A. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.5 CLEANING

A. After completing system installation, including outlet fitting and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.

END OF SECTION 23 5700

SECTION 23 7513 – CUSTOM AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes custom air-handling units with coils for outdoor installations. Built-up air handling units shall comply with this section.

B. Related Sections include the following:

1. Division 23 Section “Variable Frequency Drives” for variable frequency drive.
2. Division 23 Section “Motors for HVAC” for motors.
3. Division 23 Section “Mechanical Vibration and Seismic Controls for HVAC” for vibration control.
4. Division 23 Section “Air Duct Accessories” for dampers and sound attenuators.
5. Division 23 Section “Particulate Air Filtration” for filters and filter racks.
6. Division 23 Section “Instrumentation and Controls” for controls.

1.2 PERFORMANCE REQUIREMENTS

A. General Performance: Air handling units shall withstand 8-inches of water column or 1.5 times the fan total static pressure without failure due to defective manufacture, fabrication, installation, or other defects in construction. Air handling units shall remain watertight and airtight after installation.

B. Cooling coils: Comply with performance requirements specified, as determined by testing assemblies representing those indicated for this Project.

1. Maximum coil face velocity shall be less than 400 feet per minute at maximum design airflow.
2. Maximum coil rows: 8
3. Maximum coil fins per inch shall be 9 fpi.
4. Minimum coil water temperature differential shall be 20°F.

C. Fan: Comply with performance requirements specified, as determined by testing assemblies representing those indicated for this Project.

1. Select fan operating point to the right hand side of peak static pressure point and near the peak of static efficiency.
2. Operation of the fan above 60 hertz is acceptable during the 90 to 100% maximum airflow range.
3. Fans shall be direct drive.

D. Comply with performance requirements specified, as determined by testing assemblies representing those indicated for this Project.

1.3 SUBMITTALS

A. Product Data: For each type of air-handling unit indicated. Include the following:

1. Certified fan-performance curves with system operating conditions indicated, for present and future conditions and/or multi-rating table. Include dirty filter loading in static pressure calculation.
2. Certified fan-sound power ratings.
3. Certified coil-performance ratings with system operating conditions indicated.
4. Motor ratings, electrical characteristics, efficiency and motor and fan accessories.
5. Material gages and finishes for base, panel walls, doors, floor, drain pan, hoods, and exterior hardware.

6. Filters with performance characteristics.
7. Dampers, including housings, linkages, and operators.
8. Itemized list of specified and unspecified internal AHU pressure losses at present and future conditions. Determine total fan static pressure, including external static pressure.
9. Certified air handling unit sound power level ratings in each octave band, for radiated and transmission sound for the fan and at the air handler casing inlet and outlet connections.
10. Acoustic panel, and insulation sound and thermal performance characteristics.
11.
12. Connection data: flexible duct connectors, piping and power connection.
13. Provide detail of mounting, securing, and flashing of roof curb to roof structure. Indicate coordination requirements with roofing system.

B. Shop Drawings: Signed and sealed by a qualified and registered California professional engineer.

1. Certified plan and elevation drawings indicating dimensions, weights, configuration, equipment locations, doors, door swings, duct size and connection location, and maintenance access requirements.
2. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
3. Wiring Diagrams: Power, signal, and control wiring.

C. Coordination Drawings: Submit with Shop Drawings. Show mechanical-room layout and relationships between components, maintenance access requirements and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.

D. Field Quality-Control Test Reports: From manufacturer.

E. Factory Test Results: From manufacturer.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain air-handling units through one source from a single manufacturer. Companies specified specialize in manufacturing of industrial quality, custom-design air handling units with minimum five years documented experience of the size and type to be provided on this project.

B. Product Options: Drawings and schedules indicate size, profiles, performance requirements, and dimensional requirements of air-handling units and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements." Ensure that product meets project performance requirements and space allocation requirements, and that components are compatibly matched.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC (NFPA 70), Article 100, by a testing agency acceptable to University, and marked for intended use.

D. Comply with California Electrical Code. (NFPA 70).

E. Galvanized steel sheets shall be hot dipped conforming to ASTM A653 and shall provide 0.90 ounces of zinc per square foot (G90).

F. Aluminum sheeting shall be aluminum alloy 3003-H14, conforming to ASTM B209, with thickness of 0.040" and hardness of Brinell 40.

G. Aluminum structural base shall be aluminum alloy 6061-T6, conforming to ASTM B308, with hardness of Brinell 73.

H. Aluminum extrusions for door frames, damper frames, and other frames shall be aluminum alloy 6063-T6, conforming to ASTM B221, with hardness of Brinell 73.

I. Unit shall have the approval of one of the following agencies: Underwriters' Laboratories (UL), Electrical Testing Laboratories (ETL) or Canadian Standards Association (CSA). The air handler shall bear an appropriate label certifying that the unit has been designed and manufactured in strict accordance with the UL1995 Standard for air handling equipment. If the manufacturer cannot provide an ETL/UL sticker on the air handler, it will be the sole responsibility of the contractor to arrange for local ETL or UL approval and labeling.

J. The Unit Electrical Panel(s) shall be built in strict accordance to NEC Standards.

K. AHU Controls Compliance: The air handling unit controls shall conform to UL 508 Industrial Controls Equipment.

L. National Fire Protection Association (NFPA): Air handling unit internal insulation, and supplementary materials, shall have a flame spread rating of less than 25 and smoke developed rating less than 50 complying with NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems."

M. Certification: Fans shall have sound and air rating based on testing performed in compliance with the latest version of AMCA bulletins 210, 211, and 300.

O. P. Vibration Testing:

1. Sound and vibration testing to be performed by balancing contractor. The values will be checked with the levels being measured in mils peak to peak. Issue report for MEOR for evaluation.

2. During balancing, the fan shall be imposed with an operating resistance equal to the design external static pressure.
3. A certificate of compliance signed by the manufacturers Quality Control Inspector shall be attached to each fan assembly at the factory and incorporated into the operating and maintenance manuals.

Q. Approval: The University may witness testing. Provide a minimum two-week notification prior to proposed scheduled test. Failure of AHU to meet test requirements shall require correction of deficiency and re-testing of unit. Submit written results of factory tests to the University's Representative for approval prior to shipping of equipment.

R. Safety: AHU and components shall meet requirements of UL 1995 safety standard for "Heating and Cooling Equipment".

1.5 COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07 Section "Roof Accessories."

C. Coordinate size and location of structural-steel support members.

D. Coordinate electrical, temperature controls, and fire alarm system connection requirements. Controls may be factory mounted in lieu of field installation and is preferred by the University. Controls contractor to check prior to shipment.

E. Coordinate and provide the University's equipment access requirements. Include clearance for inspection, repair, component replacement, and maintenance service access.

F. Coordinate with the electrical contractor to provide factory installed conduit openings in the air handling unit casing.

1.6 DELIVERY, STORAGE AND HANDLING

A. Vacuum clean inside of the unit and wipe down with clean rags to remove dust, dirt and metal shaving prior to shipping. Seal exterior opening be shipment.

B. Deliver air-handling units and systems to project site on the UCI campus. Store units under cover and elevated above grade. Protect from weather and construction traffic and debris. Handle carefully to avoid damage to components, enclosures, and finish.

1.7 PROJECT CONDITIONS

A. Do not operate unites for any purpose, temporary or permanent, until ductwork is clean, filters are in place, bearings lubricated, shipping bolts removed and fan has been test run under observation.

1.8 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Filters: One set of prefilters and One set of main filter for each air-handling unit.
2. Gaskets: One set for an access door.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Air Enterprises.
2. Energy Labs
3. Haakon Industries
4. Huntair, Inc.
5. TMI

B. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section 01 6000, “Product Requirements”,

Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 MANUFACTURED UNITS

A. Custom air-handling units shall be factory assembled and consist of fans, motor and drive assembly, coils, damper, plenums, filters, condensate pans, mixing dampers, control devices, sound attenuators, and accessories.

2.3 CABINET

A. Construction: Formed and reinforced double-wall insulated panels, fabricated to allow removal for access to internal parts and components, with joints between sections sealed and constructed with thermal breaks.

1. Outside Casing: 16 gage G-90 galvanized steel.
2. Inside Casing: 22 gage G-90 galvanized steel with the following exceptions; 22 gage perforated G90 galvanized steel liner at fan sections; and 22 gage 304 stainless steel liner at outside air section and coil section. Floor Plate: material is 1/8" thick safety tread surface aluminum sheet. Provide convenience drains for each section to allow efficient wash down of units. Drains shall be 1¼" pipe size minimum and shall be piped to the exterior of the unit. Provide red brass or copper tubing rather than steel piping. Finish with male pipe threads and cap.
3. Panel Fasteners: Screws or bolts shall be galvanized, or stainless steel at maximum 9-inch on centers. If screws are used, screw tips shall not protrude into maintenance access space, presenting a safety hazard to maintenance personnel.
4. Rigidity: Reinforcement of the unit is required to limit deflection to 1/200 when static pressure is at 8-inches of water column, or 1.5 times the fan static pressure, whichever is greater.
5. Structure: Structural members shall be insulated in the same fashion as the insulated panel in order to reduce sound transmission, and surface condensation. Through metal connections, or "bridges" shall be kept to an absolute minimum.
6. Base: Welded steel base of minimum 8 inches high structural tubes or channels around the entire perimeter, and welded structural angle-iron, beams, or channels beneath the fan sections and coils. Welded or bolted cross-members shall be provided for lateral stability, and fully self-supporting system for installation on concrete housekeeping pad.
7. Casing Openings: If horizontally ducted side connections are used, duct connections shall be a minimum 6-inches above the AHU access door threshold.
8. Penetrations: Supply, return, and outside air penetrations shall be low-pressure drop design.
9. Through Penetrations: Conduit and piping penetrating the AHU casing shall be sealed airtight and watertight with an approved sealant. Ensure sealing of chilled water piping where it passes through casing wall.

B. Cabinet Insulation: Comply with CMC.

1. Materials: ASTM C 1071 with coated surface exposed to airstream to prevent erosion of Type II glass fibers.
2. Thickness for wall and roof: 4 inches.
3. Thermal Conductivity (k-Value): 0.24 btu inch/ft^2 at 70 deg F mean temperature.
4. Density: 3 lbs/ft^3.

5. Fire-Hazard Classification: Maximum flame-spread index per ASTM E84 of 25 and smoke-developed index of 50, and flame propagation index of 50 when tested according to ASTM C 411.
6. Liner Adhesive: Comply with NFPA 90A and ASTM C 916.
7. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
8. Location and Application: Encased between outside and inside casing.

C. Access Doors: One door for each air handling unit section of same materials and finishes as cabinet, complete with hinges, latches, handles, and gaskets.

1. Door frames: 16-gage welded construction.
2. Doors: Double-wall, minimum 2-inch thick, 16 gage G-90 galvanized steel; exceptions, interior 18 gage 304 stainless steel for outside air section access door, and for cooling coil section access door. Door swing shall be against the pressure, holding the door firmly against the door seal without latching the lever handle. Door sizes shall be minimum 22-inch wide by 72-inch high, except when limited by air handling unit height.
3. Gasket: Hollow closed-cell elastomeric gasket or seal.
4. Hinges: Adjustable heavy duty corrosion resistant capable of suspending a 100 pound weight placed on the latch end of the door without deflection.
5. Door Handle: Adjustable corrosion resistant alloy lever cam action handles on both sides of door.
6. Instrument Test Port: Access doors shall be equipped with Ventfabrics Model #699 or equal, screwed and gasketed instrument test port. Provide any additional test ports if necessary to allow measurement of the pressure drop across any apparatus in the air handling unit.
7. Fan section Doors: Fan section door, or removable fan section panel shall be large enough to accommodate removal of fan wheel and/or motor.

D. Condensate Drain Pans: Formed sections of 16 gage 304 stainless-steel sheet complying with requirements in ASHRAE 62. Fabricate pans with slopes in two planes to collect condensate from cooling coils (including coil piping connections and return bends) and moisture eliminator sections.

1. Double-Wall Construction: Fill space between walls with foam insulation and seal moisture tight.
2. Slope: Pan shall be sloped ¼” per foot.
3. Drain Connections: 304 stainless steel pipe to outside of unit.
4. Drain Outlet: Bottom, or recessed side outlet.
5. Dimensions: Extend pans downstream of coil edge 1/3 the height of the coil, minimum of 12-inches. Minimum depth shall be 1½-inches deep.
6. Units with stacked coils shall have an intermediate stainless steel drain pan or drain trough to collect condensate from top coil. Provide insulation on bottom of intermediate drain pan.

7. All parts in contact with cooling coil shall be 304 stainless steel.
8. Anchorage: Condensate drain bracket, support, and fastener, material shall be 304 stainless steel.

E. Finish: Salt spray test passing ASTM B-117, D-2247, and D-3359. Paint exterior of the unit casing and doors.

1. Outdoor Units: Polyester coated for a minimum of 4,000 hours salt spray resistance test.

F. Casing and Liner Joints: Seal air handling unit wall panels, floors, liners, and door joints for an airtight and watertight seal, encapsulating the insulation.

1. Sleeves and sealant shall be used on all cabinet electrical and piping penetrations.
2. Cabinet shall conform to ASHRAE/ANSI Standard 111, Leakage Class 9.
3. Assembled unit shall have maximum leakage rate of 1% of total airflow.
4. Flooring shall be of completely watertight construction with minimum 1-1/2-inch raised dams as necessary to contain any potential spills, with low spill point dumping into the mechanical room.
5. Gasket and sealant between panels.

G. Motor Rail: Include a structural I-beam over the motor and to the access door for removal of the motor from the unit with a chain hoist.

2.4 FAN SECTION

A. Fan-Section Construction: Direct-drive plenum fans consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, drive assembly, and support structure and equipped with formed-steel channel base for integral mounting of fan, motor, and casing panels. Mount fan with vibration isolation. Fans shall be selected based on future capacity.

B. Plenum Fan: Completely welded aluminum, direct drive, airfoil blades, taper lock or taper bushing to shaft.

1. Supports: Structural steel tube, steel angle- or channel-iron member supports for mounting and supporting fan wheel, motor, and accessories.
2. Performance Class: AMCA 99, Class II minimum.
3. Safety: Cal-OSHA approved inlet screen and safety devices.
4. AMCA Seal: Fan assembly shall be licensed to bear the AMCA Seal.
5. Inlet: Precision spun inlet cone.
6. Drive: Direct, with coupler.
7. Coatings: Powder-baked enamel.
8. Arrangement: arrangement 4.

C. Fan Assemblies: Statically and dynamically balanced at the factory and designed for continuous operation at maximum rated fan speed and motor horsepower.

D. Shafts: Statically and dynamically balanced and designed for continuous operation at maximum rated fan speed and motor horsepower, with final alignment made after installation.

1. Turned, ground, and polished hot-rolled steel with keyway. Ship with a protective coating of lubricating oil.
2. Solid steel ground and polished. Shaft shall be rated to operate at 20% greater speed than the maximum AMCA Class speed of the fan.

E. Vibration Control: Install fans on welded structural steel base with restrained-spring vibration isolators having a minimum of 2-inch static deflection, selected for seismic zone 4 compliance, with thrust restraint. On fan sizes 54-inch and larger, 3-inch static deflection is required. Provide flexible connectors complying with NFPA 90A. H. Fan-Section Source Quality Control:

1. Sound Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Fans shall bear AMCAcertified sound ratings seal.

2.5 MOTORS

A. General: Totally enclosed, fan-cooled, cast-iron frame, premium efficient and compatible for inverter duty service with VFD. Refer to Division 23 Section "Motors for HVAC" for requirements.

B. Torque Characteristics: Sufficient to accelerate driven loads satisfactorily.

C. Motor Sizes: large enough so driven load will not require motor to operate in service factor range.

D. Overload Protection: Built-in, automatically resetting, thermal-overload protection.

E. Nameplate: Indicate ratings, characteristics, construction, special features, and full identification of manufacturer.

F. Disconnect Switch: Mounted in an accessible location inside air handling unit casing or within 10 feet of motor.

2.6 VARIABLE FREQUENCY DRIVE

A. Refer to Division 23 Section "Variable Frequency Drives" for general requirements. VFD shall be installed integral to the AHU casing in a ventilated compartment, within the VFD manufacturers NEMA 1 enclosure. VFD shall be rated for compatibility with motor, and factory

wired with stranded copper in watertight flexible conduit to motor. Drive and motor shall be mounted, wired, and tested at the factory.

2.7 COILS

A. Coil Sections: Design and construct to facilitate removal and replacement of coil for maintenance and to ensure full airflow through coils.

B. Water Coils: Continuous circuit coil fabricated according to ARI 410, counterflow design, closed-cell insulation on tube bends and headers and any chilled water piping within casing and casing wall.

1. Arrangement: Horizontally stacked coils, individually removable.
2. Piping Connections: Threaded or flanged, on same end.
3. Tubes: minimum 5/8-inch outside diameter Copper tubes, minimum 0.025-inch tube wall thickness, with 0.030-inch thick tube bends, and minimum 48-inch support spacing. Tubes must be of round and open cross-section, void of flow enhancement accessories.
4. Rows: maximum 8.
5. Fins: Copper with corrugated fins and minimum thickness size of 0.0095-inches, and maximum of 9 fins/inch.
6. Fin and Tube Joint: Mechanical bond copper fin to copper tube.
7. Headers: Seamless copper tube with brazed joints, prime coated, with ½" copper or red brass vent and drain piping extensions to outside of the panel wall.
8. Heating Coil Frames: Minimum 16 gage G-90 galvanized-steel channel frame, with minimum ¾" flanges.
9. Cooling Coil Frames: Minimum 10 gage 304 stainless steel channel frame, with minimum ¾-inch flanges.
10. Ratings: Design tested and rated according to ASHRAE 33 and ARI 410.

    a. Working-Pressure Ratings: 200 psig, 325 deg F.

10. Source Quality Control: Test with 300 psig air underwater.
11. Air and drain lines shall be extended to outside of unit casing.

2.8 DAMPERS

A. General: Leakage rate, according to AMCA 500, "Laboratory Methods for Testing Dampers for Rating," shall not exceed 2 percent of air quantity at 2000-fpm face velocity through damper and 4-inch wg pressure differential.

B. Low-Leakage Outside air, return and relief Dampers: Double-skin, airfoil-blade extruded aluminum dampers with compressible jamb seals and rubber, or extruded-vinyl blade edge seals, in opposed-blade arrangement with steel operating rods rotating in stainless-steel sleeve bearings bronze bushings or ball bearings, mounted in a extruded aluminum frame, and with

concealed square or hexagonal zinc plated operating rods connected with a common linkage. Leakage rate shall not exceed 5 cfm/sq. ft. at 1-inch wg and 9 cfm/sq. ft. at 4-inch wg.

1. Outside-Air/Relief-Air: Extruded aluminum frame, damper, axle, and accessories.
2. Option bearings may be composed of a Celcon inner bearing fixed to a $^{7}/_{16}$" aluminum hexagon blade pin, rotating within a polycarbonate outer bearing inserted in the frame, resulting in no metal-to-metal or metal-to-plastic contact.
3. Units with 100% outside air that are 24/7 operation do not require outside air damper.

C. Fan isolation dampers required for units installed in parallel shall be in accordance with Division 23 Section "Air Duct Accessories." Fan isolation damper shall be an industrial type that will close against pressure.

2.9 FILTER SECTION

A. Filters: Comply with NFPA 90A.

B. Filter Section: Provide filter holding frames arranged for flat orientation.

1. Holding Frame: Type 8, 16-gage stainless steel with welded corners. Complete with filter hold-down clips.
2. Frame Stiffener: 3/16-inch thick stainless steel stiffeners are required at 4-foot intervals on filter frame configurations larger than 4-high by 3-wide.
3. Configuration: Flat face holding frame, provide only in 24-inch by 24-inch modules.
4. Blank-off: 16-gage stainless steel sheet blank-off's at irregular shapes at filter bank perimeter as required. Permanently fasten and seal blank-off panels for an airtight seal.
5. Frame Seal: Seal between filter supports and at plenum housing to prevent day lighting for an airtight seal, with permanent frame mounted closed-cell foam gasket for sealing against filter.
6. Filter Gage: Dwyer 2000 series magnahelic, mounted for reading differential pressure across filter bank, 0-2-inch scale.
7. Filter media: For filtration requirements, see equipment schedules on drawings. Provide 2-stage filtration comprised of 2-inch thick 30% efficient ASHRAE throwaway filters (MERV 8), and 85% efficiency ASHRAE filters (MERV 13), unless otherwise indicated.
8. Provide filter frame and racks of stainless steel construction for 100% outside air units.

2.10 AIR FLOW MONITORING STATION

A. Fans shall be supplied with a complete flow measuring system capable of supplying a 4 – 20mA. Output signal to the BMS system that is proportional to airflow.

B. Manufacturer: Haakon AFM.

C. Flow Station Requirements:

1. The flow measuring station and a flow transmitter shall be factory mounted. The flow measuring station shall consist of pressure taps pick-ups located in the inlet cone of one fan per array. The flow measuring station shall be capable of being relocated from one fan to another in the event that the fan in which the flow station is measuring fails. There shall be no obstruction created on the inlet of the fan by installation of flow measuring device. Flow measuring stations installed in the inlet of fan will obstruct the fan inlet and will decrease fan efficiency and increase sound power levels. Provide a gauge with CFM scale on external side of the fan sections, which indicates the fan volume.
2. The electronic flow transmitter shall be mounted on the exterior of the fan section. It shall be capable of receiving signals of total and static pressure from a flow element, of amplifying, extracting the square root, and scaling to produce a 4 - 20 mA or 0 - 5 VDC output signal linear and scaled to air volume or velocity. The flow transmitter shall be capable of the following performance and application criteria.
3. Calibrated spans from 0 - 896 FPM, in eight flow range increments. Output signal 4 -20 mA or 0-5 VDC standard. Integral zeroing means 3-way zeroing valve with manual switch. Temperature effect ± 2.0% of full span from 40° to 120°F.
4. The transmitter shall not be damaged by over-pressurization up to 200 times greater than span, and shall be furnished with a factory calibrated span and integral zeroing means. The transmitter shall be housed in a NEMA 12 enclosure with external signal tubing, power, and output signal connections.

2.11 LIGHTING

A. Vapor proof cast-aluminum marine light with guard, L.E.D., with EMT runs inside of unit serving lights in each section of the unit. Locate solid-state timer/switch on exterior adjacent to fan access door with independently fed lighting circuit – separate from unit power connection. Provide a minimum of 2 lights per section or a two lamp 4 foot fluorescent T-8 lamp with sealed lens for wet environment and electronic ballast.

B. Light fixtures shall be located at the least likely location that they would be bumped or knocked by maintenance staff. That may include ceiling or wall and the location shall be reviewed by the University's Representative.

2.12 ELECTRICAL

A. Electrical work shall be in accordance with current California Electric Code.

B. The mounting height of the units disconnect switches shall be coordinated with the installed working surface to meet the NEC requirements of 6'-7" or less.

C. Wiring inside unit sections shall be installed inside conduit. Conduit to fan motors shall not run across floors or be installed to prevent normal maintenance access. Provide stranded copper wire in a watertight flexible conduit for final connection to motor.

D. VFD for fans factory mounted.

E. Wiring inside units shall be factory installed.

2.13 ACCESSORIES:

A. Blank-off panels: Galvanized to match interior. Permanently fasten and seal blank-off panels for an airtight seal.

B. Lifting Lugs: Factory mounted and adequately sized lifting lugs for each component shipped.

C. Piping penetrations: Extend air lines to exterior of AHU cabinet and cap ½" brass female pipe threads.

2.14 OUTDOOR UNITS

A. Rooftop air handling units shall meet the requirements of this specification, shall be completely weatherproof, and shall meet the following requirements:

1. Doors, access panels, and casings shall have weatherproof gaskets and seals.
2. Storm Louvers:

a. Blades: drainable blade storm type with drain gutter in each blade, stainless steel, or 6063-T5 aluminum alloy. Air velocity at full economizer cycle shall not exceed 900 fpm, and shall not allow moisture carryover.
b. Downspouts: shall be provided in frame jambs and mullions.
c. Frames: aluminum
d. Screen: removable stainless steel bird screen.
e. Supports: designed to withstand wind load of 20 lb/ft^2.
f. Certification: certified and licensed to bear the AMCA Seal.

4. Lighting, switches, convenience outlets, controls, wiring, cabling and instruments shall be suitable for outdoor applications.
5. Exterior Finish: Exterior finish shall withstand 4,000 Hour salt spray testing as prescribed in ASTM B117 Operating Salt Spray (Fog) Apparatus.

Roof shall be sloped to drain, and shall not allow standing water. 2.15 SOUND POWER RATING (BASED ON)

OCTAVE BAND SOUND POWER LEVELS (Lw) in HERTZ, (dB re: 10-12 Watts)

PART 3 - EXECUTION

3.1 EXAMINATION Examine areas and conditions for compliance with requirements for University's standards for maintenance access, installation tolerances and other conditions affecting performance.

B. Examine roughing-in of hydronic, and condensate drainage piping systems and electrical services to verify actual locations of connections before installation.

C. Verify that pads or bases are level. Provide shims if necessary.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Concrete Bases: Install floor and roof mounting units on a minimum 6-inch- high concrete bases or pad. Adjust concrete base height as required to lift AHU in order to fit static condensate trap. See Division 23 Section "Common Work Results for HVAC" for concrete base materials and fabrication requirements. Secure units to concrete bases with concrete anchor bolts.

B. Arrange installation of units to provide access space around air-handling units for service and maintenance.

C. Use factory provided lifting lugs to rig the units. Spreader bars must be used to prevent damaging the casing.

D. Electrical Conduit: Route control tubing, control wiring, smoke detector wiring, if applicable in electrical conduit. Conduit must not be anchored with screw penetrations into AHU casings.

3.3 CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to machine to allow service and maintenance. Piping shall not cause tripping hazard or be in path of travel to access doors.

C. Connect condensate drain pans using NPS 1-1/4, Type L copper tubing. Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction in accordance with Campus Standard piping details.

D. Hot- and Chilled-Water Piping: Comply with applicable requirements in Division 23 Section "Hydronic Piping and Valves." Connect to supply and return coil tappings with union or flange at each connection.

E. Duct installation and connection requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of ducts and duct accessories. Internally isolated units do not need external duct flex connection.

F. Electrical: Comply with applicable requirements in Division 26 Sections for power wiring, switches, and motor controls. Provide conduit for internal wiring.

G. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

H. Tighten electrical connectors and terminals according to manufacturer's published torque tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

3.4

3.5 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

B. Final Checks before Startup: Perform the following:

1. Verify that shipping, blocking, and bracing are removed.
2. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
3. Perform cleaning and adjusting specified in this Section.
4. Verify proper motor rotation direction, and verify free fan wheel rotation and smooth bearing operations. Lubricate bearings, pulleys, and other moving parts with factory-recommended lubricants.
5. Set outside- and return-air mixing dampers to minimum outside-air setting.
6. Comb coil fins for parallel orientation.
7. Install clean filters.

C. Starting procedures for air-handling units include the following:

1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. Replace fan and motor pulleys as required to achieve design conditions.
2. Measure and record motor electrical values for voltage and amperage.
3. Manually operate dampers from fully closed to fully open position and record fan performance.

D. Refer to Division 23 Section “Commissioning for HVAC” and Division 23 Section "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.

3.6 ADJUSTING

A. Adjust damper linkages for proper damper operation.

3.7 CLEANING

A. Clean air-handling units internally, on completion of installation, according to manufacturer's written instructions.

B. After completing system installation and testing, adjusting, and balancing, air-handling and air distribution systems, clean filter housings and install new prefilters.

3.8 DEMONSTRATION

A. Engage a factory-authorized service representative to train University's maintenance personnel to adjust, operate, and maintain air-handling units. Refer to Division 01 Section “Demonstration and Training."

END OF SECTION 23 7513

SECTION 23 8113 - HYDRONIC heating PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes piping, special-duty valves, and hydronic specialties for hot-water heating, chilled-water cooling, process cooling loops, and condenser water systems; makeup water for these systems; blowdown drain lines; and condensate drain piping.

B. Related Sections include the following:

1. Division 07 Section "Penetration Firestopping" for materials and methods for sealing pipe penetrations through fire and smoke barriers.
2. Division 07 Section "Joint Sealants" for materials and methods for sealing pipe penetrations through exterior walls.
3. Division 23 Section "Common Work Results for HVAC" for general piping materials and installation requirements.
4. Division 23 Section "Hangers and Supports for HVAC" for pipe supports, product descriptions, and installation requirements. Hanger and support spacing is specified in this Section.
5. Division 23 Section "Mechanical Vibration and Seismic Controls for HVAC" for flexible pipe support and anchorage product descriptions, and installation requirements.
6. Division 23 Section "Expansion Fittings and Loops for HVAC Piping" for flexible pipe accessory product descriptions, and installation requirements.
7. Division 23 Section "Meters and Gages for HVAC" for thermometers, flow meters, and pressure gages.
8. Division 23 Section "Identification for HVAC" for labeling and identifying hydronic piping.
9. Division 23 Section "Hydronic Pumps" for pumps, motors, and accessories for hydronic piping.
10. Division 23 Section “HVAC Water Treatment” for chemicals, feeders and water treatment requirements.
11. Division 23 Section "Instrumentation and Controls" for temperature-control valves and sensors.

1.2 SUBMITTALS

A. Product Data: For each type of valve indicated. Include flow and pressure drop curves based on manufacturer's testing for valves, diverting fittings, manual calibrated balancing valves, and automatic flow-control valves.

B. Shop Drawings: Detail fabrication of pipe anchors, hangers, special pipe support assemblies, alignment guides, expansion joints and loops, and their attachment to the building structure. Detail location of anchors, alignment guides, and expansion joints and loops.

C. Welding Certificates: Copies of certificates for welding procedures and personnel.

D. Field Test Reports: Written reports of tests specified in Part 3 of this Section. Include the following:

1. Test procedures used.
2. Test results that comply with requirements.
3. Failed test results and corrective action taken to achieve requirements.

E. Maintenance Data: For hydronic specialties and special-duty valves to include in maintenance manuals specified in Division 01.

F. Piping, fittings, and accessories: For each type of materials indicated, including gaskets.

1.3 QUALITY ASSURANCE

A. Delete paragraph below if no welding. Welding: Qualify processes and operators according to the ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

B. ASME Compliance: Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with the ASME Boiler and Pressure Vessel Code, Section VIII, Division 1.

1.4 COORDINATION

A. Coordinate layout and installation of hydronic piping and suspension system components with other construction, including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.

B. Coordinate pipe sleeve installations for foundation wall penetrations.

C. Coordinate piping installation with roof curbs, equipment supports, and roof penetrations. Roof specialties are specified in Division 07 Sections.

D. Coordinate pipe fitting pressure classes with products specified in related Sections.

E. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into base. Concrete, reinforcement, and formwork requirements are specified in Division 03 Sections.

F. Coordinate installation of pipe sleeves for penetrations through exterior walls and floor assemblies. Coordinate with requirements for firestopping specified in Division 07 Section "Penetration Firestopping" for fire and smoke wall and floor assemblies.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Grooved Mechanical-Joint Fittings and Couplings:

   a. Anvil International, Inc.
   b. Victaulic Company of America.
   c. Or equal.

2. Manual Calibrated Balancing Valves:

   a. Armstrong
   b. Griswold Controls.
   c. Tour and Andersson
   d. Victaulic Company of America
   e. Or equal.

3. Pressure-Reducing Valves:

   a. Conbraco Industries, Inc.
   b. Hersey
   c. Febco
   d. Watts Industries, Inc.; Watts Regulators.
   e. Or equal.

4. Safety Valves:

   a. Conbraco Industries, Inc.
   b. ITT McDonnell & Miller Div.; ITT Fluid Technology Corp.
   c. Kunkle Valve Division.
   d. Spence Engineering Company, Inc.
   e. Or equal.

5. Automatic Flow-Control Valves:

   a. Griswold Controls.

b. Or equal (No known equal).

6. Expansion Tanks:
   a. Amtrol, Inc.
   b. Armstrong Pumps, Inc.
   c. Bell & Gossett
   d. Taco, Inc.
   e. Wheatley
   f. Or equal.

7. Air Separators and Air Purgers:
   a. Bell and Gossett
   b. Spiro Research Company; Spirotherm, Inc.
   c. Or equal

8. Piping and fittings:
   a. Pipe and fittings shall be of domestic, Canadian, Australian, or Japanese manufacture.

B. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 PIPING MATERIALS

A. General: Refer to Part 3 "Piping Applications" Article for applications of pipe and fitting materials.

2.3 COPPER TUBE AND FITTINGS

A. Drawn-Temper Copper Tubing: ASTM B 88, Type L.

B. Wrought-Copper Fittings: ASME B16.22.

C. Wrought-Copper Unions: ASME B16.22.

D. Solder Filler Metals: ASTM B 32, 95-5 tin antimony.

E. Brazing Filler Metals: AWS A5.8, Classification BAg-1 (silver).

2.4 STEEL PIPE AND FITTINGS

A. Steel Pipe, NPS ¾ through NPS 1½: ASTM A 53, Type S (seamless) Grade A, Schedule 40, black steel, plain ends.

B. Steel Pipe, NPS 2 through NPS 10: ASTM A 53, Type S (seamless) or Type ERW (welded) Grade A or B, Schedule 40, black steel, plain ends.

C. Steel Pipe, NPS 12 and larger: ASTM A 53, Type S or Type ERW (welded) Grade B, 0.375 inch wall thickness, black steel, plain ends.

D. Steel Pipe Nipples: ASTM A 733, made of ASTM A 53, Schedule 40, black steel; seamless.

E. Malleable-Iron Threaded Fittings: ASME B16.3, Classes 150 and 300.

F. Malleable-Iron Unions: ASME B16.39; Classes 150, 250, and 300.

G. Cast-Iron Pipe Flanges and Flanged Fittings: ASME B16.1, Classes 25, 125, and 250; raised ground face, and bolt holes spot faced.

H. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:

1. Material Group: 1.1.
2. End Connections: Butt welding.
3. Facings: Raised or flat face.

I. Grooved Mechanical-Joint Fittings: ASTM A 536, Grade 65-45-12 ductile iron; ASTM A 47, Grade 32510 malleable iron; ASTM A 53, Type S, Grade B fabricated steel; or ASTM A 106, Grade B steel fittings with grooves or shoulders designed to accept grooved end couplings.

J. Grooved Mechanical-Joint Couplings: Ductile- or malleable-iron housing and EPDM gasket of central cavity pressure-responsive design; with nuts, bolts, locking pin, locking toggle, or lugs to secure grooved pipe and fittings.

K. Welding Materials: Comply with Section II, Part C, of the ASME Boiler and Pressure Vessel Code for welding materials appropriate for wall thickness and for chemical analysis of pipe being welded.

L. Gasket Material: Thickness, material, and type suitable for fluid to be handled; and design temperatures and pressures.

M. Flexible Connectors and Expansion Joints: See Division 23, Section “Expansion Fittings and Loops for HVAC Piping”.

2.5 VALVES

A. Ball Valves: (Sizes NPS ½"– 2", typical)

1. Two-Piece, copper-alloy, MSS SP-110, Bronze body with full-port, 316 stainless steel ball and stem PTFE seats; and 600-psig minimum CWP rating and blowout-proof stem. Stem length shall clear insulation.

a. Conbraco Industries, Inc.; Apollo Div. Model #77-140 (threaded) or Model #77-240 (soldered)
b. Milwaukee.
c. NIBCO Inc.
d. Or equal.

B. AWWA, Cast-Iron Gate Valves for non-hot water applications:

1. Manufacturers:

a. American Cast Iron Pipe Co.; American Flow Control Div.
b. Crane Co.; Crane Valve Group; Stockham Div.
c. Grinnell Corporation; Mueller Co.; Water Products Div.
d. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
e. McWane, Inc.; Kennedy Valve Div.

f. McWane, Inc.; M&H Valve Company Division
g. NIBCO INC.
h. United States Pipe and Foundry Company.
i. Milwaukee.
j. RP&C.
k. Bonney Forge.
l. Or equal.

2. Nonrising-Stem, Resilient-Seated Gate Valves: AWWA C509, gray- or ductile-iron body and bonnet; with bronze or gray- or ductile-iron gate, resilient seats, bronze stem, and stem nut.

a. Minimum Working Pressure: 200 psig.
b. End Connections: Mechanical joint, or flanged.
c. Interior and Exterior Coating: Complying with AWWA C550, epoxy.

C. Cast-Iron Gate Valves for hot water applications:

1. Manufacturers:

a. Type I, Cast-Iron, Rising-Stem Gate Valves:

1) Crane Co.; Crane Valve Group; Crane Valves.
2) Crane Co.; Crane Valve Group; Jenkins Valves.
3) Crane Co.; Crane Valve Group; Stockham Div.
4) Milwaukee Valve Company.
5) NIBCO INC.
6) Powell, Wm. Co.
7) Walworth Co.
8) Watts Industries, Inc.; Water Products Div.
9) Or equal.

2. Cast-Iron Gate Valves, General: MSS SP-70, Type I.

a. Class 125, OS&Y, Cast-Iron Gate Valves: Cast-iron body with bronze trim, renewable bronze seat rings, rising stem, and tapered solid-wedge disc.

D. Check Valves:

1. Sizes NPS ¾"– 2": Ball-Check, spring type, Class 150, MSS-SP-80, two-piece bronze body and seat, full port, blowout proof, threaded ends, stainless steel ball, stem, and spring, Teflon elastomers, Buna-N disc.

a. Crane Co.; Crane Valve Group; Crane Valves
b. Crane Co.; Crane Valve Group; Stockham Div.
c. NIBCO INC.
d. Spriax Sarco
e. Or equal.

2. Sizes NPS 2½"- larger: Swing Check, Type 1, Class 125, MSS-SP-71, cast-iron body, flanged with bronze seat and bronze trim, bolted cap.

a. Crane Co.; Crane Valve Group; Crane Valves. 373.
b. Crane Co.; Crane Valve Group; Stockham Div. G931.
c. NIBCO INC. F-918-B.
d. Or equal.
e. Spirax Sarco.
f. Mueller.

3. Sizes NPS ¾" – 2": Non-slam Check, Class 125, bronze body and seat, tight shut-off, threaded ends. Rated for 200 °F applications.

a. Conbraco Industries, Inc.; Apollo Div. 62-100.

b. Crane Co.; Crane Valve Group; Stockham Div.
c. NIBCO INC. T-480.
d. Spirax Sarco.
e. Mueller.
f. Or equal.

4. Sizes NPS 2½"-larger: Non-slam Check, Type 1, Class 125, MSS-SP-71, cast-iron body, flanged with bronze seat and bronze trim, bolted cap.

a. Crane Co.; Crane Valve Group; Crane Valves.
b. Crane Co.; Crane Valve Group; Stockham Div.
c. NIBCO INC. F-910.
d. Spirax Sarco.
e. Mueller.
f. Or equal.

E. Iron Butterfly Valves:

1. Sizes 2 ½" and larger: 150 psig CWP rating, cast/ductile iron construction, tight shutoff, lug pattern EPDM liner, lever operator, stainless steel disc, epoxy coated body.

a. DeZurik.
b. Henry J. Pratt Company
c. NIBCO INC.
d. Milwaukee ML 224-E-A
e. Or equal.

F. Manual Calibrated Balancing Valves, NPS 2 and Smaller: Bronze body, ball type, 125-psig working pressure, 250 deg F maximum operating temperature, and having threaded ends. Valves shall have calibrated orifice or venturi, connections for portable differential pressure meter with integral seals, and be equipped with a memory stop to retain manually set position.

G. Manual Calibrated Balancing Valves, NPS 2-1/2 and Larger: Cast-iron or steel body, ball type, 125-psig working pressure, 250 deg F maximum operating temperature, and having flanged or grooved connections. Valves shall have calibrated orifice or venturi, connections for portable differential pressure meter with integral seals, and be equipped with a memory stop to retain manually set position.

H. Pressure-Reducing Valves: Diaphragm-operated, bronze or brass body with low inlet pressure check valve, inlet strainer removable without system shutdown, and noncorrosive valve seat and stem. Select valve size, capacity, and operating pressure to suit system. Valve shall be factory set at operating pressure and have capability for field adjustment.

I. Safety Valves: Diaphragm-operated, bronze or brass body with brass and rubber, wetted, internal working parts; shall suit system pressure and heat capacity and shall comply with the ASME Boiler and Pressure Vessel Code, Section IV.

J. Automatic Flow- Limiting Device: factory set to maintain constant flow with plus or minus 5 percent over system pressure fluctuations, and equipped with test probes. Each valve shall have an identification tag outside of insulation attached by chain, and be factory marked with the zone identification, valve number, and flow rate. The body shall bear factory standard product tag. Valve shall be line size and one of the following designs depending on the system:

1. Gray-iron or brass body, designed for 175 psig at 200 deg F with stainless-steel cartridge/piston and spring.
2. Brass body, designed for 175 psig at 200 deg F with stainless-steel cartridge/piston and spring.

K. Pressure Sustaining and Pressure Regulating Valve: The valve shall be hydraulically operated, single diaphragm-actuated, globe or angle pattern. The valve shall consist of three major components: the body with seat installed, the cover with bearings installed, and the diaphragm assembly. The diaphragm assembly shall be the only moving part and shall form a sealed chamber in the upper portion of the valve, separating operating pressure from line pressure.

1. Valve body shall be of cast Ductile Iron material and have stainless steel trim.
2. The valve shall contain a resilient, synthetic rubber disc, with a rectangular cross-section contained on three and one-half sides by a disc retainer and forming a tight seal against a single removable seat insert.
3. The diaphragm assembly containing a non-magnetic 303 stainless steel stem of sufficient diameter to withstand high hydraulic pressures shall be fully guided at both ends by a bearing in the valve cover and an integral bearing in the valve seat. The seat shall be a solid, one-piece design and shall have a minimum of a five-degree taper on the seating surface for a positive, drip-tight shut off.
4. The pressure reducing pilot control shall be a direct-acting, adjustable, spring-loaded, normally open, diaphragm valve with stainless steel trim designed to permit flow when controlled pressure is less than the spring setting. The pilot control is held open by the force of the compression on the spring above the diaphragm and it closes when the delivery pressure acting on the underside of the diaphragm exceeds the spring setting. The pilot control system shall include a fixed orifice. The pilot system shall include an opening speed control on all valves 3” and smaller on the model 92-01 and 4” and smaller on the model 692-01, as standard equipment. The pilot control shall have a second downstream sensing port which can be utilized to install a pressure gauge.
5. The pressure sustaining pilot control shall be a direct-acting adjustable spring loaded control which opens when upstream pressure exceeds the spring setting on the pilot. The pilot control system shall include an X44A strainer & orifice assembly.

6. A full range of spring settings shall be available in ranges of 0 to 450 psi. Downstream spring range shall be 2-30 psi.
7. A direct factory representative shall be made available for start-up service, inspection and necessary adjustments.
8. The valve shall be a Cla-Val Co. Model No. 750-01 Combination Pressure Reducing & Sustaining Valve as manufactured by Cla-Val Co., Newport Beach, CA 92659-0325 or equal.

L. Refer to Part 3 "Valve Applications" Article for applications of each valve.

M. Combination duty type valves and fittings shall not be used.

N. Combination Assemblies: Individual threaded components, ball valves, control valve, automatic flow limiting device of brass body construction, fitted with pressure and temperature test valves, strainer, flexible hoses, and designed for 300 psig at 250 deg F for duct or terminal mounted heating coils. See Campus Standard detail.

2.6 HYDRONIC SPECIALTIES

A. Manual Air Vent Bronze body ball valve with stainless steel ball; NPS ½.

B. Automatic Air Vent: Designed to vent automatically with float principle; bronze body and nonferrous internal parts; 150-psig working pressure; 240 deg F operating temperature; with NPS 1/4 discharge connection and NPS ½" or ¾" inlet connection. Provide only one automatic air vent in system at air separator.

C. Expansion Tanks: Welded carbon steel, rated for 125-psig working pressure and 375 deg F maximum operating temperature with rustproof coating. Separate air charge from system water to maintain design expansion capacity by a flexible diaphragm securely sealed into tank. Include drain fitting and taps for pressure gage and air-charging fitting. Support vertical tanks with steel legs or base; support horizontal tanks with steel saddles. Factory fabricate and test tank with taps and supports installed and labeled according to the ASME Boiler and Pressure Vessel Code, Section VIII, Division 1, shipped with minimum of 12 psig charge.

D. Air Separators: Welded black steel; ASME constructed and labeled for 150 psig minimum working pressure and 250 deg F maximum operating temperature; tangential Viton seal and Oring brass vent head and skim valve, copper coalescing medium, non-ferrous float, in-line inlet and outlet connections; threaded connections for NPS 2 and smaller; flanged connections for NPS 2-1/2 and larger; threaded blowdown connection. Provide units in sizes for full-system flow capacity with pressure loss performance of less than one foot of water, and maximum velocity of 4 feet per second, as manufactured by Spirotherm, or equal as manufactured by

others with greater than line size inlet as required to meet performance requirement of less than one foot of water at design flow capacity. E. Y-Pattern Strainers NPS 2 and smaller:

1. Strainers 2" and smaller for heating and air conditioning water service shall be based on Watts No. 777 or an equivalent strainer by Armstrong or equal, 400 psig WOG bronze body, threaded, Y-pattern, 20-mesh stainless steel screen, with a full size drain connection and ball valve.

F. Y-Pattern Strainers NPS 2-1/2 and larger:

1. Strainers 2-1/2" and larger for heating and air conditioning water service shall be based on Watts No. 77F-DI, Keckely Style "A", or an equivalent strainer by Armstrong or equal, Class 125 cast-iron body, flanged, Y-pattern, stainless steel screen, with a drain connection and ball valve (as described elsewhere herein).

G. Suction Diffuser: Angle or straight pattern, 175-psig pressure rating, cast-iron body and end cap, pump-inlet fitting; with bronze startup and bronze or stainless-steel permanent strainers; bronze or stainless-steel straightening vanes; drain plug; and factory- or field-fabricated support.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

A. Hot Water Heating and Chilled Water (above ground):

1. NPS 2 and smaller: Type L copper; with 95-5 soldered wrought copper fittings.
2. NPS 2-1/2 and larger: Black steel pipe, ASTM A53, Type S (seamless) or Type ERW (welded); with standard weight ASTM A234 forged steel fittings for butt-weld connection or 150 lb; or grooved mechanical joint coupling and fittings with roll grooved mechanical joints.

B. Heating and Chilled Water Pot Feeder:

1. Type L Copper: Type L copper: with 95-5 soldered wrought copper fittings.

C. Equipment Connections

1. NPS 2 and smaller: Use union connections.
2. NPS 2-1/2 and larger: Use flange connections.
3. Dissimilar metals: Where piping is connected to equipment with different materials, such as ferrous to copper, use brass union, brass coupler, brass pipe/nipple in order to prevent electrolysis.

4. Valves: Provide shut-off duty isolation valves and strainers at all equipment.
5. Flexible Piping Connectors: Provide flexible piping connectors at each piece of equipment unless acoustic consultant determines such devices are not required to meet project sound and vibration performance requirements.

D. Condensate Drain Lines: Type L drawn-temper copper tubing with soldered joints.

3.2 VALVE APPLICATIONS

A. General-Duty Valve Applications for hydronic systems unless otherwise noted, use the following valve types:

Type	**Minimum Size**	**Maximum Size**	**Valve Service:**
Ball	¾"	2 "	Shut-off, and Throttling duty.
Gate, AWWA (chilled water)	2½"	12"	Shut-off duty.
Butterfly (chilled water only)	2 ½"	n/a	Shut-off duty.
Gate, rising stem (hot water)	2½"	n/a	Shut-off duty.
Ball - Check (hot water)	¾"	2"	Check valve.

B. Install main building shut-off valves for hydronic systems.

C. Install shutoff duty valves at each riser branch connection to supply mains, at supply connection to each piece of equipment, unless only one piece of equipment is connected in the branch line.

D. Install auto flow limiting balancing valves in the return water line of each heating or cooling element. Install manual calibrated balancing valve at split coils as shown on the University's standard coil piping diagram.

E. Reheat Coils: Provide combination assemblies as described in Part 2, with flow limiting device and flexible hose connections.

F. Hydronic systems which utilize flow limiting devices as balancing means shall include flow limiting devices on all system user branch take-off's at heat exchange device for system uniformity and proper system balance and operation.

G. Combination duty type valves and fittings shall not be used.

H. See Division 23 Section “Instrumentation and Controls” for hydronic control valve requirements.

I. Install check valves at each pump discharge and elsewhere as required to control flow direction.

J. Install safety valves on hot-water generators and elsewhere as required by the ASME Boiler and Pressure Vessel Code. Install safety-valve discharge piping, without valves, to floor. Comply with the ASME Boiler and Pressure Vessel Code, Section VIII, Division 1, for installation requirements.

K. Install pressure-reducing valves on hot-water generators and elsewhere as required to regulate system pressure.

L. All water valves operating between 32 and 95°F and larger than 2” shall be butterfly valves. Where the valves are insulated to prevent sweating (e.g. chilled water) the valves shall be non-rising stem. Other applications may be either rising stem or non-rising stem as required. Except where buried outside, the valves shall have handwheels. Buried valves shall have 2” square operating nut.

3.3 PIPING INSTALLATIONS

A. Refer to Division 23 Section "Common Work Results for HVAC" for basic piping installation requirements.

B. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.

C. Install drains, consisting of a tee fitting, NPS 3/4 ball valve, and short NPS 3/4 threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.

D. Install piping level or at a uniform grade of 0.2 percent in direction of flow or a drain.

E. Where possible, educe pipe sizes using eccentric reducer fitting installed with level side up- top flat.

F. Install branch connections to mains using tee fittings in main pipe, with the takeoff coming out the bottom of the main pipe. For up-feed risers, install the takeoff coming out the top of the main pipe.

G. Install strainers on supply side of each control valve, pressure-reducing valve, solenoid valve, in-line pump, and elsewhere as indicated. Install NPS 3/4 nipple and ball valve in blowdown connection of strainers NPS 2 and larger. Match size of strainer blowoff connection for strainers smaller than NPS 2.

H. Anchor piping for proper direction of expansion and contraction.

I. Do not use groove-joint fittings on insulated piping system, unless insulation system is specifically designed for groove-joint fittings. J. Avoid underground piping.

K. Piping penetrations shall be carefully detailed. Insulation through penetrations shall be continuous.

L. Bushings and short nipples shall not be used.

M. Avoid pipe joints located over, or within 2 feet of electrical equipment. If it cannot be avoided provide with drip pans.

N. Teflon tape shall be utilized for threaded pipe joints.

O. Provide pipe and fittings of similar materials so dielectric fittings are not needed; i.e. only brass and bronze fittings with copper piping.

P. Grooved Mechanical-Joint Fittings and Couplings:

1. Piping shall be roll grooved only. Cut groove piping is not allowed.
2. Gaskets shall be EPDM.
3. Install per manufacturer’s installation instructions.

3.4 HANGERS AND SUPPORTS

A. Hanger, support, and anchor devices are specified in Division 23 Section "Hangers and Supports for HVAC." Comply with requirements below for maximum spacing of supports. B. Install the following pipe attachments:

1. Adjustable steel clevis hangers for individual horizontal piping less than 20 feet long.
2. Adjustable roller hangers and spring hangers for individual horizontal piping 20 feet or longer.
3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet or longer, supported on a trapeze When necessary..
4. Spring hangers to support vertical runs.

C. Install hangers for steel piping with the following maximum spacing and minimum rod sizes:

NPS	Maximum span (feet)	Minimum rod size (inches)
3/4	7’	¼”
1	7 ‘	¼”
1-1/2	9’	3/8”
2	10’	3/8”
2-1/2	11’	3/8”
3	12’	3/8”
4	14’	½”
6	17’	½”
8	19’	5/8”
10	20’	¾”
12	23’	7/8”
14	25’	1”
16	27’	1”
18	28’	1-1/4”
20	30’	1-1/4”
24	32’	1-1/4”

D. Install hangers for drawn-temper copper piping with the following maximum spacing and minimum rod sizes. Comply with hanger manufacture spacing requirements.

NPS	Maximum span (feet)	Minimum rod (inches)
3/4	5 ‘	1/4 “
1	6 ‘	1/4 “
1-1/2	8 ‘	3/8 “
2	8 ‘	3/8 “
2-1/2	9 ‘	3/8 “
3	10 ‘	3/8 “

E. Support vertical runs at roof and at each floor.

3.5 PIPE JOINT CONSTRUCTION

A. Refer to Division 23 Section "Common Work Results for HVAC" for joint construction requirements for soldered and brazed joints in copper tubing; threaded, welded, and flanged joints in steel piping.

3.6 HYDRONIC SPECIALTIES INSTALLATION

A. Install manual air vents at high points in piping, at heat-transfer coils, and elsewhere as required for system air venting.

B. Install one automatic air vent per system in mechanical equipment rooms only at air separator for system air venting.

C. Install in-line air separators in pump suction lines. Install drain valve on units NPS 2 and larger.

D. Install expansion tanks on floor. Vent and purge air from hydronic system, and ensure tank is properly charged with air to suit system design requirements.

E. Provide pot-feeder in heating systems and only in non-central plant chilled water systems.

3.7 TERMINAL EQUIPMENT CONNECTIONS

A. Size for supply and return piping connections shall be same as for equipment connections.

B. Install shut-off valves, strainers, accessories, and flexible hose threaded connections.

C. Install control valves in accessible locations close to connected equipment.

D. Never install bypass piping around control valves.

E. Install ports for pressure and temperature gages at coil inlet connections.

3.8 FIELD QUALITY CONTROL

A. Prepare hydronic piping according to ASME B31.9 and as follows:

1. Leave joints, including welds, uninsulated and exposed for examination during test.
2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
3. Flush system with clean water. Clean strainers.
4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
5. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.

B. Perform the following tests on hydronic piping:

1. Use ambient temperature water as a testing medium.
2. While filling system, use vents installed at high points of system to release trapped air. Use drains installed at low points for complete draining of liquid.
3. Check expansion tanks to determine that they are not air bound and that system is full of water.
4. Subject piping system to hydrostatic test at 150 PSI or 1.5 times the design pressure, whichever is greater, for four hours. There shall be no decrease in pressure over the four hour test period. Isolate equipment subject to damage from test pressure. Make no test against a service valve or meter. Isolate from the system all existing piping and new or existing equipment that may be damaged by test pressure. Test only new piping unless instructed otherwise. Final connection between new and existing piping shall be tested at normal system operating pressures and monitored for leaks for three working days. Verify that stress due to pressure at bottom of vertical runs does not exceed either 90 percent of specified minimum yield strength or 1.7 times "SE" value in Appendix A of ASME B31.9, "Building Services Piping."

5. After hydrostatic test pressure has been applied, examine piping, joints, and connections for leakage throughout the testing period. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.
6. Prepare written report of testing.

c Hydronic piping outside the building may be pre-tested with air at 100 psi. Upon successful testing, pipe may be buried and tested at a later date.

3.9 ADJUSTING

A. Perform these adjustments before operating the system:

1. Open valves to fully open position.
2. Check pump for proper direction of rotation.
3. Set automatic fill valves for required system pressure.
4. Check air vent at air separator and determine if it is operating freely (automatic type).
5. Check air vents at high points of system and bleed air completely (manual type).
6. Set temperature controls so all coils are calling for full flow.
7. Check and set operating temperatures of heating and chilled water systems to design requirements.
8. Lubricate motors and bearings.

3.10 CLEANING

A. Flush hydronic piping systems with clean water. Remove and clean or replace strainer screens. After cleaning and flushing hydronic piping systems, but before balancing, remove disposable fine-mesh strainers in pump suction diffusers.

END OF SECTION 23 2113

SECTION 23 8216 - AIR COILS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following types of air coils that are stand-alone or an integral part of air-handling units:

1. Hot-water.

B. Related Sections include the following:

1. Division 23 Sections for air-handling units.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each air coil. Include rated capacity and pressure drop for each air coil.

B. Shop Drawings: Diagram power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which coil location and ceiling-mounted access panels are shown and coordinated with each other.

B. Field quality-control test reports.

1.5 CLOSEOUT SUBMITTALS

1. Operation and Maintenance Data: For air coils to include in operation and maintenance manuals

1.6 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. ASHRAE Compliance:

1. Comply with ASHRAE 15 for refrigeration system safety.
2. Comply with ASHRAE 33 for methods of testing cooling and heating coils.
3. Comply with applicable requirements in ASHRAE 62.1-2004, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

PART 2 - PRODUCTS

2.1 WATER COILS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Aerofin Corporation.
2. Heatcraft Refrigeration Products LLC; Heat Transfer Division.
3. RAE
4. USA Coil & Air.

B. Performance Ratings: Tested and rated according to ARI 410 and ASHRAE 33.

C. Minimum Working-Pressure/Temperature Ratings: 250 psig, 300 deg F.

D. Source Quality Control: Factory tested to 300 psig.

E. Tubes: ASTM B 743 copper, minimum 0.020 inch thick.

F. Fins: Aluminum, minimum 0.008 inch thick.

G. Headers: Seamless copper tube with brazed joints, prime coated.

H. Frames: Galvanized-steel channel frame, minimum 0.064 inch thick for flanged mounting.

I. Hot-Water Coil , Face-and-Bypass Dampers: Alternating arrangement of coil segments and dampers.

1. Coil Configuration: Horizontal tubes.

J. Hot-Water Coil Characteristics:

1. Minimum Fin Spacing: 0.083 inch.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine ducts, plenums, and casings to receive air coils for compliance with requirements for installation tolerances and other conditions affecting coil performance.

B. Examine roughing-in for piping systems to verify actual locations of piping connections before coil installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install coils level and plumb.

B. Install coils in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."

C. Install stainless-steel drain pan under each cooling coil and under each coil located over electrical equipment or in IT/Communications rooms.

1. Construct drain pans with connection for drain; insulated and complying with ASHRAE 62.1-2007.
2. Construct drain pans to extend beyond coil length and width and to connect to condensate trap and drainage.
3. Extend drain pan upstream and downstream from coil face.
4. Extend drain pan under coil headers and exposed supply piping.

D. Straighten bent fins on air coils.

E. Clean coils using materials and methods recommended in writing by manufacturers, and clean inside of casings and enclosures to remove dust and debris.

3.3 CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to coils to allow service and maintenance.

C. Connect water piping with unions and shutoff valves to allow coils to be disconnected without draining piping. Provide air vent and drain valve at each coil.

3.4 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

END OF SECTION 23 8216

SECTION 23 8219 - FAN COIL UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes fan-coil units and accessories.

1.3 DEFINITIONS

A. BAS: Building automation system.

1.4 SUBMITTALS

A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. LEED Submittals:

1. Product Data for Credit EA 4: Documentation required by Credit EA 4 indicating that equipment and refrigerants comply.
2. Product Data for Prerequisite EQ 1: Documentation indicating that units comply with ASHRAE 62.1-2013ASHRAE 62.1-2013, Section 5 - "Systems and Equipment."

C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Wiring Diagrams: Power, signal, and control wiring.

D. Operation and Maintenance Data: For fan-coil units to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Maintenance schedules and repair part lists for motors, coils, integral controls, and filters.

E. Warranty: Special warranty specified in this Section.

1.5 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. ASHRAE/IESNA 90.1-2013 Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2013, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.6 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fan Belts: Furnish one spare fan belt for every 50 units installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Basis-of-Design Product: The design for each fan-coil unit is based on the product named on the drawings. Subject to compliance with requirements, provide either the named product or a comparable product by one of the other manufacturers specified.

2.2 DUCTED FAN-COIL UNITS

A. Manufacturers:

1. Carrier Corporation.
2. Daikin
3. Environmental Technologies, Inc.
4. International Environmental Corporation.
5. Trane.
6. YORK International Corporation.

B. Description:

1. Furnish and install horizontal concealed direct drive fan coil units of the size and capacity indicated on the plans and in the specifications. All units shall be capable of meeting or exceeding the scheduled capacities for cooling, heating and air delivery.
2. Units shall be completely factory assembled, tested and shipped as one piece. All unit dimensions for each model and size shall be considered maximums.

3. Units shall be ETL listed in compliance with UL/ANSI Standard 1995, and be certified as complying with the latest edition of ARI Standard 430 and ASHRAE 33.

C. Coil Section Insulation:

1. 1/2-inch thick, Elastomeric Closed Cell Foam Insulation. Insulation shall conform to UL 181 for erosion and NFPA 90A for fire, smoke and melting, and comply with a 25/50 Flame Spread and Smoke Developed Index per ASTM E-84 or UL 723.
2. Insulation shall comply with Antimicrobial Performance Rating of 0, no observed growth, per ASTM G-21. Polyethylene insulation is not acceptable.
3. All concealed units shall have a minimum 1 1/4" duct collar on the discharge. Plenum units shall have a minimum 1" duct collar on the return.
4. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2013.

D. Drain Pans:

1. Stainless steel. Fabricate pans and drain connections to comply with ASHRAE 62.1-2013.
2. The drain pan shall be externally insulated with fire retardant, closed cell foam insulation. The insulation shall carry no more than a 25/50 Flame Spread and Smoke Developed Rating per ASTM E-84 and UL 723 and an Antimicrobial Performance Rating of 0, no observed growth, per ASTM G-21.
3. Provide a secondary drain connection on the primary drain pan for condensate overflow.
4. Provide a condensate overflow switch in the primary drain pan for condensate overflow.

E. Chassis: Heavy gauge Galvanized steel, with baked-enamel or powder coated finish and removable access panels.

F. Cabinets: Steel with baked-enamel finish in manufacturer's standard paint color.

1. Supply-Air Plenum: Sheet metal plenum finished and insulated to match the chassis.
2. Return-Air Plenum: Sheet metal plenum finished to match the chassis.
3. Mixing Plenum: Sheet metal plenum finished and insulated to match the chassis with outdoor- and return-air, formed-steel dampers.
4. Dampers: Galvanized steel with extruded-vinyl blade seals, flexible-metal jamb seals, and interlocking linkage.

G. Filters: Minimum arrestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.

1. 2” Pleated Cotton-Polyester Media: 8 MERV.

H. Hydronic Coils:

1. ARI 410 certified and tagged with an ARI 410 label
2. Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch.
3. Include manual air vent and drain.
4. Coils shall be hydrostatically tested at 450 PSIG air pressure under water, and rated for a maximum of 300 PSIG working pressure at 200°F.

5. Heating coils shall be furnished in the reheat or preheat position.

I. Fan Assembly:

1. Direct-Driven Fans, DWDI, forward curved, centrifugal, constructed of 18 gauge Aluminum or painted-steel wheels, and painted-steel or galvanized-steel fan scrolls.
2. The fan assembly shall be easily removable for servicing the motor and blower at, or away from the unit. The entire fan assembly shall be able to come out of the unit by removing four nuts per fan and unplugging the motor(s). Plenum unit fan assemblies shall be easily serviced through the filter opening or through the bottom panel.

3. Motors shall be ECM™ type in compliance with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."

J. Mixing Box Section

1. Provide where indicated on the plans.
2. Fully insulated integral mixing box section with return and outside air dampers, including the interconnecting damper linkage.
3. Mixing box section shall be shipped attached to the concealed plenum unit as an assembly.
4. Damper actuator to be factory provided, mounted, and wired to control enclosure

K. BAS Interface Requirements:

1. Interface relay for scheduled operation.
2. Interface relay to provide indication of fault at the central workstation.
3. Provide BACnet interface for central BAS workstation for the following functions:

   a. Adjust set points.
   b. Fan-coil-unit start, stop, and operating status.
   c. Data inquiry including supply- and room-air temperature.
   d. Occupied and unoccupied schedules.

L. Electrical Connection: Factory wire motors and controls for a single electrical connection.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas to receive fan-coil units for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Examine roughing-in for piping and electrical connections to verify actual locations before fan-coil-unit installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install fan-coil units level and plumb.

B. Install fan-coil units to comply with NFPA 90A.

C. Suspend fan-coil units from structure with elastomeric hangers. Vibration isolators are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."

D. Install new filters in each fan-coil unit within two weeks after Substantial Completion.

3.3 CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties. Specific connection requirements are as follows:

1. Install piping adjacent to machine to allow service and maintenance.
2. Connect condensate drain to indirect waste.

    a. Install condensate trap of adequate depth to seal against the pressure of fan. Install cleanouts in piping at changes of direction.

B. Connect supply and return ducts to fan-coil units with flexible duct connectors specified in Division 23 Section "Air Duct Accessories." Comply with safety requirements in UL 1995 for duct connections.

C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

D. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
2. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

B. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION 23 8219

SECTION 23 8316 – RADIANT HEATING AND COOLING HYDRONIC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

A. This Section covers the hydronic radiant heating and cooling system.

B. The work in this Section includes, but is not limited to, the following:
   1. Complete radiant heating and cooling system as shown on the contract documents.
   2. Manufacturer-supported system startup and commissioning phase support.

1.3 ACTION SUBMITTALS

A. General: Provide required submittals in accordance with Conditions of the Contract and Division 1 Submittal Procedures Section.

B. Product Data: Provide manufacturer’s product submittal data, including pressure and temperature rating, oxygen-barrier performance, and fire-performance characteristics.

C. Shop Drawings: Submit the following piping layouts, calculations and reports.
   1. Piping layout scale: 1/4 inch = 1 foot
   2. Submit manufacturer's detailed drawings showing layouts, fixing details and piping details of all areas where hydronic radiant systems are indicated. Submit a cross-referenced manifold schedule indicating loop lengths, tubing diameter, flow rate, operating water temperatures, and pressure drop to meet the required heating and cooling performance listed on the contract documents along with product and performance data for each component.
   3. Indicate all equipment that are required to control and operate the hydronic radiant system heating and cooling as shown on the plans and described in the sequence of operations.
   4. Provide calculations that support the heating and cooling performance requirements of the hydronic radiant system. These calculations should indicate the slab construction and the depth of the tubing in relation to the exposed surface. Calculations must show the required flow rate, operating temperatures and pressure drops through the system for heating and cooling.
   5. Submit manifold details, including all connections, fittings, valves and mounting requirements.
   6. Submit details for embedded tubing through concrete expansion joints.
   7. Provide drawings showing piping manifold locations and installation details.

8. Provide control sequences and requirements for control hardware devices. Indicate compliance and coordination with requirements of other specification sections.
9. Provide piping sample with complete print stream indicating certification of properties.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Provide operation and maintenance manuals for valves, manifolds, and controls.

B. Closeout Documentation
1. Submit manufacturer's report detailing that the hydronic radiant system has been installed in accordance with the contract documents and the manufacturer's specified instructions. Provide manufacturer’s instructions. Note any exceptions.
2. Submit start-up report demonstrating that system meets required capacity, is fully functional and commissioned to the satisfaction of system manufacturer.
3. Provide final as-built drawings indicating tubing layout, manifold locations, zoning and manifold schedules with details required for installation of the system.
4. Provide documentation indicating that the installer is trained to install the manufacturer’s products.
5. Warranty documents specified herein.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Installer shall have demonstrated experience on projects of similar size and complexity with documentation proving successful completion of hydronic radiant system installation and/or training by the PEX tubing manufacturer.

B. Hydronic radiant system manufacturer shall have successfully completed five installations of similar type and scope. Manufacturer shall provide a representative for field support during the installation and commissioning of the hydronic radiant system.

C. Pre-installation Meetings
1. Verify project requirements, substrate conditions, floor coverings, manufacturer’s installation instructions and warranty requirements.
2. Review project construction timeline to ensure compliance or discuss modifications as required.
3. Interface with other trade representatives to verify areas of responsibility.
4. Establish the frequency and construction phase the project engineer intends for site visits and inspections by the PEX tubing manufacturer’s representative.

1.6 DELIVERY, STORAGE AND HANDLING

A. Delivery: Deliver materials in manufacturer’s original, unopened, undamaged containers with identification labels intact.

B. Storage and Protection: Store materials protected from exposure to harmful environmental conditions and at temperature and humidity conditions recommended by the manufacturer.

1. Store PEX tubing in cartons or under cover to avoid dirt or foreign material from entering the tubing.
2. Do not expose PEX tubing to direct sunlight for more than 30 days. If construction delays are encountered, cover the tubing to prevent exposure to direct sunlight.

1.7 WARRANTY

A. Project Warranty: Refer to Conditions of the Contract for project warranty provisions.

B. Manufacturer's Warranty: Submit, for Owner's acceptance, manufacturer's standard warranty document executed by authorized company official. Manufacturer's warranty is in addition to, and not a limitation of, other rights Owner may have under contract documents.
1. Warranty may transfer to subsequent owners.
2. Warranty Period for PEX Tubing: 30-year, non-prorated warranty against failure due to defect in material or workmanship, beginning with date of installation.
3. Warranty Period for Manifolds and Fittings: 5-year, non-prorated warranty against failure due to defect in material or workmanship, beginning with date of installation

PART 2 - PRODUCTS

2.1 CROSSLINKED POLYETHYLENE (PEX) PIPE AND FITTINGS

A. Manufacturer: Subject to compliance with requirements, provide products by one of the following:
1. Unonor
2. Heat Link
3. Mr. PEX
4. Viega ClimateMat

B. To ensure system compatibility consistency, all products, manifolds, components, etc. specified herein must be manufactured by and/or available from the PEX tubing manufacturer.

C. Tubing
1. Material: Engel-method crosslinked polyethylene (PEX-a)
2. Material Standard: Manufactured in accordance with ASTM F876 and ASTM F877 and tested for compliance by an independent third-party agency.
3. Pressure Ratings: Standard Grade hydrostatic design and pressure ratings as issued by the Plastics Pipe Institute (PPI), a division of the Society of the Plastics Industry (SPI).
    a. 200 degrees F (93 degrees C) at 80 psi (551 kPa)
    b. 180 degrees F (82 degrees C) at 100 psi (689 kPa)
    c. 73.4 degrees F (23 degrees C) at 160 psi (1102 kPa)
4. Show compliance with ASTM E119 and ANSI/UL 263 through certification listings through UL.
    a. UL Design No. K913 ─ 2 hour concrete floor/ceiling assemblies
5. Minimum Bend Radius (Cold Bending): Six times the outside diameter.
6. Barrier Tubing Type: Wirsbo hePEX or equal
    a. Tubing shall have an oxygen-diffusion barrier that does not exceed an oxygen diffusion rate of 0.10 grams per cubic meter per day at 104 degrees F (40 degrees C) water temperature in accordance with German DIN 4726.
    b. Nominal Inside Diameter: Provide tubing with nominal inside diameter in accordance with ASTM F876, as indicated in the system design.

D. Fittings
1. ASTM F1960 cold-expansion fitting manufactured from the following material types:
    a. UNS No. C69300 Lead-free (LF) Brass
    b. 20% glass-filled polysulfone as specified in ASTM D6394
    c. Unreinforced polysulfone (group 01, class 1, grade 2) as specified in ASTM D6394

d. Polyphenylsulfone (group 03, class 1, grade 2) as specified in ASTM D6394
e. Blend of polyphenylsulfone (55-80%) and unreinforced polysulfone (rem.) as specified in ASTM D6394
f. Reinforcing cold-expansion rings shall be manufactured from the same source as PEX-a piping manufacturer and marked "F1960".

2.2 DISTRIBUTION MANIFOLDS

A. Brass Manifolds

1. Brass manifolds assemblies shall be constructed of dezincification-resistant brass, with minimum 1-inch barrel, sized for flow rates required on submitted manifold schedule, and R32 union connections.
2. Manifold assemblies shall be furnished and installed with:

    a. Supply and return filter ball valves
    b. Supply and return temperature gauges
    c. Loop balancing and isolation valves
    d. End cap with vent and drain
    e. Mounting bracket
    f. Manual balancing valves with visual flow indicators
    g. ASTM F1960 fitting assemblies

3. Install flow setter on the return leg from the manifold to provide flow balancing between manifolds.
4. Manifolds support 5/16-inch through ¾-inch PEX tubing. Use
5. Each manifold location should have the ability to vent air manually from the system.
6. Use appropriately-sized manifolds cabinets to allow the manifold assemblies to be mounted inside the wall cavity. Provide manifold elbows and offsets, as required.

B. Stainless-steel Manifolds

1. Stainless-steel Manifold assemblies shall be constructed of 304L stainless steel, with minimum 1-inch barrel, sized for flow rates required on submitted manifold schedule.
2. Stainless-steel Manifold assemblies shall be furnished and installed with:

    a. Supply and return filter ball valves with NPT threads
    b. Supply and return temperature gauges
    c. Loop balancing and isolation valves
    d. End cap with vent and drain
    e. Mounting bracket
    f. Manual balancing valves with visual flow indicators
    g. ASTM F1960 fitting assemblies

3. Install flow setter on the return leg from the manifold to provide flow balancing between manifolds
4. Manifolds support 5/16-inch through ¾-inch PEX tubing.
5. Each manifold location should have the ability to vent air manually from the system.
6. Use appropriately-sized manifolds cabinets to allow the manifold assemblies to be

mounted inside the wall cavity. Provide manifold elbows and offsets, as required.

C. Copper Manifolds
1. For system compatibility, use 2-inch valved copper manifolds manufactured from Type L copper material, offered by the PEX tubing manufacturer.
2. Install valved copper manifolds primarily for wall-hung or boxed applications.
3. Use manifolds with an isolation valve or a combination isolation and balancing valve on each outlet.
4. Use manifolds that support ⅝ inch or ¾ inch PEX tubing.
5. Ensure manifold end cap offers tapping for ⅛ inch FNPT and ½ inch FNPT for vent and drain.
6. Install supply-and-return piping to the manifold in a reverse-return configuration to ensure self-balancing.
7. If the supply-and-return piping is in direct-return configuration, install and balance flow setters on the return leg of each manifold to the mains.

2.3 PIPING SPECIALTIES AND ACCESSORIES

A. Fixing Wire: 6 inch galvanized steel alloy wire ties shall be used to secure PEX tubing to wire mesh or reinforcing bar.
B. Plastic Cable Tie: Minimum 6 inch polyamide 6/6 nylon cable tie. Minimum 20 lb. tensile strength.
C. PVC Bend Supports: 90 degree PVC bend supports shall be used to sleeve tubing at slab penetrations. Bend supports shall be sized for appropriate tubing diameter.
D. Recessed Manifold Wall Cabinets: Minimum 20-gauge galvanized steel construction with white powder-coat finish. Manifold wall cabinets shall be lockable with removable door-trim package and shall be sized to accommodate the manifolds and associated elbows, valves, pumps, etc. as required by the contract documents.

2.4 CONTROLS

A. Refer to Sections 230900 (Instrumentation and Control for HVAC), Section 230993 (Sequence of Operations for HVAC Controls), and plans for radiant heating and cooling controls.

PART 3 - EXECUTION

3.1 MANUFACTURER’S INSTRUCTIONS

A. Install radiant heating and cooling system according to approved shop drawings or coordination drawings.

B. Comply with manufacturer’s product data, including product technical bulletins, installation instructions and design drawings.

3.2 EXAMINATION

A. Site Verification of Conditions

1. Verify that site conditions are acceptable for installation of the hydronic radiant heating and/or cooling system.

3.3 INSTALLATION

A. Slab-on-grade Installation
   1. Fasten the tubing to the wire mesh or reinforcing bar using wire ties or plastic cable ties. Space ties at a maximum of 36 inches. Secure tubing at the base and center of each bend.
   2. Fasten the tubing directly onto foam board insulation using plastic foam staples. Use the manufacturer's recommended staple size for the foam board insulation thickness. Space ties at a maximum of 36 inches. Secure tubing at the base and center of each bend.
   3. Fasten the tubing using PEX rails. Rails shall be fastened to the insulation foam board using compatible liquid nails or silicone with maximum spacing of 36 inches.
   4. Install edge insulation when the controlled system directly contacts an exterior wall.
   5. Install tubing at a consistent depth below the surface elevation. Maintain minimum cover as shown on plans. Ensure sufficient clearance to avoid control joint cuts.
   6. In areas where tubing must cross expansion joints in the concrete, ensure the tubing passes below the joints. If tubing must pass through an expansion joint, tubing shall be wrapped with pipe insulation for 6 inches on both sides of joint.
   7. For tubing that exits the slab in a 90-degree bend, use PVC bend supports.
   8. System shall be pressure-tested per the manufacturer's recommendations at a pressure no less than 40 psig. Maintain minimum 40 psig pressure during the concrete pour for 24 hours during curing.

B. Suspended Slab Construction
   1. Fasten the tubing to the wire mesh or reinforcing bar using wire ties or plastic cable ties. Space ties at a maximum of 36 inches. Secure tubing at the base and center of each bend.
   2. Install edge insulation when the controlled system directly contacts an exterior wall.
   3. Install tubing at a consistent depth below the surface elevation. Maintain minimum cover as shown on plans. Ensure sufficient clearance to avoid control joint cuts.
   4. In areas where tubing must cross expansion joints in the concrete, ensure the tubing passes below the joints. If tubing must pass through an expansion joint, tubing shall be wrapped with pipe insulation for 6 inches on both sides of joint.
   5. For tubing that exits the slab in a 90-degree bend, use PVC bend supports.
   6. System shall be pressure-tested per the manufacturer's recommendations at a pressure no less than 40 psig. Maintain minimum 40 psig pressure during the concrete pour for 24 hours during curing.

C. Topping Installation
   1. Fasten the tubing to the wire mesh using wire ties or plastic cable ties. Space ties at a maximum of 36 inches. Secure tubing at the base and center of each bend.
   2. Fasten the tubing using PEX rails. Rails shall be fastened to the structural slab using compatible liquid nails, silicone, or concrete anchors/screws with maximum spacing of 36 inches.
   3. Install edge insulation when the controlled system directly contacts an exterior wall.
   4. Install tubing at a consistent depth below the surface elevation. Maintain minimum cover as shown on plans. Ensure sufficient clearance to avoid control joint cuts.
   5. In areas where tubing must cross expansion joints in the concrete, ensure the tubing passes

below the joints. If tubing must pass through an expansion joint, tubing shall be wrapped with pipe insulation for 6 inches on both sides of joint.

6. For tubing that exits the slab in a 90-degree bend, use PVC bend supports.
7. System shall be pressure-tested per the manufacturer's recommendations at a pressure no less than 40 psig. Maintain minimum 40 psig pressure during the concrete pour for 24 hours during curing.

D. Manifold Installation
   1. Mount manifolds in manifold wall cabinets per the approved shop drawings. Coordinate door panel finish with architectural finish schedule. Install manifold cabinets in accordance with manufacturer's recommendations.

E. All piping to be identified with loop numbers marked on pipe wall before connecting to manifold using a permanent tag.
   1. Verify actual loop length for each loop on a manifold.
   2. All loops must be identified to allow for future balancing.

F. Coordinate slab tubing layout with other devices (electrical conduits and boxes, telecommunication conduits and boxes, plumbing penetrations, construction and furniture supports) and all other services within or attaching to the slab. Zones designated on the drawings shall be kept clear of all radiant floor tubing.

G. Provide survey documentation of tubing layout after installation of tubing and prior to pouring concrete. Notify Owner's Representative three days in advance of concrete pour to allow inspection of installation and survey documentation.

3.4 ADJUSTING

A. Balancing Loops Across the Manifold
   1. Balance all loops across each manifold to the flow rates specified on the approved manifold schedule.
   2. Balancing is unnecessary when all loop lengths across the manifold are within 3% of each other in length. Install the supply-and-return piping to the manifold in a reverse-return configuration to ensure self-balancing.

3.5 CLEANING/RECYCLING

A. Remove temporary coverings and protection.
B. Repair or replace damaged installed products.
C. Clean installed products in accordance with manufacturer's instructions prior to Owner's acceptance.
D. Remove construction debris from project site and legally dispose of debris. Divert waste tubing and packaging for recycling.

END OF SECTION 23 8316

SECTION 26 0500 – COMMON WORK RESULTS FOR ELECTRICAL

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Concrete equipment bases.
2. Cutting and patching for electrical construction.

B. Related Sections include the following:

1. Division 07 Section “Penetration Firestopping” for firestopping materials and requirements for penetrations through fire and smoke barriers.

1.3 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC (NFPA 70), Article 100, by a testing agency acceptable to the University, and marked for intended use.

B. Comply with CEC (NFPA 70).

1.4 COORDINATION

A. Coordinate chases, slots, inserts, sleeves, and openings with general construction work and arrange in building structure during progress of construction to facilitate the electrical installations that follow.

1. Set inserts and sleeves in poured-in-place concrete, masonry work, and other structural components as they are constructed.

B. Sequence, coordinate, and integrate installing electrical materials and equipment for efficient flow of the Work. Coordinate installing large equipment requiring positioning before closing in the building.

C. Coordinate location of access panels and doors for electrical items that are concealed by finished surfaces. Access doors and panels are specified in Division 08 Section "Access Doors and Frames."

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.
2. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 SUPPORTING DEVICES

A. Material: Cold-formed steel, with corrosion-resistant coating acceptable to the University.

B. Metal Items for Use Outdoors or in Damp Locations: Hot-dip galvanized steel.

C. Slotted-Steel Channel Supports: Flange edges turned toward web, and 9/16-inch- diameter slotted holes at a maximum of 2 inches o.c., in webs.

1. Channel Thickness: Selected to suit structural loading.
2. Fittings and Accessories: Products of the same manufacturer as channel supports.

D. Raceway and Cable Supports: Manufactured clevis hangers, riser clamps, straps, threaded clamps with retainers, ceiling trapeze hangers, wall brackets, and spring-steel clamps or clicktype hangers.

E. Pipe Sleeves: ASTM A 53, Type E, Grade A, Schedule 40, galvanized steel, plain ends. Provide RK Industries, or approved equal.

F. Cable Supports for Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug for non-armored electrical cables in riser conduits. Plugs have number and size of conductor gripping holes as required to suit individual risers. Body constructed of malleable-iron casting with hot-dip galvanized finish.

G. Expansion Anchors: Carbon-steel wedge or sleeve type.

H. Toggle Bolts: All-steel springhead type.

2.3 CONCRETE BASES

A. Concrete shall be provided by Concrete Contractor.

B. Concrete Forms and Reinforcement Materials: As specified in Division 03 Section "Cast-in Place Concrete."

C. Concrete: Minimum 3000-psi, 28-day compressive strength as specified in Division 03 Section "Cast-in-Place Concrete."

2.4 TOUCHUP PAINT

A. For Equipment: Equipment manufacturer's paint selected to match installed equipment finish.

B. Galvanized Surfaces: Zinc-rich paint recommended by item manufacturer.

PART 3 - EXECUTION

3.1 ELECTRICAL EQUIPMENT INSTALLATION

A. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide the maximum possible headroom.

B. Equipment: Install to facilitate service, maintenance, and repair or replacement of components. Connect for ease of disconnecting, with minimum interference with other installations.

C. Right of Way: Give to raceways and piping systems installed at a required slope.

3.2 WIRING INSTALLATION

A. Install splices and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.

B. Install wiring at outlets with at least 6 inches of slack conductor at each outlet.

C. Connect outlet and component connections to wiring systems and to ground. Tighten electrical connectors and terminals, according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use manufacturer’s recommendations.

3.3 ELECTRICAL SUPPORTING DEVICE APPLICATION

A. Damp Locations and Outdoors: Hot-dip galvanized materials, U-channel system components.

B. Dry Locations: Steel materials.

C. Support Clamps for PVC Raceways: Click-type clamp system.

D. Selection of Supports: Comply with manufacturer's written instructions.

3.4 SUPPORT INSTALLATION

A. Install support devices to securely and permanently fasten and support electrical components.

B. Install individual and multiple raceway hangers and riser clamps to support raceways. Provide U-bolts, clamps, attachments, and other hardware necessary for hanger assemblies and for securing hanger rods and conduits.

C. Support parallel runs of horizontal raceways together on trapeze- or bracket-type hangers.

D. Install Stiffy hanger rods.

E. Arrange supports in vertical runs so the weight of raceways and enclosed conductors is carried entirely by raceway supports, with no weight load on raceway terminals.

F. Simultaneously install vertical conductor supports with conductors.

I. Install sleeves for cable and raceway penetrations of concrete slabs and walls unless core-drilled holes are used. Install sleeves for cable and raceway penetrations of masonry and fire-rated gypsum walls and of all other fire-rated floor and wall assemblies. Install sleeves during erection of concrete and masonry walls.

J. Securely fasten electrical items and their supports to the building structure, unless otherwise indicated. Perform fastening according to the following unless other fastening methods are indicated:

1. Wood: Fasten with wood screws or screw-type nails.
2. New Concrete: Concrete inserts with machine screws and bolts or anchor bolts.
3. Existing Concrete: Anchor bolts.
4. Instead of expansion bolts, threaded studs driven by a powder charge and provided with lock washers may be used in existing concrete when prior approval is received from the University’s Representative.
5. Steel: Screws applicable for application.

7. Light Steel: Sheet-metal screws.

3.5 FIRESTOPPING

A. Apply firestopping to cable and raceway penetrations of fire-rated floor and wall assemblies to achieve fire-resistance rating of the assembly. Fire stopping materials and installation requirements are specified in Division 07 Section "Penetration Firestopping."

3.6 CONCRETE BASES

A. Concrete shall be provided by Concrete Contractor.

B. Construct concrete bases of dimensions not less than 8 inches larger, in both directions, than supported unit unless larger is required to comply with seismic restraint requirements. Follow supported equipment manufacturer's anchorage recommendations and setting templates for anchor-bolt and tie locations. Use minimum 3000-psi, 28-day compressive-strength concrete and reinforcement as specified in Division 03 Section "Cast-in-Place Concrete."

3.8CUTTING AND PATCHING (provided by General Contractor)

A. Cut, channel, chase, and drill floors, walls, partitions, ceilings, and other surfaces required to permit electrical installations.

B. Repair and refinish disturbed finish materials and other surfaces to match adjacent undisturbed surfaces. Install new fireproofing where existing fire stopping has been disturbed. Repair and refinish materials and other surfaces by skilled mechanics of trades involved.

3.9 FIELD QUALITY CONTROL

A. Inspect installed components for damage and faulty work, including the following:

1. Supporting devices for electrical components.
2. Concrete bases.
3. Electrical demolition.
4. Cutting and patching for electrical construction.
5. Touchup painting.

3.10REFINISHING AND TOUCHUP PAINTING (provided by General Contractor)

A. Refinish and touch up paint. Paint materials and application requirements are specified in Division 09 Section "Interior Painting."

1. Clean damaged and disturbed areas and apply primer, intermediate, and finish coats to suit the degree of damage at each location.
2. Follow paint manufacturer's written instructions for surface preparation and for timing and application of successive coats.
3. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
4. Repair damage to PVC or paint finishes with matching touchup coating recommended by manufacturer.

3.11 CLEANING AND PROTECTION

A. On completion of installation, including outlets, fittings, and devices, inspect exposed finish. Remove burrs, dirt, paint spots, and construction debris.

B. Protect equipment and installations and maintain conditions to ensure that coatings, finishes, and cabinets are without damage or deterioration at time of Substantial Completion.

END OF SECTION 26 0500

SECTION 26 0513 - MEDIUM-VOLTAGE CABLES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes cables and related splices, terminations, and accessories for medium voltage electrical distribution systems.

1.2 SUBMITTALS

A. Product Data: For each type of cable indicated. Include splices and terminations for cables and cable accessories.

B. Field quality-control test reports. Submit per Section “Electrical Testing”. Submit megger test reports to EEOR.

1.3 QUALITY ASSURANCE

A. Installer: Engage a cable splicer, trained and certified by splice material manufacturer, to install, splice, and terminate medium-voltage cable.

B. Source Limitations: Obtain cables and accessories through one source from a single manufacturer.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC (NFPA 70), Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. Comply with IEEE C2 and CEC (NFPA 70).

1.4 PROJECT CONDITIONS

A. Existing Utilities: Do not interrupt utilities serving facilities occupied by the University or others unless permitted under the following conditions:

1. Notify the University at least 14 days in advance of proposed utility interruptions.
2. Do not proceed with utility interruptions without University Representative written permission.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Cables:

a. Kerite Co. (The); Hubbell Incorporated.
b. Okonite Company (The).
c. Pirelli Cables & Systems NA.
d. Rome Cable Corporation.
e. Southwire Company.
f. Or equal.

2. Cable Splicing and Terminating Products and Accessories:

a. Raychem Corp.; Telephone Energy and Industrial Division.
b. RTE Components; Cooper Power Systems, Inc.
c. Thomas & Betts/Elastimold.
d. 3M Company; Electrical Products Division.
e. Or equal.

B. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 CABLES

A. Cable Type: MV-105.

B. Conductor: Copper

C. Conductor Stranding: Compact round, concentric lay, Class B stranded in accordance with ASTM B-8

D. Conductor Insulation: Ethylene-propylene rubber complying with AEIC CS 6, NEMA WC 8, and ICEA S-68-516, Part 4.

1. Voltage Rating: 15kV.

2. Insulation Thickness: 133 percent insulation level.

E. Shielding: Copper tape helically applied over semi conducting insulation shield.

F. Cable Jacket: Sunlight-resistant PVC.

2.3 SPLICE KITS

A. Connectors and Splice Kits: Comply with IEEE 386; type as recommended by cable or splicing kit manufacturer for the application.

B. Splicing Products: As recommended, in writing, by splicing kit manufacturer for specific sizes, ratings, and configurations of cable conductors. Include all components required for complete splice, with detailed instructions.

1. Combination tape and cold-shrink-rubber sleeve kit with rejacketing by cast-epoxy-resin encasement or other waterproof, abrasion-resistant material.
2. Heat-shrink splicing kit of uniform, cross-section, polymeric construction with outer heat-shrink jacket.
3. Premolded, cold-shrink-rubber, in-line splicing kit.
4. Premolded EPDM splicing body kit with cable joint sealed by interference fit of mating parts and cable.

2.4 SOLID TERMINATIONS

A. Shielded-Cable Terminations: Comply with the following classes of IEEE 48. Insulation class is equivalent to that of cable. Include shield ground strap for shielded cable terminations.

1. Class 1 Terminations: Modular type, furnished as a kit, with stress-relief tube; multiple, molded-silicone rubber, insulator modules; shield ground strap; and compression-type connector.
2. Class 1 Terminations: Heat-shrink type with heat-shrink inner stress control and outer nontracking tubes; multiple, molded, nontracking skirt modules; and compression-type connector.
3. Class 1 Terminations: Modular type, furnished as a kit, with stress-relief shield terminator; multiple-wet-process, porcelain, insulator modules; shield ground strap; and compression-type connector.
4. Class 1 Terminations, Indoors: Kit with stress-relief tube, no tracking insulator tube, shield ground strap, compression-type connector, and end seal.
5. Class 2 Terminations, Indoors: Kit with stress-relief tube, no tracking insulator tube, shield ground strap, and compression-type connector. Include silicone-rubber tape, coldshrink-rubber sleeve, or heat-shrink plastic-sleeve moisture seal for end of insulation whether or not supplied with kits.
6. Class 3 Terminations: Kit with stress cone and compression-type connector.

B. Non-shielded-Cable Terminations: Kit with compression-type connector. Include silicone rubber tape, cold-shrink-rubber sleeve, or heat-shrink plastic-sleeve moisture seal for end of insulation whether or not supplied with kits.

2.5 SEPARABLE INSULATED CONNECTORS

A. Description: Modular system, complying with IEEE 386, with disconnecting, single-pole, cable terminators and with matching, stationary, plug-in, dead-front terminals designed for cable voltage and for sealing against moisture.

B. Terminations at Distribution Points: Modular type, consisting of terminators installed on cables and modular, dead-front, terminal junctions for interconnecting cables.

C. Load-Break Cable Terminators: Elbow-type units with 200-A load make/break and continuous current rating; coordinated with insulation diameter, conductor size, and material of cable being terminated. Include test point on terminator body that is capacitance coupled.

D. Dead-Break Cable Terminators: Elbow-type unit with 600-A continuous-current rating; designed for de-energized disconnecting and connecting; coordinated with insulation diameter, conductor size, and material of cable being terminated. Include test point on terminator body that is capacitance coupled.

E. Dead-Front Terminal Junctions: Modular bracket-mounted groups of dead-front stationary terminals that mate and match with above cable terminators. Two-, three-, or four-terminal units as indicated, with fully rated, insulated, watertight conductor connection between terminals and complete with grounding lug, manufacturer's standard accessory stands, stainless steel mounting brackets, and attaching hardware.

1. Protective Cap: Insulating, electrostatic-shielding, water-sealing cap with drain wire.
2. Portable Feed-Through Accessory: Two-terminal, dead-front junction arranged for removable mounting on accessory stand of stationary terminal junction.
3. Grounding Kit: Jumper elbows, portable feed-through accessory units, protective caps, test rods suitable for concurrently grounding three phases of feeders, and carrying case.
4. Standoff Insulator: Portable, single dead-front terminal for removable mounting on accessory stand of stationary terminal junction. Insulators suitable for fully insulated isolation of energized cable-elbow terminator.

F. Tool Set: Shotgun hot stick with energized terminal indicator, fault-indicator test tool, and carrying case.

2.6 ARC-PROOFING MATERIALS

A. Tape for First Course on Metal Objects: 10-mil- thick, corrosion-protective, moisture-resistant, PVC pipe-wrapping tape.

B. Arc-Proofing Tape: Fireproof tape, flexible, conformable, intumescent to 0.3 inch thick, compatible with cable jacket.

C. Glass-Cloth Tape: Pressure-sensitive adhesive type, 1/2 inch wide.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install cables according to the latest IEEE 576.

B. Pull Conductors: Do not exceed manufacturer's recommended maximum pulling tensions, minimum bending radius and sidewall pressure values.

1. Where necessary, use manufacturer-approved pulling compound or lubricant that will not deteriorate conductor or insulation. Do not use oil, grease, graphite, or similar substances.
2. Use pulling means, including fish tape, cable, rope, and basket-weave cable grips that will not damage cables and raceways. Do not use rope hitches for pulling attachment to cable. Pulling of conductors in raceways shall be done with an approved cable pulling machine. Other methods such as using vehicles and block and tackle to install conductors are not acceptable.

C. Support cables according to Division 26 Section "Common Work Results for Electrical."

D. Install warning tape 12 inches above cables.

E. In manholes, handholes, pull boxes, junction boxes, and cable vaults, train cables around walls by the longest route from entry to exit and support cables at intervals adequate to prevent sag.

F. Arrange cables in manholes on racks. Cables shall rest on insulators supported by racks.

I. Install cable splices at pull points and elsewhere as indicated; use standard kits.

J. Install separable insulated-connector components as follows:

1. Protective Cap: At each terminal junction, with one on each terminal to which no feeder is indicated to be connected.
2. Portable Feed-Through Accessory: Three.
3. Standoff Insulator: Three.

K. Arc Proofing: Unless otherwise indicated, arc proof medium-voltage cable at locations not protected by conduit, cable tray, direct burial, or termination materials. In addition to arcproofing tape manufacturer's written instructions, apply arc proofing as follows:

1. Clean cable sheath.
2. Wrap metallic cable components with 10-mil pipe-wrapping tape.
3. Smooth surface contours with electrical insulation putty.
4. Apply arc-proofing tape in one half-lapped layer with coated side toward cable.
5. Band arc-proofing tape with 1-inch- wide bands of half-lapped, adhesive, glass-cloth tape 2 inches o.c.

L. Seal around cables passing through fire-rated elements according to Division 07 Section "Penetration Firestop Systems."

M. Apply fireproofing tape in half-lapped wrapping. Extend fireproofing one inch into duct.

N. Include separate ground conductor with feeders.

O. Ground shields of shielded cable at terminations, splices, and separable insulated connectors. Ground metal bodies of terminators, splices, cable and separable insulated-connector fittings, and hardware.

P. Identify cables according to Division 26 Section “Identification for Electrical Systems”

3.2 FIELD QUALITY CONTROL

A. Testing: Perform megger testing to ensure cabling is acceptable.

END OF SECTION 26 0513

SECTION 26 0519 – LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes building wires and cables and associated connectors, splices, and terminations for wiring systems rated 600 V and less.

B. Related Sections include the following:

1. Division 26 Section "Medium-Voltage Cables" for single-conductor and multiconductor cables, cable splices, and terminations for electrical distribution systems with 2001 to 35,000 V.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Insulation Test report. Megger testing shall perform on large feeders only. Submit under Section “Electrical Testing”.

1.3 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC (NFPA 70), Article 100, by a testing agency acceptable to the University, and marked for intended use.

B. Comply with CEC (NFPA 70).

C. Pre-installation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination."

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:

1. Manufacturers: Subject to compliance with requirements, provide products by the manufacturers specified.
2. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”,

Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 CONDUCTORS AND CABLES

A. Manufacturers (Building Wire and Cable):

1. CME
2. American Insulated Wire Corp.; a Leviton Company.
3. General Cable Corporation.
4. Southwire Company.
5. Cerrowire
6. Or equal

B. Manufacturers (Control Cable):

1. Alpha.
2. Belden.
3. Or equal.

C. Manufacturers (MC cable):

1. AFC Cable Systems.
2. Southwire Company.
3. Or equal.

D. Refer to Part 3 "Conductor and Insulation Applications" Article for insulation type, cable construction, and ratings.

E. Conductor Material: Copper complying with ICEA S-95-658 / NEMA WC 70 Nonshielded 0-2 kV Cables.

F. Conductor Insulation Types: Type THW, THHN-THWN, XHHW, UF, USE, and SO complying with NEMA WC 70.

G. Multiconductor Cable: Metal-clad cable, Type MC, THHN copper conductors with integral green ground wire, lightweight steel clad, UL Standard 1569 Type SO and Type USE with ground wire.

2.3 CONNECTORS AND SPLICES

A. Manufacturers:

1. AFC Cable Systems, Inc.
2. AMP Incorporated/Tyco International.
3. Hubbell/Anderson.

4. O-Z/Gedney; EGS Electrical Group LLC.
5. 3M Company; Electrical Products Division.
6. Arlington
7. Or equal.

B. Description: Factory-fabricated connectors and splices of size, ampacity rating, material, type, and class for application and service indicated.

PART 3 - EXECUTION

3.1 CONDUCTOR AND INSULATION APPLICATIONS

A. Service Entrance: Type THHN-THWN, single conductors in raceway. Exposed Feeders: Type THHN-THWN, single conductors in raceway.

B. Feeders Concealed in Ceilings, Walls, and Partitions: Type THHN-THWN, single conductors in raceway.

C. Feeders Concealed in Concrete, below Slabs-on-Grade: Type THHN-THWN, single conductors in raceway.

D. Exposed Branch Circuits, including in Crawlspaces: Type THHN-THWN, single conductors in raceway.

E. Branch Circuits Concealed in Concrete and below Slabs-on-Grade: Type THHN-THWN, single conductors in raceway.

F. Branch Circuits for wet and dry laboratories Concealed in Ceilings, walls and Partitions: Lightweight steel Metal-clad cable.

G. Branch Circuits Concealed in Ceilings, Walls, and Partitions: Lightweight steel Metal-clad cable Type MC or Type THHN-THWN, single conductors in raceway.

H. Lighting Circuits Concealed in Ceiling, Walls, and Partitions: Lightweight steel Metal-clad cable, or Type MC Type THHN-THWN, single conductors in raceway.

I. MC Cables shall be used under the following conditions:

1. Concealed locations only.
2. Lighting and general-purpose power only (not within lab benches)
3. Circuit voltages not exceeding 277V
4. Single vertical runs within the walls (drop from ceiling junction box to a box within the wall.
5. Do not use for horizontal “daisy chains” within walls.

6. Do not use for homeruns.

J. Outdoors and below grade: Silicone wire nuts.

K. Cord Drops and Portable Appliance Connections: Type SO, hard service cord.

L. Fire Alarm Circuits: Lightweight steel Metal-clad cable, Refer to Fire Alarm specification and drawings for details.

M. Class 1 Control Circuits: Type THHN-THWN, in raceway.

M. Class 2 Control Circuits: Type THHN-THWN, in raceway.

3.2 INSTALLATION

A. Conceal cables in finished walls, ceilings, and floors, unless otherwise indicated.

B. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not use oil, grease, graphite or similar substances. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.

C. Use pulling means; including fish tape, cable, rope, and basket-weave wire/cable grips that will not damage cables or raceway. Pulling of large conductors in raceways shall be done with an approved cable pulling machine. Other methods such as block and tackle to install conductors are not acceptable.

D. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours where possible.

E. Support cables according to Division 26 Section "Common Work Results for Electrical."

F. Seal around cables penetrating fire-rated elements according to Division 07 Section "Penetration Firestopping." Provide separate sleeves and/or fire barriers for cable fire wall penetration, unless cable is UL listed for the application.

G. Identify and color-code conductors and cables according to Division 26 Section "Identification for Electrical Systems."

H. Metal Clad (MC) Cable Installation Requirements:

1. Provide j–box before running MC cable down with partitions or walls.
2. Overhead MC cable runs shall generally follow building lines to provide a neat and workmanlike installation.
3. SSize j-box to accommodate MC cable splicing.

4. MC cable may be run down directly into panelboards to avoid extra splice into j-box above panelboard as long as concealed. Installed in a neat orderly manner using unistrut or equal to space and hold MC cable in place
5. Strapping to top of hard lid framing acceptable. MC cable runs shall not rest on ceiling structures. Do not support MC cable on hung ceiling or ceiling support wires. Do not support cables or allow contact with mechanical piping. The use of cable ties to support MC Cable is not allowed.
6. Use lock or spring nut fittings.
7. Securely support all MC cable with cable hangers, individual spring steel support clips, steel trapeze hangers, threaded rods or dedicated No. 12 AWG drop wire. Cable supports shall be fastened to concrete slabs, beams, joists or other structural members of the building.
8. MC cable shall be supported every 6 feet and secured within 12 inches from termination.
9. Limit #12 wire homeruns to code voltage drop requirements.
10. Do not make splices in home run circuits, except directly above the panelboard.
11. Cable runs shall be continuous from outlet to outlet.
12. When terminating or splicing at a junction, outlet, or switch box, cut the cable such that 6-inches of free conductors remain for connections or splices.
13. MC cable shall be cut with an armored cable rotary cutter.
14. Insert an anti-short bushing at cable ends to protect conductors from abrasion or use insulated connectors.
15. Bend radius shall be less than 7 times the external diameter of the cable.
16. MC cables passing through fire-rated walls or electrical /telecommunication room walls shall be provided with a UL listed, fire rated penetration assembly.
17. Do not exceed code requirements for total current carrying conductors in multiple MC cable runs bundled together into a single MC cable hanger or strap, unless support device is specifically listed for such purpose. Neutrals shall be counted as current carrying conductors.
18. Maintain a clearance of at least 6 inches from hot water and other high temperature pipes. Maintain at least 12-inches from telecommunication conduits and unshielded twisted-pair telecommunication cables.
19. Installation of MC cable horizontally is not allowed.

3.3 CONNECTIONS

A. Provide steel with insulated throat cable connectors, OZ/Gedney AMC series, Arlington, or equivalent. Die cast or pressure cast fittings are not permitted.

B. Tighten electrical connectors and terminals according to manufacturer's published torque tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

C. Make splices and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.

D. Wiring at Outlets: Install conductor at each outlet, with at least 6 inches of slack.

3.4 FIELD QUALITY CONTROL (Submit under Section “Electrical Testing”)

A. Test Reports: Prepare a written megger test reports:

1. Test procedures used.
2. Test results that comply with requirements.
3. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

END OF SECTION 26 0519

SECTION 26 0526 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes grounding of electrical systems and equipment. Grounding requirements specified in this Section may be supplemented by special requirements of systems described in other Sections.

B. Related Sections include the following:

1. Division 26 Section "Underground Ducts and Raceways for Electrical Systems".

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Product Data: For the following:

1. Ground rods.
2. Chemical rods.

C. Field Test Reports: Submit under Section “Electrical Testing”. Submit written test reports to include the following:

1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

1.3 QUALITY ASSURANCE

A. Testing Agency Qualifications: Testing agency as defined by OSHA in 29 CFR 1910.7 or a member company of the InterNational Electrical Testing Association and that is acceptable to authorities having jurisdiction.

1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association to supervise on-site testing specified in Part 3.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC (NFPA 70), Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1. Comply with UL 467.

C. Comply with CEC (NFPA 70); for medium-voltage underground construction, comply with IEEE C2.

D. Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Grounding Conductors, Cables, Connectors, and Rods:

a. Boggs, Inc.
b. Chance/Hubbell.
c. Copperweld Corp.
d. Dossert Corp.
e. Erico Inc.; Electrical Products Group.
f. Framatome Connectors/Burndy Electrical.
g. Hastings Fiber Glass Products, Inc.
h. Heary Brothers Lightning Protection Co.
i. Ideal Industries, Inc.
j. ILSCO.
k. Kearney/Cooper Power Systems.
l. Korns: C. C. Korns Co.; Division of Robroy Industries.
m. Lightning Master Corp.
n. Lyncole XIT Grounding.
o. O-Z/Gedney Co.; a business of the EGS Electrical Group.
p. Raco, Inc.; Division of Hubbell.
q. Salisbury: W. H. Salisbury & Co.
r. Superior Grounding Systems, Inc.
s. Thomas & Betts, Electrical.
t. Or equal.

B. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 GROUNDING CONDUCTORS

A. For insulated conductors, comply with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables.”

B. Material: Copper.

C. Equipment Grounding Conductors: Insulated with green-colored insulation.

D. Isolated Ground Conductors: Insulated with green-colored insulation with yellow stripe. On feeders with isolated ground, use colored tape, alternating bands of green and yellow tape to provide a minimum of three bands of green and two bands of yellow.

E. Grounding Electrode Conductors: Stranded cable.

F. Underground Conductors: Bare, tinned, stranded, unless otherwise indicated.

G. Bare Copper Conductors: Comply with the following:

1. Solid Conductors: ASTM B 3.
2. Assembly of Stranded Conductors: ASTM B 8.
3. Tinned Conductors: ASTM B 33.

H. Copper Bonding Conductors: As follows:

1. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG copper conductor, 1/4 inch in diameter.
2. Bonding Conductor: No. 4 or No. 6 AWG, stranded copper conductor.
3. Bonding Jumper: Bare copper tape, braided bare copper conductors, terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.
4. Tinned Bonding Jumper: Tinned-copper tape, braided copper conductors, terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.

I. Grounding Bus: Bare, annealed copper bars of rectangular cross section, with insulators.

2.3 CONNECTOR PRODUCTS

A. Comply with IEEE 837 and UL 467; listed for use for specific types, sizes, and combinations of conductors and connected items.

B. Bolted Connectors: Bolted-pressure-type connectors, or compression type. facturer's written instructions.

C. Welded Connectors: Exothermic-welded type, in kit form, and selected per manufacturers recommendation.

2.4 GROUNDING ELECTRODES

A. Ground Rods: Sectional type; copper-clad steel.

1. Size: 3/4 by 120 inches in diameter.

B. Chemical Electrodes: Copper tube, straight or L-shaped, filled with nonhazardous chemical salts, terminated with a 4/0 bare conductor. Provide backfill material recommended by manufacturer.

C. Test Wells: Provide handholes as specified in Division 26 Section "Underground Ducts and Raceways for Electrical Systems."

PART 3 - EXECUTION

3.1 APPLICATION

A. Use only copper conductors for both insulated and bare grounding conductors in direct contact with earth, concrete, masonry, crushed stone, and similar materials.

B. In raceways, use insulated equipment grounding conductors.

C. Equipment Grounding Conductor Terminations: Use bolted pressure clamps.

D. Ground Rod Clamps at Test Wells: Use bolted pressure clamps with at least two bolts.

E. Grounding Bus: Install in electrical and telephone equipment rooms, in rooms housing service equipment, and elsewhere as indicated.

1. Use insulated spacer; space 1 inch from wall and support from wall 6 inches above finished floor, unless otherwise indicated.
2. At doors, route the bus up to the top of the door frame, across the top of the doorway, and down to the specified height above the floor.

F. Underground Grounding Conductors: Use copper conductor, No. 2/0 AWG minimum. Bury at least 24 inches below grade or bury 12 inches above duct bank when installed as part of the duct bank.

3.2 EQUIPMENT GROUNDING CONDUCTORS

A. Comply with CEC (NFPA 70), Article 250, for types, sizes, and quantities of equipment grounding conductors, unless specific types, larger sizes, or more conductors than required by CEC (NFPA 70) are indicated.

B. Install equipment grounding conductors in all feeders and circuits.

C. Install insulated equipment grounding conductor with circuit conductors for the following items, in addition to those required by NEC:

1. Feeders and branch circuits.
2. Lighting circuits.
3. Receptacle circuits.
4. Single-phase motor and appliance branch circuits.
5. Three-phase motor and appliance branch circuits.
6. Flexible raceway runs.

7. Armored and metal-clad cable runs.

D. Computer Outlet Circuits: Install insulated equipment grounding conductor in branch-circuit runs from computer-area power panels or power-distribution units.

E. Isolated Grounding Receptacle Circuits: Install an insulated equipment grounding conductor connected to the receptacle grounding terminal. Isolate grounding conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of the applicable derived system or service, unless otherwise indicated.

F. Isolated Equipment Enclosure Circuits: For designated equipment supplied by a branch circuit or feeder, isolate equipment enclosure from supply raceway with a nonmetallic raceway fitting listed for the purpose. Install fitting where raceway enters enclosure, and install a separate equipment grounding conductor.

G. Nonmetallic Raceways: Install an equipment grounding conductor in nonmetallic raceways unless they are designated for telephone or data cables.

H. Signal and Communication Systems: For telephone, alarm, voice and data, and other communication systems, provide No. 2 AWG minimum insulated grounding conductor in raceway from grounding electrode system to each service location, terminal cabinet, wiring closet, and central equipment location.

1. Service and Central Equipment Locations and Wiring Closets: Terminate grounding conductor on a 1/4-by-2-by-12-inch grounding bus.
2. Terminal Cabinets: Terminate grounding conductor on cabinet grounding terminal.

I. Metal Poles Supporting Outdoor Lighting Fixtures: Provide a separate equipment grounding conductor with supply branch-circuit conductors.

3.4 INSTALLATION

A. Ground Rods: Install at least three rods spaced at least one-rod length from each other and located at least the same distance from other grounding electrodes.

Drive ground rods until tops are 6 inches below finished floor or final grade, unless otherwise indicated. Rod top shall be protected with a driving tool while being driven to protect the top from deformation or other damage.

B. Interconnect ground rods with grounding electrode conductors. Use exothermic welds, except at test wells and as otherwise indicated. Make connections without exposing steel or damaging copper coating.

C. Grounding Conductors: Route along shortest and straightest paths possible, unless otherwise indicated. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.

D. Bonding Straps and Jumpers: Install so vibration by equipment mounted on vibration isolation hangers and supports is not transmitted to rigidly mounted equipment. Use exothermic-welded connectors for outdoor locations, unless a disconnect-type connection is required; then, use a bolted clamp. Bond straps directly to the basic structure taking care not to penetrate any adjacent parts. Install straps only in locations accessible for maintenance.

E. Metal Water Service Pipe: Provide insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes by grounding clamp connectors. Where a dielectric main water fitting is installed, connect grounding conductor to street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.

F. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with grounding clamp connectors.

G. Install one test well for each service at the ground rod electrically closest to the service entrance. Set top of well flush with finished grade or floor.

H. Ufer Ground (Concrete-Encased Grounding Electrode): Fabricate according to CEC Using a minimum of 25feet of bare copper conductor not smaller than No. 3/0 AWG. If concrete foundation is less than 20 feet long, coil excess conductor within the base of the foundation.

I. Ground bar length will be sized per number of connections x 4” x ¼” copper ground bus shall be installed in electrical rooms. All equipment shall be bonded to the ground bus in addition to CEC required grounds.

J. Made electrodes shall have a measured earth resistance of 10 ohms or less and systems shall be 5 ohms or less.

3.5 CONNECTIONS

A. General: Make connections so galvanic action or electrolysis possibility is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact will be galvanically compatible.

1. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer to order of galvanic series.
2. Make connections with clean, bare metal at points of contact.
3. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.

B. Equipment Grounding Conductor Terminations: For No. 8 AWG and larger, use pressure-type grounding lugs. No. 10 AWG and smaller grounding conductors may be terminated with winged pressure-type connectors.

C. Noncontact Metal Raceway Terminations: If metallic raceways terminate at metal housings without mechanical and electrical connection to housing, terminate each conduit with a grounding

bushing. Connect grounding bushings with a bare grounding conductor to grounding bus or terminal in housing. Bond electrically noncontinuous conduits at entrances and exits with grounding bushings and bare grounding conductors, unless otherwise indicated.

D. Connections at Test Wells: Use compression-type connectors on conductors and make bolted and clamped-type connections between conductors and ground rods.

E. Tighten screws and bolts for grounding and bonding connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

F. Compression-Type Connections: Use hydraulic compression tools to provide correct circumferential pressure for compression connectors. Use tools and dies recommended by connector manufacturer. Provide embossing die code or other standard method to make a visible indication that a connector has been adequately compressed on grounding conductor.

G. Moisture Protection: If insulated grounding conductors are connected to ground rods or grounding buses.

H. Ground bus connections: Shall be one hole, pressure indented copper cable termination, type burndy hylug, T&B blue, or equal. Install with ½" galvanized or cadmium-plated steel machine bolts with beveled washer each side.

3.6 UNDERGROUND DISTRIBUTION SYSTEM GROUNDING

A. Duct Banks: Install a grounding conductor with at least 50 percent ampacity of the largest phase conductor in the duct bank.

B. Manholes and Handholes: Install a driven ground rod close to wall and set rod depth so 4 inches will extend above finished floor. If necessary, install ground rod before manhole is placed and provide a No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive tape or heat-shrunk insulating sleeve from 2 inches above to 6 inches below concrete. Seal floor opening with waterproof, nonshrink grout.

C. Connections to Manhole Components: Connect exposed-metal parts, such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with No. 2 AWG minimum, stranded, hard-drawn copper conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields as recommended by manufacturer of splicing and termination kits.

D. Pad-Mounted Transformers and Switches: Install two ground rods and counterpoise circling pad. Ground pad-mounted equipment and noncurrent-carrying metal items associated with substations by connecting them to underground cable and grounding electrodes. Use hard drawn copper not less than No. 2 AWG for counterpoise and for taps to equipment ground pad. Bury counterpoise not less than 18 inches below grade and 6 inches from the foundation.

3.7 FIELD QUALITY CONTROL

A. Testing: Perform the following field quality-control testing:

1. After installing grounding system but before permanent electrical circuitry has been energized, test for compliance with requirements.
2. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal, and at ground test wells. Measure ground resistance not less than two full days after the last trace of precipitation, and without the soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance. Perform tests, by the fall-of-potential method according to IEEE 81.

3. A ground resistance test shall be conducted at each new electrical equipment or vault site without the benefit of connections to other sites. That is, all incoming duct bank grounding system conductors shall be disconnected during the test. Grounding electrodes shall be bonded together using the appropriate size grounding electrode conductors and UL listed connections.

3.8 GRADING AND PLANTING (provided by General Contractor)

A. Restore surface features, including vegetation, at areas disturbed by Work of this Section. Reestablish original grades, unless otherwise indicated. If sod has been removed, replace it as soon as possible after backfilling is completed. Restore areas disturbed by trenching, storing of dirt, cable laying, and other activities to their original condition. Include application of topsoil, fertilizer, lime, seed, sod, sprig, and mulch. Comply with Division 32 Section "Turf and Grasses." Maintain restored surfaces. Restore disturbed paving as indicated.

END OF SECTION 26 0526

SECTION 26 0529 – HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Hangers and supports for electrical equipment and systems.
2. Seismic restraints for electrical equipment and systems.
3. Construction requirements for concrete bases.

1.2 DEFINITIONS

A. CBC: California Building Code

B. EMT: Electrical metallic tubing.

C. IMC: Intermediate metal conduit.

D. RMC: Rigid metal conduit.

E. Seismic Restraint: A structural support element such as a metal framing member, a cable, an anchor bolt or stud, a fastening device, or an assembly of these items used to transmit seismic forces from an item of equipment or system to building structure and to limit movement of item during a seismic event.

1.3 SUBMITTALS

A. Product Data: Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of electrical support and seismic-restraint component used.

1. Tabulate types and sizes of seismic restraints, complete with report numbers and rated strength in tension and shear as evaluated by an agency acceptable to the University.
2. Annotate to indicate application of each product submitted and compliance with requirements.

B. Shop Drawings: Indicate materials and dimensions and identify hardware, including attachment and anchorage devices, signed and sealed by a qualified professional engineer. Professional engineer qualification requirements are specified in Division 01 Section "Quality Requirements." Include the following:

1. Seismic Restraints: Detail anchorage and bracing not defined by details or charts on Drawings. Include the following:

a. Design Analysis: To support selection and arrangement of seismic restraints. Include calculations of combined tensile and shear loads.
b. Details: Detail fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacing. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events.

C. Coordination Drawings: Show coordination of seismic bracing for electrical components with other systems and equipment in the vicinity, including other supports and seismic restraints.

1.4 QUALITY ASSURANCE

A. Comply with seismic-restraint requirements in the California Building Code

B. Testing of Seismic Anchorage Devices: Comply with testing requirements in Part 3 and in Division 26 Section "Common Work Results for Electrical."

1.5 PROJECT CONDITIONS

A. Project Seismic Zone as Defined in the CBC: Zone 4.

B. Project Seismic Zone Factor as Defined in the CBC: Zone Factor 0.40.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.
2. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

A. Rated Strength: Adequate in tension, shear, and pullout force to resist maximum loads calculated or imposed under this Project, with a minimum structural safety factor of five times the applied force.

B. Steel Slotted Support Systems: Comply with MFMA-3, factory-fabricated components for field assembly.

1. Manufacturers:

a. Cooper B-Line; a division of Cooper Industries.
b. ERICO International Corporation.
c. Allied Support Systems; Power-Strut Unit.
d. GS Metals Corp.
e. Michigan Hanger Co., Inc.; O-Strut Div.
f. PHD Manufacturing
g. Thomas & Betts Corporation.
h. Unistrut; Tyco International, Ltd.
i. Power-Strut
j. Or equal.

2. Finishes:

a. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-3.
b. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-3.
c. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-3.

3. Channel Dimensions: Selected for structural loading and applicable seismic forces.

C. Raceway and Cable Supports: As described in NECA 1.

D. Conduit and Cable Support Devices: Steel and malleable-iron hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.

E. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for non-armored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be malleable iron.

F. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

G. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:

1. Threaded-steel stud, for use in hardened Portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.

a. Manufacturers:

1) Blue Banger
2) Hilti, Inc.
3) ITW Construction Products.
4) MKT Fastening, LLC.
5) Simpson Strong-Tie Co. Inc.
6) Or equal.

3. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated steel, for use in hardened Portland cement concrete with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used.

a. Manufacturers:

1) Cooper B-Line; a division of Cooper Industries.
2) Empire Tool and Manufacturing Co., Inc
3) Hilti, Inc.
4) ITW Construction Products.
5) MKT Fastening, LLC.
6) Powers Fasteners.
7) Or equal.

4. Concrete Inserts: Steel or malleable-iron slotted-support-system units similar to MSS Type 18; complying with MFMA-3 or MSS SP-58.
5. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.
6. Through Bolts: Structural type, hex head, high strength. Comply with ASTM A 325.
7. Toggle Bolts: All-steel springhead type.
8. Hanger Rods: Threaded steel.

2.3 SEISMIC-RESTRAINT COMPONENTS

A. Rated Strength, Features, and Application Requirements for Restraint Components: As defined in reports by an agency acceptable to the University.

1. Structural Safety Factor: Strength in tension, shear, and pullout force of components used shall be at least five times the maximum seismic forces to which they will be subjected.

B. Angle and Channel-Type Brace Assemblies: Steel angles or steel slotted-support-system components; with accessories for attachment to braced component at one end and to building structure at the other end.

C. Cable Restraints: ASTM A 603, zinc-coated, steel wire rope attached to steel or stainless-steel thimbles, brackets, swivels, and bolts designed for restraining cable service.

1. Manufacturers:

a. ISAT Seismic Bracing / CEAS Tomorco Fasteners
b. Loos & Co., Inc.
c. Mason Industries, Inc.
d. Or equal.

2. Seismic Mountings, Anchors, and Attachments: Devices as specified in Part 2 "Support, Anchorage, and Attachment Components" Article, selected to resist seismic forces.
3. Hanger Rod Stiffener: Reinforcing steel angle clamped to hanger rod, of design recognized byan agency acceptable to the University**.** Retain both subparagraphs below for projects subject to seismic design requirements; delete if bushing requirements are included in details or charts on Drawings.
4. Bushings for Floor-Mounted Equipment Anchors: Neoprene units designed for seismically rated rigid equipment mountings, and matched to type and size of anchor bolts and studs used.
5. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for seismically rated rigid equipment mountings, and matched to type and size of attachment devices used.

2.4 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

A. Description: Welded or bolted, structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.

B. Materials: Comply with requirements in Division 05 Section "Metal Fabrications" for steel shapes and plates.

PART 3 - EXECUTION

3.1 APPLICATION

A. Comply with NECA 1 for application of hangers and supports for electrical equipment and systems, except if requirements in this Section are stricter.

B. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway: Space supports for EMT, and RMC as scheduled in NECA 1, where Table 1 lists maximum spacing less than stated in.. Minimum rod size shall be 1/4 inch in diameter.

C. For individual conduit runs not directly fastened to the structure, use rod hangers.

D. Arrange conduit supports to prevent distortion of alignment by wire pulling operations. Fasten conduit using galvanized straps, lay-in adjustable hangers, clevis hangers, or bolted split galvanized hangers.

E. Do not fasten conduit with wire or perforated pipe straps. Remove wire used for temporary conduit support during construction before conductors are pulled. Do not use ceiling wire to support conduit.

F. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted support system. Supports should be spaced for maximum deflection of conduit not greater than 1/8".

1. Secure raceways and cables to trapeze member with clamps approved for application by an agency acceptable to the University.

3.2 SUPPORT AND SEISMIC-RESTRAINT INSTALLATION

A. Comply with NECA 1 for installation requirements, except as specified in this Article.

B. Raceway Support Methods: In addition to methods described in NECA 1, EMT, RMCmay be supported by openings through structure members, as permitted in CEC (NFPA 70).

C. Install seismic-restraint components using methods approved by the evaluation service providing required submittals for component.

D. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars.

3.3 INSTALLATION OF FABRICATED METAL SUPPORTS

A. Comply with installation requirements in Division 05 Section "Metal Fabrications" for site fabricated metal supports.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.

3.4 CONCRETE BASES

A. Concrete bases shall be provided by Concrete Contractor per Division 03 Section "Cast-in-Place Concrete."

B. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and seismic criteria.

C. Construct concrete bases of dimensions indicated but not less than 4 inches larger in both directions than supported unit, and so expansion anchors will be a minimum of 10 bolt diameters from edge of the base.

1. Install dowel rods to connect concrete base to concrete floor. Install dowel rods on 18inch centers minimum around full perimeter of the base.
2. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
3. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to supported equipment.
5. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
6. Use minimum 3000-psi, 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in Division 03 Section "Cast-in Place Concrete."

3.5 INSTALLATION OF SEISMIC-RESTRAINT COMPONENTS

A. Restraint Cables: Provide slack within maximums recommended by manufacturer.

D. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, upper truss chords of bar joists, or at concrete members.

E. Provide raceway fixtures and equipment systems with appropriate longitudinal and cross bracing to satisfy Seismic Zone 4 requirements.

3.7 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

A. Make flexible connections in runs of raceways, cables, wireways, cable trays, and busways where they cross expansion and seismic-control joints, where adjacent sections or branches are supported by different structural elements, and where they terminate with connection to electrical equipment that is anchored to a different structural element from the one supporting them as they approach equipment.

END OF SECTION 26 0529

SECTION 26 0533 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes raceways, fittings, boxes, enclosures, and cabinets for electrical wiring.

B. Related Sections include the following:

1. Division 26 Section "Underground Ducts and Raceways for Electrical Systems" for exterior duct banks, manholes, and underground utility construction.
2. Division 07 Section "Penetration Firestopping" for firestopping materials and installation at penetrations through walls, ceilings, and other fire-rated elements.
3. Division 26 Section "Hangers and Supports for Electrical Systems" for seismic restraints and bracing of raceways, boxes, enclosures, and cabinets.
4. Division 26 Section "Wiring Devices" for devices installed in boxes and for floor-box service fittings.

1.2 DEFINITIONS

A. EMT: Electrical metallic tubing.

B. ENT: Electrical nonmetallic tubing.

C. FMC: Flexible metal conduit.

D. IMC: Intermediate metal conduit.

E. LFMC: Liquidtight flexible metal conduit.

F. LFNC: Liquidtight flexible nonmetallic conduit.

G. RNC: Rigid nonmetallic conduit.

1.3 SUBMITTALS

A. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.

B. Shop Drawings: Submit per BIM Execution Plan under section 01 1300 “BIM Specifications”. Show fabrication and installation details of components for raceways, fittings, boxes, enclosures, and cabinets.

1.4 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in California Electrical Code (CEC), by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. Comply with CEC.

1.5 COORDINATION

A. Coordinate layout and installation of raceways, boxes, enclosures, cabinets, and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:

1. Manufacturers: Subject to compliance with requirements, provide products by the manufacturers specified.
2. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 METAL CONDUIT AND TUBING

A. Manufacturers:

1. Arlington.
2. AFC Cable Systems, Inc.
3. Alflex Inc.
4. Anamet Electrical, Inc.; Anaconda Metal Hose.
5. Electri-Flex Co.
6. Grinnell Co./Tyco International; Allied Tube and Conduit Div.
7. LTV Steel Tubular Products Company.
8. Manhattan/CDT/Cole-Flex.
9. O-Z Gedney; Unit of General Signal.
10. Wheatland Tube Co.
11. Or equal.

B. Rigid Steel Conduit: ANSI C80.1.

C. Plastic-Coated Steel Conduit and Fittings: NEMA RN 1.

D. EMT and Fittings: ANSI C80.3.

1. Fittings: Set-screw or compression type.

E. FMC: Zinc-coated steel.

F. LFMC: Flexible steel conduit with PVC jacket.

G. Fittings: NEMA FB 1; compatible with conduit and tubing materials.

2.3 NONMETALLIC CONDUIT AND TUBING

A. Manufactures:

1. Allied.
2. American International
3. Anamet Electrical, Inc.; Anaconda Metal Hose.
4. Arnco Corp.
5. Cantex Inc.
6. Certainteed Corp.; Pipe & Plastics Group.
7. Condux International.
8. ElecSYS, Inc.
9. Electri-Flex Co.
10. Lamson & Sessions; Carlon Electrical Products.
11. Manhattan/CDT/Cole-Flex.
12. RACO; Division of Hubbell, Inc.
13. Spiralduct, Inc./AFC Cable Systems, Inc.
14. Thomas & Betts Corporation.
15. Carlon
16. Or equal.

B. ENT: NEMA TC 13.

C. RNC: NEMA TC 2, Schedule 40 and Schedule 80 PVC.

D. ENT and RNC Fittings: NEMA TC 3; match to conduit or tubing type and material.

E. LFNC: UL 1660.

2.4 METAL WIREWAYS

A. Manufacturers:

1. Hoffman.
2. Square D.
3. Or equal.

B. Material and Construction: Sheet metal sized and shaped as indicated, NEMA 1.

C. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, hold down straps, end caps, and other fittings to match and mate with wire ways as required for complete system.

D. Select features, unless otherwise indicated, as required to complete wiring system and to comply with CEC.

E. Wireway Covers: Screw-cover type.

F. Finish: Manufacturer's standard enamel finish.

2.5 NONMETALLIC WIREWAYS

A. Manufacturer:

1. Hoffman.
2. Lamson & Sessions; Carlon Electrical Products.
3. Or equal.

B. Description: Fiberglass polyester, extruded and fabricated to size and shape indicated, with no holes or knockouts. Cover is gasketed with oil-resistant gasket material and fastened with captive screws treated for corrosion resistance. Connections are flanged, with stainless-steel screws and oil-resistant gaskets.

C. Description: PVC plastic extruded and fabricated to size and shape indicated, with snap-on cover and mechanically coupled connections with plastic fasteners.

D. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, holddown straps, end caps, and other fittings to match and mate with wireways as required for complete system.

E. Select features, unless otherwise indicated, as required to complete wiring system and to comply with CEC.

2.6 SURFACE RACEWAYS

A. Surface Metal Raceways: Two-channel, anodized aluminum, with permanent labels at each receptacle. Top channel: Data; Bottom channel: Power

1. Manufacturers:

a. Airey-Thompson Sentinel Lighting; Wiremold Company (The).
b. Thomas & Betts Corporation.
c. Walker Systems, Inc.; Wiremold Company (The).
d. Wiremold Company (The); Electrical Sales Division.

e. Hubbell, Inc.; Wiring Device Division.
f. Or equal.

B. Surface Nonmetallic Raceways: Two-piece construction, manufactured of rigid PVC compound with matte texture and manufacturer's standard color.

1. Manufacturer:

a. Butler Manufacturing Co.; Walker Division.
b. Enduro Composite Systems.
c. Hubbell, Inc.; Wiring Device Division.
d. Lamson & Sessions; Carlon Electrical Products.
e. Panduit Corp.
f. Walker Systems, Inc.; Wiremold Company (The).
g. Wiremold Company (The); Electrical Sales Division.
h. Or equal.

C. Types, sizes, and channels as indicated and required for each application, with fittings that match and mate with raceways.

2.7 BOXES, ENCLOSURES, AND CABINETS

A. Manufacturers:

1. Cooper Crouse-Hinds; Div. of Cooper Industries, Inc.
2. Emerson/General Signal; Appleton Electric Company.
3. Erickson Electrical Equipment Co.
4. Hoffman.
5. Hubbell, Inc.; Killark Electric Manufacturing Co.
6. O-Z/Gedney; Unit of General Signal.
7. RACO; Division of Hubbell, Inc.
8. Robroy Industries, Inc.; Enclosure Division.
9. Scott Fetzer Co.; Adalet-PLM Division.
10. Spring City Electrical Manufacturing Co.
11. Thomas & Betts Corporation.
12. Walker Systems, Inc.; Wiremold Company (The).
13. Woodhead, Daniel Company; Woodhead Industries, Inc. Subsidiary.
14. Or equal

B. Sheet Metal Outlet and Device Boxes: NEMA OS 1.

C. Cast-Metal Outlet and Device Boxes: NEMA FB 1, Type FD, with gasketed cover.

D. Nonmetallic Outlet and Device Boxes: NEMA OS 2.

E. Floor Boxes: Plastic or metal.

F. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.

G. Cast-Metal Pull and Junction Boxes: NEMA FB 1, cast aluminum with gasketed cover.

H. Hinged-Cover Enclosures: NEMA 250, Type 1, with continuous hinge cover and flush latch.

1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
2. Nonmetallic Enclosures: Plastic, finished inside with radio-frequency-resistant paint.

I. Cabinets: NEMA 250, Type 1, galvanized steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel. Hinged door in front cover with flush latch and concealed hinge. Key latch to match panelboards. Include metal barriers to separate wiring of different systems and voltage and include accessory feet where required for freestanding equipment.

2.8 FACTORY FINISHES

A. Finish: For raceway, enclosures, or cabinet components, provide manufacturer's standard paint applied to factory-assembled surface raceways, enclosures, and cabinets before shipping.

PART 3 - EXECUTION

3.1 RACEWAY APPLICATION

A. Outdoors:

1. Exposed: Rigid steel, IMC, EMT.
2. Concealed: Rigid steel, IMC, EMT, RNC.
3. Underground, Single Run: RNC.
4. Underground, Grouped: RNC.
5. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
6. Boxes and Enclosures: NEMA 250, Type 3R.

B. Indoors:

1. Exposed: EMT.
   Concealed: EMT, MC, FMC.
3. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC; except use LFMC in damp or wet locations.
4. Damp or Wet Locations: EMT
5. Boxes and Enclosures: NEMA 250, Type 1, except as follows:

   a. Damp or Wet Locations: NEMA 250, Type 3R, stainless steel

C. Minimum Raceway Size: 1/2-inch trade size.

D. Raceway Fittings: Compatible with raceways and suitable for use and location.

1. Intermediate Steel Conduit: Use threaded rigid steel conduit fittings, unless otherwise indicated.
2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings approved for use with that material. Patch all nicks and scrapes in PVC coating after installing conduits.

E. Do not install aluminum conduits embedded in or in contact with concrete.

3.2 INSTALLATION

A. Keep raceways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.

B. Complete raceway installation before starting conductor installation.

C. Support raceways as specified in Division 26 Section "Hangers and Supports for Electrical Systems."

D. Make bends and offsets so ID is not reduced. Keep legs of bends in the same plane and keep straight legs of offsets parallel, unless otherwise indicated.

E. Conceal MC, FMC, EMT within finished walls, ceilings, and floors, unless otherwise indicated.

1. Install concealed raceways with a minimum of bends in the shortest practical distance, considering type of building construction and obstructions, unless otherwise indicated.

F. Raceways Embedded in Slabs: Shall be placed completely within middle 1/3 of slab thickness where practical and leave at least 1-1/2 inches of concrete cover.

1. Secure raceways to reinforcing rods to prevent sagging or shifting during concrete placement.
2. Space raceways laterally to prevent voids in concrete. Conduits or pipes shall be placed no closer than 3 times the diameter of the largest adjacent conduits/pipes.
3. Conduits or pipe diameter shall be 1” maximum and shall not be placed in more than 2 layers.
4. Change from nonmetallic tubing to Schedule 80 nonmetallic conduit, rigid steel conduit, or IMC before rising above the floor with SP Transition coupling products.
5. For additional requirements, see Structural Drawings.

G. Install exposed raceways parallel or at right angles to nearby surfaces or structural members and follow surface contours as much as possible.

1. Run parallel or banked raceways together on common supports.

2. Make parallel bends in parallel or banked runs. Use factory elbows only where elbows can be installed parallel; otherwise, provide field bends for parallel raceways.

H. Join raceways with fittings designed and approved for that purpose and make joints tight.

1. Use insulating bushings to protect conductors.

I. Tighten set screws of thread less fittings with suitable tools.

J. Terminations:

1. Where raceways are terminated with locknuts and bushings, align raceways to enter squarely and install locknuts with dished part against box.
2. Where raceways are terminated with threaded hubs, screw raceways or fittings tightly into hub so end bears against wire protection shoulder. Where chase nipples are used, align raceways so coupling is square to box; tighten chase nipple so no threads are exposed.

K. Telephone and Signal System Raceways, 2-Inch Trade Size and Smaller: In addition to above requirements, install raceways in maximum lengths of 150 feet and with a maximum of two 90degree bends or equivalent. Separate lengths with pull or junction boxes where necessary to comply with these requirements.

L. Install raceway sealing fittings at suitable, approved, and accessible locations and fill them with UL-listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points:

1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
2. Where otherwise required by NFPA 70.

M. Stub-up Connections: Extend conduits through concrete floor for connection to freestanding equipment. Install with an adjustable top or coupling threaded inside for plugs set flush with finished floor. Extend conductors to equipment with rigid steel conduit; FMC may be used 6 inches above the floor. Install screwdriver-operated, threaded plugs flush with floor for future equipment connections. All stub-up locations will be SP product installation.

N. Flexible Connections: Use flexible conduit or MC for recessed and semi recessed lighting fixtures; for equipment subject to vibration, noise transmission, or movement; and for all motors. Use LFMC in damp or wet locations. Install separate ground conductor across flexible connections.

O. Surface Raceways: Install a separate, green, ground conductor in raceways from junction box supplying raceways to receptacle or fixture ground terminals.

T. Set floor boxes level. Trim after installation to fit flush with finished floor surface.

U. Install hinged or set screwcover enclosures and cabinets plumb. Support at each corner.

3.3 PROTECTION

A. Provide final protection and maintain conditions that ensure coatings, finishes, and cabinets are without damage or deterioration at time of Substantial Completion.

1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
2. Repair damage to PVC or paint finishes with matching touchup coating recommended by manufacturer.

3.4 CLEANING

A. After completing installation of exposed, factory-finished raceways and boxes, inspect exposed finishes and repair damaged finishes.

END OF SECTION 26 0533

SECTION 26 0543 - UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL AND COMMUNICATION SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Ducts in concrete-encased duct banks.
2. Handholes and handhole accessories.
3. Manholes and manhole accessories.

B. Related Sections include the following:

1. Division 26 Section "Grounding and Bonding for Electrical Systems" for grounding electrodes, counterpoise conductors, clamps and connectors for grounding metallic manhole and hand hole accessories, and testing of grounds.

1.2 SUBMITTALS

A. Product Data: For the following:

1. Manhole and hand hole hardware.
2. Conduit and ducts, including elbows, bell ends, bends, fittings, and solvent cement.
3. Duct-bank materials, including spacers and miscellaneous components.
4. Warning tape.

Shop Drawings: Submit per BIM Execution Plan under section 01 1300 “BIM Specifications”.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Store nonmetallic ducts with supports to prevent bending, warping, and deforming.

B. Store precast concrete units at Project site as recommended by manufacturer to prevent physical damage. Arrange so identification markings are visible.

C. Lift and support precast concrete units only at designated lifting or supporting points.

1.5 PROJECT CONDITIONS

A. Existing Utilities: Do not interrupt utilities serving facilities occupied the University or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated.

1. Notify the University's Representative fourteen days in advance of proposed utility interruptions.
2. Do not proceed with utility interruptions without University Representative's written permission.

1.6 COORDINATION

A. Coordinate layout and installation of ducts, manholes, and handholes with final arrangement of other utilities and site grading, as determined in the field.

B. Coordinate elevations of ducts and duct-bank entrances into manholes and handholes with final profiles of conduits as determined by coordination with other utilities and underground obstructions. Revise locations and elevations from those indicated as required to suit field conditions and to ensure duct runs drain to manholes and handholes, and as approved by the University's Representative.

PART 2 - PRODUCTS

2.1 PRODUCTS AND MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Underground Precast Concrete Structures:

a. Carder Concrete Products.
b. Christy Concrete Products, Inc.
c. Elmhurst-Chicago Stone Co.
d. Jensen Precast.
e. Utility Vault Co.
f. Wausau Concrete Co.
g. Or equal.

2. Frames and Covers:

a. Alhambra Foundry
b. Campbell Foundry Co.
c. East Jordan Iron Works, Inc.

d. McKinley Iron Works, Inc.
e. Neenah Foundry Co.
f. Or equal.

3. Nonmetallic Ducts and Accessories:

a. Arnco Corp.
b. Beck Manufacturing Inc.
c. Cantex, Inc.
d. Certainteed Corp.; Pipe & Plastics Group.
e. ElecSys, Inc.
f. Electri-Flex Co.
g. Lamson & Sessions; Carlon Electrical Products.
h. Manhattan/CDT/Cole-Flex.
i. Spiraduct/AFC Cable Systems, Inc.
j. Or equal.

B. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 CONDUIT

A. Conduit and fittings are specified in Division 26 Section "Raceways and Boxes for Electrical Systems."

2.3 DUCTS

A. Rigid Nonmetallic Conduit: NEMA TC 2, Type EPC-40-PVC, UL 651, with matching fittings by the same manufacturer as the conduit, complying with NEMA TC 3 and UL 514B.

2.4 HANDHOLES

A. Cast-Metal Boxes: Cast aluminum, with outside flanges and recessed, gasketed cover for flush mounting and with nonskid finish and legend on cover. Unit, when buried, shall be designed to support AASHTO H10 loading for sidewalk and landscaped areas and HS20 for roadways, parking lots and loading docks.

B. Precast Handholes: Reinforced concrete, monolithically poured walls and bottom, with steel frame and access door assembly as the top of hand hole. Duct entrances and windows shall be located near corners to facilitate racking. Pulling-in irons and other built-in items shall be

installed before pouring concrete. Cover shall have nonskid finish and legend. Unit, when buried, shall be designed to support AASHTO H10 loading for sidewalk and landscaped areas and HS20 for roadways, parking lots and loading docks.

C. Cover Legend: "ELECTRIC."

D. Cover Legend: “COMMUNICATIONS” for communications.

2.5 PRECAST MANHOLES

A. Precast Units: ASTM 478c, with interlocking mating sections, complete with accessories, hardware, and features as indicated. Include concrete knockout panels for conduit entrance and sleeve for ground rod.

B. Diameter: 48 inches minimum.

C. Design and fabricate structure according to ASTM C 858.

D. Structural Design Loading: ASTM C 857, Class A-16 (AASHTO HS20).

E. Base section: 6-inch minimum thickness for floor slab and 4-inch minimum thickness for walls and base riser section, and having separate base slab or base section with integral floor.

F. Riser Sections: 4-inch minimum thickness, and lengths to provide required depth Approved by University Representative.

G. Top Section: Eccentric-cone type unless concentric-cone or flat-slab-top type is indicated. Top of cone of size that matches grade rings.

H. Steps: ASTM A 615, deformed, 1/2-inch steel reinforcing rods encased in ASTM D 4101, PP, wide enough to allow worker to place both feet on 1 step and designed to prevent lateral slippage off of step. Cast or anchor steps into sidewalls at 12- to 16-inch intervals. Omit steps if total depth from floor of manhole to finished grade is less than 36 inches.

I. Grade Rings: Reinforced-concrete rings, 6- to 9-inch total thickness, to match diameter of manhole frame and cover.

J. Joint Sealant: ASTM C 990, bitumen or butyl rubber.

K. Source Quality Control: Inspect structures according to ASTM C 1037.

2.6 ACCESSORIES

A. Duct Spacers: Rigid PVC interlocking spacers, selected to provide minimum duct spacings and cover depths indicated while supporting ducts during concreting and backfilling; produced by the same manufacturer as the ducts.

B. Manhole Frames and Covers: Comply with AASHTO loading specified for manhole; Ferrous frame 36 inch clear ID by 6 inch minimum riser with 4-inch-minimum width flange and 36 inch-diameter cover.

1. Provide cast covers with cast-in legend:

a. "LV-ELECTRIC" for duct systems with power wires and cables for systems operating at 600 V and less.
b. "HV-ELECTRIC" for duct systems with medium-voltage cables.
c. "COMMUNICATIONS" for communications, data, and telephone duct systems.

2. Cast iron with cast-in legend as indicated above subsection 1. Milled cover-to-frame bearing surfaces.
3. Manhole Frames and Covers: ASTM A 48; Class 35B gray iron, 36-inch size, machinefinished with flat bearing surfaces.

C. Pulling Eyes in Walls: Eyebolt with reinforcing-bar fastening insert 2-inch- diameter eye and 1by-4-inch bolt.

1. Working Load Embedded in 6-Inch, 4000-psi Concrete: 13,000-lbf minimum tension.

D. Pulling and Lifting Irons in Floor: 7/8-inch- diameter, hot-dip-galvanized, bent steel rod; stress relieved after forming; and fastened to reinforced rod. Exposed triangular opening.

1. Ultimate Yield Strength: 40,000-lbf shear and 60,000-lbf tension.

E. Bolting Inserts for Cable Stanchions: Flared, threaded inserts of noncorrosive, chemicalresistant, nonconductive thermoplastic material; 1/2-inch ID by 2-3/4 inches deep, flared to 11/4 inches minimum at base.

1. Tested Ultimate Pullout Strength: 12,000 lbf minimum.

F. Expansion Anchors for Installation after Concrete Is Cast: Zinc-plated, carbon-steel-wedge type with stainless-steel expander clip with 1/2-inch bolt, 5300-lbf rated pullout strength, and minimum 6800-lbf rated shear strength.

G. Cable Stanchions: Hot-rolled, hot-dip-galvanized, T-section steel; 2-1/4-inch size; punched with 14 holes on 1-1/2-inch centers for cable-arm attachment.

H. Cable Arms: 3/16-inch- thick, hot-rolled, hot-dip-galvanized, steel sheet pressed to channel shape; 12 inches wide by 14 inches long and arranged for secure mounting in horizontal position at any location on cable stanchions.

I. Cable-Support Insulators: High-glaze, wet-process porcelain arranged for mounting on cable arms.

J. Grounding Materials: Comply with Division 26 Section "Grounding and Bonding for Electrical Systems."

K. Warning Tape: Underground-line warning tape specified in Division 26 Section " Identification for Electrical Systems."

L. Add Communications warning tape.

2.7 CONSTRUCTION MATERIALS

A. Seal manhole section joints with sealing compound recommended by the manhole manufacturer.

B. Damp proofing: Comply with Division 07 Section "Bituminous Damp proofing."

C. Mortar: Comply with ASTM C 270, Type M, except for quantities less than 2.0 cu. ft. where packaged mix complying with ASTM C 387, Type M, may be used.

D. Brick for Manhole Chimney: Sewer and manhole brick, ASTM C 32, Grade MS.

E. Concrete: Use 3000-psi- minimum, 28-day compressive strength and 1-inch maximum aggregate size. Concrete and reinforcement are specified in Division 03 Section "Cast-in-Place Concrete." Provide red dye added to concrete during batching for medium voltage.

PART 3 - EXECUTION

3.1 APPLICATION

A. Underground Ducts for Electrical Cables Higher Than 600 V: Type EPC-40-PVC, concrete encased duct bank.

B. Underground Ducts for Telephone Utility Service: Type EPC-40-PVC, direct-buried duct bank, except use Type EPC-80-PVC when crossing roads.

C. Underground Ducts for Communication Circuits: Type EPC-40-PVC, direct-buried duct bank, except use Type EPC-80-PVC when crossing roads.

D. Manholes: Underground precast concrete utility structures.

E. Manholes: Cast-in-place concrete.

3.2 EARTHWORK

A. Excavation and Backfill: Comply with Division 31 Section "Earth Moving" but do not use heavy-duty, hydraulic-operated, compaction equipment.

B. Restore surface features at areas disturbed by excavation and reestablish original grades, unless otherwise indicated. Replace removed sod immediately after backfilling is completed.

C. Restore all areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary top soiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Division 32 Section “Turf and Grasses”.

D. Restore disturbed pavement. Refer to Division 01 Section "Cutting and Patching."

3.3 CONDUIT AND DUCT INSTALLATION

A. Exercise care in excavating, trenching, and working near existing utilities. Locate any existing buried utilities before excavating.

B. Duct banks shall be installed so that the top of the concrete encasement shall be no less than 36 inches below grade or pavement for primary 12KV power, and not less 24 inches below finished grade or pavement for campus-wide communications. As a general rule, depths shall be a minimum of three feet, but not more than six feet.

C. Curves and Bends: Use manufactured 36 inches minimum elbows for stub-ups at equipment, communication pull boxes or enclosures and at building entrances. 24 inches radius is acceptable in areas where 36” cannot be achieved when approved by UCR representative. Use manufactured long sweep bends with a minimum radius of 25 feet, both horizontally and vertically, for MV feeders only. Manufactured long radius bends may be used in runs of 100 feet or less on approval from the University’s representative.

D. Use solvent-cement joints in ducts and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent ducts do not lie in the same plane.

E. Duct Entrances to Manholes and Handholes: Space end bells approximately 10 inches o.c. for 5-inch ducts and vary proportionately for other duct sizes. Change from regular spacing to endbell spacing 10 feet from the end bell without reducing duct line slope and without forming a trap in the line. Grout end bells into manhole walls from both sides to provide watertight entrances.

F. Building Entrances: Make a transition from underground duct to conduit at least 10 feet outside the building wall. Use fittings manufactured for this purpose. Follow the appropriate installation instructions below:

1. Concrete-Encased Ducts: Coordinate duct bank with structural design to support duct bank at wall without reducing structural or watertight integrity of building wall.
2. Direct-Buried, Non-encased Ducts at Non-waterproofed Wall Penetrations: Install a Schedule 40, galvanized steel pipe sleeve for each duct. Calk space between conduit and sleeve with duct-sealing compound on both sides for moisture-tight seal.
3. Waterproofed Wall and Floor Penetrations: Install a watertight entrance-sealing device with sealing gland assembly on the inside. Anchor device into masonry construction with one or more integral flanges. Secure membrane waterproofing to the device to make permanently watertight.

G. Concrete-Encased, Nonmetallic Ducts: Support ducts on duct spacers, spaced as recommended by manufacturer and coordinated with duct size, duct spacing, and outdoor temperature. Install as follows:

1. Separator Installation: Space separators close enough to prevent sagging and deforming of ducts and secure separators to earth and to ducts to prevent floating during concreting. Stagger spacers approximately 6 inches between tiers. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
2. Duct joints in concrete may be placed side by side horizontally, but shall be staggered at least 6 inches vertically. Joints shall be made in accordance with manufacturer's recommendations for the particular type of duct and coupling selected. In the absence of specific recommendations, plastic duct connections shall be made by brushing a plastic solvent cement on the inside of a plastic coupling fitting and on the outside of duct's ends. The duct and fitting shall then be slipped together with a quick one-quarter turn to set the joint.
3. Concreting: Spade concrete carefully during pours to prevent voids under and between conduits and at exterior surface of envelope. Do not allow a heavy mass of concrete to fall directly onto ducts. Use a plank to direct concrete down sides of bank assembly to trench bottom. Allow concrete to flow to center of bank and rise up in middle, uniformly filling all open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-bank application. Pour each run of envelope between manholes or other terminations in one continuous operation and reinforce only at high traffic areas.
4. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
5. Minimum Clearances between Ducts: 3 inches between ducts and exterior envelope wall, 2 inches between ducts for like services, and 4 inches between power and signal ducts.

6. Depth: Install top of duct bank at least 6 inches below finished grade in no traffic areas and at least 30 inches below finished grade in vehicular traffic areas, unless otherwise indicated.

7. Communications conduit ductbank shall be encased in 2-sack concrete mix slurry with at least 3-inch of cover on all sides. The top surface of concrete cover shall include an orange color dye for future identification.

8. After installation of communications conduit and after the concrete encasement has been cured, the Contractor shall prove all conduits by pulling a mandrel with a diameter ¼ inch smaller than the conduit and 12 inch long through each conduit end-to-end. The Inspector of Record shall be notified 24 hours before this procedure.

H. Direct-Buried Ducts: Support ducts on duct spacers, spaced as recommended by manufacturer and coordinated with duct size, duct spacing, and outdoor temperature. Install as follows:

1. Separator Installation: Space separators not more than 4 feet center-to-center along entire length of duct bank including top pipes.
2. Install expansion fittings as shown on Shop Drawings.
3. Trench Bottom: Continuous, firm, and uniform support for duct bank. Prepare trench bottoms as specified in Division 31 Section "Earth Moving" for pipes less than 6 inches in nominal diameter.
4. Backfill: Install backfill as specified in Division 31 Section "Earth Moving." After installing first tier of ducts, backfill and compact. Repeat backfilling after placing each tier. After placing last tier, hand-place backfill to 4 inches over ducts and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, complete backfilling normally.
5. Minimum Clearances between Ducts: 3 inches between ducts for like services and 6 inches between power and signal ducts.
6. Depth: Install top of duct bank at least 36 inches below finished grade, unless otherwise indicated.

I. Warning Tape: Bury warning tape approximately 12 inches above all concrete-encased duct banks. Align tape parallel to and within 3 inches of the centerline of duct bank.

J. Stub-ups: Use SP products for stub-ups and stub-outs for equipment.

K. Pulling Cord: Install 100-lbf- test nylon cord in ducts, including spares.

L. In all Communications conduits, provide three-quarter inch (3/4”) 2500 lb. tensile strength polyester mule tape in each conduit, use NEPTCO or equal.

M. Seal all emply and used communications conduits and/or innerducts with solid and/or split rubber compression plugs, use Jackmoon/Tyco or approved equal.

3.4 MANHOLE AND HANDHOLE INSTALLATION

A. Elevation: Install manholes with rooftop at least 15 inches below finished grade. Install handholes with depth as indicated. Where indicated, cast hand hole cover frame directly into roof of hand hole and set roof surface 1 inch above grade. Place and align precast manholes to provide horizontal tolerance of 2 inches in any direction and vertical alignment with not greater than 1/8 inch maximum tolerance for 6 foot of depth. Completed manhole shall be rigid, true to dimensions and alignment, and shall be watertight.

B. Drainage: Install drains in bottom of units where indicated. Coordinate with drainage provisions indicated. Sumps shall be knocked out at time of installation.

C. Access: Install cast-iron frame and cover.

1. Install precast collars and rings to support frame and cover and to connect cover with roof opening. Provide moisture-tight masonry joints and waterproof grouting for cast-iron frame to chimney.
2. Set frames in paved areas and traffic ways flush with finished grade. Set other frames 1 inch above finished grade.

D. Hardware: Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated.

E. Field-Installed Bolting Anchors: Do not drill deeper than 3-7/8 inches for anchor bolts installed in the field. Use a minimum of two anchors for each cable stanchion.

F. Grounding: Install ground rod through floor in each structure with top protruding 6 inches above floor. Seal floor opening against water penetration with waterproof nonshrink grout. Ground exposed metal components and hardware with bare-copper ground conductors. Train conductors neatly around corners. Use cable clamps secured with expansion anchors to attach ground conductors.

G. Precast Concrete Manhole Installation: comply with ASTM C 891.

1. Install units level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances.
2. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed

earth. Provide a minimum 6-inch level base of ¾ inch crushed rock under manhole to ensure uniform distribution of soil pressure on floor.

3.5 FIELD QUALITY CONTROL

A. Testing: Demonstrate capability and compliance with requirements on completion of installation of underground ducts and utility structures.

B. Grounding: Test manhole grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Division 26 Section "Grounding and Bonding for Electrical Systems."

C. Duct Integrity: Pull aluminum or wood test mandrel through duct to prove joint integrity and test for out-of-round duct. Provide mandrel equal to 80 percent fill of the duct. If obstructions are indicated, remove obstructions and retest.

D. Correct installations if possible and retest to demonstrate compliance. Remove and replace defective products and retest.

3.6 CLEANING

A.

B. Clean internal surfaces of manholes, including sump. Remove foreign material.

C. Leave a 3/8”-inch minimum polypropylene pull rope in each duct for future use.

END OF SECTION 26 0543

SECTION 26 0544 - SLEEVES AND SLEEVE SEALS FOR ELECTRICAL RACEWAYS AND CABLING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Sleeves for raceway and cable penetration of non-fire-rated construction of poured concrete walls and floors.
2. Sleeve-seal systems.
3. Sleeve-seal fittings.
4. Grout.
5. Silicone sealants.

B. Related Requirements:

1. Division 07 Section "Penetration Firestopping" for penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.

1.3 SUBMITTALS

A. Product Data

.

PART 2 - PRODUCTS

2.1 SLEEVES

A. Wall Sleeves:

1. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, plain ends.
2. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.
3. Link Seal Model CS Sleeves.

B. Sleeves for Rectangular Openings:

1. Material: Galvanized sheet steel.

2. Minimum Metal Thickness:

   a. For sleeve cross-section rectangle perimeter less than 50 inches and with no side larger than 16 inches, thickness shall be 0.052 inch.
   b. For sleeve cross-section rectangle perimeter 50 inches or more and one or more sides larger than 16 inches, thickness shall be 0.138 inch.

2.2 SLEEVE-SEAL SYSTEMS

A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. Advance Products & Systems, Inc.
   b. CALPICO, Inc.
   c. Metraflex Company (The).
   d. Pipeline Seal and Insulator, Inc.
   e. Proco Products, Inc.
   f. Link Seal

2. Sealing Elements: EPDM rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
3. Pressure Plates: Carbon steel.
4. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating, of length required to secure pressure plates to sealing elements.

2.3 SLEEVE-SEAL FITTINGS

A. Description: Manufactured plastic, sleeve-type, waterstop assembly made for embedding in concrete slab or wall. Unit shall have plastic or rubber waterstop collar with center opening to match piping OD.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. Presealed Systems.

2.4 GROUT

A. Description: Nonshrink; recommended for interior and exterior sealing openings in non-fire-rated walls or floors.

B. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.

C. Design Mix: 5000-psi, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION FOR NON-FIRE-RATED ELECTRICAL PENETRATIONS

A. Comply with NECA 1.

B. Comply with NEMA VE 2 for cable tray and cable penetrations.

C. Sleeves for Conduits Penetrating Above-Grade Non-Fire-Rated Poured Concrete Floors, Walls and where specifically required by the listed fire penetration assembly being used.

1. Interior Penetrations of Non-Fire-Rated Walls and Floors:

    a. Comply with requirements in Division 07 Section "Joint Sealants."
    b. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect material while curing.

2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
3. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable unless sleeve seal is to be installed or unless seismic criteria require different clearance.
4. Install sleeves for wall penetrations unless formed openings are used. Install sleeves during erection of walls, prior to concrete pour.
5. Install sleeves for floor penetrations. Extend sleeves installed in floors 2 inches above finished floor level. Install sleeves during erection of floors.

D. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.

E. Aboveground, Exterior-Wall Penetrations (In Poured Concrete): Seal penetrations using cast-iron pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

F. Underground, Exterior-Wall: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch annular clear space between raceway or cable and sleeve for installing sleeve-seal system.

3.2 SLEEVE-SEAL-SYSTEM INSTALLATION

A. Install sleeve-seal systems in sleeves in exterior concrete walls at raceway entries into building.

B. Install type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals

and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.3 SLEEVE-SEAL-FITTING INSTALLATION

A. Install sleeve-seal fittings in new walls and slabs as they are constructed.

B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.

C. Secure nailing flanges to concrete forms.

D. Using grout, seal the space around outside of sleeve-seal fittings.

END OF SECTION 26 0544

SECTION 26 0548 – VIBRATION AND SEISMIC CONTROLS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes seismic restraints and other earthquake-damage-reduction measures for electrical components. It complements optional seismic construction requirements in the various electrical component Sections.

1.2 DEFINITIONS

A. CBC: California Building Code.

B. Seismic Restraint: A fixed device (a seismic brace, an anchor bolt or stud, or a fastening assembly) used to prevent vertical or horizontal movement, or both vertical and horizontal movement, of an electrical system component during an earthquake.

C. Mobile Structural Element: A part of the building structure such as a slab, floor structure, roof structure, or wall that may move independent of other mobile structural elements during an earthquake.

1.3 SUBMITTALS

A. Product Data: Illustrate and indicate types, styles, materials, strength, fastening provisions, and finish for each type and size of seismic restraint component used.

1. Anchor Bolts and Studs: Tabulate types and sizes, complete with report numbers and rated strength in tension and shear as evaluated by ICBO Evaluation Service.

B. Shop Drawings: For anchorage and bracing not defined by details and charts on Drawings. Indicate materials, and show designs and calculations signed and sealed by a professional engineer.

1. Design Analysis: To support selection and arrangement of seismic restraints. Include calculations of combined tensile and shear loads.
2. Details: Detail fabrication and arrangement. Detail attachment of restraints to both structural and restrained items. Show attachment locations, methods, and spacing, identifying components and listing their strengths. Indicate direction and value of forces transmitted to the structure during seismic events.
3. Preapproval and Evaluation Documentation: By ICBO Evaluation Service, or an agency approved by University's Representative, showing maximum ratings of restraints and the basis for approval (tests or calculations).

C. Coordination Drawings: Plans and sections drawn to scale and coordinating seismic bracing for electrical components with other systems and equipment, including other seismic restraints, in the vicinity.

1.4 QUALITY ASSURANCE

A. Comply with seismic restraint requirements in California Building Code/Code of Regulations, unless requirements in this Section are more stringent.

B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in California and who is experienced in providing seismic engineering services, including the design of seismic restraints, that are similar to those indicated for this Project.

C. Testing Agency Qualifications: An independent testing agency, acceptable to University's Representative, with the experience and capability to conduct the testing indicated.

1.5 PROJECT CONDITIONS

A. Project Seismic Parameter: S_{DS} = 1.0g.

B. Seismic Category = D

C. Site Class = D

D. Risk Category as Defined in CBC: III – 1.25 (Importance Factor).

E. Acceleration Factor: SS = 1.5g; S1 = 0.62g

F. For additional criteria, see Structural Drawings.

1.6 COORDINATION

A. Coordinate layout and installation of seismic bracing with building structural system and architectural features, and with mechanical, fire-protection, electrical, and other building features in the vicinity.

B. Coordinate concrete bases with building structural system.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Tomarco / ISAT Seismic Bracing
2. Mason Industries
3. B-Line Systems, Inc.
4. Erico, Inc.
5. Powerstrut.
6. Thomas & Betts Corp.
7. Unistrut Corporation.

8. Or equal.

B. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 MATERIALS

A. Use the following materials for restraints:

1. Indoor Dry Locations: Steel, zinc plated.
2. Outdoors and Damp Locations: Galvanized steel.
3. Corrosive Locations: Stainless steel.

2.3 ANCHORAGE AND STRUCTURAL ATTACHMENT COMPONENTS

A. Strength: Defined in reports by ICBO Evaluation Service or another agency acceptable to University’s Representative.

1. Structural Safety Factor: Strength in tension and shear of components used shall be at least two times the maximum seismic forces to which they will be subjected.

B. Concrete and Masonry Anchor Bolts and Studs: Steel-expansion wedge type.

C. Concrete Inserts: Steel-channel type.

D. Through Bolts: Structural type, hex head, high strength. Comply with ASTM A 325.

E. Welding Lugs: Comply with MSS SP-69, Type 57.

F. Beam Clamps for Steel Beams and Joists: Double sided. Single-sided type is not acceptable.

G. Bushings for Floor-Mounted Equipment Anchors: Neoprene units designed for seismically rated rigid equipment mountings, and matched to the type and size of anchor bolts and studs used.

H. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for seismically rated rigid equipment mountings, and matched to the type and size of attachment devices used.

2.4 SEISMIC BRACING COMPONENTS

A. Slotted Steel Channel: 1-5/8-by-1-5/8-inch cross section, formed from 0.1046-inch- thick steel, with 9/16-by-7/8-inch slots at a maximum of 2 inches o.c. in webs, and flange edges turned toward web.

1. Materials for Channel: ASTM A 570, GR 33.
2. Materials for Fittings and Accessories: ASTM A 575, ASTM A 576, or ASTM A 36.

3. Fittings and Accessories: Products of the same manufacturer as channels and designed for use with that product.
4. Finish: Baked, rust-inhibiting, acrylic-enamel paint applied after cleaning and phosphate treatment, unless otherwise indicated.

B. Channel-Type Bracing Assemblies: Slotted steel channel, with adjustable hinged steel brackets and bolts.

C. Cable-Type Bracing Assemblies: Zinc-coated, high-strength steel wire rope cable attached to steel thimbles, brackets, and bolts designed for cable service.

1. Arrange units for attachment to the braced component at one end and to the structure at the other end.
2. Wire Rope Cable: Comply with ASTM 603. Use 49- or 133-strand cable with a minimum strength of 2 times the calculated maximum seismic force to be resisted.

D. Hanger Rod Stiffeners: Slotted steel channels with internally bolted connections to hanger rod.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install seismic restraints according to applicable codes and regulations and as approved by the University's Representative, unless more stringent requirements are indicated.

3.2 STRUCTURAL ATTACHMENTS

A. Use bolted connections with steel brackets, slotted channel, and slotted-channel fittings to spread structural loads and reduce stresses in accordance with the structural engineer of record approval.

B. Attachments to New Concrete: Bolt to channel-type concrete inserts or use expansion anchors.

C. Attachments to Existing Concrete: Use expansion anchors.

D. Holes for Expansion Anchors in Concrete: Drill at locations and to depths that avoid reinforcing bars.

E. Attachments to Solid Concrete Masonry Unit Walls: Use expansion anchors.

F. Attachments to Hollow Walls: Bolt to slotted steel channels fastened to wall with expansion anchors.

G. Attachments to Steel: Bolt to clamps on flanges of beams or on upper truss chords of bar joists.

3.3 ELECTRICAL EQUIPMENT ANCHORAGE

A. Anchor rigidly to a single mobile structural element or to a concrete base that is structurally tied to a single mobile structural element.

B. Anchor panel boards, motor controls, switchboards, switchgear, transformers, fused power-circuit devices, transfer switches, busways, power conditioners, capacitor units, communication system components, and electronic signal processing, control, and distribution units as follows:

1. Torque bolts and nuts on studs to values recommended by equipment manufacturer.

3.4 SEISMIC BRACING INSTALLATION

A. Install bracing according to spacing and strengths indicated by approved analysis.

B. Expansion and Contraction: Install to allow for thermal movement of braced components.

C. Cable Braces: Install with maximum cable slack recommended by manufacturer.

D. Attachment to Structure: If specific attachment is not indicated, anchor bracing to the structure at flanges of beams, upper truss chords of bar joists, or at concrete members.

3.5 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

A. Make flexible connections in raceways, cables, wire ways, cable trays, and busways where they cross expansion and seismic control joints, where adjacent sections or branches are supported by different structural elements, and where they terminate at electrical equipment anchored to a different mobile structural element from the one supporting them.

END OF SECTION 26 0548

SECTION 26 0553 - IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Identification for raceways.
2. Identification of power and control cables.
3. Identification for conductors.
4. Underground-line warning tape.
5. Warning labels and signs.
6. Instruction signs.
7. Equipment identification labels.
8. Miscellaneous identification products.

1.2 SUBMITTALS

A. Product Data: For each electrical identification product indicated.

1.3 QUALITY ASSURANCE

A. Comply with ANSI A13.1 and IEEE C2.

B. Comply with California Electrical Code (CEC).

C. Comply with 29 CFR 1910.144 and 29 CFR 1910.145.

D. Comply with ANSI Z535.4 for safety signs and labels.

E. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, shall comply with UL 969.

1.4 COORDINATION

A. Coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual; and with those required by codes, standards, and 29 CFR 1910.145. Use consistent designations throughout Project.

B. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

C. Coordinate installation of identifying devices with location of access panels and doors.

D. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 MATERIALS

A. For fixture descriptions in other Part 2 articles where the subparagraph titles "Products," and "Manufacturers" introduce a list of manufacturers and their products or manufacturers only, the following requirements apply for product selection:

1. Products: Subject to compliance with requirements, provide one of the products specified in other Part 2 articles.
2. Manufacturers: Subject to compliance with requirements, provide products by the manufacturers specified in other Part 2 articles.
3. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.3 ARMORED AND METAL-CLAD CABLE IDENTIFICATION MATERIALS

A. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway and cable size.

2.7 UNDERGROUND-LINE WARNING TAPE

A. Tape:

1. Recommended by manufacturer for the method of installation and suitable to identify and locate underground electrical and communications utility lines.

B. Color and Printing:

1. Comply with ANSI Z535.1 through ANSI Z535.5.
2. Inscriptions for Red-Colored Tapes: ELECTRIC LINE, HIGH VOLTAGE,
3. Inscriptions for Orange-Colored Tapes: TELEPHONE CABLE, CATV CABLE, COMMUNICATIONS CABLE, OPTICAL FIBER CABLE.

C.

2.10 EQUIPMENT IDENTIFICATION LABELS

A. Adhesive Film Label: Machine printed, in black, by thermal transfer or equivalent process. Minimum letter height shall be 3/8 inch.

B. Adhesive Film Label with Clear Protective Overlay: Machine printed, in black, by thermal transfer or equivalent process. Minimum letter height shall be 3/8 inch. Overlay shall provide a weatherproof and UV-resistant seal for label.

C. Self-Adhesive, Engraved, Laminated Acrylic or Melamine Label: Adhesive backed, with white letters on a dark-gray background. Minimum letter height shall be 3/8 inch.

D. Engraved, Laminated Acrylic or Melamine Label: Punched or drilled for screw mounting. White letters on a dark-gray background. Minimum letter height shall be 3/8 inch.

E. Stenciled Legend: In nonfading, waterproof, black ink or paint. Minimum letter height shall be 1 inch.

2.11 CABLE TIES

A. General-Purpose Cable Ties: Fungus inert, self extinguishing, one piece, self locking, Type 6/6 nylon.

1. Minimum Width: 3/16 inch.
2. Tensile Strength at 73 deg F According to ASTM D 638: 12,000 psi.
3. Temperature Range: Minus 40 to plus 185 deg F.
4. Color: Black except where used for color-coding.

B. UV-Stabilized Cable Ties: Fungus inert, designed for continuous exposure to exterior sunlight, self extinguishing, one piece, self locking, Type 6/6 nylon.

1. Minimum Width: 3/16 inch.
2. Tensile Strength at 73 deg F According to ASTM D 638: 12,000 psi.
3. Temperature Range: Minus 40 to plus 185 deg F.
4. Color: Black.

C. Plenum-Rated Cable Ties: Self extinguishing, UV stabilized, one piece, self locking.

1. Minimum Width: 3/16 inch.
2. Tensile Strength at 73 deg F According to ASTM D 638: 7000 psi.
3. UL 94 Flame Rating: 94V-0.
4. Temperature Range: Minus 50 to plus 284 deg F.
5. Color: Black.

2.12 MISCELLANEOUS IDENTIFICATION PRODUCTS

A. Paint: Comply with requirements in Division 09 painting Sections for paint materials and application requirements. Select paint system applicable for surface material and location (exterior or interior).

B. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Verify identity of each item before installing identification products.

B. Location: Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment.

C. Apply identification devices to surfaces that require finish after completing finish work.

D. Secure nameplates to equipment fronts using screws, rivets or adhesive. Secure nameplate to inside face of recessed panel board doors in finished locations. Use weatherproof adhesive for outdoor installation. Do not use tape for nameplates or legend plates.

E. Lettering, Colors, and Graphics: Coordinate names, abbreviations, colors, and other designations with corresponding designations. Use consistent designations throughout project.

1. Based on the University electrical equipment numbering and identification scheme included in this section.

F. Self-Adhesive Identification Products: Clean surfaces before applying.

G. Install nameplates and labels parallel to equipment lines.

H. Color Coded Raceways: Junction Boxes for Fire Alarm System shall be red.

I. Caution Labels for Indoor Boxes and Enclosures for Power and Lighting: Install labels identifying system voltage with black letters on orange background. Install on exterior of door or cover.

J. Circuit Identification Labels on Receptacles:

1. Public View Areas (lobbies, atrium, etc.): Stencil circuit information on back of plate.
2. All Other Areas: Engraved or permanently stencil circuit information on front of plate.

K. Conduit installed below grade shall have underground hazard tape (non-adhesive) installed a minimum of 12 inches above the conduit or top layer of conduits in a duct bank. The tape shall be 6 inches wide and 4 millimeters thick yellow polyethylene for low voltage conduits and red for medium voltage conduits. The tape shall be marked “Caution Buried Electric Line” for

low voltage and "Danger High Voltage Line" for medium voltage. Tracer wire shall be used for PVC conduits and non-metallic tape for metallic conduits. The tape shall be installed the entire length of conduit below grade.

L. Color-Coding of Secondary Phase Conductors: Use the following colors for service feeder and branch-circuit phase conductors. Wiring shall be color coded, see Division 26 Section 26 0519, "Low Voltage Electrical Power Conductors and Cables." Low voltage wire markers shall be adhering, preprinted, self-laminating vinyl wrap-around strips. Wire shall be marked with opposite end termination and shall include panel source and circuit numbers. Phasing shall be indicated by colored wire or tape. For other system voltages consult the University:

1. 208/120-V Conductors:

    a. Phase A: Black.
    b. Phase B: Red.
    c. Phase C: Blue.
    d. Switch Leg: Pink.
    e. Switch Traveler: Same as Hot Leg.

2. 480/277-V Conductors:

    a. Phase A: Brown.
    b. Phase B: Orange.
    c. Phase C: Yellow.
    d. Switch Leg: Purple
    e. Switch Traveler: Same as Hot Leg.

3. Neutral and Ground Conductors:

    a. Neutral: White.
    b. Ground: Green.

4. Factory apply color the entire length of conductors, except the following field-applied, color-coding methods may be used instead of factory-coded wire for sizes larger than No. 10 AWG:

    a. Colored, pressure-sensitive plastic tape in half-lapped turns for a distance of 6 inches from terminal points and in boxes where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding. Use 1-inch wide tape in colors specified. Adjust tape bands to avoid obscuring cable identification markings.
    b. Colored cable ties applied in groups of three ties of specified color to each wire at each terminal or splice point starting 3 inches from the terminal and spaced 3 inches apart. Apply with a special tool or pliers, tighten to a snug fit, and cut off excess length.

M. Power-Circuit Identification: Wrap-around marker bands for cables, feeders, and power circuits in vaults, pull and junction boxes, manholes, and switchboard rooms.

1. Legend: 1/4-inch- steel letter and number stamping or embossing with legend corresponding to indicated circuit designations.
2. Tag Fasteners: Nylon cable ties.
3. Band Fasteners: Integral ears.

N. Apply identification to conductors as follows:

1. Multiple Power or Lighting Circuits in the Same Enclosure: Identify each conductor with source, voltage, circuit number, and phase. Use color-coding to identify circuits' voltage and phase.
2. Multiple Control and Communication Circuits in the Same Enclosure: Identify each conductor by its system and circuit designation. Use a consistent system of tags, color coding, or cable marking tape.

O. Apply warning, caution, and instruction signs as follows:

1. Warnings, Cautions, and Instructions: Install to ensure safe operation and maintenance of electrical systems and of items to which they connect. Install engraved plastic-laminated instruction signs with approved legend where instructions are needed for system or equipment operation. Install metal-backed butyrate signs for outdoor items.
2. Emergency Operation: Install engraved laminated signs with white legend on red background with minimum 3/8-inch- high lettering for emergency instructions on power transfer, load shedding, and other emergency operations.

P. Equipment Identification Labels: Engraved plastic laminate. Install on each unit of equipment, including central or master unit of each system. This includes power, lighting, communication, signal, and alarm systems, unless units are specified with their own self-explanatory identification. Unless otherwise indicated, provide a single line of text with 1/2-inch- high lettering on 2” high label. Use black lettering on white field. Use white lettering on red field for emergency circuited equipment. Apply labels for each unit of the following categories of equipment using mechanical fasteners:

1. Panel boards, electrical cabinets, and enclosures.
2. Access doors and panels for concealed electrical items.
3. Electrical switchgear and switchboards.
4. Emergency system boxes and enclosures.
5. Disconnect switches.
6. Enclosed circuit breakers.
7. Motor starters.
8. Push-button stations.
9. Power transfer equipment.
10. Contactors.
11. Dimmers.

12. Control devices.
13. Transformers.
14. Rectifiers.
15. Power-generating units.
16. Telephone switching equipment.
17. Call system master station.
18. TV/audio-monitoring master station.
19. Fire alarm master station or control panel.
20. Security-monitoring master station or control panel.

Q. Cables in manholes, vaults, and where exiting a building, regardless of size, shall have brass cable identification tags. . Lettering on each tag shall be engraved at least 1/4 inch high. As an alternate, reflective vinyl markers such as Panduit PRL150BY, black legend with yellow background, may be used when applied to heavy vinyl sheeting and attached with tie-wrap at four points.

R. MV Cable Tags shall be connected to cables by non-ferrous cable ties and include the following minimum information:

1. Circuit Identification based on the University's Numbering Scheme
2. Phase of each conductor by letter (A, B, C) 3. Phase by Color Code

   a. A = Yellow Tape – 1 ring
   b. B = Red Tape – 2 rings
   c. C = Blue Tape – 3 rings

4. Both ends termination point of cable segment; e.g., East Sub, Cubicle 3 & MH102.

S. Equipment in manholes, buildings, and substations shall be labeled with engraved nameplates having red background and white letters. The equipment ID plus cable circuit terminations shall be provided. Identify the circuit switching devices and position in addition to cable identification noted above (i.e., SF6-46, way 2; ES-4). Letters shall be ½ inch high minimum on 2 inch by 4 inch plates.

T. An embossed brass tag with manhole number shall be permanently mounted inside the manhole and legible from outside the manhole with the cover removed.

U. The numbering scheme provided by the University accomplishes the following:

1. Establishes a unique identifier for all system components and eliminates possible duplication.

V. Identifies equipment by type as listed in the following table:

MARK OR TAG	DESCRIPTION	EXAMPLE
*	12kV Distribution Circuit	UC-1

FI	Fault Interrupter	FI-01
MH	Manhole	MH-102
OFC	Oil Filled Cutout	OFC-01
OS	Oil Switch	OS-01
PMH	Pad-Mounted Housing	PMH-01
PMS	Pad-Mounted Switch	PMS-02
SF6	Sulfur Hexafluoride Gas Switch	SF6-01
T	Transformer	T-001

* Use the substation name abbreviation for 12kV circuit breaker identification such as UC, CP1, CP2, ES for University Substation, Central Plant 1, Central Plant 2, East Substation.

W. Low Voltage Identification

1. Equipment nameplates shall be engraved three-layer laminated plastic with white background and black letters. Letters shall be ¼" minimum size. Identifications shall match plan designations and based upon the University's numbering scheme.
2. Legend plates for control panels and indicators shall be provided on disconnect and safety switches and indicating lights. The plates shall be die-stamped metal with mounting hole and positioning key.
3. For panel board directories provide the following:

    a. Provide typewritten directories arranged in numerical order showing number of room in which each device is located.
    b. Verify room numbers to be used with the University's representative prior to typing, since room numbers will most likely not be those shown on the drawings.
    c. Mount directories under a clear plastic cover inside each panelboard door.

4. The following low voltage equipment numbering scheme shall be followed:

TYPE	**DESCRIPTION**
DP	208/120V Distribution Panelboard
LP	208/120V Panelboard – Receptacles & Lighting
HDP	480/277V Distribution Panelboard
HLP	480/277 V Panelboard – Lighting
ATS	Automatic Transfer Switch
CB	Circuit Breaker
DS	Disconnect Switch
EDP	Emergency 208/120V Distribution Panelboard
ELP	Emergency 208/120V Panelboard

EHDP	Emergency 480/277V Distribution Panelboard
EMCC	Emergency Motor Control Center
MSB	Main Switchboard
MCC	Motor Control Center
T	Transformer
US	Unit Substation

5. Utilize numbering convention as follows:

   a. First letter or number = floor designation; B = basement, 1, 2, 3, etc. (B).
   b. Subsequent lower case letter = panel number on each floor; a, b, c, etc. (Ba).

      1) Example: Emergency 277/480V Distribution panelboard installed in basement is “EHDP-B”.
      2) Example: second 480/277Vpanelboard installed on third floor for lighting is “HLP-3b”.

X. Telecommunication, Signal Alarm and Control Wiring:

   1. Conductors Terminated or spliced shall be labeled at each end with tape markers.

END OF SECTION 26 0553

SECTION 26 0563 - ELECTRICAL TESTING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes general requirements for electrical field testing and inspecting. Detailed requirements are specified in each Section containing components that require testing. General requirements include the following:

1. Qualifications of testing agencies and their personnel.
2. Suitability of test equipment.
3. Calibration of test instruments.
4. Coordination requirements for testing and inspecting.
5. Reporting requirements for testing and inspecting.

1.2 QUALITY ASSURANCE

A. Testing Agency Qualifications: As specified in each Section containing electrical testing requirements and in subparagraph and associated subparagraph below.

1. Independent Testing Agencies: Independent of manufacturers, suppliers, and installers of components to be tested or inspected.

a. Testing Agency's Field Supervisor for Power Component Testing: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise onsite testing specified in Division 26 power component Sections.

B. Test Equipment Suitability: Comply with NETA ATS, Section 5.2.

PART 2 - NOT USED

PART 3 - EXECUTION

3.1 GENERAL TESTS AND INSPECTIONS

A. If a group of tests are specified to be performed by an independent testing agency, prepare systems, equipment, and components for tests and inspections, and perform preliminary tests to ensure that systems, equipment, and components are ready for independent agency testing. Include the following minimum preparations as appropriate:

1. Perform insulation-resistance tests.

2. Perform continuity tests.
3. Perform rotation test (for motors to be tested).
4. Provide a stable source of single-phase, 208/120-V electrical power for test instrumentation at each test location.

5. Testing of breakers 200A and larger.

6. Grounding test.

B. Test and Inspection Reports: In addition to requirements specified elsewhere, report the following:

1. Manufacturer's written testing and inspecting instructions.
2. Calibration and adjustment settings of adjustable and interchangeable devices involved in tests.
3. Tabulation of expected measurement results made before measurements.
4. Tabulation of "as-found" and "as-left" measurement and observation results.

END OF SECTION 26 0563

SECTION 26 0573 - OVERCURRENT PROTECTIVE DEVICE COORDINATION STUDY

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes computer-based, fault-current and overcurrent protective device coordination studies, and the setting of these devices.

1.2 SUBMITTALS

A. Product Data: For computer software program to be used for studies.

B. Qualification Data: For coordination-study specialist.

C. Other Action Submittals:

1. Coordination-study input data, including completed computer program input data sheets.
2. Coordination-study report.
3. Equipment evaluation report.
4. Setting report.

1.3 QUALITY ASSURANCE

A. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this Section. Manual calculations are not acceptable.

B. Coordination-Study Specialist Qualifications: An organization experienced in the application of computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.

C. Testing Agency Qualifications: Member company of the InterNational Electrical Testing Association.

1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association to supervise testing specified in Part 3.

D. Comply with IEEE 399 for general study procedures.

E. Comply with IEEE 242 for short-circuit currents and coordination time intervals.

F. Comply with IEEE 141 for recommended practice for electric power distribution for industrial plants.

G. Comply with IEEE 320 for special studies procedure.

PART 2 - PRODUCTS

2.1 COMPUTER SOFTWARE DEVELOPERS

A. Computer Software Developers: Subject to compliance with requirements, provide computer software programs developed by one of the following:

1. SKM Systems Analysis, Inc.
2. OTI.

2.2 COMPUTER SOFTARE PROGRAM REQUIREMENTS

A. Comply with IEEE 399.

B. Analytical features of fault-current-study computer software program shall include "mandatory," "very desirable," and "desirable" features as listed in IEEE 399, Table 7-4.

C. Computer software program shall be capable of plotting and diagramming time-current characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices.

1. Optional Features: Arcing faults.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance. Devices to be coordinated are indicated on Drawings.

B. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices not submitted for approval with coordination study may not be used in study.

3.2 FAULT-CURRENT STUDY

A. Source Impedance: Available short circuit contribution of 11,271 A on primary side of transformer, at 12kV.

B. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project and use approved computer software program to calculate values. Include studies of system-switching configurations and alternate operations that

could result in maximum fault conditions.Calculate momentary and interrupting duties on the basis of maximum available fault current.

C. Calculations to verify interrupting ratings of overcurrent protective devices shall comply with the following:

1. Low-Voltage Circuit Breakers: IEEE 1015 and IEEE C37.50.
2. Low-Voltage Fuses: IEEE C37.46.
3. Circuit Breakers: IEEE C37.13.

D. Study Report: Enter calculated X/R ratios and interrupting (5-cycle) fault currents on electrical distribution system diagram of the report. List other output values from computer analysis, including momentary (1/2-cycle), interrupting (5-cycle), and 30-cycle fault-current values for 3phase, 2-phase, and phase-to-ground faults.

E. Equipment Evaluation Report: Prepare a report on the adequacy of overcurrent protective devices and conductors by comparing fault-current ratings of these devices with calculated fault-current momentary and interrupting duties.

3.3 COORDINATION STUDY

A. Gather and tabulate the following input data to support coordination study:

1. Product Data for overcurrent protective devices specified in other Division 26 Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
2. Impedance of utility service entrance.
3. Electrical distribution system diagram showing the following:

    a. Load current that is the basis for sizing continuous ratings of circuits for cables and equipment.
    b. Circuit-breaker and fuse-current ratings and types.
    c. Relays and associated power and current transformer ratings and ratios.
    d. Transformer kilovolt amperes, primary and secondary voltages, connection type, impedance, and X/R ratios.
    e. Generator kilovolt amperes, size, voltage, and source impedance.
    f. Cables. Indicate conduit material, sizes of conductors, conductor insulation, and length.
    g. Busway ampacity and impedance.
    h. Motor horsepower and code letter designation according to NEMA MG 1.

4. Data sheets to supplement electrical distribution system diagram, cross-referenced with tag numbers on diagram:

    a. Special load considerations, including starting inrush currents and frequent starting and stopping.

b. Magnetic inrush current overload capabilities of transformers.
c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
d. Ratings, types, and settings of utility company's overcurrent protective devices.
e. Special overcurrent protective device settings or types stipulated by utility company.
f. Time-current-characteristic curves of devices indicated to be coordinated.
g. Manufacturer, frame size, interrupting rating in amperes rms symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.
h. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.
i. Panel boards, switchboards, motor-control center ampacity, and interrupting rating in amperes rms symmetrical.

B. Perform coordination study and prepare a written report using the results of fault-current study and approved computer software program. Comply with IEEE 399.

C. Comply with CEC (NFPA 70) for overcurrent protection of circuit elements and devices.

D. Comply with IEEE 141 recommendations for fault currents and time intervals.

E. Transformer Primary Overcurrent Protective Devices:

1. Device shall not operate in response to the following:

a. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
b. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.

2. Device shall protect transformer according to IEEE C57.12.00, for fault currents.

F. Conductor Protection: Protect cables against damage from fault currents according to ICEA P32-382, ICEA P-45-482, and conductor melting curves in IEEE 242. Verify adequacy of phase conductors at maximum three-phase bolted fault currents, equipment grounding conductors, and grounding electrode conductors at maximum ground-fault currents.

G. Coordination-Study Report: Prepare a written report indicating the following results of coordination study:

1. Tabular Format of Settings Selected for Overcurrent Protective Devices:

a. Device tag.
b. Relay-current transformer ratios; and tap, time-dial, and instantaneous-pickup values.

c. Circuit-breaker sensor rating; and long-time, short-time, and instantaneous settings.
d. Fuse-current rating and type.
e. Ground-fault relay-pickup and time-delay settings.

2. Coordination Curves: Prepared to determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between series devices, including power utility company's upstream devices. Show the following specific information:

a. Device tag.
b. Voltage and current ratio for curves.
c. Three-phase and single-phase damage points for each transformer.
d. No damage, melting, and clearing curves for fuses.
e. Cable damage curves.
f. Transformer inrush points.
g. Maximum fault-current cutoff point.

3. Completed data sheets for setting of overcurrent protective devices.

3.4 OVERCURRENT PROTECTIVE DEVICE SETTING

A. Manufacturer's Field Service: Engage a factory-authorized service representative, of electrical distribution equipment being set and adjusted, to assist in setting of overcurrent protective devices within equipment.

B. Testing: Perform the following device setting and prepare reports:

1. After installing overcurrent protective devices and during energizing process of electrical distribution system, perform the following:

a. Verify that overcurrent protective devices meet parameters used in studies.
b. Adjust devices to values listed in study results.

END OF SECTION 26 0573

SECTION 26 0800 - ELECTRICAL COMMISSIONING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section describes the requirements for start-up and commissioning for Division 26 installed work, including but not limited to:

1. Medium voltage distribution system
2. Low voltage distribution system.
3. Emergency power system.
4. Fire alarm system.
5. Lighting system.
6. Lighting control system.
7. Daylight control system.
8. Grounding Equipment and Building Grounding System
9. Lighting Dimming System.
10. Security system.
11. Audio/Visual system.

1.2 REFERENCES

A. National Electrical Testing Association (NETA).

B. American National Standard Institute (ANSI).

C. Institute of Electrical and Electronic Engineers (IEEE).

D. National Electrical Code (NEC).

E. California Electric Code (CEC).

1.3 SUBMITTALS

A. Provide a complete commissioning and training plan submittal for the electrical work.

B. Perform the additional field tests and inspections and prepare test reports not mentioned in this section but required by each section under “Field Quality Control” of Divisions 26, 27 and 28.

1.4 QUALITY ASSURANCE

A. Provide testing equipment and accessories that are free of defects and are certified for use.

B. Provide testing equipment with current calibration labels.

C. Comply with commissioning procedures to ANSI and IEEE guidelines. Incorporate manufacturer's recommend commission procedures for equipment.

1.5 COORDINATION

A. Coordinate commissioning work with the requirements of Section 01 9113 – General Commissioning Requirements.

B. Coordinate commissioning requirements noted in other Division 26 Sections.

PART 2 - PRODUCTS - Not Used

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that equipment testing work is complete before starting functional performance of power equipment.

B. Verify that operational manuals are complete and been approved by the University's Representative before starting functional performance testing.

C. Inspect equipment and confirm that it is clean and ready for operation. All shipping tags removed, nameplates installed and equipment manuals in place.

3.2 PREPARATION

A. Provide at least one journeyman electrician with tools and equipment necessary to perform functional testing.

B. Provide equipment factory representative for this work when needed.

C. Provide certified testing agency personnel for this work when needed.

D. Provide any necessary temporary power provisions, diesel fuel, equipment and sundries to complete this work.

3.3 POWER COMMISSIONING

A. Perform commissioning work after equipment is installed and system ready for operation.

B. Perform commissioning work in accordance with Power Check Lists and equipment manufacturer's standard procedures and check lists, including but not limited to:

1. Verify test readings, such as:

a. Ground fault protection.

b. Ground resistance.
c. Frequency.
d. Transformer heating.
e. Circuit breaker tripping.

2. Verify calibration of meters:

a. Kwhr meters.
b. Voltmeters.
c. Ammeters.
d. Frequency meters.
e. Circuit Breakers.
f. Fuses.

3. Verify operation of electronic power monitors.
4. Verify readings of remote data systems, such as:

a. Generator alarm.

5. Verify operation of emergency generator system during power loss and in specific:

a. Engine generator start.
b. Automatic transfer of power and bypass.
c. Load demand.
d. Engine cooling.
e. Exhaust.
f. Generator rated capacity (full load test).

6. Verify that total power system is performing time delays outlined in the design intent under part and full load conditions.

3.4 FIRE ALARM SYSTEM COMMISSIONING

A. Perform commissioning work after alarm equipment is installed and system ready for operation.

B. Perform commissioning work in accordance to the manufacturer's standard procedures and check lists, including but not limited to:

1. Verify tests such as:

a. Alarm db.
b. Detectors initiating signal.
c. Trouble lights.

2. Verify settings of:

a. Smoke detectors.
b. Heat detectors.

c. Duct detectors.

3. Verify readings of remote data, such as annunciator panel.
4. Verify operation of system modes:

a. Elevator control.
b. Sprinkler supervisory alarm.
c. Kitchen hood extinguishing system.
d. Kitchen gas solenoid valves.
e. Door hold open/release.

5. Verify that total alarm system is performing to provide conditions as outlined in the design intent.

3.5 CHECKLIST - NORMAL POWER DISTRIBUTION

A. Prior to Functional Performance Test:

1. System in place, including all components indicated, and tested.
2. Connected to campus power system on a permanent basis.
3. Meter wired correctly.
4. Wiring installed in conduits or other raceways.
5. System checked for unwanted grounds, short circuits or open circuits.
6. Ground installed as indicated, including transformers.
7. Equipment connections properly torqued.
8. Equipment, where indicated, on housekeeping pads.
9. Equipment cleaned and shipping blocks removed.
10. Equipment labeled.
11. Boxes and nameplates meet color coding requirements.

B. Personnel to be present or assist as required to Perform Functional Performance Test:

1. Electrical Contractor, sub-contractors and specialty contractors as required.
2. University’s Representative's Project Manager/Representative and/or Inspector of Record (I.O.R.).
3. University’s maintenance staff, as desired.
4. Design Engineer.

C. Functional Performance Test: Demonstrate operation of normal power distribution system per specifications including the following:

1. Activate system by connection to utility power.
2. Demonstrate draw out operation of circuit breakers.
3. Verify voltages and amperes at meters on switchgear.
4. Verify voltages and amperes at switchgear, substations, switchboards, motor control centers, panelboards, and transformers, both primary and secondary.
5. Verify voltages and amperes at mechanical motors and other major pieces of equipment.

D. Verify meter accuracy and connection to the Campus energy system reads correctly.Results:

1. If specified equipment performance is not verified, the Design Builder shall have corrections made and reschedule Functional performance Test as soon as possible after corrective work is completed.

3.6 CHECKLIST - EMERGENCY POWER DISTRIBUTION

A. Prior to Functional Performance Test:
   1. System in place, including all components indicated, and tested.
   2. Facility shall be connected to utility company power system on a permanent basis before emergency checklist is addressed.
   3. Wiring installed in conduits or other raceways.
   4. System check for unwanted grounds, short circuits or open circuits.
   5. Grounds installed as indicated, including transformers.
   6. Ground fault settings made.
   7. Equipment connections properly torqued.
   8. Equipment, where indicated, on housekeeping pads.
   9. Equipment cleaned and shipping blocks removed.
   10. Proper ventilation of electrical rooms.
   11. Electrical rooms free of foreign pipes and ducts.
   12. Fuel oil in fuel storage tank.
   13. Intake and exhaust air, exhaust gas pipe and muffler, fuel oil piping installed.
   14. Equipment labeled.
   15. Boxes and nameplates meet color coding requirements.
   16. Proper phase rotation coordinated between emergency and normal sources.

B. Personnel to be present or assist as required to perform Functional Performance Test:

   1. General Contractor, Mechanical Contractor, Control Contractor, and Electrical Contractor, sub-contractors and specialty contractors as required.
   2. University’s Representative's Project Manager Representative and/or Inspector of Record (IOR).
   3. University’s maintenance staff, as desired.
   4. Design Engineer(s).

C. Functional Performance Test: Demonstrate operation of emergency power distribution system per specifications including the following:

   1. Activate system by manual transfer from utility power.
   2. Demonstrate automatic transfer of power.
   3. Verify voltages and amperes at meters on paralleling gear.
   4. Verify voltages and amperes at paralleling gear switchboards.
   5. Demonstrate synchronization and paralleling automatic and manual.
   6. Demonstrate load shedding and load demand.
   7. Verify generator performance (KW rating).

D. Results:

1. If specified equipment performance is not verified, the Design Builder shall have corrections made and reschedule Functional Performance Test as soon as possible after corrective work is completed.

3.7 CHECKLIST - FIRE ALARM SYSTEM

A. Prior to Functional Performance Test:

1. System in place, including all components indicated, and tested.
2. Connected to emergency power system.
3. Wiring is plenum rated where required.
4. Exposed Areas: Wiring installed in conduit.
5. System checked for grounds or breaks.
6. System connected to elevator control system, sprinkler alarm system and air handling systems.
7. Wiring installed in cable tray, or J-hooks, or bridal spring clips.
8. Cables have color coded identification tags.
9. Boxes and nameplates meet color coding requirements.
10. Verify system has been inspected and given approval by jurisdictional authority.

B. Personnel to be present or assist as required to perform Functional Performance Test:

1. General Contract, Mechanical Contractor, Control Contractor, Fire Alarm Manufacturer's Representative, and Electrical Contractor, sub-contractors and specialty contractors as required.
2. University’s Representative's Project Manager/Representative and/or Inspector of Record (I.O.R.).
3. University’s maintenance staff, as desired.
4. Design Engineer(s).

C. Functional Performance Test: Demonstrate operation of fire alarm system per specifications including the following:

1. Alarm initiating devices including pull stations, ceiling smoke detectors, duct smoke detectors, heat detectors, and sprinkler alarm switches.
2. Air handling unit redirect upon alarm.
3. Verify tie-in and proper system operation with any off-site system monitoring.
4. Fire alarm system annunciator panel.
5. Alarm devices, visual and audible.
6. Central processing unit alphanumeric display and printer.
7. Verify system function upon loss of power.

D. Results:

1. If specified equipment performance is not verified, the Design Builder shall have corrections made and reschedule Functional Performance Test as soon as possible after corrective work is completed.

3.8 GROUNDING/BUILDING GROUNDING SYSTEM

A. Starting Procedures: Follow the manufacturer's written procedures and the following as a minimum:

1. Conduct fall of potential ground resistance tests per IEEE Standard 81at each test well and at service equipment.
2. Conduct insulation resistance, short circuit, and ground tests of each motor.

3.9 TRAINING

A. At job completion, allow a period of not less than 24 hours for instruction of building operating and maintenance personnel in the use of all systems. Include high voltage safety training where medium voltage equipment is installed. This instruction time (24 hours) is in addition to any instruction time called out in other Division 26 Sections.

B. Instruct all personnel at the same time. Design Builder shall be responsible for coordinating factory representative arrangements.

C. Design Builder shall be responsible for training expenses incurred.

END OF SECTION 26 0800

SECTION 26 0923 - LIGHTING CONTROL DEVICES

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Network lighting control system and components:

1. Touch panel controls
2. Lighting management panels
3. Lighting management modules
4. Low voltage wall stations
5. Power interfaces
6. Wired sensors

1.2 RELATED DOCUMENTS

A. Division 26 Section “Wiring Devices”

B. Division 26 Section “Lighting Control Devices”

C. Division Section “Interior Lighting Fixtures”

1.3 SUBMITTALS

A. Product Datasheets (general device descriptions, dimensions, electrical specifications, wiring details, nomenclature).

B. Riser Diagrams – typical per room type (detailed drawings showing device interconnectivity of devices).

C. Example Contractor Startup/Commissioning Worksheet – must be completed prior to factory start-up.

D. Hardware and Software Operation Manuals.

1.4 PROJECT CLOSEOUT DOCUMENTATION

A. Provide a factory published manual

1. Warranty
2. Technical support contact
3. Electronic manual on manufacturer’s website for free download.

1.5 QUALITY ASSURANCE

A. All steps in sensor manufacturing process shall occur in North America; including population of all electronic components on circuit boards, soldering, programming, wiring, and housing.

B. All components and the manufacturing facility where product was manufactured must be RoHS compliant.

C. In high humidity or cold environments, the sensors shall be conformably coated and rated for condensing humidity and -40 degree Fahrenheit (and Celsius) operation.

D. All applicable products must be UL / CUL Listed or other acceptable national testing organization.

1.6 PROJECT CONDITIONS

A. Only install equipment after the following site conditions are maintained:

1. Ambient Temperature 14 to 105 degrees F (-10 to 40 degrees C)
2. Relative Humidity less than 90% non-condensing.

B. Standard electrical enclosures are permanently installed.

C. Equipment is protected from dust, debris and moisture.

1.7 WARRANTY

A. Two (2) year 100% parts replacement.

1.8 MAINTENANCE & SUSTAINABILITY

A. Provide free telephone technical support.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Acceptable: Acuity Brands Lighting, Inc. – System: nLight by Acuity Controls.

B. Basis of controls design Manufacturer: Acuity Brands, One Lithonia Way, Conyers GA 30012, www.acuitycontrols.com.

C. Substitutions:

1. All substitutions must be submitted in writing for approval at least 14 days prior to bid date.
2. Proposed substitute products must be documented with a line by line compliance review.

2.2 SYSTEMS REQUIREMENTS

A. System shall have an architecture that is based upon three main concepts; 1) intelligent lighting control devices 2) standalone lighting control zones 3) network backbone for remote or time based operation.

B. Intelligent lighting control devices shall consist of one or more basic lighting control components; occupancy sensors, photocell sensors, relays, dimming outputs, manual switch stations, and manual dimming stations. Combining one or more of these components into a single device enclosure should be permissible so as to minimize overall device count of system.

C. Lighting control zones shall consist of one or more intelligent lighting control components, be capable of stand-alone operation, and be capable of being connected to a higher level network backbone.

D. Lighting control zone shall be capable of automatically configuring itself for default operation without any start-up labor required.

E. Individual lighting zones must continue to provide a user defined default level of lighting control in the event of a system communication failure with the backbone network or the management software becoming unavailable.

F. Power for devices within a lighting control zone shall come from either resident devices already present for switching (relay device) or dimming purposes, controls enabled luminaires, or from the network backbone. Standalone “bus power supplies” shall not be required in all cases.

G. All switching and dimming for a specific lighting zone shall take place within the devices located in the zone itself (i.e. not in remotely located devices such as panels) to facilitate system robustness and minimize wiring requirements. Specific applications that require centralized or remote switching shall be capable of being accommodated.

H. System shall have one or more primary wall mounted network control “gateway” devices that are capable of accessing and controlling connected system devices and linking into an Ethernet LAN.

I. System shall use “bridge” devices that route communication and distribute power for up to 8 directly connected lighting zones together for purposes of decreasing system wiring requirements.

J. System shall have a web-based software management program that enables remote system control, status monitoring, and creation of lighting control schedules and profiles.

K. Individual lighting zones shall be capable of being segmented into several “local” channels of occupancy, photocell, and switch functionality for more advanced configurations and sequences of operation.

L. System shall be capable of operating a lighting control zone according to several sequences of operation. System shall be able to change a spaces sequence of operation according to a time schedule so as to enable customized time-of-day, day-of-week, utilization of a space. Note: Operating modes should be utilized only in manners consistent with local energy codes.

1. Auto-On / Auto-Off (via occupancy sensors)

    a. Zones with occupancy sensors automatically turn lights on when occupant is detected.
    b. Zones with occupancy and/or photocell sensors turn lights off when vacancy or sufficient daylight is detected.
    c. Pressing a switch will turn lights off. The lights will remain off regardless of occupancy until switch is pressed again, restoring the sensor to Automatic On functionality.

2. Manual-On / Auto-Off

    a. Pushing a switch will turn lights on.
    b. Zones with occupancy and/or photocell sensors turn lights off when vacancy or sufficient daylight is detected.

3. Manual-On to Auto-On/Auto-Off

    a. Pushing a switch will turn lights on.
    b. After initial lights on, zones with occupancy and/or photocell sensors turn lights on/off according to occupancy/vacancy and/or daylight conditions.
    c. Sequence can be reset via scheduled (ex. daily each morning) events.

4. Auto-to-Override On

    a. Zones with occupancy sensors automatically turn lights on when occupant is detected.
    b. Zone lighting then goes into an override on state for a set amount of time, or until the next time event returns the lighting to an auto-off style of control.
    c. Sequence can be reset via scheduled (ex. daily each morning) events.

5. Manual-to-Override On

    a. Pushing a switch will turn lights on.
    b. Zone lighting then goes into an override on state for a set amount of time or until the next time event returns the lighting to an auto-off style of control.
    c. Sequence can be reset via scheduled (ex. daily each morning) events.

6. Auto On / Predictive Off

    a. Zones with occupancy sensors automatically turn lights on when occupant is detected.
    b. Zones with occupancy and/or photocell sensors turn lights off when vacancy or sufficient daylight is detected.

c. Pressing the switch will turn the lights off and a short "exit timer" begins. After the timer expires, sensor scans the room to detect whether occupant is still present. If no occupancy is detected, zone returns to auto-on. If occupancy is detected, lights must be turned on via the switch.

M. Control software shall enable integration with a BMS via BACnet IP, although a hardware BACnet IP integration solution is also available.

N. System shall provide the option of having pre-terminated plenum rated CAT-5e cabling supplied with hardware.

2.3 INDIVIDUAL DEVICE SPECIFICATIONS

A. Control module (gateway)

1. Control module shall be a device that facilitates communication and time-based control of downstream network devices and linking into an Ethernet network.
2. Devices shall have a user interface that is capable of wall mounting, powered by low voltage, and have a touch screen.
3. Control device shall have three RJ-45 ports for connection to the graphic touch screen, other backbone devices bridges) or directly to lighting control devices (up to 128 per port).
4. Device shall automatically detect all devices downstream of it.
5. Device shall have a standard and astronomical internal time clock.
6. Device shall have one RJ-45 10/100 BaseT Ethernet connection.
7. Device shall have a USB port
8. Each control gateway device shall be capable of linking 1500 devices to the management software, with reduced memory version capable of support up to 400 devices.
9. Device shall be capable of using a dedicated static or DHCP assigned IP address.
10. Network Control Gateway device shall be the following nLight model Series or equal:

    a. nGWY2

B. Networked system occupancy sensors

1. Occupancy sensors shall sense the presence of human activity within the desired space and fully control the on/off function of the lights.
2. Sensors shall utilize passive infrared (PIR) technology, which detects occupant motion, to initially turn lights on from an off state, thus preventing false on conditions. Ultrasonic or Microwave based sensing technologies shall not be accepted.
3. For applications where a second method of sensing is necessary to adequately detect maintained occupancy (such as in rooms with obstructions), a sensor with an additional "dual" technology shall be used.
4. Dual technology sensors shall have one of its two technologies not require motion to detect occupancy. Acceptable dual technology includes PIR/Microphonics (also known as Passive Dual Technology or PDT) which both looks for occupant motion and listens for sounds indicating occupants. Sensors where both technologies detect motion (PIR/Ultrasonic) shall not be acceptable.

5. All sensing technologies shall be acoustically passive, meaning they do not transmit sounds waves of any frequency (for example in the Ultrasonic range), as these technologies have the potential for interference with other electronic devices within the space (such as electronic white board readers). Acceptable detection technologies include Passive Infrared (PIR), and/or Microphonics technology. Ultrasonic or Microwave based sensing technologies shall not be accepted.
6. Sensors shall be available with zero or one integrated dry contact switching relays, capable of switching 1 amp at 24 VAC/VDC (resistive only).
7. Sensors shall be available with one or two occupancy “poles”, each of which provides a programmable time delay.
8. Sensors shall be available in multiple lens options which are customized for specific applications.
9. Communication and Class 2 low voltage power shall be delivered to each device via standard CAT-5 low voltage cabling with RJ-45 connectors.
10. All sensors shall have two RJ-45 ports or capable of utilizing a splitter.
11. All sensors shall have the ability to detect when it is not receiving valid communication (via CAT-5 connections) and blink its LED in a pattern to visually indicate of a potential wiring issue
12. Every sensor parameter shall be available and configurable remotely from the software and locally via the device push-button.
13. Sensors shall be able to function together with other sensors in order to provide expanded coverage areas by simply daisy-chain wiring together the units with CAT-5 cabling.
14. Sensors shall be equipped with an automatic override for 100 hour burn-in of lamps. This feature must be available at any time for lamp replacements.
15. Wall switch sensors shall recess into single-gang switch box and fit a standard GFI opening.
16. Wall switch sensors must meet NEC grounding requirements by providing a dedicated ground connection and grounding to mounting strap. Line and load wire connections shall be interchangeable. Sensor shall not allow current to pass to the load when sensor is in the unoccupied (Off) condition.
17. Wall switch sensors shall have optional features for photocell/daylight override, and low temperature/high humidity operation.
18. Wall switch sensors shall be available in four standard colors (Ivory, White, Light Almond, Gray)
19. Wall switch sensors shall be the following nLight model numbers, with device color and optional features as specified or equal:

    a. nWSX LV DX (PIR, No Relay, Raise/Lower Dim Ctrl)
    b. nWSX PDT LV DX (Dual Tech, No Relay,Raise/Lower Dim Ctrl)

20. Network system shall also have ceiling, fixture, recessed, & corner mounted sensors available or equal.
21. Sensors shall be the following nLight model numbers, with device options or equal.

Model # Series	Occupancy Poles	# of Relays	Lens Type	Detection Technology
nCM PDT 9	1	-	Standard	Dual
nCM(B) 10	1	-	Extended	PIR
nCM 6	1	-	Extended	PIR

C. Network system daylight (photocell and/or dimming) sensors

1. Photocell shall provide for an on/off set-point, and a deadband to prevent the artificial light from cycling. Delay shall be incorporated into the photocell to prevent rapid response to passing clouds.
2. Photocell and dimming sensor's set-point and deadband shall be automatically calibrated through the sensor's microprocessor by initiating an "Automatic Set-point Programming" procedure. Min and max dim settings as well as set-point may be manually entered.
3. Deadband setting shall be verified and modified by the sensor automatically every time the lights cycle to accommodate physical changes in the space (i.e., furniture layouts, lamp depreciation, or lamp outages).
4. Photocell and dimming sensors shall be equipped with an automatic override for100 hour burn-in of lamps. This feature must be available at any time for lamp replacements. (Note: This function should be performed prior to any dimming of the lamps including the "auto set-point" setting.)
5. Combination units that have all features of on/off photocell and dimming sensors shall also be available.
6. A dual zone option shall be available for On/Off Photocell, Automatic Dimming Control Photocell, or Combination units. The second zone shall be capable of being controlled as an "offset" from the primary zone.
7. Sensor shall be the following nLight model numbers, with device options as specified or equal:

    a. nCM ADCX (remote automatic dimming control photocell).

D. D.Networked System Power (Relay) Packs

1. Power Packs shall incorporate one Class 1 relay, a 0-10 VDC dimming output, and contribute low voltage power to the rest of the system. Secondary Packs shall incorporate the relay and 0-10 VDC or line voltage dimming output, but shall not be required to contribute system power. Power Supplies shall provide system power only, but are not required to switch line voltage circuit. Auxiliary Relay Packs shall switch low voltage circuits only.
2. Power Packs shall accept 120 or 277 VAC be plenum rated, and provide Class 2 power to the system.
3. All devices shall have two RJ-45 ports.
4. Every Power Pack parameter shall be available and configurable remotely from the software and locally via the device push-button.
5. Power Pack shall securely mount to junction location through a threaded ½ inch chase nipple or be capable of being secured within a luminaire ballast channel. Plastic clips into junction box shall not be accepted. All Class 1 wiring shall pass through chase nipple into

adjacent junction box without any exposure of wire leads. Note: UL Listing under Energy Management or Industrial Control Equipment automatically meets this requirement, whereas Appliance Control Listing does not meet this safety requirement.

6. When required by local code, Power Pack must install inside standard electrical enclosure and provide UL recognized support to junction box. All Class 1 wiring is to pass through chase nipple into adjacent junction box without any exposure of wire leads.
7. Power Packs and Power Supplies shall be available that are WiFi enabled.
8. Power Packs (Secondary) shall be available that provide up to 16 Amp switching of all lighting load types.
9. Power Packs shall be available that provide up to 5 Amps switching of all lighting load types as well as 0-10 VDC dimming or fluorescent ballasts/LED drivers.
10. Specific Secondary Packs shall be available that provide up to 5 Amps of switching and can dim 120 VAC incandescent lighting loads or 120/277 VAC line voltage dimmable fluorescent ballasts (2-wire and 3-wire versions).
11. Specific Secondary Packs shall be available that provide up to 5 Amps of switching and can dim 120/277 VAC magnetic low voltage transformers.
12. Specific Secondary Packs shall be available that provide up to 4 Amps of switching and can dim 120 VAC electronic low voltage transformers.
13. Specific Power/Secondary Packs shall be available that are UL924 listed for switching of Emergency Power circuits.
14. Specific Secondary Packs shall be available that control louver/damper motors for skylights.
15. Specific Secondary Packs shall be available that provide a pulse on/pulse off signal for purposes of controlling shade systems via relay inputs.
16. Power (Secondary) Packs shall be available that provide up to 20 Amps switching of general purposed receptacle (plug-load) control.
17. Power (Relay) Packs and Supplies shall be the following nLight model numbers or equal:

    a. nPP16 D (Power Pack w/ 16A relay and 0-10VDC dimming output)
    b. nPP16 D ER UL924 Listed Secondary Pack w/ 16A relay and 0-10VDC dimming output for switching/dimming emergency power circuits)
    c. nSP5 PCD 2W (Secondary Pack w/ 5A relay and incandescent dimming or 2-wire line voltage fluorescent dimming output)
    d. nSP5 PCD MLV (Secondary Pack w/ 5A relay and magnetic low voltage dimming output)
    e. nSP5 PCD ELV 120 (Secondary Pack w/ 4A relay and electronic low voltage dimming output)
    f. nPP20 PL (Secondary Pack w/ 20A relay for general purpose receptacle load)

E. Networked Auxiliary Input / Output (I/O) Devices

1. Devices shall be plenum rated and be inline wired, screw mountable, or have an extended chase nipple for mounting to a ½" knockout.
2. Devices shall have two RJ-45 ports
3. Communication and low voltage power shall be delivered to each device via standard CAT-5 low voltage cabling with RJ-45 connectors.
4. Specific I/O devices shall have an input that reads a 0-10 VDC signal from an external device.

5. Specific I/O devices shall have a switch input that can interface with either a maintained or momentary switch and run a switch event (toggle the lighting load) or run a local/remote control profile.
6. Specific I/O devices shall sense state of low voltage outdoor photocells.
7. Specific I/O devices shall enable RS-232 communication between lighting control system and Touch Screen based A/V control systems.
8. Specific I/O devices shall sense momentary and maintained contact closures, and either toggle a connected load after a momentary contact or ramp the load high/low during a maintained contact (stopping when the contact releases).
9. Auxiliary Input/Output Devices shall be the following nLight model numbers:

    a. nIO D (I/O device with 0-10 dimming output)
    b. nIO 1S or nIO RLX (I/O device with contact closure or 0-10VDC dimming input)
    c. nIO NLI (Input device for detecting state of low voltage outdoor photocell; sold in nIO PC KIT only)
    d. nIO X (Interface device for communicating with RS-232 enabled AVTouch Screens.

F. Networked LED Luminaires

1. Networked LED luminaire shall have a mechanically integrated control device.
2. Networked LED luminaire shall have two RJ-45 ports available (via control device directly or incorporated RJ-45 splitter).
3. Networked LED luminaire shall be able to digitally network directly to other network control devices (sensors, photocells, switches, dimmers).
4. Networked LED luminaire shall provide low voltage power to other networked control devices (excluding EMG versions).
5. System shall be able to turn on/off specific LED luminaires without using a relay, if LED driver supports “sleep mode.”
6. System shall be able to maintain constant lumen output over the specified life of the LED luminaire (also called lumen compensation) by varying the input control power (and thus saving up to 20% power usage).
7. System shall indicate (via a blink warning) when the LED luminaire has reached its expected life (in hrs).
8. Integrated control devices shall be the following nLight model series:

    a. nIO LEDG (ER)
    b. nIO EZ PH (ER)
    c. nPS 80 EZ (ER)
    d. nEPS 60 IO EZ
    e. nEIO EZ LC (ER)

G. Networked System Wall Switches & Dimmers

1. Devices shall recess into single-gang switch box and fit a standard GFI opening.
2. Communication and low voltage power shall be delivered to each device via standard CAT-5 low voltage cabling with RJ-45 connectors.
3. All devices shall have two RJ-45 ports.
4. All devices shall provide toggle switch control. Dimming control and low temperature/high humidity operation are available options.

5. Devices shall be available in four colors (Ivory, White, Light Almond, Gray).
6. Devices with mechanical push-buttons shall provide tactile and LED user feedback.
7. Devices with mechanical push-buttons shall be made available with custom button labeling.
8. Devices with a single "on" button shall be capable of selecting all possible lighting combinations for a bi-level lighting zone such that the user confusion as to which of two buttons (as is present in multi-button scenarios) controls which load is eliminated.
9. Wall switches & dimmers shall be the following nLight model numbers, with device options as specified or equal:

    a. nPODM DX (single on/off, single dimming raise/lower, push-buttons, LED user feedback).
    b. nPODM 2P DX (dual on/off, dual dimming raise/lower, push-buttons, LED user feedback).
    c. nPODM 4P DX (quad on/off, quad dimming raise-lower, push-buttons, LED user feedback).

H. Networked System Graphic Wall Station

1. Device shall have a 3.5" full color touch screen for selecting up to 16 programmable lighting control preset scenes or acting as up to 16 on/off/dim control switches.
2. Devices shall be available in four colors (Ivory, White, Light Almond, Gray).
3. Device shall enable configuration of all switches, dimmers, and lighting preset scenes via password protected setup screens.
4. Device shall enable user supplied .jpg screen saver image to be uploaded.
5. Device shall surface mount to single-gang switch box.
6. Device shall be powered with Class 2 low voltage supplied locally via a directly wired power supply.
7. Device shall have a micro-USB style connector for local computer connectivity.
8. Device shall have two RJ-45 ports for communication.
9. Device shall be the following nLight model number or equal:

    a. nPOD GFX

I. Communication Bridges

1. Device shall surface mount to a standard 4" x 4" square junction box.
2. Device shall have 8 RJ-45 ports.
3. Device shall be capable of aggregating communication from multiple lighting control zones for purposes of minimizing backbone wiring requirements back to Control Gateway.
4. Device shall be powered with Class 2 low voltage supplied locally via a directly wired power supply or delivered via a CAT-5 cabled connection.
5. Device shall be capable of redistributing power from its local supply and connect lighting control zones with excess power to lighting control zones with insufficient local power. This architecture also enables loss of power to a particular area to be less impactful on network lighting control system.

6. Communication Bridge devices shall be the following nLight model numbers or equal:

a. nBRG 8 (8 Ports)

2.4 LIGHTING CONTROL PROFILES

A. Changes to the operation of the system shall be capable of being made in real-time or scheduled via lighting control profiles. These profiles are outlines of settings that direct how a collection of devices function for a defined time period.

B. Lighting control profiles shall be capable of being created and applied to a single device, zone of devices, or customized group of zones.

C. All relays and dimming outputs shall be capable of being scheduled to track or ignore information regarding occupancy, daylight, and local user switches via lighting control profiles.

D. Specific device parameters (e.g. sensor time delay and photocell set-point) shall be configurable via a lighting control profile.

E. All lighting control profiles shall be stored on the network control gateway device, with a system backup on the software's host server.

F. Lighting control profiles shall be capable of being scheduled to run according to the following calendar options: start date/hour/minute, end date/hour/minute, and sunrise/sunset +/- timed offsets.

G. Sunrise/sunset times shall be automatically derived from location information using an astronomical clock.

H. Daylight savings time adjustments shall be capable of being performed automatically, if desired.

I. Lighting control profile schedules shall be capable of being given the following recurrence settings: daily, weekday, weekend, weekly, monthly, and yearly.

J. Software shall provide a graphical tool for easily viewing scheduled lighting control profiles.

2.5 MANAGEMENT SOFTWARE

A. Every device parameter (e.g. sensor time delay and photocell set-point) shall be available and configurable remotely from the software.

B. The following status monitoring information shall be made available from the software for all devices for which it is applicable: current occupancy status, current PIR Status, current Microphonics Status, remaining occupancy time delay(s), current photocell reading, current photocell inhibiting state, photocell transitions time remaining, current dim level, device temperature, and device relay state(s).

C. The following device identification information shall be made available from the software: model number, model description, serial number, manufacturing date code, custom label(s), and parent network device.

D. A printable network inventory report shall be available via the software.

E. A printable report detailing all system profiles shall be available via the software.

F. Software shall require all users to login with a User Name and Password.

G. Software shall provide at least three permission levels for users.

H. All sensitive stored information and privileged communication by the software shall be encrypted.

I. All device firmware and system software updates must be available for automatic download and installation via the internet.

J. Software shall be capable of managing systems interconnected via a WAN (wide area network).

2.6 BMS COMPATIBILITY

A. System shall provide a BACnet IP gateway as a downloadable software plug-in to its management software.

2.7 START-UP & SUPPORT FEATURES

A. To facilitate start-up, all devices daisy-chained together (using CAT-5) shall automatically be grouped together into a functional lighting control zone.

B. All lighting control zones shall be able to function according to default settings once adequate power is applied and before any system software is installed.

C. Once software is installed, system shall be able to auto-discover all system devices without requiring any commissioning.

D. All system devices shall be capable of being given user defined names.

E. All devices within the network shall be able to have their firmware upgraded remotely and without being physically uninstalled for purposes of upgrading functionality at a later date.

F. All sensor devices shall have the ability to detect improper communication wiring and blink it’s LED in a specific cadence as to alert installation/startup personnel.

PART 3 - EXECUTION

3.1 PRE-INSTALLATION MEETING

A. A factory authorized manufacturer’s representative shall provide the electrical contractor a functional overview of the lighting control system prior to installation. The contractor shall

schedule the pre-installation site visit after receipt of approved submittals to review the following:

1. Confirm the location and mounting of all digital devices, with special attention to placement of occupancy and daylighting sensors.
2. Review the specifications for low voltage control wiring and termination.
3. Discuss the functionality and configuration of all products, including sequences of operation, per design requirements.
4. Discuss requirements for integration with other trades.

3.2 INSTALLATION AND SERVICES

A. Install all devices and wiring in a professional manner. All line voltage connections to be tagged to indicate circuit and switched legs.

B. Install all room/area devices using Cat 5e cable with pre-terminated RJ-45 connectors. If pre-terminated cable is not used for room/area wiring, test each field-terminated cable following installation, and shall supply the lighting controls manufactuerer with test results. Install any room to room network devices using manufacturer-supplied LM-MSTP network wire. Network wire substitution is not permitted and may result in loss of product warranty per DLM SEGMENT NETWORK section of specification. Low voltage wiring topology must comply with manufacturer’s specifications. Route network wiring as shown in submittal drawings as closely as possible, and shall document final wiring location, routing and topology on as built drawings.

C. Install the work of this Section in accordance with manufacturer’s printed instructions unless otherwise indicated. Before start up, contractor shall test all devices to ensure proper communication.

D. Calibrate all sensor time delays and sensitivity to guarantee proper detection of occupants and energy savings.

1. Adjust time delay so that controlled area remains lighted while occupied.

E. Provide written or computer-generated documentation on the configuration of the system including room by room description including:

1. Sensor parameters, time delays, sensitivities, and daylighting setpoints.
2. Sequence of operation, (e.g. manual ON, Auto OFF. etc.)
3. Load Parameters (e.g. blink warning, etc.)

3.3 FACTORY SERVICES

A. Upon completion of the installation, the manufacturer's factory authorized representative shall start up and verify a complete fully functional system.

B. Upon completion of the system start up, the factory-authorized technician shall provide the proper training to the owner's personnel on the adjustment and maintenance of the system.

3.4 COMMISSIONING OF SUPPORT SERVICES

A. On this project, a commissioning agent will be hired to verify the installation and programming of all building systems, which includes the lighting control system. Manufacturer should include an extra day of technician's time to review the functionality and settings of the lighting control hardware with the commissioning agent, including reviewing submittal drawings and ensuring that instructions on how to configure each device are readily available. Manufacturer is NOT responsible for helping the commissioning agent inspect the individual devices. It will be the commissioning agent's responsibility to create and complete any forms required for the commissioning process, although the manufacturer or contractor may offer spreadsheets and/or printouts to assist the agent with this task.

B. The commissioning agent shall work with the electrical contractor during installation of the lighting control hardware to become familiar with the specific products. The agent may also accompany the manufacturer's technicians during their start-up work to better understand the process of testing, calibration and configuration of the products. However, the contractor and manufacturer shall ensure that interfacing with the agent does not prevent them from completing the requirements outlined in the contract documents.

3.5 OPTIONAL ACCEPTANCE TESTING SUPPORT SERVICES

A. A certified lighting controls acceptance test technician (CLCATT) must verify the installation of the lighting control system. Include an extra day of factory technician's time to assist the CLCATT review the functionality and settings of the lighting control hardware per the requirements in the California State forms. Create and complete any forms required for the commissioning process.

END OF SECTION 26 0923

SECTION 26 0926 - LIGHTING CONTROL PANELBOARDS

PART 1 - GENERAL

1.1 SUMMARY

A. The work covered in this section is subject to all of the requirements in the General Conditions of the Specifications. Contractor shall coordinate all of the work in this section with all of the trades covered in other sections of the specification to provide a complete and operable system. All Labor, materials, appliances, tools, equipment, facilities, transportation and services necessary for and incidental to performing all operations in connection with furnishing, delivery and installation of the work of this Section.

1.2 DESCRIPTION OF WORK

A. Furnish and install a complete system for the control of lighting and other equipment as indicated on the plans, detailed in the manufacturer submittal and as further defined herein. Contractor is solely responsible to verify quantity, installation locations and wiring requirements for this project. Specific manufacturer's catalog numbers, when listed in this section are for reference only. It is the responsibility of the contractor to verify with lighting control manufacturer all catalog information and specific product acceptability.

B. The system shall include but not be limited by the following list: Pre-wired, microprocessor controlled relay or dimming panels with latching relays controlled via a complete list of communication based accessories including digital switches, digital photocells, digital SmartBreaker panelboards, Digital Time Clock (DTC) and interface cards to dimming systems, building automation systems, thermostats, and other devices. The type of lighting control equipment and wiring specified in this section is covered by the description: Microprocessor Controlled Digital Lighting Control system with RS 485 Bus communications. Requirements are indicated elsewhere in these specifications for work including, but not limited to, raceways and electrical boxes and fittings required for installation of control equipment and wiring. They are not the work of this section.

C. SmartBreaker panel boards shall operate as if each breaker were a relay in the lighting control system. All references in this spec to the operation of relays shall apply equally to the solenoid operated thermal magnetic breakers within SmartBreaker panel boards.

1.3 SUBMITTALS

A. Section 16010 – Shop Drawing Requirements. Contractor may submit with Section "Lighting Control Devices" submittal for a complete lighting control system.

B. Shop Drawings: Submit dimensioned drawings of lighting control system and accessories including, but not necessarily limited to, relay panels, switches, DTC, photocells and other interfaces. Shop drawings shall indicate exact location of each device or a RFI to confirm

location. Plans are diagrammatical. Verify all lighting control material requirements from approved shop drawings. "Cut Sheet" submittal not acceptable.

C. Product Data: Submit for approval manufacturer's data on the specific lighting control system and components. Submittal shall be electronic format with hard copy available. To prevent departures from approved system operation, electronic files submitted shall be able to be directly downloaded to the specified system at manufacturer facility. Submit a complete bill of materials with part numbers, description and voltage specifications.

D. Manufacturer shall provide free software that can be used to specify the system, detail all programming and generate a single line in a format that can be dropped into industry standard CAD packages.

E. One Line Diagram: Submit a one-line diagram of the system configuration indicating the type, size and number of conductors between each component if it differs from that illustrated in the riser diagram in these specifications. Submittals that show typical riser diagrams are not acceptable.

1.4 QUALITY ASSURANCE

A. Products shall be manufactured by Lighting Control & Design, Los Angeles, CA, 800.345.4448 or approved equal. Such firms shall be regularly engaged in manufacturing of lighting control equipment and ancillary equipment, of types and capacities required, whose products have been in satisfactory use in similar service for not less than 5 years. Any product other than those listed in this specification must be pre-approved a minimum of two weeks before bid time. No exceptions.

B. Control wiring shall be in accordance with the California Electrical Code (CEC) requirements for Class 2 remote control systems, Article 725 and manufacturer specification.

C. A licensed electrician shall functionally test each system component after installation, verify proper operation and confirm that all relay and dimming panels and switch wiring conform to the wiring documentation. Contractor is required to phone LC&D a minimum of 7 days before turnover for system checkout. At time of LC&D contact, all components including phone line to modem must be installed, powered and operational.

D. Comply with CEC and all local and state codes as applicable to electrical wiring work.

E. Lighting control panels shall be UL 916 Listed. LCPs controlling emergency circuits shall be ETL listed to UL 924. Relay panels shall also be listed to comply with CSA C22.2#205 Emergency source circuits controlled in normal operation by a relay panel shall fully comply with NEC 700-9(b). Electrical contractor is responsible for verifying compliance.

F. The lighting control system shall be listed, approved and comply as required with all national, state and local energy codes to include but not limited to California Title 24 and ASHRAE 90.1-2004.

1.5 MAINTENANCE MATERIALS

A. Division 1 - Execution Requirements:

B. Provide spare relays per LCP, up to the maximum capacity of the LCP.

C. Provide CD version of manufacturers operating software to include graphical interface software.

D. Provide set of as-built and operating manuals.

1.6 SUBSTITUTIONS

A. Where substitute products are proposed, comply with provisions in Division 01 under "Product Substitution" Article.

1.7 SYSTEM DESCRIPTION

A. The lighting control system is a networked system that communicates via RS485. The system must be able to communicate with fully digital centralized relay panels, small distributed relay panels (Available with 0-10Volt dimming outputs), (also called Micro Panels), Fully distributed fixture level control by bus connected relays or dimmers, (also called X-Point) smart breaker panels, digital switches, photocells, various interfaces and operational software. The intent of the specification is to integrate all lighting control into one system. Distributed lighting control shall be provided using networked micro relay panels or bus connected fixture level control (X Point.). Lighting control system shall include all hardware and software. Software shall be resident within the lighting control system. System shall provide local access to all programming functions at the master LCP and remote access to all programming functions via dial up modem and through any standard computer workstation. Lighting control system shall have the capability to be remotely controlled via the internet or building wide Ethernet LAN. Desktop computers are not part of this section and will be provided by others.

B. System software shall provide real time status of each relay, each zone and each group.

C. Lighting control system shall be able to be monitored by and take commands from a remote PC. At any time, should the remote PC go off-line all system programming uploaded to the lighting control system shall continue to operate as intended. Systems requiring an on line PC or server for normal operation are not acceptable

D. All devices shall be pre-addressed at the factory. If required by the client the system may be specified without pre-addressing and simple software is to be provided to simplify addressing in place. This particularly applies to fixture level control where controls may be factory mounted on the fixture in advance to speed installation.

E. All programs, schedules, time of day, etc, shall be held in non-volatile memory for an indefinite time exceeding 10 years in the event of power failure. At restoration of power, lighting control system shall implement programs required by current time and date. Time of day shall be battery backed for at least 10 years.

F. System shall be capable of warning of an impending off sweep by flashing lights Off/On once or twice (programmable) by relay or by zone prior to the lights being turned off. The warning

interval times between the flash and the final lights off signal shall be definable for each zone. Additionally an audible signal shall be able to be programmed that gives a mild note on the first flash and a more insistent signal on the second one. Occupant shall be able to override any scheduled Off sweep using local wall switches within the occupied space. Occupant override time shall be locally and remotely programmable and not exceed 2-hours.

G. The system shall be capable of implementing On commands, Off commands, Raise (dimming) commands, Lower (dimming) commands for any relay, group or zone by means of digital wall switches, contact closure switches, time clock schedules including offsets from dusk and dawn by up to 10 hours, photocell, pc software or other devices connected to programmable inputs in a lighting control panel.

H. The lighting control system shall provide the ability to control each relay and each relay group per this specifications requirement. All programming and scheduling shall be able to be done locally at the master LCP and remotely via dial up modem or via the Internet. Remote connection to the lighting control system shall provide real time control and real time feedback.

I. Micro relay panels shall be capable of taking inputs from contact closure switches and outputting up to 8 independent 0v to 10v dimming signals. All micro relay panels and all devices connected to micro relay panels (switches, photocells and occupancy sensors, etc) shall be wired per lighting control manufacturers instructions.

J. X Point relay or dimming modules shall be fed from an X Point router that sits on the GR 2400 Bus in the manner of a relay panel. Individual modules are fed from this panel on a separate bus. Each router may feed two strings of up to 64 modules on a 2000ft string. Each Module may be a single relay, a dual relay or a dimming (0-10Volt) module. Relays in the modules are to be capable of being separately controlled in the same manner as an individual relay or dimmer in a relay or dimmer panel. Additionally multiple relays may be collected together to act together as a single multi-pole load or dimmer for ease of programming. Graphical software shall be available that does these assignments and reassignments in a straightforward and logical manner. Relays shall have the same specifications as laid out in 2.1.3. Modules with reduced current ratings may be supplied with Quick Connect connectors for more rapid installation.

PART 2 - PRODUCTS

2.1 MATERIAL AND COMPONENTS

A. Relay Panels:

1. All LCP’s shall be in NEMA 1 rated enclosure with screw cover or hinged Locking door. Other NEMA rated types optional.
2. A barrier shall separate the high voltage and low voltage compartments of the panel and separate 120v and 277v.
3. LCP input power shall be capable of accepting 120v or 277v without rewiring.
4. Control electronics in the low voltage section shall be capable of driving 2 to 48 relays, control any individual or group of relays, provide individual relay overrides, provide a master override for each panel, store all programming in non-volatile memory, after power is restored return system to the correct state for time of day, provide

programmable dual blink warn timers for each relay or zone of relays, and be able to control Normally Open Latching (NOL) or Normally Closed Latching (NCL) relays.

5. Lighting control system shall be digital and consist of a Master LCP, Remote LCPs, Micro LCPs with up to 8 individual relays, X Point Router and associated relays or dimmers emulating standard or Micro LCPs, digital switches, digital interface cards and if required, SmartBreaker panelboards. All system components shall connect and be controlled via Category 5, 4 twisted pair cable with RJ45 connectors, providing real time two-way communication with each system component. All Micro LCP's shall provide multiple inputs for photocells and occupancy sensors. Analog systems are not acceptable.

B. Micro Relay Panels

1. Micro relay panels shall have from 2 to 8 relays and shall control all lighting in the designated area indicated on the plans and be part of the lighting control network. Each micro relay panel shall provide minimum 300ma at 12/24vdc for powering occupancy sensors. Micro relay panels that require a separate occupancy sensor power pack are not acceptable.
2. Micro relay panel shall provide a minimum of 4-programmable photocell inputs, a minimum of 8-programmable occupancy sensor contact closure inputs. This requirement is to insure integration of entire lighting system into one networked, lighting control system.
3. Micro relay panels shall be capable of outputting a minimum of 4 and up to 8 independent 0v to 10v dimming signals, one independent dimming signal per relay for each of 8 relays. In order to maximize daylight harvesting and minimize disruption to occupants, each dimming output shall provide adjustment for baseline, start point, mid point, end point, trim, fade up rate, fade down rate, time delay and enable/disable masking. All photocell settings must be remotely accessible. Systems providing On, Off with Time Delay only, and system that do not provide remote access are not acceptable.
4. MicroPanels shall have built in capability to take commands from a fully compatible wireless switch. Wireless switch shall contain no battery; have 32-bit unique ID and a minimum 90-foot range line of sight.

C. Standard Output Relays

1. UL Listed 30 Amp @ 277VAC Ballast and HID and 20 Amp Tungsten at 120 Vac.
2. Relays shall be individually replaceable. Relay terminal blocks shall be capable of accepting two (2) #8AWG wires on both the line and the load side. Systems that do not allow for individual relay replacement or additions are not acceptable. Relays to be rated for 250,000 operations minimum at a full 30 lighting load. Standard relay shall default to closed at normal power loss, Normally Closed Latching (NCL).
3. Optional relay types available shall include: Normally Open Latching (NOL) relay rated for 250,000 operations, a 600v 2-pole NO and NC and a Single Pole, Double Throw (SPDT) relay.

D. Low Voltage Switches

1. All switches shall be digital and communicate via RS 485. Contact closure style switches, except as specified for connection to the micro relay panel programmable contact closure inputs, shall not be acceptable. The programming for a digital switch shall reside in the switch itself, via double EPROM memory. Any digital switch button function shall be

able to be changed locally (at the DTC or a PC) or remotely, via modem, Internet or Ethernet.

2. Digital low voltage switch shall be a device that sits on the lighting control system bus. Digital switch shall connect to the system bus using the same cable and connection method required for relay panels. Each button shall be capable of being programmed for On only, Off only, Mix (Some on some off), On/Off (toggle), Raise (Dim up) and Lower (Dim down). Further each button shall be able to be enabled or disabled over the bus. An audible alarm shall be available on all switches that can be programmed to beep on button push or with warning light blinks.
3. Keyed switches shall be similarly programmable and connect to the lighting control system bus.

E. Wireless Switches-System shall have the capability to accept inputs from 32-bit unique ID wireless switches. Wireless switches shall have no battery and be capable of On, Off, Raise and Lower commands. Wireless switches shall have a minimum 90 foot line of sight range.

F. DTC - Digital Electronic Time Clock

1. A Digital Time Clock (DTC) shall control and program the entire lighting control system and supply all time functions and accept modem (RS232) inputs.
2. DTC shall be capable of up to 32 schedules. Each schedule shall consist of one set of On and Off times per day for each day of the week and for each of two holiday lists. The schedules shall apply to any individual relay or group of relays.
3. The DTC shall be capable of controlling digital devices at up to 127 addresses on a single bus and capable of interfacing digitally with other buses using manufacturer supplied interface cards.
4. The DTC shall accept control locally using built in button prompts and use of an 8 line 21-space display or from a computer or modem via an on-board RS 232 port. All commands shall be in plain English. The DTC shall be run from non-volatile memory so that all system programming is retained indefinitely and time of day is battery backed for up to 10 years.
5. Unity™ lighting control software shall provide via local or remote PC a visual representation of each device on the bus, show real time status and the ability to change the status of any individual device, relay or zone. System shall be capable of running optional Unity GX lighting control software. Unity GX shall provide for importing vector based graphics and a simple interface that allows users or a factory programmer to overlay color “controls” that are associated with relays or collections of relays. Clicking on the overlays changes the color and the status of the relays for visual display of large systems.
6. System shall come with a pre-Installed modem that allows for remote programming from any location using a PC and free remote control software.
7. DTC shall provide system wide timed overrides. Any relay, group or zone that is overridden ON, before or after hours, shall automatically be swept OFF by the DTC a maximum of 2 hours later.

G. Photocell: Photocells to be mounted in location as required for maximum system efficiency operation. Photocells used for exterior lights shall provide multiple trip points from (1) roof mounted unit. All trip points shall be able to be changed remotely via Internet or dial up modem. Photocells requiring manual trip point adjustment are not acceptable. Photocell used

for interior lighting control shall have multiple settings such as start-point, mid-point, off-point, fade-up, fade-down, etc. All settings shall be remotely accessible and adjustable. Systems providing local adjustment only are not acceptable. Photocells to be certified to comply with the current energy code covering this project at time of submittal of plans for building permit.

H. Interfaces: For future expansion capability, systems are to have available all of the following interfaces. Verify and install only those interfaces indicated on the plans.

1. A dry contact input interface card that provides 14 programmable dry contact closure inputs. Use shielded cable to connect input devices to interface card on runs over 200ft.
2. Uplink Interface card that allows a single bus to be part of a greater system connected together by a Back Bone Bus. The back Bone bus requires a server for the Modem and Ethernet connections to such a large system.
3. An interface card (T-LINK) that allows the DTC to control up to 32 digital XCI brand thermostats. Programming of thermostats is to be capable of being done locally (at the DTC) or remotely, via modem, Internet or Ethernet.
4. When Unity GX software is specified full graphic pages shall be designed to the owner's specifications. Owner is to provide to manufacturer all necessary files and criteria.
5. Direct digital interface to SmartBreaker panelboards. Relay panel and SmartBreaker panelboard circuits shall appear on the system software as similar, yet distinct, items and maintain all functions and features of the system software.
6. Direct digital interface to building automation systems using DDC protocols such as BACnet, Metasys (N2) and ModBus that accept on/off commands, time schedules and report status of all relays in all panels in real time. Interface cards shall "self populate" each individual relay and each group to the BAS. All BAS system programming required shall be the responsibility of the BAS system provider.

PART 3 - EXECUTION

3.1 EQUIPMENT INSTALLATION

A. Mount relay control cabinets adjacent to respective lighting panel board. Cabinet shall be surface or flush mount, per plans. Wiring between relay control cabinets and panelboards shall be in accordance with local codes and acceptable industry standards. Under no circumstances will any extra payment be authorized for the Contractor due to Contractor's lack of knowledge or understanding of any and all prevailing codes or specified manufacturer's installation requirements. Neatly lace and rack wiring in cabinets. During construction process, protect all interior components of each relay panel and each digital switch from dust and debris. Any damage done to electronic components due to failure to protect them shall be the sole responsibility of the installing contractor.

B. Switches: Provide outlet boxes, single or multi-gang, as shown on the plans for the low voltage digital switches. Mount switches as per plans. Supply faceplates per plans and specifications. EC is specifically responsible to supply and install the required low voltage cable, Category 5, 4 twisted pair, with RJ45 connectors (commonly referred to as Cat 5 patch cable) between all switches and panels. Field-test all Cat 5 patch cable with a recognized cable tester. All low voltage wire to be run in conduit, per local codes.

C. Manufacturer to provide on all systems of more than 2 panels a crimping kit with sufficient approved EZ Brand RJ 45 connectors to populate the whole system. A simple manual that shows all the pitfalls of crimping RJ 45s and how to do it right must be both provided and read by the installing contractor.

D. Wiring:

1. Do not mix low voltage and high voltage conductors in the same conduit. No exceptions.
2. Ensure low voltage conduits or control wires do not run parallel to current carrying conduits.
3. Place manufacturer supplied "terminators" at each end of the system bus per manufacturer's instructions.
4. Use Category 5 patch cable for all system low voltage connections. Additional conductors may be required to compensate for voltage drop with specific system designs. Contact LC&D or refer to the GR2400 manual for further information. Use shielded cable for dry contact inputs on runs over 200ft.
5. Do not exceed 4000ft-wire length for the system bus.
6. All items on the bus shall be connected in sequence (daisy chained). Star and spur topologies are not acceptable.
7. Make all necessary wiring connections to external devices and equipment, to include photocell. EC to wire per manufacturer instructions.

3.2 INSTALLATION AND SET-UP

A. Verify that conduit for line voltage wires enters panel in line voltage areas and conduit for low-voltage control wires enters panel in low-voltage areas. Refer to manufacturer's plans and approved shop drawings for location of line and low-voltage areas. This is especially applicable in jobs where back boxes are shipped in advance. It is the responsibility of the contractor to verify with lighting control manufacturer all catalog information and specific product acceptability.

B. For approved contact closure switches, use #18 AWG stranded conductors. For all other digital switches, provide wiring required by system manufacturer.

C. For classroom digital switches provide wiring required by system manufacturer

D. Test all low voltage cable for integrity and proper operation prior to turn over. Verify with system manufacturer all wiring and testing requirements.

E. Before Substantial Completion, arrange and provide a one-day Owner instruction period to designated Owner personnel. Set-up, commissioning of the lighting control system and Owner instruction includes:

1. Confirmation of entire system operation and communication to each device.
2. Confirmation of operation of individual relays, switches, occupancy sensors and daylight sensors
3. Confirmation of system Programming, photocell settings, override settings, etc.
4. Provide training to cover installation, maintenance, troubleshooting, programming, and repair and operation of the lighting control system.

F. Panels shall be located so that they are readily accessible and not exposed to physical damage.

G. Panel locations shall be furnished with sufficient working space around panels to comply with the National Electric Electrical Code.

H. Panels shall be securely fastened to the mounting surface by at least 4 points.

I. Unused openings in the cabinet shall be effectively closed.

J. Cabinets shall be grounded as specified in the National Electrical Code.

K. Lugs shall be suitable and listed for installation with the conductor being connected.

L. Conductor lengths shall be maintained to a minimum within the wiring gutter space. Conductors shall be long enough to reach the terminal location in a manner that avoids strain on the connecting lugs.

M. Maintain the required bending radius of conductors inside cabinets.

N. Clean cabinets of foreign material such as cement, plaster and paint.

O. Distribute and arrange conductors neatly in the wiring gutters.

P. Follow the manufacturer's torque values to tighten lugs.

Q. Before energizing a panel, the following steps shall be taken:

1. Retighten relay connections to the manufacturer's torque specifications. Verify that required connections have been furnished.
2. Remove shipping blocks from component devices and the panel interior.
3. Remove debris from panel interior.

R. Follow manufacturer’s instructions for installation and all low voltage wiring.

S. Service and Operation Manuals:

1. Submit operation and service manuals. Complete manuals shall be bound in flexible binders and data shall be typewritten or drafted.
2. Manuals shall include instructions necessary for proper operation and servicing of system and shall include complete wiring circuit diagrams of system, wiring destination schedules for circuits and replacement part numbers. Manuals shall include as-built cable Project site plot plans and floor plans indicating cables, both underground and in each building with conduit, and as-built color coding used on cables. Programming forms of systems shall be submitted with complete information.
3. Comply with energy code lighting control system “Acceptance Requirements”. Acceptance tests are used to verify that lighting controls were installed and calibrated correctly. These tests may require that a responsible party certify that controls are installed and calibrated properly. This is the installing contractor’s responsibility. Verify requirements with building authority.

3.3 DOCUMENTATION

A. Each relay shall have an identification label indicating the originating branch circuit number and panelboard name as indicated on the drawings. Each line side branch circuit conductor shall have an identification tag indicating the branch circuit number.

B. Provide a point-to-point wiring diagram for the entire lighting control system. Diagram must indicate exact mounting location of each system device. This accurate "as built" shall indicate the loads controlled by each relay and the identification number for that relay, placement of switches and location of photocell. Original to be given to owner, copies placed inside the door of each LCP.

3.4 SERVICE AND SUPPORT

A. Telephone factory support shall be available at no additional cost to the Owner both during and after the warranty period. Factory to pre-program the lighting control system per plans and approved submittal, to the extent data is available. The specified manufacturer, at no added cost, shall provide additional remote programming via modem as required by the Owner for as long as a phone line is available for the life of the system. Upon request manufacturer to provide remote dial up software at no added cost to system owner. No exceptions.

B. Provide a factory technician for on-site training of the owners' representatives and maintenance personnel.

3.5 CLEANING

A. Division 1 - Execution Requirements: Final cleaning.

B. Clean photocell lens as recommended by manufacturer.

C. Clean all switch faceplates.

END OF SECTION 26 0926

SECTION 26 1200 - MEDIUM-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following types of transformers with medium-voltage primaries:

1. Pad-mounted, liquid-filled transformers.

B. Related Sections include the following:

1. Division 26 Section "Seismic Restraint For Electrical Systems" for requirements necessary for compliance with seismic criteria.

1.3 DEFINITIONS

A. NETA ATS: Acceptance Testing Specification.

1.4 ACTION SUBMITTALS

A. Product Data: Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, location of each field connection, and performance for each type and size of transformer indicated.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For transformer and accessories.

1.6 QUALITY ASSURANCE

A. Product Options: Drawings indicate size, profiles, and dimensional requirements of transformers and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in the California Electrical Code (CEC), by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with IEEE C2.

D. Comply with ANSI C57.12.10, ANSI C57.12.28, IEEE C57.12.70, and IEEE C57.12.80.

E. Comply with the CEC.

1.7 COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

B. Coordinate installation of louvers, doors, spill retention areas, and sumps. Coordinate installation so no piping or conduits are installed in space allocated for medium-voltage transformers except those directly associated with transformers.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Asea Brown Boveri (ABB)
2. Cooper Industries; Cooper Power Systems Division.
3. Cutler-Hammer.
4. GE Electrical Distribution & Control.
5. Siemens Energy & Automation, Inc.
6. Square D; Schneider Electric.
7. Or equal.

2.2 PAD-MOUNTED, LIQUID-FILLED TRANSFORMERS

A. Description: ANSI C57.12.13, ANSI C57.12.26, IEEE C57.12.00, pad-mounted, 2-winding transformers. Stainless steel tank base.

B. Insulating Liquid: Envirotemp FR3 less flammable fluid, dielectric, and UL listed as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested according to ASTM D 1816. Liquid shall be biodegradable and nontoxic.

C. The transformer(s) shall be rated as shown on drawings. Primary voltage 12.47 kV, delta . Secondary voltage 480V, 3-phase, 3-wire, 60 Hz.

D. Basic Impulse Level: 95kV.

E. Full-Capacity Voltage Taps: Four 2.5 percent taps, 2 above and 2 below rated high voltage; with externally operable tap changer for de-energized use and with position indicator and padlock hasp.

F. High-Voltage Switch: 200 A, make-and-latch rating of 10-kA RMS, symmetrical, arranged for radial feed with 3-phase, 2-position, gang-operated, load-break switch that is oil immersed in transformer tank with hook-stick operating handle in primary compartment.

G. Primary Fuses: 150-kV fuse assembly with fuses complying with IEEE C37.47. Rating of current-limiting fuses shall be 50-kA RMS at 15kV system.
1. Internal liquid-immersed cartridge fuses.

H. Surge Arresters: Distribution class, one for each primary phase; complying with IEEE C62.11 and NEMA LA 1; support from tank wall within high-voltage compartment. Transformers shall have three arresters for radial-feed circuits.

I. High-Voltage Terminations and Equipment: Dead front with universal-type bushing wells for dead-front bushing-well inserts, complying with IEEE 386 and including the following:

1. Bushing-Well Inserts: One for each high-voltage bushing well.
2. Surge Arresters: Dead-front, elbow-type, metal-oxide-varistor units.
3. Parking Stands: One for each high-voltage bushing well.
4. Portable Insulated Bushings: Arranged for parking insulated, high-voltage, load-break cable terminators; one for each primary feeder conductor terminating at transformer.

J. Accessories:

1. Drain Valve: 1 inch, with sampling device.
2. Dial-type thermometer.
3. Liquid-level gage.
4. Pressure-vacuum gage.
5. Pressure Relief Device: Self-sealing with an indicator.
6. Mounting provisions for low-voltage current transformers.
7. Mounting provisions for low-voltage potential transformers.

2.3 IDENTIFICATION DEVICES

A. Nameplates: Engraved, laminated-plastic or metal nameplate for each transformer. Nameplates and label products are specified in Division 26 Section "Identification for Electrical Systems."

2.4 SOURCE QUALITY CONTROL

A. Perform electrical acceptance testing prior to energization.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions for compliance with requirements for medium-voltage transformers.

B. Examine roughing-in of conduits and grounding systems to verify the following:

1. Wiring entries comply with layout requirements.
2. Entries are within conduit-entry tolerances specified by manufacturer and no feeders will have to cross section barriers to reach load or line lugs.

C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.

D. Verify that ground connections are in place and that requirements in Division 26 Section "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at location of transformer.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with mounting and anchoring per manufacturer’s or structural engineer of record recommendations.

B. Equipment Mounting: Install transformers on concrete bases complying with Division 26 Section "Common Work Results for Electrical."

C. Maintain minimum clearances and workspace at equipment according to manufacturer's written instructions and the CEC.

3.3 CONNECTIONS

A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

B. Test Reports: Prepare written reports to record the following:

1. Test results that comply with requirements.

END OF SECTION 26 1200

SECTION 26 1314 - MEDIUM VOLTAGE 4-WAY SELECTOR SWITCH

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes 15kV, 4-way, pad-mounted air switch for outdoor application.

B. Related sections include the following:

1. Division 26 Section “Grounding and Bonding” for requirements of grounding of equipment.
2. Division 26 Section “Seismic Controls for Electrical Work” for seismic anchorage and bracing at the factory and in the field.
3. Division 26 Section “Medium Voltage Cable” for requirements of terminating cables for incoming and outgoing cables.
4. Division 26 Section “Electrical Identification” for requirements of identifications of switch and cables.

1.3 STANDARDS

A. Institute of Electrical and Electronic Engineers, Inc (IEEE) Publication:

1. 386-85 Separable Insulated Connectors for Power Distribution Systems above 600 V

1.4 ACTION SUBMITTALS

A. Manufacturer’s Data: Provide for the following items:

1. Switch assembly
2. Enclosure.

B. Shop Drawings:

1. Equipment dimensional data and line-up drawings, including front, top and side views and section through assembly showing positions and locations of incoming cables, circuits, landing lugs, junction bars and bar supports.

1.5 INFORMATIONAL SUBMITTALS

A. Operation and Maintenance Manuals: Provide instruction manuals during the installation.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, protect, and handle Products to site.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Federal Pacific

B. Cooper/Eaton

C. S&C Electric Company

D. Approved equivalent.

2.2 MATERIALS AND EQUIPMENT

A. All materials and equipment shall be new and of high quality to give long life and reliable operation. All equipment shall be modern in design and shall not have been in prior service except as required by factory tests.

2.3 AIR-INSULATED SWITCHES

A. General: The switch shall have the following ratings:

1. Maximum circuit voltage to ground – 15.kV.
2. Impulse Level (BIL) – 95kV.
3. 1 Minute AC Withstand – 36.4 kV.
4. Continuous Current and Load Interrupting – 600 Amps.
5. Symmetric Interrupting Rating – 25 kA.
6. Asymmetric Interrupting Rating 40 kA.

B. Enclosure

1. The enclosure shall be weatherproof and suitable for pad mount application. Enclosure shall painted with green finish.

PART 3 - EXECUTION

3.1 INSTALLATION:

A. Installation shall conform to requirements of CEC and to manufacturer’s instructions.

B. Prior to submitting shop drawings and releasing order for equipment, Contractor shall verify dimensions of the available space where equipment will be installed.

C. Anchor according to requirements shown on Structural drawings.

3.2 CABLE CONNECTIONS:

A. Terminations of insulated power cables shall be made using materials and methods specified in specifications for medium voltage cables.

3.3 FIELD QUALITY CONTROL:

A. Test and inspect according to Division 26 Section “Acceptance Testing for Electrical Systems.”

3.4 WARRANTY

A. The complete assembly shall have a minimum two (2) years warranty. Warranty shall include labor and parts required to repair or replace the switch on site.

END OF SECTION 26 1314

SECTION 26 2200 – LOW-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following types of dry-type transformers rated 600 V and less, with capacities up to 1000 kVA:

1. Distribution transformers.
2. Control and signal transformers.

1.2 SUBMITTALS

A. Product Data Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, and performance for each type and size of transformer indicated.

B. Shop Drawings: Wiring and connection diagrams.

1.3 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC (NFPA 70), Article 100, by a testing agency acceptable to the University, and marked for intended use.

B. Comply with IEEE C 57.12.91.

C. Energy-Efficient Transformers Rated 15 kVA and Larger: Certified as meeting NEMA TP 1, Class 1 efficiency levels when tested according to NEMA TP 2.

1.5 COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

B. Coordinate installation of wall-mounting and structure-hanging supports.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Acme Electric Corporation; Power Distribution Products Division.
2. Challenger Electrical Equipment Corp.; a division of Eaton Corp.
3. Computer Power Inc.
4. Controlled Power Co.
5. Cutler-Hammer.
6. Federal Pacific Transformer Company; Division of Electro-Mechanical Corp.
7. GE Electrical Distribution & Control.
8. Hammond Co.; Matra Electric, Inc.
9. Jefferson Electric, Inc.
10. Micron Industries Corp.
11. Siemens Energy & Automation, Inc.
12. Sola/Hevi-Duty Electric.
13. Square D/Groupe Schneider NA.
14. MGM.
15. Or equal.

B. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 MATERIALS

A. Description: Factory-assembled and -tested, air-cooled units for 60-Hz service.

B. Cores: Grain-oriented, non-aging silicon steel.

C. Coils: Continuous windings without splices, except for taps.

1. Internal Coil Connections: Brazed or pressure type.
2. Coil Material: Copper.
3. Coil Conductors: Continuous windings with terminations brazed or welded.

2.3 DISTRIBUTION TRANSFORMERS

A. Comply with NEMA ST 20, and list and label as complying with UL 1561.

B. Provide transformers that are internally braced to withstand seismic forces specified in Division 26 Section "Vibration and Seismic Controls for Electrical Work."

C. Cores: One leg per phase.

D. Winding Taps, Transformers Less than 15 KVA: Two 5 percent below rated voltage, full capacity taps on primary winding.

E. Winding Taps, Transformers 15 KVA and Larger: ANSI/NEMA ST 20.

F. Basic Impulse Level: 10 KV.

G. Indoor Transformer Enclosure: Ventilated, NEMA 250, Type 2.

H. Outdoor Transformer Enclosure: Totally enclosed, non-ventilated, with lifting eyes or brackets, NEMA 250, Type 3R.

1. Core and coil shall be encapsulated within resin compound, sealing out moisture and air.

I. Indoor Transformer Enclosure Finish: Comply with NEMA 250 for "Indoor Corrosion Protection."

1. Finish Color: ANSI 61 gray.

J. Outdoor Transformer Enclosure Finish: Comply with NEMA 250 for " Outdoor Corrosion Protection."

1. Finish Color: ANSI 61 gray.

K. Insulation Class: 220 deg C, UL-component-recognized insulation system with a maximum of 115 deg C rise above 40 deg C ambient temperature.

L. Taps for Transformers Smaller than 15 kVA: Two 5 percent tap above normal full capacity on primary windings.

M. Taps for Transformers 15 kVA and Larger: Two 2.5 percent taps above and two 2.5 percent taps below normal full capacity.

N. K-Factor Rating: Transformers indicated to be K-factor rated shall comply with UL 1561 requirements for non-sinusoidal load current-handling capability to the degree defined by designated K-factor.

1. Unit shall not overheat when carrying full-load current with harmonic distortion corresponding to designated K-factor.

2. Indicate value of K-factor on transformer nameplate.

O. Electrostatic Shielding: Each winding shall have an independent, single, full-width copper electrostatic shield arranged to minimize interwinding capacitance.

1. Arrange coil leads and terminal strips to minimize capacitive coupling between input and output terminals.

2. Include special terminal for grounding the shield.
3. Shield Effectiveness:

    a. Capacitance between Primary and Secondary Windings: Not to exceed 33 picofarads over a frequency range of 20 Hz to 1 MHz.
    b. Common-Mode Noise Attenuation: Minus 120 dBA minimum at 0.5 to 1.5 kHz; minus 65 dBA minimum at 1.5 to 100 kHz.
    c. Normal-Mode Noise Attenuation: Minus 52 dBA minimum at 1.5 to 10 kHz.

P. Wall Brackets: Manufacturer's standard brackets.

2.5 CONTROL AND SIGNAL TRANSFORMERS

A. Description: Self-cooled, two-winding dry type, rated for continuous duty, complying with NEMA ST 1, and listed and labeled as complying with UL 506.

B. Ratings: Continuous duty. If rating is not indicated, provide at least 50 percent spare capacity above connected peak load.

2.6 SOURCE QUALITY CONTROL

A. Test and inspect transformers according to IEEE C57.12.91.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for each transformer.

B. Verify that field measurements are as needed to maintain working clearances required by CEC (NFPA 70) and manufacturer's written instructions.

C. Examine walls and floors for suitable mounting conditions where transformers will be installed.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

E. Nameplate: Include transformer connection data and overload capacity based on rated allowable temperature rise.

3.2 INSTALLATION

A. Install wall-mounting transformers level and plumb with wall brackets fabricated by transformer manufacturer.

1. Brace wall-mounting transformers as specified in Division 26 Section "Vibration and Seismic Controls for Electrical Work."

B. Install floor-mounting transformers level on concrete bases. Construct concrete bases of dimensions not less than 4 inches larger in both directions than supported unit and 4 inches high.

1. Anchor transformers to concrete bases according to manufacturer's written instructions, seismic codes at Project, and requirements in Division 26 Section "Vibration and Seismic Controls for Electrical Work."
2. Isolate core and coil from enclosure using vibration-absorbing mounts.

3.3 CONNECTIONS

A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Division 26 Section "Low Voltage Electrical Power Conductors and Cables."

C. Tighten electrical connectors and terminals according to manufacturer's published torque tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

D. Ground core and coil assembly to enclosure by means of a visible flexible copper grounding strap.

END OF SECTION 26 2200

SECTION 26 2413 - SWITCHBOARDS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes service and distribution switchboards rated 600 V and less.

B. Related Sections include the following:

1. Division 26 Section "Fuses."
2. Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
3. Division 26 Section "Electrical Power Monitoring and Control."

1.2 DEFINITIONS

A. EMI: Electromagnetic interference.

B. RFI: Radio-frequency interference.

C. RMS: Root mean square.

D. TVSS: Transient voltage surge suppressor.

1.3 SUBMITTALS

A. Product Data: For each type of switchboard, overcurrent protective device, TVSS device, ground-fault protector, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.

B. Shop Drawings: For each switchboard and related equipment.

1. Dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings. Include the following:

a. Enclosure types and details for types other than NEMA 250, Type 1.
b. Bus configuration, current, and voltage ratings.
c. Short-circuit current rating of switchboards and overcurrent protective devices.
d. Descriptive documentation of optional barriers specified for electrical insulation and isolation.
e. Metering provisions for BMS monitoring.
f. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

2. Wiring Diagrams: Diagram power, signal, and control wiring and differentiate between manufacturer-installed and field-installed wiring.

1.4 QUALITY ASSURANCE

A. Testing Agency Qualifications: Testing agency that is a member company of the InterNational Electrical Testing Association and that is acceptable to authorities having jurisdiction.

1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC (NFPA 70), Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with NEMA PB 2.

D. Comply with CEC (NFPA 70).

E. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchboards, including clearances between switchboards, and adjacent surfaces and other items. Comply with indicated maximum dimensions.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver in sections of lengths that can be moved past obstructions in delivery path.

B. Store indoors in clean dry space with uniform temperature to prevent condensation. Protect from exposure to dirt, fumes, water, corrosive substances, and physical damage.

1.6 PROJECT CONDITIONS

A. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving switchboards into place.

B. Existing Utilities: Do not interrupt utilities serving facilities occupied by the University or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:

1. Notify University Representative not less than fourteen days in advance of proposed utility interruptions. Identify extent and duration of utility interruptions.
2. Indicate method of providing temporary utilities.
3. Proceed with utility interruptions only after receiving University Representative written authorizations.

C. Environmental Limitations: Rate equipment for continuous operation under the following, unless otherwise indicated:

1. Ambient Temperature: Not exceeding 104 deg F.
2. Altitude: Not exceeding 6600 feet.

D. Service Conditions: NEMA PB2, usual service conditions, as follows:

1. Altitude not exceeding 6600 feet.
2. Ambient temperatures within limits specified.

1.7 COORDINATION

A. Coordinate layout and installation of switchboards and components with other construction, including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03 Section "Cast-in-Place Concrete."

PART 2 - PRODUCT

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Eaton Corp.; Cutler-Hammer Products.
2. General Electric Co.; Electrical Distribution & Control Div.
3. Siemens Energy & Automation, Inc.
4. Square D Co.
5. Or equal.

B. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 MANUFACTURED UNITS

A. Front-Connected, Front-Accessible Switchboard: Fixed, individually mounted main device, panel-mounted branches, and sections rear aligned.

1. Main Device on Switchboard MSB: Draw out mounted.
2. Branch Devices: Fixed, group- mounted.

B. Nominal System Voltage: 480Y/277 V.

C. Main-Bus Continuous: 4000 or as indicated on the drawings.

2.3 FABRICATION AND FEATURES

A. Enclosure: Steel: NEMA 250 type 1, NEMA 250 type 3

B. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's standard light gray enamel finish over a rust-inhibiting primer on treated metal surface. Coat internal surfaces with corrosion resistant paint, or plate with cadmium or zinc.

C. Barriers: Between adjacent switchboard sections.

E. Utility Metering Compartment: Fabricated compartment and section complying with University's requirements. If separate vertical section is required for utility metering, match and align with basic switchboard.

F. Bus Transition and Incoming Pull Sections: Matched and aligned with basic switchboard.

G. Buses and Connections: Three phase, four wire, unless otherwise indicated. Include the following features:

1. Load Terminals: Insulated, rigidly braced, silver-plated, copper runback bus extensions equipped with pressure connectors for outgoing circuit conductors. Provide load terminals for future circuit-breaker positions at full ampere rating of circuit-breaker position.
2. Ground Bus: 1/4-by-2-inch minimum size, drawn-temper copper of 98 percent conductivity, equipped with pressure connectors for feeder and branch-circuit ground conductors. For busway feeders, extend insulated equipment grounding cable to busway ground connection and support cable at intervals in vertical run.
3. Contact Surfaces of Buses: Silver plated.
4. Main Phase Buses, Neutral Buses, and Equipment Ground Buses: Uniform capacity for entire length of switchboard's main and distribution sections. Provide for future extensions from both ends.
5. Neutral Buses: 100 percent of the ampacity of the phase buses, unless otherwise indicated, equipped with pressure connectors for outgoing circuit neutral cables. Bus extensions for busway feeder neutral bus is braced.

2.4 TVSS DEVICES

A. IEEE C62.41, integrally mounted, plug-in style, solid-state, parallel-connected, sine-wave tracking suppression and filtering modules Minimum single-impulse current rating shall be as follows:

1. Line to Neutral: 100,000 A.
2. Line to Ground: 100,000 A.
3. Neutral to Ground: 50,000 A.

B. Protection modes shall be as follows:

1. Line to neutral.
2. Line to ground.
3. Neutral to ground.

C. EMI/RFI Noise Attenuation Using 50-ohm Insertion Loss Test: 55 dB at 100 kHz.

D. Category C combination wave clamping voltage shall not exceed 600 V, line to neutral and line to ground on 120/208 V systems and 1000 V, line to neutral and line to ground on 277/480 V systems.

E. UL 1449 clamping levels shall not exceed 400 V, line to neutral and line to ground on 120/208 V systems and 800 V, line to neutral and line to ground on 277/480 V systems.

F. Withstand Capabilities: 3000 Category C surges with less than 5 percent change in clamping H. Accessories shall include the following:I1. Form-C contacts, one normally open and one normally closed, for remote monitoring of system operation. Contacts to reverse position on failure of any surge diversion module.

G. Audible alarm activated on failure of any surge diversion module.

2.5 OVERCURRENT PROTECTIVE DEVICES

A. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.

B. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.

C. Electronic Trip Unit Circuit Breakers: RMS sensing; field-replaceable rating plug; with the following field-adjustable settings:

1. Instantaneous trip.
2. Long- and short-time pickup levels.
3. Long- and short-time time adjustments.
4. Ground-fault pickup level, time delay, and I^2t response.

D. Molded-Case Circuit-Breaker Features and Accessories: Standard frame sizes, trip ratings, and number of poles.

E. Lugs: Mechanical style, suitable for number, size, trip ratings, and material of conductors.

F. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HACR for heating, air-conditioning, and refrigerating equipment.

G. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 75 percent of rated voltage.

H. Enclosed, Insulated-Case Circuit Breaker: Fully rated, encased-power circuit breaker with interrupting capacity rating to meet available fault current.

1. Fixed circuit-breaker mounting Copper lugs.
2. Two-step, stored-energy closing.
3. Microprocessor-based trip units with interchangeable rating plug, LED trip indicators, and the following field-adjustable settings:

    a. Instantaneous trip.
    b. Long- and short-time pickup levels.
    c. Long- and short-time time adjustments with I^2t response.
    d. Ground-fault pickup level, time delay, and I^2t response.

4. Remote trip indication and control.
5. Communication Capability: Integral communication module with functions and features compatible with power monitoring and control system.
6. Control Voltage: 120- VAC.

I. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.

2.6 INSTRUMENTATION

A. Instrument Transformers: NEMA EI 21.1, IEEE C57.13, and the following:

1. Potential Transformers: Secondary voltage rating of 120 V and NEMA accuracy class of 0.3 with burdens of W, X, and Y.
2. Current Transformers: Ratios shall be as indicated with accuracy class and burden suitable for connected relays, meters, and instruments.
3. Control-Power Transformers: Dry type, mounted in separate compartments for units larger than 3 kV.
4. Current Transformers for Neutral and Ground-Fault Current Sensing: Connect secondaries to ground overcurrent relays to provide selective tripping of main and tie circuit breaker. Coordinate with feeder circuit-breaker ground-fault protection.

B. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four wire systems and with the following features:

1. Switch-selectable digital display of the following values with maximum accuracy tolerances as indicated:

a. Phase Currents, Each Phase: Plus or minus 1 percent.
b. Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.

2. Mounting: Display and control unit flush or semi-flush mounted in instrument compartment door.

2.7 CONTROL POWER

A. Control Circuits: 120 V, supplied through secondary disconnecting devices from control-power transformer.

B. Control-Power Fuses: Primary and secondary fuses for current-limiting and overload protection of transformer and fuses for protection of control circuits.

C. Control Wiring: Factory installed, with bundling, lacing, and protection included. Provide flexible conductors for No. 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.

PART 3 - EXECUTION

3.2 EXAMINATION

A. Examine elements and surfaces to receive switchboards for compliance with installation tolerances and other conditions affecting performance.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Install switchboards and accessories according to NEMA PB 2.1.

B. Support switchboards on concrete bases, 4-inch nominal thickness.

C. Comply with mounting and anchoring requirements specified in Division 26 Section "Vibration and Seismic Controls for Electrical Work."

D. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from switchboard units and components.

E. Operating Instructions: Provide operating instructions at close out in Operations and Maintenance manual.

3.4 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."

B. Switchboard Nameplates: Label each switchboard compartment with engraved metal or laminated-plastic nameplate.

3.5 CONNECTIONS

A. Install equipment grounding connections for switchboards with ground continuity to main electrical ground bus.

B. Tighten electrical connectors and terminals according to manufacturer's published torque tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

3.6 FIELD QUALITY CONTROL

A. Prepare for acceptance tests as follows:

1. Test insulation resistance for each switchboard bus, component, connecting supply, feeder, and control circuit.

B. Testing: After installing switchboards and after electrical circuitry has been energized, demonstrate product capability and compliance with requirements.

1. Procedures: Perform each visual and mechanical inspection and electrical test indicated in NETA ATS, Sections 7.1, 7.5, 7.6, 7.9, 7.10, 7.11, and 7.14 as appropriate. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

3.7 ADJUSTING

A. Set field-adjustable switches and circuit-breaker trip ranges.

3.8 CLEANING

A. On completion of installation, inspect interior and exterior of switchboards. Remove paint splatters and other spots. Vacuum dirt and debris; do not use compressed air to assist in cleaning. Repair exposed surfaces to match original finish.

END OF SECTION 26 2413

SECTION 26 2416 - PANELBOARDS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes load centers and panelboards, overcurrent protective devices, and associated auxiliary equipment rated 600 V and less for the following types:

1. Lighting and appliance branch-circuit panelboards.
2. Distribution panelboards.

B. Related Sections include the following:

1. Division 26 Section "Vibration and Seismic Controls for Electrical Work."
2. Division 26 Section "Electrical Power Monitoring and Control."

1.2 DEFINITIONS

A. EMI: Electromagnetic interference.

B. GFCI: Ground-fault circuit interrupter.

C. RFI: Radio-frequency interference.

D. RMS: Root mean square.

E. SPDT: Single pole, double throw.

F. TVSS: Transient voltage surge suppressor.

1.3 SUBMITTALS

A. Product Data: For each type of panelboard, overcurrent protective device, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.

B. Shop Drawings: For each panelboard and related equipment.

1. Dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings. Include the following:

a. Enclosure types and details for types other than NEMA 250, Type 1.
b. Bus configuration, current, and voltage ratings.

c. Short-circuit current rating of panelboards and overcurrent protective devices.
d. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

C. Maintenance Data: For panelboards and components to include in maintenance manuals specified in Division 01. In addition to requirements specified in Division 01 Section "Closeout Procedures," include the following:

1. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.

1.4 QUALITY ASSURANCE

A. Testing Agency Qualifications: Testing agency that is a member company of the InterNational Electrical Testing Association and that is acceptable to authorities having jurisdiction.

1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC (NFPA 70), Article 100, by a testing agency acceptable to the University, and marked for intended use.

C. Comply with NEMA PB 1.

D. Comply with CEC (NFPA 70).

1.5 COORDINATION

A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, and encumbrances to workspace clearance requirements.

1.6 EXTRA MATERIALS

A. Keys: Six spares of each type of panelboard cabinet lock.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Panelboards, Overcurrent Protective Devices, Controllers, Contactors, and Accessories:

a. Eaton Corp.; Cutler-Hammer Products.
b. General Electric Co.; Electrical Distribution & Control Div.
c. Siemens Energy & Automation, Inc.
d. Square D Co.
e. Or equal.

B. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 FABRICATION AND FEATURES

A. Enclosures: Flush- and surface-mounted cabinets. NEMA PB 1, Type 1, to meet environmental conditions at installed location.

1. Outdoor Locations: NEMA 250, Type 3R.
2. Kitchen Areas: NEMA 250, Type 4X, stainless steel.
3. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.
4. Hazardous Areas Indicated on Drawings: NEMA 250, Type 7C.

B. Hinged Front Cover: Entire front trim hinged to box and with standard door within hinged trim cover.

C. Finish: Manufacturer's standard enamel finish over corrosion-resistant treatment or primer coat.

D. Directory Card: Typed panel circuit schedule/index with transparent protective cover, mounted inside metal frame, inside panelboard door.

E. Bus: Hard-drawn copper, 98 percent conductivity.

F. Main and Neutral Lugs: Compression type suitable for use with conductor material.

G. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment ground conductors; bonded to box. When isolated grounds are required, provide ground bus insulated from box.

H. Future Devices: Mounting brackets, bus connections, and necessary appurtenances required for future installation of devices.

I. Isolated Equipment Ground Bus: Adequate for branch-circuit equipment ground conductors; insulated from box.

J. Extra-Capacity Neutral Bus: Neutral bus rated 200 percent of phase bus and UL listed as suitable for nonlinear loads.

2.3 PANELBOARD SHORT-CIRCUIT RATING

A. Fully rated to interrupt symmetrical short-circuit current available at terminals.

2.4 LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS

A. Branch Overcurrent Protective Devices: Bolt-on circuit breakers, replaceable without disturbing adjacent units.

B. Doors: Front mounted with concealed hinges; secured with flush latch with tumbler lock; keyed alike.

2.5 DISTRIBUTION PANELBOARDS

A. Main Overcurrent Protective Devices: Circuit breaker.

B. Branch overcurrent protective devices shall be one of the following:

1. For Circuit-Breaker Frame Sizes 125 A and Smaller: Bolt-on circuit breakers with Copper terminals.
2. For Circuit-Breaker Frame Sizes Larger Than 125 A: Bolt-on circuit breakers with Copper terminals; plug-in circuit breakers where individual positive-locking device requires mechanical release for removal.
3. Fused switches.

2.7 OVERCURRENT PROTECTIVE DEVICES

A. Molded-Case Circuit Breaker: NEMA AB 1, with interrupting capacity to meet available fault currents.

1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 225A and larger.
2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front mounted, field-adjustable trip setting.
3. Electronic Trip Unit Circuit Breakers: RMS sensing; field-replaceable rating plug; with the following field-adjustable settings:

    a. Instantaneous trip.
    b. Long- and short-time pickup levels.
    c. Long- and short-time time adjustments.
    d. Ground-fault pickup level, time delay, and I^2t response.

4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.

5. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiterstyle fuse listed for use with circuit breaker; trip activation on fuse opening or on opening of fuse compartment door.
6. GFCI Circuit Breakers: Single- and two-pole configurations with 5 -mA trip sensitivity.

B. Molded-Case Circuit-Breaker Features and Accessories. Standard frame sizes, trip ratings, and number of poles.

1. Lugs: Compression style Copper, suitable for number, size, trip ratings, and material of conductors.
2. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HACR for heating, air-conditioning, and refrigerating equipment.
3. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
4. Communication Capability: Circuit-breaker-mounted communication module with functions and features compatible with power monitoring and control system.
5. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 75 percent of rated voltage.
6. Under-voltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
7. Auxiliary Switch: Two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
8. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
9. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking groundfault protection function.

C. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install panelboards and accessories according to NEMA PB 1.1.

B. Comply with mounting and anchoring requirements specified in Division 26 Section "Vibration and Seismic Controls for Electrical Work."

C. Mounting Heights: Top of trim 74 inches above finished floor, unless otherwise indicated.

D. Mounting: Plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish.

E. Circuit Directory: Create a directory to indicate installed circuit loads after balancing panelboard loads. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are not acceptable.

F. Install filler plates in unused spaces.

G. Wiring in Panelboard Gutters: Arrange conductors into groups and bundle and wrap with wire ties after completing load balancing.

3.2 IDENTIFICATION

A. Identify field-installed conductors, with wire markers.

B. Panelboard Nameplates: Label each panelboard with laminated-plastic nameplate.

3.3 CONNECTIONS

A. Install equipment grounding connections for panelboards with ground continuity to main electrical ground bus.

B. Tighten electrical connectors and terminals according to manufacturer's published torque tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

3.4 FIELD QUALITY CONTROL

A. Prepare for acceptance tests as follows:

1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.

B. Testing: After installing panelboards and after electrical circuitry has been energized, demonstrate product capability and compliance with requirements.

1. Procedures: Perform each visual and mechanical inspection and electrical test indicated in NETA ATS, Section 7.5 for switches and Section 7.6 for molded-case circuit breakers. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

3.6 CLEANING

A. On completion of installation, inspect interior and exterior of panelboards. Remove paint splatters and other spots. Remove dirt and debris; do not use compressed air to assist in cleaning. Repair exposed surfaces to match original finish.

END OF SECTION 26 2416

SECTION 26 2419 - MOTOR CONTROL CENTER

PART 1 - GENERAL

1.01 DESCRIPTION

This section describes materials, testing, and installation of motor control center to control the operation of the submersible pump and the UV unit.

1.02 SUBMITTALS

A. Submit shop drawings in accordance with the General Conditions.

B. Submit manufacturer's descriptive and technical literature.

C. Submit manufacturer's descriptive data including ratings, single-line diagrams, three-line diagrams, control schematic wiring diagrams, dimensional data, weights, conduit entry restrictions, and overload relay ratings.

D. Submit control schematic diagrams in a “ladder diagram” format that satisfy the following minimum requirements:

1. Show unique rung numbers on left side of each rung. Provide unique wire numbers for all wires between terminals.

2. Show terminal numbers for all devices, relays, timers, contacts, etc.

3. Where the internal wiring diagrams of subassemblies are furnished on separate sheets, show as a rectangle in the schematic diagram with external points identified and cross-referenced to the separate sheets of the control circuit. Show coils and contacts internal to the subassemblies in the rectangle connected to their terminal points.

4. Use a cross-referencing system in conjunction with each relay coil so that associated contacts may be readily located on the diagram. Where a relay contact appears on a sheet separate from the one on which the coil is shown, describe the purpose of the contact on the same sheet. Show spare contacts.

5. Show symbols of external field devices on the schematic (ladder) diagram with utilities turned off (electric power, air, gas, oil, water, lubrication, etc.) and with the equipment at its normal starting position. If the equipment is shown in a specific position, identify the position.

6. Show contacts of multiple contact devices, e.g., selector switches, on the line of the schematic diagram where they are connected in a circuit. Indicate a mechanical connection between the multiple contacts by a dotted line or arrow. This does not apply to

control relays, starters, or contactors. Use additional charts or diagrams to indicate the position of multiple contact devices.

7. Show the purpose or function of switches adjacent to the symbols. Show the purpose or function of controls such as relays, starters, contactors, solenoids, subassemblies, and timers on the diagram on the right side of the respective rung.

8. The motor control center (MCC) manufacturer shall review the control schematic diagrams provided in the drawings, shall identify any adjustments that might be required to achieve the intended control features described in the drawings, and shall implement such changes, prior to shipping the equipment. If further adjustments are required, make such adjustments in the field, with the consent of the Owner's Representative.

E. Submit manufacturer's test report of the factory tests. Describe each circuit, logic function, device, or item tested. Describe results of tests and retests. Describe corrective action taken on defective circuits, logic functions, and devices.

PART 2 - MATERIALS

2.01 MCCs

A. MCCs shall be dead front, dead rear, floor standing, and front accessible NEMA 1 gasketed construction in a NEMA 3R nonwalk-in enclosure with locking provisions. Provide 10-inch minimum front access space between the exterior door and the front of the MCC. The NEMA 3R enclosure shall be provided with a duplex convenience outlet, fluorescent lighting operated from a lighting switch and thermostatically controlled space heaters and ventilation fans. Wiring shall be NEMA Class II, Type B (with wiring schematics showing field devices and connections). Tag control wiring within 2 inches of termination at each device and terminal board. Schematics shall also show terminal numbers and interior and field wire numbers. Delete last sentence of paragraph above if there is no instrument contractor.

B. Provide channel iron sills and removable lifting angles.

C. Provide a separate vertical wiring compartment for each MCC section. Provide cable supports and a hinged door separate from the unit starters.

D. Provide vertical bus insulated barriers.

E. Connect field control wires via terminal blocks. Provide hinged pull-apart terminal blocks for control wiring where foreign voltage may be present, in compliance with NEC 430.74.

F. Provide individual compartments separated by steel barriers and with separate hinged doors for each starter, circuit breaker, or other unit. Locate equipment to enable termination of field wiring from front without equipment removal.

G. Mechanically interlock starter and circuit breaker doors so doors cannot be opened with unit energized. Provide defeater mechanism to allow intentional access while starter or circuit breaker is energized. Make provisions for padlocking external disconnect handles in the off position.

H. MCC shall have short-circuit current rating equal to or greater than kAIC rating.

I. Bus bars shall be copper. Provide full horizontal bus rating for entire length of the MCC. Do not taper the bus. Bus bars shall be tin plated.

J. Do not mount components or terminals on the sides of cubicles. Only mounting on back panels or front panels is acceptable.

K. Compartments allocated for controllers and other devices and number of sections shall not be less than those shown in the drawings. If sizes are required to be larger and/or number of sections is required to be more, they shall be provided at no extra cost to the Owner. If MCC elevation is not shown in the drawings, provide 6-inch minimum vertical space in addition to manufacturer's published space requirements for each starter compartment.

L. Mount devices without obstruction, to be readily accessible.

M. Main breaker, where used, shall be molded-case electronic type with the following adjustable trip features: long-time pickup, short-time pickup, short delay time, and instantaneous pickup.

N. Feeder circuit breakers shall be molded-case thermal-magnetic or electronic type. Provide quick-make and quick-break toggle mechanism, inverse-time trip characteristics, and trip-free operation on overload or short circuit. Automatic tripping shall be indicated by a handle position between the manual off and on positions. Provide trip ratings and number of poles as indicated in the drawings.

O. MCCs shall comply with applicable NEMA, UL, and ANSI standards for industrial control. Provide UL label on each MCC section.

P. Exterior finish shall be ANSI 49 gray.

Q. MCCs shall be General Electric 8000 line, Cutler-Hammer Freedom or Advantage 2100, Allen-Bradley Centerline, Siemens Tiastar, or equal.

2.02 PUMP CONTROL PANELS

A. Panels shall have NEMA 3R enclosure. Provide wing brackets for pole or cross bar mounting.

B. Provide the wide model enclosure for mounting additional equipment. Make provisions for padlocking external disconnect handle in the off position.

C. Panel shall include a full-voltage nonreversing contactor, a 3-pole manually reset thermal overload relay with reset button on the door, a fusible disconnect switch, a "hand-off-auto"

selector switch, and "start" button on the front or side of the panel, and additional controls as shown on the schematic diagrams.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Secure MCCs rigidly to walls and floors or mounting pads with anchor bolts or Phillips Drill Company concrete anchors. Anchor bolts or concrete anchors shall be carbon steel per ASTM A307, Grade B.

B. Install manual starters on C-channel supports, where such starters are shown away from walls, even if such channels are not explicitly shown at those locations.

3.02 FIELD TESTS

A. Perform the following minimum work under the technical direction of the manufacturer's service representative, if not included in their published start-up services:

1. Perform insulation tests on each phase and verify low-resistance ground connection on ground bus. Exclude such tests harmful to electronic components.

2. Torque bolted connections made in the field and verify factory-bolted connections.

3. Verify that factory-set adjustable set points of solid-state starter are in accordance with the motor manufacturer's recommendations.

B. Test the operation of each interlock to verify that the interlock performs its function.

C. Test system for correct execution of control logic. Adjust wiring connections in panel to correct errors.

D. Set adjustable trip circuit breakers two settings above the setting that causes the breaker to trip during motor starting. Do not adjust the setting above 1,300% of the motor nameplate current rating.

E. Operate each breaker and verify that all phases of each load are disconnected.

END OF SECTION 26 2419

SECTION 262719 – MULTI-OUTLET ASSEMBLIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes multi-outlet assemblies.

B. Related Sections include the following:
   1. Division 26 Section “Wiring Devices" for receptacles.
   2. Division 27 Section “Communications Horizontal Cabling” for workstation outlets.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include material descriptions, dimensions of profiles, cross sectional area, knockout sizes and locations, finishes, and standard fittings and accessories for multi-outlet assemblies.
   2. Describe materials and process for pre-marking assembly covers.

1.4 COORDINATION

A. Coordinate lengths of multi-outlet assemblies with dimensions of casework, benches, and equipment walls so that assemblies run their entire length, stopping within 1 inch of ends of casework, benches and equipment walls and within 12 inches of sinks.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide products by Wiremold/Legrand or comparable product by one of the following:
   1. Hubbell.
   2. Mono Systems.
   3. PG LifeLink.

2.2 MULTIOUTLET ASSEMBLIES

A. Type 2.
1. Description: Two compartment extruded aluminum channel with twin fitted covers and pre-wired receptacles suitable for use as multioutlet assembly.
2. Size: 5.25 inches by 1.75 inches.
3. Outlets: As shown on drawings.
4. Outlet Spacing: As shown on drawings.
5. Circuit Assignment: As shown on drawings.
6. Wiring: Provide separate neutral for each 120V circuit.
7. Receptacle Color: White for normal power devices and Red for standby devices.
8. Finish: Anodized aluminum. or as preferred by the Architect.
9. Covers.
   a. Receptacle Compartment: Pre-cut into 12 inch lengths.
   b. Low Voltage Compartment: Pre-cut into 12 inch lengths; punched to accept for telecommunications outlets and for refrigeration alarm monitoring.
10. Fittings: Furnish manufacturers standard couplings, elbows, connectors, and closures.
11. Identification.
    a. Provide per Division 26 "Identification for Electrical Systems."
    b. Indicate panel name and circuit number; for 208V outlets also indicate voltage, phase and amperage.
    c. Use black letters for normal power outlets and red letters for stand-by power outlets.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install multi-outlet assemblies according to Manufacturer's instructions.

B. Use flat-head screws and Manufacturer's standard clips and straps to fasten assembly channel to surfaces.

C. Mount plumb and level.

D. Close ends of assemblies and unused conduit openings.

E. Ground and bond assemblies according to Division 26 Section "Grounding and Bonding."

3.3 IDENTIFICATION

A. Identify receptacles in assemblies according to Division 26 Section "Identification for Electrical Systems."

3.4 CLEANING

A. Clean exposed portions of multi-outlet assemblies with non-abrasive cleaner. Replace scratched covers.

END OF SECTION 26 2719

SECTION 26 2726 - WIRING DEVICES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Single and duplex receptacles, ground-fault circuit interrupters, integral surge suppression units, and isolated-ground receptacles.
2. Single- and double-pole snap switches and dimmer switches.
3. Device wall plates.
4. Floor service outlets, poke-through assemblies, service poles, and multioutlet assemblies.

1.2 DEFINITIONS

A. EMI: Electromagnetic interference.

B. GFCI: Ground-fault circuit interrupter.

C. RFI: Radio-frequency interference.

D. TVSS: Transient voltage surge suppressor.

E. UTP: Unshielded twisted pair.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of wiring device through one source from a single manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC (NFPA 70), Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with CEC (NFPA 70).

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Toggle switches and receptacles shall be of the same manufacturer. Only one manufacturer shall be used in a building. Subject to compliance with requirements, provide products by one of the following:

1. Wiring Devices:

a. Bryant Electric, Inc./Hubbell Subsidiary.
b. Hubbell Incorporated; Wiring Device-Kellems.
c. Leviton Mfg. Company Inc.
d. Pass & Seymour/Legrand; Wiring Devices Div.
e. Or equal.

3. Multioutlet Assemblies:

a. Hubbell Incorporated; Wiring Device-Kellems.
b. Wiremold Company (The).
c. Or equal.

4. Poke-Through, Floor Service Outlets and Telephone/Power Poles:

a. Hubbell Incorporated; Wiring Device-Kellems.
b. Pass & Seymour/Legrand; Wiring Devices Div.
c. Square D/Groupe Schneider NA.
d. Thomas & Betts Corporation.
e. Wiremold Company (The).
f. Or equal.

B. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 RECEPTACLES

A. Straight-Blade-Type Receptacles: Comply with NEMA WD 1, NEMA WD 6, DSCC W-C-596G, and UL 498, “Decora or style line” type in white color.

B. Locking Receptacles: Heavy-Duty grade.

C. Straight-Blade Receptacles: Specification grade/Institutional grade.

D. Controlled Duplex Receptacles.

1. Duplex Convenience Receptacles, 125 V, 20 A.
2. Device marked as controlled receptacle.
3. Products: Subject to compliance with requirements, provide one of the following:

    a. Pass & Seymour – 5362CD
    b. Hubbell – BR20C2
    c. Leviton – 5362-2P
    d. Or equal.

E. Combination USB Duplex Receptacles.

1. Duplex Convenience Receptacles, 125 V, 20 A, tamper resistant.
2. Device shall incorporate (2) USB ports and (2) AC outlets.
3. Products: Subject to compliance with requirements, provide one of the following:

    a. Pass & Seymour – TR5362USB
    b. Hubbell – USB20X2
    c. Leviton – T5832
    d. Or equal.

F. GFCI Receptacles: Straight blade, feed-through type, specification grade, with integral NEMA WD 6, Configuration 5-20R duplex receptacle; complying with UL 498 and UL 943. Design units for installation in a 2-3/4-inch- deep outlet box without an adapter.

G. Isolated-Ground Receptacles: Straight blade, specification grade, single duplex receptacle, orange color, with equipment grounding contacts connected only to the green grounding screw terminal of the device and with inherent electrical isolation from mounting strap.

1. Devices: Listed and labeled as isolated-ground receptacles.
2. Isolation Method: Integral to receptacle construction and not dependent on removable parts.

H. TVSS Receptacles: Straight blade, NEMA WD 6, Configuration 5-20R, with integral TVSS in line to ground, line to neutral, and neutral to ground.

1. TVSS Components: Multiple metal-oxide varistors; with a nominal clamp level rating of 500 volts and minimum single transient pulse energy dissipation of 140 J line to neutral, and 70 J line to ground and neutral to ground.
2. Active TVSS Indication: Visual and audible with light visible in face of device to indicate device is "active" or "no longer in service."
3. Receptacle Type: Hospital grade, with isolated-ground terminal.
4. Identification: Distinctive marking on face of device to denote TVSS-type unit.

2.3 PENDANT CORD/CONNECTOR DEVICES

A. Description: Matching, locking-type plug and receptacle body connector, NEMA WD 6, Configurations as shown, Heavy-Duty grade.

1. Body: Nylon with screw-open cable-gripping jaws and provision for attaching external cable grip.

2.4 CORD AND PLUG SETS

A. Description: Match voltage and current ratings and number of conductors to requirements of equipment being connected.

1. Cord: Rubber-insulated, stranded-copper conductors, with Type SOW-A jacket; with green-insulated grounding conductor and equipment-rating ampacity plus a minimum of 30 percent.
2. Plug: Nylon body and integral cable-clamping jaws. Match cord and receptacle type for connection.

2.5 SWITCHES

A. Single- and Double-Pole Switches: Comply with DSCC W-C-896F and UL 20. . "Decora or style line" type in white color.

B. Snap Switches: Heavy -Duty grade, quiet type.

C. Dimmer Switches: Modular, full-wave, solid-state units with integral, quiet on/off switches and audible frequency and EMI/RFI filters.

1. Control: Continuously adjustable slider; with single-pole or three-way switching to suit connections.

2.6 WALL PLATES

A. Single and combination types to match corresponding wiring devices.

1. Plate-Securing Screws: Metal with head color to match plate finish. Minimum of two screws per outlet box gang section.
2. Material for Finished Spaces: Smooth, high-impact thermoplastic 0.035-inch-thick, satin-finished stainless steel. When approved by the University cover plates may be nonmetallic, shatter resistant nylon in lieu of stainless steel.
3. Material for Unfinished Spaces: Smooth, high-impact thermoplastic.
4. Material for Wet Locations: Cast aluminum with spring-loaded lift cover, and listed and labeled for use in "wet locations."

2.7 FLOOR SERVICE FITTINGS

A. Type: Modular, flush-type, dual-service units suitable for wiring method used.

B. Compartments: Barrier separates power from voice and data communication cabling.

C. Service Plate: Solid brass with satin finish.

D. Power Receptacle: NEMA WD 6, Configuration 5-20R, gray finish, unless otherwise indicated.

E. Voice and Data Communication Outlet: Two modular, keyed.

2.8 POKE-THROUGH ASSEMBLIES

A. Description: Factory-fabricated and -wired assembly of below-floor junction box with multi-channeled, through-floor raceway/firestop unit and detachable matching floor service outlet assembly.

1. Service Outlet Assembly: Flush type with two simplex receptacles and space for two RJ45 jacks, Flush type with four simplex
2. Size: Selected to fit nominal 4-inch receptacles and space for four RJ-45 jacks or as indicated on the drawings. Core holes in floor and match to floor thickness.
3. Fire Rating: Unit is listed and labeled for fire rating of floor-ceiling assembly.
4. Closure Plug: Arranged to close unused 4-inch cored openings and reestablish fire rating of floor.
5. Wiring Raceways and Compartments: For a minimum of four No. 12 AWG conductors; and a minimum of four, 4-pair, Category 5 voice and data communication cables.

2.9 MULTIOUTLET ASSEMBLIES

A. Components of Assemblies: Products from a single manufacturer designed for use as a complete, matching assembly of raceways and receptacles.

B. Raceway Material: Base, cover and end plates shall be constructed of extruded aluminum #6063-T5, 0.060-inch minimum wall thickness. Finish shall be clear anodized #AA-C22A31, Class 2.

C. Wire: No. 12 AWG stranded.

2.11 FINISHES

A. Color:

1. Wiring Devices Connected to Normal Power System: White or as selected by University's Representative, unless otherwise indicated or required by CEC (NFPA 70).
2. Wiring Devices Connected to Emergency Power System: Red.
3. TVSS Devices: Blue.

4. Isolated-Ground Receptacles for computers: As specified above, with orange triangle on face.
5. Coordinate final cover plate style and color with University's Representative. The following is a general guide:

    1) White or almond in office areas
    2) Stainless steel in laboratories, vivariums, and other high use areas.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install devices and assemblies level, plumb, and square with building lines.

B. Install wall dimmers to achieve indicated rating after derating for ganging according to manufacturer's written instructions.

C. Install unshared neutral conductors on line and load side of dimmers according to manufacturers' written instructions.

D. Arrangement of Devices: Unless otherwise indicated, mount flush, with long dimension vertical, and with grounding terminal of receptacles on top. Group adjacent switches under single, multigang wall plates.

E. Remove wall plates and protect devices and assemblies during painting.

F. Coordinate locations of floor service outlets and service poles to suit arrangement of partitions and furnishings.

G. Switches shall be installed in a minimum 4-inch by 4-inch outlet boxes.

3.2 IDENTIFICATION

A. Comply with Division 26 Section " Electrical Identification."

1. Receptacles: Identify panelboard and circuit number from which served. Use hot, stamped or engraved machine printing with black-filled lettering on face of plate, and durable wire markers or tags inside outlet boxes.
2. Cover plates for receptacles shall be engraved or permanent stenciled on the front side with the device circuit number and panelboard source name. Use of an engraving on the front of the device plate is not required for housing projects.
3. Cover plates for receptacles in locations of public view such as lobbies and atriums shall have the circuit numbers and source feed point stenciled on the back of the plate.

3.3 CONNECTIONS

A. Ground equipment according to Division 26 Section "Grounding and Bonding for electrical systems."

B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

C. Tighten electrical connectors and terminals according to manufacturer's published torque tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

3.4 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

1. After installing wiring devices and after electrical circuitry has been energized, test for proper polarity, ground continuity, and compliance with requirements.
2. Test GFCI operation with both local and remote fault simulations according to manufacturer's written instructions.

B. Remove malfunctioning units, replace with new units, and retest as specified above.

END OF SECTION 26 2726

SECTION 26 2813 - FUSES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Cartridge fuses rated 600 V and less for use in switches and controllers.
2. Spare-fuse cabinets.

1.2 SUBMITTALS

A. Product Data: Include the following for each fuse type indicated:

1. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
2. Let-through current curves for fuses with current-limiting characteristics.
3. Time-current curves, coordination charts and tables, and related data.
4. Fuse size for elevator feeders and elevator disconnect switches.

B. Ambient Temperature Adjustment Information: If ratings of fuses have been adjusted to accommodate ambient temperatures, provide list of fuses with adjusted ratings.

1. For each fuse having adjusted ratings, include location of fuse, original fuse rating, local ambient temperature, and adjusted fuse rating.
2. Provide manufacturer's technical data on which ambient temperature adjustment calculations are based.

1.3 QUALITY ASSURANCE

A. Source Limitations: Obtain fuses from a single manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC (NFPA 70), Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with NEMA FU 1.

D. Comply with CEC (NFPA 70).

1.4 PROJECT CONDITIONS

A. Where ambient temperature to which fuses are directly exposed is less than 40 deg F or more than 100 deg F, apply manufacturer's ambient temperature adjustment factors to fuse ratings.

1.5 COORDINATION

A. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Cooper Bussman, Inc.
2. Eagle Electric Mfg. Co., Inc.; Cooper Industries, Inc.
3. Ferraz Shawmut, Inc.
4. Tracor, Inc.; Littelfuse, Inc. Subsidiary.
5. Or equal.

B. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 CARTRIDGE FUSES

A. Characteristics: NEMA FU 1, nonrenewable cartridge fuse; class and current rating indicated; voltage rating consistent with circuit voltage.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.

B. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 FUSE APPLICATIONS

A. Service Entrance: Class L, time delay.

B. Feeders: Class L, time delay.

C. Motor Branch Circuits: Class RK1, time delay.

D. Other Branch Circuits: Class RK1, time delay.

3.3 INSTALLATION

A. Install fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.

B. Install spare-fuse cabinet(s).

END OF SECTION 26 2813

SECTION 26 2816 - ENCLOSED SWITCHES AND CIRCUIT BREAKERS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following individually mounted, enclosed switches and circuit breakers:

1. Fusible switches.
2. Nonfusible switches.
3. Bolted-pressure contact switches.
4. Enclosures.

B. Related Sections:

1. Refer to section 26 2413 for circuit breaker requirements.

1.2 DEFINITIONS

A. HD: Heavy duty.

1.3 SUBMITTALS

A. Product Data: For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.

1. Enclosure types and details for types other than NEMA 250, Type 1.
2. Current and voltage ratings.
3. Short-circuit current rating.
4. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

1.4 QUALITY ASSURANCE

A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC (NFPA 70), Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with CEC (NFPA 70).

D. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed switches and circuit breakers, including clearances between enclosures, and adjacent surfaces and other items. Comply with indicated maximum dimensions.

E. Testing requirements above are applicable to circuit breakers 200A and above and is not applicable to enclosed switches.

1.5 PROJECT CONDITIONS

A. Environmental Limitations: Rate equipment for continuous operation under the following conditions, unless otherwise indicated:

1. Ambient Temperature: Not less than minus 22 deg F and not exceeding 104 deg F.
2. Altitude: Not exceeding 6600 feet.

1.6 COORDINATION

A. Coordinate layout and installation of switches, circuit breakers, and components with other construction, including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.
2. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 FUSIBLE AND NONFUSIBLE SWITCHES

A. Manufacturers:

1. Eaton Corporation; Cutler-Hammer Products.
2. General Electric Co.; Electrical Distribution & Control Division.
3. Siemens Energy & Automation, Inc.
4. Square D/Group Schneider.
5. Or equal.

B. Fusible Switch, 600 A and Smaller: NEMA KS 1, Type HD, with clips or bolt pads to accommodate specified fuses, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.

C. Nonfusible Switch, 600 A and Smaller: NEMA KS 1, Type HD, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.

D. Accessories:

1. Equipment Ground Kit: Internally mounted and labeled for copper ground conductors.
2. Neutral Kit: Internally mounted; insulated, capable of being grounded, and bonded; and labeled for copper neutral conductors.
3. Auxiliary Contact Kit: Auxiliary set of contacts arranged to open before switch blades open.

2.3 FUSED POWER CIRCUIT DEVICES

A. Bolted-Pressure Contact Switch: UL 977; operating mechanism shall use a rotary-mechanical bolting action to produce and maintain high-clamping pressure on the switch blade after it engages the stationary contacts.

1. Manufacturers:
   a. Eaton Corporation; Cutler-Hammer Products.
   b. Pringle Electrical Mfg. Co.
   c. Siemens Energy & Automation, Inc.
   d. Square D/Group Schneider.
   e. Or equal.

2.4 MOLDED-CASE CIRCUIT BRAKERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Square D I-Line Style bolt-on molded case circuit breakers or comparable product by one of the following. The listing of a manufacturer as “acceptable” does not imply automatic approval. It is the sole responsibility of the contractor to ensure that any submittals made are for products that meet or exceed the specifications included here.

1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
3. Siemens Energy & Automation, Inc.

B. General Requirements: Comply with UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents indicated on the drawings.

C. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits in each pole. Adjustable magnetic trip setting for circuit-breaker frame sizes 150 A and larger, adjustable from the front.

D. Construct with over center, trip-free toggle type operating mechanisms with quick make, quick break action and positive handle trip indication. Construct breakers for mounting and operating in any physical position. Provide breakers lugs AL/CU rated. Lugs shall be adequate to accept wire size indicated on the drawings.

E. Adjustable, Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.

F. Electronic Trip Circuit Breakers: Field-replaceable rating plug, rms sensing, with the following field-adjustable settings:

1. Instantaneous trip.
2. Long- and short-time pickup levels.
3. Long- and short-time time adjustments.
4. Ground-fault pickup level, time delay, and I^2t response.

G. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller, and let-through ratings less than NEMA FU 1, RK-5.

H. Ground-Fault, Circuit-Interrupter (GFCI) Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA or more trip and hold below 4mA of ground fault current). One way circuit length shall not exceed 250 feet. If length exceeds 250 feet, notify engineer in writing prior to installing circuit.

I. Ground-Fault, Equipment-Protection (GFEP) Circuit Breakers: With Class B ground-fault protection (30-mA trip). Provide as noted on plans and/or panel schedules and for all circuits supplying power to heat trace.

J. Where required to achieve system coordination with upstream and downstream overcurrent devices, solid-state circuit breakers shall be provided. All electronics shall be self-contained and require no external relaying, power supply, or accessories. Printed circuit cards shall be treated to resist moisture absorption, fungus growth, and signal leakage. All electronics shall be housed in an enclosure which provides protection against arcs, magnetic interference, dust, and other contaminants. Solid-sate sensing shall measure true RMS current with error less than one percent on systems with distortions through the 13^{th} harmonic. Peak or average actuating devices are not acceptable. Current sensors shall be toroidal construction, encased in a plastic housing, filled with epoxy to protect against damage and moisture and shall be integrally mounted on the breaker. Where indicated on the drawings, circuit breaker frames shall be rated for 100 percent continuous duty. Circuit breakers shall have tripping features as described below;

1. Long time current pick up.
2. Adjustable long time delay.
3. Short time current pick up.
4. Adjustable short time delay.
5. Short time I square times t switch.
6. Instantaneous current pick up.
7. Ground fault current pick up, adjustable from 20 percent to 60 percent of sensor rating, but in no case greater than 1200 amperes. Sensing of ground fault current at the main bonding jumper or ground strap shall not be permitted. Provide ground fault only where indicated on the drawings.
8. Overload and short circuit and ground fault trip indicators shall be provided.

K. Interrupting ratings shall be as indicated on drawings. Circuit breakers shall be fully rated for available fault current. Series rating is not acceptable.

L. Features and Accessories:

1. Standard frame sizes, trip ratings, and number of poles.
2. Lugs: Mechanical type, suitable for number, size, trip ratings, and conductor material.
3. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge lighting circuits.

4. Provide the following where noted on the drawings or schedules:

   a. Ground-Fault Protection: Comply with UL 1053; integrally mounted, self-powered for solid state type trip units and remote-mounted and powered for magnetic type trip units with mechanical ground-fault indicator; relay with adjustable pickup and time-delay settings, push-to-test feature, internal memory, and shunt trip unit; and three-phase, zero-sequence current transformer/sensor.

   b. Shunt Trip: Trip coil energized from separate circuit, with coil-clearing contact.

2.5 ENCLOSURES

A. NEMA AB 1 and NEMA KS 1 to meet environmental conditions of installed location.

1. Outdoor Locations: NEMA 250, Type 3R.
2. Kitchen Areas: NEMA 250, Type 4X, stainless steel.
3. Other Wet or Damp Indoor Locations: NEMA 250, Type 3R.
4. Hazardous Areas Indicated on Drawings: NEMA 250, Type 7C.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine elements and surfaces to receive enclosed switches and circuit breakers for compliance with installation tolerances and other conditions affecting performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Comply with applicable portions of NECA 1, NEMA PB 1.1, and NEMA PB 2.1 for installation of enclosed switches and circuit breakers.

B. Mount individual wall-mounting switches and circuit breakers with tops at uniform height, unless otherwise indicated. Anchor floor-mounting switches to concrete base.

C. Comply with mounting and anchoring requirements specified in Division 26 Section "Vibration and Seismic Controls for Electrical Work."

D. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

3.4 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Common Work Results for Electrical" and Identification for Electrical Systems."

B. Enclosure Nameplates: Label each enclosure with engraved metal or laminated-plastic nameplate as specified in Division 26 Section "Common Work Results for Electrical" and Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

1. Perform each electrical test and visual and mechanical inspection stated in NETA ATS, Section 7.5 for switches and Section 7.6 for molded-case circuit breakers. Certify compliance with test parameters.

2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

3.6 ADJUSTING

A. Set field-adjustable switches and circuit-breaker trip ranges.

3.7 CLEANING

A. Inspect exposed surfaces and repair damaged finishes.

END OF SECTION 26 2816

SECTION 26 2913 - ENCLOSED CONTROLLERS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes ac general-purpose controllers rated 600 V and less that are supplied as enclosed units.

B. Related Sections include the following:

1. Division 26 Section "Electrical Power Monitoring and Control" for monitoring and control of motor circuits.
2. Division 26 Section "Transient Voltage Suppression" for low-voltage power, control, and communication surge suppressors.
3. Division 26 Section "Fuses" for fuses in fusible switches.

1.2 SUBMITTALS

A. Product Data: For each type of enclosed controller. Include dimensions and manufacturer's technical data on features, performance, electrical characteristics, ratings, and finishes.

B. Shop Drawings: For each enclosed controller.

1. Dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings. Include the following:

a. Enclosure types and details.
b. Nameplate legends.
c. Short-circuit current rating of integrated unit.
d. UL listing for series rating of overcurrent protective devices in combination controllers.
e. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices in combination controllers.

2. Wiring Diagrams: Power, signal, and control wiring. Differentiate between manufacturer-installed and field-installed wiring.

1.3 QUALITY ASSURANCE

A. Source Limitations: Obtain enclosed controllers of a single type through one source from a single manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC (NFPA 70), Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with CEC (NFPA 70).

D. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed controllers, including clearances between enclosed controllers, and for adjacent surfaces and other items. Comply with indicated maximum dimensions.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Store enclosed controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect enclosed controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.

B. If stored in areas subjected to weather, cover enclosed controllers to protect from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; install electric heating of sufficient wattage to prevent condensation.

1.5 PROJECT CONDITIONS

A. Existing Utilities: Do not interrupt utilities serving facilities occupied by the University or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:

1. Notify the University at least fourteen days in advance of proposed utility interruptions. Identify extent and duration of utility interruptions.
2. Indicate method of providing temporary utilities.
3. Do not proceed with utility interruptions without University's Representative written permission.

1.6 COORDINATION

A. Coordinate layout and installation of enclosed controllers with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03 Section "Cast-in-Place Concrete."

C. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07 Section "Roof Accessories."

D. Coordinate features of enclosed controllers and accessory devices with pilot devices and control circuits to which they connect.

E. Coordinate features, accessories, and functions of each enclosed controller with ratings and characteristics of supply circuit, motor, required control sequence, and duty cycle of motor and load.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Manual and Magnetic Enclosed Controllers:

a. ABB Power Distribution, Inc.; ABB Control, Inc. Subsidiary.
b. Eaton Corp.; Cutler-Hammer Products.
c. General Electrical Distribution & Control.
d. Rockwell Automation Allen-Bradley Co.; Industrial Control Group.
e. Square D Co.
f. Or equal.

B. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 MANUAL ENCLOSED CONTROLLERS

A. Description: NEMA ICS 2, general purpose, Class A, with toggle action and overload element, full voltage controller for fractional horse power motors, single pole and auxiliary contacts.

2.3 MAGNETIC ENCLOSED CONTROLLERS

A. Description: NEMA ICS 2, Class A, full voltage, non-reversing, across the line, unless otherwise indicated.

B. Control Circuit: 120 V; obtained from integral control power transformer with a control power transformer of sufficient capacity to operate connected pilot, indicating and control devices,

C. Combination Controller: Factory-assembled combination controller and disconnect switch.

1. Fusible Disconnecting Means: NEMA KS 1, heavy-duty, fusible switch with rejection type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 947-4-1, as certified by a nationally recognized testing laboratory.
2. Non-fusible Disconnecting Means: NEMA KS 1, heavy-duty, non-fusible switch.
3. Circuit-Breaker Disconnecting Means: NEMA AB 1, motor-circuit protector with field adjustable, short-circuit trip coordinated with motor locked-rotor amperes.

D. Overload Relay: Ambient-compensated type with inverse-time-current characteristic and NEMA ICS 2, Class 20 tripping characteristic. Provide with heaters or sensors in each phase matched to nameplate full-load current of specific motor to which they connect and with appropriate adjustment for duty cycle.

E. Multispeed Enclosed Controller: Match controller to motor type, application, and number of speeds; include the following accessories:

1. Compelling relay to ensure motor will start only at low speed.
2. Accelerating relay to ensure properly timed acceleration through speeds lower than that selected.
3. Decelerating relay to ensure automatically timed deceleration through each speed.

F. Star-Delta Controller: NEMA ICS 2, open transition.

G. Part-Winding Controller: NEMA ICS 2, closed transition with separate overload relays for starting and running sequences.

H. Solid-State, Reduced-Voltage Controller: NEMA ICS 2, suitable for use with NEMA MG 1, Design B, polyphase, medium induction motors.

1. Adjustable acceleration rate control utilizing voltage or current ramp, and adjustable starting torque control with up to 500 percent current limitation for 20 seconds.
2. Surge suppressor in solid-state power circuits providing 3-phase protection against damage from supply voltage surges 10 percent or more above nominal line voltage.
3. LED indicators showing motor and control status, including the following conditions:

    a. Control power available.
    b. Controller on.
    c. Overload trip.
    d. Loss of phase.
    e. Shorted silicon-controlled rectifier.

I. Auxiliary contacts: NEMA ICS2, two normally open and two normally closed contacts in addition to seal-in contact.

J. Indicating lights: NEMA ICS2 run green in front cover.

K. Selector switch: NEMA ICS2, hand/off/auto in front cover.

2.5 ENCLOSURES

A. Description: Flush- or surface-mounted cabinets as indicated. NEMA 250, Type 1, unless otherwise indicated to comply with environmental conditions at installed location.

1. Outdoor Locations: NEMA 250, Type 4.
2. Kitchen Areas: NEMA 250, Type 4X, stainless steel.
3. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.
4. Hazardous Areas Indicated on Drawings: NEMA 250, Type 7C.

2.6 ACCESSORIES

A. Devices shall be factory installed in controller enclosure, unless otherwise indicated.

B. Push-Button Stations, Pilot Lights, and Selector Switches: NEMA ICS 2, heavy-duty type.

C. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.

D. Control Relays: Auxiliary and adjustable time-delay relays.

2.7 FACTORY FINISHES

A. Manufacturer's standard prime-coat finish ready for field painting.

B. Finish: Manufacturer's standard paint applied to factory-assembled and -tested enclosed controllers before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and surfaces to receive enclosed controllers for compliance with requirements, installation tolerances, and other conditions affecting performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

A. Select features of each enclosed controller to coordinate with ratings and characteristics of supply circuit and motor; required control sequence; duty cycle of motor, drive, and load; and configuration of pilot device and control circuit affecting controller functions.

B. Select horsepower rating of controllers to suit motor controlled.

3.3 INSTALLATION

A. See Division 26 Section "Common Work Results for Electrical" for general installation requirements.

B. For control equipment at walls, bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For controllers not at walls, provide freestanding racks complying with Division 26 Section "Common Work Results for Electrical."

C. Install freestanding equipment on concrete bases complying with Division 03 Section "Cast-inPlace Concrete."

D. Comply with mounting and anchoring requirements specified in Division 26 Section "Vibration and Seismic Controls for Electrical Work."

E. Enclosed Controller Fuses: Install fuses in each fusible switch. Comply with requirements in Division 26 Section "Fuses."

3.4 IDENTIFICATION

A. Identify enclosed controller components and control wiring according to Division 26 Section "Common Work Results for Electrical" **"**Identification for Electrical Systems."

3.5 CONTROL WIRING INSTALLATION

A. Bundle, train, and support wiring in enclosures.

B. Connect hand-off-automatic switch and other automatic-control devices where applicable.

1. Connect selector switches to bypass only manual- and automatic-control devices that have no safety functions when switch is in hand position.
2. Connect selector switches with enclosed controller circuit in both hand and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high temperature cutouts, and motor overload protectors.

3.6 CONNECTIONS

A. Conduit installation requirements are specified in other Division 26 Sections. Drawings indicate general arrangement of conduit, fittings, and specialties.

B. Ground equipment.

C. Tighten electrical connectors and terminals according to manufacturer's published torque tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

3.7 FIELD QUALITY CONTROL

A. Provide voltage test.

B. Check rotation

3.8 ADJUSTING

A. Set field-adjustable switches and circuit-breaker trip ranges.

3.9 CLEANING

A. Clean enclosed controllers internally, on completion of installation, according to manufacturer's written instructions.

3.10 STARTUP SERVICE

A. Verify that enclosed controllers are installed and connected according to the Contract Documents.

B. Verify that electrical wiring installation complies with manufacturer's submittal and installation requirements in Division 26 Sections.

C. Complete installation and startup checks according to manufacturer's written instructions.

END OF SECTION 26 2913

SECTION 26 3213 - ENGINE GENERATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes packaged engine-generator sets for standby power supply with the following features:

1. Diesel engine.
2. Unit-mounted cooling system.
3. Unit-mounted control and monitoring.
4. Load bank.
5. Outdoor enclosure.

B. Related Sections include the following:

1. Division 26 Section "Transfer Switches" for transfer switches including sensors and relays to initiate automatic-starting and -stopping signals for engine-generator sets.
2. Division 26 Section "Seismic Restraint For Electrical Systems" for requirements necessary for compliance with seismic criteria.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of packaged engine generator indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. In addition, include the following:

1. Factory published specification sheet indicating standard and optional accessories, ratings, etc.
2. Manufacturer’s catalog cut sheets of all auxiliary components such as isolators, battery charger, silencer, exhaust flex, main circuit breaker, etc.
3. Dimensional elevation and layout drawings of the generator set, enclosure and switchgear and related accessories.
4. Engine mechanical data at varying loads up to full load, including heat rejection, exhaust gas flows, combustion air and ventilation air flows, noise data, fuel consumption, etc.
5. Generator electrical data including temperature and insulation data, cooling requirements, excitation ratings, voltage regulation, voltage regulator, efficiencies, waveform distortion and telephone influence factor.
6. Generator resistances, reactances and time constants.
7. Generator current decrement curve.

8. Time current characteristic curves for generator protective device.
9. Generator motor starting capability.
10. Generator thermal damage curve.
11. Control panel schematics.
12. Oil sampling analysis, laboratory location, and information.
13. Manufacturer's and dealer's written warranty.
14. Emissions data.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Dimensioned outline plan and elevation drawings of engine-generator set and other components specified.
2. Vibration Isolation Base Details: Signed and sealed by a qualified professional engineer. Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include base weights.
3. Interconnect Wiring Diagrams: including generator, switchgear, fuel tank, battery charger, jacket water heater, space heater and remote alarm indications.
4. Concrete pad recommendation, layout and stub-up locations of electrical and fuel systems.

C. Submit a coordination study in conjunction with panelboards showing that all article 700 – Emergency and 701 – Legally Required Standby systems, both on the normal and emergency are selectively coordinated as required by code. Refer to additional requirements of Division 26 Section “Overcurrent Protective Device Coordination Study”.

1.4 INFORMATIONAL SUBMITTALS

A. Seismic Qualification:

1. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
2. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Source quality-control test reports.

1. Certified summary of prototype-unit test report.
2. Certified Test Reports: For components and accessories that are equivalent, but not identical, to those tested on prototype unit.
3. Report of factory test on units to be shipped for this Project, showing evidence of compliance with specified requirements.
4. Report of sound generation.
5. Report of exhaust emissions showing compliance with applicable regulations.
6. Certified Torsional Vibration Compatibility: Comply with NFPA 110.

C. Field quality-control test reports.

D. Warranty: Special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For packaged engine generators to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. List of tools and replacement items recommended to be stored at Project for ready access. Include part and drawing numbers, current unit prices, and source of supply.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.

1. Maintenance Proximity: Not more than four hours' normal travel time from Installer's place of business to Project site.

B. Source Limitations: Obtain packaged generator sets and auxiliary components through one source from a single manufacturer.

C. Electrical Components, Devices, and Accessories: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. Comply with ASME B15.1.

E. Comply with NFPA 37.

F. Comply with all applicable codes.

G. Comply with NFPA 99.

H. Comply with NFPA 110 requirements for Level 1 emergency power supply system.

I. Generator set shall be UL2200 Listed with UL 2200 labeling.

J. Engine Exhaust Emissions: Comply with current federal Environmental Protection Agency, applicable state and local government requirements.

K. Noise Emission: Comply with applicable state and local government requirements for maximum noise level at adjacent property boundaries due to sound emitted by generator set including engine, engine exhaust, engine cooling-air intake and discharge, and other components of installation.

1.7 PROJECT CONDITIONS

A. Environmental Conditions: Engine-generator system shall withstand the following environmental conditions without mechanical or electrical damage or degradation of performance capability:

1. Ambient Temperature: 5 to 40 deg C.

2. Relative Humidity: 0 to 95 percent.
3. Altitude: Sea level to 1000 feet

1.8 COORDINATION

A. Coordinate size and location of concrete bases for package engine generators. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.9 WARRANTY

A. Manufacturer's standard form in which manufacturer agrees to repair or replace components of packaged engine generators and associated auxiliary components that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Manufacturer’s standard warranty period (minimum two years) from date of start-up.
2. Labor and travel time for necessary repairs at the job site shall be included.
3. Running hours shall not be a limiting factor for the system warranty.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Caterpillar; Engine Div.
2. Kohler Co.; Generator Division.
3. Onan/Cummins Power Generation; Industrial Business Group.
4. Generac

2.2 ENGINE-GENERATOR SET

A. Factory-assembled and tested.

B. Mounting Frame: Maintain alignment of mounted components without depending on concrete foundation; and have lifting attachments.

1. Rigging Diagram: Inscribed on metal plate permanently attached to mounting frame to indicate location and lifting capacity of each lifting attachment and generator-set center of gravity.

C. Capacities and Characteristics:

1. Power Output Ratings: Generator to be standby rated, 750 kW, 937.5 kVA at .8 P.F., 480Y/277 volts, with capacity as required to operate as a unit as evidenced by records of prototype testing.
2. Output Connections: Three-phase, four wire.
3. Nameplates: For each major system component to identify manufacturer's name and address, and model and serial number of component.

D. Generator-Set Performance:

1. Steady-State Voltage Operational Bandwidth: 3 percent of rated output voltage from no load to full load.
2. Transient Voltage Performance (Voltage Dip): Not more than 15% variation for 100 percent step-load increase or decrease at rated power factor. Voltage shall recover and remain within the steady-state operating band (within 0.5% of rated voltage) within five seconds.
3. Steady-State Frequency Operational Bandwidth: 0.5 percent of rated frequency from no load to full load.
4. Steady-State Frequency Stability: When system is operating at any constant load within the rated load, there shall be no random speed variations outside the steady-state operational band and no hunting or surging of speed.
5. Transient Frequency Performance: Less than 5 percent variation for 50 percent step-load increase or decrease. Frequency shall recover and remain within the steady-state operating band within five seconds.
6. Output Waveform at Full Linear Load: Harmonic content measured line to neutral shall not exceed 5 percent total and 3 percent for single harmonics. Telephone influence factor, determined according to NEMA MG 1, shall not exceed 50 percent.
7. Output Waveform at No Load: At no load, harmonic content measured line to line or line to neutral shall not exceed 5 percent total and 3 percent for single harmonics. Telephone influence factor, determined according to NEMA MG 1, shall not exceed 50 percent.
8. Sustained Short-Circuit Current: For a 3-phase, bolted short circuit at system output terminals, system shall supply a minimum of 250 percent of rated full-load current for not less than 10 seconds and then clear the fault automatically, without damage to generator system components.
9. Start Time: Comply with NFPA 110, Type 10, system requirements. Upon loss of power the generator shall start and assume emergency load within 10 seconds.
10. An oversized alternator shall be provided to handle the harmonics from VFD Loads.

2.3 ENGINE

A. Heavy duty industrial, naturally aspirated or turbo-charged, with in-line or vee-type, four cycle compression ignition diesel.

B. Fuel: Fuel oil, Grade DF-2.

C. Rated Engine Speed: 1800 rpm.

D. Lubrication System: The following items are mounted on engine or skid:

1. Filter and Strainer: Replaceable elements rated to remove 90 percent of particles 5 micrometers and smaller while passing full flow.

2. Thermostatic Control Valve: Control flow in system to maintain optimum oil temperature. Unit shall be capable of full flow and is designed to be fail-safe.
3. Crankcase Drain: Arranged for complete gravity drainage to an easily removable container with no disassembly and without use of pumps, siphons, special tools, or appliances. Drain extension shall be provided through side of skid base.
4. Low pressure cut-out.
5. Engine oil blow-by emission recirculation kit or route blow-by tube into exhaust discharge duct.

E. Engine Fuel System:

1. Main Fuel Pump: Mounted on engine. Pump ensures adequate primary fuel flow under starting and load conditions.
2. Relief-Bypass Valve: Automatically regulates pressure in fuel line and returns excess fuel to source.
3. Shut-off Valve: Solenoid valve to shut off fuel to the engine when the Emergency Stop button is activated.

F. Coolant Jacket Heater: Electric-immersion type, factory installed in coolant jacket system. Comply with NFPA 110 requirements for Level 1 equipment for heater capacity.

1. Jacket heater shall be, 9000 watts, 208 volts, single phase with adjustable thermostat.

G. Governor: Manufactured by Woodward or equal. Electronic, adjustable isochronous, with speed sensing and overspeed cutout.

H. Cooling System: Closed loop, liquid cooled, with radiator factory mounted on engine-generator-set mounting frame and integral engine-driven coolant pump.

1. Coolant: Solution of ethylene-glycol-based antifreeze and water, with anticorrosion additives as recommended by engine manufacturer.
2. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.
3. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.
4. Coolant Hose: Flexible assembly with inside surface of nonporous rubber and outer covering of aging-, ultraviolet-, and abrasion-resistant fabric.

    a. Rating: 50-psig maximum working pressure with coolant at 180 deg F, and noncollapsible under vacuum.
    b. End Fittings: Flanges or steel pipe nipples with clamps to suit piping and equipment connections.

I. Muffler/Silencer: Critical type, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

1. Minimum sound attenuation of 25 dB at 500 Hz.
2. Sound level measured at a distance of 10 feet from exhaust discharge after installation is complete shall be 85 dBA or less.

J. Air-Intake Filter: Heavy-duty, engine-mounted air cleaner with replaceable dry-filter element and "blocked filter" indicator.

K. Starting System: 24-V electric, with negative ground.

1. Components: Sized so they will not be damaged during a full engine-cranking cycle with ambient temperature at maximum specified in Part 1 "Project Conditions" Article.
2. Cranking Motor: Heavy-duty unit that automatically engages and releases from engine flywheel without binding.
3. Cranking Cycle: 60 seconds.
4. Battery: Lead acid type with adequate capacity within ambient temperature range specified in Part 1 "Project Conditions" Article to provide specified cranking cycle at least three times without recharging.
5. Battery Cable: Stranded copper, sized as recommended by engine manufacturer. Include required interconnecting conductors and connection accessories.
6. Battery Rack: Factory fabricated of metal with acid-resistant finish. Thermostatically controlled heater shall be arranged to maintain battery above 10 deg C regardless of external ambient temperature within range specified in Part 1 "Project Conditions" Article. Include accessories required to support and fasten batteries in place.
7. Battery-Charging Alternator: Factory mounted on engine with solid-state voltage regulation and 35-A minimum continuous rating.
8. Battery Charger: 120V, Current-limiting, automatic-equalizing and float-charging type. Unit shall be UL listed and comply with UL 1236 and include the following features:

    a. Operation: Equalizing-charging rate of 10 A shall be initiated automatically after battery has lost charge until an adjustable equalizing voltage is achieved at battery terminals. Unit shall then be automatically switched to a lower float-charging mode and shall continue to operate in that mode until battery is discharged again.
    b. Automatic Temperature Compensation: Adjust float and equalize voltages for variations in ambient temperature from minus 40 deg C to plus 60 deg C to prevent overcharging at high temperatures and undercharging at low temperatures.
    c. Battery Heater: 120V, with thermostat as required by NFPA 110.
    d. Automatic Voltage Regulation: Maintain constant output voltage regardless of input voltage variations up to plus or minus 10 percent.
    e. Ammeter and Voltmeter: Flush mounted in door. Meters shall indicate charging rates.
    f. Safety Functions: Sense abnormally low battery voltage and close contacts providing low battery voltage indication on control and monitoring panel. Sense high battery voltage and loss of ac input or dc output of battery charger. Either condition shall close contacts that provide a battery-charger malfunction indication at system control and monitoring panel.
    g. Enclosure and Mounting: NEMA 250, Type 1, wall-mounted cabinet.

2.4 FUEL OIL STORAGE

A. Comply with NFPA 30.

B. Base-Mounted Fuel Oil Tank: Factory installed and piped, UL 142 listed fuel oil tank. Features include the following:

1. Tank level indicator.
2. Capacity: Fuel for 24 hours' continuous operation at 100 percent rated power output.
3. Vandal-resistant fill cap.
4. Containment Provisions: Comply with requirements of authorities having jurisdiction.
5. Fuel strainer for mounting in the fuel intake line.
6. Drain hand valve in lieu of threaded plug in bottom of tank.
7. Secondary fuel filter/water separator.
8. Manual fuel priming pump.
9. Fuel tank shall be double wall construction with leak alarm.
10. Fuel tank shall meet all local and State codes and standards.
11. Emergency fuel shut-off valve.
12. Low fuel alarm switch set at 8 hours for remote indication.
13. Provide mechanical type fuel gauge.

2.5 CONTROL AND MONITORING

A. Automatic Starting System Sequence of Operation: When mode-selector switch on the control and monitoring panel is in the automatic position, remote-control contacts in one or more separate automatic transfer switches initiate starting and stopping of generator set. When mode-selector switch is switched to the on position, generator set starts. The off position of same switch initiates generator-set shutdown. When generator set is running, specified system or equipment failures or derangements automatically shut down generator set and initiate alarms. Operation of a remote emergency-stop switch also shuts down generator set.

B. The generator set shall be provided with a microprocessor-based control system that is designed to provide automatic starting, monitoring, and control functions for the generator set. The control system shall also be designed to allow local monitoring and control of the generator set, and remote monitoring and control as described in this specification.

C. The control panel shall be mounted on the generator set. The control panel shall be vibration isolated and prototype tested to verify the durability of all components in the system under the vibration conditions encountered.

D. The generator set shall be provided with alarm and status indicating lamps to indicate non-automatic generator status, and existing warning and shutdown conditions in a common control and monitoring panel mounted on the generator set. The lamps shall be high-intensity LED type. The lamp condition shall be clearly apparent under bright room lighting conditions. The generator set control shall indicate the existence of alarm and shutdown conditions on an alphanumeric digital display panel.

1. Digital Indicating and Protective Devices and Controls: As required by NFPA 110 for Level 1 system, and the following:

    a. AC voltmeter.
    b. AC ammeter.
    c. AC frequency meter.
    d. DC voltmeter (alternator battery charging).
    e. Engine-coolant temperature gage.
    f. Engine lubricating-oil pressure gage.
    g. Running-time meter.

h. Ammeter-voltmeter, phase-selector switch(es).
i. Generator-voltage adjusting control.
j. Fuel tank high-level shutdown of fuel supply alarm.
k. Generator overload (alarm)
l. Oil pressure sender failure (alarm)
m. Engine temperature sender failure (alarm)
n. Fail to crank (shutdown)
o. Fail to start/overcrank (shutdown)
p. Weak battery (alarm)
q. Low fuel-daytank (alarm)
r. High AC voltage (shutdown)
s. Low AC voltage (shutdown)
t. Under frequency (shutdown)
u. Over current (warning)
v. Over current (shutdown)
w. Short circuit (shutdown)

E. Supporting Items: Include sensors, transducers, terminals, relays, and other devices and include wiring required to support specified items. Locate sensors and other supporting items on engine or generator, unless otherwise indicated.

F. Common Remote Audible Alarm Annunciator: Include necessary contacts and terminals in control and monitoring panel. An LED labeled with proper alarm conditions shall identify each alarm event and a common audible signal shall sound for each alarm condition. Silencing switch in face of panel shall silence signal without altering visual indication. Connect so that after an alarm is silenced, clearing of initiating condition will reactivate alarm until silencing switch is reset. Cabinet and faceplate are surface- or flush-mounting type to suit mounting conditions indicated. Alarm conditions shall also be monitored by the Building Automation System (BAS). Provide necessary interface for connection to BAS. Comply with NFPA 99 and NFPA 110 requirements for Level 1 systems and the following:

1. Overcrank shutdown.
2. Coolant low-temperature alarm.
3. Control switch not in auto position.
4. Battery-charger malfunction alarm.
5. Battery low-voltage alarm.
6. Battery high-voltage alarm.
7. Loss of normal power to charger alarm.
8. Low coolant level.
9. High engine temperature.
10. Low oil pressure.
11. Over-Speed
12. Generator supplying load.
13. Low fuel – base-mounted fuel tank.
14. High fuel level – base-mounted fuel tank.

G. Remote Emergency-Stop Switch: Flush; wall mounted, unless otherwise indicated; and labeled. Push button shall be protected from accidental operation.

1. Shall activate electric fuel solenoid shut-off valve on engine.
2. Locate in Main Electrical Room – see drawings for exact location.

2.6 GENERATOR OVERCURRENT AND FAULT PROTECTION

A. Generator Circuit Breaker(s): Molded-case, Solid State - electronic-trip type; 100 percent rated; complying with UL 489. Refer to drawings for quantities and amperage ratings.

1. Tripping Characteristics: Adjustable long-time and short-time delay and instantaneous.
2. Trip Settings: Selected to coordinate with generator thermal damage curve.
3. Shunt Trip: Connected to trip breaker when generator set is shut down by other protective devices.
4. Mounting: Adjacent to or integrated with control and monitoring panel.
5. Short circuit rating shall be a minimum of 35kA.
6. Where required to achieve system coordination with upstream and downstream overcurrent devices, solid-state, electronic trip, circuit breakers shall be provided and where noted on drawings and schedules and where required by code to achieve selective coordination.

    a. All overcurrent devices on article 700 – Emergency and 701 – Legally Required Standby systems, both on the normal and emergency side shall be selectively coordinated as required by code.

B. Ground-Fault Indication: Comply with NFPA 70, "Emergency System" signals for ground-fault. Integrate ground-fault alarm indication with other generator-set alarm indications.

2.7 GENERATOR, EXCITER, AND VOLTAGE REGULATOR

A. Comply with NEMA MG 1.

B. Drive: Generator shaft shall be directly connected to engine shaft. Exciter shall be rotated integrally with generator rotor.

C. Electrical Insulation: Class H with Class F temperature rise.

D. Construction shall prevent mechanical, electrical, and thermal damage due to vibration, overspeed up to 125 percent of rating, and heat during operation at 110 percent of rated capacity. Generator stator and exciter stator windings shall have additional treatment of epoxy for resistance to an environment of moisture and salt air.

E. Unit to sustain 300% rated output for 10 seconds to allow downstream selective circuit breaker tripping in the event of a fault. Either series boost or PMG acceptable. Generator supplier to install all series boost components. So called "extended stacks" will not be acceptable.

F. Enclosure: Dripproof.

G. Instrument Transformers: Mounted within generator enclosure.

H. Voltage Regulator: Solid-state digital type, separate from exciter, providing performance as specified.

1. Three phase sensing with automatic, +/- 1/2% voltage regulation from no load to full load.

I. Strip Heater: Thermostatically controlled unit arranged to maintain stator windings above dew point. Voltage shall be 120 volts.

J. Windings: Two-thirds pitch stator winding and fully linked amortisseur winding.

K. Subtransient Reactance: 12 percent, maximum.

2.8 RADIATOR-MOUNTED LOAD BANK

A. Description: Provide radiator-mounted load bank , resistiveunit capable of providing a balanced 3-phase, delta-connected load to generator set at [**50**] percent rated-system capacity. Resistive Load Elements: Corrosion-resistant chromium alloy with ceramic and steel supports. Elements shall be double insulated and designed for repetitive on-off cycling.

2.9 OUTDOOR WEATHERPROOF GENERATOR-SET ENCLOSURE

A. Description: Vandal-resistant, weatherproof aluminum housing. The engine/generator set, including battery charger and batteries and exhaust silencer shall be completely enclosed in a weatherproof sound attenuated outdoor enclosure provided by the generator manufacturer.

1. Sound Attenuation Requirements: Average 25 dBA sound attenuation at 21 feet in a free field.
2. The enclosure shall be constructed of minimum .08 inch aluminum.
3. The engine crank case breather/ventilation tubes shall be extended into the vertical discharge plenum section of the weatherproof enclosure.
4. Muffler Location: Within enclosure.

B. Multiple panels shall be lockable and provide adequate access to components requiring maintenance. Panels shall be removable by one person without tools. Instruments and control shall be mounted within enclosure.

C. Size shall be as required to house generator and accessories.

D. Engine Cooling Airflow through Enclosure: Maintain temperature rise of system components within required limits when unit operates at 110 percent of rated load for 2 hours with ambient temperature at top of range specified in system service conditions.

1. Louvers: Equipped with bird screen arranged to permit air circulation when engine is not running while excluding exterior dust, birds, and rodents. Storm-proof and drainable louvers prevent entry of rain.
2. Hinged Doors: With padlocking provisions.
3. Thermal Insulation: Manufacturer's standard materials and thickness selected in coordination with space heater to maintain winter interior temperature within operating limits required by engine-generator-set components.

E. Provide enclosure mounted to sub-base fuel tank. Slip-over enclosures are not acceptable. Provide structural metal platform for access to control panel if top of main breaker(s) and control panel’s control buttons or displays exceeds 72” above finished grade.

2.10 FINISHES

A. Metal parts shall be primed and finish painted at the factory for corrosion resistance in an outdoor environment.

B. Indoor and Outdoor Enclosures and Components: Manufacturer's standard finish over corrosion-resistant pretreatment and compatible primer.

C. Color of generator enclosure shall be “special” color as selected by Owner.

2.11 SOURCE QUALITY CONTROL

A. Prototype Testing: Factory test engine-generator set using same engine model, constructed of identical or equivalent components and equipped with identical or equivalent accessories. Prototype testing shall include:

1. Tests: Comply with NFPA 110, Level 1 Energy Converters and with IEEE 115.
2. Fuel consumption at 1/4, 1/2, 3/4, and full load
3. Exhaust emissions
4. Mechanical and exhaust noise
5. Governor speed regulation at 1/4, 1/2, 3/4, and full load; and during transients
6. Motor starting kVA
7. Generator temperature rise in accordance with NEMA MG1-22.40
8. Voltage regulation at 1/4, 1/2, 3/4, and full load; and during transients
9. Harmonic analysis, voltage waveform deviation and telephone influence factor
10. Generator short circuit capability
11. Cooling system performance
12. Torsional analysis
13. Linear vibration analysis
14. Generator revolving field assembly for 2 hours at 2700 rpm (150% overspeed) and 70°C, and each production unit tested at 2250 rpm (125% overspeed) at room temperature.
15. The manufacturer shall supply equipment that is a current factory production model, not a onetime fabrication.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, equipment bases, and conditions, with Installer present, for compliance with requirements for installation and other conditions affecting packaged engine-generator performance.

B. Examine roughing-in of piping systems and electrical connections. Verify actual locations of connections before packaged engine-generator installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with packaged engine-generator manufacturers' written installation and alignment instructions and with NFPA 110.

B. Install packaged engine generator to provide access, without removing connections or accessories, for periodic maintenance.

C. Install packaged engine generator with restrained spring isolators having a minimum deflection of 1 inch on 4-inch- high concrete base. Secure sets to anchor bolts installed in concrete bases.

D. Install Schedule 40, black steel piping with welded joints and connect to engine muffler. Install thimble at wall. Piping shall be same diameter as muffler outlet. Flexible connectors and steel piping materials and installation requirements are specified in Division 23 Section "Hydronic Piping."

1. Install condensate drain piping to muffler drain outlet full size of drain connection with a shutoff valve, stainless-steel flexible connector, and Schedule 40, black steel pipe with welded joints.
2. Exhaust pipe shall turn upward and be provided with a weather proof cap.

E. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not specified to be factory mounted.

F. Provide initial full fill of diesel fuel.

3.3 CONNECTIONS

A. Connect engine exhaust pipe to engine with flexible stainless steel flanged connector.

B. Connect fuel piping to engines with a gate valve and union and flexible connector.

C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

D. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 IDENTIFICATION

A. Identify system components according to Division 26 Section "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

A. Perform tests and inspections and prepare test reports.

1. Manufacturer's Field Service: Engage a local factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Tests and Inspections:

1. Coordinate all start-up and testing activities with the Engineer and Owner.
2. After installation is complete and normal power is available, the manufacturer's local dealer shall perform the following.

    a. Verify that the equipment is installed properly.
    b. Check all auxiliary devices for proper operation, including battery charger, jacket water heater(s), generator space heater, remote annunciater, etc.
    c. Test all alarms and safety shutdown devices for proper operation and annunciation.
    d. Check all fluid levels.
    e. Start engine and check for exhaust, oil, and fuel leaks, vibrations, etc.
    f. Verify proper voltage and phase rotation at the switchgear before connecting to the load.
    g. Connect the generator the building load and verify that the generator will start and run all designated loads.

3. Load Bank Test:

    a. Provide a 3-phase portable load bank at project site, in addition to prototype and factory test. Load bank shall have sufficient rating to test generator to full nameplate rating at a 1.0 (resistive) power factor. Load bank shall be performed after generator installation is complete including all room doors and louvers installed and all transfer switches connected and operational.

4. Battery-Charger Tests: Verify specified rates of charge for both equalizing and float-charging conditions.
5. System Integrity Tests: Methodically verify proper installation, connection, and integrity of each element of engine-generator system before and during system operation. Check for air, exhaust, and fluid leaks.
6. Harmonic-Content Tests: Measure harmonic content of output voltage under 25 percent and at 100 percent of rated linear load. Verify that harmonic content is within specified limits.
7. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
8. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
9. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Coordinate tests with tests for transfer switches and run them concurrently.

D. Test instruments shall have been calibrated within the last 12 months, traceable to standards of NIST, and adequate for making positive observation of test results. Make calibration records available for examination on request.

E. Remove and replace malfunctioning units and retest as specified.

F. Retest: Correct deficiencies identified by tests and observations and retest until specified requirements are met.

G. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation resistances, time delays, and other values and observations. Attach a label or tag to each tested component indicating satisfactory completion of tests. Submit written test results to Engineer.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain packaged engine generators after load bank test and after engine/generator set is electrically connected to automatic transfer switches.

1. Include a minimum of three simulated power failures in the presence of transfer switch manufacturer's startup representative.
2. Test remotely connected engine/generator status indication signals.
3. Test transfer switches.
4. Contractor to coordinate meeting to ensure presence of all parties concerned.

3.7 SYSTEM SERVICE CONTRACT

A. In order to meet potential insurance company regulations and provide longest reliable service life, the supplier of the standby power system shall provide and make available to the Owner a service contract which, at the Owner's option, may be accepted or refused. The contract shall be for the complete services rendered over a period of one year and shall include, but not be limited to, the following:

B. Engine manufacturer's recommended procedures for weekly (biweekly) inspection and maintenance to be done by user.

C. Quarterly inspection by the supplier personnel to review the weekly (biweekly) maintenance records being kept by user and train any new Owner operating personnel. Inspection will include scheduled oil sampling for lube oil contaminants. A 100% load test run on the generator set shall also be included.

D. Annual inspection shall include all of items in above paragraph except that the generator set shall be run under load - system load or load provided by supplier.

END OF SECTION 26 3213

SECTION 26 3600 - TRANSFER SWITCHES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes transfer switches rated 600 V and less, including the following:

1. Automatic open-transition transfer switches.
2. Non-bypass/isolation switches.
3. Remote annunciation system.

1.2 SUBMITTALS

A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Shop Drawings: Dimensioned plans, sections, and elevations showing minimum clearances, conductor entry provisions, gutter space, installed features and devices, and material lists for each switch specified.

1. Wiring Diagrams: Single-line diagram. Show connections between transfer switch, power sources, and load; and show interlocking provisions for each combined transfer switch and bypass/isolation switch.

C. Qualification Data: For manufacturer and testing agency. Submit with electrical test reports.

D. Field quality-control test reports. Submit with electrical test reports.

E. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Sections "Closeout Procedures" and "Operation and Maintenance Data," include the following:

1. Features and operating sequences, both automatic and manual.
2. List of all factory settings of relays; provide relay-setting and calibration instructions, including software, where applicable.

1.3 QUALITY ASSURANCE

A. Manufacturer Qualifications: Maintain a service center capable of providing training, parts, and emergency maintenance repairs within a response period of less than eight hours from time of notification.

B. Source Limitations: Obtain automatic transfer switches, open trasition, and remote annunciators through one source from a single manufacturer.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC (NFPA 70), Article 100, for emergency service under UL 1008, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. Comply with NEMA ICS 1- General Standards for Industrial Control and Systems

E. Comply with NEMA IC52 – Standards for Industrial Control Devices

F. Comply with NEMA IC56 – Enclosures for Industrial Controls and Systems; Type 1 -indoors, Type 4 - outdoors.

G. Comply with CEC (NFPA 70).

H. Comply with NFPA 99.

I. Comply with NFPA 110.

J. Comply with UL 1008 unless requirements of these Specifications are stricter.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Contactor Transfer Switches:

a. Caterpillar; Engine Div.
b. Emerson; ASCO Power Technologies, LP.
c. Generac Power Systems, Inc.
d. GE Zenith Controls.
e. Kohler Co.; Generator Division.
f. Onan Corp./Cummins Power Generation; Industrial Business Group.
g. Russelectric, Inc.
h. Spectrum Detroit Diesel.
i. Or equal.

B. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 GENERAL TRANSFER-SWITCH PRODUCT REQUIREMENTS

A. Indicated Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated.

B. Tested Fault-Current Closing and Withstand Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008.

C. Annunciation, Control, and Programming Interface Components: Devices at transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels have communication capability matched with remote device.

D. Solid-State Controls: Repetitive accuracy of all settings is plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C.

E. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.41. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1.

F. Neutral Terminal: Solid and fully rated, unless otherwise indicated.

G. Oversize Neutral: Ampacity and switch rating of neutral path through units indicated for oversize neutral shall be double the nominal rating of circuit in which switch is installed.

H. Enclosures: General-purpose NEMA 250, Type 1, complying with NEMA ICS 6 and UL 508, unless otherwise indicated.

I. Factory Wiring: Train and bundle factory wiring and label, consistent with Shop Drawings, either by color code or by numbered or lettered wire and cable tape markers at terminations.

1. Designated Terminals: Pressure type suitable for types and sizes of field wiring indicated.
2. Power-Terminal Arrangement and Field-Wiring Space: Suitable for top, side, or bottom entrance of feeder conductors as indicated.
3. Control Wiring: Equipped with lugs suitable for connection to terminal strips.

J. Electrical Operation: Accomplish by a non-fused, momentarily energized solenoid or electric motor-operated mechanism, mechanically and electrically interlocked in both directions.

K. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.

1. Switch Action: Double throw; mechanically held in both directions.
2. Contacts: Silver composition or silver alloy for load-current switching. Conventional automatic transfer-switch units, rated 225 A and higher, shall have separate arcing contacts.

2.3 AUTOMATIC TRANSFER SWITCHES

A. Comply with Level 1 equipment according to NFPA 110.

B. Switching Arrangement: Double-throw type, incapable of pauses or intermediate position stops during normal functioning, unless otherwise indicated.

C. Manual Switch Operation: Under load, with door closed and with either or both sources energized. Transfer time is same as for electrical operation. Control circuit automatically disconnects from electrical operator during manual operation.

D. Signal-Before-Transfer Contacts: A set of normally open/normally closed dry contacts operates in advance of retransfer to normal source. Interval is adjustable from 1 to 30 seconds.

E. Digital Communication Interface: Matched to capability of remote annunciator or annunciator and control panel.

F. Open Transition In-Phase Transfer ATS

1. Factory-wired, internal relay controls transfer so it occurs only when the two sources are synchronized in phase. Relay compares phase relationship and frequency difference between normal and emergency sources and initiates transfer when both sources are within 15 electrical degrees, and only if transfer can be completed within 60 electrical degrees. Transfer is initiated only if both sources are within 2 Hz of nominal frequency and 70 percent or more of nominal voltage

G. Motor Disconnect and Timing Relay: Controls designate starters so they disconnect motors before transfer and reconnect them selectively at an adjustable time interval after transfer. Control connection to motor starters is through wiring external to automatic transfer switch. Time delay for reconnecting individual motor loads is adjustable between 1 and 60 seconds, and settings are as indicated. Relay contacts handling motor-control circuit inrush and seal currents are rated for actual currents to be encountered.

2.4 AUTOMATIC TRANSFER-SWITCH FEATURES

A. Under-voltage Sensing for Each Phase of Normal Source: Senses low phase-to-ground voltage on each phase. Pickup voltage is adjustable from 85 to 100 percent of nominal, and dropout voltage is adjustable from 75 to 98 percent of pickup value. Factory set for pickup at 90 percent and dropout at 85 percent.

B. Time delay for override of normal-source voltage sensing delays transfer and engine start signals. Adjustable from zero to six seconds, and factory set for one second.

C. Voltage/Frequency Lockout Relay: Prevents premature transfer to generator. Pickup voltage is adjustable from 85 to 100 percent of nominal. Factory set for pickup at 90 percent. Pickup frequency is adjustable from 90 to 100 percent of nominal. Factory set for pickup at 95 percent.

D. Time Delay for Retransfer to Normal Source: Adjustable from 0 to 30 minutes, and factory set for 10 minutes. Provides automatic defeat of delay on loss of voltage or sustained under voltage of emergency source, provided normal supply has been restored. Upon permission by normal

source monitor by alternative source monitor: 0 to 30 seconds adjustable. E. Test Switch: Simulates normal-source failure.

F. Switch-Position Pilot Lights: Indicate source to which load is connected.

G. Source-Available Indicating Lights: Supervise sources via transfer-switch normal- and emergency-source sensing circuits.

1. Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."
2. Emergency Power Supervision: Red light with nameplate engraved "Emergency Source Available."

H. Unassigned Auxiliary Contacts: Two normally open, single-pole, double-throw contacts for each switch position, rated 10 A at 480-V ac.

I. Engine Starting Contacts: One isolated and normally closed, and one isolated and normally open; rated 10 A at 32-V dc minimum.

J. Engine Shutdown Contacts: Instantaneous; shall initiate shutdown sequence at remote engine generator controls after retransfer of load to normal source.

K. Engine-Generator Exerciser: Solid-state, programmable-time switch starts engine generator and transfers load to it from normal source for a preset time, then retransfers and shuts down engine after a preset cool-down period. Initiates exercise cycle at preset intervals adjustable from 7 to 30 days. Running periods are adjustable from 10 to 30 minutes. Factory settings are for 7-day exercise cycle, 20-minute running period, and 5-minute cool-down period. Exerciser features include the following:

1. Exerciser Transfer Selector Switch: Permits selection of exercise with and without load transfer.
2. Push-button programming control with digital display of settings.
3. Integral battery operation of time switch when normal control power is not available.

J. Elevator control interface auxiliary contacts. Transfer switches serving elevators shall be provided with auxiliary contacts designed to provide emergency system status to the elevator controllers. These contacts are in addition to the contacts required elsewhere in this specification. Required auxiliary contacts are as follows:

1. Emergency Power signal contact. This shall be a form “C” contact that will change state and maintain its state as long as the transfer switch has transferred to the emergency power source.
2. Pre-transfer warning signal contact. This contact shall be activated prior to the operation of the transfer switch, in either direction. These contacts shall change state prior to the transfer of power for a period of time as determined by the elevator installer, typically in the range of 10 to 20 seconds. These contacts shall reset to their normal state after the

transfer has taken place. The pre-transfer warning signal shall not delay transfer for a time greater than allowed by the applicable codes

2.6 FINISHES

A. Enclosures: Manufacturer's standard enamel over corrosion-resistant pretreatment and primer.

2.7 SOURCE QUALITY CONTROL

A. Factory test and inspect components, assembled switches, and associated equipment. Ensure proper operation. Check transfer time and voltage, frequency, and time-delay settings for compliance with specified requirements. Perform dielectric strength test complying with NEMA ICS 1.

PART 3 - EXECUTION

3.2 INSTALLATION

A. Comply with mounting and anchoring requirements specified in Division 26 Section "Vibration and Seismic Controls for Electrical System."

1. Concrete Bases: 4 inches high, reinforced, with chamfered edges. Extend base minimum of 4 inches in all directions beyond the maximum dimensions of switch, unless otherwise indicated. Cast anchor-bolt inserts into bases. Comply with Division 03 Section "Cast in Place Concrete."

B. Annunciator and Control Panel Mounting: Flush in wall, unless otherwise indicated.

C. Identify components according to Division 26 Section "Common Work Results For Electrical and Electrical Identification."

3.3 WIRING TO REMOTE COMPONENTS

A. Match type and number of cables and conductors to control and communication requirements of transfer switches as recommended by manufacturer. Increase raceway sizes at no additional cost to University if necessary to accommodate required wiring.

3.4 CONNECTIONS

A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Division 26 Section "Low Voltage Electrical Power Conductors and Cables."

C. Tighten electrical connectors and terminals according to manufacturer's published torque tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

3.5 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.

B. Perform the following field tests and inspections and prepare test reports:

1. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.
2. Measure insulation resistance phase-to-phase and phase-to-ground with insulation resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.

    a. Check for electrical continuity of circuits and for short circuits.
    b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
    c. Verify that manual transfer warnings are properly placed.
    d. Perform manual transfer operation.

4. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.

    a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.
    b. Simulate loss of phase-to-ground voltage for each phase of normal source.
    c. Verify time-delay settings.
    d. Verify pickup and dropout voltages by data readout or inspection of control settings.

    e. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.
    f. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cooldown and shutdown.

C. Coordinate tests with tests of generator and run them concurrently.

D. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation and contact resistances and time delays. Attach a label or tag to each tested component indicating satisfactory completion of tests.

E. Remove and replace malfunctioning units and retest as specified above.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train University's maintenance personnel to adjust, operate, and maintain transfer switches and related equipment as specified below. Refer to Division 01 Sections "Closeout Procedures" and "Demonstration and Training."

1. Coordinate this training with that for generator equipment.

END OF SECTION 26 3600

SECTION 26 4313 - TRANSIENT-VOLTAGE SUPPRESSION FOR LOW-VOLTAGE ELECTRICAL POWER CIRCUITS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes transient voltage surge suppressors for low-voltage power, control, and communication equipment.

B. Related Sections include the following:

1. Division 26 Section "Wiring Devices" for devices with integral transient voltage surge suppressors.
2. Division 26 Section "Panelboards" for factory-installed transient voltage surge suppressors.
3. Division 26 Section "Switchboards" for factory-installed transient voltage surge suppressors.

1.2 DEFINITIONS

A. ATS: Acceptance Testing Specifications.

B. SVR: Suppressed voltage rating.

C. TVSS: Transient voltage surge suppressor(s), both singular and plural; also, transient voltage surge suppression.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated. Include rated capacities; shipping, installed, and operating weights; furnished specialties; and accessories. Submit with switchboards submittal.

1.4 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member Company of NETA or an NRTL.

1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency, and marked for intended location and application.

C. Comply with IEEE C62.41.2 and test devices according to IEEE C62.45.

D. Comply with NEMA LS 1.

E. Comply with UL 1283 and UL 1449.

F. Comply with NFPA 70.

1.5 PROJECT CONDITIONS

A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:

1. Notify University's Representative 14 days in advance of proposed electrical service interruptions.
2. Do not proceed with interruption of electrical service without the University's Representative's written permission.

B. Service Conditions: Rate TVSS devices for continuous operation under the following conditions unless otherwise indicated:

1. Maximum Continuous Operating Voltage: Not less than 115 percent of nominal system operating voltage.
2. Operating Temperature: 30 to 120 deg F.
3. Humidity: 0 to 85 percent, noncondensing.
4. Altitude: Less than 20,000 feet above sea level.

1.6 COORDINATION

A. Coordinate TVSS devices with Division 26 Section "Electrical Power Monitoring and Control."

1.7 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of surge suppressors that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Two years from date of Substantial Completion.

B. Special Warranty for Cord-Connected, Plug-in Surge Suppressors: Manufacturer's standard form in which manufacturer agrees to repair or replace electronic equipment connected to circuits protected by surge suppressors.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Manufacturers of a Broad Line of Suppressors:

a. Advanced Protection Technologies, Inc.
b. Current Technology, Inc.
c. Cutler-Hammer, Inc.
d. Innovative Technology, Inc.
e. Intermatic, Inc.
f. Northern Technologies.
g. Siemens Energy & Automation.
h. Square D Co.
i. General Electric Co.
j. Or equal.

2. Manufacturers of Category A and Telephone/Data Line Suppressors:

a. MCG Electronics, Inc.
b. NTE Electronics, Inc.
c. Telebyte Technology, Inc.

B. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 SERVICE ENTRANCE SUPPRESSORS

A. Surge Protective Device Description: Non-modular type with the following features and accessories:

1. LED indicator lights for power and protection status Copper lugs.
2. Audible alarm, with silencing switch, to indicate when protection has failed.
3. One set of dry contacts rated at 5 a, 250-V ac, for remote monitoring of protection status.

B. Surge Protective Device Description: Modular design with field-replaceable modules and the following features and accessories:

1. Fuses, rated at 200-kA interrupting capacity.
2. Fabrication using bolted compression lugs for internal wiring Copper lugs.
3. Integral disconnect switch.

4. Arrangement with copper busbars and for bolted connections to phase buses, neutral bus, and ground bus.
5. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
6. Red and green LED indicator lights for power and protection status.
7. Audible alarm, with silencing switch, to indicate when protection has failed.
8. One set of dry contacts rated at 5 a and 250-V ac, for remote monitoring of protection status. Coordinate with building power monitoring and control system.
9. Surge-event operations counter.

C. Peak Single-Impulse Surge Current Rating: 240kA per phase.

D. Connection Means: Permanently wired.

E. Protection modes and UL 1449 clamping voltage for grounded wye circuits with voltages of 480Y/277 and 208Y/120; 3-phase, 4-wire circuits, shall be as follows:

1. Line to Neutral: 800 V for 480Y/277 and 400 V for 208Y/120.
2. Line to Ground: 800 V for 480Y/277 and 400 V for 208Y/120.
3. Neutral to Ground: 800 V for 480Y/277 and 400 V for 208Y/120.

2.4 CONTROL AND DATA TERMINALS

A. Protectors for copper control, data, and telephone conductors entering the building from the outside shall be as recommended by the manufacturer for the type of line being protected.

2.5 ENCLOSURES

A. NEMA 250, with type matching the enclosure of panel or device being protected.

PART 3 - EXECUTION

3.1 INSTALLATION OF SURGE PROTECTIVE DEVICES

A. Install devices at service entrance on load side, with ground lead bonded to service entrance ground.

B. Install devices for panelboard with conductors between suppressor and points of attachment as short and straight as possible. Do not exceed manufacturer's recommended lead length. Do not bond neutral and ground.

1. Provide multipole, 15-A circuit breaker as a dedicated disconnect for the suppressor, unless otherwise indicated, or direct bus mounted, internal to electrical equipment.

3.2 CONNECTIONS

A. Tighten electrical connectors and terminals according to manufacturer's published torque tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

3.3 FIELD QUALITY CONTROL

1. Verify that electrical wiring installation complies with manufacturer's installation requirements.

END OF SECTION 26 4313

SECTION 26 5100 - INTERIOR LIGHTING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Interior lighting fixtures with lamps and ballasts.
2. Lighting fixtures mounted on exterior building surfaces.
3. Emergency lighting units.
4. Exit signs.
5. Bi-level Lighting fixtures installed in stairwells.
6. Accessories, including fluorescent fixture dimmers, occupancy sensors, lighting fixture retrofitting, fail-safe feature and lamp conditioning.

B. Related Sections include the following:

1. Division 26 Section "Lighting Control Devices" for manual or programmable control systems employing low-voltage control wiring or data communication circuits.
2. Division 26 Section "Wiring Devices" for manual wall-box dimmers.
3. Division 26 Section "Lighting Control Devices" for automatic control of lighting, including time switches, photoelectric relays, occupancy sensors, and multipole lighting relays and contactors.
4. Division 26 Section "Dimming Controls" for architectural dimming systems.

1.2 DEFINITIONS

A. BF: Ballast factor. Ratio of light output of a given lamp(s) operated by the subject ballast to the light output of the same lamp(s) when operated on an ANSI reference circuit.

B. CRI: Color rendering index.

C. CU: Coefficient of utilization.

D. HID: High-intensity discharge.

E. LER: Luminaire efficiency rating, which is calculated according to NEMA LE 5. This value can be estimated from photometric data using the following formula:

1. LER is equal to the product of total rated lamp lumens times BF times luminaire efficiency, divided by input watts.

F. RCR: Room cavity ratio.

1.3 SUBMITTALS

A. Product Data: For each type of lighting fixture scheduled, arranged in order of fixture designation. Include data on features, accessories, finishes.

B. Coordination Drawings: Submit shop drawings per BIM Execution Plan under section “BIM Specifications”.

C. Operation and Maintenance Data: Provide record submittal with final fixture selections.

1.4 QUALITY ASSURANCE

A. Comply with CEC (NFPA 70).

B. FMG Compliance: Fixtures for hazardous locations shall be listed and labeled for indicated class and division of hazard by FMG.

C. CBC 2013 Compliance: Comply with visibility and luminance requirements for exit signs.

1.5 COORDINATION

A. Coordinate layout and installation of lighting fixtures and suspension system with other construction that penetrates ceilings or is supported by them, including HVAC equipment, fire suppression system, and partition assemblies.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Products: Subject to compliance with requirements, provide products by one of the manufacturers specified.
2. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 EXIT SIGNS

A. General: Comply with UL 924; for sign colors and lettering size, comply with the light fixture schedule.

B. Internally Lighted Signs:

1. Lamps for AC Operation: Light-emitting diodes, life.

2.3 FIXTURE SUPPORT COMPONENTS

A. Comply with Division 26 Section "Common Work Results for Electrical" for channel- and angle-iron supports and nonmetallic channel and angle supports.

2.5 REQUIREMENTS FOR INDIVIDUAL LIGHTING FIXTURES

A. Refer to fixture schedule on the drawings.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Fixtures: Set level, plumb, and square with ceilings and walls.

1. Install minimum ceiling support system rods or wires for each fixture.

B. Air-Handling Fixtures: Install with dampers closed and ready for adjustment.

C. Adjust directional fixtures to provide required light intensities.

3.2 FIELD QUALITY CONTROL

A. Inspect each installed fixture for damage. Replace damaged fixtures and components.

B. Verify normal operation of each fixture after installation.

C. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify normal transfer to emergency power source (generator) and retransfer to normal.

D. Corroded Fixtures: During warranty period, replace fixtures that show any signs of corrosion.

E. Louver shall be protected from construction contaminants by polyethylene cover until substantial completion.

END OF SECTION 26 5100

SECTION 26 5100 - INTERIOR LIGHTING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Interior lighting fixtures with lamps and ballasts.
2. Lighting fixtures mounted on exterior building surfaces.
3. Emergency lighting units.
4. Exit signs.
5. Bi-level Lighting fixtures installed in stairwells.
6. Accessories, including fluorescent fixture dimmers, occupancy sensors, lighting fixture retrofitting, fail-safe feature and lamp conditioning.

B. Related Sections include the following:

1. Division 26 Section "Lighting Control Devices" for manual or programmable control systems employing low-voltage control wiring or data communication circuits.
2. Division 26 Section "Wiring Devices" for manual wall-box dimmers.
3. Division 26 Section "Lighting Control Devices" for automatic control of lighting, including time switches, photoelectric relays, occupancy sensors, and multipole lighting relays and contactors.
4. Division 26 Section "Dimming Controls" for architectural dimming systems.

1.2 DEFINITIONS

A. BF: Ballast factor. Ratio of light output of a given lamp(s) operated by the subject ballast to the light output of the same lamp(s) when operated on an ANSI reference circuit.

B. CRI: Color rendering index.

C. CU: Coefficient of utilization.

D. HID: High-intensity discharge.

E. LER: Luminaire efficiency rating, which is calculated according to NEMA LE 5. This value can be estimated from photometric data using the following formula:

1. LER is equal to the product of total rated lamp lumens times BF times luminaire efficiency, divided by input watts.

F. RCR: Room cavity ratio.

1.3 SUBMITTALS

A. Product Data: For each type of lighting fixture scheduled, arranged in order of fixture designation. Include data on features, accessories, finishes, and the following:

1. Physical description of fixture, including dimensions and verification of indicated parameters.
2. Emergency lighting unit battery and charger.
3. Energy-efficiency data.
4. Air and Thermal Performance Data: For air-handling fixtures. Furnish data required in "Submittals" Article in Division 23 Section "Diffusers, Registers, and Grilles."
5. Sound Performance Data: For air-handling fixtures. Indicate sound power level and sound transmission class in test reports certified according to standards specified in Division 23 Section "Diffusers, Registers and Grilles."
6. Life, output, and energy-efficiency data for Lamps.
7. Photometric data, in IESNA format, based on laboratory tests of each lighting fixture type, outfitted with lamps, ballasts, and accessories identical to those indicated for the lighting fixture as applied in this Project.

    a. For indicated fixtures, photometric data shall be certified by a qualified independent testing agency. Photometric data for remaining fixtures shall be certified by the manufacturer.
    b. Photometric data shall be certified by a manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program (NVLAP) for Energy Efficient Lighting Products. B. Wiring Diagrams: Power, signal, and control wiring.

B. Coordination Drawings: Submit shop drawings per BIM Execution Plan under section “BIM Specifications”.

C. Operation and Maintenance Data: For lighting equipment and fixtures to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Catalog data for each fixture. Include the diffuser, ballast, and lamps installed in that fixture.

1.4 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC (NFPA 70), Article 100, by a testing agency acceptable to University's Representative, and marked for intended use.

B. Comply with CEC (NFPA 70).

C. FMG Compliance: Fixtures for hazardous locations shall be listed and labeled for indicated class and division of hazard by FMG.

D. NFPA 101 Compliance: Comply with visibility and luminance requirements for exit signs.

1.5 COORDINATION

A. Coordinate layout and installation of lighting fixtures and suspension system with other construction that penetrates ceilings or is supported by them, including HVAC equipment, fire suppression system, and partition assemblies.

1.6 WARRANTY

A. Special Warranty for Emergency Lighting Unit Batteries: Manufacturer's standard form in which manufacturer of battery-powered emergency lighting unit agrees to repair or replace components of rechargeable batteries that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Emergency Lighting Unit Batteries: 2 years from date of Substantial Completion. Full warranty shall apply for first year, and prorated warranty for the remaining nine years.
2. Warranty Period for Emergency Fluorescent Ballast and Self-Powered Exit Sign Batteries: Seven years from date of Substantial Completion. Full warranty shall apply for first year, and prorated warranty for the remaining six years.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Products: Subject to compliance with requirements, provide products by one of the manufacturers specified.
2. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 LIGHTING FIXTURES AND COMPONENTS, GENERAL

A. Recessed Fixtures: Comply with NEMA LE 4 for ceiling compatibility for recessed fixtures.

B. Fluorescent Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5 and NEMA LE 5A as applicable.

C. HID Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5B.

D. Metal Parts: Free of burrs and sharp corners and edges.

E. Sheet Metal Components: Steel, unless otherwise indicated. Form and support to prevent warping and sagging.

F. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position. Provide positive cam action steel latches and safety lock T-hinges.

G. Reflecting surfaces shall have minimum reflectance as follows, unless otherwise indicated:

1. White Surfaces: 85 percent.
2. Specular Surfaces: 83 percent.
3. Diffusing Specular Surfaces: 75 percent.
4. Laminated Silver Metallized Film: 90 percent.

I. Diffusers, Covers, and Globes:

1. Acrylic Lighting Diffusers: 100 percent virgin acrylic plastic. High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.

a. Lens Thickness: At least 0.125 inch minimum, unless otherwise indicated.
b. UV stabilized.

2. Parabolic-type reflector lens shall have minimum three-inch anodized aluminum cubes except it can be smaller for areas with glare protection requirement.
3. Glass: Annealed crystal glass, unless otherwise indicated.

J. Electromagnetic-Interference Filters: A component of fixture assembly. Suppress conducted electromagnetic-interference as required by MIL-STD-461E. Provide radio-interference filter Sprague Cat JN-14-16351. Fabricate lighting fixtures with one filter on each ballast indicated to require a filter.

K. Air-Handling Fluorescent Fixtures: For use with plenum ceiling for air return and heat extraction and for attaching an air-diffuser-boot assembly specified in Division 23 Section "Diffusers, Registers, and Grilles."

1. Air Supply Units: Slots in one or both side trims join with air-diffuser-boot assemblies.
2. Heat Removal Units: Air path leads through lamp cavity.
3. Combination Heat Removal and Air Supply Unit: Heat is removed through lamp cavity at both ends of the fixture door with air supply same as for air supply units.
4. Dampers: Operable from outside fixture for control of return-air volume.
5. Static Fixtures: Air supply slots are blanked off, and fixture appearance matches active units.

2.3 LIGHTING FIXTURES

A. Fixtures shall generate comply with:

1. Minimum BF: 0.88 unless noted otherwise.
2. Minimum LER: 1.466 unless noted otherwise.

2.4 LED LUMINARES

A. LED luminaires shall provide a continuous and controllable light source. Lamp output and dimensions shall be in accordance with contract drawings and specifications. LED luminaire lumen output will be in accordance with the specifications and shall not depreciate more than 20% after 10,000 hours of use. Rated lumen output for LED luminaires to operate in ambient temperature of minus 4°F -20°C to 122°F +50°C. Luminaires to have minimum life of 50,000 hours.

B. All LEDs used in the LED luminaires will be of high brightness and proven quality. All LEDs shall be driven digitally with pulse width modulation control to prolong life and maintain consistency of lumen output.

C. All connections to luminaires will be reverse polarity protected and provide high voltage protection in the event connections are reversed or shorted during the installation process.

2.5 LED DRIVES (POWER SUPPLIES)

A. All LED drivers to be compatible with LEDs. All LED luminaires and drivers (power supplies) shall be furnished by single manufacture to insure compatibility.

B. Drivers shall be integral to the luminaire, unless noted otherwise.

C. Electric Characteristics (at 77°F ambient temperature)

1. Input Voltage Range - 108V to 132V
2. Efficiency Minimum – 80%
3. Output Current Regulation Range (+/-) 5%A
4. Total Harmonic Distortion (THD) – 20% maximum
5. Power Factor – 0.9 minimum
6. Crest Factor (LED Current) – 1.5 maximum
7. FCC Class B for Conducted EMI
8. FCC Class A for Radiated EMI
9. Drivers life – 50,000 hours minimum

2.6 FLUORESCENT LAMP BALLASTS

A. Description: Include the following features, unless otherwise indicated:

1. Designed for type and quantity of lamps indicated at full light output except for emergency lamps powered by in-fixture battery-packs.

B. Electronic ballasts for linear lamps shall include the following features, unless otherwise indicated:

1. Comply with NEMA C82.11.
2. Ballasts shall be UL Listed, Class 'P' automatic resetting electronic type and operate lamps at a frequency above 20 KHz from an input frequency of 60 Hz and shall deliver lamp manufacturer's normal rated lamp life. Ballast size, mounting configuration, and audible noise levels produced shall be lower than CBM certified ballast for same application. Ballasts shall be "A" sound rated.
3. Ballasts shall be designed to operate two, three, and/or four, four foot, 32 watt, Super T-8 fluorescent lamps. Ballasts shall have parallel lamp connection capable of operating remaining lamp(s) at full output if one or more lamps within the same luminaire fail or are removed.
4. Utilize reduced harmonic ballasts with an input power factor (ratio of actual power to apparent power) above 0.98, and harmonic distortion less than 15 percent Total Harmonic Distortion (THD). When harmonic distortions of less than 10 percent THD are required, provide high-efficiency ballasts with a power factor above 0.99.
5. Ballast Type: Rapid start, input power factor (ratio of actual power to apparent power) .98 and above, and harmonic distortion less than 15 percent Total Harmonic Distortion (THD). When harmonic distortions of less than 10 percent THD are required, provide high-efficiency ballasts with a power factor above 0.99.
6. Programmed Start: Ballasts with two-step lamp starting to extend life of frequently started lamps.
7. Sound Rating: A.
8. Total harmonic distortion rating of less than 10 percent according to NEMA C82.11.

9. Ballast shall provide soft/stable start of rapid start lamps and maintain cathode heat during operation. The ballast shall provide an isolated output to the lamps. Ballast case shall be positively grounded to the light fixture metal housing.
10. Voltage: Ballasts shall consistently start and operate lamps from a supply line voltage of 277 volts within plus or minus 10 percent except for buildings with 208-volt service. The light output wattage shall not vary by more than 2 percent over the 10 percent variation in line voltage.
11. Transient Voltage Protection: IEEE C62.41, Category A.
12. Operating Frequency: 20 kHz or higher.
13. Lamp Current Crest Factor: Less than 1.7.
14. Parallel Lamp Circuits: Multiple lamp ballasts connected to maintain full light output on surviving lamps if one or more lamps fail.
15. Fusing: Ballasts shall be individually fused inside each lighting fixture with insulated fuse holder. The sign on the fixture interior shall read "BALLASTS ARE FUSED".

C. Electromagnetic ballasts for linear lamps shall have the following features, unless otherwise indicated:

1. Comply with NEMA C82.1.
2. Type: Energy-saving, high power factor, Class P, automatic-reset thermal protection.
3. Ballast Manufacturer Certification: Indicated by label.

D. Ballasts for compact lamps in recessed fixtures shall have the following features, unless otherwise indicated:

1. Type: Electronic.
2. Power Factor: 98 percent, minimum.
3. Flicker: Less than 5 percent.
4. Lamp Current Crest Factor: Less than 1.7.
5. Electronic Ballast Operating Frequency: 20 kHz or higher.
6. Lamp end-of-life detection and shutdown circuit.
7. Transient Protection: Comply with IEEE C62.41 for Category A1 locations.
8. Interference: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for non-consumer equipment.

E. Ballasts for compact lamps in non-recessed fixtures shall include the following features, unless otherwise indicated:

1. Power Factor: 90 percent, minimum.
2. Ballast Coil Temperature: 65 deg C, maximum.
3. Transient Protection: Comply with IEEE C62.41 for Category A1 locations.

F. Ballasts for dimmer-controlled fixtures shall comply with general and fixture-related requirements above for electronic ballasts and the following features:

1. Dimming Range: 100 to 10 percent of rated lamp lumens 100 to 1 percent where projection equipment is utilized..
2. Ballast Input Watts: Can be reduced to 20 percent of normal.

3. Compatibility: Certified by manufacturer for use with specific dimming system indicated.
4. Dimming ballasts shall be designed to operate one, two or three lamps.
5. Dimming ballast lead length shall not exceed seven (7) feet for Super T-8 lamps.
6. Dimming manufacturer shall approve dimming ballasts for use with the specified dimming equipment.
7. Dimming ballast manufacturers shall have been producing electronic dimming ballasts for a minimum of five years, and have ISO 9001 quality certification. G. Ballasts for Low-Temperature Environments:

1. Temperatures 0 deg F and Higher: Electronic type rated for 0 deg F minus 17 deg C starting temperature.

H. Ballasts for Low Electromagnetic-Interference Environments: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for consumer equipment.

2.7 HIGH-INTENSITY-DISCHARGE LAMP BALLASTS

A. Electromagnetic Ballast for Metal-Halide Lamps: Comply with ANSI C82.4 and UL 1029. Include the following features, unless otherwise indicated:

1. Ballast Circuit: Constant-wattage autotransformer or regulating high-power-factor type.
2. Minimum Starting Temperature: Minus 22 deg F for single-lamp ballasts.
3. Normal Ambient Operating Temperature: 104 deg F.
4. Open-circuit operation that will not reduce average life.
5. Low-Noise Ballasts: Manufacturers' standard epoxy-encapsulated models designed to minimize audible fixture noise.

B. Electronic Ballast for Metal-Halide Lamps: Include the following features unless otherwise indicated:

1. Lamp end-of-life detection and shutdown circuit.
2. Sound Rating: A.
3. Total Harmonic Distortion Rating: Less than 15 percent.
4. Transient Voltage Protection: IEEE C62.41, Category A or better.
5. Lamp Current Crest Factor: 1.5 or less.
6. Power Factor: 0.90 or higher.
7. Interference: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for nonconsumer equipment.
8. Protection: Class P thermal cutout.
9. Retain subparagraph and associated subparagraphs below for bi-level ballasts.
10. Bi-Level Dimming Ballast: Ballast circuit and leads provide for remote control of the light output of the associated fixture between high- and low-level and off.

    a. High-Level Operation: 100 percent of rated lamp lumens.
    b. Low-Level Operation: 35 percent of rated lamp lumens.

c. Compatibility: Certified by ballast manufacturer for use with specific bi-level control system and lamp type indicated. Certified by lamp manufacturer that ballast operating modes are free from negative effect on lamp life and colorrendering capability.

11. Continuous Dimming Ballast: Dimming range shall be from 100 to 35 percent of rated lamp lumens without flicker.

a. Ballast Input Watts: Reduced to a maximum of 50 percent of normal at lowest dimming setting.
b. Compatibility: Certified by manufacturer for use with specific dimming control system and lamp type indicated. Certified by lamp manufacturer that ballast operating modes are free from negative effect on lamp life and color-rendering capability.

C. Auxiliary Instant-On Quartz System: Factory-installed feature automatically switches quartz lamp on when fixture is initially energized and when power outages occur. System automatically turns quartz lamp off when HID lamp reaches approximately 60 percent light output.

D. High-Pressure Sodium Ballasts: Electromagnetic type, with solid-state igniter/starter. Igniterstarter shall have an average life in pulsing mode of 10,000 hours at an igniter/starter-case temperature of 90 deg C.

1. Instant-Restrike Device: Integral with ballast, or solid-state potted module, factory installed within fixture and compatible with lamps, ballasts, and mogul sockets up to 150 W.

a. Restrike Range: 105- to 130-V ac.
b. Maximum Voltage: 250-V peak or 150-V ac RMS.

2. Minimum Starting Temperature: Minus 40 deg F.
3. Open-circuit operation shall not reduce average lamp life.

2.8 EXIT SIGNS

A. General: Comply with UL 924; for sign colors and lettering size, comply with the University.

B. Internally Lighted Signs:

1. Lamps for AC Operation: Light-emitting diodes, 70,000 hours minimum of rated lamp life.

C. Self-Powered Exit Signs (Battery Type): Integral automatic charger in a self-contained power pack.

1. Battery: Sealed, maintenance-free, nickel-cadmium type with special warranty.
2. Charger: Fully automatic, solid-state type with sealed transfer relay.
3. Operation: Relay automatically energizes lamp from battery when circuit voltage drops to 80 percent of nominal voltage or below. When normal voltage is restored, relay

disconnects lamps from battery, and battery is automatically recharged and floated on charger.

4. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
5. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
6. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.
7. Integral Self-Test: Factory-installed electronic device automatically initiates coderequired test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.
8. Master/Remote Sign Configurations:

    a. Master Unit: Comply with requirements above for self-powered exit signs, and provide additional capacity in LED power supply for power connection to remote unit.
    b. Remote Unit: Comply with requirements above for self-powered exit signs, except omit power supply, battery and test features. Arrange to receive full power requirements from master unit. Connect for testing concurrently with master unit as a unified system.

2.9 EMERGENCY LIGHTING UNITS

A. General: Self-contained units complying with UL 924.

1. Battery: Sealed, maintenance-free, lead-acid type with minimum 10-year nominal life and special warranty.
2. Charger: Fully automatic, solid-state type with sealed transfer relay.
3. Operation: Relay automatically turns lamp on when power supply circuit voltage drops to 80 percent of nominal voltage or below. Lamp automatically disconnects from battery when voltage approaches deep-discharge level. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.
4. Wire Guard: Where indicated, heavy-chrome-plated wire guard protects lamp heads or fixtures.
5. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
6. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
7. Integral Time-Delay Relay: Holds unit on for fixed interval of 15 when power is restored after an outage; time delay permits high-intensity-discharge lamps to restrike and develop adequate output.
8. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit

triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.

9. Integral Self-Test: Factory-installed electronic device automatically initiates code required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.

2.10 FLUORESCENT EMERGENCY LIGHTING FIXTURES

A. Internal Type: Self-contained, modular, battery-inverter unit factory mounted within fixture body. Comply with UL 924.

1. Emergency Connection: Operate one fluorescent lamp continuously. Connect unswitched circuit to battery-inverter unit and switched circuit to fixture ballast.
2. Night Light Connection: Operate one fluorescent lamp continuously.
3. Test Switch and Light-Emitting-Diode Indicator Light: Visible and accessible without opening fixture or entering ceiling space.
4. Battery: Sealed, maintenance-free, nickel-cadmium type with minimum seven-year nominal life.
5. Charger: Fully automatic, solid-state, constant-current type.

B. Central Type: Factory installed, full light output, fluorescent emergency ballast to operate lamps indicated from a remote emergency power source.

1. Emergency Connection: Operate one fluorescent lamp continuously. Connect unswitched circuit to battery-inverter unit and switched circuit to fixture ballast.
2. Night Light Connection: Operate one fluorescent lamp in a remote fixture continuously.
3. Battery: Sealed, maintenance-free, nickel-cadmium type with minimum seven-year nominal life.
4. Charger: Fully automatic, solid-state, constant-current type.
5. Housing: NEMA 250, Class 1 enclosure or as required by University's Representative.

2.11 BI-LEVEL STAIRWELL LIGHTING FIXTURES

A. Internal Type: Self-contained, modular, battery-inverter unit factory mounted within fixture body. Occu-Smar lighting fixture by LaMar Lighting Co., or equal. Comply with UL 924.

1. Emergency Connection: Operate one fluorescent lamp continuously. Connect unswitched circuit to battery-inverter unit and switched circuit to fixture ballast.
2. Night Light Connection: Operate one fluorescent lamp continuously.
3. Test Switch and Light-Emitting-Diode Indicator Light: Visible and accessible without opening fixture or entering ceiling space.
4. Battery: Sealed, maintenance-free, nickel-cadmium type with minimum seven-year nominal life.
5. Charger: Fully automatic, solid-state, constant-current type.
6. Fail-safe switch switches light level to high (100%) if sensor is physically damaged.
7. High-frequency, extremely sensitive ultra-sonic, internally mounted.

2.12 FLUORESCENT LAMPS

A. Low-Mercury Lamps: Comply with Federal toxic characteristic leaching procedure test, and yield less than 0.2 mg of mercury per liter, when tested according to NEMA LL 1.

B. Premium T-8 rapid-start low-mercury lamps, rated 32 W maximum, nominal length of 48 inches 2800 initial lumens (minimum), CRI of 85 (minimum), color temperature of 4100 K, and average rated life of 24,000 hours, unless otherwise indicated.

C. Compact Fluorescent Lamps: 4-Pin low mercury, CRI 82 (minimum), color temperature 2700, average rated life of 10,000 hours at 3 hours operation per start and if required suitable for use with dimming ballasts, unless otherwise indicated.

1. 13 W: T4, double or triple tube, rated 900 initial lumens (minimum).
2. 18 W: T4, double or triple tube, rated 1200 initial lumens (minimum).
3. 26 W: T4, double or triple tube, rated 1800 initial lumens (minimum).
4. 32 W: T4, triple tube, rated 2400 initial lumens (minimum).
5. 42 W: T4, triple tube, rated 3200 initial lumens (minimum).
6. 55 W: T4, triple tube, rated 4300 initial lumens (minimum).

2.13 HIGH-INTENSITY-DISCHARGE LAMPS

A. High-Pressure-Sodium Lamps: NEMA C78.42, wattage and burning position as scheduled, CRI 21 (minimum), color temperature 1900, and average rated life of 24,000 hours.

1. Dual-Arc Tube Lamps: Arranged so only one of two arc tubes is lighted at one time and, when power is restored after an outage, the cooler arc tube, with lower internal pressure, lights instantly, providing an immediate 8 to 15 percent of normal light output.

B. Pulse-Start, Metal-Halide Lamps: Minimum CRI 65, and color temperature 4000 K.

C. Ceramic, Pulse-Start, Metal-Halide Lamps: Minimum CRI 80 and color temperature 4000 K.

D. Metal-Halide Lamps: ANSI C78.1372, wattage and burning position as scheduled, CRI 65 (minimum), and color temperature 4000.

2.14 EXIT SIGNS

A. Description: Comply with UL 924; for sign colors, visibility, luminance, and lettering size, comply with authorities having jurisdiction.

B. Internally Lighted Signs:

1. Lamps for AC Operation: LEDs, 50,000 hours minimum rated lamp life.
2. AC/Battery Powered Exit Signs: Integral automatic charger in a self-contained power pack.

a. Battery: Sealed, maintenance-free, nickel-cadmium type.

b. Charger: Fully automatic, solid-state type with sealed transfer relay.
c. Operation: Relay automatically energizes lamp from battery when circuit voltage drops to 80 percent of nominal voltage or below. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.
d. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
e. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.

2.15 FIXTURE SUPPORT COMPONENTS

Comply with Division 26 Section "Common Work Results for Electrical" for channel- and angle-iron supports and nonmetallic channel and angle supports.

A. Single-Stem Hangers: 1/2-inch steel tubing with swivel ball fittings and ceiling canopy. Finish same as fixture.

B. Twin-Stem Hangers: Two, 1/2-inch steel tubes with single canopy designed to mount a single fixture. Finish same as fixture.

C. Wires: ASTM A 641/A 641M, Class 3, soft temper, zinc-coated, 12 gage.

D. Wires For Humid Spaces: ASTM A 580/A 580M, Composition 302 or 304, annealed stainless steel, 12 gage.

E. Rod Hangers: 3/16-inch- minimum diameter, cadmium-plated, threaded steel rod.

F. Hook Hangers: Integrated assembly matched to fixture and line voltage and equipped with threaded attachment, cord, and locking-type plug.

G. Aircraft Cable Support: Use cable, anchorages, and intermediate supports recommended by fixture manufacturer.

2.16 FINISHES

A. Fixtures: Manufacturers' standard, unless otherwise indicated.

1. Paint Finish: Applied over corrosion-resistant treatment or primer, free of defects.
2. Metallic Finish: Corrosion resistant.
3. Interior: finished with high-gloss, based white enamel.
4. Material: metal body 22 gauge, metal endplate 20 gauge.

2.17 REQUIREMENTS FOR INDIVIDUAL LIGHTING FIXTURES

A. Refer to fixture schedule on the drawings.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Fixtures: Set level, plumb, and square with ceilings and walls. Install lamps in each fixture.

1. Install minimum ceiling support system rods or wires for each fixture.
2. Support Clips: Fasten to fixtures and to ceiling grid members at or near each fixture corner with clips that are UL listed for the application.
3. Fixtures of Sizes Less Than Ceiling Grid: Install as indicated on reflected ceiling plans or center in acoustical panel, and support fixtures independently with at least two 3/4inch metal channels spanning and secured to ceiling tees.
4. Install at least one independent support rod or wire from structure to a tab on lighting fixture. Wire or rod shall have breaking strength of the weight of fixture at a safety factor of 3.
5. Lighting fixtures installed in accessible ceilings with removable ceiling tiles shall have a junction box located within 6 feet of light fixture concealed above the ceiling. It shall have flexible steel conduit (maximum of 6 feet long) from junction box to fixture.

B. Each lighting fixture installed on or flush in non-accessible ceiling cavities shall have a junction box accessible through the fixture body, or by removing the light fixture body from ceiling, without damage to ceiling.

C. Suspended Fixture Support: As follows:

1. Pendants and Rods: Where longer than 48 inches, brace to limit swinging.
2. Stem-Mounted, Single-Unit Fixtures: Suspend with twin-stem hangers.
3. Continuous Rows: Suspend from cable.

D. Air-Handling Fixtures: Install with dampers closed and ready for adjustment.

E. Adjust directional fixtures to provide required light intensities.

3.2 CONNECTIONS

A. Tighten electrical connectors and terminals according to manufacturer's published torque tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

3.3 FIELD QUALITY CONTROL

A. Inspect each installed fixture for damage. Replace damaged fixtures and components.

B. Verify normal operation of each fixture after installation.

C. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify normal transfer to battery power source and retransfer to normal.

D. Corroded Fixtures: During warranty period, replace fixtures that show any signs of corrosion.

E. Louver shall be protected from construction contaminants by polyethylene cover until substantial completion.

END OF SECTION 26 5100

SECTION 26 5600 - EXTERIOR LIGHTING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Exterior luminaires with lamps and ballasts.
2. Luminaire-mounted photoelectric switches.
3. Poles and accessories.
4. Luminaire lowering devices.

B. Related Sections include the following:

1. Division 26 Section "Interior Lighting" for exterior luminaires normally mounted on exterior surfaces of buildings.

1.3 SUBMITTALS

A. Product Data: For each luminaire, pole and support component, arranged in the order of lighting unit designation. Include data on features, accessories, finishes.

B. Shop Drawings: Submit per BIM Execution Plan under section “BIM Specification”.

1.4 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC (NFPA 70), Article 100, by a testing agency acceptable to the University, and marked for intended use.

B. FMG Compliance: Fixtures for hazardous locations shall be listed and labeled for indicated class and division of hazard by FMG.

C. Comply with IEEE C2, "National Electrical Safety Code."

D. Comply with CEC (NFPA 70).

1.5 DELIVERY, STORAGE, AND HANDLING

A. Package aluminum poles for shipping.

PART 2 - PRODUCTS

2.1 LUMINAIRES, GENERAL REQUIREMENTS

A. Luminaires shall comply with UL 1598 and be listed and labeled for installation in wet locations by an NRTL acceptable to authorities having jurisdiction.

B. Metal Parts: Free of burrs and sharp corners and edges.

C. Housings: Rigidly formed, weather- and light-tight enclosures that will not warp, sag, or deform in use.

D. Luminaire Finish: Manufacturer's standard paint applied to factory-assembled and -tested luminaire before shipping.

2.2 FACTORY FINISHES

A. Finish: Manufacturer's standard paint applied to factory-assembled

2.3 POLES AND SUPPORT COMPONENTS, GENERAL REQUIREMENTS

A. Structural Characteristics: Comply with AASHTO LTS-4.

B. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements.

C. Mountings, Fasteners, and Appurtenances: Corrosion-resistant items compatible with support components.

D. Concrete Pole Foundations: Cast in place, with anchor bolts to match pole-base flange. Concrete, reinforcement, and formwork are specified in Division 03 Section "Cast-in-Place Concrete."

2.4 POLE ACCESSORIES

A. Base Covers: Manufacturers' standard metal units, arranged to cover pole's mounting bolts and nuts. Finish same as pole.

2.5 REQUIREMENTS FOR INDIVIDUAL EXTERIOR LIGHTING DEVICES

A. Refer to Exterior Lighting Fixtures Schedule on the drawings.

PART 3 - EXECUTION

3.1 LUMINAIRE INSTALLATION

A. Luminaire Attachment: Fasten luminaire to indicated structural supports.

B. Adjust luminaires that require field adjustment or aiming.

3.2 POLE INSTALLATION

A. Align pole foundations and poles for optimum directional alignment of luminaires and their mounting provisions on the pole.

3.3 CORROSION PREVENTION

A. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum by insulating fittings or treatment.

B. Steel Conduits: Comply with Division 26 Section "Raceway and Boxes for Electrical Systems." In concrete foundations, wrap conduit with 0.010-inch- thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

3.4 FIELD QUALITY CONTROL

A. Inspect each installed fixture for damage. Replace damaged fixtures and components.

B. Illumination Observations: Verify normal operation of lighting units after installing luminaires and energizing circuits with normal power source.

1. Verify operation of photoelectric controls.

END OF SECTION 26 5600

SECTION 26 5600 - EXTERIOR LIGHTING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Exterior luminaires with lamps and ballasts.
2. Luminaire-mounted photoelectric switches.
3. Poles and accessories.
4. Luminaire lowering devices.

B. Related Sections include the following:

1. Division 26 Section "Interior Lighting" for exterior luminaires normally mounted on exterior surfaces of buildings.

1.2 STRUCTURAL ANALYSIS CRITERIA FOR POLE SELECTION

A. Dead Load: Weight of luminaire and its horizontal and vertical supports, lowering devices, and supporting structure, applied as stated in AASHTO LTS-4.

B. Wind Load: Pressure of wind on pole and luminaire, calculated and applied as stated in AASHTO LTS-4.

1. Wind speed for calculating wind load for poles 50 feet or less in height is 70 mph.

1.3 SUBMITTALS

A. Product Data: For each luminaire, pole and support component, arranged in the order of lighting unit designation. Include data on features, accessories, finishes, and the following:

1. Physical description of luminaire, including materials, dimensions, effective projected area, and verification of indicated parameters.
2. Details of attaching luminaires and accessories.
3. Details of installation and construction.
4. Luminaire materials.
5. Photometric data based on laboratory tests of each luminaire type, complete with indicated lamps, ballasts, and accessories.

a. Photometric data shall be certified by manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program for Energy Efficient Lighting Products.

6. Ballasts, including energy-efficiency data.
7. Lamps, including life, output, and energy-efficiency data.
8. Materials, dimensions, and finishes of poles.
9. Means of attaching luminaires to supports, and indication that attachment is suitable for components involved.
10. Anchor bolts for poles.
11. Manufactured pole foundations.

B. Shop Drawings: Submit per BIM Execution Plan under section “BIM Specification”.

1.4 QUALITY ASSURANCE

A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in CEC (NFPA 70), Article 100, by a testing agency acceptable to the University, and marked for intended use.

C. FMG Compliance: Fixtures for hazardous locations shall be listed and labeled for indicated class and division of hazard by FMG.

D. Comply with IEEE C2, "National Electrical Safety Code."

E. Comply with CEC (NFPA 70).

1.5 DELIVERY, STORAGE, AND HANDLING

A. Package aluminum poles for shipping according to ASTM B 660.

B. Store poles on decay-resistant-treated skids at least 12 inches above grade and vegetation. Support poles to prevent distortion and arrange to provide free air circulation.

C. Retain factory-applied pole wrappings on metal poles until right before pole installation. For poles with nonmetallic finishes, handle with web fabric straps.

1.6 Special Warranty: Manufacturer’s standard form in which manufacturer agrees to repair or replace luminaires or components of luminaires and lamps that fail in materials or workmanship; corrode; or fade, stain, or chalk due to effects of weather or solar radiation within specified warranty period. Manufacturer may exclude lightning damage, hail damage, vandalism, abuse, or unauthorized repairs or alterations from special warranty coverage.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Products: Subject to compliance with requirements, provide one of the products specified.
2. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”,

Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 LUMINAIRES, GENERAL REQUIREMENTS

A. Luminaires shall comply with UL 1598 and be listed and labeled for installation in wet locations by an NRTL acceptable to authorities having jurisdiction.

B. Comply with IESNA RP-8 for parameters of lateral light distribution patterns indicated for luminaires.

C. Metal Parts: Free of burrs and sharp corners and edges.

D. Sheet Metal Components: Corrosion-resistant aluminum, unless otherwise indicated. Form and support to prevent warping and sagging.

E. Housings: Rigidly formed, weather- and light-tight enclosures that will not warp, sag, or deform in use. Provide filter/breather for enclosed luminaires.

F. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position. Doors shall be removable for cleaning or replacing lenses. Designed to disconnect ballast when door opens. G. Exposed Hardware Material: Stainless steel.

H. Plastic Parts: High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.

I. Light Shields: Metal Baffles, factory installed and field adjustable, arranged to block light distribution to indicated portion of normally illuminated area or field.

J. Reflecting surfaces shall have minimum reflectance as follows, unless otherwise indicated:

1. White Surfaces: 85 percent.
2. Specular Surfaces: 83 percent.
3. Diffusing Specular Surfaces: 75 percent.

K. Lenses and Refractors Gaskets: Use heat- and aging-resistant resilient gaskets to seal and cushion lenses and refractors in luminaire doors.

L. Luminaire Finish: Manufacturer's standard paint applied to factory-assembled and -tested luminaire before shipping. Where indicated, match finish process and color of pole or support materials.

M. Factory-Applied Finish for Steel Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
2. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.

    a. Color: As selected by University's Representative from manufacturer's full range.

N. Factory-Applied Finish for Aluminum Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
2. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20; and seal aluminum surfaces with clear, hard-coat wax.
3. Class I, Clear Anodic Finish: AA-M32C22A41 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
4. Class I, Color Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.

    a. Color: Dark bronze.

2.3 EXTERIOR LUMINAIRES

A. Luminaires:

1. Luminaire Street Lighting: General Electric model #M-250A-POWR/DOOR luminares, or equal. High-pressure sodium 250-Watt luminaries with self-contained 480-volt ballast shall be utilized along streets, roadways and pedestrian crossings.

    a. Street lighting shall be concrete standards with eight-foot aluminum davit arm. Ameron Contemporary series 1C1 octagonal pole anchor base, with anti-graffiti and sealer.

b. Minimum set back is 30 inches back from face of curb.
c. Check with the University when adding fixtures of this type to the campus existing power circuits.
d. Each fixture shall be fused with time delay fuse in a weatherproof holder in the head.

3. Parking Area Lighting: Gardco model Hardtop 22 inch CA series bronzed anodized finish or equal by Kim Lighting with high pressure sodium lamp (no known equal).

a. Poles should be 5-inch diameter, straight round aluminum with dark bronze with anodized finish as manufactured by Thomas Lighting.

4. Ground lighting: Landscape lighting of trees and plants shall be limited. Ground lighting must account for the very corrosive nature of the University soil. Do not recess metal fixture in the soil. Provide pedestal or non-metallic materials.

5. Pathway Lighting: Gardco model #CA 17-100HPS-480-BRA-HF or equal by Kim Lighting (no other known equal). Use 150 Watt lamps in well-lit areas when directed by the University.

a. Lighting standards shall be Gardco model #RA4-12-AF-D1-BRA, 4-inch diameter, aluminum bronze anodized, straight round pole with a round base cover.
b. Pathway lighting with bollards shall be minimized. If bollards are used in planting areas where exposure to pedestrian and bicycle traffic is minimal bollard shall be Ameron model #B20X1.5BP 113 LUC DB, 100 Watt 480V concrete aggregate type.
c. Pathway lighting for major spokes from the ring mall shall use campus theme light fixture. The University shall determine when a pathway is a major spoke.
d. University shall approve the use of handrail lighting. If used, it shall be C.W. Cole, cat #1586-5 with PL-13 lamps.

6. Exterior Lighting:

a. Exterior surface building mounted in public areas, Kim Lighting model WF 20, WF 31, or WF22. Lamps shall be high-pressure sodium or compact fluorescent.
b. Service area fixtures shall be Holophane Wallpack II with 150 Watt high pressure sodium lamp, model WL2K 15AHP MTBZ.

2.4 LUMINAIRE –MOUNTED PHOTOELECTRIC

RELAYS

A. UL 773 or UL 773A listed.

B. Contact Relays: Factory mounted, Single throw, designed to fail in the on position, and factory set to turn light unit on at 1.5 to 3 fc and off at 4.5 to 10 fc with 15-second minimum time delay. Contacts shall have directional lens in front of photocell to prevent fixed light sources to cause turnoff.

1. Relay with locking-type receptacle shall comply with NEMA C136.10.

2. Adjustable window slide for adjusting on-off set points.
3. Exterior lighting circuits shall be multi-staggered to minimize a total outage.

2.5 FLUORESCENT LAMP BALLASTS

A. Low-Temperature Ballast Capability: Rated by its manufacturer for reliable starting and operation of indicated lamp(s) at temperatures 0 deg F and higher.

B. Ballast Characteristics:

1. Power Factor: 90 percent, minimum.
2. Sound Rating: A.
3. Total Harmonic Distortion Rating: Less than 10 percent.
4. Electromagnetic Ballasts: Comply with ANSI C82.1, energy-saving, high power factor, Class P, automatic-reset thermal protection.
5. Case Temperature for Compact Lamp Ballasts: 65 deg C, maximum.
6. Transient-Voltage Protection: Comply with IEEE C62.41 Category A or better.

C. Low-Temperature Lamp Capability: Rated for reliable starting and operation with ballast provided at temperatures 0 deg F and higher.

D. Fluorescent Lamps: Low-mercury type. Comply with the EPA's toxicity characteristic leaching procedure test; shall yield less than 0.2 mg of mercury per liter when tested according to NEMA LL 1.

2.6 HIGH-INTENSITY-DISCHARGE LAMP BALLASTS

A. General: Comply with NEMA C82.4 and UL 1029. Shall include the following features, unless otherwise indicated:

1. Type: Constant-wattage autotransformer or regulating high-power-factor type.
2. Minimum Starting Temperature: Minus 22 deg F for single-lamp ballasts.
3. Normal Ambient Operating Temperature: 104 deg F.
4. Open-circuit operation will not reduce average life.
5. Ballast Fuses: One in each ungrounded power supply conductor. Voltage and current ratings as recommended by ballast manufacturer.

B. Auxiliary, Instant-On, Quartz System: Factory-installed feature automatically switches quartz lamp on when fixture is initially energized and when momentary power outages occur. Automatically turns quartz lamp off when high-intensity-discharge lamp reaches approximately 60 percent light output.

C. High-Pressure-Sodium Ballasts: Electromagnetic type with solid-state igniter/starter and capable of open-circuit operation without reduction of average lamp life. Solid-state igniter/starter with an average life in pulsing mode of 10,000 hours at an igniter/starter-case temperature of 90 deg C.

1. Instant Restrike Device: Integral with ballast, or solid-state potted module, mounted inside high-pressure-sodium fixture and compatible with high-pressure-sodium lamps, ballasts, and mogul sockets up to 150 W.
    a. Restrike Range: 105- to 130-V ac.
    b. Maximum Voltage: 250-V peak or 150-V ac RMS.
2. Single-Lamp Ballasts: Minimum starting temperature of minus 40 deg C.
3. Open-circuit operation will not reduce average life.

2.7 FLUORESCENT LAMPS

A. Compact Fluorescent Lamps: CRI 80 (minimum), color temperature 3500, averaged rated life of 10,000 hours at 3 hours operation per start, unless otherwise indicated.

1. T4, Double-Twin Tube: Rated 18 W, 1200 initial lumens (minimum).
2. T4, Double-Twin Tube: Rated 26 W, 1800 initial lumens (minimum).

2.8 HIGH-INTENSITY-DISCHARGE LAMPS

A. High-Pressure Sodium Lamps: ANSI C78.42, CRI 21 (minimum), color temperature 1900 K, and average rated life of 24,000 hours, minimum.

1. Dual-Arc Tube Lamp: Arranged so only one of two arc tubes is lighted at one time and, when power is restored after an outage, the cooler arc tube, with lower internal pressure, lights instantly, providing an immediate 8 to 15 percent of normal light output.

B. Metal-Halide Lamps: ANSI C78.1372, with a minimum CRI 65, and color temperature 4000 K.

C. Pulse-Start, Metal-Halide Lamps: Minimum CRI 65, and color temperature 4000 K.

D. Ceramic, Pulse-Start, Metal-Halide Lamps: Minimum CRI 80, and color temperature 4000 K.

2.9 FACTORY FINISHES

A. Finish: Manufacturer's standard paint applied to factory-assembled and -tested luminaire before shipping.

B. Factory-Painted Finish for Steel Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."

2. Interior Surfaces: Apply one coat of bituminous paint on interior of pole, or otherwise treat to prevent corrosion.
3. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.

    a. Color: As selected by University's Representative from manufacturer's standard catalog of colors.

C. Factory-Applied Finish for Aluminum Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
2. Class I, Color Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.

    a. Color: Dark bronze.

3. Anodic Coating: Architectural Class I, impregnated color coating 0.018 mm or thicker) complying with AAMA 611.

2.11 POLES AND SUPPORT COMPONENTS, GENERAL REQUIREMENTS

A. Structural Characteristics: Comply with AASHTO LTS-4.

B. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless-steel fasteners and mounting bolts, unless otherwise indicated.

C. Mountings, Fasteners, and Appurtenances: Corrosion-resistant items compatible with support components.

1. Materials: Shall not cause galvanic action at contact points.
2. Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication, unless stainless-steel items are indicated.
3. Anchor-Bolt Template: Plywood or steel.

D. Concrete Pole Foundations: Cast in place, with anchor bolts to match pole-base flange. Concrete, reinforcement, and formwork are specified in Division 03 Section "Cast-in-Place Concrete."

E. Power-Installed Screw Foundations: Factory fabricated by pole manufacturer, with structural steel complying with ASTM A 36/A 36M and hot-dip galvanized according to ASTM A 123/A 123M; and with top-plate and mounting bolts to match pole base flange and strength required to support pole, luminaire, and accessories.

F. Breakaway Supports: Frangible breakaway supports, tested by an independent testing agency acceptable to authorities having jurisdiction, according to AASHTO LTS-4.

2.12 STEEL POLES

A. Poles: Comply with ASTM A 500, Grade B, carbon steel with a minimum yield of 46,000 psig; 1-piece construction up to 40 feet in height with access handhole in pole wall.

1. Shape: Match UCR standard campus lighting.
2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.

B. Steel Mast Arms: Continuously welded to pole attachment plate. Material and finish same as pole.

C. Brackets for Luminaires: Detachable, cantilever, without underbrace.

1. Adapter fitting welded to pole and bracket, then bolted together with galvanized-steel bolts.
2. Cross Section: Tapered oval, with straight tubular end section to accommodate luminaire.
3. Match pole material and finish.

D. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to pole top.

E. Steps: Fixed steel, with nonslip treads, positioned for 15-inch vertical spacing, alternating on opposite sides of pole; first step at elevation 10 feet above finished grade.

F. Intermediate Handhole and Cable Support: Weathertight, 3-by-5-inch handhole located at midpoint of pole with cover for access to internal welded attachment lug for electric cable support grip.

G. Grounding and Bonding Lugs: Welded 1/2-inch threaded lug, complying with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.

H. Cable Support Grip: Wire-mesh type with rotating attachment eye, sized for diameter of cable and rated for a minimum load equal to weight of supported cable times a 5.0 safety factor.

I. Platform for Lamp and Ballast Servicing: Factory fabricated of steel with finish matching that of pole.

J. Prime-Coat Finish: Manufacturer's standard prime-coat finish ready for field painting.

K. Galvanized Finish: After fabrication, hot-dip galvanize complying with ASTM A 123/A 123M.

L. Factory-Painted Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
2. Interior Surfaces of Pole: One coat of bituminous paint, or otherwise treat for equal corrosion protection.
3. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.

a. Color: As selected by University's Representative from manufacturer's full range.

2.13 ALUMINUM POLES

A. Poles: Seamless, extruded structural tube complying with ASTM B 429, Alloy 6063-T6 with access handhole in pole wall.

B. Poles: ASTM B 209, 5052-H34 marine sheet alloy with access handhole in pole wall.

1. Shape: Match UCR standard campus lighting.
2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.

C. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to pole top.

D. Grounding and Bonding Lugs: Welded 1/2-inch threaded lug, complying with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.

E. Brackets for Luminaires: Detachable, with pole and adapter fittings of cast aluminum. Adapter fitting welded to pole and bracket, then bolted together with stainless-steel bolts.

1. Tapered oval cross section, with straight tubular end section to accommodate luminaire.
2. Finish: Same as pole

F. Prime-Coat Finish: Manufacturer's standard prime-coat finish ready for field painting.

G. Aluminum Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

2. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20; and seal aluminum surfaces with clear, hard-coat wax.
3. Class I, Clear Anodic Finish: AA-M32C22A41 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
4. Class I, Color Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.

5. Color: As selected by University's Representative from manufacturer's full range

2.14 FIBERGLASS POLES

A. Poles: Comply with ANSI C136.20, with access handhole in pole wall.

1. Mounting: Embedded.
2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.

A. Resin Color: Match UCR standard campus lighting, provide uniform coloration throughout entire wall thickness.

B. Surface Finish: Pigmented polyurethane, with a minimum dry film thickness of 1.5 mils.

2.15 DECORATIVE POLES

A. Pole Material:

1. Cast ductile iron.
2. Cast gray iron, according to ASTM A 48/A 48M, Class 30.
3. Cast aluminum.
4. Cast concrete.
5. Spun concrete.
6. Steel tube, covered with closed-cell polyurethane foam, with a polyethylene exterior.

B. Mounting Provisions:

1. Bolted to concrete foundation.
2. Embedded.

C. Fixture Brackets:

1. Cast ductile iron.
2. Cast gray iron.
3. Cast aluminum.

D. Pole Finish: Match UCR standard campus lighting.

2.19 POLE ACCESSORIES

.

A. Base Covers: Manufacturers' standard metal units, arranged to cover pole's mounting bolts and nuts. Finish same as pole.

2.20 REQUIREMENTS FOR INDIVIDUAL EXTERIOR LIGHTING DEVICES

A. Refer to Exterior Lighting Fixtures Schedule on the drawings.

a.

PART 3 - EXECUTION

3.1 LUMINAIRE INSTALLATION

A. Install lamps in each luminaire.

B. Luminaire Attachment: Fasten luminaire to indicated structural supports.

1. Use fastening methods and materials selected to resist seismic forces defined for the application and approved by manufacturer.

C. Adjust luminaires that require field adjustment or aiming.

3.2 POLE INSTALLATION

A. Align pole foundations and poles for optimum directional alignment of luminaires and their mounting provisions on the pole.

B. Clearances: Maintain the following minimum horizontal distances of poles from surface and underground features, unless otherwise indicated on Drawings:

1. Fire Hydrants and Storm Drainage Piping: 60 inches
2. Water, Gas, Electric, Communication, and Sewer Lines: 10 feet

C. Trees: 15 feetConcrete Pole Foundations: Set anchor bolts according to anchor-bolt templates furnished by pole manufacturer. Concrete materials, installation, and finishing requirements are specified in Division 03 Section "Cast-in-Place Concrete."

D. Foundation-Mounted Poles: Mount pole with leveling nuts, and tighten top nuts to torque level recommended by pole manufacturer.

1. Use anchor bolts and nuts selected to resist seismic forces defined for the application and approved by manufacturer.
2. Grout void between pole base and foundation. Use nonshrink or expanding concrete grout firmly packed to fill space.
3. Install base covers, unless otherwise indicated.
4. Use a short piece of 1/2-inch-diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.

E. Embedded Poles with Tamped Earth Backfill: Set poles to depth below finished grade indicated on Drawings, but not less than one-sixth of pole height.

1. Dig holes large enough to permit use of tampers in the full depth of hole.
2. Backfill in 6-inch layers and thoroughly tamp each layer so compaction of backfill is equal to or greater than that of undisturbed earth.

F. Embedded Poles with Concrete Backfill: Set poles in augered holes to depth below finished grade indicated on Drawings, but not less than one-sixth of pole height.

1. Make holes 6 inches in diameter larger than pole diameter.
2. Fill augered hole around pole with air-entrained concrete having a minimum compressive strength of 3000 psi at 28 days, and finish in a dome above finished grade.
3. Use a short piece of 1/2-inch-diameter pipe to make a drain hole through concrete dome. Arrange to drain condensation from interior of pole.
4. Cure concrete a minimum of 72 hours before performing work on pole.

G. Poles and Pole Foundations Set in Concrete Paved Areas: Install poles with minimum of 6inch-wide, unpaved gap between the pole or pole foundation and the edge of adjacent concrete slab. Fill unpaved ring with pea gravel to a level 1 inch below top of concrete slab.

H. Raise and set poles using web fabric slings (not chain or cable).

3.4 INSTALLATION OF INDIVIDUAL GROUND-MOUNTING LUMINAIRES

A. Install on concrete base with top 4 inchesabove finished grade or surface at luminaire location. Cast conduit into base, and finish by troweling and rubbing smooth. Concrete materials, installation, and finishing are specified in Division 03 Section "Cast-inPlace Concrete."

3.5 CORROSION PREVENTION

A. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum by insulating fittings or treatment.

B. Steel Conduits: Comply with Division 26 Section "Raceway and Boxes for Electrical Systems." In concrete foundations, wrap conduit with 0.010-inch- thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

3.6 GROUNDING

A. Ground metal poles and support structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."

1. Install grounding electrode for each pole, unless otherwise indicated.
2. Install grounding conductor pigtail in the base for connecting luminaire to grounding system.

B. Ground nonmetallic poles and support structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."

1. Install grounding electrode for each pole.
2. Install grounding conductor and conductor protector.
3. Ground metallic components of pole accessories and foundations.

3.7 CONNECTIONS

A. Tighten electrical connectors and terminals according to manufacturer's published torque tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

3.8 FIELD QUALITY CONTROL

A. Inspect each installed fixture for damage. Replace damaged fixtures and components.

B. Illumination Observations: Verify normal operation of lighting units after installing luminaires and energizing circuits with normal power source.

1. Verify operation of photoelectric controls.

3.9 DEMONSTRATION

A. Engage a factory-authorized service representative to train University's maintenance personnel to adjust, operate, and maintain luminaire lowering devices. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 26 5600

SECTION 27 0500 - COMMON WORK RESULTS FOR COMMUNICATIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Communications equipment coordination and installation.
2. Sleeves for pathways and cables.
3. Sleeve seals.
4. Grout.
5. Common communications installation requirements.

1.2 DEFINITIONS

A. EPDM: Ethylene-propylene-diene terpolymer rubber.

B. NBR: Acrylonitrile-butadiene rubber.

C. SCS: Structural Communications System

1.3 SUBMITTALS

A. Product Data: For sleeve seals.

1.4 COORDINATION

1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
3. To allow right of way for piping and conduit installed at required slope.
4. So connecting pathways, cables, wire ways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.

A. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

B. Coordinate location of access panels and doors for communications items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Division 08 Section "Access Doors and Frames."

C. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

1. Or Equal: Where products are specified by manufacturers name and accompanied by the term “or equal”, comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before the use of an unnamed manufacturer or product.

2.2 SLEEVES FOR PATHWAYS AND CABLES

A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.

B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral water stop, unless otherwise indicated.

C. Sleeves for Rectangular Openings: Galvanized sheet steel.

1. Minimum Metal Thickness:

a. For sleeve cross-section rectangle perimeter less than 50 inches and no side more than 16 inches thickness shall be 0.052 inch
b. For sleeve cross-section rectangle perimeter equal to, or more than, 50 inches and 1 or more sides equal to, or more than, 16 inches thickness shall be 0.138 inch.

2.3 SLEEVE SEALS

A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and pathway or cable.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
2. Basis-of-Design Product: Subject to compliance with requirements, provide product name or designation or comparable product by one of the following:

a. Advance Products & Systems, Inc.
b. 3M
c. Hilti

d. STI
e. Or equal.

3. Sealing Elements: EPDM interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of pathway or cable.
4. Pressure Plates: Carbon steel, Stainless steel. Include two for each sealing element.
5. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating, or Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.4 GROUT

A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, non-staining, mixed with water to consistency suitable for application and a 30-minute working time.

PART 3 - EXECUTION

3.1 COMMON REQUIREMENTS FOR COMMUNICATION INSTALLATION

A. Comply with NECA 1.

B. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.

C. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.

D. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both communications equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.

E. Right of Way: Give to piping systems installed at a required slope.

3.2 SLEEVE INSTALLATION FOR COMMUNICATIONS PENETRATIONS

A. Communications penetrations occur when pathways, cables, wire ways, or cable trays penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies. Generally the electrical trade will supply the pathways and spaces, verify that this item is covered by electrical trades. Additional path if not covered by electrical, will be required to be supplied by SCS contractor.

B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.

C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.

D. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.

E. Cut sleeves to length for mounting flush with both surfaces of walls.

F. Extend sleeves installed in floors 2 inches above finished floor level.

G. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and pathway or cable, unless indicated otherwise.

H. Seal space outside of sleeves with grout for penetrations of concrete and masonry

1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.

I. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and pathway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Division 07 Section "Joint Sealants.".

J. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pathway and cable penetrations. Install sleeves and seal pathway and cable penetration sleeves with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping."

K. Roof-Penetration Sleeves: Seal penetration of individual pathways and cables with flexible boot-type flashing units applied in coordination with roofing work.

L. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel or cast-iron pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

M. Underground, Exterior-Wall Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch annular clear space between pathway or cable and sleeve for installing mechanical sleeve seals.

3.3 SLEEVE-SEAL INSTALLATION

A. Install to seal exterior wall penetrations.

B. Use type and number of sealing elements recommended by manufacturer for pathway or cable material and size. Position pathway or cable in center of sleeve. Assemble mechanical sleeve

seals and install in annular space between pathway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.4 FIRESTOPPING

A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for communications installations to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07 Section "Penetration Firestopping."

END OF SECTION 27 0500

SECTION 27 1100 - TELECOMMUNICATIONS EQUIPMENT ROOM FITTINGS

PART 1 GENERAL

1.1 THE WORK DESCRIPTION OF WORK

A. Shall consist of the provision, termination, and testing of complete and fully-functional Structured Cabling System (SCS) for telephone and data system network. This work shall include provision of but not limited to the following:

1. Telephone and data system equipment racks, cable runway in BDF/IDFs, patch panels and associated hardware.

B. Provide all incidental items that belong to the Work described and which are required for a complete system.

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.
B. Section 01 91 13 - General Commissioning Requirements.

1.3 QUALIFICATIONS

A. Manufacture:

1. Provide products of manufacturers as named in individual articles.
2. Where no manufacturer is specified, provide products of manufacturers in compliance with requirements and referenced standards.

B. Installer:

1. Installer shall own and maintain tools and equipment approved by the manufacturer for installation equipment cabinets, racks, ladder racking, and cable management.
2. SCS Installer shall carry out the telephone and data network system installation work detailed in this specification.
3. A specialist installer company that has completed work of a similar nature shall carry out the installation work detailed in this specification.

1.4 SUMMARY

A. This Section includes the following items for mounting and routing of the SCS within the telecommunications spaces:

1. Equipment Cabinets
2. Equipment Racks

3. Cable Ladder Racking and fittings
4. Vertical Cable Management
5. Horizontal Cable Management
6. Grounding and Bonding
7. Identification products.

1.5 DEFINITIONS

A. Backbone:	A facility (e.g., pathway, cable, or conductors) between telecommunications rooms or floor distribution terminals, the entrance facilities, and the equipment rooms within or between buildings.
B. BDF:	Building Distribution Frame.
C. BICSI:	Building Industry Consulting Service International.
D. Cross-Connect:	A facility enabling the termination of cable elements and their interconnection or cross-connection.
E. EMI:	Electromagnetic interference.
F. Horizontal Cabling:	Cabling between and including the telecommunications outlet/connector and the horizontal cross-connect. Also the cabling between and including the building automation system outlet or the first mechanical terminations on the horizontal connection point and the horizontal cross-connect.
G. IDC:	Insulation displacement connector.
H. IDF:	Intermediate Distribution Frame.
I. LAN:	Local area network.
J. MDF:	Main Distribution Frame.
K. RCDD:	Registered Communications Distribution Designer.
L. SCS:	Structured Cabling System: SCS is defined in this document as all required horizontal category 6 cabling including associated hardware, patch panels, BDF/IDF patch cords, information outlets, faceplates, work area patch cords, installed and configured to provide telephone and/or computer data network connectivity.
M. TGB:	Telecommunications Grounding Busbar (IDF locations).
N. TMGB:	Telecommunications Main Grounding Busbar (BDF location).
O. UTP:	Un-shielded twisted pair cable.

1.6 SUBMITTALS

A. Provide Product Data: For each type of product indicated.

B. Shop Drawings:

1. Termination fields: Detail mounting assemblies, and show elevations and physical relationship between the installed components.

2. Cable tray layout, showing cable tray route to scale, with relationship between the tray and adjacent structural, electrical, and mechanical elements. Include the following:

C. Qualification Data: For Installer**,** qualified layout technician, installation supervisor, and field inspector.

1.7 AS BUILT DOCUMENTATION

A. As-built documentation shall consist of all the construction drawing enlarged room plans and wall elevation plans indicating placement of each piece of installed equipment

1.8 COORDINATION

A. Coordinate layout and installation of voice and data communication cabling prior to start of work.

1. Adjust arrangements and locations of distribution frames and racks and cross-connect and patch panels in equipment rooms and wiring closets to accommodate and optimize arrangement and space requirements of telephone switch and LAN equipment.

1.9 **MATERIALS STANDARDS**

A. Products, services, and materials provided by the Design-builder shall meet the requirements of the following (latest edition):

1. National Electrical Manufacturer's Association (NEMA).
2. American National Standards Institute (ANSI).
3. Institute of Electrical and Electronic Engineers (IEEE).
4. Underwriter's Laboratories, Inc., (UL) or equivalent.
5. National Electric Code (NEC).
6. National, State, and Local OSHA building and fire codes.
7. TIA/EIA/ Standard TIA/EIA-568-B.1 - Commercial Building Telecommunications Cabling Standard; Part 1: General Requirements.
8. TIA/EIA Standard TIA/EIA-568-B.2 - Commercial Building Telecommunications Cabling Standard; Part 2: Balanced Twisted-Pair Cabling Components.
9. TIA/EIA Standard TIA/EIA-568-B.3 - Optical Fiber Cabling Components Standard.
10. TIA/EIA Standard TIA/EIA-569-A - Commercial Building Standard for Telecommunications Pathways and Spaces.
11. TIA/EIA Standard TIA/EIA-606A Administration Standard for Commercial Telecommunications Infrastructures.
12. TIA/EIA Standard TIA/EIA-607 - Commercial Building Grounding and Bonding Requirements for Telecommunications.

B. Products, services, and materials provided by the Design-builder shall be new and of high quality and free of faults and defects.

1.10 WARRANTY

A. Provide a one year warranty for all installed equipment.

PART 2 PRODUCTS AND SYSTEM REQUIREMENTS

2.1 MANUFACTURERS

A. Manufacturers (Campus Standard):

1. Chatsworth Products Inc. (CPI), or equal, (see note), for in Telecom Room(s); seven-foot by 19-inch data equipment racks, cable runway and support products to include vertical cabling (between racks) management.

   Note; use one manufacturer for all racks, cable runway, vertical cable managers and associated hardware.
2. Panduit, or equal, for horizontal wire management products.

2.2 DATA SYSTEM EQUIPMENT RACKS, HARDWARE AND GROUNDING

1. Provide Data System Equipment Rack(s) minimum three (3) per BDF/ IDF. and associated hardware as required for a complete system.
2. Provide standard 3" deep channel 19" wide and 84" high Data System Equipment Rack(s). Equipment Rack(s) shall be Chatsworth Products Inc. 55053-703 UL Listed, or equal.
3. Provide all mounting components and accessories to securely fix racks to floor, overhead cable runway and supporting walls.
4. Each rack shall have a load-carrying capacity of 1000 lbs.
5. Provide Chatsworth Products 11729-703, or equal, vertical cable management on each side of the rack, or equal.
6. Provide strain relief and cable management at the rear of each 48 port patch panel to ensure tidy routing of all feeder and distribution cables.
7. Provide Chatsworth Products 31472-718 Alternate Space Cable Runway, or equal, over Data System Equipment Racks. Provide all associated hardware as required for a complete installation.
8. Provide Chatsworth Products 10250-718 Universal Cable Runway, or equal, over Data System Equipment Racks. Provide all associated hardware as required for a complete installation.
9. Provide two (2) CPI #13239-757 Horizontal Rack-Mount Power Strip with Ten (10) Outlets and NEMA 5-20P Straight Plug with Amp Meter, Surge Protection and Circuit Breaker, or equal, in each Data System Equipment Rack.
10. Provide one (1) CPI # 13622-012 Grounding Busbar (TMGB or TGB), BICSI & ANSI/EIA/TIA, or equal, in the BDF and in each IDF Telecom Rooms. Connect each TMGB and TGB to electrical panel serving BDF or IDF Telecom Room with #6AWG green insulated, stranded THHN conductor wire, or equal, using two-hole compression lugs on each end.
11. Provide #6AWG green insulated, stranded THHN conductor wire, or equal, from each Data Equipment Rack(s), Cable Runway(s) and Cable Sheath(s) to the Main Telecommunications Ground Bus (BDF) or Telecommunications Ground Bus (IDF). Terminate each end of #6 conductor wire with two-hole compression lug; connect lugs to TMGB or TGB.
12. Data Equipment Rack(s) shall be securely attached to the concrete floor using Chatsworth Products 40604-003 Rack and Frame Installation Kit, or equal. For additional strength solidly attach racks to overhead Cable Runway. When mounted in a row, maintain a

minimum of 60 inches from the wall behind and 36" in front of the row of racks. Where racks are shown side by side securely connect together to provide a stable system.

13. Provide all necessary Chatsworth Products, or equal, hardware to make a complete system as required but not limited to:

    a. 11421-712 Wall Angle Support Kit, Cable Runway
    b. 11302-701 Junction-Splice Kit
    c. 40164-001 Cable Runway Ground Strap Kit
    d. 11301-701 Butt-Splice Kit
    e. 11310-003 Threaded Ceiling Kit, Cable Runway
    f. 11312-718 Triangular Support Bracket, Aluminum

2.3 DATA SYSTEM HORIZONTAL PATCH MANAGEMENT

A. Provide horizontal patch management panel(s) for each Data System Equipment Rack(s). Provide one (1) Panduit WMPHF2E (front pathway only) 2U-high horizontal cable manager(s), or equal, above and below each 48 port patch panel and each 10 Outlet power strip.

2.4 TELEPHONE AND DATA SYSTEM LABELS

A. Provide labels for all equipment racks, and grounding and bonding equipment.

B. The lettering on each label shall be as large as is practicable. All labels shall be machine produced. Handwritten labels will not be acceptable.

C. A standard relative orientation shall be adopted for all labels unless otherwise specified.

D. Labels shall be robust, durable, shall resist abrasion, and shall be UV inhibiting, permanent and indelible. Labels shall be proof to 140° Fahrenheit.

E. Labels shall be readily visible and shall be fixed so that they remain in a visible position wherever practical.

F. Labels shall carry the full complement of characters to designate the unique identification for the item that they identify.

G. Termination Frame (110 Blocks and Patch Panels) Labels. Provide pre-printed labels on card for 110 blocks. Label each frame on the front, enabling terminations to be clearly identified. Cable terminations on frames shall be uniquely labeled in strict numerical order with the lowest numbered cable to the top left of the allocated portions of the frame.

2.5 TELEPHONE SYSTEM BACKBOARDS

A. Provide telephone system plywood backboards (4-foot by 8-foot by ¾-ich) on all walls at 6-inch AFF. Each plywood backboard shall be fire-retardant plywood, painted with two coats of white fire-retardant intumescent paint with one (1) fire rating stamp per sheet of plywood masked prior to painting and visible after installation. Exposed edges shall be chamfered, with no exposed screws, bolts, nuts, washers, or other protruding fastenings.

2.6 GROUNDING AND BONDING

A. Materials: Comply with NFPA 70, TIA/EIA-607, and UL 467.

2.7 IDENTIFICATION PRODUCTS

A. Manufacturers:

1. Brady Corporation, Inc.
2. Panduit Corp.
3. Hellerman-Tyton
4. Kroy LLC.

B. Comply with TIA/EIA-606-A Class 3 and University Standards for Telecom Identification.

C. Cable Labels: Self-Laminating Vinyl Cables Labels, machine printed with alphanumeric cable designations.

2.8 SOURCE QUALITY CONTROL

A. All equipment shall be of new stock and inspected for damage prior to installation.

PART 3 EXECUTION

3.1 INSTALLATION STANDARDS

A. Comply with BICSI TCI, TIA/EIA-568-B.1, TIA/EIA-568-B.2, TIA/EIA-568-B.3, and TIA/EIA-569-A.

B. Cabling Pathways shall be installed in a “neat and workmanlike manner” as specified by ANSI/NECA/BICSI 568-2001 and National Electrical Code (NEC) Sections 110-12 and 800-6.

C. The Design-builder shall adhere to and comply with the latest versions and/or revisions of each applicable standard. Among the various standards, guide-lines and practices applicable to this project are the latest editions of the following:

1. Building Industry Consulting Services International (BICSI) Installation Manual
2. BICSI Telecommunications Distribution Methods Manual
3. California Building Standards Commission
4. California Electrical Code (2004) Title 24, Part 3
5. Federal Communications Commission (FCC)
6. FCC Part 68.5 Establishment of Telephone Premises Wiring Attestation List
7. Insulated Cable Engineers Association (ICEA)
8. National Electrical Manufacturers Association (NEMA)
9. NEMA WC 66 (2001) Premise Wiring
10. National Fire Protection Association (NFPA)
11. NFPA 70 (2008) National Electrical Code

12. TIA/EIA-526-14A (August 1998) Optical Power Loss Measurements of Installed Multimode Fiber Cable Plant – OFSTP-14
13. TIA/EIA-568-B.1 (2004) Commercial Building Telecommunications Wiring Standard
14. TIA/EIA-568-B.2 (2003) Commercial Building Telecommunications Wiring Standard
15. TIA/EIA-568-B.3 (2002) Optical Fiber Cabling Components Standard (ANSI/TIA/EIA-568-B.3-2000)
16. TIA/EIA-569-A (1998) Commercial Building Standard for Telecommunications Pathways and Spaces (ANSI/TIA/EIA-569-A-98)
17. TIA/EIA-569-A-2 (2000) Commercial Building Standard for Telecommunications Pathways and Spaces, Addendum 2 (ANSI/TIA/EIA-569-A-2-2000). This addendum defines the furniture pathways and spaces contained in work areas.
18. TIA/EIA-606-A (2002) Administration Standard for the Telecommunications Infrastructure of Commercial Buildings
19. ANSI/J-STD-607-A (2002) Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications
20. TIA/EIA – 758 (April 1999) Customer-Owned Outside Plant Telecommunications Cabling Standard
21. UNDERWRITERS LABORATORIES INC. (UL)
22. UL 467 (1993; Bul. 1994 and 1996, R 1996) Grounding and Bonding Equipment
23. UL 514C (1988; R 1989, Bul. 1993 and 1994) Nonmetallic Outlet Boxes, Flush-Device Boxes, and Covers
24. UL 969 (1995) Marking and Labeling Systems
25. UL 1863(1995) Communication Circuit Accessories

D. Federal, state, local codes, rules, regulations, and ordinances governing the work shall be incorporated as part of these Technical Specifications.

E. In reviewing the various Contract Documents, the Design-builder shall be responsible for resolving conflicts between proposed design/concepts and the applicable standards, guidelines and practices.

3.2 EXAMINATION

A. Examine telecommunications spaces.

1. Review proposed telecommunications space layout drawings with owner.
2. Proceed with installation only after owner approval of proposed layout.

3.3 INSTALLATION PRACTICE

A. Comply with NECA 1.

B. Wiring within Wiring Closets and Enclosures:

1. Use cable strain relief brackets behind all patch panels to prevent straining connections to prevent bending cables to smaller radii than minimums recommended by manufacturer.

C. Provide and install fire stopping in accordance with all local and NFPA regulations to sustain ratings when passing through (floors, wall or ceilings) with; conduits, sleeves, raceway, cable tray, wire basket cable tray through fire-rated elements.

D. The Design-builder shall individually and properly ground all voice termination frames, data system equipment racks, copper riser sheaths and cable runway with #6AWG green stranded wire to the TMGB or TGB using two-hole compression lugs on each end.

3.4 GROUNDING

A. Comply with the appropriate Division 26 Section for "Grounding and Bonding" and with TIA/EIA 607.

B. Grounding Points:

1. Locate grounding busbars (MTGB) in BDF and (TGB) in each IDF Telecom Rooms.
2. Provide a ground connection from all voice termination frames, data system equipment racks, copper riser sheaths and cable runways to the grounding terminals in the MDF/BDF and IDFs.

3.5 LABELING AND NUMBERING CONVENTIONS

A. General.

1. All devices shall be labeled with a standard identification tag. Tags shall be typewritten or stamped with indelible waterproof ink and mechanically secured in a permanent fashion. Handwritten labels are NOT acceptable. Labels shall be mounted in a manner, which permits easy access and viewing. All equipment and fittings shall be identified using the following conventions.

3.6 IDENTIFICATION

A. Administration Drawings: Identify labeling convention and show labels for telecom rooms, backbone pathways, entrance pathways, terminal hardware and positions, grounding buses and pathways, and equipment grounding conductors. Follow convention of TIA/EIA-606-A. Furnish electronic record of all drawings.

3.7 FIELD QUALITY CONTROL

A. Perform the installation following established industry best practices.

3.8 TESTING AND DOCUMENTATION

A. General:

1. A University Representative, at the option of the University, shall be present during testing.
2. Such acceptance testing shall in no way reduce the Design-builders' obligations regarding restoration, clean up, or warranty.
3. Design-builder shall be responsible for performing, tracking, and recording the results of tests.

END OF SECTION 27 1100

SECTION 27 1300 - COMMUNICATIONS BACKBONE CABLING

PART 1 GENERAL

1.1 DESCRIPTION OF WORK

A. The work shall consist of the provision, termination, and testing of complete and fully-functional Structured Backbone Cabling System for telephone and data system network. This work shall include provision of but not limited to the following:

1. Telephone and data system optical/copper patch cords.
2. Telephone and data system optical fiber/copper riser cables.

B. The work shall not include provision of the following:

1. Telephone handsets and active switching equipment.
2. Integrated Services Digital Network equipment.
3. Telephone services or active computer and networking equipment.
4. Computer and network software.
5. Copper and Fiber entrance cables, air blown fiber (ABF) bundles and tube cables.

C. Provide all incidental items that belong to the Work described and which are required for a complete system.

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

B. Wire Basket cable tray system, raceways, conduits and boxes, external duct bank tie and other components that make up the infrastructure pathways that will carry the telephone and data cabling shall be furnished and installed by the electrical Design-builder.

C. Section 01 91 13 - General Commissioning Requirements.

1.3 QUALIFICATIONS

A. Manufacture:

1. The SCS specified products for the backbone cabling (e.g. cable, patch panels, termination blocks, patch cords, etc.) shall be supplied by a single manufacturer.
2. Manufacturer shall have a minimum of ten (10) years of experience in the manufacture of the specified cabling products and shall be ISO 9001/14000 Certified.

B. Installer:

1. Installer shall be certified by the manufacture company in all aspects of design, installation and testing of the SCS horizontal cabling specified products.

2. The installer shall utilize the authorized backbone cabling manufacturer components and distribution channels in provisioning this Project.
3. Installer shall own and maintain tools and equipment approved by the cabling system manufacturer for installation and testing of the cabling.
4. SCS Installer shall have a proven track record in the field of telephone, data, and fiber cabling installation, with at least five previous installations of comparable size and complexity undertaken within the last five years.
5. Installer shall be qualified in the installation and termination of optical fiber cabling as described in this specification.
6. Installer shall be an authorized CommScope Systimax® Business Partner and shall provide the CommScope Systimax® Solutions 20-year extended product warranty and application assurance on this installation.

1.4 SUMMARY

A. This Section includes the following items for wiring systems used as signal pathways for voice and high-speed data transmission:

1. Mounting elements.
2. Un-shielded twisted-pair cabling.
3. Fiber-optic cabling (Single-mode and/or Multi-mode).
4. Identification products.

1.5 DEFINITIONS

A.	Backbone:	A facility (e.g., pathway, cable, or conductors) between telecommunications rooms or floor distribution terminals, the entrance facilities, and the equipment rooms within or between buildings.
B.	BDF:	Building Distribution Frame.
C.	BICSI:	Building Industry Consulting Service International.
D.	Cross-Connect:	A facility enabling the termination of cable elements and their interconnection or cross-connection.
E.	EMI:	Electromagnetic interference.
F.	Horizontal Cabling:	Cabling between and including the telecommunications outlet/connector and the horizontal cross-connect. Also the cabling between and including the building automation system outlet or the first mechanical terminations on the horizontal connection point and the horizontal cross-connect.
G.	IDC:	Insulation displacement connector.
H.	IDF:	Intermediate Distribution Frame.
I.	LAN:	Local area network.
J.	MDF:	Main Distribution Frame.
K.	RCDD:	Registered Communications Distribution Designer.
L.	SCS:	Structured Cabling System: SCS is defined in this document as all required horizontal category 6 cabling including associated hardware, patch panels, BDF/IDF patch cords, information outlets, faceplates, work area patch cords, installed and configured to provide telephone and/or computer data network connectivity.
M.	TGB:	Telecommunications Grounding Busbar (IDF locations).
N.	TMGB:	Telecommunications Main Grounding Busbar (BDF location).

O. UTP: Un-shielded twisted pair cable.

1.6 **SUBMITTALS**

A. Provide Product Data: For each type of product indicated.

1. For fiber and copper backbone cabling, include the following installation data for each type used:
   a. Nominal OD.
   b. Pair/strand count
   c. Performance rating
   d. Jacket type
   e. Minimum bending radius.
   f. Maximum pulling tension.

B. Shop Drawings:

1. System Labeling Schedules: Electronic copy of labeling schedules.
2. System Labeling Schedules: Electronic copy of labeling schedules that are part of the cabling and asset identification system of the software.
3. Cabling administration drawings and printouts.
4. Wiring diagrams to show typical wiring schematics including the following:

   a. Cable Counts and cable routing.

5. Termination fields: Detail mounting assemblies, and show elevations and physical relationship between the installed components.

C. Qualification Data: For Installer**,** qualified layout technician, installation supervisor, and field inspector.

D. Reports and Documentation

1. Source quality-control reports.
2. Field quality-control reports.
3. Maintenance Data: For splices and connectors to include in maintenance manuals.

1.7 AS BUILT DOCUMENTATION

A. The as-built documentation shall also contain the cabling routes taken between the cable tray, conduit and/or J-Hooks and the telecommunications spaces.

1.8 COORDINATION

A. Coordinate layout and installation of backbone communication cabling prior to start of work.

1. Adjust arrangements and locations of distribution frames and racks and cross-connect and patch panels in equipment rooms and wiring closets to accommodate and optimize arrangement and space requirements of telephone switch and LAN equipment.

1.9 MATERIALS STANDARDS

A. Products, services, and materials provided by the Design-builder shall meet the requirements of the following (latest edition):

1. National Electrical Manufacturer's Association (NEMA).
2. American National Standards Institute (ANSI).
3. Institute of Electrical and Electronic Engineers (IEEE).
4. Underwriter's Laboratories, Inc., (UL) or equivalent.
5. National Electric Code (NEC).
6. National, State, and Local OSHA building and fire codes.
7. TIA/EIA/ Standard TIA/EIA-568-B.1 - Commercial Building Telecommunications Cabling Standard; Part 1: General Requirements.
8. TIA/EIA Standard TIA/EIA-568-B.2 - Commercial Building Telecommunications Cabling Standard; Part 2: Balanced Twisted-Pair Cabling Components.
9. TIA/EIA Standard TIA/EIA-568-B.3 - Optical Fiber Cabling Components Standard.
10. TIA/EIA Standard TIA/EIA-569-A - Commercial Building Standard for Telecommunications Pathways and Spaces.
11. TIA/EIA Standard TIA/EIA-606A Administration Standard for Commercial Telecommunications Infrastructures.
12. TIA/EIA Standard TIA/EIA-607 - Commercial Building Grounding and Bonding Requirements for Telecommunications.

B. Products, services, and materials provided by the Design-builder shall be new and of high quality and free of faults and defects.

1.10 SYSTEM TESTING

A. Following telephone, data, and fiber optic cable installation and termination at both ends, undertake and record tests to ensure that the cabling system will perform satisfactorily in service. In addition to the tests detailed in this specification, the Design-builder shall carry out any additional tests deemed necessary to ensure the satisfactory operation of the telephone, data, and fiber optic cable systems. The costs of these additional tests shall be borne by the Design-builder.

B. Provide the University Representative with the opportunity to witness all testing. Notify the University Representative in writing seven working days before the date of commencement of the cable tests. On request, the installer shall demonstrate that the test procedure competently identifies the fault conditions being tested for.

C. Complete the tests identified in all of the telephone and data system specifications in accordance with TIA/EIA-568-B.1, B.2 & B.3

D. Personnel shall be competent in and qualified by experience or training for detailed design, installation, and testing of telephone, data, and fiber optic cable systems.

E. The installer shall be responsible for ensuring that any necessary tests and rework to maintain equipment's calibration status are carried out.

F. To support the test procedure, create a printed table of every cable in the building with appropriate columns for each test result and comments.

G. Sign and date each successful series of test results as the tests proceed. As a minimum, each completed page of test results shall be signed and dated once all the tests on that page have been successfully completed and their results recorded.

H. The test documentation shall be available for inspection by the University Representative during the installation period. The original documents (not copies or retyped versions) shall be retain and included as part of the as-built information.

I. Failures detected during the testing shall be duly noted on the test results schedule and rectified. On the fault being rectified, this shall also be noted. These notes shall not be deleted or obliterated.

J. Rectification of all damaged cables shall include replacing damaged cables with new cables in complete runs or remaking poor terminations. In-line cable joints, splices, or distribution points are not acceptable. All damaged cables shall be removed from site.

PART 2 - PRODUCTS AND SYSTEM REQUIREMENTS

2.1 MANUFACTURERS

A. Manufacturers (Campus Standard):

1. Corning, or equal, for Fiber Optic cable and connectors.
2. Erico® Caddy®, or equal, for J-Hook Cable Support Systems and other non-continuous cable supports.
3. Superior Essex® ARMM, or equal, for twisted pair Copper riser distribution cable.
4. Carlon®, or equal, for Innerducts and associated fittings.
5. Leviton, or equal, for Voice Grade Patch Panels riser distribution in data equipment racks.
6. Copper B-Line Flex Tray, or equal, for Wire Basket Cable Tray support system.

2.2 TELEPHONE SYSTEM RISER CABLE

A. Provide one (1) Superior Essex® ARMM 50-Pair Riser Cables #02-100-03, or equal, between BDF 110 wall mount wiring blocks and each IDF 48-port Voice Patch Panel in Data Equipment Rack to include BDF 48-port Voice Patch Panel in Data Equipment Rack. Each cable shall be shielded twisted-pair 24 AWG solid copper conductors, be riser rated and meet or exceed the specifications for Category 3 cables detailed in the EIA/TIA cabling standard for premises horizontal wiring, see copper riser drawing for locations.

B. Provide Systimax® 110 Patch Panel System Backboard(s) between (Horizontal Telephone and Copper Riser) 110 Patch Panel System Terminal Blocks, product no. 188D3, or equal, (no known equal).

C. Ground each end of 50-Pair Riser Cable to TMGB (BDF) or TGB (IDF) with approved Cable Sheath Bonding Clamp and Two-Hole compression lugs with green #6AWG ground wire.

2.3 TELEPHONE SYSTEM 110 WIRING BLOCKS (FOR RISER CABLES)

A. Provide Systimax® 110 Patch Panel System Terminal Blocks, product no. 110 PA2-300FT, or equal, in BDF and each IDF. The wiring blocks shall be fully equipped with five pair, 110C-5 connecting blocks, jumper troughs and transparent label holders.

B. Provide Systimax® 110 Patch Panel System Backboard(s) between (Horizontal Telephone and Copper Riser) 110 Patch Panel System Terminal Blocks, product no. 188D3, or equal, in BDF and each IDF.

2.4 TELEPHONE SYSTEM VOICE GRADE PATCH PANELS (FOR RISER CABLES)

A. Provide one (1) 110-Style Voice Grade 48-Port Patch Panels in BDF and each IDF location in Data Equipment Rack. Terminate 50-Pair Copper Riser distributions cables on Patch Panels. Patch panels shall be Leviton part number 49013-P48, or equal. Panel shall be configured for one or two-pair per port wiring schemes. Rear label shall be provided which delineates between one and/or two pair wiring schemes and shows 25-pair color-coded termination. Patch Panel shall meet ANSI/TIA/EIA-568-B and FCC Part 68 requirements. Patch Panels shall be provided with forty-eight (48) 8 Pin RJ-45 jacks.

Note: On 50-Pair Riser Cable end at BDF and each IDF in Data Equipment Rack, terminate Cables Pairs 1 through 48 (pair-for-port, pair 1 to port 1, pair 2 to port 2, up to pair 48 to port 48) on 48-Port Voice Grade Patch Panels, store (coil) pairs 49 and 50 at rear of patch panel. On other end of 50-Pair Riser Cable, terminate all pairs on wall mount 110 wiring blocks with 110C-5 connecting blocks in BDF.

2.5 TELEPHONE SYSTEM JUMPER WIRE AND TOOL

A. Provide reel of telephone system jumper wire in the Building Distribution Frame Room. Reel shall consist of two unshielded twisted-pair 22 AWG solid copper conductors (i.e., single pair). Each conductor shall have a PVC sheath. The sheath of the two conductors shall be white/blue blue/white differing colors. The wire shall be General Cable, Cross-Connect Wire, or equal. Provide 500 feet of jumper wire. Hand-deliver the jumper wire to the University Representative after the job is completed.

B. Provide two (2) Telephone Termination 66/110 Automatic Impact Tools. Each tool shall be suitable for terminating telephone system feeder and distribution cables at Telephone Termination Frames and telephone outlets. The tool shall also be suitable for installing jumper wire at the telephone termination frames. The tool shall be Fluke Networks D814 Automatic Impact Punch Down Tool with 66 and 110 Blades, or equal. Hand-deliver the tools to the University Representative after the job is completed.

2.6 DATA SYSTEM FIBER OPTIC CLOSET CONNECTOR HOUSINGS (CCH) AND CONNECTOR PANELS

A. Provide 19-inch rack-mountable (2U and 4U) Closet Connector Housings (CCH) that support inter-connect or cross-connect capabilities between outside plant, riser or distribution cables and opto-electronics to include the following capabilities:

1. Shall hold CCH-CP connector panels, cassettes and/or modules that support a variety of field-termination options; e.g. ST, LC, FC connectors and/or splicing/pigtail assemblies.
2. Removable translucent top cover for visibility and ease of access for installation, testing and troubleshooting.
3. Internal and external strain-relief options.
4. EIA hole spacing (1.75-in)
5. Removable front door and field installable lock kit availability for front and rear doors.
6. Provide one (1) Corning CCH-04U, or equal, Rack Mountable Closet Connector Housing in the BDF Telecom Room, Equipment Rack (RR-XX).
7. Provide one (1) Corning CCH-02U, or equal, Rack Mountable Closet Connector Housing in each IDF Telecom Room, Equipment Rack (RR-XX).

B. Provide Closet Connector Housing Panels (CCH-CP) in CCH that support factory-installed or field-installable fiber optic connectors. CCH-CP shall support multimode and single-mode applications in 6, 8, 12, 16 and 24 fiber count options, plus 36, 72, 96 and 144 fiber count options.

1. Provided Corning CCH-CP12-59, or equal, 12-fiber single-mode SC Duplex Closet Connector Panels in BDF and each IDF Telecom Rooms for each 12 fiber single-mode cable.

2.7 OPTICAL FIBER RISER CABLE

A. Provide Optical Fiber Tight-Buffered OS2 Riser Cable consisting of twelve (12) Single-mode fibers that shall have enhanced low-loss and bend-improved fiber technologies, Corning MIC® 012U81-33131-24, or equal, from BDF to each IDF. Riser cable shall be riser rated OFNR and meet application requirements of the NEC® Article 770 and the ICEA S-83-596 test criteria to include UL-1666 flame resistance. Riser cable shall be suitable for riser type environments for intra-building back-bone installations. Fabricate system using manufacturer's standard materials, and in sizes, types, and performance characteristics as indicated. Factory-fabricated, 900 µm tight-buffered, all-dielectric, low-loss, with bend-improved technologies with the following operational and construction features.

Single Multimode Optical Fiber Specifications	
Outer Jacket Color:	Yellow
Flame Rating:	OFNR
Core Diameter:	8.2 µm nominal
Cladding Diameter:	125.0 (± 0.7) µm
Core/Clad Concentricity:	≤ 0.5 µm
Cladding Non-Circularity:	≤ 0.7%
Coated Fiber Diameter:	242 (± 5) µm
Cladding/Coating Concentricity:	≤ 12 µm
Min. Bend Radius Installation:	3.60 in
Min. Bend Radius Operation:	2.40 in
Max. Tensile Strength, Short-Term:	660 N (150 lbf)
Max. Tensile Strength, Long-Term:	200 N (45 lbf)
Maximum Attenuation:	≤ 0.32 dB/km @ 1310 nm
≤ 0.32 dB/km @ 1383 nm	
≤ 0.21 dB/km @ 1490 nm	
≤ 0.18 dB/km @ 1550 nm	
≤ 0.20 dB/km @ 1625 nm	

Maximum Dispersion:	1550 nm ≤18.0 ps/nm•km
	1625 nm ≤22.0 ps/nm•km
Mode-Field Diameter:	1310 9.2 ± 0.4 µm
1550 10.4 ± 0.5 µm	
Point Discontinuity	1310 ≤ 0.05 dB
1550 ≤ 0.05 dB	
Polarization Mode Dispersion (PMD):	
PMD Link Design Value	≤ 0.04 (ps/√km)
Maximum Individual Fiber PMD	≤ 0.1 (ps/√km)

2.8 SINGLE-MODE OPTICAL FIBER CONNECTORS

A. Provide Corning UniCam 95-200-41 SC Fiber Optic Single-mode (OS2) Connectors, or equal, on each end of all fiber optic cable strand(s). SC Connectors shall meet the following specifications:

1.	Approvals & Listing	EIA/TIA 568-B.3
2.	Intermateability:	FOCIS compliant with EIA/TIA 604-10A and IEC61754-20
3.	Product Type:	Field-Installable Connectors
4.	Technology:	No-Epoxy/No-Polish
5.	Fiber Category:	Single-mode (OS2)
6.	Operation:	-40 ^{0}C to 75 ^{0}C exceeding EIA/TIA 568-B.3
7.	Connector Type:	SC
8.	Ferrule Material:	Ceramic
9.	Housing Material:	Composite
10.	Housing Color:	Blue
11.	Boot Color:	Blue
12.	Durability:	≤ 0.2 dB change by 500 rematings, FOTP-21
13.	Temperature Cycling:	≤ 0.3 dB IL, -40 ^{0} to +75^0 C, 21 cycles
14.	Nominal Fiber OD	125 µm
15.	Tensile Strength Jacket Cable:	44 N, change ≤ 0.2 dB, FOTP-6
16.	Tensile Strength 900 µm:	4.9 N, change ≤ 0.2 dB, FOTP-6
17.	Insertion Loss, Typical:	0.2 dB
18.	Insertion Loss, Maximum:	0.5 dB
19.	Reflectance:	≤ -55 dB
20.	Polish:	UPC

2.9 OPTICAL FIBER PATCH CORDS

A. Provide fifteen (15), 6-foot duplex single-mode (SC to LC) fiber optic jumpers (patch cords) for use with Optical System Patch Panels. Each fiber optic jumper shall be a duplex Zipcord Cable. One end shall be terminated with a Duplex SC Ceramic single-mode connector and the other end shall be terminated with a Duplex LC Ceramic single-mode connector. Fiber Optic Jumpers shall be Corning 0472 02G5120 006 F, or equal, and meet the following specifications:

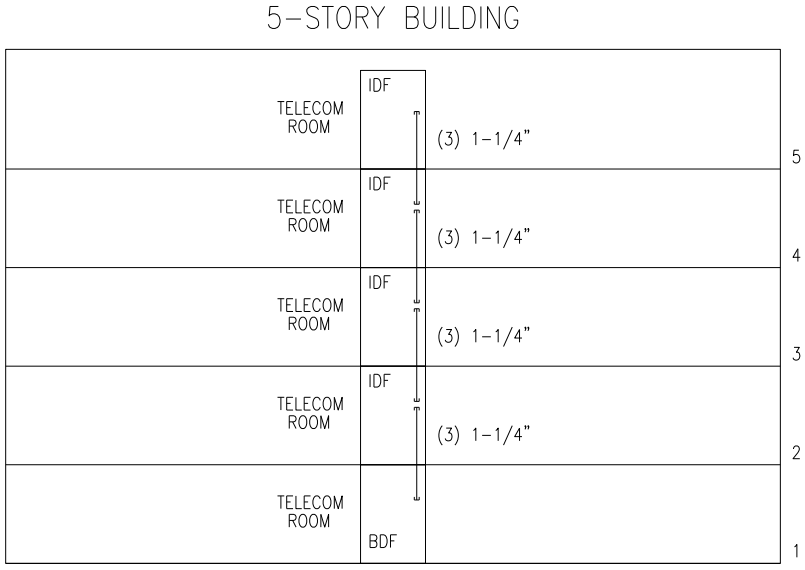
1.	Approvals & Listing	EIA/TIA 568-B.3
2.	Intermateability:	FOCIS compliant with EIA/TIA 604-10A and IEC61754-20
3.	Product Type:	Field-Installable Connectors

4. Technology: No-Epoxy/No-Polish
5. Fiber Category: Bend-improved Single-Mode (OS2)
6. Fiber Type: Single-Mode Ultra-Bendable-Fiber
7. Operation: -40 ^{0}C to 75 ^{0}C exceeding EIA/TIA 568-B.3
8. Zipcord Cable OD / Color: 2.0 mm / Yellow
9. Connector Type: SC and LC
10. Ferrule Material: Ceramic
11. Housing Material: Composite
12. Housing Color: Blue
13. Boot Color: Blue
14. Durability: ≤ 0.2 dB change by 500 rematings, FOTP-21
15. Temperature Cycling: ≤ 0.3 dB IL, -40 ^{0} to +75^0 C, 21 cycles
16. Nominal Fiber OD 125 µm
17. Tensile Strength Jacket Cable: 44 N, change ≤ 0.2 dB, FOTP-6
18. Tensile Strength 900 µm: 4.9 N, change ≤ 0.2 dB, FOTP-6
19. Insertion Loss, Typical: 0.15 dB
20. Insertion Loss, Maximum: 0.25 dB
21. Reflectance (LC & SC): ≤ -59 dB
22. Polish: UPC

2.10 DATA RISER INNERDUCT SYSTEM

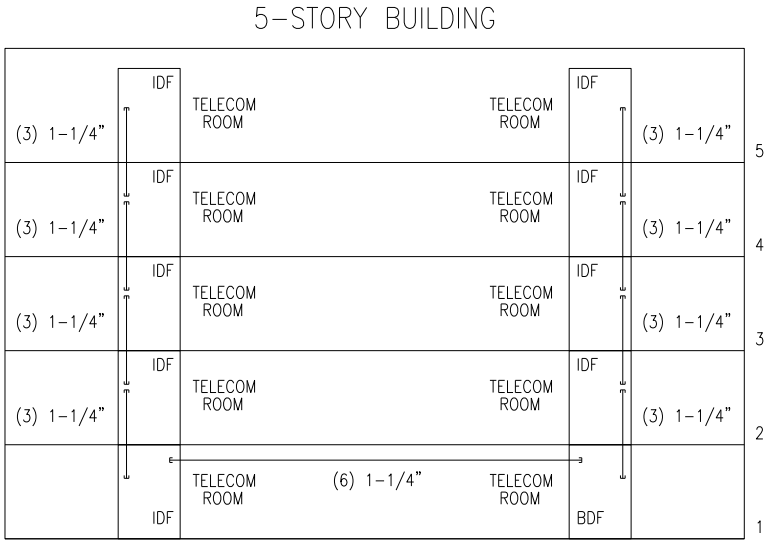
A. Provide Carlon #DG4X1C-xxx one-inch and quarter (1-1/4") Riser-Gard® Innerducts with 900lb Pull Tape, or equal, for fiber optic riser cables.

B. Single Vertical Stacked Riser System: Provide a minimum of three (3) one-inch and quarter (1-1/4") Riser-Gard® Innerducts between each IDF Telecom Room, utilizing one (1) for fiber cables (max 8 fiber cables per Innerduct) and the other two Innerducts to be spare.



SINGLE VERTICAL STACKED RISER SYSTEM
INNERDUCT RISER EXAMPLE

C. Dual Vertical Stacked Riser System: Provide a minimum of three (3) one-inch and quarter (1-1/4") Riser-Gard® Innerducts, or equal, between each IDF Telecom Room in each Riser System utilizing one (1) for fiber cables (max 8 fiber cables per Innerduct) and the other two (2) Innerducts to be spare. Also, provide minimum of six (6) one-inch and quarter (1-1/4") Riser-Gard® Innerducts, or equal, horizontally (ties) between IDF Telecom Room utilizing two (2) for fiber cables (max 8 fiber cables in per Innerduct) and the other four (4) Innerducts to be spare.



DUEL VERTICAL STACKED RISER SYSTEM
INNERDUCT RISER EXAMPLE

2.11 TELEPHONE AND DATA SYSTEM LABELS

A. Provide labels for telephone and data distribution and feeder cables, patch panels and frames, and telephone and data outlets.

B. The lettering on each label shall be as large as is practicable. All labels shall be machine produced. Handwritten labels will not be acceptable.

C. A standard relative orientation shall be adopted for all labels unless otherwise specified.

D. Labels shall be robust, durable, shall resist abrasion, and shall be UV inhibiting, permanent and indelible. Labels shall be proof to 140° Fahrenheit.

E. Labels shall be readily visible and shall be fixed so that they remain in a visible position wherever practical.

F. Labels shall carry the full complement of characters to designate the unique identification for the item that they identify.

G. Cable Labels: Provide Self-Laminating Vinyl (wrap-around type) Cables Labels Brady Corporation, or equal. Cable Labels shall have a white printing area with black print. Cables Labels shall be preprinted or computer printed type. Cable Labels shall meet the legibility,

defacement, exposure and adhesion requirements of UL 969. Hand written Labels are not acceptable.

H. Termination Frame (110 Blocks and Patch Panels) Labels. Provide pre-printed labels on card for 110 blocks. Label each frame on the front, enabling terminations to be clearly identified. Cable terminations on frames shall be uniquely labeled in strict numerical order with the lowest numbered cable to the top left of the allocated portions of the frame.

2.12 TELEPHONE DATA SYSTEM NON-CONTINUOUS J-HOOK CABLE SUPPORTS

A. Non-continuous cable supports shall provide a bearing surface of sufficient width to comply with required bend radii of high-performance cables; UL Listed. Non-continuous cable supports shall have flared edges to prevent damage while installing cables. Non-continuous cable supports sized 1-5/16-inch and larger shall have a cable retainer strap to provide containment of cables within the hanger. The cable retainer strap shall be removable and reusable and be suitable for use in air handling spaces. No larger than two-inch (2") max will be allowed for non-continuous cable supports.

2.13 TELEPHONE DATA SYSTEM WIRE BASKET CABLE TRAY SUPPORT PATHWAYS

A. Except as otherwise indicated, provide wire basket cable tray support system, Cooper B-Line Flex Tray, or equal, classes and sizes indicated; with splice plates, bolts, nuts and washers for connecting units. Construct units with rounded edges and smooth surfaces; in compliance with applicable standards; and with the following additional construction features.

B. Pre-galvanized Zinc Finish: Straight sections, fitting side rails, rungs, and covers shall be made from carbon steel wire meeting the minimum mechanical properties in accordance with ASTM A641 SS for Zink-Coated (Galvanized) Carbon Steel Wire.

C. Provide wire basket cable tray of types and sizes necessary with connector assemblies, clamp assemblies, connector plates, splice plates and splice bars. Construct units with rounded edges and smooth surfaces in compliance with applicable standards.

D. Wire basket cable tray systems are defined to include, but are not limited to straight sections of continuous wire mesh, field formed horizontal and vertical bends, tees, drop outs, supports and accessories.

E. All straight section longitudinal wires shall be constructed with a continuous top wire safety edge. Safety edge must be kinked and T-welded on all tray sizes.

F. Wire basket cable tray shall be made of high strength steel wires and formed into a standard 2 inch by 4-inch wire mesh pattern with intersecting wires welded together. All mesh sections must have at least one bottom longitudinal wire along entire length of straight section.

G. All fittings shall be field formed from straight sections in accordance with manufacturer's instructions.

H. Wire basket cable tray supports shall be trapeze type hangers or wall brackets supplied by manufactured. No center type support hanger will be allowed

I. Wire basket cable tray system installation shall be per manufacture directions and shall meet all seismic requirements. Use the proper installation tools; e.g. Cleanshear™ or Angular Bolt Cutters for cutting tools.

J. Provide all special accessories (e.g. radius shields, cable drop outs, cable rollers, etc.) and fittings as required to protect, support and install a wire basket cable tray system.

K. Wire basket sizes shall have 4-inch minimum usable load depth.

L. All fittings must have a minimum radius of 12 inches.

2.14 GROUNDING AND BONDING

A. Materials: Comply with NFPA 70, TIA/EIA-607, and UL 467.

2.15 IDENTIFICATION PRODUCTS

A. Manufacturers:

1. Brady Corporation, Inc.
2. Panduit Corp.
3. Hellerman-Tyton
4. Kroy LLC.

B. Comply with TIA/EIA-606-A Class 3 and University Standards for Telecom Identification.

C. Cable Labels: Self-Laminating Vinyl Cables Labels, machine printed with alphanumeric cable designations.

2.16 SOURCE QUALITY CONTROL

A. Each Fiber-Optic Cable (all strands) shall be tested at factory before shipping at 1310 and 1550 nm for Single mode.

PART 3 - EXECUTION

3.1 INSTALLATION STANDARDS

A. Comply with BICSI TCI, TIA/EIA-568-B.1, TIA/EIA-568-B.2, TIA/EIA-568-B.3, and TIA/EIA-569-A.

B. Installation and certification of all unshielded twisted pair (UTP) cabling in accordance with the latest available TIA/EIA requirements for cabling installations is required.

C. Cabling Systems and Pathways shall be installed in a “neat and workmanlike manner” as specified by ANSI/NECA/BICSI 568-2001 and National Electrical Code (NEC) Sections 110-12 and 800-6.

D. The Design-builder shall adhere to and comply with the latest versions and/or revisions of each applicable standard. Among the various standards, guide-lines and practices applicable to this project are the following:

1. Building Industry Consulting Services International (BICSI)
2. BICSI Telecommunications Distribution Methods Manual (TDMM 11th edition)
3. California Building Standards Commission
4. California Electrical Code (2004) Title 24, Part 3
5. Federal Communications Commission (FCC)
6. FCC Part 68.5 Establishment of Telephone Premises Wiring Attestation List
7. Insulated Cable Engineers Association (ICEA)
8. National Electrical Manufacturers Association (NEMA)
9. NEMA WC 66 (2001) Premise Wiring
10. National Fire Protection Association (NFPA)
11. NFPA 70 (2008) National Electrical Code
12. Telecommunications Industry Association / Electronic Industries Alliance (EIA)
13. TIA/EIA-526-14A (August 1998) Optical Power Loss Measurements of Installed Multimode Fiber Cable Plant – OFSTP-14
14. TIA/EIA-568-B.1 (2004) Commercial Building Telecommunications Wiring Standard
15. TIA/EIA-568-B.2 (2003) Commercial Building Telecommunications Wiring Standard
16. TIA/EIA-568-B.3 (2002) Optical Fiber Cabling Components Standard (ANSI/TIA/EIA-568-B.3-2000)
17. TIA/EIA-569-A (1998) Commercial Building Standard for Telecommunications Pathways and Spaces (ANSI/TIA/EIA-569-A-98)
18. TIA/EIA-569-A-2 (2000) Commercial Building Standard for Telecommunications Pathways and Spaces, Addendum 2 (ANSI/TIA/EIA-569-A-2-2000). This addendum defines the furniture pathways and spaces contained in work areas.
19. TIA/EIA-606-A (2002) Administration Standard for the Telecommunications Infrastructure of Commercial Buildings
20. ANSI/J-STD-607-A (2002) Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications
21. TIA/EIA – 758 (April 1999) Customer-Owned Outside Plant Telecommunications Cabling Standard
22. UNDERWRITERS LABORATORIES INC. (UL)
23. UL 444 (1994; R 1995, Bul. 1995 and 1996) Communications Cables
24. UL 467 (1993; Bul. 1994 and 1996, R 1996) Grounding and Bonding Equipment
25. UL 497 (1995) Safety Protector for Paired Conductor Communication Circuit
26. UL 514C (1988; R 1989, Bul. 1993 and 1994) Nonmetallic Outlet Boxes, Flush-Device Boxes, and Covers
27. UL 910 (1995; R 1995, Bul. 1995 and 1996) Flame-Propagation and Smoke-Density Values for Electrical and Optical-Fiber Cables Used in Spaces Transporting Environmental Air
28. UL 969 (1995) Marking and Labeling Systems
29. UL 1286 (1993) Office Furnishings
30. UL 1581 (1991; Bul. 1993, 1994, 1995, and 1996, R 1996) Electrical Wires, Cables, and Flexible Cords
31. UL 1666 (1991; Bul. 1995 and 1996) Flame Propagation Height of Electrical and Optical-Fiber Cables Installed in Vertical Shafts
32. UL 1863(1995) Communication Circuit Accessories

E. Federal, state, local codes, rules, regulations, and ordinances governing the work shall be incorporated as part of these Technical Specifications.

F. In reviewing the various Contract Documents, the Design-builder shall be responsible for resolving conflicts between proposed design/concepts and the applicable standards, guidelines and practices.

3.2 EXAMINATION

A. Examine pathway elements intended for cables.

1. Verify proposed routes of pathways. Check raceways, cable trays, J-Hooks, and other elements for compliance with space allocations, clearances, installation tolerances, hazards to cable installation, and other conditions affecting installation. Verify that cabling can be installed complying with EMI clearance requirements.
2. Identify plan to support cables in suspended and/or open ceilings from the cable tray, conduits sizes and/or J-Hooks to the workstation locations. Verify that load capacity of cable support structures is adequate for each pathway.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 APPLICATION OF MEDIA

A. Backbone Fiber Optic Distribution Cable for Data Service: Use 8.3/125 single-mode fiber-optic cable for runs between the BDF and each IDF's.

B. Backbone Copper Cable for Voice Service: Use Listed (as required for installation) category 3 cable for runs between the BDF and each IDF's.

3.4 TELEPHONE SYSTEM INSTALLATION DETAILS

A. Telephone System Riser Cables:

1. Provide telephone system riser cables between the telephone system 110 wall mount block located in the BDF Telecom Room and each voice grade patch panel (data equipment rack) of the IDF Rooms on each floor. Terminate all pairs of feeder cable in sequential order on the 110 block with 110C-5's on BDF side and pairs 1 thru 48 on IDF voice grade patch panel side.

B. Telephone System Cross-Connects:

1. All Telephone System Cross-Connects will be completed by the University. Coordinate installation needs with University Representative in a timely manner as to not create a scheduling problem.

3.5 DATA SYSTEM INSTALLATION DETAILS

A. Data System Riser Cabling:

1. Provide data system optical fiber riser cabling running between the optical fiber termination unit connector panel(s) in the BDF Telecom Room and the fiber optical termination unit connector panel(s) located in each floor IDF Telecom Room.

3.6 INSTALLATION PRACTICE

A. Comply with NECA 1.

B. Wiring Method: Install cables in raceway and using conduit, J-Hooks and/or cable tray except within consoles, cabinets, desks, and counters and in gypsum board partitions where unenclosed wiring method may be used. Use UL-listed plenum cable in environmental air spaces, including plenum ceilings. Conceal raceway and cables except in unfinished spaces.

C. Cable Installation:

1. Install cables parallel and perpendicular to surfaces or exposed structural members and follow surface contours where possible.
2. Make terminations only at indicated outlets, terminals, and cross-connect and/or patch panels.
3. Pulling Cable: Do not exceed manufacturer's written recommended pulling tensions. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
4. Secure and support cables at intervals 36" to 48" and not more than 6" from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
5. Install UTP cables using techniques, practices, and methods that are consistent with Category 6 rating of components and that ensure Category 6 performance of completed and linked signal paths, end to end.

D. Wiring within Wiring Closets and Enclosures:

1. Use cable strain relief brackets behind all patch panels to prevent straining connections to prevent bending cables to smaller radii than minimums recommended by manufacturer.

E. Separation from EMI Sources: Comply with BICSI TDMM and TIA/EIA-569-A recommendations for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment. Comply with the following minimum separation distances from possible sources of EMI:

1. Separation between unshielded power lines or electrical equipment in proximity to open cables or cables in nonmetallic raceways is as follows:

   a. Electrical Equipment Rating Less Than 2 kVA: 5 inches.
   b. Electrical Equipment Rating between 2 and 5 kVA: 12 inches.
   c. Electrical Equipment Rating More Than 5 kVA: 24 inches.

2. Separation between unshielded power lines or electrical equipment in proximity to cables in grounded metallic raceways is as follows:

   a. Electrical Equipment Rating Less Than 2 kVA: 2-1/2 inches.

b. Electrical Equipment Rating between 2 and 5 kVA: 6 inches.
c. Electrical Equipment Rating More Than 5 kVA: 12 inches.

3. Separation between power lines and electrical equipment located in grounded metallic conduits or enclosures in proximity to cables in grounded metallic raceways is as follows:

a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
b. Electrical Equipment Rating between 2 and 5 kVA: 3 inches.
c. Electrical Equipment Rating More Than 5 kVA: 6 inches.

4. Electrical Motors and Transformers, 5 kVA or HP and Larger: 48 inches.
5. Fluorescent Fixtures: 5 inches.

F. Do not untwist more than 1/4 inch of Category 6 cables at connector terminations

G. Provide grommets and strain-relief for cables terminating on wall-mounted user outlets to ensure durable and robust connections. Leave a 4" slack loop in each cable neatly coiled in the back box at each termination point.

H. Take due account of the minimum bend radius of all cables installed. No cables shall be installed in a fashion that contravenes the minimum bend radius of the cable.

I. Provide all cables in straight parallel runs when on cable trays and/or J-hooks. Hold cables running in the vertical direction in place with broad cable ties at not more than 15" centers. Hold cables running in the horizontal direction in place with broad cable ties at no more than 32" centers.

J. Telephone and data system cables shall run in dedicated cable tray, J-hooks and/or conduit provided for data and telephone system use only. Do not tie communication system cables to power or other foreign services. All cabling shall run parallel or at right angles to building wall structures.

K. Reinstate all pull-wires in conduits after use to facilitate future addition of cables.

L. Provide and install firestopping in accordance with all local and NFPA regulations to sustain ratings when passing through (floors, wall or ceilings) with; conduits, sleeves, raceway, cable tray, wire basket cable tray through fire-rated elements.

M. Install all cables in complete runs from outlet or patch panel to patch panel. In-line joints, splices, distribution points, or other intermediate connections are not permitted.

N. The Design-builder shall individually and properly ground all voice termination frames, data system equipment racks, copper riser sheaths and cable runway with #6AWG green stranded wire to the TMGB or TGB using two-hole compression lugs on each end.

3.7 WIRE BASKET CABLE TRAY INSTALLATION

A. Install wire basket cable tray in accordance with NEMA VE 2 to ensure that the cable tray equipment complies with the requirements of the NEC, applicable portions of NFPA 70B, and

the National Electrical Design-builders Association's (NECA) 'Guide to Quality Electrical Installations' pertaining to general electrical installations practices.

B. Coordinate wire basket cable tray with other electrical work as necessary to properly interface installation of wire basket cable tray with other work.

C. Install expansion connectors where recommended by manufacturer.

D. Comply with the appropriate Division 26 Section for "Grounding and Bonding" and with TIA/EIA 607.

3.8 GROUNDING

A. Comply with the appropriate Division 26 Section for "Grounding and Bonding" and with TIA/EIA 607.

B. Grounding Points:

1. Locate grounding busbars (MTGB) in BDF and (TGB) in each IDF Telecom Rooms.
2. Provide a ground connection from all voice termination frames, data system equipment racks, copper riser sheaths and cable runways to the grounding terminals in the MDF/BDF and IDFs.

3.9 LABELING and numbering CONVENTIONS

A. General.

1. Outlets, cables, and terminations shall be labeled with a standard identification tag. Tags shall be typewritten or stamped with indelible waterproof ink and mechanically secured in a permanent fashion. Handwritten labels are NOT acceptable. Labels shall be mounted in a manner, which permits easy access and viewing. Receptacles, cables, and terminations shall be identified using the following conventions.

B. Outside Plant and Riser Cables:

1. Telephone cable(s) will have cable ID and pair counts, from and to locations clearly marked on each cable and building equipment room punch down blocks.
2. Optical fiber cable will have cable ID and strand count, from and to locations clearly marked on each building equipment room fiber optic patch panel.
3. Label each cable so that the label is visible for inspection.

C. Telephone System Termination 110 Block:

1. Termination 110 Block Labels. Provide a full complement of pre-printed cardboard patch frame labels, allowing each pair of each telephone system distribution, feeder, and external cable to be clearly identified. Telephone feeder cable pairs at terminal frames shall identify telephone outlet that they are connected to via the telephone station cable.

D. Data System Patch Panels:

1. Provide a full complement of data system patch panel labels, allowing each data system distribution and feeder cable connector to be clearly identified. Both copper and fiber connectors shall be labeled.

3.10 IDENTIFICATION

A. Cabling Administration Drawings: Show building floor plans with cable administration-point labeling. Identify labeling convention and show labels for telecom rooms, backbone pathways and cables, entrance pathways and cables, terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding conductors. Follow convention of TIA/EIA-606-A. Furnish electronic record of all drawings.

3.11 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

B. Category 6 UTP Cabling Tests:

1. Tests shall include all tests of Category 6, conducted from 1 to 250 MHz

2. Channel and permanent link tests shall be performed with a tester that complies with performance requirements in TIA/EIA-568-B.2, Level III. Include tests for longitudinal or transverse conversion loss.

3. Performance shall comply with minimum criteria in TIA/EIA-568-B.1 & B.2.

C. Data for each measurement shall be documented. Data for submittals shall be printed in a summary report that is formatted similar to Table 10.1 in BICSI TDM, or transferred from the instrument to the computer, saved as text files, and printed and submitted.

D. Remove and replace cabling where test results indicate that they do not comply with specified requirements.

E. Retest and inspect cabling to determine compliance of replaced or additional work with specified requirements.

3.12 TESTING AND DOCUMENTATION

A. General:

1. Acceptance testing shall be in compliance with TIA/EIA-568-B.1, B.2 & B.3.
2. A University Representative, at the option of the University, shall be present during testing.
3. Such acceptance testing shall in no way reduce the Design-builders' obligations regarding restoration, clean up, or warranty.
4. Design-builder shall be responsible for performing, tracking, and recording the results of tests.

B. Telephone and Data (copper & fiber) BDF to IDF Riser Cables:

1. A visual inspection shall be made to insure that the cables have been terminated on the punch down block in proper color code order. An end-to-end continuity test is to be made for each pair to insure wire continuity and correct tip and ring polarity. Riser cables will be tested from the BDF 110 frame punch down blocks to each IDF Telecom Room patch panel that the cable serves.
2. Vertical and horizontal riser cables will be tested to insure that they meet the current requirements of EIA/TIA cabling standard for premises horizontal wiring for the category of cable being installed, i.e., Category 3 cable shall meet Category 3 parameters within a 25-pair binder group. Documentation will include cable ID; pair ID, from and to points, pair ID marked on the punch down blocks, results of testing, and as-built information.
3. Bad pairs in copper cables shall be limited to a maximum of 0 percent of the total number of pairs.
4. Acceptance testing shall be completed prior to completion of Design-builder's contractual obligations.
5. Documentation will include cable ID, from and to points, strand ID, bi-directional attenuation figures in dB, OTDR wave forms, and as-built information.
6. Use of an OTDR may require that a "launch reel" be used to overcome the OTDR's dead zone. Include this information in the as-build documentation.
7. Fiber jumpers used with the OTDR, light source, and power meter must be of the same size and type as the fiber being tested.
8. Fiber jumpers used with the light source and attaching the jumper from the light source via a coupler to the jumper from the power meter shall zero power meters out. This reading noted will become the reference level to obtain a true attenuation reading (some power meters can be zeroed to allow reading the attenuation level directly).

C. Test Equipment:

1. It will be the Design-builder's responsibility to provide the test equipment necessary and document to the University Representative the test equipment available for testing and the last date of certification.

2. Testing Equipment:

   a. Continuity tester.
   b. Power meter/source.
   c. OTDR (Optical Time Domain Reflectometer).
   d. Appropriate types of fiber jumpers.
   e. Equipment for two testers to communicate.
   f. OmniScanner 2 or Agilent Wirescope 350 or other equal Level III tester.

D. Documentation:

1. The Design-builder shall submit three (3) copies (drawings hard copy 24" x 36" and Compact Disc) of the following as-built record drawings and documentation in a 3-ring binder following completion of testing (and re-certification, as necessary):

   a. Construction Drawings: The as-built documentation shall be in AutoCAD min R2004 dwg or dxf equal and shall consist of the construction drawings with the station location numbers (faceplate identification numbers, e.g. 1A-V12, 1A-C15, etc.) inserted next to

the symbol for each location. Also, Equipment Rack and Wall elevations to include Copper and Fiber riser diagrams shall be provided.

b. Fiber Optic Riser Test reports (OTDR and Power Meter).
c. Copper riser Test reports (Cable No. and pair counts: opens, shorts, grounds, etc.).
d. Cat-6 Test reports to be provided in pdf file format and shall include and be arranged in:

1. Overall Summary Page (numerical order)
2. Telecom Room (BDF/IDF), Patch Panel (A thru Z) (numerical order)

END OF SECTION 27 1300

SECTION 27 1500 - COMMUNICATIONS HORIZONTAL CABLING

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK

A. The work shall consist of the provision, termination, and testing of complete and fully-functional Structured Cabling System (SCS) for telephone and data system network. This work shall include provision of but not limited to the following:

1. Telephone and data system patch panels and associated hardware.
2. Telephone and data system horizontal station cables.
3. Telephone and data system connectors and faceplates.

B. The work shall not include provision of the following:

1. Telephone handsets and active switching equipment.
2. Integrated Services Digital Network equipment.
3. Telephone services or active computer and networking equipment.
4. Computer and network software.
5. Copper and Fiber entrance cables, air blown fiber (ABF) bundles and tube cables.

C. Provide all incidental items that belong to the Work described and which are required for a complete system.

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

B. Wire Basket cable tray system, raceways, conduits and boxes, external duct bank tie and other components that make up the infrastructure pathways that will carry the telephone and data cabling shall be furnished and installed by the electrical Design-builder.

C. Section 01 91 13 - General Commissioning Requirements.

1.3 QUALIFICATIONS

A. Manufacture:

1. The SCS specified products for the horizontal cabling (e.g. Cat-6 cable, patch panels, information outlets, faceplates, jacks, patch cords, etc.) shall be supplied by a single manufacturer.
2. Manufacturer shall have a minimum of ten (10) years of experience in the manufacture of the specified cabling products and shall be ISO 9001/14000 Certified.

B. Installer:

1. Installer shall be certified by the manufacture company in all aspects of design, installation and testing of the SCS horizontal cabling specified products.
2. The installer shall utilize the authorized SCS manufacturer horizontal cabling components and distribution channels in provisioning this Project.
3. Installer shall own and maintain tools and equipment approved by the cabling system manufacturer for installation and testing of the SCS Category 6 horizontal cabling balanced twisted pair distribution systems.
4. SCS Installer shall carry out the telephone and data network system installation work detailed in this specification.
5. SCS Installer shall have a proven track record in the field of telephone, data, and fiber cabling and system installation, with at least five previous installations of comparable size and complexity undertaken within the last five years.
6. Installer shall be qualified in the installation and termination of optical fiber cabling as described in this specification.
7. A specialist installer company that has completed work of a similar nature shall carry out the telephone and data system installation work detailed in this specification.
8. Installer shall be an authorized CommScope Systimax® Business Partner and shall provide the CommScope Systimax® Solutions 20 year extended product warranty and application assurance on this installation.

1.4 SUMMARY

A. This Section includes the following items for wiring systems used as signal pathways for voice and high-speed data transmission:

1. Mounting elements.
2. Un-shielded twisted-pair cabling.
3. Workstation outlets.
4. Identification products.

1.5 DEFINITIONS

A. Backbone: A facility (e.g., pathway, cable, or conductors) between telecommunications rooms or floor distribution terminals, the entrance facilities, and the equipment rooms within or between buildings.
B. BDF: Building Distribution Frame.
C. BICSI: Building Industry Consulting Service International.
D. Cross-Connect: A facility enabling the termination of cable elements and their interconnection or cross-connection.
E. EMI: Electromagnetic interference.
F. Horizontal Cabling: Cabling between and including the telecommunications outlet/connector and the horizontal cross-connect. Also the cabling between and including the building automation system outlet or the first mechanical terminations on the horizontal connection point and the horizontal cross-connect.

G. IDC: Insulation displacement connector.
H. IDF: Intermediate Distribution Frame.
I. LAN: Local area network.
J. MDF: Main Distribution Frame.
K. RCDD: Registered Communications Distribution Designer.
L. SCS: Structured Cabling System: SCS is defined in this document as all required horizontal category 6 cabling including associated hardware, patch panels, BDF/IDF patch cords, information outlets, faceplates, work area patch cords, installed and configured to provide telephone and/or computer data network connectivity.
M. TGB: Telecommunications Grounding Busbar (IDF locations).
N. TMGB: Telecommunications Main Grounding Busbar (BDF location).
O. UTP: Un-shielded twisted pair cable.

1.6 SUBMITTALS

A. Provide Product Data: For each type of product indicated.

1. For horizontal cabling include the following installation data for each type used:

a. Nominal OD.
b. Jacket type
c. Performance Rating
d. Minimum bending radius.
e. Maximum pulling tension.

B. Shop Drawings:

1. System Labeling Schedules: Electronic copy of labeling schedules.
2. System Labeling Schedules: Electronic copy of labeling schedules that are part of the cabling and asset identification system of the software.
3. Cabling administration drawings and printouts.
4. Wiring diagrams to show typical wiring schematics including the following:

a. Cable Counts and cable routing.

5. Termination fields: Detail mounting assemblies, and show elevations and physical relationship between the installed components.

C. Qualification Data: For Installer**,** qualified layout technician, installation supervisor, and field inspector.

D. Reports

1. Source quality-control reports.
2. Field quality-control reports.

1.7 AS BUILT DOCUMENTATION

A. As-built documentation shall consist of all the construction drawing floor plans with the telephone and/or data outlet station location numbers (faceplate identification numbers, e.g. 1A- V12, 1A-C15, etc.) inserted next to the telephone and/or data symbols for each location.

B. The as-built documentation shall also contain the cabling routes taken between the cable tray, conduit and/or J-Hooks and the workstation outlets.

1.8 COORDINATION

A. Coordinate layout and installation of voice and data communication cabling prior to start of work.

1. Adjust arrangements and locations of distribution frames and racks and cross-connect and patch panels in equipment rooms and wiring closets to accommodate and optimize arrangement and space requirements of telephone switch and LAN equipment.

1.9 MATERIALS STANDARDS

A. Products, services, and materials provided by the Design-builder shall meet the requirements of the following (latest edition):

1. National Electrical Manufacturer's Association (NEMA).
2. American National Standards Institute (ANSI).
3. Institute of Electrical and Electronic Engineers (IEEE).
4. Underwriter's Laboratories, Inc., (UL) or equivalent.
5. National Electric Code (NEC).
6. National, State, and Local OSHA building and fire codes.
7. TIA/EIA/ Standard TIA/EIA-568-B.1 - Commercial Building Telecommunications Cabling Standard; Part 1: General Requirements.
8. TIA/EIA Standard TIA/EIA-568-B.2 - Commercial Building Telecommunications Cabling Standard; Part 2: Balanced Twisted-Pair Cabling Components.
9. TIA/EIA Standard TIA/EIA-568-B.3 - Optical Fiber Cabling Components Standard.
10. TIA/EIA Standard TIA/EIA-569-A - Commercial Building Standard for Telecommunications Pathways and Spaces.
11. TIA/EIA Standard TIA/EIA-606A Administration Standard for Commercial Telecommunications Infrastructures.
12. TIA/EIA Standard TIA/EIA-607 - Commercial Building Grounding and Bonding Requirements for Telecommunications.

B. Products, services, and materials provided by the Design-builder shall be new and of high quality and free of faults and defects.

1.10 SYSTEM TESTING

A. Following telephone, data, and fiber optic cable installation and termination at both ends, undertake and record tests to ensure that the cabling system will perform satisfactorily in service. In addition to the tests detailed in this specification, the Design-builder shall carry out any additional tests deemed necessary to ensure the satisfactory operation of the telephone, data, and fiber optic cable systems. The costs of these additional tests shall be borne by the Design-builder.

B. Provide the University Representative with the opportunity to witness all testing. Notify the University Representative in writing seven working days before the date of commencement of

the cable tests. On request, the installer shall demonstrate that the test procedure competently identifies the fault conditions being tested for.

C. Complete the tests identified in all of the telephone and data system specifications in accordance with TIA/EIA-568-B.1, B.2 & B.3

D. Personnel shall be competent in and qualified by experience or training for detailed design, installation, and testing of telephone, data, and fiber optic cable systems.

E. The installer shall be responsible for ensuring that any necessary tests and rework to maintain equipment's calibration status are carried out.

F. To support the test procedure, create a printed table of every cable in the building with appropriate columns for each test result and comments.

G. Sign and date each successful series of test results as the tests proceed. As a minimum, each completed page of test results shall be signed and dated once all the tests on that page have been successfully completed and their results recorded.

H. The test documentation shall be available for inspection by the University Representative during the installation period. The original documents (not copies or retyped versions) shall be retain and included as part of the as-built information.

I. Failures detected during the testing shall be duly noted on the test results schedule and rectified. On the fault being rectified, this shall also be noted. These notes shall not be deleted or obliterated.

J. Rectification of all damaged cables shall include replacing damaged cables with new cables in complete runs or remaking poor terminations. In-line cable joints, splices, or distribution points are not acceptable. All damaged cables shall be removed from site.

PART 2 - PRODUCTS AND SYSTEM REQUIREMENTS

2.1 MANUFACTURERS

A. Manufacturers (Campus Standard):

1. CommScope Systimax®, or equal, for Category 6 (voice and data) horizontal structured cabling system.
2. Corning, or equal, for Fiber Optic cable and connectors.
3. Erico® Caddy®, or equal, for J-Hook Cable Support Systems and other non-continuous cable supports.
4. Leviton, or equal, for Voice Grade Patch Panels riser distribution in data equipment racks.

2.2 TELEPHONE AND DATA SYSTEM HORIZONTAL STATION CABLING

A. Provide Systimax® 2071E GigaSPEED® Category 6 / Class E (campus standard), or equal, plenum cable. Each cable shall have eight unshielded twisted-pair 24 AWG solid copper conductors (i.e., four pairs), be plenum rated, color white (telephone), color blue (data) and meet or exceed the specifications for Category 6 cables detailed in the EIA/TIA cabling standard for premises horizontal wiring to include:

1. Category 6 cable and all Category 6 channel components shall be manufactured by a single manufacture.
2. Category 6 UTP balanced twisted pair cable and apparatus channel performance shall be guaranteed up to the maximum 100 meters (328 feet) length, including up to 6 connection points and shall meet the following Guaranteed Channel Performance Specifications for 6-Connection High Performance Category 6 Systems:

Guaranteed Channel Performance Specifications for 6-Connection GigaSPEED XL7 Channels

Frequency (MHz)	**1**	**4**	**8**	**10**	**16**	**20**	**25**	**31.25**	**62.5**	**100**	**200**	**250**
Insertion Loss (dB)	2.1	3.9	5.4	6.1	7.7	8.7	9.7	10.9	15.8	20.4	30.3	34.5
NEXT (dB)	69.0	67.0	62.2	60.6	57.2	55.6	54.0	52.4	47.4	43.9	38.8	37.1
ACR (dB)	66.9	63.2	56.7	54.5	49.5	47.0	44.3	41.5	31.6	23.5	8.5	2.6
PSNEXT (dB)	67.5	66.0	61.1	59.5	56.1	54.5	52.8	51.2	46.1	42.6	37.4	35.7
PSACR (dB)	65.4	62.1	55.7	53.4	48.4	45.8	43.1	40.3	30.3	22.1	7.1	1.2
ELFEXT (dB)	67.3	55.2	49.2	47.3	43.2	41.2	39.3	37.4	31.3	27.3	21.2	19.3
PSELFEXT (dB)	66.3	54.2	48.2	46.3	42.2	40.2	38.3	36.4	30.3	26.3	20.2	18.3
Return Loss (dB)	21.0	21.0	21.0	21.0	20.0	19.5	19.0	18.5	16.0	14.0	11.0	10.0
Delay (ns)	580	562	557	555	553	552	551	550	549	548	547	546
Delay Skew (ns)	30	30	30	30	30	30	30	30	30	30	30	30

Note: The table provides reference values only. All parameters comply with the governing equations

given below over the entire frequency range. All values and equations apply to worst-case channels utilizing four-pair 71E series cables with up to 6 embedded connections in a channel for any channel lengths up to 100 meters.

Electrical Parameter (1 - 250MHz)	Guaranteed Margins to Category 6 / Class E Channel Specifications
Insertion Loss	4 %
NEXT	4 dB
PSNEXT	5.5 dB
ELFEXT	4 dB
PSELFEXT	6 dB
Return Loss	2 dB

Governing Equations for 6-Connection Premium Performance Channels (1-250MHz):

$$Insertion\ Loss \le 1.8472 \times \sqrt{f} + 0.0166 \times f + \frac{0.1958}{\sqrt{f}} + 2.88 \times 10^{-4} \times f^{1.5}$$

$$NEXT \ge -\left\lceil 20 \times \log\left(1.2162 \times 10^{-4} \times f^{0.75} + 2.5179 \times 10^{-5} \times f \right) \right\rceil$$

$$PSNEXT \ge -\left\lceil 20 \times \log\left(1.1482 \times 10^{-4} \times f^{0.75} + 2.9925 \times 10^{-5} \times f \right) \right\rceil$$

$$ELFEXT \ge -\left\lceil 20 \times \log\left(4.3367 \times 10^{-4} \times f \right) \right\rceil$$

$$PSELFEXT \ge -\left\lceil 20 \times \log\left(4.8658 \times 10^{-4} \times f \right) \right\rceil$$

$$RL \ge 21,\ 1 \le f < 10\ MHz; \quad RL \ge 26 - 5 \times \log(f),\ 10 \le f < 40\ MHz; \quad RL \ge 34 - 10 \times \log(f),\ 40 \le f < 250\ MHz$$

$$Delay \le 544 + \frac{36}{\sqrt{f}}; \quad Skew \le 30$$

3. Cable Specifications for GigaSPEED® 2071E:

Nominal Outer Jacket OD:	0.224 in
Nominal Outer Jacket Thickness:	0.020 in
Maximum Pulling Tension:	25 lbs.
Nominal Cable Weight:	29.1 lbs./1,000 ft.
Operating Temperature:	-4°F to 140°F
Installation Temperature:	32°F to 140°F
Conductor Diameter:	23 AWG
Jacket Material:	Low Smoke PVC
ETL Listed Type:	CMP
Nominal Velocity of Propagation:	71%
Maximum DC Resistance	7.61 Ohms/100 m
Maximum DC Resistance Unbalanced:	3%
Maximum Mutual Capacitance at 1 KHz:	5.6 nF/100 m
Minimum Dielectric Strength:	1500 VAC or 2500 VDC
Voltage Safety Rating:	300 Volts per NEC 800.179

2.3 TELEPHONE AND DATA SYSTEM INFORMATION OUTLETS

Provide a Category 6 eight-position information outlet for each telephone and/or data system outlet. The outlets shall be capable of supporting telephone (analog and digital) and/or data services. The outlets shall allow the cable to terminate directly onto the connector with no intermediate cable "tails" or other untwisted links. The information outlets shall be Systimax® MGS400-270, (Grey for voice), MGS400-003, (Black for data), or equal. Category 6 outlets shall meet the following Guaranteed Margin Performance and Physical Specifications:

Guaranteed Margin Performance:

	Category 6 Outlet	High Performance Channel (4 Connections)	Premium Performance Channel (4 Connections)
	Typical Worst Pair Margin*	Guaranteed Margin**	Guaranteed Margin**
Insertion Loss	26.9%	5.0%	7.5%
NEXT	5.4 dB	6.0 dB	7.0 dB

PSNEXT	4.7 dB	7.5 dB	8.5 dB

ELFEXT	10.5 dB	6.0 dB	8.0 dB
PSELFEXT	10.8 dB	8.0 dB	10.0 dB
Return Loss	8.0 dB	4.0 dB	4.0 dB
Frequency Range	1-250 MHz	1-250 MHz	1-250 MHz

* Typical worst pair swept margin when measured with same manufacture's Category 6 modular patch cord.

**Guaranteed margin is valid at any frequency from 1-250 MHz for the single manufacturer's certified channel comprising the single manufacturer's Category 6 apparatus and the single manufacturer's High Performance series cable or Premium Performance series. Values represent margin over the draft Category 6/Class E channel specifications.

Physical Specifications:

Dimensions	0.8 in (20 mm) W x 0.8 in (20 mm) H x 1.2 in (31 mm) D
Plastic	High-impact, flame-retardant, UL rated 94V-0 thermoplastic
Connector	Copper alloy, 100 micro-inch bright solder over 100 micro-inch nickel underplate
Outlet Wires	Copper alloy, 50 micro-inch lubricated gold plating over 100 micro-inch nickel underplate
Operating Temperature	14°F to 140°F (-10°C to 60°)
Storage Temperature Range	-40°F to 158°F (-40°C to 70°C)
Humidity	95% (noncondensing)
Nominal Solid Conductor Diameter:	0.025 to 0.020 in (22 to 24 AWG)
Nominal Stranded Conductor Diameter	0.64 to 0.51mm (22 to 24 AWG)
Plug Retention Force	30lb (133 N) minimum
Plug / Jack Contact Force	100 grams minimum per contact using FCC-8 position telecommunication plug
Insertion Life	750 cycles minimum using FCC-8 position telecommunication plug

2.4 TELEPHONE SYSTEM 110 WIRING BLOCKS (FOR RISER CABLES)

A. Provide Systimax® 110 Patch Panel System Terminal Blocks, product no. 110 PA2-300FT, or

equal, in BDF and each IDF. The wiring blocks shall be fully equipped with five pair, 110C-5 connecting blocks, jumper troughs and transparent label holders.

B. Provide Systimax® 110 Patch Panel System Backboard(s) between (Horizontal Telephone and Copper Riser) 110 Patch Panel System Terminal Blocks, product no. 188D3, or equal, in BDF and each IDF.

2.5 TELEPHONE SYSTEM JUMPER WIRE AND TOOL

A. Provide reel of telephone system jumper wire in the Building Distribution Frame Room. Reel shall consist of two unshielded twisted-pair 22 AWG solid copper conductors (i.e., single pair). Each conductor shall have a PVC sheath. The sheath of the two conductors shall be white/blue blue/white differing colors. The wire shall be General Cable, Cross-Connect Wire, or equal. Provide 500 feet of jumper wire. Hand-deliver the jumper wire to the University Representative after the job is completed.

B. Provide two (2) Telephone Termination 66/110 Automatic Impact Tools. Each tool shall be suitable for terminating telephone system feeder and distribution cables at Telephone Termination Frames and telephone outlets. The tool shall also be suitable for installing jumper wire at the telephone termination frames. The tool shall be Fluke Networks D814 Automatic Impact Punch Down Tool with 66 and 110 Blades, or equal. Hand-deliver the tools to the University Representative after the job is completed.

2.6 TELEPHONE AND DATA SYSTEM FACEPLATES

A. Provide a flush-mounted modular faceplate to house data and telephone system connectors, capable of housing a minimum of six (6) information outlets. The faceplate shall fit over a standard NEMA electrical outlet box (4S) with a single-gang plaster ring, and shall allow information outlets to be snapped into the faceplate with the nose flush to the plate surface. The faceplate shall be Systimax® M16L 6 port single gang wall plate or equal, (match color of electrical plates), or equal.

B. Provide modular faceplates suitable for Modular Furniture to support data and telephone system connectors, capable of housing a minimum of three (3) information outlets. The faceplate shall be compatible to fit modular furniture raceway. Provide bezel(s) and all associated hardware as required. The faceplate shall be Systimax® M13C series triplex outlets, match color of electrical plates, or equal.

C. Blanking Plates. Provide blanking plates to be installed in faceplate outlet positions that are not populated with telephone and/or data system information outlets. Provide blanking plates in sufficient quantities to cover all unused openings in every faceplate. The blanking plate shall be Systimax® M20AP blank module or equal, (match color of telephone / data plate).

D. At Wall (+42" AFF) Phone Outlet locations. Provide Stainless Steel Faceplate suitable for wall mount phone, equipped with an six-position connector, RJ45 connector with screw terminations, faceplate shall be stainless steel wall plate.

2.7 TELEPHONE AND DATA SYSTEM OUTLET MOUNTING COLLARS

A. Provide a flush-mounted modular mounting collar to house data and/or telephone system

information outlets at fixed or mobile the lab benches. The mounting collar shall fit in a pre-punched opening, and shall allow connectors to be snapped into the mounting collar with the nose flush to the collar surface. The mounting collar shall be Systimax® M30MC Mounting Collar or equal, (match color of electrical plates) or equal.

2.8 TELEPHONE AND DATA SYSTEM MODULAR PATCH PANELS

A. Telephone and Data System Modular Patch Panels:

1. Provided Systimax® 1100GS3 CAT-6 48 port patch panels for telephone and data cables, product 1100GS3-48, or equal, with 110 IDC connector terminations on rear. Patch Panel shall meet the following specifications: (See Item 2.3 for information outlet specifications.)

Performance Specifications:

	Category 6 Patch Panel	High Performance Solution	Premium Performance Solution
		Category 6 Channel (4 Connectors)	
	Typical Worst Pair Margin*	**Guaranteed Margin****	**Guaranteed Margin****
Insertion Loss	64.3%	5.0%	7.5%
NEXT	6.6 dB	6.0 dB	7.0 dB
PSNEXT	7.3 dB	7.5 dB	8.5 dB
ELFEXT	6.4 dB	6.0 dB	8.0 dB
PSELFEXT	6.1 dB	8.0 dB	10.0 dB
Return Loss	6.6 dB	4.0 dB	4.0 dB
Frequency Range	1-250 MHz	1-250 MHz	1-250 MHz

* Typical worst pair swept margin when measured with a GS8E modular patch cord.

**Guaranteed margin is valid at any frequency from 1-250 MHz for a SYSTIMAX® certified channel comprising GigaSPEED XL apparatus and 71E series cable (GigaSPEED XL7 Solution). Values represent margin over the draft Category 6/Class E channel specifications.

Physical Specification:

48 Port Patch Panel	19.0 x 5.25 x 1.25 in (48.26 x 13.34 x 3.20 cm) - 3 Rack Unit Universal A/B labeling
Operating Temperature Range	14°F to 140°F (-10°C to 60°C)
Storage Temperature Range	-40°F to 158°F (-40°C to 70°C)
Humidity	95% (noncondensing)

Nominal Solid Conductor Diameter	0.016 to 0.025 in (0.40 to 0.64 mm) (22 to 24 AWG)
Nominal Stranded Conductor Diameter	0.020 to 0.025 in (0.51 to 0.64 mm (22 to 24 AWG)
Insulation Size	0.046 in (1.17 mm) (22 to 24 AWG) Maximum

	DOD
Insulation Types	All plastic insulates (including PVC, irradiated PVC Polyethylene, Polypropylene
PTF Polyurethane Nylon	and FEP
Modular Jack Insertions	750 minimum insertions of an FCC 8-Position Telecommunications Plug
Front Panel	Black powder painted steel.
Modular Panels	High-impact, flame retardant UL-rated 94V-0 thermoplastic

Operational Specifications:

Operating Temperature Range:	14°F to 140°F (-10°C to 60°C)
Storage Temperature Range:	-40°F to 158°F (-40°C to 70°C)
Humidity:	95% (noncondensing)
Nominal Solid Conductor Diameter:	0.016 to 0.025 in (0.40 to 0.64 mm) (22 to 24 AWG)
Nominal Stranded Conductor Diameter:	0.020 to 0.025 in (0.51 to 0.64 mm (22 to 24 AWG)
Insulation Size:	0.046 in (1.17 mm) (22 to 24 AWG) Maximum DOD
Insulation Types:	All plastic insulates (including PVC,irradiated PVC, Polyethylene, Polypropylene, PTF Polyurethane, Nylon, and FEP)
Insertion Life :	750 minimum insertions of an FCC 8-Position Telecommunications Plug
Front Panel:	Black powder painted steel.
Plastic:	High-impact, flame retardant, UL-rated 94V-0 thermoplastic

2. Terminate Telephone and Data Cat-6 cables on separate 48 Port Patch Panels, do not mix terminations.
3. Patch Panel shall have strain relief (rear wire management bars) for each cable terminated on the connector.
4. Patch Panel shall be UL listed, UL-C certified and ACA approved.
5. Patch Panel 19-inch rack mountable and be able to store cable reserve with no bends sharper

than 2" bend radius.

6. Provide sufficient finger space to allow connectors to be mounted and demounted easily.
7. Provide Space for labeling of each individual copper connector.
8. Shall allow any individual cable to be terminated or otherwise handled without disturbing other cables.

2.9 TELEPHONE AND DATA SYSTEM PATCH CORDS

A. Provide (1) four-pair Systimax® CPC3312-03Fxxx GigaSPEED XL CAT 6 Patch Cord, or equal, for each telephone and data system information outlet installed in the project. (Note: xxx is length of patch cord, see item 2 below). Each patch cord shall have eight unshielded twisted-pair 24 AWG stranded copper conductors (i.e., four pairs), meeting the specifications for Data System Distribution Cabling and as detailed in this specification. Each patch cord shall be terminated with a Category 6 GS8E RJ45 data system copper connector on each end and meet the following:

1. Category 6 Patch Cord Requirement:

a. All patch cords shall exceed TIA/EIA and ISO/IEC Category 6/Class E specifications.
b. The patch cords shall incorporate an anti-snag feature that provides maximum protection from snagging during moves and re-arrangements.
c. Patch cords shall be UL listed, UL-C certified.
d. Patch cords shall support network line speeds in excess of 1 gigabit per second.
e. Patch cords shall be available in stranded and solid conductor in lengths to 100 feet.
f. Guaranteed Margin:

	Category 6 Modular Patch Cord (4 Pair)	High Performance Channel (4 Connections)	Premium Performance Channel (4 Connections)
	Typical Worst Pair Margin*	Guaranteed Margin**	Guaranteed Margin**
Insertion Loss	NA	5.0%	7.5%
NEXT	4.4 dB	6.0 dB	7.0 dB
PSNEXT	NA	7.5 dB	8.5 dB
ELFEXT	NA	6.0 dB	8.0 dB
PSELFEXT	NA	8.0 dB	10.0 dB
Return Loss	5.9 dB	4.0 dB	4.0 dB
Frequency Range	1-250 MHz	1-250 MHz	1-250 MHz

* Typical worst pair swept margin to TIA Patch cord specification when measured with same manufacturer's Category 6 telecommunications outlet.
** Guaranteed margin is valid at any frequency from 1-250 MHz for the single manufacturer's certified channel comprising the single manufacturer's Category 6

apparatus and the single manufacturer's High Performance series cable or Premium Performance series. Values represent margin over the draft Category 6/Class E channel specifications.

2. Provide the following:

   a. 50 percent of Patch Cords shall be Systimax® CPC3312-03F001 GigaSPEED XL CAT 6 Patch Cord, or equal, (No Known Equal).
   b. 25 percent of Patch Cords shall be Systimax® CPC3312-03F003 GigaSPEED XL CAT 6 Patch Cord, or equal, (No Known Equal).
   c. 25 percent of Patch Cords shall be Systimax® CPC3312-03F006 GigaSPEED XL CAT 6 Patch Cord, or equal, (No Known Equal).

3. Deliver all data system Patch Cords to the University Representative.

   a. The Design-builder is not required to install patch cords.

2.10 DATA SYSTEM HORIZONTAL PATCH MANAGEMENT

A. Provide horizontal patch management panel(s) for each Data System Equipment Rack(s). Provide one (1) Panduit WMPHF2E (front pathway only) 2U-high horizontal cable manager(s), or equal, above and below each 48 port patch panel and each 10 Outlet power strip.

2.11 TELEPHONE AND DATA SYSTEM LABELS

A. Provide labels for telephone and data distribution and feeder cables, patch panels and frames, and telephone and data outlets.

B. The lettering on each label shall be as large as is practicable. All labels shall be machine produced. Handwritten labels will not be acceptable.

C. A standard relative orientation shall be adopted for all labels unless otherwise specified.

D. Labels shall be robust, durable, shall resist abrasion, and shall be UV inhibiting, permanent and indelible. Labels shall be proof to 140° Fahrenheit.

E. Labels shall be readily visible and shall be fixed so that they remain in a visible position wherever practical.

F. Labels shall carry the full complement of characters to designate the unique identification for the item that they identify.

G. Cable Labels: Provide Self-Laminating Vinyl (wrap-around type) Cables Labels Brady Corporation, or equal. Cable Labels shall have a white printing area with black print. Cables Labels shall be preprinted or computer printed type. Cable Labels shall meet the legibility, defacement, exposure and adhesion requirements of UL 969. Hand written Labels are not acceptable.

H. Termination Frame (110 Blocks and Patch Panels) Labels. Provide pre-printed labels on card for 110 blocks. Label each frame on the front, enabling terminations to be clearly identified. Cable

terminations on frames shall be uniquely labeled in strict numerical order with the lowest numbered cable to the top left of the allocated portions of the frame.

2.12 GROUNDING AND BONDING

A. Materials: Comply with NFPA 70, TIA/EIA-607, and UL 467.

2.13 IDENTIFICATION PRODUCTS

A. Manufacturers:

1. Brady Corporation, Inc.
2. Panduit Corp.
3. Hellerman-Tyton
4. Kroy LLC.

B. Comply with TIA/EIA-606-A Class 3 and University Standards for Telecom Identification.

C. Cable Labels: Self-Laminating Vinyl Cables Labels, machine printed with alphanumeric cable designations.

PART 3 EXECUTION

3.1 INSTALLATION STANDARDS

A. Comply with BICSI TCI, TIA/EIA-568-B.1, TIA/EIA-568-B.2, TIA/EIA-568-B.3, and TIA/EIA-569-A.

B. Installation and certification of all unshielded twisted pair (UTP) cabling in accordance with the latest available TIA/EIA requirements for cabling installations is required.

C. Cabling Systems and Pathways shall be installed in a "neat and workmanlike manner" as specified by ANSI/NECA/BICSI 568-2001 and National Electrical Code (NEC) Sections 110-12 and 800-6.

D. The Design-builder shall adhere to and comply with the latest versions and/or revisions of each applicable standard. Among the various standards, guide-lines and practices applicable to this project are the following:

1. Building Industry Consulting Services International (BICSI)
2. BICSI Telecommunications Distribution Methods Manual (TDMM 11th edition)
3. California Building Standards Commission
4. California Electrical Code (2004) Title 24, Part 3
5. Federal Communications Commission (FCC)
6. FCC Part 68.5 Establishment of Telephone Premises Wiring Attestation List
7. Insulated Cable Engineers Association (ICEA)
8. National Electrical Manufacturers Association (NEMA)
9. NEMA WC 66 (2001) Premise Wiring
10. National Fire Protection Association (NFPA)

11. NFPA 70 (2008) National Electrical Code
12. Telecommunications Industry Association / Electronic Industries Alliance (EIA)
13. TIA/EIA-526-14A (August 1998) Optical Power Loss Measurements of Installed Multimode Fiber Cable Plant – OFSTP-14
14. TIA/EIA-568-B.1 (2004) Commercial Building Telecommunications Wiring Standard
15. TIA/EIA-568-B.2 (2003) Commercial Building Telecommunications Wiring Standard

16. TIA/EIA-568-B.3 (2002) Optical Fiber Cabling Components Standard (ANSI/TIA/EIA-568-B.3-2000)
17. TIA/EIA-569-A (1998) Commercial Building Standard for Telecommunications Pathways and Spaces (ANSI/TIA/EIA-569-A-98)
18. TIA/EIA-569-A-2 (2000) Commercial Building Standard for Telecommunications Pathways and Spaces, Addendum 2 (ANSI/TIA/EIA-569-A-2-2000). This addendum defines the furniture pathways and spaces contained in work areas.
19. TIA/EIA-606-A (2002) Administration Standard for the Telecommunications Infrastructure of Commercial Buildings
20. ANSI/J-STD-607-A (2002) Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications
21. TIA/EIA – 758 (April 1999) Customer-Owned Outside Plant Telecommunications Cabling Standard
22. UNDERWRITERS LABORATORIES INC. (UL)
23. UL 444 (1994; R 1995, Bul. 1995 and 1996) Communications Cables
24. UL 467 (1993; Bul. 1994 and 1996, R 1996) Grounding and Bonding Equipment
25. UL 497 (1995) Safety Protector for Paired Conductor Communication Circuit
26. UL 514C (1988; R 1989, Bul. 1993 and 1994) Nonmetallic Outlet Boxes, Flush-Device Boxes, and Covers
27. UL 910 (1995; R 1995, Bul. 1995 and 1996) Flame-Propagation and Smoke-Density Values for Electrical and Optical-Fiber Cables Used in Spaces Transporting Environmental Air
28. UL 969 (1995) Marking and Labeling Systems
29. UL 1286 (1993) Office Furnishings
30. UL 1581 (1991; Bul. 1993, 1994, 1995, and 1996, R 1996) Electrical Wires, Cables, and Flexible Cords
31. UL 1666 (1991; Bul. 1995 and 1996) Flame Propagation Height of Electrical and Optical-Fiber Cables Installed in Vertical Shafts
32. UL 1863(1995) Communication Circuit Accessories

E. Federal, state, local codes, rules, regulations, and ordinances governing the work shall be incorporated as part of these Technical Specifications.

F. In reviewing the various Contract Documents, the Design-builder shall be responsible for resolving conflicts between proposed design/concepts and the applicable standards, guidelines and practices.

3.2 EXAMINATION

A. Examine pathway elements intended for cables.

1. Verify proposed routes of pathways. Check raceways, cable trays, J-Hooks, and other elements for compliance with space allocations, clearances, installation tolerances, hazards to cable installation, and other conditions affecting installation. Verify that cabling can be installed complying with EMI clearance requirements.
2. Identify plan to support cables in suspended and/or open ceilings from the cable tray, conduits sizes and/or J-Hooks to the workstation locations. Verify that load capacity of cable support structures is adequate for each pathway.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 APPLICATION OF MEDIA

A. Horizontal Copper Cable for Data Service: Use UTP Category 6 cable (blue) for wiring runs between BDF or IDF's to workstations, cameras, lighting control, card access, energy management system or any other outlet identified as Data.

B. Horizontal Copper Cable for Voice Service: Use UTP Category 6 cable (white) for wiring runs between BDF or IDF's to workstation outlets.

3.4 TELEPHONE SYSTEM INSTALLATION DETAILS

A. Telephone System Patch Panels (110 blocks):

1. Provide Telephone system 110 wiring blocks with patch management in the BDF Room. Securely fix each panel to the telephone system backboard.

2. Provide a sufficient number of Telephone Patch Panels in Data System Equipment Rack to house all Telephone system information outlet connectors.

B. Telephone System Distribution Cables and Connectors:

1. Provide telephone distribution cable(s) running from each telephone outlet to the BDF and/or IDF on that floor. Provide telephone system distribution cable(s) at each combined telephone/data and/or telephone only outlet location.

2. Terminate each telephone system distribution cable(s) with an information outlet connector (MGS400-270) at the outlet end and on patch panel in the BDF or IDF end of the cable. Use the EIA/TIA-T568B wiring configuration, as defined in the ANSI/EIA/TIA-568-A-1995 Commercial Building Telecommunications Cabling Standard as detailed below:

Patch Panel	Conductor Color	Connector Pin
Pair 1	White/Blue	Pin 5
	Blue/White	Pin 4
Pair 2	White/Orange	Pin 1
	Orange/White	Pin 2
Pair 3	White/Green	Pin 3
	Green/White	Pin 6
Pair 4	White/Brown	Pin 8
	Brown/White	Pin 7

C. Telephone System Cross-Connects:

1. All Telephone System Cross-Connects will be completed by the University. Coordinate installation needs with University Representative in a timely manner as to not create a scheduling problem.

D. Telephone and/or Data System Faceplates:

1. Provide one (1) 6 Port Faceplate at each combination telephone/data and/or telephone only and/or data only outlet location. Fix each faceplate to the electrical back box with its full complement of screws.
2. Fix data and telephone connectors in the openings of the faceplate. Locate a blanking plate(s) in all unused openings in each faceplate.
3. Provide one (1) single Port Stainless Steel Faceplate (Wall +42" AFF) at each telephone only outlet.

3.5 DATA SYSTEM INSTALLATION DETAILS

A. Data System Patch Panels:

1. Provide Data System Patch Panels in the equipment racks located in the BDF and each IDF Telecom Room.
2. Provide a sufficient number of Data Patch Panels to house all Data system information outlet connectors.
3. Provide one 2U horizontal cable manager above and below each patch panel and power strip to allow for the horizontal routing of cables.

B. Data System Distribution Cables and Connectors:

1. Provide horizontal data system distribution cable(s) running from each data outlet to the BDF and/or IDF Telecom Room data system patch panel on that floor. Provide data system distribution cable(s) at each combined telephone/data and/or data only outlet location shown on drawings.
2. Terminate each data system distribution cable with an information outlet connector (MSG400-003) at outlet end of the cable. Use the EIA/TIA-T568B wiring configuration, as defined in the ANSI EIA/TIA cabling standard for premises horizontal wiring, shown below:

Patch Panel	Conductor Color	Connector Pin
Pair 1	White/Blue	Pin 5
	Blue/White	Pin 4
Pair 2	White/Orange	Pin 1
	Orange/White	Pin 2
Pair 3	White/Green	Pin 3
	Green/White	Pin 6
Pair 4	White/Brown	Pin 8
	Brown/White	Pin 7

3. Install station cables using the most direct route possible between outlet and patch panel while using the conduit, J-hooks and/or cable tray. Avoid distribution cables that are in excess of 250 feet in length.

C. Telephone and/or Data System Faceplates:

1. Provide one (1) 6 Port Faceplate at each combination telephone/data and/or telephone only and/or data only outlet location. Fix each faceplate to the electrical back box with its full complement of screws.
2. Fix data and telephone connectors in the openings of the faceplate. Locate a blanking plate(s) in all unused openings in each faceplate.

3.6 INSTALLATION PRACTICE

A. Comply with NECA 1.

B. Wiring Method: Install cables in raceway and using conduit, J-Hooks and/or cable tray except within consoles, cabinets, desks, and counters and in gypsum board partitions where unenclosed wiring method may be used. Use UL-listed plenum cable in environmental air spaces, including plenum ceilings. Conceal raceway and cables except in unfinished spaces.

C. Cable Installation:

1. Install cables parallel and perpendicular to surfaces or exposed structural members and follow surface contours where possible.
2. Make terminations only at indicated outlets, terminals, and cross-connect and/or patch panels.
3. Pulling Cable: Do not exceed manufacturer's written recommended pulling tensions. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
4. Secure and support cables at intervals 36" to 48" and not more than 6" from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
5. Install UTP cables using techniques, practices, and methods that are consistent with Category 6 rating of components and that ensure Category 6 performance of completed and linked signal paths, end to end.

D. Wiring within Wiring Closets and Enclosures:

1. Use cable strain relief brackets behind all patch panels to prevent straining connections to prevent bending cables to smaller radii than minimums recommended by manufacturer.

E. Separation from EMI Sources: Comply with BICSI TDMM and TIA/EIA-569-A recommendations for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment. Comply with the following minimum separation distances from possible sources of EMI:

1. Separation between unshielded power lines or electrical equipment in proximity to open cables or cables in nonmetallic raceways is as follows:

a. Electrical Equipment Rating Less Than 2 kVA: 5 inches.
b. Electrical Equipment Rating between 2 and 5 kVA: 12 inches.
c. Electrical Equipment Rating More Than 5 kVA: 24 inches.

2. Separation between unshielded power lines or electrical equipment in proximity to cables in grounded metallic raceways is as follows:

   a. Electrical Equipment Rating Less Than 2 kVA: 2-1/2 inches.
   b. Electrical Equipment Rating between 2 and 5 kVA: 6 inches.
   c. Electrical Equipment Rating More Than 5 kVA: 12 inches.

3. Separation between power lines and electrical equipment located in grounded metallic conduits or enclosures in proximity to cables in grounded metallic raceways is as follows:

   a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
   b. Electrical Equipment Rating between 2 and 5 kVA: 3 inches.
   c. Electrical Equipment Rating More Than 5 kVA: 6 inches.

4. Electrical Motors and Transformers, 5 kVA or HP and Larger: 48 inches.
5. Fluorescent Fixtures: 5 inches.

F. Do not untwist more than 1/4 inch of Category 6 cables at connector terminations

G. Provide grommets and strain-relief for cables terminating on wall-mounted user outlets to ensure durable and robust connections. Leave a 4" slack loop in each cable neatly coiled in the backbox at each termination point.

H. Take due account of the minimum bend radius of all cables installed. No cables shall be installed in a fashion that contravenes the minimum bend radius of the cable.

I. Provide all cables in straight parallel runs when on cable trays and/or J-hooks. Hold cables running in the vertical direction in place with broad cable ties at not more than 15" centers. Hold cables running in the horizontal direction in place with broad cable ties at no more than 32" centers.

J. Telephone and data system cables shall run in dedicated cable tray, J-hooks and/or conduit provided for data and telephone system use only. Do not tie communication system cables to power or other foreign services. All cabling shall run parallel or at right angles to building wall structures.

K. Reinstate all pull-wires in conduits after use to facilitate future addition of cables.

L. Provide and install firestopping in accordance with all local and NFPA regulations to sustain ratings when passing through (floors, wall or ceilings) with; conduits, sleeves, raceway, cable tray, wire basket cable tray through fire-rated elements.

M. Install all cables in complete runs from outlet or patch panel to patch panel. In-line joints, splices, distribution points, or other intermediate connections are not permitted.

N. The Design-builder shall individually and properly ground all voice termination frames, data system equipment racks, copper riser sheaths and cable runway with #6AWG green stranded wire to the TMGB or TGB using two-hole compression lugs on each end.

3.7 GROUNDING

A. Comply with the appropriate Division 26 Section for "Grounding and Bonding" and with TIA/EIA 607.

B. Grounding Points:

1. Locate grounding busbars (MTGB) in BDF and (TGB) in each IDF Telecom Rooms.
2. Provide a ground connection from all voice termination frames, data system equipment racks, copper riser sheaths and cable runways to the grounding terminals in the MDF/BDF and IDFs.

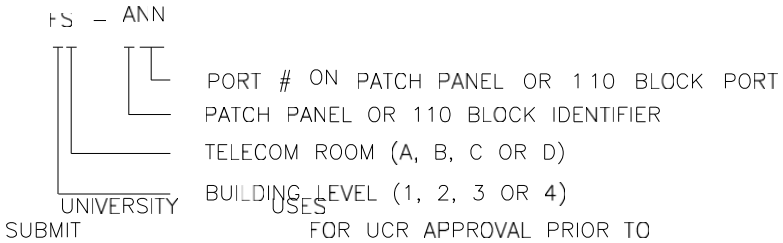
3.8 LABELING AND NUMBERING CONVENTIONS

A. General.

1. Outlets, cables, and terminations shall be labeled with a standard identification tag. Tags shall be typewritten or stamped with indelible waterproof ink and mechanically secured in a permanent fashion. Handwritten labels are NOT acceptable. Labels shall be mounted in a manner, which permits easy access and viewing. Receptacles, cables, and terminations shall be identified using the following conventions.

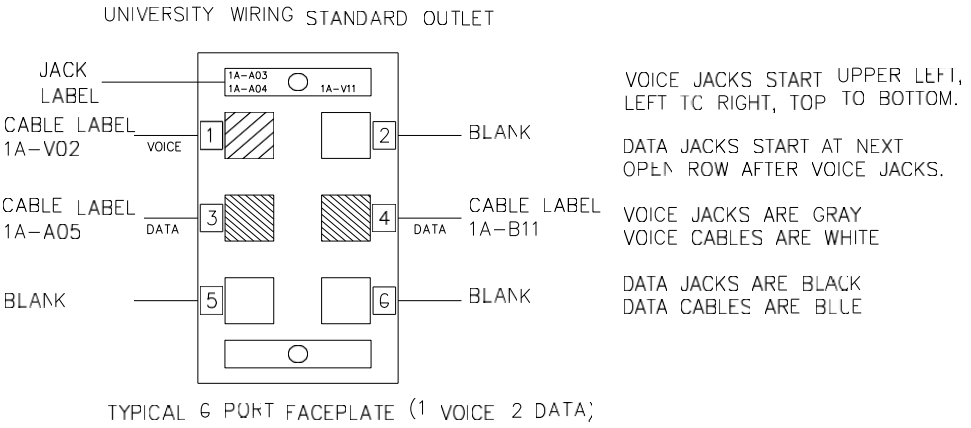
B. Station Cable:

1. Label each component of the telephone and data systems with its unique identification number using TIA/EIA 606-A Class 3 standards. The labeling and numbering scheme shall be compatible with the labeling and numbering scheme currently used by the University of California, Riverside. The labeling and numbering scheme used by the Design-builder shall be approved by the University Representative.
2. All labeling will follow the TIA 606-A Class 3 standard. Each telecommunications room; e.g. BDF or IDF will have a letter (A, B, C, etc.) assigned on each floor.
3. A workstation outlet and associated cabling identifier, unique within the building, shall be assigned to each workstation outlet and to its elements. A work station outlet shall have the form *fs-ann* where, *f* = BDF or IDF serving floor (B, 1, 2, 3, etc) and *s* = the BDF or IDF number (A, B, C, etc) and *a* = one or two alpha characters identifying the 48 port data system patch panel in the equipment rack or 110 termination block on the wall (A, B, C, D, etc) and *nn* = the port number on the patch panel or 110 termination block on the wall (01, 02, 03, 04, 05, etc). **DO NOT DUPLICATE PATCH PANEL OR 110 BLOCK IDENTIFIER**. . Voice jacks shall start at the top left position on the wall plate left to right top to bottom. Data jacks shall start at the next open lower row after all voice jack locations are populated. The voice jacks shall be gray and the data jacks shall be black. Data cables are blue and voice cables are white.



THE (UCR) TIA 606-A CLASS 3 STANDARD.
LABELING SCHEME
STARTING WORK.

C. Typical 6-Port Faceplate (1 Voice, 2 Data)



1. The cable serving each receptacle must be labeled at the receptacle and patch panel or 110 wiring block with wrap-around label. Label each cable (voice or data) so that the label is within 2" of the end of the cable at the 48 port data system patch panel end or 110 wiring block and at each outlet end.

D. Connectors:

1. Label each connector at each outlet (faceplate) location. The label shall be clearly visible for inspection.

E. Telephone System Termination 110 Block:

1. Termination 110 Block Labels. Provide a full complement of pre-printed cardboard patch frame labels, allowing each pair of each telephone system distribution, feeder, and external cable to be clearly identified. Telephone feeder cable pairs at terminal frames shall identify telephone outlet that they are connected to via the telephone station cable.

F. Data System Patch Panels:

1. Provide a full complement of data system patch panel labels, allowing each data system distribution and feeder cable connector to be clearly identified. Both copper and fiber connectors shall be labeled.

3.9 IDENTIFICATION

A. Cabling Administration Drawings: Show building floor plans with cable administration-point labeling. Identify labeling convention and show labels for telecom rooms, backbone pathways and cables, entrance pathways and cables, terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding conductors. Follow convention of TIA/EIA-606-A. Furnish electronic record of all drawings.

3.10 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

B. Category 6 UTP Cabling Tests:

1. Tests shall include all tests of Category 6, conducted from 1 to 250 MHz
2. Channel and permanent link tests shall be performed with a tester that complies with performance requirements in TIA/EIA-568-B.2, Level III. Include tests for longitudinal or transverse conversion loss.
3. Performance shall comply with minimum criteria in TIA/EIA-568-B.1 & B.2.

C. Data for each measurement shall be documented. Data for submittals shall be printed in a summary report that is formatted similar to Table 10.1 in BICSI TDM, or transferred from the instrument to the computer, saved as text files, and printed and submitted.

D. Remove and replace cabling where test results indicate that they do not comply with specified requirements.

E. Retest and inspect cabling to determine compliance of replaced or additional work with specified requirements.

3.11 TESTING AND DOCUMENTATION

A. General:

1. Acceptance testing shall be in compliance with TIA/EIA-568-B.1, B.2 & B.3.
2. A University Representative, at the option of the University, shall be present during testing.
3. Such acceptance testing shall in no way reduce the Design-builders' obligations regarding restoration, clean up, or warranty.
4. Design-builder shall be responsible for performing, tracking, and recording the results of tests.

B. Horizontal Station Cables:

1. Visual inspection will be made to insure that all cables have been terminated on the punch down block and on the eight-position station jack in proper color code order.
2. Four-pair station cables attached between station voice jacks and floor equipment room punch down blocks will be link tested with a cable analyzer to insure compliance with current EIA/TIA cabling standard Category 6 parameters. Four-pair station cables attached between data station jacks and floor equipment room jackfields will be link tested with a cable analyzer to insure compliance with current EIA/TIA cabling standard Category 6 parameters. All pairs shall test good and meet Category 6 parameters.
3. Test 100% of station wire in both directions with a certified Category 6 handheld tester, such as the OmniScanner 2 or Agilent Wirescope 350 or other Level III tester, and other test equipment as necessary to assure proper termination sequences, continuity, and Category 6 compliance. Station cables shall have NO bad pairs.
4. Test results shall meet or exceed the Category 6 test requirements as specified in the EIA/TIA cabling standard for premises horizontal wiring specifications. The approved Category 6 handheld tester will have the capability to be programmed with current Category 6 requirements as specified in the EIA/TIA cabling standard for premises horizontal wiring.

5. Documentation will include cable ID (same as jack ID) to be marked on the punch down block in the communication closet, station jack ID to be marked on the station jack, and results of Category 6 channel testing done with the cable analyzer. Analyzer documentation of testing shall consist of test result recorded in a ".txt" or ".csv" file on CD and on hard copy installed in a ring binder.

C. Test Equipment:

1. It will be the Design-builder's responsibility to provide the test equipment necessary and document to the University Representative the test equipment available for testing and the last date of certification.

2. Testing Equipment:

a. Continuity tester.
b. Power meter/source.
c. Equipment for two testers to communicate.
d. OmniScanner 2 or Agilent Wirescope 350 or other equal Level III tester.

D. Documentation:

1. The Design-builder shall submit three (3) copies (drawings hard copy 24" x 36" and Compact Disc) of the following as-built record drawings and documentation in a 3-ring binder following completion of testing (and re-certification, as necessary):

a. Construction Drawings: The as-built documentation shall be in AutoCAD min R2004 dwg or dxf equal and shall consist of the construction drawings with the station location numbers (faceplate identification numbers, e.g. 1A-V12, 1A-C15, etc.) inserted next to the symbol for each location.
b. Cat-6 Test reports to be provided in pdf file format and shall include and be arranged in:

1. Overall Summary Page (numerical order)
2. Telecom Room (BDF/IDF), Patch Panel (A thru Z) (numerical order)

END OF SECTION 27 1500

SECTION 27 5126 – ASSISTIVE LISTENING SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Assistive Listening equipment coordination and installation.
2. Assistive Listening installation requirements.

1.2 DEFINITIONS

A. ALS: Assistive Listening system.

1.3 SUBMITTALS

A. Product Data: Stationary RF System and accessories.

1.4 COORDINATION

A. Coordinate arrangement, mounting, and support of equipment in AV rack.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Listen Technologies
2. Or equal

2.2 TRANSMITTER AND ACCESSORIES

1. Listen Technologies LT-800-072 Base Transmitter (Qty: 1 ea.)

2. Listen Technologies LA-326 Rack mount kit (Qty: 1 ea.)

3. Listen Technologies LA-122 Universal antenna. (Qty: 1 ea.)

4. Listen Technologies LR-4200-072 Intelligent DSP RF Receiver (72 MHz) receiver (Qty: 4 each)

5. Listen Technologies LA-401 Universal Ear Speaker (Qty: 4 ea)

6. Listen Technologies LA-430 Intelligent Earphone/Neck Loop Lanyard. (Qty: 2 ea.)

7. Listen Technologies LPT-A107-B Dual RCA to Dual RCA Cable 6.6 ft. (Qty: 1 ea.)

8. Listen Technologies LA-381-01 Intelligent 12-Unit Charging Tray (Qty: 1 ea.)

9. Listen Technologies LA-304 ADA Access/Compliance signage kit. (Qty: 1 ea.)

PART 3 - EXECUTION

3.1 COMMON REQUIREMENTS FOR ASSISTIVE LISTENING SYSTEM

A. Install an RF wireless assistive listening system for use by the hearing-impaired. The assistive listening system (ALS) shall be capable of broadcasting on 57 channels and be frequency agile. The RF receiver shall be capable of receiving on 57 wide and narrow band channels. The device shall tune to a single channel and user shall not be able to change the channel. The receiver shall have a signal-to-noise ratio of 80 dB or greater and shall have an audio frequency response of 50 Hz - 15 kHz (±3 dB). The device shall employ a unique DSP SQ™ noise reduction technology. The unit shall have a programmable squelch circuit. The unit shall incorporate a multi-functional display that indicates battery status, inventory number and channel. The device shall have the option of being lanyard or belt clip worn and the lanyard shall have the option of an integrated DSP driven neck loop that automatically senses and sends optimized audio signals directly to hearing aids and cochlear implants equipped with telecoils. The neck loop shall have a field strength of 400 mA/m (+/- 3dB) and frequency response of 100Hz to 5kHz (+/- 3 dB ref 1kHz). The device shall have a USB connector used for inventory control, set up, charging and firmware upgrades. The device shall incorporate automatic battery charging circuitry and use a non-proprietary lithium ion battery. The device shall have additional charging contacts to allow multiply charging options. The ALS system shall have 80dB SNR or greater, end-to-end. Listen Technologies Corporation products are specified.

B. The minimum number of receivers to be provided shall be equal to 4% of the total number of seats, but in no case less than two. 25% minimum of receivers provided, but no fewer than two, shall be hearing aid compatible in accordance with CBC Section 11B-706.3.

END OF SECTION 27 51 26

SECTION 28 1300 – ACCESS CONTROL

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:
1. The controller shall be Hirsch MX8 and MX2.

a. The controller shall be a fully stand-alone processor capable of making all access control decisions without the involvement of the server computer based on a set of parameters passed to the controller from the server.

4. The identification and location for security access is related to the building design and building type. In general, floors of a laboratory building shall be isolated. Building public entrances and service entrances shall be isolated. Close coordination with curtain wall systems, adjacent materials, hardware, parking, adequate lighting, and recessed telephone boxes with a nearby phone book for visitor night access shall be considered for each Project.
5. The system shall monitor door contacts for door propped alarms to sound at the readers.
6. The central control panel shall have an Ethernet network 10 base T card to allow connection to the campus network. Security system wiring shall be segregated from other systems. The central control panel shall be located in the MDF telephone room and include a hinged, lockable cover.

1.2 MANUFACTURERS

A. Acceptable Access Control System Manufacturers:
1. Hirsch

B. Products:

1. MX8 and MX2, controller and enclosure.
2. REB8, relay panel.
3. DTLM3, digital line module.

1.3 SYSTEM DESCRIPTION AND FUNCTION

A. Design and install an access control system including necessary hardware and software to perform the functions intended.

B. The system shall be fully integrated to the existing campus Hirsch access system and the existing hardware and software shall be modified to include the extended system.

C. The system shall provide the following functions:

1. Provide access control using the Weigand type access card.
2. Monitor access doors and other points for alarm and status.
3. Log selected events to the host system printer.
4. Upload access data to the host system terminal.
5. Display alarms on the host system terminal including a location plan.
6. Local programming of the system using a portable computer.
7. Access control decisions shall be made locally by the ACS automatically without the need for any operator intervention. Whenever an alarm or other exceptional situation occurs, the ACS shall automatically alert the existing campus central station operator via an Ethernet connection while simultaneously alerting any remote alarm terminal printer, executing preprogrammed output commands as established by the University's Representative. The systems or devices shall produce an orchestrated response to the event
8. The ACS shall provide programmed access control by card number time zones, and location of access. The existing campus central station shall be able to perform supervisory checks of ACS entry transactions.
9. The ACS shall perform data acquisition of facility security conditions and shall be capable of uploading transactions and/or events to the existing campus central station system and include the date, time, location, and nature of the event.
10. The ACS shall utilize distributed control architecture to ensure minimum upsets or shutdowns in the event of a single or multiple component failure. The ACS shall be capable of identifying the failed component(s) and bring it to the attention of the existing campus central station operator

1.4 SUBMITTALS

A. Submit complete coordination system documentation including, but not limited to:

1. Equipment location and conduit routing drawings.
2. Point-to-point wiring diagrams.

3. Descriptive literature and specification sheets for hardware and equipment.
4. Operating and maintenance instructions on hardware and equipment.
5. I/O (input/output device) point assignments.
6. Complete schedule and legend listing sensors, readers, etc., indicating its location, make and model number, I/O assignment, etc. Room numbers shall be actual, final building room numbers.
7. Database and software modification documentation indicating sequences of operation, listing of control program additions, flow charts of control program additions, and proposed floor maps with symbols to be programmed into the existing campus central station terminal.
8. Procedures and documents to be used for training, check-out, and commissioning (prior University approval required).

1.5 QUALITY ASSURANCE DURING CONSTRUCTION

A. The installation contractor shall have an established engineering, sales, installation, and service presence within Southern California. This office shall have been in operation for a period of not less than five years prior to the bid date of the project.

B. The Installation Contractor shall be a Branch office, a Main Office, or an authorized dealer and/or Installer of the system manufacturer and shall have done at least two (2) projects similar to this project in size and type in the last three (3) years.

C. The Installation Contractor shall be responsible for the complete installation and proper operation of the ACS, including the initial data input, system debugging, and initial calibration of system components.

D. A full-time Project Manager with a minimum of five (5) years experience with facilities of this size project and complexity shall be assigned to manage both the engineering/design and system installation/start-up phases of the projects. Close coordination and approval from and with the Design Professional is required.

1.6 SEQUENCE OF OPERATION

A. Operation of a valid card on an access control reader shall release the lock mechanism for a preset time.

B. Request to exit as detected by the motion sensor shall release the lock mechanism for a preset time.

C. While the lock mechanism is released, the alarm contacts shall be shunted to prevent an alarm.

D. If the alarm contacts are opened or are not closed at the end of the lock release preset time, a local alarm shall sound. This alarm shall be repeated to the control security station.

E. Card readers in elevator cars shall be linked to elevator controls to allow travel to selected floors. The system shall be capable of restricting access to floors not permitted by the access card.

PART 2 PRODUCTS

2.1 COMPONENTS

A. The access control system shall comprise the following principal hardware.

1. Intelligent Terminal Controller to support the Smart Terminal Interface Programming Equipment and communications with the existing central controller. Controller shall have a battery sized to provide six hours of power in event of primary power failure.
2. Smart Terminal Interface units for connection of door hardware and access reader.
3. Card Readers shall use the Weigand stripe technology as used on the campus. Card readers shall be suitable for their installed locations.
4. Access cards shall be Weigand "effect" security cards as used on the campus. Access cards shall be provided with the system preprogrammed with the University's facility code.
5. Door hardware shall consist of:

    a. Electric strikes as furnished in door hardware Division. Verify the strikes' power and connection requirements and provide equipment necessary to interface with the electric strike. Coordinate and provide necessary hardware for connection to any automatic disabled access control doors.
    b. Request to exit shall consist of a motion sensor mounted above the door.
    c. Door alarm contacts shall be coordinated with the door construction.
    d. Door alarm sounder shall be provided by each access control door to signal an alarm condition at that door.
    e. Where an access control door is installed on a means of escape, an emergency pull station shall be provided. The pull station shall release the door lock and signal an intrusion.

PART 3 EXECUTION

3.1 INSTALLATION

A. Provide conduit and wire from dedicated 120 VAC emergency power circuits.

B. Power supply wiring (120 VAC) shall be run in dedicated conduit. Power conduit shall be separated from control and signal conduits by a minimum of 3 inches.

C. ACS equipment shall be located such that it is accessible for service while maintaining clearances or walkways required around other equipment or obstacles.

D. Control elements located in outdoor installations shall be weatherproof.

E. Splices in shielded cables shall not be permitted. Terminations of shields and conductors shall be done in accordance with the manufacturer's instructions.

F. Cabling and wiring within panels shall be harnessed with tie wraps and secured in a neat and orderly fashion.

G. Cable runs shall be kept as short as possible, allowing extra length for making connections to termination points.

H. Each cable or individual conductor shall be labeled with a unique tag for quick identification during checkout, testing, and troubleshooting. Each component shall be permanently labeled with the device name and at each terminal point per Division 26 Section "Identification for Electrical Systems."

3.2 SYSTEM TESTING AND CHECKOUT

A. Prior to the acceptance test, the perform the following tasks:

1. Check for electrical continuity, eliminating shorts and open circuits, and verify grounding.
2. Install, calibrate, adjust, debug and set system's initial operating parameters including the existing campus central station.
3. Check out systems to verify the provided engineering documentation and approved submittals have been followed.

B. The ACS, including the interface with and programmed responses of the existing campus central station, must operate continuously for seven (7) days with no operational malfunctions or problems before setting an acceptance test date. Simulate different access and egress scenarios for worst case condition and simulate other alarm conditions to test the ACS's response and handling of situations. Keep a detailed log of tests conducted, problems encountered, and the corrective action that was taken.

C. Prepare and submit an Acceptance Test Plan for approval. This test shall include verification of communications, control, and response from the existing campus central station to a floor terminal controller, to a smart terminal interface, and finally to the sensor and controlled device to demonstrate the proper operation of control loops, conditional control and default sequences in accordance with the project documentation.

D. Obtain the approval of the University's Representative as to when the acceptance test will be performed.

E. Conduct the acceptance test in the presence of the University's security supervisor and/or of their designated Representative, following the approved Acceptance Test Plan.

F. The University's Representative shall check off and initial each successfully tested item. Demonstrate that the electromechanical systems are operating properly, and that the system is providing the required control sequences, alarms, graphic displays, and report generations.

G. An ongoing punch list shall be maintained throughout the test of items. This list shall contain items that must be corrected prior to accepting the system for beneficial use and commencement of the warranty period.

3.3 TRAINING

A. Furnish the services of competent instructor(s) who shall give a maximum of four hours instruction and orientation to the University's designated personnel in the adjustment, operation and maintenance, including pertinent safety requirements of the equipment, the affected systems, and the software provided. The training shall be customized to reflect the actual system installed rather than being a general (canned) training course. Each instructor shall be thoroughly familiar with all aspects of the subject matter they are to teach.

END OF SECTION 28 1300

SECTION 28 2300 - IP VIDEO SURVEILLANCE SYSTEM

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Provide a complete IP video recording system, including network video recorder, cameras, all components required for a fully functioning system, installation and commissioning.

1.2 RELATED SECTIONS

A. Section 270528 – Pathways for Communications.

B. Section 271500 – Communications Horizontal Cabling.

C. Section 282200 – Access Control System.

1.3 REFERENCES

A. Reference Standards: Provide systems which meet or exceed the requirements of the following publications and organizations as applicable to the Work of this Section:

1. Canadian ICES-003
2. Consultative Committee for International Radio (CCIR)
3. Conformity for Europe (CE)
4. Electronic Industry Association (EIA)
5. Federal Communications Commission (FCC)
6. Joint Photographic Experts Group (JPEG)
7. National Television Systems Committee (NTSC)
8. Phase Alternating by Line (PAL)
9. Underwriters Laboratories Inc. (UL)
10. Institute for Electrical and Electronics Engineers (IEEE)
11. Physical Security Interoperability Alliance (PSIA)
12. Open Network Video Interface Forum (ONVIF)

1.4 DEFINITIONS

A. HD (High-definition) – refers to video having resolution substantially higher than traditional television systems. HD has one or two million pixels per frame.

B. CIF (Common Intermediate Format) – refers to a standard video format, which is categorized based on the resolution.

1.5 SYSTEM DESCRIPTION

A. The Network Video Recorder (NVR) supports simultaneous recording, search, and system management for IP surveillance cameras. Multiple NVR's may be deployed for system expansion and multiple instances of client software run on the same workstation PC for simultaneous viewing of multiple units.

1.6 SUBMITTALS

A. Manufacturer's Product Data: Submit manufacturer's data sheets indicating systems and components proposed for use, including instruction manuals.

B. Shop Drawings: Submit complete shop drawings including connection diagrams for interfacing equipment, list of connected equipment, and locations for major equipment components.

C. Record Drawings: During construction maintain record drawings indicating location of equipment and wiring. Submit an electronic version of record drawings not later than Substantial Completion of the project.

D. Operation and Maintenance Data: Submit manufacturer's operation and maintenance data, customized to the system installed. Include system and operator manuals.

E. Field Tests: Submit results of field testing of every device including date, testing personnel, retesting date if applicable, and confirmation that every device passed field testing.

F. Maintenance Service Agreement: Submit a sample copy of the manufacturer's maintenance service agreement, including cost and services for a one year period for Owner's review. Maintenance shall include, but not be limited to; labor and materials to repair the system provide test and adjustments, and regular inspections.

1.7 QUALITY ASSURANCE

A. Manufacturer: Minimum ten years experience in manufacturing and maintaining IP video recording systems. Manufacturer shall provide toll-free technical assistance and support available 24/7.

B. Installer: Minimum two years experience installing similar systems, and certified by the manufacturer of the IP video recording system.

C. Environmental Conditions: The NVR shall be designed to function in the following environmental conditions:

1. Operating Temperature: 32°F to 95°F (0°C to 35°C).
2. Emissions: FCC part 15
3. Safety: UL 60950-1:2007; CSA C22.2 No. 60950-1.

D. Power Requirements: NVR shall have the following electrical specifications:

1. Input Voltage: 110/220 VAC 50/60 Hz
2. Operating Voltage: 110V/220V Auto Sensing
3. Dual hot plug, redundant power supply, 350 Watt

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's labeled packages. Store and handle in accordance with manufacturer's requirements, in a facility with environmental conditions within recommended limits.

1.9 WARRANTY

A. Manufacturer's Warranty: The warranty period shall be a minimum of twelve (12) months from the delivery date of the system under normal use and service.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. IP Video Recording System (NVR) Manufacturer:

2.2 SYSTEM COMPONENTS

A. IP CAMERAS

1. Sony SNC-EP550 (Exterior PTZ), Sony SNC-EM602RC (Exterior Fixed)
2. Sony SNC-EM601 (Interior)
3. Sony SNC-DH110W (Elevator)

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine site conditions prior to installation. Notify Architect and Owner in writing if unsuitable conditions are encountered. Do not start installation until site conditions are acceptable.

3.2 INSTALLATION

A. Test all components before shipping to the project location

B. NVR system shall be installed, programmed, and tested in accordance with manufacturer's installation instructions.

1. Coordinate interfaces with Owner's representative where appropriate.
2. Provide backboxes, racks, connectors, supports, conduit, cable, and wire for a complete and reliable installation. Obtain Owner's approval for exact location of all boxes, conduit, and wiring runs prior to installation.
3. Install conduit, cable, and wire parallel and square with building lines, including raised floors areas. Do not exceed forty percent fill in conduits. Gather wires and tie to create an orderly installation.
4. Coordinate with other trades to provide proper sequencing of installation.

3.3 FIELD COMMISSIONING AND CERTIFICATION

A. Field Commissioning: Testing the IP Video Recording system as recommended by manufacturer, including the following:

1. Conduct complete inspection and testing of equipment, including verification of operation with connected equipment.
2. Test devices and demonstrate operational features for Owner's representative and authorities having jurisdiction as applicable.

3. Correct deficiencies until satisfactory results are obtained.
4. Submit written copies of test results.

3.4 TRAINING

A. Conduct on-site system administrator and security/surveillance operator training, with the number of sessions and length of sessions as recommended by the NVR system manufacturer. Training shall include administration, provisioning, configuration, operation, and diagnostics.

END OF SECTION 28 2300

SECTION 28 3100 – FIRE ALARM SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Fire Alarm Control Unit.
2. Manual Fire Alarm Boxes.
3. Analog Sensors.
4. Conventional Detectors.
5. Miscellaneous Detection.
6. Addressable Modules.
7. Notification Appliances.
8. Magnetic Door Holders.
9. Remote Annunciators.
10. Addressable Interface Modules.
11. Digital Alarm Communicator Transmitter.
12. Network Printer.

B. Related Work in other Sections or Divisions:
Coordinate with work of all other trades as required, including but not limited to:

1. Electric door locks or gate controllers
2. Electric/magnetic door holders
3. Integral fire door smoke detectors and magnetic hold-opens
4. Water flow switches
5. Sprinkler valve supervisory switches
6. Mechanical HVAC, Damper controls & EMS
7. Raceways, boxes, outlets and terminal cabinets

1.2 DEFINITIONS

A. Definitions in NFPA 72 and UL 864 are inclusive to this section.

B. LED: Light-emitting diode.

C. NICET: National Institute for Certification in Engineering Technologies.

D. FACP: Main Fire Alarm Control Panel.

E. MINIPLEX: Remote input/output panel connected to a FACP via Remote Unit Interface.

F. NETWORK: FACP(s) interlinked via dedicated fiber connections to the TSW.

G. IMS: Integrated Management System – Campus FACP Network Portal.

H. RPS: Remote Power Supply for conventional horns and strobes.

1.3 SYSTEM DESCRIPTION

A. This section of the specification includes the furnishing, installation, and connection of the microprocessor-controlled fire alarm equipment required to form a complete coordinated system ready for operation. Provide a complete and operable active multiplex, addressable fire alarm system for the protected premise building referred to as Multidisciplinary Research Building 1 (MRB1).

B. Base bid is to provide the protected premise fire alarm system, connected as part of the existing active-multiplex, fiber-optic cabled, Campus Remote Station Fire Alarm System.

C. The system shall comprise all necessary component parts to provide the functions and facilities described and obtain the required approvals.

1. Fire Alarm Control Panel (FACP)

2. Alarm initiating devices.

   a. Manual stations.
   b. Area photoelectric smoke detectors (Total coverage throughout occupiable spaces).
   c. Heat detectors - fixed and combination where environmental conditions merit.
   d. Wet pipe automatic fire sprinkler water flow and valve tamper switches.

3. Fire alarm terminal and power supply cabinets.

4. Remote control relays for air handling fans and dampers, elevator recall service, access control, supervision of emergency power systems, energy management systems, and similar auxiliary control devices and modules.

5. Alarm audio/visual notification appliances (horns and strobe lights) to meet NFPA 72 & ADA provisions.

6. Conduit, boxes, fittings, hangers, outlets, wiring, etc. required to provide power to and interconnect all components listed above within the building and identified points of connection to components in adjacent buildings, as required.

7. Conduit, 24 strand multi-mode fiber optic cable, patch cables, breakout boxes, multiplex panels, connections, fittings, terminations, etc. to connect the protected premise building fire alarm to the Campus fire alarm fiber optic infrastructure at the identified point of connection in the adjacent Material Science & Engineering (MS&E) building under provisions of the base bid.

8. Conduit, wiring, outlets, etc. required to provide power to and interconnect any devices supplied under other Divisions, including:

   a. Electric door locks or gate controls, release controls.
   b. Electric/magnetic door holders.
   c. Sprinkler water flow switches.
   d. Sprinkler valve supervisory switches.

e. Smoke / Fire dampers.
f. Energy management systems, HVAC shut down.
g. Emergency generator and power systems.
h. Integral fire door smoke detectors and magnetic hold-opens.

D. Copies of as-built drawings shall be provided as computer aided drafting (CAD) files, compatible with the AutoCAD (2010) or equal, *.dwg file format and *.dxf format. The content of the CAD files shall include only fire alarm system elements and contain no proprietary xref's, fonts or features.

1.4 WARRANTY

A. Equipment shall be manufactured by the indicated suppliers, or others as allowed by testing lab approvals or listings. All equipment shall be supplied and warranted by the system installer for no less than two years from date of completion of acceptance testing. Such warranty shall be required of the installing contractor, even if in excess of original manufacture warranties. Documentation to be provided as part of project close-out. Refer to specification section 01 7700 Closeout Procedures for requirements.

1.5 PERFORMANCE REQUIREMENTS

A. Seismic Performance FACP and raceways shall withstand the effects of earthquake motions determined according to the VIBRATION AND SEISMIC CONTROLS FOR ELECTRICAL SYSTEM SPECIFICATION SECTION.

B. Special Provisions – System Operation Requirements:

1. Alarm Verification Operation

a. When an alarm condition is detected by a smoke sensor, on an Initiating Device Circuit or Signaling Line Circuit, which has been programmed for Alarm Verification, the system will automatically enter the ALARM verification mode of no greater than 30 seconds.

2. Signal Silence Operation

a. All Notification Appliance Circuits shall be programmed to silence off if the panel signal silence switch is manually activated. Visual devices shall continue to operate until the system is reset.

3. Building Evacuation Capability

a. The protected premise FACP and the existing Campus system receivers shall be programmed with a "general building evacuation" command button, matching existing Campus Standard.

1.6 SUBMITTALS

A. General Submittal Requirements:

1. Shop Drawings shall be prepared by persons with the following qualifications:

    a. Trained and certified by manufacturer in fire alarm system design.
    b. Fire alarm certified by NICET, minimum Level II.

B. Product Data:

1. Provide manufactures data sheets and CSFM listing sheets for all products.

C. Shop Drawings:

1. Fire Alarm System:

    a. Include plans, elevations, sections, details, riser diagrams, general notes, location, Scope of the Work and attachments to other work, etc. required by local Authorities.
    b. System Operation Description: Detailed description for this Project, including method of operation and supervision of each type of circuit and sequence of operations for manually and automatically initiated system inputs and outputs. Manufacturer's standard descriptions for generic systems are not acceptable.
    c. Contractor shall comply with recommendations in the “Documentation” Section of the “Fundamentals of Fire Alarm Systems” chapter in NFPA 72 by preparing and submit detailed shop drawings meeting the provisions of NFPA 72 and California Fire Code to the Office of the Campus Fire Marshal, and obtain approvals prior to proceeding with installation. The University Representative and Campus Fire Marshal approval of submittals and/or shop drawings is for permission to proceed with installation and does not authorize design, products, or installation not conforming to referenced codes and standards and this specification.

    d. Include voltage drop calculations for all notification appliance circuit.

        1) Worst case only calculations are not acceptable.

    e. Include battery-size calculation(s) with stand-by and alarm loads for all components.

    f. Include electrical panel and circuit number for all 120VAC sources.

    g. Drawings shall include identification of all terminals and illustrating all typical device wiring connections.

    h. Device Address:

        1) Show the address for each addressable device shown on the plans.
        2) Coordinate custom device label with DCFM prior to programming labels.

    i. System Riser Diagram: Show all equipment, terminal cans, devices, conduit routing, cable routing and cable type and quantity. Provide ladder type riser lay-

out with all interconnecting conduits.

j. Wiring Diagrams: Provide wiring type, part number, manufacture and color code.

k. Power, Signal, and Control Wiring: Include diagrams for equipment and for system with all terminals and interconnections identified.

l. Ductwork Drawings: Show critical dimensions that relate to placement and support of sampling tubes, the detector housing, and remote status and alarm indicators. Locate detectors on plans according to manufacturer's written recommendations.

m. Room numbers: Confirm room numbers being used in programming are the final numbers assigned by Facilities Management.

D. Submittals to Campus Fire Marshal (DCFM): In addition to distribution requirements for submittals specified in Division 01 Section "Submittals," make an identical submittal to the University. To facilitate review, include copies of annotated Contract Drawings as needed to depict component locations. Resubmit as required to make clarifications or revisions to obtain approval. On receipt of comments from Campus Fire Marshal, submit them to the University for review.

E. Resubmittals: Make corrections and resubmit drawings as required until the plans are reviewed and approved by the Campus Fire Marshal.

F. Delegated-Design Submittals: The Mechanical Engineer of Record will coordinate the specific location of each duct detector with the mechanical, electrical and fire alarm contractors prior to the installation of any duct mounted device.

G. As-built drawings shall be prepared and operation and maintenance manuals shall be prepared and provided for approval prior to requesting acceptance testing from the office of the Campus Fire Marshal. The installing contractor shall prepare required Certificate of Compliance per NFPA 72, prior to requesting acceptance testing from the office of the Campus Fire Marshal.

1. Copies of as-built drawings shall be provided as computer aided drafting (CAD) files, compatible with the AutoCAD (2010) or equal, *.dwg file format and *.dxf format. The content of the CAD files shall include only fire alarm system elements and contain no proprietary xref's, fonts or features.

1.7 QUALITY ASSURANCE

A. The system of this project shall be classified as a protective premise (local) fire alarm system and shall also be a component of the Campus proprietary supervising station fire alarm system, as defined by NFPA 72, 2013 Edition with State amendments.

B. All equipment shall be currently listed by Underwriters' Laboratories, FM, ETL, or equivalent and the California State Fire Marshal.

C. All systems shall be designed, installed, and perform in accordance with appropriate statutory codes and referenced standards. Editions or versions of such codes and/or standards shall be as accepted as those legally adopted by the Building Standards Commission, enforced by the Office of the State Fire Marshal (OSFM), in effect at the time the plans for the proposed project were approved by the Regents of the University of California and preliminary plans were submitted to the Office of the Campus Fire Marshal. The contractor, subcontractor, supplier, designer, technician, and any other involved parties shall also perform their respective scope of work in conformance with acceptable industry practices.

D. Installing Contractor, and any second or third tier sub-contractor shall demonstrate satisfactory installations of comparable systems within the immediately preceding five years, including references.

E. Installing Contractor, and any second or third tier sub-contractor shall demonstrate ability to provide response to effect repair within 4 hours by factory certified personnel, during the warranty period.

F. Installer Qualifications:

1. Personnel installing wire, cable, devices or making final connections shall be trained or supervised by the manufacturer.

2. Installers shall be licensed, as required, by the State of California.
   a. Electrical Components, Devices, and Accessories:
      1) Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to California State Fire Marshal, and marked for intended use.

1.8 PROJECT CONDITIONS

A. Interruption of Existing Fire Alarm Service: Do not interrupt fire alarm service to facilities occupied by The University or others unless permitted under the following conditions and then only after arranging to provide temporary guard service according to requirements indicated:

1. Notify University's Representative no fewer than fourteen calendar days in advance of proposed interruption of fire alarm service.

2. Do not proceed with interruption of fire alarm service without the University's Representative written permission.

1.9 SOFTWARE SERVICE AGREEMENT

A. End-User Technical Support: The campus is trained on all software required for the proper operation, programming, servicing or testing of the FACP and FACP Network. Additional Software and Hardware training for the Campus staff shall be coordinated with the Facilities Department on as needed bases.

B. At the completion of the project update the FACP software and firmware to the latest

version required for proper operation of the system. Provide access for software and firmware upgrades via the internet. Upgrade shall include new or revised licenses for use of the software.

1.10 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Quantities of the following devices equal to 10 percent of the amounts shown for each device on the approved plans but no less than one of each type of device.

a. Pull Station.
b. Addressable Monitor Module.
c. Addressable Control Module.
d. Smoke Detector Head (sensor).
e. Smoke Detector Base.
f. Heat Detector Head (sensor).
g. Heat Detector Base.
h. Duct Detector Housing with Head.
i. In-Duct Detector Housing.
j. Indoor Indicating Devices: Horn, Speaker, Strobe and/or combination devices.
k. Keys and Tools: One set of each key and/or special tool used for locks and access.

PART 2 - PRODUCTS

2.1 MULTIPLEX TYPE SYSTEM

A. University requires a protected premises system; an addressable multiplex microprocessor-controlled Fire Alarm System. Systems that do not meet the following criteria shall not be considered:

1. The system shall be fully programmable by Campus personnel or system supplier using equipment provided as part of this project.

2. All memories shall be maintained during loss of all power supplies, (including batteries), and the system shall automatically restore to its normal operating mode upon restoration of power.

3. The system shall be provided with electric horns, strobes, and/or combination horn/strobes as required to achieve current ADA provisions for the building.

4. Remote data gathering panels, if used shall be capable of operating all critical functions required for safe evacuation while disconnected from the main processing unit due to communications link or main processor derangement.

2.2 FIRE ALARM CONTROL PANEL (FACP)

1. The system control panel shall be a Simplex Model 4100ES and shall be configured with all

required components, modules, etc. to provide for the complete operation of the system. The system shall also be provided with and configured to support (2) 250 point IDNET circuits. Also, support 2 remote annunciator's locations/enclosures.

Additionally, the system shall be provided with no less than 16 programmable form "C", dry relay outputs within the building to be used as described herein. Such contacts shall be pre-wired by the installing contractor using a style D, IDC, for each contact to a dedicated surface mounted junction box, sized per CEC, Article 370 for 1.5 times the number of conductors required. Such junction box shall be located within 3 feet of the control panel and no greater than 5 feet above finished floor. Fire alarm control panel cabinet shall be surface mounted, red in color. The control panel cabinet shall contain required space for all components involved and shall be sized for required expansion to include spare capacities as indicated within this specification or construction drawings.

2. The system shall communicate with the existing Campus receiver system fiber-optic loop using all required interface components, hardware, and software, to be contractor provided and installed. Contractor shall be responsible for confirming mode of communication and routing, prior to system shop drawing submittal preparation.

3. System Capacity and General Operation

   a. The control panel shall be capable of expansion as specified above.

   b. The CPU shall provide the following controls and indicators used by the system operator:

AC POWER	(Green LED)
SYSTEMS ALARM	(Red LED)
SUPERVISORY	(Yellow LED)
SYSTEM TROUBLE	(Yellow LED)
SIGNALS SILENCED	(Yellow LED)
POWER TROUBLE	(Yellow LED)
ACKNOWLEDGE	(Momentary Switch)
SIGNAL SILENCE	(Momentary Switch)
SYSTEM RESET	(Momentary Switch)
DISABLE/ENABLE	(Momentary Switch)
EVACUATION DRILL (Programmed F Key)	(Momentary Switch)
DAMPER BYPASS (Programmed F Key)	(Momentary Switch)
HVAC BYPASS (Programmed F Key)	(Momentary Switch)
ELEVATOR BYPASS (Programmed F Key)	(Momentary Switch)

   c. All programming shall be accomplished through manufactures\ listed instructions with all required computer hardware and software provided to the Owner as specified above.

   d. Entry into program mode, if requiring a special key and/or a special password, shall be provided to the Owner.

4. Central Processing Unit Module

   a. The central processing unit (CPU) module shall, and will communicate, monitor and

control all other modules in the panel. Removal, disconnection, failure, or change of type of any control panel module shall be detected and reported by the CPU as a module failure. The CPU shall contain and execute all custom programs for specific action to be taken if a fire situation is detected in the system. Programming shall be held in non-volatile memory, and shall not be lost even if system primary and secondary power failure occurs.

5. Enclosures:

   a. The control panel shall be housed in the manufacturer's UL-listed cabinet suitable for surface or semi-flush mounting. Provide NEMA 3R enclosure for all outdoor devices.

   b. The back box and door shall be constructed of .060 steel with provisions for electrical conduit connections into the sides and top.

   c. The door shall provide a key lock matching Campus standard and shall include a glass or other transparent opening for viewing of all indicators. For convenience, the door shall be selectable for either right or left-hand hinging.

6. Power Supply:

   a. The main power supply for the fire alarm control panel shall provide all control panel and peripheral initiating device power needs.

   b. All system power supplies shall meet UL 864 Standards and NFPA, and NEC requirements for power-limited operation on all SLC, IDC, and NAC circuits.

   c. Integral positive-temperature-coefficient thermistors, circuit breakers, and other over-current protection shall be provided on all power outputs. The power supply shall provide an integral battery charger for use with batteries up to 100 AH, or may be used with external battery and charger systems. Battery arrangement may be configured in the field.

   d. The main power supply shall continuously monitor all field wires for Earth Ground conditions and shall have the following indications:

      1) Ground Fault
      2) Battery Fail
      3) AC Power Fail

   e. All power supplies shall be provided pigtails or otherwise configured to allow the safe addition, and use of a voltmeter and ammeter for diagnostic purposes.

B. Batteries

1. All FACP and NAC power supplies shall be provided with batteries, sized for sufficient capacity to power the fire alarm system for not less than 24-hours plus 5 minutes of alarm upon a normal AC power failure.

2. The batteries are to be completely maintenance free, gel cell technology. No fluid level checks,

refilling, spill potential or and leakage shall not be permitted.

3. In necessary to meet requirements, external battery and charger systems may be used.

C. Notification Appliances

1. Programmable Electronic Horns:

   a. System Sensor, SpectrAlert Advance series, HR or H12/24K as appropriate (no known equal).

   b. Electronic horns shall be field programmable without the use of special tools, to provide temporal (Uniform Fire Alarm Signal) slow whoop, or continuous tone with an output sound level of at least 88 dBA measured at 10 feet from the device. All devices shall be field pre-set for High Volume, unless noted otherwise, and subject to field adjustment at no additional charges.

   c. Shall be flush or surface mounted, wall or ceiling mounted.

2. Electric strobes:

   a. System Sensor, SpectrAlert Advance series, SR (no known equal) meeting the requirements of the ADA, UL Standard 1971 and be field pre-set for 75cd unless noted otherwise.

3. Horn Strobe Combination Devices:

   a. System Sensor, SpectrAlert Advance series, P2R (no known equal).

   b. Electronic horns shall be field programmable without the use of special tools, to provide temporal (Uniform Fire Alarm Signal) slow whoop, or continuous tone with an output sound level of at least 88 dBA measured at 10 feet from the device. All devices shall be field pre-set for High Volume, unless noted otherwise, and subject to field adjustment at no additional charges

4. NAC Appliances:

   a. Altronix model AL1002UL-ADA power supply, or equal of the same manufacture.

   b. The quantity of power supplies shall be based upon no less than four notification appliance circuits per floor or as necessary to maintain a maximum calculated point-to-point voltage drop of less than 10 percent, of the normal operating voltage of the circuit. Voltage drop is subject to field verification during acceptance testing. Power supply NAC circuits shall be individually monitored for two distinct trouble conditions, power supply and logic board by the fire alarm control panel.

5. The installing contractor is responsible for providing sufficient audible devices to meet the requirements of NFPA 72 for a system operating in the public mode and sufficient visible devices to comply with the provisions of NFPA 72 and ADAAG.

D. Alphanumeric Display and System Controls: Panel shall include an 80 character LCD display to indicate alarm, supervisory, and component status messages and shall include a keypad for use in entering and executing control commands.

1. Display shall be mounted so that the viewing window is located between 4’9” and 5’0” above finished floor.

2.3 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements and approval of the University’s Representative, provide products compatible with the existing Campus TSW and Network (Simplex Model 4100ES is the Campus Standard):

1. FACP Equipment and enclosures:

a. SimplexGrinnell.
b. WSA.
c. Hoffman (weatherproof applications only).

2. Wire and Cable:

a. Comtran Corporation.
b. Helix/HiTemp Cables, Inc.; a Draka USA Company.
c. Rockbestos-Suprenant Cable Corporation; a Marmon Group Company.
d. West Penn Wire/CDT; a division of Cable Design Technologies.

3. Audible and Visual Signals:

a. SimplexGrinnell.
b. Wheelock (weatherproof applications only).

2.4 ADDRESSABLE MANUAL FIRE ALARM BOXES

A. UL 38 listed; finished in red with molded, raised-letter operating instructions in contrasting color. Station shall show visible indication of operation. Mounted on recessed outlet box; if indicated as surface mounted, provide manufacturer's surface back box.

B. Double action break-glass type. With integral addressable module, arranged to communicate individual manual-station status (normal, alarm, or trouble) to the FACP and Campus GCC. They shall use a key operated test-reset lock, matching Campus standard, and shall be designed so that after actual emergency operation, they cannot be restored to normal use except by the use of a key.

1. All operated stations shall have a positive, visual indication of operation and utilize a key type reset.

2.5 ADDRESSABLE ANALOG SENSORS

A. Smoke Sensors:

1. Type: Smoke sensors shall be of the photoelectric.

    a. Simplex or equal and use the photoelectric (light-scattering) principal to measure smoke density and shall, on command from the control panel, send data to the panel representing the analog level of smoke density.

    b. Bases: Relay output, Remote LED, sounder and isolator bases shall be supported alternatives to the standard base. The base shall be of a common type from the manufacturer so as to allow for either smoke or heat sensors to be installed, without replacement of the base.

2.6 HEAT SENSORS

A. Thermal Sensor:

1. Where deemed necessary, use of heat sensors shall be a combination rate of rise and fixed temperature type. The fixed temperature element shall be selected based upon maximum anticipated ceiling temperature. In locations where weatherproof devices are required, heat sensors shall be of rate compensation type. Heat detectors shall be Simplex or equal, intelligent addressable devices rated at 135 degrees Fahrenheit (58 degrees Celsius) and have a rate-of-rise element rated at 15 degrees F (9.4 degrees C) per minute. It shall connect via two wires to the fire alarm control panel signaling line circuit

2.7 ADDRESSABLE CIRCUIT INTERFACE MODULES

A. Addressable Dry Contact Monitor Module:

1. Addressable monitor modules shall be Simplex or equal and provided to connect typically one, or no more than two supervised IDC zone of conventional alarm initiating devices (example: waterflow and tamper, or NAC Power supply trouble) to one of the fire alarm control panel SLCs.

2. The monitor module shall mount in a 4-inch square (101.6 nun square), 2 1/8 inch (54 nun) deep electrical box.

3. The IDC zone shall be suitable for Style D or Style B operation. An LED shall be provided that shall flash under normal conditions, indicating that the monitor module is operational and in regular communication with the control panel.

4. For difficult to reach areas, the monitor module shall be available in a miniature package and shall be no larger than 2-3/4 inch (70 mm) x 1-1/4 inch (31.7 mm) x 1/2 inch (12.7 mm). This version need not include Style D or an LED.

2.8 VIVARIUM LEVEL ALARM NOTIFICATION APPLIANCES

A. Speakers: System Sensor SPC and SPCV

1. System Sensor, SpectrAlert Advance series, SPC and SPCV as appropriate producting an evacuation tone between 430 hz and 470 hz.

a. Field adjust sound pressure from 77 dB to 90 Db as required, to provide meased at 10 feet from the device (verify with AHJ for requirments therin). All devices shall be field pre-set for High Volume, unless noted otherwise, and subject to field adjustment at no additional charges. Speaker will provide ¼, ½, 1 and 2 watt tap option.

b. Enclosure shall mount directly to standard single gang, double gang or 4" square electrical box, without the use of special adapters or trim rings.

c. Specialized notification appliances required in support of vivarium activities shall be allowed subject to electrical compatibility. Speakers shall be initially tapped at 1 Watt, field verification with Fire Marshal may require increase or decrease of SPL at each location.

2. Visible/Only:

a. System Sensor, SpectrAlert Advance series, SR (no known equal)

1) Appliances shall be wired with UTP conductors, having a minimum of 3 twists per foot. V/O appliances shall be provided with different minimum flash intensities of 15cd, 75cd and 110cd. Provide a label inside the strobe lens to indicate the listed candela rating of the specific Visible/Only appliance.

2) The wall mount V/O enclosure shall mount directly to standard single gang, double gang or 4" square electrical box, without the use of special adapters or trim rings. The ceiling mount V/O shall mount to a single gang electrical box.

3. Non-Vivarium Audible/ Visible:

a. System Sensor, SpectrAlert Advance series, P2R (no known equal).

1) Field programmable without the use of special tools, to provide temporal (Uniform Fire Alarm Signal) slow whoop, or continuous tone with an output sound level of at least 88 dBA @ 24VDC measured at 10 feet from the device.

2) The audible/ visible enclosure shall mount directly to standard single gang, double gang or 4" square electrical box, without the use of special adapters or trim rings. Appliances shall be wired with UTP conductors, having a minimum of 3 twists per foot.

3) The appliance shall be capable of two-wire synchronization with one of the following options:

a) Strobes shall synchronize throughout the entire facility.

b) Synchronized Strobe firing to NAC sync signal with Horn silenced.

2.9 ADDRESSABLE ALARM NOTIFICATION APPLIANCES

1. Programmable Electronic Horn:

a. System Sensor, SpectrAlert Advance series, HR or H12/24K as appropriate (no known equal).

1) Field programmable without the use of special tools, to provide temporal (Uniform Fire Alarm Signal) slow whoop, or continuous tone with an output sound level of 88 dBA @ 24VDC measured at 10 feet from the device (excluding Vivarium/animal holding spaces. Verify with AHJ for requirements therein). All devices shall be field pre-set for High Volume, unless noted otherwise, and subject to field adjustment at no additional charges.

2) Enclosure shall mount directly to standard single gang, double gang or 4" square electrical box, without the use of special adapters or trim rings.

3) Specialized notification appliances required in support of vivarium activities shall be allowed subject to electrical compatibility.

2. Visible/Only:

a. System Sensor, SpectrAlert Advance series, SR (no known equal)

1) Appliances shall be wired with UTP conductors, having a minimum of 3 twists per foot. V/O appliances shall be provided with different minimum flash intensities of 15cd, 75cd and 110cd. Provide a label inside the strobe lens to indicate the listed candela rating of the specific Visible/Only appliance.

2) The wall mount V/O enclosure shall mount directly to standard single gang, double gang or 4" square electrical box, without the use of special adapters or trim rings. The ceiling mount V/O shall mount to a single gang electrical box.

B. Notification Appliance Circuit (NAC) Power Extender:

1. Altronix model AL1002UL-ADA power supply, or equal of the same manufacture.

a. The quantity of power supplies shall be based upon no less than four notification appliance circuits per floor or as necessary to maintain a maximum calculated point-to-point voltage drop of less than 10 percent, of the normal operating voltage of the circuit. Voltage drop is subject to field verification during acceptance testing. Power supply NAC circuits shall be individually monitored for two distinct trouble conditions, power supply and logic board by the fire alarm control panel.

2. Notification appliance circuits shall be Class B Style 4. Unless noted elsewhere.

    a. Batteries are to be completely maintenance free, gel cell technology. No fluid level checks, refilling, spill potential or and leakage shall not be permitted.

3. The NAC extender panel may be mounted close to the host control panel or can be remotely located.

4. Provide sufficient audible devices to meet the requirements of NFPA 72 for a system operating in the public mode and sufficient visible devices to comply with the provisions of NFPA 72 and ADAAG.

2.10 ADDITIONAL SYSTEM COMPONENTS

A. Description:

1. Equipped for mounting as indicated and with screw terminals for system connections.

    a. Combination Devices:
    b. Factory-integrated audible and visible devices in a single-mounting assembly.

2. Sprinkler Bell:

    a. Electric-vibrating, 24-V dc, under-dome type; with provision for housing the operating mechanism behind the bell. Bells shall produce a sound-pressure level of 94 dBA, measured 10 feet from the bell. 10-inch size, unless otherwise indicated. Bells shall be provided with weatherproof back box where indicated.

3. Waterflow Switches:

    a. The fire sprinkler system shall be provided with vane type water flow switches as necessary to indicate only the floor with water flow occurring, per NFPA 13.

    b. Waterflow Switches shall have an alarm transmission delay time which is adjustable from 0 to 60 seconds (Initially set at 45 seconds). Any required time delays for water surge shall be provided by the water flow switch. No delays shall be used by the programming of the software of the fire alarm control panel, unless specifically approved in writing by the University.

    c. All waterflow switches shall come from a single manufacturer and series.

    d. Where possible, locate waterflow switches a minimum of one (1) foot from a fitting which changes the direction of the flow, a minimum of three (3) feet from a valve, and/or manufactures listed instructions.

    e. The University shall be provided three sets of any specialized tools used for normal access of the device.

4. Tamper Switches (Furnished by Fire Sprinkler Division)

a. Any above ground fire sprinkler control valves shall be provided with appropriate tamper switches that provide a distinct supervisory alarm at the control panel and off-site retransmission of the distinct supervisory alarm.

b. Each sprinkler system water supply control valve riser, zone control valve shall be equipped with a supervisory switch. Standpipe hose valves, and test and drain valves shall not be equipped with supervisory switches.

c. The switch shall be mounted so as not to interfere with the normal operation of the valve and adjusted to operate within two revolutions toward the closed position of the valve control, or when the stem has moved no more than one-fifth of the distance from its normal position.

d. The supervisory switch shall be contained in a weatherproof aluminum housing, which shall provide a 3/4 inch (19 mm) weather tight conduit entrance, weather tight flex and incorporate the necessary fittings for attachment to the valves. The switch housing shall be finished in red baked enamel.

e. The entire installed assembly shall be tamper proof and arranged to cause a switch operation if the housing cover is removed, or if the unit is removed from its mounting. The University shall be provided three sets of any specialized tools used for normal access of the device.

f. Valve supervisory switches shall be provided and connected under this section and installed by fire sprinkler contractor.

2.11 GUARDS FOR PHYSICAL PROTECTION

A. Description:

1. Welded wire mesh of size and shape for the manual station, smoke detector, gong, or other device requiring protection.
2. Factory fabricated and furnished by manufacturer of the device.
3. Finish: Paint of color to match the protected device.

2.12 REMOTE INDICATORS

A. Remote status and test switches with LED indicating lights.

1. LED is connected to flash when the associated device is being polled by the FACP.
2. The LED and LED test switch are mounted on a plate and designed to flush mount to a single-gang electrical.

2.13 MAGNETIC DOOR HOLDERS AND CLOSERS

A. Description:

1. Units are equipped for wall or floor mounting and are complete with matching door plate.
2. Interfaced to the FACP to shut down on alarm.

3. Wall-Mounted Units: Flush mounted, unless otherwise indicated.
4. Rating:

    a. Unit shall operate from a 120VAC, a 24VAC or a 24VDC source, and develops a minimum of 25 lbs. holding force.

    b. Door holders controlled by the fire alarm system shall not be powered from the fire alarm system. Door holders shall be de-energized through a buffer relay, by opening of a normally closed dry contact provided by the control panel and shall release automatically on power failure.

B. Material and Finish: Chrome or brushed aluminum unless noted otherwise.

C. Door holders are to be installed by the door hardware contractor.

D. Door Closers are to be supplied and installed by the door hardware contractor.

2.14 REMOTE ANNUNCIATOR

A. Description – Protected Premise:

1. Duplicate annunciator functions of the FACP for alarm, supervisory, and trouble indications. Also duplicate manual switching functions of the FACP, including acknowledging, silencing, resetting, and testing as allowed by the AHJ.

2. Remote annunciators shall be programmed to allow acknowledgement and review of alarm activity without the use any key or tool. All functions other than review shall require the switches be activated/enabled from an integral key switch, keyed to match Campus standard.

B. Display Type and Functional Performance:

1. Alphanumeric display same as the FACP. Controls with associated LEDs permit acknowledging, silencing, resetting, and testing functions for alarm, supervisory, and trouble signals identical to those in the FACP.

2. Mounted on the unit shall be an audible signaling device, which shall be activated upon any alarm or trouble condition, and a buzzer silencing switch. Switch shall be automatically restoring type, after correction of alarm or trouble condition, such that any subsequent alarm or trouble will sound the buzzer. All components to be compatible with Fire Alarm Control Panel operation and U.L. listed.

C. Outdoor Enclosure for Remote Annunciator:

1. Type: Stainless Steele with hinged windowed door for viewing annunciator.
2. Manufactured from 16 or 14 gauge Type 304 or Type 316L stainless steel. Seams continuously welded and ground smooth. Minimum width body flange to provide maximum door opening. Door to include handle with key lock. Window door enclosures have a clear polycarbonate window mounted flush with door surface.

3. Mounting: Surface type. Panel mounting studs fit optional panels and other accessories. Mounting holes in back of body for direct mounting or for optional external mounting brackets.
4. Provide quarter turn handle with locking key.

D. Provide Sprinkler Bell and General Alarm Horn at an outdoor location approved by the DCFM.

2.15 NETWORK INTERFACE

A. Furnish and install network media hardware and software as required to match network left and right topographic network panels required for network left and right topographical neighbor and update camous Truesite. All events are to be reported to the Campus TSW for archiving and printing of events and event history as required by University's Representative.

2.16 WIRE, CABLE, AND FIBER

A. Wire and cable: All wiring shall be installed in metal conduit or fire rated MC cable, or within equipment. Conductors shall be installed in accord with Specification Section 16. Conductors within equipment enclosures shall be carefully cabled and laced. Minimum conductor size for NAC circuits shall be No. 14 AWG, 7 strand copper, THHN insulation, installed within metallic conduit. Sizing of wire shall be subject to a maximum voltage drop of 10 percent. Conductors for SLC shall be as specified by the control panel manufacture. Metallic conduit systems shall be no smaller than ¾" or sized as to not to exceed 40 percent fill per CEC. MC cable conductors must be labled.

PART 3 - EXECUTION

3.1 EQUIPMENT INSTALLATION

A. Installation shall be in accordance with the state adopted codes, local provisions, and as recommended by the major equipment manufacturer.

B. All conduit, junction boxes, conduit supports and hangers shall be concealed in finished areas and may be exposed in unfinished areas. Smoke detectors shall not be installed prior to the system programming and test period. If construction is ongoing during this period, measures shall be taken to protect smoke detectors from contamination and physical damage.

C. Conduit: All conduit and its installation shall be in accordance with Specification Section 26. All fire alarm system conduits shall be externally identified at no greater than 20 ft. intervals, and at junction boxes by permanent red paint suitable for the purpose. Box cover shall be red in color. Exposed flexible conduit shall be liquid tight and shall not exceed 3 ft in length and shall transition properly into metallic conduit.

D. Wire and cable: All wiring shall be installed in metal conduit or fire rated MC cable, or within equipment. Conductors shall be installed in accord with Specification Section 26. Conductors within equipment enclosures shall be carefully cabled and laced. Minimum conductor size for NAC circuits shall be No. 14 AWG, 7 strand copper, THHN insulation, installed within metallic conduit. Sizing of wire shall be subject to a maximum voltage drop

of 10 percent. Conductors for SLC shall be as specified by the control panel manufacture. Metallic conduit systems shall be no smaller than ¾" or sized as to not to exceed 40 percent fill per CEC.

E. Outlet pull and junction box covers shall be painted red on the exterior and shall be installed in accord with Specification Section 26.

F. Pigtail and/or tapped connection will not be allowed on supervised circuit. Connections shall be made directly to and from device terminal screws.

G. Manual Pull Stations shall be suitable for flush or semi-flush mounting on standard single gang box or plaster ring, and shall be installed not less than 42 inches (106.68 cm) or more than 48 inches (1.22 m) to center of box above the finished floor.

H. All devices located at exterior or areas subject to damp conditions shall be listed for outdoor or weatherproof locations. Back-boxes for such devices shall be confirmed with manufacture and shall be installed per listing requirements.

I. The Office of the Campus Fire Marshal, prior to system programming, shall approve all protected premise and proprietary receiver fire alarm addressable custom labels. Design Builder is responsible for confirming final room numbers with University Representative prior to system programming.

J. Design Builder shall be responsible for coordination meetings with other appropriate trades to confirm operation of smoke/fire dampers, energy management systems, access control systems, intrusion systems, elevator, or other fire and life safety systems prior to and as needed during course of installation.

K. Design Builder shall coordinate and have programmable attributes of the fire alarm system reviewed by the Office of the Campus Fire Marshal prior to system programming.

3.2 TESTING AND REPORTS

A. Upon completion of the system's installation, a representative of the system manufacturer shall conduct a thorough acceptance test, as described by NFPA 72, of the system, witnessed by the Campus Fire Marshal and submit a written report of the results to the University Representative. The test shall include at least, verifying the following:

1. Before energizing the cables and wires, check for correct connections and test for short circuits, ground faults, continuity, and insulation.

2. Close each sprinkler system control valve and verify proper supervisory alarm at the FACP.

3. Verify activation of all flow switches.

4. Open initiating device circuits and verify that the trouble signal actuates.

5. Open and short notification appliance circuits and verify that the trouble signal actuates.

6. Ground initiating device circuits and verify response of trouble signals.

7. Check all alarm notification devices for operation.

8. Check installation, supervision, and operation of smoke detectors.

9. Verify that each initiating device alarm signal is properly received and processed by the fire alarm control panel.

10. Functional operation of each alarm device and circuit.

11. Functional operation of each monitored device circuit.

12. Functional operation of each control circuit.

13. Conduct tests to verify trouble indications for common mode failures, such as alternating current power failure. Consult the manufacturer's manual for other common mode failures and conduct the described testing procedures.

14. A certified Powerscope report shall be provided for all 6 starnd of multi-mode fiber between the MRB and MS&E facility fire alarm network patch bay, measuring signal losses to neighboring panels on both sides of the protected premises.

3.3 TRAINING

A. Engage a factory-authorized service representative to train University's maintenance personnel to adjust, operate, and maintain the fire alarm system, appliances, and devices. Location of training (on site, local training facility, or manufacturer’s district office) to be coordinated with University Representative.

3.4 FIELD QUALITY CONTROL

A. Final acceptance testing shall be witnessed by University’s Representative.

B. A final pre-test shall be witnessed by University’s Representative. Notification for testing and inspection required in writing 48 hours in advance.

C. Manufacturer's Field Service:

1. Engage a factory-authorized installation representative to assist during the installation, pre-testing and adjust of the fire alarm system and field devices, components and equipment.
2. Include a manufacturer’s field representative during all final acceptance testing.

D. ADJUSTING

1. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, the manufacturer shall provide on-site assistance in adjusting system to suit actual occupied conditions. The manufacturer shall provide up to two visits to Project outside normal occupancy hours for this purpose.

2. Follow-Up Tests and Inspections: After date of Substantial Completion, test the fire alarm system complying with testing and visual inspection requirements in NFPA 72.

END OF SECTION 28 3111

SECTION 31 1000 - SITE CLEARING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Removing existing **trees, shrubs**, **groundcovers**, **plants and grass**.
2. Clearing and grubbing.
3. Stripping and stockpiling topsoil.
4. Removing above- and below-grade site improvements.
5. Disconnecting, capping or sealing, and removing site utilities.
6. Temporary erosion and sedimentation control measures.

B. Related Sections include the following:

1. Division 01 Section "Temporary Facilities and Controls" for temporary utilities, temporary construction and support facilities, temporary security and protection facilities, and temporary erosion and sedimentation control procedures.
2. Division 01 Section "Execution" for verifying utility locations and for recording field measurements.
3. Division 31 Section "Earth Moving" for soil materials, excavating, backfilling, and site grading.
4. Division 32 Section "Temporary Tree and Plant Protection" for protecting trees remaining on-site that are affected by site operations.

1.2 DEFINITIONS

A. Topsoil: Natural or cultivated surface-soil layer containing organic matter and sand, silt, and clay particles; friable, pervious, and black or a darker shade of brown, gray, or red than underlying subsoil; reasonably free of subsoil, clay lumps, gravel, and other objects more than 2 inches in diameter; and free of subsoil and weeds, roots, toxic materials, or other nonsoil materials.

B. Tree Protection Zone: Area surrounding individual trees or groups of trees to be protected during construction, and defined by the drip line of individual trees or the perimeter drip line of groups of trees, unless otherwise indicated.

1.3 MATERIAL OWNERSHIP

A. Except for stripped topsoil or other materials indicated to remain University property, cleared materials shall become design builder's property and shall be removed from Project site and legally disposed of at design builder's expense.

1.4 SUBMITTALS

A. Photographs or videotape, sufficiently detailed, of existing conditions of trees and plantings, adjoining construction, and site improvements that might be misconstrued as damage caused by site clearing.

B. Record drawings, according to Division 01 Section "Project Record Documents," identifying and accurately locating capped utilities and other subsurface structural, electrical, and mechanical conditions.

C. RIFA Certification: Submit certification form CA-1 from the Cooperative Red Imported Fire Ant (RIFA) Project stating that red imported fire ants are not present at the project site prior to grading or moving of soil.

1. If red imported fire ants are found at the Project site, establish and implement an approved pesticide treatment plan. Schedule reinspections from the Cooperative RIFA Project at least three days in advance.

1.5 QUALITY ASSURANCE

A. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination."

1.6 PROJECT CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during site-clearing operations.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from University's Representative.
2. Provide alternate routes around closed or obstructed traffic ways if required by University's Representative.

B. Salvable Improvements: Carefully remove items indicated to be salvaged and store on University's premises where indicated.

C. Utility Locator Service: Notify utility locator service and University's Representative before site clearing.

D. Do not commence site clearing operations until temporary erosion and sedimentation control measures are in place.

PART 2 - PRODUCTS

2.1 SOIL MATERIALS

A. Satisfactory Soil Materials: Requirements for satisfactory soil materials are specified in Division 31 Section "Earth Moving."

B. Obtain approved borrow soil materials off-site when satisfactory soil materials are not available on-site.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect and maintain benchmarks and survey control points from disturbance during construction.

B. Locate and clearly flag trees and vegetation to remain or to be relocated.

C. Protect existing site improvements to remain from damage during construction.

1. Restore damaged improvements to their original condition, as acceptable to University's Representative.

3.2 TEMPORARY EROSION AND SEDIMENTATION CONTROL

A. Provide temporary erosion and sedimentation control measures to prevent soil erosion and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways, according to a sediment and erosion control plan, specific to the site, that complies with EPA 832/R-92-005 or requirements of the University representative, whichever is more stringent and to comply with LEED Prerequisite SS 1, sediment and erosion control plan.

B. Inspect, repair, and maintain erosion and sedimentation control measures during construction until permanent vegetation has been established.

C. Remove erosion and sedimentation controls and restore and stabilize areas disturbed during removal following completion of permanent control measures.

3.3 TREE PROTECTION

A. Erect and maintain temporary fencing around tree protection zones before starting site clearing. Remove fence when construction is complete.

1. Do not store construction materials, debris, or excavated material within fenced area.
2. Do not permit vehicles, equipment, or foot traffic within fenced area.
3. Maintain fenced area free of weeds and trash.

B. Do not excavate within tree protection zones, unless otherwise indicated.

C. Where excavation for new construction is required within tree protection zones, hand clear and excavate to minimize damage to root systems. Use narrow-tine spading forks, comb soil to expose roots, and cleanly cut roots as close to excavation as possible.

1. Cover exposed roots with burlap and water regularly.
2. Temporarily support and protect roots from damage until they are permanently redirected and covered with soil.
3. Coat cut faces of roots more than 1-1/2 inches in diameter with an emulsified asphalt or other approved coating formulated for use on damaged plant tissues.
4. Backfill with soil as soon as possible.

D. Repair or replace trees and vegetation indicated to remain that are damaged by construction operations, in a manner approved by University's Representative.

1. Employ an arborist approved by University's Representative, to submit details of proposed repairs and to repair damage to trees and shrubs.

2. Replace trees that cannot be repaired and restored to full-growth status, as determined by University's Representative.

3.4 UTILITIES

A. Locate, identify, disconnect, and seal or cap off utilities indicated to be removed.

1. Provide a minimum of 14 days' notice to University's Representative and receive written authorization to proceed before interrupting any utility.
2. University will interrupt and return to service the existing utilities.

B. Excavate for and remove underground utilities indicated to be removed.

3.5 CLEARING AND GRUBBING

A. Remove obstructions, trees, shrubs, grass, and other vegetation to permit installation of new construction.

1. Do not remove trees, shrubs, and other vegetation indicated to remain or to be relocated.
2. Cut minor roots and branches of trees indicated to remain in a clean and careful manner where such roots and branches obstruct installation of new construction.

3. Grind stumps and remove roots, obstructions, and debris extending to a depth of 18 inches below exposed subgrade.
4. Use only hand methods for grubbing within tree protection zone.
5. Chip removed tree branches and dispose of off-site at an approved site, at design builder's expense. If disposed of off-site, provided University's Representative with quantity of material dispensed of.

B. Fill depressions caused by clearing and grubbing operations with satisfactory soil material unless further excavation or earthwork is indicated.

1. Place fill material in horizontal layers not exceeding a loose depth of 8 inches, and compact each layer to a density equal to adjacent original ground.

3.6 TOPSOIL STRIPPING

A. Remove sod and grass before stripping topsoil.

B. Strip topsoil to whatever depths are encountered in a manner to prevent intermingling with underlying subsoil or other waste materials.

1. Remove subsoil and nonsoil materials from topsoil, including trash, debris, weeds, roots, and other waste materials.

3.7 SITE IMPROVEMENTS

A. Remove existing above- and below-grade improvements as indicated and as necessary to facilitate new construction.

B. Remove slabs, paving, curbs, gutters, and aggregate base as indicated.

1. Unless existing full-depth joints coincide with line of demolition, neatly saw-cut length of existing pavement to remain before removing existing pavement. Saw-cut faces vertically.
2. Paint cut ends of steel reinforcement in concrete to remain to prevent corrosion.

3.8 DISPOSAL

A. Disposal: Remove surplus soil material, unsuitable topsoil, obstructions, demolished materials, and waste materials including trash and debris, and legally dispose of them off University's property at design builders' expense.

1. Separate recyclable materials produced during site clearing from other nonrecyclable materials. Store or stockpile without intermixing with other materials and transport them to recycling facilities.

END OF SECTION 31 1000

SECTION 31 2000 – EARTH MOVING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Preparing subgrades for slabs-on-grade, walks, pavements, lawns and grasses and exterior plants.
2. Excavating and backfilling for buildings and structures.
3. Drainage course for slabs-on-grade.
4. Subbase course for concrete walks and pavements.
5. Subbase and base course for asphalt paving.
6. Subsurface drainage backfill for walls and trenches.
7. Excavating and backfilling for utility trenches.
8. Excavating and backfilling trenches for buried mechanical and electrical utilities and pits for buried utility structures.

B. Related Sections include the following:

1. Division 01 Section "Allowances" for quantity allowance provisions related to unit-price rock excavation and authorized additional excavation.
2. Division 01 Section "Unit Prices" for unit-price rock excavation and authorized additional excavation provisions.
3. Division 01 Sections "Construction Progress Documentation" and "Photographic Documentation" for recording pre-excavation and earthwork progress.
4. Division 01 Section "Temporary Facilities and Controls" for temporary controls, utilities, and support facilities.
5. Division 03 Section "Cast-in-Place Concrete" for granular course if placed over vapor retarder and beneath the slab-on-grade.
6. Divisions 21, 22, 23, 26, 27, and 28 Sections for installing underground mechanical and electrical utilities and buried mechanical and electrical structures.
7. Divisions 22, 23, 26 and 33 Sections for installing underground mechanical and electrical utilities and buried mechanical and electrical structures.
8. Division 31 Section "Site Clearing" for temporary erosion and sedimentation control measures, site stripping, grubbing, stripping and stockpiling topsoil, and removal of above- and below-grade improvements and utilities.
9. Division 31 Section "Dewatering" for lowering and disposing of ground water during construction.
10. Division 31 Section "Excavation Support and Protection" for shoring, bracing, and sheet piling of excavations.
11. Division 31 Section "Drilled Concrete Piers and Shafts " for excavation of shafts and disposal of surplus excavated material.

12. Division 32 Section "Temporary Tree and Plant Protection" for protecting and trimming trees to remain.

13. Division 32 Section "Turf and Grasses" for finish grading, including preparing and placing topsoil and planting soil for lawns.
14. Division 32 Section “Plants" for planting bed establishment and tree and shrub pit excavation and planting.
15. Division 33 Section "Subdrainage" for drainage of foundations, slabs-on-grade, walls and landscaped areas.

1.2 UNIT PRICES

A. Unit prices for earthwork are included in Division 01 Section "Unit Prices."

B. Quantity allowances for earthwork are included in Division 01 Section "Allowances."

C. Rock Measurement: Volume of rock actually removed, measured in original position, but not to exceed the following. Unit prices for rock excavation include replacement with approved materials.

1. 24 inches outside of concrete forms other than at footings.
2. 12 inches outside of concrete forms at footings.
3. 6 inches outside of minimum required dimensions of concrete cast against grade.
4. Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.
5. 6 inches beneath bottom of concrete slabs-on-grade.
6. 6 inches beneath pipe in trenches, and the greater of 24 inches wider than pipe or 42 inches wide.

1.3 DEFINITIONS

A. Backfill: Soil material or controlled low-strength material used to fill an excavation.

1. Initial Backfill: Backfill placed beside and over pipe in a trench, including haunches to support sides of pipe.
2. Final Backfill: Backfill placed over initial backfill to fill a trench.

B. Base Course: Course placed between the subbase course and hot-mix asphalt or P.C.C. paving.

C. Bedding Course: Course placed over the excavated subgrade in a trench before laying pipe.

D. Borrow Soil: Satisfactory soil imported from off-site for use as fill or backfill.

E. Drainage Course: Course supporting the slab-on-grade that also minimizes upward capillary flow of pore water.

F. Excavation: Removal of material encountered above subgrade elevations and to lines and dimensions indicated.

1. Authorized Additional Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions as directed by University's Representative. Authorized additional excavation and replacement material will be paid for according to Contract provisions for unit prices.
2. Bulk Excavation: Excavation more than 10 feet in width and more than 30 feet in length.
3. Unauthorized Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions without direction by University's Representative. Unauthorized excavation, as well as remedial work directed by University's Representative, shall be without additional compensation.

G. Fill: Soil materials used to raise existing grades.

H. Rock: Rock material in beds, ledges, unstratified masses, conglomerate deposits, and boulders of rock material 3/4 cu. Yd or more in volume that exceed a standard penetration resistance of 100 blows/2 inches when tested by an independent geotechnical testing agency, according to ASTM D 1586.

I. Structures: Buildings, footings, foundations, retaining walls, slabs, tanks, curbs, mechanical and electrical appurtenances, or other man-made stationary features constructed above or below the ground surface.

J. Subbase Course: Course placed between the subgrade and base course for hot-mix asphalt pavement, or course placed between the subgrade and a cement concrete pavement or a cement concrete or hot-mix asphalt walk.

K. Subgrade: Surface or elevation remaining after completing excavation, or top surface of a fill or backfill immediately below subbase, drainage fill, or topsoil materials.

L. Utilities: On-site underground pipes, conduits, ducts, and cables, as well as underground services within buildings.

1.4 SUBMITTALS

A. Product Data: For the following:

1. Each type of plastic warning tape.
2. Geotextile.
3. Controlled low-strength material, including design mixture.
4. Geofoam.

B. Samples: 12-by-12-inch Sample of subdrainage and separation geotextile.

C. Material Test Reports: From a qualified testing agency indicating and interpreting test results for compliance of the following with requirements indicated:

1. Classification according to ASTM D 2487 of each on-site and borrow soil material proposed for fill and backfill.
2. Laboratory compaction curve according to ASTM D 1557 for each on-site and borrow soil material proposed for fill and backfill.

D. Preexcavation Photographs or Videotape: Show existing conditions of adjoining construction and site improvements, including finish surfaces that might be misconstrued as damage caused by earthwork operations. Submit before earthwork begins.

E. RIFA Certification: Refer to Division 31 Section “Site Clearing” for submittal requirements.

1.5 QUALITY ASSURANCE

A. Geotechnical Testing Agency Qualifications: An independent testing agency qualified according to ASTM E 329 to conduct soil materials and rock-definition testing, as documented according to ASTM D 3740 and ASTM E 548.

B. Preexcavation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination."

1.6 PROJECT CONDITIONS

A. Existing Utilities: Do not interrupt utilities serving University’s facilities unless permitted in writing by University’s Representative and then only after arranging to provide temporary utility services according to requirements indicated.

1. Notify University’s Representative not less than 14 days in advance of proposed utility interruptions.
2. Do not proceed with utility interruptions without University’s Representative's written permission.
3. Contact utility-locator service for area where Project is located before excavating.
4. University’s staff will interrupt existing utilities and return them to service.

B. Demolish and completely remove from site existing underground utilities indicated to be removed. Coordinate with utility companies to shut off services if lines are active.

PART 2 - PRODUCTS

2.1 SOIL MATERIALS

A. General: Provide borrow soil materials when sufficient satisfactory soil materials are not available from excavations.

B. Satisfactory Soils: ASTM D 2487 Soil Classification Groups GW, GP, GM, SW, SP, and SM, or a combination of these groups; free of rock or gravel larger than 2 inches in any dimension, debris, waste, frozen materials, vegetation, and other deleterious matter.

C. Unsatisfactory Soils: Soil Classification Groups GC, SC, CL, ML, OL, CH, MH, OH, and PT according to ASTM D 2487, or a combination of these groups.

1. Unsatisfactory soils also include satisfactory soils not maintained within 2 percent of optimum moisture content at time of compaction.

D. Subbase Material: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D 2940; with at least 90 percent passing a 1-1/2-inch sieve and not more than 12 percent passing a No. 200 sieve.

E. Base Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D 2940; with at least 95 percent passing a 1-1/2-inch sieve and not more than 8 percent passing a No. 200 sieve.

F. Engineered Fill: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D 2940; with at least 90 percent passing a 1-1/2-inch sieve and not more than 12 percent passing a No. 200 sieve.

G. Bedding Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D 2940; except with 100 percent passing a 1-inch sieve and not more than 8 percent passing a No. 200 sieve.

H. Drainage Course: Narrowly graded mixture of washed crushed stone, or crushed or uncrushed gravel; ASTM D 448; coarse-aggregate grading Size 57; with 100 percent passing a 1-1/2-inch sieve and 0 to 5 percent passing a No. 8 sieve.

I. Filter Material: Narrowly graded mixture of natural or crushed gravel, or crushed stone and natural sand; ASTM D 448; coarse-aggregate grading Size 67; with 100 percent passing a 1inch sieve and 0 to 5 percent passing a No. 4 sieve.

J. Sand: ASTM C 33; fine aggregate, natural, or manufactured sand.

K. Impervious Fill: Clayey gravel and sand mixture capable of compacting to a dense state.

2.2 GEOTEXTILES

A. Subsurface Drainage Geotextile: Nonwoven needle-punched geotextile, manufactured for subsurface drainage applications, made from polyolefins or polyesters; with elongation greater

than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:

1. Survivability: Class 2; AASHTO M 288.
2. Grab Tensile Strength: 157 lbf; ASTM D 4632.
3. Sewn Seam Strength: 142 lbf; ASTM D 4632.
4. Tear Strength: 56 lbf; ASTM D 4533.
5. Puncture Strength: 56 lbf; ASTM D 4833.
6. Apparent Opening Size: No. 60 sieve, maximum; ASTM D 4751.
7. Permittivity: 0.2 per second, minimum; ASTM D 4491.
8. UV Stability: 50 percent after 500 hours' exposure; ASTM D 4355.

B. Separation Geotextile: Woven geotextile fabric, manufactured for separation applications, made from polyolefins or polyesters; with elongation less than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:

1. Survivability: Class 2; AASHTO M 288.
2. Grab Tensile Strength: 247 lbf; ASTM D 4632.
3. Sewn Seam Strength: 222 lbf; ASTM D 4632.
4. Tear Strength: 90 lbf; ASTM D 4533.
5. Puncture Strength: 90 lbf; ASTM D 4833.
6. Apparent Opening Size: No. 60 sieve, maximum; ASTM D 4751.
7. Permittivity: 0.02 per second, minimum; ASTM D 4491.
8. UV Stability: 50 percent after 500 hours' exposure; ASTM D 4355.

2.3 CONTROLLED LOW-STRENGTH MATERIAL

A. Controlled Low-Strength Material: Low-density, self-compacting, flowable concrete material as follows:

1. Portland Cement: ASTM C 150, Type II or V.
2. Fly Ash: ASTM C 618, Class C or F.
3. Normal-Weight Aggregate: ASTM C 33, 3/4-inch nominal maximum aggregate size.
4. Foaming Agent: ASTM C 869.
5. Water: ASTM C 94/C 94M.
6. Air-Entraining Admixture: ASTM C 260.

B. Produce conventional-weight, controlled low-strength material with 140-psi compressive strength when tested according to ASTM C 495.

2.4 GEOFOAM

A. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, 1.60 lb/cu. ft..

B. Molded-Polystyrene Board Insulation: ASTM C 578, Type VIII, 1.15 lb/cu. ft..

1. Manufacture molded polystyrene with an inorganic mineral registered with the EPA and suitable for application as a termite deterrent.

C. Geofoam Connectors: Geofoam manufacturer's multibarbed galvanized steel sheet connectors.

2.5 ACCESSORIES

A. Warning Tape: Acid- and alkali-resistant polyethylene film warning tape manufactured for marking and identifying underground utilities, 6 inches wide and 4 mils thick, continuously inscribed with a description of the utility; colored as follows:

1. Red – Electrical
2. Yellow – Gas, oil, steam and dangerous materials.
3. Orange – Telephone and other communications.
4. Blue – Water Systems.
5. Green – Sewer Systems.
6. Purple – Reclaimed water systems

B. Tracer Wire: provide tracer wire as specified in other Sections. Tracer wire shall be minimum 12 AWG, solid, insulated copper wire.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by earthwork operations.

B. Preparation of subgrade for earthwork operations including removal of vegetation, topsoil, debris, obstructions, and deleterious materials from ground surface is specified in Division 31 Section "Site Clearing."

C. Protect and maintain erosion and sedimentation controls, which are specified in Division 31 Section "Site Clearing," during earthwork operations.

3.2 DEWATERING

A. Prevent surface water and ground water from entering excavations, from ponding on prepared subgrades, and from flooding Project site and surrounding area.

B. Protect subgrades from softening, undermining, washout, and damage by rain or water accumulation.

1. Reroute surface water runoff away from excavated areas. Do not allow water to accumulate in excavations. Do not use excavated trenches as temporary drainage ditches.
2. Install a dewatering system**,** specified in Division 31 Section "Dewatering," to keep subgrades dry and convey ground water away from excavations. Maintain until dewatering is no longer required.

3.3 EXPLOSIVES

A. Explosives: Do not use explosives.

3.4 EXCAVATION, GENERAL

A. Classified Excavation: Excavate to subgrade elevations. Material to be excavated will be classified as earth and rock. Do not excavate rock until it has been classified by design builder per paragraph 1.5 above and cross sectioned by University's Representative. The Contract Sum will be adjusted for rock excavation according to unit prices included in the Contract Documents. Changes in the Contract time may be authorized for rock excavation.

1. Earth excavation includes excavating pavements and obstructions visible on surface; underground structures, utilities, and other items indicated to be removed; together with soil, boulders, and other materials not classified as rock or unauthorized excavation.

    a. Intermittent drilling; ram hammering; or ripping of material not classified as rock excavation is earth excavation.

2. Rock excavation includes removal and disposal of rock. Remove rock to lines and subgrade elevations indicated to permit installation of permanent construction without exceeding the following dimensions:

    a. 24 inches outside of concrete forms other than at footings.
    b. 12 inches outside of concrete forms at footings.
    c. 6 inches outside of minimum required dimensions of concrete cast against grade.
    d. Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.
    e. 6 inches beneath bottom of concrete slabs on grade.
    f. 6 inches beneath pipe in trenches, and the greater of 24 inches wider than pipe or 42 inches wide.

3.5 EXCAVATION FOR STRUCTURES

A. Excavate to indicated elevations and dimensions within a tolerance of plus or minus 1 inch. If applicable, extend excavations a sufficient distance from structures for placing and removing concrete formwork, for installing services and other construction, and for inspections.

1. Excavations for Footings and Foundations: Do not disturb bottom of excavation. Excavate by hand to final grade just before placing concrete reinforcement. Trim bottoms to required lines and grades to leave solid base to receive other work.
2. Pile Foundations: Stop excavations 6 to 12 inches above bottom of pile cap before piles are placed. After piles have been driven, remove loose and displaced material. Excavate to final grade, leaving solid base to receive concrete pile caps.
3. Excavation for Underground Tanks, Basins, and Mechanical or Electrical Utility Structures: Excavate to elevations and dimensions indicated within a tolerance of plus or minus 1 inch. Do not disturb bottom of excavations intended as bearing surfaces.

3.6 EXCAVATION FOR WALKS AND PAVEMENTS

A. Excavate surfaces under walks and pavements to indicated lines, cross sections, elevations, and subgrades.

3.7 EXCAVATION FOR UTILITY TRENCHES

A. Excavate trenches to indicated gradients, lines, depths, and elevations.

B. Excavate trenches to uniform widths to provide the following clearance on each side of pipe or conduit. Excavate trench walls vertically from trench bottom to 12 inches higher than top of pipe or conduit, unless otherwise indicated.

1. Clearance: 12 inches each side of pipe or conduit.

C. Trench Bottoms: Excavate and shape trench bottoms to provide uniform bearing and support of pipes and conduit. Shape subgrade to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits. Remove projecting stones and sharp objects along trench subgrade.

1. For pipes and conduit less than 6 inches in nominal diameter and flat-bottomed, multiple duct conduit units, hand-excavate trench bottoms and support pipe and conduit on an undisturbed subgrade.
2. For pipes and conduit 6 inches or larger in nominal diameter, shape bottom of trench to support bottom 90 degrees of pipe circumference. Fill depressions with tamped sand backfill.
3. Excavate trenches 6 inches deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.

3.8 SUBGRADE INSPECTION

A. Notify University's Representative when excavations have reached required subgrade.

B. If University's Representative determines that unsatisfactory soil is present, continue excavation and replace with compacted backfill or fill material as directed.

C. Proof-roll subgrade below the building slabs and pavements with heavy pneumatic-tired equipment to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.

1. Completely proof-roll subgrade in one direction**,** repeating proof-rolling in direction perpendicular to first direction. Limit vehicle speed to 3 mph.
2. Proof-roll with a loaded 10-wheel, tandem-axle dump truck weighing not less than 15 tons.
3. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by University's Representative, and replace with compacted backfill or fill as directed.

D. Authorized additional excavation and replacement material will be paid for according to Contract provisions for unit prices.

E. Reconstruct subgrades damaged by freezing temperatures, frost, rain, accumulated water, or construction activities, as directed by University's Representative, without additional compensation.

3.9 UNAUTHORIZED EXCAVATION

A. Fill unauthorized excavation under foundations or wall footings by extending bottom elevation of concrete foundation or footing to excavation bottom, without altering top elevation. Lean concrete fill, with 28-day compressive strength of 2500 psi, may be used when approved by University's Representative.

1. Fill unauthorized excavations under other construction or utility pipe as directed by University's Representative.

3.10 STORAGE OF SOIL MATERIALS

Stockpile borrow soil materials and excavated satisfactory soil materials without intermixing. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.

1. Stockpile soil materials away from edge of excavations. Do not store within drip line of remaining trees.

3.11 BACKFILL

A. Place and compact backfill in excavations promptly, but not before acceptance by University's Representative and completing the following:

1. Construction below finish grade including, where applicable, subdrainage, dampproofing, waterproofing, and perimeter insulation.
2. Surveying locations of underground utilities for Record Documents.
3. Testing and inspecting underground utilities.
4. Removing concrete formwork.
5. Removing trash and debris.
6. Removing temporary shoring and bracing, and sheeting.
7. Installing permanent or temporary horizontal bracing on horizontally supported walls.

B. Place backfill on subgrades free of mud.

3.12 UTILITY TRENCH BACKFILL

A. Place backfill on subgrades free of mud, frost, snow, or ice.

B. Place and compact bedding course on trench bottoms and where indicated. Shape bedding course to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits.

C. Backfill trenches excavated under footings and within 18 inches of bottom of footings with satisfactory soil; fill with concrete to elevation of bottom of footings. Concrete is specified in Division 03 Section "Cast-in-Place Concrete."

D. Provide 4-inch- thick, concrete-base slab support for piping or conduit less than 30 inches below surface of roadways. After installing and testing, completely encase piping or conduit in a minimum of 4 inches of concrete before backfilling or placing roadway subbase.

E. Place and compact initial backfill of satisfactory soil, free of particles larger than 1 inch in any dimension, to a height of 12 inches over the utility pipe or conduit.

1. Carefully compact initial backfill under pipe haunches and compact evenly up on both sides and along the full length of utility piping or conduit to avoid damage or displacement of piping or conduit. Coordinate backfilling with utilities testing.

F. Controlled Low-Strength Material: Place initial backfill of controlled low-strength material to a height of 12 inches over the utility pipe or conduit.

G. Backfill voids with satisfactory soil while installing and removing shoring and bracing.

H. Place and compact final backfill of satisfactory soil to final subgrade elevation. See Article "Compaction of Soil Backfills and Fills" for compaction requirement.

I. Install warning tape directly above utilities, 12 inches below finished grade, except 6 inches below subgrade under pavements and slabs.

J. Install continuous tracer wire directly on top of all non-ferrous pipes and attach at 10-foot intervals. Terminate by bringing to the surface at ends of the buried run and attach to exposed pipe or other adjacent structure.

3.13 SOIL FILL

A. Plow, scarify, bench, or break up sloped surfaces steeper than 1 vertical to 4 horizontal so fill material will bond with existing material.

B. Place and compact fill material in layers to required elevations as follows:

1. Under grass and planted areas, use satisfactory soil material.
2. Under walks and pavements, use satisfactory soil material.
3. Under steps and ramps, use engineered fill.
4. Under building slabs, use engineered fill.
5. Under footings and foundations, use engineered fill.

C. Place soil fill on subgrades free of mud.

3.15 SOIL MOISTURE CONTROL

Uniformly moisten or aerate subgrade and each subsequent fill or backfill soil layer before compaction to within 2 percent of optimum moisture content.

1. Do not place backfill or fill soil material on surfaces that are muddy.
2. Remove and replace, or scarify and air dry otherwise satisfactory soil material that exceeds optimum moisture content by 2 percent and is too wet to compact to specified dry unit weight.

3.16 COMPACTION OF SOIL BACKFILLS AND FILLS

A. Place backfill and fill soil materials in layers not more than 8 inchesin loose depth for material compacted by heavy compaction equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers.

B. Place backfill and fill soil materials evenly on all sides of structures to required elevations, and uniformly along the full length of each structure.

C. Compact soil materials to not less than the following percentages of maximum dry unit weight according to ASTM D 1557:

1. Under structures, building slabs, steps, and pavements, scarify and recompact top 12 inches of existing subgrade and each layer of backfill or fill soil material at 95 percent.
2. Under walkways, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill soil material at 95 percent.
3. Under lawn or unpaved areas, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill soil material at 85 percent.
4. For utility trenches, compact each layer of initial and final backfill soil material at 90 percent.

3.17 GRADING

A. General: Uniformly grade areas to a smooth surface, free of irregular surface changes. Comply with compaction requirements and grade to cross sections, lines, and elevations indicated.

1. Provide a smooth transition between adjacent existing grades and new grades.
2. Cut out soft spots, fill low spots, and trim high spots to comply with required surface tolerances.

B. Site Grading: Slope grades to direct water away from buildings and to prevent ponding. Finish subgrades to required elevations within the following tolerances:

1. Lawn or Unpaved Areas: Plus or minus 1 inch.
2. Walks: Plus or minus 1 inch.
3. Pavements: Plus or minus 1/2 inch.

C. Grading inside Building Lines: Finish subgrade to a tolerance of 1/2 inch when tested with a 10-foot straightedge.

3.18 SUBSURFACE DRAINAGE

A. Subdrainage Pipe: Specified in Division 33 Section "Subdrainage."

B. Subsurface Drain: Place subsurface drainage geotextile around perimeter of subdrainage trench. Place a 6-inch course of filter material on subsurface drainage geotextile to support subdrainage pipe. Encase subdrainage pipe in a minimum of 12 inches of filter material, placed in compacted layers 6 inches thick, and wrap in subsurface drainage geotextile, overlapping sides and ends at least 6 inches.

1. Compact each filter material layer to 85 percent of maximum dry unit weight according to ASTM D 1557 with a minimum of two passes of a plate-type vibratory compactor.

C. Drainage Backfill: Place and compact filter material over subsurface drain, in width indicated, to within 12 inches of final subgrade, in compacted layers 6 inches thick. Overlay drainage backfill with 1 layer of subsurface drainage geotextile, overlapping sides and ends at least 6 inches.

1. Compact each filter material layer to 85 percent of maximum dry unit weight according to ASTM D 1557 with a minimum of two passes of a plate-type vibratory compactor.
2. Place and compact impervious fill over drainage backfill in 6-inch- thick compacted layers to final subgrade.

3.19 SUBBASE AND BASE COURSES

A. Place subbase and base course on subgrades free of mud, frost, snow, or ice.

B. On prepared subgrade, place subbase and base course under pavements and walks as follows:

1. Install separation geotextile on prepared subgrade according to manufacturer's written instructions, overlapping sides and ends.
2. Place base course material over subbase course under hot-mix asphalt pavement.
3. Shape subbase and base course to required crown elevations and cross-slope grades.
4. Place subbase and base course 6 inches or less in compacted thickness in a single layer.
5. Place subbase and base course that exceeds 6 inches in compacted thickness in layers of equal thickness, with no compacted layer more than 6 inches thick or less than 3 inches thick.
6. Compact subbase and base course at optimum moisture content to required grades, lines, cross sections, and thickness to not less than 95 percent of maximum dry unit weight according to ASTM D 1557.

C. Pavement Shoulders: Place shoulders along edges of subbase and base course to prevent lateral movement. Construct shoulders, at least 12 inches wide, of satisfactory soil materials and compact simultaneously with each subbase and base layer to not less than 95 percent of maximum dry unit weight according to ASTM D 1557.

3.20 DRAINAGE COURSE

Place drainage course on subgrades free of mud, frost, snow, or ice.

B. On prepared subgrade, place and compact drainage course under cast-in-place concrete slabson-grade as follows:

1. Install sub drainage geotextile on prepared subgrade according to manufacturer's written instructions, overlapping sides and ends.
2. Place drainage course 6 inches or less in compacted thickness in a single layer.
3. Place drainage course that exceeds 6 inches in compacted thickness in layers of equal thickness, with no compacted layer more than 6 inches thick or less than 3 inches thick.

4. Compact each layer of drainage course to required cross sections and thicknesses to not less than 95 percent of maximum dry unit weight according to ASTM D 1557.

3.21 FIELD QUALITY CONTROL

A. Testing Agency: University will engage a qualified independent geotechnical engineering testing agency to perform field quality-control testing.

B. Allow testing agency to inspect and test subgrades and each fill or backfill layer. Proceed with subsequent earthwork only after test results for previously completed work comply with requirements.

C. Footing Subgrade: At footing subgrades, at least one test of each soil stratum will be performed to verify design bearing capacities. Subsequent verification and approval of other footing subgrades may be based on a visual comparison of subgrade with tested subgrade when approved by University's Representative.

D. Testing agency will test compaction of soils in place according to ASTM D 1556, ASTM D 2167, ASTM D 2922, and ASTM D 2937, as applicable. Tests will be performed at the following locations and frequencies:

1. Paved and Building Slab Areas: At subgrade and at each compacted fill and backfill layer, at least 1 test for every 2000 sq. ft. Or less of paved area or building slab, but in no cases fewer than 3 tests.
2. Foundation Wall Backfill: At each compacted backfill layer, at least 1 test for each 100 feet or less of wall length, but no fewer than 2 tests.
3. Trench Backfill: At each compacted initial and final backfill layer, at least 1 test for each 150 feet or less of trench length, but no fewer than 2 tests.

E. When testing agency reports that subgrades, fills, or backfills have not achieved degree of compaction specified, scarify and moisten or aerate, or remove and replace soil to depth required; recompact and retest until specified compaction is obtained.

3.22 PROTECTION

A. Protecting Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.

B. Repair and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.

1. Scarify or remove and replace soil material to depth as directed by University's Representative; reshape and recompact.

C. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with additional soil material, compact, and reconstruct surfacing.

1. Restore appearance, quality, and condition of finished surfacing to match adjacent work, and eliminate evidence of restoration to greatest extent possible.

3.23 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Coordinate with requirements in Division 31 Section “Site Clearing.” Coordinate soil storage requirements with University’s Representative.

B. Disposal: Transport surplus satisfactory soil; waste material including unsatisfactory soil; trash; and debris; and legally dispose of it off University's property at design builder’s expense.

END OF SECTION 31 2000

SECTION 31 5000 - EXCAVATION SUPPORT AND PROTECTION

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes temporary excavation support and protection systems.

B. Related Sections include the following:

1. Division 01 Section "Construction Progress Documentation" and "Photographic Documentation" for recording preexisting conditions and excavation support and protection system progress.
2. Division 01 Section "Temporary Facilities and Controls" for temporary utilities and support facilities.
3. Division 03 Section "Shotcrete" for use in excavation support and protection.
4. Division 31 Section "Earth Moving" for excavating and backfilling
5. Division 31 Section "Dewatering" for dewatering excavations.

1.2 PERFORMANCE REQUIREMENTS

A. Design, furnish, install, monitor, and maintain excavation support and protection system capable of supporting excavation sidewalls and of resisting soil and hydrostatic pressure and superimposed and construction loads.

1. Provide professional engineering services needed to assume engineering responsibility, including preparation of Shop Drawings and a comprehensive engineering analysis by a qualified California Registered Professional Engineer.
2. Prevent surface water from entering excavations by grading, dikes, or other means.
3. Install excavation support and protection systems without damaging existing buildings, pavements, and other improvements adjacent to excavation.
4. Monitor vibrations, settlements, and movements.

1.3 SUBMITTALS

A. Shop Drawings for Information: Prepared by or under the supervision of a qualified professional engineer for excavation support and protection systems.

1. Include Shop Drawings signed and sealed by the qualified California Registered Professional Engineer responsible for their preparation.

B. Qualification Data: For Installer and professional engineer.

C. Photographs or videotape, sufficiently detailed, of existing conditions of adjoining construction and site improvements that might be misconstrued as damage caused by the absence of, the installation of, or the performance of excavation support and protection systems.

1.4 PROJECT CONDITIONS

A. Existing Utilities: Do not interrupt utilities serving facilities occupied by University or others unless permitted in writing by University's Representative and then only after arranging to provide temporary utility services according to requirements indicated.

B. Survey Work: Engage a qualified land surveyor or professional engineer to survey adjacent existing buildings, structures, and site improvements; establish exact elevations at fixed points to act as benchmarks. Clearly identify benchmarks and record existing elevations.

1. During installation of excavation support and protection systems, regularly re-survey benchmarks, maintaining an accurate log of surveyed elevations and positions for comparison with original elevations and positions. Promptly notify University's Representative if changes in elevations or positions occur or if cracks, sags, or other damage is evident in adjacent construction.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Provide materials that are either new or in serviceable condition.

B. Structural Steel: ASTM A 36, ASTM A 690, or ASTM A 992.

C. Steel Sheet Piling: ASTM A 328, ASTM A 572, or ASTM A 690; with continuous interlocks.

1. Corners: Site-fabricated mechanical interlock or Roll-formed corner shape with continuous interlock.

D. Wood Lagging: 3 inches, 4 inches No. 2 Douglas Fir Larch or better.

E. Shotcrete: Comply with Division 03 Section "Shotcrete" for shotcrete materials and mixes, reinforcement, and shotcrete application.

F. Cast-in-Place Concrete: ACI 301, of compressive strength required for application.

G. Reinforcing Bars: ASTM A 615, Grade 60 (Grade 420), deformed.

H. Tiebacks: Steel bars, ASTM A 722.

I. Slurry Cement Backfill: State of CA Standard Specifications (Caltrans 2010) section 19-3.02D.

i Slurry cement backfill must be a fluid workable mixture of aggregate, cement, and water.

ii Cement must comply with section 90-1.02B(2) except testing is not required.

iii Water must be free from oil, salts, and other impurities that adversely affect the backfill.

iv Aggregate must be one of the following:

1 Commercial-quality concrete sand

2 Excavated or imported material in any combination, free of organic material and other deleterious substances and complying with the grading requirements shown in the following table:

Sieve Size	Percentage Passing
1-1/2”	100
1”	80-100
3/4"	60-100
3/8”	50-100
No. 4	40-80
No. 100	10-40

Proportion slurry cement backfill by weight or volume. Use at least 188 pounds of cement per cubic yard. Use sufficient water to produce a fluid workable mix that flows and can be pumped without segregation during placement.

Mix materials thoroughly by machine. Use a pugmill, rotary drum, or other authorized mixer. Mix until cement and water are thoroughly dispersed.

You may use slurry cement backfill as structure backfill for pipe culverts.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards that could develop during excavation support and protection system operations.

1. Shore, support, and protect utilities encountered.

B. Install excavation support and protection systems to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from University's Representative. Provide alternate routes around closed or obstructed traffic ways if required by University's Representative.

C. Locate excavation support and protection systems clear of permanent construction so that forming and finishing of concrete surfaces is not impeded.

D. Monitor excavation support and protection systems daily during excavation progress and for as long as excavation remains open. Promptly correct bulges, breakage, or other evidence of movement to ensure that excavation support and protection systems remain stable.

E. Promptly repair damages to adjacent facilities caused by installing excavation support and protection systems.

3.2 SOLDIER BEAMS AND LAGGING

A. Install steel soldier beams before starting excavation. Extend soldier piles below excavation grade level to depths adequate to prevent lateral movement. Space soldier beams at regular intervals not to exceed allowable flexural strength of wood lagging. Accurately align exposed faces of flanges to vary not more than 2 inches from a horizontal line and not more than 1:120 out of vertical alignment.

B. Install wood lagging within flanges of soldier beams as excavation proceeds. Trim excavation as required to install lagging. Fill voids behind lagging with soil, and compact.

C. Install wales horizontally at centers indicated and secure to soldier beams.

3.4 TIEBACKS

A. Tiebacks: Drill for, install, grout, and tension tiebacks into position. Test load-carrying capacity of each tieback and replace and retest deficient tiebacks.

1. Test loading shall be observed by a qualified California Registered Professional Engineer responsible for design of excavation support and protection system.
2. Maintain tiebacks in place until permanent construction is able to withstand lateral earth and hydrostatic pressures.

3.5 BRACING

A. Bracing: Locate bracing to clear columns, floor framing construction, and other permanent work. If necessary to move brace, install new bracing before removing original brace.

1. Do not place bracing where it will be cast into or included in permanent concrete work, unless otherwise approved by University's Representative.
2. Install internal bracing, if required, to prevent spreading or distortion of braced frames.
3. Maintain bracing until structural elements are supported by other bracing or until permanent construction is able to withstand lateral earth and hydrostatic pressures.

3.6 REMOVAL AND REPAIRS

A. Remove excavation support and protection systems when construction has progressed sufficiently to support excavation and bear soil and hydrostatic pressures. Remove in stages to avoid disturbing underlying soils or damaging structures, pavements, facilities, and utilities.

B. Only with the University's approval shall excavation support and protection systems be permanently left in place.

END OF SECTION 31 5000

SECTION 31 6329 - DRILLED CONCRETE PIERS AND SHAFTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes:

1. Dry-installed drilled piers.
2. Slurry displacement-installed drilled piers.
3. Dry-installed or slurry displacement-installed drilled piers, at Contractor's choice.

B. Related Sections include the following:

1. Division 03 Section “Cast in Place Concrete” for general structural and building applications of concrete.
2. Division 03 Section “Concrete Reinforcement.”

1.3 REFERENCES

A. Standards listed below apply where designation is cited in this Section. Where the applicable year of adoption or revision is not listed below, the latest edition applies.

B. American Concrete Institute (ACI): Use applicable year of adoption or revision as published in the “ACI Manual of Concrete Practice”.

1. ACI 336.1: Standard Specification for the Construction of Drilled Piers.

C. American Society for Testing and Materials (ASTM): Use applicable year of adoption or revision as published in the “Annual Book of ASTM Standards”.

1. ASTM A 252: Specification for Welded and Seamless Pipe Piles.
2. ASTM A 36: Standard Specification for Carbon Structural Steel.

D. CBC: 2013 California Building Code

E. Evaluation Report: Where designated in this Section, products shall have an active Evaluation Report evidencing compliance with provisions of the International Building Code. Reports are available at www.icc-es.org and www.iapmoes.org.

F. Geotechnical Report:

1.4 SUBMITTALS

A. Submittal procedures and administrative provisions are established by Division 01 Section "Submittals".

B. Product Data: For each type of product indicated.

C. Design Mixes: For each class of concrete. Include revised mix proportions when characteristics of materials, project conditions, weather, test results, or other circumstances warrant adjustments.

D. Shop Drawings: For concrete reinforcement detailing fabricating, bending, and placing.

E. Shaft Drilling Reports: Record of as-built pier location, diameter, tip elevation, cut off elevation, reinforcing and concrete placement.

F. Submit pier installation and proposed temporary shaft protection plan to the Geotechnical Engineer of Record (GEOR) at least three weeks prior to mobilization.

1. The installation and shaft protection plan shall provide information on the following:

a. Name and experience record of the drilled pier superintendent who will be in charge of drilled pier operations for the project.
b. List of proposed equipment to be used, including cranes, drills, augers, bailing buckets, final cleaning equipment, de-sanding equipment, slurry pumps, core sampling equipment, tremies, concrete pumps, casing.
c. Details of overall construction operation sequence and the sequence and schedule of shaft construction.
d. Details of shaft excavation methods.
e. When the use of slurry is anticipated, details of the mix design and its suitability for the subsurface conditions at the construction site, mixing and storage methods, maintenance methods, disposal procedures, slurry mixing procedures, pumping and handling equipment, testing procedures, slurry cleaning procedures, recycling and disposal procedures.
f. Details of methods to clean the shaft excavation.
g. Details of reinforcement placement, including support and centralization methods.
h. Details of concrete placement, including proposed operational procedures for free fall, tremie or pumping methods.
i. Details of casing installation and removal methods.

2. The GEOR will evaluate the drilled pier installation plan for conformance with the plans, specifications and special provisions. Within 14 days after receipt of the installation plan, the GEOR will notify the contractor of any additional information required and or changes necessary to meet the contract requirements.

G. Submit a survey plan locating new drilled piers after installation. Actual pier locations and pier reinforcement to be coordinated with pier cap reinforcement.

H. Submit a concrete placement procedure for drilled piers for 30 minutes maximum interruption of placement. The procedure shall include a contingency plan that gives an additional 15 minutes of interruption of placement.

1.5 QUALITY ASSURANCE

A. Contractor Qualifications:

1. Minimum of 3 successful projects with similar soil conditions, shaft sizes, depth and volumes of work contained in this project.
2. Submit proof of compliance within 30 days after "Notice to Proceed."

B. Drilled Pier Standard: Comply with provisions in ACI 336.1.

C. Survey Work: Engage a California licensed land surveyor to perform surveys, layouts and measurements for drilled pier work.

1. Conduct layout work for each pier to lines and levels required before excavation and actual measurements of each pier's horizontal axial location, shaft diameter, bottom and top elevations, deviations from specified tolerances and other data as required.
2. Record and maintain information pertinent to each pier and cooperate with other testing and inspection personnel to provide data required for reports.
3. The Geotechnical Engineer of Record will inspect shafts prior to and after the installation of reinforcement, test soil materials and verify pier depth. The Geotechnical engineer will also inspect shafts prior to concrete placement.
4. If the Geotechnical Engineer's inspection determines that there is loose material in the shaft excavation, the Contractor will clean the hole as directed by the Geotechnical Engineer, including the removal of the reinforcing cage as required.
5. The University's Testing Agency will inspect installation of reinforcing and placement of concrete in drilled piers.
6. Materials and installed work may require testing and retesting at any time during the progress of work. Allow free access to material stockpiles and facilities.

1.6 PROJECT CONDITIONS

A. Subsurface Information: Refer to Geotechnical Report.

B. Existing Utilities: Locate existing underground utilities by careful hand excavation before starting shaft excavation operations.

1. If utilities are to remain in place, provide protection from damage during construction operations.
2. Should uncharted or incorrectly charted piping or other utilities be encountered during excavation, consult the design team immediately for directions as to procedure.
3. Cooperate with the University and public and private utility companies in keeping their respective service and facilities in operation at all times.
4. Repair damaged utilities to the satisfaction of the utility owner.
5. Do not interrupt existing utility serving facilities occupied and used by Owner or others, except where permitted in writing by the University's Representative and then only after acceptable temporary utility services have been provided.

C. Environmental Requirements: Groundwater is expected to be encountered during drilling. See Geotechnical Report for expected depth.

1. Provide adequate temporary drainage to prevent shaft instability.
2. Pump shafts when directed by the Geotechnical Engineer.

D. Barricade excavations as required in accordance with Division 1 Section "Temporary Facilities and Controls."

PART 2 - PRODUCTS

2.1 MATERIALS

A. Concrete Reinforcement: See Division 3 Section "Concrete Reinforcement."

B. Concrete Materials: See Division 3 Section "Cast-in-Place Concrete."

C. Steel Pipe Casings: ASTM A 283, Grade C; or ASTM A 36, carbon-steel plate, with joints full-penetration welded according to AWS D1.1.

D. Slurry: Pulverized sodium bentonite, pulverized attapulgite, or polymers, mixed with water to form stable colloidal suspension; complying with ACI 336.1 for density, viscosity, sand content, and pH. Super Mud manufactured by PDS Company Inc. or approved equal. To be used in accordance with manufacturer's recommendations.

E. Concrete Mix:

1. Prepare design mixes according to ACI 211.1 and ACI 301 for each type and strength of concrete determined by either laboratory trial mix or field test databases. Mix designs shall be stamped and signed by a registered Civil or Structural engineer licensed in the state of California. Contractor shall bear all costs for concrete mix designs.

    a. Use a qualified testing agency for preparing and reporting proposed mix designs for laboratory trial mix basis.

2. Proportion mixes according to ACI 211.1 and ACI 301 to provide normal-weight concrete with the following properties:

    a. Compressive Strength (28 Days): 5,000 psi.
    b. Minimum Slump: Capable of maintaining the following slump until completion of placement:

        1) 4 inches for dry, uncased, or permanent-cased drilling method.
        2) 6 inches for temporary-casing drilling method.
        3) 7 inches for slurry displacement method.

F. Do not air entrain concrete for drilled piers.

G. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than portland cement according to ACI 301 limits as if concrete were exposed to deicing chemicals.

H. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

I. Concrete-mix design adjustments may be considered if characteristics of materials, Project conditions, weather, test results, or other circumstances warrant. Resubmit and obtain approval of proposed changes to concrete-mix proportions

PART 3 - EXECUTION

3.1 DESIGN

A. Construct pier reinforcement cage per contract documents and to allow for insertion of a tremie tube for concrete placement. Reinforcing cage shall be free of irregularities that could interfere with insertion and removal of the tremie.

3.2 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, vibration, and other hazards created by drilled-pier operations.

3.3 EXAMINATION

A. Examine site conditions prior to commencement of drilling shafts.

B. Notify immediately the University and the design team in writing in the event of unsatisfactory site conditions, indicating the nature of extent of unsatisfactory conditions.

C. Protect adjacent affected structures from damage.

D. Notify the University's Representative at least two workdays prior to commencing work.

3.4 SHAFT EXCAVATION

A. Excavate shaft for piers to lengths shown on the drawings. Pier holes shall be reamed with a bucket and auger prior to steel reinforcement cage installation.

1. Excavate shafts only after adjacent holes with 2.5 pier diameters are filled with concrete and allowed to set for at least 24 hours.

B. Temporary Shaft Protection:

1. Temporary shaft protection is the responsibility of the contractor.
2. Temporary casing and/or drilling slurry shall be required for shaft protection of piers extending below the water table.
3. Temporary casings shall have sufficient thickness to withstand compressive and withdrawal stresses as required to maintain shaft walls without displacing.
4. Remove and replace or repair casings which are damaged during installation and which could impair the strength or efficiency of the completed pier.
5. Remove all casings after placing concrete.
6. The drilling slurry shall be maintained at least six feet above the groundwater level in order to provide adequate support to soil on the walls of the drilled pier excavations.
7. Drilling slurry shall be mixed in external tanks with adequate agitation for the slurry to become uniformly mixed, self-suspending and free of lumps. The slurry shall be mixed in accordance with the manufacturer's recommendations. pH and marsh funnel viscosity testing of the slurry shall be performed before introducing slurry to the drilled hole.
8. During drilling and prior to concrete placement, slurry shall be sampled from the top and bottom of each pier excavation using a double ball bailer. The slurry samples shall be tested for pH, marsh funnel viscosity, sand content and specific weight to confirm that the

slurry properties are within the range of the manufacturer's recommendations. Slurry mix testing shall be performed by individuals trained by the manufacturer's representative. Slurry may be recycled for use on subsequent piers.

C. Construction Tolerances:

1. Maximum permissible variation of location at top of pier: Not more than 1/24 of the shaft diameter or 3 inches, whichever is less.
2. Maximum shaft out-of-plumb: Not be more than 1.5 percent of length nor exceeding 12.5 percent of shaft diameter or 15 inches, whichever is less.
3. Concrete cut-off elevation: Plus 1 inch or minus 3 inches.
4. If above tolerances are exceeded, submit additional or corrective construction to compensate for excessive eccentricity.
5. Submit proposed corrective construction methods to the University's Representative and to the design team for review before proceeding.

D. Obstructions:

1. Use core barrels with drilling equipment, hand labor using air-powered tools or other safe methods to remove rock, boulders and obstructions.
2. Dispose of excavated material in accordance as required by the Specifications.

3.5 DEWATERING

A. Comply with requirements of Division 1 Section "Temporary Facilities and Controls."

3.6 OVER EXCAVATION

A. No payment will be made for extra length when shafts are excavated to a greater depth than required or authorized by the Geotechnical Engineer, due to overdrilling.

B. Complete pier depth and fill extra depth with approved concrete if other conditions are satisfactory.

3.7 REINFORCING STEEL

A. Comply with recommendations in CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement. See Division 3 Section "Concrete Reinforcement."

B. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy bond with concrete.

C. Fabricate and install reinforcing cages symmetrically about axis of shafts in a single unit.

D. Accurately position, support, and secure reinforcement against displacement during concreting. Maintain minimum cover to reinforcement. Use 4 approved spacers equally spaced around the cage. Longitudinal spacing shall not be more than 10-15 feet between spacers to be tied to the cage.

E. Use templates to set anchor bolts, leveling plates, and other accessories furnished in work of other Sections. Provide blocking and holding devices to maintain required position during final concrete placement.

F. Protect exposed ends of extended reinforcement, dowels, or anchor bolts from mechanical damage and exposure to weather and to ensure smooth movement of the tremie.

G. Reinforcing cages must be placed in the same shift that concrete placement occurs. Cages will not be allowed to stay in the hole until the next work shift. Reaming shaft, inspection of shaft, placement of cage, final inspection of shaft and concrete placement should take place in continuous sequence of operations without interruption.

3.8 CONCRETE PLACEMENT

A. Place concrete in continuous operation and without segregation immediately after inspection and approval of shaft by Owner's Geotechnical Engineer, Owner's independent testing and inspecting agency. Provide protection sheets extending at least 12 inches beyond the edges of excavation opening.

A. Dry Method: Dry Method: Place concrete to fall vertically down the center of drilled pier without striking sides of shaft or steel reinforcement.

1. Where concrete cannot be directed down shaft without striking reinforcing, place concrete with chutes, tremies, or pumps.
2. Vibrate top 60 inches of concrete.

B. Slurry Displacement Method: Place concrete in slurry-filled shafts by tremie methods or pumping. Control placement operations to ensure that tremie or pump pipe is embedded no fewer than 60 inches into concrete, and flow of concrete is continuous from bottom to top of drilled pier without segregating the mixed materials.

C. Maintain sufficient pressure head of concrete to prevent reduction in diameter of shaft by earth pressure and to prevent extraneous material from mixing with fresh concrete.

D. Coordinate withdrawal of temporary casings with concrete placement to maintain at least a 60-inch head of concrete above bottom of casing.

E. Screed concrete at cutoff elevation level and apply scoured, rough finish. Where cutoff elevation is above the ground elevation, form top section above grade and extend shaft to required elevation.

F. Interrupted placing operations of over 45 minutes shall not be permitted.

G. Remove excess laitance and slurry contaminated concrete using vacuum truck or other approved means to cut off elevation and backfill hole to working grade with clean sand.

H. Hot and Cold Weather Placement: Provide in accordance with provisions of Division 3 Section "Cast-in-Place Concrete."

3.9 FIELD QUALITY CONTROL

A. Provide field quality control testing and inspection for concrete and reinforcing steel as specified in Division 3 Section "Concrete Reinforcement" and Section "Cast-in-Place Concrete."

B. Notify the University and the Geotechnical Engineer at least 48 hours prior to time that excavations will be ready for inspection and tests.

C. Provide facilities as required to assist inspection and testing of excavations and cooperate with inspecting and testing personnel to expedite work.

D. Geotechnical Engineer of Record (Hired by the contractor):

1. Inspect and report results.
2. Conduct inspections and provide reports as soon as possible so as not to delay concrete placement for acceptable excavations.
3. Inspect shaft borings prior to installation of reinforcement, test soil materials and confirm pier depth.

E. Testing Agency (Hired by the contractor):

1. Inspect placement of concrete and reinforcement per Division 3 Section "Cast-in-Place Concrete."

F. Perform slurry testing and provide results to the design team in accordance with approved Pier Installation Plan.

END OF SECTION

SECTION 32 0190 — LANDSCAPE MAINTENANCE PERIOD

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Monitoring and Maintenance of Plant Material, Including Existing Trees to Remain.
2. Monitoring and Maintenance of Irrigation Systems.
3. Maintenance of Wood Chip Mulch.
4. Maintenance of Tree Staking Systems.
5. Monitoring and Control of Pests (insects, disease, mites and any other pathogen) on Plant Material, Grasses, Succulent and Cacti, Including Existing Trees to Remain.
6. Monitoring of Watering on Plant Material, Plant Material, Grasses, Succulent and Cacti.
7. Application of Fertilizers and Weed Control on Plant Material, Succulent and Cacti, Including Existing Trees to Remain.

B. Related Sections:

1. Section 32 84 00, Planting Irrigation.
2. Section 32 91 13, Planting Soil Preparation.
3. Section 32 92 21, Meadow Seeding.
4. Section 32 92 23, Lawn Sodding.
5. Section 32 93 00, Planting Materials.

C. Unit Prices:

1. Provide a unit price for each chemical application indicated in the Preliminary Chemical Application Schedule under Article 3.11 in this Section to establish a bid price.
2. Provide a unit price for each fertilizer application, based on the preliminary fertilization programs indicated in this Section to establish a bid price.
3. Unit prices shall be applicable for the cost of additional chemical and fertilizer applications required beyond the quantity of applications included in the bid and shall be applicable for crediting the Owner for applications included in the bid price which are not required by the Horticultural Consultant.
4. Credit Owner for any chemical or fertilizer applications included in the bid price which are not required by the Horticultural Consultant.

1.2 REFERENCES

A. ANSI — American National Standards Institute:

1. Z60.1 — American Standard for Nursery Stock, Current Edition.
2. A 300 — Trees, Shrubs, and Other Woody Plant Maintenance — Standard Practice.

B. ASTM — ASTM International: D 1557 Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort.

C. ICBN — International Code of Botanical Nomenclature.

D. ICNCP — International Code of Nomenclature of Cultivated Plants.

1.3 DEFINITIONS

A. IPM — Integrated Pest Management: An approach to pest control that utilizes regular monitoring to determine if and when treatments are needed and employs physical, mechanical, cultural, biological and educational tactics to keep pest numbers low enough to prevent intolerable damage or annoyance. Least-toxic chemical controls are used as a last resort.

B. Acceptance, Acceptable, or Accepted: Acceptance by the Landscape Architect in writing.

C. Excessive Compaction of Soil: Planting area soil compaction greater than 75 percent dry density, as determined by ASTM D 1557.

D. Horticultural Consultant for Construction Period and until Commencement of One-Year Maintenance Period: Horticultural consultant employed by Landscape Architect for Project.

E. Horticultural Consultant for the One-Year Maintenance Period after Date of Final Completion: Horticultural consultant employed by Contractor to provide field quality control inspections and reports for project.

F. Landscape Architect: Landscape Architect employed by the Owner to provide professional landscape architectural services for the Project.

1.4 SUBMITTALS

A. General Requirements: Refer to Division 1.

B. Product Purchase and Delivery Documentation: Fertilizer: Within 5 working days of each application submit purchase orders, invoices and receipts showing supplier name and address, person who sold product, date of purchase, specific product purchased, quantity purchased, and delivery date.

C. Maintenance Log:

1. Maintain a daily record of work performed until Owner acceptance of maintenance.
2. Include precipitation records from on-site rain gauge; time and duration of each water application; chemical and fertilizer applications; irrigation problems; drainage problems; soil temperatures; visual observations of plants, including lawn sod; mowing activity; tests performed; and moisture sensor readings.
3. Make log available for review at any time by the Owner, the Horticultural Consultant, and the Landscape Architect.

4. At end of maintenance period, submit to the Owner a complete and chronologically organized maintenance log as a digital file, saved in Microsoft Office® format, and one printed copy.

D. Documentation of Accepted Conditions: Within 7 working days after the Owner's acceptance of maintenance, submit color photographs and a written report documenting the Owner's accepted conditions of the plant material.

E. Certificates: Certificate indicating chemical applicator is currently certified by the State of Texas for commercial application, name of applicator, and State of Texas license number.

F. Plant Condition Inspection Reports: Plant inspection report documenting damage and signs of stress due to pests and disease, nutritional deficiencies, watering or any other problem submitted via e-mail to the Owner, the Landscape Architect, and the Horticultural Consultant within 2 days of observation.

G. Landscape Architect and Horticultural Consultant Inspection Reports: Plant inspection report documenting damage and signs of stress due to pests and disease, nutritional deficiencies, watering or any other problem submitted via e-mail to the Contractor for immediate action within 24 hours to reverse problems.

H. Test Reports: Soil test reports for soil samples taken from plant material (tree, shrub, ground cover, turf and wildflower meadow including existing trees to remain).

1.5 QUALITY ASSURANCE

A. Landscape Maintenance Contractor Qualifications:

1. Demonstrated experience in maintenance of commercial landscape projects.
2. Demonstrated experience in landscape maintenance supervision, with experience and training in integrated pest management, turf management, entomology, pest control, soils, fertilizers and plant identification.
3. Thoroughly familiar and trained in the work to be accomplished and perform the task in a competent efficient manner.
4. Directly employs and supervises the Work force at all times.
5. Must notify the Owner's Designated Representative of changes in supervision.
6. Provide proper identification for landscape maintenance firm's labor force.

B. Regulatory Requirements:

1. Meet requirements of applicable laws, codes, and regulations required by authorities having jurisdiction over Work.
2. Provide for inspections and permits required by Federal, State, or local authorities in furnishing, transporting, and installing of chemicals.
3. Keep on site a record of all herbicides, pesticides, and fungicides used to include MSDS sheets and any information required by law such as wind speed at application time, rate of application and target pest, pathogen or weed. This information should be ready to submit upon request by law to any employee of the City, County, or State Regulatory Offices.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Plant Material: Meet requirements of Section 329300.

1.7 SITE CONDITIONS

A. Environmental Requirements: Do not apply chemicals during windy conditions.

1.8 SEQUENCING AND SCHEDULING

A. Work Schedule:

1. Perform maintenance during normal working hours, except for emergencies.
2. Be present at the project site 7 days per week including holidays, to perform specified maintenance.

B. Chemical Applications:

1. Notify the Owner's Designated Representative and Horticultural Consultant 48 hours in advance of required chemical applications.
2. Obtain the Owner's Designated Representative's and Horticultural Consultant's approval of application schedule.

PART 2 PRODUCTS

2.1 MATERIALS

A. Replacement Plant Material:

1. Match existing genus, species, cultivar and size.
2. Meet requirements of Section 02930.
3. Meet requirements of ANSI Z60.1, ICBN and ICNCP.

B. Seed: Match existing genus, species, varieties and cultivars.

C. Fertilizers for Trees: Depending upon soil nutrition based on soil tests, deep root fertilize all trees with a combination of PHC for trees 27-9-9 and Mycor Tree Injectable. Or apply InjectoFeed 32-7-7 and AgriPlex Micro-Mix 0-4-4 with 2-percent magnesium, 2-percent water soluble magnesium, 3-percent sulfur, 0.02-percent boron, 5-percent iron, 0.5-percent manganese, and 0.5-percent zinc.

D. Fertilizer for Shrubs and Ground Cover: Fertilize with Anderson 18-6-12 (granular) or a 3-1-2 ratio such as 18-6-12 granular fertilizer with 50 percent of the available Nitrogen being slow-release Nitroform and 50 percent being slow-release Nutralene, Monoammonium phosphate as a phosphorous source, 13-percent sulfur, 4-percent calcium, 0.5-percent magnesium, 5-percent Ruffin iron, and 0.5-percent zinc.

E. Fertilizer for Turf and Meadow Areas: Apply Anderson 18-6-12 (granular) or a 3-1-2 ratio such as 18-6-12 granular fertilizer with 50 percent of the available nitrogen being slow release Nitroform, 50 percent being slow release Nutralene, the phosphorous source being monoammonium phosphate, 13 percent sulfur, 4 percent calcium, 0.5 percent manganese, 0.5 percent magnesium, 5 percent Ruffin iron, and 0.5 percent zinc.

F. Pesticides, Insecticides, Herbicides, Fungicides and Minor Element Packets: Legal commercial-quality non-staining materials with original manufacturers' containers, properly labeled with guaranteed analysis, least toxic required.

G. Replacement Staking Materials: Same as original installation.

H. Wood Chip Mulch: As specified in Section 329300.

PART 3 EXECUTION

3.1 PREPARATION

A. Protection of Existing Conditions:

1. Use every possible precaution to prevent damage to existing conditions to remain such as structures, utilities, plant materials and walks on or adjacent to the site of the Work.
2. Use every possible precaution to prevent excessive compaction of planting area soil within or adjacent to the areas of Work.
3. Provide barricades, fences or other barriers to protect existing conditions from damage during maintenance operations.
4. Do not store materials or equipment, permit burning, or operate or park equipment under the branches of existing plants.
5. Submit written notification of damaged plants and structures to the Owner's Designated Representative immediately.

3.2 GENERAL MAINTENANCE

A. Maintenance Period:

1. Continuously maintain nursery-grown and field-collected plant material from time of plant delivery, during progress of Work, and for a minimum period of 1 year after date of Final Completion to include all weekends and holidays until the Owner accepts maintenance responsibility of plant material.
2. Continuously maintain irrigation system during progress of Work, and for a minimum period of 1 year after date of Final Completion to include all weekends and holidays until the Owner accepts maintenance responsibility of the plant material.
3. Continuously maintain existing trees to remain from time of construction commencement, during progress of Work, and for a minimum period of 1 year after date of Final Completion to include all weekends and holidays, until the Owner accepts maintenance responsibility of plant material.

B. Integrated Pest Management: Employ principles of integrated pest management for each aspect of maintenance.

C. Dust Removal: Continuously remove construction dust from all plant material from time of plant delivery, during progress of Work, and for a minimum period of 1 year after date of Final Completion to include all weekends and holidays until the Owner accepts maintenance responsibility of plant material.

3.3 TREE MAINTENANCE

A. General Watering:

1. Using a soil sample tube, tensiometers and soil probe, check rootball moisture and surrounding soil moisture at representative plants at least twice a week.
2. Maintain watering basins around trees and shrubs if required to adequately apply water to root zones.
3. Open basins to allow surface drainage away from the root crown when excess water accumulates and restore watering basins when needed to adequately water root balls.
4. Remove watering basin berms at the end of the maintenance period and form mulch area around trees as indicated on the Drawings.
5. Adjust frequency and length of time for watering cycles according to changing soil and weather conditions.
6. When some plants but not every plant within a valve zone require supplemental water due to varying soil or microclimate conditions, apply supplemental water to watering basins by hand using a hose and water wand to break the water force.
7. Do not permit crown roots to become exposed to air through dislodging of soil and mulch.
8. Maintain depth of mulch to reduce evaporation and frequency of watering.

B. Settled or Leaning Plants: Reset plants to proper grades or upright position when weather and soil conditions permit.

C. Weed Control:

1. Keep mulched areas between plants and watering basins weed free.
2. As a last resort use least toxic herbicides.
3. Avoid frequent soil cultivation that destroys shallow roots.
4. When applying any weed control, follow all label instructions for rates and application instructions. Do not apply against label.

D. Preliminary Fertilization Program to Establish Bid Price:

1. Fertilize trees on February 1, April 1, June 1, and August 1 unless directed otherwise by the Horticultural Consultant.
2. Fertilize all trees with a combination of PHC for trees 27-9-9 and Mycor Tree Injectable. Mix 8 pounds of PHC for trees and A and B packets of Mycor Tree Injectable per 100 gallons of water. Apply this solution by drenching top or rootball at the rate of five gallons per inch trunk diameter measured at breast height. Keep fertilizer solution agitated during application. Or mix 20 pounds of Injecto-Feed 32-7-7 and 1 gallon of

Agri-Plex 0-4-4 in 100 gallons of water, and slowly and uniformly drench top of each root ball with 10 to 15 gallons of the fertilizer solution. Horticultural Consultant will direct which fertilizer to use at each application based on soil tests and vigor of trees.

3. Irrigate trees on same day of fertilizer application by operating spray heads for 20–30 minutes and 45–60 minutes for rotary heads, unless directed otherwise by the Horticultural Consultant.
4. Water in short cycles so that run-off does not occur.

E. Final Fertilization Program: Apply fertilizer as directed in writing by the Landscape Architect after the Horticultural Consultant determines the fertilization requirements based on soil test data.

F. General Tree Pruning:

1. Meet requirements of ANSI A300 for Definitions, Pruning Tools and Equipment, Pruning Cuts, and Wound Treatment.
2. Perform crown cleaning to eliminate weak branches, water sprouts, dead growth, dying growth, diseased growth, and damaged growth.
3. Perform crown thinning to reduce toppling and wind damage.
4. Perform crown reduction and shaping to maintain growth within space limitations and maintain a natural appearance, as directed by the Horticultural Consultant in the field.
5. Retain lower branches in a “tipped back” or pinched condition to promote caliper trunk growth.
6. Do not cut back to fewer than six buds or leaves on branches.
7. Prune damaged trees or those that constitute health or safety hazards at any time of year.

G. Tree Staking:

1. Inspect stakes and ties at least once a week to check for rubbing that causes bark wounds.
2. Adjust tree stakes and ties as often as required to allow tree caliper growth and prevent bark wounds.
3. Replace defective materials with materials to match original materials.

H. Replacement of Plants: Replace, at no additional cost to the Owner, and as soon as weather conditions permit, plants not in a vigorous, thriving condition, during and at the end of the maintenance period.

3.4 SHRUBS AND GROUND COVERS

A. Watering:

1. Using a soil sampling tube, tensiometer and soil probe, check for moisture penetration throughout the root zone at least twice a week.
2. Water as frequently as necessary to maintain healthy growth of ground covers.
3. Adjust frequency and length of time for watering cycles according to changing soil and weather conditions.

B. Weed Control:

1. Maintain continuous, uniform mulch layer.
2. Control weeds via manual extraction to the degree practical.
3. Minimize hoeing of weeds to avoid plant damage.
4. As a last resort use least toxic herbicides required.
5. Apply a pre-emerge herbicide Snapshot, Ronstar, Barricade, or Gallery, or a combination of these herbicides in February, May, and September for control of summer and winter weeds.
6. Spot treat perennial grasses such as bermudagrass and dalisgrass with glyophosate, Fusilade or Acclaim.
7. Apply Image, Manage, or Sedgehammer for nutgrass control.
8. Apply Ornamec to control other grasses.
9. When applying any weed control, follow all label instructions for rates and application instructions. Do not apply against label.

C. Fertilizer Application:

1. Fertilize ground cover 3 times per year in February, May, and July.
2. Apply dry fertilizers with either a broadcast centrifugal or gravity spreader on planting bed areas.
3. Uniformly apply 2-1/2 pounds of actual Nitrogen per 1,000 square feet. Apply fertilizers evenly over planting areas by spreading half the fertilizer in one direction and half in a direction 90 degrees to the first direction to assure even application.
4. Apply dry fertilizers with either a broadcast centrifugal or gravity spreader on planting bed areas.
5. Water planting areas thoroughly after application. Irrigate plants on the same day of application for 20 to 30 minutes at spray heads and 45 to 60 minutes at rotary heads. Water in short cycles so that run-off does not occur.

D. Final Fertilization Program: Apply fertilizer as directed in writing by the Landscape Architect after Horticultural Consultant determines the fertilization requirements based on soil test data.

E. Replacement of Shrubs and Ground Cover: Replace, at no additional cost to the Owner, and as soon as soil and weather conditions permit, shrub and ground cover plants not in vigorous, thriving condition, during and at the end of the maintenance period.

3.5 LAWN

A. Watering:

1. Using a soil sampling tube, tensiometers and soil probe, check for moisture penetration throughout the root zone at least twice a week.
2. Water lawns at such frequency as weather conditions require, to replenish soil moisture to 6 inches below root zone.
3. Provide a total of 1 1/2 inches of water weekly during hot summer weather, in 3 applications per week.
4. Water at night if irrigation system is electrically controlled. Otherwise, watering shall be done during early mornings.

B. Weed Control:

1. As a last resort, control broadleaf weeds with least toxic herbicides.
2. Coordinate application of herbicides with thatch control.
3. Apply pre-emerge herbicide such as Barricade or Gallery or a combination of these products in February and May for control of summer weeds.
4. Apply post-emerge herbicides Certainty, Pendulum, Image or Blade for control of grassy and broadleaf weeds.
5. Apply post-emerge herbicides Lontrel, Speed Zone Southern, Blade or Prompt, for control of broadleaf weeds.
6. Apply post-emerge herbicides Certainty, Prompt, Image or Manage for control of sedges.
7. When applying any weed control, follow all label instructions for rates and application instructions. Do not apply against label.

C. Mowing and Edging:

1. Mow to a height of 2 1/2 inches when it reaches a height of 3 inches.
2. Trim edges weekly or as needed for neat appearance.
3. Remove and dispose of grass clippings.

D. Fertilizer Application:

1. Uniformly apply 18-6-12 at rate of 2 pounds actual nitrogen per 1,000 square feet, 4 times per year in March, May, July, and September.
2. Meet requirements of fertilizer manufacturer's current printed instructions.
3. Apply fertilizers evenly over planting areas by spreading half the fertilizer in one direction and half in a direction 90 degrees to the first direction to assure even application.
4. Apply dry fertilizers with a gravity or a broadcast centrifugal spreader.
5. Apply liquid fertilizers with a metered sprayer.
6. Water planting areas thoroughly after fertilizer application.
7. If turf is chlorotic, treat with a minor element package as directed by Horticultural Consultant for Owner.

E. Resodding of Lawn Areas: Replace, at no additional cost to the Owner, and as soon as weather conditions permit, lawn areas not in a vigorous, thriving condition, during and at the end of the maintenance period.

F. Aeration:

1. Aerate lawn areas two times during maintenance period, at times of year determined by the Horticultural Consultant.
2. Use a piston-driven type aerifier with 4-inch long by 1/2-inch diameter hollow tines.
3. Moisten soil to 6-inch depth a few days prior to aeration to help achieve full depth penetration with the tines.
4. Remove cores from the lawn surface and dispose of cores.

G. Dethatching: Verticut lawn areas to remove excessive thatch to a maximum 1/4-inch below soil surface when directed by Horticultural Consultant in Spring at grass green-up.

3.6 FLOWERING AND GRASS MEADOW

A. Watering:

1. Using a soil sampling tube, tensiometers and soil probe, check for moisture penetration throughout the root zone at least twice a week.
2. Water meadow areas at such frequency as weather conditions require, to replenish soil moisture to 6 inches below root zone.
3. Do not allow plant root balls to dry out.
4. Water at night if irrigation system is electrically controlled, otherwise, water during early mornings.

B. Weed Control:

1. As a last resort, control noxious or aggressive weeds, such as Bermuda Grass, Kikuya Grass, with least toxic herbicides.
2. Apply post-emerge herbicide for control of noxious weeds.
3. Coordinate application of herbicides with reseeding schedule.
4. Do not apply herbicide unless directed by the Horticultural Consultant.
5. When applying any weed control, follow all label instructions for rates and application instructions. Do not apply against label.

C. Meadow Establishment Mowing:

1. Mow entire surface of meadow areas every 4 weeks until established and 4 times per year to a height of 4 to 6 inches only when directed by the Horticultural Consultant.
2. Trim edges along paving with the lawn edger 21 times per year when required for neat appearance.
3. Grass clippings shall be removed from site unless directed otherwise by Horticultural Consultant.

D. Mowing and Edging Upon Meadow Establishment: Mow to height of 4 inches September through October.

E. Fertilizer Application:

1. Uniformly apply 16-6-8 at the rate of 5 pounds of actual nitrogen per 1,000 per square feet every 4 weeks until establishment of full coverage.
2. Meet requirements of fertilizer manufacturer’s current printed instructions.
3. Apply fertilizers evenly over planting areas by spreading half the fertilizer in one direction and half in a direction 90 degrees to the first direction to assure even application.
4. Apply dry fertilizers with a gravity or a broadcast centrifugal spreader.
5. Apply liquid fertilizers with a metered sprayer.
6. Water planting areas thoroughly after fertilizer application.

F. Reseeding of Meadow Areas: Replace, at no additional cost to the Owner, and as soon as weather conditions permit, seed meadow areas not in a vigorous, thriving condition, during and at the end of the maintenance period, except at areas affected by too much shade.

3.7 INSECTS, PESTS, AND DISEASE CONTROL

A. General:

1. Employ principles of IPM in the selection of preventative and control measures for plant pests and diseases.
2. Insignificant pests will be tolerated providing they do not seriously threaten planting health and appearance unless directed otherwise by the Horticultural Consultant.
3. Monitor the site closely and take timely action to address problems identified.
4. Use personnel licensed and experienced using materials approved by the EPA and conform to applicable laws, codes and regulations, under the direction of a licensed certified pest control operator.
5. When necessary apply the least toxic chemical required for the existing problem, unless directed otherwise by the Horticultural Consultant.
6. Apply sprays only if a pest or disease is a serious threat and cease application after problem is under control, unless directed otherwise by the Horticultural Consultant.
7. Spray with extreme care to avoid hazards to any person, pet, or automobile in the area or adjacent areas.
8. Meet requirements of chemical manufacturer's current printed label and application instructions.
9. The Contractor shall be held liable for plant damage due to the use of chemicals.

B. Plant Condition Inspection:

1. Inspect plant material daily for damage and signs of stress, pests, and disease.
2. Submit a written and photographic inspection report of observed damage, and signs of stress, pests, or disease via e-mail to the Owner, the Landscape Architect, and Horticultural Consultant within 2 days of observations.
3. Use a digital camera with at least 5.0 megapixels of resolution to document observations.

C. Spraying:

1. When necessary apply the least toxic chemical required for the existing problem.
2. Meet requirements of manufacturer's current printed instructions.
3. Apply sprays only if a pest or disease is a serious threat and cease application after problem is under control.
4. Make spray applications in early morning hours, prior to 7:00 a.m., unless approved otherwise by Owner and Horticultural Consultant.

D. Treating Existing Trees with Insecticides:

1. Aphids: Treat with merit, triact, mavrik, tempo, talstar or marathon when present.
2. Bagworms: Treat with merit, tempo, talstar, mavrik or bacillus thuringiensis when present.
3. Borers: Treat when borers are present. Spray the trunks and upper branches with merit, talstar or marathon. Open wounds are easily susceptible to borer attack.
4. Caterpillar: Treat with merit, tempo, talstar, mavrik or bacillus thuringiensis when present.
5. Galls: Treat as leaves first start to come out in the early spring with horticultural oil or with a combination spray of horticultural oil and merit, talstar or marathon.

6. Grasshoppers: Treat when present with merit, talstar, tempo or marathon.
7. Lace Bugs: Treat when present with merit, tempo or marathon.
8. Leaf Miners: Treat when present with merit, talstar, avid, marathon or tempo.
9. Scale: Treat when present with horticultural oil or a combination of merit, triact, talstar or marathon and oil. Follow the temperature restrictions for use of oil.
10. Thrips: Treat when present with merit, avid, talstar or marathon.
11. Twig Girdlers: Treat when present with merit, talstar or tempo.
12. Leaf Skeletonizer: Treat when present with talstar, merit, tempo or mavrik.

E. Treating Flowering and Grass Meadow Areas with Insecticides: Use IPM approach and spray only when thresholds could cause damage and as directed by Horticultural Consultant.

F. Preventative Treatment for Insects and Mites: Spray trees, shrubs, and ground cover once during winter months with an application of dormant oil in combination with Talstar, making sure to thoroughly cover trunks, branches, and leaves, including the underside of leaves.

G. Treating Existing Trees with Fungicides:

1. Powdery Mildew: Treat when present with clearys 3336, heritage, OHP 6672, compass, triact 70, banner, funginex, bayleton or rubigan.
2. Rust: Treat when present with heritage, banner, clearys 3336, OHP 6672, triact 70, bayleton, manzate 200 or dithane M-45.
3. Leaf Spot: Treat when present between May and September with medallion, heritage, banner, clearys 3336, OHP 6672, compass, triact 70, sextant, daconil 2787, manzate 200, dithane M-45 or durosan.
4. Botrytis: Treat when present with medallion, clearys 3336, OHP 6672, compass, triact 70, sextant.
5. Twig Blight: Treat when present with medallion, clearys 3336, OHP 6672, triact 70, sextant.
6. Rhizoctonia: Treat when present with medallion, clearys 3336, OHP 6672, compass, sextant.
7. Fusarium: Treat when present with medallion, clearys 3336, OHP 6672, sextant.
8. Anthracnose: Treat when present with clearys 3336, OHP 6672, compass, triact 70.
9. Oak Leaf Blister: Treat with bordeaux mixture when leaves are appearing in the early spring if there was a problem with this disease the previous year.
10. Oak Wilt: Inject alamo into the root flares to prevent and control oak wilt.
11. Hypoxylon Canker: Chemical treatments would not be effective because the fungus is located within the tree.

H. Treating Meadow Areas with Fungicides: Use IPM approach and spray only when thresholds could cause damage.

I. Mite Control: Treat trees and shrubs, when mites are present, from March through October with Miticidal soap, Talstar, Dicofol, Vendex, Pentac, Mavrik, or Avid.

J. Root Disease Control: Treat root diseases on trees and shrubs with Captan, Banrot, Aliette, or Subdue 2E as recommended by the Horticultural Consultant.

K. Preliminary Chemical Application Schedule to Establish Bid Price: See Preliminary Chemical Application Schedule under Article 3.13 in this Section.

L. Final Chemical Application Schedule: As directed by the Horticultural Consultant in writing.

3.8 IRRIGATION SYSTEM

A. Damages:

1. Monitor irrigation system daily for damage.
2. Repair at no additional cost to the Owner damages to system caused by Contractor's operations.
3. Perform repairs before next irrigation cycle commences.

B. Cleaning and Monitoring the System:

1. Continually monitor (daily, including weekends and holidays) the irrigation systems to verify that they are functioning properly as designed.
2. Clean filters and strainers at least once a month and as often as necessary to keep the irrigation systems free of sand and other debris.
3. Set and continuously adjust and program automatic controller for seasonal water requirement.
4. Make program adjustments as required by changing field conditions.
5. At least once a week, daily when required, use a soil sampling tube, tensiometers and soil probe to check the rootball moisture of representative plants as well as the surrounding soil.
6. Prevent or minimize spraying on paving, windows, building walls, and other structures, by balancing the throttle control on the remote control valves and the adjustment screws on the sprinkler heads.
7. Do not allow water to atomize and drift.
8. Record in writing the daily watering times set for each remote control valve and submit log of times to Owner's Designated Representative, Landscape Architect, and Horticultural Consultant bi-monthly for record purposes.

C. Winter Months: During periods of freezing temperatures, make sure irrigation system is turned off drain and restart system as soon as temperatures go above freezing.

3.9 WOOD CHIP MULCH AREAS

A. Surface Smoothness: Smooth out finished surfaces of mulch twice monthly.

B. Weed Control:

1. Maintain areas weed-free.
2. As a last resort, control weeds with least toxic chemicals.

C. Mulch Replenishment: During the last month of the maintenance period, add mulch to settled areas to bring finished surfaces back to the levels indicated on the Drawings.

3.10 FIELD QUALITY CONTROL

A. Soil Testing to Determine Fertilization Requirements:

1. When directed by the Horticultural Consultant, take up to 10 composite soil samples from locations determined by the Horticultural Consultant in the field.
2. Send samples to same laboratory used for soil testing required by Section 02910.
3. Employ the laboratory to test for the following:
4. pH measurement in the saturation extract per USDA Handbook No. 60, Method 21.
5. Electrical conductivity of the saturation extract per USDA Handbook No. 60, Method 2.
6. Sodium absorption ratio of the saturation extract per USDA Handbook No. 60, Method 20b.
7. Determination of boron, calcium, copper, iron, magnesium, manganese, molybdenum, phosphorous, potassium, sodium, sulfur, and zinc, via the following test methods: Mehlich Number 3, Bray P1, Bray P2, Olsen P, DTPA, ammonium acetate, ammonium bicarbonate DTPA, and hot water extract from boron.
8. Analysis of saturation extract for calcium, magnesium, sodium, boron, chloride, phosphorous, nitrate, and sulfate.
9. Measurement of following trace metals by the DTPA extract: aluminum, arsenic, cadmium, chromium, cobalt, lead, lithium, nickel, selenium, silver, strontium, tin, and vanadium.
10. Presence of calcium carbonate and magnesium carbonate.
11. Estimate of soil texture per commonly used methods.
12. Estimate of organic matter content per commonly used methods.
13. Exchangeable Ammonium Cation.
14. Base Saturation.
15. Cation Exchange Capacity.
16. Carbonates Determination.
17. Soil Bulk Density.
18. Water Infiltration Rate per USDA Handbook No. 60, Method 34b.
19. At least 30 days prior to commencement of soil preparation Work, submit to the Landscape Architect and Horticultural Consultant the laboratory's written soil test report including the laboratory's soil test data; the laboratory's interpretation of nutritional deficiencies, excesses, and potential toxicities; and the laboratory's amendment recommendations.
20. The Horticultural Consultant will determine the fertilization programs based on the soil test report which may differ from the soil test report amendment recommendations.

B. Maintenance Review for Two-Year Maintenance Period Following the date of Final Completion:

1. Horticultural Consultant will review Work and prepare a written report for each site inspection and will submit the report within 24 hours via e-mail to the Contractor for immediate action to reverse problems.
2. Horticultural Consultant will inspect site 12 times per year.
3. Horticultural Consultant Inspection Reports: Shall include, but not be limited to written and photographic documentation of damage and signs of stress due to pests, disease, nutritional deficiencies, watering and any other problem.
4. Contractor Verification Report: Contractor shall document and verify corrective actions to Landscape Architect and Horticultural Consultant via e-mail within 24 hours following action.

C. Maintenance Review at End of One-Year Maintenance Period:

1. At the end of the one-year maintenance period, request the Landscape Architect and Horticultural Consultant to review Work.
2. Submit a written request at least five working days prior to the anticipated date of review.
3. If the Landscape Architect and Horticultural Consultant observe Work that fails to meet the Contract Document requirements the Contractor will receive written notification from the Owner's Designated Representative of corrective Work preventing Owner acceptance of the maintenance Work.
4. Perform corrective Work within 10 calendar days after the review.
5. Upon completion of the corrective Work, request the Landscape Architect and Horticultural Consultant to review the Work.
6. Corrective Work followed by Landscape Architect and Horticultural Consultant's review will be required until the Landscape Architect and Horticultural Consultant no longer observes Work not meeting the Contract Document requirements.

D. Owner's Acceptance of Maintenance Responsibility:

1. When it appears to the Landscape Architect and Horticultural Consultant that the maintenance Work conforms to the requirements of the Contract Documents the Contractor will receive written notification designating the day which the Owner will accept maintenance responsibility.
2. Continue maintenance of landscape Work until the date that the Owner accepts maintenance responsibility.

3.11 SCHEDULES

A. Preliminary Chemical Application Schedule to Establish a Bid Price:

Chemical Type	*Applications per Year per Plant after Installation*
Insecticide spraying:	8
Fungicide spraying:	8
Root drench:	8
Dormant oil:	1
Pre-Emerge Weed Control:	4
Post-Emerge Weed Control:	8

END OF SECTION

SECTION 32 1216 - ASPHALT PAVING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Hot-mix asphalt paving.
2. Hot-mix asphalt patching.
3. Hot-mix asphalt paving overlay.
4. Asphalt surface treatments.
5. Pavement-marking paint.
6. Cold milling of existing hot-mix asphalt pavement.

B. Related Sections include the following:

1. Division 31 Section "Earth Moving" for aggregate subbase and base courses and for aggregate pavement shoulders.
2. Division 32 Section "Concrete Paving Joint Sealants" for joint sealants and fillers at paving terminations.

1.2 DEFINITIONS

A. Hot-Mix Asphalt Paving Terminology: Refer to ASTM D 8 for definitions of terms.

1.3 SYSTEM DESCRIPTION

A. Provide hot-mix asphalt paving according to materials, workmanship and other applicable requirements of the Standard Specifications for, State of California, Department of Transportation (Caltrans).

1. Highway Design Manual, latest edition.
2. Measurement and payment provisions and safety program submittals included in standard specifications do not apply to this Section.

B. American society for Testing Materials (ASTM).

C. American Association of State Highway Officials (AASHO).

D. Asphalt Institute Manual (AIM).

1. Construction Specifications for Asphalt Concrete and other plant mix Types.
2. MS-10 – Soils Manual for Design of Asphalt Pavement Structures.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated. Include technical data and tested physical and performance properties.

B. Job-Mix Designs: Certification, by authorities having jurisdiction, of approval of each job mix proposed for the Work.

C. Samples: For each paving fabric, 12 by 12 inches minimum.

E. Qualification Data: For manufacturer.

F. Material Certificates: For each paving material, signed by manufacturers.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer.

B. Testing Agency Qualifications: Qualified according to ASTM D 3666 for testing indicated, as documented according to ASTM E 548.

C. Regulatory Requirements: Comply with Standard Specifications of Caltrans for asphalt paving work.

D. Asphalt-Paving Publication: Comply with AI MS-22, "Construction of Hot Mix Asphalt Pavements," unless more stringent requirements are indicated.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver pavement-marking materials to Project site in original packages with seals unbroken and bearing manufacturer's labels containing brand name and type of material, date of manufacture, and directions for storage.

B. Store pavement-marking materials in a clean, dry, protected location within temperature range required by manufacturer. Protect stored materials from direct sunlight.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not apply asphalt materials if subgrade is wet or excessively damp or if the following conditions are not met:

1. Prime and Tack Coats: Minimum surface temperature of 60 deg F.
2. Slurry Coat: Comply with weather limitations of ASTM D 3910.
3. Asphalt Base Course: Minimum surface temperature of 40 deg F and rising at time of placement.
4. Asphalt Surface Course: Minimum surface temperature of 60 deg F at time of placement.

B. Pavement-Marking Paint: Proceed with pavement marking only on clean, dry surfaces and at a minimum ambient or surface temperature of 40 deg F for oil-based materials, 50 deg F for water-based materials, and not exceeding 95 deg F.

C. Traffic Control: Maintain control of vehicular and pedestrian traffic during paving operations and as required for construction activities.

D. Phasing: Where existing facilities will be occupied during construction activities, phase paving work as required to maintain adequate parking and access to the parking.

PART 2 - PRODUCTS

2.1 AGGREGATES

A. General: Use materials and gradations that have performed satisfactorily in previous installations.

B. Coarse Aggregate: ASTM D 692, sound; angular crushed stone, or crushed gravel.

C. Fine Aggregate: ASTM D 1073 or AASHTO M 29, sharp-edged natural sand or sand prepared from stone, gravel, or combinations thereof.

1. For hot-mix asphalt, limit natural sand to a maximum of 20 percent by weight of the total aggregate mass.

D. Mineral Filler: ASTM D 242 or AASHTO M 17, rock dust, hydraulic cement, or other inert material.

2.2 ASPHALT MATERIALS

A. Asphalt Binder: AASHTO MP 1, PG 70-22 .

B. Prime Coat: Asphalt emulsion prime complying with Caltrans requirements.

C. Tack Coat: ASTM D 977 , emulsified asphalt or ASTM D 2397 , cationic emulsified asphalt, slow setting, diluted in water, of suitable grade and consistency for application.

D. Fog Seal: ASTM D 977 , emulsified asphalt or ASTM D 2397 , cationic emulsified asphalt, slow setting, factory diluted in water, of suitable grade and consistency for application.

E. Water: Potable.

2.3 AUXILIARY MATERIALS

A. Herbicide: Commercial chemical for weed control, registered by the EPA. Provide in granular, liquid, or wettable powder form.

B. Sand: ASTM D 1073 , Grade Nos. 2 or 3.

C. Paving Geotextile: AASHTO M 288, nonwoven polypropylene; resistant to chemical attack, rot, and mildew; and specifically designed for paving applications.

D. Joint Sealant: ASTM D 3405 , hot-applied, single-component, polymer-modified bituminous sealant.

E. Pavement-Marking Paint: Latex, waterborne emulsion, lead and chromate free, ready mixed, complying with FS TT-P-1952, with drying time of less than **3**minutes.

1. Color: **As indicated**

F. Glass Beads: AASHTO M 247, Type 1.

G. Wheel Stops: Precast, air-entrained concrete, 2500-psi minimum compressive strength, 4-1/2 inches high by 9 inches wide by 72 inches long. Provide chamfered corners and drainage slots on underside and holes for anchoring to substrate.

1. Dowels: Galvanized steel, 3/4-inch diameter, 10-inch minimum length.

H. Wheel Stops: Solid, integrally colored, 96 percent recycled HDPE or commingled postconsumer and postindustrial recycled plastic; UV stabilized; 4 inches high by 6 inches wide by 72 inches long. Provide chamfered corners and drainage slots on underside and holes for anchoring to substrate.

1. Dowels: Galvanized steel, 3/4-inch diameter, 10-inch minimum length.

2.4 MIXES

A. Hot-Mix Asphalt: Dense, hot-laid, hot-mix asphalt plant mixes designed according to procedures in the SSPWC.

1. Provide mixes with a history of satisfactory performance in geographical area where Project is located.
2. Provide mixes complying with composition, grading, and tolerance requirements in ASTM D 3515 for the following nominal, maximum aggregate sizes:

a. Base Course: Class B per Table 203-6.4.3 (A)
b. Surface Course: Class D1 per Table 203-6.4.3 (A)

B. Emulsified-Asphalt Slurry: ASTM D 3910, Type **2** consisting of emulsified asphalt, fine aggregate, and mineral fillers.

C. Base Materials: Crushed aggregate base over crushed miscellaneous base:

1. Class 2 crushed aggregate base per Article 2.00-2.2 of the SSPWC or recycled material such as Crushed Miscellaneous Base (CMB) complying with Article 2.0b-2.4 or processed miscellaneous base (PMB) complying with Section 200-2.5 of the SSPWC.
2. Sub-base material shall be suitable material approved by the University's Represntative for use as sub base material.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that subgrade is dry and in suitable condition to support paving and imposed loads.

B. Proof-roll subbase using heavy, pneumatic-tired rollers to locate areas that are unstable or that require further compaction.

C. Proceed with paving only after unsatisfactory conditions have been corrected.

3.2 PATCHING

A. Hot-Mix Asphalt Pavement: Saw cut perimeter of patch and excavate existing pavement section to sound base. Excavate rectangular or trapezoidal patches, extending 12 inches into adjacent sound pavement, unless otherwise indicated. Cut excavation faces vertically. Remove excavated material. Recompact existing unbound-aggregate base course to form new subgrade.

B. Tack Coat: Apply uniformly to vertical surfaces abutting or projecting into new, hot-mix asphalt paving at a rate of 0.05 to 0.15 gal./sq. yd..

1. Allow tack coat to cure undisturbed before applying hot-mix asphalt paving.
2. Avoid smearing or staining adjoining surfaces, appurtenances, and surroundings. Remove spillages and clean affected surfaces.

C. Patching: Partially fill excavated pavements with hot-mix asphalt base mix and, while still hot, compact. Cover asphalt base course with compacted, hot-mix surface layer finished flush with adjacent surfaces.

3.3 SURFACE PREPARATION

A. General: Immediately before placing asphalt materials, remove loose and deleterious material from substrate surfaces. Ensure that prepared subgrade is ready to receive paving.

1. Sweep loose granular particles from surface of unbound-aggregate base course. Do not dislodge or disturb aggregate embedded in compacted surface of base course.

B. Herbicide Treatment: Apply herbicide according to manufacturer's recommended rates and written application instructions. Apply to dry, prepared subgrade or surface of compactedaggregate base before applying paving materials.

C. Tack Coat: Apply uniformly to surfaces of existing pavement at a rate of 0.05 to 0.15 gal./sq. yd..

1. Allow tack coat to cure undisturbed before applying hot-mix asphalt paving.
2. Avoid smearing or staining adjoining surfaces, appurtenances, and surroundings. Remove spillages and clean affected surfaces.

3.4 HOT-MIX ASPHALT PLACING

A. Machine place hot-mix asphalt on prepared surface, spread uniformly, and strike off. Place asphalt mix by hand to areas inaccessible to equipment in a manner that prevents segregation of mix. Place each course to required grade, cross section, and thickness when compacted.

1. Place hot-mix asphalt base course in number of lifts and thicknesses indicated.
2. Spread mix at minimum temperature of 250 deg F.+
3. Begin applying mix along centerline of crown for crowned sections and on high side of one-way slopes, unless otherwise indicated.
4. Regulate paver machine speed to obtain smooth, continuous surface free of pulls and tears in asphalt-paving mat.

B. Place paving in consecutive strips not less than 10 feet wide unless infill edge strips of a lesser width are required.

1. After first strip has been placed and rolled, place succeeding strips and extend rolling to overlap previous strips. Complete a section of asphalt base course before placing asphalt surface course.

C. Promptly correct surface irregularities in paving course behind paver. Use suitable hand tools to remove excess material forming high spots. Fill depressions with hot-mix asphalt to prevent segregation of mix; use suitable hand tools to smooth surface.

3.5 JOINTS

A. Construct joints to ensure a continuous bond between adjoining paving sections. Construct joints free of depressions with same texture and smoothness as other sections of hot-mix asphalt course.

1. Clean contact surfaces and apply tack coat to joints.
2. Offset longitudinal joints, in successive courses, a minimum of 6 inches.
3. Offset transverse joints, in successive courses, a minimum of 24 inches.
4. Construct transverse joints as described in AI MS-22, "Construction of Hot Mix Asphalt Pavements."
5. Compact joints as soon as hot-mix asphalt will bear roller weight without excessive displacement.
6. Compact asphalt at joints to a density within 2 percent of specified course density.

3.6 COMPACTION

A. General: Begin compaction as soon as placed hot-mix paving will bear roller weight without excessive displacement. Compact hot-mix paving with hot, hand tampers or vibratory-plate compactors in areas inaccessible to rollers.

1. Complete compaction before mix temperature cools to 185 deg F.

B. Breakdown Rolling: Complete breakdown or initial rolling immediately after rolling joints and outside edge. Examine surface immediately after breakdown rolling for indicated crown, grade, and smoothness. Correct laydown and rolling operations to comply with requirements.

C. Intermediate Rolling: Begin intermediate rolling immediately after breakdown rolling while hot-mix asphalt is still hot enough to achieve specified density. Continue rolling until hot-mix asphalt course has been uniformly compacted to the following density:

1. Average Density: 92 percent of reference maximum theoretical density according to ASTM D 2041, but not less than 90 percent nor greater than 96 percent.

D. Finish Rolling: Finish roll paved surfaces to remove roller marks while hot-mix asphalt is still warm.

E. Edge Shaping: While surface is being compacted and finished, trim edges of pavement to proper alignment. Bevel edges while asphalt is still hot; compact thoroughly.

F. Repairs: Remove paved areas that are defective or contaminated with foreign materials and replace with fresh, hot-mix asphalt. Compact by rolling to specified density and surface smoothness.

G. Protection: After final rolling, do not permit vehicular traffic on pavement until it has cooled and hardened.

H. Erect barricades to protect paving from traffic until mixture has cooled enough not to become marked.

3.7 INSTALLATION TOLERANCES

A. Thickness: Compact each course to produce the thickness indicated within the following tolerances:

1. Base Course: Plus or minus 1/2 inch.
2. Surface Course: Plus 1/4 inch, no minus.

B. Surface Smoothness: Compact each course to produce a surface smoothness within the following tolerances as determined by using a 10-foot straightedge applied transversely or longitudinally to paved areas:

1. Base Course: **1/4 inch**

2. Surface Course: **1/8 inch**

3.8 SURFACE TREATMENTS

A. Fog Seals: Apply fog seal at a rate of 0.10 to 0.15 gal./sq. yd. to existing asphalt pavement and allow to cure. With a fine sand, lightly dust areas receiving excess fog seal.

3.9 PAVEMENT MARKING

A. Do not apply pavement-marking paint until layout, colors, and placement have been verified with University's Representative.

B. Allow paving to age for 7 days before starting pavement marking.

C. Sweep and clean surface to eliminate loose material and dust.

D. Apply paint with mechanical equipment to produce pavement markings, of dimensions indicated, with uniform, straight edges. Apply at manufacturer's recommended rates to provide a minimum wet film thickness of 15 mils.

1. Broadcast glass spheres uniformly into wet pavement markings at a rate of 6 lb/gal..

3.10 WHEEL STOPS

A. Securely attach wheel stops into pavement with not less than two galvanized steel dowels embedded at one-quarter to one-third points. Securely install dowels into pavement and bond to wheel stop. Recess head of dowel beneath top of wheel stop.

1. Minimum length of dowels shall be 2'-0".

3.11 FIELD QUALITY CONTROL

A. Testing Agency: University will engage a qualified independent testing and inspecting agency to perform field tests and inspections and to prepare test reports.

1. Testing agency will conduct and interpret tests and state in each report whether tested Work complies with or deviates from specified requirements.

B. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

C. Thickness: In-place compacted thickness of hot-mix asphalt courses will be determined according to ASTM D 3549.

D. Surface Smoothness: Finished surface of each hot-mix asphalt course will be tested for compliance with smoothness tolerances.

E. In-Place Density: Testing agency will take samples of uncompacted paving mixtures and compacted pavement according to **ASTM D 979**.

1. Reference maximum theoretical density will be determined by averaging results from four samples of hot-mix asphalt-paving mixture delivered daily to site, prepared according to ASTM D 2041, and compacted according to job-mix specifications.
2. In-place density of compacted pavement will be determined by testing core samples according to ASTM D 1188 or ASTM D 2726.

a. One core sample will be taken for every 1000 sq. yd. or less of installed pavement, with no fewer than 3 cores taken.
b. Field density of in-place compacted pavement may also be determined by nuclear method according to ASTM D 2950 and correlated with ASTM D 1188 or ASTM D 2726.

F. Remove and replace or install additional hot-mix asphalt where test results or measurements indicate that it does not comply with specified requirements.

3.12 DISPOSAL

A. Except for material indicated to be recycled, remove excavated materials from Project site and legally dispose of them in an EPA-approved landfill.

1. Do not allow excavated materials to accumulate on-site.

END OF SECTION 32 1216

SECTION 32 1313 - CONCRETE PAVING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes exterior cement concrete pavement for the following:

1. Curbs and gutters.
2. Walkways.

B. Related Sections include the following:

1. Division 03 Section "Cast-in-Place Concrete" for general building applications of concrete.
2. Division 31 Section "Earth Moving" for subgrade preparation, grading, and subbase course.
3. Division 32 Section "Concrete Paving Joint Sealants" for joint sealants of joints in concrete pavement and at isolation joints of concrete pavement with adjacent construction.

1.2 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash and other pozzolans, and ground granulated blast-furnace slag

1.3 SYSTEM DESCRIPTION

A. Provide portland cement and concrete pouring according to materials, workmanship and other applicable requirements of the Standard specification for Public Works Construction (SSPWC), current edition.

B. American Society for Testing Material (ASTM)

C. American Association of State Highway Transportation Officials. (AASHTO)

D. American Concrete Institute (ACI)

1.4 SUBMITTALS

A. Product Data: For each type of manufactured material and product indicated.

B. Design Mixtures: For each concrete pavement mixture. Include alternate mixture designs when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

C. Material Test Reports: From a qualified testing agency indicating and interpreting test results for compliance of the following with requirements indicated, based on comprehensive testing of current materials:

1. Aggregates: Include service record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.

D. Material Certificates: Signed by manufacturers certifying that each of the following materials complies with requirements:

1. Cementitious materials.
2. Steel reinforcement and reinforcement accessories.
3. Admixtures.
4. Curing compounds.
5. Joint fillers.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Manufacturer of ready-mixed concrete products who complies with ASTM C 94 requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

B. ACI Publications: Comply with ACI 301, "Specification for Structural Concrete," unless modified by requirements in the Contract Documents.

C. Mockups: Cast mockups of full-size sections of concrete pavement to demonstrate typical joints, surface finish, texture, color, and standard of workmanship.

1. Refer to Division 01 Section “Quality Requirements” for mockup requirements.
2. Obtain University’s Representative's approval of mockups before starting construction.
3. Maintain approved mockups during construction in an undisturbed condition as a standard for judging the completed pavement.
4. Demolish and remove approved mockups from the site when directed by University’s Representative.

5. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 PROJECT CONDITIONS

A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Products: Subject to compliance with requirements, provide one of the products specified.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.
3. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01, Section 01600, “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 FORMS

A. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, smooth exposed surfaces.

1. Use flexible or curved forms for curves with a radius of 100 feet or less.

B. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent treatments of concrete surfaces.

2.3 STEEL REINFORCEMENT

A. Plain-Steel Welded Wire Reinforcement: ASTM A 185, fabricated from as-drawn steel wire into flat sheets.

B. Deformed-Steel Welded Wire Reinforcement: ASTM A 497, flat sheet.

C. Epoxy-Coated Welded Wire Fabric: ASTM A 884, Class A, plain steel.

D. Reinforcing Bars: ASTM A 615 Grade 60; deformed.

E. Galvanized Reinforcing Bars: ASTM A 767, Class II zinc coated, hot-dip galvanized after fabrication and bending; with ASTM A 615, Grade 60 deformed bars.

F. Epoxy-Coated Reinforcing Bars: ASTM A 775 or ASTM A 934; with ASTM A 615. Grade 60 deformed bars.

G. Steel Bar Mats: ASTM A 184; with ASTM A 615 Grade 60, deformed bars; assembled with clips.

H. Plain Steel Wire: ASTM A 82, as drawn.

I. Deformed-Steel Wire: ASTM A 496.

J. Epoxy-Coated-Steel Wire: ASTM A 884, Class A coated, plain.

K. Joint Dowel Bars: Plain steel bars, ASTM A 615, Grade 60. Cut bars true to length with ends square and free of burrs.

L. Epoxy-Coated Joint Dowel Bars: ASTM A 775; with ASTM A 615, Grade 60, plain steel bars.

M. Tie Bars: ASTM A 615, Grade 60, deformed.

N. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded wire reinforcement, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice" from steel wire, plastic, or precast concrete of greater compressive strength than concrete, and as follows:

1. Equip wire bar supports with sand plates or horizontal runners where base material will not support chair legs.
2. For epoxy-coated reinforcement, use epoxy-coated or other dielectric-polymer-coated wire bar supports.

O. Epoxy Repair Coating: Liquid two-part epoxy repair coating, compatible with epoxy coating on reinforcement.

P. Zinc Repair Material: ASTM A 780.

2.4 BASE MATERIAL

A. Base material: Crushed aggregate base or crushed miscellaneous base:

1. Class 2 crushed aggregate base per Article 200-2.2 of the SSPWC or recycled material such as crushed miscellaneous base CMB) complying with Article 200-2.4 or processed miscellaneous base complying with Article 200-2.5 of the SSPWC.
2. Sub-base material shall be suitable material approved by the University's Representative for use as sub-base material.

2.5 CONCRETE MATERIALS

A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source throughout the Project:

1. Portland Cement: ASTM C 150, Type II.

   a. Fly Ash: ASTM C 618, Class C or F.
   b. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.

B. Normal-Weight Aggregates: ASTM C 33, Class 1N coarse aggregate, uniformly graded. Provide aggregates from a single source with documented service record data of at least 10 years' satisfactory service in similar pavement applications and service conditions using similar aggregates and cementitious materials.

1. Maximum Coarse-Aggregate Size: 1inch nominal.
2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

3. Aggregate Sizes**: 1/2 to 3/4 inch** nominal.

E. Air-Entraining Admixture: ASTM C 260.

F. Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.

1. Water-Reducing Admixture: ASTM C 494, Type A.
2. Retarding Admixture: ASTM C 494, Type B.
3. Water-Reducing and Retarding Admixture: ASTM C 494, Type D.
4. High-Range, Water-Reducing Admixture: ASTM C 494, Type F.
5. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494, Type G.
6. Plasticizing and Retarding Admixture: ASTM C 1017, Type II.

2.6 CURING MATERIALS

A. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. dry.

B. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.

C. Water: Potable.

D. Evaporation Retarder: Waterborne, monomolecular film forming; manufactured for application to fresh concrete.

1. Products:

a. Axim Concrete Technologies; Cimfilm.
b. Burke by Edeco; BurkeFilm.
c. ChemMasters; Spray-Film.
d. Conspec Marketing & Manufacturing Co., Inc.; Aquafilm.
e. Dayton Superior Corporation; Sure Film.
f. Euclid Chemical Company (The); Eucobar.
g. Kaufman Products, Inc.; Vapor Aid.
h. Lambert Corporation; Lambco Skin.
i. L&M Construction Chemicals, Inc.; E-Con.
j. MBT Protection and Repair, ChemRex Inc.; Confilm.
k. Meadows, W. R., Inc.; Sealtight Evapre.
l. Metalcrete Industries; Waterhold.
m. Nox-Crete Products Group, Kinsman Corporation; Monofilm.
n. Sika Corporation, Inc.; SikaFilm.
o. Symons Corporation; Finishing Aid.
p. Vexcon Chemicals, Inc.; Certi-Vex EnvioAssist.
q. Or equal.

E. Clear Waterborne Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B.

1. Products:

a. Anti-Hydro International, Inc.; AH Curing Compound #2 DR WB.
b. Burke by Edoko; Aqua Resin Cure.
c. ChemMasters; Safe-Cure Clear.
d. Conspec Marketing & Manufacturing Co., Inc.; W.B. Resin Cure.
e. Dayton Superior Corporation; Day Chem Rez Cure (J-11-W).
f. Euclid Chemical Company (The); Kurez DR VOX.
g. Kaufman Products, Inc.; Thinfilm 420.

h. Lambert Corporation; Aqua Kure-Clear.
i. L&M Construction Chemicals, Inc.; L&M Cure R.
j. Meadows, W. R., Inc.; 1100 Clear.
k. Nox-Crete Products Group, Kinsman Corporation; Resin Cure E.
l. Symons Corporation; Resi-Chem Clear.
m. Tamms Industries Inc.; Horncure WB 30.
n. Unitex; Hydro Cure 309.
o. Vexcon Chemicals, Inc.; Certi-Vex Enviocure 100.
p. Or equal.

F. White Waterborne Membrane-Forming Curing Compound: ASTM C 309, Type 2, Class B.

1. Products:

a. Anti-Hydro International, Inc.; AH Curing Compound #2 WP WB.
b. Burke by Edoco; Resin Emulsion White.
c. ChemMasters; Safe-Cure 2000.
d. Conspec Marketing & Manufacturing Co., Inc.; W.B. Resin Cure.
e. Dayton Superior Corporation; Day-Chem White Pigmented Cure (J-10-W).
f. Euclid Chemical Company (The); Kurez VOX White Pigmented.
g. Kaufman Products, Inc.; Thinfilm 450.
h. Lambert Corporation; Aqua Kure-White.
i. L&M Construction Chemicals, Inc.; L&M Cure R-2.
j. Meadows, W. R., Inc.; 1200-White.
k. Symons Corporation; Resi-Chem White.
l. Tamms Industries, Inc.; Horncure 200-W.
m. Unitex; Hydro White.
n. Vexcon Chemicals, Inc.; Certi-Vex Enviocure White 100.
o. Or equal.

2.7 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D 1752, cork or self-expanding cork.

B. Color Pigment: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, free of carbon black, nonfading, and resistant to lime and other alkalis.

1. Manufacturers:

a. Davis Colors.
b. Scofield, L. M.Company.
c. QC Construction Products, Inc.
d. Or equal.

2. Color: As selected by University’s Representative from manufacturer's full range.

C. Slip-Resistive Aggregate Finish: Factory-graded, packaged, rustproof, nonglazing, abrasive aggregate of fused aluminum-oxide granules or crushed emery with emery aggregate containing not less than 50 percent aluminum oxide and not less than 20 percent ferric oxide; unaffected by freezing, moisture, and cleaning materials.

2.8 PAVEMENT MARKINGS

A. Pavement-Marking Paint: Alkyd-resin type, lead and chromate free, ready mixed, complying with FS TT-P-115, Type **II** or AASHTO M 248, Type **F.**

1. Color: **As indicated**

B. Pavement-Marking Paint: Latex, waterborne emulsion, lead and chromate free, ready mixed, complying with FS TT-P-1952, with drying time of less than **3** minutes.

1. Color **As indicated**

C. Glass Beads: AASHTO M 247, Type 1.

2.9 WHEEL STOPS

A. Wheel Stops: Precast, air-entrained concrete, 2500-psi minimum compressive strength, 4-1/2 inches high by 9 inches wide by 72 inches long. Provide chamfered corners and drainage slots on underside and holes for anchoring to substrate.

1. Dowels: Galvanized steel, 3/4-inch diameter, 12-inch minimum length.

B. Wheel Stops: Solid, integrally colored, 96 percent recycled HDPE or commingled postconsumer and postindustrial recycled plastic; UV stabilized; 4 inches high by 6 inches wide by 72 inches long. Provide chamfered corners and drainage slots on underside and holes for anchoring to substrate.

1. Dowels: Galvanized steel, 3/4-inch diameter, 12-inch minimum length.

2.10 CONCRETE MIXTURES

A. Prepare design mixtures, proportioned according to ACI 301, for each type and strength of normal-weight concrete determined by either laboratory trial mixes or field experience.

1. Use a qualified independent testing agency for preparing and reporting proposed concrete mixture designs for the trial batch method.

B. Proportion mixtures to provide normal-weight concrete with the following properties:

1. Compressive Strength (28 Days): 3000 psi.

2. Maximum Water-Cementitious Materials Ratio at Point of Placement: 0.50.
3. Slump Limit: 4 inches, plus or minus 1 inch.

C. Add air-entraining admixture at manufacturer's prescribed rate to result in normal-weight concrete at point of placement having an air content as follows:

1. Air Content: 3-1/2 percent plus or minus 1.5 percent for 1-inch nominal maximum aggregate size

D. Limit water-soluble, chloride-ion content in hardened concrete to **0.30** percent by weight of cement.

E. Chemical Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.

F. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

2.11 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, and mix concrete materials and concrete according to ASTM C 94. Furnish batch certificates for each batch discharged and used in the Work.

1. When air temperature is between 85 deg F and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine exposed subgrades, subbase, and base surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.

B. Proof-roll prepared subbase, and base surface below concrete pavements with heavy pneumatictired equipment to identify soft pockets and areas of excess yielding.

1. Completely proof-roll subbase and base in one direction and repeat in perpendicular direction. Limit vehicle speed to 3 mph.
2. Proof-roll with a loaded 10-wheel tandem-axle dump truck weighing not less than 15 tons.
3. Subbase and base with soft spots and areas of pumping or rutting exceeding depth of 1/2 inch require correction according to requirements in Division 31 Section "Earth Moving."

C. Proceed with concrete pavement operations only after nonconforming conditions have been corrected and subgrade is ready to receive pavement.

3.2 PREPARATION

A. Remove loose material from compacted subbase and base surface immediately before placing concrete.

3.3 EDGE FORMS AND SCREED CONSTRUCTION

A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides for pavement to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.

B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

3.4 STEEL REINFORCEMENT

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

B. Clean reinforcement of loose rust and mill scale, earth, or other bond-reducing materials.

C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.

D. Install welded wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh, and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.

E. Install fabricated bar mats in lengths as long as practicable. Handle units to keep them flat and free of distortions. Straighten bends, kinks, and other irregularities, or replace units as required before placement. Set mats for a minimum 2-inch overlap of adjacent mats.

3.5 JOINTS

A. General: Form construction, isolation, and contraction joints and tool edgings true to line with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline, unless otherwise indicated.

1. When joining existing pavement, place transverse joints to align with previously placed joints, unless otherwise indicated.

B. Construction Joints: Set construction joints at side and end terminations of pavement and at locations where pavement operations are stopped for more than one-half hour unless pavement terminates at isolation joints.

1. Continue steel reinforcement across construction joints, unless otherwise indicated. Do not continue reinforcement through sides of pavement strips, unless otherwise indicated.
2. Provide tie bars at sides of pavement strips where indicated.

3. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt-coat one-half of dowel length to prevent concrete bonding to one side of joint.

C. Isolation and expansion Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, walks, other fixed objects, and where indicated. Form doweled expansion joints of preformed joint-filler strips at maximum spacing of 24 feet.

1. Extend joint fillers full width and depth of joint.
2. Terminate joint filler not less than 1/2 inch or more than 1 inch below finished surface if joint sealant is indicated.
3. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
4. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
5. Protect top edge of joint filler during concrete placement with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.

D. Contraction Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of the concrete thickness, as follows to match jointing of existing adjacent concrete pavement:

1. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint with grooving tool to a 1/4-inch radius. Repeat grooving of contraction joints after applying surface finishes. Eliminate groove marks on concrete surfaces. Locate joints at 30 inches on center each way, unless indicated otherwise.
2. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch- wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks. Locate joints at 30 inches on center each way, unless indicated otherwise.

3. Doweled Contraction Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of dowel length to prevent concrete bonding to one side of joint. Locate joints at 20 feet minimum to 24 feet maximum on center each way unless otherwise indicated.

E. Edging: Tool edges of pavement, gutters, curbs, and joints in concrete after initial floating with an edging tool to a 1/4-inch radius. Repeat tooling of edges after applying surface finishes. Eliminate tool marks on concrete surfaces.

3.6 CONCRETE PLACEMENT

A. Inspection: Before placing concrete, inspect and complete formwork installation, steel reinforcement, and items to be embedded or cast in. Notify other trades to permit installation of their work.

B. Moisten subbase to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.

C. Comply with ACI 301 requirements for measuring, mixing, transporting, and placing concrete.

D. Do not add water to fresh concrete after testing.

E. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.

F. Consolidate concrete according to ACI 301 by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.

1. Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies, reinforcement, or side forms. Use only square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating reinforcement, dowels, and joint devices.

G. Screed pavement surfaces with a straightedge and strike off.

H. Commence initial floating using bull floats or darbies to impart an open textured and uniform surface plane before excess moisture or bleed water appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.

I. Curbs and Gutters: When automatic machine placement is used for curb and gutter placement, submit revised mix design and laboratory test results that meet or exceed requirements. Produce curbs and gutters to required cross section, lines, grades, finish, and jointing as specified for formed concrete. If results are not approved, remove and replace with formed concrete.

J. Slip-Form Pavers: When automatic machine placement is used for pavement, submit revised mix design and laboratory test results that meet or exceed requirements. Produce pavement to required thickness, lines, grades, finish, and jointing as required for formed pavement.

1. Compact subbase and prepare subgrade of sufficient width to prevent displacement of paver machine during operations.

K. When adjoining pavement lanes are placed in separate pours, do not operate equipment on concrete until pavement has attained 85 percent of its 28-day compressive strength.

L. Hot-Weather Placement: Comply with ACI 301 and as follows when hot-weather conditions exist:

1. Cool ingredients before mixing to maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Cover steel reinforcement with water-soaked burlap so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
3. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

3.7 FLOAT FINISHING

A. General: Do not add water to concrete surfaces during finishing operations.

B. Float Finish: Begin the second floating operation when bleed-water sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats, or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.

1. Medium-to-Fine-Textured Broom Finish: Draw a soft bristle broom across float-finished concrete surface perpendicular to line of traffic to provide a uniform, fine-line texture.

3.8 CONCRETE PROTECTION AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.

B. Evaporation Retarder: Apply evaporation retarder to concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.

C. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.

D. Curing Methods: Cure concrete by moisture curing, moisture-retaining-cover curing, curing compound, or a combination of these as follows:

1. Moist Curing: Keep surfaces continuously moist for not less than seven days with the following materials:

    a. Water.
    b. Continuous water-fog spray.
    c. Absorptive cover, water saturated and kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.

2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Immediately repair any holes or tears during curing period using cover material and waterproof tape.
3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

3.10 PAVEMENT TOLERANCES

A. Comply with tolerances of ACI 117 and as follows:

1. Elevation: 1/4 inch.
2. Thickness: Plus 3/8 inch, minus 1/4 inch.
3. Surface: Gap below 10-foot- long, unleveled straightedge not to exceed 1/4 inch.
4. Lateral Alignment and Spacing of Tie Bars and Dowels: 1 inch.
5. Vertical Alignment of Tie Bars and Dowels: 1/4 inch.
6. Alignment of Tie-Bar End Relative to Line Perpendicular to Pavement Edge: 1/2 inch.
7. Alignment of Dowel-Bar End Relative to Line Perpendicular to Pavement Edge: Length of dowel 1/4 inch per 12 inches.
8. Joint Spacing: 3 inches.
9. Contraction Joint Depth: Plus 1/4 inch, no minus.
10. Joint Width: Plus 1/8 inch, no minus.

3.11 PAVEMENT MARKING

A. Do not apply pavement-marking paint until layout, colors, and placement have been verified with University’s Representative.

B. Allow concrete pavement to cure for 28 days and be dry before starting pavement marking.

C. Sweep and clean surface to eliminate loose material and dust.

D. Apply paint with mechanical equipment to produce pavement markings of dimensions indicated with uniform, straight edges. Apply at manufacturer's recommended rates to provide a minimum wet film thickness of 15 mils.

1. Spread glass beads uniformly into wet pavement markings at a rate of 6 lb/gal..

3.12 WHEEL STOPS

A. Securely attach wheel stops into pavement with not less than two galvanized steel dowels embedded in holes drilled or cast into wheel stops at one-quarter to one-third points. Securely install dowels into pavement and bond to wheel stop. Recess head of dowel beneath top of wheel stop.

1. Minimum length of dowels shall be 2’-0”

3.13 FIELD QUALITY CONTROL

A. Testing Agency: University will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Testing Services: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:

1. Testing Frequency: Obtain at least 1 composite sample for each 100 cu. yd. or fraction thereof of each concrete mix placed each day.

a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

2. Slump: ASTM C 143; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mix. Perform additional tests when concrete consistency appears to change.
3. Air Content: ASTM C 231, pressure method; one test for each composite sample, but not less than one test for each day's pour of each concrete mix.
4. Concrete Temperature: ASTM C 1064; one test hourly when air temperature is 40 deg F and below and when 80 deg F and above, and one test for each composite sample.

5. Compression Test Specimens: ASTM C 31; cast and laboratory cure one set of three standard cylinder specimens for each composite sample.

6. Compressive-Strength Tests: ASTM C 39; test 1 specimen at 7 days and 2 specimens at 28 days.

a. A compressive-strength test shall be the average compressive strength from 2 specimens obtained from same composite sample and tested at 28 days.

C. Strength of each concrete mix will be satisfactory if average of any 3 consecutive compressive strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.

D. Test results shall be reported in writing to University's Representative, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.

E. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by University's Representative but will not be used as sole basis for approval or rejection of concrete.

F. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by University's Representative.

G. Remove and replace concrete pavement where test results indicate that it does not comply with specified requirements.

H. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.14 REPAIRS AND PROTECTION

A. Remove and replace concrete pavement that is broken, damaged, or defective or that does not comply with requirements in this Section.

B. Drill test cores, where directed by University's Representative, when necessary to determine magnitude of cracks or defective areas. Fill drilled core holes in satisfactory pavement areas with portland cement concrete bonded to pavement with epoxy adhesive.

C. Protect concrete from damage. Exclude traffic from pavement for at least 14 days after placement. When construction traffic is permitted, maintain pavement as clean as possible by removing surface stains and spillage of materials as they occur.

D. Maintain concrete pavement free of stains, discoloration, dirt, and other foreign material. Sweep concrete pavement not more than two days before date scheduled for Substantial Completion inspections.

END OF SECTION 32 1313

SECTION 32 13 16 - DECORATIVE CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes colored and natural gray retardant finish concrete paving, concrete stairs, ramps, curbs and gutter and concrete bands, headers and finish for concrete site walls.

B. Related Sections:

1. Section 03 30 00 "Cast-in-Place Concrete" for general building applications of concrete.
2. Section 03 30 00.16 "Stratified Concrete Walls" for architectural concrete walls.
3. Section 07 92 00 "Joint Sealants" for joint sealants in expansion and contraction joints within decorative concrete paving and in joints between decorative concrete paving and asphalt paving or adjacent construction.

1.3 LEED REQUIREMENTS

A. Owner has established that the project will achieve LEED Certification per the requirements outlined in Section 01 35 15.

B. Following LEED requirements are mandatory for Work included in this Section in order to achieve LEED certification.

1.4 SUBMITTALS

A. See section 01 30 00 – Administrative Requirements, for submittal procedures.

~~B. Shop Drawings: Indicate layout of joints.~~

~~C.~~B. Product Data: Provide data on specified products, describing physical and performance characteristics; sizes, patterns, colors available, and method of installation.

~~D.~~C. Product Data:

1. For each type of product indicated submit manufacturer's product data, specifications, typical installation details and other data to demonstrate compliance with the specified requirements for all manufacturer products.

2. Statement of Mix Design: Submit (3) copies of Statement of Mix Design prepared by batch plant servicing Project for each load delivered to Project. Statement of Mix Design to contain following information:

    a. Name, address, and telephone number of batch plant preparing statement of mix design.
    b. Date of mix design.
    c. Project location.
    d. Contractor requesting load delivery.
    e. Mix design number.
    f. Integral color used.
    g. Gradations for sand and aggregate.
    h. Material weights, specific gravity, and absolute volumes.
    i. Basis of testing, i.e. UBC 2605 D4 and Title 24 2604 D4.
    j. Water/cement ratio.
    k. PSI rating.
    l. Signature of testing laboratory manager.
    m. Signed stamp from registered Project structural engineer or architect LEED Submittals:

E.D. Samples for Verification: To be determined by the mock-ups.

F.E. Shop Drawings:

1. Submit shop drawings for reinforcing steel and accessories in accordance with ACI standards.
2. Paving Jointing and Pour Sequence Plan - submit three full size bond prints of each paving sheet indicating the following:

    a. Proposed layout of contraction, construction and isolation joints. Clearly delineate the three different joint types.
    b. Layout of paving types as indicated on Drawing Paving Schedule. Give overall dimensions of each paving type.
    c. Concrete pour sequence. Indicated sequence of paving pour installation.

1.5 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash and other pozzolans, and ground granulated blast-furnace slag.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Material Certificates: For the following, from manufacturer:

1. Cementitious materials.
2. Steel reinforcement and reinforcement accessories.
3. Fiber reinforcement.

4. Admixtures.
5. Curing compounds.
6. Applied finish materials.
7. Bonding agent or epoxy adhesive.
8. Joint fillers.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: A firm and individuals trained and approved by manufacturer of decorative concrete paving systems with a minimum of fifteen consecutive years' experience. Provide written evidence to indicate successful experience in installing Intecrete or equivalent architectural concrete paving, or similar, on at least (5) projects with a combined installed square footage of at least 75,000 SF with (3) projects located within a 100 mile radius of Project site.

B. ACI Certified Personnel:

1. Concrete Flatwork Finisher:

   a. Minimum of 1,500 hours of field experience having installed at least (5) projects containing Intecrete® architectural concrete paving.
   b. Must be present during important stages of concrete production such as layout, formwork, or concrete placement and finishing.
   c. Project must have a minimum of (1) ACI certified Concrete Flatwork Finisher at important phases of production.
   d. Submit verification of current ACI certification.

2. Concrete Flatwork Technician:

   a. Minimum of (1) ACI certified Concrete Flatwork Technician able to render technical assistance on project, if requested.
   b. Submit verification of current ACI certification.

C. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities" (Quality Control Manual - Section 3, "Plant Certification Checklist").

D. Testing Agency Qualifications: Qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.

1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.

E. Source Limitations: Obtain decorative concrete paving products and each type or class of cementitious material of the same brand from same manufacturer's plant, and obtain each aggregate from single source.

F. Concrete Testing Service: Engage a qualified testing agency to perform material evaluation tests and to design concrete mixtures.

G. ACI Publications: Comply with ACI 301 (ACI 301M) unless otherwise indicated.

H. Mockups:

1. Prepare on-site paving and stair mock-ups as follows:
   a. Prepare a minimum 8-foot square mock-up of each different paving type specified on Drawings. Label mock-ups (preferably on vertical side of mock-up) with specified paving type to facilitate mock-up review.
   b. Construct mock-ups using identical concrete mix design, products, jointing, and methods of overall workmanship that will be employed during production.
   c. Ensure that same crew preparing mock-ups will be responsible for production work.
   d. Construct mock-ups in a protected location approved by Owner. Ideally mock-ups should be located as close to production work as possible to facilitate comparison review and be located in a sunny location.
   e. Approved mock-ups will be used as standard for future production work review and assessment. Owner should be prepared to physically sign mock-up using a permanent black marker to attest Owner's approval of mock-up. Rejected mock-ups can remain on-site until removal of approved mock-ups is required.
   f. Original 6-inch or 12-inch concrete samples, if they were prepared for this project, will not be used in future production paving review once mock-ups have been approved.
   g. Owner will incur costs to redo mock-ups if Owner requires design changes during mock-up review. Contractor will incur costs to redo mock-ups if Owner rejects mock-ups due to Contractor error such as incorrect concrete mix design or unacceptable appearance.
   h. Protect approved mock-ups from damage during course of Work.
   i. Clean mock-ups prior to Final Walkthrough for Acceptance to facilitate unencumbered comparison review by Owner between approved mock-ups and production work.
   k. Remove mock-ups from site when directed by Owner.

2. Prepare site wall mock-ups as follows:
   a. Minimum 5-foot long mock-up of each specific Wall type indicated on Drawings.
   b. Construct mock-ups using products, materials and workmanship methods identical to those that will be employed during production. Workmanship to exhibit finish, jointing, and edging.
   c. Use same concrete mix that will be used during production.
   d. Ensure that same personnel that prepared mock-ups will also install production work.
   e. Construct mock-ups in a location approved by General Contractor.
   f. Approved wall mock-ups will be standard for assessment for future production work.
   g. Construct additional mock-ups at Contractor's expense if workmanship is responsible for mock-up rejection by Owner, however, Owner will incur costs to redo mock-up if Owner requests design changes during mock-up preparation.
   h. Protect approved mock-ups during course of Work.

i. Remove mock-ups from site when directed by General Contractor.

I. Preinstallation Conference: Conduct conference at Project site.

1. At least three weeks prior to ordering specified materials or the start of concrete work, Arrange a pre-installation meeting between the Contractor, Architect, Project superintendent, concrete supplier, and concrete finisher to review finishing techniques of Concrete, use of additives, application of curing compounds and coordination with other trades.

1.8 PROJECT CONDITIONS

A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

PART 2 - PRODUCTS

2.1 FLAT WORK FORMS

A. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, and smooth exposed surfaces.

1. Use flexible or uniformly curved forms for curves of a radius of 100 feet (30.5 m) or less. Do not use notched and bent forms.

B. Forms for Textured Finish Concrete: Units of face design, size, arrangement, and configuration indicated. Provide solid backing and form supports to ensure stability of textured form liners.

C. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and that will not impair subsequent treatments of concrete surfaces.

2.2 FORM MATERIALS

A. Plywood:

1. Exterior grade plywood panels, non-absorptive, providing a continuous, true, and smooth surface such as medium-density overlay (MDO), Class 1, or better, with mill-applied release agent and sealed edges.

2. Form Joint Tape: Pressure-sensitive compressible foam tape.

3. Form-Release Agent: Colorless form-release agent that will not bond with concrete surface or impair subsequent treatments of those surfaces.

B. Structural:

1. #2 Construction Grade S4S Douglas Fir minimum 1-1/2-inches thick, free of warping, loose knots, cupping, checks, bows, cracks, and other imperfections that would produce objectionable defects in finished work.

2. Depth of forms to be same depth as concrete being placed.

2.3 STEEL REINFORCEMENT

A. Reinforcing Bars: Grade 60 steel conforming to AS A615 and free of rust, dirt, grease or oils.

B. Steel Tie Wire: 16-gauge plain cold-drawn steel conforming to AS A1064/A1064M and free of rust, dirt, grease or oils.

C. Joint Dowel Baskets: Pre-manufactured dowel basket assembly to provide construction joint stability, eliminate tripping hazards, positive load transfer, maintain continuity of surface profile, reduce joint spalling, and reduce “checkerboard” pours, without prohibiting horizontal slab movement.

1. PD3 Basket Assembly® by PNA Construction Technologies; www.pna-inc.com.

2. PNA Square/Round Dowel Basket Assembly by PNA Construction Technologies; www.pna-inc.com

D. Joint Dowel Bars: Plain steel bars, ASTM A 615, Grade 60. Cut bars true to length with ends square and free of burrs.

D.E. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded wire reinforcement, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice" from steel wire, plastic, or precast concrete of greater compressive strength than concrete specified.

E.F. Steel Bar Mats:

1. Grade 60 deformed steel bars assembled with clips conforming to ASTM A184 and free of rust, dirt, grease or oils.

2.4 CONCRETE MATERIALS

A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project:

1. Portland Cement: ASTM C 150, gray portland cement Type III or Type V. Supplement with the following:

a. Fly Ash: ASTM C 618, Class C or F. Fly Ash content not to exceed 25% total concrete weight.
b. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.

B. Normal-Weight Aggregates: ASTM C 33, Class 4S uniformly graded. Provide aggregates from a single source.

1. Maximum Aggregate Size: 1 inch (25 mm) nominal.
2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

C. Water: Potable and complying with ASTM C 94/C 94M.

D. Air-Entraining Admixture: ASTM C 260.

E. Chemical Admixtures: Admixtures certified by manufacturer to be compatible with other admixtures and to contain no more than 0.1 percent water-soluble chloride ions by mass of cementitious material.

1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
2. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
3. Water-Reducing and Accelerating Admixture: ASTM C 494/C 494M, Type E.

F. Liquid Color Pigment: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, nonfading, and resistant to lime and other alkalis.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Davis Colors.
b. Admixtures Inc.
c. Scofield, L. M. Company.
d. Solomon Colors, Inc.

2.5 FIBER REINFORCEMENT

A. Synthetic Fiber: Monofilament polypropylene fibers engineered and designed for use in decorative concrete paving, complying with ASTM C 1116/C 1116M, Type III, 1/4" inch (6 mm long.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Monofilament Fibers:
1) Grace, W. R. & Co. - Conn.; Grace MicroFiber.
2) Propex Fibermesh: Fibermix Stealth.

2.6 CURING AND SEALING MATERIALS

A. Amber, Aliphatic, Membrane-Forming Curing and Sealing Compound; manufactured for use with colored concrete.

1. Admixtures Inc; Colorfull Clear Curing Compound.

2. 1100-Clear by WR Meadows; www.wrmeadows.com.

2.7 RELATED MATERIALS

A. Fine and Coarse Aggregate: Clean, hard, and durable washed concrete sand conforming to ASTM C33. Use same fine aggregate from single source throughout duration of Project. Refer to Paving Schedule on Drawings for sizing of coarse aggregate. Some paving types may require different coarse aggregate sizes

B. Joint Fillers: ASTM D 5249, Type 2, flexible foam expansion joint in preformed strips.

1. Products: W.R. Meadows; Seal Tight Cermar.

C. Chemical Surface Retarder: Water-soluble, liquid, set retarder with color dye, for horizontal concrete surface application, capable of temporarily delaying final hardening of concrete to a depth of 1/8 to 1/4 inch (3 to 6 mm).

1. ACC; Optimus.

2. Grace, Topcast.

2.8 JOINT MATERIALS

A. Construction Joints:
1. Steel Slip Dowels: 5/8-inch-diameter smooth steel bars, free of dirt, grease, and oils.
2. Plastic Dowel Sleeves: Encase 50 percent of each dowel in a Speed Dowel® plastic alignment sleeve to allow parallel lateral movement of each dowel.

a. Acceptable Manufacturers:
1) Speed Dowel® by Greenstreak Group; www.greenstreak.com.

2.9 CONCRETE SEALER

A. Low sheen, low VOC, penetrating sealer that exhibits superior resistance to stains, spills, and other contaminates.

B. Acceptable Manufacturers:
1. Repello® by Scofield; www.scofield.com.
2. Siloxene PD® by Prosoco; www.prosoco.com.
3. 511 Impregnator by Miracle Sealants; www.miraclesealants.com.

PART 3 - EXECUTION

3.1 CONCRETE MIXTURES

A. Prepare design mixtures, proportioned according to ACI 301 (ACI 301M), for each type and strength of normal-weight concrete, and as determined by either laboratory trial mixtures or field experience.

1. Use a qualified independent testing agency for preparing and reporting proposed concrete design mixtures for the trial batch method.

B. Proportion mixtures to provide normal-weight concrete with the following properties:

1. Compressive Strength (28 Days): ~~28~~3000 psi.
2. Maximum Water-Cementitious Materials Ratio at Point of Placement: 0.50.
3. Slump Limit: 5 inches (125 mm). plus or minus 1 inch (25 mm).

C. Add air-entraining admixture at manufacturer's prescribed rate to result in normal-weight concrete at point of placement having an air content as follows:

1. Air Content: 5 percent plus or minus 1.5 percent for 3/4-inch (19-mm) nominal maximum aggregate size.

D. Chemical Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use water-reducing and retarding admixture in concrete as required for placement and workability.

E. Synthetic Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than 1.0 lb/cu. yd. (0.60 kg/cu. M)

F. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

3.2 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M. Furnish batch certificates for each batch discharged and used in the Work.

1. When air temperature is between 85 and 90 deg F (30 and 32 deg C), reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F (32 deg C), reduce mixing and delivery time to 60 minutes.

3.3 SUBGRADE

1. Subgrade to meet requirements of project's Geotechnical report.
2. Water condition subgrade and compact to 90 percent relative compaction is placed over prior to placing concrete.

   a. Screed subgrade to a smooth plane.
   b. Ensure that utilities, including irrigation lines are buried and compacted.
   c. Keep subgrade damp prior to placing concrete.

3.4 EXAMINATION

A. Examine exposed subgrades and subbase surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.

B. Proof-roll prepared subbase surface below decorative concrete work to identify soft pockets and areas of excess yielding.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.5 PREPARATION

A. Remove loose material from compacted subbase surface immediately before placing concrete.

B. Protect adjacent construction from discoloration and spillage during application of color hardeners, release agents, stains, curing compounds, and sealers.

3.6 FORMWORK

A. General:

1. Construct forms accurately to dimensions, plumb and true to line and grade.
2. Use forms that are strong, mortar tight, braced and tied so as to maintain position and shape during placing of reinforcing and concrete.
3. Wavy surfaces and bulged walls or slab surfaces resulting from settlement or springing of formwork will be rejected.
4. Carefully verify and check forms for alignment and level as the Work proceeds.
5. Make needed adjustments or add additional bracing prior to pouring concrete.

B. Formwork Material at Exposed Surfaces: Smooth metal, resin-coated plywood, or high-density overlay plywood which will provide an ultra-smooth surface.

C. Tolerances for Exposed Concrete:

1. Top of form units shall not vary more than 1/8 inch from a 10 feet long straight edge.
2. Vertical faces shall not vary more than 1/8 inch from a 10 feet long straight edge.

D. Joints:

1. Construct forms and assemble them in such a manner so that joints occur at accepted locations.
2. Seal joints to prevent leakage and provide exposed finish surfaces free of joint marks or any indication of where the form joints occurred.

E. Corners:

1. Form intersecting planes to provide true, clean-cut corners, with edge grain of plywood not exposed to face of concrete.

2. Form exposed corners to produce square smooth, solid unbroken lines, unless indicated otherwise.

F. Other Trade Requirements:

1. Construct chases, slots and recesses as required.
2. Locate inserts, anchor plates and other items to be embedded in concrete where required, properly place and securely anchor.

G. Recesses and Openings: Provide as shown on the Drawings.

H. Prior to Pouring Concrete:

1. Thoroughly clean out forms to be used.
2. Thoroughly wet wood forms where form coatings are not used.

I. Removal of Forms:

1. Do not remove supporting forms or shoring until concrete has sufficient strength to carry its own weight and other loads upon it.
2. Remove forms only after concrete has attained at least 50% of its design compressive strength.

J. Re-use of Forms:

1. Do not reuse if there is any evidence of surface wear or tear which would impair quality of exposed finishes.
2. Store formwork and form materials in such a manner as to prevent damage or distortion.
3. Clean forms after each use, and coat with form release agent as often as required to ensure separation from concrete without damage to concrete finish.

~~.~~

~~3.0 FORMWORK~~

~~. General:~~

~~9. Construct forms accurately to dimensions, plumb and true to line and grade.~~
~~10. Use forms that are strong, mortar tight, braced and tied so as to maintain position and shape during placing of reinforcing and concrete.~~
~~11. Wavy surfaces and bulged walls or slab surfaces resulting from settlement or springing of formwork will be rejected.~~
~~12. Carefully verify and check forms for alignment and level as the Work proceeds.~~
~~13. Make needed adjustments or add additional bracing prior to pouring concrete.~~

~~.A. Formwork Material at Exposed Surfaces: Smooth metal, resin-coated plywood, or high-density overlay plywood which will provide an ultra-smooth surface.~~

.A. Tolerances for Exposed Concrete:

16.1. Top of form units shall not vary more than 1/8 inch from a 10 feet long straight edge.
17.1. Vertical faces shall not vary more than 1/8 inch from a 10 feet long straight edge.

.A. Joints:

19.1. Construct forms and assemble them in such a manner so that joints occur at accepted locations.
20.1. Seal joints to prevent leakage and provide exposed finish surfaces free of joint marks or any indication of where the form joints occurred.

.A. Corners:

22.1. Form intersecting planes to provide true, clean-cut corners, with edge grain of plywood not exposed to face of concrete.
23.1. Form exposed corners to produce square smooth, solid unbroken lines, unless indicated otherwise.

.A. Other Trade Requirements:

25.1. Construct chases, slots and recesses as required.
26.1. Locate inserts, anchor plates and other items to be embedded in concrete where required, properly place and securely anchor.

.A. Recesses and Openings: Provide as shown on the Drawings.

.A. Prior to Pouring Concrete:

29.1. Thoroughly clean out forms to be used.
30.1. Thoroughly wet wood forms where form coatings are not used.

.A. Removal of Forms:

32.1. Do not remove supporting forms or shoring until concrete has sufficient strength to carry its own weight and other loads upon it.
33.1. Remove forms only after concrete has attained at least 50% of its design compressive strength.

.A. Re-use of Forms:

35.1. Do not reuse if there is any evidence of surface wear or tear which would impair quality of exposed finishes.
36.1. Store formwork and form materials in such a manner as to prevent damage or distortion.
37.1. Clean forms after each use, and coat with form release agent as often as required to ensure separation from concrete without damage to concrete finish.

3.383.7 REINFORCEMENT

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

B. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.

C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.

D. Install fabricated bar mats in lengths as long as practicable. Handle units to keep them flat and free of distortions. Straighten bends, kinks, and other irregularities, or replace units as required before placement. Set mats for a minimum 2-inch (50-mm) overlap to adjacent mats.

3.393.8 FORM TIES

A. Exposed form ties will not be visible once the concrete wall is architecturally finished, however, form ties will still be required to construct wall.

B. Internally disconnecting or removable ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete upon removal. Furnish internally disconnecting ties that will leave no metal closer than 1-1/2-inches from the architectural concrete surface.

C. Form ties to have a minimum working strength when fully assembled of at least 3,000 lbs.

D. Adjust form ties in length so as to permit complete tightening of forms and of such type as to lean no metal closer than 1-inch to an exterior surface or closer than ½-inch to an interior surface.

E. Do not fit form ties with lugs, cones, washers, or other device so as to act as a spreader within forms, or for other purposes that will leave a hole or depression larger than 7/8-inch in diameter back of exposed surface of concrete.

F. Do not use wire or wood ties.

G. Coat ties that are to be pulled from walls with cup grease or other approved material to facilitate efficient removal.

H. Loosen tie rods that are to be entirely removed from walls 24 hours after concrete is poured. Remove all but a sufficient number of ties to hold forms in place.

3.403.9 JOINTS

A. General: Form construction, isolation, and contraction joints and tool edges true to line, with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline unless otherwise indicated.

1. When joining existing paving, place transverse joints to align with previously placed joints unless otherwise indicated.

B. Construction Joints: Set construction joints at side and end terminations of paving and at locations where paving operations are stopped for more than one-half hour unless paving terminates at isolation joints.

1. Continue steel reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of paving strips unless otherwise indicated.
2. Dowelled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

C. Expansion Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, walks, other fixed objects, and where indicated.

1. Locate expansion as indicated.
2. Extend joint fillers full width and depth of joint.
3. Terminate joint filler not less than 1/2 inch (13 mm) or more than 1 inch (25 mm) below finished surface if joint sealant is indicated.
4. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
5. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
6. During concrete placement, protect top edge of joint filler with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.

D. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 3/16-inch- (5-mm-) wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks.

1. Perform jointing with a new diamond tip circular saw.
2. Joint Width: Per Drawings. Do not exceed 3/16-inch in width.
3. Depth of sawcuts: 1/4th depth of slab.
4. Sawcut joints in a straight line complete with no overcutting.
5. Use a hand tool to sawcut up to vertical edges such as walls, steps, curbs and columns. No over cutting into vertical surfaces will be allowed.

E. Edging: After initial floating, tool edges of paving, gutters, curbs, and joints in concrete with an edging tool to a 1/4-inch (6-mm) radius. Repeat tooling of edges after applying surface finishes. Eliminate edging tool marks on concrete surfaces.

3.413.10 CONCRETE PLACEMENT

A. Before placing concrete, inspect and complete formwork installation, steel reinforcement, and items to be embedded or cast-in.

B. Moisten subbase to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.

C. Comply with ACI 301 (ACI 301M) requirements for measuring, mixing, transporting, and placing concrete.

D. Do not add water to concrete during delivery or at Project site. Do not add water to fresh concrete after testing.

E. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.

F. Consolidate concrete according to ACI 301 (ACI 301M) by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.

1. Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies, reinforcement, or side forms. Use only square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating reinforcement dowels and joint devices.

G. Screed paving surface with a straightedge and strike off.

H. Commence initial floating using bull floats or darbies to impart an open-textured and uniform surface plane before excess moisture or bleed water appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.

I. Hot-Weather Placement: Comply with ACI 301 (ACI 301M)and as follows when hot-weather conditions exist:

1. Cool ingredients before mixing to maintain concrete temperature below 90 deg F (32 deg C) at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

3.423.11 FLOAT FINISHING

A. General: Do not add water to concrete surfaces during finishing operations.

B. Float Finish: Begin the second floating operation when bleed-water sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.

A.K. Broom Finish:

1. Prior to brooming, provide a floated finish.
2. While the surface is still plastic, provide a uniform, broom-texture finish by pulling a fiber-bristle broom uniformly over the surface.
3. Broom sidewalk paving along street in direction 90 degrees to street curb.
4. Broom Service Area paving in direction 90 degrees to building walls.

5. Provide texture to match the accepted mock-up finish.

3.433.12 RETARDANT CONCRETE FINISH

A. Integrally Colored Concrete Finish; after final floating:

1. Retardant Finish: Roll with roller tamper and then immediately bullfloat in both directions. Immediately after initial floating, towel smooth with no indentions, apply retardant when surface has sufficient moisture in the surface.
2. Spray-apply chemical surface retarder to paving according to manufacturer's written instructions.
3. Provide texture to match the accepted mock-up finish.

3.443.13 CONCRETE PROTECTION AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.

B. Begin curing after finishing concrete but not before and applying retardant finish.

C. Curing and Sealing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.

3.453.14 TOLERANCES

A. Comply with tolerances in ACI 117 and as follows:

1. Elevation: 3/4 inch (19 mm).
2. Thickness: Plus 3/8 inch (10 mm), minus 1/4 inch (6 mm).
3. Surface: Gap below 10-foot- (3-m-) long, unleveled straightedge not to exceed 1/8 inch (3 mm).
4. Lateral Alignment and Spacing of Dowels: 1 inch (25 mm).
5. Vertical Alignment of Dowels: 1/4 inch (6 mm).
6. Alignment of Dowel-Bar End Relative to Line Perpendicular to Paving Edge: 1/4 inch per 12 inches (6 mm per 300 mm) of dowel.
7. Joint Spacing: 1/8 inches (3 mm).
8. Contraction Joint Depth: Plus 1/4 inch (6 mm), no minus.
9. Joint Width: 1/16 inches (1.5 mm).

3.46 FIELD QUALITY CONTROL

. Strength of each concrete mixture will be satisfactory if average of any three consecutive compressive strength tests equals or exceeds specified compressive strength and no compressive strength test value falls below specified compressive strength by more than 500 psi (3.4 MPa).

. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.

. Decorative concrete paving will be considered defective if it does not pass tests and inspections.

. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.513.15 STAINING AND SEALING

A. Allow Stratified or Sedimentary ™ to dry sufficiently before applying specified stain or sealer.

B. Do not apply sealer if air temperatures are below 50 degree F or above 90 degrees F.

C. Once the concrete surface has been sealed, protect surface until fully dried.

D. Follow manufacturer’s directions for stain or sealer application.

3.52

3.533.16 REPAIRS AND PROTECTION

A. Remove and replace decorative concrete paving that is broken or damaged or does not comply with requirements in this Section. Remove work in complete sections from joint to joint unless otherwise approved by Architect.

B. Protect decorative concrete paving from damage. Exclude traffic from paving for at least 14 days after placement. When construction traffic is permitted, maintain paving as clean as possible by removing surface stains and spillage of materials as they occur.

C. Maintain decorative concrete paving free of stains, discoloration, dirt, and other foreign material. Sweep paving not more than two days before date scheduled for Substantial Completion inspections.

END OF SECTION 32 13 16

SECTION 32 1401 – BIORETENTION SOIL MEDIA (BSM)

PART 1 – GENERAL

1.1 GENERAL REQUIREMENTS

BSM should achieve a long-term, in-place infiltration rate of 5 inches per hour, according to the 2012 Standard Urban Stormwater Mitigation Plan (SUSMP) requirements.

BSM should also support plant growth while providing pollutant treatment. In order to achieve these two goals, the BSM should be a mixture of sand, fines and compost. The following composition includes the measurements for determining the BSM by volume and weight:

BSM Composition	**Sand**	**Sandy Loam**			**Compost**
		Sand	**Silt**	**Clay**	
Volume	65%	20%			15%
Weight	75-80%		10% max.	3% max.	9 % max.

1.2 SUBMITTALS

Product Data: Submit manufacturer's product data and installation instructions. Include required substrate preparation, list of materials, application rate/testing, and permeability rates.

Verifications: Manufacturer shall submit a letter of verification that the products meet or exceed all physical property, endurance, performance and packaging requirements.

Tests should be conducted no more than 180 days prior to the delivery date of the BSM to the project site. Batch-specific test results and certification will be required for projects installing more than 100 cubic yards of BSM.

The applicant should submit the following to the municipality for approval if requested.

A. A sample of mixed BSM
B. Grain size analysis results of the sand component performed in accordance with American Society for Testing and Materials (ASTM) D422. *Standard Test Method for Particle Size Analysis of Soils.*
C. Grain size analysis results of sandy loam soil component performed in accordance with ASTM D422., *Standard Test Method for Particle Size Analysis of Soils.*
D. Grain size analysis results of compost component performed in accordance with ASTM D422, *Standard Test Method for Particle Size Analysis of Soils.*
E. Organic matter content test results of compost. Organic matter content tests *Standard Test Methods for Organic Matter Content of Athletic Field Rootzone Mixes* or *Testing Methods for the Examination of Compost and Composting* (TMECC) 05.07A, *Loss-On-Ignition Organic Matter Method.*

F. A description of the equipment and methods used to mix the sand, sandy loam, and compost to produce BSM.
G. Constant head permeability results of the mixed BSM. Constant head permeability testing in accordance with ASTM D2434, *Standard Test Method for Permeability of Granular Soils (Constant Head)* should be conducted on a minimum of two samples with a 6-inch mold and vacuum saturation.
H. Provide the following information about the testing laboratory(ies) including:
    1) Name of laboratory(ies)
    2) Contact person(s)
    3) Address(es)
    4) Phone contact(s)
    5) Email address(es)
    6) Qualifications of laboratory (ies), including use of ASTM and U.S. Department of Agriculture (USDA) method of standards.

1.3 SAND SPECIFICATIONS FOR BSM

1.3.1 SAND QUALITY

Sand should be thoroughly washed prior to delivery and free of wood, waste, and coatings such as clay, stone dust, carbonate, or any other deleterious material. All aggregate passing the No. 200 sieve size should be non-plastic.

1.3.2 SAND TEXTURE

Sand for BSM should be analyzed by a qualified lab using #200, #100, #40, #30, #16, #8, #4, and 3/8-inch sieves (ASTM D422 or as approved by municipality) and meet the following gradation:

Sieve Size	Percent Passing (by weight)	
	Min.	Max.
3/8 inch	100	100
No. 4	90	100
No. 8	70	100
No. 16	40	100
No. 30	15	70
No. 40	5	55
No. 100	0	15
No. 200	0	5

Note: all sands complying with ASTM C33, *Standard Specification for Concrete Aggregates* for fine aggregate comply with the above gradation requirements.

1.4 SANDY LOAM SOIL SPECIFICATIONS FOR BSM

1.4.1 SANDY LOAM SOIL QUALITY

Sandy loam soil for the BSM shall be free of wood, waste, coating such as stone dust, carbonate, etc., or any other deleterious material. All aggregate passing the No. 200 sieve size shall be non-plastic.

1.4.2 SANDY LOAM SOIL TEXTURE

Sandy loam soil should comply with the following specifications by weight based on ASTM D422 (or as approved by municipality):

A. 50-74 percent sand
B. 0-48 percent silt
C. 2-15 percent clay

Note: these ranges were selected from the USDA soil textural classifications for a sandy loam, such that clay content does not exceed 15 percent of sandy loam.

1.5 COMPOST SOIL SPECIFICATIONS FOR BSM

1.5.1 COMPOST TEXTURE

A qualified lab should analyze compost using No. 200 and 1/2-inch sieves (ASTM D422 or as approved by municipality), and meet the following gradation:

	Percent Passing (by weight)	
Sieve Size	Min.	Max.
½ inch	97	100
No. 200	0	5

1.5.2 COMPOST QUALITY TESTING

Compost should be well-decomposed, stable, weed-free organic matter source derived from waste materials including yard debris, wood wastes or other organic materials, **not including manure or biosolids**. Compost shall have a dark brown color and a soil-like odor. Compost that is exhibiting a sour or putrid smell, contains recognizable grass or leaves, or is hot (120 degrees Fahrenheit) upon delivery or rewetting is not acceptable.

Compost shall be produced at a facility inspected and regulated by the Local Enforcement Agency for CalRecycle. The past three inspection reports shall be submitted verifying testing and compliance with CalRecycle Title 14, *Process to Further Reduce Pathogens (*PFRP), and EPA 40 CFS 503.

Compost should comply with the following requirements:

Parameter	Method	Requirement	Units
Metals			
Aresenic	-	< 20	mg/kg dry weight
Cadmium		< 10	
Chromium		< 600	
Copper		< 750	
Lead		< 150	
Mercury		< 8	
Nickel		< 210	
Selenium		< 18	
Zinc		< 1400	
Pathogens			
Salmonella	-	< 3	MPN per 4 g
Fecal Coliform		< 1000	MPN per 1 g
Inert Material/Physical Contaminants			
Plastic, Metal and Glass	-	< 1%	by weight
Sharps (% > 4mm)		0%	by weight

1.5.3 ALTERNATIVE ORGANIC AMENDMENTS

Alternative organic amendments (in lieu of previously defined compost) will be reviewed on a case-by-case basis. Organic amendments should make up no more than 5 percent of the BSM bulk volume, unless organic alternatives comply with the specifications of section G.1.5.2.

1.6 BSM SPECIFICATIONS

BSM shall be free of roots, clods stones larger than 1-inch in the greatest dimension, pockets of coarse sand, noxious weeds, sticks, lumber, brush, and other litter. It shall not be infested with nematodes or undesirable disease-causing organisms such as insects and plant pathogens. BSM shall be friable and have sufficient structure in order to give good aeration to the soil. The following specifications should govern the bulk BSM.

1.6.1 BSM TEXTURE

Gradation Limit: The definition of the soil should be the following USDA classification scheme by weight:

A. Sand: 85-90 percent

B. Silt: 10 percent maximum

C. Clay: 5 percent maximum

Compost should compose no more than 9 percent of the bulk BSM weight and should primarily fall into the sand component above (per section G.1.5.1 compost gradation limits)

1.6.2 BSM QUALITY TESTING

In addition to the compost quality testing requirements outlined in section G.1.5.2, the final BSM should meet the following standards. Testing results from the following specifications shall be submitted for approval prior to BSM acceptance.

Parameter	Method	Requirement	Units
Organic Matter	Loss of Ignition	2%-5%	dry weight
pH	Saturation Paste	6.0-8.0	-
Carbon: Nitrogen Ration	-	10:1-20:1	-
Cation Exchange Capacity(CEC)	-	≥ 5	meq/100 g of dry soil
Salinity (Electrical Conductivity)	Saturation Extract	0.5-3	dS/m
Boron	Saturation Extract	< 2.5	
Chloride	Saturation Extract	< 150	
Sodium Adsorption Rate (SAR)	-	< 3	
Extractable Nutrients			
Phosphorous	Ammonium Bicarbonate/DPTA extraction method	< 15	mg/kg dry weight
Potassium		100-200	
Iron		24-35	
Manganese		0.6-6.0	
Zinc		1.0-8.0	
Copper		0.3-5.0	
Magnesium		50-150	
Sodium		0-100	
Sulfur		25-500	
Molybdenum		0.1-2.0	
Aluminum		< 3.0	

PART 2 – SUBSURFACE BASE

2.1 DECORATIVE ROCK

Top rock layer of the bioretention basin shall be per Landscape plans. Provide 2 inch hardened permeable material as directed by landscape architect to avoid erosion by harsh velocity. Rock layer may consist of a combination of rock, tile, and rooted plants.

2.2 CLASS II PERMEABLE BASE

Permeable base course shall only be used as specified on plans. Refer to CA Department of Transportation Standard Specifications, Division VII, Section 68 for further requirements.

A. Permeable material for use in backfilling trenches under, around, and over underdrains must consist of hard, durable, clean sand, gravel, or crushed stone and must be free from organic material, clay balls, or other deleterious substances. Permeable material must have a durability index of not less than 40.
B. Class 2 permeable material must have a sand equivalent value of not less than 75.

C. The percentage composition by weight of Class 2 permeable material in place must comply with the gradation requirements shown in the following table:

Sieve Size	Percentage Passing
1”	100
3/4”	90-100
3/8”	40-100
No. 4	25-40
No. 8	18-33
No. 30	5-15
No. 50	0-7
No. 200	0-3

2.3 GRAVEL ABOVE AND BELOW PIPE

Rock surrounding subsurface drains shall conform to AASHTO requirements for No. 57 Grading. The percentage composition by weight of rock material in place must comply with the gradation requirements shown in the following table:

Sieve Size	Percentage Passing
1.5”	100
1”	95-100
1/2"	25-60
No. 4	0-10
No. 8	0-5

PART 3 - INSTALLATION OF BSM

The following section provides consideration for proper BSM installation.

3.1 CONSIDERATIONS PRIOR TO BSM INSTALLATION

The following questions and guidelines should be discussed with the contractor prior to installing the BSM at the project site to prevent any confusion and errors.

A. Ensure that the contractor is familiar with constructing bioretention systems.
B. Plan how inspections will be handled as part of the construction process.
C. Verify BSM meets specification prior to delivery and placement in the facility.
D. Prevent over-compaction of native soils in areas of the basin where infiltration will occur. Delineate the facility area, and keep construction traffic off. Protect soils with fencing, plywood, etc.
E. Provide erosion control in the contributing drainage areas of the facility. Stabilize upslope areas.

F. Drainage should be directed away from bioretention facilities until upslope areas are stabilized. The concentration of fines could prevent post-construction infiltration and cause design failure.
G. If drainage is to be allowed through the facility during construction, leave and backfill at least 6 inches above the final grade. Temporarily cover the underdrain with plastic or fabric. Line or mulch the facility.
H. Bioretention facilities should remain outside the limit of disturbance to prevent soil compaction by heavy equipment. Protect bioretention areas with silt fence or construction fencing.
I. Verify installation of underdrain is correct prior to placing soil.

3.2 BSM MIXING AND PLACEMENT

These guidelines should be followed to ensure proper BSM mixing and placement:

A. Erosion and sediment control practices during construction should be employed to protect the long-term functionality of the bioretention. The following practices shall be followed for this reason:
    1) Provide erosion control in the contributing drainage areas to the facility and stabilize upslope areas.
    2) Facilities should not be used as sediment control facilities, unless installation of all bioretention-related materials are withheld towards the end of construction, allowing the temporary use of the location as a sediment control facility, and appropriate excavation of sediment is provided prior to installation of bioretention materials.
B. Do not excavate, place soils, or amend soils during wet or saturated conditions.
C. Operate equipment adjacent to the facility. Equipment operation within the facility should be avoided to prevent soil compaction. If machinery must operate in the facility, use lightweight, low ground-contact pressure equipment.
D. If constructing an infiltrating facility, the subgrade should be ripped or scarified to a minimum depth of 9 inches on 3-foot centers to promote greater infiltration.
E. Consider the time of year and site working area when determining whether to mix BSM on-site or to import pre-mixed soil. It is recommended that the BSM should be mixed prior to being delivered to the site, and mixing is not allowed on-site during rainy season. If BSM mixing occurs on-site during the dry season, use an adjacent impervious area or mix BSM on plastic sheeting. (Mixing should not occur within the bioretention basin.)
F. Place soil in 6- to 12-inch lifts with machinery adjacent to the facility (to ensure equipment is not driven across soil). If working within the facility, to avoid over-compacting, place first lifts at far end from entrance and place backwards towards entrance.
G. Allow BSM lifts to settle naturally, lightly water to provide settlement and natural compaction between lifts. After lightly watering, allow soil to dry between lifts. Soil cannot be worked when saturated, so this method should be used with caution to ensure dry conditions. After all lifts are placed, wait a few days to check for settlement, and add additional media as needed. No mechanical compaction is allowed.
H. The long-term hydraulic conductivity rate should not be less than 5 inches per hour when tested with a double ring infiltrometer (in accordance with ASTM D3385, *Standard Test Method for Infiltration Rate of Soils in Field Using Double Ring Infiltrometer)*, a single ring infiltrometer, a Modified Philip-Dunne Infiltrometer, or other approved methods.

I. Vehicular traffic and construction equipment shall not drive on, move onto, or disturb the BSM once placed and water-compacted.
J. Rake bioretention soil as needed to level out. Verify BSM elevations before applying mulch or installing plants.

Other Considerations:

- Protect adjacent infiltration systems including swales, soils, and porous pavement from sediment.
- Protect adjacent trees.

3.3 MULCH AND BIORETENTION FACILITIES

A 2-inch layer of aged mulch shall be installed on the surface of the bioretention soil for planting of container stock and if no hydroseeding is to be installed.

Aged mulch reduces the ability of weeds to establish, keeps soil moist, and replenishes soil nutrients. Aged mulch can be obtained through soil suppliers or directly from commercial recycling yards. Apply 2 inches of well-aged shredded hardwood mulch once a year, preferably in June, after and weeding.

Compared to green wood chip or bark mulch, aged mulch has less of a tendency to float into overflow inlets during intense storms. Bark or wood chip mulch may be used on the side slopes of basins above the maximum water line. The project landscape architect may also specify another type of **non-floating** mulch, subject to approval by the local jurisdiction. Composted mulch should be avoided due to its potential to contribute pathogens and nutrients to the bioretention facility.

If hydroseeding is to be installed on the surface of the bioretention soil, no stabilized matrix shall be used in the hydroseed components or mix.

SECTION 32 1402 – PERMEABLE INTERLOCKING CONCRETE PAVEMENT

PART 1 - GENERAL

1.1 DEFINITIONS

Bundle: Several paver layers packaged together.

Paver layer: Concrete pavers manufactured into patterned layers and ready for mechanical installation.

Mechanical installation: Using a machine to lift and install paving layers.

Laying face: Exposed, vertical face of a row of concrete pavers complete in place.

1.2 SUBMITTALS

For jointing and bedding aggregates submit:

1. Gradation under California Test 202
2. Crushed particle under California Test 205
3. Abrasion loss under California Test 211
4. Cleanness value under California Test 227

For pavers submit:

1. Four manufactured, representative full-size samples of each type, thickness, finish, and color
2. Laboratory test reports indicating compliance with ASTM C 936

Submit PICP installation crew qualifications.

1.3 TEST PANELS

The Contracting officer uses authorized test panels as the standard when evaluating the texture and color of the PICP surface.

As a first order of work, construct and test panels at the jobsite. Use the materials, tools, equipment, personnel, and methods you will use in the work. Construct at least 2 test panels. Test panels must meet the requirements for surface finish, thickness, and joints.

Test panels must be:

1. Constructed at an authorized location
2. At least 10 by 10 ft if the pavers are installed manually

If the Engineer rejects the test panels, construct new test panels.

Obtain authorization of the test panels before placing other PICP.

Remove and dispose of rejected test panels. Authorized test panels must remain in place until all PICP is completed. If authorized test panels are not constructed within the limits shown for PICP, remove and dispose of them.

1.4 AGGREGATE

At least once per project, test aggregate as shown in the following table:

Test	Test method
Sieve analysis	CT 202
Percent of crushed particles, course aggregate, 2 fractured faces, percent minimum	CT 205
Los Angeles Rattler, loss at 500 revolutions, percent maximum	CT 211
Cleanness value	CT 227

1.5 SURFACE INFILTRATION TESTING

Test the completed PICP surface under ASTM C1701. For each area of 25,000 sf, perform 3 tests. For each additional area of 10,000 sf or less, perform 1 test. Each test location must be separated by at least 20 ft. Do not perform tests (1) if there is standing water on the pavement surface or (2) less than 24 hours after 1/4 inch or more of rain. The infiltration rate must be at least 100 inches/hour.

PART 2 – MATERIALS

2.1 GENERAL

The aggregate for bedding and jointing must be graded within the limits shown in the following table:

Sieve size	Percentage passing		
	No. 8	No. 89	No. 9
1/2 inch	100	100	100
3/8 inch	85–100	90–100	100
No. 4	10–30	20–55	85–100
No. 8	0–10	5–30	10–40
No. 16	0–5	0–10	0–10
No. 50	--	0–5	0–5

If the joints between manufactured units are 1/4 inch wide or less, use no. 89 or no. 9 aggregate.

At least 95 percent of the aggregate particles must have at least 2 fractured faces.

The abrasion loss of the aggregate must not exceed 40 percent.

The cleanness value of the aggregate must be at least 80.

2.2 PAVERS

Pavers must comply with ASTM C 936 except the requirements for resistance to freezing and thawing do not apply.

Pavers must be at least 3-1/8 inch thick.

PART 3 – CONSTRUCTION

3.1 SUBGRADE AND BEDDING

Immediately before placing bedding, the subgrade must be

1. Compacted and graded as specified
2. Free of loose and extraneous material
3. Free of standing or flowing water
4. Consists or small-sized, open-graded angular aggregate, ASTM No. 8 stone or similar sized material.

Moisten, spread, and screed the bedding over the subgrade. Test the screeded surface for smoothness with a 12-foot straightedge. The surface must be within 0.03 ft of the straightedge's lower edge.

Keep all vehicles off the screeded surface. If you disturb the subgrade, recompact and regrade. If you disturb the screeded surface, screed the surface and retest for smoothness with the straightedge.

3.2 PAVERS AND JOINTING AGGREGATE

Install pavers in the pattern shown. Maintain straight pattern lines.

Fill gaps at the edges of the PICP area with cut pavers. Cut pavers must be at least one-third of a whole paver. Use a masonry saw to cut the pavers.

Fill the joints with dry jointing aggregate by sweeping. Remove excess aggregate by sweeping.

Compact jointing aggregate and seat the pavers into the bedding course using a low-amplitude, 75-90 Hz plate compactor capable of at least 5,000 lbf. Make two passes across the PICP with the plate compactor. Do not compact within 6 ft of the unconfined edges of the PICP. Remove and replace any cracked pavers.

Apply additional jointing aggregate and fill within 1/4-inch of the top of the pavers. Remove excess aggregate by sweeping.

For each day of paving, fill joints, seat pavers, and apply additional jointing aggregate to within 6 ft of the laying face.

Test the PICP surface for smoothness with a 12-foot straightedge. The surface must be within 0.03 ft of the straightedge's lower edge.

Joints formed along the bond lines of the paver pattern must be straight. Joints must not deviate more than 0.04 ft. from a straight line. Measure the joint deviation from a 50-ft string line pulled over contiguous joint lines.

The surface elevation of the PICP must be 0.03 to 0.04 ft above adjacent drainage inlets, concrete collars, or channels.

Protect PICP from sediment deposition and damage due to subsequent construction activity on the site.

At least 14 days after placement of PICP, adjust the PICP by applying additional jointing aggregate to within 1/4-inch of the top of the pavers. Remove excess aggregate by sweeping.

3.3 PRE-CONSTRUCTION MEETING

For commercial and municipal projects, the specifications should include a preconstruction meeting. The pre-construction meeting is held to discuss methods of accomplishing all phases of the construction operation, contingency planning, and standards of workmanship. The general contractor typically provides the meeting facility, meeting date and time. Representatives from the following entities should be present;

1. “General” Contractor superintendent.
2. PICP subcontractor foreman.
3. Concrete paving unit manufacturer’s representative.
4. Testing laboratory(ies) representative(s).
5. Engineer or owner’s representative.
6. Other affected trades or representatives who will access PICP area.

The following items should be discussed and determined:

1. Test panel (mock-up) location and dimensions.
2. Methods for keeping all materials free from sediment during storage, placement, and on completed areas.
3. Methods for checking slopes, surface tolerances, and elevations.
4. Concrete paving unit delivery method(s), timing, storage location(s) on the site, staging, paving start point(s) and direction(s).
5. Anticipated daily paving production and actual record.
6. Diagrams of paving laying/layer pattern and joining layers as indicated on the drawings
7. Monitoring/verifying paver dimensional tolerances in the manufacturing facility and on-site if the concrete paving units are mechanically installed.
8. Testing intervals for sieve analyses of aggregates and for the concrete paving units.
9. Method(s) for tagging and numbering concrete unit paving packages delivered to the site.
10. Testing lab location, test methods, report delivery, contents and timing.
11. Engineer inspection intervals and procedures for correcting work that does not conform to the project specifications.
12. Procedure for testing and approval of subgrade, subbase and base.

13. Curb type and installation schedule.

3.4 PLAN SITE ACCESS AND KEEPING PICP MATERIALS FREE FROM SEDIMENT

Preventing and diverting sediment from entering the aggregates and pavement surface during construction must be the highest priority. Extra care must be applied to keeping sediment completely away from aggregates stored on site as well as the PICP. In some cases, it may be necessary to construct PICP before other soil-disturbing construction is completed. The options below are for ensuring that the PICP does not become contaminated with sediment from construction vehicles. The options below are in ascending cost order. One or more of these options should be decided in the project planning stages and included in the specifications and drawings.

1. Install the PICP first and allow construction traffic to use the finished PICP surface. When construction traffic has ceased and adjacent soils are stabilized with vegetation or erosion control mats, clean the PICP surface and joints with a vacuum machine capable of removing an inch (25 mm) of the stone from the joints. Vacuum a test area and inspect the joints when stone is removed to be sure there are no visible traces of sediment on the stone remaining in the joints. If it is visible, then vacuum out jointing stones until no sediment is present. Fill the joints with clean stones and sweep the PICP surface clean.

2. Protect finished PICP system by covering the surface with a woven geotextile and a minimum 2 in. thick No. 8 open-graded aggregate layer. This aggregate layer and geotextile are removed upon project completion and when adjacent soils are stabilized with vegetation or erosion control mats. The PICP surface is swept clean.

3. Construct the aggregate subbase and base and protect the surface of the base aggregate with geotextile and an additional 2 in. (50 mm) thick layer of the same base aggregate over the geotextile. Thicken this layer at transitions to match elevations of adjacent pavement surfaces subject to vehicular traffic. A similar more costly approach can be taken using a temporary asphalt wearing course rather than the additional base aggregate and geotextile. When construction traffic has ceased and adjacent soils are vegetated or stabilized with erosion control mats, remove geotextile and soiled aggregate (or the asphalt) and install the remainder of the PICP system per the project specifications.

4. Establish temporary road or roads for site access that do not allow construction vehicle traffic to ride over and contaminate the PICP base materials and/ or surface with mud and sediment. Other trades on the jobsite need to be informed on using temporary road(s) and staying off the PICP. The temporary road is removed upon completion of construction and opening of the PICP surface to traffic.

5. A washing station for the truck ties may be deemed necessary by the contracting officer.

6 in. (150 mm) of the final bottom elevation. This area can contain water during storms over the construction period and exit via temporary drain pipes. Heavy equipment should be kept from this area to prevent compaction. If equipment needs to traverse the bottom of the excavation, tracked

vehicles can reduce the risk of soil compaction. As the project progresses, sediment and the remaining soil depth can be excavated to the final grade immediately before installing the aggregate subbase and base. Depending on the project design, this technique might eliminate the need for a separate sediment basin during construction.

3.5 AVOID SOIL COMPACTION UNLESS REQUIRED IN THE PLANS AND SPECIFICATIONS

If compaction is not specified, the initial undisturbed soil infiltration should be carefully maintained during excavation and construction as this will enable the base to drain as designed. If the soil is inadvertently compacted by equipment during construction, there will be substantial loss of infiltration. A loss may be acceptable if the infiltration rate of the soil when compacted was initially considered during design and in drainage calculations. Compacted soil can be remedied by scarifying to increase its infiltration. This is done by back-dragging loader bucket teeth across the soil prior to placing the aggregate subbase. This loose layer will receive subbase or base aggregate compacted into it to reduce the risk of surface settlement.

3.6 INSTALL GEOTEXTILES, IMPERMEABLE LINERS AND DRAIN PIPES IF REQUIRED IN THE PLANS AND SPECIFICATIONS

Geotextiles are used in some permeable pavement applications per the design engineer. If there are no concrete curbs and soil is restraining the sides of the base/subbase at its perimeter, then geotextile should be applied to prevent lateral migration of soil into the base/subbase aggregates. Geotextile is applied vertically against the soil with at least 1 ft (0.3 m) extending horizontally under the subbase and resting on the soil subgrade. A minimum 1 ft (0.3 m) overlap is recommended in stronger subgrade soils and 2 ft (0.6 m) overlap on poor-draining weaker soils (CBR<5%). When specified, impermeable liners require assembly per the manufacturer’s instructions at the shop or job site. Once assembled, they should be tested for leaks with special attention to seams and pipe penetrations. Drain pipes are installed according to plans and specifications and should be rigid PVC. Designs should have curb cutouts or drain pipes from the PICP entering swales or storm sewer catch basins to handle overflow conditions. A minimum of 12 in. (300 mm) aggregate cover is recommended over drainpipes to protect them from damage during subbase or base compaction. If there is a risk of drain pipe damage, consider using a heavy gauge pipe or test the pipe and base in a trial area with compaction equipment prior to placing and compacting a large area. Perforations in pipes should terminate 1 ft (0.3 m) short of the sides of the opening for the base. When corrugated metal drain pipes are used, they should be aluminized, and aluminized pipe in contact with concrete should be coated to prevent corrosion. Perforated drain pipes should have caps fastened to the upslope ends. Daylighted drain pipes require wire mesh over the openings to keep out debris and animals.

3.7 OBSERVATION WELLS

A 4 to 6 in. (100 to 150 mm) diameter vertical perforated pipe that serves as an observation well may be specified in PICP subject to vehicular traffic. The pipe should be kept vertical during filling of the excavated area with open-graded aggregate and during compaction. The bottom of the pipe can be forced into the soil subgrade and held in place during base/subbase filling and compaction. The pipe should be

located in the lowest elevation and a minimum of 3 ft (1 m) from the PICP side. Figures 12, 13 and 14 illustrate a well accessible from the surface and another with the pipe under the pavers to prevent damage from vandals.

3.8 PLACE AND COMPACT THE AGGREGATE SUBBASE

ASTM No. 2 subbase material should be spread in minimum 6 in. (150 mm) lifts. Compaction is typically done with a 10 ton (9 T) steel vibratory roller or a 13,500 lbf (60 kN) plate compactor. Greater lift thicknesses are normal (i.e., 12 in. or 0.3 m) when using either of these compactors. When using a roller, the first two passes are in vibratory mode and the last two are in static mode. Compaction is completed when no visible movement can be seen in the base when rolled by the compactor. Figure 15 illustrates a vibratory roller compacted No. 2 stone subbase. Plate compactors with a minimum compaction force of 13,500 lbf (60 kN) with compaction indicators should be used to determine when compaction is completed. Plate compactors are needed to compact in corners and edges where roller compactors are not effective. Aggregates should not be crushed by the compactor. Surface tolerance of the compacted ASTM #2 shall be +/- 21/2 in. (65 mm) over a 10 ft. (3 m) straightedge.

3.9 INSTALL CURBS OR OTHER EDGE RESTRAINTS

The selection of edge restraints depends on whether the PICP is for pedestrian, residential driveway or vehicular use. Table 1 summarizes recommended by edge restraint type based on the application. Cast-in-place concrete, precast concrete and cut stone curbs are typically a minimum of 9 in. (225 mm) high and rest on the compacted No. 2 stone subbase. Consideration should be given to installing a concrete haunch under precast concrete or stone curbs. Curbs may be higher than 9 in, (225 mm) if they hold back grass, a sidewalk, bioswale or other structure. Figure 6 illustrates typical curb cross-section. If PICP is adjacent to existing impervious asphalt or concrete pavement, curbs level with the permeable and impervious surfaces are used. The curb should extend the full depth of the base under the impermeable pavement to protect its base from becoming weakened from excessive water. Another option is to separate the two bases with an impermeable liner. Figure 7 shows a concrete curb between impervious pavement and PICP base and subbase. The risk of water weakening the base under the impervious pavement can be substantially decreased by sloping the soil subgrade under the PICP away from the impervious pavement base and by using perforated drain pipes to remove water before it can collect next to the base supporting the impervious pavement. Curbs installed against existing impervious pavement and base may cause erosion and weakening of the base from excavation due to installing the PICP. Eroded spaces can be filled with concrete to support the asphalt or concrete surface and base next to the curb. For pedestrian areas and residential driveways, an edge restraint option is using compacted, dense graded berms around PICP base perimeter with plastic or metal edging fastened to their surface. The dense-graded base is a foundation for metal or plastic edging secured with steel spikes. These edge restraints are installed on the dense-graded berms in a manner identical to those on interlocking concrete pavement driveways. Figure 16 shows a typical cross-section of this construction and Figure 17 illustrates the berms in place prior to filling the driveway with open-graded aggregate. Figure 18 shows compaction of both types of bases. Figure 19 shows the pavers in place against a plastic edge restraint spiked or nailed into the dense-graded base. The edge restraint contains some of the bedding layer such that at least the bottom half of the pavers is also contained by the edging. Figure 20 illustrates a concrete toe placed against a sidewalk behind a driveway with a cast-in-place concrete edge. Concrete toes rest on the base extending at least 6 in. (150

mm) past the paver edges. The concrete should be a minimum of 4 in. (100 mm) wide by 3 in. (75 mm) deep so that it can restrain the pavers. Concrete mixed on the job site should use an approximate 5:1 aggregate to cement content. Once prepared in a concrete mixer, the concrete toe is typically spread with a shovel and smoothed with trowel. Pavers are compacted once the concrete has hardened. This type of edging is not recommended in cold climate regions because of the high risk of cracking.

3.10 PLACE AND COMPACT THE AGGREGATE BASE

The ASTM No. 57 base layer is spread and compacted as one 4 in. (100 mm) lift. Like the subbase aggregate, the initial passes with the roller can be with vibration to consolidate the base material as shown in Figure 21. A 13,500 lbf (60 kN) plate compactor (Figure 22) also can be used to compact the No. 57 base layer. Surface tolerance of the compacted No. 57 stone shall be +/- 3/4 in. (19 mm) over a 10 ft. (3 m) straightedge. Equipment drivers should avoid rapid acceleration, hard braking, or sharp turning when driving on the compacted No. 2 subbase and on the No. 57 base. Tracked equipment is recommended. If the subbase or base surfaces are disturbed, they should be re-leveled and re-compacted. A test section of the subbase and base should be constructed initially for compaction monitoring. The section will indicate settlement of the pavement section, and be used to monitor and prevent crushing of the aggregate. The area should be used to train inexperienced construction personnel on compaction techniques. Some designers prefer field measurement of subbase and base densities after compaction. If nuclear density gauge testing is desired, it cannot effectively be done on the No. 2 subbase. However, density testing can be done in backscatter mode on the No. 57 base layer). The guide construction specification includes a compaction testing method for the No. 57 base layer. The purpose of this test method is to attain consistent density. Besides nuclear density gauges, (nonnuclear) stiffness gauges may also be used to assess compacted base density.

3.11 PLACE AND SCREED THE BEDDING LAYER

When subbase and base lifts are compacted the surface should then be topped with a 2 in. (50 mm) thick layer of No. 8 crushed stone bedding layer. This layer is screeded and leveled over the No. 57 base. Metal rails are placed on the compacted No. 57 layer and are used to guide screeding elevations. Various sizes of screeding equipment can be used ranging from hand tools, bucket screeds powered manually or by machine, or a modified asphalt spreader that uses a laser guidance system to maintain elevations. Figure 25 and 26 illustrate examples of screeding equipment. A moist bedding layer facilitates screeding. The surface tolerance of the screeded No. 8 bedding material should be ±3/8 in. over 10 ft. (±10 mm over 3 m). The concrete pavers should be placed immediately after the No. 8 stone bedding is placed and screeded. Construction equipment and foot traffic should be kept off the screeded layer.

3.12 INSTALL THE PAVERS MANUALLY OR WITH MECHANICAL INSTALLATION EQUIPMENT

After screeding the bedding material, the pavers are placed on this layer. Paver installation can be by hand or with mechanical equipment. Mechanized installation may be a cost-efficient means to install the units and reduce installation time. Figure 27 and 28 shows mechanized equipment placing permeable paver layers manufactured for placement in their final laying pattern. Mechanical installation requires careful

planning including selection available paver layer patterns from local manufacturers and well-orchestrated material flow logistics in order to gain efficiencies. For further information on mechanical installation, consult *ICPI Tech Spec 11—Mechanical Installation of Interlocking Concrete Pavements* and *ICPI Tech Spec 15—A Guide for the Construction of Mechanically Installed Interlocking Concrete Pavements*. An important consideration on large mechanical installation projects is monitoring paver production mold wear. *Tech Spec 15* covers managing dimensional growth of pavers and provides means for confirming dimensions of the pavers at the factory and on the job site. Managing paver dimensions should be decided between the paver manufacturer and paver installation contractor and confirmed at the preconstruction meeting. Border courses consisting of mostly whole (uncut) pavers are typically used against curbs at PICP edges and at transitions to other pavement surfaces. Paving units abutting border courses should be cut to fill spaces prior to compaction. Cuts should provide gaps around the entire perimeter of the stone that are consistent with the typical joint size—this will allow for proper interlock between units and prevent direct paver on paver contact. Cut units should be no smaller than one-third of a whole unit if subject to vehicular traffic. All installed units should have joints filled and compacted within 6 ft (2 m) of the laying face at the end of each day.

3.13 FILLING THE PAVER JOINTS AND SWEEP THE SURFACE CLEAN

The paver joints are filled with ASTM No. 8, 89 or 9 stone. Depending on the PICP area, spreading and sweeping can be done with shovels and brooms, or larger areas with machines and swept into the paver joints with powered brooms or sweepers. Once the joints are full (within 1/4 in. or 6 mm of the paver surface), the surface must be swept clean prior to compaction as loose stones on the surface can mar the pavers when in contact with a plate compactor. Figure 29 illustrates various filling and sweeping methods.

3.14 COMPACT THE PAVERS

After the PICP surface is swept clean, it is compacted with a plate compactor. A minimum of two passes should be made with the second pass in a perpendicular direction from the first pass. The path of the plate compactor should overlap several inches (cm). For paving units 3 1/8 to 4 in. (80 to 100 mm) thick, the plate compactor should exert a minimum 5,000 lbf (22 kN) at 75 to 90 Hz. Figure 30 shows permeable pavers being compacted for a street project using a large plate compactor.

3.15 TOP UP JOINTS WITH JOINT FILLING STONE AS NEEDED AND SWEEP THE SURFACE CLEAN

Compaction can cause some settlement of the aggregates inside the joints. If the aggregates are more than 1/4 in. (6 mm) from the paver surface, they should be topped up to this level with additional aggregates. The paver surface should be swept clean prior to opening the PICP to traffic.
Aggregates in the paver joints can settle in early in the life of the pavement. Some settlement can be reduced through consistent, thorough compaction of the base, pavers and bedding layers. However, it is advisable for the contractor to return to the site after six months, inspect the joints and top them up with aggregate if they have settled to more than 1/4 in. (6 mm) below the paver surface. This service should be included in the construction specifications.

PICP = Permeable interlocking concrete pavement

SECTION 32 14 10 - UNIT PAVERS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:
1. Concrete Unit Pavers over Aggregate Sub-Base.

B. Related Sections:
1. Section 32 16, Decorative Concrete.
2. Section 05 50 00, Site Metal Fabrications.
3. Section 32 90 00; Landscape Irrigation.

1.2 REFERENCES

A. ASTM — ASTM International:
1. C 33 — Specification for Concrete Aggregates.
2. C 144 — Specification for Aggregate for Masonry Mortar.
3. C 902 — Specification for Pedestrian and Light Paving Unit.
5. D 1557 — Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort.

1.3 DEFINITIONS

A. Acceptance, Acceptable, or Accepted: Acceptance by the Landscape Architect in writing.

B. Excessive Compaction: Planting area soil or soil mix compaction greater than 75 percent of maximum dry density as determined by ASTM D 1557.

C. Landscape Architect: Landscape Architect employed by the Owner to provide professional landscape architectural services for the Project.

1.4 SUBMITTALS

A. General Requirements: Refer to Division 1.

B. Product Data:
1. Concrete Unit Pavers.
2. Joint Aggregate for Paver Joints.
3. Geotextile Fabric
4. Aggregate sub-base.
5. Aggregate bed under pavers.

C. Samples:
1. Pavers — Three full size pavers of each material and size representing size, color, and finish.
2. Joint Aggregate — 1-pound plastic bag of joint aggregate material representing size and color.
3. Geotextile — Three 6-inch squares.

D. Test Reports:
1. Aggregate sub-base with Test Date less than 4 Weeks Old.
2. Bedding Aggregate Sieve Analysis with Test Date less than 4 Weeks Old.
3. Joint Aggregate Sieve Analysis with Test Date less than 4 Weeks old.

E. Manufacturer's Instructions for Informational Purposes: Surebond Manufacturer's Current Printed Installation Instructions.

1.5 QUALITY ASSURANCE

A. Installer Qualifications:
1. Successfully installed unit paving similar to the quality specified and in the quantity shown for a period of not less than 10 years.
2. Use adequate numbers of skilled workers who are thoroughly trained and experienced in the necessary
crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the Work of this Section.

B. Regulatory Requirements:
Meet requirements of applicable laws, codes, and regulations required by authorities having jurisdiction over such Work.

C. Unit Paving Mock-up:
1. Construct an 8-feet wide by 8-feet long area of unit paving pavers for each size of paver indicated with adjacencies and edge restraints.
2. Compact pavers on aggregate base and-setting bed, fill joints with joint aggregate, and wet.
3. Construct as many samples as necessary to achieve an accepted mock-up.
4. Mock-ups which are partially constructed or finished incorrectly will be rejected.
5. Remove rejected mock-ups immediately from the site.
6. Place accepted mock-ups in a location where samples can be referenced.
7. Mock-up panels may be installed and remain as part of the permanent installation if acceptable to the
Landscape Architect.
8. Accepted mock-up panels shall become the project standard for tolerances and appearance.

D. Pre-installation Meeting:
Prior to commencement of unit installation, schedule and conduct an on-site meeting with the Landscape Architect and the Landscape Architect's paving engineer to review the critical aspects of consolidating the aggregate-cement bedding, hydrating the aggregate-cement bedding, installing and wetting the joint aggregate, layout starting points, and other requirements of this Section.

1.6 DELIVERY, STORAGE AND HANDLING

A. Loading and Shipment:
1. Carefully pack the pavers for shipment free from stains, saw mud, and other deleterious material.
2. Exercise precautions against damage in transit.

B. Storage:

1. Store pavers on non-staining wood skids or pallets at least 4 inches above grade.
2. Place and stack skids and pavers to distribute weight evenly and to prevent breakage or cracking of pavers.
3. Store and protect pavers from weather and soiling with waterproof non-staining covers or enclosure, but
allow air to circulate around pavers.

C. Handling:

1. Handle pavers to prevent chipping, breakage, soiling or other damage.
2. Do not use pinch or wrecking bars without protecting edges of pavers with wood or other rigid materials.
3. Lift with wide-belt type slings wherever possible.
4. Do not use wire rope or ropes containing tar or other substances which might cause staining.
5. Use wood rollers and provide cushion at end of wood slides.

1.7 SITE CONDITIONS

A. Environmental Requirements: Meet requirements of joint aggregate manufacturer's current printed instructions.

1.8 WARRANTY

A. General Description: In addition to manufacturer's warranties, warrant Work for a period of one year from the date of Final Completion against defects in materials and workmanship.
B. Additional Items Covered: Warranty shall also cover repair of damage to other materials and workmanship resulting
from defects in materials and workmanship.
C. Exceptions: Contractor shall not be held responsible for failures due to normal wear, neglect by Owner, vandalism,
and other causes outside Contractor's control.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS AND SUPPLIERS

A. Concrete Unit Pavers: Ackerstone, Corona, CA (951) 674-0047, www.ackerstone.com.
C. Geotextile: TenCate, Pendergrass, GA (706) 693-2226.

2.2 MATERIALS

A. Unit Pavers: As indicated on the drawings.
B. Joint material: Naturally occurring, not manufactured, ASTM No. 8, stone.
C. Leveling / Bedding material: Clean, crushed or aggregate, No. 8 stone in a 1 ½" - 2" thick layer.
D. Open graded base: Clean crushed aggregate, No. 57 stone in a 4" layer.
E. Permeable subbase course materials: Clean crushed aggregate No. 2 aggregates in the bottom layer.

F. Leveling / Bedding material on structure: Clean, crushed or aggregate, No. 8 stone in a depth from bottom of paver to drainage mat.
G. Edge Restraints: GeoEdge, Permaloc Corporation (616) 399-9600.

2.3 UNIT PAVER FABRICATION TOLERANCES

A. Maximum Variation from Thickness, Face Size, and From Flat: 1/16-inch.

PART 3 EXECUTION

3.1 EXAMINATION

A. General: Examine site and verify that conditions are suitable to receive Work and that no defects or errors are
present which would cause defective installation of products or cause latent defects in workmanship and function.

3.2 PREPARATION

A. Protection:
1. Use every possible precaution to prevent damage to existing conditions to remain such as structures,
utilities, plant materials and walks on or adjacent to the site of the Work.
2. Provide barricades, fences or other barriers as necessary to protect existing conditions to remain from
damage during construction.

3.3 PAVER INSTALLATION

A. Spreading Aggregate Setting Bed:
1. Making allowances for compaction, screed un-compacted to a consistent thickness which will bring the finish surface of the pavers to the elevations indicated on the Drawings.
2. Check and verify effect of setting bed mix compaction in a sample panel to determine the screeded aggregatecement bed thickness.
3. Do not use setting bed mix for leveling.
4. Maintain setting bed mix in a loose condition and protected against pre-compaction both prior to and
following screeding.
5. Screed setting bed, slightly ahead of the laying the pavers.
6. Under no circumstances shall the setting bed mix be screeded in advance of the laying face to an extent to
which paving will not be completed that day.
7. Protect screeded setting bed mix fully against accidental pre-compaction including compaction by rain, dew, or other moisture.

B. Laying Pavers:
1. Place pavers on the un-compacted setting bed mix to the specified laying pattern.

2. Place pavers so that joints are aligned and installed in the pattern as shown on the Drawings.
3. Use string lines to hold pattern lines and elevations true.
4. Lay rows of full units first.
5. Cut off and fit closure units subsequently by using two combined butt jointed pavers. Do not install a paver that is less than ¼ its nominal dimensions.
6. Cut paver units with power diamond blade masonry saw where partial pavers abut straight surfaces.
7. Cut radial paver edges with a diamond-blade masonry saw by kerfing and coring or other acceptable where pavers abut round elements such as manholes, bollards and columns to achieve smoothly curved edges parallel with the abutting surfaces with butt joints or ¼" maximum width joint.
8. Do not allow other construction traffic on pavement during the paver installation until pavers have been
compacted.

C. Compaction of Pavers:
1. Achieve consolidation of the setting bed mix and bring paver surfaces to design levels by using beating block and rubber mallet.
2. Continue beating and leveling until unacceptable lippage has been eliminated and pavers are at proper
elevations.
3. Immediately remove and replace pavers which are damaged during installation.

D. Filling Upper 1/4-Inch of Joints:
1. After compaction, and prior to the termination of Work on that day and prior to the acceptance of construction traffic, cover surface of pavers with cement-free joint aggregate and sprinkle surface with water so that aggregate washes into joints and cement in bedding aggregate is activated.
2. After aggregate has dried, sweep surplus material from the surface or leave on surface during construction to insure complete filling of joints during initial use until the joint sealer is applied.

3.4 EDGING:

A. Install GeoEdge in conformance with manufactuers wrtiiten specifications. All edges to be plumb, straight and within tolerances for concrete flatwork.

3.5 TOLERANCES:

A. Paver Finished Surface: Do not permit finished paving surfaces to vary more than 1/8 inch measured with a 10-foot
long metal straightedge, except at grade changes.
B. Lippage Between Adjacent Pavers: 1/16-inch maximum.
C. Joint Widths: butt joint minimum; 1/4-inch maximum.

3.6 CLEANING

A. Pavers:
1. Prior to final inspection, clean stained or dirty pavers with clean water and stiff bristle brush.
2. Remove and replace permanently stained pavers.
3. Add additional aggregate to joints where cleaning has dislodged aggregate and re-wet joints.

3.7 PROTECTION

A. Damage and Defacement: Protect paving against damage and defacement during subsequent construction
operations until date of Final Completion by covering paving with 3/4-inch thick exterior plywood where subject to
traffic damage.

END OF SECTION

SECTION 32 1500 - AGGREGATE SURFACING

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes:

1. Aggregate surfacing.

B. Related Requirements:

1. Division 01 - General Requirements.
2. Section 32 91 19: Finish Grading.
4. Section 32 13 13: Concrete Paving.
7. Section 32 80 00: Irrigation

1.02 REFERENCES

A. ASTM F-1632: Standard Test Method for Particle Size Analysis

B. ASTM D- 422: Standard Test Method for Fine Particle Size Analysis.

1.03 LEED REQUIREMENTS

A. Owner has established that the project will achieve LEED Certification per the requirements outlined in Section 01 35 15.

B. Following LEED requirements are mandatory for Work included in this Section in order to achieve LEED certification.

1.04 SUBMITTALS

A. See section 01 30 00 – Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on specified products, describing physical and performance characteristics; sizes, patterns, colors available, and method of installation.

1.05 PROJECT REQUIREMENTS

A. Sub base material shall be uniformly graded and compacted, and shall mirror finish grade contours to ensure an even depth of material.

B. Survey subgrade elevations prior to placement of material.

1.06 SUBMITTALS

A. Submit in accordance with Section 01 33 00 - Submittal Procedures.

B Submit a one pound sample and sieve analysis per ASTM C136, F-1632 for all decomposed granite aggregate surfacing.

C. Submit (3) images of available boulders with supplier and material location.

D. Submit (3) stone as representative samples with supplier and material location.

E. Manufacturer’s product data sheet and installation instructions for each product to be used.

F. MOCKUPS:

A. Prepare on-site paving and stair mock-ups as follows:

1. Prepare a minimum 4-foot square mock-up of each different decomposed granite surfacing type specified on Drawings. Label mock-ups (preferably on vertical side of mock-up) with specified paving type to facilitate mock-up review.

2. Prepare a minimum 8-foot square mock-up of aggregate mulch surfacing type specified on Drawings. Include aggregate size transition and 2-3 boulders.

3. Construct mock-ups using identical products, edging, depth and methods of overall workmanship that will be employed during production.

4. Ensure that same crew preparing mock-ups will be responsible for production work.

5. Construct mock-ups in a protected location approved by Owner. Ideally mock-ups should be located as close to production work as possible to facilitate comparison review and be located in a sunny location.

6. Approved mock-ups will be used as standard for future production work review and assessment. Owner should be prepared to physically sign mock-up using a permanent black marker to attest Owner's approval of mock-up. Rejected mock-ups can remain on-site until removal of approved mock-ups is required.

7. Owner will incur costs to redo mock-ups if Owner requires design changes during mock-up review. Contractor will incur costs to redo mock-ups if Owner rejects mock-ups due to Contractor error such as incorrect concrete mix design or unacceptable appearance.

7. Protect approved mock-ups from damage during course of Work.

8. Clean mock-ups prior to Final Walkthrough for Acceptance to facilitate unencumbered comparison review by Owner between approved mock-ups and production work.

9. Remove mock-ups from site when directed by Owner.

1.07 QUALITY ASSURANCE

A. Comply with the Standard Specifications for Public Works Construction, current edition, except as modified herein.

B. Provide evidence of successful experience by the installer in the Work of this section.

1.08 DELIVERY, STORAGE AND HANDLING

A. Do not install aggregate surfacing during rainy conditions.

PART 2 - PRODUCTS

2.01 STABILIZED DECOMPOSED GRANITE PAVING

A. Acceptable Manufacturer:

1. Specification is based on products by Gail Materials, Corona, CA; phone 951- 667-6106; fax 951-667-6102; www.gailmaterials.net.

B. Stabilized Decomposed Granite:

1. Produce from naturally friable granite. Blends of coarse sand and rock dust are not acceptable.

2. Gradation, in accordance with ASTM C136:

Sieve Size	Percent Passing
1/2”	100
3/8”	90 - 100
No. 4	50 - 100
No. 30	25 - 55
No. 100	10 - 20
No. 200	5 - 18

3. Sand Equivalent: 30 minimum in accordance with ASTM D2419.

4. Color: To be selected by Landscape Architect from manufacturer’s standard colors.

C. Binder: Provide Natracil by Gail Materials and complying with following requirements:

1. Swell Volume: 35 ml/gm minimum in accordance with USP procedures. 2. 90% minimum shall pass a No. 40 mesh screen. D. Factory Blending:

1. Mix decomposed granite and Natracil™ with a pug mill that includes a weigh-belt feeder. 2. Pedestrian Paths and Dog Park: Mix 12 lbs. of binder per 2000 lbs. of aggregate.

D. Unstabilized Decomposed Granite:

1. Produce from naturally friable granite. Blends of coarse sand and rock dust are not acceptable.

2. Gradation, in accordance with ASTM C136:

Sieve Size	Percent Passing
1/2”	100
3/8”	90 - 100
No. 4	50 - 100
No. 30	25 - 55
No. 100	10 - 20
No. 200	5 - 18

3. Sand Equivalent: 30 minimum in accordance with ASTM D2419.

4. Color: To be selected by Landscape Architect from manufacturer's standard colors.

E. Stone mulch: 2"-3" and miscellaneous sizes, see drawings.

F. Boulders: 2'-4' and miscellaneous sizes, see drawings.

G. Uncompacted decomposed granite graded at 1/8"-1/4" no fines.

H. Steel Edging:

1. Dimensions: 3/16" thick by 6-inch deep, with overlapping joints.

2. Stakes: 3/16" x 16" long x 1-3/4" wide at top tapering to point at bottom; located 36" o.c. maximum.

3. Finish: Baked-on brown paint.

PART 3 - EXECUTION

3.01 PREPARATION OF SUBGRADE

A. The sub-grade shall be graded to an elevation 3 inches lower than the finish grades indicated on the Drawings. After the areas are graded to the required elevations, they shall be compacted and/or rolled as required by Section 31 22 00 - Grading. Sub-grade shall then be dragged or floated to provide a uniform surface, free from any irregularities.

3.03 INSTALLATION OF AGGREGATE SURFACING

A. Stabilized Decomposed Granite:

1. 3 inch layer of aggregate surfacing shall then be spread evenly over the entire areas to finish grades. Grade and smooth as desired. Thoroughly water entire area so that the entire depth of the material is moist and to activate the Natracil. After a period of +/- 6 hours compact the finale lift with a 1000 – 3000 lb static drum roller. Allow for a sufficient curing period of +/- 4 days prior to use. Surface shall be filled as required and again rolled to produce a 4 inch thick uniform plane with proper drainage and slopes.

B. Unstabilized Decomposed Granite at Walking Path:

1. 3 inch layer of aggregate surfacing shall then be spread evenly over the entire areas to finish grades. Grade and smooth as desired. Thoroughly water entire area so that the entire depth of the material is moist and washed. Do not compact.

C. Stone Mulch:

1. 6"-10" inch layer of stone muclh shall then be spread evenly over the entire areas to finish grades. Grade and smooth for acceptance by the Landscape Architect. Adjust mulch until it is accepted. Thoroughly water entire area to remove fines and dust. Do not compact.

D. Boulders:

1. Excavate area to receive boulders to depths indicated on the drawings. Over excavate to allow field adjustment. Boulders are to be planted at 1/3 the dimension of the boulder and stabile. Adjust until accepted by the landscape architect.

3.04 PROTECTION

A. Protect the Work of this section until Substantial Completion.

3.05 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 32 3119 - DECORATIVE METAL FENCES AND GATES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Decorative steel fences.
2. Swing gates.

B. Related Requirements:

1. Section 07 4213.13 "Formed Metal Wall Panels" for metal panels on gate.
2. Section 28 1300 "Access Control" for access control devices installed at gates and provided as part of a security system.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For gates. Include plans, elevations, sections, details, and attachments to other work.

1. Include diagrams for power, signal, and control wiring.

C. Samples: For each fence material and for each color specified.

1. Provide Samples 12 inches in length for linear materials.
2. Provide Samples 12 inches square for sheet or plate materials.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For gate operators to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Fabricator of products.

B. Accessibility: Comply with requirements of the 2010 ADA Standards and CBC 11B for gate hardware, operating force, clear floor space.

C. Provide the following upon request:

1. Field quality-control reports.

2. Product Test Reports: For decorative metallic-coated-steel tubular picket fences, including finish, indicating compliance with referenced standard[and other specified requirements].

PART 2 - PRODUCTS

2.1 DECORATIVE STEEL FENCES

A. Decorative Steel Fences: Fences made from steel tubing bars and shapes, hot-dip galvanized.

B. Posts: Square steel tubing.

1. Horizontal-Slide Gate Post, Openings Wider Than 12 Feet: 4 by 4 inches with 3/16-inch wall thickness.

2. Guide Posts for Class 1 Horizontal-Slide Gates: 4 by 4 inches with 3/16-inch wall thickness; installed adjacent to gate post to permit gate to slide in space between.

C. Post Caps: Formed from steel sheet and hot-dip galvanized after forming.

D. Rails:

1. Steel Tube Rails: Square steel tubing 2 by 2 inches with 1/8-inch wall thickness.

E. Infill: Custom design as indicated on Drawings.

1. Formed metal wall panels specified in Section 07 4213.13.

F. Fasteners: Stainless-steel carriage bolts and tamperproof nuts.

G. Finish exposed welds to comply with NOMMA Guideline 1, Finish #2 - completely sanded joint, some undercutting and pinholes okay.

H. Galvanizing: For items other than hardware that are indicated to be galvanized, hot-dip galvanize to comply with ASTM A 123/A 123M. For hardware items, hot-dip galvanize to comply with ASTM A 153/A 153M.

1. Hot-dip galvanize custom-design rail and infill assemblies after fabrication.

I. Finish for Metallic-Coated-Steel Items[Other than Bar Grating Infill]: High-performance coating.

2.2 HORIZONTAL-SLIDE GATES

A. Gate Configuration: Double leaf.

1. Type: Cantilever slide, with external roller assemblies.

B. Gate Frame Height: As indicated.

C. Gate Opening Width: As indicated.

D. Automated vehicular gates shall comply with ASTM F 2200, Class I .

E. Galvanized-Steel Frames and Bracing: Fabricate members from square tubing.

1. Frame Members: Square tubes 2-1/2 by 2-1/2 inches formed from 0.108-inch nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch nominal-thickness steel sheet and hot-dip galvanized after fabrication.

2. Bracing Members: Square tubes 2-1/2 by 2-1/2 inches formed from 0.108-inch nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch nominal-thickness steel sheet and hot-dip galvanized after fabrication.

F. Frame Corner Construction:

1. Welded frame with panels assembled with bolted or riveted corner fittings and 5/16-inch-diameter, adjustable truss rods for panels 5 feet wide or wider.

G. Additional Rails: Provide as indicated, complying with requirements for fence rails.

H. Infill: Formed metal wall panels.

I. Hardware: Latches permitting operation from both sides of gate, locking devices roller assemblies and stops fabricated from galvanized steel . Comply with 2013 CBC 11B.309.4.

J. Finish exposed welds to comply with NOMMA Guideline 1, Finish #2 - completely sanded joint, some undercutting and pinholes okay.

K. Galvanizing: For items other than hardware that are indicated to be galvanized, hot-dip galvanize to comply with ASTM A 123/A 123M. For hardware items, hot-dip galvanize to comply with ASTM A 153/A 153M.

L. Metallic-Coated-Steel Finish: High-performance coating.

2.3 GATE OPERATORS

A. Gate Operators:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Chamberlain Group, Inc. (The).

b. Tymetal Corp.

c. USAutomatic Inc.

d. Viking Access Systems.

B. Provide factory-assembled automatic operating system designed for gate size, type, weight, and operation frequency. Provide operation control system with characteristics suitable for Project conditions, with remote-control stations, safety devices, and weatherproof enclosures; coordinate electrical requirements with building electrical system.

1. Provide operator designed so motor may be removed without disturbing limit-switch adjustment and without affecting auxiliary emergency operator.
2. Provide operator with UL approval.
3. Provide electronic components with built-in troubleshooting diagnostic feature.
4. Provide unit designed and wired for both right-hand/left-hand opening, permitting universal installation.

C. Comply with NFPA 70.

D. UL Standard: Manufacturer and label gate operators to comply with UL 325.

E. Emergency Access Requirements: Comply with requirements of authorities having jurisdiction for automatic gate operators on gates that must provide emergency access.

F. Motor Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, within installed environment, with indicated operating sequence, and without exceeding nameplate rating or considering service factor. Comply with NEMA MG 1 and the following:

1. Voltage: NEMA standard voltage selected to operate on nominal circuit voltage to which motor is connected.
2. Horsepower: Not less than 3/4.
3. Enclosure: Totally enclosed.
4. Duty: Continuous duty at ambient temperature of 105 deg F and at altitude of 3300 feet above sea level.
5. Service Factor: 1.15 for open dripproof motors; 1.0 for totally enclosed motors.
6. Phase: One.

G. Gate Operators: Concrete base mounted and as follows:

1. Mechanical Slide Gate Operators:
   a. Duty: Heavy duty, commercial/industrial.
   b. Gate Speed: Minimum 60 feetper minute .
   c. Maximum Gate Weight: 3000 lb.
   d. Frequency of Use: 10 cycles per hour .
   e. Operating Type: Roller chain, with manual release.
   f. Drive Type: Enclosed worm gear and chain-and-sprocket reducers, roller-chain drive.

H. Remote Controls: Electric controls separated from gate and motor and drive mechanism, with [NEMA ICS 6, Type 1] [NEMA ICS 6, Type 4] <Insert type of enclosure> enclosure for [surface] [recessed or flush] [concrete base] [pedestal] <Insert mounting> mounting, and with space for additional optional equipment. Provide the following remote-control device(s):

1. Control Station: Keyed, [two] [three]-position switch with open[, stop,] and close function; located remotely from gate. Provide two keys per station.
2. Card Reader: Functions only when authorized card is presented. Programmable, [multiple] [single]-code system[, permitting four different access time periods] [; face-lighted unit fully visible at night].
    a. Reader Type: [Touch plate] [Swipe] [Insertion] [Proximity].
    b. Features: [Timed antipassback] [Limited-time usage] [Capable of monitoring and auditing gate activity].
3. Digital Keypad Entry Unit: [Programmable,]multiple-code capability of not less than [five] [500] [2500] <Insert number> possible individual codes, consisting of [1- to 7] [4] [5]-digit codes[, and permitting four different access time periods].
    a. Features: [Timed antipassback] [Limited-time usage] [Capable of monitoring and auditing gate activity].
    b. Face-lighted unit with [metal-keyed] [keyless-membrane] keypad fully visible at night.
4. Radio Control: Digital system consisting of code-compatible universal receiver for each gate, located where indicated, with remote antenna with coaxial cable and mounting brackets designed to operate gates. Provide [one] [two] <Insert number> programmable transmitter(s) with multiple-code capability permitting validating or voiding of not less than [1000] [10,000] <Insert number> codes per channel configured for the following functions:
    a. Transmitters: [Single] [Three] button operated, with open [and close]function.
    b. Channel Settings: [Two] [Three] [Four] <Insert number> independent channel settings controlling separate receivers for operating more than one gate from each transmitter.

I. Obstruction Detection Devices: Provide each motorized gate with automatic safety sensor(s). Activation of sensor(s) causes operator to immediately function as follows:

1. Action: Reverse gate in both opening and closing cycles, and hold until clear of obstruction.
2. Photoelectric/Infrared Sensor System: Designed to detect an obstruction in gate's path when infrared beam in the zone pattern is interrupted.

J. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop gate at fully retracted and fully extended positions.

K. Emergency Release Mechanism: Quick-disconnect release of operator drive system of the following type, permitting manual operation if operator fails. Design system so control-circuit power is disconnected during manual operation.

1. Type: Integral fail-safe release, allowing gate to be pushed open without mechanical devices, keys, cranks, or special knowledge.

L. Operating Features:

1. Digital Microprocessor Control: Electronic programmable means for setting, changing, and adjusting control features[with capability for monitoring and auditing gate activity]. Provide unit that is isolated from voltage spikes and surges.
2. System Integration: With controlling circuit board capable of accepting any type of input from external devices.
3. Master/Slave Capability: Control stations designed and wired for gate pair operation.
4. Automatic Closing Timer: With adjustable time delay before closing[and timer cutoff switch].
5. Open Override Circuit: Designed to override closing commands.
6. Reversal Time Delay: Designed to protect gate system from shock load on reversal in both directions.
7. Maximum Run Timer: Designed to prevent damage to gate system by shutting down system if normal time to open gate is exceeded.
8. Clock Timer: [24-hour] [Seven-day] <Insert time period> programmable for regular events.

M. Accessories:

1. Warning Module: [Audio] [Visual], [constant] [strobe]-light alarm sounding three to five seconds in advance of gate operation and continuing until gate stops moving; compliant with the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines.
2. Battery Backup System: Battery-powered drive and access-control system, independent of primary drive system:
   a. Fail-Safe: Gate opens and remains open until power is restored.
   b. Fail-Secure: Gate cycles on battery power, then fail-safe when battery is discharged.
3. External electric-powered [solenoid] [magnetic] lock with delay timer allowing time for lock to release before gate operates.
4. [Fire] [Postal] box.
5. Fire [strobe] [siren] sensor.
6. Intercom System: <Insert requirements>.
7. Instructional, Safety, and Warning Labels and Signs: [According to UL 325] [Manufacturer's standard for components and features specified] [As indicated on Drawings] <Insert requirements>.
8. Equipment Bases/Pads: Precast concrete, [depth not less than 12 inches] <Insert depth>, dimensioned and reinforced according to gate operator component manufacturer's written instructions and as indicated on Drawings.

2.4 STEEL AND IRON

A. Plates, Shapes, and Bars: ASTM A 36/A 36M.

B. Bars (Pickets): Hot-rolled, carbon steel complying with ASTM A 29/A 29M, Grade 1010.

C. Tubing: ASTM A 500/A 500M, cold-formed steel tubing.

D. Galvanized-Steel Sheet: ASTM A 653/A 653M, structural quality, Grade 50, with [G90] [G60] coating.

2.5 COATING MATERIALS

A. Shop Primer for Steel: Manufacturer's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.

2.6 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Concrete: Normal-weight, air-entrained, ready-mix concrete complying with requirements in Section 03 3000 "Cast-in-Place Concrete" with a minimum 28-day compressive strength of 3000 psi, 3-inch slump, and 1-inch maximum aggregate size or dry, packaged, normal-weight concrete mix complying with ASTM C 387/C 387M mixed with potable water according to manufacturer's written instructions.

2.7 METALLIC-COATED-STEEL FINISHES

A. Galvanized Finish: Clean welds, mechanical connections, and abraded areas, and repair galvanizing to comply with ASTM A 780/A 780M.

B. Powder Coating: Immediately after cleaning and pretreating, apply two-coat finish consisting of zinc-rich epoxy prime coat and TGIC polyester topcoat, with a minimum dry film thickness of 2 mils for topcoat. Comply with coating manufacturer's written instructions to achieve a minimum total dry film thickness of 4 mils.

1. Color and Gloss: As selected by Architect from manufacturer's full range.
2. Comply with surface finish testing requirements in ASTM F 2408 except change corrosion-resistance requirement to 3000 hours without failure.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for site clearing, earthwork, pavement work, construction layout, and other conditions affecting performance of the Work.

B. Do not begin installation before final grading is completed unless otherwise permitted by Architect.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Stake locations of fence lines, gates, and terminal posts. Do not exceed intervals of 500 feet or line of sight between stakes. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.

1. Construction layout and field engineering are specified in Section 01 7300 "Execution."

3.3 GATE INSTALLATION

A. Install gates according to manufacturer's written instructions, level, plumb, and secure for full opening without interference. Attach hardware using tamper-resistant or concealed means. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation and lubricate where necessary.

3.4 GATE OPERATOR INSTALLATION

A. General: Install gate operators according to manufacturer's written instructions, aligned and true to fence line and grade.

B. Excavation for Support Posts Concrete Bases: Hand-excavate holes for bases in firm, undisturbed soil to dimensions and depths and at locations as required by gate operator component manufacturer's written instructions and as indicated.

C. Concrete Bases: Cast-in-place or precast concrete, depth not less than 12 inches, dimensioned and reinforced according to gate operator component manufacturer's written instructions and as indicated on Drawings.

D. Comply with NFPA 70 and manufacturer's written instructions for grounding of electric-powered motors, controls, and other devices.

3.5 ADJUSTING

A. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.

B. Automatic Gate Operators: Energize circuits to electrical equipment and devices. Adjust operators, controls, safety devices,[alarms,] and limit switches.

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

2. Test and adjust controls, alarms, and safeties. Replace damaged and malfunctioning controls and equipment.

C. Lubricate hardware, gate operators, and other moving parts.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's personnel to adjust, operate, and maintain gates.

END OF SECTION

SECTION 02810 - LANDSCAPE IRRIGATION

PART 1 - GENERAL

1.1 SUMMARY

A. It is the intent of the specifications and drawings that the finished system is complete in every respect and shall be ready for operation satisfactory to the University.

B. The work shall include all materials, labor, services, transportation, and equipment necessary to perform the work as indicated on the drawings, in these specifications, and as necessary to complete the contract.

1.2 CONSTRUCTION DRAWINGS

A. Due to the scale of the drawings, it is not possible to indicate all offsets, fittings, sleeves, etc. which may be required. The Contractor shall carefully investigate the structural and finished conditions affecting all of his work and plan his work accordingly, furnishing such fittings, etc. as may be required to meet such conditions. Drawings are generally diagrammatic and indicative of the work to be installed. The work shall be installed in such a manner as to avoid conflicts between irrigation systems, planting, and architectural features.

B. All work called for on the drawings by notes or details shall be furnished and installed whether or not specifically mentioned in the specifications. When an item is shown on the plans but not shown on the specifications or vice versa, it shall be deemed to be as shown on both. The Landscape Architect shall have final authority for clarification.

C. The Contractor shall not willfully install the irrigation system as shown on the drawings when it is obvious in the field that obstructions, grade differences or discrepancies in area dimensions exist that might not have been considered in engineering. Such obstructions or differences should be brought to the attention of the Landscape Architect as soon as detected. In the event this notification is not performed, the Irrigation Contractor shall assume full responsibility for any revision necessary.

1.3 QUALITY ASSURANCE

A. Provide at least one English speaking person who shall be present at all times during execution of this portion of the work and who shall be thoroughly familiar with the type of materials being installed and the manufacturer's recommended methods of installation and who shall direct all work performed under this section.

B. Manufacturer's directions and detailed drawings shall be followed in all cases where the manufacturer of articles used in this contract furnish directions covering points not shown in the drawings and specifications.

C. All local, municipal, and state laws, rules and regulations governing or relating to any portion of this work are hereby incorporated into and made a part of these specifications, and their provisions shall be carried out by the Contractor. Anything contained in these specifications shall not be construed to conflict with any of the above rules and regulations of the same. However, when these specifications and drawings call for or describe materials, workmanship, or construction of a better quality, higher standard, or larger size than is required by the above rules and regulations, the provisions of these specifications and drawings shall take precedence.

D. All materials supplied for this project shall be new and free from any defects. All defective materials shall be replaced immediately at no additional cost to University.

E. The Contractor shall secure the required licenses and permits including payments of charges and fees, give required notices to public authorities, verify permits secured or arrangements made by others affecting the work of this section.

1.4 SUBMITTALS

A. Water Pressure Test
1. After award of contract and before any irrigation system materials are ordered from suppliers or delivered to the job site, submit to the University a written verification of the existing water pressure on the project at each of the points of connection shown.
2. The water pressure test shall be performed to measure the dynamic water pressure at the point of connection at the maximum flow rate of the proposed irrigation system as shown on the point of connection note. Dynamic water pressure is when water is flowing through the point of connection. Static water pressure readings, water is not flowing, are not acceptable.
3. Written dynamic water pressure test confirmation shall be made on the contractor's letterhead and include the flow rate during the test, the recorded water pressure, the date of the test and the time of the test.

B. Material List:
1. After award of contract and before any irrigation system materials are ordered from suppliers or delivered to the job site, submit to the University a complete list of all irrigation system materials, or processes proposed to be furnished and installed as part of this contract.
2. The submittals materials list shall include the following information:
   a. A title sheet with the job name, the contractor's name, contractor's address and telephone number, submittal date and submittal number.
   b. An index sheet showing the item number (i.e. 1,2,3, etc.); an item description (i.e. sprinkler head); the manufacturer's name (i.e. Hunter Industries); the item model number (i.e. I-40-ADV/36V); and the page(s) in the submittal set that contain the catalog cuts.
   c. The catalog cuts shall be one or two pages copied from the most recent manufacturer's catalog that indicate the product submitted. Do not submit parts lists, exploded diagrams, price lists or other extra information.

d. The catalog cuts shall clearly indicate the manufacturer's name and the item model number. The item model number, all specified options and specified sizes shall be circled on the catalog cuts.
e. Submittals for equipment indicated on the legend without manufacturer names, or "as approved", shall contain the manufacturer, Class or Schedule, ASTM numbers and/or other certifications as indicated in these specifications.

3. Submittal materials list format requirements:
   a. Submittals shall be provided as one complete package for the project. Multiple partial submittals will not be reviewed.
   b. Submittal package shall be stapled or bound in such a way as to allow for disassembly for review processing. Submittals shall not have tabs, tab sheets, spiral binding, or any other type of binding that will interfere with automated copying of submittals.
   c. Submittal package shall have all pages numbered in the lower right hand corner. Page numbers shall correspond with submittal index.
   d. Re-submitted packages must be revised to include only the equipment being re-submitted. Equipment previously reviewed and accepted shall not be re-submitted in the materials list/index sheet or in the catalog cut sheet package.

C. Substitutions: If the Irrigation Contractor wishes to substitute any equipment or materials for those equipment or materials listed on the irrigation drawings and specifications, he may do so by providing the following information to the Landscape Architect or University's authorized representative for approval.
   1. Provide a written statement indicating the reason for making the substitution.
   2. Provide catalog cut sheets, technical data, and performance information for each substitute item.
   3. Provide in writing the difference in installed price if the item is accepted.

D. The Landscape Architect or University's authorized representative will allow no substitutions without prior written acceptance

E. No substitutions of pump manufacturers, distributors or assemblies will be accepted.

F. Manufacturer's warranties shall not relieve the Contractor of his liability under the guarantee. Such warranties shall only supplement the guarantee.

G. The Landscape Architect or University's authorized representative will not review the submittal package unless provided in the format described above.

1.5 EXISTING CONDITIONS

A. The Contractor shall verify and be familiar with the locations, size and detail of points of connection provided as the source of water, and electrical supply connection to the irrigation system.

B. Irrigation design is based on the available static water pressure shown on the drawings. Contractor shall verify static water on the project prior to the start of construction. Should a

discrepancy exist, notify the Landscape Architect and University's authorized representative prior to beginning construction.

C. Prior to cutting into the soil, the Contractor shall locate all cables, conduits, sewer septic tanks, and other utilities as are commonly encountered underground and he shall take proper precautions not to damage or disturb such improvements. If a conflict exists between such obstacles and the proposed work, the Contractor shall promptly notify the Landscape Architect and University who will arrange for relocations. The Contractor will proceed in the same manner if a rock layer or any other such conditions are encountered.

D. The Contractor shall protect all existing utilities and features to remain on and adjacent to the project site during construction. Contractor shall repair, at his own cost; all damage resulting from his operations or negligence.

E. The Irrigation Contractor shall coordinate with the General Contractor for installation of required sleeving as shown on the plans prior to paving operations.

F. The Contractor shall verify and be familiar with the existing irrigation systems in areas adjacent to and within the Project area of work.

G. The Contractor shall protect all existing irrigation systems, in areas adjacent to and within the project area of work, from damage due to his operations.

H. Contractor shall notify University’s Representative if any existing system is temporarily shut off, capped or modified. Provide 48-hour notice, prior to turning off or modifying any existing irrigation system.

I. The Contractor shall repair or replace all existing irrigation systems, in areas adjacent to and within the project area of work, damaged by the construction of this project. Adjacent irrigation systems shall be made completely operational and provide complete coverage of the existing landscaped areas. All repairs shall be complete to the satisfaction of the University’s Representative.

J. The contractor shall provide bore holes under any existing pavement or paving encountered for the required lateral, mainline and low voltage control wire sleeving. Bore holes under 2 inches in diameter and smaller shall be made with a BulletMole® underground boring tool as manufactured by Dimension Tools, LLC (Contact telephone number (888)-650-5554 or at www.bulletmole.com). Bore holes larger than 2 inches in diameter shall be made with an approved mechanical boring tool. No air jacking or hydraulic boring of any kind shall be allowed.

1.6 INSPECTIONS

A. The Contractor shall permit the Landscape Architect and University's authorized representative to visit and inspect at all times any part of the work and shall provide safe access for such visits.

B. Where the specifications require work to be tested by the Contractor, it shall not be covered over until accepted by the Landscape Architect, University's authorized representative, and/or governing agencies. The Contractor shall be solely responsible for notifying the Landscape Architect, University, and governing agencies, a minimum of 48 hours in advance, where and when the work is ready for testing. Should any work be covered without testing or acceptance, it shall be, if so ordered, uncovered at the Contractor's expense.

C. Inspections will be required for the following at a minimum:
   1. Pre-construction meeting.
   2. System layout.
   3. Pressure test of irrigation mainline (Four hours at 125 PSI or 120% of static water pressure, whichever is greater.) Mainline pressure loss during test shall not exceed 2 PSI.
   4. Coverage test of irrigation system. Test shall be performed prior to any planting.
   5. Final inspection prior to start of maintenance period.
   6. Final acceptance prior to turnover.

D. Site observations and testing will not commence without the field record drawings as prepared by the Irrigation Contractor. Record drawings must be complete and up to date for each site visit.

E. Work that fails testing and is not accepted will be retested. Hourly rates and expenses of the Landscape Architect, University's authorized representative, and governing agencies for re-inspection or retesting will be paid by the Irrigation Contractor at no additional expense to University.

1.7 STORAGE AND HANDLING

A. Use all means necessary to protect irrigation system materials before, during, and after installation and to protect the installation work and materials of all other trades. In the event of damage, immediately make all repairs and replacements necessary to the acceptance of the Landscape Architect and University and at no additional cost to the University.

B. Exercise care in handling, loading, unloading, and storing plastic pipe and fittings under cover until ready to install. Transport plastic pipe only on a vehicle with a bed long enough to allow the pipe to lay flat to avoid undue bending and concentrated external load.

1.8 CLEANUP AND DISPOSAL

A. Dispose of waste, trash, and debris in accordance with applicable laws and ordinances and as prescribed by authorities having jurisdiction. Bury no such waste material and debris on the site. Burning of trash and debris will not be permitted. The Contractor shall remove and dispose of rubbish and debris generated by his work and workmen at frequent intervals or when ordered to do so by the University's authorized representative.

B. At the time of completion the entire site will be cleared of tools, equipment, rubbish and debris which shall be disposed of off-site in a legal disposal area.

1.9 TURNOVER ITEMS

A. Record Drawings:
1. Record accurately on one set of drawings all changes in the work constituting departures from the original contract drawings and the actual final installed locations of all required components as shown below.
2. The record drawings shall be prepared to the satisfaction of the University. Prior to final inspection of work, submit record drawings to the Landscape Architect or University's authorized representative.
3. All record drawings shall be prepared using AutoCAD 2016 drafting software and the original irrigation drawings as a base. No manual drafted record drawings shall be acceptable. The Contractor may obtain digital base files from the Landscape Architect or University's authorized representative.
4. If the Contractor is unable to provide the AutoCAD drafting necessary for the record drawings the irrigation designer does provide record drawing drafting as a separate service.
5. Prior to final inspection of work, submit record drawings plotted onto vellum sheets for review by the Landscape Architect or University's authorized representative. After acceptance by the Landscape Architect, City Inspector or University's authorized representative re-plot the record drawings onto reproducible Mylar sheets. The Contractor shall also provide record drawing information on a digital AutoCAD Release 2016 drawing file. All digital files shall be provided on a compact disc (CD) clearly marked with the project name, file descriptions and date.
    a. Record drawing information and dimensions shall be collected on a day-to-day basis during the installation of the pressure mainline to fully indicate all routing locations and pipe depths. Locations for all other irrigation equipment shall be collected prior to the final inspection of the work.
    b. Two dimensions from two permanent points of reference such as buildings, sidewalks, curbs, streetlights, hydrants, etc. shall be shown for each piece of irrigation equipment shown below. Where multiple components are installed with no reasonable reference point between the components, dimensioning may be made to the irrigation equipment. All irrigation symbols shall be clearly shown matching the irrigation legend for the drawings. All lettering on the record drawings shall be minimum 1/8 inch in size.
6. Show locations and depths of the following items:
    a. Point of connection (including water POC, backflow devices, master control valves, flow sensors, etc.)
    b. Routing of sprinkler pressure main lines (dimensions shown at a maximum of 100 feet along routing)
    c. Isolation valves
    d. Automatic remote control valves (indicate station number and size)
    e. Quick coupling valves
    f. Drip air relief and flush valves
    g. Routing of control wires where separate from irrigation mainline
    h. Irrigation controllers (indicate controller number and station count)
    i. Related equipment (as may be directed)

B. Controller Charts:

1. Provide one controller chart for each automatic controller. Chart shall show the area covered by the particular controller. The areas covered by the individual control valves shall be indicated using colored highlighter pens. A minimum of six individual colors shall be used for the controller chart unless less than six control valves are indicated.
2. Landscape Architect or University's authorized representative must approve record drawings before controller charts are prepared.
3. The chart is to be a reduced copy of the actual "record" drawing. In the event the controller sequence is not legible when the drawing is reduced, it shall be enlarged to a readable size.
4. When completed and approved, the chart shall be hermetically sealed between two pieces of plastic, each piece being a minimum 20 mils in thickness.

C. Operation and Maintenance Manuals:
1. Two individually bound copies of operation and maintenance manuals shall be delivered to the Landscape Architect or University's authorized representative at least 10 calendar days prior to final inspection. The manuals shall describe the material installed and the proper operation of the system.
2. Each complete, bound manual shall include the following information:
3. Index sheet stating Contractor's address and telephone number, duration of guarantee period, list of equipment including names and addresses of local manufacturer representatives.
   a. Operating and maintenance instructions for all equipment.
   b. Spare parts lists and related manufacturer information for all equipment.

D. Equipment:
1. Supply as a part of this contract the following items:
   a. Two (2) wrenches for disassembly and adjustment of each type of sprinkler head used in the irrigation system.
   b. Three 30-inch sprinkler keys for manual operation of control valves.
   c. Two keys for each automatic controller.
   d. Two quick coupler keys with a 1" bronze hose bib, bent nose type with hand wheel and two coupler lid keys.
   e. One valve box cover key or wrench.
   f. Six extra sprinkler heads of each size and type.
   g. For specified ball valves if required: One (1) 5-foot long valve handle, to fit the specified ball valves.
2. The above equipment shall be turned over to University's authorized representative at the final inspection.

1.10 COMPLETION

A. At the time of the pre-maintenance period inspection, the Landscape Architect, University's authorized representative, and governing agencies will inspect the work, and if not accepted, will prepare a list of items to be completed by the Contractor. Punch list to be checked off by contractor and submitted to Landscape Architect or University’s authorized representative prior to any follow-up meeting. This checked off list to indicate that all punch list items have been completed. At the time of the post-maintenance period or final inspection the work will

be re-inspected and final acceptance will be in writing by the Landscape Architect, University's authorized representative, and governing agencies.

B. The University's authorized representative shall have final authority on all portions of the work.

C. After the system has been completed, the Contractor shall instruct University's authorized representative in the operation and maintenance of the irrigation system and shall furnish a complete set of operating and maintenance instructions.

D. Any settling of trenches which may occur during the one-year period following acceptance shall be repaired to the University's satisfaction by the Contractor without any additional expense to the University. Repairs shall include the complete restoration of all damage to planting, paving or other improvements of any kind as a result of the work.

1.11 GUARANTEE

A. The entire sprinkler system, including all work done under this contract, shall be unconditionally guaranteed against all defects and fault of material and workmanship, including settling of backfilled areas below grade, for a period of one (1) year following the filing of the Notice of Completion.

B. Should any problem with the irrigation system be discovered within the guarantee period, it shall be corrected by the Contractor at no additional expense to University within ten (10) calendar days of receipt of written notice from University. When the nature of the repairs as determined by the University constitute an emergency (i.e. broken pressure line) the University may proceed to make repairs at the Contractor's expense. Any and all damages to existing improvement resulting either from faulty materials or workmanship, or from the necessary repairs to correct same, shall be repaired to the satisfaction of the University by the Contractor, all at no additional cost to the University.

C. Guarantee shall be submitted on Contractors own letterhead as follows:

GUARANTEE FOR SPRINKLER IRRIGATION SYSTEM

We hereby guarantee that the sprinkler irrigation system we have furnished and installed is free from defects in materials and workmanship, and the work has been completed in accordance with the drawings and specifications, ordinary wear and tear and unusual abuse, or neglect excepted. We agree to repair or replace any defective material during the period of one year from date of filing of the Notice of Completion and also to repair or replace any damage resulting from the repairing or replacing of such defects at no additional cost to the University. We shall make such repairs or replacements within 10 calendar days following written notification by the University. In the event of our failure to make such repairs or replacements within the time specified after receipt of written notice from University, we authorize the University to proceed to have said repairs or replacements made at our expense and we will pay the costs and charges therefore upon demand.

PART 2 - MATERIALS

2.1 SUMMARY

Use only new materials of the manufacturer, size and type shown on the drawings and specifications. Materials or equipment installed or furnished that do not meet Landscape Architect's, University's, or governing agencies standards will be rejected and shall be removed from the site at no expense to the University.

2.2 PIPE

A. Pressure supply line between the water meter and the backflow prevention device shall be type K copper, one size larger than backflow device.

B. Backflow prevention assemblies, and all other above grade assemblies, shall be constructed of threaded brass pipe and threaded brass fittings the same size as the backflow device, unless otherwise directed.

C. Pressure supply lines 2 inches in diameter and up to 3 inches in diameter downstream of backflow prevention unit shall be Class 315 solvent weld PVC. Piping shall conform to ASTM D2241.

D. Non-pressure lines 3/4 inch in diameter and larger downstream of the remote control valve shall be SCH 40 solvent weld PVC conforming to ASTM D1785.

E. Recycled water PVC pipe to be color-coded purple in color marked on two sides with recycled water warning statements “Caution-Recycled Water”. Recycled water piping must be accepted by the local recycled water governing agencies.

2.3 METAL PIPE AND FITTINGS

A. Brass pipe shall be 85 percent red brass, ANSI, IPS Standard 125 pounds, Schedule 40 screwed pipe.

B. Fittings shall be medium brass, screwed 125-pound class.

C. Copper pipe and fittings shall be Type "K" sweat soldered, or brazed as indicated on the drawings.

2.4 PLASTIC PIPE AND FITTINGS

A. Pipe shall be marked continuously with manufacturer's name, nominal pipe size, schedule or class, PVC type and grade, National Sanitation Foundation approval, Commercial Standards designation, and date of extrusion.

B. All plastic pipe shall be extruded of an improved PVC virgin pipe compound in accordance with ASTM D2672, ASTM D2241 or ASTM D1785.

C. All solvent weld PVC fittings shall be standard weight Schedule 40 (and Schedule 80 where specified on the irrigation detail sheet, all mainline fittings shall be Schedule 80 PVC) and shall be injection molded of an improved virgin PVC fitting compound. Slip PVC fittings shall be the "deep socket" bracketed type. Threaded plastic fittings shall be injection molded. All tees and ells shall be side gated. All fittings shall conform to ASTM D2464 and ASTM D2466.

D. All threaded nipples shall be standard weight Schedule 80 with molded threads and shall conform to ASTM D1785.

E. All solvent cementing of plastic pipe and fittings shall be a two-step process, using primer and solvent cement applied per the manufacturer's recommendations. Cement shall be of a fluid consistency, not gel-like or ropy. Solvent cementing shall be in conformance with ASTM D2564 and ASTM D2855.

F. When connection is plastic to metal, female adapters shall be hand tightened, plus one turn with a strap wrench. Joint compound shall be non-lead base Teflon paste, tape, or equal.

G. All pressure mainlines installed with solvent weld PVC fittings shall be installed with concrete thrust blocking at all directional changes in the mainline routing. Concrete thrust blocking shall not be required when ductile iron fittings and mechanical restraints are specified.

2.5 VALVES

A. Gate Valves:
   1. Gate valves shall be of the manufacturer, size, and type indicated on the drawings.
   2. All gate valves shall have a minimum working pressure of not less than 150 PSI and shall conform to AWWA standards.

B. Quick Coupler Valves:
   1. Quick coupler valves shall be of the manufacturer, size, and type indicated on the drawings.
   2. Quick coupler valves shall be brass with a wall thickness guaranteed to withstand normal working pressure of 150 psi without leakage. Valves shall have 1" female threads opening at base, with two-piece body. Valves to be operated only with a coupler key, designed for that purpose. Coupler key is inserted into valve and a positive, watertight connection shall be made between the coupler key and valve.
   3. Vinyl quick coupler cover for recycled water systems to be purple in color with the words "Warning-Recycled Water-Do Not Drink" permanently marked on lid.

C. Automatic Control Valves:
   1. Automatic control valves shall be of the manufacturer, size, and type indicated on the drawings.
   2. Automatic control valves shall be electrically operated.
   3. Provide Christy's valve ID tags for each remote control valve with valve number.

2.6 VALVE BOXES

A. Valve boxes shall be fabricated from a durable, weather-resistant plastic material resistant to sunlight and chemical action of soils.

B. The valve box cover for potable water irrigation systems shall be green in color, for recycled water systems shall be purple in color and secured with a hidden latch mechanism or bolts.

C. The cover and box shall be capable of sustaining a load of 1,500 pounds.

D. Valve box extensions shall be by the same manufacturer as the valve box.

E. The plastic irrigation valve box cover shall be an overlapping type.

F. Automatic control valve, master valve, and flow sensor boxes shall be 17"x11"x12" 'nominal' rectangular size. Valve box covers shall be marked "RCV" with the valve identification number, or "MV", "FS" "heat branded" onto the cover in 1-1/4 inch high letters / numbers.

G. Drip air relief valve boxes shall be 6" circular size. Valve box covers shall be marked with "ARV" "heat branded" onto the cover in 1-1/4 inch high letters.

H. Quick coupler and gate valve boxes shall be 10" circular size. Valve box covers shall be marked with "QCV" or "Gate" "heat branded" onto the cover in 1-1/4 inch high letters.

2.7 AUTOMATIC CONTROLLER

A. Automatic controller shall be of the manufacturer, size, and type indicated on the drawings.

B. Controller enclosure shall be of the manufacturer, size, and type indicated on the drawings.

C. Controller shall be grounded according to local codes using equipment of the manufacturer, size, and type indicated on the drawings; or as required by local codes and ordinances.

2.8 ELECTRICAL

A. All electrical equipment shall be NEMA Type 3, waterproofed for exterior installations.

B. All electrical work shall conform to local codes and ordinances.

2.9 LOW VOLTAGE CONTROL WIRING

A. Remote control wire shall be direct-burial AWG-UF type, size as indicated on the drawings, and in no case smaller than 14 gauge.

B. Remote control wire shall be 14 AWG solid core twisted pair, type as indicated on the irrigation drawings.

C. Connections shall of the manufacturer, size, and type indicated on the drawings.

D. Ground wires shall be green in color or bare copper and in no case smaller than 6 gauge.

2.10 IRRIGATION HEADS AND DRIP EMITTERS AND INLINE DRIP TUBING

A. Irrigation heads, drip emitters and inline drip tubing shall be of the manufacturer, size, type, with radius of throw, operating pressure, and discharge rate indicated on the drawings.

B. Irrigation heads, drip emitters and inline drip tubing shall be used as indicated on the drawings.

2.11 DRIP IRRIGATION EQUIPMENT

Drip tubing equipment such as flush valves, air relief valves, wye strainers and pressure regulators shall be of the manufacturer, size, and type indicated on the drawings.

2.12 MISCELLANEOUS EQUIPMENT

A. Landscape Fabric:
   1. Landscape fabric for valve box assemblies shall be 5.0- oz. weight woven polypropylene weed barrier. Landscape fabric shall have a burst strength of 225 PSI, a puncture strength of 60 lbs. and capable of water flow of 12 gallons per minute per square foot.
   2. Type: DeWitt Pro 5 Weed Barrier or approved equal.

B. Equipment such as flow sensors, rain sensors, flush valves, air relief valves, wye strainers, and master valves shall be of the manufacturer, size and type indicated on the drawings.

PART 3 - EXECUTION

3.1 SITE CONDITIONS

A. Inspections:

1. Prior to all work of this section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence.
2. Verify that irrigation system may be installed in strict accordance with all pertinent codes and regulations, the original design, the referenced standards, and the manufacturer's recommendations.

B. Discrepancies:
1. In the event of discrepancy, immediately notify the Landscape Architect or University's authorized representative.
2. Do not proceed with installation in areas of discrepancy until all discrepancies have been resolved.

C. Grades:
1. Before starting work, carefully check all grades to determine that work may safely proceed, keeping within the specified material depths with respect to finish grade.
2. Final grades shall be accepted by the Engineer before work on this section will be allowed to begin.

D. Field Measurements:
1. Make all necessary measurements in the field to ensure precise fit of items in accordance with the original design. Contractor shall coordinate the installation of all irrigation materials with all other work.
2. All scaled dimensions are approximate. The Contractor shall check and verify all size dimensions prior to proceeding with work under this section.
3. Exercise extreme care in excavating and working near existing utilities. Contractor shall be responsible for damages to utilities, which are caused by his operations or neglect.

E. Diagrammatic Intent:
The drawings are essentially diagrammatic. The size and location of equipment and fixtures are drawn to scale where possible. Provide offsets in piping and changes in equipment locations as necessary to conform with structures and to avoid obstructions or conflicts with other work at no additional expense to University.

F. Layout:
1. Prior to installation, the Contractor shall stake out all pressure supply lines, routing and location of sprinkler heads, valves, backflow preventer, and automatic controller.
2. Layout irrigation system and make minor adjustments required due to differences between site and drawings. Where piping is shown on drawings under paved areas, but running parallel and adjacent to planted areas, install the piping in the planted areas.

G. Water Supply:
Connections to, or the installation of, the water supply shall be at the locations shown on the drawings. Minor changes caused by actual site conditions shall be made at no additional expense to University.

H. Electrical Service:

1. Connections to the electrical supply shall be at the locations shown on the drawings. Minor changes caused by actual site conditions shall be made at no additional expense to University.
2. Contractor shall make electrical connections to the irrigation controller. Electrical power source to controller locations shall be provided by others.
3. Contractor shall make electrical connections to the irrigation controller. 230-volt single-phase electrical power source to pump assembly location shall be provided by others per NEC codes.

3.2 TRENCHING

A. Excavations shall be straight with vertical sides, even grade, and support pipe continuously on bottom of trench. Trenching excavation shall follow layout indicated on drawings to the depths below finished grade and as noted. Where lines occur under paved area, these dimensions shall be considered below subgrade.

B. Provide minimum cover of 24 inches on pressure supply lines 2 ½ inches and smaller.

C. Provide minimum cover of 24 inches for control wires within planters.

D. Provide minimum cover of 24 inches for control wires within sleeves below paving.

E. Provide minimum cover of 36 inches on pressure supply lines under vehicular travel ways.

F. Provide minimum cover of 12 inches for non-pressure lines.

G. Pipes installed in a common trench shall have a 6-inch minimum space between pipes.

3.3 THRUST BLOCKS

A. Thrust blocks must be constructed of Class “B” concrete.

B. Thrust blocks shall be poured against undisturbed site soil.

C. PVC fitting joints shall be kept free of concrete. Do not encase fitting in concrete.

D. Thrust blocking shall be sized to provide the minimum bearing areas as shown below. Bearing areas indicated have been calculated for Class 200 PVC pipe at a test pressure of 150 PSI in soil with 2,000 PSI bearing capacity. Increase thrust block sizing as necessary for varying soil conditions.
   1. Provide a minimum thrust block bearing area of 2.0 square feet on all bends (all degrees) and tees installed on pressure supply lines 4 inches and smaller.

3.4 BACKFILLING

A. Backfill material on all lines shall be the same as adjacent soil free of debris, litter, and rocks over 1/2 inches in diameter.

B. Backfill shall be tamped in 4-inch layers under the pipe and uniformly on both sides for the full width of the trench and the full length of the pipe. Backfill materials shall be sufficiently damp to permit thorough compaction, free of voids. Backfill shall be compacted to dry density equal to adjacent undisturbed soil and shall conform to adjacent grades.

C. Flooding in lieu of tamping is not allowed.

D. Under no circumstances shall truck wheels be used to compact backfill.

E. Provide sand backfill a minimum of 4 inches over and under all piping under paved areas.

3.5 PIPING

A. Piping under existing pavement may be installed by jacking, boring, or hydraulic driving. No hydraulic driving is permitted under asphalt pavement.

B. Cutting or breaking of existing pavement is not permitted.

C. Carefully inspect all pipe and fittings before installation, removing dirt, scale, burrs, and reaming. Install pipe with all markings up for visual inspection and verification.

D. Remove all dented and damaged pipe sections.

E. All lines shall have a minimum clearance of 4 inches from each other and 12 inches from lines of other trades.

F. Parallel lines shall not be installed directly over each other.

G. In solvent welding, use only the specified primer and solvent cement and make all joints in strict accordance with the manufacturer's recommended methods including wiping all excess solvent from each weld. Allow solvent welds at least 15 minutes setup time before moving or handling and 24 hours curing time before filling.

H. PVC pipe shall be installed in a manner, which will provide for expansion and contraction as recommended by the pipe manufacturer.

I. Center load all plastic pipe prior to pressure testing.

J. All threaded plastic-to-plastic connections shall be assembled using Teflon tape or Teflon paste.

K. For plastic-to-metal connections, work the metal connections first. Use a non-hardening pipe dope an all threaded plastic-to-metal connections, except where noted otherwise. All plastic-to-metal connections shall be made with plastic male adapters.

3.6 CONTROLLER

A. The exact location of the controller shall be approved by the Landscape Architect or University's authorized representative before installation. The electrical service shall be coordinated with this location.

B. The Irrigation Contractor shall be responsible for the final electrical hook up to the irrigation controller.

C. The irrigation system shall be programmed to operate during the periods of minimal use of the design area.

3.7 CONTROL WIRING

A. Low voltage control wiring shall occupy the same trench and shall be installed along the same route as the pressure supply lines whenever possible.

B. Where more than one wire is placed in a trench, the wiring shall be taped together in a bundle at intervals of 10 feet. Bundle shall be secured to the mainline with tape at intervals of 20 feet.

C. All connections shall be of an approved type and shall occur in a valve box. Provide an 18-inch service loop at each connection.

D. An expansion loop of 12 inches shall be provided at each wire connection and/or directional change, and one of 24 inches shall be provided at each remote control valve.

E. A continuous run of wire shall be used between a controller and each remote control valve. Under no circumstances shall splices be used without prior approval.

3.8 VALVES

A. Automatic control valves, quick coupler, and ball valves are to be installed in the approximate locations indicated on the drawings.

B. Valve shall be installed in shrub areas whenever possible.

C. Install all valves as indicated in the detail drawings.

D. Valves to be installed in valve boxes shall be installed one valve per box.

E. Provide valve ID tags for each remote control valve with valve number.

3.9 VALVE BOXES

A. Valve boxes shall be installed in shrub areas whenever possible.

B. Each valve box shall be installed on a foundation of 3/4 inch gravel backfill, 3 cubic feet minimum. Valve boxes shall be installed with their tops 1/2 inch above the surface of surrounding finish grade in lawn areas and 2 inches above finish grade in ground cover areas.

3.10 IRRIGATION HEADS DRIP EMITTERS AND INLINE DRIP TUBING

A. Irrigation heads, drip emitters and inline drip tubing shall be installed as indicated on the drawings.

B. Spacing of heads and inline drip tubing shall not exceed maximum indicated on the drawings.

C. Riser nipples shall be of the same size as the riser opening in the sprinkler body.

3.11 MISCELLANEOUS EQUIPMENT

A. Install all assemblies specified herein according to the respective detail drawings or specifications, using best standard practices.

B. Quick coupler valves shall be set approximately 18 inches from walks, curbs, header boards, or paved areas where applicable.

C. Install devices such as rain sensors, flush valves, and air relief valves, master valves and flow sensors as indicated on the drawings and as recommended by the manufacturer.

3.12 FLUSHING THE SYSTEM

A. Prior to installation of irrigation heads, the valves shall be opened and a full head of water used to flush out the lines and risers.

B. Irrigation heads shall be installed after flushing the system has been completed.

3.13 ADJUSTING THE SYSTEM

A. Contractor shall adjust valves, align heads, and check the coverage of each system prior to coverage test.

B. If it is determined by the Landscape Architect or University's authorized representative that additional adjustments or nozzle changes will be required to provide proper coverage, all necessary changes or adjustments shall be made prior to any planting.

C. The entire system shall be operating properly before any planting operations commence.

D. Automatic control valves are to be adjusted so that the irrigation heads, drip emitters and inline drip tubing operate at the pressure recommended by the manufacturer.

3.14 TESTING AND OBSERVATION

A. Do not allow or cause any of the work of this section to be covered up or enclosed until it has been observed, tested and accepted by the Landscape Architect, University, and governing agencies.

B. The Contractor shall be solely responsible for notifying the Landscape Architect, University, and governing agencies, a minimum of 48 hours in advance, where and when the work is ready for testing.

C. When the sprinkler system is completed, the Contractor shall perform a coverage test of each system in its entirety to determine if the water coverage for the planted areas is complete and adequate in the presence of the Landscape Architect.

D. The Contractor shall furnish all materials and perform all work required to correct any inadequacies of coverage due to deviations from the plans, or where the system has been willfully installed as indicated on the drawings when it is obviously inadequate, without bringing this to the attention of the Landscape Architect. This test shall be accepted by the Landscape Architect and accomplished before starting any planting.

E. Areas to be maintained for the formal maintenance period shall start maintenance at the same time, as directed by the Landscape Architect, University, and governing agencies. Partial areas will not be released into maintenance prior to completion of items listed in the pre-maintenance review. The maintenance period may not be phased.

F. If, after the maintenance review, the irrigation systems are not accepted by the Landscape Architect, the contractor shall reimburse the Architect for additional site visits, or additional time required to review work. All additional time will be billed at the Architect's hourly rate and will be paid for by the contractor at no additional cost to the University.

G. Final inspection will not commence without record drawings as prepared by the Irrigation Contractor.

3.15 MAINTENANCE

During the maintenance period the Contractor shall adjust and maintain the irrigation system in a fully operational condition providing complete irrigation coverage to all intended plantings.

3.16 COMPLETION CLEANING

Clean up shall be made as each portion of the work progresses. Refuse and excess dirt shall be removed from the site, all walks and paving shall be swept, and any damage sustained on the work of others shall be repaired to original conditions.

END OF SECTION

SECTION 32 8410 - UV DISINFECTION SYSTEM

PART 1 - GENERAL

1.01 DESCRIPTION

This section includes materials, equipment, and appurtenances for a closed pressure vessel, medium pressure, high-intensity UV disinfection system with control equipment and accessories.

1.02 RELATED WORK SPECIFIED ELSEWHERE

A. Motor Control : 262419

1.03 SUBMITTALS

A. Submit shop drawings in accordance with the General Provisions

B. Submit electrical and controls shop drawings for approval

C. Submit dimensional drawings. Show materials of construction by ASTM reference and grade. Show coatings. Show design of pressure vessel and accessories.

D. Submit installation requirements including support requirements.

E. Submit hydraulic calculations demonstrating compliance with the specified hydraulic characteristics.

F. Submit head loss calculations.

G. Submit documentation that equipment provided has CSA or UL rating.

H. Submit a bioassay calculation as well as an independently produced bioassay report on the proposed UV equipment. The bioassay calculations shall demonstrate that the proposed UV system design will deliver the intended dose.

I. Submit documentation of previous performance by submitting the following information and samples:

1. At least three installations in California that have been in operation for at least two years with the same lamp and ballast configuration proposed for this project. The installation must be similar disinfecting at least 50 gpm flow. Submit the following information for each installation:

    a. Name of facility.

b. Owner.

c. Contact name and title.

d. Telephone number.

e. Average flow capacity of facility.

f. Peak design flow capacity of facility.

g. Design criteria.

h. System start-up date.

J. Submit a letter from the California Department of Public Health certifying the proposed system meets the Title 22 requirements for RW irrigation applications along with conditions and supporting documentation.

K. Submit a statement by the equipment manufacturer listing any deviations or exceptions taken to these specifications. Include specification reference and proposed alternative with reason stated for exception.

L. UV unit shall operation shall be controlled by the irrigation pump operation. UV unit will work only when the irrigation pump is working.

M. Submit operation and maintenance manuals

N. Submit required certification.

1.04 MANUFACTURER'S EXPERIENCE CRITERIA

A. If the UV disinfection system manufacturer's standard equipment does not meet these specifications, the manufacturer shall modify their standard design to meet the minimum values specified for dimensions, design, and intent.

B. Manufacturers shall show evidence of quality assurance in manufacturing and supplying equipment essential in details to the equipment herein specified. This assurance shall be demonstrated by certification to the quality system requirements of ISO 9001.

1.05 PERFORMANCE REQUIREMENTS

A. At the time of bid, the UV manufacturer shall provide a validation certificate, to demonstrate that it has obtained third-party validation that covers the full range of the specified design and operating conditions (flow rate and UVT). The selected UV manufacturer shall provide the validation report as part of the submittal package to substantiate the dose delivery (RED).

B. The system shall be able to continue providing disinfection while the automatic cleaning system is in operation.

C. The system shall be able to continue providing disinfection while the UV intensity sensor calibration is being checked.

1.06 MANUFACTURER'S SERVICES

Provide equipment manufacturer's services at the jobsite for the minimum labor days listed below, travel time excluded:

A. One labor days to check the installation and advise during start-up, testing, and adjustment of the equipment and instruct the Owner's personnel in the operation and maintenance of the equipment.

B. PART 2 - MATERIALS

2.01 MANUFACTURER

The UV disinfection system shall be a UVSwift® system as manufactured by Trojan Technologies, Inc., or equal.

2.02 UV REACTOR

A. The UV reactor shall be of welded Type 316L stainless steel construction. The UV reactor shall be pickled, passivated, and bead blasted for uniform external finish.

B. Prior to shipment from the factory, the UV reactor shall be fully assembled and hydrostatically tested to 1.5 times the design pressure for at least 10 minutes without leakage.

C. Provide each UV reactor with ASME B16.5, Class 150 flanged inlet/outlet connections.

D. Each UV reactor shall consist of high-intensity medium pressure UV lamps arranged horizontally and perpendicular to the direction of flow. Each lamp shall be enclosed in an individual quartz sleeve, one end of which shall be closed and the other sealed with compressed O-rings. Each quartz sleeve shall be independently sealed within the reactor.

E. Design the UV reactor such that operating personnel can change the lamps without draining the reactor. Provide the UV reactor with access ports for easy access to the quartz sleeves and cleaning system.

F. Design piping so that the reactor will be full of water at all times. Air trapped in the reactor shall result in reactor shut down to avoid overheating.

G. Install the UV reactor either vertically or horizontally; however, lamps must be installed horizontally.

H. The UV lamps shall reach maximum UV output within three minutes (defined as the warm-up period). Cooling water shall not be required for reactor start-up as long as the minimum in-line flow rates are initiated within the allowable “zero flow” operation time.

2.03 UV LAMPS

A. Lamps shall be high-intensity medium pressure type with a 24-inch arc length and a maximum power input of 9.1 kW. The lamps shall be operated by variable output electronic ballasts with 1% power increments, from 30% to 100% of full rated output.

B. The filament shall be sufficiently rugged to withstand shock and vibration. The lamp bases shall be resistant to UV and ozone.

2.04 UV LAMP SLEEVES

Manufacture the UV lamp sleeves from Type O22, fully annealed, clear fused quartz tubing. Lamp sleeves shall be domed at one end. The open end of the lamp sleeve shall be sealed by means of an O-ring and Type 316 stainless steel compression plate.

2.05 UV INTENSITY SENSOR(S)

A. Locate the UV intensity sensor(s) inside the reactor within protective quartz sleeves. Provide one sensor per lamp.

B. Sensor(s) shall incorporate SiC diodes and provide NIST-traceable measurement with a total absolute uncertainty of 15% or less at an 80% confidence level. Sensor(s) shall meet the requirements of the EPA 815-R-06-007. Sensor(s) shall filter out wavelengths below 240 nm and have a spectral response peaking between 250 nm and 280 nm with less than 10% coming from wavelengths greater than 300 nm.

C. The complete sensor assembly and the internal circuit board containing the diode shall each be serialized.

2.06 BALLASTS

A. Each ballast shall supply power to one lamp only. Ballasts shall be of a high frequency output, fully electronic design with a minimum efficiency of 95% at full load and a power factor of 99% or better. Ballasts shall have a variable operation range of 30% to 100% of full rated output and be adjustable in 1% increments.

B. The maximum allowable total current harmonic distortion (current THD) shall not exceed 10% at the maximum power level.

C. Ballasts shall have a mean design life expectancy of at least 10 years.

2.07 CONTROL POWER PANEL

A. Power distribution and control for each UV reactor shall be through the associated control power panel. Design the control power panel to operate with the specified electrical supply. The control power panel shall house the power supplies and control hardware. The control power panel enclosure shall be epoxy painted carbon steel, NEMA Type 12, ventilated, with forced-air cooling.

B. Signal wiring interfacing the UV reactor with the control power panel shall be as shown in the drawings.

C. Provide each control power panel with a lockable disconnect handle that shall shut down the reactor/cabinet power when the cabinet door is opened.

2.08 CONTROL AND INSTRUMENTATION

A. General:

1. Provide one control power panel for each UV reactor. Control hardware and software for a given reactor shall be contained within the associated control power panel. Each UV reactor shall be controlled independently.

2. Each UV reactor shall be controlled by an Allen Bradley Compact Logix L35 which shall continuously monitor and control the UV reactor's functions. The electronics system, an input flow signal (supplied by others), and the UV sensor(s) shall provide the PLC with the necessary indications of system parameters.

3. Control of multiple reactors shall be accomplished through SCADA.

B. Operator Interface: Complete control and monitoring of each reactor shall be accomplished through the operator interface located on the control power panel. The operator interface shall be menu driven and shall display the following system information when prompted: reactor status, individual lamp status, lamp operating hours, RED (dose), UV intensity, power level, alarms, and alarm history. The most recent alarms shall be displayed on the operator interface when prompted and recorded by alarm type, date, and time of occurrence and date and time of correction. The operator interface shall be the Allen Bradley Panelview+ 700.

C. Remote Monitoring/Control:

1. The communication between the UV reactors and the plant control center shall be through the following protocol:

Allen Bradley – Ethernet

2. Each reactor shall be capable of being placed in either local or remote mode.

3. Provide each system with the following interface hardwired I/O:

a. Discrete input for reactor on/off control from remote location.

b. Discrete output indicating critical alarm.

c. Discrete output indicating major alarm.

d. Discrete output indicating minor alarm.

e. Discrete output indicating system ready.

f. Discrete on/off status.

g. 4- to 20-mA flow signal analog input.

h. 4- to 20-mA UV intensity analog output.

2.09 DOSE PACING

A. Provide a dose-pacing system to modulate the lamp power levels based on the flow rate, UV sensor signal(s), and UV transmission values according to the validation report.

B. The system shall be dose paced such that as the flow rate, water quality, and lamp conditions change, the UV RED (dose) target shall be achieved while conserving power.

2.10 SAFETY FEATURES

A. Provide each UV reactor with a temperature switch to prevent the reactor from overheating. The temperature switch shall be wired to the control power panel and shall shut down the reactor and initiate a critical alarm condition when activated.

B. Provide each UV reactor with a water level sensor to prevent operation of the UV lamps in air. The level sensor shall be wired to the control power panel and shall shut down the reactor and initiate a critical alarm condition if low water level is detected.

C. Provide each UV reactor with a cover to protect the lamp’s electrical connections. Provide the protective cover with a switch to disconnect power to the lamps when the cover is removed.

D. Provide each UV reactor with a pilot light indicating when the reactor and lamps are on.

E. Provide each UV reactor with a reactor-mounted junction box that provides separate access to high- and low-voltage circuits.

F. Provide each control power panel and reactor with an emergency stop button to shut off power to the lamps.

2.11 ON-LINE UV TRANSMISSION MONITOR

A. Provide an on-line UV transmission monitor to automatically monitor the UV transmission of the process stream (measured at 254 nm, 1-cm path length). The UV transmission monitor shall include a UV lamp, UV sensor, drive system, system controller, and operator interface. UV transmission range shall be 70% to 100%.

B. Power supply to the monitoring system shall be 120 volts, single phase, 60 Hz.

C. The operator interface shall display the system status and allow for manual on/off system control. Locate the operator interface system on the door of the enclosure. Enclosure shall be stainless steel, Type 4X.

D. Design the monitoring system to accommodate flow rates of 0.1 gpm (0.4 l/min.) to 0.5 gpm (2.0 l/min) at a maximum inlet pressure of 30 psi. Inlet/outlet fittings shall be 3/8-inch female for connection to process stream and drain. Supply tubing/piping shall be a maximum of 1/4-inch internal diameter. Provide flow regulators and/or pressure reducers to maintain specified minimum and maximum values.

E. Provide a 4- to 20-mA output for data transmission to remote devices. Provide a discrete common alarm for remote indication of alarm condition.

F. Monitoring panel shall be UL, CSA, and CE approved.

G. The process stream temperature range shall be 36°F to 104°F (2°C to 40°C).

H. The expected life of the lamp shall be 9,000 hours.

2.12 CLEANING SYSTEM

A. Provide each UV reactor with an automatic on-line sleeve cleaning system. If an automatic chemical/mechanical cleaning system is not furnished, the Contractor shall provide an additional reactor and related equipment to automatically clean the lamps while maintaining full flow capacity. The cleaning system shall be driven by a hermetically sealed magnetically coupled hydraulic drive. Design the drive system such that hydraulic connections are outside the UV reactor. The hydraulic fluid used shall be biodegradable.

B. The cleaning system shall provide both mechanical and chemical cleaning abilities for both the lamp sleeves and the UV sensor sleeves/windows, complete with an automatically initiated and controlled cleaning cycle. The cleaning system shall be fully operational while still providing disinfection.

C. Cleaning cycle intervals shall be field adjustable via the operator interface. Manual cleaning system control shall also be through the operator interface.

D. Provide the system with the cleaning reagents and solutions required for initial equipment testing and equipment start-up. Cleaning reagents and solutions used shall be NSF 60 approved.

PART 3 - EXECUTION

3.01 SERVICE CONDITIONS

Provide equipment which shall disinfect an effluent with the following characteristics:

UV Design Flow	20 gpm
Design Pressure	75 psi

3.02 INSTALLATION

A. Connect piping to the UV vessels after grouting, anchor bolt installation and attachment, and final field welding have been completed.

B. Do not install unsupported piping and conduits on the pressure vessels. Install piping and conduit hangers and supports as shown in the drawings to minimize piping-applied strain on the equipment.

C. Ensure that fluid passages of pressure vessels are free from dirt, foreign objects, and other contamination. Install temporary blinds at the flanges to prevent dirt and debris from entering them during installation. Plug threaded openings with a threaded pipe plug to prevent contamination. Do not use plastic piping plugs.

D. Do not use duct tape and plastic for covering the ends of pipe flanges. Use a solid metal cover with rubber gasket to cover flanged openings during installation. These metal covers shall remain in place until the piping is connected to the equipment.

3.03 FIELD TESTING

A. Perform field testing for 10 days on the installed system. Prepare and submit a report containing the following data:

1. Plant flow for each 24-hour period.

2. Peak hourly flow in the 24-hour testing period.

3. UV dosage produced.

4. System energy consumption for each 24-hour period.

5. Effluent coliform count for each 24-hour period.

END OF SECTION 32 84 10

SECTION 32 8420 - IRRIGATION PUMP

PART 1 - GENERAL

1.01 DESCRIPTION

This section includes materials and installation for the stainless steel vertical well type submersible pump

Submittals

A. Submit shop drawings in accordance with the General Conditions

B. Submit dimensional drawings.

C. Submit manufacturer's catalog data and detail drawings showing all pump parts and described by material of construction, specification (such as AISI, ASTM, SAE, or CDA), and grade or type. Show linings and coatings.

D. Submit pump curves on which the specified operating points are marked. Show efficiency and brake horsepower for the selected pump curve. Show required submergence and NPSH.

PART 2 - MATERIALS

2.01 PUMP DESIGN

A. Equipment for the pumps, including motors, float switches, shall be provided as a complete unit by the pump manufacturer.

B. Impellers shall be dynamically balanced.

2.02 MATERIALS OF CONSTRUCTION

A. Pumps shall have the following materials of construction:

Component	Material	Specification
Motor housing, volute, head, shell, and mounting bracket	Stainless Steel	AISI Type 316
Shaft	Stainless steel	AISI Type 303 or 416
Shaft column	Stainless Steel	AISI Type 303 or 416
Impeller	Stainless Steel	AISI Type 316
Impeller cover	Stainless Steel	AISI Type 316
Exposed cap screws, nuts, and bolts	Stainless steel	AISI Type 316
Strainer	Stainless steel	AISI Type 316

2.03 SUBMERSIBLE PUMP

A. Submersible pump shall be stainless steel capable of passing a 1/2-inch sphere, with automatic start/stop operation, based on water level in the sump. Provide oil-filled motor chamber, internal mechanical seal, internal thermal overload protection, and float switch control.

B. Pump design point shall be 20 GPM and 75 PSI head.

C. Manufacturers and Models: Wayne, Goulds, Grundfos equal.

2.04 CONTROLS

A. Provide electrical panels per Section 26-2419

B. Provide NEMA 4X control panel with alternator circuit, UL listed. Provide HOA switch and run light, with audible alarm and test switch. Provide motor contactor and circuit breakers. Provide output contacts for the specified level alarms.

C. Provide float-actuated switches to start and stop the pumps.

3.01 SHIPMENT AND STORAGE

A. Prepare equipment for shipment including blocking of the rotor when necessary. Identify blocked rotors by means of corrosion-resistant tags attached with stainless steel wire.

B. Identify the equipment with item and serial numbers. In addition, ship crated equipment with duplicate packing lists, one inside and one on the outside of the shipping container.

C. Pack and ship one copy of the manufacturer’s standard installation instructions with the equipment. Provide the instructions necessary to preserve the integrity of the storage preparation after the equipment arrives at the jobsite and before start-up.

D. Coat exterior machined surfaces with a rust preventative.

E. The interior of the equipment shall be clean and free from scale, welding spatter, and foreign objects.

F. Provide flanged openings with metal closures at least 3/16-inch thick, with elastomer gaskets and at least four full-diameter bolts. Provide closures at the place of pump manufacture prior to shipping. For studded openings, use all the nuts needed for the intended service to secure closures.

G. Provide threaded openings with steel caps or solid-shank steel plugs. Do not use nonmetallic (such as plastic) plugs or caps. Provide caps or plugs at the place of pump manufacture prior to shipping.

END OF SECTION 32 84 20

SECTION 32 91 13 — PLANTING SOIL PREPARATION AND PLANTING SOIL MIX DESIGNS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. In-Place Amendment of Planting Area Soil Surfaces.
2. Plant Pit Backfill Mix.

B. Related Sections:

1. Section 32 01 90, Landscape Maintenance Period.
2. Section 32 84 00, Planting Irrigation.
3. Section 32 91 19, Planting Area Finish Grading.
4. Section 32 93 00, Planting Materials.

1.2 REFERENCES

A. ASTM — ASTM International: D 1557 — Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort.

B. USDA — United States Department of Agriculture:

1. Soil Texture Triangle Classification.
2. Handbook No. 60.

1.3 DEFINITIONS

A. Acceptance, Acceptable, or Accepted: Acceptance by the Landscape Architect in writing.

B. Excessive Compaction: Planting area soil compaction greater than 75 percent of maximum dry density as determined by ASTM D 1557.

C. Horticultural Consultant: Horticultural consultant employed by Landscape Architect for Project.

D. Landscape Architect: Landscape Architect employed by the Owner to provide professional landscape architectural services for the Project.

E. Drip Line: Line straight down from outermost limit of tree canopy branching.

1.4 SYSTEM DESCRIPTION

A. Backfill Mixes and Amended Planting Area Surface Soil: Uncompacted on-site soil with amendments incorporated uniformly to provide a well-draining, fertile medium for vigorous plant root growth.

B. Soil Mixes: Uncompacted, imported topsoil with amendment incorporated uniformly to provide a well-draining, fertile medium for vigorous plant root growth.

1.5 SUBMITTALS

A. General Requirements: Refer to Division 1.

B. Product Data:

1. Chemical Amendments.
2. Organic Soil Conditioner.
3. Fertilizers.
4. Polymeric Soil Conditioner.
5. Organic Amendment.
6. Coco Peat.

C. Test Reports:

1. Laboratory soil test reports indicating specified characteristics of soil, with test date no more than 2 weeks old.
2. Laboratory soil test reports.
3. Laboratory test report of organic amendment indicating specified characteristics of organic amendment, with test date no more than 2 weeks old.
4. Sieve analysis of sand for sodded lawn planting mix with test date no more than 2 weeks old.
5. Sieve analysis of sand for palm tree plant pit backfill mix.

D. Purchase Documentation:

1. Fertilizer Purchase and Delivery Invoices.
2. Chemical Amendment Purchase and Delivery Invoices.

1.6 QUALITY ASSURANCE

A. Requirements of Regulatory Agencies:

1. Meet requirements of applicable laws, codes, and regulations required by authorities having jurisdiction over Work.
2. Provide for inspections and permits required by federal, state and local authorities in furnishing, transporting, and installing materials.

B. Agronomic Testing Agency:

1. Send samples to Wallace Laboratories, 365 Coral Circle, El Segundo, CA 90245, and employ the laboratory to test the soil mixes and import soils.

C. Settlement Mock-Up:

1. Mock-up areas of backfill mix at the specified depths and apply irrigation to induce settlement, to help determine the amount of settlement which will be caused by irrigation and rain.
2. Use settlement observed in mock-up to help determine allowances to make for settlement as required by this Section and other Sections.

1.7 SITE CONDITIONS

A. Environmental Requirements:

1. Do not work soil when moisture content is so great that excessive compaction will occur, nor when it is so dry that dust will form in the air or that clods will not break readily.
2. Apply water, if necessary, to bring soil to an optimum moisture content for tilling.
3. Do not work soil when muddy or frozen.
4. Do not apply chemicals if wind conditions will cause hazardous drift to people or property.

B. Existing Conditions:

1. Prior to Work commencement review and clearly mark in field horizontal and vertical locations of existing public underground utilities and structures with respective utility companies.
2. Prior to Work commencement review and clearly mark in field horizontal and vertical locations of existing private underground utilities and structures with the Owner's Designated Representative.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS AND SUPPLIERS

A. Fertilizers:

1. Roots, Inc., Independence, Mo.; (800) 342-6173; www.rootsinc.com.
2. Vermi Technology Unlimited, Orange Lake, Fla; (352) 591-1111; www.vermitechnology.com.
3. Kelly's Green Team, Newark, Mo.; (660) 627-5500; www.kellysgreenteam.com.

2.2 MATERIALS

A. Import Top Soil: Import top soil shall be classified as sandy loam, and must conform to the following:

1. Particle size

Class	Particle Size Range	Maximum %	Minimum %
Coarse sand	0.5 - 2.0mm	15	0
Silt plus clay	<0.05mm	50	15
Other classes:			
Gravel	2-13mm	15	0
Rock	1/2 - 1”	5% by volume with none > 1”	

2. Chemistry

a. Salinity: Saturation Extract Conductivity (ECe) - less than 3.0 sD/m @ 25° C

b. Sodium: Sodium Absorption Ratio (SAR) - less than 6.0

c. Boron: Saturation Extract Concentration - Less than 1.0 ppm

d. Reaction: pH of Saturated Paste - 5.5-7.8 without high lime content

3. Soil shall contain sufficient quantities of available nitrogen, phosphorus, potassium, calcium and magnesium to support normal plant grown. In the even t of nutrient inadequacies, provisions shall be made to add required material prior to planting.
4. In order to insure conformance, samples of the import soil shall be submitted to an approved laboratory for analysis prior to and following backfilling.
5. Obtain imported topsoil from approved local sources.

A. Organic Amendment:

1. Humus material shall have an acid-soluble ash content of no less than 5 percent and no more than 20 percent.
2. The pH of the material shall be between 6 and 7.5.
3. The salt content shall be less than 10 millimho/cm at 25 degrees C on a saturated paste extract.
4. Boron content of the saturated extract shall be less than 1.0 part per million
5. Silicon content (acid-insoluble ash) shall be less than 50 percent.
6. Calcium carbonate shall not be present if the amendment is to be applied on alkaline soils.
7. Types of acceptable products are composts, manures, mushroom composts, straw, alfalfa, peat mosses, etc., low in salts, low in heavy metals, free from weed seeds, free of pathogens and other deleterious materials.
8. Composted wood products are conditionally acceptable (stable humus must be present). Wood-based products are not acceptable which are based on redwood or cedar.

9. Sludge-based materials are not acceptable.
10. Carbon-nitrogen ratio shall be less than 25:1.
11. The compost shall be aerobic without malodorous presence of decomposition products.
12. The maximum particle size shall be 0.5-inch and 80 percent or more shall pass a No. 4 screen for mixing with soil. The maximum particle size for applying via hydroseeding machine shall be 0.25-inch.
13. Maximum total permissible pollutant concentrations in organic amendment in parts per million on a dry-weight basis:

Arsenic:	20
Cadmium:	15
Chromium:	300
Cobalt:	50
Copper:	150
Lead:	200
Mercury:	10
Molybdenum:	20
Nickel:	100
Selenium:	50
Silver:	10
Vanadium:	400
Zinc:	250

Higher amounts of salinity or boron may be present if the soils are to be pre-leached to reduce the excess or if the plant species will tolerate the salinity and/or boron.

14. From 45- to 65-percent moisture measured via wet-weight basis.
15. Free of stones and debris.
16. Tests 5 to 8 on Solvita Test.

B. Fertilizers:

1. Roots “M-Roots” with mycorrhiza 3-3-3.
2. Kelley’s Green Team Gypsum Fairway Pellets, 76-percent calcium sulphate dehydrate, 17-percent calcium; 14-percent sulphur, derived from mined gypsum, less than 1-percent moisture content.
3. Vermi Technology pure black worm castings produced without waste products; free of larva, sticks, stones, and debris; 48 percent by weight minimum organic content per ASTM D2974; complying with the following:

Item	*Criteria*
Total Ash	48% to 52%
pH:	5.0 to 7.5
% Moisture (wet wt. basis:	30% to 50%
Solvita Rating:	> 8

C. Potential Chemical Amendments Required by Accepted Amendment Program and Backfill Mix:

1. Ground Limestone: Agricultural limestone containing not less than 85 percent of total carbonate, ground to such fineness that 50 percent will pass No. l sieve and 90 percent will pass No. 20 sieve.
2. Dolomite Lime: Agricultural grade mineral soil conditioner containing 35 percent minimum magnesium carbonate and 49 percent minimum calcium carbonate, 100 percent passing No. 65 sieve.
3. Gypsum: Agricultural grade product containing 80 percent minimum calcium sulfate.
4. Iron Sulfate (Ferric or Ferrous): Supplied by a commercial fertilizer supplier, containing 20 to 30 percent iron and 35 percent to 40 percent sulfur.
5. Sulfate of Potash: Agricultural grade containing 50 to 53 percent of water-soluble potash.
6. Single Superphosphate: Commercial product containing 20 to 25 percent available phosphoric acid.
7. Ammonium Sulfate: Commercial product containing approximately 21 percent ammonia.
8. Ammonium Nitrate: Commercial product containing approximately 34 percent ammonia.
9. Calcium Nitrate: Agricultural grade containing 15-1/2 percent nitrogen.
10. Urea Formaldehyde: Granular commercial product containing 38 percent nitrogen.
11. IBDU (Iso Butyldiene Diurea): Commercial product containing 31 percent nitrogen.
12. Soil Sulfur: Agricultural grade sulfur containing a minimum of 96 percent sulfur.
13. Silicic Acid Calcium: Commercial grade.

D. Polymeric Soil Conditioner: Twenty to 25 percent anionic polyacrylamide, water-soluble, linear, 7,500,000-dalton, soil aggregating polymer containing a minimum of 20,000 soil binding sites proven to be efficacious.

2.3 MIXES

A. Preliminary Plant Pit Backfill and Shrub Import Profile Mix for interior courtyard to Establish Bid (actual quantities contingent on amendment program determined by the Landscape Architect and Horticultural Consultant based on soil test report):

1. Content:
   a. 8 cubic feet of organic amendment per cubic yard of dry import top soil.
   b. 1-pound dry polymeric soil conditioner per cubic yard of dry soil.
   c. 2 pounds Iron Sulfate per cubic yard of dry soil.
   d. 1-pound granular Micromax per cubic yard of dry soil.
   e. 1/2-pound Triple Superphosphate 0-45-0 per cubic yard of dry soil.
   f. 1-pound of Nitroform 38-0-0 per cubic yard dry soil.
   g. 1-pound of Potassium Sulfate 0-0-50 per cubic yard dry soil.

2. Mixing:
   a. Blend materials uniformly with 50 percent dry existing soil excavated from plant pits and 50 percent dry imported topsoil in bulk by turning over materials with an end loader.

b. Blend materials in a clean area which will not contaminate mix.
c. Do not mix in planting areas.

B. Final Plant Pit Backfill Mix for Installation: Backfill mixes determined by the Landscape Architect and Horticultural Consultant upon review of the soil test report.

C. Preliminary In-Place Amendment of Planting Area Surfaces to Establish Bid (actual quantities contingent on amendment program determined by the Landscape Architect and Horticultural Consultant based on soil test report):

D. Final In-Place Amendment of Planting Area Surfaces: Determined by the Landscape Architect and Horticultural Consultant upon review of the soil test report.

2.4 SOURCE QUALITY CONTROL

A. Organic Amendment: Employ independent soil testing laboratory to test organic amendment for specified properties and submit test results.

PART 3 EXECUTION

3.1 EXAMINATION

A. General: Examine site and verify that conditions are suitable to receive Work and that no defects or errors are present which would cause defective installation of products or cause latent defects in workmanship and function.

B. Subgrade: Verify that the subgrade is at the correct elevation and slope.

C. Underground Utilities and Structures: Verify that the locations of utilities, structures and other underground items have been clearly marked.

D. Notification of Unsuitable Conditions: Before proceeding with Work, notify the Owner's Designated Representative in writing of unsuitable conditions and conflicts.

E. Soil Tests to Determine Final Plant Pit Backfill Mix, Planting Area Soil Surface Amendment Programs, and Maintenance Period Fertilization Programs:

1. Take fifteen 1-pound composite representative soil samples from locations determined by the Architect/Engineer in the field.
2. Send samples to Wallace Laboratories, 365 Coral Circle, El Segundo, CA 90245, and employ the laboratory to test the soil samples for the following:
   a. pH measurement in the saturation extract per USDA Handbook No. 60, Method 21.
   b. Electrical conductivity of the saturation extract per USDA Handbook No. 60, Method 2.
   c. Sodium absorption ratio of the saturation extract per USDA Handbook No. 60, Method 20b.

d. Determination of boron, calcium, copper, iron, magnesium, manganese, molybdenum, phosphorous, potassium, sodium, sulfur, and zinc, via the following test methods: Mehlich Number 3, Bray P1, Bray P2, Olsen P, DTPA, ammonium acetate, ammonium bicarbonate DTPA, and hot water extract from boron.
e. Analysis of saturation extract for calcium, magnesium, sodium, boron, chloride, phosphorous, nitrate, and sulfate.
f. Measurement of following trace metals by the DTPA extract: aluminum, arsenic, cadmium, chromium, cobalt, lead, lithium, nickel, selenium, silver, strontium, tin, and vanadium.
g. Presence of calcium carbonate and magnesium carbonate.
h. Estimate of soil texture per commonly used methods.
i. Estimate of organic matter content per commonly used methods.
j. Exchangeable Ammonium Cation.
k. Base Saturation.
l. Cation Exchange Capacity.
m. Carbonates Determination.
n. Soil Bulk Density.
o. Water Infiltration Rate per USDA Handbook No. 60, Method 34b.

3. At least 30 days prior to commencement of soil preparation Work, submit to the Architect/Engineer and Horticultural Consultant the laboratory's written soil test report including the laboratory's soil test data; the laboratory's interpretation of nutritional deficiencies, excesses, and potential toxicities; the laboratory's amendment recommendations; and the laboratory's maintenance recommendations.
4. The Architect/Engineer and Horticultural Consultant will determine the final amendment and maintenance period fertilization programs based on the soil test report which may differ from the soil test report amendment recommendations.

F. Soil Tests for Parasitic Nematodes:

1. Test soils which have been used for agricultural purposes within the prior 12 months for parasitic nematodes.
2. Soil will be acceptable if the parasitic nematode population is less than 200 per 50 cubic centimeters of soil.
3. Do not artificially dry soil prior to testing.
4. Submit written test report to the Architect/Engineer and Horticultural Consultant.

G. Soil Tests for Herbicide Contamination:

1. Perform a radish/rye grass growth trial on soils suspected of herbicide contamination.
2. Submit written test report to the Architect/Engineer and Horticultural Consultant.

3.2 WEED ERADICATION PROGRAM OF EXISTING VEGETATION AT PLANTING AREAS

A. Six weeks prior to planting and before tilling or amending planting areas, spray existing vegetation with 3 percent Glyphosate solution and repeat treatment 3 weeks later to kill re-emerging vegetation.

3.3 PREPARATION OF IN-PLACE TOPSOIL AREAS FOR CONTAMINATED SOILS AREAS AS DETERMINED BY TESTING

A. Protection:

1. Use every possible precaution to prevent damage to existing conditions to remain such as structures, utilities, irrigation systems, plant materials and paving on or adjacent to the site of the Work.
2. Use every possible precaution to prevent excessive compaction of planting area soil within or adjacent to the areas of Work.
3. Provide barricades, fences or other barriers to protect existing conditions to remain from damage and excessive compaction during construction.
4. Do not store materials or equipment, permit burning, or operate or park equipment under the branches of existing plants to remain.
5. Submit written notification of conditions damaged during construction to the Owner's Designated Representative immediately.

B. Tilling: After ripping, uniformly till soil surface to a 6 to 8-inch depth using a rototiller or other accepted tilling implement.

C. Cleaning Soil Surface: After tilling soil surface, clear soil surface of surface stones larger than 1 inch, debris, roots, branches, sticks, contaminated soil, and other extraneous materials.

3.4 PREPARATION OF SUBGRADE TO RECEIVE IMPORTED SOIL MIXES

A. Protection:

1. Use every possible precaution to prevent damage to existing conditions to remain such as structures, utilities, irrigation systems, plant materials and paving on or adjacent to the site of the Work.
2. Use every possible precaution to prevent excessive compaction of planting area soil within or adjacent to the areas of Work.
3. Provide barricades, fences or other barriers to protect existing conditions to remain from damage and excessive compaction during construction.
4. Do not store materials or equipment, permit burning, or operate or park equipment under the branches of existing plants to remain.
5. Submit written notification of conditions damaged during construction to the Owner's Designated Representative immediately.

B. Ripping Subgrade Soil:

1. Prior to placing topsoil, rip areas to receive topsoil on the same day topsoil is placed.
2. Rip subgrade twice to a depth of **6** inches unless indicated otherwise.
3. Space ripping tines at 24 inches on center.
4. Make second ripping pass in a direction 90 degrees to the direction of the first ripping pass.
5. Do not rip closer than 2 feet horizontally and vertically to installed and existing utility lines and structures.

C. Location and Depths: As indicated on the Drawings.

D. Topsoil Placement:

1. Place topsoil same day that subgrade soil ripping occurs and prior to vehicle or equipment traffic running over the ripped surface.
2. Place topsoil with equipment of appropriate size for area and in a manner that avoids excessive compaction of the topsoil.
3. Avoid repeatedly driving equipment in same tracks so that topsoil does not become excessively compacted.

E. Allowances: Place topsoil to elevations that allow for settlement, addition of soil amendment, and finish grading tolerances.

F. Topsoil Finished Grade: See Section 32 91 19.

G. Surface Drainage: Keep topsoil surface sloped so that surface drains.

H. Compaction and Contamination:

1. In handling materials and operating tools and equipment, protect the topsoil from excessive compaction by laying down planks, plywood, or other accepted protective devices.
2. Do not store or stockpile materials on the topsoil.
3. Do not allow vehicles to park or drive on topsoil, except equipment which is preparing and finish grading the soil.
4. If ruts are formed, blade rutted topsoil smooth.
5. Loosen excessively compacted soil to the full depth of the excessive compaction, rototill, and grade surface smooth.

I. Excessively Compacted Topsoil:

1. Mechanically loosen excessively compacted topsoil to its full depth via a method acceptable to the Landscape Architect and re-grade surface smooth.
2. Keep topsoil from being excessively compacted until date of Final Completion.

J. Erosion Repair:

1. Repair erosion that occurs between topsoil installation and plant or seed installation.
2. Fill eroded areas with topsoil and finish grade.

3.5 PREPARATION OF SOIL SURFACE OF PLANTING AREAS

A. Protection of Existing Conditions:

1. Use every possible precaution to prevent damage to existing conditions to remain such as structures, utilities, plant materials and walks on or adjacent to the site of the Work.
2. Use every possible precaution to prevent excessive compaction of planting area soil within or adjacent to the areas of Work.

3. Provide barricades, fences or other barriers to protect existing conditions to remain from damage during construction.
4. Do not store materials or equipment, permit burning, or operate or park equipment under the branches of existing plants to remain.
5. Submit written notification of damaged plants and structures to the Owner's Designated Representative immediately.

B. Surface Preparation:

1. Inspect soil surface for sticks, oils, chemicals, plaster, concrete, and other deleterious materials.
2. Do Work required to remove and dispose of the deleterious materials.

C. Excessively Compacted Areas:

1. Where tilled planting soil or imported planting soils have become compacted more than 75-percent maximum dry density per ASTM D 1557 rip soil to 4 inches below the depth of the excessive compaction.
2. Space ripping tines at 18 inches on center.

3.6 AMENDMENT OF SOIL SURFACE OF PLANTING AREAS

A. Preliminary Amendment Program to Establish Bid for Areas Within Drip Lines of Existing Trees to Remain in Planting Areas Not to Receive Topsoil: 3 cubic yards of organic amendment per 1,000 square feet, 10 pounds of granular Micromax per 1,000 square feet, 9 pounds of Nitroform 38-0-0 per thousand square feet, and 2.5 pounds of Triple Superphosphate 0-45-0 per thousand square feet.

B. Preliminary Amendment Program to Establish Bid for Areas with Imported Topsoil: 6 cubic yards of organic amendment per 1,000 square feet, 25 pounds of polymeric soil conditioner per 1,000 square feet, 40 pounds Iron Sulfate per 1,000 square feet, 20 pounds of granular Micromax per 1,000 square feet, 20 pounds of Nitroform 38-0-0 per 1,000 square feet, 10 pounds of Potassium Sulfate 0-0-50 per 1,000 square feet, and 5 pounds of Triple Superphosphate 0-45-0 per 1,000 square feet.

C. Final Amendment Programs for Installation: Determined by Architect/Engineer and Horticultural Consultant based on soil test report results.

D. Amendment Incorporation:

1. Spread dry amendments evenly over surface of dry soil with a drop spreader.
2. Organic amendment and soil must be dry.
3. Incorporate amendments uniformly within top 6 to 8 inches of soil within a few hours after amendment application, except at areas within drip lines of existing trees to remain.
4. At areas within drip lines of existing trees to remain, incorporate amendments uniformly to 1 to 2-inch depth within a few hours after application.
5. Mechanically incorporate the amendments into the soil via a method that will not excessively compact the soil below incorporated amendments.

6. To activate polymeric conditioner, irrigate soil very slowly so that soil surface will not form a crust and until water penetrates 6-inch depth.
7. Allow soil to dry until stringiness disappears.
8. Prior to planting, re-till soil to a 6-inch depth at areas outside of drip lines of existing trees to remain and re-till soil to a 1 to 2-inch depth at areas within drip lines of existing trees to remain.

3.7 FIELD QUALITY CONTROL

A. Soil Amendment Verification:

1. Schedule Horticultural Consultant to take up to 4 random composite samples of amended soil surface areas and soil mixes for laboratory testing to verify amendment composition.
2. Submit composite samples collected by the Horticultural Consultant to the same soil testing laboratory used to test the soil as indicated in Article 3.1 E of this Section.
3. Employ the laboratory to test soil samples and submit test results to Horticultural Consultant and Architect/Engineer.
4. Perform corrective work as recommended by the laboratory soil test reports if directed to do so by the Architect/Engineer.
5. When a laboratory soil test indicates that the soil or soil mixes meet the requirements of the Specifications the Contractor will receive written notification of acceptance from the Architect/Engineer.
6. Installation of ground cover plants and seed may commence upon Contractor’s receipt of the written notification of acceptance.

END OF SECTION

SECTION 32 9119 -FINISH GRADING

PART 1 - GENERAL

1.1 DESCRIPTION

A. Work includes: weeding and finish grading of lawn and planting areas.

B. Related work:

1. Section 32 13 13: Concrete Paving.

2. Section 32 84 00: Landscape Irrigation.

3. Section 32 90 00: Planting Materials.

4. Section 32 91 13 Planting Soil Preparation and Planting Soil Mix Designs.

1.2 DEFINITIONS:

A. Finish grading: finish grading shall consist of adjusting and finishing soil surfaces with site or imported topsoil, raking grades to a smooth, even, uniform plane. Remove and legally dispose of all extraneous matter off site. Facilitate natural run-off water and establish grades and drainage indicated as part of the contract work.

B. The word Architect as used herein shall refer to the Landscape Architect or the Owner's authorized representative.

PART 2 - PRODUCTS

2.1 MATERIALS:

A. Import Top Soil: Import top soil shall be classified as sandy loam, and must conform to the following:

1. Particle size

Class	Particle Size Range	Maximum %	Minimum %
Coarse sand	0.5 - 2.0mm	15	0
Silt plus clay	<0.05mm	50	15
Other classes:			
Gravel	2-13mm	15	0
Rock	1/2 - 1”	5% by volume with none > 1”	

2. Chemistry

a. Salinity: Saturation Extract Conductivity (ECe) - less than 3.0 sD/m @ 25° C

b. Sodium: Sodium Absorption Ratio (SAR) - less than 6.0

c. Boron: Saturation Extract Concentration - Less than 1.0 ppm

d. Reaction: pH of Saturated Paste - 5.5-7.8 without high lime content

3. Soil shall contain sufficient quantities of available nitrogen, phosphorus, potassium, calcium and magnesium to support normal plant grown. In the even t of nutrient inadequacies, provisions shall be made to add required material prior to planting.

B. In order to insure conformance, samples of the import soil shall be submitted to an approved laboratory for analysis prior to and following backfilling.

C. Obtain imported topsoil from approved local sources.

PART 3 - EXECUTION

3.1 EXAMINATION:

A. Verification of conditions: Prior to commencing the finish grading, review the installed work of other trades and verify that their work is complete.

1. Rough Grading: Grading in planting areas (except raised planter areas) shall be established to within plus or minus 0.10 foot prior to beginning of finish grading.

2. Moving onto the site and/or commencing work shall be construed as acceptance of rough grade conditions by the Contractor.

B. Import topsoil only when necessary to supplement site soil to achieve grades shown on Drawings, or if site soil is unsuitable for planting.

3.2 PREPARATION:

A. Weeding: Before finish grading, weeds and grasses shall be dug out by the root or sprayed with an herbicide and disposed of off-site. This procedure is outlined under the Landscape Planting Section.

B. Debris: Remove stones and debris 1 inch in diameter and greater and clumps of earth that do not break up. Dispose of off-site.

3.3 INSTALLATION:

A. General: When rough grading and weeding have been completed, and the soil has dried sufficiently to be readily worked, lawn and planting areas shall be graded to the elevations indicated on the Drawings.

1. Grades indicated on Drawing are grades that will result after thorough settlement and compaction of the soil.

2. Grades not otherwise indicated shall be uniform finish grades and, if required, shall be made at the direction of the Architect.

3. Finish grades shall be smooth, even, and a uniform plane with no abrupt change of surfaces.

4. Soil areas adjacent to buildings shall slope away from the building to allow a natural run-off of water, and surface drainage shall be directed as indicated on the drawings by remodeling surfaces to facilitate the run off water at 2% minimum grade.

5. Low spots and pockets shall be graded to drain properly.

B. Drainage: Finish grade with proper slope to drains.

1. Flow lines, designated or not, shall be graded and maintained to allow free flow of surface water.

2. If any drainage problems arise during construction period due to Contractor's work (such as, but not limited to, low spots, slides, gullies and general erosion), the Contractor shall be responsible for repairing these areas to a condition equal to their original condition, and in so doing shall prevent further drainage problems from occurring.

C. Toe of slope: To prevent soil creep or erosion across pavement, where pavement (walk, curb, etc.) is at the toe of a slope, finish grade is to level out or swale slightly at least 6” before reaching pavement

D. Moisture Content: The soil shall not be worked when the moisture content is so great that excessive compaction occurs, nor when it is so dry that dust may form in the air or that clods do not break readily. Water may be applied, if necessary, to provide moisture content for tilling and planting operations. It is the Contractor’s responsibility to control dust that is spread as a result of grading operations.

E. Grades: The finish grade shall be 1-1/2 inch below grade of adjacent pavement, walks, curbs, or headers except when drainage conditions require flush grades, as directed by the Owner's Representative, or if otherwise indicated on Drawings.

F. Compaction: Soils in planted areas shall be loose and friable, yet firm enough that no settling occurs from normal foot traffic or irrigation.

3.4 FIELD OBSERVATION:

A. Contact the Architect 48 hours or two working days in advance of each agreed observation or conference.

B. Schedule for On-Site Reviews: At completion of finish grading and prior to any planting operations.

END OF SECTION

SECTION 32 9300 - PLANTING MATERIALS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Trees.
2. Shrubs.
3. Ground Cover.
4. Wood Chip Mulch.
5. Tree Stakes.
6. Root Barrier.
7. Root Ball Anchor Systems.
8. Palm Trees.

B. Related Sections:

1. Section 32 01 90, Landscape Maintenance Period.
2. Section 32 84 00, Irrigation.
3. Section 32 91 13, Planting Soil Preparation and Soil Mix Design.

1.2 REFERENCES

A. ANSI — American National Standards Institute: Z60.1 — American Standard for Nursery Stock, Current Edition.

B. ICBN — International Code of Botanical Nomenclature.

C. ICNCP — International Code of Nomenclature of Cultivated Plants.

D. ASTM — American Society for Testing Materials: D 1557 — Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort.

1.3 DEFINITIONS

A. Plant Height: Measurement of main body height, not measurement to top branch tip.

B. Plant Spread: Measurement of main body diameter, not measurement from branch tip to tip.

C. Caliper: Trunk diameter measured at a point 6 inches above natural ground surface for trees up to 4 inches in caliper, and measured at a point 12 inches above natural ground surface for trees over 4 inches in caliper.

D. Acceptance, Acceptable, or Accepted: Acceptance by the Landscape Architect in writing.

E. Excessive Compaction: Planting area soil compaction greater than 75 percent of maximum dry density as determined by ASTM D 1557.

1.4 ACTION SUBMITTALS

A. General Submittal Requirements: Refer to Division 1.

B. Product Data:

1. Tree Ties.
2. Root Barrier.
3. Wood Pole Tree Stakes.
4. Fertilizers.
5. Fertilizer for Palm Trees.
6. Fungicide for Palm Trees.

C. Samples:

1. Wood Chip Mulch — 1/2-pound bag.
2. Tree Tie — 1 tie.

1.5 INFORMATIONAL SUBMITTALS

A. General Submittal Requirements: Refer to Section 32 01 90.

B. Contract Grow Requirements: Refer to Section 32 92 10.

C. Plant Material Location Data:

1. At 60 days after award of contract submit of plant material location data.
2. Quantities and sizes of each plant material type at each nursery or other place of growth.
3. Address, phone number, and contact person for each nursery or other place of growth.

D. Plant Material Photographs:

1. At 15 days after material location submittal data submit three color photographs each of representative plants of each type of plant material.
2. Include a scale object in each photograph such as a tape measure or person.

1.6 QUALITY ASSURANCE

A. Regulatory Requirements:

1. Meet requirements of applicable laws, codes, and regulations required by authorities having jurisdiction over Work.

2. Provide for inspections and permits required by federal, state and local authorities in furnishing, transporting, and installing materials.

B. Tree Staking System Mock-Up:

1. Prepare mock-up of wood pole staking system.
2. Construct mock-up using specified materials.
3. Accepted mock-up shall be project standard by which Work will be judged.

C. Root Ball Anchor System Mock-up:

1. Prepare mock-up of root ball anchoring kit in accordance with the manufacturer's current printed installation instructions.
2. Accepted mock-up shall be Project standard by which Work will be judged.

1.7 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Handling Plants:

1. Do not lift or handle container plants by tops, stems or trunks.
2. Do not bind or handle plants with wire or rope.
3. Pad trunk and branches where hoisting cables or straps contact.

B. Digging Plants: Dig ball and burlap plants with firm, natural balls of earth of diameter meeting or exceeding requirements of ANSI Z60.1 and of sufficient depth as required to include the fibrous and feeding roots.

C. Plant Storage Prior to Installation:

1. Protect plant root balls from sun and drying winds.
2. Keep root balls moist.
3. Keep sun-sensitive plants shaded.
4. Anchor plants to prevent damage from strong winds.

D. Packaged Materials:

1. Deliver in original unopened factory containers with original labels intact and legible indicating the guaranteed chemical analysis.
2. Meet manufacturer's requirements for storage and protection of materials on-site.

E. Purchase Documentation: Fertilizer Purchase and Delivery Invoices.

1.8 SITE CONDITIONS

A. Environmental Requirements: Protect plant material being stored on site from sun and drying winds.

B. Existing Conditions:

1. Prior to Work commencement, review and clearly mark in field horizontal and vertical locations of public existing underground utilities and structures with respective utility companies.
2. Prior to Work commencement, review and clearly mark in field horizontal and vertical locations of private underground utilities and structures with the Owner's Representative.

1.9 WARRANTY

A. Warranty Period: Warrant that plant material will be healthy and in vigorous, flourishing condition of active growth one year from date of Final Completion.

B. Delays: Delays in completion of planting operations which extend the planting into more than one planting season shall extend the Warranty Period correspondingly.

C. Condition of Plants: Plants shall be free of dead or dying branches and branch tips, with foliage of a normal density, size and color.

D. Incorrect Materials:

1. During Warranty Period, replace at no additional cost to the Owner, plants revealed as being untrue to name.
2. Provide replacements of a size and quality to match the planted materials at the time the mistake is discovered.

E. Replacements:

1. As soon as weather and seasonal conditions permit, replace at no additional cost to the Owner, dead plants and plants not in a vigorous, thriving condition, as determined by the Owner's Arborist during and at the end of Warranty Period.
2. Apply requirements of this Section to replacements.

1.10 MAINTENANCE

A. Maintenance Service: Refer to Section 32 01 90.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND SUPPLIERS

1. Wood Chip Mulch: Forest Floor 1-2" by Aguinaga Fertilizer Company, (949) 786-9558.

A. Fertilizers: Vermitechnology Unlimited, Orange Lake, FL; (352) 591-1111; www.vermitechnology.com.

B. Fertilizer for Palm Trees: Vermitechnology Unlimited, Orange Lake, FL; (352) 591-1111; www.vermitechnology.com.

C. Fungicides for Palm Trees:

1. Frond Application: W.A. Cleary Chemical; (800) 524-1162
2. Fungicide Soil Drench: Novartis; (910) 632-7208.

D. Root Ball Anchor System Kits: Laconia Earth Anchors, Inc., Nashua, NH; (877) 603-0237; www.laconiaearthanchors.com.

E. Root Barrier: Deep Root Partners, L.P., San Francisco, CA; (800) 458-7668; www.deeproot.com.

F. Mycorrhizal fungi shall be added in all planting areas, regardless of Soils Report. Mycorrhizal inoculum consists of a combination of :

1. Innoculum shall contain a blend of eight top types of Endospores: Glomus aggregatum, G. clarum, G. deserticola, G. intraradices, G. monosporus, G. mosseae, Gigaspora margarita, and Paraglomus brasilianum, and seven top types of Ecto fungi spores:Lacarria laccata, Pisolithus tinctorius, Rhizopogon amylpogon, R. fulvigleba, R. rubescens, R. villosuli, and Scleroderma spp. The guaranteed Endo spore count shall be a minimum 50 spores/cc, and the Ecto spore count shall be a minimum 50,000 spores/cc

2. Manufacturers:

a. BioOrganics Mycorrhizae Inoculants, (888) 332-7676

b. Mycorrhizal Applications, Inc, (866) 476-7800

c. Or equal.

2.2 SUBSTITUTIONS

A. Plant Material: Accepted substitute plants shall be true to species and variety and shall meet requirements of this Section except that plants larger than specified may be used, if accepted by the Landscape Architect, and at no additional cost to the Owner.

2.3 MATERIALS

A. General Plant Requirements:

1. Growing Practices: Nursery grown in accordance with best horticultural industry practices.
2. Nomenclature: Plant nomenclature shall meet requirements of ICBN and ICNCP.
3. Climatic Growing Conditions: Grown under climatic conditions similar to those of project for at least two years unless otherwise accepted by the Landscape Architect.
4. Container Growth Limitations: Container stock excluding annuals shall have been grown in the containers in which delivered for at least six months, but not over two years.
5. Root Ball Size: Meet or exceed requirements of ANSI Z60.1.
6. Branching: Structurally strong, able to stand upright without stakes or guys on a windless day; exceptionally heavy, symmetrical, tightly knit, so trained or favored in

development and appearance as to be superior in form, number of branches, compactness and symmetry.
7. Vigor: Sound, healthy and vigorous, well branched and densely foliated when in leaf.
8. Disease and Pests: Free of disease, insect pests, eggs, or larvae.
9. Root System: Healthy well-developed root systems, free of kinked, circling, girdling and center roots, root-bound condition and cracked or broken root balls.
10. Plant Size: Measure plants when branches are in their normal upright position.
11. Pruning: Do not prune, thin or shape plants before delivery without acceptance by the Landscape Architect.
12. Unacceptable Conditions: Multiple leaders, unless specified, damaged or crooked leaders, bark abrasions, sunscald, disfiguring knots, or fresh cuts of limbs over 3/4-inch diameter which have not completely callused.

B. Water: Clean, fresh, potable and free of toxic elements.

C. Wood Chip Mulch for Shrub and Ground Cover Areas: Grover Arbor Mulch.

D. Anti-Desiccant: Commercially available spray protective coating, designed to reduce plant transpiration loss, which produces a moisture retarding barrier not removable by rain or snow.

E. Wood Pole Tree Stakes: Pine round poles with 10-inch tapered driving point and chamfered top, un-treated pine or fir.

F. Tree Ties: Original Treestrap Biodegradeable Cotton (800) 360-3584.

G. Bolts, Lock Washers and Nuts: Hot-dip galvanized steel.

H. Root Barrier: Deeproot UB 18-2, or accepted substitute.

I. Fertilizers:

1. Vermitechnology Nutri-Sorb Biofertilizer plus natural water absorbing polymer. Nitrogen and water fixing organic fertilizer with mycorrhizae.
2. Vermitechnology - VermaPlex soil microbial activator.

J. Fertilizer for Palm Trees: Vermitechnology – Palm Perfection biofertilizer.

K. Fungicides for Palm Trees:

1. Palm Frond Application: W.A. Cleary Chemical "3336WP".
2. Fungicide Soil Drench: Novartis "Subdue".

L. Frond Tie: Minimum 1/2-inch diameter soft sisal rope. Use no wire.

M. Tree Root Ball Anchor Systems:

1. Laconia 13/RBS-HD kit for trees under 3 inches caliper.
2. Laconia 36/RBS-HD kit for trees 3 inches to 6 inches caliper.
3. Laconia 610/RBS-HD kit for trees over 6 inches caliper.

2.4 MIXES

A. Tree Plant Pit Backfill Mixes: Refer to Section 32 91 13.

B. On-Structure Soil Mix: Refer to Section 32 91 13.

C. Palm Backfill Mix: Refer to Section 32 91 13.

D. Desert Garden Soil Mix: Refer to Section 32 91 13

E. Polymeric Soil Conditioner-water Mix:

1. Mix dry polymeric soil conditioner with water at 0.04% concentration which equals 1/2-cup of dry soil conditioner per 30-gallon container.
2. While filling container with water, slowly pour dry soil conditioner into water stream to disperse particles.
3. Agitate container for 5 to 10 minutes until conditioner is completely dissolved.

2.5 SOURCE QUALITY CONTROL

A. Advanced Tree Procurement:

1. Within 30 days of award of Contract, notify Landscape Architect in writing of the availability or lack thereof of the specified plant material.
2. Procure trees and arrange for contract growing as required to ensure that plant material is available in the quantities and sizes specified, and of the quality specified, at time of installation.
3. Verify plant branching requirements with Landscape Architect prior to contract growing.
4. Landscape Architect will review advanced procured trees prior to initial purchase and at end of the first growing season.
5. Prior to delivery of advanced procured plant material to site, coordinate and schedule a final review of the plant material at the place of growth.
6. Review and acceptance of the advance-procured plant material at the place of growth does not cancel the right of the Landscape Architect to reject plant material at the site, if damage or unacceptable conditions are found that were not detected at the place of growth.

B. Plant Material Review and Tagging:

1. Trees will be reviewed, photographed and tagged using irremovable tags by the Landscape Architect at the nursery, or other place of growth prior to delivery of trees to site.
2. At the Landscape Architect’s discretion, shrubs may or may not be reviewed, photographed, and tagged by the Landscape Architect at the nursery or other place of growth.
3. Tagging of plant material at the nursery or place of growth does not affect the right of the Landscape Architect to reject plant material at the site, if damage or unacceptable conditions are found that were not detected at the nursery, place of growth, or in the submitted photographs.

PART 3 - EXECUTION

3.1 EXAMINATION

A. General: Examine site and verify that conditions are suitable to receive Work and that no defects or errors are present which would cause defective installation of products or cause latent defects in workmanship and function.

B. Fine Grading and Soil Preparation: Verify that fine grading and soil preparation Work is complete.

C. Verification Surface Drainage: Verify positive surface drainage of planted areas.

D. Notification: Before proceeding with Work, notify the Owner's Representative in writing of unsuitable conditions.

3.2 PREPARATION

A. Protection of Existing Conditions:

1. Use every possible precaution to prevent damage to existing conditions to remain such as structures, utilities, plant materials and walks on or adjacent to the site of the Work.
2. Provide barricades, fences or other barriers to protect existing conditions to remain from damage during construction.
3. Use every possible precaution to prevent excessive compaction of planting area soil within or adjacent to the areas of Work.
4. Do not store materials or equipment, permit burning, or operate or park equipment under the branches of existing plants to remain.
5. Submit written notification of damaged plants and structures to the Owner's Representative immediately.

3.3 SUBSURFACE OBSTRUCTIONS

A. Plant Pit Excavation:

1. If rock, underground utilities, structures, tree roots or other obstructions are encountered in the excavation of plant pits, alternate locations may be accepted by the Landscape Architect.
2. Submit written notification of encountered obstructions to the Landscape Architect immediately.

B. Irrigation Piping: Reroute around the plant root ball.

C. Irrigation Valves: Re install outside of hedge line and/or plant rootball.

3.4 PLANT LAYOUT

A. Trees:

1. Stake location of trees where indicated on Drawings.
2. Scale tree locations where no dimensions are given.
3. Drive a 3-foot long wood lath stake at each tree location and mark each tree type with different color survey tape.
4. Contact the Landscape Architect to review locations in field prior to excavating plant pits and installing irrigation.
5. Do not excavate plant pits or install irrigation until the Landscape Architect has accepted plant locations.

B. Planting Bed Limits for Each Type of Shrub:

1. Spray paint on the ground for the individual shrub mass bed type limits for review of the planting bed line curvature.
2. Scale planting bed limits from planting Drawings where no dimensions are given.
3. Contact Landscape Architect to review bed outlines in field prior to excavating plant pits and installing irrigation.
4. Do not excavate plant pits or install irrigation until the Landscape Architect has accepted plant locations.

3.5 EXCAVATION OF TREE, PALM TREE, AND SHRUB PLANT PITS

A. Equipment:

1. Excavate square pits with a back-hoe or hand digging.
2. Do not use an auger.

B. Dimensions:

1. Where not indicated on the Drawings, excavate plant pits to a depth equal to the root ball height minus the amount needed to allow for settlement and to install the root balls at the specified elevation relative to adjacent finished grade.
2. Install top of plant root balls 1 inch above adjacent finished grade, or higher if required to allow settlement, except where indicated otherwise.
3. Excavate pits to a diameter which is 3 times the root ball diameter, except where indicated otherwise on the Drawings, and except for Palm trees.
4. Center plant pits on plant locations where possible.
5. Where plant pits cannot be excavated to specified dimensions nor centered on plants due to obstructions such as paving, walls, curbs, or other structures excavate pits in directions without obstructions until pit volume equals the specified plant pit volume, except where indicated otherwise.
6. Do not undercut adjacent obstructions unless accepted by the Landscape Architect.
7. Excavate plant pit sides along adjacent elements such as paving, walls, curbs, and other structures at a 45 degree angle sloping away from the bottom surfaces of the adjacent elements, except where indicated otherwise.

3.6 PLANTING AND BACKFILL OPERATIONS FOR TREES, SHRUBS, AND GROUNDCOVERS (NOT PALM TREES)

A. Protection of Plants Prior to Installation:

1. Protect plant root balls from sun or drying winds.
2. Keep root balls of plants that cannot be planted immediately upon delivery in the shade, well-protected and well-watered.

B. Removal of Containers:

1. Remove canned stock carefully after cans have been cut on two sides with accepted cutter.
2. Do not use spade to cut containers.

C. Root Ball Scarification:

1. After removing plant from container, scarify side of root ball to prevent root-bound condition.
2. Loosen root ball soil surface to depth of 1/8-inch to 1/4-inch without damaging roots or breaking root ball.

D. Cutting Circling Roots:

1. If circling roots are encountered at root ball sides, notify the Landscape Architect for field review.
2. Upon the Landscape Architect's acceptance, cut roots on 4 sides of root ball 90 degrees apart at no additional cost to the Owner.
3. Use a 4-inch wide sharp straight blade.
4. Cut roots by pushing spade or knife down sides of root ball 90 degrees to root ball surface and 2 inches into root ball.
5. Keep spade or knife sharp to cut roots cleanly.

E. Plant Placement:

1. Handling plant carefully, set plant root ball on pit bottom centered on accepted horizontal location.
2. Install plant root ball vertically so that top of root ball is 2 inches above adjacent finished grade after settlement except where indicated otherwise.

F. Removal of Root Ball Wrapping Materials: Remove and dispose of burlap, nylon cord, wire baskets, twine and other materials prior to backfilling.

G. Soil Mix Placement:

1. Place mix carefully as not to damage the plant root ball, trunk, branches, or foliage.
2. Fill area or pit until top of backfill mix is even with top of root ball.

H. Fertilizer Application after Soil Mix Placement:

1. Apply Nutri-Sorb at rate of 2.5 pounds per caliper inch of tree on the rootball and into the surface backfill soil. For container plants apply 6 ounces per gallon of size and incorporate into the top of container and backfill.
2. Apply a 1:20 dilution of VermaPlex and drench backfill of rootball with 1 gallon drench per 1 inch caliper of tree. Drench container plants with 0.5 gallons of diluted VermaPlex per gallon size.
3. Sprinkle surface of soil mix with 2 inches of water after application of fertilizers.

I. Backfill and Soil Mix Settlement:

1. After backfill mix has been drenched with fertilizers and has dried for 2 days, settle mix by watering evenly.
2. Fill settled backfill mix areas with additional backfill mix as required to bring it even with top of root ball, drench added backfill mix with water and allow to dry for 2 days.
3. Continue filling settled areas and drenching with soil-conditioner water mix until settlement stops.
4. Do not install backfill mix over conditioned backfill mix without drenching it with soil-conditioner water mix.

J. Settled Plant Adjustment: Raise plant root balls which settle so that top of root balls are at the specified elevation relative to adjacent finished grade.

3.7 PALM TREE PLANTING AND BACKFILL OPERATIONS

A. Protection of Plants Prior to Installation:

1. Protect plant root balls from sun or drying winds.
2. Keep root balls of plants that cannot be planted immediately upon delivery in the shade, well-protected and well-watered.

B. Plant Placement:

1. Handling plant carefully, set plant root ball on pit bottom centered on accepted horizontal location.
2. Install plant root ball vertically so that top of root ball is 2 inches above adjacent finished grade after settlement except where indicated otherwise.

C. Removal of Root Ball Wrapping Materials: Remove and dispose of burlap, nylon cord, wire baskets, twine, boxing material, and other materials prior to backfilling.

D. Backfill Mix Placement:

1. Backfill palm pit with palm tree pit backfill mix.
2. Continuously adjust palm to insure a plumb and rigidly-based trunk.
3. When plant pit has been backfilled approximately 2/3 full, water thoroughly to saturate before installing remainder of backfill.
4. Fill pit until top of backfill mix is 2 inches below the top of root ball.

E. Fertilizer Placement: Apply Palm Perfection at 5 pounds per caliper inch of tree. Place on top of root ball and incorporate into backfill.

F. Backfill Mix Settlement:

1. After backfill mix has been drenched with compost tea and has dried for 2 days, settle mix by watering evenly.
2. Fill settled backfill mix areas with additional backfill mix as required to bring it 2 inches below top of root ball, drench added backfill mix with water and allow to dry for 2 days.

G. Settled Plant Adjustment: Raise plant root balls which settle so that top of root balls are at the specified elevation relative to adjacent finished grade.

3.8 PALM TREE GUYING

A. Guying:

1. Palms shall be able to stand upright and may require guying to counter site wind conditions. All palms shall remain plumb and straight for all given conditions from installation through the Warranty Period.
2. Palm guying, if required, shall be as described below:
   a. Guy palms at point 1/3 of the way down from the bottom of the crown bud to finish grade.
   b. Guying collar shall be either drilled to accept bolt-type guying anchors or with guying anchors welded securely to the collar.
   c. Locate guys in three equidistant locations around the outside of the collar. Provide three guys per palm with a turnbuckle for each guy. Use 2 cable clamps at each cable connection.
   d. Connect cable to deadmen or ground anchor assembly.

3.9 WOOD POLE TREE STAKING SYSTEM

A. Locations, Stake Size, and Stake Quantity: Refer to Schedule at end of this Section.

B. Orientation:

1. Locate stakes in a line with trunk of tree, as close to the main trunk as possible without penetrating root ball.
2. Locate line of stakes and trunk perpendicular to the prevailing wind direction.

C. Stake Depth:

1. Drive 8-foot long stakes into soil to minimum 12 inches below the root-ball bottom.
2. Drive 10-foot long stakes into soil to minimum 12 inches below the root-ball bottom.
3. Pre-drill pilot holes 1/2 diameter of stake if required to drive stakes in hard soil conditions.

D. Tying Trees to Stakes Trees:

1. Refer to detail on Drawings.
2. Tie ends of ties with double-back locking configuration as recommended by the tie manufacturer.

3.10 METAL PIPE TREE STAKING SYSTEM

A. Locations and Stake Size: See Schedule at end of this Section.

B. Orientation: Install stakes on prevailing-wind side of trees.

C. Stake and Tree Tie Installation: Install in accordance with manufacturer's current printed instructions, and the accepted mock-up.

3.11 ROOT BALL ANCHOR SYSTEMS

A. Trees Requiring Root Ball Anchor System Kits: Install root ball anchor systems on the trees, in lieu of tree stake systems.

B. Root Ball Anchor Kit Manufacturer's Requirements: Install in accordance with the manufacturer's current printed installation instructions.

3.12 WOOD CHIP MULCH INSTALLATION

A. Depth:

1. Install a uniform 2-inch depth mulch layer over plant watering basins and shrub areas except where indicated otherwise.
2. Install uniform 2-inch depth mulch layer over ground cover areas, except where indicated otherwise.
3. Install uniform 3-inch depth mulch layer over planting areas where indicated on the Drawings.

B. Surface: Rake mulch surface smooth.

C. Woody Plant Stems: Slope mulch away from woody plant stems so that mulch does not touch stems.

END OF SECTION

SECTION 33 1110 – SITE WATER DISTRIBUTION PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes water-distribution piping and specialties outside the building for the following:

1. Water services.
2. Fire-service.

1.2 DEFINITIONS

A. Fire-Service: Exterior fire-suppression-water piping branch from service main to backflow preventer and into building fire suppression-water system.

B. Fire-Suppression-Water Piping: Interior fire-suppression-water piping.

C. Water Service: Exterior domestic-water piping branch from service main into building to water distribution piping.

D. The following are industry abbreviations for piping materials:

1. PE: Polyethylene plastic.
2. PVC: Polyvinyl chloride plastic.
3. DI: Ductile iron.

1.3 SUBMITTALS

A. Product Data: For the following:

1. Piping specialties.
2. Valves and accessories.
3. Water meters.
4. Backflow preventers and assemblies.
5. Protective enclosures.
6. Fire hydrants.
7. Fire department connections.
8. Alarm devices.
9. Drinking fountains.

B. Coordination Drawings: For piping and specialties including relation to other services in same area. Show piping and specialty sizes and valves, meter and specialty locations, and elevations.

C. Field Quality-Control Test Reports: From Contractor.

D. Operation and Maintenance Data: For specialties to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Valves.
2. Backflow preventers.
3. Protective enclosures.
4. Fire hydrants.

1.4 QUALITY ASSURANCE

A. Product Options: Drawings indicate size, profiles, and dimensional requirements of piping and specialties and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."

B. Regulatory Requirements:

1. Comply with requirements of utility company supplying water, only as applicable to University's requirements. The University's standard details shall be used.
2. Comply with standards of University's Representative (EH&S) for disinfection of potable water service piping.
3. Comply with standards of OCFA and SFM for fire-suppression water-service piping, including materials, hose threads, installation, and testing.

C. Piping materials shall bear label, stamp, or other markings of specified testing agency.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in California Electric Code (NFPA 70), Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Comply with ASTM F 645 for selection, design, and installation of thermoplastic water piping.

F. NFPA Compliance: Comply with NFPA 24 for materials, installations, tests, flushing, and valve and hydrant supervision for fire-service-main piping.

G. NSF Compliance:

1. Comply with NSF 14 for plastic potable-water-service piping. Include marking "NSFpw" on piping.
2. Comply with NSF 61 for materials for water-service piping and specialties for domestic water.

H. Pre-installation conference: Conduct conference at Project site to comply with requirements of Division/Section "Project Management and Coordination`.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Preparation for Transport: Prepare valves, including fire hydrants, according to the following:

1. Ensure that valves are dry and internally protected against rust and corrosion.
2. Protect valves against damage to threaded ends and flange faces.
3. Set valves in best position for handling. Set valves closed to prevent rattling.

B. During Storage: Use precautions for valves, including fire hydrants, according to the following:

1. Do not remove end protectors unless necessary for inspection; then reinstall for storage.
2. Protect from weather. Store indoors and maintain temperature higher than ambient dewpoint temperature. Support off the ground or pavement in watertight enclosures when outdoor storage is necessary.

C. Handling: Use sling to handle valves and fire hydrants if size requires handling by crane or lift. Rig valves to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

D. Deliver piping with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe-end damage and to prevent entrance of dirt, debris, and moisture.

E. Protect stored piping from moisture and dirt. Elevate above grade. Do not exceed structural capacity of floor when storing inside.

F. Protect flanges, fittings, and specialties from moisture and dirt.

G. Store plastic piping protected from direct sunlight. Support to prevent sagging and bending.

1.6 PROJECT CONDITIONS

A. Existing Utilities: Do not interrupt utilities serving facilities occupied by University or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:

1. Notify University’s Representative not less than two weeks in advance of proposed utility interruptions.
2. Do not proceed with utility interruptions without University Representative’s written permission. University personnel will conduct all utility system shutdowns and startups.
3. If utility interruption is for more than four hours, provide temporary utility service.

1.7 COORDINATION

A. Coordinate connection to existing water main with University’s Representative.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:

1. Products: Subject to compliance with requirements, provide one of the products specified.
2. Manufacturers: Subject to compliance with requirements, provide products by the manufacturers specified.
3. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01 Section “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 PIPING MATERIALS

A. Refer to Part 3 "Piping Applications" Article for applications of pipe, tube, fitting, and joining materials.

2.3 DUCTILE-IRON PIPE AND FITTINGS

A. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151, AWWA C116, epoxy coated in interior and exterior with mechanical-joint, bell- and plain-spigot end unless grooved or flanged ends are indicated.

1. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, AWWA C116, epoxy coated ductile- or gray-iron standard pattern or AWWA C153, AWWA C116, ductile-iron compact pattern.

a. Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and stainless steel bolts.

B. Push-on-Joint, Ductile-Iron Pipe: AWWA C151, AWWA C116, epoxy coated with push-onjoint, bell- and plain-spigot end unless grooved or flanged ends are indicated.

1. Push-on-Joint, Ductile-Iron Fittings: AWWA C110, AWWA C116, epoxy coated interior and exterior ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.

a. Gaskets: AWWA C111, rubber.

C. Grooved-End, Ductile-Iron Pipe: AWWA C151, epoxy coated with one or both ends with cut rounded grooves according to AWWA C606.

1. Ductile-Iron, Grooved-End Fittings: ASTM A 47, epoxy-coated malleable-iron castings or ASTM A 536, ductile-iron castings with dimensions matching pipe.
2. Ductile-Iron-Piping Keyed Couplings: epoxy coated AWWA C606, AWWA C116, for ductile-iron-pipe dimensions. Include ferrous housing sections, gasket suitable for water, and stainless steel bolts and nuts.

D. Ductile-Iron Flexible Expansion Joints: Compound, ductile-iron fitting with combination of flanged and mechanical-joint ends complying with AWWA C110 or AWWA C153. Include two gasketed ball-joint sections and one or more gasketed sleeve sections, epoxy coated, exterior and interior. Assemble components for offset and expansion indicated. Include AWWA C111, ductile-iron glands, rubber gaskets, and stainless steel bolts.

E. Ductile-Iron Deflection Fittings: Compound, ductile-iron coupling fitting epoxy coated interior and exterior, with sleeve and flexing sections for up to 20-degree deflection, gaskets, and restrained-joint ends complying with AWWA C110 or AWWA C153. Include AWWA C111, ductile-iron glands, rubber gaskets, and stainless steel bolts.

F. Ductile-Iron Expansion Joints: Three-piece, epoxy coated ductile-iron assembly consisting of telescoping sleeve with gaskets and restrained-type, ductile-iron, bell-and-spigot end sections complying with AWWA C110 or AWWA C153. Select and assemble components for expansion indicated. Include AWWA C111, ductile-iron glands, rubber gaskets, and stainless steel bolts.

G. Reducing Couplings: Shall not be used.

2.4 COPPER TUBE AND FITTINGS

A. Soft Copper Tube: ASTM B 88, Type K, water tube, annealed temper.

1. Copper Fittings: ASME B16.22, wrought-copper, solder-joint pressure type. Furnish only wrought-copper fittings.

B. Hard Copper Tube: ASTM B 88, Type K, water tube, drawn temper.

1. Copper Fittings: ASME B16.22, wrought-copper, solder-joint pressure type. Furnish only wrought-copper fittings.

C. Bronze Flanges: ASME B16.24, Class 150, (DR14) with solder-joint end. Furnish Class 300 flanges if required to match piping.

D. Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.

2.5 PVC PIPE AND FITTINGS

A. PVC, AWWA Pipe: AWWA C900, Class 200, (DR14) with bell end with gasket and spigot end.

1. Comply with UL 1285 for fire-service mains.
2. Push-on-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.

    a. Gaskets: AWWA C111, rubber.
    b. Coating: Fusion bonded epoxy coating, both interior and exterior per AWWA C116.

3. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.

    a. Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and stainless steel bolts.
    b. Coating: Fusion bonded epoxy coating, both interior and exterior per AWWA C116.

2.6 JOINING MATERIALS

A. Refer to Division 33 Section "Common Work Results For Utilities" for commonly used joining materials.

B. Transition Couplings:

1. Underground Piping, NPS 1-1/2 and Smaller: Manufactured fitting or coupling same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.
2. Underground Piping, NPS 2 and Larger: AWWA C219, metal, sleeve-type coupling same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.
3. Aboveground Piping: Pipe fitting same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.

C. Brazing Filler Metals: AWS A5.8, BCuP3 or BCuP4 Series.

D. Soldering Flux: ASTM B 813, water-flushable type.

E. Solder Filler Metal: ASTM B 32, lead-free type with 0.20 percent maximum lead content.

F. Plastic Pipe-Flange Gasket, Bolts, and Nuts: Flange and gasket type and material recommended by piping system manufacturer. Bolts and nuts shall be stainless steel.

2.7 PIPING SPECIALTIES

A. Flexible Connectors:

1. Nonferrous-Metal Piping: Bronze hose covered with bronze wire braid; with coppertube, pressure-type, solder-joint ends or bronze flanged ends brazed to hose.
2. Ferrous Piping: Stainless-steel hose covered with stainless-steel wire braid; with ASME B1.20.1, threaded steel pipe nipples or ASME B16.5, steel pipe flanges welded to hose.

B. Dielectric Fittings: Combination of copper alloy and ferrous; threaded, solder, or plain end types; and matching piping system materials.

1. Dielectric Unions: Not acceptable for use.
2. Dielectric Flanges: Factory-fabricated companion-flange assembly, for 150- or 300-psig minimum working pressure to suit system pressures.
3. Dielectric-Flange Insulation Kits: Field-assembled companion-flange assembly, full-face or ring type. Components include neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and stainless steel backing washers.

    a. Provide separate companion flanges and stainless steel bolts and nuts for 150- or 300-psig minimum working pressure to suit system pressures.

4. Dielectric Couplings: Galvanized-steel couplings with inert and non-corrosive thermoplastic lining, with threaded ends and 300-psig minimum working pressure at 225 deg F.
5. Dielectric Nipples: Electroplated steel nipples with inert and non-corrosive thermoplastic lining, with combination of plain, threaded, or grooved end types and 300-psig minimum working pressure at 225 deg F.
6. Six inch red brass nipple and union.

2.8 CORROSION-PROTECTION ENCASEMENT FOR PIPING

A. Encasement for Underground Metal Piping: ASTM A 674 or AWWA C105, 8mil. Minimum thickness, PE film in tube or sheet.

B. Nuts, bolts, clamps and accessories below grade shall be stainless steel. Bolt threads shall be sealed with silicon only (no grease or bitumastic). Stainless steel bolts and nuts shall be Teflon coated to prevent galling of the material during assembly.

2.9 GATE VALVES

A. AWWA, Cast-Iron Gate Valves:

1. Manufacturers:

    a. American Cast Iron Pipe Co.; American Flow Control Div.
    b. American AVK.
    c. Grinnell Corporation; Mueller Co.; Water Products Div.
    d. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).

e. McWane, Inc.; Kennedy Valve Div.
f. McWane, Inc.; M&H Valve Company Division
g. United States Pipe and Foundry Company.
h. Or equal.

2. Non-rising-Stem, Resilient-Wedge Gate Valves: AWWA C509, ductile-iron body and bonnet; with bronze or gray- or ductile-iron gate, resilient seats, bronze stem, and stem nut. Valves shall be full wall thickness whether using cast iron or ductile iron. The wall thickness reductions allowed by AWWA C515 shall not be used on University Projects.

a. Rated Operating Pressure: 250 psig.
b. Test Pressure : 500psig
c. End Connections: Mechanical joint or flanged.
d. Interior and exterior coating: Comply with ANS/AWWA C550, standard for Protective Interior Coating of hydrants and valves.
e. Body to Bonnet bolts: Stainless steel 18-8
f. Stem shall have an integral thrust collar. Two-piece assemblies shall not be provided.
g. Grate shall be fully encapsulated in EPDM or SBR. Gate shall have Delrin or other anti-friction insert (s) to reduce operating torque.
h. Valves in buried service shall have a 2 inch square operating nut.

3. OS&Y, Rising-Stem, Resilient-Seated Gate Valves: AWWA C509, UL 262, FM-approved cast-iron or ductile-iron body and bonnet, outside screw and yoke; with bronze or gray- or ductile-iron gate, resilient seats, and bronze stem. Valves shall be full wall thickness whether using cast iron or ductile iron. The wall thickness reductions allowed by AWWA C515 shall not be used on University Projects.
a. Minimum Working Pressure: 200 psig.
b. End Connections: Flanged.
c. Interior and Exterior Coating: Complying with AWWA C550, epoxy.

2.10 GATE VALVE ACCESSORIES AND SPECIALTIES

A. Tapping-Sleeve Assemblies: Comply with MSS SP-60. Include sleeve and valve compatible with drilling machine. Where line-stopping or other activity that is similar to tapping occurs, the same requirements for tapping sleeves shall be followed.

1. Manufacturers:

a. Mueller Co.; Water Products Div.
b. JCM Industries.

2. Tapping Sleeve: Cast- or ductile-iron or stainless steel, mechanical joint tapping sleeve with flanged outlet for new branch connection. Include sleeve matching size and type of pipe material being tapped and with recessed flange for branch valve. The tapping sleeve

shall provide a mechanical joint fitting at each end so that a failure of the pipe being tapped will not cause a leak. Unless it has positively been determined that the pipe to be tapped is not ACP, the sleeve shall be compatible for use with ACP.

a. JCM Industries No. 414 mechanical joint tapping sleeve with fusion-bonded epoxy coating interior and exterior.
b. Mueller Co.; H-615 or H-619 mechanical joint tapping sleeve with fusion- bonded epoxy coating interior and exterior.

3. Valve: AWWA, C509 cast-iron, fusion-bonded, epoxy coated. Non-rising-stem, resilient-seated gate valve with one raised face flange mating tapping-sleeve flange.

B. Valve Boxes: Include triangular top section, adjustable extension of length required for depth of burial of valve, plug with lettering "WATER," bottom section with base of size to fit over valve. The triangular top section is deliberately different from the Standards of the Irvine Ranch Water District for potable water.

1. Provide precast concrete valve box by Christy or equal with one-piece 8” SDR 35 or SCH 40 PVC extension to valve per standard detail 33 W-7a or
2. Provide cast-iron valve box complying with AWWA M44 with approximately 5-inch diameter barrel per standard detail 33 W-7a.
3. Operating Wrenches: Steel, tee-handle with one pointed end, stem of length to operate deepest buried valve, and socket matching valve operating nut.

2.11 CHECK VALVES

A. AWWA Check Valves:

1. Manufacturers:

a. American Cast Iron Pipe Co.; American Flow Control Div.
b. American AVK.
c. Crane Co.; Crane Valve Group; Crane Valves.
d. Crane Co.; Crane Valve Group; Stockham Div.
e. Grinnell Corporation; Mueller Co.; Water Products Div.
f. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
g. McWane, Inc.; Kennedy Valve Div.
h. McWane, Inc.; M & H Valve Company Div.
i. NIBCO INC.
j. Valve and Primer Corp.
k. Watts Industries, Inc.; Water Products Div.
l. Or equal.

2. Check Valves: AWWA C508, swing-check type with 175-psig working-pressure rating and resilient seat. Include interior and exterior epoxy coating according to AWWA C550 and ends to match piping.

B. UL-Labeled Check Valves:

1. Manufacturers:

a. American AVK.
b. Central Sprinkler Company.
c. Crane Co.; Crane Valve Group; Stockham Div.
d. Firematic Sprinkler Devices, Inc.
e. Globe Fire Sprinkler Corporation.
f. Grinnell Corporation.
g. Grinnell Corporation; Mueller Co.; Water Products Div.
h. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
i. McWane, Inc.; Kennedy Valve Div.
j. NIBCO INC.
k. Reliable Automatic Sprinkler Co., Inc.
l. Star Sprinkler, Inc.
m. United Brass Works, Inc.
n. Victaulic Co. of America.
o. Viking Corporation.
p. Watts Industries, Inc.; Water Products Div.
q. Or equal.

2. Check Valves: UL 312, swing-check type with 175-psig working-pressure rating, rubber-face checks unless otherwise indicated, and ends matching piping.
3. Check Valves: UL 312, swing-check type with 250-psig working-pressure rating, rubber-faced checks unless otherwise indicated, and ends matching piping.

2.12 WATER-REGULATING VALVES

A. Manufacturers:

1. Cla-Val Co.
2. Or equal.

B. Pressure-Regulating Valves: Automatic, pilot-operated, cast-iron body with interior and exterior epoxy coating according to AWWA C550. Include 250-psig working-pressure design, bronze pressure-reducing pilot valve and tubing, and means for discharge pressure adjustment.

C. Flow-Regulating Valves: Automatic, pilot-operated, cast-iron body with interior and exterior epoxy coating according to AWWA C550. Include 250-psig working-pressure design, bronze pressure-reducing pilot valve and tubing, and means for flow adjustment.

2.13 RELIEF VALVES

A. Manufacturers:

1. BERMAD.
2. GA Industries, Inc.
3. MULTIPLEX Manufacturing Co.
4. OCECO, Inc.
5. Val-Matic Valve & Mfg. Corp.
6. Cla-Val Co.
7. Or equal.

B. Combination Air Valves: AWWA C512, float-operated, hydromechanical device to automatically release accumulated air or to admit air. Include 300-psig working-pressure design.

C. Pressure Thermal Expansion relief Valves: Valves shall comply with UL 1478A with Factory Mutual approved. Valves shall be a minimum of ½" and a maximum of 1" as manufactured by

1. Tyco Corp. Kunkle Div: Model 912
2. AGF MFG. Inc. Model No. 7000
3. Or equal

D. All Valves shall be epoxy coated, both interior and exterior according to AWWA C550.

2.14 DETECTOR-TYPE WATER METERS

A. The detector water meter shall be provided by the manufacturer of the double detector check assembly and shall be installed as part of the double detector check assembly of the type and manufacturer as specified below.

2.15 BACKFLOW PREVENTERS

A. Manufacturers and products:

1. Reduced Pressure Detector type. See Division 22 Section "Domestic Water Piping Specialties".

2. Double Check Detector Assembly

a. CMB Industries, Inc.; Febco Div. Model 806YD DCDA.
b. Watts Industries, Inc.; Water Products Div. Model 709 DCDA-OSY-CFM.
c. Wilkens Water Control Products, Zurn Plumbing Products Group. Model 950DAOSY-CFM or 450DA-OSY-CFM.
d. Or equal.

B. General: ASSE standard, backflow preventers.

1. Working Pressure: 150 psig minimum.
2. NPS 2-1/2 and Larger: Bronze, cast-iron, steel, or stainless-steel body with flanged ends.

    a. Interior Lining: AWWA C550 or FDA-approved, epoxy coating for backflow preventers having cast-iron or steel body.

3. NPS 2 and smaller: Bronze body with flanged or threaded ends. Provide isolation valves and unions to allow removal of the device without cutting the pipe.
4. Interior Components: Corrosion-resistant materials.
5. Exterior Finish: Fusion bonded epoxy coating.
6. Strainer: Do not furnish strainer on backflow assembly.

C. Reduced-Pressure-Detector Assembly Backflow Preventers: ASSE 1047, FM approved or UL listed, and suitable for continuous pressure application. Include outside screw and yoke gate valves on inlet and outlet, and strainer on inlet. Include test cocks; pressure-differential relief valve with ASME A112.1.2, air-gap fitting located between two positive-seating check valves; and bypass with displacement-type water meter, valves, and reduced-pressure backflow preventer.

1. Maximum Pressure Loss: 12 psig through middle 1/3 of flow range.

2.16 FREE STANDING FIRE HYDRANTS

A. Wet-Barrel Fire Hydrants: AWWA C503, two NPS 4 and one NPS 2-1/2 outlets, NPS 6 threaded or flanged inlet with 6 bolts, and base section with NPS 6 mechanical-joint inlet. Include interior coating according to AWWA C550. Hydrant shall have 150-psig minimum working-pressure design.

1. Manufacturers and Product:

    a. Jones, James Company, Model No. J-3775.
    b. Clow Model No. 2065.
    c. Or equal (no known equal).

2. Materials of construction: Hydrant top section shall be bronze conforming to ASTM B62. Interior working part, including stems, shall be of bronze containing no more than 7 percent zinc or 2 percent aluminum.
3. Outlet Threads: NFPA 1963, with external hose thread used by OCFA. Include bronze caps with steel chains.
4. Operating and Cap Nuts: Pentagon, 1-1/2 inches point to flat.

5. Direction of Opening: Open hydrant valves by turning operating nut to left or counter clockwise.
6. Exterior Finish: Yellow alkyd-gloss enamel paint.

2.17 FIRE HYDRANT BREAK-OFF CHECK VALVE

A. Provide break-off check valve for immediately stopping the flow of water when a hydrant has been knocked off its mounting. Provide double-grooved break-off riser, enclosed with a concrete collar and properly installed between the check valve and hydrant base.

B. Check valve shall be cast iron with epoxy lining and include bronze check valve flapper, stainless steel spring, stainless steel break-off rod, stainless steel flapper pin and flapper pin plugs.

1. Manufacturers:

a. Long Beach Iron Works (Clow) Model LB400.
b. Or equal.

2.18 FIRE DEPARTMENT CONNECTIONS

A. Manufacturers:

1. AFAC, Inc.; Badger Fire Protection.
2. Elkhart Brass Mfg. Co., Inc.
3. Fire End & Croker Corporation.
4. Firematic Sprinkler Devices, Inc.
5. Grinnell Corporation.
6. Guardian Fire Equipment, Inc.
7. Reliable Automatic Sprinkler Co., Inc.
8. Smith Industries, Inc.; Potter-Roemer Div.
9. Or equal.

B. Exposed, Freestanding, Fire Department Connections: UL 405, cast-bronze body, with thread inlets according to NFPA 1963 and matching OCFA hose threads, and threaded bottom outlet. Include lugged caps, gaskets, and chains; lugged swivel connection and drop clapper for each hose-connection inlet; 18-inch- high brass sleeve; and round escutcheon plate.

1. Connections: Six NPS 2-1/2 inlets and one **NPS 6** outlet.
2. Inlet Alignment: Horizontal.
3. Finish Including Sleeve: Per architecture plans.
4. Escutcheon Plate Marking: "AUTO SPRINKLER"

2.19 ALARM DEVICES

A. Description: UL 753, FM approved, of types and sizes to mate and match piping and equipment.

2.20 MISCELLANEOUS MATERIALS

A. Warning Tape; See Division 31 Section “Earth Moving.” Tape shall state “Caution Potable Water Line Buried Below.”

B. Tracer Wire; See Division 31 Section “Earth Moving.”

PART 3 - EXECUTION

3.1 EARTHWORK

A. Refer to Division 31 Section “Earth Moving” for excavating, trenching, and backfilling.

3.2 PIPING APPLICATIONS

A. General: Use pipe, fittings, and joining methods for piping systems according to the following applications.

B. Transition couplings and special fittings with pressure ratings at least equal to piping pressure rating may be used in applications below, unless otherwise indicated.

C. Do not use flanges, unions, or keyed couplings for underground piping.

D. Flanges, unions, keyed couplings, and special fittings may be used, instead of joints indicated, on aboveground piping.

E. Underground Water-Service Piping: Use the following piping materials for each size range:

1. NPS 3/4 to NPS 4: Soft copper tube, Type K; wrought-copper fittings; and brazed joints.
2. Option for NPS 2 ½ to NPS 3 1/2; Use NPS3 and NPS4, ductile-iron pipe with the grooved ends; ductile iron grooved end fitting: ductile-iron keyed couplings; and grooved joints.
3. NPS 4 to NPS12; Ductile-iron with grooved ends; ductile-iron grooved end fitting; epoxy coated on interior and exterior, ductile-iron keyed coupling; and grooved joints
4. NPS 4 to NPS 12; PVC, AWWA C900 Class 200 pipe; PVC fabricated or molded fittings of same class as pipe; and gasketed joints. Use ASTM, F 477 elastomeric seals.

F. Aboveground Water-Service Piping: Use any of the following piping materials for each size range:

1. NPS 3/4 to NPS 4: Hard copper tube, Type K; wrought-copper fittings; and brazed joints.
2. Option for NPS 2-1/2 to NPS 3-1/2: Use NPS 3 and NPS 4; ductile-iron pipe with grooved ends; ductile-iron, grooved-end fittings; ductile-iron keyed couplings; and grooved joints epoxy coated on interior and exterior.

3. NPS 4: Ductile-iron pipe with grooved ends; ductile-iron, grooved-end fittings; ductileiron keyed couplings; and grooved joints, epoxy coated on interior and exterior.
4. NPS 6 and NPS 8: Ductile-iron pipe with grooved ends; ductile-iron, grooved-end fittings; ductile-iron keyed couplings; and grooved joints, epoxy coated on interior and exterior.

G. Underground Fire-Service-Main Piping: Use the following:

1. NPS 4 to NPS 12: Ductile-iron, mechanical-joint pipe; ductile-iron, mechanical-joint fittings; and mechanical joints.

2. NPS 4 to NPS 12: PVC, AWWA Class 200 pipe listed for fire-protection service; PVC fabricated or molded fittings of same class as pipe; and gasketed joints.

H. Aboveground Fire-Service-Main Piping: Ductile-iron pipe with flanged or grooved ends; ductile-iron, grooved-end or flanged fittings; ductile-iron keyed couplings; and grooved joints epoxy coated on interior and exterior.

I. Underground Combined Water-Service and Fire-Service-Main Piping: Use the following:

1. NPS 6 to NPS 12: Ductile-iron, mechanical-joint pipe; ductile-iron, mechanical-joint fittings; and mechanical joints epoxy coated on interior and exterior.
2. NPS 6 to NPS 12: PVC, AWWA C900 Class 200 pipe listed for fire-protection service; PVC fabricated or molded fittings of same class as pipe; and gasketed joints.

3.3 VALVE APPLICATIONS

A. General Application: Use mechanical-joint-or flanged-end valves for NPS 3 and larger underground installation. Use corporation valves and curb valves with ends compatible with piping, for NPS 2 and smaller installation. All Valves shall be epoxy coated.

B. Valve types to be used:

1. Underground Valves, NPS 3 and Larger: AWWA, cast-iron, non-rising-stem, resilient seated, epoxy coated gate valves with valve box.
2. Use the following for valves above ground:

a. Ball Valves, NPS 2 and Smaller: Bronze, full port stainless steel ball.
b. Gate Valves, NPS 3 and Larger: AWWA, cast iron, OS&Y rising or non-rising stem, resilient Wedge seated. Use rising stem valves in fire service and non-rising stems in potable water and regulating stations.
c. Check Valves: AWWA C508, swing-check valves.

3. Water-Regulating Valves: Use for water-service piping aboveground.

a. Pressure-Regulating Valves: To control water pressure.
b. Flow-Regulating Valves: To control water flow.

4. Relief Valves: Use for water-service piping aboveground.

a. Combination Air Valves: To release or admit air.
b. Pressure relief valves; To release pressure build-up per code.

5. Detector Check Valves: Use for fire water-service piping aboveground to detect unauthorized use of water.

3.4 JOINT CONSTRUCTION

A. See Division 33 Section "Common Work Results For Utilities" for basic piping joint construction.

B. Make pipe joints according to the following:

1. Ductile-Iron Piping, Gasketed Joints for Water-Service Piping: AWWA C600 and AWWA M41.
2. Ductile-Iron Piping, Gasketed Joints for Fire-Service-Main Piping: UL 194.
3. Ductile-Iron Piping, Grooved Joints: Cut-groove pipe. Assemble joints with keyed couplings, gaskets, lubricant, and bolts according to coupling manufacturer's written instructions.
4. Copper Tubing Soldered Joints: ASTM B 828. Use flushable flux and lead-free solder.
5. PVC Piping Gasketed Joints: Use joining materials according to AWWA C900. Construct joints with elastomeric seals and lubricant according to ASTM D 2774 or ASTM D 3139 and pipe manufacturer's written instructions.
6. Dissimilar Materials Piping Joints: Use adapters compatible with both piping materials, with OD, and with system working pressure. Refer to Division 33 Section "Common Work Results For Utilities" for joining piping of dissimilar metals.

C. Provide stainless steel bolts, nuts and washers both above ground and below ground.

3.5 PIPING SYSTEMS - COMMON REQUIREMENTS

A. See Division 33 Section "Common Work Results For Utilities" for piping-system common requirements.

3.6 PIPING INSTALLATION

A. Water-Main Connection:

1. Make connection using a tee fitting or tapping sleeve.

2. No taps or other connections shall be made to existing water mains prior to conducting an approved pressure test on the new water distribution system down stream from the tapping valve. Tapping sleeves shall be pressure tested in an approved manner in the field, in the presence of the inspector, prior to tapping the main line. Tapping of the main line shall not proceed unless the inspector is present.
3. Expose connection point to the existing domestic water system for verification of horizontal and vertical location before starting new connection and piping.

B. Make connections larger than NPS 2 with tapping machine according to the following:

1. Install tapping sleeve and tapping valve according to MSS SP-60.
2. Install tapping sleeve on pipe to be tapped. Position flanged outlet for gate valve.
3. Use tapping machine compatible with valve and tapping sleeve; cut hole in main. Remove tapping machine and connect water-service piping.
4. Install gate valve onto tapping sleeve. Comply with MSS SP-60. Install valve with stem pointing up and with valve box.

C. Make connections NPS 2 and smaller with drilling machine according to the following:

1. Install service-saddle assemblies and corporation valves in size, quantity, and arrangement required by University standards.
2. Install service-saddle assemblies on water-service pipe to be tapped. Position outlets for corporation valves.
3. Use drilling machine compatible with service-saddle assemblies and corporation valves. Drill hole in main. Remove drilling machine and connect water-service piping.
4. Install corporation valves into service-saddle assemblies.
5. Install manifold for multiple taps in water main.
6. Install curb valve in water-service piping with head pointing up and with service box.

D. Comply with NFPA 24 for fire-service-main piping materials and installation.

1. Install PE corrosion-protection encasement according to ASTM A 674 or AWWA C105. Encasement shall be complete the entire length and run through wall or floor and be left exposed for visual inspection. Seal end of encasement to pipe in a visual area.

E. Install ductile-iron, water-service piping according to AWWA C600 and AWWA M41.

1. Install PE corrosion-protection encasement according to ASTM A 674 or AWWA C105. Encasement shall be complete the entire length and run through wall or floor and be left exposed for visual inspection. Seal end of encasement to pipe in a visual area.

F. Install copper tube and fittings according to CDA's "Copper Tube Handbook."

G. Install PVC, AWWA pipe according to AWWA M23 and ASTM F 645.

H. Bury piping with depth of cover over top of pipe as shown on the drawing profiles according to the following:

1. Mains in paved areas: With at least 42 inches cover over top.
2. Mains in unpaved areas: With at least 48 inches cover over top.
3. Laterals to fire hydrants: With at least 48 inches cover over top.
4. Laterals 4 inches and smaller to buildings: With at least 30 inches cover over top.
5. Laterals 6 inches and larger to buildings: With at least 36 inches cover over top.
6. In Loose Gravelly Soil and Rock: With at least 12 inches additional cover.

I. Install piping by tunneling, jacking, or combination of both, under streets and other obstructions that cannot be disturbed.

J. Extend water-service piping and connect to water-supply source and building water piping systems at outside face of building wall.

1. Terminate water-service piping at building wall until building water piping systems are installed. Terminate piping with caps, plugs, or flanges as required for piping material. Make connections to building water piping systems when those systems are installed.

K. Sleeves are specified in Division 33 Section "Common Work Results For Utilities."

L. Mechanical sleeve seals are specified in Division 22 Section "Common Work Results For Plumbing."

M. Install underground piping with restrained joints at horizontal and vertical changes in direction. Use restrained-joint piping, thrust blocks, anchors, tie-rods and clamps, and other supports.

1. Thrust blocks shall be installed at all changes in direction, changes in size, valves and terminal ends, such as plugs, caps and tees.
2. Thrust blocks shall be concrete having a compressive strength of not less than 2000 psi after 28 days and shall be in accordance with Division 03, Section “Cast-In-Place Concrete.”
3. Thrust blocks shall be placed between solid ground and the fitting to be anchored. The base and the thrust bearing sides of the thrust blocks shall be poured directly against undisturbed earth.
4. The sides of the thrust blocks not subject to thrust may be poured against forms.
5. Thrust blocks shall be placed so that the joints for all fittings will be accessible for repair in the future. No pipe joint shall be embedded in concrete.
6. The thrust blocks shall provide for transfer of thrusts and reactions without exceeding the allowable stress of the concrete and shall be installed in accordance with pipe manufacturer's instructions.

N. See Division 22 Section "Domestic Water Piping and Valves" for potable-water piping inside the building.

O. See Division 21 Sections for Water-Base Fire-Suppression System inside the building.

P. Install water-supply piping with shutoff valve in water supply to each drinking fountain. Use curb valve and service box.

Q. Provide expansion joint when fire service enters the building through basement wall.

R. Buried metallic fittings shall be wrapped with double wrap of PE film before backfill. In addition, buried metallic fittings and appurtenances in PVC pipe installation shall be "bagged" or wrapped with polyethylene before concrete thrust blocks are poured. AWWA C105 applies.

S. Curbs in streets, drives or ring mall shall be inscribed with a "W" indicating location of domestic water service crossing curb.

T. Lay piping on a bed of sand, at least 6 inches thick, on firm undisturbed earth. Remove loose rock, clods, and debris from the trench before placing bedding sand and before laying any pipe.

3.7 ANCHORAGE INSTALLATION

A. Install anchorages for tees, plugs and caps, bends, crosses, valves, and hydrant branches. Include anchorages for the following piping systems:

1. Gasketed-Joint, Ductile-Iron, Water-Service Piping: According to AWWA C600.
2. Gasketed-Joint, PVC Water-Service Piping: According to AWWA M23.
3. Fire-Service-Main Piping: According to NFPA 24.

B. Apply full coat of asphalt or other acceptable corrosion-resistant material to surfaces of installed ferrous anchorage devices.

3.8 VALVE INSTALLATION

A. AWWA Gate Valves: Comply with AWWA C600 and AWWA M44. Install each underground valve with stem pointing up and with valve box. Main line valves shall be accessible at all times during construction. Valves with over 48-inches of cover shall be provided with extension stem as per Campus Standard Detail drawing 33-W-8.

B. Water-Regulating Valves: Install above ground between shutoff valves.

C. Relief Valves: Install above ground with shutoff valve on inlet.

D. Detector Check Valves: Install above ground.

E. Fire Service check valves; Install above ground

F. Main line valves shall be accessible during construction, and valve stem tops having over 48inches of cover shall be provided with extension as per Campus Standard Detail drawing 33-W8.

3.9 DETECTOR CHECK VALVE INSTALLATION

A. Install detector check valves for proper direction of flow. Install bypass with water meter, gate valves on each side of meter, and check valve downstream from meter.

B. Support detector check valves, meters, shutoff valves, and piping on pipe stand and concrete pad.

3.10 WATER-METER INSTALLATION

A. Water Meters: Install water meters, above ground with shutoff valve and strainer on watermeter inlets. Include shutoff valves on water-meter inlets. Support meters, valves and piping on pipe stands.

3.11 BACKFLOW-PREVENTER AND DETECTOR CHECK INSTALLATION

A. Install backflow preventers detector check assemblies of type, size, and capacity indicated above ground. Include valves and test cocks. Install according to requirements of California Plumbing Code and Orange County Health Department and University's Representative.

B. Do not install backflow preventers with relief drain in vault or other space subject to flooding.

C. Do not install bypass piping around backflow assemblies

D. Install NPS2 and swollen backflow assemblies in such a way that the assembly can be removed from the piping without cutting or unsoldering piping. Provide additional valves, flanges or unions as necessary. NPS 21/2 and larger backflow assemblies shall be flanged. Ensure assemblies are installed such that they can be removed without springing the pipe.

E. Support NPS 2-1/2 and larger backflow preventers, valves, and piping above grade at low elevation and on pipe stands and concrete pad. Backflow shall be low while still allowing maintenance and not overly high to avoid an unsightly visual appearance. Coordinate to provide visual barriers such as retaining walls and/or bushes to conceal backflow. Assemblies shall be installed such that its lowest point is a minimum of 12 inches above the finished surface with a preferred minimum of 24 inches.

F. Install pressure relief valve, immediately downstream of Backflow assembly on the service and discharge drain in non-obstructive way. Relief valve shall be set at not more than 175 psig. G. Provide 5-foot clearance on each side around backflow cross connection devices.

3.12 FIRE HYDRANT INSTALLATION

A. General: Install each fire hydrant with separate gate valve in supply pipe, anchor with restrained joints or thrust blocks, and support in upright position. If hydrant is more than 10 feet from the main line install a second valve near the main line with a second valve near the hydrant as required by the University's standard detail.

B. Installation shall be in accordance with the University's Standard details.

C. AWWA-Type Fire Hydrants: Comply with AWWA M17.

D. Provide break-off check valve. With installation of break-off check valve, no break-away bolts shall be installed.

E. Fire hydrants shall be set with the bottom flange of breakaway spool 6-inches above the concrete pad or sidewalk and shall be located a minimum of 2.5 feet and maximum of 3.0 feet from curb.

F. When used, breakaway bolts in base of hydrant shall be installed with the threads up and the hollows shall be filled and sealed with silicon. The hydrant shall be installed at such a height that the bolts can be removed without interference from the surface below the hydrant flange.

G. Both of the fire hydrants 4 inch port outlets shall face the emergency access roadway at 45 degrees to the road.

3.13 FIRE DEPARTMENT CONNECTION INSTALLATION

A. Install fire department connections.

B. Install ball drip valves at each check valve for fire department connection.

C. Install protective pipe bollards to protect from accidental damage from vehicles on sides of each freestanding fire department connection. Refer to Division 05 Section "Metal Fabrications" for pipe bollards.

3.14 ALARM DEVICE INSTALLATION

A. General: Comply with NFPA 24 for devices and methods of valve supervision. Underground valves with valve box do not require supervision.

B. Locking and Sealing: Secure unsupervised valves as follows:

1. Valves: Install chain and padlock on open OS&Y gate valve.

C. Pressure Switches: Drill and thread hole in exposed barrel of fire hydrant. Install switch into the threaded hole.

D. Water-Flow Indicators: Install in water-service piping in vault. Select indicator with saddle and vane matching pipe size. Drill hole in pipe, insert vane, and bolt saddle to pipe.

E. Connect alarm devices to building fire alarm system. Wiring and fire-alarm devices are specified in Division 28 Section "Digital Addressable Fire Alarm System."

3.15 DRINKING FOUNTAIN INSTALLATION

A. Install drinking fountains anchored to concrete pavement or to concrete block. Install per manufacturer's recommendations.

3.16 CONNECTIONS

A. Connect water-distribution piping to University's existing water main. Use tapping sleeve and tapping valve or flanged tee.

B. Connect water-distribution piping to hydrants .

C. Connect water-distribution piping to interior domestic-water and fire-suppression piping as required for the project.

D. Connect waste piping from drinking fountains to sanitary sewerage system. See Division 33 Section "Facility Sanitary Sewer" for connection to sanitary-sewer] piping.

E. Ground equipment according to Division 26 Section "Grounding and Bonding For Electrical Systems."

F. Tighten electrical connectors and terminals according to manufacturer's published torque tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

3.17 FIELD QUALITY CONTROL

A. Piping Tests: Conduct piping tests before joints are covered and after thrust blocks have hardened sufficiently. Fill pipeline 24 hours before testing and apply test pressure to stabilize system. Use only potable water.

B. Hydrostatic Tests: Test at 150 psig or 1-1/2 times working pressure, whichever is greater, for 4 hours.

1. Increase pressure in 50-psig increments and inspect each joint between increments. Hold at test pressure for 2 hours; decrease to 0 psig. Slowly increase again to test pressure and hold for 2 more hours. Maximum allowable leakage is 2 quarts per hour per 100 joints. Remake leaking joints with new materials and repeat test until leakage is within allowed limits.

C. Prepare reports of testing activities.

D. Backflow Assemblies: Backflow assemblies shall be tested by a certified tester.

E. Fire main and water mains serving fire suppression risers and fire hydrant piping shall be pressure tested and flushed before backfilling according to the procedures set forth in NFPA 24. The DCFM shall witness an inspection of underground installation, back flush, and hydrostatic test. Hydrostatic testing shall be made with before joints are covered. Backfill between joints before testing to prevent movement of piping.

3.18 IDENTIFICATION

A. Install continuous underground warning tape during backfilling of trench for underground water-service piping. See Division 31 Section "Earth Moving" for underground warning tapes.

B. Install tracer wire on top of and attached to pipe for all non-ferrous piping. See Division 31 Section "Earth Moving" for tracer wirer.

C. Show termination points for tracer wire on record drawings.

3.19 ADJUSTING

A. Adjust drinking fountain flow regulators for proper flow and stream height.

3.20 CLEANING

A. Clean and disinfect water-distribution piping as follows:

1. Use purging and disinfecting procedure prescribed, use procedure described in AWWA C651 or as described below:

a. Fill system or part of system with water/chlorine solution containing at least 50 ppm of chlorine; isolate and allow to stand for 24 hours.
b. An optional disinfecting procedure that can be used in lieu of paragraph above is to drain system or part of system of previous solution and refill with water/chlorine solution containing at least 200 ppm of chlorine; isolate and allow to stand for 3 hours.

c. Submit water samples in sterile bottles to the University’s Representative for review and acceptance by the University’s Environmental Health and Safety Representatives. Repeat procedure if biological examination shows evidence of contamination.
d. Underground mains shall be flushed at maximum flow during non-peak campus usage time

B. Prepare reports of purging and disinfecting activities.

C. After completing drinking fountain installation, inspect unit. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.

D. Clean drinking fountains, on completion of installation, according to manufacturer's written instructions.

3.21 EMERGENCY CONTACT

A. The existing water, sewer, storm drain, electrical, gas, high temperature water, compressed air, chilled water, underground utilities on campus, with the exception of some private Utility company lines, are under the care custody and control of the University's Facilities Management Department. Only under extreme emergency circumstances shall a contractor shutdown or interrupt existing lines or utilities.

B. In the event of an emergency, UCR Facilities Management is to be notified immediately. Contact the Facilities Management Service Desk at (951) 827-4214. Since it is impossible for a contractor to have an understanding of the entirety of the impacts that such a shut down on campus may have, the immediate and sustained involvement of Facilities Management personnel is essential. For example, it is possible that a decision will be made to allow water to run for some time rather than shut down the campus. Like calling 911 for other emergencies, it is not necessary or appropriate to wait for approval from the project manager to call Facilities Management in these cases. UCI Facilities Management personnel will perform shutdowns and close the appropriate valves to isolate the area of work.

C. Schedule outages for utility tie-in work in advance and state the maximum duration of shutdown. Operation of the central plant governs. The construction schedule may have to be adjusted to perform work during off-hours.

END OF SECTION 33 1110

SECTION 33 16 00 - STORAGE TANKS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Underground Water Tanks:
   1. Tank installations in the following locations:
      a. United States.
   2. For the following applications:
      a. Rainwater Harvesting / Stormwater Detention.

1.2 RELATED SECTIONS

A. Section 31 2000 – Earth Moving

B. Section 31 5000 – Excavation Support and Protection.

C. Section 32 1313 – Concrete Paving.

1.3 REFERENCES

A. Underground Water Tanks in the United States:
   1. American Concrete Institute (ACI) standard ACI 318, Building Code Requirements for Structural Concrete.
   2. ANSI/AWWA D120 - Thermosetting Fiberglass-Reinforced Plastic Tanks.
   3. Tank manufacturer shall be recognized by Underwriters Laboratories as a manufacturer of tanks listed to the UL-1316 standard.

1.4 SUBMITTALS

A. Product Data: Submit manufacturer's data sheets on each product to be used, including, but not limited to, the following:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation manual and operating guidelines.

B. Shop Drawings: Tank manufacturer shall submit the following for review and approval prior to fabrication of the tanks:
   1. Detailed shop drawings of each tank complete with all accessories supplied by the manufacturer.
   2. Detailed shipping, handling and installation instructions.

1.5 QUALITY ASSURANCE

A. Tank installations in the United States:
   1. Regulatory Requirements: Comply with applicable requirements of the laws, codes, ordinances, and regulations of Federal, State, and local authorities having jurisdiction.

1.6 DELIVERY, STORAGE, AND HANDLING

A. General: Comply with tank manufacturer's Installation and Operating Guidelines recommendations for delivery, storage, and tank handling.

1.7 WARRANTY

A. Warranty: Provide manufacturer's standard limited warranty.

PART 2 PRODUCTS

2.1 MANUFACTURERS:

A. Tank installations in the United States:
   1. Acceptable Manufacturer: Xerxes Corporation, which is located at: 7901 Xerxes Ave. S.; Minneapolis, MN 55431; Tel: 952-887-1890; Fax: 952-887-1882; Email:info@xerxes.com; Web:www.xerxes.com

B. Substitutions: Not permitted without prior approval from University.

C. Requests for substitutions will be considered in accordance with provisions of Section 01600 - Product Requirements.

2.2 UNDERGROUND WATER TANKS

A. Tank Design - Fiberglass reinforced plastic (FRP) tanks:
   1. The tank size, fittings and accessories shall be as shown on the drawings.
   2. Tank shall be manufactured with structural ribs which are fabricated as in integral part of the tank wall.
   3. Tank shall be manufactured with a laminate consisting of resin and glass fiber reinforcement only. No sand/silica fillers or resin extenders shall be used.
   4. Tank shall be vented to atmospheric pressure.
   5. Tank shall be capable of handling liquids with specific gravity up to 1.1
   6. Tank shall be compatible with liquids identified in the manufacturer's standard limited warranty.

B. Loading Conditions - Tank shall meet the following design criteria:
   1. Internal Load - Tank shall be designed to withstand a 5-psig (35 kPa) air-pressure test with a 5:1 safety factor.
   2. Surface Loads - Tank shall be designed to withstand surface H-20 and HS-20 axle loads when properly installed according to manufacturer's current Installation Manual and Operating Guidelines.
   3. External Hydrostatic Pressure - Tank shall be designed for 7 feet (2.1 m) of overburden over the top of the tank, the hole fully flooded, and a safety factor of 5:1 against general buckling.

C. Rainwater Harvesting / Stormwater Detention Applications:
   1. Governing Standards, as applicable:
      a. ANSI/AWWA D120 - Thermosetting Fiberglass-Reinforced Plastic Tanks.
      b. American Concrete Institute (ACI) standard ACI 318, Building Code Requirements for Structural Concrete.

c. Tank manufacturer shall be recognized by Underwriters Laboratories (UL) as a manufacturer of tanks listed to the UL-1316 standard.

2. Tank Design: Single-Wall or vessel as specified and shown on the Drawings.

3. Tank Accessories - Rainwater Harvesting / Stormwater Detention Applications:
   a. Tank Anchoring:
      1) Anchor straps shall be as supplied by tank manufacturer and designed for a maximum load of 25,000 lbs (11340 kg).
      2) Galvanized turnbuckles shall be supplied by the tank manufacturer.
      3) Prefabricated concrete anchors shall be supplied by the tank manufacturer, designed to the ACI 318 standard, manufactured with 4,000 psi concrete and shall have adjustable anchor points.
   b. Access Openings:
      1) All access openings shall have a diameter of 24 inches or 30 inches (610 mm or 762 mm), complete with riser, lid and necessary hardware.
   c. Attached Access Risers:
      1) Attached access risers shall be PVC or FRP as supplied by tank manufacturer.
      2) Attached access risers shall be 24 inches or 30 inches (610 mm or 762 mm) diameter
      3) Access risers shall be attached to access openings during installation utilizing adhesive or FRP bonding kits as supplied by the tank manufacturer.
   d. Piping and Fittings:
      1) Tank shall be equipped with factory-installed threaded fittings, or pipe stubs.
      2) PVC piping shall at a minimum meet the requirements of ANSI Schedule 40.
      3) All flanged nozzles shall be flanged and flat-faced, and conform to Class 150 bolting patterns as specified in ANSI/ASME/ B16.5.
      4) Carbon steel and stainless steel NPT fittings shall withstand a minimum of 150 foot-pounds (203 NM) of torque and 1,000 foot-pounds (1356 NM) of bending, both with a 2:1 safety factor.
   e. Manway Openings:
      1) The standard manway shall be flanged, 22 inches (559 mm) I.D. and complete with gaskets, bolts and cover.
      2) Manway openings shall be designed to withstand 5-psig (35 kPa) test pressure with a 5:1 safety factor.
   f. Ladders: Ladders shall be the standard FRP ladder as supplied by tank manufacturer.

PART 3 EXECUTION

3.1 TESTING

A. Tank shall be tested according to the tank manufacturer's Installation Manual and Operating Guidelines in effect at time of installation.

3.2 INSTALLATION

A. Tank shall be installed according to the tank manufacturer's Installation Manual and Operating Guidelines in effect at time of installation.

END OF SECTION

SECTION 33 3100 – FACILITY SANITARY SEWER

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes gravity-flow, nonpressure sanitary sewerage outside the building, with the following components:

1. Backwater valves.
2. Cleanouts.
3. Precast concrete manholes.

1.2 DEFINITIONS

A. PVC: Polyvinyl chloride plastic.

1.3 PERFORMANCE REQUIREMENTS

A. Gravity-Flow, Nonpressure, Drainage-Piping Pressure Rating: 10-foot head of water.

1.4 SUBMITTALS

A. Product Data: For the following:

1. Special pipe fittings.
2. Backwater valves.

B. Shop Drawings: For the following:

1. Manholes: Include plans, elevations, sections, details, and frames and covers. Include concrete design-mix report for cast-in-place concrete.

C. Field quality-control test reports.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Do not store plastic materials, pipe, and fittings in direct sunlight.

B. Protect pipe, pipe fittings, and seals from dirt and damage.

C. Handle manholes according to manufacturer's written rigging instructions.

1.6 PROJECT CONDITIONS

A. Interruption of Existing Sanitary Sewerage Service: Do not interrupt service to facilities occupied by University or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:

1. Notify University's Representative no fewer than 14 days in advance of proposed interruption of service.
2. Do not proceed with interruption of service without University Representative's written permission.

1.7 QUALITY ASSURANCE

A. Pre-installation Conference: Conduct conference at Project Sit to comply with requirements in Division 01 Section "Project Management and Coordination".

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.
2. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01, Section 01 6000, "Product Requirements", Part 2 "Product Substitutions" Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 PIPING MATERIALS

A. Refer to Part 3 "Piping Applications" Article for applications of pipe, fitting, and joining materials.

2.8 PVC PIPE AND FITTINGS

A. PVC Sewer Pipe and Fittings, NPS 15 and Smaller: ASTM D 3034, SDR 35, with bell-andspigot ends for gasketed joints with ASTM F 477, elastomeric seals.

B. PVC Sewer Pipe and Fittings, NPS 18 and Larger: ASTM F 679, T- 2 wall thickness, with belland-spigot ends for gasketed joints with ASTM F 477, elastomeric seals.

C. PVC Profile Gravity Sewer Pipe and Fittings: ASTM F 794 pipe, with bell-and-spigot ends; ASTM D 3034 fittings, with bell ends; and ASTM F 477, elastomeric seals.

D. PVC Force Main Sewer Pipe and Fittings: AWWA C-900, class 150 pipe standard ends and ASTM F477 class to metric seals.

2.9 NONPRESSURE-TYPE PIPE COUPLINGS

A. Comply with ASTM C 1173, elastomeric, sleeve-type, reducing or transition coupling, for joining underground nonpressure piping. Include ends of same sizes as piping to be joined and corrosion-resistant-metal tension band and tightening mechanism on each end.

B. Sleeve Materials:

1. For Cast-Iron Soil Pipes: ASTM C 564, rubber.
2. For Plastic Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.
3. For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.

C. Unshielded, Flexible Couplings: Elastomeric sleeve with stainless-steel shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.

1. Manufacturers:

a. Dallas Specialty & Mfg. Co.
b. Fernco Inc.
c. Logan Clay Products Company (The).
d. Mission Rubber Company; a division of MCP Industries, Inc.
e. NDS Inc.
f. Plastic Oddities, Inc.
g. Or equal

D. Shielded, Flexible Couplings: ASTM C 1460, elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.

1. Manufacturers:

a. Cascade Waterworks Mfg.
b. Dallas Specialty & Mfg. Co.
c. Mission Rubber Company; a division of MCP Industries, Inc.
d. Or equal.

E. Ring-Type, Flexible Couplings: Elastomeric compression seal with dimensions to fit inside bell of larger pipe and for spigot of smaller pipe to fit inside ring.

1. Manufacturers:

a. Fernco Inc.
b. Logan Clay Products Company (The).
c. Mission Rubber Company; a division of MCP Industries, Inc.
d. Or equal.

F. Nonpressure-Type, Rigid Couplings: ASTM C 1461, sleeve-type reducing- or transition-type mechanical coupling molded from ASTM C 1440, TPE material with corrosion-resistant-metal tension band and tightening mechanism on each end.

1. Manufacturers:

a. ANACO.
b. Or equal.

2.10 BACKWATER VALVES

A. Gray-Iron Backwater Valves: ASME A112.14.1, gray-iron body and bolted cover, with bronze seat.

1. Manufacturers:

a. Josam Company.
b. Smith, Jay R. Mfg. Co.
c. Wade Div.; Tyler Pipe.
d. Watts Industries, Inc.
e. Watts Industries, Inc.; Enpoco, Inc. Div.
f. Zurn Specification Drainage Operation; Zurn Plumbing Products Group.
g. Or equal.

2. Horizontal Type: With swing check valve and hub-and-spigot ends.
3. Combination Horizontal and Manual Gate-Valve Type: With swing check valve, integral gate valve, and hub-and-spigot ends.
4. Terminal Type: With bronze seat, swing check valve, and hub inlet.

B. PVC Backwater Valves: Horizontal type; with PVC body, PVC removable cover, and PVC swing check valve.

1. Manufacturers:

a. Canplas Inc.
b. IPS Corporation.
c. NDS Inc.
d. Plastic Oddities, Inc.
e. Sioux Chief Manufacturing Company, Inc.
f. Zurn Light Commercial Specialty Plumbing Products; Zurn Plumbing Products Group.
g. Or equal.

2.11 CLEANOUTS

A. Gray-Iron Cleanouts: ASME A112.36.2M, round, gray-iron housing with clamping device and round, secured, scoriated, gray-iron cover. Include gray-iron ferrule with inside calk or spigot connection and countersunk, tapered-thread, brass closure plug.

1. Manufacturers:

a. Josam Company.
b. MIFAB Manufacturing Inc.
c. Smith, Jay R. Mfg. Co.
d. Wade Div.; Tyler Pipe.
e. Watts Industries, Inc.
f. Watts Industries, Inc.; Enpoco, Inc. Div.
g. Zurn Specification Drainage Operation; Zurn Plumbing Products Group.
h. Or equal.

2. Top-Loading Classification: Heavy duty.
3. Sewer Pipe Fitting and Riser to Cleanout: ASTM A 74, Service class, cast-iron soil pipe and fittings.

B. PVC Cleanouts: PVC body with PVC threaded plug. Include PVC sewer pipe fitting and riser to cleanout of same material as sewer piping.

1. Manufacturers:

a. Canplas Inc.
b. IPS Corporation.
c. NDS Inc.
d. Plastic Oddities, Inc.
e. Sioux Chief Manufacturing Company, Inc.
f. Zurn Light Commercial Specialty Plumbing Products; Zurn Plumbing Products Group.
g. Or equal.

2.12 CORROSION-PROTECTION PIPING ENCASEMENT

A. Encasement for Underground Metal Piping or Fittings: ASTM A 674 or AWWA C105.

1. Form: Sheet or tube.
2. Material: high-density, crosslaminated PE film of 8 mil. Minimum thickness, Tube or sheet.
3. Color: Black or Natural.

2.13 MANHOLES

A. Designed Precast Concrete Manholes: ASTM C 913; designed according to ASTM C 890 for A-16 (ASSHTO HS20-44), heavy-traffic, structural loading; of depth, shape, and dimensions indicated, with provision for sealant joints.

1. Ballast: Increase thickness of one or more precast concrete sections or add concrete to manhole as required to prevent flotation.
2. Joint Sealant: ASTM C 990, bitumen or butyl rubber.

3. Steps: ASTM A 615, deformed, 1/2-inch steel reinforcing rods encased in ASTM D 4101, PP, wide enough to allow worker to place both feet on 1 step and designed to prevent lateral slippage off of step. Cast or anchor steps into sidewalls at 12to 16-inch intervals. Omit steps if total depth from floor of manhole to finished grade is less than 36 inches.

4. Grade Rings: Reinforced-concrete rings, 6- to 9-inch total thickness, to match diameter of manhole frame and cover.
5. Manhole Frames and Covers: Ferrous frame; 30 or 36-inch, ID by 6-inch minimum riser with 4-inch-minimum width flange and 32 or 38-inch-diameter cover. Include indented top design with lettering cast into cover, using wording equivalent to "UCI SEWER."

   a. Material: ASTM A 536, Grade 60-40-18 ductile iron, unless otherwise indicated.
   b. Protective Coating: Foundry-applied, coal-tar, epoxy-polyamide paint; 10-mil minimum thickness applied to all surfaces, unless otherwise indicated.

B. Manhole Cover Inserts: Manufactured, form, of size to fit between manhole frame and cover and designed to prevent stormwater inflow. Include handle for removal and gasket for gastight sealing.

1. Manufacturers:

   a. FRW Industries; a Syneco Systems, Inc. Company.
   b. L.F. Manufacturing, Inc.
   c. Parson Environmental Products, Inc.
   d. Or equal.

2. Type: With valve.

2.14 CONCRETE

A. General: Cast-in-place concrete according to ACI 318/318R, ACI 350R, and the following:

1. Cement: ASTM C 150, Type II.

2. Fine Aggregate: ASTM C 33, sand.
3. Coarse Aggregate: ASTM C 33, crushed gravel.
4. Water: Potable.

B. Portland Cement Design Mix: 4000 psi minimum, with 0.45 maximum water/cementitious materials ratio.

1. Reinforcement Fabric: ASTM A 185, steel, welded wire fabric, plain.
2. Reinforcement Bars: ASTM A 615, Grade 60, deformed steel.

C. Manhole Channels and Benches: Factory or field formed from concrete. Portland cement design mix, 4000 psi minimum, with 0.45 maximum water/cementitious materials ratio. Include channels and benches in manholes.

1. Channels: Concrete invert, formed to same width as connected piping, with height of vertical sides to three-fourths of pipe diameter. Form curved channels with smooth, uniform radius and slope.

a. Invert Slope: 1 percent through manhole.

2. Benches: Concrete, sloped to drain into channel.

a. Slope: 4 percent.

D. Ballast and Pipe Supports: Portland cement design mix, 3000 psi minimum, with 0.58 maximum water/cementitious materials ratio.

1. Reinforcement Fabric: ASTM A 185, steel, welded wire fabric, plain.
2. Reinforcement Bars: ASTM A 615, Grade 60, deformed steel.

2.15 MISCELLANEOUS MATERIALS

A. Paint: SSPC-Paint 16.

B. PE Sheeting: ASTM D A674, with at least 8-mil thickness.

C. Warning Tape: See Division 31 Section “Earth Moving”. Tape shall state “Caution Sanitary Sewer Buried Below”.

D. Tracer Wire: See Division 31 Section “Earth Moving”.

E. Laboratory Waste Piping: See Division 22 Section “Chemical Waste Systems for Lab and Healthcare.”

PART 3 – EXECUTION

3.1 EARTHWORK

A. Excavating, trenching, and backfilling are specified in Division 31 Section “Earth Moving”.

3.2 PIPING APPLICATIONS

A. Pipe couplings and special pipe fittings with pressure ratings at least equal to piping rating may be used in applications below, unless otherwise indicated.

1. Use nonpressure-type flexible couplings where required to join gravity-flow, nonpressure sewer piping, unless otherwise indicated.

a. Shielded flexible or rigid couplings for same or minor difference OD pipes.
b. Unshielded, increaser/reducer-pattern, flexible or rigid couplings for pipes with different OD.
c. Ring-type flexible couplings for piping of different sizes where annular space between smaller piping's OD and larger piping's ID permits installation.

B. Special Pipe Fittings: Use for pipe expansion and deflection. Pipe couplings and special pipe fittings with pressure ratings at least equal to piping rating may be used in applications below, unless otherwise indicated.

C. Gravity-Flow, Nonpressure Sewer Piping: Use any of the following pipe materials for each size range:

1. NPS 3: Hub-and-spigot, Extra-Heavy class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. NPS 3: Hubless cast-iron soil pipe and fittings; heavy-duty, shielded, stainless-steel couplings; and coupled joints.
3. NPS 4: Hub-and-spigot, Extra-Heavy class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
4. NPS 4: Hubless cast-iron soil pipe and fittings; heavy-duty, shielded, stainless-steel couplings; and coupled joints.
5. NPS 4: ABS, SDR 35, sewer pipe and fittings; gaskets; and gasketed joints.
6. NPS 5 and NPS 6: Hub-and-spigot, Extra-Heavy class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
7. NPS 5 and NPS 6: Hubless cast-iron soil pipe and fittings; heavy-duty, shielded, stainless-steel couplings; and coupled joints.
8. NPS 5 and NPS 6 : NPS 6 ABS, SDR 35, sewer pipe and fittings; gaskets; and gasketed joints.
9. NPS 5 and NPS 6: NPS 6 PVC sewer pipe and fittings, gaskets, and gasketed joints.
10. NPS 8 and NPS 10: ABS, SDR 42, sewer pipe and fittings; gaskets; and gasketed joints.
11. NPS 8 and NPS 10: PVC sewer pipe and fittings, gaskets, and gasketed joints.
12. NPS 12: ABS, SDR 42, sewer pipe and fittings; gaskets; and gasketed joints.
13. NPS 12 and NPS 15: PVC sewer pipe and fittings, gaskets, and gasketed joints.
14. NPS 18 to NPS 24: PVC sewer pipe and fittings, gaskets, and gasketed joints.

D. Force-Main, Pressure Piping: Use the following pipe materials for each size range:

1. NPS 2: PVC Schedule **80**, water-service pipe; PVC Schedule **80**, waterservice-pipe fittings; and solvent-cemented joints.

2. NPS 3: PVC Schedule **80**, water-service pipe; PVC Schedule **80**, waterservice-pipe fittings; and solvent-cemented joints.

3. NPS 6 to NPS 8: PVC pressure pipe, PVC pressure fittings, gaskets, and gasketed joints.

4. NPS 10 and NPS 12: PVC pressure pipe; compact-pattern, ductile-iron fittings; gaskets; and gasketed joints.

3.3 PIPING INSTALLATION

A. General Locations and Arrangements: Drawing plans and details indicate general location and arrangement of underground sanitary sewerage piping. Location and arrangement of piping layout take design considerations into account. Install piping as indicated, to extent practical. Where specific installation is not indicated, follow piping manufacturer's written instructions.

B. Install piping beginning at low point, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install gaskets, seals, sleeves, and couplings according to manufacturer's written instructions for using lubricants, cements, and other installation requirements.

C. Install manholes for the end of line with future connections, change in grade or size, change in alignment or intersection of two or more mains. Use fittings for branch connections. Direct tap into existing sewer is Only allowed when branch is two pipe sizes smaller than existing sewer main.

D. Install proper size increasers, reducers, and couplings where different sizes or materials of pipes and fittings are connected. Reducing size of piping in direction of flow is prohibited.

E. Tunneling: Install pipe under streets or other obstructions that cannot be disturbed by tunneling, jacking, or combination of both.

F. Install gravity-flow, nonpressure, drainage piping according to the following:

1. Install piping pitched down in direction of flow, at minimum slope of 2 percent for branches to buildings.
2. Install sewer mains piping with 48-inch minimum cover.
3. Sewer mains minimum slope shall be per following table:

SEWER SIZE	SLOPE AT:
6	0.0100
8	0.0080
10	0.0055
12	0.0040
15	0.0030
18	0.0020
21	0.0015

4. Install PVC sewer piping according to ASTM D 2321 and ASTM F 1668.

5. Install PVC profile gravity sewer piping according to ASTM D 2321 and ASTM F 1668.

G. Clear interior of piping and manholes of dirt and superfluous material as work progresses. Maintain swab or drag in piping, and pull past each joint as it is completed. Place plug in end of incomplete piping at end of day and when work stops.

3.4 PIPE JOINT CONSTRUCTION

A. Basic piping joint construction is specified in Division 33 Section "Common Work Results For Utilities." Where specific joint construction is not indicated, follow piping manufacturer's written instructions.

B. Join gravity-flow, nonpressure, drainage piping according to the following:
1. Join PVC sewer piping according to ASTM D 2321 and ASTM D 3034 for elastomericseal joints or ASTM D 3034 for elastomeric-gasket joints.
2. Join PVC profile gravity sewer piping according to ASTM D 2321 for elastomeric-seal joints or ASTM F 794 for gasketed joints.
3. Join dissimilar pipe materials with nonpressure-type, flexible couplings.

3.5 MANHOLE INSTALLATION

A. General: Install manholes complete with appurtenances and accessories indicated.

B. Install precast concrete manhole sections with sealants according to ASTM C 891.

C. Form continuous concrete channels and benches between inlets and outlet.

D. Set tops of frames and covers flush with finished surface of manholes that occur in pavements. Set tops 3 inches above finished surface elsewhere, unless otherwise indicated.

E. E. Install manhole cover inserts in frame and immediately below cover.

F. Temporary covers may be necessary in new streets. In these cases, the manhole shaft shall be left six (6) inches, minimum, below subgrade. A heavy metal plate acceptable to the University’s Inspector shall be provided to cover the manhole opening. Cleats shall be provided in at least four (4) points for the underside of the temporary cover to prevent the temporary cover from moving. These cleats shall extend a minimum of 3-inches from the cover plate and shall be welded to the plate.

G. Plywood shall be cut to the shape and size of the manhole base and placed in the base before the temporary cover is placed on the shaft. At the completion of final paving, the installation of grade rings, as necessary, and the installation of the permanent frame and cover assembly shall raise each manhole to final grade.

3.6 CONCRETE PLACEMENT

A. Place cast-in-place concrete according to ACI 318/318R.

3.7 BACKWATER VALVE INSTALLATION

A. Install horizontal-type backwater valves in piping where indicated.

B. Install combination horizontal and manual gate valve type in piping and in manholes where indicated.

C. Install terminal-type backwater valves on end of piping and in manholes where indicated. Secure units to sidewalls.

3.8 CLEANOUT INSTALLATION

A. Install cleanouts and riser extensions from sewer pipes to cleanouts at grade. Use cast-iron soil pipe fittings in sewer pipes at branches for cleanouts and cast-iron soil pipe for riser extensions to cleanouts. Install piping so cleanouts open in direction of flow in sewer pipe.

1. Use medium-duty, top-loading classification cleanouts in earth or unpaved foot traffic, and paved foot-traffic areas.
2. Use heavy-duty, top-loading classification cleanouts in service cart or service vehicletraffic service areas.
3. Use extra-heavy-duty, top-loading classification cleanouts in ring mall, fire lanes and roads.

B. Set cleanout frames and covers in earth in cast-in-place-concrete block, 18 by 18 by 12 inches deep. Set with tops 1 inch above surrounding grade.

C. Set cleanout frames and covers in concrete pavement with tops flush with pavement surface.

3.9 CONNECTIONS

A. Connect nonpressure, gravity-flow drainage piping to building's sanitary building drains specified in Division 22 Section "Sanitary Waste and Vent Piping."

B. Make connections to existing piping and underground manholes.

1. Use commercially manufactured wye fittings for piping branch connections. Remove section of existing pipe; install wye fitting into existing piping; and encase entire wye fitting, plus 6-inch overlap, with not less than 6 inches of concrete with 28-day compressive strength of 3000 psi.
2. Make branch connections from side into existing piping, NPS 4 to NPS 20. Remove section of existing pipe; install wye fitting into existing piping; and encase entire wye with not less than 6 inches of concrete with 28-day compressive strength of 3000 psi.
3. Make branch connections from side into existing piping, NPS 21 or larger, or to underground manholes by cutting opening into existing unit large enough to allow 3 inches of concrete to be packed around entering connection. Cut end of connection pipe passing through pipe or structure wall to conform to shape of and be flush with inside

wall, unless otherwise indicated. On outside of pipe or manhole wall, encase entering connection in 6 inches of concrete for minimum length of 12 inches to provide additional support of collar from connection to undisturbed ground.

a. Use concrete that will attain minimum 28-day compressive strength of 3000 psi, unless otherwise indicated.
b. Use epoxy-bonding compound as interface between new and existing concrete and piping materials.

4. Protect existing piping and manholes to prevent concrete or debris from entering while making tap connections. Remove debris or other extraneous material that may accumulate.

C. Connect to **grease** interceptors specified in Division 22 Section "Sanitary Waste Piping Specialties."

3.10 CLOSING ABANDONED SANITARY SEWERAGE SYSTEMS

A. Abandoned Piping: Close open ends of abandoned underground piping indicated to remain in place. Include closures strong enough to withstand hydrostatic and earth pressures that may result after ends of abandoned piping have been closed. Use either procedure below:

1. Close open ends of piping with at least 8-inch- thick, brick masonry bulkheads.
2. Close open ends of piping with threaded metal caps, plastic plugs, or other acceptable methods suitable for size and type of material being closed. Do not use wood plugs.

B. Abandoned Manholes: Excavate around manhole as required and use either procedure below:

1. Remove manhole and close open ends of remaining piping.
2. Remove top of manhole down to at least 36 inches below final grade. Fill to within 12 inches of top with stone, rubble, gravel, or compacted dirt. Fill to top with concrete.

C. Backfill to grade according to Division 31 Section "Earth Moving."

3.11 PAINTING

A. Clean and prepare concrete manhole surfaces for field painting. Remove loose efflorescence, chalk, dust, grease, oils, and release agents. Roughen surface as required to remove glaze. Paint the following concrete surfaces as recommended by paint manufacturer:

1. Precast Concrete Manholes: All exterior and interior.

B. Prepare ferrous frame and cover surfaces according to SSPC-PA 1 and paint according to SSPC-PA 1 and SSPC-Paint 16. Do not paint surfaces with foundry-applied corrosion-resistant coating.

3.12 IDENTIFICATION

A. Materials and their installation are specified in Division 31 Section "Earth Moving." Arrange for installation of green warning tape directly over piping and installation of tracer wire.

1. Use warning tape over all piping.
2. Use detectable tracer wire over nonferrous piping and over edges of underground manholes.

3.13 FIELD QUALITY CONTROL

A. Inspect interior of piping to determine whether line displacement or other damage has occurred. Inspect after approximately 24 inches of backfill is in place, and again at completion of Project.

1. Submit separate report for each system inspection.
2. Defects requiring correction include the following:

    a. Alignment: Less than full diameter of inside of pipe is visible between structures.
    b. Deflection: Flexible piping with deflection that prevents passage of ball or cylinder of size not less than 92.5 percent of piping diameter.
    c. Crushed, broken, cracked, or otherwise damaged piping.
    d. Infiltration: Water leakage into piping.
    e. Exfiltration: Water leakage from or around piping.

3. Replace defective piping using new materials, and repeat inspections until defects are within allowances specified.
4. Reinspect and repeat procedure until results are satisfactory.
5. University will run a camera through completed piping to determine if all work is satisfactory. Any defective piping shall be replaced using new material.

B. Test new piping systems, and parts of existing systems that have been altered, extended, or repaired, for leaks and defects.

1. Do not enclose, cover, or put into service before inspection and approval.
2. Test completed piping systems according to requirements of University’s Representative.
3. Schedule tests and inspections by authorities having jurisdiction with at least 24 hours' advance notice.
4. Submit separate report for each test.
5. Hydrostatic Tests: Test sanitary sewerage according to requirements of the University Representative and the following:

    a. Allowable leakage is a maximum of 50 gal./inch of nominal pipe size per mile of pipe, during 24-hour period.
    b. Close openings in system and fill with water.
    c. Purge air and refill with water.
    d. Disconnect water supply.
    e. Test and inspect joints for leaks.

6. Air Tests: Not allowed unless approved by University's Representative. Test sanitary sewerage according to requirements of UNI-B-6, and the following:

   a. Option: Test plastic gravity sewer piping according to ASTM F 1417.

7. Manholes: Perform hydraulic test according to ASTM C 969.

C. Leaks and loss in test pressure constitute defects that must be repaired.

D. Replace leaking piping using new materials, and repeat testing until leakage is within allowances specified.

3.14 CLEANING

A. Clean interior of piping of dirt and superfluous material.

END OF SECTION 33 3100

SECTION 33 4100 - STORM UTILITY DRAINAGE PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes gravity-flow, non-pressure storm drainage outside the building, with the following components:

1. Backwater valves.
2. Cleanouts.
3. Drains.
4. Precast concrete or Cast-in-place concrete manholes.

1.2 DEFINITIONS

A. PE: Polyethylene plastic.

B. PP: Polypropylene plastic.

C. PVC: Polyvinyl chloride plastic.

1.3 PERFORMANCE REQUIREMENTS

A. Gravity-Flow, Nonpressure, Drainage-Piping Pressure Rating: 10-foot head of water. Pipe joints shall be at least silttight.

1.4 SUBMITTALS

A. Product Data: For the following:

1. Drains.
2. Channel drainage systems.
3. Storage and leaching chambers.

B. Shop Drawings: For the following:

1. Manholes: Include plans, elevations, sections, details, and frames and covers.
2. Catch Basins and Storm water Inlets: Include plans, elevations, sections, details, and frames, covers, and grates.
3. Storm water Detention Structures: Include plans, elevations, sections, details, frames and covers, design calculations, and concrete design-mix report.

E. Field quality-control test reports.

F. Concrete mix designs: Concrete mix designs reports for poured-in-place manholes and manhole bases.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Do not store plastic manholes, pipe, and fittings in direct sunlight.

B. Protect pipe, pipe fittings, and seals from dirt and damage.

C. Handle manholes according to manufacturer's written rigging instructions.

D. Handle catch basins and storm water inlets according to manufacturer's written rigging instructions.

1.6 PROJECT CONDITIONS

A. Interruption of Existing Storm Drainage Service: Do not interrupt service to facilities occupied by University or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:

1. Notify University’s Representative no fewer than 14 days in advance of proposed interruption of service.
2. Do not proceed with interruption of service without University Representative's written permission.

1.7 QUALITY ASSURANCE

A. Preinstallation meeting: Conduct conference at Project Site to comply with requirements in Division 01, Section “Project Management and Coordination”.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.
2. Or Equal: Where products are specified by manufacturers name and accompanied by the term "or equal", comply with provisions in Division 01, Section 01 6000, “Product Requirements”, Part 2 “Product Substitutions” Article. Specific procedures must be followed before use of an unnamed product or manufacturer.

2.2 PIPING MATERIALS

A. Refer to Part 3 "Piping Applications" Article for applications of pipe, fitting, and joining materials.

2.3 PE PIPE AND FITTINGS

A. Corrugated PE Drainage Pipe and Fittings NPS 10 and Smaller: AASHTO M 252M, Type S, with smooth waterway for coupling joints. Pipe shall be joined with a bell and spigot joint. The bell shall be an integral part of the pipe. Inside surface of pipe shall be smooth.

1. Silttight Couplings: PE sleeve with ASTM D 1056, Type 2, Class A, Grade 2 gasket material that mates with tube and fittings.

2. Joints shall remain silt-tight when subjected to a 1.5 foot axial misalignment.

2.4 PVC PIPE AND FITTINGS

A. PVC Sewer Pipe and Fittings, NPS 15 and Smaller: ASTM D 3034, SDR 35, with bell-and-spigot ends for gasketed joints with ASTM F 477, elastomeric seals.

B. PVC Profile Gravity Sewer Pipe and Fittings: ASTM F 794 pipe, with bell-and-spigot ends; ASTM D 3034 fittings, with bell ends; and ASTM F 477, elastomeric seals.

2.5 NONPRESSURE-TYPE PIPE COUPLINGS

A. Comply with ASTM C 1173, elastomeric, sleeve-type, reducing or transition coupling, for joining underground nonpressure piping. Include ends of same sizes as piping to be joined, and corrosion-resistant-metal tension band and tightening mechanism on each end.

B. Sleeve Materials:

1. For Concrete Pipes: ASTM C 443, rubber.
2. For Plastic Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.
3. For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.

C. Unshielded Flexible Couplings: Elastomeric sleeve with stainless-steel shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.

1. Manufacturers:

a. Dallas Specialty & Mfg. Co.

b. Fernco Inc.
c. Logan Clay Products Company (The).
d. Mission Rubber Company; a division of MCP Industries, Inc.
e. NDS Inc.
f. Plastic Oddities, Inc.
g. Or equal.

D. Shielded Flexible Couplings: ASTM C 1460, elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.

1. Manufacturers:

a. Cascade Waterworks Mfg.
b. Dallas Specialty & Mfg. Co.
c. Mission Rubber Company; a division of MCP Industries, Inc.
d. Or equal.

E. Ring-Type Flexible Couplings: Elastomeric compression seal with dimensions to fit inside bell of larger pipe and for spigot of smaller pipe to fit inside ring.

1. Manufacturers:

a. Fernco Inc.
b. Logan Clay Products Company (The).
c. Mission Rubber Company; a division of MCP Industries, Inc.
d. Or equal.

F. Nonpressure-Type Rigid Couplings: ASTM C 1461, sleeve-type reducing- or transition-type mechanical coupling molded from ASTM C 1440, TPE material with corrosion-resistant-metal tension band and tightening mechanism on each end.

1. Manufacturers:

a. ANACO.
b. Or equal.

2.6 BACKWATER VALVES

A. PVC Backwater Valves: Horizontal type; with PVC body, PVC removable cover, and PVC swing check valve.

1. Manufacturers:

a. Canplas Inc.
b. IPS Corporation.
c. NDS Inc.

d. Plastic Oddities, Inc.
e. Sioux Chief Manufacturing Company, Inc.
f. Zurn Industries, Inc.; Zurn Light Commercial Specialty Plumbing Products.
g. Or equal.

2.7 CLEANOUTS

A. Gray-Iron Cleanouts: ASME A112.36.2M, round, gray-iron housing with clamping device and round, secured, scoriated, gray-iron cover. Include gray-iron ferrule with inside calk or spigot connection and countersunk, tapered-thread, brass closure plug.

1. Manufacturers:

a. Josam Company.
b. MIFAB Manufacturing, Inc.
c. Smith, Jay R. Mfg. Co.
d. Wade Div.; Tyler Pipe.
e. Watts Industries, Inc.
f. Watts Industries, Inc.; Enpoco, Inc. Div.
g. Zurn Industries, Inc.; Zurn Specification Drainage Operation.
h. Or equal.

2. Top-Loading Classification(s): Heavy duty.
3. Sewer Pipe Fitting and Riser to Cleanout: ASTM A 74, Service class, cast-iron soil pipe and fittings.

B. PVC Cleanouts: PVC body with PVC threaded plug. Include PVC sewer pipe fitting and riser to cleanout of same material as sewer piping.

1. Manufacturers:

a. Canplas Inc.
b. IPS Corporation.
c. NDS Inc.
d. Plastic Oddities, Inc.

e. Sioux Chief Manufacturing Company, Inc.
f. Zurn Industries, Inc.; Zurn Light Commercial Specialty Plumbing Products.
g. Or equal.

2.12 WALKWAY, PLAZA AND PLANTING AREA DRAINS

A. Gray-Iron Area Drains: ASME A112.21.1M, round body with anchor flange and round secured grate. Include bottom outlet with inside calk or spigot connection, of sizes indicated.

1. Manufacturers:

a. Josam Company.
b. MIFAB Manufacturing, Inc.
c. Smith, Jay R. Mfg. Co.
d. Wade Div.; Tyler Pipe.
e. Watts Industries, Inc.
f. Zurn Industries, Inc.; Zurn Specification Drainage Operation.
g. Or equal.

2. Top-Loading Classification(s): Medium and heavy duty.

B. Gray-Iron Trench Drains: ASME A112.21.1M, 6-inch- wide top surface, rectangular body with anchor flange or other anchoring device, and rectangular secured grate. Include units of total length indicated and number of bottom outlets with inside calk or spigot connections, of sizes indicated.

1. Manufacturers:

a. Josam Company.
b. Smith, Jay R. Mfg. Co.
c. Wade Div.; Tyler Pipe.
d. Watts Industries, Inc.
e. Zurn Industries, Inc.; Zurn Specification Drainage Operation.
f. Or equal.

2. Top-Loading Classification(s): Medium and heavy duty.

2.13 CORROSION-PROTECTION PIPING ENCASEMENT

A. Encasement for Underground Metal Piping: ASTM A 674 or AWWA C105.

1. Form: Sheet or tube.
2. Material: LLDPE film of 0.008-inch minimum thickness or high-density, cross laminated PE film of 0.004-inch minimum thickness.
3. Color: Black or Natural.

2.14 MANHOLES

A. Standard Precast Concrete Manholes: ASTM C 478, precast, reinforced concrete, of depth indicated, with provision for sealant joints.

1. Diameter: 48 inches minimum
2. Ballast: Increase thickness of precast concrete sections or add concrete to base section, as required to prevent flotation.
3. Base Section: 6-inch minimum thickness for floor slab and 4-inch minimum thickness for walls and base riser section, and having separate base slab or base section with integral floor.

4. Riser Sections: 4-inch minimum thickness, and lengths to provide required depth approved by University's Representative.
5. Top Section: Eccentric-cone type unless concentric-cone or flat-slab-top type is indicated. Top of cone of size that matches grade rings.
6. Joint Sealant: ASTM C 990, bitumen or butyl rubber.
7. Resilient Pipe Connectors: ASTM C 923, cast or fitted into manhole walls, for each pipe connection.
8. Steps: ASTM A 615, deformed, 1/2-inch steel reinforcing rods encased in ASTM D 4101, PP, wide enough to allow worker to place both feet on 1 step and designed to prevent lateral slippage off of step. Cast or anchor steps into sidewalls at 12to 16-inch intervals. Omit steps if total depth from floor of manhole to finished grade is less than 36 inches.
9. Grade Rings: Reinforced-concrete rings, 6- to 9-inch total thickness, to match diameter of manhole frame and cover.
10. Manhole Frames and Covers: Ferrous frame; 30 or 36-inch ID by 6-inch minimum riser with 4-inch- minimum width flange and 32 or 38-inch- diameter cover. Include indented top design with lettering cast into cover, using wording equivalent to "UCR STORM SEWER."
    a. Material: ASTM A 536, Grade 60-40-18 ductile iron, unless otherwise indicated.

B. Designed Precast Concrete Manholes: ASTM C 913; designed according to ASTM C 890 for A-16 (ASSHTO HS20-44), heavy-traffic, structural loading; of depth, shape, and dimensions required, with provision for sealant joints.

1. Ballast: Increase thickness of one or more precast concrete sections or add concrete to manhole, as required to prevent flotation.
2. Joint Sealant: ASTM C 990, bitumen or butyl rubber.
3. Resilient Pipe Connectors: ASTM C 923, cast or fitted into manhole walls, for each pipe connection.
4. Steps: ASTM A 615, deformed, 1/2-inch steel reinforcing rods encased in ASTM D 4101, PP], wide enough to allow worker to place both feet on 1 step and designed to prevent lateral slippage off of step. Cast or anchor steps into sidewalls at 12to 16-inch intervals. Omit steps if total depth from floor of manhole to finished grade is less than 30 inches.
5. Grade Rings: Reinforced-concrete rings, 6- to 9-inch total thickness, to match diameter of manhole frame and cover.
6. Manhole Frames and Covers: Ferrous frame; 30 or 36-inch ID by 6-inch minimum riser with 4-inch- minimum width flange and 32 or 38 -inch- diameter cover. Include indented top design with lettering cast into cover, using wording equivalent to "UCR STORM SEWER."

a. Material: ASTM A 536, Grade 60-40-18 ductile iron, unless otherwise indicated.

2.15 CONCRETE

A. General: Cast-in-place concrete according to ACI 318/318R, ACI 350R, and the following:

1. Cement: ASTM C 150, Type II.
2. Fine Aggregate: ASTM C 33, sand.
3. Coarse Aggregate: ASTM C 33, crushed gravel.
4. Water: Potable.

B. Portland Cement Design Mix: 4000 psi minimum, with 0.45 maximum water-cementitious materials ratio.

1. Reinforcement Fabric: ASTM A 185, steel, welded wire fabric, plain.
2. Reinforcement Bars: ASTM A 615, Grade 60, deformed steel.

C. Ballast and Pipe Supports: Portland cement design mix, 3000 psi minimum, with 0.58 maximum water-cementitious materials ratio.

1. Reinforcement Fabric: ASTM A 185, steel, welded wire fabric, plain.
2. Reinforcement Bars: ASTM A 615/A 615M, Grade 60, deformed steel.

2.17 CATCH BASINS

A. Standard Precast Concrete Catch Basins: ASTM C 478, precast, reinforced concrete, of depth indicated, with provision for sealant joints.

1. Base Section: 6-inch minimum thickness for floor slab and 4-inch minimum thickness for walls and base riser section, and having separate base slab or base section with integral floor.
2. Riser Sections: 4-inch minimum thickness, 48-inch diameter, and lengths to provide depth indicated.
3. Top Section: Eccentric-cone type unless concentric-cone or flat-slab-top type is indicated. Top of cone of size that matches grade rings.
4. Joint Sealant: ASTM C 990, bitumen or butyl rubber.
5. Grade Rings: Include 2 or 3 reinforced-concrete rings, of 6- to 9-inch total thickness, that match 24-inch- diameter frame and grate.
6. Steps: ASTM A 615/A 615M, deformed, 1/2-inch steel reinforcing rods encased in ASTM D 4101, PP, wide enough to allow worker to place both feet on 1 step and designed to prevent lateral slippage off of step. Cast or anchor steps into sidewalls at 12to 16-inch intervals. Omit steps if total depth from floor of catch basin to finished grade is less than 30 inches..
7. Pipe Connectors: ASTM C 923, resilient, of size required, for each pipe connecting to base section.

B. Designed Precast Concrete Catch Basins: ASTM C 913, precast, reinforced concrete; designed according to ASTM C 890 for A-16 (ASSHTO HS20-44), heavy-traffic, structural loading; of depth, shape, and dimensions indicated, with provision for sealant joints.

1. Joint Sealants: ASTM C 990, bitumen or butyl rubber.
2. Grade Rings: Include 2 or 3 reinforced-concrete rings, of 6- to 9-inch total thickness, that match 24-inch- diameter frame and grate.
3. Steps: ASTM A 615/A 615M, deformed, 1/2-inch steel reinforcing rods encased in ASTM D 4101, PP, wide enough to allow worker to place both feet on 1 step and designed to prevent lateral slippage off of step. Cast or anchor steps into sidewalls at 12to 16-inch intervals. Omit steps if total depth from floor of catch basin to finished grade is less than 30 inches.
4. Pipe Connectors: ASTM C 923, resilient, of size required, for each pipe connecting to base section.

C. Cast-in-Place Concrete, Catch Basins: Construct of reinforced concrete; designed according to ASTM C 890 for structural loading; of depth, shape, dimensions, and appurtenances indicated.

1. Bottom, Walls, and Top: Reinforced concrete.
2. Channels and Benches: Concrete.
3. Steps: ASTM A 615/A 615M, deformed, 1/2-inch steel reinforcing rods encased in ASTM D 4101, PP, wide enough to allow worker to place both feet on 1 step and designed to prevent lateral slippage off of step. Cast or anchor steps into sidewalls at 12to 16-inch intervals. Omit steps if total depth from floor of catch basin to finished grade is less than 30 inches.

Retain paragraph and subparagraphs below for rectangular structures.

D. Frames and Grates: ASTM A 536, Grade 60-40-18, ductile iron designed for A-16, structural loading. Include flat grate with small square or short-slotted drainage openings.

1. Size: 24 by 24 inches minimum, unless otherwise indicated.
2. Grate Free Area: Approximately 50 percent, unless otherwise indicated.
3. Grates in bicycle pathway shall be suitable for bike tires.
4. Grates in walkways shall have heel proof option.

Retain paragraph and subparagraphs above or paragraph and subparagraph below.

Retain paragraph below for round, manhole-type structures.

E. Frames and Grates: ASTM A 536, Grade 60-40-18, ductile iron designed for A-16, structural loading. Include 24-inch ID by 7- to 9-inch riser with 4-inch minimum width flange, and 26inch- diameter flat grate with small square or short-slotted drainage openings.

1. Grate Free Area: Approximately 50 percent, unless otherwise indicated.
2. Grates in bicycle pathway shall e suitable for bike tires.
3. Grates in walkways shall have heel proof option.

2.18 STORM WATER INLETS

A. Curb Inlets: Made with vertical curb opening, of materials and dimensions according to City of Riverside standards.

B. Gutter Inlets: Made with horizontal gutter opening, of materials and dimensions according to City of Riverside standards. Include heavy-duty frames and grates.

C. Combination Inlets: Made with vertical curb and horizontal gutter openings, of materials and dimensions according to City of Riverside standards. Include heavy-duty frames and grates.

D. Frames and Grates: Heavy-duty frames and grates according to City of Riverside standards, except openings shall not affect bike tires.

E. Curb Inlets: Vertical curb opening, of materials and dimensions indicated.

F. Gutter Inlets: Horizontal gutter opening, of materials and dimensions indicated. Include heavy duty frames and grates.

G. Combination Inlets: Vertical curb and horizontal gutter openings, of materials and dimensions indicated. Include heavy-duty frames and grates.

H. Frames and Grates: Dimensions, opening pattern shall be “Bike Tire Proof”, free area, and other attributes indicated or required..

2.19 STORM WATER DETENTION STRUCTURES

A. Cast-in-Place Concrete, Storm water Detention Structures: Construct of reinforced-concrete bottom, walls, and top; designed according to ASTM C 890 for A-16 (ASSHTO HS20-44), heavy-traffic, structural loading; of depth, shape, dimensions, and appurtenances indicated.

1. Ballast: Increase thickness of concrete, as required to prevent flotation.

2. Grade Rings: Include 2 or 3 reinforced-concrete rings, of 6- to 9-inch total thickness, that match 24-inch- diameter frame and cover.
3. Steps: ASTM A 615, deformed, 1/2-inch steel reinforcing rods encased in ASTM D 4101, PP, wide enough to allow worker to place both feet on 1 step and designed to prevent lateral slippage off of step. Cast or anchor steps into sidewalls at 12to 16-inch intervals. Omit steps if total depth from floor of structure to finished grade is less than 30 inches.

B. Manhole Frames and Covers: ASTM A 536, Grade 60-40-18, ductile-iron castings designed for heavy-duty service. Include 24-inch ID by 7- to 9-inch riser with 4-inch minimum width flange, and 26-inch- diameter cover. Include indented top design with lettering "UCR STORM SEWER" cast into cover.

2.20 PIPE OUTLETS

A. Head Walls: Cast-in-place reinforced concrete, with apron and tapered sides.

B. Riprap Basins: Broken, irregular size and shape, graded stone according to NSSGA's "Quarried Stone for Erosion and Sediment Control."

1. Average Size: NSSGA No. R-5, screen opening 5 inches.

2.21 MISCELLANEOUS MATERIALS

A. Paint: SSPC-Paint 16.

B. Warning Tape: Provide non-metallic warning tape shall state “caution storm drain buried below.”

C. PE Sheeting: ASTM D 4397, with at least 8-mil thickness.

D. Foam Pad

1 Waterstops

a Pads shown to be placed between bearing surfaces must either be (1) neoprene complying with the specifications for strip waterstops in section 51-2.05 or (2) commercial quality no. 30 asphalt felt. The protective board is not required for neoprene pads.

b Waterstops must be manufactured from neoprene or PVC. Neoprene must (1) be manufactured from a vulcanized elastomeric compound containing neoprene as the only elastomer and (2) comply with the requirements shown in the following table:

Property	Test method	Requirement
Tensile strength	ASTM D 412	2,000 psi min
Ultimate elongation	ASTM D 412	300 percent min
Compression set, 22 hours at 70 °C	ASTM D 395, Method B	30 percent max
Tear strength	ASTM D 624, Die C	26 kN/m min
Hardness, Type A	ASTM D 2240	55 ± 5
Ozone resistance 20% strain, 100 hours at 100 ± 2.2 °F	ASTM D 1149 except 100 ± 20 parts per 100,000,000	No cracks
Brittleness temperature at -40 °C	ASTM D 746, Procedure B	Pass
Flame propagation	ASTM C 542	Must not propagate flame
Change in volume, IRM 903, immersed 70 hours at 100 °C	ASTM D 471	80 percent max
Change in mass, immersed 7 days at 70 °C	ASTM D 471	15 percent max

c After accelerated aging under ASTM D 573 for 70 hours at 100 degrees C, the elastomer must not show property changes greater than those shown in the following table:

Property	Requirement
Tensile strength	-15 percent
Elongation at break	-40 percent
Hardness	+10 points

d PVC waterstops must (1) be manufactured from PVC complying with CRD-C 572 and (2) comply with the ozone resistance requirement for neoprene. Furnish waterstops full length for straight portions of joints. Manufacturer's shop splices must be fully vulcanized.

2 Strip Waterstops

a The neoprene sheet must comply with the specifications for neoprene in section 51-2.04B. The neoprene adhesive must comply with Federal Specification MMM-A-121. The protective board must be at least 1/2-inch-thick wood or fiberboard that is at least 4 ft long and the width shown. The neoprene sheet must be smooth and free from pin holes or surface blemishes and show no sign of delamination. Surfaces where adhesive is to be applied must have a cloth finish or a buffed finish. Surfaces must be clean and dry when the adhesive is applied.

PART 3 - EXECUTION

3.1 EARTHWORK

A. Excavation, trenching, and backfilling are specified in Division 31 Section "Earth Moving."

3.2 PIPING APPLICATIONS

A. Pipe couplings and special pipe fittings with pressure ratings at least equal to piping rating may be used in applications below, unless otherwise indicated.

1. Use nonpressure-type flexible couplings where required to join gravity-flow, nonpressure sewer piping, unless otherwise indicated.

a. Shielded flexible or rigid couplings for same or minor difference OD pipes.
b. Unshielded, increaser/reducer-pattern, flexible or rigid couplings for pipes with different OD.

c. Ring-type flexible couplings for piping of different sizes where annular space between smaller piping's OD and larger piping's ID permits installation.

B. Special Pipe Fittings: Use for pipe expansion and deflection. Pipe couplings and special pipe fittings with pressure ratings at least equal to piping rating may be used in applications below, unless otherwise indicated.

C. Gravity-Flow, Nonpressure Sewer Piping: Use any of the following pipe materials for each size range:

1. NPS 3 and NPS 6: ABS, SDR 35, sewer pipe and fittings; gaskets; and gasketed joints.
2. NPS 3 and NPS 15: PVC sewer pipe and fittings, gaskets, and gasketed joints.
3. NPS 8 to NPS 12: Corrugated PE drainage pipe and fittings in NPS 8 and NPS 10 and corrugated PE pipe and fittings in NPS 12, silttight couplings, and coupled joints.
4. NPS 15: Corrugated PE pipe and fittings, silttigh tcouplings, and coupled joints.
5. NPS 15: PVC profile gravity sewer pipe and fittings, gaskets, and gasketed joints.

3.3 PIPING INSTALLATION

A. General Locations and Arrangements: Drawing plans and details indicate general location and arrangement of underground storm drainage piping. Location and arrangement of piping layout take design considerations into account. Install piping as indicated, to extent practical. Where specific installation is not indicated, follow piping manufacturer's written instructions.

B. Install piping beginning at low point, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install gaskets, seals, sleeves, and couplings according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements.

C. Install manholes for changes in direction unless 12inch or smaller pipe size. Use fittings for branch connections unless direct tap into existing storm drain and pipe is twice the size of branch.

D. Install proper size increasers, reducers, and couplings where different sizes or materials of pipes and fittings are connected. Reducing size of piping in direction of flow is prohibited.

E. Tunneling: Install pipe under streets or other obstructions that cannot be disturbed by tunneling, jacking, or a combination of both.

F. Install gravity-flow, nonpressure drainage piping according to the following:

1. Install piping pitched down in direction of flow, at minimum slope of 1 percent, unless otherwise indicated or approved by University Representative.
2. Install piping NPS 6 and larger with restrained joints at tee fittings and at changes in direction. Use corrosion-resistant rods, pipe or fitting manufacturer's proprietary restraint system, or cast-in-place concrete supports or anchors.
3. Install piping with 36-inch minimum cover.

4. Install hubless cast-iron soil piping according to CISPI C310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook."
5. Install ductile-iron culvert piping according to ASTM A 716.
6. Install ductile-iron and special fittings according to AWWA C600 or AWWA M41.
7. Install PE corrugated sewer piping according to CPPA's "Recommended Installation Practices for Corrugated Polyethylene Pipe and Fittings."
8. Install PVC sewer piping according to ASTM D 2321 and ASTM F 1668.
9. Install PVC profile gravity sewer piping according to ASTM D 2321 and ASTM F 1668.
10. Install nonreinforced-concrete sewer piping according to ASTM C 1479 and ACPA's "Concrete Pipe Installation Manual."
11. Install reinforced-concrete sewer piping according to ASTM C 1479 and ACPA's "Concrete Pipe Installation Manual."

G. Foam Strip Waterstops: Install neoprene sheets as follows:
1. Lap the sheets at least 12 inches.
2. Apply the adhesive to both faces at the manufacturer's recommended rate.
3. Let the adhesive dry to an aggressive tack.
4. Bring the sheets together and roll in both directions to obtain a tight bond.

Abrasive blast clean the concrete surfaces to receive a strip waterstop. Allow the cleaned surfaces to air dry 24 hours before applying the adhesive. Apply the adhesive to the concrete and neoprene sheet at the manufacturer's recommended rate. Let the adhesive dry to an aggressive tack. Apply the sheet to the concrete surface and roll in both directions to obtain a tight bond. Completely cover the installed strip waterstops with 1 layer of protective board attached with adhesive. The protective board must remain in place until backfilling is complete.

3.4 PIPE JOINT CONSTRUCTION

A. Basic pipe joint construction is specified in Division 33 Section "Common Work Results for Utilities." Where specific joint construction is not indicated, follow piping manufacturer's written instructions.

B. Join gravity-flow, nonpressure drainage piping according to the following:

1. Join corrugated PE piping according to CPPA 100 and the following:

a. Use silttight couplings for Type 1, silttight joints.

6. Join PVC sewer piping according to ASTM D 2321 and ASTM D 3034 for elastomericseal joints or ASTM D 3034 for elastomeric gasket joints.
7. Join PVC profile gravity sewer piping according to ASTM D 2321 for elastomeric-seal joints or ASTM F 794 for gasketed joints.
8. Join dissimilar pipe materials with nonpressure-type flexible couplings.

3.5 BACKWATER VALVE INSTALLATION

A. Install horizontal-type backwater valves in piping where indicated or anywhere needed to prevent the backflow of water into a building or depressed area.

B. Install combination horizontal and manual gate valve type in piping and in manholes where indicated.

C. Install terminal-type backwater valves on end of piping and in manholes where indicated.

3.6 CLEANOUT INSTALLATION

A. Install cleanouts and riser extension from storm drain pipe to cleanout at grade. Use cast-iron soil pipe fittings in pipes at branches for cleanouts and cast-iron soil pipe for riser extensions to cleanouts. Install piping so cleanouts open in direction of flow in sewer pipe.

1. Use heavy-duty, top-loading classification cleanouts in earth or unpaved foot traffic and paved foot traffic and vehicle-traffic service areas.
2. Use extra-heavy-duty, top-loading classification cleanouts in roads areas.

B. Set cleanout frames and covers in earth in cast-in-place concrete block, 18 by 18 by 12 inches deep. Set with tops 1 inch above surrounding earth grade.

C. Set cleanout frames and covers in concrete pavement with tops flush with pavement surface.

3.7 DRAIN INSTALLATION

A. Install type of drains in locations indicated.

1. Use heavy-duty, top-loading classification drains in earth or unpaved foot traffic and paved foot traffic, and vehicle-traffic service areas.
2. Use extra-heavy-duty, top-loading classification drains in roads areas.

B. Embed drains in 4-inch minimum depth of concrete around bottom and sides.

C. Fasten grates to drains if indicated.

D. Set drain frames and covers with tops flush with pavement surface.

E. Assemble trench sections with flanged joints.

F. Embed trench sections in 4-inch minimum concrete around bottom and sides.

3.8 MANHOLE INSTALLATION

A. General: Install manholes, complete with appurtenances and accessories indicated.

B. Install precast concrete manhole sections according to ASTM C 891.

C. Construct cast-in-place manholes as indicated.

D. Install PE sheeting on earth where cast-in-place-concrete manholes are to be built.

E. Set tops of frames and covers flush with finished surface of manholes that occur in pavements. Set tops 3 inches above finished surface elsewhere, unless otherwise indicated.

F. Construct base slab of cast-in-place concrete or use precast concrete base sections. Make inverts in cast-in-place concrete and precast concrete bases with a smooth-surfaced semicircular bottom conforming to the inside contour of the adjacent drainage sections. For changes in direction of drains and entering branches into the manhole, make a circular curve in the manhole invert of as large a radius as manhole size will permit.

G. For cast-in-place concrete construction, either pour bottom slabs and walls integrally or key and bond walls to bottom slab.

H. For precast concrete construction, make joints between sections with gaskets made for installing joints in concrete piping. Give a smooth finish to the inside joints of precast concrete manholes, curb inlets, and catch basins.

I. Make joints between concrete manholes and pipes entering manholes with the resilient connectors or mortared to produce a watertight joint; install in accordance with the recommendations of the connector manufacturer.

3.9 CATCH BASIN INSTALLATION

A. Construct catch basins to sizes and shapes in or required.

B. Set frames and grates to elevations indicated or required.

3.10 STORM WATER INLET AND OUTLET INSTALLATION

A. Construct inlet head walls, aprons, and sides of reinforced concrete.

B. Construct riprap of broken stone.

C. Install outlets that spill onto grade, anchored with concrete.

D. Install outlets that spill onto grade, with flared end sections that match pipe.

E. Construct energy dissipaters at outlets.

3.11 CONCRETE PLACEMENT

A. Place cast-in-place concrete according to ACI 318/318R.

3.12 DRAINAGE SYSTEM INSTALLATION

A. Assemble and install components according to manufacturer's written instructions.

B. Install with top surfaces of components, except piping, flush with finished surface.

C. Assemble channel sections to form slope down toward drain outlets. Use sealants, adhesives, fasteners, and other materials recommended by system manufacturer.

D. Embed channel sections and drainage specialties in 4-inch minimum concrete around bottom and sides.

E. Fasten grates to channel sections if indicated.

F. Assemble channel sections with flanged or interlocking joints.

G. Embed channel sections in 4-inch minimum concrete around bottom and sides.

3.13 STORM WATER DISPOSAL SYSTEM INSTALLATION

A. Chamber Systems: Excavate trenches of width and depth, and install system and backfill according to chamber manufacturer's written instructions. Include storage and leaching chambers, filtering material, and filter mat.

B. Piping Systems: Excavate trenches of width and depth, and install piping system, filter fabric, and backfill according to piping manufacturer's written instructions.

3.14 CONNECTIONS

A. Connect nonpressure, gravity-flow drainage piping in building's storm building drains specified in Division 22 Section "Storm Drainage Piping."

B. Make connections of existing piping and underground structures per City of Irvine junction details. Finish work will conform as nearly as practicable to requirements for new work.

C. Use commercially manufactured wyes for branch connections. Field cutting into piping will not be permitted. Spring wyes into existing line and encase entire wye, plus 6" overlap, with not less than 6" of 3000 psi 28 day compressive strength concrete.

D. For branch connections from side into existing 24" or larger piping, or to underground structures, cut opening into unit sufficiently large to allow 3" of concrete to be packed around entering connection. Cut ends of connection passing through pipe or structure wall to conform to shape and be flush with inside wall, unless otherwise indicated. On outside of pipe structure

wall, encase entering connection in 6" of concrete for minimum length of 12" to provide additional support or collar from connection to undisturbed ground.

E. Use epoxy-bonding compound as interface between new and existing concrete and piping materials.

F. Maintain minimum 10 foot separation between PVC piping and any existing direct buried High Temperature Water (HTW) supply and return piping.

G. Connect storm water pumped pressure piping from the building's to the site storm drainage piping. -Pressure piping is specified in Division 22 Section "Storm Drainage Piping." Terminate piping where indicated or as directed by the University's Representative.

1. Use commercially manufactured wye fittings for piping branch connections. Encase entire wye fitting, plus 6-inch overlap, with not less than 6 inches of concrete with 28-day compressive strength of 3000 psi.
2. Make branch connections from side into piping, NPS 4 to NPS 20.
3. Make branch connections from side into existing piping, NPS 21 or larger, or to underground manholes and structures by cutting opening into unit large enough to allow 3 inches of concrete to be packed around entering connection. Cut end of connection pipe passing through pipe or structure wall to conform to shape of and be flush with inside wall, unless otherwise indicated. On outside of pipe, manhole, or structure wall, encase entering connection in 6 inches of concrete for minimum length of 12 inches to provide additional support of collar from connection to undisturbed ground.

    a. Use concrete that will attain a minimum 28-day compressive strength of 3000 psi, unless otherwise indicated.
    b. Use epoxy-bonding compound as interface between new and existing concrete and piping materials.

4. Protect piping, manholes, and structures to prevent concrete or debris from entering while making tap connections. Remove debris or other extraneous material that may accumulate.

3.15 PAINTING

A. Clean and prepare concrete manhole surfaces for field painting. Remove loose efflorescence, chalk, dust, grease, oils, and release agents. Roughen surface as required to remove glaze. Paint the following concrete surfaces as recommended by paint manufacturer:

1. Cast-in-Place-Concrete Manholes: All exterior, except bottom and all interior.
2. Precast Concrete Manholes: All exterior and interior.

B. Prepare ferrous frame and cover surfaces according to SSPC-PA 1 and paint according to SSPC-PA 1 and SSPC-Paint 16. Do not paint surfaces with foundry-applied, corrosion-resistant coating.

3.16 IDENTIFICATION

A. Materials and their installation are specified in division 31 Section "Earth Moving." Arrange for installation of green warning tape directly over piping and at outside edge of underground structures.

1. Use warning tape over ferrous piping.
2. Use copper tracer wire over nonferrous piping and over edges of underground structures if system is concealed and could not be located in the future by visual surface structures. Show termination points for tracer wire on Record Drawings.
3. Use detectable warning tape and copper tracer wire over nonferrous piping and over edges of underground structures.

3.17 FIELD QUALITY CONTROL

A. Inspect interior of piping to determine whether line displacement or other damage has occurred. Inspect after approximately 24 inches of backfill is in place, and again at completion of Project.

1. Submit separate reports for each system inspection.
2. Defects requiring correction include the following:

    a. Alignment: Less than full diameter of inside of pipe is visible between structures.
    b. Deflection: Flexible piping with deflection that prevents passage of ball or cylinder of size not less than 92.5 percent of piping diameter.
    c. Crushed, broken, cracked, or otherwise damaged piping.
    d. Infiltration: Water leakage into piping.
    e. Exfiltration: Water leakage from or around piping.

3. Replace defective piping using new materials, and repeat inspections until defects are within allowances specified.
4. Reinspect and repeat procedure until results are satisfactory.
5. University will run a camera through completed piping to determine if all work is satisfactory. Replace any defective piping using new materials.

B. Test new piping systems, and parts of existing systems that have been altered, extended, or repaired, for leaks and defects.

1. Do not enclose, cover, or put into service before inspection and approval.
2. Test completed piping systems.
3. Schedule tests and inspections by University Representative with at least 48 hours' advance notice.
4. Submit separate report for each test

5. Gravity-Flow Storm Drainage Piping: Test according to requirements of University's Representative, UNI-B-6, and the following:

    a. Option: Test plastic piping according to ASTM F 1417.
    b. Option: Test concrete piping according to ASTM C 924.

C. Leaks and loss in test pressure constitute defects that must be repaired.

D. Replace leaking piping using new materials, and repeat testing until leakage is within allowances specified.

3.18 CLEANING

A. Clean interior of piping of dirt and superfluous materials. Any flushing of piping shall be with potable water.

END OF SECTION 33 4100

SECTION 44 5361 - SOLID WASTE COMPACTORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Solid waste compactors.

B. Related Requirements:

1. Section 03 3000 "Cast-in-Place Concrete.
2. Division 26 "Electrical"

1.3 DEFINITIONS

A. WASTEC Rating: The volume of waste material in the charging chamber moved by the ram within the compactor in a single stroke.

1.4 COORDINATION

A. Electrical System Roughing-in: Coordinate layout and installation of onnections to power supplies and control system.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.6 SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal and Samples submittal. Ensure compliance with requirements included in Section 01 3300 "Submittal Procedures."

B. Product Data:

1. For each type of product indicated. Include rated capacities, operating characteristics, furnished specialties and accessories, and finishes.

C. Shop Drawings:

1. For each installation and for special components not dimensioned or detailed in manufacturer's product data. Include plans, elevations, sections, details, and attachments to other work.

a. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
b. Equipment access points and required space for equipment service and operation.
c. Setting drawings, templates, and instructions for installing anchor bolts and other anchorages.
d. Wiring Diagrams: For power, signal, and control wiring.

D. Qualification Data:

1. For qualified Installer.

E. Product Certificates:

1. For each type of waste compactor, from manufacturer.

F. Field quality-control reports.

G. Operation and Maintenance Data:

1. For waste compactors to include in operation and maintenance manuals.

1.7 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.

B. Waste Compactor Standards: Comply with ANSI Z245.2 and with NFPA 82.

C. Waste Bin and Hopper Standard: Comply with ANSI Z245.30.

1.8 CLOSEOUT SUBMITTALS

A. Maintenance Data: For automatic door operators, safety devices, and control systems, to include in maintenance manuals.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. WASTEC Rating: 1.31 cu. yd.

B. Feed Opening: 41" x 58".

C. Continuous feeding capability while compactor is operating.

D. Adaptable to special loading systems such as large capacity hoppers, security chutes, or total enclosures.

E. Loading from either ground or dock level.

F. Cycle Time: 33 sec.

G. Total Normal Force: 39.9 tons.

H. Total Maximum Force: 49.5 tons.

I. Ram Penetration: 6 inches.

J. Fire hose connection provided on each unit.

K. Factory testing to ensure leak-proof construction.

L. UL®and CUL®Listed.

M. Motor Size: 10 hp .

N. Electrical Power Supply: 230-460V 3 phase, 60 Hz.

2.2 MANUFACTURERS

A. Marathon RJ250SC or approved equal.

2.3 WASTE COMPACTORS

A. Waste Compactors:

1. Manufacturer's standard self-contained horizontal packaged units with components, options, and accessories needed to comply with requirements and provide complete functional systems.
2. Capacity: 34 cubic yards.
3. Size: 22'-5"x 8'-8"x 8'-5".
4. Controls: CYNCON Cyclic Control System, solid state, automatic container full system.
5. Finish: Manufacturer's standard .
6. Deodorizing Device: Ozone Odor Control system..

B. Number of Extra Storage Containers: Two.

2.4 FABRICATION

A. Fabricate waste compactors with smooth, eased, exposed edges to prevent injury to persons in vicinity of the equipment.

B. Fabricate containers, hoppers, compaction chambers, unit bodies, and similar components of steel with welded joints. Reinforce with steel members sized and spaced to withstand impacts and pressures of normal operations and to prevent deformation.

C. Fabricate equipment with replaceable parts at points of normal wear.

D. Fabricate liquid tight compactor baffles to stop liquid from leaking out.

E. Fabricate diverter to fit chute and properly align with compactor hoppers.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances, clearances, service rough-ins, and other conditions affecting performance of waste-compactor work.

B. Examine walls and floors for suitable conditions where each waste compactor will be installed.

C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install each waste compactor according to manufacturer's written instructions, ANSI Z245.2, and ANSI Z245.21 including annexes.

B. Set waste compactors level, plumb, properly aligned, and securely in place. Anchor as required for secure operation.

3.3 FIELD QUALITY CONTROL

A. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Tests and Inspections:

1. Perform installation and startup checks according to ANSI Z245.21, Annex D, "Tests for Evaluation of Equipment and Performance," and manufacturer's written instructions.
2. Test and adjust controls, alarms, and safeties. Replace damaged and malfunctioning controls and equipment.
3. Verify unrestricted access to each firefighting access door or fire port required by ANSI Z245.21 and NFPA 82 for compactor container(s).
4. Verify correct locations, color-coding, and legibility of caution, warning, and danger markings.
5. Certify compliance with test parameters.

C. A waste compactor will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.4 ADJUSTING, CLEANING, AND PROTECTION

A. Clean, lubricate, and adjust operating hardware.

B. Touch up marred finishes to factory-finished appearance.

3.5 MAINTENANCE SERVICE

A. Initial Maintenance Service:

1. Beginning at Substantial Completion, provide 12 months' full maintenance by skilled employees of waste compactor Installer.

2. Include monthly preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper waste-compactor operation at rated speed and capacity.

3. Provide parts and supplies the same as those used in the manufacture and installation of original equipment.

B. Continuing Maintenance Proposal:

1. From Installer to Owner, in the form of a standard yearly (or other period) maintenance agreement, starting on date initial maintenance service is concluded.

2. State services, obligations, conditions, and terms for agreement period and for future renewal options.

END OF SECTION
