

X.7.3 – Email from Project Superintendent

Hello “Project Engineer”,

I finished my evaluation of what I think HP needs to provide for the added SS lift station work:

- Misc. HP craft labor to facilitate barricade and temp fencing setup and relocation during phased excavation work: 2 HP laborers for 2 days each (8 hours per day).
- 450 LF of temp fencing. Our going rental rate from our temp fence vendor has been \$1.50/LF.
- We need additional water barricades and traffic control material to maintain safe barricading while the excavation work is going on. I have a lump sum quote from SAFE SUPPLY for \$4,560.00

That’s what I got. Trench plates, shoring, fall protection, etc. while be carried by CUDI.

Thanks,

“Project Superintendent”
