LEED BD+C: New Construction | v4 - LEED v4

# Building product disclosure and optimization - sourcing of raw materials

Possible 2 points

## Intent

To encourage the use of products and materials for which life cycle information is available and that have environmentally, economically, and socially preferable life cycle impacts. To reward project teams for selecting products verified to have been extracted or sourced in a responsible manner.

## Requirements

### Option 1. **raw material** source and extraction reporting (1 point)

Use at least 20 different permanently installed products from at least five different manufacturers that have publicly released a report from their raw material suppliers which include raw material supplier extraction locations, a commitment to long-term ecologically responsible land use, a commitment to reducing environmental harms from extraction and/or manufacturing processes, and a commitment to meeting applicable standards or programs voluntarily that address responsible sourcing criteria.

Products sourced from manufacturers with self-declared reports are valued as one half (1/2) of a product for credit achievement.

Third-party verified corporate sustainability reports (CSR) which include environmental impacts of extraction operations and activities associated with the manufacturer's product and the product's supply chain, are valued as one whole product for credit achievement calculation. Acceptable CSR frameworks include the following:

### Global Reporting Initiative (GRI) Sustainability Report

**Organisation for Economic Co-operation and Development  
(OECD) Guidelines for Multinational Enterprises**

**U.N. Global Compact:** Communication of Progress

**ISO 26000:** 2010 Guidance on Social Responsibility

**USGBC approved program:** Other USGBC approved programs meeting the CSR criteria.

**AND/OR**

**Option 2. leadership extraction practices (1 point)**

Use products that meet at least one of the responsible extraction criteria below for at least 25%, by cost, of the total value of permanently installed building products in the project.

Extended producer responsibility. Products purchased from a manufacturer (producer) that participates in an [extended producer responsibility](#) program or is directly responsible for extended producer responsibility. Products meeting extended producer responsibility criteria are valued at 50% of their cost for the purposes of credit achievement calculation.

Bio-based materials. Bio-based products must meet the Sustainable Agriculture Network's Sustainable Agriculture Standard. Bio-based raw materials must be tested using ASTM Test Method D6866 and be legally harvested, as defined by the exporting and receiving country. Exclude hide products, such as leather and other animal skin material. Products meeting bio-based materials criteria are valued at 100% of their cost for the purposes of credit achievement calculation.

Wood products. Wood products must be certified by the Forest Stewardship Council or USGBC-approved equivalent. Products meeting [wood](#) products criteria are valued at 100% of their cost for the purposes of credit achievement calculation.

Materials [reuse](#). Reuse includes salvaged, refurbished, or reused products. Products meeting materials reuse criteria are valued at 100% of their cost for the purposes of credit achievement calculation.

Recycled content. Recycled content is the sum of [postconsumer recycled content](#) plus one-half the [preconsumer recycled content](#), based on cost. Products meeting recycled content criteria are valued at 100% of their cost for the purposes of credit achievement calculation.

USGBC approved program. Other USGBC approved programs meeting leadership extraction criteria.

**Pilot Alternative Compliance Path Available**

The following pilot alternative compliance paths is available for this credit. See the [pilot credit library](#) for more information.

## MRpc102 - Legal Wood

For credit achievement calculation, products sourced (extracted, manufactured, and purchased) within 100 miles (160 km) of the project site are valued at 200% of their base contributing cost. For credit achievement calculation, the base contributing cost of individual products compliant with multiple responsible extraction criteria is not permitted to exceed 100% its total actual cost (before regional multipliers) and double counting of single product components compliant with multiple responsible extraction criteria is not permitted and in no case is a product permitted to contribute more than 200% of its total actual cost.

Structure and [enclosure](#) materials may not constitute more than 30% of the value of compliant building products.

### SITES-LEED Equivalency

This LEED credit (or a component of this credit) has been established as equivalent to a SITES v2 credit or component. For more information on using the equivalency as a substitution in your LEED or SITES project, see [this article](#) and [guidance document](#).
