish.

M. Pulls with plates: Provide with four beveled edges, .050 thickness Plate s with ANSI J401 Pull as listed in hardware set. Provide proper fasteners for door construction.

N. Kick Plates: Provide with four beveled edges ANSI J102, 12 inches high by width less 2 inches on single doors and 1 inch on pairs of doors. Furnish oval-head countersunk screws to match finish.

O. Mop Plates: Provide with four beveled edges ANSI J103, 6 inches high by width less 1 inch on single doors and 1 inch on pairs of doors. Furnish oval-head countersunk screws to match finish.

P. Armor Plates: Provide ANSI J101 with four beveled edges, 34 inches high by width less 1 inch on single or pairs of doors. Furnish oval-head countersunk screws to match finish.

1. Provide cutouts for hardware as listed in the hardware sets.
2. Provide Warnock Hersey labeled plates for 3 hour metal fire doors where allowed by local authority.

Q. Seals: All seals shall be finished to match adjacent frame color. Seals shall be furnished as listed in schedule. Material shall be UL listed for labeled openings.

R. Door Bottoms: Surface mounted or concealed door bottom where listed in the hardware sets.

1. Door seal shall be resilient seal of (Neoprene, Polyurethane, Nylon Brush, Silicone)
2. UL10C Positive Pressure rated seal set when required.
3. Coordinate door bottom with threshold height and door undercut such that door bottom provides accurate seal with threshold without binding door or preventing positive latching.
4. Notch as required for adjacent hardware.

S. Thresholds: Thresholds shall be aluminum or bronze type for conformance with ADA requirements. Furnish as specified and/or per details. Provide fasteners and screws suitable for floor conditions.

1. Refer to Door Schedule and Drawing details for type and configuration required. Additionally, where combustible flooring passes under doors, provide fire door thresholds in accordance with applicable regulatory requirements.
2. Saddle, offset, and bumper seal type thresholds as required for applications.

T. Silencers: Furnish silencers on all interior frames, 3 for single doors, 2 for pairs. Omit where any type of seals occur.

U. Knox Co, 3200 Series: Subject to compliance with requirements provide as required.

1. Recessed mount, UL-listed, heavy-duty unit; fabricate from 1/4-inch-thick steel plate.
2. Provide with restricted keying as required by Local Fire Department.
3. Provide one box at each main entry from each parking area designated with a fire emergency lane.
4. Provide tamper alarm switch with each box.
5. Provide outlet boxes, conduit, wiring, and connections as specified in appropriate Division 25-28 Sections.
6. Coordinate finish as required with Architect

V. Junction Box:

1. Coordinate and provide as required by Electrical Contractor.
2. All electrical components to be wired to junction box and labeled.
3. Coordinate with Related Trades

W. Door Monitoring:

1. Door Position Switch: Coordinate with access control provider as required.

   a. At all fired rated door and frames the [concealed] position switch preparation will be provided by the door and frame manufacturer or by an authorized label service agent.

2. Request to Exit: Coordinate with access control provider as required.
3. Latchbolt Monitoring: Coordinate with access control provider as required.

2.5 KEYS AND KEYING

A. Provide keyed brass construction cores and keys during the construction period. Construction control and operating keys and core shall not be part of the Owner's permanent keying system or furnished in the same keyway (or key section) as the Owner's permanent keying system. Permanent cores and keys (prepared according to the accepted keying schedule) will be furnished to the Owner.

B. Cylinders, interchangeable core master keyed system: BEST [Patented] Cormax

C. Permanent keys and cores: Stamped with the applicable key mark for identification. These visual key control marks or codes will not include the actual key cuts. Permanent keys will also be stamped "Do Not Duplicate."

D. Transmit Grand Masterkeys, Masterkeys and other Security keys to Owner by Registered Mail, return receipt requested.

E. For estimate furnish keys in the following quantities:

1. 1 each Grand Masterkeys
2. 4 each Masterkeys
3. 2 each Change keys each keyed core
4. 15 each Construction masterkeys
5. 1 each Control keys
6. 100 each Key Blanks

F. Bitting List: use secured shipment direct from point of origination to Owner upon completion.

G. The Owner, or the Owner's agent, will install permanent cores and return the construction cores to the Hardware Supplier. Construction cores and keys remain the property of the Hardware Supplier.

H. Keying Schedule: Arrange for a keying meeting and programming meeting with Architect Owner and hardware supplier, and other involved parties to ensure locksets and locking hardware are functionally correct and keying and programming complies with project requirements. Furnish 3 typed copies of keying and programming schedule to Architect.

2.6 FABRICATION

A. Manufacturer's Nameplate: Do not provide products that have manufacturer's name or trade name displayed in a visible location except in conjunction with required fire-rated labels and as otherwise approved by Architect.

1. Manufacturer's identification is permitted on rim of lock cylinders only.

B. Base Metals: Produce door hardware units of base metal indicated, fabricated by forming method indicated, using manufacturer's standard metal alloy, composition, temper, and hardness. Furnish metals of a quality equal to or greater than that of specified door hardware units and BHMA A156.18.

C. Fasteners: Provide door hardware manufactured to comply with published templates prepared for machine, wood, and sheet metal screws. Provide screws that comply with commercially recognized industry standards for application intended, except aluminum fasteners are not permitted. Provide Phillips flat-head screws with finished heads to match surface of door hardware, unless otherwise indicated.

1. Concealed Fasteners: For door hardware units that are exposed when door is closed, except for units already specified with concealed fasteners. Do not use through bolts for installation where bolt head or nut on opposite face is exposed unless it is the only means of securely attaching the door hardware. Where through bolts are used on hollow door and frame construction, provide sleeves for each through bolt.
2. Fire-Rated Applications:

a. Wood or Machine Screws: For the following:

1) Hinges mortised to doors or frames; use threaded-to-the-head wood screws for wood doors and frames.
2) Strike plates to frames.
3) Closers to doors and frames.

b. Steel Through Bolts: For the following unless door blocking is provided:

1) Surface hinges to doors.
2) Closers to doors and frames.
3) Surface-mounted exit devices.

3. Spacers or Sex Bolts: For through bolting of hollow-metal doors.
4. Fasteners for Wood Doors: Comply with requirements in DHI WDHS.2, "Recommended Fasteners for Wood Doors."

2.7 FINISHES

A. Designations used in Schedule of Finish Hardware - 3.5, and elsewhere to indicate hardware finishes are those listed in ANSI/BHMA A156.18 including coordination with traditional U.S. finishes shown by certain manufacturers for their products

B. Powder coat door closers to match other hardware, unless otherwise noted.

C. Aluminum items shall be finished to match predominant adjacent material. Seals to coordinate with frame color.

D. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

E. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine doors and frames, with Installer present, for compliance with requirements for installation tolerances, labeled fire-rated door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Examine roughing-in for electrical power systems to verify actual locations of wiring connections before electrified door hardware installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Steel Doors and Frames: For surface applied door hardware, drill and tap doors and frames according to ANSI/SDI A250.6.

B. Wood Doors: Comply with DHI WDHS.5 "Recommended Hardware Reinforcement Locations for Wood Flush Doors."

3.3 INSTALLATION

A. Mounting Heights: Mount door hardware units at heights to comply with the following unless otherwise indicated or required to comply with governing regulations.

1. Standard Steel Doors and Frames: ANSI/SDI A250.8
2. Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."
3. Accessibility Standards: Conform to the 2010 ADA Standards for Accessible Design and the accessibility requirements of the 2016 California Building Code for positioning requirements for disabled.

B. Install each door hardware item to comply with manufacturer's written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing. Do not install surface-mounted items until finishes have been completed on substrates involved.

1. Set units level, plumb, and true to line and location. Adjust and reinforce attachment substrates as necessary for proper installation and operation.
2. Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors according to industry standards.

C. Hinges: Install types and in quantities indicated in door hardware schedule but not fewer than the number recommended by manufacturer for application indicated or one hinge for every 30 inches of door height, whichever is more stringent, unless other equivalent means of support for door, such as spring hinges or pivots, are provided.

D. Lock Cylinders: Install construction cores to secure building and areas during construction period.

1. Replace construction cores with permanent cores as directed by Owner.
2. Furnish permanent cores to Owner for installation.

E. Closers: Coordinate installation of closer for maximum degree of hold open or opening. Hold open arms to stop door from hitting wall. Closers typically mount on interior side of room.

F. Locksets: Provide appropriate backset to center lockset on stile and rail type doors.

G. Thresholds: Set thresholds for exterior doors in full bed of sealant complying with requirements specified in Division 7 Section “Joint Sealants.” Securely and permanently anchor exterior thresholds using countersunk non-ferrous screws to match color of threshold. Stainless steel screws at aluminum thresholds. Set thresholds at interior acoustical rated openings with acoustical sealant.

H. Boxed Power Supplies: Locate power supplies as indicated or, if not indicated, verify location with Architect.

I. Mount cylinder keyways in proper position as recommended by manufacturers

J. Gaskets: install jamb-applied gaskets before closers, overhead stops, rim strikes, etc; fasten hardware over and through these seals where possible. Install sweeps across bottoms of doors before astragals, cope sweeps around bottom pivots, trim astragals to tops of sweeps.

K. Replace fasteners damaged by power-driven tools.

L. Silencers: Set in place before adjusting strikes.

M. Raindrips: Set in waterproof sealant and fasten as recommended by manufacturer.

N. Floor Stops: Floor stops shall be installed a maximum of 4 inches from adjacent walls.

O. Auto Door Bottom shall not be adjusted until substantial completion. Door bottoms are to be raised to highest position while construction occurs (so to not have rubber seal torn or damaged by debris under the door). At substantial completion, adjust door bottom to fully engage and touch the floor for proper sound dampening.

P. Hardware Installer shall coordinate with Security contractor to route cable to connect electrified locks, panic hardware, and fire exit hardware to power transfers or electric hinges at the time these items are installed so as to avoid disassembly and reinstallation of hardware.

Q. Hardware Installer shall also be present with the security contactor when the power is turned on for the testing of the electronic hardware applications. Installer shall make adjustments to solenoids, latches, vertical rods and closer to insure proper and secure operation

R. All wiring for electro-mechanical hardware mounted on the door shall be connected through the power transfer and terminated in the interface junction box.

S. Conductors shall be minimum 18 gage stranded multicolored unless specified otherwise. A minimum 12 inch loop for conductors shall be coiled in the interface junction box. Each conductor shall be permanently marked with its function.

T. If a power supply is specified in the hardware sets, all conductors shall be terminated in the power supply. Make all connections required for proper operation between the power supply and the electro-mechanical hardware. Provide the proper size conductors as specified in the manufacture’s technical documentation.

3.4 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

1. Electric Strikes: Adjust horizontal and vertical alignment of keeper to properly engage lock bolt.
2. Door Closers:

    a. Sweep Period: Adjust sweep period to comply with accessibility requirements and requirements of authorities having jurisdiction.
    b. Opening Force: Set door opening force to comply with requirements in “Quality Assurance” Article above.

3.5 CLEANING AND PROTECTION

A. Clean adjacent surfaces soiled by door hardware installation.

B. Clean operating items as necessary to restore proper function and finish.

C. Provide final protection and maintain conditions that ensure that door hardware is without damage or deterioration at time of Substantial Completion.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain door hardware and door hardware finishes. Refer to Section 017900 "Demonstration and Training."

3.7 DOOR HARDWARE SCHEDULE

A. See door schedule in drawings for hardware set assignments.

B. The hardware set represent the design intent and direction of the Owner and Architect. They shall not be considered a detailed hardware schedule. Omitted items not included in a hardware set shall be scheduled with the appropriate additional hardware required for proper application and functionality.

C. Manufacturer's Abbreviations:

1. BE BEST
2. NA National Guard Products
3. PE Pemko
4. PR Precision
5. TR Trimco
6. ST Stanley
7. DJ Don Jo
8. AB ABH Manufacturing
9. SD Stanley Door Closers
10. ZE Zero

D. Hardware Sets:

SET #001

2	Continuous Hinge	661 CE-58 x Sch Opt	AL	ST

END OF SECTION 087100

SECTION 087113 - AUTOMATIC DOOR OPERATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes power door operators for swinging doors.

B. Related Requirements:

1. Division 08 Sections for doors and entrances that need reinforcement for automatic door operators.
2. Division 26 Sections for tie-in to power, fire alarm, and smoke detection/evacuation systems.
3. Division 28 Section “Intrusion Detection” for coordination with intrusion detection system.

1.3 DEFINITIONS

A. AAADM: American Association of Automatic Door Manufacturers.

B. Double-Swing (Doors): A pair of doors that swing with the two doors moving in opposite directions with a mullion between them; each door functioning as a single-swing door.

C. Safety Device: A control that, to avoid injury, prevents a door from opening or closing.

D. For automatic door terminology, see BHMA A156.10 for definitions of terms.

1.4 COORDINATION

A. Coordinate sizes and locations of recesses in concrete floors for recessed control mats that control automatic door operators. Concrete, reinforcement, and formwork requirements are specified elsewhere.

B. Templates: Distribute for doors, frames, and other work specified to be factory prepared and reinforced for installing automatic door operators.

C. Coordinate hardware for doors with operators to ensure proper size, thickness, hand, function, and finish.

D. Electrical System Roughing-in: Coordinate layout and installation of automatic door operators with connections to power supplies, access-control system, fire alarm systems, and smoke detection/evacuation systems.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for automatic door operators.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings: For automatic door operators.

1. Include plans, elevations, sections, hardware mounting heights, and attachment details.
2. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Indicate locations of activation and safety devices.
4. Include diagrams for power, signal, and control wiring.
5. Include plans, elevations, sections, and attachment details for guide rails.

C. Samples: For each exposed product and for each color and texture specified, manufacturer's standard size.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Certificates: For each type of automatic door operator.

C. Field quality-control reports.

D. Sample Warranties: For manufacturer's special warranties.

1.8 CLOSEOUT SUBMITTALS

A. Maintenance Data: For automatic door operators, safety devices, and control systems, to include in maintenance manuals.

1.9 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of automatic door operators that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 10 years' experience installing automatic door operators similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1. Maintenance Proximity: Not more than two hours' normal travel time from Installer's place of business to Project site.

1.10 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of automatic door operators that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Faulty or sporadic operation of automatic door operator, including controls.
b. Deterioration of metals, metal finishes, and other materials beyond normal weathering or use.

2. Warranty Period: Four years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Besam Entrance Solutions; ASSA ABLOY.
2. LCN; an Allegion brand.
3. Stanley Access Technologies.

B. Source Limitations: Obtain automatic door operators, including activation and safety devices, from single source from single manufacturer.

2.2 AUTOMATIC DOOR OPERATORS, GENERAL

A. General: Provide operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for long-term, maintenance-free operation under normal traffic load for occupancy type indicated; and according to UL 325. Coordinate operator mechanisms with door operation, hinges, and activation and safety devices.

B. Electromechanical Operating System: Self-contained unit powered by permanent-magnet dc motor; with closing speed controlled mechanically by gear train and dynamically by braking action of electric motor, connections for power and activation- and safety-device wiring, and manual operation including spring closing when power is off.

C. Hinges: See Section 087100 "Door Hardware" for hinge type for each door that door operator shall accommodate.

D. Housing for Overhead Concealed Operators: Fabricated from minimum 0.125-inch-thick, extruded or formed aluminum and extending full width of door opening including door jambs to conceal door operators and controls. Provide hinged or removable access panels for service and adjustment of door operators and controls. Secure panels to prevent unauthorized access.

E. Cover for Surface-Mounted Operators: Fabricated from 0.125-inch-thick, extruded or formed aluminum; continuous over full width of operator-controlled door opening; with enclosed end caps, provision for maintenance access, and fasteners concealed when door is in closed position. Match same color and finish of adjacent mullion system.

F. Brackets and Reinforcements: Fabricated from aluminum with nonstaining, nonferrous shims for aligning system components.

G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 POWER DOOR OPERATORS

A. Standard: BHMA A156.10 and Section 11B-404.3 of the 2016 California Building Code.

B. Performance Requirements:

1. Opening Force:

a. Power-Operated Swinging Doors: Not more than 30 lbf required to manually open door if power fails.
b. Power-assist door operators shall be connected to the building's stand-by or emergency power system per CBC 11B-404.2.9 Exception b. Refer to Division 26 Section(s).

2. Entrapment-Prevention Force: Not more than 40 lbf required to prevent stopped door in the last 10 degrees of opening from moving in the direction of opening; not more than 30 lbf required to prevent stopped door from moving in direction of closing.

C. Configuration: Operator to control single swinging door.

1. Traffic Pattern: Two way.
2. Operator Mounting: Overhead concealed.

D. Operation: Power opening and spring closing. Provide time delay for door to remain open before initiating closing cycle as required by BHMA A156.10.

E. Operating System: Electromechanical.

F. Microprocessor Control Unit: Solid-state controller.

G. Features:

1. Adjustable opening and closing speed.
2. Adjustable opening and closing force.
3. Adjustable backcheck.
4. Adjustable hold-open time from zero to 30 seconds.
5. Adjustable time delay.
6. Adjustable acceleration.
7. Adjustable limit switch.
8. Obstruction recycle.
9. Automatic door re-open if stopped while closing.
10. On-off/hold-open switch to control electric power to operator; key operated.

H. Controls: Activation and safety devicesaccording to BHMA standards.

1. Activation Device:

a. Push-plate switch on each side of door to activate door operator.
b. Fire alarm, smoke detection/evacuation system.

2. Safety Device: Presence sensor mounted on door header to detect pedestrians in presence zone and to prevent door from closing.
3. Safety Device: One photoelectric beam mounted in guide rails to detect pedestrians in presence zone and to prevent door from closing.
4. Safety Device: Control mat(s) installed on egress side of door to detect pedestrians in presence and safety zones and to prevent door from closing.

I. Exposed Finish: Finish matching door and frame.

1. Color: Match Architect's sample.

2.4 MATERIALS

A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

1. Extrusions: ASTM B 221.
2. Sheet: ASTM B 209.

B. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304, stretcher-leveled standard of flatness, in manufacturer's standard thickness.

C. Fasteners and Accessories: Corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

2.5 CONTROLS

A. General: Provide controls, including activation and safety devices, according to BHMA standards; for condition of exposure; and for long-term, maintenance-free operation under normal traffic load for occupancy type indicated. Coordinate activation and safety devices with door operation and door operator mechanisms.

B. Motion Sensors: Self-contained, K-band-frequency, microwave-scanner units; fully enclosed in plastic housing; adjustable to provide detection field sizes and functions required by BHMA A156.10.

1. Provide capability for switching between bidirectional and unidirectional detection.

C. Push-Plate Switch: Momentary-contact door control switch with flat push-plate actuator with contrasting-colored, engraved message.

1. Configuration: Square push plate with 4-by-4-inch junction box.

a. Mounting: As indicated on Drawings.

2. Push-Plate Material: Stainless steel as selected by Architect from manufacturer's full range.
3. Message: International symbol of accessibility.

D. Electrical Interlocks: Unless units are equipped with self-protecting devices or circuits, provide electrical interlocks to prevent activation of operator when door is locked, latched, or bolted.

E. Tie controls into building fire alarm system and smoke detection/evacuation system.

2.6 FABRICATION

A. Factory fabricate automatic door operators to comply with indicated standards.

B. Form aluminum shapes before finishing.

C. Fabricate exterior components to drain condensation and water passing joints within operator enclosure to the exterior.

D. Use concealed fasteners to greatest extent possible. Where exposed fasteners are required, use countersunk Phillips flat-head machine screws, finished to match operator.

E. Provide metal cladding, completely covering visible surfaces before shipment to Project site. Fabricate cladding with concealed fasteners and connection devices, with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion, and with allowance for thermal expansion at exterior doors.

2.7 ACCESSORIES

A. Signage: As required by cited BHMA standard for type of door and its operation.

1. Application Process: Silk-screened.
2. Provide sign materials with instructions for field application when operators are installed.

2.8 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying strippable, temporary protective covering before shipping.

B. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within range of approved Samples and are assembled or installed to minimize contrast.

2.9 ALUMINUM FINISHES

A. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances, door and frame preparation and reinforcements, and other conditions affecting performance of automatic door operators.

B. Examine roughing-in for electrical systems to verify actual locations of power connections before automatic door operator installation.

C. Examine roughing-in for compressed-air piping systems to verify actual locations of piping connections before automatic door operator installation.

D. Verify that full-height finger guards are installed at each door with pivot hinges where door has a clearance at hinge side greater than 1/4 inch and less than 3/4 inch with door in any position.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install automatic door operators according to manufacturer's written instructions and cited BHMA standard for type of door operation and direction of pedestrian travel, including signage, controls, wiring, remote power units if any, and connection to building's power supply.

1. Do not install damaged components. Fit joints to produce hairline joints free of burrs and distortion.
2. Install operators true in alignment with established lines and door geometry without warp or rack. Anchor securely in place.

B. Controls: Install activation and safety devices according to manufacturer's written instructions and cited BHMA standard for operator type and direction of pedestrian travel. Connect control wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

C. Access-Control System: Connect operators to access-control system as specified in Section 281300 "Access Control."

D. Signage: Apply on both sides of each door as required by cited BHMA standard for type of door operator and direction of pedestrian travel.

3.3 FIELD QUALITY CONTROL

A. Certified Inspector: Engage a Certified Inspector to test and inspect components, assemblies, and installations, including connections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Test and inspect each automatic door operator installation, using AAADM inspection forms, to determine compliance of installed systems with applicable BHMA standards.

C. Automatic door operators will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.4 ADJUSTING

A. Adjust automatic door operators to function smoothly, and lubricate as recommended by manufacturer; comply with requirements of applicable BHMA standards.

1. Adjust operators on exterior doors for weathertight closure.

B. After completing installation of automatic door operators, inspect exposed finishes on doors and operators. Repair damaged finish to match original finish.

C. Readjust automatic door operators and controls after repeated operation of completed installation equivalent to three days' use by normal traffic (100 to 300 cycles).

D. Occupancy Adjustment: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.5 MAINTENANCE SERVICE

A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of automatic door operator Installer. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

1. Engage a Certified Inspector to perform safety inspection after each adjustment or repair and at end of maintenance period. Furnish completed inspection reports to Owner.
2. Perform maintenance, including emergency callback service, during normal working hours.
3. Include 24-hour-per-day, 7-day-per-week, emergency callback service.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain automatic door operators.

END OF SECTION 087113

SECTION 088000 - GLAZING (DEFERRED APPROVAL)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Glass for interior and exterior applications where not specified in other Section(s).
2. Glazing sealants and accessories.

B. Exterior glazing is part of a “Deferred Approval.” Coordinate with the deferred approval requirements in Section 013300 “Submittal Procedures” and with the requirements indicated on the Drawings.

C. Related Requirements:

1. Section 081113 "Hollow Metal Doors and Frames" for glazing provided under this Section and factory installed within hollow metal doors and frames.
2. Section 081416 "Flush Wood Doors" and Section 081433 "Stile and Rail Wood Doors" for glazing provided under this Section and installed within wood doors.
3. Section 084113 "Interior Aluminum-Framed Storefronts" for glazing provided under this Section and field installed within aluminum-framed storefronts.
4. Section 084413 "Glazed Aluminum Curtain Walls and Entrances" for glazing provided under this Section and field installed within glazed aluminum curtain walls and entrances.
5. Section 084426 "Point-Supported Glazing Systems" for glazing provided under this Section and field installed within point-supported glazing systems.
6. Section 088300 "Mirrors."

1.3 DEFINITIONS

A. AAMA: Architectural Aluminum Manufacturers Association

1. AAMA GAG-1, Glass and Glazing
2. AAMA TIR-A4, Reflective Insulating Glass
3. AAMA CWS-12, Structural Properties of Glass

B. ASTM: American Society for Testing and Materials – Latest Edition.

1. ASTM E 997, Test Method for Structural Performance of Glass in Exterior Windows, Curtain Walls and Doors under the influence of Uniform Static Loads by Destructive Methods.
2. ASTM E 998, Test Method for Structural Performance of Glass in Exterior Windows, Curtain Walls and Doors under the influence of Uniform Static Loads by Non-destructive Methods.
3. ASTM C 1048, Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass.
4. ASTM C 1172, Standard Specification for Laminated Architectural Flat Glass.

C. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.

D. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.

E. CBC: 2016 California Building Code.

F. CEC: 2016 California Energy Code.

G. Interspace: Space between lites of an insulating-glass unit.

1.4 COORDINATION

A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
2. Review temporary protection requirements for glazing during and after installation.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For sealants, indicating VOC content.

C. Shop Drawings: Include the following with glazed framing shop drawings required under other Division 08 Section(s):

1. Glass types, make-up, sizes, and thicknesses.
2. Glazing materials manufacturers, products, types, and profiles.
3. Glass bite, edge clearance, and depth of rabbet.
4. Sealant thickness and profile.

D. Glass Samples: For each type of glazing type; 12 inches square.

E. Glazing Accessory Samples: For sealant and colored spacers, in 12-inch lengths. Install sealant Samples between two strips of material representative in color of the adjoining framing system.

F. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

G. Deferred-Approval Submittal: For glass indicated to comply with performance requirements and design criteria, including analysis data stamped and signed by the qualified California-licensed professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer, installer, and professional engineer.

B. Product Certificates: For each type of glass and glazing product, from manufacturer.

C. Product Test Reports: For tinted glass, insulating glass, and glazing sealants, for tests performed by a qualified testing agency.

1. For glazing sealants, provide test reports based on testing current sealant formulations within previous 36-month period.

D. Sample Warranty: For special warranty.

1.8 CLOSE-OUT SUBMITTALS

A. Maintenance Data: For inclusion maintenance manual required by appropriate Division 01 Section; include following:

1. Manufacturer's instructions for maintenance of installed work
2. Methods and frequency recommended for maintaining optimum condition under anticipated use.
3. Precautions against cleaning products and methods which may be detrimental to finishes and performance.

1.9 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of architectural glass and glazing that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports, labels, and calculations. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 10 years' experience installing interior and exterior glazing similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section. Supervisor and installing personnel shall also be "Certified Glass Installers" by the National Glass Association.

C. Engineering Responsibility: Prepare data for glazing, including Shop Drawings, based on testing and engineering analysis for manufacturer's standard units in systems similar to those indicated for the Project and submission of reports of tests performed on manufacturer's standard assemblies.

D. Safety Glazing Standard: 16 CFR 1201 for heat treated and laminated glass, permanently marked with Safety Glazing Certification Council label. Comply with the 2016 CBC.

E. Quality Standards: In addition to standards specified elsewhere, comply with following, unless otherwise specified:

1. GANA's Glazing Manual.
2. GANA's Laminated Glass Reference Manual.
3. IGMA SIGMA TM-3000 Insulating Glass Units

F. Mockups: Build mockups demonstrate aesthetic effects and to set quality standards for materials and execution.

1. Install glazing in mockups as specified in other Section(s).
2. Construct mockup in presence of manufacturer's technical representative.
3. Measurements for glass panels used in mockups will establish fabrication tolerances for the Work.
4. Glass panels used in visual mockups will be fabricated to and representative of the same fabrication tolerances as glass panels used in the Work.
5. Testing shall be performed on mockups according to requirements in other Section(s).
6. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.10 PRECONSTRUCTION TESTING

A. Preconstruction Adhesion and Compatibility Testing: Test each glass product, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.

1. Testing is not required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
2. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
3. Test no fewer than eight Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.

4. Test insulated glass units adhesion pull testing shall be completed at the same time of production and on the same production line using the same processing equipment for the production of the units for the Work. Testing shall be completed at each shift or carton change on units not less than 24 by 36 inches.
5. Conduct desiccant temperature rise testing in accordance with the manufacturer's written recommendations.
6. Schedule enough time for testing and analyzing results to prevent delaying the Work.
7. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.

1.11 DELIVERY, STORAGE, AND HANDLING

A. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.

1.12 FIELD CONDITIONS

A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.

1. Do not install glazing sealant when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or are below 40 deg F.
2. Maintain minimum ambient temperature before, during and 24 hours after installation of glazing compounds.

1.13 WARRANTY

A. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.

1. Warranty Period: 10 years from date of Substantial Completion.

B. Manufacturer's Special Warranty on Laminated Glass: Manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1. Warranty Period: 10 years from date of Substantial Completion.

C. Manufacturer's Special Warranty on Insulating Glass: Manufacturer's standard form in which insulating-glass manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.

1. Warranty Period: 10 years from date of Substantial Completion.

D. Failures include, but are not limited to, the following:

1. Defective manufacture, fabrication, and installation.
2. Deterioration of coating, lamination, and/or hermetic seal.
3. Failure of sealants or gaskets to remain watertight and airtight.
4. Spontaneous glass breakage.
5. Glass breakage due to installation or thermal movement.
6. Scratches.
7. Pinholes in coated spandrel glass.
8. Roller wave distortions exceeding specified limits.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturers: Subject to compliance with requirements, provide products by manufacturers specified in glazing schedules below.

B. Source Limitations for Glass: Obtain from single source from single manufacturer for each glass type.

C. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer for each product and installation method.

2.2 PERFORMANCE REQUIREMENTS

A. General: Installed glazing systems shall withstand normal thermal movement and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight, deterioration of glazing materials; or other defects in construction.

B. Deferred-Approval Design: Engage a qualified California-licensed professional engineer, as defined in Section 014000 “Quality Requirements,” to design exterior glazing.

1. Project Glazing Analysis: Prepared by manufacturer for primary glass or fabricator for fabricated glass units, analyze each glass type and glazing condition to comply with performance requirements and the following:

a. Thermal Analysis:

1) Evaluate effects of partial and full shading of glass under expected service temperature ranges.
2) Evaluate that specified probability of breakage, glass statistical factor, will not be reduced.

b. Wind Load Analysis: Evaluate effects of wind loading and determine design factor, statistical probability of breakage, and center deflection for largest size of each thickness and type of primary glass or fabricated glass units.
c. Heat Strengthened Glass Face Pressure: Evaluate that pressure falls within specified limits.

C. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated determined according to the 2016 CBC and ASTM E 1300.

1. Design Wind Pressures: As indicated on Structural Drawings.
2. Maximum Lateral Deflection: For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or 1 inch, whichever is less.
3. Differential Shading: Design glass to resist thermal stresses induced by differential shading within individual glass lites.

D. Interstory Drift: Accommodate design displacement of adjacent stories indicated.

1. Elastic and Inelastic Displacements: As indicated on Structural Drawings.
2. Test Performance: Complying with criteria for passing based on building occupancy type when tested according to AAMA 501.4 at elastic displacement and inelastic displacement.

E. Seismic Performance: Glazing shall withstand the effects of earthquake motions determined according to the 2016 California Building Code.

1. Seismic Drift Causing Glass Fallout: Complying with criteria for passing based on building occupancy type at elastic displacement and inelastic displacement when tested according to AAMA 501.6 or by engineering analysis.

F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.

1. Temperature Change: 120 def F, ambient; 180 deg F, materials surfaces.

G. Safety Glazing: Where safety glazing is indicated and/or required per the CBC, provide glazing that complies with 16 CFR 1201, Category II.

H. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:

1. For monolithic-glass lites, properties are based on units with lites 6.0 mm thick.
2. For laminated-glass lites, properties are based on products of construction indicated.
3. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
4. U-Factors: Center-of-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F.
5. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
6. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

I. Flatness Tolerances for Heat Strengthened and Tempered Glass:

1. Roller Wave Distortion or Ripple: Deviation from flatness at any peak shall not exceed 0.003 inches from peak to valley for 1/4-inch thick glass as measured per GANA test procedure TD 04-03-26 “Standard Test Method for In-Plant Measurement of Roll Wave in Heat-Treated Architectural Glass.

a. Measurement Device: LiteSentry measurement system or equal.
b. Roll Wave Criteria (Horizontal): Maximum 0.003 center / 0.008 edges (peak to valley).
c. Milidiopter Criteria (90 Percent Surface): Maximum + or - 125A overall, or the highest overall measurement from the approved visual mockp that is less than + or - 125A overall, whichever is less.

2. Bow and Warp: Bow and warp tolerances shall not exceed 1/32-inch per linear foot as measured per ASTM C 1048.

2.3 GLASS PRODUCTS, GENERAL

A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organization below unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.

1. GANA Publications: "Laminated Glazing Reference Manual" and "Glazing Manual."
2. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."

B. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the SGCC. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.

C. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IgCC.

D. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass that complies with performance requirements and is not less than the thickness indicated.

1. Minimum Glass Thickness for Exterior Lites: 6 mm.

2.4 GLASS PRODUCTS

A. Heat-Strengthened Float Glass: ASTM C 1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.

1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.

B. Fully Tempered Float Glass: ASTM C 1048, Kind FT (fully tempered), heat soaked, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.

1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.

C. Ceramic-Coated Spandrel Glass: ASTM C 1048, Condition B, Type I, Quality-Q3, and complying with other requirements specified.

1. Basis-of-Design Product: Subject to compliance with requirements, match same glass type as adjacent insulated vision glazing with ceramic coating applied to #4 surface.
2. Ceramic Coating Color: Match Architect’s sample.

D. Silicone-Coated Spandrel Glass: ASTM C 1048, Condition C, Type I, Quality-Q3, and complying with other requirements specified.

1. Basis-of-Design Product: Subject to compliance with requirements, match same glass type as adjacent insulated vision glazing with silicone coating applied to #4 surface.
2. Silicone Coating Color: Match Architect’s sample.

2.1 LAMINATED GLASS

A. Laminated Glass: ASTM C 1172. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.

1. Construction: Laminate glass with polyvinyl butyral interlayer to comply with interlayer manufacturer's written instructions.
2. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
3. Interlayer Color: Clear unless otherwise indicated.

2.2 INSULATING GLASS

A. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified according to ASTM E 2190.

1. Sealing System: Dual seal, with manufacturer's standard primary sealant (polyisobutylene) and secondary sealant (silicone) in accordance with ASTM C 1249.

a. Color: Black.

2. Spacer: Stainless steel.

a. Color: Black.

3. Desiccant: Molecular sieve or silica gel, or a blend of both.

2.3 GLAZING GASKETS

A. Dense Compression Gaskets: Molded or extruded gaskets of profile and hardness required to maintain watertight seal, made from one of the following:

1. Neoprene complying with ASTM C 864.
2. EPDM complying with ASTM C 864.
3. Silicone complying with ASTM C 1115.
4. Thermoplastic polyolefin rubber complying with ASTM C 1115.

B. Soft Compression Gaskets: Extruded or molded, closed-cell, integral-skinned neoprene, EPDM, silicone or thermoplastic polyolefin rubber gaskets complying with ASTM C 509, Type II, black; of profile and hardness required to maintain watertight seal.

1. Application: Use where soft compression gaskets will be compressed by inserting dense compression gaskets on opposite side of glazing or pressure applied by means of pressure-glazing stops on opposite side of glazing.

C. Lock-Strip Gaskets: Neoprene extrusions in size and shape indicated, fabricated into frames with molded corner units and zipper lock-strips, complying with ASTM C 542, black.

2.4 GLAZING SEALANTS

A. General:

1. Compatibility: Compatible with one another and with other materials they contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
3. Sealant shall have a VOC content of 250 g/L or less.
4. Colors of Exposed Glazing Sealants: As selected by Architect from manufacture’s full range.

B. Glazing Sealant: As recommended by manufacturer for joint type and performance requirements indicated.

2.5 GLAZING TAPES

A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C 1281 and AAMA 800 for products indicated below:

1. AAMA 804.3 tape, where indicated.
2. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
3. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.

2.6 MISCELLANEOUS GLAZING MATERIALS

A. General: Provide products of material, size, and shape complying with referenced glazing standard, with requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.

B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.

C. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.

D. Spacers: Elastomeric blocks or continuous extrusions of hardness required by glass manufacturer to maintain glass lites in place for installation indicated.

E. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).

F. Cylindrical Glazing Sealant Backing: ASTM C 1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

2.7 FABRICATION OF GLAZING UNITS

A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

1. Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.

a. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites to produce square edges with slight chamfers at junctions of edges and faces.

C. Grind smooth and polish exposed glass edges and corners.

D. Glass Tolerances:

1. Squareness of panels governs other tolerances and shall be within 4.0 mm of specified dimensions.
2. Edge lengths shall be within 3.0 mm of specified dimensions.
3. Holes shall be within 1.5 mm of specified locations.
4. Bow shall be better than 0.3 percent.
5. Air Space Gap Tolerance: Plus or minus 1/16 inch at time of fabrication.

E. Glass Holes: Drilled holes shall be straight through. Fitting type shall be as shown in the Contract Documents and approved Shop Drawings. All edges of holes shall be cleaned and free of loose or ground materials.

2.8 EXTERIOR GLASS SCHEDULE

A. Low-E-Coated, Clear Insulated Glass (GL-1):

1. Basis-of-Design Product: Vitro (formerly PPG) "Solarban 90 Solar Control Low-E Glass."
2. Overall Unit Thickness: 1 inch.
3. Minimum Thickness of Each Glass Lite: 6 mm (nominal 1/4 inch).
4. Outdoor Lite: Clear heat-strengthened float glass (fully tempered where safety glazing is required).
5. Interspace Content: Air.
6. Indoor Lite: Clear heat-strengthened float glass (fully tempered where safety glazing is required).
7. Low-E Coating: Triple silver coating deposition on second surface.
8. Visible Light Transmittance: 51 percent minimum.
9. Winter Nighttime U-Factor: 0.29 maximum.
10. Solar Heat Gain Coefficient: 0.23 maximum.
11. Light-to-Solar Gain: 2.22.
12. Safety glazing required.

B. Low-E-Coated, Tinted Insulated Glass (GL-2): Not Used.

C. Low-E-Coated, Ultra-Clear Insulated Glass (GL-3 / Atrium - Vertical Glazing):

1. Basis-of-Design Product: Vitro (formerly PPG) "Solarban 90 Solar Control Low-E Glass."
2. Overall Unit Thickness: Per deferred-approval engineering calculations.
3. Minimum Thickness of Each Glass Lite: Per deferred-approval engineering calculations, but no less than 6 mm (nominal 1/4 inch) for each glass lite.
4. Outdoor Lite: Ultra-clear (Starphire) fully tempered.
5. Interspace Content: Air.
6. Indoor Lite: Ultra-clear (Starphire) fully tempered.
7. Low-E Coating: Triple silver coating deposition on second surface.
8. Visible Light Transmittance: 54 percent minimum.
9. Winter Nighttime U-Factor: 0.29 maximum.
10. Solar Heat Gain Coefficient: 0.23 maximum.
11. Light-to-Solar Gain: 2.35.
12. Safety glazing required.

D. Low-E-Coated, Ultra-Clear Laminated Insulated Glass, Fritted (GL-4 / Atrium - Horizontal/Sloped Glazing):

1. Basis-of-Design Product: Vitro (formerly PPG) ""Solarban 90 Solar Control Low-E Glass."
2. Overall Unit Thickness: Per deferred-approval engineering calculations.
3. Minimum Thickness of Each Glass Lite: Per deferred-approval engineering calculations, but no less than 6 mm (nominal 1/4 inch) for each glass lite.
4. Outdoor Lite: Ultra-clear (Starphire) fully tempered.
5. Interspace Content: Air.
6. Indoor Lites: Ultra-clear (Starphire) fully tempered and laminated.
    a. Interlayer Color: As indicated on Drawings, or if not indicated, clear.
    b. Frit Pattern: Silkscreen applied on third surface, in pattern as indicated on Drawings.
7. Low-E Coating: Triple silver coating deposition on second surface.
8. Visible Light Transmittance: 54 percent minimum.
9. Winter Nighttime U-Factor: 0.29 maximum.
10. Solar Heat Gain Coefficient: 0.23 maximum.
11. Light-to-Solar Gain: 2.35.
12. Safety glazing required.

E. Insulated Spandrel Glass (GL-1S): Ceramic- or Silicone-coated, insulated spandrel glass.

1. Same glass system as GL-1, except provide opacifier on #4 surface.
2. Color: Custom color to match Architect’s sample.

2.9 INTERIOR GLASS SCHEDULE

A. Clear Fully Tempered Float Glass (GL-10): ASTM C 1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) as indicated, Quality-Q3.

1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
2. Minimum Thickness: As indicated on Drawings, or if not indicated, complying with the following:
    a. Lites with a maximum length of 60 inches: 6 mm (nominal 1/4 inch).
    b. Lites with a maximum length of 61-96 inches: 10 mm (nominal 3/8 inch).
    c. Lites with a maximum length of 97-120 inches: 12 mm (nominal 1/2 inch).
3. Safety glazing required.

B. Translucent Laminated Glass (GL-11): ASTM C 1172. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. GlassPro (www.glas-pro.com)

1) Type: As indicated, or if not indicated, as selected by Architect from manufacturer's full range.
2) Minimum Thickness of Each Ply: 3 mm (nominal 1/8 inch).
3) Minimum Interlayer Thickness: 0.030 inch.
4) Safety glazing required.

C. Clear Fire-Protection-Rated Glazing (GL-X)

1. Fire-Protection-Rated Glazing: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on positive-pressure testing according to NFPA 257 or UL 9, including the hose-stream test, and shall comply with NFPA 80.

a. Fire-protection-rated glazing required to have a fire-protection rating of 20 minutes shall be exempt from the hose-stream test.

2. Fire-Protection-Rated Glazing Labeling: Permanently mark each lite of fire-protection-rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name; test standard; whether glazing is permitted to be used in doors or openings; if permitted in openings, whether or not glazing has passed the hose-stream test; whether or not glazing meets 450 deg F (250 deg C) temperature-rise limitation; and the fire-resistance rating in minutes.
3. Laminated Glass with Intumescent Interlayers: Laminated glass made from multiple plies of uncoated, ultraclear float glass; with intumescent interlayers; and complying with 16 CFR 1201, Category II.

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) AGC Glass Company North America, Inc.
2) Pilkington North America.
3) Technical Glass Products.

4. Provide glazing gaskets, glazing sealants, glazing tapes, setting blocks, spacers, edge blocks, and other glazing accessories that are compatible with glazing products and each other and are approved by testing agencies that listed and labeled fire-resistant glazing products with which products are used for applications and fire-protection ratings indicated.
5. Glazing Sealants for Fire-Rated Glazing Products: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 50, Use NT. Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated.

a. Sealants shall have a VOC content of 250 g/L or less.
b. Colors of Exposed Glazing Sealants: Match Architect's samples.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:

1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
2. Presence and functioning of weep systems.
3. Minimum required face and edge clearances.
4. Effective sealing between joints of glass-framing members.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that leave visible marks in the completed Work.

3.3 GLAZING, GENERAL

A. Use methods approved by testing agencies that listed and labeled glazing products.

B. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials unless more stringent requirements are indicated, including those in referenced glazing publications.

C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.

D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.

E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.

G. Provide spacers for glass lites where length plus width is larger than 50 inches.

1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
2. Provide 1/8-inch minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

I. Set glass lites with proper orientation so that coatings face proper orientation as specified.

3.4 TAPE GLAZING

A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.

B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.

C. Cover vertical framing joints by applying tapes to heads and sills first, then to jambs. Cover horizontal framing joints by applying tapes to jambs, then to heads and sills.

D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.

E. Do not remove release paper from tape until right before each glazing unit is installed.

F. Apply heel bead of elastomeric sealant.

G. Center glass lites in openings on setting blocks, and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.

H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.5 GASKET GLAZING (DRY)

A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.

B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.

C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks, and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

E. Install gaskets so they protrude past face of glazing stops.

3.6 SEALANT GLAZING (WET)

A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.

B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.

C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.7 FIELD QUALITY CONTROL

A. Field Quality-Control Testing: Conduct field quality-control testing as specified in other Section(s).

B. Repair or remove work if test results and inspections indicate that it does not comply with specified requirements.

C. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

D. Glazing will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.8 CLEANING AND PROTECTION

A. Immediately after installation remove nonpermanent labels and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.

1. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer. Remove and replace glass that cannot be cleaned without damage to coatings.

C. Remove and replace glass that is damaged during construction period.

D. Wash glass on both exposed surfaces not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

END OF SECTION 088000

SECTION 088300 - MIRRORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes the following types of silvered flat glass mirrors:

1. Tempered glass mirrors qualifying as safety glazing.

1.3 COORDINATION

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of work specified in other Sections to ensure that mirrors can be supported and installed as indicated.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

1. Mirrors. Include description of materials and process used to produce each type of silvered flat glass mirror specified that indicates sources of glass, glass coating components, edge sealer, and quality-control provisions.

B. Sustainable Design Submittals:

1. Product Data: For adhesives, indicating VOC content.

C. Shop Drawings: Include mirror elevations, edge details, mirror hardware, and attachments to other work.

D. Samples: For each type of the following products:

1. Mirrors: 12 inches square, including edge treatment on two adjoining edges.
2. Mirror Clips: Full size.
3. Mirror Trim: 12 inches long.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Certificates: For each type of mirror.

C. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITALS

A. Maintenance Data: For mirrors to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of mirrors that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports.

B. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Protect mirrors according to mirror manufacturer's written instructions and as needed to prevent damage to mirrors from moisture, condensation, temperature changes, direct exposure to sun, or other causes.

B. Comply with mirror manufacturer's written instructions for shipping, storing, and handling mirrors as needed to prevent deterioration of silvering, damage to edges, and abrasion of glass surfaces and applied coatings. Store indoors.

1.9 PROJECT CONDITIONS

A. Environmental Limitations: Do not install mirrors until ambient temperature and humidity conditions are maintained at levels indicated for final occupancy.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard form in which mirror manufacturer agrees to replace mirrors that deteriorate within specified warranty period. Deterioration of mirrors is defined as defects developed from normal use that are not attributed to mirror breakage or to maintaining and cleaning mirrors contrary to manufacturer's written instructions. Defects include discoloration, black spots, and clouding of the silver film.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Guardian Industries.
2. Independent Mirror Industries, Inc.
3. Lenoir Mirror Company.
4. National Glass Industries.
5. Or Equal.

B. Source Limitations for Mirrors: Obtain mirrors from single source from single manufacturer.

C. Source Limitations for Mirror Accessories: Obtain mirror glazing accessories from single source.

2.2 SILVERED FLAT GLASS MIRRORS

A. Glass Mirrors, General: ASTM C 1503; manufactured using copper-free, low-lead mirror coating process.

B. Tempered Clear Glass: Mirror Glazing Quality, for blemish requirements; and comply with ASTM C 1048 for Kind FT, Condition A, tempered float glass before silver coating is applied.

C. Sheet Mirror (Custom):

1. Nominal Thickness: Nominal 1/4 inch (6.0 mm).
2. Bevel: None.
3. Edge: Flat edge.
4. Dimensions: As indicated.

2.3 MISCELLANEOUS MATERIALS

A. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.

B. Edge Sealer: Coating compatible with glass coating and approved by mirror manufacturer for use in protecting against silver deterioration at mirrored glass edges.

C. Film Backing for Safety Mirrors: Film backing and pressure-sensitive adhesive; both compatible with mirror backing paint as certified by mirror manufacturer.

2.4 MIRROR HARDWARE

A. Top Channel/Cleat and Bottom Aluminum J-Channels: Aluminum extrusions with a return deep enough to produce a glazing channel to accommodate mirrors of thickness indicated and in lengths required to cover bottom and top edges of each mirror in a single piece.

1. Bottom Trim: J-channels formed with front leg and back leg not less than 5/16 and 3/4 inch in height, respectively.

a. Product: Subject to compliance with requirements, provide D638 FHA Type "J" Channel by Laurence, C. R. Co., Inc.

2. Top Trim: Formed with front leg with a height of 5/16 inch and back leg designed to fit into the pocket created by wall-mounted aluminum cleat.

a. Product: Subject to compliance with requirements, provide D 1638 Top Channel and D 1637M Mirror Mount System Cleat by Laurence, C. R. Co., Inc.

3. Finish: Clear bright anodized.

B. Fasteners: Fabricated of same basic metal and alloy as fastened metal and matching it in finished color and texture where fasteners are exposed.

C. Anchors and Inserts: Provide devices as required for mirror hardware installation. Provide toothed or lead-shield expansion-bolt devices for drilled-in-place anchors. Provide galvanized anchors and inserts for applications on inside face of exterior walls and where indicated.

2.5 FABRICATION

A. Fabricate mirrors in the shop to greatest extent possible.

B. Fabricate cutouts for notches and holes in mirrors without marring visible surfaces. Locate and size cutouts so they fit closely around penetrations in mirrors.

C. Mirror Edge Treatment (where exposed): Flat polished.

1. Require mirror manufacturer to perform edge treatment and sealing in factory immediately after cutting to final sizes.

D. Film-Backed Safety Mirrors: Apply film backing with adhesive coating over mirror backing paint as recommended in writing by film-backing manufacturer to produce a surface free of bubbles, blisters, and other imperfections.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, over which mirrors are to be mounted, with Installer present, for compliance with installation tolerances, substrate preparation, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected and surfaces are dry.

3.2 INSTALLATION

A. General: Install mirrors to comply with mirror manufacturer's written instructions and with referenced GANA publications. Mount mirrors accurately in place in a manner that avoids distorting reflected images.

B. Provide a minimum air space of 1/8 inch between back of mirrors and mounting surface for air circulation between back of mirrors and face of mounting surface.

C. Wall-Mounted Mirrors: Install mirrors with mirror hardware. Attach mirror hardware securely to mounting surfaces with mechanical fasteners installed with anchors or inserts as applicable. Install fasteners so heads do not impose point loads on backs of mirrors.

1. Top and Bottom Aluminum J-Channels: Provide setting blocks 1/8 inch thick by 4 inches long at quarter points. To prevent trapping water, provide, between setting blocks, two slotted weeps not less than 1/4 inch wide by 3/8 inch long at bottom channel.
2. Mirror Clips: Place a felt or plastic pad between mirror and each clip to prevent spalling of mirror edges. Locate clips so they are symmetrically placed and evenly spaced.

3.3 CLEANING AND PROTECTION

A. Protect mirrors from breakage and contaminating substances resulting from construction operations.

B. Do not permit edges of mirrors to be exposed to standing water.

C. Maintain environmental conditions that will prevent mirrors from being exposed to moisture from condensation or other sources for continuous periods of time.

D. Wash exposed surface of mirrors not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash mirrors as recommended in writing by mirror manufacturer.

END OF SECTION 088300

SECTION 089119 - FIXED LOUVERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes fixed, extruded-aluminum louvers.

B. Related Requirements:

1. Section 076000 "Sheet Metal Flashing and Trim" for flashing to be coordinated with fixed louvers.
2. Section 081113 "Hollow Metal Doors and Frames" for louvers in hollow-metal doors where scheduled.
3. Section 081416 "Flush Wood Doors" for louvers in flush wood doors where scheduled.

1.3 DEFINITIONS

A. Louver Terminology: Definitions of terms for metal louvers contained in AMCA 501 apply to this Section unless otherwise defined in this Section or in referenced standards.

B. Horizontal Louver: Louver with horizontal blades (i.e., the axes of the blades are horizontal).

C. Vertical Louver: Louver with vertical blades (i.e., the axes of the blades are vertical).

D. Drainable-Blade Louver: Louver with blades having gutters that collect water and drain it to channels in jambs and mullions, which carry it to bottom of unit and away from opening.

E. Wind-Driven-Rain-Resistant Louver: Louver that provides specified wind-driven rain performance, as determined by testing according to AMCA 500-L.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. For louvers specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.

B. Shop Drawings: Provide project-specific shop drawings for louvers and accessories.

1. Include plans, elevations, sections, details, and attachments to other work. Show frame profiles and blade profiles, angles, and spacing.
2. Show weep paths, gaskets, flashing, sealant, and other means of preventing water intrusion.
3. Show mullion profiles and locations.

C. Samples: For each type of metal finish required.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Date: For manufacturer and installer.

B. Product Test Reports: Based on evaluation of comprehensive tests performed according to AMCA 500-L by a qualified testing agency or by manufacturer and witnessed by a qualified testing agency, for each type of louver and showing compliance with performance requirements specified.

C. Sample Warranties: For special warranties.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of louvers that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 5 years' experience installing fixed louvers similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1, "Structural Welding Code - Steel."
2. AWS D1.2, "Structural Welding Code - Aluminum."

1.7 COORDINATION

A. Coordinate fixed louver installation with adjoining work to provide a leakproof, secure, and noncorrosive installation.

B. Coordinate installation of miscellaneous metal sub-framing, anchorage items, or other items to be embedded in or attached to other construction before starting that Work. Provide locations, setting diagrams, templates, instructions, and directions for installation. Deliver such items to Project site in time for installation.

1.8 FIELD CONDITIONS

A. Pre-Installation Field Measurements: Coordinate exact hardware and anchorage locations with other Trade Contractors before permanently attaching to other construction.

B. Post-Installed Field Measurements: Field verify and examine actual installed locations of connection hardware and anchorage items prior to installation of Work provided under this Section. Notify General Contractor and Architect immediately of any discrepancies in writing. Provide letter from fixed louver installer indicating acceptance of connection hardware and anchorage items.

1.9 WARRANTY

A. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.

1. Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, and unless otherwise indicated, provide fixed louvers by one of the following:

1. Aerolite; Model SCH401.
2. Construction Specialties, Inc.; Model RS-4700.
3. Ruskin Company; EME520DD.

B. Source Limitations: Obtain louvers from single source from a single manufacturer where indicated to be of same type, design, or factory-applied color finish.

2.2 PERFORMANCE REQUIREMENTS

A. General: Fixed louvers assemblies and associated flashings shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed fixed louver assemblies and associated flashings shall not rattle, leak or loosen, and shall remain watertight and prevent intrusion into the building interior.

B. Structural Performance: Louvers shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of louver components, noise or metal fatigue caused by louver-blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures shall be considered to act normal to the face of the building.

1. Wind Loads: Per the 2016 California Building Code (CBC) based upon criteria indicated on the Structural Drawings.

C. Seismic Performance: Louvers, including attachments to other construction, shall withstand the effects of earthquake motions determined according to the CBC and ASCE/SEI 7.

1. Component Importance Factor: Per the CBC.

D. Louver Performance Ratings: Provide louvers complying with requirements specified, as demonstrated by testing manufacturer's stock units identical to those provided, except for length and width according to AMCA 500-L.

1. Air Flow: As indicated on Drawings.

E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

F. SMACNA Standard: Comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" for fabrication, construction details, and installation procedures.

2.3 FIXED, EXTRUDED-ALUMINUM LOUVERS

A. Interior Louvers:

1. Type: Sight-proof.
2. Louver Depth: As required to meet performance criterial, but no less than 4 inches.
3. Frame and Blade Nominal Thickness: Not less than 0.060 inch for blades and 0.080 inch for frames.
4. Louver Performance Ratings:

a. Free Area: As required to meet performance criteria and mechanical performance indicated.
b. Air Performance: As indicated on Drawings.

B. Exterior, Horizontal, Wind-Driven-Rain-Resistant Louver:

1. Louver Depth: As required to meet performance criteria, but no less than 4 inches.
2. Frame and Blade Nominal Thickness: Not less than 0.060 inch for blades and 0.080 inch for frames.
3. Louver Performance Ratings:

   a. Free Area: As required to meet performance criteria and mechanical performance indicated.
   b. Air Performance: As indicated on Drawings.
   c. Wind-Driven Rain Performance:

      1) Not less than 99 percent effectiveness when subjected to a rainfall rate of 3 inches per hour and a wind speed of 29 mph at a core-area intake velocity of 600 fpm. Class A effectiveness rating.
      2) Not less than 99 percent effectiveness when subjected to a rainfall rate of 8 inches per hour and a wind speed of 50 mph at a core-area intake velocity of 290 fpm. Class A effectiveness rating.

4. AMCA Seal: Mark units with AMCA Certified Ratings Seal.
5. Mullion Type: Concealed.

2.4 LOUVER SCREENS

A. General: Provide screen at each exterior louver.

1. Screen Location for Fixed Louvers: Interior face.
2. Screening Type: Insect screening.

B. Secure screen frames to louver frames with machine screws with heads finished to match louver, spaced a maximum of 6 inches from each corner and at 12 inches o.c.

C. Louver Screen Frames: Fabricate with mitered corners to louver sizes indicated.

D. Insect Screening: Aluminum, 18-by-16 mesh, 0.012-inch wire.

2.5 BLANK-OFF PANELS

A. Uninsulated, Blank-Off Panels: Metal sheet attached to back of louver.

1. Aluminum sheet for aluminum louvers, not less than 0.050-inch nominal thickness.
2. Panel Finish: Same finish applied to louvers.
3. Attach blank-off panels with sheet metal screws.
4. Where exposed to view, blank-off panels shall be finished with a black color.

2.6 MATERIALS

A. Aluminum Extrusions: ASTM B 221, Alloy 6063-T5, T-52, or T6.

B. Aluminum Sheet: ASTM B 209, Alloy 3003 or 5005 with temper as required for forming, or as otherwise recommended by metal producer for required finish.

C. Fasteners: Use types and sizes to suit unit installation conditions.

1. Use tamper-resistant screws for exposed fasteners unless otherwise indicated.
2. For fastening aluminum, use aluminum or 300 series stainless-steel fasteners.
3. For color-finished louvers, use fasteners with heads that match color of louvers.

D. Post-Installed Concrete Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E 488 conducted by a qualified testing agency. Special inspection of post-installed concrete anchors shall be in compliance with CBC Table 1705.3 and the evaluation report for the anchor.

E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.7 FABRICATION

A. Factory assemble louvers to minimize field splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

B. Vertical Assemblies: Where height of louver units exceeds fabrication and handling limitations, fabricate units to permit field-bolted assembly with close-fitting joints in jambs and mullions, reinforced with splice plates.

1. Continuous Vertical Assemblies: Fabricate units without interrupting blade-spacing pattern unless horizontal mullions are indicated.
2. Horizontal Mullions: Provide horizontal mullions at joints unless continuous vertical assemblies are indicated.

C. Maintain equal louver blade spacing, including separation between blades and frames at head and sill, to produce uniform appearance.

D. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.

E. Include supports, anchorages, and accessories required for complete assembly.

F. Provide vertical mullions of type and at spacings indicated, but not more than is recommended by manufacturer, or 72 inches o.c., whichever is less.

1. Fully Recessed Mullions: Where indicated, provide mullions fully recessed behind louver blades. Where length of louver exceeds fabrication and handling limitations, fabricate with close-fitting blade splices designed to permit expansion and contraction.
2. Semirecessed Mullions: Where indicated, provide mullions partly recessed behind louver blades so louver blades appear continuous. Where length of louver exceeds fabrication and handling limitations, fabricate with interlocking split mullions and close-fitting blade splices designed to permit expansion and contraction.

G. Provide subsills made of same material as louvers for recessed louvers.

H. Join frame members to each other and to fixed louver blades with fillet welds concealed from view, threaded fasteners, or both, as standard with louver manufacturer unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.

2.8 ALUMINUM FINISHES

A. Finish louvers after assembly.

B. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: Custom color to match Architect's sample.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and openings, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

3.3 INSTALLATION

A. Locate and place louvers level, plumb, and at indicated alignment with adjacent work.

B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.

C. Form closely fitted joints with exposed connections accurately located and secured.

D. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.

E. Protect unpainted galvanized and nonferrous-metal surfaces that are in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.

F. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Section 079200 "Joint Sealants" for sealants applied during louver installation.

3.4 ERECTION TOLERANCES

A. Erection Tolerances: Install fixed louvers to comply with the following maximum tolerances:

1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
3. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.
4. Alignment:

    a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
    b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
    c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4 inch.

3.5 FIELD QUALITY CONTROL (BY OWNER)

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Field and shop welds in compliance with CBC 1705.2.
2. Post-installed concrete anchors in compliance with CBC 1705.3.
3. Exterior cladding in compliance with CBC 1705.12.5.

B. Repair or remove work if test results and inspections indicate that it does not comply with specified requirements.

C. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

D. Fixed louvers will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.6 ADJUSTING AND CLEANING

A. Clean exposed louver surfaces that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate during construction period.

B. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.

C. Restore louvers damaged during installation and construction so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.

1. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

END OF SECTION 089119

SECTION 092116 - GYPSUM BOARD SHAFT WALL ASSEMBLIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes gypsum board shaft wall assemblies.

B. Related Requirements:

1. Section 092900 "Gypsum Board" for gypsum board panels and accessories not provided as part of this Section.

1.3 ACTION SUBMITTALS

A. Product Data: For each component of gypsum board shaft wall assembly.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: For each gypsum board shaft wall assembly, for tests performed by a qualified testing agency. Include fire-resistance rating test data and acoustical test data. Unlisted manufacturers and products will not be accepted.

C. Research/Evaluation Reports: For post-installed anchors and power-actuated fasteners, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

D. Field quality control reports.

1.5 QUAILITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of gypsum board shaft wall assemblies that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports and ICC evaluation reports.

B. Installer Qualifications: A firm with not less than 5 years' experience installing gypsum board shaft wall assemblies similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section. Installer shall also be a member of the Western Wall and Ceiling Contractor's Association.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Comply with ASTM C 840 requirements or with gypsum board manufacturer's written recommendations, whichever are more stringent.

B. Unless using gypsum products that are specifically manufactured for limited exposure, do not install interior products until installations areas are protected from moisture.

C. Do not install panels that are wet, moisture damaged, or mold damaged.

1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.

B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.

2.2 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. CertainTeed Corporation.
2. Georgia-Pacific Building Products.
3. National Gypsum Company.
4. PABCO Gypsum.
5. United States Gypsum.

B. Source Limitations: Obtain all gypsum board shaft wall panels (provided under this Section) and gypsum panels provided under Section 092900 “Gypsum Board” from single manufacturer. Do NOT mix-and-match gypsum board panel products that have not been tested together.

2.3 GYPSUM BOARD SHAFT WALL ASSEMBLIES

A. Fire-Resistance Rating: As indicated.

B. STC Rating: As indicated.

C. Gypsum Shaftliner Board:

1. Moisture- and Mold-Resistant Type X: ASTM C 1396; manufacturer's proprietary fire-resistive liner panels with ASTM D 3273 mold-resistance score of 10 as rated according to ASTM D 3274, 1 inch thick, with double beveled long edges.

D. Non-Load-Bearing Steel Framing, General: Complying with ASTM C 645 requirements for metal unless otherwise indicated and complying with requirements for fire-resistance-rated assembly indicated.

1. Protective Coating: Coating with equivalent corrosion resistance of ASTM A 653, G40, unless otherwise indicated.

E. Studs: Manufacturer's standard profile for repetitive, corner, and end members as follows:

1. Depth: As indicated.
2. Minimum Base-Metal Thickness: As indicated, but no less than 0.033 inch.

F. Runner Tracks: Manufacturer's standard J-profile track with manufacturer's standard long-leg length, but at least 2 inches long and matching studs in depth.

1. Minimum Base-Metal Thickness: As indicated, but no less than 0.033 inch.

G. Elevator-Hoistway-Entrance Struts: Manufacturer's standard J-profile jamb strut with long-leg length of 3 inches, matching studs in depth, and not less than 0.033 inch thick.

H. Finish Panels: Gypsum board as specified in Section 092900 "Gypsum Board."

I. Batt / Blanket Insulation: As specified in Section 092900 "Gypsum Board."

2.4 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with shaft wall manufacturer's written instructions.

B. Trim Accessories: Cornerbead, edge trim, and control joints of material and shapes as specified in Section 092900 "Gypsum Board" that comply with gypsum board shaft wall assembly manufacturer's written instructions for application indicated.

C. Mechanical Fasteners for Cold-Formed Steel Framing Connections: ASTM C 1513, corrosion-resistant-coated, self-drilling, self-tapping steel drill screws.

1. Head Type: Low-profile head beneath gypsum panels, manufacturer's standard elsewhere.

D. Steel Drill Screws for Application of Gypsum Board to Cold-Formed Steel Framing: ASTM C 1002 unless otherwise indicated.

E. Track Fasteners: Power-driven fasteners of size and material required to withstand loading conditions imposed on shaft wall assemblies without exceeding allowable design stress of track, fasteners, or structural substrates in which anchors are embedded.

1. Post-Installed Concrete Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E 488 conducted by a qualified testing agency. Special inspection of post-installed anchors shall be in compliance with the 2016 California Building Code (CBC) Table 1705.3 and the evaluation report for the anchor.
2. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E 1190 conducted by a qualified testing agency.

F. Reinforcing: Galvanized-steel reinforcing strips with 0.033-inch minimum thickness of base metal (uncoated).

G. Perimeter Joints and Penetrations through Gypsum Board Shaft Wall Assemblies: As specified in Section 092900 "Gypsum Board."

H. Gypsum Board Cants:

1. Gypsum Board Panels: As specified in Section 092900 "Gypsum Board," Type X, 5/8-inch panels.
2. Non-Load-Bearing Steel Framing: As specified in Section 092216 "Non-Structural Metal Framing."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine panels before installation. Reject panels that are wet, moisture damaged, or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Sprayed Fire-Resistive Materials: Coordinate with gypsum board shaft wall assemblies so both elements of Work remain complete and undamaged. Patch or replace sprayed fire-resistive materials removed or damaged during installation of shaft wall assemblies to comply with requirements specified in Section 078100 "Applied Fireproofing."

B. After sprayed fire-resistive materials are applied, remove only to extent necessary for installation of gypsum board shaft wall assemblies and without reducing the fire-resistive material thickness below that which is required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

3.3 INSTALLATION

A. General: Install gypsum board shaft wall assemblies to comply with requirements of fire-resistance-rated assemblies indicated, manufacturer's written installation instructions.

B. Do not bridge building expansion joints with shaft wall assemblies; frame both sides of expansion joints with furring and other support.

C. Install supplementary framing in gypsum board shaft wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, wall-mounted door stops, and similar items that cannot be supported directly by shaft wall assembly framing.

1. Elevator Hoistway: At elevator hoistway-entrance door frames, provide jamb struts on each side of door frame.
2. Reinforcing: Where handrails or other elements directly attach to gypsum board shaft wall assemblies, provide galvanized steel reinforcing strip with 0.054-inch minimum thickness of base metal (uncoated), accurately positioned and secured behind at least one layer of face panel.

D. Penetrations: At penetrations in shaft wall, maintain fire-resistance rating of shaft wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons, elevator floor indicators, and similar items.

E. Isolate perimeter of gypsum panels from building structure to prevent cracking of panels, while maintaining continuity of fire-rated construction.

F. Control Joints: Install control joints in compliance with Section 092900 "Gypsum Board" and according to ASTM C 840 and in specific locations approved by Architect while maintaining fire-resistance rating of gypsum board shaft wall assemblies.

G. Seal gypsum board shaft walls with fire sealant at fire-resistant rated construction and acoustical sealant elsewhere at perimeter of each assembly where it abuts other work and at joints and penetrations within each assembly. Install acoustical sealant to withstand dislocation by air-pressure differential between shaft and external spaces; maintain an airtight and smoke-tight seal; and comply with ASTM C 919 requirements or with manufacturer's written instructions, whichever are more stringent.

H. Gypsum Board Cants: In elevator hoistways where gypsum board shaft-wall assemblies cannot be positioned within 4 inches of the shaft face of structural beams, floor edges, and similar projections into shaft, install 5/8-inch- thick, gypsum board cants covering tops of projections. No recesses allowed (at steel beams especially).

1. Slope cant panels at least 75 degrees from horizontal. Set base edge of panels in adhesive and secure top edges to shaft walls at 24 inches o.c. with screws fastened to shaft wall framing.
2. Where steel framing is required to support gypsum board cants, install framing at 24 inches o.c. and extend studs from the projection to shaft wall framing.

I. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch from the plane formed by faces of adjacent framing.

3.4 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Post-installed concrete anchors.

B. Testing agency will report test results promptly and in writing to Contractor and Architect.

C. Remove and replace work where test results indicated that it does not comply with specified requirements.

D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.5 PROTECTION

A. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.

B. Remove and replace panels that are wet, moisture damaged, or mold damaged.

1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION 092116

SECTION 092216 - NON-STRUCTURAL METAL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Interior steel framing systems for interior partitions and furring.
2. Interior suspension systems for supports for ceilings and suspended soffits.
3. Framing accessories, including, but not limited to: supplementary framing, bracing, bridging, solid blocking, backing, kickers, hole-reinforcing plates, backer plates, and custom-formed shapes as indicated or as required to provide suitable framing attachments for substrate materials.

B. Related Requirements:

1. 054000 "Cold-Formed Metal Framing" for exterior cold-formed metal framing and for interior non-structural metal framing not provided as part of this Section.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Certificates: For each type of code-compliance certification for studs and tracks.

C. Research/Evaluation Reports: For post-installed anchors and power-actuated fasteners, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

D. Field quality control reports.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of non-structural metal framing that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports and evaluation reports.

1. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Steel Stud Manufacturers Association.

B. Installer Qualifications: A firm with not less than 10 years' experience installing non-structural metal framing similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section. Installer shall also be a member of the Western Wall and Ceiling Contractor's Association.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated, according to ASTM E 119 by an independent testing agency.

B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated, according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.

2.2 FRAMING SYSTEMS

A. Framing Members, General: Comply with ASTM C 754 for conditions indicated.

1. Steel Sheet Components: Comply with ASTM C 645 requirements for metal unless otherwise indicated.
2. Protective Coating: ASTM A 653, G40, hot-dip galvanized unless otherwise indicated.

B. Studs and Runners: ASTM C 645.

1. Depth: As indicated on Drawings.
2. Minimum Base-Metal Thickness: As indicated on Drawings, but no less than 0.033 inch. "Embossed" steel studs and tracks are not acceptable.

a. For studs supporting cabinets/millwork: As indicated on Drawings, but no less than 0.054 inch.

C. Slip-Type Head Joints:

1. Single Long-Leg Runner System: ASTM C 645 top runner with minimum 2.5-inch-deep flanges in thickness not less than indicated for studs, installed with studs friction fit into top runner and with continuous bridging located within 12 inches of the top of studs to provide lateral bracing.
2. Deflection Track: Do NOT use slotted deflection track. Use single long-leg runner system.

D. Pre-Notched Backing Track: For items supported from metal framing.

1. Minimum Base-Metal Thickness: As indicated on Drawings, but no less than 0.054 inch.
2. Depth: As indicated on Drawings.

E. Cold-Rolled Channel Bridging: Steel, 0.054-inch minimum base-metal thickness, with minimum 1/2-inch-wide flanges.

1. Depth: As indicated on Drawings.
2. Clip Angle: Not less than 1-1/2 by 1-1/2 inches, 0.068-inch-thick, galvanized steel.

F. Hat-Shaped, Rigid Furring Channels: ASTM C 645.

1. Minimum Base-Metal Thickness: As indicated on Drawings, but no less than 0.033 inch.
2. Depth: As indicated on Drawings.

G. Resilient Furring Channels: 1/2-inch-deep, steel sheet members designed to reduce sound transmission.

1. Configuration: Asymmetrical.
2. Basis-of-Design: Cemco, “RC-1.”

H. Cold-Rolled Furring Channels: 0.054-inch uncoated-steel thickness, with minimum 1/2-inch-wide flanges.

1. Depth: As indicated on Drawings.

I. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches, wall attachment flange of 7/8 inch, minimum uncoated-metal thickness of 0.0179 inch, and depth required to fit insulation thickness indicated.

2.3 SUSPENSION SYSTEMS

A. Tie Wire: ASTM A 641, Class 1 zinc coating, soft temper, 0.062-inch-diameter wire, or double strand of 0.048-inch-diameter wire.

B. Wire Hangers: ASTM A 641, Class 1 zinc coating, soft temper.

1. For Acoustic Panel Ceilings: Refer to Section 095113 "Acoustical Panel Ceilings."
2. For Gypsum Board and Plaster Ceilings/Soffits: Minimum 0.16-inch (#8 gauge) diameter.

C. Carrying Channels: Cold-rolled, commercial-steel sheet with a base-metal thickness of 0.054 inch and minimum 1/2-inch-wide flanges.

1. Depth: As indicated on Drawings.

D. Hat-Shaped, Rigid Furring Channels: ASTM C 645, minimum 0.033-inch bare-steel thickness.

1. Depth: As indicated on Drawings.

E. Steel Studs: ASTM C 645.

1. Minimum Base-Metal Thickness: As indicated on Drawings, but no less that 0.033-inch thickness.
2. Depth: As indicated on Drawings.

2.4 ANCHORS, CLIPS, AND FASTENERS

A. Steel Shapes and Clips: ASTM A 36, zinc coated by hot-dip process according to ASTM A 123.

B. Anchor Bolts: ASTM F 1554, Grade 36, threaded carbon-steel hex-headed bolts and carbon-steel nuts; and flat, hardened-steel washers; zinc coated by mechanically deposition according to ASTM B 695, Class 50.

C. Post-Installed Concrete Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E 488 conducted by a qualified testing agency. Special inspection of post-installed concrete anchors shall be in compliance with CBC Table 1705.3 and the evaluation report for the anchor.

D. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E 1190 conducted by a qualified testing agency.

1. Power-actuated fasteners shall be in compliance with ASCE 7-10 Section 13.4.5:

a. Power-actuated fasteners in concrete or steel shall not be used for sustained tension loads or for brace applications. Power-actuated fasteners in masonry are not permitted unless approved for seismic loading.

1) Exception: Power-actuated fasteners in concrete used for support of acoustical tile or lay-in panel suspended ceiling applications and distributed systems where the service load on any individual fastener does not exceed 90 lbs.

E. Mechanical Fasteners: ASTM C 1513, corrosion-resistant-coated, self-drilling, self-tapping steel drill screws.

1. Head Type: Low-profile head beneath sheathing, manufacturer's standard elsewhere.

2.5 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards.

1. Fasteners for Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.

B. Provide accessories as indicated, or if not indicated, in size, shape, gauge, and configuration to meet performance requirements:

1. Supplementary framing.
2. Bracing, bridging, and blocking.
3. Anchor clips.
4. End clips.
5. Stud kickers and knee braces.
6. Hole reinforcing plates.
7. Backing plates and pre-notched backing tracks.

C. Isolation Strip at Exterior Walls: Provide one of the following:

1. Asphalt-Saturated Organic Felt: ASTM D 226, Type I (No. 15 asphalt felt), nonperforated.
2. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch thick, in width to suit steel stud size.

D. Drywall Penetration Barrier Mesh: Supply and install Barrier Mesh steel expanded metal panels as a penetration barrier behind gypsum wallboard walls and/or ceilings, as indicated on Drawings.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. ClarkDietrich Building Systems; Barrier Mesh for Security.

1) Type: BM10.
2) Material: Carbon steel mesh, complying with ASTM F 1267.
3) Sheet Size: 48 inches by 96 inches.
4) Gauge: 16.
5) Minimum Thickness: 0.048 inches.
6) Diamond: 1 inch.
7) Bond Size, Center-to-Center: 1.00 inches x 2.50 inches.
8) Weight: 41 lbs per 100 square feet.
9) Percent Open Area: 78.

2. The finished shape of the mesh openings shall be a flattened diamond, per ASTM F 1267, Style 2.
3. Barrier Mesh Clips: Barrier Mesh shall be attached to framing members using Barrier Mesh Clips and the appropriate threaded fasteners.

a. For steel framing install a flat head bugle type self-tapping fine thread screw long enough to penetrate the framing member a minimum of 3/8 inch.
b. For wood framing applications install a 1-5/8 inch fine thread drywall screw allowing the fastener to penetrate the framing member at least 1½ inches.
c. In ceiling applications BM-Clips shall be spaced a minimum of (6 or 12) inches along ceiling joists.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.

1. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.

B. Coordination with Sprayed Fire-Resistive Materials:

1. Before sprayed fire-resistive materials are applied, attach offset anchor plates or ceiling runners (tracks) to surfaces indicated to receive sprayed fire-resistive materials. Where offset anchor plates are required, provide continuous plates fastened to building structure not more than 24 inches o.c.
2. After sprayed fire-resistive materials are applied, remove them only to extent necessary for installation of non-load-bearing steel framing. Do not reduce thickness of fire-resistive materials below that are required for fire-resistance ratings indicated. Protect adjacent fire-resistive materials from damage.

3.3 INSTALLATION, GENERAL

A. Installation Standard: ASTM C 754.

1. Gypsum Board Assemblies: Also comply with requirements in ASTM C 840 that apply to framing installation.

B. Install framing and accessories plumb, square, and true to line, with connections securely fastened.

C. Backing: Secure pre-notched backing track to studs. Install backing and supplementary framing for support of plumbing fixtures, toilet partitions, wall cabinets, toilet accessories, hardware, opening frames, equipment services, heavy trim, grab bars, furnishings, and similar construction.

D. Install bracing at terminations in assemblies.

E. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

3.4 INSTALLING FRAMED ASSEMBLIES

A. Install framing system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.

1. Single-Layer Application: As indicated.
2. Multilayer Application: As indicated.
3. Tile Backing Panels: 16 inches o.c. unless otherwise indicated.

B. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.

C. Install studs so flanges within framing system point in same direction.

D. Install tracks (runners) at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts that penetrate partitions above ceiling.

1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.

    a. Do NOT use slotted deflection track. Use single long-leg runner system.

2. Bridging: Install horizontal bridging in wall studs, spaced in rows indicated, but not more than 48 inches apart. Fasten at each stud intersection.

    a. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches of single deflection track. Cold-rolled steel channel, mechanically fastened to webs of punched studs.
    b. Bridging: Cold-rolled steel channel, mechanically fastened to webs of punched studs.

3. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install runner track section (for cripple studs) at head and secure to jamb studs.

    a. Install king-post stud at each jamb with a minimum flange of 3-inches unless otherwise indicated.
    b. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.

4. Other Framed Openings: Install header and sill section and secure to jamb studs as indicated.
5. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
6. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.
7. Curved Partitions:

    a. Bend track to uniform curve and locate straight lengths so they are tangent to arcs.
    b. Begin and end each arc with a stud, and space intermediate studs equally along arcs. On straight lengths of no fewer than two studs at ends of arcs, place studs 6 inches o.c.

8. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

E. Z-Shaped Furring Members:

1. Erect insulation, specified in Section 072100 "Thermal Insulation," vertically and hold in place with Z-shaped furring members spaced as indicated on Drawings.
2. Except at exterior corners, securely attach narrow flanges of furring members to wall with screw fasteners spaced at a maximum of 24 inches o.c.
3. At exterior corners, attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw-attach short flange of furring channel to web of attached channel. At interior corners, space second member no more than 12 inches from corner and cut insulation to fit.

F. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch from the plane formed by faces of adjacent framing.

3.5 INSTALLING RESILIENT CHANNELS

A. Walls:

1. Attach single leg resilient channels attachment flange down and at right angles (perpendicular) to studs. Bottom channel (nearest floor) positioned with attachment flange up for ease of attachment. Drive screws through the attachment flange for attachment. Provide screws in accordance with manufacturer's instructions. Nails are not recommended. Fasten channels to studs at each intersection.
2. Locate channels 2" maximum up from floor, within 6" of the ceiling and at no more than 24" intervals. Extend channels into all corners and attach to corner framing. Splice channels directly over studs by nesting (not butting) the channels and driving fastener through both flanges into the support.
3. Screws that are used to attach gypsum board to resilient channel shall only engage the resilient channel and shall not engage any other non-structural metal framing.

B. Ceilings:

1. Attach single leg resilient channels at right angles to ceiling joists/framing. Drive screws through attachment flange for attachment. Provide screws in accordance with manufacturer's instructions. Fasten channels to joists at each intersection. Do not use nails to attach channels to joists. Hold channels away from adjacent walls a minimum of one inch.

3.6 INSTALLING SUSPENSION SYSTEMS

A. Install suspension system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.

B. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.

C. Suspend hangers from building structure as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.

    a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.

2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.

    a. Size supplemental suspension members and hangers to support ceiling loads within deflection limit of L/360.

3. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
4. Do not attach hangers to steel roof deck.
5. Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.
6. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.
7. Do not connect or suspend steel framing from ducts, pipes, or conduit.

D. Fire-Resistance-Rated Assemblies: Wire tie furring channels to supports.

E. Seismic Bracing: Provide sway-brace suspension systems as indicated on Drawings.

F. Installation Tolerances: Install suspension systems that are level to within 1/8 inch in 12 feet measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

3.7 INSTALLING DRYWALL PENETRATION BARRIER MESH

A. Install drywall penetration barrier mesh in compliance with manufacture's written instructions and as follows:

1. Barrier Mesh (BM) sheets may be installed with diamond running in direction most suitable.
2. BM-Clips shall be installed to secure the mesh to the framing members.
3. Mesh joints occurring on framing members may either join staggered or butt together.
4. It is acceptable to overlap mesh joints to achieve tie-in.
5. BM sheets shall join, begin and terminate on a framing member.
6. BM sheets not joining on framing member shall be wire tied with 18GA steel tie wire. Wire tying shall be no less frequent than the installation of Mesh Clips.

3.8 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Post-installed concrete anchors.

B. Testing agency will report test results promptly and in writing to Contractor, Architect, and Owner.

C. Remove and replace work where test results indicated that it does not comply with specified requirements.

D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

END OF SECTION 092216

SECTION 092400 - CEMENT PLASTERING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes exterior cement plastering system, including, but not limited to, the following:

1. Bond breaker.
2. Lath.
3. Factory-blended base coats, separately cast and cured:

    a. Scratch coat, fiber-reinforced.
    b. Brown coat, fiber-reinforced.

4. Reinforcing mesh and level coat.
5. Primer.
6. Elastomeric textured finish coat.
7. Accessories.
8. System also includes application of sheet air barrier, z-shaped furring, and continuous insulation specified in other Sections.

B. Related Sections:

1. Section 061600 "Sheathing" for glass-mat gypsum sheathing substrates.
2. Section 072100 "Thermal Insulation" for rigid mineral-wool board insulation.
3. Section 072713 "Modified Bituminous Sheet Air Barriers" for sheet air barriers and accessories.

    a. Installer of cement plastering system provided under this Section shall be same installer as for sheet air barriers in order to be eligible for specified special weathertightness warranty.

4. Section 076200 "Sheet Metal Flashing and Trim" for sheet metal flashings to the extent not provided under this Section.
5. Section 079200 "Joint Sealants" for sealants installed with cement plaster.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 SEQUENCING AND SCHEDULING

A. Sequence and schedule installation of cement plastering system with sheet air barrier installation to minimize exposure of weather barrier in accordance with weather barrier manufacturer's written instructions.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product, trim, and accessory.

B. Sustainable Design: For sealants and fluid-applied products, include statement of VOC content.

C. Shop Drawings: Provide project-specific shop drawings showing locations of cement plaster system including plans, elevations, sections, details of components, and attachments to other work.

1. Show locations of all expansion joints and control joints.

D. Samples for Initial Selection: For each type of trim accessory and textured finish indicated.

E. Samples for Verification: For the following products:

1. Trim Accessories: Full-size sample in 12-inch-long length for each trim accessory indicated.
2. Textured Finishes: 12 inch square for each color and texture indicated and on same backing indicated for Work.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: For components of cement plastering system, for tests performed by manufacturer and witnessed by a qualifying testing agency.

C. Field quality control reports.

D. Sample Warranty: For special warranty.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 20 years' experience regularly engaged in the production and sales of pre-blended exterior cement plaster systems that have been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance. Manufacturer shall offer 10-year warranty for cement plastering system

B. Installer Qualifications: A firm with not less than 10 years' experience installing exterior cement plaster systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1. Installer of cement plastering system shall also be same installer as for sheet air barrier system specified in Section 072713 "Modified Bituminous Sheet Air Barriers" in order to be eligible for special weathertightness warranty.

C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Build exterior cement plastering mockup as part of overall integrated exterior mockup per Section 014000 "Quality Requirements."
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver all materials in their original sealed containers bearing manufacturer's name and identification of product.

B. Store materials inside under cover, and keep them dry and protected against damage from weather, moisture, direct sunlight, surface contamination, corrosion, construction traffic, and other causes.

C. Protect portland cement based materials (bag products) from moisture and humidity. Store under cover off the ground in a dry location.

D. Handle all products as directed on labeling.

1.9 FIELD CONDITIONS

A. Comply with ASTM C 926 requirements and manufacturer's written instructions.

B. Environmental Requirements, General: Comply with requirements of referenced plaster application standards and recommendations of plaster manufacturer for environmental conditions before, during, and after plaster application.

C. Protect construction below cement plaster system from climatic conditions to prevent moisture / weather damage until the installation of cement plaster system.

D. Protect contiguous work from moisture deterioration and soiling that might result from plastering operations. Provide temporary covering and whatever other provisions may be necessary to minimize harmful spattering of plaster on other work.

E. Cold Weather Requirements: Provide heat and protection (temporary or permanent) as required to protect each coat of plaster from freezing for not less than 24 hours after application. Distribute heat uniformly to prevent concentration of heat on plaster near heat sources; provide deflection or protective screens.

1. Exterior Plaster Work: Do not apply plaster when ambient temperature is less than 40°F and falling.

F. Warm Weather Requirements: Protect plaster against uneven and excessive evaporation and from strong flows of dry air, both natural and artificial. Apply and cure plaster as required by climatic and job conditions to prevent dry out during cure period. Provide suitable coverings, moist curing, and barriers to deflect sunlight and wind, or combinations of these, as required.

1. Exterior Plaster Work: Extreme temperatures may require the use of tarps or plastic sheeting to retard evaporation of scratch and brown coats. Do not install cement plastering system if ambient temperatures are expected to rise above 100 deg F within a 24 hour period.

G. Curing Requirements for Exterior Plaster Work: Apply and cure plaster to prevent plaster drying out during curing period. Use procedures required by climatic conditions, including moist curing, providing coverings, and providing barriers to deflect sunlight and wind.

1. Moist cure by lightly fogging in compliance with manufacturer's written instructions, for a duration of not less than 48 hours after installation. Schedule work accordingly to coordinate plaster operations with curing operations during evenings, weekends, and holidays.

H. Factory-Prepared Finishes: Comply with manufacturer's written recommendations for environmental conditions for applying finishes.

1.10 WARRANTY

A. Special Warranty: Cement plaster manufacturer's standard or customized warranty, in which manufacturer agrees to repair or replace components of cement plastering system that do not comply with requirements within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Bond integrity.
b. Deterioration of cement plastering finishes and other cement plastering materials beyond normal weathering.

2. Warranty Period: 10 years from date of Substantial Completion.

B. Special Weathertightness Warranty: Sheet air barrier manufacturer's standard or customized warranty in which sheet air barrier manufacturer and installer of cement plastering system agree to repair or replace components of cement plastering system, including sheet air barriers, flashings, sealants, and associated accessories that do not comply with requirements or that fail to remain air and/or watertight within specified warranty period.

1. Warranty includes removing and reinstalling cement plaster system, air barriers, flashings, accessories, substrates and overburdens.
2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Basis-of-Design Cement Plaster System: Subject to compliance with requirements, provide the following:

1. Parex USA, Inc., Anaheim, CA; "Parex Armourwall 300 HE."

a. See "Plaster Materials" Article below for specific products eligible for manufacturer's 10 year warranty.

2. Or Comparable Equal, subject to compliance with performance and warranty requirements, in addition to compliance with Section 016000 "Product Requirements."

B. Source Limitation: Obtain cement plaster system components and accessories from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. General Performance (Cement Plastering): Installed cement plaster system shall withstand exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction.

B. Fire-Resistance Ratings: Where indicated, provide cement plaster assemblies identical to those of assemblies tested for fire resistance according to ASTM E 119 by a qualified testing agency.

C. Fire Propagation Characteristics: Combustible products provided under this Section shall be compliant with listed materials from NFPA-285 test data assemblies as specified in Section 072700 "Sheet Air Barriers."

D. Material Compatibility: Cement plastering system materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by cement plastering manufacturer based on testing and field experience.

E. VOC Emissions: Components of cement plaster system shall have a VOC content of 100 g/L or less.

2.3 BOND BREAKER

A. Building Paper: Water-vapor-permeable, asphalt-saturated kraft building paper that complies with ICC-ES AC38, Grade D.

1. Specified product is NOT to be considered the primary air/weather barrier for the exterior wall assembly. Refer to Section 072700 "Sheet Air Barriers" for primary air/weather barrier.

2.4 LATH

A. Expanded-Metal Lath: ASTM C 847, cold-rolled carbon-steel sheet with ASTM A 653, G60, hot-dip galvanized-zinc coating.

1. Vertical Framing: Diamond-mesh lath, self-furring, 2.5 lb/sq. yd.
2. Horizontal Framing: 3/8-inch rib lath, 3.4 lb/sq. yd.

B. Lath Fasteners and Plates:

1. Corrosion resistant fasteners in conformance with AISI Standard S200-2007 and ASTM C 1513 with minimum three thread penetration beyond steel framing members, and minimum 1-1/4 inch corrosion resistant lath plates, with minimum fastener size and length complying with the following:

a. #8 x 3 inch for 1 inch insulation board thickness.
b. #10 x 3-1/2 inches for 1-1/2 inch insulation board thickness.
c. #10 x 4 inch for 2 inch insulation board thickness.

2. Lath Fastener Spacing: Maximum 6 inches vertically along studs.

2.5 PLASTER MATERIALS

A. Stucco Base Coats:

1. Stucco Scratch Coat: Pre-blended, fiber-reinforced, cement plaster scratch coat material shall be in compliance with ASTM C 926, with a nominal overall thickness of 3/8 inch. Base coat shall be applied separately from brown coat, with appropriate cure time between coats.

a. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

1) Parex USA, Inc.; "Fiber-47 Armourwall Sanded."

2. Stucco Brown Coat: Pre-blended, fiber-reinforced, cement plaster scratch and brown coat material shall be in compliance with ASTM C 926, with a nominal overall thickness of 3/8 inch. Combined thickness of base coat and brown coat shall be minimum 5/8 inch and maximum 7/8 inch. Brown coat shall be applied separately from scratch coat, with appropriate cure time between coats.

a. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

1) Parex USA, Inc.; "Fiber-47 Armourwall Sanded."

B. Leveling and Reinforcing Coat: Copolymer based, factory blend of cement proprietary ingredients requiring addition of water, with minimum 4.5 oz. / sq, yd, reinforcing mesh.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Parex USA, Inc.; "Parex Stucco Level Coat."

C. Primers: A 100-percent acrylic-based, vapor permeable, primer designed to reduce variations in surface absorption, improve finish coverage, and improve consistency of finished aesthetics.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Parex USA, Inc.; Type as recommended by manufacturer suitable for finish coat.

D. Elastomeric Finish Coat: Factory-blended, 100-percent acrylic-polymer based elastomeric textured finish, integrally colored.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Parex USA, Inc.; "Parex E-Lastic Elastomeric Finish."

1) Texture: Per approved sample panels and mockup.

2.6 MISCELLANEOUS MATERIALS

A. Air and Weather Barrier: As specified in Section 072713 "Modified Bituminous Sheet Air Barriers."

B. Z-Shaped Furring: As specified in Section 054000 "Cold-Formed Metal Framing."

C. Continuous Insulation: As specified in Section 072100 "Thermal Insulation."

D. Joint Sealant: As specified in Section 079200 "Joint Sealants."

E. Sand Aggregate: ASTM C 897.

F. Water for Mixing and Finishing Plaster: Potable and free of substances capable of affecting plaster set or of damaging plaster, lath, or accessories.

G. Bonding Compound: ASTM C 932.

H. Fasteners for Attaching Metal Lath to Substrates: ASTM C 1063.

I. Wire: ASTM A 641, Class 1 zinc coating, soft temper, not less than 0.0475-inch diameter unless otherwise indicated.

J. Accessories: Foundation weep screed, casing bead, corner lath in compliance with ASTM C 1063, and fabricated of zinc in compliance with ASTM B 69. All accessories shall have perforated or expanded flanges and shall be designed with grounds for the specified thickness of stucco.

K. Aluminum Trim / Joints: Extruded accessories of profiles and dimensions indicated:

1. Basis-of-Design Joints: Subject to compliance with requirements, provide joints by the following:

a. Fry Reglet Corporation.

2. Aluminum: Alloy and temper with not less that the strength and durability properties of ASTM B 221, Alloy 6063-T5.
3. Finish: Baked-enamel finish, in custom color to match Architect's sample.

2.7 PLASTER MIXES

A. General: Comply with ASTM C 926 for applications indicated.

B. Factory-Prepared Scratch, Brown, and Finish-Coat Mixes: Comply with manufacturer's written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
2. Verify that sheathing surfaces are free for damage, deterioration, and moisture damage.
3. Verify that sheathing, air barriers, and continuous insulation have been installed in accordance with referenced standards, manufacturer's written installation instructions, and have passed all tests and inspections.
4. Report deviations from the requirements of project specifications, manufacturer's written instructions, or other conditions that may adversely affect the cement plastering system installation.

B. Examine roof edges, wall framing, flashings, openings, substrates, and junctures at other construction for suitable conditions where cement plastering will be installed.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

1. Begin application only after surfaces are dry.
2. Application of cement plastering system indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Protect contiguous work from moisture deterioration and soiling caused by application of cement plastering. Provide temporary covering and other protection needed to prevent spattering of exterior finish coats on other work.

B. Protect cement plastering substrates, and wall construction behind them from inclement weather during installation. Prevent penetration of moisture behind drainage plane of cement plastering and deterioration of substrates.

C. Prepare and clean substrates to comply with cement plastering manufacturer's written instructions to obtain optimum bond between substrate and cement plastering system.

1. Prepare smooth, solid substrates for plaster according to ASTM C 926.
2. Concrete Substrates: Provide clean, dry, neutral-pH substrate for cement plaster installation. Verify suitability of substrate by performing bond and moisture tests recommended by cement plastering manufacturer.

3.3 INSTALLING AIR AND WEATHER BARRIER

A. Install air and weather barrier as specified in Section 072713 "Modified Bituminous Sheet Air Barriers."

3.4 INSTALLING Z-FURRING SHAPES AND CONTINUOUS INSULATION

A. Erect insulation, specified in Section 072100 "Thermal Insulation," vertically and hold in place with Z-shaped furring members spaced 16 inches o.c.

B. Except at exterior corners, securely attach narrow flanges of furring members to wall framing with screws not exceeding 16 inches on center.

C. At exterior corners, attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw-attach short flange of furring channel to web of adjacent channel. At interior corners, space second member no more than 12 inches from corner and cut insulation to fit.

3.5 INSTALLING BOND BREAKER

A. Cover exposed exterior surface of continuous insulation with bond breaker securely fastened to framing immediately after continuous insulation is installed.

B. Apply horizontally with a 2-inch overlap and a 6 inch end lap, fastened to framing.

3.6 INSTALLING METAL LATH

A. Metal Lath: Install according to ASTM C 1063 and manufacturer’s written instructions.

3.7 INSTALLING ACCESSORIES

A. Install according to ASTM C 1063 and at locations indicated on Drawings.

B. Reinforcement for External (Outside) Corners:

1. Install lath-type, external-corner reinforcement at exterior locations.

C. Control Joints: Locate as approved by Architect for visual effect and as follows:

1. Provide two piece expansion joints in the stucco system where building movement is anticipated: at joints in the substrate or supporting construction, where the system is to be installed over dissimilar construction or substrates, at changes in building height, at floor lines, at columns and cantilevered areas.
2. Unless otherwise indicated, provide one piece expansion joints every 144 sq. ft. Cut and wire tie lath to the expansion joint accessory so lath is discontinuous at or beneath the accessory. Do not exceed length to width ratio of 2-1/2:1 in expansion joint layout and do not exceed more than 18 feet in any direction without an expansion joint. Where casing bead is used back-to-back as the expansion joint, back the joint with barrier membrane.

    a. Review location of control joints with Architect prior to installation.

3. Provide one piece expansion joints at through wall penetrations, above and below doors and windows.
4. Provide minimum 3/8 inch wide joints where the system abuts windows, doors and other through wall penetrations.
5. Provide appropriate accessories at stucco terminations and joints.
6. Provide appropriate sealant at stucco terminations and at stucco accessory butt joints.

3.8 PLASTER APPLICATION

A. General: Comply with ASTM C 926.

1. Do not deviate more than plus or minus 1/4 inch in 10 feet from a true plane in finished plaster surfaces when measured by a 10-foot straightedge placed on surface.
2. Finish plaster flush with metal frames and other built-in metal items or accessories that act as a plaster ground unless otherwise indicated. Where casing bead does not terminate plaster at metal frame, cut base coat free from metal frame before plaster sets and groove finish coat at junctures with metal.
3. Provide plaster surfaces that are ready to receive field-applied finishes indicated.

B. Bonding Compound: Unless otherwise recommended by manufacture, apply on unit masonry and concrete substrates for direct application of plaster.

C. Stucco Base:

1. Scratch Coat:

a. Apply scratch coat to a minimum thickness of 3/8 in, using sufficient trowel pressure to key stucco into lath or to create bond to substrates as applicable.
b. Prior to initial set, scratch horizontally to provide key for bond of brown coat.
c. Moist cure scratch coat with clean potable water for at least 48 hours in accordance with ASTM C926 and the building code following initial application (unless brown coat is applied as soon as the scratch coat has achieved sufficient rigidity to support the brown coat).

2. Brown Coat:

a. Apply brown coat to a minimum thickness of 3/8 in, using sufficient trowel pressure to key stucco into scratch coat.
b. Rod surface to true plane and float to densify.
c. Trowel to smooth and uniform surface to receive acrylic polymer finish coat.
d. Moist cure brown coat with clean potable water for at least 48 hours, in accordance with ASTM C926 and the building codes.

D. Leveling and Reinforcing Coat:

1. After moist curing, allow stucco base to air dry a minimum of 24 hours before applying the leveling and reinforcing coat.
2. Using a stainless steel trowel, apply the stucco leveling coat over the stucco base coat at a thickness of 1/16 to 3/32 in.
3. Fully embed reinforcing mesh into wet leveling coat, including diagonal strips at corners of openings, and trowel smooth. Seam in accordance with manufacturer's written installation instructions.

E. Primer Installation:

1. Remove surface contaminants such as dust or dirt without damaging the substrate.
2. Ambient and surface temperature must be in accordance with manufacturer's written instructions, but no less than 40 deg F during the application and drying time. Supplemental heat and protection from precipitation must be provided as needed.
3. Install primer coat in accordance with manufacturer’s written installation instructions.

F. Elastomeric-Based Finish Coating Installation:

1. Apply finish to stucco that has cured for a duration, with a pH value, in accordance with manufacturer’s written instructions. Apply finish by spraying or troweling with a stainless steel trowel, depending on the specified finish. Follow these general rules for application of finish and manufacturer’s written instructions:

a. Avoid application in direct sunlight.
b. Apply finish in a continuous application, and work a wet edge towards the unfinished wall area. Work to an architectural break in the wall before stopping to avoid cold joints.

c. Weather conditions affect application and drying time. Hot or dry conditions limit working time and accelerate drying. Adjustments in the scheduling of work may be required to achieve desired results; cool or damp conditions extend working time and retard drying and may require added measures of protection against wind, dust, dirt, rain and freezing. Adjust work schedule and provide protection.
d. Do not install separate batches of finish side-by-side.
e. Do not apply finish into or over sealant joints. Apply finish to outside face of wall only.
f. Do not apply finish over irregular or unprepared surfaces, or surfaces not in compliance with the requirements of the project specifications.
g. Do not install finish over high pH (> 10) stucco surfaces or surfaces that have not been fully cured.

2. Apply to provide finish texture and color to match approved sample panels and mockup.

3.9 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Manufacturer's technical representative shall provide technical assistance and guidance for preparation and application of cement plastering system. At a minimum, arrange for manufacturer's technical representative to observe installation of system during mock-up, first 100 square feet of initial installation, at mid-point of the installation, and at completion. Provide additional field observation as required to obtain warranty specified and when requested by Architect or Construction Manager. After each field visit, submit manufacturer's written report of observations within 3 working days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective action.

B. Final Inspection: Arrange for manufacturer's technical personnel to inspect cement plastering installation upon completion, and as required to obtain manufacturer's warranty.

C. If test results or inspections show cement plaster system does not comply with requirements, remove and replace or repair the cement plaster system as recommended in writing by the manufacturer, and make further repairs after retesting and inspecting until system installation passes. Repair damage to plaster caused by testing; follow manufacturer's written instructions.

D. Cement plastering will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.10 PROTECTION

A. Provide protection of installed materials from water infiltration into or behind them.

B. Provide protection of installed cement plaster from dust, dirt, and precipitation.

C. Protect installed primer and finish from dust, dirt, precipitation, and continuous high humidity until fully dry.

D. Provide sealant and backer material at cement plaster terminations to protect against air, water and insect infiltration. Provide weeps at floor lines, window and door heads, and other areas to conduct water to the exterior.

3.11 PLASTER REPAIRS

A. Repair or replace work to eliminate cracks, dents, blisters, buckles, crazing and check cracking, dry outs, efflorescence, sweat outs, and similar defects and where bond to substrate has failed.

3.12 CLEANING

A. Remove temporary protection and enclosure of other work after plastering is complete. Promptly remove plaster from door frames, windows, and other surfaces not indicated to be plastered. Repair floors, walls, and other surfaces stained, marred, or otherwise damaged during plastering.

B. Clean and maintain the stucco finish for a fresh appearance and to prevent water entry into and behind the stucco. Repair cracks, impact damage, spalls, and/or delamination promptly.

C. Maintain adjacent components of construction such as sealants, windows, doors, and flashings to prevent water entry into the wall assembly.

END OF SECTION 092400

SECTION 092900 - GYPSUM BOARD

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Interior gypsum board.
2. Tile backing panels.
3. Cementitious backer units.

B. Related Requirements:

1. Section 054000 "Cold-Formed Metal Framing" for cold-formed metal framing supporting gypsum board assemblies.
2. Section 061600 "Sheathing" for gypsum sheathing for exterior walls.
3. Section 078413 "Penetration Firestopping" and Section 078443 "Joint Firestopping" for sealing and fire-safing perimeters and penetrations through fire-resistant-rated gypsum board assemblies.
4. Section 079200 "Joint Sealants" for sealing perimeters and penetrations through gypsum board assemblies.
5. Section 092116 "Gypsum Board Shaft Wall Assemblies" for metal shaft-wall framing, gypsum shaft liners, and other components of shaft-wall assemblies.
6. Section 092216 "Non-Structural Metal Framing" for non-structural steel framing and suspension systems that support gypsum board panels.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: Product data for adhesives and sealants, indicating VOC content.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: For each fire-resistant-rated and/or acoustic-rated gypsum board wall assembly, for tests performed by a qualified testing agency. Unlisted manufacturers and products will not be accepted.

C. Field quality control reports.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of gypsum board that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports.

B. Installer Qualifications: A firm with not less than 10 years' experience installing gypsum board assemblies similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section. Installer shall also be a member of the Western Wall and Ceiling Contractor's Association.

C. Mockups: Build mockups of at least 100 sq. ft. in surface area to demonstrate aesthetic effects and to set quality standards for materials and execution.

1. Build mockups for the following:

a. Each level of gypsum board finish indicated for use in exposed locations.
b. Each type of gypsum board indicated for use.

2. Apply or install final decoration indicated, including painting and wallcoverings, on exposed surfaces for review of mockups.
3. Simulate finished lighting conditions for review of mockups.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion

1.6 DELIVERY, STORAGE AND HANDLING

A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Comply with ASTM C 840 requirements or gypsum board manufacturer's written instructions, whichever are more stringent.

B. Unless using gypsum products that are specifically manufactured for limited exposure, do not install interior products until installations areas are protected from moisture.

C. Do not install panels that are wet, moisture damaged, and mold damaged.

1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency. Do not "mix-and-match" board types within the same wall that have not been tested.

B. STC-Rated Assemblies: For STC-rated assemblies and demising construction around rooms and spaces designated as acoustically air tight ("AT"), provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency. Comply with Section 098100 "Acoustic Insulation and Sealants."

C. Size: Provide maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

2.2 MANUFACTURERS

A. Manufacturer: Subject to compliance with requirements, provide products by the following:

1. CertainTeed Corporation.
2. Georgia-Pacific Building Products.
3. National Gypsum Company.
4. PABCO Gypsum.
5. United States Gypsum.

B. Source Limitations: Obtain all gypsum board panels (provided under this Section) and gypsum board shaft wall panels provided under Section 092116 “Gypsum Board Shaft Wall Assemblies” from single manufacturer. Do NOT mix-and-match gypsum board panel products that have not been tested together.

2.3 INTERIOR GYPSUM BOARD

A. Gypsum Board, Type X: ASTM C 1396.

1. Thickness: 5/8 inch.
2. Long Edges: Tapered.

B. Gypsum Board, Type C: ASTM C 1396. Manufactured to have increased fire-resistive capability.

1. Thickness: As required by fire-resistance-rated assembly indicated on Drawings.
2. Long Edges: Tapered.

C. Flexible Gypsum Board: ASTM C 1396. Manufactured to bend to fit radii and to be more flexible than standard regular-type gypsum board of same thickness.

1. Thickness: 1/4 and 3/8 inch.
2. Long Edges: Tapered.

D. Glass-Mat Interior Gypsum Board: ASTM C 1658. With fiberglass mat laminated to both sides. Specifically designed for interior use.

1. Core: 5/8 inch, Type X.
2. Long Edges: Tapered.
3. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.

E. Impact-Resistant Gypsum Board: ASTM C 1396 gypsum board, tested according to ASTM C 1629.

1. Core: Type X.
2. Thickness: 5/8 inch.
3. Surface Abrasion: ASTM C 1629, meets or exceeds Level 3 requirements.
4. Indentation: ASTM C 1629, meets or exceeds Level 1 requirements.
5. Long Edges: Tapered.
6. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.

2.4 EXTERIOR GYPSUM BOARD FOR CEILINGS AND SOFFITS

A. Comply with Section 061600 “Sheathing.”

2.5 TILE BACKING PANELS (OTHER THAN WET AREAS / SURFACES)

A. Glass-Mat, Water-Resistant Backing Board: ASTM C 1178, with manufacturer's standard edges.

1. Core: 5/8 inch, Type X.
2. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.

2.6 CEMENTITIOUS BACKER UNITS (WET AREAS / SURFACES)

A. Cementitious Backer Units: ANSI A118.9 or ASTM C 1325 (Type A), with manufacturer's standard edges.

1. Thickness: 1/2 inch, unless otherwise indicated.
2. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.
3. Where used at steam, sauna, showers, and other similar rooms or spaces, cement backer units shall be specifically designated for such use.

2.7 TRIM ACCESSORIES

A. Interior Trim: ASTM C 1047.

1. Material: Galvanized or aluminum-coated steel sheet or rolled zinc.
2. Shapes:
    a. Cornerbead.
    b. LC-Bead: J-shaped; exposed long flange receives joint compound.
    c. L-Bead: L-shaped; exposed long flange receives joint compound.
    d. U-Bead: J-shaped; exposed short flange does not receive joint compound.
    e. Expansion (control) joint.
    f. Curved-Edge Cornerbead: With notched or flexible flanges.

B. Aluminum Trim: Extruded accessories of profiles and dimensions indicated.

1. Subject to compliance with requirements, provide aluminum trim by one of the following:
    a. Fry Reglet Corporation.
    b. Gordon, Inc.
2. Aluminum: Alloy and temper with not less than the strength and durability properties of ASTM B 221, Alloy 6063-T5.
3. Finish: Factory painted, baked enamel finish.

2.8 JOINT TREATMENT MATERIALS

A. General: Comply with ASTM C 475.

B. Joint Tape: As recommended by panel manufacturer.

C. Joint Compound for Interior Gypsum Board: For each coat, use formulation that is compatible with other compounds applied on previous or for successive coats.

1. Prefilling: At open joints and damaged surface areas, use setting-type taping compound.
2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use setting-type taping compound.
    a. Use setting-type compound for installing paper-faced metal trim accessories.
3. Fill Coat: For second coat, use setting-type, sandable topping compound.
4. Finish Coat: For third coat, use setting-type, sandable topping compound.
5. Skim Coat: For final coat of Level 5 finish, use setting-type, sandable topping compound.

D. Joint Compound for Tile Backing Panels:

1. Glass-Mat, Water-Resistant Backing Panel: As recommended by backing panel manufacturer.

E. Joint Compound for Cementitious Backing Units: As recommended by cementitious backer unit manufacturer.

2.9 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards and manufacturer's written instructions.

B. Steel Drill Screws: ASTM C 1002 unless otherwise indicated.

1. Use screws complying with ASTM C 954 for fastening panels to steel members from 0.033 to 0.112 inch thick.
2. Provide hot dipped zinc-coated fasteners complying with ASTM F 2329 in all wet areas.
3. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.

C. Mineral-Fiber Insulation [I-4] (For all STC-rated walls, where required in fire tested assemblies, and where indicated): Minimum 2.5 pcf density, consisting of fibers manufactured from slag or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Roxul, Inc.; "Safe 'N' Sound."

2. Product shall be GreenGuard certified.

D. Batt / Blanket Insulation [I-5]: ASTM C 665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 450, respectively, per ASTM E 84 and in compliance with Section 720 of the 2016 California Building Code:

1. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.
2. Product shall be GreenGuard certified.

E. Gypsum Board Joint Sealant: As specified in Section 079200 "Joint Sealants."

F. Thermal Insulation: As specified in Section 072100 "Thermal Insulation."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and substrates including welded hollow-metal frames and support framing, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLYING AND FINISHING PANELS, GENERAL

A. Comply with ASTM C 840 and GA-216.

B. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.

C. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch of open space between panels. Do not force into place.

D. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.

E. Form control and expansion joints with space between edges of adjoining gypsum panels.

F. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.

1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. in area.
2. Fit gypsum panels around ducts, pipes, and conduits.
3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch-wide joints to install sealant.

G. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments. Provide 1/4- to 1/2-inch-wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.

H. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.

I. Perimeter Joints and Penetrations Through Gypsum Board Assemblies:

1. At Fire-Resistant Rated Assemblies: Comply with Section 078413 "Penetration Firestopping" and Section 078443 "Joint Firestopping."
2. Elsewhere: Comply with requirements in Section 079299 "Joint Sealants," other Section(s) as applicable, as indicated on Drawings, and with the following:

a. Per Section 2508.1 of the 2016 California Building Code, gypsum board shall be assembled and installed in compliance with ASTM C 840 and GA-216, including, but not limited to, the following:

1) ASTM C 840 paragraph 22.4.4: "All cut-outs shall be back filled with compound used for taping and finishing so that there is no opening larger than 1/4 inch between the gypsum board and the penetrating element."
2) GA-216 paragraph 19.9.1: "All cut edges and openings around pipes and fixtures shall be caulked flush with water-resistant flexible sealant."

J. Install batt / blanket insulation attenuation blankets before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.

3.3 APPLYING INTERIOR GYPSUM BOARD

A. Install interior gypsum board in the following locations:

1. Glass-Mat Interior Gypsum Board Type X:

a. Vertical and horizontal surfaces installed prior to completion of building envelope.
b. At wet walls in toilet rooms and other areas not indicated to receive ceramic tile.
c. Interior surface of exterior walls.

2. Impact-Resistant Gypsum Board Type X:

a. At interior exit stairways, and elevator hoistway enclosures, in accordance with “Performance Requirements” article.
b. At vertical surfaces within all corridors, hallways, lobbies, vestibules, atriums, and walls in toilet rooms not receiving tile. At non-fire-rated locations, impact-resistant gypsum board shall be installed from floor level to a height no less than 6-inches above finished ceiling, with Type X board from top of impact resistant board to underside of structure.

3. Flexible Type: Apply in double layer at curved assemblies.
4. Cementitious Backer Board: At shower and other similar wet walls to receive ceramic tile.
5. Glass-Mat, Water-Resistant Backing Board Type X: At walls to receive ceramic tile.
6. Type C: Where required for specific fire-resistance rated assembly indicated.
7. Type X: Vertical and horizontal surfaces unless otherwise indicated.

B. Single-Layer Application:

1. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing unless otherwise indicated.
2. On partitions/walls, apply gypsum panels vertically (parallel to framing) unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.

    a. Stagger abutting end joints not less than one framing member in alternate courses of panels.
    b. At stairwells and other high walls, install panels horizontally unless otherwise indicated or required by fire-resistance-rated assembly.

3. On Z-shaped furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
4. Fastening Methods: Apply gypsum panels to supports with steel drill screws.

C. Multilayer Application:

1. On ceilings, apply gypsum board indicated for base layers before applying base layers on walls/partitions; apply face layers in same sequence. Apply base layers at right angles to framing members and offset face-layer joints one framing member, 16 inches minimum, from parallel base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly.
2. On partitions/walls, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.
3. On Z-shaped furring members, apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.
4. Fastening Methods: Fasten base layers and face layers separately to supports with screws.

D. Curved Surfaces:

1. Install panels horizontally (perpendicular to supports) and unbroken, to extent possible, across curved surface plus 12-inch-long straight sections at ends of curves and tangent to them.
2. For double-layer construction, fasten base layer to studs with screws 16 inches o.c. Center gypsum board face layer over joints in base layer, and fasten to studs with screws spaced 12 inches o.c.

3.4 APPLYING TILE BACKING PANELS

A. Glass-Mat, Water-Resistant Backing Panels: Comply with manufacturer's written installation instructions and install at locations indicated to receive tile. Install with 1/4-inch gap where panels abut other construction or penetrations.

B. Cementitious Backer Units: ANSI A108.11, at shower and other similar wet wall locations indicated to receive tile, as a tile underlayment at wood floors, and where indicated.

C. Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.

3.5 INSTALLING TRIM ACCESSORIES

A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.

B. Control Joints: Install control joints according to ASTM C 840 and in specific locations approved by Architect for visual effect.

C. Interior Trim: Install in the following locations:

1. Cornerbead: Use at outside corners.
2. LC-Bead: Use at exposed panel edges.
3. L-Bead: Use where indicated.
4. U-Bead: Use at exposed panel edges.
5. Curved-Edge Cornerbead: Use at curved openings.

D. Aluminum Trim: Install in locations indicated on Drawings.

3.6 FINISHING GYPSUM BOARD

A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.

B. Prefill open joints, rounded or beveled edges, and damaged surface areas.

C. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.

D. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C 840:

1. Level 2: Ceiling plenum areas, concealed areas, and panels that are substrates for tile.
2. Level 4: At panel surfaces that will be exposed to view unless otherwise indicated.
    a. Primer and its application to surfaces are specified in other Division 09 Sections.
3. Level 5: Provide at the following locations:
    a. All exposed gypsum board surfaces in spaces open to the public, including, but not limited to the following:
        1) Lobbies.
        2) Gallery.
        3) Public corridors and hallways exceeding 30 feet in length
        4) Walls indicated to receive wall coverings.
        5) Walls indicated to receive a dry erase coating.
        6) Walls indicated to receive a dark paint color.
        7) Where indicated.
    b. Primer and its application to surfaces are specified in other Division 09 Sections.

E. Glass-Mat Faced Panels: Finish according to manufacturer's written instructions.

3.7 PROTECTION

A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.

B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.

C. Remove and replace panels that are wet, moisture damaged, and mold damaged.

1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION 092900

SECTION 093013 - INTERIOR CERAMIC TILING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes interior ceramic tiling systems, including, but not limited to, the following:

1. Tile products; includes ceramic, stone, and glass tile.
2. Stone thresholds.
3. Vapor barrier; at showers and where indicated.
4. Shower pan liner; below all showers, whether indicated or not.
5. Waterproof / crack isolation membrane:

    a. Below all tile floors, whether indicated or not.
    b. Below tile walls in all showers, whether indicated or not.

6. Setting materials.
7. Grout materials.
8. Miscellaneous materials and accessories.
9. Testing and application of systems for the reduction of moisture vapor transmission and alkalinity control for interior concrete slabs that are not in compliance with ceramic tile flooring manufacturer’s written requirements.

B. Related Requirements:

1. Section 012100 "Allowances" for moisture vapor emission control allowance.
2. Section 035416 "Hydraulic Cement Underlayment" for self-leveling and patching compound if not provided as part of this Section.
3. Section 079200 "Joint Sealants" for sealing of expansion, contraction, control, and isolation joints in tile surfaces.
4. Section 092900 "Gypsum Board" for tile backer board and cementitious backer units.

1.3 DEFINITIONS

A. General: Definitions in the ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.

B. ANSI A108 Series: ANSI A108.01, ANSI A108.02, ANSI A108.1A, ANSI A108.1B, ANSI A108.1C, ANSI A108.4, ANSI A108.5, ANSI A108.6, ANSI A108.8, ANSI A108.9, ANSI A108.10, ANSI A108.11, ANSI A108.12, ANSI A108.13, ANSI A108.14, ANSI A108.15, ANSI A108.16, and ANSI A108.17, which are contained in its "Specifications for Installation of Ceramic Tile."

C. Module Size: Actual tile size plus joint width indicated.

D. Face Size: Actual tile size, excluding spacer lugs.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review requirements in ANSI A108.01 for substrates and for preparation by other trades.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: Product data for fluid-applied membranes, setting products, and grouts, indicating VOC content.

C. Shop Drawings: Provide project-specific shop drawings, showing locations of each type of tile and tile pattern. Show widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.

D. Samples for Initial Selection: For tile, grout, and accessories involving color selection.

E. Samples for Verification:

1. Full-size units of each type and composition of tile and for each color and finish required.
2. Assembled samples mounted on a rigid panel, with grouted joints, for each type and composition of tile and for each color and finish required. Make samples at least 12 inches square, but not fewer than four tiles. Use grout of type and in color or colors approved for completed Work.
3. Full-size units of each type of trim and accessory for each color and finish required.
4. Stone thresholds in 6-inch lengths.
5. Metal edge strips in 6-inch lengths.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturers and installer.

B. Master Grade Certificates: For each shipment, type, and composition of tile, signed by tile manufacturer and Installer.

C. Product Certificates: For each type of product.

D. Product Test Reports: For tile-setting and -grouting products.

E. Field Quality Control Reports.

F. Sample Warranty.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match and are from same production runs as products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Tile and Trim Units: Furnish quantity of full-size units equal to 3 percent of amount installed for each type, composition, color, pattern, and size indicated.
2. Grout: Furnish quantity of grout equal to 3 percent of amount installed for each type, composition, and color indicated.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications (Ceramic Tile): A firm regularly engaged in producing ceramic tile that has been used for similar applications with successful results, capable of fabricating ceramic tile that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports.

B. Manufacturer Qualifications (Setting Material, Grout, Waterproof / Crack Isolation Membrane): A firm with not less than 10 years' experience regularly engaged in the production and sales of waterproofing / crack isolation membranes for ceramic tile that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

C. Installer Qualifications: A firm with not less than 10 years' experience installing ceramic tile systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.. Firm shall also be a five-star member of the National Tile Contractors Association or a Trowel of Excellence member of the Tile Contractors' Association of America.

D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockup of minimum 100 square feet of each type of tile installation.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.

B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.

C. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.

D. Store liquid materials in unopened containers and protected from freezing.

1.10 FIELD CONDITIONS

A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

1.11 WARRANTY

A. Special Warranty: Manufacturer's standard or customized form, in which manufacturer and installer agree to repair or replace components of waterproofing systems and/or crack isolation systems that do not comply with requirements or that fails to remain watertight within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Cracked tile as a result of cracking in the substrate material.
b. Inability of the waterproofing membrane to stop the passage of water.

2. Warranty also includes removal and replacement of ceramic tile, setting material, grout, and accessories.
3. Warranty Period: 10 years after date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Tile Products:

1. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide tile products from the following:

a. As indicated on Drawings.

2. Source Limitations for Tile: Obtain tile from single source or producer.

a. Obtain tile of each type and color or finish from same production run and of consistent quality in appearance and physical properties for each contiguous area.

B. Waterproofing/Crack Control, Setting Materials, Grout:

1. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide products from the following:

a. Laticrete International, Inc.; See Articles below for specific products.

2. Source Limitations for Waterproofing / Crack Isolation, Setting Materials, Grout: Obtain all setting, grouting, and waterproofing / crack isolation materials from single source, from single manufacturer.

2.2 PRODUCTS, GENERAL

A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1 (ceramic tile) and ANSI 137.2 (glass tile) for types, compositions, and other characteristics indicated.

1. Provide tile complying with Standard grade requirements unless otherwise indicated.

B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCNA installation methods specified in tile installation schedules, and other requirements specified.

C. Factory Blending: For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.

D. Temporary Protective Coating: Protect exposed surfaces of tile against adherence of mortar and grout by precoating with continuous film of petroleum paraffin wax, applied hot. Do not coat unexposed tile surfaces.

2.3 TILE PRODUCTS

A. Ceramic Tile:

1. Basis-of-Design Products: As indicated on Drawings.
2. Composition: As indicated on Drawings.
3. Certification: For porcelain tile, certified by the Porcelain Tile Certification Agency.
4. Module Size: As indicated on Drawings.
5. Thickness: As indicated on Drawings.
6. Dynamic Coefficient of Friction for Floor Tile: Not less than 0.42 according to ANSI A137.1.
7. Tile Color and Pattern: As indicated, or if not indicated, as selected by Architect from manufacturer's full range.
8. Grout Color: As indicated, or if not indicated, as selected by Architect from manufacturer’s full range.
9. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile. Provide shapes as indicated, or if not indicated, as selected from manufacturer's standard shapes.

B. Stone Tile:

1. Basis-of-Design Products: As indicated on Drawings.
2. Stone Types: As indicated on Drawings, complying with the following:

    a. Stone Type: Limestone, complying with ASTM C 568.

3. Abrasion Resistance of Stone Tile for Floors: Not less than 10 according to ASTM C 1353 or ASTM C 241.
4. Dynamic Coefficient of Friction for Floor Tile: Not less than 0.42 according to ANSI A137.1.
5. Provide stone products that are free of defects impairing their function for use indicated, including cracks, seams, and starts.
6. Finish: As indicated on Drawings, or if not indicated, match Architect's sample.
7. Module Size: As indicated on Drawings.
8. Nominal Tile Thickness: As indicated on Drawings.
9. Grout Color: As indicated, or if not indicated, as selected by Architect from manufacturer's full range.
10. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile. Provide shapes as indicated, or if not indicated, as selected from manufacturer's standard shapes.

C. Glass Tile:

1. Basis-of-Design Products: As indicated on Drawings.
2. Module Size: As indicated on Drawings.
3. Grout Color: As indicated, or if not indicated, as selected by Architect from manufacturer's full range.
4. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile. Provide shapes as indicated, or if not indicated, as selected from manufacturer's standard shapes.

2.4 STONE THRESHOLDS

A. General: Fabricate to sizes and profiles indicated or required to provide transition between adjacent floor finishes.

1. Bevel edges at 1:2 slope, with lower edge of bevel aligned with or up to 1/4 inch above adjacent floor surface. Finish bevel to match top surface of threshold. Limit height of threshold to 1/2 inch or less above adjacent floor surface.

B. Quartz Agglomerate: Solid sheets consisting of quartz aggregates bound together with a matrix of filled plastic resin and complying with ICPA SS-1, except for composition.

1. Basis-of-Design Product: Subject to compliance with requirements, provide quartz agglomerate by the following:

    a. As indicated on Drawings.

2. Colors and Patterns: As indicated on Drawings.

3. Profile: As indicated on Drawings and in compliance with the 2010 ADA Standards for Accessible Design and the accessibility requirements of the 2016 California Building Code.

2.5 VAPOR BARRIER

A. Vapor Barrier: Polyethylene Vapor Retarders: ASTM D 4397, 6-mil-thick sheet, with maximum permeance rating of 0.1 perm.

2.6 SHOWER PAN LINER

A. Shower Pan Liner: Sheet membrane, ASTM D 4068, polyethylene core with a fused non-woven polypropylene exterior surface, IAMPO approved as a shower pan liner.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Laticrete International, Inc.; Laticrete HYDRO BAN Sheet Membrane.

2.7 WATERPROOF AND CRACK ISOLATION MEMBRANE

A. General: Manufacturer's standard product, that complies with both ANSI A118.10, A118.12 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Fluid-Applied Membrane: System consists of a single-component, self-curing, liquid rubber polymer that forms a flexible, seamless waterproofing membrane. Membrane shall provide anti-fracture protection of up to 1/8 inch over shrinkage and other non-structural cracks. Membrane is suitable for direct thin-set installation of ceramic tile and stone directly onto membrane.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Laticrete International, Inc.; Laticrete HYDRO BAN Fluid-Applied Membrane

C. Waterproof and crack isolation membrane shall have a VOC content of 65 g/L or less.

2.8 SETTING MATERIALS

A. Latex-Portland Cement Mortar (Thin Set): Fortified, one-step, thin-set mortar complying with both ANSI A118.4 and A118.15.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Laticrete International, Inc.

1) For glass and transparent tile: Laticrete Glass Tile Adhesive.
2) For opaque tile: Laticrete 254 Platinum.

B. Latex-Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.02.

1. Reinforcing Wire Fabric: Galvanized, welded-wire fabric, 2 by 2 inches by 0.062-inch diameter; comply with ASTM A 185 and ASTM A 82, except for minimum wire size.
2. Latex Additive: Manufacturer's standard water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement and aggregate mortar bed.
3. Where used below shower pan liners, provide minimum 1/4-inch-per-foot slope to drain.
4. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Laticrete International, Inc.; Laticrete 3701 Fortified Mortar Bed.

C. Setting materials shall have a VOC content of 65 g/L or less.

2.9 GROUT MATERIALS

A. Water-Cleanable Epoxy Grout: ANSI A118.3.

1. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

a. Laticrete International, Inc.

B. Color: As indicated, or if not indicated, as selected by Architect from manufacturer’s full range.

C. Grout materials shall have a VOC content of 65 g/L or less.

2.10 MISCELLANEOUS MATERIALS

A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.

B. Moisture and Alkalinity Control System: As recommended by flooring manufacturer for mitigation of concrete slabs with moisture emissions and/or alkalinity measurements that are not within flooring manufacturer's written limitations.

C. Waterproof Membrane Accessories: In addition to membrane, provide sealing tape, preformed corners, shapes, and collars for a complete and watertight installation.

D. Temporary Protective Coating: Product indicated below that is formulated to protect exposed surfaces of tile against adherence of mortar and grout; compatible with tile, mortar, and grout products; and easily removable after grouting is completed without damaging grout or tile.

1. Grout release in form of manufacturer's standard proprietary liquid coating that is specially formulated and recommended for use as temporary protective coating for tile.

E. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

F. Grout Sealer: Manufacturer's standard product for sealing grout joints and that does not change color or appearance of grout.

1. Manufacturers: Subject to compliance with requirements, provide one of the following:

a. Laticrete International, Inc.

2. Grout sealer materials shall have a VOC content of 65 g/L or less.

2.11 MIXING MORTARS AND GROUT

A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.

B. Add materials, water, and additives in accurate proportions.

C. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions where tile will be installed, with manufacturer and installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. Verify that substrates for setting tile are firm; dry; clean; free of coatings that are incompatible with tile-setting materials, including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
2. Verify that concrete substrates for tile floors installed with thinset mortar comply with surface finish requirements in ANSI A108.01 for installations indicated.

a. Verify that surfaces that received a steel trowel finish have been mechanically scarified.
b. Verify that protrusions, bumps, and ridges have been removed by sanding or grinding.

3. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.
4. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.
5. Verify that substrates below shower pans are sloped at a minimum of 1/4-inch per foot.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to the ceramic tile and waterproof/crack control membrane manufacturer's written instructions, and with oversight of manufacturer's representative to ensure adhesion of ceramic tile and waterproof/crack control membrane.

B. Concrete Substrates: Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.

1. Mechanically remove, according to manufacturer's written instructions, laitance, glaze, efflorescence, curing compounds, sealers, and hardeners, and other substances that are incompatible with tile-setting materials and that contain soap, wax, oil or silicone, without using solvents.
2. Moisture, Alkalinity, and Bond Testing: Determine the suitability of the concrete subfloor for receiving the waterproof/crack control membrane with regard to moisture content and pH level by moisture and alkalinity tests. Conduct moisture testing in accordance with ASTM F 1869 and ASTM F 2170 unless otherwise recommended by the waterproof/crack control membrane manufacturer. Conduct alkalinity testing as recommended by the manufacturer. Determine the compatibility of the waterproof/crack control membrane to the concrete floors by a bond test in accordance with the manufacturer's recommendations. Submit copy of test reports for moisture and alkalinity content of concrete slab, and bond test, stating date of test, person conducting the test, and the area tested.

    a. Apply moisture and alkalinity control system as recommended by waterproofing manufacturer. Proceed with installation only after substrates pass testing.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

D. Substrate Tolerance for Tile Floors Installed with Thinset Mortar: Where substrate tolerances are not in compliance with ANSI A108.01 for installations indicated, provide a level surface in accordance with ANSI A108.01, manufacturer's written instructions, and the following:

1. Measure surface, grind high spots and protrusions (of concrete, and prior to application of any vapor control system). Fill low spots, so gap at any point between flooring substrate surface and an unleveled, freestanding, straightedge resting on two high spots and place anywhere on the surface does not exceed the following:

    a. Ceramic tile with all edges less than 15 inches:
        1) 1/4 inch in 10 feet, and
        2) 1/16 inch in 12 inches.

    b. Ceramic tile with at least one edge 15 inches in length or longer:
        1) 1/8 inch in 10 feet, and
        2) 1/16 inch in 24 inches.

2. Use compatible trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.

    a. In wet areas with drains, uniformly slope hydraulic cement underlayment toward drains. Flare underlayment to create level surface transition from tile to adjacent flooring material.

E. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

F. Scrape, sand, sweep, and vacuum clean substrates to be covered immediately before product installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

G. Field-Applied Temporary Protective Coating: If indicated under tile type or needed to prevent grout from staining or adhering to exposed tile surfaces, precoat them with continuous film of temporary protective coating, taking care not to coat unexposed tile surfaces.

3.3 VAPOR BARRIER INSTALLATION

A. Place vapor barrier on side of construction indicated on Drawings.

B. Extend vapor barriers to extremities of areas to protect from vapor transmission. Secure vapor barriers in place with adhesives, vapor barrier fasteners, or other anchorage system as recommended by manufacturer. Extend vapor barriers to cover miscellaneous voids in insulated substrates, including those filled with loose-fiber insulation.

C. Seal vertical joints in vapor barriers over framing by lapping no fewer than two studs and sealing with vapor-barrier tape according to vapor-barrier manufacturer's written instructions. Locate all joints over framing members or other solid substrates.

D. Seal joints caused by pipes, conduits, electrical boxes, and similar items penetrating vapor barriers with vapor-barrier tape to create an airtight seal between penetrating objects and vapor barriers.

E. Repair tears or punctures in vapor barriers immediately before concealment by other work. Cover with vapor-barrier tape or another layer of vapor barriers.

3.4 SHEET SHOWER PAN INSTALLATION

A. Install in accordance with ANSI A 108.01-3.6 and manufacturer’s instructions for installation of sheet membrane waterproofing.

B. Overlap sheets minimum 2 inches shingle fashion in direction of water drainage. Seal joints watertight.

C. In shower receptor waterproofing applications, turn sheet membrane installed on floors up vertical surfaces minimum 3 inches higher than flood plane and mechanically fasten to backing or metal studs.

1. Shower Walls: When sheet membrane is turned up and terminated behind backer board, extend minimum 3 inches above flood plane and fasten to substrate with no penetrations less than 2 inches above flood plane.

D. Extend sheet membrane into floor drains. Cut drain opening in sheet membrane and seal to drain body. Apply a bead of sealant between the membrane and drain body. Secure membrane to floor drain with clamping collar.

E. Seal sheet membrane watertight to items penetrating sheet membrane.

F. Secure liner to backing or studs with nails, screws, or staples in top 1" of flashed membrane.

1. Install upturn at dam over the top and fasten on outside face.
2. Provide fasteners or sealants recommended by manufacturer to suit application.
3. Protect weep holes in drain from clogging using a weep protector or pea gravel.
4. Install mortar bed over the waterproofing membrane per TCNA recommendations.

3.5 WATERPROOF / CRACK ISOLATION MEMBRANE INSTALLATION

A. Install waterproof / crack isolation membrane to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof / crack isolation membrane of uniform thickness that is bonded securely to substrate.

B. Allow waterproof / crack isolation membrane to cure and verify by testing that it is watertight before installing tile or setting materials over it.

3.6 CERAMIC TILE INSTALLATION

A. Comply with TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation" for TCNA installation methods specified in tile installation schedules and/or for systems as indicated on Drawings. Comply with parts of the ANSI A108 series "Specifications for Installation of Ceramic Tile" that are referenced in TCNA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.

1. For the following installations, follow procedures in the ANSI A108 series of tile installation standards for providing 95 percent mortar coverage:

a. Exterior tile floors.
b. Tile floors in wet areas, including, but not limited to, toilet rooms and similar areas.
c. Tile floor consisting of tiles 8 by 8 inches or larger.
d. Tile floors consisting of rib-backed tiles.

B. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.

C. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

D. Provide manufacturer's standard trim shapes where necessary to eliminate exposed tile edges.

E. Where accent tile differs in thickness from field tile, vary setting-bed thickness so that tiles are flush.

F. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.

1. Where adjoining tiles on floor, base, walls, or trim are specified or indicated to be same size, align joints.
2. Where tiles are specified or indicated to be whole integer multiples of adjoining tiles on floor, base, walls, or trim, align joints unless otherwise indicated.

G. Joint Widths: Unless otherwise indicated, joint widths shall be in accordance with ANSI A108.02 Section 4.3.8, the ceramic tile manufacturer’s written recommendation, and not less than the following:

1. Ceramic Mosaic Tile: 1/8 inch.
2. Glazed Wall Tile: 1/8 inch.
3. Porcelain Tile:

a. With at least one edge 15 inches or longer: 3/8 inch.
b. With all edges less than 15 inches: 1/4 inch

H. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated and where required per ANSI A108.01. Form joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.

1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.
2. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."

I. Stone Thresholds: Install stone thresholds in same type of setting bed as adjacent floor unless otherwise indicated.

1. Fill joints between such thresholds and adjoining tile set on waterproofing / crack isolation membrane with elastomeric sealant.

J. Grout Sealer: Apply grout sealer according to grout-sealer manufacturer's written instructions. As soon as grout sealer has penetrated grout joints, remove excess sealer and sealer from tile faces by wiping with soft cloth.

3.7 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer's Field Service: Contractor shall engage a manufacturer's technical representative for technical assistance and guidance for preparation and application of waterproof/crack isolation membrane. At a minimum, arrange for manufacturer's technical representative to observe initial installation of waterproof / crack isolation membrane, at mid-point of the installation, and at completion. Provide additional field observation as required to obtain warranty specified and when requested by Architect or Owner. After each field visit, submit manufacturer's written report of observations within 3 business days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective action.

B. Final Waterproofing Inspection: Arrange for waterproof / crack isolation membrane manufacturer's personnel to inspect waterproofing installation upon completion of application.

C. Flood Testing: For ceramic tile flooring areas subject to water (shower rooms, toilet rooms, kitchen areas, etc.), flood test each deck area for leaks, according to recommendations in ASTM D 5957, after completing waterproofing but before overlying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.

1. Flood to a maximum depth not exceeding slab slope. Do not wet any adjacent gypsum board.
2. Flood each area for a duration as required per ASTM D 5957 and Testing Agency, but no less than 24 hours.
3. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing installation is watertight.

D. Owner will engage an independent testing agency to observe flood testing and examine underside of decks and terminations for evidence of leaks during flood testing.

E. If test results or inspections show waterproofing / crack isolation membrane does not comply with requirements, remove and replace or repair the waterproofing as recommended in writing by the manufacturer, and make further repairs after retesting and inspecting until waterproofing installation passes.

F. Prepare test and inspection reports.

3.8 ADJUSTING AND CLEANING

A. Remove and replace tile that is damaged or that does not match adjoining tile. Provide new matching units, installed as specified and in a manner to eliminate evidence of replacement.

B. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.

1. Remove grout residue from tile as soon as possible.
2. Clean grout smears and haze from tile according to tile and grout manufacturer's written instructions but no sooner than 10 days after installation. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.

3.9 PROTECTION

A. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.

B. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.

C. Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces.

3.10 INTERIOR CERAMIC TILE INSTALLATION SCHEDULE

A. Quality Standard: Unless otherwise indicated, comply with TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation" for TCNA installation methods specified in tile installation schedules and/or for systems as indicated on Drawings.

1. The Contract Documents may contain requirements that are more stringent than the referenced TCNA quality standard. Comply with the requirements of Contract Documents in addition to those of the referenced quality standard.

B. Interior Floor Installations, Cracked Concrete Subfloor (On-Ground and Above-Ground): TCNA F125-Full-16.

C. Interior Wall Installations, Metal Studs or Furring over Glass-Matt Water-Resistant Gypsum Backer Board (excluding showers): TCNA W248-16.

D. Shower Receptor and Wall Installations (Curbless): TCNA B421C-16.

END OF SECTION 093013

SECTION 095113 - ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes acoustical panels and exposed suspension systems for ceilings.

B. Related Requirements:

1. Section 092216 "Non-Structural Metal Framing" for seismic bracing if not included as part of this Section.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of size indicated below.

1. Acoustical Panel: Set of 6-inch-square Samples of each type, color, pattern, and texture.
2. Exposed Suspension-System Members, Moldings, and Trim: Set of 6-inch-long Samples of each type, finish, and color.
3. Clips: Full-size seismic clips.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Ceiling suspension-system members.
2. Structural members to which suspension systems will be attached.
3. Method of attaching hangers to building structure.
4. Carrying channels or other supplemental support for hanger-wire attachment where conditions do not permit installation of hanger wires at required spacing.
5. Items penetrating finished ceiling including the following:

a. Lighting fixtures.
b. Air outlets and inlets.
c. Speakers.
d. Sprinklers.
e. Access panels.
f. Security components.
g. Perimeter moldings.
h. Security components.

6. Perimeter moldings.
7. Show operation of hinged and sliding components adjacent to acoustical panels.

B. Qualification Data: For manufacturer and installer.

C. Product Test Reports: For each acoustical panel ceiling, for tests performed by a qualified testing agency.

D. Evaluation Reports: For each acoustical panel ceiling suspension system and anchor/fastener type, from ICC-ES.

E. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For finishes to include in maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Acoustical Ceiling Panels: Full-size panels equal to 2 percent of quantity installed.
2. Suspension-System Components: Quantity of each exposed component equal to 2 percent of quantity installed.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of acoustic panel ceilings that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports Manufacturer shall also have a valid ICC evaluation report for suspension system, including 7/8-inch perimeter metal edge molding for use in seismic design categories D, E, F.

B. Installer Qualifications: A firm with not less than 5 years' experience installing acoustical panel ceilings similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver acoustical panels, suspension-system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.

B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

C. Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.

1.10 FIELD CONDITIONS

A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1. Pressurized Plenums: Operate ventilation system for not less than 48 hours before beginning acoustical panel ceiling installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Products: Subject to compliance with requirements, provide products by the following:

1. As indicated on Drawings.

B. Source Limitations: Obtain each type of acoustical ceiling panel and its supporting suspension system from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Acoustical ceiling shall withstand the effects of earthquake motions determined according to the 2016 California Building Code (CBC).

1. Manufacturer shall have a valid ICC evaluation report for suspension system, including 7/8-inch perimeter metal edge molding, for seismic design categories D, E, F.

B. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: Class A according to ASTM E 1264.
2. Smoke-Developed Index: 50 or less.

C. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL or from the listings of another qualified testing agency.

2.3 ACOUSTICAL PANELS

A. Acoustical Panel Standard: Provide manufacturer's standard panels of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectances unless otherwise indicated.

B. Performance Characteristics:

1. Classification: Where part of a fire-resistant-rated assembly, provide fire-resistance-rated panels complying with ASTM E 1264.
2. Color: As indicated on Drawings.
3. Edge Joint Detail: As indicated on Drawings.
4. Thickness: Minimum 5/8 inch.
5. Modular Size: As indicated on Drawings.
6. Broad Spectrum Antimicrobial Fungicide and Bactericide Treatment: Provide acoustical panels treated with manufacturer's standard antimicrobial formulation that inhibits fungus, mold, mildew, and gram-positive and gram-negative bacteria and showing no mold, mildew, or bacterial growth when tested according to ASTM D 3273 and evaluated according to ASTM D 3274 or ASTM G 21.
7. Sustainable Design: Acoustical panels made with binder containing no urea formaldehyde.

2.4 METAL SUSPENSION SYSTEM

A. Metal Suspension-System Standard: Provide manufacturer's standard direct-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C 635.

1. High-Humidity Finish: Comply with ASTM C 635 requirements for "Coating Classification for Severe Environment Performance."

B. Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; prepainted, electrolytically zinc coated, or hot-dip galvanized, G30 coating designation; with prefinished metal caps on flanges.

1. Structural Classification: Heavy-duty system.
2. Profile: As indicated on Drawings.
3. Material: Hot-dipped galvanized steel.
4. Finish: Baked polyester paint or powder coated. Minimum dry film thickness of 1.5 mils. Comply with ASTM C 635 and coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
5. Color: As indicated on Drawings, or if not indicated, white.

2.5 ACCESSORIES

A. Attachment Devices: Provide products as indicated on Drawings and as follows:

1. Post-Installed Cast-in-Place Concrete Anchors: Fabricated from corrosion-resistant materials with allowable load or strength design capacities calculated according to ICC ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM C 488 conducted by a qualified testing agency. Special inspection of post-installed concrete anchors shall be in compliance with CBC Table 1705.3 and the evaluation report for the anchor.
2. Power-Actuated Fasteners (PAF): Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E 1190 conducted by a qualified testing agency.

a. PAFs shall NOT be used to anchor diagonal bracing assemblies used to resist seismic loads.

B. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:

1. Zinc-Coated, Carbon-Steel Wire: ASTM A 641, Class 1 zinc coating, soft temper.
2. Stainless-Steel Wire: ASTM A 580, Type 304, nonmagnetic.
3. Nickel-Copper-Alloy Wire: ASTM B 164, nickel-copper-alloy UNS No. N04400.
4. Size: As required to meet performance requirements, but not less than 0.106-inch- diameter wire.

C. Hold-Down Clips: Where indicated and/or as required to meet performance requirements, provide manufacturer's standard hold-down clips spaced 24 inches o.c. on all cross tees.

D. Seismic Clips: Manufacturer's standard seismic clips designed and spaced to secure acoustical panels in place.

E. Seismic Separation Joints: Manufacturer's standard seismic separation joints designed to seismically separate adjacent ceiling diaphragms.

F. Clean-Room Gasket System: Where clean-room-type ceilings are indicated, provide manufacturer's standard system, including manufacturer's standard gasket and related adhesives, tapes, seals, and retention clips, designed to seal out foreign material from and maintain positive pressure in clean room.

2.6 METAL EDGE MOLDINGS AND TRIM

A. General: Provide metal edge moldings and trim by same manufacturer as metal suspension system.

B. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's 7/8-inch moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension-system runners.

1. Provide manufacturer's ICC-approved ceiling seismic attachment clip for connecting main and cross runners to edge molding, that fits acoustical panel edge details and suspension system indicated, and that matches width and configuration of exposed runners unless otherwise indicated.
2. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.

C. Exposed Metal Edge Moldings (At Freestanding Ceiling Edges): Provide exposed members as indicated or required to conceal edges of and penetrations thorough ceiling, to conceal edges of beams, to cover runner webs, for fixture trim and adapters, for fascie at changes in ceiling height, and for other conditions; of metal and finish matching suspended ceiling system.

1. Height: As indicated on Drawings.
2. For circular penetrations of ceiling, fabricate edge moldings to diameter required to fit penetration exactly.

D. Pre-Engineered Perimeter Roller Window Shade Pockets: Manufacturer's pre-engineered and seismically rated perimeter roller window shade pockets designed to receive roller window shades as specified in Section 122413 "Roller Window Shades."

2.7 ACOUSTICAL SEALANT

A. Acoustical Sealant: As specified in Section 079200 "Joint Sealants."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.

B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans.

B. Layout openings for penetrations centered on the penetrating items.

3.3 INSTALLATION

A. General: Install acoustical panel ceilings to comply with ASTM C 636, seismic design requirements indicated, according to the CBC, manufacturer's written instructions, and CISCA's "Ceiling Systems Handbook."

1. Fire-Rated Assembly: Install fire-rated ceiling systems according to tested fire-rated design.

B. Suspend ceiling hangers from building's structural members and as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
2. Splay hangers only where required and, if permitted with fire-resistance-rated ceilings, to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
4. Secure wire hangers to ceiling-suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
5. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
6. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
7. Do not attach hangers to steel deck tabs.
8. Do not attach hangers to steel roof deck. Attach hangers to structural members.
9. Space hangers not more than 48 inches o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
10. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
11. Light fixtures, ceiling-mounted air terminals, and other ceiling-mounted equipment: Comply with the stricter requirement of the CBC and the manufacturer’s ICC Evaluation Report.

C. If rigid bracing is not indicated, secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with post-installed concrete anchors.

1. PAFs shall NOT be used to anchor diagonal bracing wires used to resist seismic loads

D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.

1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
2. Screw attach moldings to substrate in compliance with manufacture’s IC report, leveling ceiling suspension system to a tolerance of 1/8 inch in 12 feet. Miter corners accurately and connect securely.
3. Do not use exposed fasteners, including pop rivets, on moldings and trim.

E. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

F. Install acoustical panels with undamaged edges and fit accurately into suspension-system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.

1. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension-system runners and moldings.
2. For reveal-edged panels on suspension-system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges.
3. For reveal-edged panels on suspension-system members with box-shaped flanges, install panels with reveal surfaces in firm contact with suspension-system surfaces and panel faces flush with bottom face of runners.
4. For field-fabricated edges and any other field-cut edges exposed to view, finish to match factory edge; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer
5. Install hold-down clips in areas indicated, in areas required by authorities having jurisdiction, and for fire-resistance ratings; space as recommended by panel manufacturer's written instructions unless otherwise indicated.
6. Install clean-room gasket system in areas indicated, sealing each panel and fixture as recommended by panel manufacturer's written instructions.
7. Protect lighting fixtures and air ducts to comply with requirements indicated for fire-resistance-rated assembly.

3.4 ERECTION TOLERANCES

A. Suspended Ceilings: Install main and cross runners level to a tolerance of 1/8 inch in 12 feet, non-cumulative.

B. Moldings and Trim: Install moldings and trim to substrate and level with ceiling suspension system to a tolerance of 1/8 inch in 12 feet, non-cumulative.

3.5 FIELD QUALITY CONTROL (BY OWNER)

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Suspended Ceiling Installation and Anchorage: Comply with periodic special inspection requirements of Section 1705.12.4 of the 2016 California Building Code and with the manufacture’s ICC evaluation report.
2. Installation of post-installed concrete anchors.

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections and prepare test reports.

C. Acoustical panel ceiling hangers and anchors and fasteners will be considered defective if they do not pass tests and inspections.

D. Remove and replace work where test results indicate that it does not comply with specified requirements.

E. Additional testing and inspecting, at Contractor’s expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.6 CLEANING

A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension-system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage.

B. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION 095113

SECTION 095423 - LINEAR METAL CEILINGS (DEFERRED APPROVAL)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes exterior and interior linear metal ceiling system, including, but not limited to, the following:

1. Linear metal ceiling pans.
2. Suspension system.
3. Seismic and wind restraints for suspension system.
4. Sound-absorbent pads.
5. Accessories.

B. Work under this Section is part of a “Deferred Approval.” Coordinate with the deferred approval requirements in Section 013300 “Submittal Procedures” and with the requirements indicated on the Drawings.

C. Related Requirements:

1. Section 054000 "Cold-Formed Metal Framing," Section 055000 "Metal Fabrications," and/or 092216 "Non-Structural Metal Framing" for seismic bracing if not included as part of this Section.
2. Section 095426 "Linear Wood Ceilings" for interior linear wood ceilings.
3. Division 21 Section(s) for sprinkler coordination with ceiling.
4. Division 26 Section(s) for light fixture coordination with ceiling.

1.3 DEFINITIONS

A. CBC: 2016 California Building Code.

B. NRC: Noise Reduction Coefficient.

1.4 COORDINATION

A. Coordinate layout and installation of linear metal pans and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

B. Coordination: Furnish layouts for cast-in-place anchors, clips, and other ceiling anchors whose installation is specified in other Sections.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Provide project-specific shop drawings for linear metal ceiling system, including seismic support details.

1. Shop drawings shall be stamped and signed by the qualified California-licensed professional engineer responsible for their preparation, including calculations, indicating compliance with performance requirements.

C. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of size indicated below:

1. Linear Metal Pan: Set of 12-inch-long Samples of each type and color and a 12-inch-long spliced section.
2. Suspension System Members: 12-inch-long Sample of each type.
3. Exposed Molding and Trim: Set of 12-inch-long Samples of each type, finish, and color.
4. Sound Absorber: 12 inches long.

D. Deferred-Approval Submittal: For linear metal ceiling system indicated to comply with performance requirements and design criteria, including shop drawings, calculations, and analysis data stamped and signed by the qualified California-licensed professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Linear pattern.
2. Joint pattern.
3. Ceiling suspension members.
4. Method of attaching hangers to building structure.

a. Furnish layouts for cast-in-place anchors, clips, and other ceiling attachment devices whose installation is specified in other Sections.

5. Ceiling-mounted items including light fixtures, diffusers, grilles, speakers, sprinklers, and access panels.
6. Ceiling perimeter and penetrations through ceiling; trim and moldings.

B. Qualification Data: For manufacturer, installer, and professional engineer.

C. Product Test Reports: For each linear metal ceiling, for tests performed by a qualified testing agency.

D. Evaluation Reports: For linear metal ceiling and components and anchor and fastener type, from ICC-ES.

E. Field quality-control reports.

1.8 CLOSEOUT SUBMITTALS

A. Maintenance Data: For finishes to include in maintenance manuals.

1.9 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Linear Metal Ceiling Components: Quantity of each pan, carrier, accessory, and exposed molding and trim equal to 2 percent of quantity installed.

1.10 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of linear metal ceiling systems that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports Manufacturer shall also have a current tests reports for linear wood ceiling system indicating system has been tested for use in seismic design categories D, E, F.

B. Installer Qualifications: A firm with not less than 5 years' experience installing linear metal ceiling systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Engineering Responsibility: Prepare data for linear metal ceiling system, including Shop Drawings, based on testing and engineering analysis for manufacturer's standard units in systems similar to those indicated for the Project and submission of reports of tests performed on manufacturer's standard assemblies, stamped and signed by the qualified California-licensed professional engineer responsible for their preparation.

D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and to set quality standards for materials and execution.

1. Description: First 100 square feet of installation.
2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.11 DELIVERY, STORAGE, AND HANDLING

A. Deliver linear metal pans, suspension system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they are protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.

B. Handle linear metal pans, suspension system components, and accessories carefully to avoid damaging units and finishes in any way.

1.12 PROJECT CONDITIONS

A. Environmental Limitations: Do not install linear metal ceilings until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide products by the following:

1. As indicated on Drawings.

B. Source Limitations: Obtain each type of linear metal ceiling panel and its supporting system from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Deferred Approval Engineering: Engage a qualified California-licensed professional engineer, as defined in Section 014000 "Quality Requirements," to engineer linear metal ceilings, including, but not limited to seismic / wind restraints and attachment devices.

B. Structural Performance: Exterior linear metal ceilings shall withstand exterior exposure and the effects of gravity loads and the following loads and stresses without showing permanent deformation of ceiling system components including pans and suspension system; noise or metal fatigue caused by vibration, deflection, and displacement of ceiling pans; or permanent damage to fasteners and anchors:

1. Wind Load: Uniform pressure as indicated on Drawings, acting inward or outward.
2. Seismic Criteria: Provide linear metal ceilings designed and installed to withstand the effects of earthquake motions according to the following:

a. CBC.
b. Manufacturer shall have independent testing, acceptable to authorities having jurisdiction, confirming linear wood ceiling system has been tested and approved for use in seismic design categories D, E, F.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F material surfaces.

D. Acoustical Performance (Interior Only): Sound absorption NRC of not less than 0.65 according to ASTM C 423.

E. Combustion Characteristics:

1. Exterior: Non-combustible passing ASTM E 136 for combustion characteristics.
2. Interior:

a. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1) Flame-Spread Index: Comply with ASTM E 1264 for Class A materials.
2) Smoke-Developed Index: 450 or less.

2.3 LINEAR METAL CEILING PANS

A. Linear Metal Ceiling Characteristics:

1. Metal: Aluminum, with a pan thickness complying with performance requirements and not less than 0.027 inch.
2. Pan Edge Detail: As indicated on Drawings.
3. Linear Module Width and Pan Face Width: As indicated on Drawings.
4. Pan Face Finish: Manufacturer's factory-applied painted finish.

a. Color, Pattern, Texture: As indicated on Drawings.

5. Suspension System Main Carrier Material: Hot dipped galvanized steel.

B. Acoustical Metal Pan Standard: Provide manufacturer's standard linear metal pans of configuration indicated that comply with ASTM E 1264 classifications as designated by types, acoustical ratings, and light reflectances unless otherwise indicated.

1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches away from test surface per ASTM E 795.

C. Sheet Metal Characteristics: For metal components exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, roughness, stains, or discolorations.

1. Aluminum Sheet: Roll-formed aluminum sheet, complying with ASTM B 209; alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

D. Pan Fabrication: Manufacturer's standard units of size, profile, and edge treatment indicated, formed from metal indicated to snap on and be securely retained on carriers without separate fasteners, and finished to comply with requirements indicated.

E. Pan Splices: Construction same as pans, in lengths 8 to 12 inches; with manufacturer's standard finish.

F. End Caps: Metal matching pans; fabricated to fit and conceal exposed ends of pans.

G. Filler Strips: Metal matching pans; fabricated to uninterruptedly close voids between pans.

H. Moldings and Trim: Provide manufacturer's standard moldings and trim for exposed members, and as indicated or required, for edges and penetrations of ceiling, around fixtures, at changes in ceiling height, and for other conditions; of same metal and finish as linear metal ceiling pans.

I. Sound-Absorbent Pads: Provide width and length to completely fill between carriers, joined at center of panel, with surface-burning characteristics for flame-spread index of 25 or less and smoke-developed index of 50 or less, as determined by testing per ASTM E 84, and to comply with the following requirements:

1. Plastic Sheet-Wrapped Mineral-Fiber Insulation: Pads consisting of nonrigid, PVC plastic sheet encapsulating unfaced mineral-fiber insulation complying with ASTM C 553, Type I, II, or III, and as follows:

a. Mineral-Fiber Type and Thickness: Glass fiber; in thickness required to achieve acoustic performance requirements.
b. Plastic Sheet Thickness and Color: Not less than 0.003 inch; flat black.

2.4 METAL SUSPENSION SYSTEMS

A. Metal Suspension Systems Standard: Provide ceiling manufacturer's standard metal suspension systems of types and finishes indicated that comply with applicable ASTM C 635 requirements.

B. Suspension Systems: Provide systems complete with carriers, splice sections, connector clips, alignment clips, leveling clips, hangers, molding, trim, retention clips, load-resisting struts, fixture adapters, and other suspension components required to support ceiling units and other ceiling-supported construction.

C. Attachment Devices: Comply with the more stringent seismic design requirements of the 2016 California Building Code, manufacturer’s written installation instructions for use in seismic design categories D, E, F, and the following:

1. Post-Installed Concrete Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E 488 conducted by a qualified testing agency. Special inspection of post-installed concrete anchors shall be in compliance with CBC Table 1705.3 and the evaluation report for the anchor
2. Power-Actuated Fasteners (PAF): Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E 1190 conducted by a qualified testing agency.

a. PAFs shall not be used to anchor diagonal brace assemblies used to resist seismic loads.

D. Wire Hangers, Braces, and Ties: Provide wire complying with the following requirements:

1. Zinc-Coated, Carbon-Steel Wire: ASTM A 641, Class 1 zinc coating, soft temper.
2. Stainless-Steel Wire: ASTM A 580, Type 304, nonmagnetic.
3. Nickel-Copper-Alloy Wire: ASTM B 164, nickel-copper-alloy UNS No. N04400.
4. Size: As required to meet performance requirements, but not less than 0.106-inch- diameter wire.

E. Carriers: Factory finished with matte-black baked finish.

1. Main Carriers: ASTM C 635, heavy duty, steel, not less than 0.0209-inch nominal thickness, cold-rolled sheet, with factory-applied protective coating.

a. Hot-Dip Galvanized Steel: ASTM A 653, not less than G60 zinc coating.

2. Flexible Radial Carriers: Manufacturer's standard radial carriers.
3. Expansion Carriers: Manufacturer's standard carriers allowing for irregularities or other unusual space conditions.
4. Accessories:

a. Special Shapes, Clips, and Components: Provide manufacturer's special shapes, clips, and components to transfer forces in linear carrier members in both directions across linear light fixtures, linear slot diffusers, and other similar conditions.

5. Seismic Separation Joints: Provide manufacturer's standard seismic separation joint system for linear wood ceilings exceeding 2,500 square feet in area. Provide in locations indicated, or if not indicated, in locations as directed by Architect.

F. Carrier Splices: Same metal, profile, and finish as for carriers.

G. Stabilizer Channels, Tees, and Bars: Manufacturer's standard components for stabilizing main carriers at regular intervals and at light fixtures, air-distribution equipment, access doors, and other equipment; spaced as standard with manufacturer for use indicated; and factory finished with matte-black baked finish.

H. Seismic Struts: Manufacturer's standard compression struts designed to accommodate seismic forces.

I. Exterior Bracing: Cold-rolled steel channels and angles, hot-dip galvanized to comply with ASTM A 653, G60 coating designation; size and profile as required to withstand wind load.

J. Hold-Down Clips: Manufacturer's standard hold-down clips spaced as standard with manufacturer.

K. Edge Moldings and Trim: Provide exposed members as indicated or required to comply with seismic requirements of authorities having jurisdiction, to conceal edges of penetrations through ceiling, to conceal ends of pans and carriers, for fixture trim and adapters, for fasciae at changes in ceiling height, and for other conditions; of metal and finish matching linear metal pans or extruded plastic unless otherwise indicated.

1. For Circular Penetrations of Ceiling: Fabricate edge moldings to diameter required to fit penetration exactly.

2.5 ACCESSORIES

A. Access Panels: For access at locations indicated, provide door hinge assembly, retainer clip, and retainer bar, assembled with ceiling panels and carrier sections into access doors of required size, permitting upward or downward opening.

2.6 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. High-Humidity Finish: Comply with ASTM C 635 requirements for "Coating Classification for Severe Environment Performance" where high-humidity finishes are indicated and for exterior linear metal ceilings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing and substrates to which linear metal ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of linear metal ceilings.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Measure each ceiling area and establish layout of linear metal pans to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width pans at borders, and comply with layout shown on reflected ceiling plans and on Coordination Drawings.

3.3 INSTALLATION

A. Comply with ASTM C 636 and seismic requirement indicated, per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."

B. Suspend ceiling hangers from building's structural members and as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
4. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate to which hangers are attached and for type of hanger involved.
5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both structure to which hangers are attached and type of hanger involved. Install hangers in a manner that does not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
8. Do not attach hangers to steel deck tabs.
9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
10. Space hangers not more than 48 inches o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
12. Light fixtures, ceiling-mounted air terminals, and other ceiling-mounted equipment: Comply with the stricter requirement of the Building Code and the manufacturer’s ICC Evaluation Report.

C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers but without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.

1. PAFs shall NOT be used to anchor diagonal bracing assemblies used to resist seismic loads.

D. Install edge moldings and trim of type indicated at perimeter of linear metal ceiling area and where necessary to conceal edges and ends of linear metal pans.

1. Screw attach moldings to substrate at intervals not more than 16 inches o.c. and not more than 3 inches from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet. Miter corners accurately and connect securely.
2. Do not use exposed fasteners, including pop rivets, on moldings and trim.

E. Install suspension system carriers so they are aligned and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

F. Cut linear metal pans for accurate fit at borders and at interruptions and penetrations by other work through ceilings. Stiffen edges of cut units as required to eliminate evidence of buckling or variations in flatness exceeding referenced standards for stretcher-leveled metal sheet.

G. Install linear metal pans in coordination with suspension system and exposed moldings and trim.

1. Align joints in adjacent courses to form uniform, straight joints parallel to room axis in both directions unless otherwise indicated.
2. Fit adjoining units to form flush, tight joints. Scribe and cut units for accurate fit at borders and around construction penetrating ceiling.
3. Install pans with butt joints using internal pan splices and in the following joint configuration:

    a. As indicated.

4. Install directionally textured metal pans in directions indicated.
5. Where metal pan ends are visible, install end caps unless trim is indicated.
6. Install filler strips where indicated.
7. Install sound-absorbent pads at right angle to perforated metal pans so pads do not hang unsupported.

H. Install hold-down clips complying with performance requirements.

3.4 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Suspended ceiling system installation and anchorage: Comply with periodic special inspection requirements of the CBC and manufacturer's evaluation report.
2. Installation of post-installed concrete anchors.

B. Linear metal ceiling hangers and anchors and fasteners will be considered defective if they do not pass tests and inspections.

C. Remove and replace work where test results indicated that it does not comply with specified requirements.

D. Additional testing and inspecting, at Contractor’s expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.5 CLEANING

A. Clean exposed surfaces of linear metal ceilings, including trim and edge moldings after removing strippable, temporary protective covering if any. Comply with manufacturer's written instructions for stripping of temporary protective covering, cleaning, and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage, including dented and bent units.

END OF SECTION 095423

SECTION 095426 - LINEAR WOOD CEILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes interior linear wood ceiling system, including, but not limited to, the following:

1. Linear wood ceiling members.
2. Suspension system.
3. Seismic restraints for suspension system.
4. Sound-absorbent pads.
5. Accessories.

B. Engineering Responsibility: If manufacturer's linear wood ceiling system is not pre-engineered to meet performance requirements, Contractor’s responsibility includes providing professional engineering services needed to assume engineering responsibility for linear wood ceilings.

C. Related Sections.

1. Section 092216 "Non-Structural Metal Framing" for seismic bracing if not included as part of this Section.
2. Section 095423 "Linear Metal Ceilings" for interior and exterior linear metal ceilings.
3. Division 21 Section(s) for sprinkler coordination with ceiling.
4. Division 23 Section(s) for HVAC work to be coordinated with ceiling.
5. Division 26 Section(s) for light fixture coordination with ceiling.

1.3 DEFINITIONS

A. CBC: 2016 California Building Code.

B. NRC: Noise Reduction Coefficient.

1.4 COORDINATION

A. Coordinate layout and installation of linear metal pans and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

B. Coordination: Furnish layouts for cast-in-place anchors, clips, and other ceiling anchors whose installation is specified in other Sections.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: Product data indicating compliance with sustainable performance requirements.

C. Shop Drawings: Provide project-specific shop drawings for linear wood ceiling system, including seismic support details.

1. If manufacturer's linear wood ceiling system is not pre-engineered to meet performance requirements, shop drawings and analysis data shall be stamped and signed by the qualified California-licensed professional engineer responsible for their preparation.

D. Samples for Verification:

1. Linear Wood Plank: Set of 12-inch-long Samples for each type and color and a 12-inch-long spliced section.
2. Suspension System Members: 12-inch-long Sample of each type.
3. Exposed Molding and Trim: Set of 12-inch-long Samples of each type, finish, and color.
4. Sound Absorber: 12 inches square.

1.7 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Ceiling suspension-system members.
2. Structural members to which suspension systems will be attached.
3. Method of attaching hangers to building structure.
4. Carrying channels or other supplemental support for hanger-wire attachment where conditions do not permit installation of hanger wires at required spacing.
5. Items penetrating finished ceiling including the following:

a. Lighting fixtures.
b. Air outlets and inlets.
c. Speakers.
d. Sprinklers.
e. Access panels.
f. Security components.
g. Perimeter moldings.

B. Qualification Data: For manufacturer and installer.

C. Product Test Reports: For each linear wood ceiling, for tests performed by a qualified testing agency.

D. Evaluation Reports: For each anchor and fastener type, from ICC-ES.

E. Field quality-control reports.

1.8 CLOSEOUT SUBMITTALS

A. Maintenance Data: For finishes to include in maintenance manuals.

1.9 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Linear Wood Ceiling Panels: Full-size panels equal to 1 percent of quantity installed, or 2 boxes, whichever is less.
2. Suspension-System Components: Quantity of each exposed component equal to 1 percent of quantity installed.

1.10 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of linear wood ceilings that have been used for similar applications with successful results, that meet or exceed performance requirements indicated, and of documenting this performance by inclusion in test reports Manufacturer shall also have a current tests reports for linear wood ceiling system indicating system has been tested for use in seismic design categories D, E, F.

1. Engineering Responsibility: If manufacturer's linear wood ceiling system is not pre-engineered to meet performance requirements, Contractor's responsibility includes providing professional engineering services needed to assume engineering responsibility for linear wood ceiling systems.

a. Prepare data for linear wood ceilings, including Shop Drawings and calculations, stamped and signed by the qualified California-licensed professional engineer responsible for their preparation.

B. Installer Qualifications: A firm with not less than 5 years' experience installing linear wood ceilings similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Source Limitations: Obtain each set of linear wood ceilings and suspension systems from one source with resources to provide products of consistent quality in appearance, physical properties, and performance.

D. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Mockup Description: First 100 square feet of installation.
2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.11 DELIVERY, STORAGE AND HANDLING

A. Deliver linear wood ceilings, suspension system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.

B. Do not store in unconditioned spaces with humidity greater than 55 percent or lower than 25 percent relative humidity and temperatures lower than 50 degrees F or greater than 86 degrees F. Panels must not be exposed to extreme temperatures, for example, close to a heating source or near a window with direct sunlight.

C. Before installing linear wood ceiling, permit them to reach room temperature and a stabilized moisture content for a minimum of 72 hours.

D. Handle linear wood ceiling members carefully to avoid chipping edges or damaging units in any way.

1.12 PROJECT CONDITIONS

A. Environmental Limitations: Do not install linear wood ceilings until spaces are enclosed and weatherproof, wet-work in spaces is completed and dry, work above ceilings is complete and ambient temperature and humidity conditions are being maintained at the levels indicated for Project when occupied for its intended use.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide products by the following:

1. As indicated on Drawings.

B. Source Limitations: Obtain each type of linear wood ceiling panel and its supporting suspension system from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Engineering Responsibility: If manufacturer's linear wood ceiling system is not pre-engineered to meet performance requirements, Contractor's responsibility includes engaging a qualified professional engineer, as defined in Section 014000 “Quality Requirements” to design and engineer linear wood ceiling systems to comply with performance requirements.

B. Structural Performance (Interior): Interior linear wood ceilings inside the conditioned building envelope shall withstand the effects of gravity loads and the following loads and stresses without showing permanent deformation of ceiling system components including linear wood members and suspension system; noise or metal fatigues caused by vibration, deflection, and displacement of linear ceiling members; or permanent damage to fasteners and anchors:

1. Seismic Performance: Linear wood ceilings shall withstand the effects of earthquake motions determined according to the following:

a. CBC.
b. Manufacturer shall have independent testing, acceptable to authorities having jurisdiction, confirming linear wood ceiling system has been tested and approved for use in seismic design categories D, E, F.

C. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: Class A according to ASTM E 1264.
2. Smoke-Developed: Maximum 450.

D. Acoustical Performance: Sound absorption NRC of not less than 0.65 according to ASTM C 423.

E. Sustainable Design Requirements:

1. Adhesives: Adhesives, adhesive bonding primers, adhesive primers, sealants, sealant primers and caulks shall comply with local or regional air pollution control or air quality management district rules where applicable, or SCAQMD Rule 1168 VOC limits, as shown in 2016 CALGreen Tables 5.504.4.1 and 5.504.4.2. Such products also shall comply with the Rule 1168 prohibition on the use of certain toxic compounds (chloroform, ethylene dichloride methylene chloride, perchloroethylene and trichloroethylene). Adhesives shall have no added formaldehyde resins.

a. Adhesives shall have a VOC content of 70 g/L or less

2. Composite Wood Products: Hardwood plywood and medium density fiberboard composite wood products used on the interior or exterior of the building shall meet the requirements for formaldehyde as specified in ARB's Air Toxics Control Measure (ATCM) for Composite Wood (17 CCR 93120 et seq.) Those materials not exempted under the ATCM must meet the specified emission limits, as shown in 2016 CALGreen Table 5.504.4.5.

2.3 LINEAR WOOD CEILING

A. Linear Wood Ceiling Characteristics:

1. Species: As indicated on Drawings.
2. Member Size: As indicated on Drawings.
3. Edge Profile: Square.
4. Members per Linear Foot: As indicated on Drawings.
5. Assembly Style: Cross piece backer.
6. Panel Sizes: As indicated on Drawings.
7. Surface-Burning Characteristics: Class A.
8. Finish: Transparent finish, as indicated on Drawings.
9. Reveal Scrim: Black reveal scrim.

2.4 ACCESSORIES

A. Sound-Absorbent Backing: Provide width and length to completely fill between carriers, with surface-burning characteristics for flame-spread index of 25 or less and smoke-developed index of 50 or less, as determined by testing per ASTM E 84, and to comply with the following requirements:

1. Plastic Sheet-Wrapped Mineral-Fiber Insulation: Pads consisting of nonrigid, PVC plastic sheet encapsulating unfaced mineral-fiber insulation complying with ASTM C 553, Type I, II, or III and as follows:

a. Mineral-Fiber Type: Glass fiber.
b. Acoustical Performance and Thickness: Provide in thickness to meet acoustic performance requirement, but no less than 1/2-inch in thickness.
c. Plastic Sheet Thickness and Color: Not less than 0.003 inch; flat black.

B. Wood Biscuits: For joining and aligning planks end to end.

2.5 METAL SUSPENSION SYSTEM, GENERAL

A. Metal Suspension-System Standard: Provide manufacturer's standard direct-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C 635.

B. Suspension Systems: Provide systems complete with carriers, splice sections, connector clips, alignment clips, leveling clips, hangers, molding, trim, retention clips, load-resisting struts, fixture adapters, and other suspension components required to support ceiling units and other ceiling-supported construction.

C. Attachment Devices: Comply with the more stringent seismic design requirements of the CBC, manufacturer’s written installation instructions for use in seismic design categories D, E, F, and the following:

1. Post-Installed Concrete Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E 488 conducted by a qualified testing agency. Special inspection of post-installed concrete anchors shall be in compliance with CBC Table 1705.3 and the evaluation report for the anchor
2. Power-Actuated Fasteners (PAF): Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E 1190 conducted by a qualified testing agency.

a. PAFs shall NOT be used to anchor diagonal bracing assemblies used to resist seismic loads.

D. Wire Hangers, Braces, and Ties: Provide wires complying with the more stringent of the requirements of the CBC, manufacturer's written installation instructions for seismic design categories D, E, F, and the following:

1. Zinc-Coated, Carbon-Steel Wire: ASTM A 641, Class 1 zinc coating, soft temper.
2. Nickel-Copper-Alloy Wire: ASTM B 164, nickel-copper-alloy UNS No. N04400.
3. Size: As required to meet performance requirements, but not less than 0.106-inch- diameter wire.

E. Seismic Stabilizer Bars: Manufacturer's standard perimeter stabilizers designed to accommodate seismic forces.

F. Seismic Braces: Rigid braces assembled from cold-formed metal framing as indicated on Drawings, and per Section 092216 "Non-Structural Metal Framing."

G. Seismic Clips: Manufacturer's standard seismic clips designed and spaced to secure linear wood ceiling panels in place.

H. Carriers: Factory finished.

1. Components: All linear carriers shall be commercial quality hot-dipped galvanized steel per ASTM A 653. Linear carriers shall be double-web construction with 15/16 inch type concealed flange design. Exposed surfaces shall be chemically cleansed, capping prefinished galvanized steel in baked polyester paint.

a. Structural Classification: ASTM C 635, Heavy Duty.
b. Color: Black, unless otherwise noted.
c. Clips: Integral, factory-applied, spring steel clips on linear carriers in sufficient number to receive linear wood planks.
d. Accessories:

1) Special Shapes, Clips, and Components: Provide manufacturer's special shapes, clips, and components to transfer forces in linear carrier members in both directions across linear light fixtures, linear slot diffusers, and other similar conditions.

e. Seismic Separation Joints: Provide manufacturer's standard seismic separation joint system for linear wood ceilings exceeding 2,500 square feet in area. Provide in locations indicated, or if not indicated, in locations as directed by Architect.

2.6 ACCESSORIES, EDGE MOLDINGS, AND TRIM

A. Linear Splices: For splicing member together end to end.

B. Clip: Radius clip for creating faceted grid applications.

C. Wall Molding: In compliance with seismic performance requirements.

1. Color: Black.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing to which linear wood ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of linear wood ceilings.

B. Examine linear wood ceiling panels before installation. Reject wood panels that are wet, moisture damaged, or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Measure each ceiling area and establish the layout of linear wood ceiling to balance border widths at opposite edges of each ceiling. Conform to the layout shown on reflected ceiling plans in accordance with linear wood ceiling manufacturer's approved Shop Drawings.

3.3 INSTALLATION

A. General: Install suspension system and linear wood panels in compliance with ASTM C 636, seismic design requirements, and manufacturer's written instructions.

B. Suspend ceiling hangers from building's structural members and as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
2. Splay hangers only where required and, if permitted with fire-resistance-rated ceilings, to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
4. Secure wire hangers to ceiling-suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
8. Do not attach hangers to steel deck tabs.
9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
10. Space hangers not more than 48 inches o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
12. Light fixtures, ceiling-mounted air terminals, and other ceiling-mounted equipment: Comply with the stricter requirement of the Building Code and the manufacturer's ICC Evaluation Report.

C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors. PAFs shall NOT be used to anchor diagonal bracing wires or rigid braces used to resist seismic loads.

D. Install linear wood panels by mechanically attaching the crosspiece backer into the main runner using screws per manufacturer's written instructions for use in seismic design categories D, E. F.

E. Install wall moldings at intersection of suspended linear wood ceiling and vertical surfaces.

F. Follow manufacturer's written instructions for border treatment and accessories of linear wood ceiling system.

3.4 ERECTION TOLERANCES

A. Suspended Ceilings: Install main and cross runners level to a tolerance of 1/8 inch in 12 feet, non-cumulative.

B. Linear Wood Ceiling Components: Install linear wood ceiling components level with ceiling suspension system to a tolerance of 1/8 inch in 12 feet, non-cumulative.

3.5 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Suspended Ceiling Installation and Anchorage: Comply with periodic special inspection requirements of the CBC and with the manufacturer's ICC evaluation report as applicable.
2. Installation of post-installed concrete anchors.

B. Suspension system, seismic bracing system, and anchors will be subject to testing and inspection.

C. Suspension system, hangers and anchors and fasteners will be considered defective if they do not pass tests and inspections.

D. Remove and replace work where test results indicated that it does not comply with specified requirements.

E. Additional testing and inspecting, at Contractor’s expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.6 CLEANING

A. Clean exposed surfaces of linear wood ceilings, including trim, edge moldings, and suspension-system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION 095426

SECTION 096513 - RESILIENT BASE AND ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Resilient base.
2. Resilient molding accessories.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: Product data for adhesives, indicating VOC content.

C. Samples for Verification: For each type of product indicated and for each color, texture, and pattern required in manufacturer's standard-size Samples, but not less than 12 inches long.

D. Product Schedule: For resilient base and accessory products. Use same designations indicated on Drawings.

1.4 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Furnish not less than 10 linear feet for every 500 linear feet or fraction thereof, of each type, color, pattern, and size of resilient product installed.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F.

1.6 FIELD CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 85 deg F, in spaces to receive resilient products during the following time periods:

1. 48 hours before installation.
2. During installation.
3. 48 hours after installation.

B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer.

C. Install resilient products after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. FloorScore Compliance: Resilient base and accessories shall comply with requirements of FloorScore certification.

B. Adhesives shall have a VOC content of 50 g/L or less.

2.2 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide products by the following:

1. As indicated on Drawings.

B. Source Limitations: Obtain resilient base and accessories from single source from single manufacturer.

2.3 RESILIENT BASE

A. Product Standard: ASTM F 1861.

1. Style and Location:

a. Style A, Straight: Provide in areas with carpet.
b. Style B, Cove: Provide in areas with resilient flooring.

B. Minimum Thickness: 0.125 inch.

C. Height: As indicated on Drawings.

D. Lengths: Coils in manufacturer's standard length.

E. Outside Corners: Preformed.

F. Inside Corners: Preformed.

G. Colors: As indicated on Drawings, or if not indicated, as selected by Architect from manufacturer’s full range of colors.

2.4 RESILIENT MOLDING ACCESSORY

A. Description: Resilient cap for cove carpet, cap for cove resilient flooring, carpet bar for tackless installations, carpet edge for glue-down applications, nosing for carpet, nosing for resilient flooring, reducer strip for resilient flooring, joiner for tile and carpet transition strips.

B. Profile and Dimensions: As indicated.

C. Locations: Provide resilient molding accessories in areas indicated, or if not indicated, at flooring transitions of flooring types identified above.

D. Colors and Patterns: As indicated on Drawings, or if not indicated, as selected by Architect from manufacturer’s full range of colors.

2.5 INSTALLATION MATERIALS

A. Adhesives: Water-resistant type recommended by resilient-product manufacturer for resilient products and substrate conditions indicated.

1. Adhesives shall have a VOC content of 50 g/L or less.

B. Metal Edge Strips: Extruded aluminum with mill finish of width shown, of height required to protect exposed edges of flooring, and in maximum available lengths to minimize running joints.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with conditions affecting performance of the Work.

1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

1. Installation of resilient products indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.

B. Do not install resilient products until they are the same temperature as the space where they are to be installed.

1. At least 48 hours in advance of installation, move resilient products and installation materials into spaces where they will be installed.

C. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient products.

3.3 RESILIENT BASE INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient base.

B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.

C. Install resilient base in lengths as long as practical without gaps at seams and with tops of adjacent pieces aligned.

D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.

E. Do not stretch resilient base during installation.

F. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.

G. Preformed Corners: Install preformed corners before installing straight pieces.

3.4 RESILIENT ACCESSORY INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient accessories.

B. Resilient Molding Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips at edges of floor covering that would otherwise be exposed.

3.5 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protecting resilient products.

B. Perform the following operations immediately after completing resilient-product installation:

1. Remove adhesive and other blemishes from exposed surfaces.
2. Sweep and vacuum horizontal surfaces thoroughly.
3. Damp-mop horizontal surfaces to remove marks and soil.

C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

D. Cover resilient products subject to wear and foot traffic until Substantial Completion.

END OF SECTION 096513

SECTION 096516 - RESILIENT SHEET FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Resilient sheet flooring.
2. Testing and application of systems for the reduction of moisture vapor transmission and alkalinity control for interior concrete slabs that are not in compliance with resilient sheet flooring manufacturer's written requirements.

B. Related Requirements:

1. Section 012100 "Allowances" for hydraulic cement underlayment allowance and moisture vapor emission control allowance.
2. Section 035416 "Hydraulic Cement Underlayment" for trowelable leveling and patching compound if not provided as part of this Section.
3. Section 096513 "Resilient Base and Accessories" for reducer strips, and other accessories installed with resilient sheet flooring.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to resilient sheet flooring including, but not limited to, the following:

a. Examination and preparation of substrates to receive resilient sheet flooring.
b. Installation.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For resilient flooring products, data indicating compliance with sustainable design performance requirements.

C. Shop Drawings: For each type of resilient sheet flooring.

1. Include sheet flooring layouts, locations of seams, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
2. Show details of special patterns.

D. Samples for Verification: For each type of resilient sheet flooring, in manufacturer's standard size, but not less than 6-by-9-inch sections of each color, texture, and pattern required.

1. For heat-welding bead, manufacturer's standard-size Samples, but not less than 9 inches long, of each color required.

E. Welded-Seam Samples: For seamless-installation technique indicated and for each resilient sheet flooring product, color, and pattern required; with seam running lengthwise and in center of 6-by-9-inch Sample applied to a rigid backing and prepared by Installer for this Project.

F. Product Schedule: For resilient sheet flooring.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency.

C. Field quality-control reports.

D. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of resilient sheet flooring to include in maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Resilient Sheet Flooring: Furnish not less than 10 linear feet for every 500 linear feet or fraction thereof, in roll form and in full roll width for each type, color, and pattern of flooring installed.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of resilient sheet flooring that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 5 years' experience installing resilient sheet flooring similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Coordinate mockups in this Section with mockups specified in other Sections.

a. Size: First 100 sq. ft. of installation for each type, color, and pattern in locations directed by Architect.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Store resilient sheet flooring and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F. Store rolls upright.

1.10 FIELD CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 85 deg F, in spaces to receive resilient sheet flooring during the following periods:

1. 72 hours before installation.
2. During installation.
3. 72 hours after installation.

B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 85 deg F.

C. Close spaces to traffic during resilient sheet flooring installation.

D. Close spaces to traffic for 72 hours after resilient sheet flooring installation.

E. Install resilient sheet flooring after other finishing operations, including painting, have been completed.

1.11 WARRANTY

A. Special Warranty for Resilient Sheet Flooring: Manufacturer's standard or customized form in which Manufacturer and installer agree to repair or replace components of resilient sheet flooring that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, defects/blemishes, scratches/cuts, bubbling/ blistering, cracking/crazing/alligatoring, delamination, resilient sheet "bloom" (yellowing film), failure of heat welded seams, failure to meet manufacturer's minimum published standards for traffic wear and durability.
2. Warranty Period: Ten (10) years from date of Substantial Completion.

B. Special Warranty for Moisture/Alkalinity Control System: Manufacturer's standard or customized form in which Manufacturer and installer agree to repair or replace materials that fail to control water vapor transmission or fail to control alkalinity within specified warranty period.

1. This warranty includes, but is not limited to, the following:

a. Moisture control system.
b. Underlayments.
c. Floor covering system
d. Labor.

2. Warranty Period: Ten (10) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Products: Subject to compliance with requirements, provide resilient sheet flooring by the following:

1. As indicated on Drawings.

B. Source Limitations: Obtain resilient sheet flooring products from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Dynamic Coefficient of Friction: Not less than 0.42 according to ANSI B101.3.

B. Sustainable Design Requirements (CALGreen):

1. At least 80 percent of the total area of resilient tile flooring shall comply with one of the following:

a. Certified under the Resilient Floor Covering Institute FloorScore program.
b. Compliant with the VOC-emission limits and testing requirements specified in the California Department of Public Health's 2010 Standard Method for the Testing and Evaluation Chambers, Version 1.1, February 2010.
c. Compliant with the Collaborative for High Performance Schools California (CA-CHPS) Criteria Interpretation for EQ 7.0 and EQ 7.1 (formerly EQ 2.2) dated July 2012 and listed in the CHPS High Performance Product Database.
d. Products certified under UL GREENGUARD Gold (formerly the Greenguard Children's & Schools Program).

C. Visual Characteristics and Product Options: Information on Drawings and in specifications establishes requirements for aesthetic effects. Aesthetic effects are indicated by colors, patterns, arrangements, alignments and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

2.3 RESILIENT SHEET FLOORING

A. Product Standard: ASTM F 1913, ASTM F 1303, ASTM F 1859, and/or ASTM F 1860 as applicable to the basis-of-design products indicated.

B. Thickness: As indicated on Drawings, or if not indicated, as standard with manufacturer.

C. Wearing Surface: As indicated on Drawings, or if not indicated, smooth subject to compliance with performance requirements.

D. Sheet Width: As standard with manufacturer.

E. Seamless-Installation Method: Heat welded.

F. Colors and Patterns: As indicated on Drawings.

G. Approvals: Approved for food-process environments.

2.4 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by resilient sheet flooring manufacturer for applications indicated.

B. Adhesives: Water-resistant type recommended by flooring and adhesive manufacturers to suit resilient sheet flooring and substrate conditions indicated.

1. Adhesives shall have a VOC content of 50 g/L or less.

C. Heat-Welding Bead: Manufacturer's solid-strand product for heat welding seams.

1. Colors: Match flooring unless otherwise indicated.

D. Integral-Flash-Cove-Base Accessories:

1. Cove Strip: 1-inch radius provided or approved by resilient sheet flooring manufacturer.
2. Cap Strip: Square metal, vinyl, or rubber cap provided or approved by resilient sheet flooring manufacturer.
3. Corners: Metal inside and outside corners and end stops provided or approved by resilient sheet flooring manufacturer.

E. Floor Polish: Provide protective, liquid floor-polish products recommended by resilient sheet flooring manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer and manufacturer's representative present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion or resilient sheet flooring.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to resilient sheet flooring manufacturer's written instructions, and with oversight by manufacturer’s representative, to ensure adhesion of flooring.

B. Concrete Substrates: Prepare according to ASTM F 710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners prior to testing and prior to flooring application.

2. Mechanically remove, according to manufacturer’s written instructions, laitance, glaze, efflorescence, curing compounds, sealers, and hardeners, and other substances that are incompatible with resilient sheet flooring materials and that contain soap, wax, oil or silicone, without using solvents.

3. Moisture, Alkalinity, and Bond Testing: Determine the suitability of the concrete subfloor for receiving the resilient sheet flooring with regard to moisture content and pH level by moisture and alkalinity tests. Conduct moisture testing in accordance with ASTM F 1869 (calcium chloride) and ASTM F 2170 (relative humidity) unless otherwise recommended by the resilient sheet flooring manufacturer. Conduct alkalinity testing as recommended by the resilient sheet flooring manufacturer. Determine the compatibility of the resilient sheet flooring adhesives to the concrete floors by a bond test in accordance with the resilient sheet flooring manufacturer’s recommendations. Submit copy of test reports for moisture and alkalinity content of concrete slab, and bond test, stating date of test, person conducting the test, and the area tested.

a. Apply moisture and alkalinity control system as recommended by resilient sheet flooring manufacturer. Proceed with installation only after substrates pass testing.

C. Substrate Tolerance: Where substrate tolerances are not in compliance with resilient sheet flooring manufacturer's written instructions, produce a level surface in accordance with manufacturer's written instructions and the following:

1. Measure surface, grind high spots, fill low spots, so gap at any point between concrete surface and an unleveled, freestanding, 10-ft-long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/4 inch.
2. Use compatible trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.

D. Do not install resilient sheet flooring until it is same temperature as space where it is to be installed.

1. Move resilient sheet flooring and installation materials into spaces where they will be installed at least 72 hours in advance of installation.

E. Scrape, sand, sweep, and vacuum clean substrates to be covered immediately before product installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 RESILIENT SHEET FLOORING INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient sheet flooring.

B. Unroll resilient sheet flooring and allow it to stabilize before cutting and fitting.

C. Lay out resilient sheet flooring as follows:

1. Maintain uniformity of flooring direction.
2. Minimize number of seams; place seams in inconspicuous and low-traffic areas, at least 6 inches away from parallel joints in flooring substrates.
3. Match edges of flooring for color shading at seams.
4. Avoid cross seams.

D. Scribe and cut resilient sheet flooring to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.

E. Extend resilient sheet flooring into toe spaces, door reveals, closets, and similar openings.

F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on resilient sheet flooring as marked on substrates. Use chalk or other nonpermanent marking device.

G. Install resilient sheet flooring on covers for telephone and electrical ducts and similar items in installation areas. Maintain overall continuity of color and pattern between pieces of flooring installed on covers and adjoining flooring. Tightly adhere flooring edges to substrates that abut covers and to cover perimeters.

H. Adhere resilient sheet flooring to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

I. Seamless Installation:

1. Heat-Welded Seams: Comply with ASTM F 1516. Rout joints and heat weld with welding bead to fuse sections permanently into a seamless flooring installation. Prepare, weld, and finish seams to produce surfaces flush with adjoining flooring surfaces.

J. Integral-Flash-Cove Base: Cove resilient sheet flooring to dimension indicated, but no less than 6 inches, up vertical surfaces. Support flooring at horizontal and vertical junction with cove strip. Butt at top against cap strip.

1. Install metal corners at inside and outside corners.

3.4 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer's Field Services: Engage manufacturer's representative for technical assistance and guidance for surface preparation and installation of resilient sheet flooring system. At a minimum, arrange for manufacturer's representative to observe initial installation (mockup) of resilient sheet flooring system, at midpoint of installation, and at completion. Provide additional field observation as required to obtain specified warranty and when requested by Owner, Architect, or General Contractor. After each field visit, submit manufacturer's written report of observations within 3 business days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective actions.

B. Field Testing: Engage a qualified testing agency to perform field testing to determine if resilient sheet flooring, including floor polish, complies with specified dynamic coefficient of friction.

1. Field testing is not required if manufacturer provides test reports confirming compliance with performance requirements.

C. If test results or inspections show resilient sheet flooring does not comply with requirements, remove and replace resilient sheet flooring as recommended in writing by manufacturer, and make further repairs after retesting and inspecting until resilient sheet flooring installation passes.

D. Prepare test and inspection reports.

3.5 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protecting resilient sheet flooring.

B. Perform the following operations immediately after completing resilient sheet flooring installation:

1. Remove adhesive and other blemishes from surfaces.
2. Sweep and vacuum surfaces thoroughly.
3. Damp-mop surfaces to remove marks and soil.

C. Protect resilient sheet flooring from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

D. Floor Polish: Remove soil, adhesive, and blemishes from flooring surfaces before applying liquid floor polish.

1. Apply number of coat(s) as recommended by resilient sheet flooring for conditions indicated.
2. Verify that both floor polish and its application method are approved by resilient sheet manufacturer.

E. Cover resilient sheet flooring until Substantial Completion.

END OF SECTION 096516

SECTION 096519 - RESILIENT TILE FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Resilient floor tile.
2. Testing and application of systems for the reduction of moisture vapor transmission and alkalinity control for interior concrete slabs that are not in compliance with resilient flooring manufacturer's written requirements.

B. Related Requirements:

1. Section 012100 "Allowances" for moisture vapor emission control allowance.
2. Section 035416 "Hydraulic Cement Underlayment" for self-leveling hydraulic cement underlayment at concrete floor substrates.
3. Section 096513 "Resilient Base and Accessories" for resilient base, reducer strips, and other accessories installed with resilient flooring.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to resilient flooring including, but not limited to, the following:

a. Examination and preparation of substrates to receive resilient flooring.
b. Installation.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. For resilient flooring products, product data indicating compliance with sustainable design performance requirements.
2. For adhesives, product data indicating VOC content.

C. Shop Drawings: Provide project-specific shop drawings for each type of floor tile.

1. Include floor tile layouts, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
2. Show details of special patterns.

D. Samples: Full-size units of each color and pattern of floor tile required.

E. Product Schedule: For floor tile. Use same designations indicated on Drawings.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency.

C. Field quality control reports.

D. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of floor tile to include in maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Floor Tile: Furnish one box for every 50 boxes or fraction thereof, of each type, color, and pattern of floor tile installed.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of resilient tile flooring that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 5 years' experience installing resilient tile flooring similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockups for floor tile including resilient base and accessories.

a. Size: First 100 sq. ft. of installation for each type, color, and pattern in locations directed by Architect.

2. Commence installation of mockup in presence of manufacturer's technical representative.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Store floor tile and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F. Store floor tiles on flat surfaces.

1.10 FIELD CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 85 deg F, in spaces to receive floor tile during the following time periods:

1. 7 days before installation.
2. During installation.
3. 7 days after installation.

B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer.

C. Close spaces to traffic during floor tile installation.

D. Close spaces to traffic for 48 hours after floor tile installation.

E. Install floor tile after other finishing operations, including painting, have been completed.

1.11 WARRANTY

A. Special Warranty for Resilient Flooring: Manufacturer's standard or customized form in which manufacturer and installer agree to repair or replace components of resilient flooring that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, defects/blemishes, scratches/cuts, bubbling/ blistering, cracking/crazing/alligatoring, delamination, failure to meet manufacturer's minimum published standards for traffic wear and durability.
2. Warranty Period: Ten (10) years from date of Substantial Completion.

B. Special Warranty for Moisture/Alkalinity Control System: Manufacturer's standard or customized form in which manufacturer and installer agree to repair or replace materials that fail to control water vapor transmission or fail to control alkalinity within specified warranty period.

1. This warranty includes, but is not limited to, the following:

a. Moisture control system.
b. Underlayments.
c. Floor covering system
d. Labor.

2. Warranty Period: Ten (10) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide resilient tile flooring products by the following:

1. As indicated on Drawings.

B. Source Limitations: Obtain resilient tile flooring from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Dynamic Coefficient of Friction: Not less than 0.42 according to ANSI B101.3.

B. Sustainable Design Requirements:

1. At least 80 percent of the total area of resilient tile flooring shall comply with one of the following:

   a. Certified under the Resilient Floor Covering Institute FloorScore program.
   b. Compliant with the VOC-emission limits and testing requirements specified in the California Department of Public Health's 2010 Standard Method for the Testing and Evaluation Chambers, Version 1.1, February 2010.
   c. Compliant with the Collaborative for High Performance Schools California (CA-CHPS) Criteria Interpretation for EQ 7.0 and EQ 7.1 (formerly EQ 2.2) dated July 2012 and listed in the CHPS High Performance Product Database.
   d. Products certified under UL GREENGUARD Gold (formerly the Greenguard Children's & Schools Program).

2. Adhesives shall have a VOC content of 50 g/L or less.

C. Visual Characteristics and Product Options: Information on Drawings and in specifications establishes requirements for aesthetic effects. Aesthetic effects are indicated by colors, patterns, arrangements, alignments and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

2.3 RESILIENT FLOOR TILE

A. Tile Standard: ASTM F 1700.

B. Thickness: In manufacturer's standard thickness, but not less than 0.125 inch.

C. Size: As indicated on Drawings.

D. Colors and Patterns: As indicated on Drawings, or if not indicated, as selected by Architect from full range of industry colors.

2.4 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by floor tile manufacturer for applications indicated.

B. Moisture and Alkalinity Control System: As recommended by resilient flooring manufacturer for mitigation of concrete slabs with moisture emissions and/or alkalinity measurements that are not within resilient flooring manufacturer's written limitations.

C. Adhesives: Water-resistant type recommended by floor tile and adhesive manufacturers to suit floor tile and substrate conditions indicated.

D. Floor Polish: Provide protective, liquid floor-polish products recommended by floor tile manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient tile flooring.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to floor tile manufacturer's written instructions, and with oversight by manufacturer’s representative, to ensure adhesion of resilient products.

B. Concrete Substrates: Prepare according to ASTM F 710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners prior to testing and prior to flooring application.

2. Mechanically remove, according to manufacturer’s written instructions, laitance, glaze, efflorescence, curing compounds, sealers, and hardeners, and other substances that are incompatible with flooring materials and that contain soap, wax, oil or silicone, without using solvents.

3. Moisture, Alkalinity, and Bond Testing: Determine the suitability of the concrete subfloor for receiving the resilient flooring with regard to moisture content and pH level by moisture and alkalinity tests. Conduct moisture testing in accordance with ASTM F 1869 (calcium chloride) and ASTM F 2170 (relative humidity) unless otherwise recommended by the resilient flooring manufacturer. Conduct alkalinity testing as recommended by the resilient flooring manufacturer. Determine the compatibility of the resilient flooring adhesives to the concrete floors by a bond test in accordance with the resilient flooring manufacturer’s recommendations. Submit copy of test reports for moisture and alkalinity content of concrete slab, and bond test, stating date of test, person conducting the test, and the area tested.

a. Apply moisture and alkalinity control system as recommended by resilient flooring manufacturer. Proceed with installation only after substrates pass testing.

C. Substrate Tolerance: Where substrate tolerances are not in compliance with resilient flooring manufacturer’s written instructions, produce a level surface in accordance with manufacturer’s written instructions and the following:

1. Measure surface, grind high spots (of concrete, and prior to application of any vapor control system), fill low spots, so gap at any point between floor substrate surface and an unleveled, freestanding, 10-ft-long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/8 inch.
2. Use compatible trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.

D. Do not install floor tiles until they are the same temperature as the space where they are to be installed.

1. At least 48 hours in advance of installation, move resilient floor tile and installation materials into spaces where they will be installed.

E. Immediately before installation, scrape, sand, sweep, and vacuum clean substrates to be covered. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 FLOOR TILE INSTALLATION

A. Comply with manufacturer's written instructions for installing floor tile.

B. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.

1. Lay tiles in pattern indicated, or if not indicated, square with room axis.

C. Match floor tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed tiles.

D. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.

E. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.

F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent marking device.

G. Adhere floor tiles to flooring substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.4 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer’s Field Services: Engage manufacturer’s representative for technical assistance and guidance for surface preparation and installation of resilient tile flooring system. At a minimum, arrange for manufacturer’s representative to observe initial installation (mockup) of resilient flooring system, at midpoint of installation, and at completion. Provide additional field observation as required to obtain specified warranty and when requested by Owner, Architect, or General Contractor. After each field visit, submit manufacturer’s written report of observations within 3 business days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective actions.

B. Field Testing: Engage a qualified testing agency to perform field testing to determine if polished resilient tile flooring complies with specified dynamic coefficient of friction.

1. Field testing is not required if manufacturer provides test data conducted with the last three years that installed resilient tile flooring product meets performance requirements indicated.

C. If test results or inspections show resilient tile flooring does not comply with requirements, remove and replace polish and/or replace the resilient tile flooring as recommended in writing by manufacturer, and make further repairs after retesting and inspecting until resilient tile flooring installation passes.

D. Prepare test and inspection reports.

3.5 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protecting floor tile.

B. Perform the following operations immediately after completing floor tile installation:

1. Remove adhesive and other blemishes from exposed surfaces.
2. Sweep and vacuum surfaces thoroughly.
3. Damp-mop surfaces to remove marks and soil.

C. Protect floor tile from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

D. Floor Polish: Remove soil, adhesive, and blemishes from floor tile surfaces before applying liquid floor polish.

1. Apply number of coat(s) as recommended by manufacturer of resilient tile flooring for conditions indicated.
2. Verify that both floor polish and its application method are approved by manufacturer.

E. Cover floor tile until Substantial Completion.

END OF SECTION 096519

SECTION 096536 - STATIC-CONTROL RESILIENT FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Static-conductive, solid vinyl floor tile.
2. Testing and application of systems for the reduction of moisture vapor transmission and alkalinity control for interior concrete slabs that are not in compliance with resilient flooring manufacturer's written requirements.

B. Related Requirements:

1. Section 012100 "Allowances" for moisture vapor emission control allowance.
2. Section 035416 "Hydraulic Cement Underlayment" for trowelable leveling and patching compound if not provided as part of this Section.
3. Section 096513 "Resilient Base and Accessories" for resilient base, reducer strips, and other accessories installed with static-control resilient flooring.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to static-control resilient flooring including, but not limited to, the following:

a. Examination and preparation of substrates to receive static-control resilient flooring.
b. Installation.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. For resilient flooring products, product data indicating compliance with sustainable design performance requirements.
2. For adhesives, product data indicating VOC content.

C. Shop Drawings: For each type of static-control resilient flooring. Include floor-covering layouts, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.

1. Show details of special patterns.
2. Submit grounding diagram showing location of grounding strips and connections.

D. Samples: Full-size units of each color and pattern of static-control floor tile required.

E. Product Schedule: For static-control resilient flooring. Use same designations indicated on Drawings.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for static-control resilient flooring.

C. Field quality control reports.

D. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of static-control resilient flooring to include in maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Floor Tile: Furnish one box for every 50 boxes or fraction thereof, of each type, color, and pattern of floor tile installed.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of static-control resilient flooring that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 5 years' experience installing static-control resilient flooring similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockups for static-control resilient flooring including resilient base and accessories.

a. Size: First 100 sq. ft. of installation for each type, color, and pattern in locations directed by Architect.

2. Commence installation of mockup in presence of manufacturer's technical representative.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Store static-control resilient flooring and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer but not less than 50 deg F or more than 90 deg F. Store floor tiles on flat surfaces.

1.10 FIELD CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 85 deg F, in spaces to receive static-control resilient flooring during the following time periods:

1. 7 days before installation.
2. During installation.
3. 7 days after installation.

B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer.

C. Close spaces to traffic during static-control resilient flooring installation.

D. Close spaces to traffic for 48 hours after static-control resilient flooring installation.

E. Install static-control resilient flooring after other finishing operations, including painting, have been completed.

1.11 WARRANTY

A. Special Warranty for Resilient Flooring: Manufacturer's standard or customized form in which Manufacturer agrees to repair or replace components of static-control resilient flooring that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, defects/blemishes, scratches/cuts, bubbling/ blistering, cracking/crazing/alligatoring, delamination, failure to meet manufacturer's minimum published standards for traffic wear and durability.
2. Warranty Period:

a. Electrical Resistance: Lifetime warranty.
b. Wear-Through: 25 years from date of Substantial Completion.
c. Defects in Workmanship and Materials: 75 years from date of Substantial Completion.

B. Special Warranty for Moisture/Alkalinity Control System: Manufacturer's standard or customized form in which Manufacturer agrees to repair or replace materials that fail to control water vapor transmission or fail to control alkalinity within specified warranty period.

1. This warranty includes, but is not limited to, the following:

a. Moisture control system.
b. Underlayments.
c. Floor covering system
d. Labor.

2. Warranty Period: Ten (10) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide static-control resilient flooring products by the following:

1. As indicated on Drawings.

B. Source Limitations: Obtain static-control resilient tile flooring from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Conductive Properties: Provide static-control resilient flooring with static-control properties indicated as determined by testing identical products per test method indicated by an independent testing and inspecting agency.

1. Electrical Resistance: Test per ASTM F 150 and ESD-STM-7.1.

a. Average greater than 25,000 ohms and less than 1 megohm when test specimens and installed floor coverings are tested surface to surface (point to point).
b. Average greater than 25,000 ohms with no single measurement less than 10,000 ohms when installed floor coverings are tested surface to ground.

2. Static Generation: Less than 12 V when tested per AATCC-134 at 20 percent relative humidity with conductive footwear.
3. Static Decay: 5000 to zero V in less than 0.01 seconds when tested per ASTM E-101C.

B. Dynamic Coefficient of Friction: Not less than 0.42 in accordance with ANSI B101.3.

C. Sustainable Design Requirements:

1. At least 80 percent of the total area of resilient tile flooring shall comply with one of the following:

a. Certified under the Resilient Floor Covering Institute FloorScore program.
b. Compliant with the VOC-emission limits and testing requirements specified in the California Department of Public Health's 2010 Standard Method for the Testing and Evaluation Chambers, Version 1.1, February 2010.
c. Compliant with the Collaborative for High Performance Schools California (CA-CHPS) Criteria Interpretation for EQ 7.0 and EQ 7.1 (formerly EQ 2.2) dated July 2012 and listed in the CHPS High Performance Product Database.
d. Products certified under UL GREENGUARD Gold (formerly the Greenguard Children's & Schools Program).

2. Adhesives shall have a VOC content of 50 g/L or less.

D. Visual Characteristics and Product Options: Information on Drawings and in specifications establishes requirements for aesthetic effects. Aesthetic effects are indicated by colors, patterns, arrangements, alignments and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

2.3 STATIC CONDUCTIVE RESILIENT FLOOR COVERINGS

A. Tile Standard: ASTM F 1700.

B. Thickness: In manufacturer’s standard thickness, but not less than 0.125 inch.

C. Size: As indicated on Drawings.

D. Colors and Patterns: As indicated on Drawings.

2.4 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified portland cement or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.

B. Moisture and Alkalinity Control System: As recommended by resilient flooring manufacturer for mitigation of concrete slabs with moisture emissions and/or alkalinity measurements that are not within resilient flooring manufacturer’s written limitations.

C. Static-Control Adhesive: Provided or approved by manufacturer; type that maintains electrical continuity of floor-covering system to ground connection.

D. Grounding Strips: Provided or approved by manufacturer; type and size that maintains electrical continuity of floor-covering system to ground connection.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer and manufacturer's representative present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion or static-control characteristics of floor coverings.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to manufacturer's written instructions and with oversight by manufacturer's representative to ensure adhesion of static-control resilient flooring and electrical continuity of floor-covering systems.

B. Concrete Substrates: Prepare according to ASTM F 710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners prior to testing and prior to flooring application.

2. Mechanically remove, according to manufacturer’s written instructions, laitance, glaze, efflorescence, curing compounds, sealers, and hardeners, and other substances that are incompatible with wood flooring materials and that contain soap, wax, oil or silicone, without using solvents.

3. Moisture, Alkalinity, and Bond Testing: Determine the suitability of the concrete subfloor for receiving the resilient flooring with regard to moisture content and pH level by moisture and alkalinity tests. Conduct moisture testing in accordance with ASTM F 1869 (calcium chloride) and ASTM F 2170 (relative humidity) unless otherwise recommended by the resilient flooring manufacturer. Conduct alkalinity testing as recommended by the resilient flooring manufacturer. Determine the compatibility of the resilient flooring adhesives to the concrete floors by a bond test in accordance with the resilient flooring manufacturer's recommendations. Submit copy of test reports for moisture and alkalinity content of concrete slab, and bond test, stating date of test, person conducting the test, and the area tested.

   a. Apply moisture and alkalinity control system as recommended by resilient flooring manufacturer. Proceed with installation only after substrates pass testing.

C. Substrate Tolerance: Where substrate tolerances are not in compliance with resilient flooring manufacturer's written instructions, produce a level surface in accordance with manufacturer's written instructions and the following:

1. Measure surface, grind high spots (of concrete, and prior to application of any vapor control system), fill low spots, so gap at any point between floor substrate surface and an unleveled, freestanding, 10-ft-long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/8 inch.
2. Use compatible trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.

D. Do not install static-control resilient flooring until it is same temperature as space where it is to be installed.

1. Move static-control resilient flooring and installation materials into spaces where they will be installed at least 48 hours in advance of installation.

E. Immediately before installation, scrape, sand, sweep, and vacuum clean substrates to be covered. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION, GENERAL

A. Install static-control resilient flooring according to manufacturer's written instructions and with oversight by manufacturer's representative.

B. Embed grounding strips in static-control adhesive. Extend grounding strips beyond perimeter of static-control resilient floor-covering surfaces to ground connections.

C. Scribe, cut, and fit static-control resilient flooring to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.

D. Extend static-control resilient flooring into toe spaces, door reveals, closets, and similar openings. Extend static-control resilient flooring to center of door openings.

E. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on static-control resilient flooring as marked on substrates. Use chalk or other nonpermanent, nonstaining marking device.

F. Adhere static-control resilient flooring to substrates using a full spread of static-control adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.4 FLOOR-TILE INSTALLATION

A. Comply with manufacturer's written instructions for installing floor tile.

B. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so floor tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half floor tile at perimeter.

1. Lay floor tiles in pattern indicated, or if not indicated, square with room axis.

C. Match floor tiles for color and pattern by selecting floor tiles from cartons in same sequence as manufactured and packaged if so numbered. Discard broken, cracked, chipped, or deformed floor tiles.

D. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.

E. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.

F. Adhere floor tiles to flooring substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.5 FIELD QUALITY CONTROL (BY CONTRACTOR)

A. Manufacturer’s Field Services: Engage manufacturer’s representative for technical assistance and guidance for surface preparation and installation of resilient tile flooring system. At a minimum, arrange for manufacturer’s representative to observe initial installation (mockup) of resilient flooring system, at midpoint of installation, and at completion. Provide additional field observation as required to obtain specified warranty and when requested by Owner, Architect, or General Contractor. After each field visit, submit manufacturer’s written report of observations within 3 business days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective actions.

B. Field Testing: Engage a qualified testing agency to perform field testing to determine if static-control resilient tile flooring complies with specified dynamic coefficient of friction.

1. Field testing is not required if manufacturer provides test data conducted with the last three years that installed resilient tile flooring product meets performance requirements indicated.

C. If test results or inspections show static-control resilient flooring does not comply with requirements, remove and replace the static-control resilient flooring as recommended in writing by manufacturer, and make further repairs after retesting and inspecting until static-control resilient flooring installation passes.

D. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protection of static-control resilient flooring.

B. Perform the following operations immediately after completing static-control resilient flooring:

1. Remove static-control adhesive and other blemishes from exposed surfaces.
2. Sweep and vacuum surfaces thoroughly.
3. Damp-mop surfaces to remove marks and soil.

C. Protect static-control resilient flooring from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

1. Do not wax static-control resilient flooring.
2. If recommended in writing by manufacturer, apply protective static-control floor polish formulated to maintain or enhance floor covering's electrical properties; ensure static-control resilient flooring surfaces are free from soil, static-control adhesive, and surface blemishes.

    a. Verify that both floor polish and its application method are approved by manufacturer and that floor polish will not leave an insulating film that reduces static-control resilient flooring's effectiveness for static control.

D. Cover static-control resilient flooring until Substantial Completion.

END OF SECTION 096536

SECTION 096566 - RESILIENT ATHLETIC FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Resilient rubber athletic flooring system.
2. Testing and application of systems for the reduction of moisture vapor transmission and alkalinity control for interior concrete slabs that are not in compliance with resilient athletic flooring manufacturer's written requirements.

B. Related Requirements:

1. Section 012100 "Allowances" for hydraulic cement underlayment and moisture vapor emission control allowances.
2. Section 035416 "Hydraulic Cement Underlayment" for trowelable leveling and patching compound if not provided as part of this Section.
3. Section 096513 "Resilient Base and Accessories" for resilient base, reducer strips, and other accessories installed with resilient flooring.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to resilient athletic flooring including, but not limited to, the following:

a. Examination and preparation of substrates to receive resilient flooring.
b. Installation.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. For adhesives, product data indicating VOC content.
2. For resilient athletic flooring products, product data indicating compliance with sustainable design performance requirements.

C. Shop Drawings: Provide project-specific shop drawings for each type of resilient athletic flooring.

1. Show installation details and floor patterns.

D. Samples for Verification: For each type, color, and pattern of flooring specified, 6-inch- square in size and of same thickness and material indicated for the Work.

1. Seam Samples: For each sheet flooring color and pattern required; with seam running lengthwise and in center of 6-by-9-inch Sample applied to a rigid backing and prepared by Installer for this Project.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency.

C. Field quality control reports.

D. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For resilient athletic flooring to include in maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Sheet Flooring: Furnish amount approximately 2 percent of the total floor surface, of each type, color and dye lot.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of resilient athletic flooring that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 5 years' experience installing resilient athletic flooring similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section.

C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockups for resilient athletic flooring, including accessories.

a. Size: Minimum 100 sq. ft. for each type, color, and pattern in locations directed by Architect.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storing.

B. Store materials to prevent deterioration.

C. Avoid storing materials for extended periods of time.

1.10 FIELD CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 85 deg F, in spaces to receive floor tile during the following time periods:

1. 7 days before installation.
2. During installation.
3. 7 days after installation.

B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer.

C. Close spaces to traffic during floor tile installation.

D. Close spaces to traffic for 48 hours after floor tile installation.

E. Install floor tile after other finishing operations, including painting, have been completed.

1.11 WARRANTY

A. Special Warranty for Moisture/Alkalinity Control System: Manufacturer's standard or customized form in which manufacturer and installer agree to repair or replace materials that fail to control water vapor transmission or fail to control alkalinity within specified warranty period.

1. This warranty includes, but is not limited to, the following:

a. Moisture control system.
b. Underlayments.
c. Floor covering system
d. Labor.

2. Warranty Period: Ten (10) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide resilient athletic flooring products by the following:

1. As indicated on Drawings.

B. Source Limitations: Obtain resilient tile flooring from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Dynamic Coefficient of Friction: Not less than 0.42 according to ANSI B101.3.

B. Sustainable Design Requirements:

1. At least 80 percent of the total area of resilient tile flooring shall comply with one of the following:

a. Certified under the Resilient Floor Covering Institute FloorScore program.

b. Compliant with the VOC-emission limits and testing requirements specified in the California Department of Public Health's 2010 Standard Method for the Testing and Evaluation Chambers, Version 1.1, February 2010.
c. Compliant with the Collaborative for High Performance Schools California (CA-CHPS) Criteria Interpretation for EQ 7.0 and EQ 7.1 (formerly EQ 2.2) dated July 2012 and listed in the CHPS High Performance Product Database.
d. Products certified under UL GREENGUARD Gold (formerly the Greenguard Children's & Schools Program).

2. Adhesives shall have a VOC content of 50 g/L or less.

C. Visual Characteristics and Product Options: Information on Drawings and in specifications establishes requirements for aesthetic effects. Aesthetic effects are indicated by colors, patterns, arrangements, alignments and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

2.3 RUBBER SHEET FLOORING

A. Description: Prefabricated resilient rubber athletic flooring, calendered and vulcanized with a base of natural and synthetic rubbers, stabilizing agents and pigmentation, provided as sheet goods for adhered installation.

B. Material: Rubber wear layer and rubber shock-absorbent layer, vulcanized together.

C. Traffic-Surface Texture: Hammered.

D. Sheet Size: Manufacturer's standard width by longest length that is practical to minimize splicing during installation.

E. Thickness: Not less than 10 mm.

F. Color and Pattern: As indicated on Drawings, or if not indicated, as selected by Architect from manufacturer's full range.

G. Border: Same material as sheet flooring; with bevels that transition from thickness of sheet flooring to surface below it; with straight outside edges; for use where flooring corners and edges do not abut vertical surfaces.

1. Border Color and Pattern: As indicated on Drawings, or if not indicated, as selected by Architect from manufacturer's full range.

2.4 ACCESSORIES

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by floor tile manufacturer for applications indicated

B. Moisture and Alkalinity Control System: As recommended by resilient flooring manufacturer for mitigation of concrete slabs with moisture emissions and/or alkalinity measurements that are not within resilient flooring manufacturer's written limitations.

C. Adhesives: Water-resistant type recommended by floor tile and adhesive manufacturers to suit floor tile and substrate conditions indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for installation tolerances, moisture content, and other conditions affecting performance of the Work.

B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to manufacturer's written instructions, and with oversight by manufacturer's representative, to ensure adhesion of flooring.

B. Concrete Substrates: Prepare according to ASTM F 710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners prior to testing and prior to flooring application.

2. Mechanically remove, according to manufacturer's written instructions, laitance, glaze, efflorescence, curing compounds, sealers, and hardeners, and other substances that are incompatible with wood flooring materials and that contain soap, wax, oil or silicone, without using solvents.

3. Moisture, Alkalinity, and Bond Testing: Determine the suitability of the concrete subfloor for receiving the resilient athletic flooring with regard to moisture content and pH level by moisture and alkalinity tests. Conduct moisture testing in accordance with ASTM F 1869 (calcium chloride) and ASTM F 2170 (relative humidity) unless otherwise recommended by the resilient athletic flooring manufacturer. Conduct alkalinity testing as recommended by the resilient athletic flooring manufacturer. Determine the compatibility of the resilient athletic flooring adhesives to the concrete floors by a bond test in accordance with the resilient athletic flooring manufacturer's recommendations. Submit copy of test reports for moisture and alkalinity content of concrete slab, and bond test, stating date of test, person conducting the test, and the area tested.

a. Apply moisture and alkalinity control system as recommended by resilient athletic flooring manufacturer. Proceed with installation only after substrates pass testing.

C. Substrate Tolerance: Where substrate tolerances are not in compliance with resilient flooring manufacturer's written instructions, produce a level surface in accordance with manufacturer's written instructions and the following:

1. Measure surface, grind high spots, fill low spots, so gap at any point between concrete surface and an unleveled, freestanding, 10-ft-long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/8 inch.
2. Use compatible trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.

D. Do not install resilient athletic flooring until it is at the same temperature as the space where it is to be installed.

1. At least 48 hours in advance of installation, move resilient athletic flooring and installation materials into spaces where they will be installed.

E. Immediately before installation, scrape, sand, sweep, and vacuum clean substrates to be covered. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 FLOORING INSTALLATION, GENERAL

A. Comply with manufacturer's written installation instructions.

B. Scribe, cut, and fit flooring to butt neatly and tightly to vertical surfaces, equipment anchors, floor outlets, and other interruptions of floor surface.

C. Extend flooring into toe spaces, door reveals, closets, and similar openings unless otherwise indicated.

D. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating subfloor markings on flooring. Use nonpermanent, nonstaining marking device.

3.4 SHEET FLOORING INSTALLATION

A. Allow sheet flooring to stabilize before cutting and fitting.

B. Lay out sheet flooring as follows:

1. Maintain uniformity of flooring direction.
2. Minimize number of seams; place seams in inconspicuous and low-traffic areas, at least 6 inches away from parallel joints in flooring substrates.
3. Match edges of flooring for color shading at seams.
4. Locate seams according to approved Shop Drawings.

C. Adhere products to substrates using a full spread of adhesive applied to substrate to comply with adhesive and flooring manufacturers' written instructions, including those for trowel notching, adhesive mixing, and adhesive open and working times.

1. Provide completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.
2. Seam in accordance with manufacturer’s written installation instructions.

3.5 FIELD QUALITY CONTROL

A. Manufacturer’s Field Services: Engage manufacturer’s representative for technical assistance and guidance for surface preparation and installation of resilient athletic flooring system. At a minimum, arrange for manufacturer’s representative to observe initial installation of resilient flooring system, at midpoint of installation, and at completion. Provide additional field observation as required to obtain specified warranty and when requested by Owner, Architect, or Construction Manager. After each field visit, submit manufacturer’s written report of observations within 3 business days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective actions.

B. Field Testing: Engage a qualified testing agency to perform field testing to determine if resilient athletic flooring complies with specified dynamic coefficient of friction.

1. Field testing is not required if manufacturer provides test data conducted with the last three years that installed resilient athletic flooring product meets performance requirements indicated.

C. If test results or inspections show resilient athletic flooring does not comply with requirements, remove and replace polish and/or replace the resilient athletic flooring as recommended in writing by manufacturer, and make further repairs after retesting and inspecting until resilient athletic flooring installation passes.

D. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

A. Perform the following operations immediately after completing flooring installation:

1. Remove adhesive and other blemishes from flooring surfaces.
2. Sweep and vacuum flooring thoroughly.
3. Damp-mop flooring to remove marks and soil after time period recommended in writing by manufacturer.

B. Protect flooring from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period. Use protection methods recommended in writing by manufacturer.

1. Do not move heavy and sharp objects directly over flooring. Protect flooring with plywood or hardboard panels to prevent damage from storing or moving objects over flooring.

C. Cover resilient athletic flooring until Substantial Completion.

END OF SECTION 096566

SECTION 096723 - RESINOUS FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Resinous urethane flooring system, also qualifying as a waterproof membrane.
2. Testing and application of systems for the reduction of moisture vapor transmission and alkalinity control for interior concrete slabs that are not in compliance with fluid-applied epoxy flooring manufacturer's written requirements.

B. Related Sections:

1. Section 012100 "Allowances" for moisture vapor emission control allowance.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to resinous flooring, including, but not limited to, the following:

a. Review of drawings and specifications affecting Work of this Section.
b. Protection of adjacent surfaces.
c. Surface preparation and substrate conditions.
d. Application.
e. Field quality control.
f. Protection of coating system.
g. Repair of coating system.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include manufacturer's technical data, application instructions, and recommendations for each resinous flooring component required.

B. Sustainable Design Submittals: For resinous flooring components (primer, body, top coats), product data indicating VOC content.

C. Shop Drawings: Provide project-specific shop drawings for resinous flooring.

1. Include installation details, layout, and base.
2. Show details of special patterns.

D. Samples for Verification: For each resinous flooring system required, 6 inches square, applied to a rigid backing by Installer for this Project.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency.

C. Letter from manufacturer's technical representative indicating written acceptance of substrate.

D. Field quality control reports.

E. Sample Warranty: For manufacturer's special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For resinous flooring to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of resinous flooring that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports. Manufacturer shall have factory-authorized service representatives who are available for consultation, periodic Project-site observations, and on-site assistance.

B. Installer Qualifications: A firm with not less than 10 years' experience installing resinous flooring similar in material, design, and extent to that indicated for this Project, whose work has resulted in installations with a record of successful in-service performance, and that employs installers and supervisors who are trained and approved by manufacturer to perform work of this Section

C. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards of material and execution.

1. Build mockups for resinous flooring including base and accessories.

a. Size: Minimum 100 sq. ft. of first installation of resinous flooring and cove base for each color and pattern in locations directed by Architect. Include 48-inch length of integral cove base.

2. Approval of mockup does not constitute approval of deviations from the Contractor Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage and mixing with other components.

1.9 FIELD CONDITIONS

A. Environmental Limitations: Comply with resinous flooring manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting resinous flooring application.

B. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during resinous flooring application.

C. Close spaces to traffic during resinous flooring application and for 24 hours after application unless manufacturer recommends a longer period.

1.10 WARRANTY

A. Special Warranty for Resinous Flooring: Manufacturer's standard or customized form in which manufacturer and installer agree to repair or replace components of resinous flooring that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, bubbling, blistering, cracking/crazing/alligatoring, delamination, failure to meet manufacturer's minimum published standards for traffic wear and durability.
2. Warranty Period: Ten (10) years from date of Substantial Completion.

B. Special Warranty for Moisture/Alkalinity Control System: Manufacturer's standard form in which Manufacturer agrees to repair or replace materials that fail to control water vapor transmission or fail to control alkalinity within specified warranty period.

1. This warranty includes, but is not limited to, the following:

a. Moisture control system.
b. Underlayments.
c. Resinous flooring system.
d. Labor.

2. Warranty Period: Ten (10) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain primary resinous flooring materials, including primers, waterproof membrane, base coat, undercoat, and top seal coats, from single source from single manufacturer. Obtain secondary materials, including patching and fill material, joint sealant, and repair materials, of type and from manufacturer recommended in writing by manufacturer of primary materials.

2.2 RESINOUS FLOORING [RF-1]

A. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

1. Stonehard, Inc.; "StonTEC TRF" with integral cove base.

a. Waterproofing System Option: Include "Stonproof ME7" membrane system with texture #3 broadcast to refusal to qualify system as a waterproof membrane.

2. Or Comparable Equal, subject to compliance with specified requirements herein, and in compliance with Section 016000 "Product Requirements."

B. Resinous Flooring System: Abrasion-, impact-, and chemical-resistant, aggregate-filled, and resin-based monolithic floor surfacing designed to produce a seamless floor and integral cove base. System consists of a nominal 3/16-inch thick durable floor system with a decorative, slip-resistant, stain-resistant surface.

C. System Performance Characteristics:

1. Recommended Uses: Biotech, pharmaceutical, .

2. Color and Pattern: As indicated on Drawings, or if not indicated, as selected by Architect from manufacturer's full ranges.
3. Wearing Surface: Textured for slip resistance.

a. Dynamic Coefficient of Friction: Not less than 0.42 for level floor surfaces in accordance with ANSI B101.3.

4. Overall System Thickness: 3/16 inch.
5. Includes integral cove base.
6. Sustainable Design Requirements:

    a. Laboratory Test Reports: Flooring products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
    b. VOC Content:

        1) Primer: VOC content of not more than 100 g/L.
        2) Body and Topcoats: VOC content of not more than 100 g/L.

D. Primer: Type recommended by resinous flooring manufacturer for substrate and resinous flooring system indicated.

E. Waterproof Membrane: Type recommended by resinous flooring manufacturer for substrate and resinous flooring system indicated.

F. Reinforcing Membrane: Flexible resin formulation that is recommended by resinous flooring manufacturer for substrate and resinous flooring system indicated and that inhibits substrate cracks from reflecting through resinous flooring.

G. Patching and Fill Material: Resinous product of or approved by resinous flooring manufacturer and recommended by manufacturer for application indicated.

H. Urethane Mortar Base Coat: A four-component, troweled, 100-percent solids urethane mortar system.

1. Nominal Thickness: 1/8 inch.

I. Undercoat: A two component, 100-percent solids, epoxy bonding coat. A colored coat that accepts the broadcast flakes.

J. Broadcast Flakes: Brightly colored decorative flakes.

1. Color: As selected by Architect from manufacturer's full range.

K. Urethane Sealer Coats: A two-component, UV-resistant, aliphatic polyaspartic urethane sealer.

1. Finish: Matte.
2. Number of seal coats: Two, in accordance with manufacturer's written instructions.

L. Cove Base: Manufacturer’s cove base mix matching resinous flooring system and broadcast aggregate.

M. System Physical Properties: Provide resinous flooring system with the following minimum physical property requirements when tested according to test methods indicated:

1. Tensile Strength: 1,000 psi according to ASTM D 638.
2. Impact Resistance: Minimum 160 in./lbs. according to ASTM D 4226.
3. Abrasion Resistance: Maximum 0.03 gm according to ASTM D 4060, CS-17.
4. Flexural Strength: 2,000 psi according to ASTM C 580.
5. Flexural Modulus of Elasticity: 1.1×10^{6} psi according to ASTM D 790.
6. Hardness: 80 according to ASTM D 2240, Shore D.
7. Flammability: Class I according to ASTM E 648.
8. Linear Coefficient of Thermal Expansion: 12×10^{-6} in./in. deg F according to ASTM C 531.
9. Compressive Strength: 5,000 psi after 7 days according to ASTM C 579.

2.3 RESINOUS FLOORING [RF-2] From Phase I spec; Dex-O-Tex actually installed.

A. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

1. Stonehard "StonShield HRI" System.

Or a Comparable Product by one of the following:

2. Crossfield Products Corp.; Dex-O-Tex "Cheminert CFS Flooring" system, including "Cheminert SC Membrane."

B. Resinous Flooring System: Abrasion-, impact-, and chemical-resistant, aggregate-filled, and resin-based monolithic floor surfacing designed to produce a seamless floor and integral cove base.

C. System Characteristics:

1. Color and Pattern: As indicated on Drawings, or if not indicated, as selected by Architect from manufacturer's available standard and optional colors and patterns.
2. Wearing Surface: In compliance with performance requirements.
3. Integral Cove Base: Height as indicated on Drawings.
4. Overall System Thickness: Nominal 1/4 inch.

D. System Components: Manufacturer's standard components that are compatible with each other and as follows:

1. Primer:
   a. Material Basis: Stonhard Standard Primer.
   b. Resin: Epoxy.
   c. Formulation Description: Two component, 100 percent solids.
   d. Application Method: Squeegee and roller.
   e. Number of Coats: One.

2. Mortar Base:
   a. Material Basis: Stonclad GS.
   b. Resin: Epoxy.
   c. Formulation Description: Three component, 100 percent solids.
   d. Application Method: Metal trowel.
      1) Thickness of Coats: Nominal 3/16 inch.
      2) Number of Coats: One.
   e. Aggregates: Pigmented blended aggregate.

3. Undercoat:
   a. Material Basis: Stonshield undercoat.
   b. Resin: Epoxy.
   c. Formulation Description: Two component, 100 percent solids, UV stable.
   d. Type: Clear.
   e. Finish: Gloss.
   f. Number of Coats: One.

4. Broadcast Media:
   a. Material Basis: Stonshield quartz aggregate.
   b. Type: Pigmented.
   c. Finish: Standard.
   d. Number of Coats: One.
   e. Pattern: Tweed.

5. Sealer:
   a. Material Basis: Stonshield sealer.
   b. Resin: Epoxy.
   c. Formulation Description: Two component, 100 percent solids, UV stable.
   d. Type: Clear.
   e. Finish: Gloss.
   f. Number of Coats: One.
   g. Texture Level: In compliance with performance requirements.

E. System Physical Properties: Provide resinous flooring system with the following minimum physical property requirements when tested according to test methods indicated:

1. Compressive Strength: 10,000 psi after 7 days per ASTM C 579.
2. Tensile Strength: 2,000 psi per ASTM C 307.
3. Flexural Strength: 4,300 psi per ASTM C 580.
4. Water Absorption: < 1% per ASTM C 413.
5. Impact Resistance: > 160 in. lbs. per ASTM D 2794.
6. Flammability: Class 1 per ASTM E-648.
7. Hardness: 85 to 90, Shore D per ASTM D 2240.

2.4 RESINOUS FLOORING [RF-3]

A. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

1. Crossfield Products Corp.; Dex-O-Tex Tek-Crete SL-F (Self-Leveling) and Tek-Crete Sealer.

Or a Comparable Product by one of the following:

2. General Polymers, a division of the Sherwin Williams Company; “FasTop S Urethane Slurry System.

B. Resinous Flooring System: Abrasion-, impact-, and chemical-resistant, aggregate-filled, and resin-based monolithic floor surfacing designed to produce a seamless floor and integral cove base.

C. System Characteristics:

1. Color and Pattern: As selected by Architect from manufacturer's full range.
2. Wearing Surface: Textured for slip resistance.
3. Approvals: Approved for food-processing environments.

D. Primer: Type recommended by resinous flooring manufacturer for substrate and resinous flooring system indicated.

E. Crack-Isolation Reinforcing Membrane: Flexible resin formulation that is recommended by resinous flooring manufacturer for substrate and resinous flooring system indicated and that inhibits substrate cracks from reflecting through resinous flooring.

F. Patching and Fill Material: Resinous product of or approved by resinous flooring manufacturer and recommended by manufacturer for application indicated.

G. Body Coats:

1. Resin: Urethane.
2. Application Method: Flowable, self-leveling.
3. Thickness: 1/8 inch.
4. Aggregates: As selected by Architect from manufacturer's full range of standard and optional aggregates.

H. Top Coats: Sealing or finish coats.

1. Resin: Urethane.
2. Formula Description:
3. Type: Clear.
4. Number of Coats: Two.
5. Thickness: 10 mils per coat.
6. Finish: Matte.

I. Cove Base: Manufacturer’s cove base mix matching body coat and broadcast aggregate.

J. System Physical Properties: Provide resinous flooring system with the following minimum physical property requirements when tested according to test methods indicated:

1. Compressive Strength: 8,100 psi minimum according to ASTM C 579.
2. Tensile Strength: 1,000 psi minimum according to ASTM C 307.
3. Flexural Strength: 2,000 psi minimum according to ASTM D 580.
4. Surface Hardness: 85-90 according to ASTM D 2240 Shore D
5. Adhesion: Minimum 400 psi (100% failure in concrete) according to ASTM D 4541.
6. Water Absorption: 0.64 percent maximum according to MIL-D-3134.
7. Temperature Distortion: Passes according to Crossfield Lab dry, wet and oil at 250 deg F.
8. Critical Radiant Flux: 0.45 W/sq. cm or greater according to NFPA 253.

K. Moisture and Alkalinity Control System: As recommended by flooring manufacturer for mitigation of concrete slabs with moisture emissions and/or alkalinity measurements that are not within flooring manufacturer's written limitations.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and areas, with Installer present, for compliance with requirements for installation tolerances, moisture content, and other conditions affecting performance.

B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resinous flooring.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to resinous flooring manufacturer's written instructions, and with oversight by manufacturer's technical representative, to ensure adhesion of flooring.

B. Clean substrates of substances, including oil, grease, and curing compounds, that might impair resinous flooring bond. Provide clean, dry substrate for resinous flooring application.

C. Concrete Substrates: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with resinous flooring.

1. Roughen concrete substrates as follows:

   a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
   b. Comply with ASTM C 811 requirements unless manufacturer's written instructions are more stringent.

2. Repair damaged and deteriorated concrete according to resinous flooring manufacturer's written instructions.
3. Moisture, Alkalinity, and Bond Testing: Determine the suitability of the concrete subfloor for receiving the resinous flooring with regard to pH level and moisture content by moisture and alkalinity tests. Conduct moisture testing in accordance with ASTM F 1869 (calcium chloride) and ASTM F 2170 (relative humidity) unless otherwise recommended by the resinous flooring manufacturer. Conduct alkalinity testing as recommended by the resinous flooring manufacturer. Determine the compatibility of the resinous flooring system to the concrete floors by a bond test in accordance with the resinous flooring manufacturer's recommendations. Submit copy of test reports for moisture and alkalinity content of concrete slab, and bond test, stating date of test, person conducting the test, and the area tested.

   a. Apply moisture and alkalinity control system as recommended by resinous flooring manufacturer. Proceed with installation only after substrates pass testing.

D. Substrate Tolerance: Where substrate tolerances are not in compliance with resinous flooring manufacturer's written instructions, produce a level surface in accordance with manufacturer's written instructions and the following:

1. Measure surface, grind high spots, fill low spots, so gap at any point between concrete surface and an unleveled, freestanding, 10-ft-long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/8 inch.
2. Use compatible trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.

E. Control Joint and Crack Treatment: Treat control joints and other nonmoving substrate cracks to prevent cracks from reflecting through resinous flooring according to manufacturer's written instructions.

F. Resinous Materials: Mix components and prepare materials according to resinous flooring manufacturer's written instructions.

G. Installation of resinous flooring indicates acceptance of surfaces and conditions.

3.3 APPLICATION

A. Apply components of resinous flooring system according to manufacturer's written instructions to produce a uniform, monolithic wearing surface.

1. Coordinate application of components to provide optimum adhesion of resinous flooring system to substrate, and optimum intercoat adhesion.
2. Cure resinous flooring components according to manufacturer's written instructions. Prevent contamination during application and curing processes.
3. Expansion and Isolation Joint Treatment: At substrate expansion and isolation joints, comply with resinous flooring manufacturer's written instructions.

B. Primer: Apply primer over prepared substrate at manufacturer's recommended spreading rate.

C. Waterproof Membrane: Apply waterproof membrane over entire substrate surface, in manufacturer's recommended thickness.

1. Apply waterproofing membrane to integral cove base substrates.

D. Reinforcing Membrane: Apply reinforcing membrane over entire deck substrates.

1. Apply reinforcing membrane to integral cove base substrates.

E. Integral Cove Base: Apply cove base mix to wall surfaces before applying flooring. Apply according to manufacturer's written instructions and details, including those for taping, mixing, priming, troweling, sanding, and topcoating of cove base. Round internal and external corners.

1. Integral Cove Base: As indicated on Drawings, but no less than 4 inches high.

F. Base Coat: Apply troweled base coats in thickness indicated for flooring system and in accordance with manufacturer's written installation instructions.

G. Undercoat: Apply undercoat in thickness indicated for flooring system, and in accordance with manufacturer's written installation instructions.

1. Aggregates: Broadcast aggregates at rate recommended by manufacturer and, after resin is cured, remove excess aggregates to provide surface texture indicated.

H. Seal Topcoats: Apply two topcoats for flooring system and at spreading rates recommended in writing by manufacturer and to produce wearing surface in accordance with performance requirements.

I. Cure resinous flooring according to manufacturer's written instructions, taking care to prevent contamination during application stages and before completing curing process. Close application area for a minimum of 24 hours.

3.4 FIELD QUALITY CONTROL

A. Manufacturer's Field Services: Engage manufacturer's representative for technical assistance and guidance for surface preparation and application of resinous flooring system. Arrange for manufacturer's representative to observe initial installation (mock-up) of resinous flooring system, at mid-point of the installation, and at completion. Provide additional field observations when requested by Architect or General Contractor. After each field visit, submit manufacturer's written report of observations within 3 business days. The report shall note overall quality of work, deficiencies, and any other concerns, and recommend corrective action.

B. Field Testing: Engage a qualified testing agency to perform field testing to determine if resinous flooring system, including sealer, complies with specified coefficient of friction.

1. Field testing is not required if manufacturer provides test reports confirming compliance with performance requirements.

3.5 PROTECTION

A. Protect resinous flooring from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by resinous flooring manufacturer.

1. Do not move heavy and sharp objects directly over flooring. Protect flooring with plywood or hardboard panels to prevent damage from storing or moving objects over flooring.

END OF SECTION 096723

SECTION 096813 - TILE CARPETING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Modular carpet tile.
2. Testing and application of systems for the reduction of moisture vapor transmission and alkalinity control for interior concrete slabs that are not in compliance with tile carpeting manufacturer's written requirements.

B. Related Requirements:

1. Section 012100 "Allowances" for moisture vapor emission control allowance.
2. Section 035416 "Hydraulic Cement Underlayment" for self-leveling hydraulic cement underlayment at concrete floor substrates.
3. Section 096513 "Resilient Base and Accessories" for resilient wall base and accessories installed with carpet.
4. Section 096816 "Sheet Carpeting" for sheet carpeting and carpet cushion.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to carpet tile installation including, but not limited to, the following:

a. Review delivery, storage, and handling procedures.
b. Review ambient conditions and ventilation procedures.
c. Review subfloor preparation procedures.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include manufacturer's written data on physical characteristics, durability, and fade resistance.
2. Include manufacturer's written installation recommendations for each type of substrate.
3. Fire-Test-Response Characteristics: Provide products with the critical radiant flux classification indicated in Part 2, as determined by testing identical products per ASTM E 648 by an independent testing and inspecting agency.

B. Sustainable Design Submittals:

1. For tile carpeting, product data indicating compliance with sustainable design performance requirements.
2. For adhesives, product data indicating VOC content.

C. Shop Drawings: Provide project-specific shop drawings for each type of tile carpeting. Include plans showing the following:

1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet tiles.
2. Carpet tile type, color, and dye lot.
3. Type of subfloor.
4. Type of installation.
5. Pattern of installation.
6. Pattern type, location, and direction.
7. Pile direction.
8. Type, color, and location of insets and borders.
9. Type, color, and location of edge, transition, and other accessory strips.
10. Transition details to other flooring materials.

D. Samples for Verification: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.

1. Carpet Tile: Full-size Sample.
2. Exposed Edge, Transition, and Other Accessory Stripping: 12-inch-long Samples.

E. Product Schedule: For carpet tile. Use same designations indicated on Drawings.

1.5 IINFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and installer.

B. Product Test Reports: For carpet tile, for tests performed by a qualified testing agency.

C. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For carpet tiles to include in maintenance manuals. Include the following:

1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
2. Precautions for cleaning materials and methods that could be detrimental to carpet tile.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Carpet Tile: Full-size units equal to 5 percent of amount installed for each type indicated, but not less than 10 sq. yd..

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm with not less than 10 years' experience regularly engaged in the production and sales of tile carpeting that has been used for similar applications with successful results, that meets or exceeds performance requirements indicated, and of documenting this performance by inclusion in test reports.

B. Installer Qualifications: An experienced installer who is certified by the International Certified Floorcovering Installers Association.

C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Build mockups for tile carpeting including resilient base and accessories.

a. Size: First 100 sq. ft. of installation for each type, color, and pattern in locations directed by Architect.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Comply with CRI's "CRI Carpet Installation Standard."

1.10 FIELD CONDITIONS

A. Comply with CRI's "CRI Carpet Installation Standard" for temperature, humidity, and ventilation limitations.

B. Environmental Limitations: Do not deliver or install carpet tiles until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at levels planned for building occupants during the remainder of the construction period.

C. Do not install carpet tiles over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet tile manufacturer.

D. Where demountable partitions or other items are indicated for installation on top of carpet tiles, install carpet tiles before installing these items.

1.11 WARRANTY

A. Special Warranty for Carpet Tiles: Manufacturer’s standard or customized non-prorated warranty in which manufacturer agrees to repair or replace components of carpet tile installation that fail in materials or workmanship within specified warranty period.

1. Warranty does not include deterioration or failure of carpet tile due to unusual traffic, failure of substrate, vandalism, or abuse.
2. Failures include, but are not limited to, the following:

a. More than 15 percent edge raveling, snags, zippering and runs.
b. Dimensional instability.
c. Excess static discharge. Excessive static discharge means more than 3.0 kilovolts when tested per AATCC 134 at a relative humidity of 20% and room temperature of 70% F.
d. Resiliency Loss of Backing: More than 10-percent loss of backing resiliency.
e. Loss of tuft-bind strength.
f. Loss of face fiber.
g. Delamination.

3. Warranty Period: Ten (10) years from date of Substantial Completion.

B. Special Warranty for Moisture/Alkalinity Control System: Manufacturer’s standard or customized warranty in which manufacturer and installer agree to repair or replace materials that fail to control water vapor transmission or fail to control alkalinity within specified warranty period.

1. This warranty includes, but is not limited to, the following:

a. Moisture control system.
b. Underlayments.
c. Floor covering system
d. Labor.

2. Warranty Period: Ten (10) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide products from the following:

1. As indicated on Drawings.

B. Source Limitations: Provide tile carpeting from single source from single manufacturer.

2.2 CARPET TILE

A. Color: As indicated on Drawings.

B. Pattern: As indicated on Drawings.

C. Primary Backing/Backcoating: Manufacturer's standard composite materials.

D. Secondary Backing: Manufacturer's standard material.

E. Size: As indicated on Drawings.

F. Applied Treatments:

1. Soil-Resistance Treatment: Manufacturer's standard treatment.
2. Antimicrobial Treatment: Manufacturer's standard treatment that protects carpet tiles as follows:

G. Sustainable Design Requirements: Carpet and carpet tile shall comply with the following:

1. All carpet installed in the building interior shall meet the testing and product requirements of the following:

a. Carpet and Rug Institute's Green Label Plus Program.

2. All carpet cushion installed in the building interior shall meet the requirements of the Carpet and Rug Institute's Green Label program.
3. All carpet adhesive shall have a VOC content of 50 g/L or less.

H. Performance Characteristics:

1. Appearance Retention Rating (TARR), not less than the following according to ASTM D 7330:

a. Special traffic, 3.5 minimum, for stairs and elevators.
b. Severe traffic, 3.5 minimum, for public areas, entrances, lobbies, corridors, dining areas:
c. Moderate traffic, 3.0 minimum, for all other rooms or spaces.

2. Critical Radiant Flux Classification: Not less than 0.45 W/sq. cm according to NFPA 253.
3. Optical Density Smoke Rating: Not to exceed 450 per ASTM E 662 (per 2016 CBC Section 804.4).
4. Dry Breaking Strength: Not less than 100 lbf according to ASTM D 2646.
5. Dimensional Tolerance: Within 1/32 inch of specified size dimensions, as determined by physical measurement.
6. Dimensional Stability: 0.2 percent or less according to ISO 2551 (Aachen Test).
7. Electrostatic Propensity: Less than 3.5 kV according to AATCC 134.
8. Carpet shall be in compliance with 2010 ADA Section 302.2:

a. Carpet or carpet tile shall be securely attached and shall have a firm cushion, pad, or backing or no cushion or pad. Carpet or carpet tile shall have a level loop, textured loop, level cut pile, or level cut/uncut pile texture. Pile height shall be 1/2 inch maximum. Exposed edges of carpet shall be fastened to floor surfaces and shall have trim on the entire length of the exposed edge. Carpet edge trim shall comply with Section 303.

I. Visual Characteristics and Product Options: Information on Drawings and in specifications establishes requirements for aesthetic effects. Aesthetic effects are indicated by colors, patterns, arrangements, alignments and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

2.3 INSTALLATION ACCESSORIES

A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet tile manufacturer.

B. Moisture and Alkalinity Control System: As recommended by carpet tile manufacturer for mitigation of concrete slabs with moisture emissions and/or alkalinity measurements that are not within carpet tile manufacturer's written limitations.

C. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that comply with flammability requirements for installed carpet tile, and are recommended by carpet tile manufacturer for releasable installation.

D. Metal Edge/Transition Strips: Extruded aluminum with mill finish of profile and width shown, of height required to protect exposed edge of carpet, and of maximum lengths to minimize running joints.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer and manufacturer's representative present, for compliance with requirements for maximum moisture content, installation tolerances, and other conditions affecting carpet tile performance.

B. Examine carpet tile for type, color, pattern, and potential defects.

C. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of tile carpeting.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to CRI's "CRI Carpet Installation Standards" and manufacturer's written instructions, and with oversight by manufacturer's representative, to ensure adhesion of tile carpet.

B. Concrete Substrates:

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners prior to testing and prior to flooring application

2. Mechanically remove, according to manufacturer's written instructions, laitance, glaze, efflorescence, curing compounds, sealers, and hardeners, and other substances that are incompatible with carpet flooring materials and that contain soap, wax, oil or silicone, without using solvents.

3. Moisture, Alkalinity, and Bond Testing: Determine the suitability of the concrete subfloor for receiving the tile carpeting with regard to moisture content and pH level by moisture and alkalinity tests. Conduct moisture testing in accordance with ASTM F 1869 (calcium chloride) and ASTM F 2170 (relative humidity) unless otherwise recommended by the carpet tile manufacturer. Conduct alkalinity testing as recommended by the carpet tile manufacturer. Determine the compatibility of the carpet tile adhesives to the concrete floors by a bond test in accordance with the carpet tile manufacturer's recommendations. Submit copy of test reports for moisture and alkalinity content of concrete slab, and bond test, stating date of test, person conducting the test, and the area tested.

   a. Apply moisture and alkalinity control system as recommended by carpet tile manufacturer. Proceed with installation only after substrates pass testing.

C. Substrate Tolerance: Where substrate tolerances are not in compliance with tile carpeting manufacturer's written instructions, produce a level surface in accordance with manufacturer's written instructions and the following:

1. Measure surface, grind high spots (of concrete, and prior to application of any vapor control system), fill low spots, so gap at any point between floor substrate surface and an unleveled, freestanding, 10-ft-long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/8 inch.
2. Use compatible trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.

D. Scrape, sand, sweep, and vacuum clean substrates to be covered immediately before product installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. General: Comply with CRI's "CRI Carpet Installation Standard," Section 18, "Modular Carpet" and with carpet tile manufacturer's written installation instructions.

B. Installation Method: As recommended in writing by carpet tile manufacturer.

C. Maintain dye-lot integrity. Do not mix dye lots in same area.

D. Maintain pile-direction patterns recommended in writing by carpet tile manufacturer.

E. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.

F. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.

G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on carpet tile as marked on subfloor. Use nonpermanent, nonstaining marking device.

H. Install pattern parallel to walls and borders.

3.4 CLEANING AND PROTECTION

A. Perform the following operations immediately after installing carpet tile:

1. Remove excess adhesive and other surface blemishes using cleaner recommended by carpet tile manufacturer.
2. Remove yarns that protrude from carpet tile surface.
3. Vacuum carpet tile using commercial machine with face-beater element.

B. Protect installed carpet tile to comply with CRI's "CRI Carpet Installation Standard," Section 20, "Protecting Indoor Installations."

C. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

END OF SECTION 096813

SECTION 096816 - SHEET CARPETING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Sheet carpet.
2. Carpet cushion.
3. Testing and application of systems for the reduction of moisture vapor transmission and alkalinity control for interior concrete slabs that are not in compliance with sheet carpeting manufacturer's written requirements.

B. Related Requirements:

1. Section 012100 "Allowances" for moisture vapor emission control allowance.
2. Section 035416 "Hydraulic Cement Underlayment" for self-leveling hydraulic cement underlayment at concrete floor substrates.
3. Section 096513 "Resilient Base and Accessories" for resilient wall base and accessories installed with carpet.
4. Section 096813 "Tile Carpeting" for tile carpeting.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to carpet installation including, but not limited to, the following:

a. Review delivery, storage, and handling procedures.
b. Review ambient conditions and ventilation procedures.
c. Review subfloor preparation procedures.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include manufacturer's written data on physical characteristics and durability.
