 - d. Date of submission of samples for approval by the Architect of all finishes/materials which will be visible to the public.
 - e. Programming of all remote control and Digital Signal Processing driven devices.
 - f. Completion dates(s) for the following tests:
 - 1) Performance tests on all individual system components as they are received from the manufacturer in the Contractor's shop.
 - 2) Performance tests on completed assemblies and subassemblies assemblies, including all racks in the Contractor's shop.
 - 3) Performance tests on the completed systems as a whole prior to shipment to the project site.
 - 4) General performance testing of systems at the project site.
 - g. Completion dates for the following Shop and Field Observations.
 - 1) Shop fabricated assembly and subassembly observation.
 - 2) Substantial Completion Observation at the project site.
 - 3) Final acceptance observation at the project site.
 - h. Submission date for operating, maintenance manuals, as-built drawings, documentation and closeout materials.
 - i. In the event the Contractor wishes to deviate from the schedule once it is established and approved, he may do so only receiving written approval from the General Contractor.
- D. Field and shop Drawing Submittal: Within sixty (60) calendar days of the receipt of notice to proceed the Contractor shall prepare and submit for approval, in accordance with the General Conditions, a schedule which shall include, but is not limited to the following:
 1. Submit four (4) half-size copies and one (1) CD-ROM copy of the following:
 - a. Corrected items from previous submittals. All resubmitted drawings shall be identified with clouded changes. Label each cloud with delta number and date of resubmittal.
 - b. Control panel Layouts: Developed drawings of all control system panel layouts.

- c. Functional Diagram: single-line block diagram showing interconnection of all components, receptacles, terminal blocks, controls, transformers and loudspeakers in addition to the active elements. Include terminal and cable numbers, all system and component labels. Show detailed system component information including but not limited to manufacturer's name, model number, any specialized part number option and all input and output connection information, for each piece of equipment. No drawing codes shall be permitted. Mount one (1) full-scale original or photograph (not blueprint) copy behind acrylic in the control booth for each system.
- d. Floor plans, at scale of Contract Documents, showing the locations throughout the project of all receptacles, conduits, wireways, trays, pull boxes, junction boxes, equipment racks equipment and other devices with appropriate designations and fill.
- e. Riser diagrams, showing all elevations, room numbers, conduit sizes, types and fills, box sizes and types, devices, equipment and rack designations.
- f. Equipment rack elevation drawings scaled ($1\text{'-}1/2" = 1\text{'-}0"$ or larger):
 - 1) Front Elevations: include equipment designation, manufacturer's name, model number, rack location and rack designation.
 - 2) Rear Elevations: include AC power wireways and route of wiring harnesses.
 - 3) Sections: include depth of all equipment components.
- g. Patch bay elevations, showing all patch bay appearances and designations.
- h. Samples for approval by the Architect of all finishes/materials that will be visible to the public including at least receptacles and controls with associated trim plate and each type of loudspeaker baffle and/or grille.
- i. Cable schedules and run sheets, associates with each equipment rack and/or any isolated piece of equipment or device, including cable designation, type, manufacturer and manufacturer's type number, wire color, device and terminal designation and device location, keyed to both the system block diagram and equipment rack elevation drawings.
- j. Contractor fabricated items, detailed drawings showing all components, devices and equipment, including dimensions, component values, terminal designations, types, locations, manufacturer's name and model number.
- k. Loudspeaker cluster and monitor loudspeaker supports stamped and signed by an engineer licensed in the project state. Include all loads, location of attachment to building structure, complete layout of all components, devices and equipment, including dimensions, methods of assembly, and connections to supporting construction, details of hardware, locations, manufacturer's name and model number. All design calculations, loads, etc. shall be shown.

- I. All drawings shall be clear and legible. The minimum text size for all drawings shall be 1/8" high. Permissible scales shall be: 1/8"=1', 1/4"=1', 3/8"=1', 1/2"=1', 1"=1', 1-1/2"=1', 3"=1', 6"=1', and full scale
 - m. A bound volume or volumes of comprehensive specifications for all material, devices, components and equipment selected for use in this section, whether modified or not, provided as required under "Post Award Submittals" above.
- E. Digital Signal Processor (DSP) System Submittal for Owner review.
 - 1. Prior to programming the Digital Signal Processing (DSP) system, the Contractor shall submit shop drawings per the project standards showing all screen layouts and control descriptions of all system functions to the Owner for review and comment prior to actual programming of the system. Shop drawings shall include screen layouts of the DSP software "Control Pages" for all "configuration presets" and "parameter presets". Submit all information in native file format and hard copy form to the Consultant for review and approval. The contractor shall incorporate all Consultant and Owner comments into the programming of the system.
 - 2. Prior to delivery of the systems to the job site, the Contractor shall demonstrate fully functioning systems in the Contractor's facilities that include the DSP system programming. This demonstration shall coincide with the Owner's Representatives observation of Completed Sub-Assemblies (Refer to Part 3 paragraph entitled "System Performance Tests"). The Owner will review and comment upon the remote-control programming, and the Contractor shall incorporate all Owner comments into the programming of the systems.
 - 3. After the installation of the AV systems has been deemed substantially complete, but prior to final acceptance of the system, the Owner shall have a review period of thirty (30) days to observe the operation of the DSP system. At the end of this review period, the Owner may request programming changes relating to the look and feel of the operation pages or the functionality of commands. The Contractor shall make these changes prior to acceptance of the systems.
- F. Shop Test Statement Submittals:
 - 1. Submit four hard copies and one electronic of the following prior to shipping fabricated equipment racks to the Project site:
 - 2. A bound volume, or volumes, of results of performance tests and adjustment data, including all test procedures specified in Part 3 paragraph entitled "System Performance Tests". Example Shop Test Statement submittal templates are available from the Consultant upon request.
 - a. Submit a written request for equipment rack observation certifying that equipment racks are completely assembled, tested and ready for inspection.

- b. Detailed interior and exterior photos of assembly supporting claim for readiness for inspection.

G. Final Submittals:

1. Four (4) half-size copies and one (1) electronic of each of the block diagrams, plans, risers, patch bay drawings, rack elevations, cable schedules and detail drawings. All reproducible drawings shall also be submitted in electronic format. Electronic drawing format shall be AutoCAD® Release 2014 or later. COPAD shall have the right and capability to manipulate all electronic file drawings and documentation.
 - a. One (1) complete set of Functional diagrams dry mounted to matte board and set under clear acrylic cover.
 - b. One (1) additional set of rack elevation drawings, each drawing mounted in the associated equipment rack with a protective plastic cover
2. No more than thirty (30) days after Acceptance Testing, submit three (3) copies of each of the following manuals prior to, and as a requirement of, Owner Acceptance of the work of this section:
 - a. Equipment operating instructions; complete, comprehensive instructions for the operations of all contractor-fabricated devices and equipment items provided as part of the work of this section.
 - b. Manufacturer's installation, operating and service information including schematic diagrams for each item of equipment furnished. Order the equipment manuals in the order of the specifications. Provide tabs between each equipment manual. Provide a detailed index at the front of each manual indicating specification reference number, manufacturer's trade name, model number and part description. Provide three (3) copies to the Owner after they have been reviewed and approved by the Consultant.
 - c. Printed material within contractor-fabricated equipment and systems operating manuals shall be bond paper copies, offset or letterpress printed. Drawings, charts and graphs shall be bond paper offset printed. The systems contractor-fabricated equipment instruction manuals shall be composed using a single, consistent visual format and writing style; text shall be derived from component equipment manufacturer's instruction manuals and may include reproductions of artwork and other materials.
3. Submit four (4) copies of each of the following schedules, lists, and data prior to, and as a requirement of, Owner Acceptance of the work of this section:
 - a. All source code for any contractor provided or programmed equipment on CD-ROM.
 - b. Final bill of quantities; complete bill of quantities all material as delivered, including a separate schedule of portable equipment.
 - c. Equipment schedule; complete, final schedules of equipment and devices provided in each room, by room number and name.

- d. Performance, test and adjustment data; comprehensive documentation of all performance verification and correction procedures and measurements, including raw and equalized house curves and equalizer settings.
 - e. Maintenance and spare parts schedules; a comprehensive tabulation of equipment, devices, miscellaneous parts and maintenance items, including manufacturer's name, address, model number, systems use and miscellaneous information.
 - 4. No more than thirty (30) days after Acceptance Testing, provide one (1) copy of the following:
 - a. Certificates; any and all licenses, certificates of operation and/or compliance as required.
 - b. The system will not be accepted until these documents are reviewed and approved by the Owner's Representative.
- H. Paging Zone Code Documents.
 - 1. Submit floor plans which use color coding and shading to indicate all of the individual loudspeaker zones and the codes that access each loudspeaker zone individually and each zone group. Laminated color copies and PDF format software copies shall be provided.
 - 2. Submit a list of all paging stations, their locations, and which buttons or codes access which zone groups. If the paging stations are of the 12-button type and require a user-access code, the document is to contain a list of the user types, a description of their level of access, and what the access code is. The user types (for instance: emergency, administrator, airline employee, etc.) and levels of access shall be determined by the Owner and submitted to the Contractor in a timely manner.
 - 3. The documents above are to be submitted to the Consultant for approval prior to the System Acceptance testing. The final version of this document shall be created after one month of regular system use and written approval from the Owner that paging station zone group assignment are satisfactory.
- I. Post changes and modifications to the Documents as they occur. Drawings will be updated electronically and submitted to COPAD in accordance with the schedule provided for this by COPAD. Do not wait until the end of the Project. Consultant will periodically review Project Record Documents to assure compliance with this requirement.
- J. At every quarter, submit Project Record Documents to Consultant for COPAD's records.
 - 1. Upon completion of the as-built drawings, the Design Consultant will review the as built work with the Contractor.
 - 2. If the as built work is not complete, the Contractor will be so advised and shall complete the work as required.

3. The Contractor shall at all times keep an up to date set of as-built documentation at the project work site and available for review if requested by the Owner, Architect or Consultant.

1.05 QUALITY ASSURANCE

- A. The Contractor's Quality Assurance Inspector shall conduct a visual inspection of all installations to verify that the installations are in accordance with the COPAD's and manufacturer's specifications. Records of the inspections signed and dated by the Quality Assurance Inspector shall be provided to the Design Consultant. The Design Consultant shall be notified by the Contractor of any inspection(s) and the Design Consultant may elect to participate in any inspection(s). All QC information shall be provided to COPAD for input into the CMMS (refer to paragraph 3.7).
- B. Unless otherwise stated, all electrical, electronic and optical equipment shall be a product of firms regularly engaged in the manufacture of electrical, electronic or optical equipment. The equipment shall be the latest model or type offered which meets the applicable specifications at the time of the submittal. Discontinued items replaced by newer models or versions are prohibited and should not be submitted for review. It shall be the Contractor's responsibility to provide the Consultant with information regarding discontinued products listed as alternatives in the specification. If an alternative listed is discontinued prior to installation, the Contractor shall submit a substitution request to provide the manufacturer's replacement model.
- C. Quality of workmanship and fabrication of all equipment and components, which are custom fabricated shall be comparable to professional equipment produced by specialized manufacturers of the trade involved and shall be verified by observation. Only firms having 5 years' experience in all aspects of the fabrication and installation of similar systems shall be allowed to perform the work.
- D. All materials and products shall be new and of professional quality. Unless specifically stated in the drawings or specifications, no existing or pre-owned materials shall be installed.
- E. The work specified herein, and in each of the allied sections, shall be accomplished by a single Contractor experienced in the design, fabrication, installation, checkout and warranty contract management of systems such as those described in each section. This Contractor shall have complete responsibility for the systems described herein and shall be the single contract point for the Architect, the Consultant and/or the Owner with respect to all work specified herein.
- F. Contractor Qualifications:

1. The Contractor shall have a minimum of five (5) years' experience in the fabrication, assembly, and installation of audiovisual systems of similar magnitude and quality to that indicated for this project.
2. The Contractor shall possess a current Contractors license in the appropriate category(ies) in the project state at the time of bid.
3. The Contractor shall employ a qualified project engineer on its staff assigned to this project. (Refer to Part 1 paragraph 1.5.E "Post-Award Submittal" subparagraph 12 "credentials of project engineer...").
4. The Contractor shall have current membership in (or employ at least two (2) staff with individual memberships in) one (1) or more professional Audiovisual organizations for two (2) or more years. (Refer to Part 1 paragraph 1.5.E "Post-Award Submittal" subparagraph 11 "Proof of firm's current membership in...").
5. The Contractor shall employ qualified staff assigned to this project. (Refer to Part 1 paragraph 1.5.E "Post-Award Submittal" subparagraph 13 "credentials of supporting staff...").

1.06 DELIVERY, STORAGE, AND HANDLING

A .

1.07 WARRANTY

- A. Materials and workmanship shall meet or exceed industry standards and best practices and be fully guaranteed for a minimum of two (2) years from Final Acceptance.
 1. The Contractor shall use qualified service personnel to conduct all maintenance work. Service personnel must be local to the project jurisdiction to allow required response times to be met.
 2. The Contractor shall be responsible for and make good, without expense to COPAD, any and all defects arising during this warranty period that are due to imperfect materials, appliances, improper installation or poor workmanship.
- B. Submit a copy of all manufacturer warranty information.
- C. The Contractor shall, within the warranty period, schedule two visits annually to inspect and perform preventive maintenance on the system. The first visit shall be six months after the commencement of the warranty period. The last visit shall be just prior to the end of the warranty period. All work done must be submitted to COPAD in a written report describing the work, the amount of time taken, and all the individual's names who performed the work.
- D. The Contractor shall return 90 to 120 days after the system has been turned over to the Owner for additional programming, maintenance and system fine-tuning. Conduct interviews with the user group via telephone to acquire information needed to complete this task. Allow for one full day of

programming in your initial bid to complete. Provide a per hour programming fee that will be charged if additional programming is needed.

- E. The following items shall be furnished to the Owner by the Contractor for future maintenance and repair:
 - 1. Provide (2) spare amplifiers
 - 2. Provide (1) spare DSP card
 - 3. Provide (2) spare ambient noise sensors

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

- A. It is the intention of these specifications to provide a complete and properly operating system. The major items of equipment shall be furnished in the quantity indicated by the system diagrams on the drawings or in the quantity as specified herein (see Equipment Schedules at the end of the specifications). However, any minor equipment item or hardware that may not be specifically shown on the drawings or specified herein but required for proper paging system operation or installation shall be provided by the Contractor.
- B. All equipment and material shall be new and suitable for continuous operation.
- C. In any case, where a specific specification has not been included herein or shown on the drawings for any item that is required, the Contractor shall furnish only the best quality equipment or material consistent with the quality of other specified equipment and material.
- D. Where the specifications list several manufacturers for a particular major item of equipment such as power amplifiers or loudspeakers, the Contractor shall supply all of that item of equipment from one manufacturer. This specification identifies the essential functional requirements of the automatic networked fire alarm system(s) for installation. The manufacturer's equipment (hardware and software) and system configuration shall comply with or exceed the functional intent of this specification.

2.02 SUBSTITUTIONS

- A. Where a specific piece of equipment has been discontinued and/or replaced by a new model, submission of the new model or a suitable item as applicable may be required for evaluation prior to acceptance.
- B. If substitute equipment is allowed by written consent, the Paging Systems Contractor shall be completely responsible for the use of such equipment, including suitability with the equalization process to be employed. The Paging Systems Contractor shall replace all such equipment with equipment listed by

type number in the specifications if there is any evidence of equipment instability or unsuitability.

- C. Costs of any required evaluation and testing of substitute equipment shall be paid by the Paging Systems Contractor.
- D. Any use of substitute equipment shall be at no extra cost to the project.
- E. Proposed substitute equipment shall be specifically noted in submittals as "substitution" with a footnote stating the reason for the substitution.
- F. Offerors proposing to furnish an "or equal" product must furnish all descriptive material necessary to demonstrate the acceptability of such product. The Acoustical Consultant shall be the sole determiner as to whether the proposed "or equal" product is suitable for use based upon review of the descriptive materials furnished.

2.03 AUDIO AMPLIFIERS AND SIGNAL PROCESSORS

- A. (AMP1) AMPLIFIER, 70V, 4CH, 300W
 - 1. Features
 - a. Network enabled monitoring and control
 - b. Digital audio input bus, 256 channel
 - c. Load monitoring
 - d. Error reporting
 - e. Pilot Tone (20kHz) monitoring
 - f. GPI/O ports
 - g. On-Board DSP
 - 2. Acceptable
 - a. Crown DCi 4/300N
 - b. Consultant approved equal.
- B. (AMPFO) FAIL-OVER SWITCH, AMPLIFIER, 8 CH
 - 1. Features
 - a. Network enabled
 - b. GPI/O enabled
 - 2. Acceptable
 - a. Crown CT8SHO
 - b. Consultant approved equal.
- C. (DSP) DIGITAL SIGNAL PROCESSOR
 - 1. Features
 - a. Four card slot core frame
 - b. Dante digital audio interface
 - c. GPI i/o (12x6)
 - 2. Acceptable
 - a. QSC Q-SYS Core 510i

- 1) Furnish High Performance mic/line modules as required
 - 2) Furnish AEC input modules as required
 - 3) Furnish additional I/O cards as necessary
- b. Consultant approved equal

2.04 AUDIO TRANSDUCERS

- A. (S1) LOUDSPEAKER, CEILING RECESSED, 8", 70V
1. Features
 - a. 8" LF and 1.4" HF drivers
 - b. UL-1480 and UL-2043 rated
 - c. Furnish separate pre-install back can and round grille
 2. Acceptable
 - a. QSC AD-C820R System
 - b. Consultant Approved equal
- B. (S2) LOUDSPEAKER, SURFACE, 6.5", 70V
1. Features
 - a. 6.5" driver
 - b. Weather resistance rated IP65
 - c. UL-1480 rated
 - d. Furnish U-bracket for install
 2. Acceptable
 - a. Tannoy AMS ICT LS
 - b. Consultant Approved equal
- C. (M1) Ambient Noise Analysis Sensor, Type 1
1. Features
 - a. Weather-resistant model for outdoor use
 - b. Hemispherical polar pattern
 - c. Line-level output
 2. Acceptable
 - a. AKG PZM11 LL WR
 - b. Consultant approved equal.
- D. (M2) Ambient Noise Sensor, Type 2
1. Features
 - a. Hemispherical polar pattern
 - b. Line-level output
 2. Acceptable
 - a. AKG PZM-10 LL
 - b. Consultant approved equal
- E. (AMPEOL) END OF LINE SENSOR
1. Features
 - a. Utilize 20kHz pilot tone to support error messages based on loudspeaker line conditions.

- b. Switchable impedance 5 or 10 Ohms
- 2. Acceptable
 - a. Crown EOL Box
 - b. Consultant approved equal.

2.05 NOT USED

2.06 NOT USED

2.07 DATA NETWORK DISTRIBUTION SYSTEM

A. (AVPC) CONTROL & MONITORING COMPUTER:

- 1. Features (minimum requirements):
 - a. Small form factor chassis (SFF) (11.8"w x 3.5"h x 12.9"d) with 235watt power supply
 - b. ATX motherboard with minimum 3.20 GHz Intel i5-4750 Quad Core, 8GB DDR3 1333MHz RAM,
 - c. AMD Radeon HD8570 1GB video card w/ dual output (DP + DVI)
 - d. CD-R/RW/DVD+/-RW drive
 - e. 2.5 inch,500GB (min.), Solid-State SSD Hybrid drive
 - f. Dual 10/100/1000 Base Ethernet NIC (motherboard + card slot)
 - g. Rack mounted Flat panel LCD-TFT video monitor (RKMON)
 - h. Rack mounted 104 key PS2 keyboard + mouse (RKKBD)
 - i. Windows 10 Professional operating system
 - j. Provide Middle Atlantic custom CPU rack kit.
 - k. Provide minimum 30-minute UPS backup for the CPU.
- 2. Acceptable:
 - a. Dell OptiPlex 9020 and ancillary components/options.
 - b. Consultant approved equal.

B. (RKMON) Monitor, 17" Rack Mount:

- 1. Features:
 - a. Rack mountable
 - b. Resolution: 1920x1080 TFT LCD
 - c. Inputs: VGA + HDMI w/Audio
 - d. OSD On-screen Display function
- 2. Acceptable:
 - a. Acnodes RMW 6170 Plus HDMI option

C. (RKKBD) Keyboard/Touchpad, Rack Mount:

- 1. Features:
 - a. Keyboard / Touchpad
 - b. Rack mountable, 1RU
 - c. Built in KVM
- 2. Acceptable: Acnodes RK1200T

D. (D-#) Data Patch Panel

1. Features:
 - a. Rack Mountable, 2RU
 - b. Category 6 Rated
 - c. 48 Port Configuration
 - d. Furnish (1) 24" patch cord per jack pair
 - e. Furnish wall mounted patchcord cable hangers for all patchcords
2. Acceptable
 - a. Leviton eXtreme 6+ QuickPort Patch Panel with one factory certified patch cable per two ports (AVC shall furnish patchbays in sufficient quantity to fulfill the functional intent of the drawings.)
 - b. Consultant approved equal

2.08 NOT USED

2.09 RACKS, WIRE, CONNECTORS AND MISCELLANEOUS HARDWARE

- A. Rack Panels:
 1. Blank Panels:
 - a. Features:
 - 1) 1/8" anodized brushed aluminum finish.
 - 2) 19" standard EIA width.
 - b. Acceptable: Lowell, Middle Atlantic or approved equal.
 - c. Quantity: As shown on drawings.
 2. Vent Panels:
 - a. Features:
 - 1) 16 Ga. perforated steel with black power coat finish.
 - 2) 60% minimum open area.
 - 3) 19" standard EIA width.
 - b. Acceptable: Lowell, Middle Atlantic or approved equal.
 - c. Quantity: As shown on drawings.
 3. Rack Kit(s):
 - a. Features:
 - 1) 1/6" anodized brushed aluminum finish.
 - 2) Custom manufactured for each piece of equipment.
 - 3) 19" standard EIA width.
 - b. Acceptable: Middle Atlantic or manufactures optional rack kit.
 - c. Quantity: 1 for each non-standard 19" EIA piece of equipment.
- B. (BAL/UBAL) Line Input Transformer +4dB output to -10dB input:
 1. Features:
 - a. Unbalances "Pro" to "Consumer IHF" Outputs.
 - b. Transformer isolation.
 - c. Passive device.
 2. Electrical Characteristics:
 - a. Bandwidth: -3dB at 0.25 Hz and 100 kHz.
 - b. Input impedance: 13 kOhm.
 - c. Common Mode Rejection: greater than 60dB.

- d. Insertion loss: 14dB
 3. Acceptable: Jensen ISO-MAX PC-2XR or approved equal.
 4. Quantity: 1 per unbalanced stereo input pair.
- C. (ISO-A) 1:1 Line Transformer:
1. Features:
 - a. 1:1 turn ratio.
 - b. Transformer isolation.
 - c. Passive device.
 2. Electrical Characteristics:
 - a. Bandwidth: -3dB at 0.25 Hz and 100 kHz.
 - b. Distortion: > 0.001% THD
 - c. Common Mode Rejection: greater than 60dB.
 - d. Insertion loss: less than 1.5 dB
 - e. Hum Rejection: greater than 60dB.
 3. Acceptable: Jensen ISO-MAX DM2-2XX or approved equal.
 4. Quantity: Use as required.
- D. Rack Power Conditioner:
1. Features:
 - a. Power line filters for spike and RFI control.
 - b. 20-amp power conditioning capacity.
 2. Acceptable: SurgeX SX1120-RT or approved equal.
 3. Quantity: Provide 1 per equipment rack provided.
- E. Audio Terminal Blocks:
1. Features:
 - a. All mic, line level and DC control cables interconnecting with an equipment rack shall connect to an audio terminal block, prior to exiting the rack or landing on a piece of equipment.
 - b. Rated for stranded 20 GA - 24 GA wire.
 2. Acceptable: WAGO Style modular terminal blocks (must be used in conjunction with cable end ferrules and mfg. recommended tooling).
- F. High-Level Audio Terminal Blocks:
1. All loudspeaker lines leaving an equipment rack shall be connected via barrier-type screw terminal blocks.
- G. Installed Wiring: (NOTE: Non-plenum versions listed, furnish plenum equivalents as required by Code.)
1. Loudspeaker lines in conduit: standard electrical wire, stranded copper, color-coded, THHN/THWN type.
 - a. CONDUIT HAS BEEN SIZED FOR THHN
 - b. High Z: AWG #14 unless otherwise noted
 2. Circuit Integrity in Conduit Cable (CIC):
 - a. ComTran VITALink 14AWG Solid FPLR-CI-LS
 - 1) Install from amplifier top first loudspeaker in run.

- 2) Follow mfg installation instructions.
 3. Mic and Line, twisted, shielded pair #22: equal to Belden 8761 or WestPenn/CDT (x)454 or consultant approved equal.
 4. DC Control Lines:
 - a. low current loads (<2A) (mute, relays, VCA, LED): AWG #20.
 - b. medium current loads (>2A) (actuators, illuminators): AWG #18.
 - c. Acceptable: Carol 1130, West Penn 271, or approved equal.
 5. Unshielded, Twisted Pair:
 - a. Category 6
 - 1) Acceptable: Berk-Tek LanMark-1000, or approved equal.
- H. Connectors and Receptacles:
1. Only metal connector shells and bodies are permitted.
 2. Mic and Line:
 - a. Solder only. No IDC, 1-piece compression or screw terminal versions permitted.
 - b. Input: 3-pin female XLR-type and 1/4" TRS jacks where shown on drawings. Insulate 1/4" jacks from plate, do not ground pin 1 on XLRs.
 - c. Output: 3-pin male XLR-type and 1/4" TRS as above.
 - d. RCA: Only solder style, metal connector shells and bodies are permitted., no "molded assemblies" shall be permitted
 3. Loudspeaker:
 - a. Only Neutrik Speakon® devices are acceptable.
 - b. Wire all terminals unless otherwise noted.
 - c. Panel: Neutrik NL4MP or NL2MP as required.
 - d. Cords: NL4FC.
 - e. Cable couplers: Neutrik NL4MM.
 - f. Wooden box mounting: Neutrik NL4MPR.
 - g. All NL4 devices shall be cabled for two channel operation unless otherwise noted.
 4. Control: submit cut sheets.
 5. Production Communications: 3-pin and 6-pin male XLR-type as shown on drawings
 6. Digital Media (RJ45 style):
 - a. Only punch down style (female jack) connectors shall be acceptable.
 - b. No feed-thru's will be allowed.
 - c. Any male (plug) terminations shall be factory performed and certified.
- I. Receptacle Panels, aluminum:
1. Field-verify panel sizes required for backboxes.
 - a. Oversize flush panels sufficient to trim wall openings but not less than 1/2"
 - b. Size surface mount panels exactly to backbox yielding no sharp corners and chamfering edges

2. Aluminum panels 0.125" thick, with labels engraved and back-filled in black
 3. Anodized, horizontal brushed finish
 4. Submit engraved sample for approval by architects.
- J. DC Power Supplies:
1. Voltage and capacity as required with 100% headroom, UL (or other) listed: Acopian linear or approved equal, submit cut sheets.
 2. Provide and install in shielded metal chassis with fused LED status indicators.
- K. UPS Uninterruptible Power Supply
1. Acceptable: Middle Atlantic UPS-2200R-8IP
 - a. Rack mounted, furnish one, appropriately sized, unit per each rack populated with the following devices:
 - 1) RC's
 - 2) DSP's
 - 3) Digital Media Switches
 - b. Unit shall function as
 - 1) Conditioner
 - 2) UPS backup in case of brown-outs
 - 3) IP management of RC and DSP devices
 - 4) Soft shutdown in event of power loss
 2. Consultant Approved Equal

PART 3 EXECUTION

3.01 GENERAL

- A. System installation and construction methods shall conform to COPAD requirements, requirements of the State of Arizona and all applicable building codes.
- B. Contractor shall install equipment to meet any Seismic Zone requirements of the State of Arizona and as stated herein.
1. Where undefined by codes and standards, Contractor shall apply a safety factor of at least 2 times the rated load to all fastenings and supports of system components.
- C. All equipment locations shall be coordinated with other trades and field conditions before installation. Coordinate with all the Telecommunications, Mechanical and Electrical Drawings. Verify with Design Consultant the exact location and mounting height of all equipment in finished areas.
- D. All work shall be concealed above ceilings and in walls, below slabs, and elsewhere throughout building. If concealment is impossible or impractical, Engineer shall be notified before starting that part of the work. In areas with no

ceilings, install only after Design Consultant reviews and comments on arrangement and appearance.

- E. The Contractor shall patch all openings remaining around and inside all conduit, sleeves and cable penetrations to maintain the integrity of any fire rated wall, ceiling, floor, etc. The fire stop system shall consist of a dielectric, water resistant, non-hardening, permanently pliable/re-enterable putty along with the appropriate damming materials (where required). The sealant must be capable of being removed and reinstalled and must adhere to all penetrants and common construction materials and shall be capable of allowing normal wire/cable movement without being displaced.
- F. Provide required supports, beams, angles, hangers, rods, bases, braces, straps, struts, and other items to properly support work. Supports shall meet the approval of Design Consultant.
- G. Cable Dressing: Where fiber or copper cables enter telecommunications room, it shall be neatly bundled and fastened and a suitable transition device installed to minimize tension and bend radius on cables. All cable runs shall be horizontal or vertical, and bends shall comply with minimum specified cable bending radii.
 - 1. Cables shall be combed, and each strand shall run parallel with the other strands.
 - 2. After combing and straightening strands, Contractor shall separate strands into bundles according to routing requirements and termination points.
 - 3. Bundles shall be secured with hook-and-loop cable strap material.
 - a. Cable ties manufactured from a hard polymer material, such as plastic or nylon, shall not be used.
 - b. Hook-and-loop material shall be low life cycle, back-to-back type, black in color, and ½ inch wide.
 - 4. Contractor shall begin to bundle and strap cables within 6 inches of exit from conduit, and bundles shall have cable straps applied at intervals not greater than 10 feet for entire length of vertical and horizontal run.

3.02 PHASES OF IMPLEMENTATION

- A. Provide a consolidated and integrated schedule.
- B. Functionality of the existing paging system shall be maintained at all times. The work shall be done in such a fashion that no existing paging zone is out of service during the hours of 5:00am to Midnight, and no zone is out of service at all for more than 1 hour in areas which are still in use. Temporary paging must be provided as required at no additional cost to the Owner.

3.03 INSPECTIONS

- A. The Contractor shall perform a detailed inspection of the site prior to submitting any technical data for approval.
- B. The Contractor shall verify that the proposed equipment and methods of installation are compatible with the existing conditions and prepare a corresponding written report of their findings.
- C. COPAD shall be notified in writing if modifications of the existing building are required in order to accommodate the new equipment. These modifications shall be made only upon receiving written approval from COPAD.
- D. Submit installation drawings for COPAD review and approval.

3.04 TESTING REQUIREMENTS

- A. Phases of Testing
 - 1. On-Site Performance Verification Testing
 - 2. On-Site Endurance Testing
- B. Test Plan/Procedure: The Contractor shall submit a Test Plan for each testing phase for the review and approval of the Design Consultant. The test plan for each phase shall detail the objectives of all tests. The tests shall clearly demonstrate that the system and its components fully comply with the requirements specified herein. The test plan shall be provided at least thirty (30) days prior to the scheduled start of each test. Test plans shall contain at a minimum:
 - 1. Functional procedures including use of any test equipment
 - 2. Test equipment is to be identified by manufacturer, model and last calibration date.
 - 3. Interconnection of test equipment and steps of operation shall be defined
 - 4. Expected results required to comply with specifications
 - 5. Record of test results with witness initials or signature and date performed
 - 6. Pass or fail evaluation with comments.
 - 7. The test procedures shall provide conformity to all specification requirements. Satisfactory completion of the test procedure is necessary as a condition of system acceptance.
 - 8. Documentation verification, both interconnects and functionality, shall be part of the test. Where documentation is not in accordance with the installed system interconnect and operating procedures, the system shall not be considered accepted until the system and documentation correlate.
 - 9. The Contractor shall cooperate with and provide COPAD representative(s) the opportunity(s) to participate in any of the tests.
 - 10. Test Reports: The Contractor shall submit for each test, a test report document that shall certify successful completion of that test. Submit for review and acceptance within seven (7) days following each test. The test report shall contain, at a minimum:
 - a. Commentary on test results.

- b. A listing and discussion of all discrepancies between expected and actual results and of all failures encountered during the test and their resolution.
 - c. Complete copy of test procedures and test data sheets with annotations showing dates, times, initials, and any other annotations entered during execution of the test.
 - d. Signatures of persons who performed and witnessed the test.
 - e. Test Resolution: Any discrepancies or problems discovered during these tests shall be corrected by the Contractor at no cost to the Owner. The problems identified in each phase shall be corrected and the percentage of the entire system re-tested determined by the Design Consultant, before any subsequent testing phase is performed.
- C. Performance Verification Testing
 - 1. Complete operational testing of all components and systems shall be witnessed by the Design Consultant and designated COPAD Representatives.
 - 2. Schedule test with Design Consultant. Do not begin testing until:
 - a. All systems have been installed and individually and jointly tested to ensure they are operating properly.
 - b. Written permission from Design Consultant has been received.
 - 3. Testing: As part of performance verification, test all components of system. The tests shall demonstrate system features.
 - 4. Verification: Verify correct operation of the required system functionality as defined in these specifications.
 - 5. Adjustment, Correction, and Completion:
 - a. Correct deficiencies and retest affected components.
 - b. Make necessary adjustments and modification to system after obtaining approval of the Design Consultant.
 - c. Completion: Performance verification test shall be complete when testing or retesting of each component has produced a positive result and has been approved in writing by the Design Consultant.
 - 6. Recording:
 - a. Describe actual operational tests performed and equipment used and list personnel performing tests.
 - b. Record in tabular form all test results, deficiencies, and corrective measures.
 - 7. Termination
 - a. Performance verification test shall be terminated by the Design Consultant when:
 - 1) Individual components, subsystems, or the integrated system fail to perform as specified.
 - 2) It is determined that system is missing components or installation is not complete.

- a) Upon termination, corrective work shall be performed and performance verification test rescheduled with the Design Consultant.
 - b) Retesting shall be performed by Contractor at no additional expense.
 - c) Contractor shall continue to perform corrective actions and retest until system passes all tests to satisfaction of the Design Consultant.
- D. Endurance Testing
- 1. Provide personnel to monitor the systems 24 hours per day, including weekends and holidays during endurance testing. This monitoring may be remote provided the system can issue Email/SMS error reports.
 - 2. Start test after:
 - a. Successful completion of performance verification testing.
 - b. Training as specified has been completed.
 - c. Correction of deficiencies has been completed.
 - d. Receipt of written start notification from the Design Consultant.
 - 3. Monitor all systems during endurance testing. Coordinate monitoring with the Design Consultant.
 - 4. Recording: Record data on approved forms to provide a continuous log of systems performance. Include:
 - a. Date and time for all entries.
 - b. Name of individual making entry.
 - c. Environmental conditions.
 - d. Authority activities in process.
 - e. Description of all alarm annunciations, responses, corrective actions, and causes of alarms. Classify as to type of alarm.
 - f. Description of all equipment failures, including software errors.
 - g. Description of all maintenance and adjustment operations performed on system.
 - h. Daily and weekly tabulations.
 - i. Daily entries of performance data shall be reviewed by the Design Consultant's representative designated to observe monitoring of system.
 - 5. The Design Consultant may terminate testing at any time when the system fails to perform as specified. Upon termination of testing the Contractor shall commence an assessment period as described in Phase II.
 - 6. Testing
 - a. Phase I - Initial Testing:
 - 1) Time: 24 hours per day for 7 consecutive calendar days.
 - 2) Make no repairs during this phase unless authorized in writing by the Design Consultant.
 - 3) If system experiences no failures, proceed to Phase II - Initial Assessment.

- b. Phase II - Initial Assessment:
 - 1) After conclusion of Phase I or terminating of testing, identify all failures, determine causes, and repair. Submit report explaining: Nature of each failure, corrective action taken, results of tests performed to verify corrective action as being successful, and recommended point for resumption of testing.
 - 2) After submission of report, schedule review meeting at job site. Schedule date and time with the Design Consultant.
 - 3) At review meeting, demonstrate that all failures have been corrected by performing verification tests.
 - 4) Based on report and review meeting, the Design Consultant will direct Contractor to repeat Phase I, restart Phase I, or proceed to Phase III - Final Testing.
- c. Phase III - Final Testing:
 - 1) Time: 24 hours per day for 7 consecutive calendar days.
 - 2) Make no repairs during this phase unless authorized in writing by the Design Consultant.
- d. Phase IV - Final Assessment:
 - 1) After conclusion of Phase III or termination of testing, identify all failures, determine causes, and repair. Submit explaining the nature of each failure, corrective action taken, results of tests performed, and recommended point for resumption of testing.
 - 2) After submission of report schedule review meeting at job site. Schedule date and time with the Design Consultant.
 - 3) At review meeting, demonstrate that all failures have been corrected by performing verification tests.
 - 4) Based on report and review meeting, the Design Consultant will approve endurance test or direct Contractor to repeat all or part of Phases III and IV.
- 7. Adjustment, Correction, and Maintenance
 - a. During endurance testing make adjustments and corrections to system only after obtaining written approval of the Design Consultant.
 - b. During endurance testing, perform required maintenance on systems including provision of replacement parts.
- E. Commissioning Testing
 - 1. The Contractor shall develop a commissioning test plan that includes the following components, as a minimum:
 - a. COPAD readiness
 - b. Operational procedures verification
 - c. Disaster recovery procedures
 - d. Computerized Maintenance Management System data verification
 - e. Change management procedures
 - 2. The commissioning test plan/procedures shall be submitted to the Design Consultant for review and approval.

F. Final Inspection and Acceptance

1. After endurance testing is complete, review tabulated records with the Design Consultant.
2. The Contractor will not be responsible for failures caused by:
 - a. Outage of main power in excess of backup power capability provided that automatic initiation of all backup sources was accomplished, and automatic shutdowns and restarts of systems performed as specified.
 - b. Failure of any COPAD furnished power, communications, and control circuits provided failure was not due to Contractor furnished equipment, installation, or software.
 - c. Failure of existing COPAD equipment provided failure was not due to Contractor furnished equipment, installation, or software.
3. When performance of integrated system does not fall within the above rates, determine cause of deficiencies, correct, and retest.
4. When requested by the Design Consultant, extend monitoring period for a time as designated by the Design Consultant.
5. Period shall not exceed 60 days exclusive of retesting periods caused by termination of Phases I or III and assessment period of Phases II and IV.
6. Submit final report of endurance testing containing all recorded data.

3.05 SYSTEM STARTUP

- A. Upon completion of the installation of all equipment in an area, perform the following tests and record results. Verify safe and proper operation of all components, devices, or equipment, establish nominal signal levels within the systems and verify the absence of extraneous or degrading signals. Make all preliminary adjustments and document the setting of all controls, parameters of all corrective networks, voltages at key system interconnection points, gains and losses, as applicable. Submit test report. Correct all non-conforming conditions prior to requesting Acceptance Testing. Perform at least the following procedures:
- B. Mechanical. Verify:
 1. Integrity of all support provisions.
 2. Absence of debris of any kind, tools, etc.
- C. Power and Isolated Ground. Verify:
 1. Isolation of Isolated Ground system from raceway and related ground.
 2. Grounding of devices and equipment. Integrity of signal and technical power system ground connections.
 3. Proper provision of power to devices and equipment.
- D. Signal Wiring. Verify:
 1. Integrity of all insulation, shield terminations and connections.
 2. Integrity of soldered connections. Absence of solder splatter, solder bridges.
 3. Routing and dressing of wire and cable.

4. Continuity, including conformance with wire designations on running sheets, field and shop drawings.
 5. Absence of ground faults.
 6. Polarity.
- E. Use the proper sequence of energizing systems to minimize the risk of damage.
- F. Sound Systems:
1. Electronic Tests; confirm:
 - a. Gain at 1 kHz.
 - b. Maximum output.
 - c. Input clipping level.
 - d. Frequency response.
 - e. Total harmonic distortion.
 - f. Signal-to-Noise ratio.
 - g. Signal-to-Crosstalk ratio.
 2. Gain control settings: Establish tentative normal settings for all gain controls. Set all equalizers flat. Set all automatic gain control devices to bypass. Terminate power amplifier outputs with power load resistors with resistance value within 10% the nominal output impedance of the respective amplifier. Adjust all gain controls on equipment for optimum signal to noise ratio and signal balance and, unless they are sub panel mounted, cap them to prevent tampering. Unless specified or directed otherwise, adjust gains such that in a given system the "front end" operates at unity gain and maintains 10 dB of clip margin referenced to the first onset of clipping of the associated power amplifier(s). Measure and document system gains at 1 kHz. Settings may require further adjustment by the Contractor, a result of testing by the representative of the Owner.
 3. Freedom from parasitic oscillation and radio frequency pickup: Maintain previous setup. Set up for each mode of operation specified in the functional requirements; verify that all systems are free from spurious oscillation and radio frequency pickup using broadband oscilloscope. Correct any such defects.
 4. Hum and noise level/signal to noise level/signal to crosstalk level: Maintain previous setup. Terminate microphone and line level inputs with shielded resistors of 150 and 600 ohms, respectively. Set available variable gain controls such that full power amplifier output would be achieved with 40 dBm input level at a microphone input and
 5. +12 dBm at a line level input. Measure and document the specified parameters of the system overall for each microphone input channel and line level input channel. Compare with nominal signal level.
 6. Total Harmonic Distortion: Maintain previous setup. Measure at reference operating level at 63 Hz, 125 Hz, 1 kHz, 10 kHz.

G. Electro/Acoustic Tests:

1. Uniformity of coverage.
2. Electronic and acoustic frequency response/one third octave equalization. Measure at ear level. Comply with applicable portions of NFPA 72-2016 Representative of the Owner will direct final adjustment.
3. Maximum continuous sound pressure level (in the reverberant field). Drive systems with broadband pink noise. Sustain for at least five minutes with no system damage. Measure for "A" and "C" weightings at ear level on loudspeaker axis. Turn off noise.
4. Acoustic signal to noise ratio referenced to the specified maximum continuous sound pressure level in the reverberant field. Measure for "A" and "C" weightings at ear level on loudspeaker axis with mechanical systems operating. Present comparison with previous measurement.
5. Acoustic gain before feedback. Locate acoustic source (4-inch loudspeaker/pink noise generator) two feet from system microphone. Measure at system microphone position and at most distant listener position at ear level. Present comparison.

H. System Overall:

1. Verify levels.
2. Provide permanent "wedge" type labels on all controls, as applies, to indicate correct settings after systems performance testing and adjustment procedures have been successfully completed.

I. At least 10% of the total number of zones must be tested at two different times and at two different locations within the zone during peak hours and during quiet hours. These tests must indicate that pages are at least 6dB, but no greater than 10dB above, ambient noise levels. Measured ambient noise levels must be time averaged over a period of at least one minute and are not to include announcements from the paging system.

J. Upon completion of the installation of all loudspeakers in an area, perform the following tests and record results. Correct non-conforming conditions, unless the cause is clearly outside the Work of this Section, in which case submit the apparent cause to the Owner.

1. Loudspeaker Line Impedance: At terminal cabinets at equipment rooms, measure the impedance of each loudspeaker line. Sweep from at least 20 Hz to at least 16 kHz.
2. Loudspeaker Polarity: Test the acoustic polarity of all loudspeakers using an Acoustic Polarity Tester.
3. Freedom from Buzzes, Rattles and Objectionable Distortion: Individually apply to each loudspeaker line a slow sine wave sweep from 50 Hz to 5 kHz at a level of 6 dB below rated power amplifier output voltage. Listen carefully for buzzes, rattles and objectionable distortion.
4. Uniformity of Coverage: Apply broadband Pink Noise. Adjust level to approximately 70-80 dBA at measurement locations. Measure in 4 kHz octave band at ear level. Adjust loudspeaker aiming and 70 Volt loudspeaker taps for uniformity of coverage.

- K. Satisfaction of the above requirements shall not relieve the Contractor of responsibility for incorrect installations, defective equipment items, or collateral damage resulting from Contractor work/equipment.

3.06 IDENTIFICATION AND LABELING

- A. All cables and patch cables shall have a permanent label attached at both ends.
- B. The Contractor shall confirm specific labeling requirements with the Design Consultant prior to cable installation or termination.
- C. All indoor cable and patch cable labels shall be pre-printed using BRADY TLS 2200 printer or equivalent and shall be placed loose on the patch cable near the connector end without heat shrinking labels. Labels shall use a three line format with the origination patch panel and port on the first line, the destination patch panel and port on the second line and the system or other descriptive information on the third line.

3.07 COMPUTERIZED MAINTENANCE MANAGEMENT SYSTEM

- A. As required by COPAD, Information regarding all equipment including model, nomenclature, serial number, function, location, recommended preventative maintenance schedule, Quality Assurance Inspections and other pertinent data may be stored in a CMMS database. Contractor shall include in their Bid the cost for collecting and inputting this data for all systems and equipment provided by this Contract into this database.

3.08 TRAINING

- A. By means of training classes augmented by individual instruction as necessary, the Contractor shall fully instruct COPAD's designated staff and Airline personnel in the operation, adjustment and maintenance of all products, equipment and systems.
- B. The Contractor shall be required to provide all training aids, e.g., notebooks, manuals.
- C. The Contractor shall provide an appropriate training area equipped with all required equipment. The location of the training area shall be coordinated with the Design Consultant.
- D. All training shall be completed a minimum of two weeks prior to system cut over. Training schedule shall be subject to the Design Consultant's approval.
- E. Training shall be conducted by experienced personnel and supported by training aids. An adequate number and amount of training material shall be provided by the Contractor. The following is considered a minimum.

1. Functional flow-charts, overall block diagrams, and descriptive material for all software;
 2. Schematic drawings for each of the hardware components;
 3. All procedure manuals, specification manuals, and operating manuals;
 4. As-built drawings.
- F. Participants shall receive individual copies of technical manuals and pertinent documentation at the time the course is conducted. The courses shall be scheduled such that COPAD personnel can participate in all courses (no overlap).

3.09 TYPES OF TRAINING

- A. User Training: System users shall be instructed in all aspects of operations of the system. Four (4) hours of basic user training shall be provided. Additionally, four (4) hours of advanced user training shall be provided.
- B. Technician Training: Eight (8) hours of maintenance training shall be provided. Training for maintenance technicians shall be provided on site, and shall include, but not be limited to, installation, operation, renovation, alteration, inspection, maintenance and service on each system and subsystem provided, so as to enable troubleshooting and repair to the component level.
- C. System Administrator Training: System Administrator Training shall be provided. System Administrator Training shall include both classroom work and on the job training and shall be provided on-site at PHX or at a location within 50 miles of PHX.
1. Classroom Training: Up to eight (8) hours of software training shall be provided for each system. The Contractor shall structure the course to describe all systems, software and applications and support programs. This course shall include a functional overview of the complete software system. The course material must be presented in depth with the instructor covering detailed design, structure, and algorithms.

3.10 FINAL INSPECTION AND ACCEPTANCE

- A. Completion of the installation, in-progress and final inspections, receipt of the test and as-built documentation including data input of all installed cables in the COPAD management system and successful performance of the cabling system for a two-week period will constitute acceptance of the system. Upon successful completion of the installation and subsequent inspection, COPAD shall be provided with a numbered certificate from the Manufacturer registering the installation.

SECTION 13922

ELECTRIC DRIVEN, CENTRIFUGAL FIRE PUMPS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for new electric driven, centrifugal fire pumps.
- B. Products Installed But Not Supplied Under This Section:
 - 1. New fire alarm control unit for the 44th Street Sky Train Station.
 - 2. Addressable monitor modules for the fire sprinkler system tamper and flow switches and fire pump signals.
- C. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 01810 - Commissioning.
 - 5. Section 03100 - Concrete Forms and Accessories.
 - 6. Section 03200 - Concrete Reinforcement.
 - 7. Section 03300 - Cast-In-Place Concrete.
 - 8. Section 13851 - Fire Alarm.
 - 9. Section 15060 – Hangars and Supports.
 - 10. Section 15070 – Mechanical Sound, Vibration, and Seismic Control.
 - 11. Section 15995 - Commissioning of Mechanical Systems.
 - 12. Section 16061 - Electrical Grounding and Bonding.
 - 13. Section 16120 – Conductors and Cables.
 - 14. Section 16995 - Commissioning of Electrical Systems.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. FACU: Fire alarm control unit.
 - 2. LED: Light emitting diode.
 - 3. MSDS: Material safety data sheets.
 - 4. N/C: Normally closed.
 - 5. NICET: National Institute for Certification in Engineering Technology.
 - 6. N/O: Normally open.
 - 7. NRTL: Nationally Recognized Testing Laboratory.
 - 8. RMS: Root-mean-square.

9. USB: Universal serial bus.

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
2. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.
3. Corrosion Resistance Ratio (CRR): An Underwriters Laboratory, Inc. term for the estimated life expectancy of a pipe joint based on the calculated wall thickness at the base of the first exposed thread, assumed to be the weakest point of the pipe length.
4. Unifier: The web based management software/database system the Phoenix Sky Harbor International Airport (PSHIA) uses to manage all correspondence, requests for interpretation (RFI), submittals, and similar information related to construction activities for the PHX Sky Train Project.

C. Reference Standards:

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

- 1. Prior to commencement and after completion of the Work of this Section, submit written notification to the Program/Project Manager.
- 2. Coordinate with the Program/Project Manager, the Commissioning Authority (CA), the Phoenix Sky Harbor International Airport, and others to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the

Commissioning Authority (CA), the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.

3. Coordinate the installation and testing of the electric driven, centrifugal fire pumps and the associated equipment and circuits with the appropriate Subcontractors, equipment maintenance and testing representatives, the Sky Harbor International Airport Aviation Department, and the Authorities Having Jurisdiction.
 - a. Coordinate the connection of the monitor modules for pump running, power loss, phase reversal, and the transfer switch for the emergency power system.
 - b. Coordinate the location of the fire pump test header with the drainage shown on the Contract Drawings.
 - c. Coordinate the underground fire line with the foundation notching shown on the Contract Drawings.
 - d. Coordinate the relief valve discharge so that water is routed to an appropriate drain shown on the Contract Drawings.
 - e. Coordinate the Pre-Acceptance and the Final Acceptance Test of the electric fire pump specified in this Section with the Program/Project Manager, the Sky Harbor International Airport Aviation Department, the Commissioning Authority (CA), and other Authorities Having Jurisdiction (AHJ).
 - 1) Furnish all participants with at least 5 working days advance notice prior to all tests.
 - 2) At the time of notification, submit 1 copy of the approved Record Sets of Drawings for the electric driven, centrifugal fire pump system and the approved Electric Driven, Centrifugal Fire Pump System Test Plan to the Program/Project Manager.
 - f. Final Acceptance Test:
 - 1) In order to assure attendance at the Final Acceptance Test by the necessary representatives, provide reasonable notification of the test date to each representative scheduled to witness the test at least 48 hours prior to the test.
 - 2) Do not conduct this test until all parties agree on a test date.
4. Coordinate the dates and times of each required training session as specified herein through the Sky Harbor International Airport Aviation Department, not less than 2 weeks prior to the training session.

B. Sequencing:

1. Complete installation of the fire suppression system components, including the fire pumps, so the fire alarm equipment Supplier can make

the final connections and conduct tests of the fire alarm system as specified in Section 13851, Fire Alarm, without delaying the Work.

C. Scheduling:

1. Prior to beginning the Work of this Section, submit a schedule indicating the fire pump system installation sequence and time frame to the Program/Project Manager for approval.
 - a. Include specific time lines indicating the start and completion of major portions of the fire alarm system installation.
 - b. Include time lines indicating the start and completion of impairments of the existing fire sprinkler system.
 - c. Indicate the delivery dates of the equipment to be supplied.
 - d. Indicate the dates for the Fire Sprinkler System Pre-Acceptance and the Final Acceptance Tests.
2. Submit weekly schedule updates to the Program/Project Manager for approval.
3. Advise the Program/Project Manager of all anticipated projects the Contractor and the equipment Supplier may have with the same approximate completion date as this Contract, and what impact those projects may have on the timely completion of this Contract.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Fire pumps, equipment, and system components.
 - 2) Preliminary equipment list for the fire pump system.
 - 3) Sequence of operation for the electric drive, centrifugal fire pump system.
 - b. Shop Drawings:
 - 1) Fire pump system.
 - 2) Working Drawings for installation of the fire pump system.
 - c. Delegated Design Submittals:
 - 1) Fire pump systems' hydraulic calculations.
 - d. Special Procedure Submittals:
 - 1) Written notification of the commencement of the Work of this Section.
 - 2) Schedule indicating the fire pump system installation sequence and time frame, and weekly schedule updates.
 - 3) Fire Pump Supplier's Compliance Plan.

- 4) Electric Driven, Centrifugal Fire Pump System Test Plan.
- 5) Written notification of the completion of the Work of this Section.
- e. Qualification Statements:
 - 1) Qualifications of the fire pump system installer.
 - 2) Qualifications of the Contractor's project manager and the fire pump system Supplier's technical representative in responsible charge of installation.
 - 3) Qualifications of the proposed fire pump system Supplier's technical representative responsible for preparing the fire alarm system Shop Drawings and calculations.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Flow meter system manufacturer's written installation instructions.
 - 2) Grease-lubrication-type bearing manufacturer's written lubrication instructions.
 - b. Site Quality Control Submittals:
 - 1) Factory-authorized service representative's inspection and testing reports.
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Maintenance Contracts:
 - 1) Firm fixed price to furnish an Electrically Driven, Centrifugal Fire Pump System Maintenance Contract.
 - b. Operation and Maintenance Data:
 - 1) A copy of NFPA 20.
 - 2) A copy of NFPA 25.
 - 3) Suggested spare parts list and the firm guaranteed unit prices for all of the maintenance materials.
 - c. Warranty Documentation:
 - 1) New Electrically Driven Fire Pump Materials Warranty.
 - 2) New Electrically Driven Fire Pump Workmanship Warranty.
 - d. Record Documentation:
 - 1) Record Sets of Drawings for the electric driven, centrifugal fire pump system.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Special Inspections:

- a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
- b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.

2. Authorities Having Jurisdiction:

- a. To obtain approval of the fire alarm system by the Program/Project Manager, the City of Phoenix Fire Department, Sky Harbor International Airport Aviation Department, and other Authorities Having Jurisdiction, documents prepared according to the requirements specified in NFPA 13 and the City of Phoenix Annual Facilities Permit Program Registration Packet, including Shop Drawings, water flow test results, and material specifications, are required.
 - 1) Submit these documents and the required fees to the Annual Facilities Permit Program, attention Mary Schilling, for review and approval.
 - 2) Submit the fire protection system Permit received to the Program/Project Manager.

B. Qualifications:

1. Fire Pump System Installer's Qualifications:

- a. Employ a firm that is licensed in the State of Arizona, and that has a minimum of 5 years of documented experience installing fire sprinkler and standpipe systems and fire pumps similar in type to that required for this Contract.
- b. Employ a firm that has installed fire sprinkler and standpipe systems, and fire pumps similar in scope to this Contract, and that has obtained design and inspection approvals for similar projects from the Authorities Having Jurisdiction.
- c. Submit the qualifications of the proposed fire pump system installer and the resume of the proposed system installer's foreman and project manager-assigned to this Contract to the Program/Project Manager for approval.

- 1) Include the number of years the proposed fire pump system installer has been in business, and their service policies, warranty definitions, and prior experience with installations that include the type of equipment that is to be supplied under this Contract.
 - a) Furnish a list of at least 3 installations similar in scope to this Contract, including the addresses of the properties, contact names, telephone numbers, and the types of system equipment installed.
- 2) Include proposed system installer's personnel and company contact information.
 - a) Furnish sufficient information to describe the qualifications of the proposed representatives, the work efforts to be performed, and the materials to be provided, and include the names and qualifications of the Contractor's project manager who will be in responsible charge during installation of the fire alarm system.
- d. Nonconformance of the proposed fire pump system installer's qualifications with the qualifications specified in this Section are cause for immediate elimination of the proposed system installer without further comment.
- e. Do not replace an approved fire pump system installer or the approved fire pump system installer's foreman without the written approval of the Program/Project Manager.
 - 1) No requested change in Subcontractor will be accepted unless justification is made in writing to the Program/Project Manager and approved.
 - a) Upon written request, the Program/Project Manager may authorize changes, but the decision to do so is at the sole choice and discretion of the Program/Project Manager.
2. Fire Pump System Supplier's Technical Representatives' Qualifications:
 - a. To supervise the field installation of the fire pump system provided under this Contract, employ a trained and qualified technical representative who, at a minimum, holds a current NICET Level II Fire Protection Engineering Technology Automatic Sprinkler System Layout Certification.
 - b. Submit the name and qualifications of the proposed fire pump system Supplier's technical representative who will be in responsible charge of the installation of the system under this Contract to the Program/Project Manager for approval.
 - c. Do not replace an approved fire pump system technical representative without the written approval of the Program/Project Manager.

- d. The specified fire pump system Shop Drawings and calculations must be prepared by a certified technician holding at a minimum NICET Level III Fire Protection Engineering Technology Automatic Sprinkler System Layout Certification.
 - 1) Submit the name and qualifications of the proposed fire pump system Supplier's technical representative who will be responsible for preparing the fire alarm system Shop Drawings and calculations under this Contract to the Program/Project Manager for approval.
 - a) Furnish sufficient information to describe the qualifications of the proposed representative, the work efforts to be performed, and the materials to be provided.

C. Certifications:

- 1. Listing and Labeling of Components, Devices, and Accessories:
 - a. Provide components, equipment, and devices that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products listed in the UL Fire Protection Equipment Directory (UL FPED) and that are labeled with their intended use or classification.
 - a) For various major sections of the fire pump system, partial listings or multiple listings are unacceptable.
 - 2) If a UL listing for a specific device is unavailable, products approved by FM Approvals LLC (FM) or another nationally recognized testing laboratory (NRTL) acceptable to the Sky Harbor International Airport Aviation Department will be acceptable.
 - 3) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.

- 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Ensure materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.
- B. Storage and Handling Requirements:
 1. Store and handle the fire pump equipment, conductors, devices, appliances, and other equipment and materials in accordance with the manufacturer's requirements.
 - a. Submit the manufacturer's written storage and handling requirements to the Program/Project Manager for information.
 2. Store materials in a neat and clean location that is protected from the elements so they are not subject to damage, moisture, or other reasonably foreseen circumstances.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

- A. Manufacturer Warranty:
 1. Have the manufacturer or the manufacturer's authorized representative warrant the new fire pump equipment against defects in material within the 2-year period after the date of Substantial Completion or acceptance by the Program/Project Manager.
 - a. Submit a written New Electrically Driven Fire Pump Materials Warranty, without monetary limitation, in which the manufacturer agrees to replace components of the new electrically driven fire pump that fail in materials within the specified warranty period to the Program/Project Manager for approval.
- B. Special Warranty:
 1. Warrant the new electrically driven fire pump equipment installed under this Contract against defects in workmanship and inherent mechanical and electrical defects within the 1-year period after the date of Substantial Completion or acceptance by the Program/Project Manager.

- a. After the installation of the new electrically driven fire pump, prepare a signed written statement, substantially in the format that follows:
 - 1) "The undersigned, having been engaged as the Contractor for Contract [***insert the Contract number***] of the Phoenix Sky Train Project located in Phoenix, Arizona, confirms that the new electrically driven fire pump equipment provided under the Contract has been installed in accordance with the approved system Shop Drawings; the system manufacturer's wiring diagrams, installation instructions, and technical specifications; and the Contract Documents."
- b. Submit a written New Electrically Driven Fire Pump Workmanship Warranty, without monetary limitation and including the above signed written statement, in which the Contractor agrees to repair or replace components of the new electrically driven fire pump equipment installed under this Contract that fail in workmanship or exhibit inherent mechanical and/or electrical defects within the specified warranty period to the Program/Project Manager for approval.
 - 1) Indicate service work not included in the warranty, and furnish a price for providing a service contract to cover the work not covered by the warranty.

PART 2 PRODUCTS

2.01 FIRE PUMP SYSTEMS

- A. Manufacturers:
 1. Manufacturer List:
 - a. If manufacturers are listed for the products specified in this Section, subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified and approval by the Program/Project Manager, products from other manufacturers may be provided.
 3. Product Options:
 - a. Provide new equipment and system components of the first quality, of the manufacturer's best type, and the latest model capable of complying with the requirements specified in this Section
 - 1) Provide only new and unused equipment, devices, and appliances.
 - 2) Do not provide obsolete equipment.

- B. Description:

1. Regulatory Requirements:

a. Phoenix Building Construction Code and Phoenix Fire Code:

- 1) Perform the Work of this Section in compliance with the requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as amended by the City of Phoenix], and the Phoenix Fire Code and Amendments [ICC International Fire Code (IFC) as amended by the City of Phoenix].

C. Performance:

1. Pressure Ratings:

- a. Provide pumps and fittings having pressure ratings meeting or exceeding the maximum working pressures available within the fire suppression system, but not less than 175 pounds per square inch.

2. Fire Pump Densities:

- a. Provide fire pumps capable, at 100 percent of the motor rating, of pumping 1000 gallons per minute at a pressure of 75 pounds per square inch.
- b. Provide fire pumps capable of furnishing not less than 150 percent of the rated capacity at not less than 65 percent of the total rated head, and having a shutoff head limited to 140 percent of the total rated head.

3. Pressure-Maintenance-Pump Characteristics:

a. Rated Capacity:

- 1) Provide pressure-maintenance pumps rated for 5 gallons per minute.
- 2) Match the pressure-maintenance pump suction and discharge ratings as required for the pressure-maintenance pump capacity rating.

4. Seismic Performance:

- a. Provide pumps with bases and their attachment to the fire pumps, pressure-maintenance pumps, and controllers having reinforcement to resist the movement of the pumps and controllers during a seismic event when their bases are anchored to the building structure.
- b. Provide fire pump houses designed to resist the effects of seismic ground motions.

D. Design Criteria:

1. Equipment Locations:

- a. The Contract Drawings indicate the general arrangement of piping, fittings, and specialties.

- b. The actual location of the electric drive, centrifugal fire pump system equipment, controls, piping, valves, and drains are subject to the Program/Project Manager's approval.
 - c. Locate the pumps and controllers so access space is provided for performing periodic maintenance tasks, including space for removal of motors, impellers, couplings, and accessories.
 - 1) Install piping adjacent to the pumps and equipment so access space is provided for performing service and maintenance.
2. Provide new fire pumps, equipment, and system components listed by Underwriters Laboratories, Inc. (UL), or approved by Factory Mutual (FM), for their intended use.
3. Match the fire-pump suction and discharge ratings as required for the fire-pump capacity rating.
4. Fire Pump System Hydraulic Calculations:
 - a. Have the fire pump system Supplier's NICET-certified technical representative prepare hydraulic calculations for each fire pump system.
 - b. Submit the fire pump systems' hydraulic calculations to the Program/Program Manager for approval.
5. Fire Pump House Structural Requirements:
 - a. Live Load:
 - 1) Provide fire pump houses capable of resisting live loads of not less than 40 pounds per square foot applied on the horizontal projection of the fire pump house roof without failure.
 - b. Wind Load:
 - 1) Provide fire pump houses capable of resisting wind loads of not less than 110 miles per hour without failure.
6. Fire Pump Supplier's Compliance Plan and Reliability Information:
 - a. Prior to performing any of the other Work of this Section, prepare a written description of how the fire pump Supplier intends to comply with the operational design and performance requirements specified for the fire pump system, and pertinent information regarding the reliability and operation of the equipment proposed to be supplied, to the Program/Project Manager for approval.
 - b. Submit the fire pump Supplier's Compliance Plan and reliability information to the Program/Project Manager for review and approval.
7. Product Data:
 - a. Obtain the original manufacturer's Product Data for the new fire pumps, equipment, and system components, including specification sheets.
 - b. Equipment Lists:

- 1) Submit a Preliminary Equipment List identifying the type, quantity, make, and model number of each piece of fire pump system equipment to be provided under this Contract to the Program/Project Manager for approval.
 - a) Ensure that the types and quantities of equipment on the Preliminary Equipment List coincide with the types and quantities of equipment shown on the Shop Drawings.
 - b) Include the type, quantity, make, and model of spare equipment as specified in this Section.
 - c. Sequence of Operation:
 - 1) Prepare the sequence of operation for the electric drive, centrifugal fire pump system.
 - d. Submit the Product Data to the Program/Project Manager for approval.
8. Shop Drawings:
 - a. Prepare Shop Drawings of the fire pump system.
 - b. Prepare Working Drawings for installation of the fire pump system.
 - c. Submit the Shop Drawings and Working Drawings to the Program/Project Manager for approval.
 - 1) Do not commence the Work of this Section prior to approval of the Shop Drawings by the Program/Project Manager.
 - 2) Changes required in Work installed prior to approval of the Shop Drawings must be performed at no increase in the Contract Price.
9. Conflicts Arising Due to Discrepancies Between Documents:
 - a. Should conflicts arise due to discrepancies between documents referenced in this Section, the most stringent requirement applies; however, should a level of stringency be indeterminable, resolve the discrepancy as follows:
 - 1) The International Building Code (IBC) as Amended by the City of Phoenix and the International Fire Code (IFC) as Amended by the City of Phoenix, the National Fire Protection Association (NFPA) Standards, and this Section take precedence over the Contract Drawings.
 - 2) The International Building Code (IBC) as Amended by the City of Phoenix and the International Fire Code (IFC) as Amended by the City of Phoenix take precedence over the National Fire Protection Association (NFPA) Standards, this Section, and the Contract Drawings.
 - 3) The National Fire Protection Association (NFPA) Standards take precedence over this Section and the Contract Drawings.
 - 4) This Section takes precedence over the Contract Drawings.

E. Materials:

1. Fire Pump House

- a. Provide a factory-supplied pump house to house the fire pump equipped with the following appurtenances:
 - 1) Continuous duty exhaust fan.
 - 2) Motor operated louver.
 - 3) Heater with thermostat, and capable of generating 3kW to 50 kW of heat.
 - 4) Interior fluorescent lighting.
 - 5) Automatic sprinklers.
 - 6) Electrical distribution panel.

2. Fire Pump:

- a. Provide factory-assembled and factory-tested, single-stage, horizontally mounted, split-case, electric drive, centrifugal fire pumps complying with the requirements specified in UL 448, and having both pump and driver mounted on the same base and connected by a coupling.
- b. Pump:
 - 1) Unless otherwise indicated in the Contract Documents, provide an axially split cast-iron casing having suction and discharge flanges machined in accordance with the requirements for Class 125 dimensions specified in ASME B16.1.
 - a) Impellers:
 - (1) Provide cast bronze impellers matching the fire pump, statically and dynamically balanced, and keyed to the shaft.
 - b) Wear Rings:
 - (1) Provide replaceable, bronze wear rings.
 - c) Shafts and Sleeves:
 - (1) Provide steel shafts with bronze sleeves.
 - d) Shaft Bearings:
 - (1) Provide grease-lubricated ball bearings in cast-iron housings.
 - e) Seals:
 - (1) Provide seals consisting of a stuffing box having a minimum of 4 rings of graphite-impregnated braided yarn, and a bronze packing gland.
- c. Coupling:
 - 1) Provide a flexible coupling capable of absorbing torsional vibration and shaft misalignment.
 - 2) Provide a metal coupling guard.
- d. Driver:

- 1) Provide a UL-listed, open drip-proof, squirrel-cage, induction motor complying with the requirements specified in NEMA MG 1, NFPA 20, and NFPA 70.
- 2) Wire the driver so it is compatible with the controller provided.
- 3) Corrosion protection:
 - a) Protect piping and hangers exposed to the weather or installed in a corrosive atmosphere against corrosion.
 - b) Provide piping having a corrosion resistance rating ratio (CRR) greater than or equal to 1.0.
- 4) Fire Department Connections:
 - a) Provide electric drive, centrifugal fire pumps having the Fire Department connections shown on the Contract Drawings.
- e. Finish:
 - 1) Apply the manufacturer's standard red paint to the electric drive, centrifugal fire pumps before shipping them to the Site.
- f. Nameplate:
 - 1) Provide a nameplate, complete with the capacities, characteristics, and other pertinent data, on the electric drive, centrifugal fire pumps.
- g. Manufacturers:
 - 1) Pentair Pump Group, Aurora Pump, <http://www.aurorapump.com>.
 - 2) Approved equal.
3. Fire Pump Controllers:
 - a. Provide factory-assembled and factory-wired main fire pump controllers having a wired and tested power transfer switch, and complying with the requirements specified in NFPA 20 and NFPA 70.
 - 1) Provide fire pump controllers listed by Underwriters Laboratories, Inc. in accordance with the requirements specified in UL 218, and approved by FM Approvals LLC for fire pump service.
 - 2) Provide front mounted controller components, wired and front accessible for maintenance.
 - b. Starting Method
 - 1) Provide combined manual and automatic type controllers designed for solid state soft starting of a fire pump motor having the horsepower, voltage, phase and frequency rating shown on the Contract Drawings.
 - 2) House the controller components in a NEMA 2 (IEC IP11) Type drip-proof, wall mounted enclosure.
 - c. Withstand Ratings (Short Circuit Current Ratings):
 - 1) Provide fire pump controllers having a minimum withstand rating not less than 100,000 Amperes RMS symmetrical at 200 Volts to 600 Volts.

- 2) If the available system fault current exceeds these withstand ratings, supply controllers with a withstand rating of 150,000 Amperes RMS symmetrical or 200,000 Amperes RMS symmetrical, as required.
- d. Isolation Switch and Circuit Breaker:
 - 1) Provide controllers having a motor rated combination isolating disconnect switch/circuit breaker, mechanically interlocked and operated with a single, externally mounted handle.
 - a) Provide a locking type handle and three-point cam and roller vault type hardware for the controller door.
 - b) When the handle is moved from the OFF position to the ON position, the interlocking mechanism must first sequence the isolating disconnect switch to ON, and then sequence the circuit breaker to ON.
 - c) When the handle is moved from the ON position to the OFF position, the interlocking mechanism must first sequence the circuit breaker to OFF, and then sequence the isolating disconnect switch to OFF.
 - 2) Mechanically interlock the isolating disconnect switch/circuit breaker so the enclosure door cannot be opened with the handle in the ON position, except by a hidden tool operated defeater mechanism.
 - a) Provide an isolating disconnect switch/circuit breaker capable of being padlocked in the OFF position for installation and maintenance safety, and capable of being locked in the ON position without affecting the tripping characteristics of the circuit breaker.
 - 3) Factory set, test, and seal the circuit breaker trip curve adjustment to the full load amperes of the connected motor.
 - 4) Provide a circuit breaker capable of being field tested to verify the actual pick up, locked rotor, and instantaneous trip points after field installation without disturbing the incoming line and load conductors.
- e. Operator Interfaces:
 - 1) Provide fire pump controllers that feature an operator interface with a user keypad and a 2-line, 20-character, vacuum fluorescent, dot matrix type display designed to allow easy viewing from all angles and in all light conditions.
 - a) Provide operator displays and interfaces rated for NEMA 2, NEMA 3R, NEMA 4, NEMA 4X, and NEMA 12 Type protection in accordance with the requirements specified in

- NEMA 250, and that are fully accessible without opening the controller door.
- 2) Provide operator interfaces that monitor and display the motor operating conditions, including all alarms, events, and pressure conditions.
 - a) Provide an operator interface that displays all alarms, events, and pressure conditions with a time and date stamp.
 - 3) Provide system security by including multiple levels of password protection for the displays and user interfaces.
 - a) Provide a minimum of 3 password levels.
 - 4) Provide displays capable of being programmed for any software language.
- f. Ammeter/Voltmeter:
- 1) Provide fire pump controller operator interfaces capable of displaying true RMS digital motor voltage and current measurements for all 3 phases simultaneously.
 - a) Displays requiring push-buttons and selector switches to toggle between phases or current and voltage are unacceptable.
 - 2) Provide fire pump controller operator interfaces that use True RMS technology to measure voltage and current so the most accurate measurement of the waveforms, including non-sinusoidal waveforms, is made.
 - a) Average responding meters are unacceptable.
- g. Digital Status/Alarm Messages:
- 1) Provide digital displays capable of indicating status and alarm text messages for the following conditions:
 - a) Motor on.
 - b) Minimum run time.
 - c) Off delay time.
 - d) Fail to start.
 - e) Under voltage.
 - f) Locked rotor trip.
 - g) Over frequency.
 - h) Motor over 320.
 - i) Motor overload.
 - j) Printer error.
 - k) Sequential start time.
 - l) Local start.
 - m) Remote start.
 - n) System battery low.
 - o) Over voltage.

- p) Low suction pressure.
- q) Emergency start.
- r) Drive not installed.
- s) Disk error.
- t) Disk near full.
- h. Light Emitting Diode (LED) Visual Indicators:
 - 1) Provide digital displays having light emitting diode (LED) indicators capable of visibly indicating the following conditions with the door closed:
 - a) Power on.
 - b) Pump running.
 - c) Alarm.
 - d) Deluge open.
 - e) Phase failure.
 - f) Interlock on.
 - g) Emergency isolating switch open.
 - h) Low system pressure.
 - i) Transfer switch normal.
 - j) Transfer switch emergency.
 - k) Phase reversal.
- i. In addition to the standard alarm contacts required by NFPA 20, the digital display module must have N/O and N/C contacts for remote indication of any digitally displayed alarm, and N/O and N/C contacts for remote indication of up to 8 specified, programmable alarms.
- j. Data Logging:
 - 1) Provide digital displays capable of monitoring the system and logging the following data:
 - a) Motor calls/starts.
 - b) Last trip currents.
 - c) Last breaker trip.
 - d) Minimum voltages.
 - e) Maximum voltages.
 - f) Last phase failure.
 - g) Last phase reversal.
 - h) Minimum / maximum pressure.
 - i) Elapsed motor run time.
 - j) Elapsed power on time.
 - k) Maximum run currents.
 - l) Minimum run currents.
 - m) Last motor run time.
 - n) Last start currents.
 - o) Minimum / maximum frequency.

- k. Event Recording:
 - 1) Universal Serial Bus (USB) "Thumb" Drive:
 - a) Provide controllers equipped to save selectable data to a universal serial bus (USB) thumb drive.
 - 2) Memory:
 - a) Provide controllers that record all operational and alarm events in system memory.
 - (1) Provide controllers that time and date stamps all events, and includes an index number.
 - (2) Provide controllers having system memory capable of storing 3000 events, and of allowing the user to access the event log via the user interface.
 - (3) Provide controllers allowing the user to scroll through the stored messages in groups of 1, 10, or 100 messages.
 - 3) Communications:
 - a) Provide controllers that have 2 independent communications ports that allow connectivity to computers, modems, or building management systems.
 - 4) Solid State Pressure Transducer:
 - a) Provide controllers having a solid state pressure transducer with a range of 0 pounds per square inch (0bar) to 300 pounds per square inch (20.7bar) plus or minus 1 pound per square inch.
 - (1) Provide a solid state pressure switch that both displays the system pressure and controls of the fire pump controller.
 - (2) Systems using analog pressure devices or mercury switches for operational control are unacceptable.
 - b) Mount the pressure transducer inside the controller to prevent accidental damage.
 - (1) Directly pipe-mount the pressure transducer on a bulkhead pipe coupling without any other supporting members.
 - (2) Make field connections externally at the controller coupling to prevent distortion of the pressure switch element and mechanism.
 - 5) Provide controllers that allow START, STOP and SYSTEM PRESSURE to be digitally displayed and adjusted through the user interface.
 - 6) Controller Operation:
 - a) Provide controllers having a digitally set On Delay (Sequential Start) timer as standard.

- b) Upon a call to start, the user interface must display a message indicating the remaining time value of the On Delay timer.
- 7) For manual stop automatic stop, provide field programmable controllers.
 - a) If set for automatic stopping, the controller must allow the user to select either a Minimum Run Timer or an Off Delay Timer.
 - b) Both timers must be programmable through the user interface.
- 8) Provide fully programmable controllers that allow up to 8 custom alarm messages to be displayed on the user interface.
- 9) Provide nonadjustable restart delay timers that allow the residual voltage of the motor to decay prior to restarting the motor.
 - a) At least 2 seconds, but not more than 3 seconds, must elapse between stopping and restarting the pump motors.
- 10) Weekly Test Timer:
 - a) Provide a weekly test timer as a standard feature.
 - b) Provide controllers having the ability to program the time, date, and frequency of a weekly test.
 - c) Provide controllers having the capability to display a preventative maintenance message for a service inspection.
 - (1) The message text and frequency of occurrence must be programmable through the user interface.
- 11) Lamp Test Feature:
 - a) Provide controllers having a lamp test feature, and the ability to display the status of the system inputs and outputs on the user interface.
- 12) Provide controllers that cannot start the fire pump motor under a single-phase condition.
 - a) If the motor is already running when a phase loss occurs, the controller must continue to run the motor, but still display a Phase Failure alarm.
- I. Manufacturers:
 - 1) Firetrol, <http://www.firetrol.net>.
 - 2) Approved equal.

2.02 ACCESSORIES

A. Power Transfer Switch:

- 1. For switching each electric driven fire pump to a generator set emergency power source, provide a power transfer switch.
 - a. Provide factory assembled fire pump controller/power transfer switches, wired and tested as a unit prior to shipment.

2. Housing:
 - a. House the power transfer switches within the fire pump controller enclosure or in a NEMA 2 (IEC IP11) Type drip-proof enclosure attached directly to the fire pump controller.
 - 1) Where the power transfer switch is housed in an attached enclosure, fit the enclosure so the assembly constitutes a single unit.
 - b. Provide a locking type handle and three-point cam and roller vault type hardware for the power transfer switch door.
 3. Disconnect/Isolating Switches:
 - a. Provide power transfer switches having a motor rated disconnect/isolating switch capable of interrupting the motor locked rotor current.
 - b. Mechanically interlock the disconnect/isolating switches so the enclosure doors cannot be opened with the handles in the ON position, except by a hidden tool-operated defeater mechanism.
 - c. For installation and maintenance safety, provide disconnect/isolating switches capable of being padlocked in the OFF position with up to 3 padlocks and capable of being locked in the ON position.
 4. Provide an auxiliary contact on the transfer switch to prevent the emergency generator set from starting when the transfer switch or the main fire pump controller are being serviced.
 5. Provide transfer switch circuitry capable of sensing both the normal power source and the emergency power source.
 - a. Set the normal power source pickup at 95 percent of the nominal voltage.
 - b. Set the emergency power source to pick up at 90 percent of the nominal voltage and 95 percent of the nominal frequency.
 - c. To accommodate individual installation requirements, provide field adjustable voltage sensing, frequency sensing, and time delays.
 - d. Provide transfer switch circuitry capable of delaying the transfer signal for 1 second, delaying the transfer and engine start signals to compensate for momentary, normal power outages.
 - e. To allow the motor to slow sufficiently, preventing line disturbances that could trip either the generator set or fire pump circuit breakers, provide transfer switch circuitry capable of providing an automatic delay of 3 seconds upon transfer to or from the emergency power source.
- B. Fire Pump Accessories and Specialties:
1. Provide the following fire pump accessories and specialties:
 - a. Automatic air-release valve.

- b. Circulation relief valve.
 - c. Suction and discharge pressure gages.
 - d. Eccentric-tapered reducer at suction inlets.
 - e. Concentric-tapered reducer at discharge outlets.
 - f. Test-Header Manifold:
 - 1) Provide a ductile-iron or brass body test-header manifold for the hose valves.
 - a) Provide nozzle outlets arranged in a single line.
 - b) Provide a horizontal, flush-wall mounting attachment.
 - c) Provide a rectangular, brass finish escutcheon plate with lettering equivalent to "PUMP TEST CONNECTION".
 - g. Hose Valves:
 - 1) Provide bronze, straightway pattern hose valves complying with the requirements specified in UL 668, and having a cap and chain.
 - 2) Provide hose valves having hose threads complying with the requirements specified in NFPA 1963 and with local fire department standards.
 - 3) Finish:
 - a) Provide hose valves having the same finish as the test-header manifold escutcheon plate.
 - h. Ball Drip Valve:
 - 1) Provide ball drip valves complying with the requirements specified in UL 1726.
 - i. Main Relief Valve:
 - 1) Provide main relief valves complying with the requirements specified in UL 1478.
 - j. Finish:
 - 1) Provide the manufacturer's standard factory-applied red paint unless brass or another finish is specified.
- C. Pressure-Maintenance Pumps:
- 1. Provide factory-assembled and factory-tested pumps each having an electric-motor driver, a controller, and accessories and specialties.
 - a. Provide pressure-maintenance pumps having a cast-iron or stainless-steel casing, bronze or stainless-steel impellers, and mechanical seals; and, unless Class 250 flanges are indicated and except that connections may be threaded in sizes where flanges are not available, provide suction and discharge flanges machined in accordance with the requirements for Class 125 dimensions specified in ASME B16.1.
 - b. Finishes:

- 1) Apply the manufacturer's standard color paint to the factory-assembled and factory-tested pressure-maintenance pumps before shipping them to the Site.
- c. Nameplates:
 - 1) Provide nameplates complete with the capacity, characteristics, and other pertinent data for the pressure-maintenance pumps.
2. Multistage, Pressure-Maintenance Pumps:
 - a. Provide multiple-impeller type pressure-maintenance pumps complying with requirements for multistage centrifugal pumps; and having bases, suction and discharge pressure gages, and a circulation relief valve.
 - b. Drivers:
 - 1) Provide open-drip-proof, squirrel-cage pressure-maintenance pumps complying with the requirements specified in NEMA MG 1, and having induction motors complying with the requirements specified in NFPA 20 and NFPA 70.
 - 2) Wire the driver to be compatible with the controller used.
 - c. Controllers:
 - 1) Provide factory-assembled, factory-wired, and factory-tested, across-the-line type controllers complying with the requirements specified in UL 508, suitable combined automatic and manual operation, rated for the scheduled horsepower, and having the following accessories and specialties.
 - a) Fusible disconnect switches.
 - b) Pressure switches.
 - c) Hand-off-auto selector switches.
 - d) Pilot lights.
 - e) Running period timers.
 - d. Enclosures:
 - 1) For the pressure-maintenance pump controllers, provide wall-mounted enclosures complying with the requirements specified in UL 508, and with the requirements for NEMA 2 Type enclosures specified in NEMA 250, and of a type suitable for field electrical wiring.
 - e. Finishes:
 - 1) Apply the manufacturer's standard color paint to the factory-assembled and factory-tested controllers before shipping them to the Site.

D. Flow Meter Systems:

1. Provide a fire-pump flow meter system that indicates the flow to at least 175 percent of the rated capacity of the fire pump.

2. Pressure Rating:
 - a. Provide a fire-pump flow meter system rated for pressures of at least 200 pounds per square inch.
3. Flow Sensors:
 - a. Unless otherwise indicated, provide venturi, annubar probe, or orifice plate flow sensors.
 - b. Provide sensors sized to match the pipe, tubing, flow meter, and fittings.
4. Flow Meters:
 - a. Provide flow meters that are compatible with the flow sensor, and that have a dial at least 4-1/2 inches in diameter or of the manufacturer's equivalent size.
 - b. Permanently Mounted Flow Meters:
 - 1) Provide permanently mounted flow meters that are suitable for wall mounting, and that have copper tubing for connecting to the flow sensors.

E. Pressure Gages:

1. Provide pressure gages complying with the requirements specified in UL 393, and that have 3-1/2-inch diameter to 4-1/2-inch diameter dials that indicate pressure ranges of at least 0 pounds per square inch gage to 300 pounds per square inch gage.
2. Provide the caption "WATER" on dial faces of the pressure gages.

F. Grout:

1. Provide factory-mixed and factory-packaged non-staining, non-corrosive, and nongaseous grout complying with the requirements for dry, hydraulic-cement, non-shrink and nonmetallic grout specified in ASTM C 1107, and that is suitable for interior and exterior applications.
2. Design Mix:
 - a. Provide grout having a 28-day compressive strength of 5,000 pounds per square inch.

2.03 SOURCE QUALITY CONTROL

A. Tests and Inspections:

Materials specified in this Section require advance examination or testing in accordance with the methods specified herein, or as required by the Program/Project Manager.

- a. Before the tests will be performed, provide advance notice of the tests to the Program/Project Manager to give the Program/Project Manager and the Approved Agency the opportunity to observe the tests.
 2. National Fire Protection Association (NFPA) Test:
 - a. Test Procedure:
 - 1) Test and inspect fire pumps with their controllers in accordance with the methods for certified shop tests specified in NFPA 20.
 - 2) Submit certified test reports for the National Fire Protection Association (NFPA) Test for each fire pump to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Fire pumps having certified test reports showing the pump has complied with the requirements specified in NFPA 20 pass the National Fire Protection Association (NFPA) Test.
- B. Manufacturer Services:
 1. Verification of Performance:
 - a. Rate the fire pumps provided under this Section in accordance with the requirements specified in this Section.
- C. Coordination of Other Tests and Inspections:

Notify the code-required Approved Agency responsible for performing special inspections when electric driven, centrifugal fire pumps for this Contract are being fabricated and/or tested.

Cooperate with the code-required Approved Agency when they are performing required material verifications and other special inspections.

 - a. Provide full access to the Work.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. The Contract Drawings indicate the numbers and prospective locations of system components, including the locations for the fire pumps.
 - a. Visit the Site, observe the existing conditions, and confirm that the indicated quantities of devices and the specific options for the locations shown are appropriate.
 2. Review the Contract Drawings, and become familiar with the conditions under which the work will be performed.
- B. Evaluation and Assessment:

Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Protection of In-Place Conditions:

1. Protect adjacent areas from damage resulting from installation of the electric driven, centrifugal fire pump systems.

B. Surface Preparation:

Concrete Bases:

- a. Provide flat concrete pads to support each electrically driven fire pump and housing unit.
 - 1) Provide 4-inch high reinforced concrete bases with chamfered edges to support the electrically driven fire pump and housing unit.
 - 2) Extend the base not less than 3 inches in all directions beyond the maximum dimensions of the electrically driven fire pump and housing unit, unless otherwise indicated on the Contract Drawings, or unless required for seismic anchor support.
- b. Place and secure anchorage devices.
 - 1) Design each fastener and support in accordance with the seismic-restraint requirements specified in Section 15070, Mechanical Sound, Vibration, and Seismic Control, to carry the load indicated by seismic requirements and according to seismic-restraint details.
 - 2) Install anchor bolts to the elevations required for proper attachment to the electrically driven fire pump and housing unit.
 - a) Use setting drawings, templates, diagrams, instructions, and directions for the items to be embedded to properly locate these items.
 - b) Cast anchor-bolt inserts into the concrete bases.
- c. Construct the concrete bases in accordance with the seismic-restraint requirements specified in Section 15060, Hangers and Supports.
 - 1) Provide concrete formwork as specified in Section 03100, Concrete Forms and Accessories; concrete reinforcement as specified in Section 03200, Concrete Reinforcement; and concreting as specified in Section 03300, Cast-In-Place Concrete, that comply with the requirements for concrete bases.

C. Demolition/Removal:

1. Remove scale and foreign debris from the fire suppression system piping.
2. Cutting and Patching Openings:

- a. Prior to performing structural Work, submit instructions for furnishing the openings and penetrations required for installing the electric fire pump systems to the Program/Project Manager for approval.
 - 1) Provide any subsequent additional penetrations or openings or relocations required, but not delineated in the original instructions, at no increase in Contract Price.

3.03 INSTALLATION

- A. Prior to installation, the equipment and materials must be clean inside and outside.
 1. Remove waste material, such as chips, filings, welding stubs, dirt, rags, debris, and any other foreign material, from the components before assembly.
 2. Attach pipe coupons or punched holes to the pipe near the pipe hole.
- B. Install and align fire pumps, pressure-maintenance pumps, and controllers in accordance with the requirements specified in NFPA 20.
 1. Install the electrically driven fire pumps in accordance with the approved Shop Drawings.
 2. Install new fire pumps, equipment, and system components within the limitations of their respective Underwriters Laboratories, Inc. (UL) listings or FM Approvals LLC (FM) approvals.
 3. Install piping accessories, hangers and supports, anchors, valves, meters and gages, and equipment supports.
- C. Base-Mounted Pumps:
 1. Set base-mounted type pumps on concrete bases.
 2. Disconnect the drive coupling halves before setting the pumps.
 - a. Do not reconnect the couplings until alignment operations have been completed.
 3. Fire Pump Frame:
 - a. Support the pump base plate on rectangular metal blocks and shims, or on metal wedges having a small taper, placed at points near anchor bolts so a 3/4-inch to 1-1/2-inch gap is provided between the pump base and the concrete base for grouting.
 - b. Adjust the metal supports or wedges until the pump and driver shafts are level.
 - 1) Verify that the coupling faces and pump suction and discharge flanges are level and plumb.
 - c. Fully grout the fire pump frame to the concrete base.
 - 1) With the metal blocks and shims or wedges in place, fill the base plate completely with grout.

d. Tighten the anchor bolts after the grout has hardened.

D. Controllers:

1. Properly connect the pump controllers to the pumps.
2. Properly connect the fire pump controllers to the building fire-alarm system.

E. Piping:

1. Aesthetics is a primary consideration when installing the system piping.
 - a. Any facet of installation that does not meet with the Program/Project Manager's approval must be revised to the Program/Project Manager's satisfaction.
2. Piping installation requirements are specified in other Sections.
3. Provide suction and discharge piping having diameters equal to or greater than the diameters of the fire-pump nozzles.
4. Support the pumps and the piping separately so the weight of the piping does not rest on the pumps.
5. Connect water supply and discharge piping to the fire pumps.
6. Connect water supply and discharge piping to the pressure-maintenance pumps.

F. Valves:

1. Provide valves that are the same size as the piping connecting the fire pumps, bypasses, test headers, and other piping systems.
2. Connect the relief-valve discharges to the point of disposal.

G. Meters and Gages:

1. Provide pressure gages on pressure-gage tapings at the fire-pump suction and discharge.
2. Provide flow meters and sensors at the locations indicated in the Contract Documents.
 - a. Install flow meter system sensors, meters, and other components, and make connections, in accordance with the flow meter system manufacturer's installation instructions.
 - b. Submit the flow meter system manufacturer's written installation instructions to the Program/Project Manager for information.

H. Special Techniques:

1. Alignment:
 - a. Align split-case fire pump and driver shafts after the complete unit has been leveled on its concrete base, the grout has set, and anchor bolts have been tightened.

- 1) Align vertically mounted, split-case pump and driver shafts after the complete unit has been made plumb on its concrete base, the grout has set, and its anchor bolts have been tightened.
 - b. Align the piping connections.
 - c. Align the pump and driver shafts so both angular and parallel alignment are within the tolerances specified by the pump and driver manufacturer.
 - d. After the alignment is correct, tighten the anchor bolts evenly.
 - e. Re-check the alignment, and make the corrections required.
 2. Electrical Grounding:
 - a. Ground the electric driven, centrifugal fire pump equipment in accordance with the requirements specified in Section 16061, Electrical Grounding and Bonding.
- I. Interface with Other Work:
 1. Electrical Wiring:
 - a. Install the electrical devices furnished by the electric driven, centrifugal fire pump equipment manufacturer, but not specified to be factory-mounted.
 - b. Furnish copies of electrical device manufacturers' wiring diagram Submittals to the electrical installer.
 - c. Connect the wiring in accordance with the requirements specified in Section 16120, Conductors and Cables.
- J. Systems Integration:
 1. Cooperation with Other Trades:
 - a. Coordinate installation of the electric driven, centrifugal fire pump systems with the Work of the other trades so construction progresses as rapidly and as smoothly as possible with a minimum of interference between trades.
 2. Work that is provided under other Sections but that is related to the sprinkler system includes, but is not limited to, the following:
 - a. Sprinkler Water Flow and Valve Supervisory Switches.
 - 1) Coordinate the connection of the tamper and water flow switches with the fire alarm system installation.
 - 2) Verify the quantity and location of the sprinkler water flow and supervisory switches, and test the switches in accordance with the requirements specified in NFPA 13 and NFPA 72.
 - 3) Devices for alarm monitoring of the water flow and valve supervisory switches will be provided under Section 13851, Fire Alarm.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

During the period when electric driven, centrifugal fire pumps are being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing and inspection of materials.

- a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - 1) Periodic Special Inspections will be performed during the installation of electric driven, centrifugal fire pumps.
- b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
- c. Failure of the Testing and Inspection Agency and/or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.

2. Test Plan:

- a. Prepare an Electric Driven, Centrifugal Fire Pump System Test Plan describing how the electric driven, centrifugal fire pump systems will be tested, and include a step-by-step description of all tests and the type and location of the test apparatus to be employed.
- b. Upon completion of the installation of each system and a minimum of 1 week prior to the Electric Driven, Centrifugal Fire Pump Pre-Acceptance Test, submit the Electric Driven, Centrifugal Fire Pump System Test Plan to the Program/Project Manager for approval.
 - 1) Do not perform any testing of the electric driven, centrifugal fire pump systems until the Electric Driven, Centrifugal Fire Pump System Test Plan is approved by the Program/Project Manager.
- c. Furnish the number, size, and length of fire hoses required to reach a storm drain or other acceptable location to dispose of fire-pump test water.
 - 1) These fire hoses are for field-acceptance tests only, and will not become the property of the Owner.

3. Leak Test and Inspection:

- a. Test Procedure:

- 1) After the fire pumps are installed, have the factory-authorized service representative charge the fire suppression system and test the fire pumps for leaks.
 - a) Perform the field tests for each fire pump after installation is complete.
 - b) Comply with the operating instructions and procedures specified in NFPA 20 to demonstrate compliance with the specified requirements.
- 2) Final Checks before Startup:
 - a) Perform the following preventive maintenance operations and checks before startup:
 - (1) Lubricate oil-lubrication-type bearings.
 - (2) Remove grease-lubrication-type bearing covers, flush these bearings with kerosene, and thoroughly clean the bearings.
 - (a) Fill the bearings with new lubricant in accordance with the grease-lubrication-type bearing manufacturer's lubrication instructions.
 - (b) Submit the grease-lubrication-type bearing manufacturer's written lubrication instructions to the Program/Project Manager for information.
 - (3) Disconnect the coupling, and check the electric motor for proper rotation.
 - (a) The rotation must match the direction of rotation marked on the pump casing.
 - (4) Verify that the fire pumps are free to rotate by hand.
 - (a) If a pump is bound, or if it drags even slightly, do not operate the pump until the cause of the trouble is determined and corrected.
- 3) Pump Starting Procedure:
 - a) Prime the pump by opening the suction valve and closing drains, and otherwise prepare the pump for operation.
 - b) If a pump is fitted with sealing-liquid supply valves, open these supply valves.
 - c) Start the motor.
 - d) Open the discharge valve slowly.
 - e) Observe if leakage is occurring from the stuffing boxes; and if so, adjust the sealing-liquid valve to furnish the flow that will ensure proper lubrication of the packing.
 - (1) Do not tighten the gland immediately, but let the packing run in before reducing the leakage through the stuffing boxes.

- f) Check the general mechanical operation of pump and motor.
- g) Test and adjust the controls and safeties.
 - (1) Replace damaged and malfunctioning controls and equipment with properly functioning units.
- 4) Following the field tests and inspections, have the factory-authorized service representative prepare test reports documenting the results of the inspections and testing.
- b. Acceptance Criteria:
 - 1) Fire pumps that do not leak pass the Leak Test.

B. Non-Conforming Work

- 1. Do not install damaged system components.
- 2. Do not install system components if there is evidence that the components have manufacturer defects.
- 3. Repair fire pump system leaks, and retest the repaired pumps until no leaks exist.
 - a. Where possible, field correct malfunctioning equipment, and then retest the corrected equipment to demonstrate compliance with the specified requirements.
 - b. Replace equipment that cannot be satisfactorily corrected, or that does not perform as indicated, and then retest the replacement equipment to demonstrate compliance with the specified requirements.
 - c. Verify that each fire pump performs as specified.

C. Manufacturer Services:

- 1. Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in the field testing.
 - a. Have the factory-authorized service representative submit the results of his or her inspections and testing in writing to the Program/Project Manager for information.

3.05 REPAIR/RESTORATION

- A. Repair damage to the skins and finishes of the station caused by installation of the electric driven, centrifugal fire pump system to the satisfaction of the Program/Project Manager at no increase in Contract Price.
- B. Holes:

1. Patch holes made in walls, ceilings, or floors, so the wall, ceiling, floor or member is restored to its original condition, fire resistance, and integrity.
- C. Touch up minor scratches to fire pump equipment and other accessories using paint and finish techniques matching those originally used on the items.

3.06 SYSTEM STARTUP

- A. Commissioning:
 1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning; Section 15995, Commissioning of Mechanical Systems; and Section 16995, Commissioning of Electrical Systems, for the fire protection system Work of this Section.
- B. Startup Testing:
 1. After installation of the electric driven, centrifugal fire pump system has been completed, the preliminary tests have been completed, and deficiencies found have been corrected, and the system is ready for the Electric Driven, Centrifugal Fire Pump Pre-Acceptance Test, notify the Program/Project Manager in writing a minimum of 2 weeks in advance of this planned demonstration to arrange for the inspection and witnessing of the acceptance tests.
 2. Conduct the inspections and witness the acceptance testing.
 - a. The Pre-Acceptance Test is separate from the testing required by the local Authorities Having Jurisdiction.
 - 1) If the Authorities Having Jurisdiction (AHJ) are required to witness the tests, take responsibility for making the necessary arrangements with the code authorities, and for coordinating the work with the Program/Project Manager.
 - 2) Obtain the test documents from the Authorities Having Jurisdiction having the required approval stamps and signatures of the code authorities, and submit a copy of each of these documents to the Program/Project Manager.
 3. Perform the tests and inspections required by the referenced Codes and Standards, the Phoenix Fire Department, and the Program/Project Manager.
- C. Pre-Acceptance Test:
 1. Upon completion of each installation phase, perform and document on an approved format, the following electric driven, centrifugal fire pump system tests and procedures in the presence of the Program/Project Manager or their designed representative:

- a. Perform the Fire Pump and Controller Acceptance Test in accordance with the requirements specified by the manufacturer and in NFPA 20.
 - b. Flush the underground piping.
 - c. Test the monitor modules.
 - d. Perform a flow test from the test header.
 - e. Prepare a fire pump test report showing the fire pump curve including the churn, 100 percent, and 150 percent of the fire pump's rating and output.
2. Correct any errors, non-conformances, or non-performing components discovered during the Pre-Acceptance Test at no increase in the Contract Price.

D. Final Acceptance Test:

1. Upon completion of the Pre-Acceptance Test, perform and document in an approved format the following electric driven, centrifugal fire pump system tests in the presence of the Program/Project Manager, a designed representative, and the City of Phoenix Authorities Having Jurisdiction:
 - a. Perform the Fire Pump and Controller Acceptance Test in accordance with the requirements specified by the manufacturer and in NFPA 20.
 - b. Test the monitor modules.
 - c. Perform a flow test from the test header.
 - d. Prepare a fire pump test report showing the fire pump curve including the churn, 100 percent, and 150 percent of the fire pump's rating and output.

E. Final Approval:

1. Final approval and acceptance of the Work of this Section will only be given by the Program/Project Manager when the following items have been performed to the satisfaction of the Program/Project Manager:
 - a. The completed electric driven, centrifugal fire pump system has been inspected, tested, and approved by the Program/Project Manager and the City of Phoenix Fire and Development Services Departments.
 - b. Required submittals, system operation and maintenance manuals, record drawings, spare parts, special tools, and training have been submitted to, and reviewed and accepted by the Program/Project Manager.
 - c. Additional Tests:
 - 1) Additional tests required by the referenced codes and standards, design criteria, or in writing by the Program/Project Manager have

been satisfactorily performed, and the following information regarding the tests has been submitted to the Program/Project Manager for information:

- a) Written directives requiring the additional tests.
- b) The date and time each test was performed.
- c) A description of each test performed.
- d) A checklist of each device tested, indicating the results of each test.
- e) A reference set of contractor record drawings, numerically identifying the individual components.

3.07 ADJUSTING

- A. Adjust the fittings to complete the turn-key fire pump system installation.

3.08 CLEANING

- A. After installation of the electric driven, centrifugal fire pump system, flush the entire fire pump system and suction pipe with clean water, either in sections or entirety in accordance with the method specified in NFPA 20, in order to remove all dirt and debris
 1. Continue the flushing operations for the systems for a time sufficient to ensure thorough cleaning, but not less than 10 minutes.
- B. At the end of the Contract, remove the equipment furnished for testing and flushing, and remove special equipment required for the installation of the Work of this Section.
- C. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.
 2. When performing flushing and other discharge testing, safely dispose of the waste water.

3.09 CLOSEOUT ACTIVITIES

- A. Training:
 1. To familiarize building personnel with the features, operation, and maintenance of the electric driven, centrifugal fire pump system conduct 2 training sessions of 4 hours each.
 - a. The Program/Project Manager will schedule the training sessions at a time mutually agreeable to the Contractor.
 - b. Final Agenda:

- 1) Submit the final approved training agenda to the Program/Project Manager 14 days prior to the first training session.

B. Record Set of Drawings:

1. Prepare a Record Set of Drawings recording the as-built electric driven, centrifugal fire pump system in conformance with the requirements specified in the Agreement and Section 01780, Closeout Submittals, to furnish information essential to those who test and maintain the electric driven, centrifugal fire pump system and account for all field changes made during installation.
 - a. During installation of the electric driven, centrifugal fire pump system, develop a Record Set of Drawings that include the original electric driven, centrifugal fire pump system Shop Drawings annotated to show exactly where the system components have been installed.
 - b. Furnish floor plans for the Record Set of Drawings showing the as-built information:
2. During the course of the Contract, develop an electronic version of the Record Set of Drawings for the electric driven, centrifugal fire pump system as a draft prepared using software and electronic media in accordance with the requirements specified in Section 01330, Submittal Procedures.
 - a. Show the equipment listed in this Section on a separate layer, and provide copies of this layer only on the floor plans furnished as part of the Record Set of Drawings for the electric driven, centrifugal fire pump system.
 - b. Update these draft as-built drawings every 24 hours during the installation of each electric driven, centrifugal fire pump system.
3. Make the onsite as-built Record Set of Drawings for the electric driven, centrifugal fire pump system available for inspection and review on request by the Program/Project Manager.
4. Submit the as-built Record Set of Drawings for the electric driven, centrifugal fire pump system as-built drawings to the Program/Project Manager for approval.
 - a. After the fire alarm system has been completely installed, and a minimum of 1 week prior to the Electric Driven, Centrifugal Fire Pump System Pre-Acceptance Test, submit an updated, as-built Record Set of Drawings for the electric driven, centrifugal fire pump system on electronic media that complies with the requirements specified in Section 01330, Submittal Procedures, to the Program/Project Manager for approval.

- b. After the Program/Project Manager approves the as-built Record Sets of Drawings for the electric driven, centrifugal fire pump system, they will be posted on Unifier for general distribution.

3.10 PROTECTION

- A. Provide caps over openings, even during and after assembly, to prevent foreign material from entering the pumps and pipe at any time.
 1. For example, pipe caps should be provided on the sprinkler extensions when the pipe is roughed in and the sprinklers are not yet installed.

3.11 MAINTENANCE

- A. Maintenance Materials:
 1. Obtain per unit costs for additional devices and appliances with firm prices to be maintained for 1 year beyond the duration of the manufacturer's warranty period as specified herein.
 2. Spare Parts List:
 - a. Prepare a suggested spare parts list of replacement electric driven, centrifugal fire pump system parts, with firm unit prices guaranteed to be maintained for the duration of the warranty period as specified herein for the manufacturer's-New Electrically Driven Fire Pump Materials Warranty.
 3. Submit the suggested spare parts list and the firm guaranteed unit prices for all of the maintenance materials to the Program/Project Manager for information.
- B. Maintenance Standards:
 1. Furnish and submit one copy each of NFPA 20 and NFPA 25 to the Program/Project Manager.
- C. Maintenance Contract:
 1. Submit a firm fixed price to furnish an Electrically Driven, Centrifugal Fire Pump System Maintenance Contract for covering a maintenance period of 1 year to the Program/Project Manager for information.

END OF SECTION

0	12/01/2017	N/A	All	First edition.

SECTION 13930

WET-PIPE FIRE SUPPRESSION SPRINKLERS

PART 1 GENERAL

1.01 DESCRIPTION

- A. Requirements for testing and inspection of all new sprinkler system components.
- B. Requirements for the installation of upright, pendant, and concealed sprinkler heads and pipe.

1.02 RELATED WORK

- A. Addressable monitor modules for the fire sprinkler system tamper and flow switches provided under Section 28 31 33, Fire Alarm, will be installed under this Section.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 01810 - Commissioning.
 - 5. Section 02510 - Water Distribution.
 - 6. Section 07850 - Through Penetration Firestopping Systems.
 - 7. Section 09912 – Painting.
 - 8. Section 09960 - High-Performance Coatings.
 - 9. Section 13851 - Fire Alarm.
 - 10. Section 15995 - Commissioning of Mechanical Systems.
 - 11. Section 16995 - Commissioning of Electrical Systems.

1.03 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. CPVC: Chlorinated polyvinyl chloride.
 - 2. CRR: Corrosion resistance ratio.
 - 3. DPDT: Double pole, double throw.
 - 4. FACU: Fire Alarm Control Unit.
 - 5. GMP: Guaranteed Maximum Price.
 - 6. MSDS: Material Safety Data Sheet(s).
 - 7. NICET: National Institute for Certification in Engineering Technology.
 - 8. NRTL: Nationally Recognized Testing Laboratory.
 - 9. OS&Y: Outside screw and yoke.

10. UL FPED: Underwriter's Laboratory, Inc. Fire Protection Equipment Directory.

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
2. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA); which meets the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory; and which tests for safety and lists or labels or accepts equipment or materials.
3. Contractor's Material and Test Certificate: A document that acknowledges the features of the installation, operation (performance), service, and equipment with representation by the property owner, system installer, System Supplier, service organization, and the Authority Having Jurisdiction.
4. Refer to Subparagraph 3.06.B.1 for additional details regarding the Record of Completion. Corrosion Resistance Ratio (CRR): An Underwriters Laboratory, Inc. term for the estimated life expectancy of a pipe joint based on the calculated wall thickness at the base of the first exposed thread, assumed to be the weakest point of the pipe length.
5. Unifier: The web based management software/database system the Phoenix Sky Harbor International Airport (PSHIA) uses to manage all correspondence, requests for interpretation (RFI), submittals, and similar information related to construction activities for the Phoenix Sky Train Project.

1.04 CODES

- A. Compliance with the following Codes and Standards are required for the project.
1. International Building Code (IBC) – 2012 with City of Phoenix amendments
 2. International Fire Code (IFC) – 2012 with City of Phoenix amendments
 3. Requirements of the Phoenix Fire Department and Aviation Design Guide.
 4. Annual Facilities Permit Program Registration Packet.
 5. American Society of Mechanical Engineers (ASME):

1.05 SCOPE OF WORK

- A. The installation of a fire sprinkler system in the South Concourse.
- B. Install and support the new sprinkler pipe as required by NFPA 13.
- C. Install and support new sprinkler heads in accordance with NFPA 13

1.06 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Prior to commencement and after completion of the Work of this Section, provide written notification to the Program/Project Manager.
 2. Coordinate the impairment planning for tying the combination wet-pipe fire suppression sprinkler system into the existing fire sprinkler water supply mains with the City of Phoenix Fire and Aviation Departments.
 - a. Bear the cost of the impairment coordination.
 - b. Comply with the time allotments granted by the Authorities Having Jurisdiction for the fire sprinkler system tie-in to the existing fire sprinkler water supply mains.
 3. Coordinate with the Program/Project Manager, the Commissioning Authority (CA), the Phoenix Sky Harbor International Airport, and others to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and

- Inspection Agency, Commissioning Authority (CA), and the City prior to incorporating items requiring testing by them into the Work.
4. Coordinate the installation and testing of the automatic wet-pipe fire sprinkler system and the associated equipment and circuits with the appropriate Subcontractors, equipment maintenance and testing representatives, the Sky Harbor International Airport Aviation Department, and the Authorities Having Jurisdiction.
 - a. Coordinate the connection of the tamper and water flow switches with the installation of the fire alarm.
 - b. Coordinate the Pre-Acceptance and the Final Acceptance Test of the automatic wet-pipe fire sprinkler system specified herein with the Program/Project Manager, the Sky Harbor International Airport Aviation Department, and other Authorities Having Jurisdiction (AHJ).
 - 1) Furnish at least 5 working days advance notice for all tests.
 - 2) At the time of notification, submit 1 copy of the approved Record Set of Drawings and the approved System Test Plan to the Program/Project Manager.
 - c. Final Acceptance Test:
 - 1) In order to assure attendance at the Final Acceptance Test by the necessary representatives, provide reasonable notification of the test date to each representative scheduled to witness the test at least 48 hours prior to the test.
 - 2) Do not conduct this test until all parties agree on a test date.
 5. Coordinate the dates and times of each required training session as specified herein through the Sky Harbor International Airport Aviation Department, not less than 2 weeks prior to the training session.
- B. Sequencing:
1. Complete the installation of the combination automatic wet-pipe fire suppression sprinkler system components so the fire alarm equipment Supplier can make the final connections and conduct tests of the fire alarm system as specified in other Sections without delaying the Work.
 2. Complete the installation of the combination automatic wet-pipe fire sprinkler system components to facilitate the scheduled cut-in to the fire sprinkler water supply mains.
- C. Scheduling:
1. Prior to beginning the Work of this Section, submit a schedule indicating the wet-pipe fire suppression sprinkler system installation sequence and time frame to the Program/Project Manager for approval.
 - a. Include specific time lines indicating the start and completion of major portions of each new combination automatic wet-pipe fire sprinkler system installation.
 - b. Include time lines indicating the start and completion of impairments of the existing fire sprinkler system.

- c. Indicate the delivery dates of the equipment to be supplied.
- d. Indicate the dates for the automatic wet-pipe fire sprinkler system Pre-Acceptance Test and the Final Acceptance Test specified herein.
2. Provide weekly schedule updates to the Program/Project Manager for approval.
3. Advise the Program/Project Manager of all anticipated projects the Contractor and the equipment Supplier may have with the same approximate completion date as this Contract, and what impact those projects may have on the timely completion of this Contract.

1.07 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Pipe and fittings.
 - 2) Pipe hangers and supports.
 - 3) Control and drain valves.
 - 4) Sprinklers.
 - 5) Identification signs.
 - 6) Supervisory and alarm equipment.
 - 7) Inspector's test and drain assemblies.
 - 8) Hose valve connections.
 - 9) Access panels.
 - b. Shop Drawings:
 - 1) Shop Drawings for the combination wet-pipe fire suppression sprinkler system.
 - 2) Working Drawings for installation of the combination wet-pipe fire suppression sprinkler system.
 - c. Certificates:
 - 1) Contractor's Material and Test Certification for Above Ground Piping.
 - d. Delegated Design Submittals:
 - 1) Hydraulic calculations.
 - 2) Valve chart.
 - 3) Preliminary Equipment List.
 - 4) Sequence of operation.
 - 5) Schedule indicating the automatic wet-pipe fire sprinkler system installation sequence and time frame, and weekly schedule updates.
 - 6) Training agenda.
 - e. Special Procedure Submittals:

- 1) Instructions for furnishing the openings and penetrations required for installing the combination wet-pipe fire suppression sprinkler system.
- 2) Automatic wet-pipe fire sprinkler system Test Plan.
- f. Qualification Statements:
 - 1) Qualifications of the wet-pipe fire suppression sprinkler system installer.
 - 2) Qualifications of the automatic wet-pipe fire sprinkler system NICET certified technician responsible for supervising the installation.
 - 3) Qualifications of the wet-pipe fire sprinkler system manufacturer's NICET certified technician responsible for preparing the automatic wet-pipe fire sprinkler standpipe system Shop Drawings and calculations.
- B. Closeout Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Maintenance Contracts:
 - 1) Firm fixed price for a 1 year Combination automatic wet-pipe fire sprinkler standpipe system Maintenance Contract.
 - b. Operation and Maintenance Data:
 - 1) Spare Parts List.
 - 2) A copy of NFPA 25.
 - c. Warranty Documentation:
 - 1) Automatic wet-pipe fire suppression sprinkler system Materials Warranty.
 - 2) Automatic wet-pipe fire suppression sprinkler system Workmanship Warranty.
 - d. Record Documentation:
 - 1) Record Set of Drawings.
- C. Maintenance Material Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish spare automatic wet-pipe fire sprinkler system products in accordance with the requirements specified in NFPA 13 and that match the products installed.
 - b. Tools:
 - 1) Furnish a sprinkler head wrench.

1.08 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Authorities Having Jurisdiction:
 - a. To obtain approval of the combination automatic wet-pipe fire sprinkler system by the Program/Project Manager, the City of Phoenix Fire Department, Sky Harbor International Airport Aviation Department, and other Authorities Having Jurisdiction, documents prepared according to the requirements specified in NFPA 13 and the City of Phoenix Annual Facilities Permit Program Registration Packet, including Shop Drawings, hydraulic calculations, and water flow test results are required.
 - 1) An inspector's drawings apply to the Work of this Section.
 - 2) Submit these documents and the required fees to the Annual Facilities Permit Program, attention Mary Schilling, for review and approval.
 - 3) Submit the fire protection system Permit received to the Program/Project Manager.
- B. Impairment coordination
- C. The fire alarm system impairment (taken off line for work by the Contractor) shall be planned and coordinated in accordance with the International Fire Code with City of Phoenix Amendments Section 901.7.4
- D. Qualifications:
 1. Automatic wet-pipe fire sprinkler system Installer's Qualifications:
 - a. Employ a firm that is licensed in the State of Arizona, and that has a minimum of 5 years of documented experience installing fire sprinkler systems similar in type to those required for this Contract.
 - b. Employ a firm that has installed fire sprinkler systems for projects similar in scope to this Contract, and that has obtained design and inspection approvals for similar projects from the Authorities Having Jurisdiction.
 - c. Submit the qualifications of the proposed system installer and the resume of the proposed system installer's foreman and project manager-assigned to this Contract to the Program/Project Manager for approval.
 - 1) Include the number of years the proposed sprinkler system installer has been in business, and their service policies, warranty definitions, and prior experience with installations that include the type of equipment that is to be supplied under this Contract.
 - a) Furnish a list of at least 3 installations similar in scope to this Contract, including the addresses of the properties, contact names, telephone numbers, and the types of system equipment installed.
 - 2) Include proposed automatic wet-pipe fire sprinkler system installer's personnel and company contact information.

- a) Furnish sufficient information to describe the qualifications of the proposed representatives, the work efforts to be performed, and the materials to be provided, and include the names and qualifications of the Contractor's project manager who will be in responsible charge during installation of the automatic wet-pipe fire sprinkler system.
- d. Nonconformance of the proposed automatic wet-pipe fire sprinkler system installer's qualifications with the qualifications specified in this Section are cause for immediate elimination without further comment.
- e. Do not replace an approved installer or the approved foreman without the written approval of the Program/Project Manager.
 - 1) No requested change in Subcontractor will be accepted unless justification is made in writing to the Program/Project Manager and approved.
 - a) Upon written request, the Program/Project Manager may authorize changes, but the decision to do so is at the sole choice and discretion of the Program/Project Manager.
- 2. Automatic wet-pipe fire sprinkler system Technical Representative's Qualifications:
 - a. To supervise the field installation of the automatic wet-pipe fire sprinkler system provided under this Contract, employ a trained and qualified representative who, at a minimum, holds a current NICET Level II Fire Protection Engineering Technology Automatic Sprinkler System Layout Certification.
 - 1) Submit the name and qualifications of the proposed technical representative who will be in responsible charge of the installation of the system under this Contract to the Program/Project Manager for approval.
 - a) Furnish sufficient information to describe the qualifications of the proposed representative, the work efforts to be performed, and the materials to be provided.
 - 2) Do not replace an approved technical representative without the written approval of the Program/Project Manager.
 - b. The specified automatic wet-pipe fire sprinkler system Shop Drawings and calculations must be prepared by a certified technician holding at a minimum NICET Level III Fire Protection Engineering Technology Automatic Sprinkler System Layout Certification or be a licensed Fire Protection Engineer in the State of Arizona.
 - 1) Submit the name and qualifications of the proposed certified technician who will be responsible for preparing the automatic wet-pipe fire sprinkler system Shop Drawings and calculations under this Contract to the Program/Project Manager for approval.
 - a) Furnish sufficient information to describe the qualifications of the proposed technician, the work efforts to be performed, and the materials to be provided.

E. Certifications:

1. Listing and Labeling of Components, Devices, and Accessories:

- a. Provide only components, equipment, and devices that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories (NRTL) are not available or unless standards do not exist for the products.
 - 1) Provide products listed in the UL Fire Protection Equipment Directory (UL FPED) and that are labeled with their intended use or classification.
 - a) For various major sections of the wet-pipe fire suppression sprinkler system, partial listings or multiple listings are unacceptable.
 - 2) If a UL listing for a specific device is unavailable, products approved by FM Approvals LLC (FM) or another nationally recognized testing laboratory (NRTL) acceptable to the Sky Harbor International Airport Aviation Department will be acceptable.
 - 3) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
- b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Ensure materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.

B. Storage and Handling Requirements:

1. Store materials in a neat and clean location that is protected from the elements and damage.
 - a. Store materials so they are not subject to damage, moisture, or other reasonably unforeseen circumstances.
2. Store and handle all equipment, devices, appliances, and other equipment and materials in accordance with the manufacturer's requirements.

C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.10 WARRANTY

A. Manufacturer Warranty:

1. Have the manufacturer or the manufacturer's authorized representative warrant the new automatic wet-pipe fire sprinkler system materials against defects in material within the 2-year period after the date of Substantial Completion or acceptance by the Program/Project Manager.
 - a. Submit a written Automatic wet-pipe fire sprinkler system Materials Warranty, without monetary limitation, in which the manufacturer agrees to replace components of the new combination wet-pipe fire suppression sprinkler system that fail in materials within the specified warranty period to the Program/Project Manager for approval.

B. Special Warranty:

1. Warrant the automatic wet-pipe fire sprinkler system installed under this Contract against defects in workmanship and inherent mechanical and electrical defects within the 1-year period after the date of Substantial Completion or acceptance by the Program/Project Manager.
 - a. After the installation of each automatic wet-pipe fire sprinkler system, submit a signed written statement, substantially in the format that follows, to the Program/Project Manager:
 - 1) "The undersigned, having been engaged as the Contractor for Contract [*insert the Contract number*] of the Phoenix Sky Train Project located in Phoenix, Arizona, confirms that the combination wet pipe fire sprinkler standpipe system equipment provided under the Contract has been installed in accordance with the approved system Shop Drawings, the manufacturer's installation instructions and technical specifications; and the Contract Documents."
 - b. Submit a written Automatic wet-pipe fire sprinkler system Workmanship Warranty, without monetary limitation, in which the Contractor agrees to repair or replace components of the new automatic wet-pipe fire sprinkler system installed under this Contract that fail in workmanship or exhibit inherent mechanical and/or electrical defects within the specified warranty period to the Program/Project Manager for approval.
 - 1) Indicate service work not included in the warranty, and furnish a price for providing a service contract to cover the work not covered by the warranty.

PART 2 PRODUCTS

2.01 WET-PIPE FIRE SUPPRESSION SPRINKLER SYSTEMS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. If manufacturers are listed for the products specified in this Section, subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified and approval by the Program/Project Manager, products from other manufacturers may be provided.
 - 3. Product Options:
 - a. Provide new equipment and system components of the first quality, of the manufacturer's best type, and the latest model capable of complying with the requirements specified in this Section
 - 1) Provide only new and unused equipment, devices, and appliances.
 - 2) Do not provide obsolete equipment.
- B. Description:
 - 1. The Work of this Section consists of providing a new automatic wet pipe fire sprinkler standpipe system.
 - a. One new riser must be installed as shown on the Contract Drawings.
 - b. Furnish and install necessary control valves, fitting, components, and connections for a system that complies with NFPA 13.
 - c. Furnish the equipment necessary for testing and any special equipment required for the installation of the Work of this Section.
 - 2. Regulatory Requirements:
 - a. IBC and IFC:
 - 1) Perform the Work of this Section in compliance with the requirements of the IBC and IFC.
- C. Design Criteria:
 - 1. General Locations:
 - a. The actual location of the automatic wet-pipe fire sprinkler system equipment, controls, piping, valves, and drains are subject to Program/Project Manager's approval.
 - 2. Deflector Distances:
 - a. Install permanently installed sprinklers so the deflector-to-ceiling distances are in accordance with the requirements specified in NFPA 13.
 - 1) Take the ceiling design into consideration when designing deflector to ceiling distances in the pedestrian walkways.

- 2) Refer to the Contract Drawings for further information regarding deflector to ceiling distances.
3. Sprinkler Piping:
 - a. Sprinkler piping on any floor level may cross building structural separations, such as expansion and seismic joints, provided that the piping is specifically designed with flexible connections at each crossing and is able to accommodate the calculated differential motions during an earthquake in accordance with the IBC as Amended by the City of Phoenix and NFPA 13.
 - 1) Employ a qualified Professional Engineer to perform the required structural, differential movement, and drift calculations.
 - 2) Verify the locations of seismic joints.
 - b. Conceal the sprinkler piping installed in public areas or non-public areas with suspended ceilings in the walls and/or ceilings.
 - c. Pipe in unfinished areas may be exposed.
 - d. Pipe Sizes:
 - 1) For all branch line piping except in gridded systems, provide piping having nominal pipe diameters of at least 1 inch unless otherwise shown on the contract drawings.
 - 2) For all branch line piping in gridded systems, provide piping having nominal pipe diameters of at least 1-1/4 inch unless otherwise shown on the contract documents.
 - e. Pressure Ratings:
 - 1) Provide fittings having pressure ratings meeting or exceeding the maximum working pressures available within the automatic wet-pipe fire sprinkler system. The minimum pressure rating shall be 175 psi.
 - f. Corrosion Protection:
 - 1) Where the piping and hangers are exposed to the weather or installed in a corrosive atmosphere, protect the piping and hangers against corrosion.
 - 2) Provide piping having a corrosion resistance ratio (CRR) greater than or equal to 1.0.
4. Sprinklers:
 - a. Under ducts, stairs, and other obstructions, provide sprinklers in accordance with the requirements specified in NFPA 13.
 - b. Densities:
 - 1) Design the system to produce the following sprinkler discharge densities:
 - a) Light Hazard:
 - (1) Over the hydraulically most remote 1,500 square feet throughout the building, design the system to furnish 0.10 gallons per minute per square foot.
 - b) Ordinary Hazard:

- (1) Over the hydraulically most remote 1,500 square feet in selected areas, design the system to furnish 0.15 gallons per minute per square foot.
5. Sprinkler Head Cabinet:
 - a. Locate the sprinkler head cabinet for storing spare sprinkler heads where indicated by the Program/Project Manager.
6. Valves:
 - a. Pressure Ratings:
 - 1) Provide valves having pressure ratings meeting or exceeding the maximum working pressures available within the combination wet-pipe fire suppression sprinkler system, but rated for not less than 175 psi.
 - b. Supervision:
 - 1) Provide control valves that are locked and electrically supervised.
7. Conflicts Arising Due to Discrepancies between Documents:
 - a. Should conflicts arise due to discrepancies between documents referenced in this Section, the most stringent requirement applies; however, should a level of stringency be indeterminable, resolve the discrepancy as follows:
 - 1) The International Building Code (IBC) as Amended by the City of Phoenix and the International Fire Code (IFC) as Amended by the City of Phoenix, the National Fire Protection Association (NFPA) Standards, and this Section take precedence over the Contract Drawings.
 - 2) The International Building Code (IBC) as Amended by the City of Phoenix and the International Fire Code (IFC) as Amended by the City of Phoenix take precedence over the National Fire Protection Association (NFPA) Standards, this Section, and the Contract Drawings.
 - 3) The National Fire Protection Association (NFPA) Standards take precedence over this Section and the Contract Drawings.
 - 4) This Section takes precedence over the Contract Drawings.
8. Product Data:
 - a. Obtain Product Data, including the original manufacturer's specification sheets, for the products provide as the Work of this Section.
 - 1) Submit the Product Data to the Program/Project Manager for approval.
 - b. Equipment Lists:
 - 1) Submit a Preliminary Equipment List identifying the type, quantity, make, and model number of each piece of automatic wet-pipe fire sprinkler system equipment to be provided under this Contract to the Program/Project Manager for approval.

- a) Ensure that the types and quantities of equipment on the Preliminary Equipment List coincide with the types and quantities of equipment shown on the Shop Drawings.
 - b) Include the type, quantity, make, and model of spare equipment as specified in this Section.
 - 9. Shop Drawings:
 - a. Prepare Shop Drawings for the automatic wet-pipe fire sprinkler system.
 - 1) Include a riser diagram of the system.
 - 2) Indicate the location of the inspector's test and drain valve on the Shop Drawings and riser diagram.
 - b. Submit the Shop Drawings to the Program/Project Manager for approval.
 - 1) Do not commence the Work of this Section prior to approval of the Shop Drawings by the Program/Project Manager.
 - 2) Changes required in Work installed prior to approval of the Shop Drawings must be performed at no increase in the Contract Price.
 - 10. Calculations.
 - a. Have the NICET III technician perform hydraulic calculations for the automatic wet-pipe fire sprinkler system assuming the following hose stream flows:
 - 1) Inside Hose Stream: 100 gallons per minute.
 - 2) Combined (Inside and Outside) Hose Stream: 250 gallons per minute located at the base of the riser.
 - b. Submit the calculations to the Program/Project Manager for approval.
- D. Sequence of Operation:
 - 1. Submit a sequence of operation describing how the automatic wet-pipe fire sprinkler system will respond during alarm, supervisory, and trouble conditions to the Program/Project Manager for approval.
 - a. Provide sufficient information so the exact function of each installed device and appliance is known.
- E. Materials:
 - 1. Pipe and Fittings:
 - a. Aboveground Piping Components:
 - 1) 2-Inch and Larger Pipe Sizes:
 - a) For piping having nominal pipe sizes of 2 inches and larger, provide piping complying with the requirements for Weight Class STD (Standard), Schedule 40, Type E or Type S, Grade A black steel pipe specified in ASTM A 795/A 795M, except that for nominal pipe sizes of 8 inches (200mm) and greater in diameter Schedule 30 pipe is acceptable; or an equal approved by the Program/Project Manager.
 - b) Pipe Joints:

- (1) Only provide steel pipes designed to be joined using flanges welded to the pipe or by using mechanical grooved joint systems.
 - (2) Do not provide pipe designed to be joined by welding or weld fittings.
- 2) 2-Inch and Smaller Pipe Sizes:
 - a) For piping having nominal pipe sizes of 2 inches and smaller, provide piping complying with the requirements for Weight Class STD (Standard), Schedule 40, Type E or Type S, Grade A steel pipe specified in ASTM A 795/A 795M having threaded end connections; or an equal approved by the Program/Project Manager.
 - b) Fittings:
 - (1) Provide fittings complying with the requirements for Class 150 threaded fittings specified in ASME B16.39.
 - c) Unions:
 - (1) Provide unions complying with the requirements for Class 150 unions specified in ASME B16.39.
- 3) Copper pipe or tube is unacceptable.
- 4) Chlorinated polyvinyl chloride (CPVC) pipe is unacceptable
2. Pipe Hangers and Supports:
 - a. Provide adjustable pipe hangers and supports that are listed in the UL Fire Protection Directory or FM Global Approval Guide.
 - 1) Zinc-plate the rods, nuts, washers, hangers, and supports shall be zinc-plated after fabrication.
 - 2) Do not mix pipe hanger and support components of different manufacturers.
3. Control and Drain Valves:
 - a. Provide control and drain valves for the automatic wet-pipe fire sprinkler system of the following types:
 - 1) Gate Valves:
 - a) Provide outside screw and yoke (OS&Y) type gate valves.
 - 2) Butterfly Valves:
 - a) Provide butterfly valves that are approved for use in sprinkler systems; and for butterfly valves that have integral valve supervisory switches, ensure that the entire assembly is approved for use in sprinkler systems.
 - b. Signs:
 - 1) Permanently mark all water supply control valves and drain valves with metal signs that show their function and the sprinkler system zone which they serve.
 - 2) Prepare a valve chart to be mounted at the fire alarm control unit (FACU), and submit a copy of the valve chart to the Program/Project Manager for approval.
4. Sprinklers:

- a. Provide quick response, 165 degree Fahrenheit sprinklers unless otherwise shown on the contract drawings.
- b. Uniformity:
 - 1) Within the same space, only provide sprinklers from the same manufacturer and that each have the same heat response element, including the same temperature rating and response characteristics.
- c. Corrosion Resistance:
 - 1) For sprinklers located on exterior piping systems, provide corrosion resistant sprinklers.
- d. Sprinkler Escutcheons:
 - 1) Provide metal escutcheons listed with the sprinklers for recessed sprinkler locations.
- e. Sprinkler Orifice:
 - 1) Unless specifically approved otherwise by the Program/Project Manager, provide standard orifice sprinklers (1/2-inch orifice).
- 5. Identification Signs:
 - a. Required Information:
 - 1) Provide hydraulic calculation signs that include the information indicated in Appendix A of NFPA 13.
 - 2) Provide valve identification signs that identify the function of the valve and the area served.
 - 3) Provide a sign identifying the riser room in accordance with the IFC Appendix D.
 - b. Provide signs consisting of rigid, flat steel or aluminum plaques having an embossed enamel background and lettering.
- 6. Supervisory and Alarm Equipment:
 - a. Provide water flow and valve supervisory switches each having 2 "Form C" (DPDT.) contacts for monitoring.
 - 1) Coordinate specific contact ratings with the fire alarm Supplier.
 - b. Water Flow Switches:
 - 1) Provide vane-type water flow indicators capable of indicating the water flow in each sprinkler system zone.
 - c. Supervisory Switches:
 - 1) Provide valve supervisory switches of the loop type, either yoke mounted or integral type.
 - 2) Do not provide remote mounted, wire loop type switches.
- 7. Inspector's Test and Drain Assemblies:
 - a. Provide test and drain assemblies for the wet-pipe systems that comply with the requirements specified in NFPA 13.
 - 1) This test and drain assembly may be a modular unit type.

F. Finishes:

- 1. The paint colors and finishes for materials must be approved in writing by the Project/Program Manager.

- a. The Program/Project Manager will select the finishes for the automatic sprinklers and escutcheons from the manufacturer's standard range.
- b. The Program/Project Manager will select the finishes for the access panels.

2.02 ACCESSORIES

- A. Access Panels:
 1. Provide access panels at least 12-inches by 12-inches in size.
 2. For access panels to be installed in fire resistive construction, provide the types required to maintain the proper protection of the protected assembly.

2.03 SEISMIC JOINT

- A. Metroflex or pre-approved equal.
- B. Flexible couplings installed in accordance with NFPA 13.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. The Contract Drawings indicate the numbers and prospective locations of system components, including the locations for sprinklers, branch lines, and standpipes and risers.
 - a. Visit the Site, observe the existing conditions, and confirm that the indicated quantities of devices and the specific options for the locations shown are appropriate.
 2. Review the Contract Drawings, and become familiar with the conditions under which the work will be performed.
- B. Evaluation and Assessment:
 1. If deviations from the approved Shop Drawings are necessary, notify the Program/Project Manager.
 - a. Prior to installation of the deviations, obtain approval in writing from the Program/Project Manager, and update the as-built drawings to reflect the changes subsequent to making the changes.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the automatic wet-pipe fire sprinkler system.

B. Demolition/Removal:

1. Cutting and Patching Openings:

- a. Prior to performing structural Work, submit instructions for furnishing the openings and penetrations required for installing the combination wet-pipe fire suppression sprinkler system to the Program/Project Manager for approval.
 - 1) Provide any subsequent additional penetrations or openings or relocations required, but not delineated in the original instructions, at no increase in Contract Price.

3.03 INSTALLATION

- A. Prior to installation, ensure that the equipment and materials are clean inside and outside.
- B. Remove all waste material, such as chips, filings, welding stubs, dirt, rags, debris, and any other foreign material, from the components before assembly.
- C. Attach pipe coupons or punched holes to the pipe near the pipe hole.
- D. Install the automatic wet-pipe fire sprinkler system's sprinklers and equipment in accordance with the approved Shop Drawings, the limitations of the respective UL listings or FM approvals, and the manufacturer's installation instructions.
 1. Submit the automatic wet-pipe fire sprinkler system manufacturer's written installation instructions to the Program/Project manager for information.
 2. Employ special tools recommended by the manufacturer for installing the system.
 3. Aesthetics is a major consideration when installing sprinklers and sprinkler piping.
 - a. Revise sprinkler installation not meeting with the Program/Project Manager's approval to the satisfaction of the Program/Project Manager.
- E. Exposed Piping:
 1. Remove scale and foreign debris from the system piping.
 2. Minimum Height:
 - a. Install exposed piping and devices as high as possible, but not less than 7-feet 0-inches above the finished floor in traffic or working areas.
 3. Install exposed piping and devices so they do not obstruct any portion of a window, doorway, stairway or passageway; and do not interfere with the operation or accessibility of any mechanical, plumbing or electrical equipment.
 4. Sway Bracing, Flexible Couplings, Hangers:

- a. Design and install the flexible couplings, hangers and sway bracing in accordance with the requirements specified in NFPA 13, including its appendices.
 - 1) Allow for flexibility, internal pressure, and differential movement between the piping and building, earth, or other supporting structures, so no allowable stresses are exceeded in any member.
5. Pipe Coatings:
 - a. Paint the piping exposed within the building public areas in accordance with the requirements specified in Section 09912, Painting.
 - b. Paint the system materials including but not limited to pipe, fittings, fasteners, and hangers installed above the Aerobreeze ceiling.
 - c. Prime exterior piping with zinc chromate, and paint the exterior piping in accordance with the requirements specified in Section 09960, High-Performance Coatings.
 - d. Apply the colors selected by the Program/Project Manager.
6. Escutcheon Plates:
 - a. Provide escutcheon plates for exposed pipe which passes through a wall, ceiling, or floor.
7. For all piping 2-1/2 inches and larger in diameter, provide labels at 20-foot intervals to indicate the piping is sprinkler system piping.
 - a. Stencil the words: fire sprinkler system in a contrasting color.
 - b. Apply the colors selected by the Program/Project Manager.
- F. Risers:
 1. Locate the main risers and standpipes for the sprinkler system in the locations approved by the Program/Project Manager, and so obstruction of traffic or building operations is minimized.
- G. Sprinklers:
 1. Unless otherwise approved by the Program/Project Manager, center sprinklers in finished areas in the center of a ceiling tile plus or minus 2 inches.
- H. Valves:
 1. Install valves that controlling the water supply to the sprinkler systems less than 7-feet 0-inches above the finished floor.
 - a. When specifically approved by the Program/Project Manager, these valves may be installed higher if they are provided with operating chains.
 2. Supervisory Switches:
 - a. Provide valve supervisory switches for all valves controlling the water supply to the sprinkler and standpipe systems, including valves located at backflow preventers.

- I. Signs:
 - 1. Provide hydraulic calculation signs for each new sprinkler zone.
 - a. Install hydraulic calculation signs on the riser of each system in a workmanlike manner.
 - 2. Provide identification signs for the valves installed under this Section.
 - a. Secure signs by chain or durable wire to each sprinkler zone control valve, or in an obvious location specifically approved by the Program/Project Manager.
 - 3. Provide a sign identifying the location of the fire sprinkler riser room in accordance with IFC Appendix D.
- J. Inspector's Test and Drain Assembly:
 - 1. Provide an inspector's test and drain assembly at the most hydraulically remote part of the sprinkler system.
 - 2. Discharge:
 - a. Hard pipe the test connections and drain riser connections as shown in the mechanical drawings.
 - 1) Coordinate the routing of the drain pipe with the Program/Project Manager and other Work.
- K. Access Panels:
 - 1. Install access panels for the control valves located above finished ceilings or concealed in walls.
 - 2. For access panels installed in fire resistive construction, provide the types of access panels required to maintain the proper protection of assembly.
- L. Interface with Other Work:
 - 1. Firestopping:
 - a. Sleeve and grout or seal pipe which passes through fire-resistive barriers, including shaft walls, to maintain the integrity and rating of the fire resistive barrier.
 - b. Provide material for through penetration fire stopping complying with the requirements specified in Section 07850, Through Penetration Firestopping Systems, and that is compatible with the sprinkler piping.
- M. Systems Integration:
 - 1. Cooperation with Other Trades:
 - a. Coordinate installation of the automatic wet-pipe fire sprinkler system with the work of the other trades so construction progresses as rapidly and as smoothly as possible with a minimum of interference between trades.
 - 2. Work that is provided under other Sections but that is related to the sprinkler system includes, but is not limited to, the following:
 - a. Sprinkler Water Flow and Valve Supervisory Switches.

- 1) Coordinate the connection of the tamper and water flow switches with the fire alarm system installation.
- 2) Verify the quantity and location of the sprinkler water flow and supervisory switches, and test the switches in accordance with the requirements specified in NFPA 13 and NFPA 72.
- 3) Devices for alarm monitoring of the water flow and valve supervisory switches will be provided by others.

3.04 REPAIR/RESTORATION

- A. Holes:
 1. Patch holes made in walls, ceilings, or floors, so the wall, ceiling, floor or member is restored to its original condition, fire resistance, and integrity.
- B. Repair damage to finishes caused by installation of the automatic wet-pipe fire sprinkler system to the satisfaction of the Program/Project Manager at no increase in Contract Price.
- C. Touch up minor scratches to sprinkler pipe and other accessories using paint and finish techniques matching those originally used on the items.

3.05 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 1. Automatic wet-pipe fire sprinkler system Test Plan:
 - a. Prepare an automatic wet-pipe fire sprinkler system Test Plan describing how the automatic wet-pipe fire sprinkler system will be tested, and include a step-by-step description of all tests and the type and location of the test apparatus to be employed.
 - b. Upon completion of the installation of each system and a minimum of 1 week prior to the Automatic wet-pipe fire sprinkler system Pre-Acceptance Test, submit the Automatic wet-pipe fire sprinkler system Test Plan to the Program/Project Manager for approval.
 - c. Do not test the automatic wet-pipe fire sprinkler system until the Automatic wet-pipe fire sprinkler system Test Plan is approved by the Program/Project Manager.
 2. Hydrostatic Test:
 - a. Test Procedure:
 - 1) Prior to acceptance of the automatic wet-pipe fire sprinkler system by the Program/Project Manager, hydrostatically test the system in accordance with the method specified in NFPA 13.
 - b. Acceptance Criteria:
 - 1) Pressure drop within the limits required by NFPA 13.
- B. Non-Conforming Work
 1. Repair or replace nonconforming installation.

2. Do not install system components that are damaged.
3. Do not install system components where there is evidence of manufacturer defects.

3.06 SYSTEM STARTUP

A. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning; Section 15995, Commissioning of Mechanical Systems; and Section 16995, Commissioning of Electrical Systems, for the fire protection system Work of this Section.

B. Startup Testing:

1. Prior to the Pre-Acceptance Test, submit 2 copies of the Contractor's Material and Test Certification for Above Ground Piping prepared in accordance with the requirements specified in NFPA 13 to the Program/Project Manager for information.
2. After installation of the automatic wet-pipe fire sprinkler system has been completed, the preliminary tests have been completed, and deficiencies found have been corrected, and the system is ready for the Automatic wet-pipe fire sprinkler system Pre-Acceptance Test, notify the Program/Project Manager in writing a minimum of 2 weeks in advance of this planned demonstration to arrange for the inspection and witnessing of the acceptance tests.
3. Conduct the inspections and witness the acceptance testing.
 - a. This acceptance testing is separate from the testing required by the local Authorities Having Jurisdiction.
 - 1) When local code authorities are required to witness tests, take responsibility for making the necessary arrangements with the code authorities, and for coordinating the work with the Program/Project Manager.
 - 2) Obtain the test documents from the Authorities Having Jurisdiction having the required approval stamps and signatures of the code authorities, and submit a copy of each of these documents to the Program/Project Manager.

C. Pre-Acceptance Test:

1. Perform the tests and inspections required by the referenced Codes and Standards, the Phoenix Fire Department, and the Program/Project Manager.
 - a. Upon completion of each installation phase, perform and document on an approved format, the following automatic wet-pipe fire sprinkler system tests in the presence of the Program/Project Manager or their designed representative:

- 1) Hydrostatic tests.
 - 2) Test of the sprinkler supervisory system.
 - 3) Flow test from the inspector's test connection.
 - b. Correct any errors, non-conformances, or non-performing components discovered during the Pre-Acceptance Test at no increase in the Contract Price.
2. Final Acceptance Test:
 - a. Upon completion of the Pre-Acceptance Test, perform and document in an approved format the following automatic wet-pipe fire sprinkler system tests in the presence of the Program/Project Manager, a designed representative, and the City of Phoenix Authorities Having Jurisdiction:
 - 1) Hydrostatic tests.
 - 2) Flushing of piping.
 - 3) Test of the sprinkler supervisory system.
 - 4) Flow test from the inspector's test connection.
3. Final Approval:
 - a. Final approval and acceptance of the Work of this Section will only be given by the Program/Project Manager when the following items have been performed to the satisfaction of the Program/Project Manager:
 - 1) The completed automatic wet pipe sprinkler system has been inspected, tested, and approved by the Program/Project Manager and the City of Phoenix Fire and Development Services Departments.
 - 2) Required submittals, system operation and maintenance manuals, record drawings, spare parts, special tools, and training have been provided to, reviewed, and accepted by the Program/Project Manager.
 - 3) Additional Tests:
 - a) Additional tests required by the referenced codes and standards, design criteria, or the Program/Project Manager have been satisfactorily performed, and the following information regarding the tests has been submitted to the Program/Project Manager for information:
 - (1) Written directive requiring the additional tests.
 - (2) The date and time each test was performed.
 - (3) A description of each test performed.
 - (4) A checklist of each device tested, indicating the results of each test.
 - (5) A reference set of contractor record drawings, numerically identifying the individual components.

3.07 ADJUSTING

- A. Adjust the fittings and hangars to complete the turn-key fire sprinkler system installation.
- B. Properly adjust the water flow and valve supervisory switches.

3.08 CLEANING

- A. Clean up sprinkler system installation debris during fabrication and installation of system components.
- B. At the end of the Contract, remove the equipment furnished for testing and remove special equipment required for the installation of the Work of this Section.
- C. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.
 - 2. When performing flushing and other discharge testing, safely dispose of the water.

3.09 CLOSEOUT ACTIVITIES

- A. Training:
 - 1. To familiarize building personnel with the features, operation, and maintenance of the sprinkler system conduct 2 training sessions of 4 hours each.
 - a. The Program/Project Manager will schedule the training sessions at a time mutually agreeable to the Contractor.
 - b. Final Agenda:
 - 1) Submit the final approved training agenda to the Program/Project Manager 14 days prior to the first training session.
- B. Record Set of Drawings:
 - 1. Prepare a Record Set of Drawings recording the as-built automatic wet-pipe fire sprinkler system in conformance with the requirements specified in the Agreement and Section 01780, Closeout Submittals, to furnish information essential to those who test and maintain the automatic wet-pipe fire sprinkler system and account for all field changes made during installation.
 - a. During installation of the automatic wet-pipe fire sprinkler system, develop a Record Set of Drawings that include the original system Shop Drawings annotated to show exactly where the system components have been installed.

- b. Furnish floor plans for the Record Set of Drawings showing the as-built information:
 2. During the course of the Contract, develop an electronic version of the Record Set of Drawings for the automatic wet-pipe fire sprinkler system as a draft prepared using software and electronic media in accordance with the requirements specified in Section 01330, Submittal Procedures.
 - a. Show the equipment listed in this Section on a separate layer, and provide copies of this layer only on the floor plans furnished as part of the Record Set of Drawings for the automatic wet-pipe fire sprinkler system.
 - b. Update these draft as-built drawings every 24 hours during the installation of each automatic wet-pipe fire sprinkler system.
 3. Make the onsite as-built Record Set of Drawings for the automatic wet-pipe fire sprinkler system available for inspection and review on request by the Program/Project Manager.
 4. Submit the as-built Record Set of Drawings for the automatic wet-pipe fire sprinkler system as-built drawings to the Program/Project Manager for approval.
 - a. After the fire alarm system has been completely installed, and a minimum of 1 week prior to the Automatic wet-pipe fire sprinkler system Pre-Acceptance Test, submit an updated, as-built Record Set of Drawings for the automatic wet-pipe fire sprinkler system on electronic media that complies with the requirements specified in Section 01330, Submittal Procedures, to the Program/Project Manager for approval.
 - b. After the Program/Project Manager approves the as-built Record Sets of Drawings for the automatic wet-pipe fire sprinkler system, they will be posted on Skier for general distribution.

3.10 PROTECTION

- A. Protect valves and assemblies exposed to potential damage by vehicles or other traffic by providing a cage for the valves and assemblies located inside the building, or guard posts for exterior hydrants and post indicator valves.
- B. For installed piping, valves, devices or accessories which, in the Program/Project Manager's opinion, are subject to physical damage or may be hazards, provide adequate permanent protection
 1. The protective measures to be implemented must be approved by the Program/Project Manager prior to implementation:
- C. To prevent foreign material from entering the piping, furnish caps over openings during and after assembly
 1. For example, pipe caps should be provided on the sprinkler extensions when the pipe is roughed in and the sprinklers are not yet installed.

3.11 MAINTENANCE

A. Spare Parts List:

1. Submit a suggested spare parts list of replacement automatic wet-pipe fire sprinkler system parts, with firm unit prices guaranteed to be maintained for the duration of the warranty period as specified herein for the manufacturer's-Combination Wet-Pipe Fire Suppression Sprinkler System Materials Warranty, to the Program/Project Manager.

B. Maintenance Standard:

1. Furnish and submit a copy of NFPA 25 to the Program/Project Manager.

C. Maintenance Contract:

1. Submit a firm fixed price to furnish a Combination Wet-Pipe Fire Suppression Sprinkler System Maintenance Contract for covering a maintenance period of 1 year to the Program/Project Manager for information.

SECTION 13931

COMBINATION AUTOMATIC WET-PIPE FIRE SUPPRESSION SPRINKLER STANDPIPE SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for installation of a combination automatic wet pipe fire sprinkler and manual wet standpipe systems for the 24th Street and Rental Car Center (RCC) Sky Train stations as indicated in the Contract Documents.
- B. Products Installed But Not Supplied Under This Section:
 - 1. Addressable monitor modules for the fire sprinkler system tamper and flow switches provided under Section 13851, Fire Alarm, will be installed under this Section.
- C. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 01810 - Commissioning.
 - 5. Section 07850 - Through Penetration Firestopping Systems.
 - 6. Section 09912 – Painting.
 - 7. Section 09960 - High-Performance Coatings.
 - 8. Section 13851 - Fire Alarm.
 - 9. Section 15995 - Commissioning of Mechanical Systems.
 - 10. Section 16995 - Commissioning of Electrical Systems.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. CPVC: Chlorinated polyvinyl chloride.
 - 2. CRR: Corrosion resistance ratio.
 - 3. DPDT: Double pole, double throw.
 - 4. FACU: Fire Alarm Control Unit.
 - 5. MSDS: Material Safety Data Sheet(s).
 - 6. NICET: National Institute for Certification in Engineering Technology.
 - 7. NRTL: Nationally Recognized Testing Laboratory.
 - 8. OS&Y: Outside screw and yoke.

9. UL FPED: Underwriter's Laboratory, Inc. Fire Protection Equipment Directory.

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
2. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA); which meets the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory; and which tests for safety and lists or labels or accepts equipment or materials.
3. Contractor's Material and Test Certificate: A document that acknowledges the features of the installation, operation (performance), service, and equipment with representation by the property owner, system installer, system Supplier, service organization, and the Authority Having Jurisdiction.
 - a. Refer to Subparagraph 3.06.B.1 for additional details regarding the Contractor's Material and Test Certification.
4. Corrosion Resistance Ratio (CRR): An Underwriters Laboratory, Inc. term for the estimated life expectancy of a pipe joint based on the calculated wall thickness at the base of the first exposed thread, assumed to be the weakest point of the pipe length.
5. Unifier: The web based management software/database system the Phoenix Sky Harbor International Airport (PSHIA) uses to manage all correspondence, requests for interpretation (RFI), submittals, and similar information related to construction activities for the Phoenix Sky Train Project.

C. Reference Standards:

1. American Society of Mechanical Engineers (ASME):
 - a. ASME B16.39 – Malleable Iron Threaded Pipe Unions: Classes 150, 250, 300.
2. ASTM International (ASTM):
 - a. ASTM A 795/A 795M – Standard Specification for Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless Steel Pipe for Fire Protection Use.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Prior to commencement and after completion of the Work of this Section, provide written notification to the Program/Project Manager.
 - 2. Coordinate with the Program/Project Manager, the Commissioning Authority (CA), the Phoenix Sky Harbor International Airport, and others to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, Commissioning Authority (CA), and the City prior to incorporating items requiring testing by them into the Work.
 - 3. Coordinate the installation and testing of the combination automatic wet-pipe fire suppression sprinkler system and the associated equipment and circuits with the appropriate Subcontractors, equipment maintenance and testing representatives, the Sky Harbor International Airport Aviation Department, and the Authorities Having Jurisdiction.
 - a. Coordinate the connection of the tamper and water flow switches with the installation of the fire alarm.

- b. Coordinate the Pre-Acceptance and the Final Acceptance Test of the combination automatic wet-pipe fire suppression sprinkler and standpipe system specified herein with the Program/Project Manager, the Sky Harbor International Airport Aviation Department, and other Authorities Having Jurisdiction (AHJ).
 - 1) Furnish at least 5 working days advance notice for all tests.
 - 2) At the time of notification, submit 1 copy of the approved Record Set of Drawings and the approved System Test Plan to the Program/Project Manager.
 - c. Final Acceptance Test:
 - 1) In order to assure attendance at the Final Acceptance Test by the necessary representatives, provide reasonable notification of the test date to each representative scheduled to witness the test at least 48 hours prior to the test.
 - 2) Do not conduct this test until all parties agree on a test date.
 - 4. Coordinate the dates and times of each required training session as specified herein through the Sky Harbor International Airport Aviation Department, not less than 2 weeks prior to the training session.
- B. Sequencing:
 - 1. Complete the installation of the combination wet-pipe fire suppression sprinkler standpipe system components so the fire alarm equipment supplier can make the final connections and conduct tests of the fire alarm system as specified in other Sections without delaying the Work.
 - 2. Complete the installation of the combination wet-pipe fire suppression sprinkler standpipe system components to facilitate the scheduled cut-in to the fire sprinkler water supply mains.
- C. Scheduling:
 - 1. Prior to beginning the Work of this Section, submit a schedule indicating the wet-pipe fire suppression sprinkler standpipe system installation sequence and time frame to the Program/Project Manager for approval.
 - a. Include specific time lines indicating the start and completion of major portions of each new combination automatic wet-pipe fire suppression sprinkler standpipe system installation.
 - b. Include time lines indicating the start and completion of impairments of the existing fire sprinkler system.
 - c. Indicate the delivery dates of the equipment to be supplied.
 - d. Indicate the dates for the combination automatic wet-pipe fire suppression sprinkler system Pre-Acceptance Test and the Final Acceptance Test specified herein.
 - 2. Provide weekly schedule updates to the Program/Project Manager for approval.

3. Advise the Program/Project Manager of all anticipated projects the Contractor and the equipment Supplier may have with the same approximate completion date as this Contract, and what impact those projects may have on the timely completion of this Contract.

1.04 SYSTEM DESCRIPTION

A. Design Requirements:

1. Densities: Hydraulically calculated sprinkler systems shall be installed in accordance with the construction documents. The systems have been designed to produce discharge densities of:
 - a. 0.15 gpm/square foot over the hydraulically most remote 1,500 (Ordinary Hazard Group 1).
 - b. 0.2 gpm/square foot over the hydraulically most remote 1,500 (Ordinary Hazard Group 2)
2. Develop and submit shop drawings.
3. Hose requirements: NFPA 14 flow requirements.
4. The standpipe system shall be designed so that the required flow is delivered to the hose valve connection at 130 psi. This is a City of Phoenix Fire Department Requirement and is not negotiable.
5. Sprinklers under ducts (or other): Provide sprinklers under ducts and obstructions as required by NFPA 13.
6. All branch line piping shall be 1" minimum.
7. All hydraulically calculated sprinkler systems shall provide a minimum safety factor in accordance with IFC Section 903.3.5.3.
8. Separate area control valve assemblies shall be provided for the pre-action sprinkler system.
9. Water supply information shall be obtained from the local water authority where the project is located. The Contractor is required to calculate pressure losses due to elevation and friction through all fittings, piping, and valves in accordance with NFPA 13.

1.05 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Pipe and fittings.
 - 2) Pipe hangers and supports.
 - 3) Sprinklers.
 - 4) Identification signs.
 - 5) Supervisory and alarm equipment.

- 6) Hose valve connections.
 - b. Shop Drawings:
 - 1) Shop Drawings for the combination wet-pipe fire suppression sprinkler standpipe system.
 - 2) Working Drawings for installation of the combination wet-pipe fire suppression sprinkler standpipe system.
 - c. Certificates:
 - 1) Contractor's Material and Test Certification for above ground piping.
 - d. Delegated Design Submittals:
 - 1) Hydraulic calculations.
 - 2) Valve chart.
 - 3) Preliminary Equipment List.
 - 4) Schedule indicating the combination automatic wet-pipe fire suppression sprinkler standpipe system installation sequence and time frame, and weekly schedule updates.
 - 5) Training agenda.
 - e. Special Procedure Submittals:
 - 1) Instructions for furnishing the openings and penetrations required for installing the combination wet-pipe fire suppression sprinkler standpipe system.
 - 2) Combination Automatic Wet-Pipe Fire Suppression Sprinkler Standpipe System Test Plan.
 - f. Qualification Statements:
 - 1) Qualifications of the combination wet-pipe fire suppression sprinkler standpipe system installer.
 - 2) Qualifications of the combination wet-pipe fire suppression sprinkler standpipe system manufacturer's technical representative.
 - 3) Qualifications of the combination wet-pipe fire suppression sprinkler standpipe system manufacturer's certified technician responsible for preparing the combination automatic wet-pipe fire suppression sprinkler standpipe system Shop Drawings and calculations.
- B. Closeout Submittals:
- 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Maintenance Contracts:
 - 1) Firm fixed price for a 1 year Combination Automatic Wet-Pipe Fire Suppression Sprinkler Standpipe System Maintenance Contract.
 - b. Operation and Maintenance Data:
 - 1) Spare Parts List.

- 2) A copy of NFPA 25.
 - c. Warranty Documentation:
 - 1) Combination Wet-Pipe Fire Suppression Sprinkler Standpipe System Materials Warranty.
 - 2) Combination Wet Pipe Fire Sprinkler Standpipe System Workmanship Warranty.
 - d. Record Documentation:
 - 1) Record Set of Drawings.
- C. Maintenance Material Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - b. Furnish spare combination automatic wet-pipe fire suppression sprinkler standpipe system products in accordance with the requirements specified in NFPA 13 and that match the products installed. A minimum of six (6) sprinkler heads of each type used on the systems shall be provided in a cabinet where indicated by the Program/Project Manager Tools:
 - 1) Furnish a sprinkler head wrench.

1.06 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Authorities Having Jurisdiction:
 - a. To obtain approval of the combination wet-pipe fire suppression sprinkler standpipe system by the Program/Project Manager, the City of Phoenix Fire Department, Sky Harbor International Airport Aviation Department, and other Authorities Having Jurisdiction, documents prepared according to the requirements specified in NFPA 13, NFPA 14, and the City of Phoenix Annual Facilities Permit Program Registration Packet, including Shop Drawings, hydraulic calculations, and water flow test results are required.
 - 1) An inspector's drawings apply to the Work of this Section.
 - 2) Submit these documents and the required fees to the Annual Facilities Permit Program, attention Mary Schilling, for review and approval.
 - 3) Submit the fire protection system Permit received to the Program/Project Manager.
- B. Qualifications:
 - 1. Combination Wet-Pipe Fire Suppression Sprinkler Standpipe System Installer's Qualifications:

- a. Employ a firm that is licensed in the State of Arizona, and that has a minimum of 5 years of documented experience installing fire sprinkler and standpipe systems similar in type to those required for this Contract.
- b. Employ a firm that has installed fire sprinkler and standpipe systems for projects similar in scope to this Contract, and that has obtained design and inspection approvals for similar projects from the Authorities Having Jurisdiction.
- c. Submit the qualifications of the proposed system installer and the resume of the proposed system installer's foreman and project manager-assigned to this Contract to the Program/Project Manager for approval.
 - 1) Include the number of years the proposed combination wet-pipe fire suppression sprinkler standpipe system installer has been in business, and their service policies, warranty definitions, and prior experience with installations that include the type of equipment that is to be supplied under this Contract.
 - a) Furnish a list of at least 3 installations similar in scope to this Contract, including the addresses of the properties, contact names, telephone numbers, and the types of system equipment installed.
 - 2) Include proposed combination wet-pipe fire suppression sprinkler standpipe system installer's personnel and company contact information.
 - a) Furnish sufficient information to describe the qualifications of the proposed representatives, the work efforts to be performed, and the materials to be provided, and include the names and qualifications of the Contractor's project manager who will be in responsible charge during installation of the combination wet-pipe fire suppression sprinkler standpipe system.
- d. Nonconformance of the proposed combination wet-pipe fire suppression sprinkler standpipe system installer's qualifications with the qualifications specified in this Section are cause for immediate elimination of the proposed wet-pipe fire suppression sprinkler system installer without further comment.
- e. Do not replace an approved combination wet-pipe fire suppression sprinkler system installer or the approved installer's foreman without the written approval of the Program/Project Manager.
 - 1) No requested change in Subcontractor will be accepted unless justification is made in writing to the Program/Project Manager and approved.

- a) Upon written request, the Program/Project Manager may authorize changes, but the decision to do so is at the sole choice and discretion of the Program/Project Manager.
 2. Combination Wet-Pipe Fire Suppression Sprinkler Standpipe System Technical Representative's Qualifications:
 - a. To supervise the field installation of the combination wet-pipe fire suppression sprinkler standpipe system provided under this Contract, employ a trained and qualified manufacturer's technical representative who, at a minimum, holds a current NICET Level II Fire Protection Engineering Technology Automatic Sprinkler System Layout Certification.
 - 1) Submit the name and qualifications of the proposed combination wet-pipe fire suppression sprinkler standpipe system manufacturer's technical representative who will be in responsible charge of the installation of the wet-pipe fire suppression sprinkler system under this Contract to the Program/Project Manager for approval.
 - a) Furnish sufficient information to describe the qualifications of the proposed representative, the work efforts to be performed, and the materials to be provided.
 - 2) Do not replace an approved manufacturer's technical representative without the written approval of the Program/Project Manager.
 - b. The specified combination wet-pipe fire suppression sprinkler standpipe system Shop Drawings and calculations must be prepared by a certified technician holding at a minimum NICET Level III Fire Protection Engineering Technology Automatic Sprinkler System Layout Certification or State of Arizona Licensed Fire Protection Engineer.
 - 1) Submit the name and qualifications of the proposed combination wet-pipe fire suppression sprinkler standpipe system certified technician who will be responsible for preparing the Shop Drawings and calculations under this Contract to the Program/Project Manager for approval.
- C. Certifications:
 1. Listing and Labeling of Components, Devices, and Accessories:
 - a. Provide only components, equipment, and devices that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized

testing laboratories (NRTL) are not available or unless standards do not exist for the products.

- 1) Provide products listed in the UL Fire Protection Equipment Directory (UL FPED) and that are labeled with their intended use or classification.
- 2) If a UL listing for a specific device is unavailable, products approved by FM Approvals LLC (FM) or another nationally recognized testing laboratory (NRTL) acceptable to the Sky Harbor International Airport Aviation Department will be acceptable.
- 3) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Ensure materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.
- B. Storage and Handling Requirements:
 1. Store materials in a neat and clean location that is protected from the elements and damage.
 - a. Store materials so they are not subject to damage, moisture, or other reasonably unforeseen circumstances.
 2. Store and handle all equipment, devices, appliances, and other equipment and materials in accordance with the manufacturer's requirements.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.08 SITE CONDITIONS

1. Not applicable.

1.09 WARRANTY

A. Manufacturer Warranty:

1. Have the manufacturer or the manufacturer's authorized representative warrant the new combination wet-pipe fire suppression sprinkler standpipe system materials against defects in material within the 2-year period after the date of Substantial Completion or acceptance by the Program/Project Manager.
 - a. Submit a written Combination Wet-Pipe Fire Suppression Sprinkler Standpipe System Materials Warranty, without monetary limitation, in which the manufacturer agrees to replace components of the new combination wet-pipe fire suppression sprinkler standpipe system that fail in materials within the specified warranty period to the Program/Project Manager for approval.

B. Special Warranty:

1. Warrant the combination wet-pipe fire suppression sprinkler standpipe system installed under this Contract against defects in workmanship and inherent mechanical and electrical defects within the 1-year period after the date of Substantial Completion or acceptance by the Program/Project Manager.
 - a. After the installation of each wet-pipe fire suppression sprinkler system, submit a signed written statement, substantially in the format that follows, to the Program/Project Manager:
 - 1) "The undersigned, having been engaged as the Contractor for Contract [***insert the Contract number***] of the Phoenix Sky Train Project located in Phoenix, Arizona, confirms that the combination wet pipe fire sprinkler standpipe system equipment provided under the Contract has been installed in accordance with the approved system Shop Drawings, the manufacturer's installation instructions and technical specifications; and the Contract Documents."
 - b. Submit a written Combination Wet Pipe Fire Sprinkler Standpipe System Workmanship Warranty, without monetary limitation, in which the Contractor agrees to repair or replace components of the new wet-pipe fire suppression sprinkler system installed under this Contract that fail in workmanship or exhibit inherent mechanical and/or electrical defects within the specified warranty period to the Program/Project Manager for approval.
 - 1) Indicate service work not included in the warranty, and furnish a price for providing a service contract to cover the work not covered by the warranty.

PART 2 PRODUCTS

2.01 WET-PIPE FIRE SUPPRESSION SPRINKLER SYSTEMS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. If manufacturers are listed for the products specified in this Section, subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified and approval by the Program/Project Manager, products from other manufacturers may be provided.
 - 3. Product Options:
 - a. Provide new equipment and system components of the first quality, of the manufacturer's best type, and the latest model capable of complying with the requirements specified in this Section
 - 1) Provide only new and unused equipment, devices, and appliances.
 - 2) Do not provide obsolete equipment.
- B. Description:
 - 1. The Work of this Section consists of providing a combination automatic wet pipe fire sprinkler standpipe system for the 24th Street and RCC Sky Train Stations.
 - a. Furnish the special equipment required for the installation of the Work of this Section and equipment necessary for testing the system.
 - 2. Regulatory Requirements:
 - a. Phoenix Building Construction Code and Phoenix Fire Code:
 - 1) Perform the Work of this Section in compliance with the requirements of the IBC and the IFC.
- C. Design Criteria:
 - 1. General Locations:
 - a. The actual location of the combination wet-pipe fire suppression sprinkler standpipe system equipment, controls, piping, valves, and drains are subject to Program/Project Manager's approval.
 - 2. Deflector Distances:
 - a. Install permanently installed sprinklers so the deflector-to-ceiling distances are in accordance with the requirements specified in NFPA 13.
 - 3. Sprinkler Piping:
 - a. Pipe Sizes:

- 1) For all branch line piping except in gridded systems, provide piping having nominal pipe diameters of at least 1 inch.
 - 2) For all branch line piping in gridded systems, provide piping having nominal pipe diameters of at least 1-1/4 inch.
 - b. Standpipes Connections:
 - 1) Provide standpipe connections calculated in accordance with and designed to comply with the requirements specified in Section 7.10 of NFPA 14 and having City of Phoenix threads.
 - 2) System must be designed to deliver the required flow at a minimum 130 psi at the hose connection.
 - c. Pressure Ratings:
 - 1) Provide fittings having pressure ratings meeting or exceeding the maximum working pressures available within the combination automatic wet-pipe fire suppression sprinkler system.
 - d. Corrosion Protection:
 - 1) Where the piping and hangers are exposed to the weather or installed in a corrosive atmosphere, protect the piping and hangers against corrosion.
 - 2) Provide piping having a corrosion resistance ratio (CRR) greater than or equal to 1.0.
4. Sprinklers:
 - a. Under ducts, stairs, and other obstructions, provide sprinklers in accordance with the requirements specified in NFPA 13.
5. Sprinkler Head Cabinet:
 - a. Locate the sprinkler head cabinet for storing spare sprinkler heads where indicated by the Program/Project Manager.
6. Valves:
 - a. Pressure Ratings:
 - 1) Provide valves having pressure ratings meeting or exceeding the maximum working pressures available within the combination wet-pipe fire suppression sprinkler standpipe system, but rated for not less than 175 psi.
 - b. Supervision:
 - 1) Provide control valves that are locked and electrically supervised.
7. Conflicts Arising Due to Discrepancies between Documents:
 - a. Should conflicts arise due to discrepancies between documents referenced in this Section, the most stringent requirement applies; however, should a level of stringency be indeterminable, resolve the discrepancy as follows:
 - 1) The International Building Code (IBC) as Amended by the City of Phoenix and the International Fire Code (IFC) as Amended by the City of Phoenix, the National Fire Protection Association (NFPA)

- Standards, and this Specification Section take precedence over the Contract Drawings.
- 2) The International Building Code (IBC) as Amended by the City of Phoenix and the International Fire Code (IFC) as Amended by the City of Phoenix take precedence over the National Fire Protection Association (NFPA) Standards, this Specification Section, and the Contract Drawings.
 - 3) The National Fire Protection Association (NFPA) Standards take precedence over this Specification Section and the Contract Drawings.
 - 4) This Specification Section takes precedence over the Contract Drawings.
8. Product Data:
- a. Obtain Product Data, including the original manufacturer's specification sheets, for the products provide as the Work of this Section.
 - 1) Submit the Product Data to the Program/Project Manager for approval.
 - b. Equipment Lists:
 - 1) Submit a Preliminary Equipment List identifying the type, quantity, make, and model number of each piece of combination automatic wet-pipe fire suppression sprinkler standpipe system equipment to be provided under this Contract to the Program/Project Manager for approval.
 - a) Ensure that the types and quantities of equipment on the Preliminary Equipment List coincide with the types and quantities of equipment shown on the Shop Drawings.
 - b) Include the type, quantity, make, and model of spare equipment as specified in this Section.
9. Shop Drawings:
- a. Prepare Shop Drawings for the combination automatic wet-pipe fire suppression sprinkler standpipe system and the associated equipment and circuits.
 - 1) Include a riser diagram of the system.
 - 2) Indicate the location of the inspector's test and drain valve on the Shop Drawings and riser diagram.
 - b. Prepare Working Drawings for installation of the combination automatic wet-pipe fire suppression sprinkler standpipe system and the associated equipment and circuits in accordance with the applicable codes.
 - c. Submit the Shop Drawings to the Program/Project Manager for approval.

- 1) Do not commence the Work of this Section prior to approval of the Shop Drawings by the Program/Project Manager.
- 2) Changes required in Work installed prior to approval of the Shop Drawings must be performed at no increase in the Contract Price.

10. Calculations.

- a. Have the certified technician holding NICET Level III Fire Protection Engineering Technology Automatic Sprinkler System Layout Certification perform hydraulic calculations for the combination automatic wet-pipe fire suppression sprinkler system:
- b. Submit the calculations to the Program/Project Manager for approval.

D. Materials:

1. Pipe and Fittings:

a. Aboveground Piping Components:

1) 2.0-Inch and Larger Pipe Sizes:

- a) For piping having nominal pipe sizes of 2.0 inches and larger, provide piping complying with the requirements for Weight Class STD (Standard), Schedule 40, Type E or Type S, Grade A black steel pipe specified in ASTM A 795/A 795M, except that for nominal pipe sizes of 8 inches (200mm) and greater in diameter Schedule 30 pipe is acceptable; or an equal approved by the Program/Project Manager.

(1) Copper tubing and schedule 40 alternative pipe are unacceptable.

b) Pipe Joints:

- (1) Only provide steel pipes designed to be joined using flanges welded to the pipe or by using mechanical grooved joint systems.

(2) Do not provide pipe designed to be joined by welding or weld fittings.

2) 2.0-Inch and Smaller Pipe Sizes:

- a) For piping having nominal pipe sizes of 2 inches and smaller, provide piping complying with the requirements for Weight Class STD (Standard), Schedule 40, Type E or Type S, Grade A steel pipe specified in ASTM A 795/A 795M having threaded end connections; or an equal approved by the Program/Project Manager.

(1) Chlorinated polyvinyl chloride (CPVC) pipe is unacceptable.

b) Fittings:

- (1) Provide fittings complying with the requirements for Class 150 threaded fittings specified in ASME B16.39.

c) Unions:

- (1) Provide unions complying with the requirements for Class 150 unions specified in ASME B16.39.
2. Pipe Hangers and Supports:
 - a. Provide adjustable pipe hangers and supports that are listed in the UL Fire Protection Directory or FM Global Approval Guide.
 - 1) Zinc-plate the rods, nuts, washers, hangers, and supports shall be zinc-plated after fabrication.
 - 2) Do not mix pipe hanger and support components of different manufacturers.
3. Signs:
 - a. Permanently mark all water supply control valves and drain valves with metal signs that show their function and the sprinkler system zone which they serve.
 - b. Prepare a valve chart to be mounted at the fire alarm control unit (FACU), and submit a copy of the valve chart to the Program/Project Manager for approval.
4. Sprinklers:
 - a. Quick response sprinklers.
 - 1) Inside of the building envelope install ordinary temperature rated sprinklers.
 - 2) Outside of the building envelop install intermediate temperature rated sprinklers.
 - b. Uniformity:
 - 1) Within the same space, only provide sprinklers from the same manufacturer and that each have the same heat response element, including the same temperature rating and response characteristics.
 - c. Corrosion Resistance:
 - 1) For sprinklers located on exterior piping systems, provide corrosion resistant sprinklers.
 - d. Sprinkler Escutcheons:
 - 1) Provide metal escutcheons listed with the sprinklers for recessed sprinkler locations.
5. Supervisory and Alarm Equipment:
 - a. Provide water flow and valve supervisory switches each having 2 "Form C" (DPDT.) contacts for monitoring.
 - 1) Coordinate specific contact ratings with the fire alarm Supplier.
 - b. Water Flow Switches:
 - 1) Provide vane-type water flow indicators capable of indicating the water flow in each sprinkler system zone.
 - c. Supervisory Switches:
 - 1) Provide valve supervisory switches of the loop type, either yoke mounted or integral type.

- 2) Do not provide remote mounted, wire loop type switches.
6. Hose Valve Connections:
 - a. Provide hose valve connections consisting of a 2.5-inch valve having Phoenix type threads.
 - b. Manufacturers:
 - 1) Elkhart Brass, 2.5-inch valve, <http://www.elkhartbrass.com>.
 - 2) Pre-approved equal.
- E. Finishes:
 1. The paint colors and finishes for materials must be approved in writing by the Project/Program Manager.
 - a. The Program/Project Manager will select the finishes for the automatic sprinklers and escutcheons from the manufacturer's standard range.
 - b. The Program/Project Manager will select the finishes for the access panels.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. The Contract Drawings indicate the numbers and prospective locations of system components, including the locations for sprinklers, branch lines, and standpipes and risers.
 2. Review the Contract Drawings, and become familiar with the conditions under which the work will be performed.
- B. Evaluation and Assessment:
 1. If deviations from the approved Shop Drawings are necessary, notify the Program/Project Manager.
 - a. Prior to installation of the deviations, obtain approval in writing from the Program/Project Manager, and subsequent to making the changes update the as-built drawings to reflect the changes.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the combination automatic wet-pipe fire suppression sprinkler standpipe system.
- B. Demolition/Removal:
 1. Cutting and Patching Openings:

- a. Prior to performing structural Work, submit instructions for furnishing the openings and penetrations required for installing the combination wet-pipe fire suppression sprinkler standpipe system to the Program/Project Manager for approval.
 - 1) Provide any subsequent additional penetrations or openings or relocations required, but not delineated in the original instructions, at no increase in Contract Price.

3.03 INSTALLATION

- A. Prior to installation, ensure that the equipment and materials are clean inside and outside.
 1. Remove all waste material, such as chips, filings, welding stubs, dirt, rags, debris, and any other foreign material, from the components before assembly.
 2. Attach pipe coupons or punched holes to the pipe near the pipe hole.
- B. Install the combination automatic wet-pipe fire suppression sprinkler standpipe system's sprinklers and equipment in accordance with the approved Shop Drawings, the limitations of the respective UL listings or FM approvals, and the manufacturer's installation instructions.
 1. Submit the combination automatic wet-pipe fire suppression sprinkler standpipe system manufacturer's written installation instructions to the Program/Project manager for information.
 2. Employ special tools recommended by the manufacturer for installing the system.
 3. Aesthetics is a major consideration when installing sprinklers and sprinkler piping.
 - a. Revise sprinkler installation not meeting with the Program/Project Manager's approval to the satisfaction of the Program/Project Manager.
- C. Exposed Piping:
 1. Remove scale and foreign debris from the system piping.
 2. Minimum Height:
 - a. Install exposed piping and devices as high as possible, but not less than 7-feet 0-inches above the finished floor in traffic or working areas.
 3. Install exposed piping and devices so they do not obstruct any portion of a window, doorway, stairway or passageway; and do not interfere with the operation or accessibility of any mechanical, plumbing or electrical equipment.
 4. Sway Bracing, Flexible Couplings, Hangers:

- a. Design and install the flexible couplings, hangers and sway bracing in accordance with the requirements specified in NFPA 13, including its appendices.
 - 1) Allow for flexibility, internal pressure, and differential movement between the piping and building, earth, or other supporting structures, so no allowable stresses are exceeded in any member.
 5. Pipe Coatings:
 - a. Paint the piping exposed within the building public areas in accordance with the requirements specified in Section 09912, Painting.
 - b. Prime exterior piping with zinc chromate, and paint the exterior piping in accordance with the requirements specified in Section 09960, High-Performance Coatings.
 - c. Apply the colors selected by the Program/Project Manager.
 6. For all piping 2-1/2 inches and larger in diameter, provide labels at 20-foot intervals to indicate the piping is sprinkler system piping.
- D. Risers:
1. Locate the standpipe for the combination sprinkler standpipe system in the location shown on the Contract Drawings so obstruction of traffic or building operations is minimized.
- E. Sprinklers:
1. Unless otherwise approved by the Program/Project Manager, center sprinklers in finished areas in the center of a ceiling tile plus or minus 2 inches.
- F. Valves:
1. Install valves that control the water supply to the sprinkler systems less than 7-feet 0-inches above the finished floor.
 - a. When specifically approved by the Program/Project Manager, these valves may be installed higher if they are provided with operating chains.
 2. Supervisory Switches:
 - a. Provide valve supervisory switches for all valves controlling the water supply to the sprinkler and standpipe systems, including valves located at backflow preventers.
- G. Expansion Joints
1. Install flexible couplings in accordance with the manufacturer's requirements for the expansion joint locations.
- H. Hose Valve Connections:
1. Provide hose valve connections where shown on the Contract Drawings.

- I. Interface with Other Work:
 - 1. Firestopping:
 - a. Sleeve and grout or seal pipe which passes through fire-resistive barriers, including shaft walls, to maintain the integrity and rating of the fire resistive barrier.
 - b. Provide material for through penetration fire stopping complying with the requirements specified in Section 07850, Through Penetration Firestopping Systems, and that is compatible with the sprinkler piping.
- J. Systems Integration:
 - 1. Cooperation with Other Trades:
 - a. Coordinate installation of the combination automatic wet-pipe fire suppression sprinkler standpipe system with the work of the other trades so construction progresses as rapidly and as smoothly as possible with a minimum of interference between trades.
 - 2. Work that is provided under other Sections but that is related to the combination sprinkler standpipe system includes, but is not limited to, the following:
 - a. Sprinkler Water Flow and Valve Supervisory Switches.
 - 1) Coordinate the connection of the tamper and water flow switches with the fire alarm system installation.
 - 2) Verify the quantity and location of the sprinkler water flow and supervisory switches, and test the switches in accordance with the requirements specified in NFPA 13 and NFPA 72.
 - 3) Devices to be installed under this Section for alarm monitoring of the water flow and valve supervisory switches will be furnished under this Section.

3.04 REPAIR/RESTORATION

- A. Holes:
 - 1. Patch holes made in walls, ceilings, or floors, so the wall, ceiling, floor or member is restored to its original condition, fire resistance, and integrity.
- B. Repair damage to the skins and finishes of the station caused by installation of the combination automatic wet-pipe fire suppression sprinkler standpipe system to the satisfaction of the Program/Project Manager at no increase in Contract Price.
- C. Touch up minor scratches to sprinkler pipe and other accessories using paint and finish techniques matching those originally used on the items.

3.05 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. Combination Automatic Wet-Pipe Fire Suppression Sprinkler Standpipe System Test Plan:
 - a. Prepare a Combination Automatic Wet-Pipe Fire Suppression Sprinkler Standpipe System Test Plan describing how the combination automatic wet-pipe fire suppression sprinkler standpipe system will be tested, and include a step-by-step description of all tests and the type and location of the test apparatus to be employed.
 - b. Upon completion of the installation of each system and a minimum of 1 week prior to the Combination Automatic Wet-Pipe Fire Suppression Sprinkler Standpipe System Pre-Acceptance Test, submit the Combination Automatic Wet-Pipe Fire Suppression Sprinkler Standpipe System Test Plan to the Program/Project Manager for approval.
 - c. Do not test the combination automatic wet-pipe fire suppression sprinkler standpipe system until the Combination Automatic Wet-Pipe Fire Suppression Sprinkler Standpipe System Test Plan is approved by the Program/Project Manager.
2. Hydraulic Test:
 - a. Test Procedure:
 - 1) Prior to acceptance of the combination automatic wet-pipe fire suppression sprinkler standpipe system by the Program/Project Manager, flush the system's underground piping, and hydraulically test the system's above ground piping in accordance with the method specified in NFPA 13 and 14.
 - b. Acceptance Criteria:
 - 1) Above ground piping complying with the requirements specified in NFPA 13 passes the Hydraulic Test.

B. Non-Conforming Work

1. Repair or replace nonconforming installation.
2. Do not install system components that are damaged.
3. Do not install system components where there is evidence of manufacturer defects.

3.06 SYSTEM STARTUP

A. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning; Section 15995, Commissioning of Mechanical Systems; and Section 16995,

Commissioning of Electrical Systems, for the fire protection system Work of this Section.

B. Startup Testing:

1. Prior to the Pre-Acceptance Test, submit 2 copies of the Contractor's Material and Test Certification for above ground piping prepared in accordance with the requirements specified in NFPA 13 and NFPA 14 to the Program/Project Manager for information.
2. After installation of the combination automatic wet-pipe fire suppression sprinkler standpipe system has been completed, the preliminary tests have been completed, and deficiencies found have been corrected, and the system is ready for the Combination Automatic Wet-Pipe Fire Suppression Sprinkler Standpipe System Pre-Acceptance Test, notify the Program/Project Manager in writing a minimum of 2 weeks in advance of this planned demonstration to arrange for the inspection and witnessing of the acceptance tests.
3. Conduct the inspections and witness the acceptance testing.
 - a. This acceptance testing is separate from the testing required by the local Authorities Having Jurisdiction.
 - 1) When local code authorities are required to witness tests, take responsibility for making the necessary arrangements with the code authorities, and for coordinating the work with the Program/Project Manager.
 - 2) Obtain the test documents from the Authorities Having Jurisdiction having the required approval stamps and signatures of the code authorities, and submit a copy of each of these documents to the Program/Project Manager.

C. Pre-Acceptance Test:

1. Perform the tests and inspections required by the referenced Codes and Standards, the Phoenix Fire Department, and the Program/Project Manager.
 - a. Upon completion of each installation phase, perform and document on an approved format, the following combination automatic wet-pipe fire suppression sprinkler standpipe system tests in the presence of the Program/Project Manager or their designed representative:
 - 1) Hydrostatic tests.
 - 2) Test of the sprinkler supervisory system.
 - 3) Flow test from the top standpipe connections.
 - b. Correct any errors, non-conformances, or non-performing components discovered during the Pre-Acceptance Test at no increase in the Contract Price.
2. Final Acceptance Test:

- a. Upon completion of the Pre-Acceptance Test, perform and document in an approved format the following combination automatic wet-pipe fire suppression sprinkler standpipe system tests in the presence of the Program/Project Manager, a designed representative, and the City of Phoenix Authorities Having Jurisdiction:
 - 1) Hydrostatic tests.
 - 2) Test of the sprinkler supervisory system.
 - 3) Flow test from the top standpipe connections.
3. Final Approval:
 - a. Final approval and acceptance of the Work of this Section will only be given by the Program/Project Manager when the following items have been performed to the satisfaction of the Program/Project Manager:
 - 1) The completed combination automatic wet pipe sprinkler and standpipe system has been inspected, tested, and approved by the Program/Project Manager and the City of Phoenix Fire and Development Services Departments.
 - 2) Required submittals, system operation and maintenance manuals, record drawings, completed NFPA 13 and 14 test documents, spare parts, special tools, and training have been provided to, reviewed by, and accepted by the Program/Project Manager.
 - 3) Additional Tests:
 - a) Additional tests required by the referenced codes and standards, design criteria, or in writing by the Program/Project Manager have been satisfactorily performed, and the following information regarding the tests has been submitted to the Program/Project Manager for information:
 - (1) Written directive requiring the additional tests.
 - (2) The date and time each test was performed.
 - (3) A description of each test performed.
 - (4) A checklist of each device tested, indicating the results of each test.
 - (5) A reference set of contractor record drawings, numerically identifying the individual components.

3.07 ADJUSTING

- A. Adjust the fittings and hangars to complete the turn-key fire sprinkler standpipe system installation.
- B. Properly adjust the water flow and valve supervisory switches.

3.08 CLEANING

- A. At the end of the Contract, remove the equipment furnished for testing and flushing, and remove special equipment required for the installation of the Work of this Section.
- B. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.
 - 2. When performing flushing and other discharge testing, safely dispose of the water.

3.09 CLOSEOUT ACTIVITIES

- A. Training:
 - 1. To familiarize building personnel with the features, operation, and maintenance of the sprinkler system conduct 2 training sessions of 4 hours each.
 - a. The Program/Project Manager will schedule the training sessions at a time mutually agreeable to the Contractor.
 - b. Final Agenda:
 - 1) Submit the final approved training agenda to the Program/Project Manager 14 days prior to the first training session.
- B. Record Set of Drawings:
 - 1. Prepare a Record Set of Drawings recording the as-built combination automatic wet-pipe fire suppression sprinkler standpipe system in conformance with the requirements specified in the Agreement and Section 01780, Closeout Submittals, to furnish information essential to those who test and maintain the combination automatic wet-pipe fire suppression sprinkler standpipe system and account for all field changes made during installation.
 - a. During installation of the combination automatic wet-pipe fire suppression sprinkler standpipe system, develop a red line Record Set of Drawings that include the original combination automatic wet-pipe fire suppression sprinkler standpipe system Shop Drawings annotated to show exactly where the system components have been installed.
 - b. Furnish floor plans for the Record Set of Drawings showing the as-built information:
 - 2. During the course of the Contract, develop an electronic version of the Record Set of Drawings for the combination automatic wet-pipe fire suppression sprinkler standpipe system as a draft prepared using software

and electronic media in accordance with the requirements specified in Section 01330, Submittal Procedures.

- a. Show the equipment listed in this Section on a separate layer, and provide copies of this layer only on the floor plans furnished as part of the Record Set of Drawings for the combination automatic wet-pipe fire suppression sprinkler system.
 - b. Update these draft as-built drawings every 24 hours during the installation of each combination automatic wet-pipe fire suppression sprinkler standpipe system.
3. Make the onsite as-built Record Set of Drawings for the combination automatic wet-pipe fire suppression sprinkler standpipe system available for inspection and review on request by the Program/Project Manager.
 4. Submit the as-built Record Set of Drawings for the combination automatic wet-pipe fire suppression sprinkler standpipe system as-built drawings to the Program/Project Manager for approval.
 - a. After the combination automatic wet-pipe fire suppression sprinkler standpipe system has been completely installed, and a minimum of 1 week prior to the Combination Automatic Wet-Pipe Fire Suppression Sprinkler System Pre-Acceptance Test, submit an updated, as-built Record Set of Drawings for the combination automatic wet-pipe fire suppression sprinkler standpipe system on electronic media that complies with the requirements specified in Section 01330, Submittal Procedures, to the Program/Project Manager for approval.
 - b. After the Program/Project Manager approves the as-built Record Sets of Drawings for the combination automatic wet-pipe fire suppression sprinkler standpipe system, they will be posted on Unifier for general distribution.

3.10 PROTECTION

- A. Protect valves and assemblies exposed to potential damage by vehicles or other traffic by providing a cage for the valves and assemblies located inside the building, or guard posts for exterior hydrants and post indicator valves.
- B. For installed piping, valves, devices or accessories which, in the Program/Project Manager's opinion, are subject to physical damage or may be hazards, provide adequate permanent protection
 1. The protective measures to be implemented must be approved by the Program/Project Manager prior to implementation:
- C. To prevent foreign material from entering the piping, furnish caps over openings during and after assembly
 1. For example, pipe caps should be provided on the sprinkler extensions when the pipe is roughed in and the sprinklers are not yet installed.

**3.11 MAINTENANCE****A. Spare Parts List:**

1. Submit a suggested spare parts list of replacement combination automatic wet-pipe fire suppression sprinkler standpipe system parts, with firm unit prices guaranteed to be maintained for the duration of the warranty period as specified herein for the manufacturer's-Combination Wet-Pipe Fire Suppression Sprinkler Standpipe System Materials Warranty, to the Program/Project Manager.

B. Maintenance Standard:

1. Furnish and submit a copy of NFPA 25 to the Program/Project Manager.

C. Maintenance Contract:

1. Submit a firm fixed price to furnish a Combination Wet-Pipe Fire Suppression Sprinkler Standpipe System Maintenance Contract for covering a maintenance period of 1 year to the Program/Project Manager for information.

END OF SECTION

REV. NO.	REV. DATE	RFC/CN/CO	Section(s) Affected	Comments

SECTION 13941

DOUBLE INTERLOCK PRE-ACTION

FIRE SUPPRESSION SPRINKLERS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. The new double interlock pre-action fire sprinkler systems (the system). This section describes the requirements for furnishing and installing all materials and labor for the design and installation of new double interlocked pre-action automatic fire sprinkler system, hereafter referred to as the Work (or System). All control valves shall be supervised by the building's fire alarm control unit/releasing control unit (FACU/RCU).
 - a. The system shall be installed to protect the IDF Rooms. Each room shall have a dedicated system as shown in the contract drawings.
2. All work shall be performed in accordance with these specifications. No modifications to these specifications will be accepted without the express written approval of the Program/Project Manager. It is the Contractor's responsibility to document any modifications to the system design prior to the execution of work. Any deviation from these specifications shall be approved in writing, by the Program/Project Manager. All applicable taxes shall be included in the Contractor's base bid.
3. Drawings provided for this work show the general intent for device layout and coverage. These drawings, as such, provide minimum coverage guidelines only. The Contractor shall provide shop drawings in accordance with these specifications, NFPA 13, and all applicable Codes and Standards. Devices installed in public or finished areas shall be fully coordinated with reflected ceiling plans, mechanical, and electrical components as shown on the electrical and mechanical drawings and specifications. The Contractor will be responsible for the development of shop drawings, installation and commissioning of the new double interlock pre-action fire sprinkler systems as required by the City of Phoenix and the Sky Harbor International Airport Aviation Department. These specifications do not necessarily contain all information required for installation of the system, but are intended to be used as a guide by the Contractor for the purpose of shop drawing development and preparing his/her bid.

4. The Contractor shall verify all information contained on the project bid drawings and is responsible for design and installation of the system in accordance with the specifications. If information is not clear, the contractor shall issue an RFI to the Program/Project Manager.
5. At the completion of work, there shall be no degradation of any of the adjoining building system(s) in any way due to the work provided for in this specification.
6. It is intended that the work performed pursuant to these specifications be complete in every respect, resulting in a double interlock pre-action sprinkler system installed entirely in accordance with the applicable codes, standards, manufacturer's recommendations and Underwriters Laboratories Inc. (UL) Listings, and FM Global approval.
7. It is further intended that upon completion of this work, the Program/Project Manager shall be provided with:
 - a. Complete information and drawings describing and depicting the entire system as installed, including all information necessary for maintaining, troubleshooting, and/or expanding the system at a future date.
 - b. Complete documentation of system testing.
 - c. Certification that the entire system has been inspected and tested, is installed entirely in accordance with the applicable codes, standards, manufacturer's recommendations and UL listings, and is in proper working order. Contractor shall use "Contractor's Material and Test Certificate(s)" as required by Chapter 26 of NFPA 13.
 - d. Copies of required City of Phoenix permits for installation.
8. General: Provide all materials and labor for the design and installation of a new double interlock pre-action sprinkler systems in accordance with the applicable codes and all requirements of this specification.
9. Sprinkler: Provide and install all components necessary for the double interlock pre-action sprinkler systems and provide all monitoring and control points to be interfaced to the fire alarm system, as specified in the Fire Alarm Specification.
10. The Contractor shall perform testing and verify the available water supply at the pre-action riser locations. The Contractor shall submit this documentation with the shop drawings for review and approval by the Program/Project Manager and the City of Phoenix.

11. Waterflow Switches: Provide, install and properly adjust system supervisory switches and waterflow indicators.
12. Drains: Provide indirect piped connections to the exterior of the building necessary to drain and test the double interlock pre-action fire sprinkler system. Coordinate the location with the mechanical drawings.
13. Valves: Provide all supervised control valves, and other appurtenance as required for a fully operable system. All valves are to be electronically supervised.
14. Submittals: Prepare and submit shop drawings, product data sheets, calculations, record drawings and other submittals required herein.
15. Tests: Test the double interlock pre-action sprinkler system. The Contract is required to coordinate acceptance testing with the Fire Alarm Contractor. The Sprinkler Contractor shall be available for troubleshooting during the fire alarm system testing.
16. Warranty: Warranty all new equipment and systems during installation and for a two (2) year period after final acceptance of the work by the Program/Project Manager.
17. Shop Drawings: Develop shop drawings for the review and approval by the Program/Project Manager and City of Phoenix Authorities.
18. Approvals: Obtain all approvals required for the work of this section from the City of Phoenix and from the Program/Project Manager.
19. Fees: Pay all fees required to obtain permits, inspections and final approval of this work.
20. Coordination: Coordinate work with other trades working on the project, and with the other fire protection systems specified elsewhere.
21. Drawings and general provisions of the Contract, including General and Supplementary, apply to this Section.
22. Drawings supplied with this specification shall be used by the Contractor as a reference for the requirement and location of system components. It shall be the responsibility of the Contractor to visit the site, observe the existing conditions, and confirm the required quantities of devices and specific options for locations of the same.
23. Documents, including shop drawings, hydraulic calculations, and water flow test results shall be required for obtaining approval by the Program/Project Manager, the City of Phoenix Fire Department, Sky

Harbor International Airport Aviation Department, and other Authorities Having Jurisdiction (AHJ).

24. Prior to commencement and after completion of work, the Contractor shall provide written notification to the Program/Project Manager.
25. The Contractor shall notify the Program/Project Manager in writing when the system is ready for the Demonstration Test and the Acceptance Test. Notification shall be a minimum of two (2) weeks in advance of the planned tests. The system shall be considered ready for the Demonstration Test, only after all preliminary tests have been made by the Contractor, and all deficiencies have been found and corrected. In addition, two (2) copies of the Contractor's Material and Test Certification for Above Ground shall be submitted to the Program/Project Manager prior to the Demonstration Test.

B. Products Installed but Not Supplied Under This Section:

1. Underground water supply for the fire sprinkler system.

C. Related Requirements:

1. Section 01330 - Submittal Procedures.
2. Section 01780 - Closeout Submittals.

1.02 REFERENCES

A. Abbreviations and Acronyms:

1. National Fire Protection Association (NFPA)
2. International Fire Code (IFC)
3. International Building Code (IBC)
4. Underwriters Laboratory (UL)
5. Fire Alarm Control Unit (FACU)
6. Releasing Control Unit (RCU)

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.

C. Reference Standards:

1. City of Phoenix (COP):
 - a. International Building Code (IBC) – 2012 with City of Phoenix amendments.
 - b. International Fire Code (IFC) – 2012 with City of Phoenix amendments.
2. The fire sprinkler system shall comply with all applicable codes and standards, including the International Building Code (IBC) – 2012 with City of Phoenix amendments, the International Fire Code (IFC) – 2012 with City of Phoenix amendments, and NFPA 13 – 2013.
3. All equipment and devices shall be labeled and Listed for the intended use in Underwriters Laboratories, Inc. (UL), UL FPED *Fire Protection Equipment Directory*.
4. If a UL Listing for a specific device is unavailable, approval by FM Global (FM) or other nationally recognized testing laboratory (NRTL) acceptable to the Program/Project Manager.
5. Installation shall be made in accordance with the applicable provisions of the following:
 - a. NFPA 70 – (2011) National Electrical Code® (NEC) as amended by the City of Phoenix.
 - b. NFPA 72 – (2013) National Fire Alarm and Signaling Code.
 - c. NFPA 13 – (2013) Standard for the Installation of Sprinkler Systems.
6. The latest published edition of the equipment manufacturers' product datasheets, technical specifications, installation instructions and wiring guidelines.
7. The systems shall be tested in accordance with the following:
 - a. NFPA 13 – 2013 Chapter 26, Installation of Sprinkler Systems.
 - b. The latest published edition of the equipment manufacturers' testing procedures and guidelines.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Prior to commencement and after completion of the Work of this Section, provide written notification to the Program/Project Manager.

2. Coordinate with the Program/Project Manager, the Phoenix Sky Harbor International Airport, and others to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
3. Coordinate the installation and testing of the system and the associated equipment and circuits with the appropriate Subcontractors, equipment maintenance and testing representatives, the Sky Harbor International Airport Aviation Department, and the Authorities Having Jurisdiction (AHJ).
 - a. Coordinate the System Pre-Acceptance and the Final Acceptance Test of the system specified herein with the Program/Project Manager, the Sky Harbor International Airport Aviation Department, and other Authorities Having Jurisdiction (AHJ).
 - 1) At the time of notification, submit 1 copy of the approved Record Set of Drawings and the approved System Test Plan to the Program/Project Manager.
 - b. Final Acceptance Test:
 - 1) In order to assure attendance at the Final Acceptance Test by the necessary representatives, provide reasonable notification of the test date to each representative scheduled to witness the test at least 48 hours prior to the test.
 - 2) Do not conduct this test until all parties agree on a test date.
4. Coordinate the networking of the system releasing panels to the new FACU.
5. Coordinate the dates and times of each required training session as specified herein through the Sky Harbor International Airport Aviation Department, not less than 2 weeks prior to the training session.
6. Conflicts Arising Due to Discrepancies between Documents:
 - a. Should conflicts arise due to discrepancies between documents referenced in this Section, the most stringent requirement applies; however, should a level of stringency be indeterminable, resolve the discrepancy as follows:
 - 1) The International Building Code (IBC), the International Fire Code (IFC), the National Fire Protection Association (NFPA) Standards, this Section shall take precedence over the Contract Drawings.

- 2) The International Building Code (IBC) and the International Fire Code (IFC) take precedence over the National Fire Protection Association (NFPA) Standards, this Section, and the Contract Drawings.
- 3) The National Fire Protection Association (NFPA) Standards shall take precedence over, this Section, and the Contract Drawings.
- 4) This Section takes precedence over the Contract Drawings.

B. Sequencing:

1. Complete all component installation, and coordination of wiring, circuit testing in time so the fire alarm equipment Supplier can make the final connections and conduct tests of the fire alarm system as specified other sections without delaying the Work.

C. Scheduling:

1. Prior to beginning the Work of this Section, submit a schedule indicating the system installation sequence and time frame to the Program/Project Manager for approval.
 - a. Include specific time lines indicating the start and completion of major portions of the system installation.
 - b. Indicate the delivery dates of the equipment to be supplied.
 - c. Indicate the dates for the system Pre-Acceptance and the Final Acceptance Test specified herein.
2. Provide weekly schedule updates to the Program/Project Manager for approval.
3. Advise the Program/Project Manager of all anticipated projects the Contractor and the equipment supplier may have with the same approximate completion date as this contract, and what impact those projects may have on the timely completion of this contract.

1.04 SYSTEM DESCRIPTION

A. Design Requirements:

1. Densities: Hydraulically calculated sprinkler systems shall be installed in accordance with the construction documents. The systems have been designed to produce discharge densities of:

- a. 0.15 gpm/square foot over the hydraulically most remote 1,950 (Ordinary Hazard).
2. Develop and submit shop drawings.
3. Hose stream requirements: The calculations shall include a 100 gpm inside hose stream. The combined (inside and outside) hose stream for the calculations shall be 250 gpm located at the base of the riser.
4. Sprinklers under ducts (or other): Provide sprinklers under ducts and obstructions as required by NFPA 13.
5. All branch line piping shall be 1" minimum.
6. All hydraulically calculated sprinkler systems shall provide a minimum safety factor of 10 percent between the calculated sprinkler system demand and the available water supply.
7. Separate area control valve assemblies shall be provided for the pre-action sprinkler system.
8. Water supply information shall be obtained from the local water authority where the project is located. The Contractor is required to calculate pressure losses due to elevation and friction through all fittings, piping, and valves in accordance with NFPA 13.
9. The pre-action system shall be designed so that opening of the inspector's test connection with normal supervisory air pressure in the piping simultaneously with electrical tripping of the valve shall deliver water to the inspector's test connection within 60 seconds.
10. Sprinkler heads shall be on return bends or dry pendent sprinklers shall be provided on all drops.

1.05 SUBMITTALS

A. Informational Submittals:

- a. Prior to performing any work, submit the following Contractor documentation in addition to those documents required elsewhere in this specification.
- b. Written confirmation of how the manufacturer/supplier plans to comply with the performance operational design of the system and all pertinent information regarding the reliability and operation of the equipment to be supplied.

B. Maintenance Material Submittals:

1. Provide per unit costs for additional devices and appliances to the Program/Project Manager with firm prices maintained for one year beyond the duration of the manufacturer's warranty period as specified herein.

C. Action Submittals:

1. Submit the following to the Construction Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) The Contractor shall submit a product data submittal with the shop drawings. Manufacturer's Data Sheets shall show the type and model of all equipment or material proposed. This information shall include type of pipe or tube, hangers, valves, pipe fittings/joining methods, air compressors, sprinklers, escutcheons, and signage. When a Data Sheet shows more than one product, the specific proposed product shall be clearly indicated by arrows or other suitable means
 - b. Certificates:
 - 1) Project supervisor NICET II certificate.
 - 2) Shop drawing technician NICET III or IV certificate.
 - c. Shop Drawings:
 - 1) Shop Drawings: The Contractor will be authorized to start each portion of the work when the shop drawings are received, reviewed and approved by the Program/Project Manager and the City of Phoenix. Installation prior to these approvals shall be at the risk of the Contractor.
 - 2) Submit the system shop drawings for review and approval to the Program/Project Manager.
 - 3) Submit the system shop drawings for review and approval to the City of Phoenix Annual Facilities Program (AFP).
 - 4) Shop drawings shall show all of the information required by NFPA 13 for working plans and shall include drawings showing the location of all equipment, controls, piping, valves and drains. The drawings shall also show: Locations of all sway bracing, seismic bracing, hangers and of flexible couplings installed as flexure joints, location and diameter of all necessary core drills, pipe sleeves and pipe clearance openings in walls and floors.

2. Contractor shall provide hydraulic calculations to show that the pipe sizes provided will produce adequate performance.
3. The Program/Project Manager shall review and recommend approval/disapproval or take other appropriate action on the Contractor's submittals including shop drawings, samples, documentation and record drawings. This review is to verify conformance to project specifications and design concepts expressed in the Contract Documents. This action shall be taken with all reasonable promptness as to cause no delay in the work, while allowing sufficient time to permit adequate review. Review of such submittals is not conducted for the purpose of determining the accuracy and completeness of other details (e.g., dimensions) or for substantiating installation or performance of equipment or systems designed by the Contractor, all of which remain the Contractor's responsibility to the extent required by the Contract Documents. The Program/Project Manager's review shall not constitute approval of safety precautions for construction, means, methods, techniques, sequences of procedures or approval of a specific assembly of which the item is a part.
4. If submittals are found not to conform to the requirements of these specifications; the Contractor shall be required to resubmit with modifications within 5 calendar days. The Contractor shall be responsible for the expenses for subsequent review(s) of rejected submittals necessitated by the Contractor's failure to make the requested modifications. Such extra fees shall be deducted from payments to the Contractor. Approval of the submittals shall, in no case, relieve the Contractor of his responsibility to meet the requirements of this specification.
5. The Program/Project Manager shall review all submittals prior to submittal to local authorities for review and approval.
6. All drawings and diagrams shall be prepared on drawing sheets of uniform size, in accordance with the governing CAD Specifications for the project and shall contain no extraneous information. Marked up electrical, HVAC, or similar drawings or copies of catalog data sheets are not acceptable in lieu of the required drawings or diagrams. All other information required for this submittal shall be submitted in one or more appropriately labeled (i.e., Contractor's name, project, submittal name/description and date) and indexed 3-ring binders.
7. All drawings and diagrams shall include the Contractor's title block, complete with drawing title, Contractor's name, address, date including revisions, and preparer's and reviewers' initials.

8. Floor plan drawings required for this submittal may be generated using the bid drawings as backgrounds.
9. Samples: Upon award of the change order and within 5 business days of authorization to proceed, the Contractor shall submit to the Program/Project Manager for approval samples of all types of proposed equipment list including sprinklers and types of finishes available and a complete list of where each type and finish will be installed.
10. Permits: Prior to start of installation, the Contractor shall submit copies of all permits and approvals to the Program/Project Manager necessary to conduct this work.
11. Certificates: The Contractor shall provide the Program/Project Manager with one copy of all documents that are reviewed and approved by the local code authorities. These documents shall include, but not be limited to, the following:
 - a. Site inspection forms
 - b. Shop drawings
 - c. Final inspection forms
 - d. Service directory – submit to the Program/Project Manager the draft O & M manual for approval (excluding the test certificates and drawings, and final Operation & Maintenance manual upon completion of the work
12. All documents shall include all required approval stamps, signatures or other information necessary to properly certify that the installation has been reviewed and accepted by the Program/Project Manager and the City of Phoenix Development Services, Aviation, and Fire Departments.
13. Operation and Maintenance Manual: The Contractor shall provide the Program/Project Manager with a loose-leaf manual containing:
 - a. 11" x 17" reduced copies of the record drawings required below (Final submittal only)
 - b. Manufacturer's catalog data sheets and installation manuals
 - c. A detailed narrative description of the system architecture, inputs, evacuation signaling, auxiliary functions, suppression system releasing, annunciation, intended sequence of operations, expansion capability, application considerations and limitations.

- d. Operator instructions for basic system operations including alarm acknowledgement, system shutdown, system reset, operation of controls, isolation of components for servicing, etc.
 - e. Copy of NFPA 25.
 - f. Copy of all test certificates and approvals.
 - g. A list of recommended spare parts.
 - h. A service directory, including a list of individual's names and telephone numbers to obtain service on the system, including emergency service as required elsewhere in these Specifications.
 - i. Final O&M Manual: Within 30 days of the completion of the work, copies of the approved manual with reduced drawings and test certificates shall be delivered to the Owner.
 - j. Record Drawings: The Contractor shall provide and maintain on the site an up-to-date record set of City of Phoenix approved shop drawing prints which shall be red line marked to show each and every change made to the double interlock pre-action sprinkler system from the original approved shop drawings. This shall not be construed as authorization to deviate from or make changes to the shop drawings approved by the Program/Project Manager without written instruction in each case. This set of drawings shall be used only as a record set. These drawings shall be maintained in a current condition at all times and shall be made available for review immediately upon request during normal working hours.
14. Final Submittal: Upon review of the record drawings, before final approval, one set of reproducible record drawings and two additional sets of bond record drawings shall be delivered to the Program/Project Manager in accordance with the project CAD specifications.
15. If the Contractor's submittals, upon review by the Program/Project Manager do not conform to the requirements of these specifications, the Contractor shall be required to resubmit with modifications, within five (5) working days of receipt of the Program/Project Manager's notification to the Contractor. The Contractor shall be responsible for the Program/Project Manager's extra expenses for subsequent review of rejected submittals necessitated by the Contractor's failure to make the requested modifications. Such extra fees shall be deducted from payments by the Program/Project Manager to the Contractor.

D. Closeout Submittals:

1. Submit the following to the Construction Manager in accordance with the requirements of Section 01780, Closeout Submittals:

- a. Warranty Documentation:

- 1) Transmit to the Program/Project Manager all applicable warranty information about the installed materials and products.

E. Maintenance Material Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:

- a. Spare Parts:

- 1) Spare parts and special tools shall be provided to the Program/Project Manager prior to final acceptance, and be provided for each building.
 - 2) Spare Parts: The Contractor shall install one metal sprinkler cabinet containing a minimum total of five sprinklers, of each type, finish and temperature rating used. Contractor shall provide two (2) sets of sprinkler wrenches compatible with each type of sprinkler provided. The cabinets shall be installed at the locations approved by the Program/Project Manager.
 - 3) The Contractor shall provide at least five working days' notice for all tests.
 - 4) All Contractor's testing shall conform minimally to the applicable requirements NFPA 13 Chapter 26. Contractor testing shall include 100 percent of all devices, appliances, interfaced systems and control unit functions. The Contractor shall record the results of the tests.

1.06 QUALITY ASSURANCE

A. Qualifications:

1. All Contractors connected with the captioned project shall provide proof of competence of both their company and the individual foreman that will be assigned to this project. The Contractor shall have been in the business of installing fire sprinkler systems for at least five (5) years, acceptable to the Program/Project Manager. Once assigned, the Contractor's foreman shall not be changed without the approval of the Program/Project Manager.

2. If the use of outside sub-contractors is necessary, the sub-contractor shall be licensed in the State of Arizona and be experienced in the installation of systems in buildings similar to the building in question and has obtained design and inspection approvals for similar projects from Authorities Having Jurisdiction.
3. Each proposed bid shall be professionally presented, bound and shall include a title page and index.
4. As a minimum, all bidding Contractors shall include the following in the fire sprinkler systems bid:
 - a. The names and qualifications of the Contractor's and the equipment supplier's foreman and project manager during the entire project installation. Contractor's and supplier's qualifications shall include years in business, service policies, warranty definitions and prior experience with installations that include the type of equipment that is to be supplied.
 - b. The personnel and company contact information of all subcontractors that the Contractor plans to use on this project.
 - c. A list of at least three (3) similar installations with addresses of properties, contact names, telephone numbers, and types of system equipment installed.
 - d. The price for the systems as specified, the prices for required and recommended or requested alternatives for equipment, service work not included in the warranty and prices for a service contract. The Contractor shall list all deviations and/or exceptions to these specifications as proposed alternatives.
 - e. Completed pricing shall be accompanied by equipment manufacturer's product data sheets for the major components of the proposed system.
 - f. Nonconformance to the Qualification of Bidders requirements outlined in this specification shall be cause for immediate dismissal of the Bid Documents without comment.
 - g. The award of the contract shall be based on the submitted information and all considerations in the best interests of the Program/Project Manager. Once the contract is awarded, no requested changes for equipment, suppliers or subcontractors shall be accepted unless justification is made in writing. Once assigned, the Contractor's foreman and the fire sprinkler technicians shall not be changed

without the approval of the Program/Project Manager. Upon written request from the Contractor, the Program/Project Manager may authorize changes, but at their sole choice and discretion. The Contractor shall be at risk for any attempt to substitute the equipment suppliers or subcontractors accepted. All cost for removal, relocation, or replacement of a substituted item shall be at the risk of the Contractor.

B. Order of Precedence:

1. Should conflicts arise out of discrepancies between documents referenced in this specification, the most stringent requirement shall apply; however, should a level of stringency be indeterminable, the discrepancies shall be resolved as follows:
 - a. The Phoenix Sky Harbor International Airport Sky Train Project Design Manual shall take precedence over this specification.
 - b. The IBC and IFC shall take precedence over this specification.
 - c. The National Fire Protection Association Standards shall take precedence over this specification.
 - d. This specification shall take precedence over the drawings.
2. System Technical Representative's Qualifications:
 - a. To supervise the field installation of the system provided under this Contract, employ a trained and qualified technical representative who, at a minimum, holds a current NICET Level II Fire Protection Engineering Technology Water Based Sprinkler Design Certification.
 - b. Submit the name and qualifications of the proposed system technical representative who will be in responsible charge of the installation of the system under this Contract to the Program/Project Manager for approval.
 - c. Do not replace an approved system technical representative without the written approval of the Program/Project Manager.
 - d. The specified system Shop Drawings and calculations shall be prepared by a certified technician holding at a minimum NICET Level III Fire Protection Engineering Technology Water Based Sprinkler Design Certification or licensed Fire Protection Engineer in the State of Arizona.

3. Sufficient information to describe their qualifications, the work efforts to be performed, and the materials to be provided, including the names and qualifications of the Contractor's and the equipment Supplier's Project Manager who shall be in responsible charge during the entire project installation.
4. Drawings supplied with this specification shall be used by the Contractor as a reference for the requirement and location of system components. It shall be the responsibility of the Contractor to visit the site, observe the existing conditions, and confirm the required quantities of devices and specific options for locations of the same.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. The Sprinkler Contractor shall store all fire suppression system equipment in accordance with the manufacturer's specifications.

1.08 WARRANTY

A. Manufacturer Warranty:

1. The Contractor shall warrant all materials and workmanship for a period of two (2) years beginning with the date of final acceptance by the Program/Project Manager. The Contractor is responsible during the design, installation, testing and guarantee periods for any damage caused by him (or his subcontractors) or by defects in his (or his subcontractors') work, materials, or equipment.

B. Special Warranty:

1. During the installation and warranty period, the Contractor shall provide emergency repair service for the sprinkler system within four (4) hours of a request by the Owner or owner for such service. This service shall be provided on a 24-hour per day, seven days per week basis.

PART 2 PRODUCTS

2.01 CONTRACTOR-FURNISHED PRODUCTS

A. New Products:

1. All equipment and system components furnished and installed shall be new and of first quality, and be listed by Underwriters Laboratories Inc. (UL), or approved by Factory Mutual (FM) for their intended use. All such

equipment and system components shall be installed within the limitations of the respective UL listings or FM approvals.

2. The double interlock pre-action deluge valve shall be quick opening, hydraulically operated and controlled with a diaphragm deluge valve mechanism and hydraulic lock open using a pressure relief operated valve. The actuating device shall be controlled by an electrically actuated hydraulic releasing device. Closing of the main water supply valve and manually closing the hydraulic control line shall automatically reset the diaphragm deluge valve. Valve shall be released either manually at the valve or automatically from the Pre-Action Fire Alarm Control Panel. Valve shall be complete with all trim piping and devices including sprinkler riser, air compressor with an air maintenance device for supervision of piping, with flow alarm, valve and air supervisory pressure switches.

B. Pipe and Fittings – General:

- a. Pressure ratings: Pressure ratings of all fittings shall meet or exceed maximum working pressures available within the system.
 - b. Corrosion protection: All piping and hangers where exposed to the weather or installed in a corrosive atmosphere shall be protected against corrosion
 - c. All piping shall have a corrosion resistance rating ratio (CRR) greater than or equal to 1.0.
 - d. Fire Department Connections: Furnish new.
2. Aboveground Piping Components:
- a. Pipe Sizes 2 inches and Larger: Steel pipe shall be ASTM A 795, Weight Class STD (Standard), Schedule 40 Type E or Type S, Grade A; black steel pipe or approved equal. Steel pipe shall be joined by means of flanges welded to the pipe or mechanical grooved joints only. Piping shall not be joined by welding or weld fittings.
 - b. Piping Sizes 2 inches and smaller: Steel pipe shall be ASTM A 795, Weight Class STD (Standard), Schedule 40, Type E or Type S, Grade A, steel pipe with threaded end connections or approved equal. Fittings shall be ASME B16.39, Class 150, threaded fittings. Unions shall be ASME B16.39, Class 150, unions
 - c. Chlorinated polyvinyl chloride (CPVC) Pipe is not permitted.
 - d. Copper pipe or tube or schedule 40 equivalent pipe are not permitted.

- e. Pipe hangers and supports: Pipe hangers and support shall be listed in the UL Fire Protection Directory or FM Global Approval Guide and shall be the adjustable type. Finish of rods, nuts, washers, hangers, and supports shall be zinc-plated after fabrication. They shall be according to the manufacturers listing. Mixing of components between manufacturers is not permitted.
3. Control and Drain Valves:
- a. Types: Sprinkler system control and drain valves shall be the following types:
 - 1) O.S&Y. gate valves
 - b. Butterfly valves that are approved for use in sprinkler systems.
 - c. Butterfly valves with integral valve supervisory switches that the entire assembly is approved for use in sprinkler systems.
 - d. Listing: All valves shall be UL listed or FM approved for their intended use.
 - e. Signs: All water supply control valves and drain valves shall be permanently marked with metal signs to show their function and sprinkler system zone which they serve. Provide a valve chart to be mounted at the FACU.
 - f. Pressure Ratings: Pressure ratings of all valves shall meet or exceed maximum working pressures available within the system. A minimum 175 psi is required.
 - g. Supervision: All control valves shall be and electrically supervised.
 - h. Access Panels: Provide and install access panels (minimum size 12-inches by 12-inches) for all control valves located above finished ceilings or concealed in walls. Owner will select finish of access panels. Access panels installed in fire resistive construction shall be of the types required for maintaining proper protection of assembly.
 - i. Valves and assemblies that are exposed to potential damage by vehicles or other traffic are to be protected by providing a cage when located inside the building, or guard posts for exterior hydrants and post indicator valves.
4. Specialty Valves
- a. Deluge Valves: UL Listed, 250-psig working pressure, 90-degree or straight-through pattern, designed for horizontal or vertical installation,

externally resettable by hydraulic means, positive priming line vent, cast-iron flanged or grooved inlet and outlet, complete with compatible trim set.

- b. Solenoid Valve: UL Listed, 250-psig working pressure, electrically operated, ½-inch brass body with stainless steel core tube, core, plug nut and springs.
 - c. The Contractor shall furnish and install an air check valve on the riser as recommended by the Pre-Action Valve's manufacturer.
 - d. Deluge, Solenoid and Control Valves for the pre-action system shall be manufactured by Reliable Automatic Sprinkler Company or pre-approved equal.
5. Sprinklers:
- a. Types: Quick Response, 165 degree Fahrenheit unless otherwise noted in the contract drawings.
 - b. Final Selection: The Program/Project Manager will select finishes for all automatic sprinklers and escutcheons.
 - c. Uniformity: All sprinklers within a space shall be from the same manufacturer and have the same heat response element, including temperature rating and response characteristics.
 - d. Corrosion Resistance: Sprinklers located on exterior piping systems shall be corrosion resistant.
 - e. Sprinkler Escutcheons: Escutcheons shall be metal and be listed with the sprinklers for recessed sprinkler locations.
 - f. Sprinkler Orifice: All sprinklers shall be standard orifice sprinklers (1/2" orifice) unless specifically approved otherwise.
 - g. All sprinklers in finished areas shall be center of tile plus or minus 2 inches, unless approved by the Owner.
 - h. Listed sprinkler guards shall be installed where heads are positioned at or less than 7-feet above the finished floor.
6. Identification Signs:
- a. Contractor shall furnish and install hydraulic calculation signs for each new sprinkler zone. Contractor shall also provide identification signs for all valves installed under this section.

- b. Required Information: Hydraulic calculation signs shall include all information indicated in Appendix A, NFPA 13. Valve identification signs shall identify the function of the valve and the area served.
 - c. Description: Signs shall be rigid, flat steel or aluminum plaques with embossed enamel background and lettering. Signs shall be secured by chain or durable wire to each sprinkler zone control valve, or in an obvious location specifically approved by the Owner.
 - d. The hydraulic calculation signs shall be installed in a workmanlike manner on the riser of each system.
7. Supervisory and Alarm Equipment:
- a. All waterflow and valve supervisory switches shall be furnished, installed and properly adjusted by this Contractor. Alarm monitoring of these devices will be by others.
 - b. Contacts: All waterflow and valve supervisory switches shall be provided with two "Form C" (D.P.D.T.) contacts for monitoring. Specific contact rating shall be coordinated with the fire alarm Contractor.
 - c. Waterflow Switches: pressure type waterflow indicators shall be provided to indicate waterflow in each sprinkler system zone.
 - d. Supervisory Switches: Valve supervisory switches shall be provided for all valves controlling the water supply to the sprinkler and standpipe systems.
 - e. Loop Type Switches: Valve supervisory switches shall be the yoke mounted or integral type. Contractor shall not use remote mounted, wire loop type switches.
8. Inspector's Test and Drain Assembly:
- a. An inspector's test and drain assembly is required.
 - 1) Test and drain assembly(s) shall be provided for the double interlock pre-action system. This test and drain assembly shall be a modular unit type. The valve location shall be located on the shop drawings and riser diagram.
 - 2) An inspector's test and drain assembly shall be provided at the most hydraulically remote part of the double interlock pre-action system shall discharge to a location approved by the Program/Project Manager and as shown on the contract drawings.

- 3) Inspector's test and drain assemblies shall comply with the requirements of NFPA 13. All components of test and drain assemblies shall be UL listed or FM approved.
- 4) Discharge: All test connections and drain riser connections shall be hard piped to discharge waste water to the exterior of the building. The sprinkler contractor shall coordinate routing of the drain pipe with the mechanical drawings.

9. Risers:

- a. Supervisory Switches: Valve supervisory switches shall be provided on all valves controlling water supply to the fire sprinkler system, including valves located at backflow preventers.
- b. All flexible couplings, hangers and sway bracing shall be designed and installed as required by NFPA 13 (including all appendices). Flexibility, internal pressure, and differential movement between the piping and building, earth, or other supporting structure(s) shall be allowed for, so that no allowable stress is exceeded in any member.

10. Pressure Gauges

- a. Pressure gages shall be UL Listed (UL 393), 3-1/2- to 4-1/2-inch-diameter dial with dial range of 0 to 250 psig.

11. Automatic Air Pressure Maintenance Device

- a. UL Listed, FM approved, automatic air pressure maintenance device to maintain a constant air pressure within the pre-action sprinkler piping is required.
- b. The automatic air pressure maintenance device shall be constructed of non-corrosive material, and consist of the following:
 - 1) Adjustable sensing element for sensing of the air pressure within the pipe and for activation of the flow control device.
 - 2) Flow control device to limit the flow of air into the system.
 - 3) Backflow prevention device to prevent the flow of air out of the sprinkler system.
 - 4) Strainer sized to protect the flow control device.
 - 5) Valved, 1/4 inch air supply bypass around the flow control device.

12. Compressed Air Supply

- a. Provide air supply capable of restoring system pressure within 30 minutes. Acceptable air supply arrangements are:
 - 1) A riser mounted air compressor with an air pressure maintenance device between the air compressor and the air supply inlet on the system riser.
 - 2) A riser mounted air compressor feeding an air reservoir with an air pressure maintenance device placed between the air reservoir and the system riser.
 - 3) A riser mounted compressor listed as an air maintenance compressor.

13. Releasing Control Unit (RCU)

- a. Provide an RCU for each of the double interlock pre-action fire sprinkler systems.
- b. The RCU shall be conventional or analog addressable.
- c. The RCU shall be compatible and networked with the Honeywell Fire Alarm Control Unit.
- d. The RCU shall be capable of processing the signals from the fire detection devices and air loss for the actuation of the deluge valve.
- e. The control unit shall support a minimum of two (2) visible (strobe) and two (2) audible notification appliance circuits to provide an evenly distributed number of notification appliances. All visible (strobe) notification appliance circuits shall be independent from the audible notification appliance circuits. Each circuit's power load shall not exceed 75% of the individual circuit power available from the RCU and new installed circuits shall be Class A (Style Z) circuits. Additional NACs shall be furnished and installed as necessary to comply with this requirement.
- f. Power for all notification appliances shall come from integral power supplies in the RCU. Remote power supplies, if needed, shall be of the same manufacturer as the RCU. The location of all remote control equipment, such as remote power supplies (extenders) shall be approved prior to installation by the Program/Project Manager.
- g. RCU shall be manufactured by Honeywell, Notifier, FCI-Gamewell, Potter or pre-approved equal.

C. Manufacturers:

1. Manufacturer List:
 - a. All equipment and system components furnished and installed shall be new and of first quality, and be listed by Underwriters Laboratories Inc. (UL), or approved by Factory Mutual (FM) for their intended use. All such equipment and system components shall be installed within the limitations of the respective UL listings or FM approvals.
2. Substitution Limitations:
 - a. Only approved in writing by the Program/Project Manager.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. It shall be the Contractor's responsibility to inspect the drawings and become familiar with the conditions under which the work will be performed.
 2. Cooperation with other trades: The sprinkler Contractor shall coordinate with the work of the other trades towards the general purpose of having the construction progress as rapidly and as smoothly as possible with a minimum of interference between trades.
 3. Openings, cutting and patching: Before the start of Structural Work, the sprinkler Contractor shall submit instructions for openings and penetrations required for his work to the Program/Project Manager. Instructions shall be subject to the Program/Project Manager's approval. The Contractor shall provide any subsequent additional penetrations, openings, or relocation required, but not delineated in his instructions at no additional cost to the Program/Project Manager.
 4. Approval prior to installation: No work shall commence prior to approval of shop drawings by the Program/Project Manager. Any change in work which has been installed prior to approval of the shop drawings shall be made without additional compensation to the Contractor.
 5. All materials will be stored in a proper manner, so they are not subject to damage, moisture, or other reasonable unforeseen circumstances.

3.02 PREPARATION

- A. Protection of In-Place Conditions:

1. Aesthetics shall be a primary consideration when installing sprinklers and sprinkler piping. Any facet of sprinkler installation that does not meet with the Program/Project Manager's approval shall be revised by the Contractor.
2. Holes: All holes made by the Contractor in any wall, ceiling, or floor shall be patched by the Contractor, restoring the wall, ceiling, floor or member to its original condition, fire resistance, and integrity.
3. General Locations: Location of all equipment, controls, piping, valves and drains shall be subject to Owner's approval.
4. Special Installation Instructions: All sprinklers and equipment shall be installed in accordance with manufacturer's instructions. All special tools recommended by the manufacturer shall be used.
5. Deflector Distances: Sprinklers permanently installed shall be installed with the deflector to ceiling distances in accordance with NFPA 13.

3.03 INSTALLATION

1. The system shall be installed in accordance with the approved shop drawings. If deviations are necessary, the Program/Project Manager shall be notified prior to installation. Approval shall be obtained in writing from the Program/Project Manager and the as-built drawings updated to reflect the change.
2. Sprinkler piping on any floor level may cross building structural separations such as expansion and seismic joints, provided that the piping is specifically designed with flexible connections at each crossing and able to accommodate the calculated differential motions during an earthquake in accordance with the IBC and NFPA 13. All required structural, differential movement and drift calculations shall be prepared by a licensed structural engineer possessing current State of Arizona Registration. (Contractor shall verify locations of seismic joints.).
3. All sprinkler piping installed in public areas or non-public areas with suspended ceilings shall be concealed in the walls, ceilings. Pipe in unfinished areas may be exposed.
4. Exposed Piping: All piping exposed within the building public areas shall be painted by the Contractor. All exterior piping shall be primed with zinc chromate and painted by the Contractor. Program/Project Manager to select paint colors.
5. Escutcheon Plates: All exposed pipe which passes through a wall, ceiling, or floor shall be provided with escutcheon plates.

6. Minimum Height: All exposed piping and devices shall be installed as high as possible, but no less than 7-feet 0-inches above the finished floor in traffic or working areas, and so as not to obstruct any portion of a window, doorway, stairway or passageway, and shall not interfere with the operation or accessibility of any mechanical, plumbing or electrical equipment.
7. Operating Chains: Valves controlling water supply to the sprinkler systems shall be less than 7-feet 0-inches above the finished floor when specifically approved by the Program/Project Manager. They may be higher if they are provided with operating chains.
8. Protection: The Contractor shall provide Program/Project Manager approved permanent protection for any installed piping, valves, devices or accessories which, in the Program/Project Manager's opinion, are subject to physical damage or may be hazards.
9. Firestopping: Pipe which passes through fire-resistive barriers shall be sleeved and grouted or sealed to maintain the integrity and rating of the fire resistive barrier. Material used for through penetration fire stopping shall be compatible with the sprinkler piping.
10. Testing: All piping is to be flushed and hydraulically tested prior to acceptance by Program/Project Manager. Flushing and testing shall be performed in accordance with NFPA 13. Above ground piping is not permitted to lose any pressure during the tests.
11. Contractor shall provide all equipment necessary for testing and flushing and any special equipment required for the installation of any portion of the specification and drawings. The Contractor is also responsible for removing all same equipment at the end of the job.
12. All piping 2-1/2" and larger shall be provided with labels at 20-foot intervals indicating sprinkler system piping.

B. Sway Bracing, Flexible Couplings, Hangers

1. All flexible couplings, hangers and sway bracing shall be designed and installed as required by NFPA 13 (including all appendices). Flexibility, internal pressure, and differential movement between the piping and building, earth, or other supporting structure(s) shall be allowed for, so that no allowable stress is exceeded in any member.

C. Interface with Other Work:

1. Cooperation with other trades: The sprinkler Contractor shall coordinate with the work of the other trades towards the general purpose of having the construction progress as rapidly and as smoothly as possible with a minimum of interference between trades.
2. Openings, cutting and patching: Before the start of Structural Work, the sprinkler Contractor shall submit instructions for openings and penetrations required for his work to the Program/Project Manager. Instructions shall be subject to the Program/Project Manager's approval. The Contractor shall provide any subsequent additional penetrations or openings or relocation required, but not delineated in his instructions at no additional cost to the Program/Project Manager.
3. Approval prior to installation: No work shall commence prior to approval of shop drawings by the Program/Project Manager. Any change in work which has been installed prior to approval of the shop drawings shall be made without additional compensation to the Contractor.

3.04 SYSTEM STARTUP

- A. Documents, including shop drawings, hydraulic calculations, and water flow test results shall be required for obtaining approval by the Program/Project Manager, the City of Phoenix Fire Department, Sky Harbor International Airport Aviation Department, and other authorities having jurisdiction.
- B. Prior to commencement and after completion of work, the Contractor shall provide written notification to the Program/Project Manager.
- C. The Contractor shall notify the Program/Project Manager in writing when the system is ready for the Demonstration Test and the Acceptance Test. Notification shall be a minimum of two (2) weeks in advance of the planned tests. The system shall be considered ready for the Demonstration Test, only after all preliminary tests have been made by the Contractor, and all deficiencies have been found and corrected. In addition, two (2) copies of the Contractor's Material and Test Certification for Above Ground Piping from NFPA 13 shall be submitted to the Program/Project Manager prior to the Demonstration Test.

3.05 CLEANING

- A. All equipment and materials prior to installation shall be clean inside and outside. All waste material such as chips, filings, welding stubs, dirt, rags, debris, and any other foreign material shall be removed from the components before assembly. All pipe coupons or punched holes shall be attached to the

pipe near the pipe hole. Caps shall be located over openings even during and after assembly to prevent foreign material from entering the pipe at any time. For example, pipe caps should be provided on all sprinkler extensions even when pipe is roughed in and sprinklers are not yet installed.

3.06 CLOSEOUT ACTIVITIES

A. Demonstration:

1. The Contractor shall make arrangements with the Program/Project Manager for final inspection and witnessing of the final acceptance tests. The Contractor will conduct the final inspection and witness the final acceptance test. This test shall be separate from testing by the local authorities. A full trip test of the deluge valve is required.
2. Required Tests: All tests and inspections required by the referenced Codes and Standards, the Phoenix Fire Department, and the Program/Project Manager shall be performed by the Contractor under this scope of work.
3. When local code authorities are required to witness tests, the Contractor shall be responsible for making all necessary arrangements with the code authorities and coordinating the work with the Program/Project Manager.
4. The Contractor shall be responsible for obtaining all test documents with necessary approval stamps and signatures of the code authorities. The Contractor shall submit one copy of each of these documents to the Program/Project Manager.
5. Pre-acceptance Testing: Upon completion of each installation phase, perform and document on an approved format, system tests as described herein. Tests shall be performed in the presence of the Owner or designed representative:
 - a. Hydrostatic tests;
 - b. Test of sprinkler supervisory system;
 - c. Full trip test
6. Contractor shall provide at least five (5) working days' notice for all tests.
7. Final Approval: Final approval and acceptance of the work will be given by the Program/Project Manager when:
 - a. The completed sprinkler systems have been inspected, tested and approved by the Program/Project Manager and the Phoenix Fire and Development Services Departments.

- b. Required submittals, system operation and maintenance manuals, record drawings, spare parts, special tools and training have been provided to, reviewed, and accepted by the Program/Project Manager.
 - c. Written certification is submitted that states all equipment is installed in accordance with the manufacturer's recommendations and UL or FM approvals. Additional Tests: Any additional tests, required by the referenced codes, standards, or criteria, or by the Program/Project Manager, shall be performed.
 - d. Additional Tests: Any additional tests, required by the referenced codes, standards, or criteria, or by the Program/Project Manager, shall be performed. This documentation shall include.
 - e. The date and time of each test.
 - f. A reference set of Contractor record drawings, numerically identifying the individual components.
 - g. A description of each test performed.
 - h. A completed NFPA 13 Test Document.
 - i. A checklist of each device tested, indicating the results of each test.
8. The final acceptance test shall Tests shall be performed in the presence of the Owner or designed representative, Phoenix Fire Department and Building Department:
- a. Hydrostatic tests;
 - b. Test of sprinkler supervisory system;
 - c. Full trip test

B. Training:

- 1. The Contractor shall conduct two (2) training sessions of four (4) hours each to familiarize the building personnel with the features, operation and maintenance of the sprinkler system. Training sessions shall be scheduled by the Program/Project Manager at a time mutually agreeable to the Contractor.
- 2. Final Agenda: The Contractor shall submit the final approved training agenda 14 days prior to the first training session.

SECTION 13968

CLEAN AGENT FIRE-EXTINGUISHING SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. New clean agent fire-extinguishing system (the system) for the MDF Room located in the GMP 3 Stage 1a Terminal 3.
- B. Products Installed But Not Supplied Under This Section:
 - 1. Door sweeps and related devices and room features used to make the protected space air tight.
- C. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 01810 - Commissioning.
 - 5. Section 02510 - Water Distribution.
 - 6. Section 07850 - Through Penetration Firestopping Systems.
 - 7. Section 09912 – Painting.
 - 8. Section 09960 - High-Performance Coatings.
 - 9. Section 13851 - Fire Alarm.
 - 10. Section 15995 - Commissioning of Mechanical Systems.
 - 11. Section 16995 - Commissioning of Electrical Systems.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. FACU – Fire Alarm Control Unit.
 - 2. GMP: Guaranteed Maximum Price.
 - 3. MSDS: Material Safety Data Sheet(s).
 - 4. NICET - National Institute for Certification in Engineering Technology.
 - 5. NRTL: Nationally Recognized Testing Laboratory.
 - 6. UL – Underwriter’s Laboratory, Inc.
 - 7. UL FPED – Underwriter’s Laboratory, Inc. Fire Protection Equipment Directory.

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
2. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.
3. Clean Agent: Electrically nonconducting, volatile, or gaseous fire extinguishment that does not leave residue upon evaporation. The word agent as used in NFPA 2001 means clean agent unless otherwise indicated.
4. FM 200® Suppression System: A fire suppression system that employs gaseous FM-200®, chemically known as heptafluoropropane, to inhibit the chain reaction of fuel, heat, and oxygen.
 - a. FM-200® is a registered trademark of Great Lakes Chemical Corporation.
5. The System: New clean agent fire-extinguishing system that includes the necessary detection devices, releasing panel, and agent storage container.
6. Unifier: The web based management software/database system the Phoenix Sky Harbor International Airport (PSHIA) uses to manage all correspondence, requests for interpretation (RFI), submittals, and similar information related to construction activities for the PHX Sky Train Project.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Prior to commencement and after completion of the Work of this Section, provide written notification to the Program/Project Manager.
 2. Coordinate with the Program/Project Manager, the Phoenix Sky Harbor International Airport, and others to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
 3. Coordinate the installation and testing of the system and the associated equipment and circuits with the appropriate Subcontractors, equipment

maintenance and testing representatives, the Sky Harbor International Airport Aviation Department, and the Authorities Having Jurisdiction.

- a. Coordinate the System Pre-Acceptance and the Final Acceptance Test of the system specified herein with the Program/Project Manager, the Sky Harbor International Airport Aviation Department, and other Authorities Having Jurisdiction (AHJ).
 - 1) At the time of notification, submit 1 copy of the approved Record Set of Drawings and the approved System Test Plan to the Program/Project Manager.
- b. Final Acceptance Test:
 - 1) In order to assure attendance at the Final Acceptance Test by the necessary representatives, provide reasonable notification of the test date to each representative scheduled to witness the test at least 48 hours prior to the test.
 - 2) Do not conduct this test until all parties agree on a test date.
4. Coordinate the networking of the system releasing panel to the new FACU.
5. Coordinate with the mechanical contractor for the installation of the fire smoke damper in the HVAC duct serving the room.
6. Coordinate with other trades on the installation of door sweeps, room seals, and penetration sealing.
7. Coordinate the dates and times of each required training session as specified herein through the Sky Harbor International Airport Aviation Department, not less than 2 weeks prior to the training session.
8. Conflicts Arising Due to Discrepancies between Documents:
 - a. Should conflicts arise due to discrepancies between documents referenced in this Section, the most stringent requirement applies; however, should a level of stringency be indeterminable, resolve the discrepancy as follows:
 - 1) The International Building Code (IBC), the International Fire Code (IFC), the National Fire Protection Association (NFPA) Standards, this Section shall take precedence over the Contract Drawings.
 - 2) The International Building Code (IBC) and the International Fire Code (IFC) take precedence over the National Fire Protection Association (NFPA) Standards, this Section, and the Contract Drawings.
 - 3) The National Fire Protection Association (NFPA) Standards shall take precedence over, this Section, and the Contract Drawings.
 - 4) This Section takes precedence over the Contract Drawings.

B. Sequencing:

1. Complete all component installation, and coordination of wiring, circuit testing in time so the fire alarm equipment Supplier can make the final connections and conduct tests of the fire alarm system as specified other sections without delaying the Work.

C. Scheduling:

1. Prior to beginning the Work of this Section, submit a schedule indicating the system installation sequence and time frame to the Program/Project Manager for approval.
 - a. Include specific time lines indicating the start and completion of major portions of the system installation.
 - b. Indicate the delivery dates of the equipment to be supplied.
 - c. Indicate the dates for the system Pre-Acceptance and the Final Acceptance Test specified herein.
2. Provide weekly schedule updates to the Program/Project Manager for approval.
3. Advise the Program/Project Manager of all anticipated projects the Contractor and the equipment Supplier may have with the same approximate completion date as this Contract, and what impact those projects may have on the timely completion of this Contract.

1.04 SYSTEM DESCRIPTION

A. Design Requirements:

1. The system shall provide a design concentration of 7% by volume for Class A hazards and a minimum of 5.85% by volume for Class B hazards in all areas and/or protected spaces, at the minimum anticipated temperature within the protected area. System design shall not exceed 10% for normally occupied spaces, adjusted for maximum space temperature anticipated, with provisions for room evacuation before agent release.

1.05 SUBMITTALS

A. Informational Submittals:

- a. Prior to performing any work, submit the following Contractor documentation in addition to those documents required elsewhere in this specification.
- b. Written confirmation of how the manufacturer/supplier plans to comply with the performance operational design of the system and all pertinent information regarding the reliability and operation of the equipment to be supplied.

B. Maintenance Material Submittals:

- 1) Provide per unit costs for additional devices and appliances to the Program/Project Manager with firm prices maintained for one year beyond the duration of the manufacturer's warranty period as specified herein.

C. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Original manufacturer's specification sheets.
 - b. Shop Drawings:
 - 1) Shop Drawings of the system.
 - 2) Working Drawings for installation of the system.
 - 3) Hydraulic/Phase Calculations.
 - c. Certificates:
 - 1) Project supervisor NICET certificate.
 - 2) Shop drawing technician NICET certificate.
 - d. Delegated Design Submittals:
 - 1) Preliminary Equipment List.
 - 2) Sequence of operation.
 - 3) Schedule indicating the installation sequence and time frame, and weekly schedule updates.
 - e. Special Procedure Submittals:
 - 1) System Test Plan.
 - f. Qualification Statements:
 - 1) System installer's qualifications.

D. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Maintenance Contracts:
 - 1) Firm fixed price for a year maintenance contract.
 - b. Operation and Maintenance Data:
 - 1) Suggested spare parts list of replacement system parts.
 - c. Warranty Documentation:
 - 1) System Materials Warranty.
 - 2) System Workmanship Warranty.
 - d. Record Documentation:
 - 1) Record Set of Drawings for the system.

E. Maintenance Material Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish one (1) ionization and one (1) photoelectric smoke detector.
 - 2) Furnish one "FM-200" strobe notification appliance.

1.06 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Authorities Having Jurisdiction:
 - a. To obtain approval of the system by the Program/Project Manager and the Authorities Having Jurisdiction, documents including Shop Drawings and material specifications prepared according to the requirements specified in NFPA 2001 are required.
 - b. Shop drawings shall be submitted to the Annual Facilities Permit program to the attention of Mary Schilling for review and approval.

B. Qualifications:

1. System Installer's Qualifications:
 - a. Employ a firm that is licensed in the State of Arizona, and that has a minimum of 5 years of documented experience installing fire sprinkler and standpipe systems similar in type to those required for this Contract.
 - b. Employ a firm that has installed clean agent systems for projects similar in scope to this Contract, and that has obtained design and inspection approvals for similar projects from the Authorities Having Jurisdiction.
 - c. Submit the qualifications of the proposed system installer and the resume of the proposed system installer's foreman and Project Manager-assigned to this Contract to the Program/Project Manager for approval.
 - 1) Include the number of years the proposed system installer has been in business, and their service policies, warranty definitions, and prior experience with installations that include the type of equipment that is to be supplied under this Contract.
 - a) Furnish a list of at least 3 installations similar in scope to this Contract, including the addresses of the properties, contact names, telephone numbers, and the types of system equipment installed.
 - 2) Include proposed system installer's personnel and company contact information.

- d. Nonconformance of the proposed system installer's qualifications with the qualifications specified in this Section are cause for immediate elimination of the proposed system installer without further comment.
 - e. Do not replace an approved system installer or the approved system installer's foreman without the written approval of the Program/Project Manager.
 - 1) No requested change in Subcontractor will be accepted unless justification is made in writing to the Program/Project Manager and approved.
 - a) Upon written request, the Program/Project Manager may authorize changes, but the decision to do so is at the sole choice and discretion of the Program/Project Manager.
2. System Technical Representative's Qualifications:
- a. To supervise the field installation of the system provided under this Contract, employ a trained and qualified technical representative who, at a minimum, holds a current NICET Level II Fire Protection Engineering Technology Special Hazard Fire Suppression Certification.
 - b. Submit the name and qualifications of the proposed system technical representative who will be in responsible charge of the installation of the system under this Contract to the Program/Project Manager for approval.
 - c. Do not replace an approved system technical representative without the written approval of the Program/Project Manager.
 - d. The specified system Shop Drawings and calculations must be prepared by a certified technician holding at a minimum NICET Level III Fire Protection Engineering Technology Special Hazard Fire Suppression Certification.
 - 1) Sufficient information to describe their qualifications, the work efforts to be performed, and the materials to be provided, including the names and qualifications of the Contractor's and the equipment Supplier's Project Manager who shall be in responsible charge during the entire project installation.

C. Certifications:

- 1. Listing and Labeling of Components, Devices, and Accessories:
 - a. Provide products listed in the UL Fire Protection Equipment Directory (UL FPED) and that are labeled with their intended use or classification.
 - 1) For major sections of the system, partial listings or multiple listings are unacceptable.

- 2) If a UL listing for a specific device is unavailable, products approved by FM Approvals LLC (FM) or another nationally recognized testing laboratory (NRTL) acceptable to the Sky Harbor International Airport Aviation Department will be acceptable.
- 3) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Storage and Handling Requirements:
 1. Store and handle all equipment, devices, appliances, and other equipment and materials in accordance with the manufacturer's requirements.
 2. At the very least materials shall be stored in a neat and clean location that is protected from the elements and damage.
- B. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.08 WARRANTY

- A. Manufacturer Warranty:
 1. Have the manufacturer or the manufacturer's authorized representative warrant the new FM200 system materials against defects in material within the 2-year period after the date of Substantial Completion or acceptance by the Program/Project Manager.
 - a. Submit a written FM200 Materials Warranty, without monetary limitation, in which the manufacturer agrees to replace components of the new combination wet-pipe fire suppression sprinkler system that fail in materials within the specified warranty period to the Program/Project Manager for approval.

B. Special Warranty:

1. Warrant the FM200 system installed under this Contract against defects in workmanship and inherent mechanical and electrical defects within the 1-year period after the date of Substantial Completion or acceptance by the Program/Project Manager.
 - a. After the installation of the FM200 system, submit a signed written statement, substantially in the format that follows, to the Program/Project Manager:
 - 1) "The undersigned, having been engaged as the Contractor for Contract 131403 of the Phoenix Sky Train Project located in Phoenix, Arizona, confirms that the combination wet pipe fire sprinkler standpipe system equipment provided under the Contract has been installed in accordance with the approved system Shop Drawings, the manufacturer's installation instructions and technical specifications; and the Contract Documents."
 - b. Submit a written FM200 System Workmanship Warranty, without monetary limitation, in which the Contractor agrees to repair or replace components of the new FM200 system installed under this Contract that fail in workmanship or exhibit inherent mechanical and/or electrical defects within the specified warranty period to the Program/Project Manager for approval.

- C. Indicate service work not included in the warranty, and furnish a price for providing a service contract to cover the work not covered by the warranty.

PART 2 PRODUCTS

2.01 CONTRACTOR-FURNISHED PRODUCTS

A. New Products:

1. The system shall be a FM 200 Fire Suppression System supplied by a licensed distributor.
2. The system shall be complete in all ways. It shall include a mechanical and electrical installation, all detection and control equipment, addressable fire alarm control unit releasing panel, agent storage containers, agent, discharge nozzles, pipe and fittings, manual release and abort stations, audible and visual alarm devices, auxiliary devices and controls, shutdowns, alarm interface, advisory signs, functional checkout and testing, training and any other operations necessary for a functional UL listed Clean Agent suppression system.
3. The fire alarm control unit releasing panel shall be compatible with the Stage 1a GMP 3 Terminal 3 Fire Alarm Control Unit.

4. The Project/Program Manager shall be responsible for sealing and securing the protected spaces against agent loss and/or leakage during the 10-minute "hold" period.
5. The system(s) shall be actuated by a combination of ionization and photoelectric detectors installed for maximum area coverage of 450 sq. ft. (23.2 m) per detector.
6. Detectors shall be Cross-Zoned detection requiring two separate detector types to be in alarm before release.
7. Automatic operation of the protected area shall be as follows:
 - a. Actuation of one (1) fire detector, within the protected area, shall:
 - 1) Illuminate the "ALARM" lamp on the releasing control panel face.
 - 2) Energize the "FM-200" notification appliance.
 - 3) Actuate a pulse-tone audible alarm from the "FM-200" notification appliance.
 - 4) Transfer auxiliary contacts, which can perform auxiliary system functions such as: Operate door holder/closures on access doors; Transmit a signal to a fire alarm system; Shutdown HVAC equipment, and damper closure.
 - b. Actuation of a 2nd, cross-zoned fire detector or manual pull release station, within the protected area, shall:
 - 1) Illuminate the "PRE-DISCHARGE" lamp on the releasing control panel face.
 - 2) Actuate a steady-tone audible alarm from the "FM-200" notification appliance.
 - 3) Shut down the HVAC system.
 - 4) Start time-delay sequence (not to exceed 30 seconds).
 - 5) System abort sequence is enabled at this time.
 - c. After completion of the time-delay sequence, the Clean Agent system shall discharge and the following shall occur.
 - 1) Illuminate a "SYSTEM FIRED" lamp on the control panel face.
 - 2) Energize a visual indicator(s) outside the hazard in which the discharge occurred.
 - 3) Energize a "System Fired" horn/strobe.
 - d. The system shall be capable of being actuated by manual discharge devices located at the protected space exit. Operation of a manual device shall duplicate the sequence description above except that the time delay and abort functions shall be bypassed. The manual discharge station shall be of the electrical actuation type and shall be supervised at the main control panel.

B. Manufacturers:

1. Manufacturer List:

a. General Requirements

- 1) The Clean Agent system materials and equipment shall be standard products of the supplier's latest design and suitable to perform all functions intended. When one or more pieces of equipment must perform the same function(s), they shall be duplicates produced by one manufacturer.
- 2) The system design can be modular, central storage, or a combination of both design criteria.
- 3) Systems shall be designed in accordance with the manufacturer's guidelines.
- 4) Each supply shall be located within the hazard area, or as near as possible, to reduce the amount of pipe and fittings required to install the system.
- 5) The clean agent shall be stored in Clean Agent storage tanks. Tanks shall be super-pressurized with dry nitrogen to an operating pressure of 360 psi @ 70 °F (24.8 bar at 21 °C). Tanks shall be of high-strength low alloy steel construction and conforming to NFPA 2001.
- 6) Each tank shall have a pressure gauge and low pressure switch (optional) to provide visual and electrical supervision of the container pressure. The low-pressure switch shall be wired to the control panel to provide audible and visual "Trouble" alarms in the event the container pressure drops below 290 psi (20 bar). The pressure gauge shall be color coded to provide an easy, visual indication of container pressure.
- 7) Tanks shall have a pressure relief provision that automatically operates before the internal nominal pressure exceeds 730 psi (50 bar).
- 8) Engineered discharge nozzles shall be provided within the manufacturer's guidelines to distribute the clean agent throughout the protected spaces. The nozzles shall be designed to provide proper agent quantity and distribution. Nozzles shall be available in 1/2 in. through 2 in. pipe sizes. Each size shall be available in 180° and 360° distribution patterns.
- 9) Distribution piping and fittings shall be installed in accordance with the manufacturer's requirements, NFPA 2001, and approved piping standards and guidelines. All distribution piping shall be installed by qualified individuals using accepted practices and quality procedures. All piping shall be adequately supported and anchored at all directional changes and nozzle locations.

- b. The fire suppression agent shall be FM 200 Fire Protection Fluid.

- c. The detection control system and its components shall be UL listed and FM approved for use as a local releasing panel. The panel shall be compatible and able to be networked with the Stage 1a GMP 3 Terminal 3 FACU.
- d. The control system shall perform all functions necessary to operate the system detection, actuation, and auxiliary functions.
- e. The control system shall be microprocessor based, utilizing a distributed processing concept. A single microprocessor failure shall not impact operation of additional modules in the system.
- f. The control system shall be capable of supporting Cross Zoned Detection.
 - 1) The control system shall supply integrated 2.0 amp (minimum) power supply circuitry.
- g. Each control system shall contain release circuits for activation of a fire suppression system(s).
 - 1) Each circuit shall be capable of Class A operation.
 - 2) Each circuit shall be rated for a minimum of 1.5 amp @ 24 VDC.
- h. Each control system shall contain two (2) indicating appliance circuits for annunciation.
 - 1) Each circuit shall be capable of Class A operation.
 - 2) Each circuit shall be rated for a minimum of 1.5 amp @ 24 VDC.
- i. Each control system shall provide an auxiliary power supply rated for 2 amps @ 24 VDC.
- j. Each control system shall provide two (2) SPST relays: one for common alarm and one for common trouble. Four (4) additional programmable relays can be added to each control system by adding a relay module.
- k. The detectors shall be spaced and installed in accordance with the manufacturer's specifications and the guidelines of NFPA 72.
- l. The electric manual release shall be a dual action device which provides a means of manually discharging the suppression system when used in conjunction with the detection system.
- m. The manual release or manual pull station shall be a dual action device requiring two distinct operations to initiate a system actuation.
- n. Manual actuation shall bypass the time delay and abort functions and shall cause all release and shutdown devices to operate in the same manner as if the system had operated automatically.
- o. Manual release shall be located at each exit from the protected hazard.
- p. The abort station shall be the "Dead Man" type and shall be located next to each manual release station.

- q. The abort station shall be supervised and shall indicate a trouble condition at the FM-200 control panel and the station FACU, if depressed, and no alarm condition exists.
 - 1) Locking or Keyed abort stations shall not be permitted.
- r. Alarm audible and visual signal devices shall operate from the control panel.
- s. The visual alarm unit shall be a strobe device.
- t. A strobe device shall be placed outside, and above, each exit door from the protected space. Provide an advisory sign at each light location.
- u. Signs shall be provided to comply with NFPA 2001 and the recommendations of the FM 200 equipment provider.
- v. Entrance sign: (1) required at each entrance to a protected space.
- w. Manual discharge sign: (1) required at each manual release station
Flashing light sign: (1) required at each flashing light over each exit from a protected space.
- 2. System and Control Wiring
 - a. All system wiring shall be furnished and installed by the contractor.
 - b. All wiring shall be installed in electrical metallic tubing (EMT), or conduit, and must be installed and kept separate from all other building wiring.
 - c. All system components shall be securely supported independent of the wiring. Runs of conduit and wiring shall be straight, neatly arranged, properly supported, and installed parallel and perpendicular to walls and partitions.
 - d. The sizes of the conductors shall be those specified by the manufacturer. Color-coded wire shall be used. All wires shall be tagged at all junction points and shall be free from shorts, earth connections (unless so noted on the system drawings), and crosses between conductors. Final terminations between the control panel and the system field wiring shall be made under the direct supervision of a factory-trained representative.
 - e. All wiring shall be installed by qualified individuals, in a neat and workmanlike manner, to conform to the National Electrical Code, Article 725 and Article 760, except as otherwise permitted for limited energy circuits, as described in NFPA 72. Wiring installation shall meet all local, state, province, and/or country codes.
 - f. The complete system electrical installation and all auxiliary components shall be connected to earth ground in accordance with the National Electrical Code.
- 3. Substitution Limitations:

- a. No substitutions are permitted unless approved in writing by the Program/Project Manager.
- C. Finishes:
 - 1. Shop Finishing Methods:
 - a. The paint color and finish of all materials shall be approved in writing by the Project/Program Manager.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. It shall be the Contractor's responsibility to inspect the drawings and become familiar with the conditions under which the work will be performed.
 - 2. Cooperation with other trades: The clean agent Contractor shall coordinate with the work of the other trades towards the general purpose of having the construction progress as rapidly and as smoothly as possible with a minimum of interference between trades.
 - 3. Openings, cutting and patching: Before the start of Structural Work, the Contractor shall submit instructions for openings and penetrations required for his work to the Program/Project Manager. Instructions shall be subject to the Program/Project Manager's approval. The Contractor shall provide any subsequent additional penetrations or openings or relocation required, but not delineated in his instructions at no additional cost to the Program/Project Manager.
 - 4. Approval prior to installation: No work shall commence prior to approval of shop drawings by the Program/Project Manager. Any change in work which has been installed prior to approval of the shop drawings shall be made without additional compensation to the Contractor.
 - 5. All materials will be stored in a proper manner so they are not subject to damage, moisture, or other reasonable unforeseen circumstances.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Aesthetics shall be a primary consideration when installing the system piping. Any facet of the system installation that does not meet with the Program/Project Manager's approval shall be revised by the Contractor to the Program/Project Manager's satisfaction.

2. Holes: All holes made by the Contractor in any wall, ceiling, or floor shall be patched by the Contractor, restoring the wall, ceiling, floor or member to its original condition, fire resistance, and integrity.
3. General Locations: Location of all equipment, controls, piping, valves and drains shall be subject to Owner's approval.
4. Special Installation Instructions: All sprinklers and equipment shall be installed in accordance with manufacturer's instructions. All special tools recommended by the manufacturer shall be used.

B. Surface Preparation:

1. Remove all scale and foreign debris from the system piping. No damaged system components are permitted to be installed. No system components are permitted to be installed where there is evidence of manufacturer defect.

3.03 INSTALLATION

A. After the system installation has been completed, the entire system shall be checked out, inspected, and functionally tested by qualified, trained personnel, in accordance with the manufacturer's recommended procedures and NFPA standards.

1. All containers and distribution piping shall be checked for proper mounting and installation.
2. All electrical wiring shall be tested for proper connection, continuity and resistance to earth.
3. The complete system shall be functionally tested in the presence of the Project/Program Manager or his or her representative and related authorities having jurisdiction. All functions, including system and equipment interlocks, must be operational at least five (5) days prior to the final acceptance tests.
4. Each detector shall be tested in accordance with the manufacturer's recommended procedures and test values recorded.
5. All system and equipment interlocks, such as door release devices, audible and visual devices, equipment shutdowns, and local and remote alarms shall function as required and designed.
6. Each control panel circuit shall be tested for trouble by inducing a trouble condition into the system.

B. Systems Integration:

1. Integrate FM-200 system with the Stage 1a GMP 3 Terminal 3 fire detection and alarm system. Alarm and Trouble signals from the FM-200 control unit shall be transmitted to the command center in Terminal 3.

3.04 SYSTEM STARTUP

- A. Upon completion of the installation of each system and a minimum of one (1) week prior to the Pre-Acceptance Test, the FM-200 Contractor shall deliver two (2) complete sets of the Test Plan to the Project/Program Manager, which shall describe how the system shall be tested. This shall include a step-by-step description of all tests and shall indicate type and location of test apparatus to be employed. All tests shall be conducted in the presence of the Program/Project Manager and other parties identified and shall not be conducted until the "Test Plan" is approved.
- B. The Project/Program Manager shall provide three (3) complete indexed bound sets of the Operating and Maintenance (O&M) manual, as outlined in NFPA 2001, a minimum of two (2) week prior to the Pre-Acceptance Test of the system. These O&M manuals shall include the following:
 - a. The final Equipment List identifying the quantities and types of equipment listed by manufacturer's part number.
 - b. A detailed narrative description of the system inputs, evacuation signaling, ancillary functions, annunciation, intended sequence of operations, expansion capability, application considerations, and limitations.
 - c. An equipment datasheet (or specification sheet) on every piece of Clean Agent Suppression System equipment installed.
 - d. Operator instructions for basic system operations, including alarm acknowledgement, system reset, interpretation of system output, operation of manual evacuation signaling and ancillary function controls.
 - e. Standby power calculations and voltage drop calculations that accurately reflect with the equipment that has been installed in the building.
 - f. A point ID list referencing the signaling line circuit loops and the devices on those loops.
 - g. A sensitivity report for all smoke detectors at the time of acceptance.
 - h. The results of the testing of all wiring free from faults, as specified in this specification.
 - i. A detailed description of routine maintenance and testing as required and recommended and as would be provided under a maintenance contract, including testing and maintenance instructions for each type of device installed.
 - 1) This information shall include manuals that outline inspection, testing and cleaning procedures for all detectors and control equipment, as well as any other special maintenance procedures

- for any other pieces of Clean Agent Suppression System equipment installed in the building.
- 2) Detailed troubleshooting instructions for each trouble condition generated from the monitored field wiring, including opens, grounds, and loop failures.
 - 3) These instructions shall include a list of all trouble signals annunciated by the system, a description of the condition(s) that causes such trouble signals, and step-by-step instructions describing how to isolate such problems and correct them (or how to call for service, as appropriate).
- C. A service directory, including a list of names and telephone numbers of those who provide service for the system.

3.05 CLOSEOUT ACTIVITIES

- A. Pre-Acceptance Test:
1. Test Procedure:
 - a. The tests shall demonstrate that the entire control system functions as designed and intended. All circuits shall be tested: automatic actuation and manual actuation, HVAC and power shutdowns, audible and visual alarm devices, and manual override of abort functions. Supervision of all panel circuits, including AC power and battery power supplies, shall be tested and qualified.
 - 1) A room pressurization test shall be conducted in each protected space to determine the presence of openings, which would affect the agent concentration levels. The test(s) shall be conducted using the Retro- Tec Corp. Door Fan system, or equivalent, with integrated computer program. All testing shall be in accordance with NFPA 2001.
 - 2) If room pressurization testing indicates that openings exist which would result in leaks and/or loss of the extinguishing agent, the installing contractor shall be responsible for coordinating the proper sealing of the protected space(s) by the Project/Program Manager or his or her sub-contractor or agent. The Project/Program Manager shall be responsible for adequately sealing all protected space(s) against agent loss or leakage. The installing contractor shall coordinate an inspection all work to ascertain that the protected space(s) have been adequately and properly sealed. If the first room pressurization test is not successful, in accordance with these specifications, the installing Contractor shall deliver the test results to the Program/Project Manager and assist in determining the cause of the test failure.

The installing Contractor shall conduct additional room pressurization tests, at no additional cost to the Program/Project Manager, until a successful test is obtained. Copies of successful test results shall be submitted to the Program/Project Manager for his record. Upon acceptance by the Program/Project Manager, the completed system(s) shall be placed into service.

B. Final Acceptance Test

1. The final acceptance tests shall demonstrate that the entire control system functions as designed and intended. All circuits shall be tested: automatic actuation and manual actuation, HVAC and power shutdowns, audible and visual alarm devices, and manual override of abort functions. Supervision of all panel circuits, including AC power and battery power supplies, shall be tested and qualified.
 - a. A room pressurization test shall be conducted in each protected space to determine the presence of openings, which would affect the agent concentration levels. The test(s) shall be conducted using the Retro-Tec Corp. Door Fan system, or equivalent, with integrated computer program. All testing shall be in accordance with NFPA 2001.
 - b. The test shall be conducted in the presence of the Program/Project Manager and Authorities Having Jurisdiction.
2. If room pressurization testing indicates that openings exist which would result in leaks and/or loss of the extinguishing agent, the installing Contractor shall be responsible for coordinating the proper sealing of the protected space(s) by the Project/Program Manager or his or her Subcontractor or agent. The Project/Program Manager shall be responsible for adequately sealing all protected space(s) against agent loss or leakage. The installing Contractor shall coordinate an inspection of all work to ascertain that the protected space(s) have been adequately and properly sealed. If the first room pressurization test is not successful, in accordance with these specifications, the installing Contractor shall deliver the test results to the Program/Project Manager and assist in determining the cause of the test failure. The installing Contractor shall conduct additional room pressurization tests, at no additional cost to the Program/Project Manager, until a successful test is obtained. Copies of successful test results shall be submitted to the Program/Project Manager for his record. Upon acceptance by the Program/Project Manager, the completed system(s) shall be placed into service.

3.06 TRAINING:

- A. Prior to final acceptance, the installing contractor shall provide operational training to each shift of the Owner's personnel. Each training session shall

include control panel operation, manual and (optional) abort functions, trouble procedures, supervisory procedures, auxiliary functions and emergency procedures

SECTION 14215

MACHINE ROOM-LESS ELEVATORS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. All Documents and related specification sections associated with these elevators included in Package B01

1.02 GENERAL DESCRIPTION:

- A. Duplex Passenger Elevators and Simplex Passenger Elevator with adjacent or remote controllers as shown on the contract documents.
- B. Provide all engineering, equipment, labor and permits required to satisfactorily complete design, fabrication, installation, testing and commissioning of five (5) elevator installations as required by contract documents for Machine Room-Less elevators at the 24th Street Station and Rental Car Center Station at Phoenix Sky Harbor International Airport. The components provided shall comply with heavy duty transit APTA guidelines as specified herein.
- C. The Installer is to ensure that all work is performed in accordance with the requirements of local codes and regulations, which govern the requirements of the work specified. All equipment, design, clearances, construction, operation and tests are required to be in accordance with these specifications and the ASME/ANSI A17.1 - Safety Code for Elevators and Elevators and all pertinent codes, regulations and rules being enforced by the City of Phoenix Planning and Developmental Services.
- D. The Installer is required to perform thorough field surveys in addition to providing all engineering, labor, materials, storage, tools, equipment, supervision and transportation in order to fulfill the requirements for design, engineering, fabrication, and installation of the elevator equipment in a complete first-class manner and in accordance with the requirements of the contract documents.
- E. Whenever a reference is made to a part of the equipment being provided in a singular number, it applies to as many such items that may be required to provide a complete installation.
- F. Any equipment not specifically identified within the contract documents but that is essential to the Code and contractual compliant installation and operation of the equipment specified herein is to be provided by the Contractor as if the same was identified in the specification.

- G. Specifications indicate the arrangement of the elevator work to be provided. The Installer is to carefully review these documents along with field conditions and the overall design of the project, as the Installer will be responsible for the proper fitting and installation of the equipment specified. Contractor is required to work closely with the Program/Project Manager.
- H. Provide all required staging, hoisting, hoist/safety beams, and equipment necessary for the movement of equipment.
- I. Transportation and Handling: Materials, products and equipment shall be properly packaged and protected from damage during transportation, storage and handling. Coordinate delivery and movement of large items in the Phoenix Sky Harbor International Airport facilities with City of Phoenix Aviation Department.
- J. Product Delivery, Storage and Handling:
 - 1. Deliver material in manufacturer's original, unopened protective packaging.
 - 2. Protect equipment and exposed finished from damage and stains during transportation, erection and construction.
 - 3. Available storage space at the site is limited. Any additional off-site space required, including cost, is responsibility of the Installer.
 - 4. Locate available site storage areas and coordinate use with City of Phoenix Aviation Department and the work of other contractors.
 - 5. Provide suitable temporary weather-tight storage facilities as may be required for materials that will be stored in the open.
- K. Installer is to provide any and all information as required for the appropriate coordination of work to be performed by other trades. Address any possible impacts on the installation schedule.
- L. Commissioning Requirements: Completion of the elevator work requires of the Installer to have the equipment completely inspected in accordance with the specifications in order to demonstrate that the equipment, as installed, conforms to the specifications and code requirements. All labor, tools and equipment necessary to conduct the onsite commissioning inspections and testing are the responsibility of the Installer. The commissioning inspections and tests will be performed by the Program/Project Manager prior to the inspection by the City of Phoenix Elevator Inspector.
- M. The Installer has no advertising privileges related to this project unless specific written permission is obtained from the owner. Installer is required to maintain the work area free from any and all posters, signs and decorations. Installer's name, trademarks, logos or other identifying symbols are not to appear on any surface on the equipment visible to the general public.

1.03 DEFINITIONS:

- A. Elevator, Passenger: An elevator used primarily to carry persons other than the operator and persons necessary for loading and unloading.
- B. Elevator, Gearless: A traction machine, without intermediate gearing, that has the traction sheave and the brake drum mounted directly on the motor shaft.
- C. Defective Elevator Work: Operation or control system failure, including excessive malfunctions; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; the need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.
- D. Dwell Time: The period of time the elevator is at a landing while the doors open, passengers transfer and doors close.
- E. Installer: The installer is the contractor, or subcontractor, responsible for furnishing and installing the elevators. For this project it will be the Vertical Transportation Equipment Supplier.
- F. Contractor: Any responsible party involved in the installation other than the installer of the elevators. For this project it will be considered the CM@Risk.
- G. Program/Project Manager: This is considered the Vertical Transportation Design Professional for the project. He will be responsible for design coordination, submittal review, construction support/inspection services, and commissioning on behalf of the Owner.
- H. APTA – American Public Transit Association

1.04 TEMPORARY AND PERMANENT ELECTRICAL POWER SERVICES TO BE PROVIDED BY OTHERS

- A. Temporary power for installation shall be made available to Installer at the time of the installation. Permanent power shall be made available for testing. All power shall be provided at no cost to Installer.
- B. For elevator drive systems: 480 volts, 3-phase, 3-wire, 60 Hertz terminating in a disconnect switch within sight of the controller.
- C. For lighting and GFCI receptacles: 120 volts, 1-phase, 3-wire, 60 Hertz terminating at the elevator controller location.
- D. Separate disconnect for cab lighting and wiring to cab: 120 volts, 1-phase, 3-wire, 60 Hertz terminating in a disconnect switch within sight of the controller.

1.05 APPLICABLE CODES, STANDARDS, AND PUBLICATIONS:

- A. Elevators designs and installations shall comply with the following.
1. ASME A17.1 - Safety Code for Elevators and Escalators; applicable edition
 2. ASME A17.2 - Guide for Inspection of Elevators, Escalators, and Moving Walks; applicable edition
 3. ASME A17.5 – Elevator and Escalator Electrical Equipment, applicable edition.
 4. European Norm – EN 115
 5. Local Fire jurisdiction
 6. Life Safety Code, NFPA 101
 7. Uniform Federal Accessibility Standard (UFAS)
 8. ASTM A 36/A 36M - Standard Specification for Carbon Structural Steel; applicable edition
 9. ASTM A 325 - Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength; applicable edition
 10. ASTM A 325M - Standard Specification for High-Strength Bolts for Structural Steel Joints (Metric); applicable edition
 11. ASTM A 490 - Standard Specification for Structural Bolts, Alloy Steel, Heat Treated, 150 ksi Minimum Tensile Strength; applicable edition
 12. ASTM A 490M - Standard Specification for High-Strength Steel Bolts, Classes 10.9 and 10.9.3, for Structural Steel Joints (Metric); applicable edition
 13. ASTM A 500 - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes; applicable edition
 14. ASTM A 501 - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing; applicable edition
 15. ASTM A 666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless-Steel Sheet, Strip, Plate, and Flat Bar; applicable edition
 16. ASTM B 138/B 138M - Standard Specification for Manganese Bronze Rod, Bar, and Shapes; applicable edition
 17. ASTM B 209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; applicable edition
 18. ASTM B 209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate (Metric); applicable edition
 19. ASTM B 221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; applicable edition
 20. ASTM B 221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric); applicable edition
 21. ASTM C 1048 - Standard Specification for Heat-Treated Flat Glass--Kind HS, Kind FT Coated and Uncoated Glass; applicable edition
 22. AWS D1.1 - Structural Welding Code - Steel; applicable edition
 23. NFPA 70 - National Electrical Code; applicable edition

24. UL (ECMD) - Electrical Construction Materials Directory; current edition
25. ANSI Y14.3 Multi and Sectional View Drawings
26. International Building Code, applicable edition
27. Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG)
28. American Public Transit Association (APTA) Low and Mid-Rise Elevator Guidelines
29. AFBMA (Anti-Friction Bearing Manufacturers Association) – Std. 9 and 11

- B. Specifications and references contained within this section are not to be construed as supplanting any code requirements governing the design, fabrication, installation or operation of the equipment.
- C. The most stringent requirement shall take precedent in case of a conflict between codes, regulations or standards incorporated into this section.
- D. Any specific provision cited herein and/or shown on the contract documents shall govern for the specified application.
- E. The Installer shall be licensed and strictly governed by local and governmental authorities of this area in order to perform this work.

1.06 DESIGN CRITERIA:

- A. General
 1. Elevators shall be designed with provisions for thermal expansion and contraction of complete elevator systems. They shall be designed to meet the operating and performance requirements of these specifications, to fit within the spaces provided, and to comply with all Code requirements.
- B. Operational Requirements
 1. Hours of operation shall be considered as twenty-four (24) hours per day, seven (7) days per week.
 2. Elevator components shall be designed based on the following applied duty cycle during operation:
 - a. Two separate three (3) hour periods with 90% rated load (total 6 hours).
 - b. Eighteen (18) hours with 50% rated load.
 3. Maximum dwell time per landing in these calculations shall be no more than 10 seconds.
- C. Environmental Requirements
 1. General: Elevator shall be capable of operating with full-specified performance capability while exposed to the following climatic and environmental conditions.
 - a. Interior installations: Elevators shall be designed to operate in a temperature range of plus (+5) to plus one hundred and twenty

(+120) degrees Fahrenheit, dry bulb; and all conditions of relative humidity while exposed to airborne dust and debris.

- D. Seismic Zone Requirements: The elevator shall be designed to comply with seismic zone 2 requirements of ASME A17.1-2010 regardless of edition of ASME A17.1 approved for this project. The sole exception to this requirement is where the Owner has designed the structure for a more stringent seismic requirement.
- E. Fasteners:
 - 1. Fasteners shall be compatible with materials being fastened
 - 2. Fasteners shall be furnished with self-locking nuts or retaining rings (spring washers, toothed disks).
 - 3. Fasteners shall be equal to or of greater corrosion resistance than the most corrosion resistant metals being fastened.
- F. Bearings
 - 1. Bearings shall be rated for an AFBMA L10 life as specified, under a fluctuating bearing load. All bearings shall have dynamic load ratings.

1.07 SUBMITTALS

- A. General: Submittal shall contain sufficient detail to show full compliance with Contract Documents.
- B. Product Data:
 - 1. Submit expected heat dissipation of elevator equipment in controller room and overhead machine space (i.e. BTUs/hr).
 - 2. Submit manufacturer's product data for each product and material
 - 3. Indicate manufacturer, trade names, and model numbers, components, arrangement, optional and accessories being provided.
 - 4. Include applicable literature, catalog material or technical brochures.
 - 5. Include material and equipment specifications, sizes, types, dimensions, weights, rated capacities, and performance curves.
 - 6. Include utility requirements for wiring, piping, and service connection data, motor sizes complete with electrical characteristics.
- C. Shop Drawings: Information to be provided to Program/Project Manager will include but not be limited to the following:
 - 1. Six (6) copies of the layout and shop drawings shall be provided by the Contractor for review within three weeks of notice to proceed.
 - 2. All drawings, views and details shall be developed and presented in accordance with ANSI Y14.3 Multi and Sectional View Drawings.
 - 3. Drawings shall clearly reflect dimensional data for elevator hoistways including cross references to building column lines and finish elevations depicted in the Contract Documents.

4. Elevator layout shall be shown in three orthogonal views and shall include key dimensions, support details, power connection locations and power connection terminal points.
5. Shop drawings: Six (6) copies of the shop drawings shall be provided by the Installer. Submit approval layout drawings to scale. Drawings shall include, but not be limited to the following:
 - a. Car, counterweight, guide rails, buffers, machine, governor and other components in hoistway
 - b. Maximum rail bracket spacing.
 - c. Maximum loads imposed on guide rails requiring load transfer to the building structure
 - d. Loads on hoisting beams.
 - e. Clearances and travel of car and counterweight run-by.
 - f. Clear inside hoistway and pit dimensions.
 - g. Location and sizes of access doors, hoistway entrances and frames.
 - h. Car & Hall signal and operating fixtures.
 - i. Remote wiring layouts for each elevator.
 - j. Refuge space on top of car and pit.
 - k. Control room, machine area, pit and hoistway layout.
 - l. Cab design, dimensions and layout.
 - m. Hoistway-door and frame details
6. Complete assembly detail of machine, machine mounting, machine beam assembly, dead end hitch and beam assemblies, governors, safeties, counterweights, with all load calculations.
7. Shop drawings shall include complete schematic and connection diagrams for the controller and all electrical devices including a legend for components.
8. Controller information shall include complete I/O list.
9. An I/O list of items to be monitored by the remote monitoring system (Lift Net) shall be provided for review and approval.
10. All drawings shall reflect existing field measured as-built conditions.

D. Samples:

1. Submit [6] samples minimum 6"x 6" in size of all finish materials including but not limited to the following:
 - a. Cab Flooring
 - b. Ceiling, including surface material, supporting frame and light fixture
 - c. Cab Interior including car door, front return, wall finish etc.
 - d. Fixture faceplate with Engraving
2. Samples shall be clearly labeled to reflect:
 - a. Project Name
 - b. Contract Number
 - c. Description of Sample

- E. Maintenance programs: within sixty (60) days after notice to proceed, and prior to installation, Installer shall submit detailed Maintenance Control Plan as required by Code specific to the elevator equipment being installed.
- F. Operating and Maintenance manuals: Prior to installation, Installer shall submit six (6) complete sets of Operation and Maintenance manuals for approval: After Owner approval and prior to the beginning of acceptance testing, six (6) sets of the approved manuals shall be provided by the Installer. The manuals shall include the following:
 - 1. Complete table of contents.
 - 2. Complete instructions regarding operation and maintenance of equipment, including complete illustrated, exploded views of all assemblies, and a complete, illustrated, exploded view for identifying all system parts.
 - 3. Complete nomenclature of replaceable parts, part numbers, current cost, and warehouse location. If product source is another vendor, Installer shall include name and address of other vendor.
 - 4. Sample copies of a preventive maintenance chart.
 - 5. Descriptions of safety devices.
 - 6. Safety rules, tests, and procedures, including testing of all systems and subsystems.
 - 7. Procedures for adjusting all elevator equipment, including pictorials.
 - 8. Troubleshooting techniques.
 - 9. Detailed lubrication and cleaning schedule indicating weekly, monthly, quarterly, semiannual, and annual lubrication; and a description of each lubrication point, lubrication type, and specification.
 - 10. Control and schematic electrical wiring diagrams of controller, including wiring of safety devices to connections with remote indication and control panels for each elevator or group of elevators.
 - 11. Electrical layout showing placement of lighting, light switches, receptacles, light fixtures, disconnect switches, and convenience outlets in machinery/control room spaces and pits.
 - 12. Complete detailed drawings and wiring diagram of elevator system.
 - 13. Electronic and hard copies of ladder diagrams, logic and controller program.
 - 14. Controller information shall include complete I/O list.
 - 15. Provide one (1) laminated set of wiring diagrams mounted in the controller room.
 - 16. As-built drawings for final elevator installation, controller and hoistway wiring. Also provide As-built drawings in electronic format approved by the Owner.
 - 17. At substantial completion, an elevator adjuster level laptop used by the elevator adjuster for this project shall be provided to the Owner.
- G. Certification:
 - 1. The elevator manufacturer shall provide to the operating authority, with copies of all documents related to maintenance, safety, operations, design

- changes, modifications, and retrofits which relate to any part, component, equipment, system, subsystem, or material and services applicable to the elevators provided.
2. All of the above-referenced shall be provided as it pertains to the original installation and for a period of ten (10) years after final acceptance of the last elevators provided under any contract.
 3. The referenced material shall be provided within thirty (30) days of publication or internal distribution by the elevator manufacturer. The material, even if labeled PROPRIETARY, shall be delivered to the Owner without prejudice or delay and at no additional cost.
 4. Provide all material on CD-ROM in a format approved by the Owner.
- H. MSDS and product data sheets: Shall be submitted with an index listing each product, along with the application method of the product, approximate quantity of product per elevator and the component the product is applied to or associated with. The Installer shall allow 6 (six) weeks for review of MSDS.
- I. Installer shall provide copies of welder's certification in accordance with Part 1.08B.

1.08 QUALITY ASSURANCE:

- A. Regulatory agencies: elevator design, materials, construction clearances, workmanship, and tests shall conform to the requirements of the codes and regulations listed in Part 1.05.
- B. Welding: Welding shall be performed in accordance with the requirements of AWS or CWB. Welders shall produce evidence of current certification by AWS or CWB.
- C. Requirements of Regulatory Agencies
1. Installer shall obtain and pay for all necessary permits and perform such tests as may be required for acceptance and approval of elevators by jurisdictional agencies.
 2. Installer shall notify the proper inspectors to witness required testing.
- D. Factory Visit
1. The Installer shall provide for the costs of up to three of the operating authorities representatives including the Program/Project Manager to visit the factory where the elevators are being manufactured, per contract, per unit type.
 2. Installer shall not ship the elevator without the approval of the Program/Project Manager after the conclusion of the factory visit.
- E. Labeling
1. Elevator controller shall be clearly marked permanently on the controller cabinet door with rated load and speed, manufacturer serial number, and

designated City of Phoenix and Phoenix Sky Harbor Airport identification numbers.

1.09 DELIVERY, STORAGE, AND HANDLING

- A. Packing, Shipping Packing, Shipping, Handling, and Unloading:
 - 1. Accept equipment, materials, and other Products on site in factory containers, bundles, and shipping skids.
- B. Delivery and Acceptance at Site:
 - 1. Deliver material in original packages, containers, skid loads, or bundles bearing brand names and identification of source of manufacture or supply.
 - 2. Inspect deliveries for damage.
- C. Storage and Protection:
 - 1. Store materials inside under cover and in a dry location.
 - 2. Protect from weather, direct sunlight, surface damage, corrosion, and construction traffic and activity.
 - 3. Installer shall make necessary provisions to protect systems from damage, deterioration, and environmental conditions during installations and until elevator systems are fully operative.
- D. Handling:
 - 1. Handle material to prevent damage to edges, ends, surfaces, and finishes.

1.10 PROJECT/SITE CONDITIONS

- A. Project Conditions:
 - 1. Coordinate the elevator installation with required utility services and the work of other trades involved on the project.
 - 2. Sequence installation to insure utility connections are made in an orderly and timely manner.
 - 3. Installer shall coordinate lock and key requirements with the Owner.
- B. Site Conditions:
 - 1. Installer shall design and fabricate elevator components to fit within the space allocated by the Design Team. Structures will not be modified to meet the requirements of the Installer's equipment. If Installer requires modification to existing structures, they will be responsible for the timely submission of shop drawings and documentation to the Program/Project Manager so that the Program/Project Manager can convey this information to the Design Team in order for the modifications to be made to the current design.
 - 2. Installer shall review site conditions and measure as-built dimensions for hoistway and pit prior to delivery of equipment to the site.

3. Installer shall coordinate with the Owner in relation to connections between elevator equipment and CCTV, remote monitoring system, communications, fire alarm initiating devices and system, shunt trip breakers, power and cab lighting.
4. Installer shall coordinate with the contractor all requirements in relation to mounting of elevator equipment and guide rails in the hoistways.

1.11 ACCEPTANCE AND WARRANTY

- A. The Installer shall warrant in writing that all equipment manufactured and installed under this specification, for a period of twelve (12) months from the date of Final Acceptance by the Owner, be free of defects in design, materials, and workmanship, under normal use and service. Defective work shall be repaired or replaced at no additional cost to the Owner.
- B. The warranty shall include materials and labor necessary to correct defects.
- C. Defects shall include, but not be limited to, noisy, rough, or substandard operation; loose, damaged, and missing parts; and fluid leaks.
- D. Warranty Maintenance Requirements: NONE – maintenance services will be provided by the incumbent service provider at the completion of construction.

1.12 GUARANTEES

- A. Notwithstanding the Specifications forming a part of this Contract, any inspection or approval of the Work by the Owner, or the existence of any patent or trade name, the Installer nevertheless unconditionally guarantees that the equipment furnished and installed hereunder shall be of the best quality and shall be fully fit for the purpose for which it is intended.

1.13 OWNER INSTRUCTION / DEMONSTRATION AND COORDINATION

- A. The Installer shall provide eight (8) hours of onsite demonstration and instructions to the Owner and existing service personnel upon completion of the elevator installation. Instructions are to include safety procedures, proper operation of all equipment, including remote monitoring system, and routine maintenance procedures. All instructions and demonstrations are to be video recorded and remain the property of the Owner.
- B. Check operation of the elevators with Owner's personnel or designated representative present not more than one month before end of warranty period. Determine that operation systems and devices are functioning properly.

PART 2 PRODUCTS

2.01 GENERAL

- A. Installer shall furnish and install elevators that shall comply with the following requirements:
 - 1. All elevators supplied under this contract shall be the product of a single manufacturer.
- B. Acceptable Machine Manufacturers:
 - 1. KONE Elevator Company
 - 2. Otis Elevator Company
 - 3. Schindler Elevator Company
 - 4. ThyssenKrupp Elevator Company
- C. Acceptable Controller Manufacturers:
 - 1. KONE Elevator Company
 - 2. Otis Elevator Company
 - 3. Schindler Elevator Company
 - 4. ThyssenKrupp Elevator Company
 - 5. G.A.L. Manufacturing
 - 6. Motion Control Engineering
 - 7. SmartRise
 - 8. Virginia Controls
- D. Acceptable Drive Manufacturers:
 - 1. KONE Elevator Company
 - 2. Otis Elevator Company
 - 3. Schindler Elevator Company
 - 4. ThyssenKrupp Elevator Company
 - 5. KEB
 - 6. Magnetek
- E. Subject to compliance with the requirements of the Section, Elevator Cab design shall be coordinated with the Architect and Program/Project Manager. Installer is to include an Allowance of \$25,000 per elevator cab interior (which only includes walls, ceilings, returns and transom) in their bid.

2.02 MATERIALS:

- A. Except where product conformance to specific standards is indicated on the Contract Documents and in ASME/ANSI A17.1, OEM's standard materials and equipment may be used in elevator construction, subject to approval. Materials cited below are intended to establish the standard of quality for comparable materials used by the manufacturer.
- B. Structural Shapes, Plates, Sheets, and Tubing: ASTM A36 Steel.

- C. Sheet Steel: ASNI/ASTM A446, Grade B.
- D. (ALL) Stainless Steel: ASTM A167, Type 304
 - 1. Finishes to be coordinated with Architect and Program/Project Manager.
- E. Aluminum: ASTM B211 or ASTM B221, Alloy 6061, T6.
- F. Flooring: Design of elevators should account for 3/8" thick epoxy matrix thin-set terrazzo on a flexible epoxy crack suppression membrane. Subfloor provided by installer shall be stainless steel plate construction. Color to be selected by the Architect and flooring to be installed by others.

2.03 SPECIAL FEATURES

- A. General:
 - 1. Elevator shall be of size, arrangement, capacity and shall comply with design criteria specified in this Section and as shown on the Contract Documents, and in accordance with the requirements of the ANSI/ASME A17.1-Safety Code for Elevators and Escalators, hereinafter in this Section the "Code".
 - 2. Provide all material and equipment necessary for the complete execution of all elevator work as specified in this Section and as shown on the Contract Documents.
 - 3. Provide hoistway guards for protecting hoistway during construction. Hoistway protection shall include high solid panels surrounding each hoistway opening at each floor.
 - 4. All electric equipment, conduit, fittings and wiring shall conform to the requirements of ANSI/NFPA No. 70 National Electric Code.
 - 5. Provide concrete inserts and other similar anchoring devices for the installation of guide rails, machinery and other elevator components. Epoxy ceiling anchors or epoxy side wall anchors shall not be permitted.
 - 6. Clearance around equipment located in each elevator control room and machine area shall comply with the applicable provisions of ANSI/NFPA No. 70 National Electrical Code.
 - 7. All elevators will be on Emergency Power and all signal communication requirements are to be coordinated with the contractor by the installer for proper testing and function.
 - 8. All elevators will be tied to a new Remote Monitoring System as manufactured by Lift Net that shall be provided by the installer as part of this contract. Communication protocol as well as elevator items to be monitored to be coordinated with the contractor, Owner and Program/Project Manager.

2.04 SUMMARY OF FEATURES:

- A. Machine Room-Less Elevators

1. Elevator Use: Passenger
2. Contract Load, in pounds: As per Contract Documents
3. Contract Speed, in FPM: As per Contract Documents
4. Travel Distance: As per Contract Documents
5. Platform Size: As per Contract Documents
6. Number of Stops: As per Contract Documents
7. Number of Openings: As per Contract Documents
8. Operation: Selective/Collective
9. Machine Location: Overhead within Hoistway
10. Controller Location: As per Contract Documents
11. Machine Type: AC gearless machine room-less
12. Motor Horse Power: As required for specified duty
13. Power Supply: As per Contract Documents
14. Lighting/ Signal Power Supply: As per Contract Documents
15. Ancillary/Auxiliary Power Supply: As per Contract Documents
16. Car/Hoistway Door Size: As per Contract Documents
17. Car/Hoistway Door Type: Single Speed Center Opening
18. Car/Hoistway Door Operation: Linear Type Power High-speed, heavy duty (Minimum opening speed 3.0 FPS, Minimum closing speed 5.0 FPS)
19. Hoistway Entrance: As per Contract Documents
20. Cab Enclosure: As per Contract Documents
21. Cab Flooring: As per Contract Documents
22. Door-Reversal Device: Infrared, Full Screen 3D Device, with Differential Timing, Nudging and Interrupted Beam Time – Janus Panachrome 3D or approved equal. (3D shall be turned off at turnover.)
23. Car Operating Panel: As per Aviation Department Standard manufactured by Innovation Industries.
24. Car Position Indicator: As per Contract Documents As per Aviation Department Standard manufactured by Innovation Industries.
25. Car Direction Indicator: As per Contract Documents As per Aviation Department Standard manufactured by Innovation Industries.
26. Hall Call Stations: As per Contract Documents As per Aviation Department Standard manufactured by Innovation Industries.
27. Communication System: Coordinate with Project/Program Manager per Aviation Department Standard
28. Security Features: Coordinate with Project/Program Manager per Aviation Department Standard
29. Guide Rails: As per Contract Documents
30. Buffer Type: As per Contract Documents
31. Additional Features:
 - a. ADA and Emergency Medical Services Access and Signage
 - b. Hoistway Access Switches at Top and Bottom Floors
 - c. Independent Service Feature
 - d. Combination Vertical and Horizontal Sensor Type Seismic Switch

- e. Counterweight Derailment Device
- f. Whisper Flex Type Compensation, if compensation means is required by the manufacturer
- g. Firefighter's Control Panel and Remote Wiring, if applicable
- h. Tamper Resistant Fasteners for Signal Fixture Faceplates
- i. Firefighter's Telephone Jack, if applicable.
- j. Two-Way Communication System between Machine Room and Elevator Cab where required by code
- k. Emergency Paging Speaker Installation
- l. Card Reader Provisions
- m. CCTV Provisions
- n. Remote Monitoring- Lift Net provided by Installer
- o. Battery Pack Emergency Car Lighting. Provide Separate Constant Pressure Test Button in Car Service Compartment to Illuminate Portion of Normal Car Lighting
- p. Signage Engraving filled with Colored Paint per Aviation Standard
- q. No Visible Company Name or Logo
- r. System Diagnostic Means and Instructions
- s. No Special Tools shall be required to troubleshoot and maintain elevator system
- t. Roller type Car and Counterweight Guides
- u. Load Weighing Device
- v. LED Car Lighting as manufactured by Man-D-Tec or approved equal.
- w. All hoistway and car door rollers shall utilize polypropylene material for the wearing surface of the rollers.

2.05 CAR PERFORMANCE

- A. Car Speed: + or – 3% of contract speed under any loading condition.
- B. Car Capacity: Safely lower, stop and hold 125% of rated load.
- C. Car Stopping Zone: + or – ¼" under any loading condition.
- D. Door Opening Time: Seconds from start of opening to fully open;
 - 1. In accordance with NEII Standards
- E. Door Closing Time: Seconds from start of closing to fully closed;
 - 1. In accordance with NEII Standards
- F. Car Floor-to-Floor Performance Time: Seconds from start of doors closing until doors are ½ open and car level and stopped at next successive floor under any loading condition or travel direction
 - 1. Based on capacity, speed, door size, and travel distance per Contract Documents.

G. Car Ride Quality

1. All elevators shall have a minimum decibel reading of 60 Dba with the doors closed during a run in the up direction, measured 5 feet above the floor in the center of the cab.
2. All elevators shall have a maximum vibration of 30 milli-g's in the X, Y and Z axis measured with an A95 filter.
3. Acceleration and Deceleration: Smooth constant and not more than 3 feet/second² with initial ramp between 0.5 and 0.75 second.
4. Sustained Jerk: Not more than 8 feet/second³
5. Ride quality shall be verified in the field with an EVA-625 (as manufactured by PMT, Inc. or approved equal) placed in the center of the cab floor.

2.06 DOOR OPERATOR EQUIPMENT:

- A. Provide Linear Type door operator with encoder-less VVVF drive or approved equal. Closed loop door operator designed to operate car and hoistway doors simultaneously at the speed specified. Door shall open automatically when car stops at landing to discharge passengers or to answer valid calls and close automatically after predetermined time interval has elapsed. The doors shall be capable of smooth and quiet operation without slam or shock. Door operator to have the following features.

1. ½ hp motor and heavy-duty sprocket, chain, belt, and sheaves
2. Closed loop regulated speed performance
3. Hand-held keypad or built-in programming
4. Adjustments can be stored in the keypad and downloaded to another operator
5. Adjustable door obstruction reversal unit
6. Optical cams with LED indicators
7. Test switches for open, close, nudging and speed zone set up
8. Universal inputs for open, close, and nudging
9. Reversing switch to back up the door reversal device.

- B. Cab Door Interlock. The doors on cab doors shall be equipped with approved cab door interlocks of the cab unit system type tested as required by the Code.

1. Interlock shall prevent operation of the car away from a landing until doors are locked in the closed position. Interlock shall prevent doors from opening at any position within the hoistway and or landing from the cab side unless car is at rest at that landing, or is in the leveling zone and stopping at that landing.
2. Cab door unlocking devices shall conform to the requirements of the Code and shall be provided to permit authorized persons to gain access to hoistway when car is away from landing
3. Provide an electric contact mounted on the car that will prevent the car from moving away from landing unless car doors are closed.

C. Door Control Device:

1. Door Protection: Electronic Entrance Detector Screen: Provide an electronic door detector device and or approved equal, which projects an infrared curtain of light guarding the door opening. Arrange to reopen doors if one beam of the curtain is penetrated. Unit shall have transmitters and receivers spaced at a minimum distance to provide the maximum amount of protection within the height of the doorway. Systems, which have the ability to turn Off or On individual zones within the curtain, will not be allowed. Unit must provide a visual cue when doors are open and when doors start to close as per Janus Panachrome 3D or approved equal. The 3D operation should be capable of being changed to 2D by the City of Phoenix Aviation Department if desired.
2. Nudging Operation: After beams of door control device are obstructed for a predetermined time interval (minimum 20.0-25.0 seconds), a warning signal shall sound and doors shall attempt to close with a minimum of 2.5-foot pounds kinetic energy. Activation of the door open button shall override nudging operation and reopen doors.
3. Interrupted Beam Time: When beams are interrupted during initial door opening, hold door open a minimum of 3.0 seconds. When beams are interrupted after the initial 3.0 second hold time, reduce time doors remain open to an adjustable time of approximately 1.0-1.5 seconds after beams are reestablished.
4. Differential Door Time: Provide separately adjustable timers to vary time that doors remain open after stopping in response to calls.
 - a. Car Call: Hold open time adjustable between 3.0 and 5.0 seconds.
 - b. Hall Call: Hold open time adjustable between 5.0 and 8.0 seconds.

2.07 HOISTWAY EQUIPMENT:

A. Guide Rails:

1. Guides shall be steel T-section rails. Rail surfaces shall be machined smooth to insure proper operation of guides. Rail ends shall be accurately machined with tongue and matching groove centrally located on web. Non-wearing rail surfaces are to be painted at the completion of the elevator in color selected by the Architect.
2. Guides shall be joined and installed in accordance with Section 2.23 of the Code.

B. Car and Counterweight Buffers: Provide spring type with blocking and support.

C. Guide Assemblies: New roller guide assemblies of the size and type required for the applicable application shall be mounted on top and bottom of the car and counterweight frames to engage the guide rails. Each guide shall consist of a set of three (3) large diameter polyurethane rollers equipped with sealed preloaded ball bearings. Each roller shall be supported by a pivoted rocker

arm that shall automatically adjust itself to guide rail misalignment and prevent excessive lateral car movement.

- D. **Suspension Means:** If steel core ropes are supplied, a means to provide constant lubrication shall be provided. If rubberized steel belts are utilized as the suspension means, the monitoring device utilized to monitor the condition of the suspension means shall be installed and be the property of the Owner as well as any diagnostic, troubleshooting, or adjustment tools required or associated with the monitoring device. Suspension means shall be designed for ASME A17.1 rated load requirements.
- E. **Deflector Sheaves:** Provide machined and grooved sheave for diameter of ropes. All bearings are to be shielded or sealed. Provide resilient isolation materials including isolating grommets and washers at hold down
- F. **Stop Switch:** An enclosed stop switch, mounted in the pit (in a NEMA 4 rated enclosure for the elevator at the station that serves the platform) of each elevator in accordance with Rule 2.2.6 of the Code, shall prevent operation of elevator when switch is activated. Switch shall be of the type described in Rule 2.2.6 of the Code.
- G. **Emergency Auxiliary Stop Switch:** An enclosed stop switch, mounted in the over-head machine area and/or on the machine of each elevator in accordance with Rule 2.7 of the Code, shall prevent operation of elevator when switch is activated. Switch shall be of the type described in Rule 2.7 of the Code.
- H. **Dead End Hitch Assemblies:** Provide dead end hitch assemblies in accordance with engineered loading requirements.
- I. **Counterweight:** Counterweights shall consist of a steel frame welded or bolted together and necessary steel weight sections. These weight sections shall be held securely in place within the frame. A minimum of two (2)-tie rods shall pass through the holes in all weight sections. Submit paint finish of counterweights for approval. Paint color selection to be determined by the Program/Project Manager.
 - 1. A required counterweight screen where no compensation is used.
 - 2. The bottom of the counterweight shall have a buffer striking plate and means to attach knock-off blocks during rope stretch.
- J. **Idler Sheave:** To be located directly above the counterweight frame and integral with counterweight frame. The sheave material shall be accurately machined of semi-steel of hardness BHN 220-250 or as per manufacturer's requirements.

- K. Governor: Friction type over-speed self-resetting governor rated for the duty of the elevator specified and to operate the car safety. The finish of pit tension sheave shall be factory paint.
 - 1. Locate the governor where the car or the counterweight in case of over-travel cannot strike it, and where there is adequate space for full movement of governor parts.
 - 2. An electrical governor over-speed protective switch that, where operated, shall remove power from the driving machine motor and brake before or at the time of application of the safety.
 - 3. Seal and tag the governor with the running speed, tripping speed, and date last tested as required by Code.
 - 4. Operation/rest of the governor shall not require the installation of an overhead access panel. Status of the governor shall be capable of being monitored remotely at the elevator controller. A mechanical means to secure the car at the top of the hoistway while performing testing of the governor shall be provided.
 - 5. Location of elevator, direction of travel and movement of elevator car shall be capable of being monitored remotely. Emergency Rescue operation shall not require the use of an overhead access panel.
- L. Tension Sheave: Provide tension sheave in accordance with OEM's governor and car safety loading requirements.
- M. Terminal Limits: Limit switches shall slowdown and stop the car at the terminals if the primary automatic stopping system fails.
- N. Life Safety Provisions: Life safety hooks and/or other life safety devices for fall protection to be in accordance with OSHA standards/guidelines. Life safety hook and/or other life safety devices locations to be coordinated and installed by the Installer.
- O. Pit Ladder: Provide new Code compliant pit ladder.

2.08 MACHINE COMPONENTS:

- A. General: Provide equipment to fit into elevator hoistways as per the Contract Drawings. Hoistway dimensions as shown are firm and cannot be changed to accommodate therefore the installer must provide equipment that will fit within the dimensions shown.
- B. Machine: AC gearless machine, with permanent magnet synchronous motor, direct current electromechanical disc brakes and integral traction drive sheave. Machine to be mounted to the car guide rail or support beam mounted at the top of the hoistway. Machines are to be mounted in proper alignment on isolated bedplate utilizing resilient isolation material. Bolts utilized for seismic

restraint of the hoist machines shall not short-circuit the resilient isolation material.

C. Motor:

1. The motors shall be of the alternating current reversible asynchronous or synchronous type of a design adapted to the severe requirements of elevator service. Motor shall be capable of developing the torque required to meet or exceed an acceleration rate of 2 ft/sec² for the elevator car.
2. A means to protect the windings and bearings from airborne dust shall be provided.
3. Insulation of all windings shall be impregnated and baked to prevent absorption of moisture and oil. The insulation resistance between motor frame and windings shall not be less than one meg-ohm. The motor windings shall stand a dielectric test of twice the normal voltage plus 1000 RMS volts of 60 Hertz, alternating current for one minute.
4. Motor leads in the conduit box shall have the same insulation class as the windings. Motor lead wire shall be rated 125 C and shall be sized for 105 C at the motor nameplate amperes at 1.0 Power Factor per Electrical Apparatus Service Association (EASA) recommendations. Leads are to be numbered for clockwise rotation when facing opposite the shaft end.
5. The motor shall be designed to stand the severe loads encountered in elevator service and the windings shall have a minimum insulation temperature rating two ratings higher than the actual temperature rise of the motor, with a minimum rating of NEMA class F.
6. The motor shall be designed to the ASME A17.1 rated load requirements.

D. Brake:

1. Provide dual brakes that shall be of the self-adjusting fail-safe (spring applied and electrically released) type provided with a remotely operated, in the controller room, manual brake release and designed to meet the service factor demand of its intended use. Access panels at the top of hoistway shall not be required. Dual brakes shall operate independent of each other for ascending car overspeed and unintended car movement. Disc type brake shall be securely mounted to the shaft and shall run concentric to the shaft. Disc shall be machined to obtain a smooth and accurate face. The brake shall be spring actuated, direct current, electrically released, heavy construction with proper braking area for the load and speed specified. The brake shall be provided with sufficient power to stop and hold the car with full contract load. Disc brakes shall be of caliper or multiple disc design. car over speed and unintended car movement. Provide operation to prevent the elevator from striking the hoistway overhead or unintended car movement per the requirements of code

E. Drive and Deflector Sheave:

1. Sheave: The sheave material shall be accurately machined of semi-steel of hardness BHN 220-250. It shall be firmly pressed onto its shaft.

F. Mounting:

2.09 ANTI-VIBRATION MOUNTS: FOR MACHINES THAT ARE SUPPORT BEAM MOUNTED, AN ANTI-VIBRATION MOUNTING PAD IS TO BE PROVIDED. MACHINE TO BE MOUNTED TO THE CAR GUIDE RAIL OR SUPPORT BEAM MOUNTED AT THE TOP OF THE HOISTWAY. MACHINES ARE TO BE MOUNTED IN PROPER ALIGNMENT ON ISOLATED BEDPLATE UTILIZING RESILIENT ISOLATION MATERIAL. BOLTS UTILIZED FOR SEISMIC RESTRAINT OF THE HOIST MACHINES SHALL NOT SHORT-CIRCUIT THE RESILIENT ISOLATION MATERIAL. THE MACHINE BEAMS SHALL BE MOUNTED ON VIBRATION ISOLATION PADS. ELEVATOR DRIVE SYSTEMS

- A. Fully Regenerative AC Variable Voltage Variable Frequency (VVVF) Motor Drive: Provide fully regenerative drive as required to absorb regenerative power generated by the elevator system. Resistor banks to absorb energy are not permitted.
1. The drive shall be capable of varying the torque on the motor during acceleration and deceleration.
 2. The drive shall be capable of on-site programming the volts per Hertz, acceleration and deceleration ride profiles to adjust the ride quality due to drive control characteristics.
 3. The drive shall control AC induction motors through the use of a high resolution, dual channel optical encoder.
 4. The drive shall be capable of delivering 100% rated motor torque from base speed down to zero speed.
 5. The drive shall not use DC injection for slowdown braking.
 6. The drive shall be adjustable to achieve the required current, motor voltage and frequency so as to match the characteristics of the hoist motor.
 7. The drive shall not create excessive audible noise in the elevator motor.
 8. The drive shall be capable of delivering sufficient current to accelerate the elevator to contract speed at the rated load. The drive shall provide speed regulation within 5% during all phases of acceleration, deceleration and leveling.
 9. A contactor shall disconnect the hoist motor from the drive's output each time the elevator stops. If the contactor has not returned to the de-energized state when the elevator stops, the elevator shall not restart.
 10. Maximum total harmonic distortion shall not exceed IEEE Std. 519 to be measured at the elevator disconnect.
 11. The drive shall be housed in a NEMA 2 rated enclosure. If the drive is remotely located so as to require that a signal repeater be installed, installer shall properly locate and install taking into account the site constraints and in accordance with code requirements.

12. The cabinets containing the drives, if separate from the controller cabinet, shall be mounted on neoprene pads equivalent to Mason Industries Type 'W', with hold down bolts and grommets to provide seismic restraint and to avoid short circuiting the isolators.
13. Drives shall be either of the following:
 - a. KEB
 - b. Magnetek
 - c. OEM drive

2.10 SAFETIES

- A. General: A governor actuated mechanical safety device mounted under the car platform and securely bolted to the car sling.
 1. When tripped, the safety mechanism shall engage the rails with sufficient force to stop a fully loaded car with an average rate of retardation within limits given by the ASME A17.1 Code for the capacity.
 2. Make provisions to release the car safety. In no event shall the safety be released by downward motion of the car. Raising the car to reset the safety shall be allowed.
 3. Include an electrical safety plank switch that will interrupt the power to the hoist machine when the safety is set. Resetting the plank switch shall be separate from resetting the safety jaws.
 4. Install a car safety marking plate of corrosion resistant metal showing the data required by the Code.

2.11 CONTROLLER:

- A. General:
 1. The elevator control equipment shall contain diagnostic capabilities as required for the ease of complete maintenance. The diagnostic system shall be an integral part of the controller and provide user-friendly interaction between the service person and the controls. All such systems shall be free from decaying circuits that must be periodically reprogrammed by the manufacturer.
 2. Switch gear shall be mounted in NEMA 2 stainless steel cabinets and labeled terminal strips.
 3. The main controller shall be microprocessor based controller manufactured by the Vendor capable of being tied to the Lift Net remote monitoring system. Items/Specifics to be monitored to be determined by the Owner and Program/Project Manager.
 4. The Controller shall be provided, governing starting and stopping, as well as preventing, damage to the motor from overload or excessive current. It shall automatically cut off the motor current and bring the car to rest in the event any of the safety devices are activated. The controller shall be mounted in a vented cabinet within the machine room. The controller shall utilize soft start characteristics.

5. Selective Collective Operation: As defined by ASME A17.1.
6. Provide intermittent automatic operation, once every 3 hours through the entire run of the hoistway. Cycling shall be the full 24 hours each day throughout the year.
7. The controller shall be capable of being remotely located in a location that is not adjacent to the hoistway and within 150 linear feet from the elevator machine location. If the location of the controller and drive require that a signal repeater be installed, elevator installer must properly locate in accordance with site constraints and in compliance with code requirements.
8. The controller cabinet shall be floor mounted on neoprene vibration isolation pads, with no rigid contact between the cabinets and the walls.
9. Installer shall provide a dielectric/non-conductive floor mat in front of each controller.

- B. Remote Monitoring System: The Lift Net remote monitoring system shall be provided by the installer and all elevators shall be connected to this system. The Installer is responsible for providing all provisions necessary for connecting the elevators to the Lift Net system. The elevators may be connected via Wi-Fi or Ethernet. This is to be coordinated with PSHIA IT Department.

2.12 HOISTWAY ENTRANCES

- A. General:
1. Hoistway entrances shall be of the horizontal sliding type, with operation and number of panels as indicated on the Contract Documents.
 2. All materials and finished surfaces exposed to public view shall be as indicated on Contract Documents.
- B. Hoistway Frames and Doors:
1. Entrance frames shall be of welded and mitered construction for complete one-piece unit assembly. All frames shall be sound deadened and securely fastened to fixing angles mounted in the hoistway.
 2. Entrance frames shall be provided with an extended sill floor plate the full width and depth of each entrance frame assembly.
 3. Hoistway entrances shall be of the horizontal sliding type, with operation and number of panels as indicated on the Contract Documents.
 4. Hoistway doors shall be reinforced and provided with keyways as required for operating mechanisms and door hangers. Door panels shall be hollow metal flush door construction, 16-gauge furniture steel. Fill with fireproof, sound deadening material. Provide reinforcement by formed vertical sections running full height of door. Panels front and rear, framing, operating levers, and integral hardware shall be type 316 stainless steel; panel shall be 2 mm and have finish as indicated on Contract Documents. Door shall be provided with door gibs, quantity as required for proper

- operation and to meet Code, and shall be SEES Enforcer or approved equal. Guides are to be replaceable without removing door panels.
5. Provide die cast jamb markings (2 per entrance) mounted at 5'-0".
 6. Hoistway door hangers and door operator shall be as specified herein.
 7. Hoistway door rollers are to utilize polypropylene material for wearing surface.
 8. Finishes coordinated with the Architect.
 9. Sight guards shall be type 304 stainless steel.
- C. Struts and Closer Support Angles: Hoistway entrances adjacent to non-load bearing walls (gypsum dry wall, gypsum block, etc.) shall have hanger housing and door closers supported by steel angles of adequate size. Angles shall be continuous between sill and building beams above and shall be bolted to the hanger support. For load bearing walls (masonry, concrete block), submit for Program/Project Manager's approval Shop Drawings of the method to be used to support hanger housing and door closers on the wall.
- D. Landing Sills: Landing sills shall conform to Rule 2.11 of the Code and shall be nickel silver sills supplied with grooves and trash slots for door guides and machine planed for minimum clearance. Mount sills on combination of concrete/grout and steel supports anchored to floor construction.
- E. Hanger Supports and Cover Plates: Hanger supports shall be T bolted to strut angles and closer support angles. Hanger cover plates shall be nominal 14-gauge Type 304 stainless steel minimum and shall extend, as indicated in the contract documents. Covers shall be made in sections for convenient access when servicing hangers. Hanger sections above door openings shall be removable from within elevator car.
- F. Dust Cover: Shall be Type 304 stainless steel. Dust cover shall be reinforced as necessary to ensure a flat even surface throughout. Dust cover shall extend at least the full width of door opening on each side and fastened to hanger housings. Dust cover shall extend above entrance opening as indicated on Contract documents.
- G. Interlocks and Contacts:
1. The doors at each hoistway entrance shall be equipped with approved hoistway door interlocks of the hoistway unit system type tested as required by the Code.
 2. Interlock shall prevent operation of the car away from a landing until doors are locked in the closed position. Interlock shall prevent doors from opening at any landing from the corridor side unless car is at rest at that landing, or is in the leveling zone and stopping at that landing.
 3. Hoistway door unlocking devices shall conform to the requirements of the Code and shall be provided to permit authorized persons to gain access to

- hoistway when car is away from landing. Ferrules shall be supplied for all hoistway unlocking device keyholes to protect elevator hoistway doors.
4. Provide an electric contact mounted on the car that will prevent the car from moving away from landing unless car doors are closed.

- H. All Hoistway Fascia Panels shall be stainless steel of thickness and construction to meet requirements of the Code in regard to strength and deflection.

2.13 CAB ENCLOSURE COMPONENTS

A. General:

1. Elevator car and car components shall meet the applicable requirements of the Code. Car operating stations, position indicators, riding lanterns shall be per PSHIA Standard. Engraving shall be coordinated with the Owner.
2. Entire car assembly, including car frame and platform, shall be free from warps, buckles, and squeaks and rattles. Joints shall be lightproof.

B. Car Frame and Platform:

1. Car frame and platform shall be welded galvanized steel units designed and fabricated in accordance with applicable requirements herein and shall meet APTA loading requirements.
2. Protect car platform with fire retardant material. The platform shall be recessed as required to accept floor finish. Floor finish shall be epoxy terrazzo coordinated with the Architect and installed by others.
3. Sub floor shall be suitably reinforced to support live loads of the elevator cab and shall be of stainless steel plate construction.
4. Floor covering for platform shall be 3/8" thick epoxy matrix thin-set terrazzo on a flexible epoxy crack suppression membrane. Substrate shall be exterior grade plywood – 3/4" minimum thickness. Color to be selected by the Architect. Flooring to be installed by others.

C. Car Enclosures:

1. Car top shall be of stretcher leveled, cabinet grade, and nominal 0.104" thick furniture sheet steel, reinforced to support 300 pounds on any one square foot area. An emergency exit shall be installed in the car top in conformance with the Code. Interior surface of car top shall be painted reflective white. Exterior surface of car top shall be painted black. (NEW)
2. Ventilation: 3-speed exhaust fan. Finish and material of fan enclosure and blade shall match the finish and material of the ceiling. Exhaust blowers shall be designed with a hood.
3. Size and detail to withstand design stresses and provide for attachment and support of cladding, housing, ceiling, glass panels, and appurtenances. Paint all members after fabrication.

4. Suspended Ceiling: to be coordinated with Architect and Program/Project Manager for type and finish.
5. Interior Walls: to be coordinated with Architect and Program/Project Manager for type and finish.
6. Cab Walls shall have sound deadening.
7. Fixed Front Return Panels: to be coordinated with Architect and Program/Project Manager for finish.
8. Car Doors: Car doors to be supplied as indicated in the Contract Documents. Doors shall protect the full width and height of car entrance opening when in the fully closed position. Car doorframe shall be integral with front wall of cab.
9. Handrails / Bumper Rails: to be coordinated with the Architect and Program/Project Manager for type, finish, and location.

D. Car Door Equipment:

1. Door Hangers: Door hangers for car and hoistway doors shall be of the two-point suspension sheave type equipped with grease packed heavy duty precision ball bearings, eccentric up-thrust rollers, and oiler/cleaners. Track shall be of formed cold rolled steel or cold drawn steel with rounded track surface to receive sheaves. Track shall be mounted on an eccentric stud to provide for adjustment. Rollers shall have polypropylene material for wearing surface.

E. Toe Guard:

1. Provide forty-eight (48) inch toe guard.

F. Top of car railings: Provide where required to meet Code requirements.

2.14 SIGNAL DEVICES AND FIXTURES

- A. General: Provide signal fixtures and control devices for each elevator. Buttons and signals shall be tamper resistant of the illuminated type that light-up when activated and remain lit until call or other function has been fulfilled. All signal fixture and control devices shall be nominal 0.135 inch thick, unless otherwise shown on the Contract Documents. Design to be per PSHIA Standards and as modified by these specifications. It's design, including all engraving and custom features are to be coordinated with the Owner, Architect and Program/Project Manager.

B. Car Operating Station:

1. Provide one (1) main station and one (1) auxiliary station for all elevators in the front returns of the passenger elevators. Car operating stations shall be supplied with hinges that are inconspicuous when installed.
2. Car operating station shall have engravings and Braille that spell out landings served adjacent to each call button. Contractor to coordinate proper landing call outs based on maximum characters as indicated on

Contract drawings. Buttons for DOOR-OPEN, DOOR-CLOSE, ALARM, EMERGENCY PHONE call functions are to be supplied. Buttons are to be vandal resistant and of the positive stop type.

3. Station shall also have keyed switches for car light operation, ventilation, inspection, independent service, and any other keyed functions as directed by the Owner and Program/Project Manager and be located within a lockable compartment
4. Engrave the car operating panel as coordinated with Owner, Architect and Program/Project Manager.
5. Provide engraved raised markings for the car buttons and car controls in compliance with the "Handicapped Requirements" of ANSI/ASME A17.1.
6. Emergency Communication: per PSHIA Standards.
7. Fixtures shall be free of any manufacturer identification.
8. Fixtures shall have Voice Annunciation.
9. Main Car Operating Panel shall incorporate an elevator display that shall be customizable. Customization and graphics shall be coordinated with the Owner and Architect. The elevator display shall be Model EMN70-AHX as manufactured by C.E. Electronics.
10. Fixtures shall be factory pre-wired for ease of installation.
11. Floor Name Inserts (without Braille) are to be provided to the right of the Car Call Pushbuttons. Floor Names are to be coordinated with the Owner, Architect and Program/Project Manager. Level Number (with Braille) inserts are to be provided to the left of the Car Call Pushbuttons.

- C. Top of Car Operation Device: Provide a top-of-car operating device in compliance with the Code. The device shall have control switches for UP, DOWN, OPERATE/INSPECT and EMERGENCY STOP. The device shall also have an 110v ac outlet for extension cord and provided with a light and guard.
1. Top of Car Operating Device shall have integral emergency LED light that illuminates in the event of power loss.

- D. Hall Stations: Hall stations of the push-button, call acknowledging, stainless recess mounted into the wall and or returns at all elevator landings.
1. Buttons are to be vandal resistant and of the positive stop type. They are to be installed in water tight enclosures at all exterior locations.
 2. Highest landing shall have a single DOWN button. Lowest landing shall have a single UP button. Intermediate landings shall have UP and DOWN buttons with the Up button on top.
 3. Provide die cast raised markings for the hall buttons in compliance with the "Handicapped Requirements" of ANSI/ASME A17.1. Die cast plates are to be flush with faceplate surface. They shall show the words, Up and Down on the plates.
 4. Engrave the hall station with the following:
 - a. In Case of Fire Do Not Use Elevator.
 - b. Firefighters Operating Instructions.

- c. Emergency Power indication.
 - d. Communications Failure indication.
- E. Hall Lanterns:
 - 1. Tamper resistant hall lanterns shall be equipped with illuminated UP and DOWN signal arrows. Provide units projecting from faceplate for ease of angular viewing.
 - 2. In conjunction with each hall lantern, provide an adjustable electronic chime signal to indicate that a car is arriving in response to a hall call and to indicate direction of car travel. Signal shall sound one for up direction of travel and twice for the down direction.
 - 3. Hall Lanterns shall incorporate a Digital P.I. as manufactured by C.E. Electronics.
- F. Firefighters Service: Firefighters' service system shall be provided in compliance with national and local code requirements. Keys shall be AZFS standard.
- G. Hoistway Access: key switches shall be installed at the uppermost and lowest landings as per Code requirements. They are to be NEMA 4 rated.
- H. Provide two-way communication between car and machine room if required by Code.
- I. Bell Alarm System: Bell alarm system for each elevator shall be properly located within building and audible outside hoistway when activated by the Emergency Stop switch or Alarm call button on each car control station.
- J. Machine Room Monitors: Provide a monitor in each machine room capable of displaying status, position and critical items for troubleshooting of equipment.
- K. Provide installation assistance and provision for ACAM card readers and security features, where applicable, within the elevator cab.

2.15 OPERATION:

- A. General: Operation shall be selective collective.
 - 1. Operation shall be automatic by means of the car and landing buttons. Stops registered by the momentary actuation of the car or landing buttons shall be made in the order in which the landings are reached in each direction of travel after the buttons have been actuated. All stops shall be subject to the respective car or landing button being actuated sufficiently in advance of the arrival of the car at that landing to enable the stop to be made. The first car or landing button actuated shall establish the direction of travel for an idle car.
 - 2. "UP" landing calls shall be answered while the car is traveling in the up direction and "DOWN" landing calls shall be answered while the car is

traveling down. The car shall reverse after the uppermost or lowermost car or landing calls has been answered, and proceed to answer car calls and landing calls registered in the opposite direction of travel.

3. If the car without registered car calls arrives at a floor where both up and down hall calls are registered, it shall initially respond to the hall call in the direction that the car was traveling. If no car call or hall call is registered for further travel in that direction, the car shall close its doors and immediately reopen them in response to the hall call in the opposite direction. Direction lanterns, if provided, shall indicate the changed direction when the doors reopen.

- B. Independent Service: Provide a key switch in the car operating panel which, when actuated, shall cancel previously registered car calls, disconnect the elevator from the hall buttons and allow operation from the car buttons only.
- C. Automatic Leveling: Machine room less gearless machine/motor design shall be coordinated with the control so that car shall slow down and stop automatically at the floor (within 1/4 inch) after transition from contract speed. Car level shall be maintained automatically within one-quarter inch of the landing by an anti-creep leveling device regardless of any deviation that maybe caused by the loading or unloading of the car. Landing zone detection shall indicate to the control system the position with respect to the floor level.
- D. Other Items:
 1. Load Weighing: Provide means for weighing car passenger load. Control system to provide dispatching at main floor in advance of normal intervals when car fills to capacity. Provide hall call by-pass when the car is filled to preset percentage of rated capacity and traveling in down direction. Adjustment range: 10% to 100%
 2. Anti-Nuisance Feature: If weight in car is not commensurate with number of registered car calls, cancel car calls. Systems employing either load weighing or door protective device for activation of this feature are acceptable.
 3. Earthquake Operation: to meet Seismic Zone 2 requirements.
 4. Fan and Light Output Timer: Provide an adjustable timer (Range 1 to 10 minutes) that when activated will turn off the fan and light within the car. The timer will start when the car becomes inactive.
 5. Emergency Power Requirements: Provide emergency power provisions in accordance with code requirements for all elevators.
 6. Home Floor Function: Elevators shall be capable of having a pre-set home floor where the elevator will automatically return to when no demand is present.

2.16 WIRING AND ELECTRICAL INSTALLATION:

- A. Conduit and Wiring:

1. Unless otherwise specified, all electrical conductors in the pits and hoistways, except traveling cable connections to the car shall be provided in rigid galvanized steel conduit with steel outlet boxes, except that a small amount of flexible conduit may be used where conduit is not subject to moisture or embedded in concrete.
2. Rigid steel conduit shall be full weight, threaded, galvanized, inside enameled, conforming to ANSI C80.1.
3. Terminal boxes and other similar items shall be of approved construction, thoroughly reinforced, and in no case less than number 12 USSG and shall meet ANSI/NEMA FB 1.
4. All electrical boxes exceeding 150 cubic inches shall be supported independently of the conduits. The rigid conduit shall conform to the specifications here in before specified. All raceway shall be threaded rigid galvanized steel conduit complying with ANSI/NEMA FB 1.
5. Where permitted flexible heavy-duty service cord, type SO, may be used between fixed car wiring and switches on car doors for door reversal devices.
6. Where permitted, flexible metal conduit shall be fabricated in continuous length from galvanized steel strip, spirally wound and formed to provide an interlocking design with a gray XLPO Thermoset Type 2 outer jacket.
7. All conduits terminating in steel cabinets, junction boxes, wire-ways, switch boxes, outlet boxes and similar locations shall have approved insulation bushings. If the bushings are constructed completely of insulation material, a steel locknut shall be installed under the bushing. At ends of conduits not terminating in steel cabinets or boxes, the conductors shall be protected by terminal fittings having an insulated opening for the conductors.
8. All conduits terminating in a NEMA 4X boxes shall be backed up with flat rust resistant steel plates to fit the entire area where the conduit penetrated the box.
9. Conduit fittings and connections shall be compression type. The use of set screws or indentations as a means of attachment is not permitted.
10. Connect motors and other components subject to movement or vibration, to the conduit systems with flexible conduit.
11. The Contractor shall furnish all materials and completely wire all parts of the electrical equipment of the elevators including electrical devices on hatch doors. All car wiring and conduit shall be replaced with new including car junction boxes.
12. Conduits shall be brought and connected to suitable approved connection boxes at all outlets, apparatus and panels.
13. Conduit Sizing, Arrangement, and Support
 - a. Size conduit per NEC for conductor type installed or for Type THW conductors, whichever is larger; 3/4-inch minimum size for conduit.
 - b. Conduits for small devices such as door switches, interlocks, etc. shall be permitted at ½ inch.

- c. The total overall cross-sectional area of the wires contained in any conduit shall not exceed 40 percent of the internal area of the conduit.
 - d. Arrange conduit to maintain headroom and present a neat appearance.
 - e. Route exposed conduit parallel and perpendicular to walls and adjacent piping.
 - f. Maintain minimum 6-inch clearance between conduit and piping. Maintain 12-inch clearance between conduit and heat sources such as flues, steam pipes, and heating appliances.
 - g. Arrange conduit supports to prevent distortion of alignment by wire pulling operations. Fasten conduit using galvanized straps, lay-in adjustable hangers, clevis hangers, or bolted split stamped galvanized hangers.
 - h. Group conduit in parallel runs where practical and use conduit rack constructed of steel channel with conduit straps or clamps. Provide space for 25 percent additional conduit on racks.
 - i. Do not fasten conduit with wire or perforated pipe straps. Remove all wire used for temporary conduit support during construction, before conductors are pulled.
 - j. No conduit shall be attached to a cable tray or installed within 6 inches of a cable tray or light fitting except for termination.
 - k. Approved strain boxes shall be installed for all vertical runs in accordance with Code.
14. Where conduit penetrates fire-rated walls and floors, seal opening around conduit with UL listed through penetration fire-stop system to maintain wall or floor rating.
15. All interlock, hall button and limit switch branch wiring shall be enclosed in flexible steel conduit with covering of liquid tight Type "EF" with connectors having nylon insulated throat.
16. All screws used for terminal connections of all wiring (machine room, hoistway and pit) shall be provided with "star washers" of proper size and type.

B. Conductors:

- 1. Unless otherwise specified, conductors, exclusive of traveling cables, shall be 98% conductivity copper, solid, for size 10 AWG and smaller, and stranded for size 8 AWG and larger shall be stranded or solid coated annealed copper in accordance with the NEC for Type THHW.
- 2. Where 16 and 18 AWG are permitted by Code, either single conductor cable in accordance with Code for Type TF, or multiple conductor cable may be used provided the insulation of single conductor cable and outer jacket of multiple conductor cable is flame retardant and moisture resistant.
- 3. Insulation Voltage Rating: 600 volts.
- 4. Insulation: ANSI/NFPA 70, type THHN/THWN, XHHW or THW.

5. The use of PVC insulation shall not be permitted.
6. Multiple conductor cable shall have color coding or other suitable identification for each conductor. Conductors for control boards shall be in accordance with Code.
7. No joints or splices shall be permitted in wiring except at outlets. Tap connectors may be used in wireways provided they meet all UL requirements.
8. All wiring shall test free from short circuits or grounds. Insulation resistance between individual external conductors and between conductors and ground shall be not less than one meg-ohm.
9. Where size of conductors is not given, capacity shall be such that maximum current shall not exceed limits prescribed by Code.
10. Equipment grounding shall be furnished and installed. Ground conduits, supports, controller enclosures, motors, platform and car frames, and all other non-current conducting metal enclosures for electrical equipment in accordance with Code. The ground wires shall be copper, green, insulated and sized as required.
11. Terminal connections for all conductors used for external wiring between various items of elevator equipment shall be solderless pressure wire connectors in accordance with Code. The Contractor may at his option make these terminal connections on No. 10 or smaller conductors with approved terminal eyelets set on the conductor with a special setting tool, or with an approved pressure type terminal block. Terminal blocks using pierce-through serrated washers are not acceptable.
12. Provide all necessary conduit and wiring between all remote machine room and hoistway.
13. Color Coding: All power conductors identified as to phase and voltage by means of color impregnated insulation, as follows:

Voltage	ØA	ØB	ØC	Neutral	Ground
120/208V	Black	Red	Blue	White	Green
277/480V	Brown	Orange	Yellow	White	Green

For wire sizes No. 8 AWG and larger, color banding tape, minimum 2 inches wide, may be used at all accessible locations in lieu of colored insulation.

C. Traveling Cables:

1. Traveling cables from junction box on car to junction box in hoistway shall consist of flexible traveling cables conforming to the requirements of Code.
2. Junction boxes in hoistway and on car shall be equipped with terminal blocks. All connections to terminal blocks shall be made with either terminal eyelet connections or pressure wire connectors of the clamp type that meet UL 486 requirements for stranded wire.

3. Terminal blocks shall have permanent indelible identifying numbers for each connection. The outer covering must remain intact between junction boxes. Abrupt bending or twisting producing distortion of cable is not permitted.
4. Cables shall be free from any possible contact with hoistway structure, car or other equipment. Furnish and install shields or pads to protect the cables.
5. Provide 10 percent spares, but not less than 6 spare conductors in each traveling cable
6. Provide two (2) spare CCTV wires and twelve (12) shielded pairs of Type ETT/300V as manufactured by Draka Elevator Products, SuperFlex WSCC 14X18SH or approved equal for IT/Data, security and telephone systems.
7. Provide separate traveling cables for car lighting and fan control circuits.
8. Provide traveling cable for telephone in the elevator car. Cable shall extend from junction box in hoistway to telephone box in car.
9. Provide traveling cable for car work lights. Cable shall extend from junction box in hoistway to car junction box.
10. Car and hoistway junction boxes shall be provided for on the top of the elevator cab.
11. Cables shall include ten percent spare wires between each controller, selector, and hoistway junction box, all spares to be properly tagged or otherwise identified with clear and indelible markings.
12. All insulated wiring, control wiring and wiring in traveling cables shall be tag coded at their terminals in the motor room or controller location and hoistway junction box, elevator cab junction box, and push-button stations within the cab, and shall agree with the approved wiring diagrams.
13. The traveling cable shall be wired directly from the controller to the elevator with no hoistway junction box.

D. Motor Circuits

1. Contacts in elevator motor circuits that are to be opened by governors or other safety devices shall be copper to carbon or other approved of the non-fusing type. Contacts on control and signal relays and switches shall be commercially pure silver. Contacts on switches breaking heavy motor circuits shall be copper to carbon or, if of metal, shall have supplementary breaking contacts and shall operate with suitable wiping action, or shall be of approved equivalent design and construction. They shall be equipped with suitable blowout coils, vanes, barriers, etc., where necessary to prevent undue arcing and heating.

E. Car and hall operating signal circuits shall be not exceeding 48 volts.

F. Each major component of equipment shall have the manufacturer's name, type, class or catalog number on a metal plate securely attached to the item of equipment in a conspicuous location.

- G. All cabinets containing motor drives, filter boxes, transformers and power reactors shall be supported on rails and isolated from the base building structure with elastomer pads having a minimum static deflection of 3/8" (Mason Type N, or equivalent). All connections to and from the cabinetry shall be flexible in order not to compromise the isolation system. Use non-rigid conduit for the final electrical connection, with all other conduit supports and clamps provided on a neoprene sponge insert.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Prior to commencing with the installation of elevator equipment, examine the following and verify that no irregularities exist that would affect the quality of execution of work specified. Physically verify all dimensions. It is important to note that the elevator spaces will be constructed as shown on the Contract Drawings and no modifications will be permitted to accommodate the equipment. Therefore, the installer must provide equipment that will be suitable for the space provided.
 - 1. Controller room size and location
 - 2. Hoistway size and Plumbness
 - 3. Anchor brackets
 - 4. Sill Support
 - 5. Pit depth
 - 6. Overhead clearance

3.02 INSTALLATION

- A. Install elevator in accordance with the OEM's installation procedures and approved Shop Documents. Install equipment so it may be easily removed for maintenance and repair. Install all equipment to afford maximum accessibility, safety, and continuity of operation.
- B. All elevator equipment including their supports and fastenings to the building, shall be mechanically isolated from the building structure and main line power feeders to minimize objectionable noise and vibration transmission to car, building structure, or adjacent occupied areas of the building.
- C. Verify that electrical wiring installation is in accordance with the OEM's submittal.
- D. Erect all items square, plumb, straight and accurately fitted with tight joints and intersections.
- E. Coordinate with the Contractor to ensure that the installation of the elevators is not in conflict with the work performed of other trades.

- F. Isolate non-compatible, dissimilar materials from each other by providing vibration isolation, gaskets or insulating compounds.
- G. Provide protective coverings for finished surfaces.
- H. Upon completion, touch up and restore damaged or defaced factory finished surfaces.
- I. Touch up any marred finishes and replace as directed by the Program/Project Manager.
- J. Remove protective coverings and clean exposed surfaces after completion.
- K. Welding shall comply with AWS D1.1. Identify field welds with welder's identification stamp.
- L. Installer shall provide all special tools to the Owner, including elevator adjuster's laptop at completion of installation.
- M. Elevators will be periodically inspected during the installation process by the Program/Project Manager and Owner/Owner's Representative. All requests made by the inspecting personnel are to be addressed by the installer to the satisfaction of the inspecting personnel.

3.03 FIELD TESTING

- A. General: After installation, the Installer shall inspect and test each elevator and related equipment to the Program/Project Manager and Owner's satisfaction that operation of every part of the equipment complies with this specification and with applicable requirements of ASME/ANSI A17.1 including ride quality, performance, and sound level criteria specified herein. Elevator will be inspected in accordance with the following:
 - 1. Installer shall notify the Owner seven (7) days prior to each scheduled test. Installer shall perform testing in the presence of an Owner representative and the Program/Project Manager. The test will include the functionality of the remote monitoring system and verification that all monitored items are being monitored by Lift Net. The test is in addition to those performed by the Authority Having Jurisdiction.
 - 2. Installer shall notify the appropriate local authorities having jurisdiction a minimum of seven (7) days in advance of final acceptance tests.
 - 3. Installer shall provide all instruments, materials, and labor required for tests specified herein.
- B. Acceptance Testing:
 - 1. After installation and before date approved for start of warranty period, inspect and test the elevator and related equipment to the Program/Project Manager's and Owner's satisfaction that operation of

every part of equipment complies with applicable requirements of ASME/ANSI A17.1 and local codes along with requirements of the contract specifications. Elevator shall be inspected in accordance with procedures outlined ANSI/ASME A17.2. This inspection and testing is in addition to any inspections and tests performed in the presence of the authority having jurisdiction.

- C. Notification Requirements: Notify the Program/Project Manager a minimum of five (5) working days prior to each scheduled test.
- D. Full Load Run Test: Run elevator continuously a minimum of four (4) hours with full specified rated load, during which time car shall be stopped at top and bottom landings with a minimum standing period of ten (10) seconds at each landing.
- E. Speed Test: Make tests before, during and after full load tests. Using a tachometer on guide rail, determine actual speed of car in both directions of travel, both with full-specified rated load and no load in car. Tolerances for determining if car speeds meet the specified requirements are as follows: Ascending and Descending Car Speed not more than 10 percent above or more than 10 percent below required speed.
- F. Car Leveling Test: Determine accuracy of floor landing tests both before and after full load run tests. Minimum of 1/4 inch leveling must be maintained. Test accuracy of landing at all floors with full load and no load in car, in both directions of travel.
- G. Electrical Tests: Ensure elevator wiring system is free of short circuits and accidental grounds. Test ground resistance of elevator structure, equipment, and raceways for continuity. Using meg-ohm-meter, determine that insulation resistance of each circuit is more than one (1) meg-ohm or higher as required by the cable manufacturer. Insulation resistance for motors shall be determined under actual conditions after installation.
- H. Acceptance: Elevator acceptance will be based upon elevators meeting requirements of Contract Documents, including training, and upon evidence of passing specified acceptance tests and inspections, completion of commissioning and verification that all punch list items have been addressed to the Owner's and Program/Project Manager's satisfaction.
- I. Test Reports: Within five (5) days after completion of a test, submit a test report stating type of test, test requirements, failures, or problems, and name of certifying Engineer and Title. Safety device failure or defective equipment shall be identified, with description of cause and corrective action taken.
- J. Failures for any reasons shall be identified with cause(s) and corrective action taken.

K. Retest Notification Requirements:

1. The Program/Project Manager shall be notified ten (10) days prior to the scheduled retest. If any equipment is found to be damaged or defective, or if performance of the elevator does not conform to the requirements of the contract specifications or the Safety Code, no approval or acceptance of elevators shall be issued until all defects have been corrected. When the repairs and adjustments have been completed and the discrepancies corrected, the Program/Project Manager shall be notified and the elevator will be re-inspected. Rejected elevators shall not be used until they have been re-inspected and approved.
2. The certificate of inspection for operational use will be issued to the Owner by the enforcing inspection agency. The certificate shall be posted in the elevator control room and in the car operating station.

3.04 ADJUSTING, CLEANING AND PAINTING

- A. All equipment shall be adjusted prior to final testing and acceptance.
- B. Restore all exposed work soiled or damaged during installation to its original finish. Repair to match adjoining work prior to final acceptance.
- C. Painting: The following equipment shall be clearly identified by number using four-inch stenciled numerals; crosshead, pit equipment, stop switches, and all machine room and secondary equipment (including but not limited to machines, controllers, drives). The pit equipment including rails shall be painted. The top of the elevator shall be completely cleaned and painted. Painting shall include the top of the cab, stiles, crosshead, and all other top of car related equipment. The machine area shall be completely cleaned and painted including the machine support steel and machine. The counterweight shall be cleaned and painted.

SECTION 14310

HEAVY-DUTY TRANSIT TYPE ESCALATORS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Design, fabrication, installation, testing and commissioning of APTA Heavy Duty Transit type escalators.
- B. Related Requirements:
 - 1. All contract documents in Package B04 (GMP-5).

1.02 GENERAL DESCRIPTION

- A. Provide all engineering, equipment, labor and permits required to satisfactorily complete design, fabrication, installation, testing and commissioning of four (4) heavy-duty transit escalators as required by contract documents at 24th Street Station.
- B. The Installer is to ensure that all work is performed in accordance with the requirements of local codes and regulations, which govern the requirements of the work specified. All equipment, design, clearances, construction, operation and tests are required to be in accordance with these specifications, the APTA Heavy Duty Transit Guidelines and the ASME/ANSI A17.1 - Safety Code for Elevators and Escalators and all pertinent codes, regulations and rules being enforced by the City of Phoenix Planning and Developmental Services.
- C. The Installer is required to perform thorough field surveys in addition to providing all engineering, labor, materials, storage, tools, equipment, supervision and transportation in order to fulfill the requirements for design, engineering, fabrication, and installation of the escalator equipment in a complete first-class manner and in accordance with the requirements of the contract documents.
- D. Whenever a reference is made to a part of the equipment being provided in a singular number, it applies to as many such items that may be required to provide a complete installation.
- E. Any equipment not specifically identified within the contract documents but that is essential to the installation and operation of the equipment specified herein is to be provided by the Installer as if the same was identified in the specification.

- F. Specifications indicate the arrangement of the escalator work to be provided. The Installer is to carefully review these documents along with field conditions and the overall design of the project, as the Installer will be responsible for the proper fitting and installation of the equipment specified. Installer is required to work closely with the Program/Project Manager.
- G. Installation of the new escalators includes, but is not limited to, the following:
 - 1. Installation of new heavy-duty escalators.
 - 2. Installation of flashing and closure elements required to coordinate new escalators with structural and architectural elements.
 - 3. Installation of truss cladding on all exposed sides, including the cladding beneath the escalator truss, to match finishes indicated on the contract documents.
- H. Provide all required staging, protection, hoisting, hoist/safety beams, and equipment necessary for the movement of equipment.
- I. Transportation and Handling: Materials, products and equipment shall be properly packaged and protected from damage during transportation, storage and handling. Coordinate delivery and movement of large items in Phoenix Sky Train facilities with the Engineer.
- J. Product Delivery, Storage and Handling:
 - 1. Deliver material in manufacturer's original, unopened protective packaging.
 - 2. Protect equipment and exposed finishes from damage and stains during transportation, erection and construction.
 - 3. Available storage space at the site is limited. Any additional off-site space required, including cost, is responsibility of the Vertical Transportation Equipment Supplier.
 - 4. Allocate available site storage areas and coordinate their use with the Engineer and the work of other contractors.
 - 5. Provide suitable temporary weather-tight storage facilities as may be required for materials that will be stored in the open.
- K. Installer is to provide any and all information as required for the appropriate coordination of work to be performed by other trades. Address any possible impacts on the installation schedule.
- L. Commissioning Requirements: Completion of the escalator work requires of the Installer to have the equipment completely inspected in accordance with the specifications in order to demonstrate that the equipment, as installed, conforms to the specifications and code requirements. All labor, tools and equipment necessary to conduct the onsite commissioning inspections and testing are the responsibility of the Installer. The commissioning inspections

and tests will be performed by the Program/Project Manager prior to the inspection by the City of Phoenix Elevator Inspector.

- M. The Installer has no advertising privileges related to this project unless specific written permission is obtained from the owner. Installer is required to maintain the work area free from any and all posters, signs and decorations. Installer's name, trademarks, logos or other identifying symbols are not to appear on any surface on the equipment visible to the general public.

1.03 DEFINITIONS

- A. Heavy-duty escalator: An escalator designed specifically for transit system usage. Substantially different from commercial units in the design of truss, machine, step chain, step chain tensioning device, steps, brake, and other components/equipment.
- B. Flat steps: Number of flat steps shall be measured from edge of combplate in horizontal direction to first exposure of a riser, at upper and lower landings.
- C. Working points: Points of intersection of step nosing line and the horizontal line of the top and bottom landing plates at finish elevation.
- D. Special tools: Tools designed specifically for tasks associated with escalator examinations, maintenance, and repair, or those which are required for these tasks and are not readily available through normal purchasing channels.
- E. Step width: The horizontal distance between skirt panels.
- F. Escalator support: These are the upper, lower, and intermediate supports needed to support the total loads of the escalator.
- G. Installer: The installer is the Contractor, or Subcontractor, responsible for furnishing and installing the escalators. For this Project, it will be the Vertical Transportation Equipment Supplier.
- H. Contractor: Any responsible party involved in the installation other than the installer of the escalators. For this Project, it will be considered the CM@Risk.
- I. Program/Project Manager: This is considered the Vertical Transportation Design Professional for the project. He will be responsible for design coordination, submittal review, construction support/inspection services and commissioning on behalf of the Owner.
- J. APTA – American Public Transit Association

1.04 TEMPORARY AND PERMANENT ELECTRICAL POWER SERVICES TO BE PROVIDED BY OTHERS

- A. For the escalator drive systems: 480 volts, 3-phase, 3-wire, 60 Hertz terminating in at a primary disconnect switch located in the new remote controller rooms and an auxiliary disconnect switch will be required in the upper escalator pit. Vertical Transportation Equipment Supplier must coordinate with the Contractor and the Program/Project Manager.
- B. For escalator lighting: 120 volts, 1-phase, 3-wire, 60 Hertz terminating at the escalator controller as a basis of design; however, Vertical Transportation Equipment Supplier must coordinate with the Contractor and the Program/Project Manager for specific requirements for lighting systems provided.
- C. For pit lighting and receptacles: 120 volts, 1-phase, 3-wire, 60 Hertz terminating at a disconnect switch in the upper escalator pit as a basis of design, however, Vertical Transportation Equipment Supplier must coordinate with the Contractor and Program/Project Manager.

1.05 APPLICABLE CODES, STANDARDS, AND PUBLICATIONS

- A. Escalator designs and installations: Heavy-duty, public transit service type in accordance with APTA standards and are to comply with the following:
 - 1. ASME A17.1 – Safety Code for Elevators and Escalators, applicable edition.
 - 2. ASME A17.2 - Guide for Inspection of Elevators, Escalators, and Moving Walks; applicable edition.
 - 3. ASME A17.5 – Elevator and Escalator Electrical Equipment; applicable edition
 - 4. European Norm – EN 115
 - 5. Local Fire jurisdiction
 - 6. Life Safety Code, NFPA 101, and CCR Title 19
 - 7. Uniform Federal Accessibility Standard (UFAS)
 - 8. City of Phoenix Elevator Code
 - 9. ASTM A 36/A 36M - Standard Specification for Carbon Structural Steel; applicable edition
 - 10. ASTM A 325 - Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength; applicable edition
 - 11. ASTM A 325M - Standard Specification for High-Strength Bolts for Structural Steel Joints (Metric); applicable edition
 - 12. ASTM A 490 - Standard Specification for Structural Bolts, Alloy Steel, Heat Treated, 150 ksi Minimum Tensile Strength; applicable edition
 - 13. ASTM A 490M - Standard Specification for High-Strength Steel Bolts, Classes 10.9 and 10.9.3, for Structural Steel Joints (Metric); applicable edition

14. ASTM A 500 - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes; applicable edition
 15. ASTM A 501 - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing; applicable edition

 31. AFBMA (Anti-Friction Bearing Manufacturers Association) - Std. 9 and 11.
- B. Specifications and references contained within this section are not to be construed as supplanting any code requirements governing the design, fabrication, installation or operation of the equipment.
- C. The most stringent requirement shall take precedent in case of a conflict between codes, regulations or standards incorporated into this section.
- D. Any specific provision cited herein and/or shown on the contract documents shall govern for the specified application.

- E. The Installer shall be licensed and strictly governed by local and governmental authorities of this area in order to perform this work.

1.06 SYSTEM DESCRIPTION

A. General:

1. Design escalators with provisions for thermal expansion and contraction of complete escalator assemblies due to changing ambient conditions as well as any movement of the facility. Escalators shall be of the heavy-duty type for use in transit systems, modified per these specifications to meet the requirements at the Phoenix Sky Train Station. They shall be designed to meet the operating and performance requirements of these specifications, to fit within the spaces provided, and to comply with all Code requirements.
2. No wood or wood products shall be permitted in escalator systems.
3. Escalators shall be designed per the minimum indicated transition radii and number of flat steps based on vertical rise as per the contract documents.

B. Operational Requirements:

1. Hours of operation shall be considered as twenty-four (24) hours per day, seven (7) days per week.
2. Direction of travel shall be considered as either direction, and unit shall be reversible.
3. Speed of operation shall not exceed 100 feet per minute. The no load to full load speed shall not exceed 4% of the rated speed.
4. Number of flat steps shall be per APTA guidelines.
5. Escalators shall be capable of variable speed operation as described in Paragraph 2.01.L.

C. Structural Requirements:

1. For the escalators provided, Vertical Transportation Equipment Supplier shall provide escalator truss mounting angles and intermediate truss supports with attachments, sized as required to install escalators, for lengths and vertical rise as indicated on contract documents, into wellway structural support system without structural modification.
2. Loads shall be indicated on shop drawings and shall be provided by the Vertical Transportation Equipment Supplier to the Program/Project Manager. These reaction loads shall include the dead weights of the escalators machinery, structure and truss cladding.
3. Special design loads shall be computed by the Vertical Transportation Equipment Supplier for heavy-duty, transit system type escalators as specified herein.
4. Seismic designs must be based on actual story drift data from the building's structural engineer.

5. Seismic calculations shall be based on the APTA loadings in these guidelines.
6. Escalator intermediate support points shall be provided by Vertical Transportation Equipment Supplier where required and shall be coordinated with structural bearing locations for intermediate supports. Details and calculations shall be submitted by the Vertical Transportation Equipment Supplier for coordination and record by the Engineer.
7. Escalator truss design shall have a maximum deflection of 1:1000 of the spans between supports as depicted in the contract documents using the design loads specified.
8. Foundations: Additional room for escalator controllers will not be provided for the escalators as noted on the documents.
9. Design load shall be 320 pounds per 40 inch exposed step for all truss, machinery, chains, motors and brakes.
10. Escalator Installations shall be designed to meet Seismic zone 2 criteria per ASME A17.1 requirements regardless of the local code authority requirement unless local code requirement is higher.
11. Escalator components shall be designed based on the following applied duty cycle during operation:
 - a. Three (3) Hours with 100% Rated Load
 - b. Six (6) Hours with 50% Rated Load
 - c. Fifteen (15) Hours with 25% Rated Load

D. Environmental Operations Requirements

1. General: Escalators shall be capable of operating with full specified performance capability while exposed to the following climatic and environmental conditions.
2. For Interior Escalators (those within a climatically controlled space):
 - a. Escalators shall be designed to operate in a temperature range of plus five (+5) to plus one hundred four (+104) degrees Fahrenheit, dry bulb; and all conditions of relative humidity while exposed to airborne dust and debris. However, truss heaters, combplate heaters, and oil water separators shall not be required.

E. Fire Protection

1. No wood or wood products shall be used in the escalators.
2. No products containing PVC or Halogen shall be permitted.

F. Performance Requirements:

1. Escalator rated Speed shall not exceed 100 feet per minute (FPM). Deviations in speed between no passenger load and full passenger loads shall not exceed 4% of the rated speed.
2. Sound Level: Escalators shall be designed to operate at or below a sixty-five (65) decibels sound level, measured five (5) feet above the escalator at any location, with the escalator operating normally, either free-running

or under load. For multiple escalator installation, the noise measurements shall be made with only one (1) escalator unit in operation, but with the entire installation complete and in operating condition. An ambient level not to exceed forty-nine (49) decibels shall be maintained prior to units being turned on.

3. Bearings shall be rated for an AFBMA L10 life as specified, under fluctuating bearing load. All bearings shall have basic dynamic load ratings.

- G. Labeling Requirements: Every escalator shall be clearly marked with rated load, rated speed, sleep mode speed, sleep mode detection distance, acceleration rate from sleep mode speed to normal speed, stopping distances under no load and full load, braking torque range, manufacture serial number, and the designated PSHIA identification.

1.07 JOB CONDITIONS

- A. Protection: During installations and until escalator systems are fully operative; Vertical Transportation Equipment Supplier shall make necessary provisions to protect systems from damage, deterioration, and environmental conditions.

- B. Coordination Requirements

1. Installation: The Vertical Transportation Equipment Supplier will be required to install the new escalator system. Vertical Transportation Equipment Supplier shall coordinate directly with the Contractor and the Program/Project Manager in order to properly execute this work sequence.
2. Cladding: Vertical Transportation Equipment Supplier shall provide and install truss cladding on all exposed sides of the escalators, including beneath the escalators. Refer to contract documents and other specifications for cladding material.
3. Decking: Vertical Transportation Equipment Supplier shall coordinate with the Architect and Program/Project Manager and review any and all appropriate design documents dealing with escalator decking. No exposed fastenings are to be provided and decking in between parallel escalators shall be one common piece in width. Outer decking shall consist of one-piece widths and extend to the finish walls. Drawings are to be submitted for approval.
4. Floor finish at landing plates and newels: Vertical Transportation Equipment Supplier shall coordinate with Owner and the Architect.
5. Lock and key requirements: Vertical Transportation Equipment Supplier shall coordinate with the Program/Project Manager and Owner.

- C. Site Conditions

1. Vertical Transportation Equipment Supplier shall design and fabricate escalators to fit within the wellways as designed by the Design Team.

2. Vertical Transportation Equipment Supplier shall review site conditions and measure as-built dimensions for escalator wellway(s) prior to construction of equipment and delivery of equipment to the site.

1.08 QUALITY ASSURANCE:

- A. Regulatory agencies: escalator design, materials, construction clearances, workmanship, and tests shall conform to the requirements of the codes and regulations listed in Part 1.05.
- B. Welding: Welding shall be performed in accordance with the requirements of AWS or CWB. Welders shall produce evidence of current certification by AWS or CWB.
- C. Dimensions
 1. Each escalator shall be forty (40) inch (1000mm) nominal step width as specified and designed for a maximum of 30 degrees.
 2. Escalator widths shall not exceed those indicated on contract documents.
 3. Escalator lengths shall be equal to that required by the constructed wellway.
 4. Structural dimension requirements:
 - a. It is to be understood that Vertical Transportation Equipment Supplier shall design and fabricate escalators to the requirements of the contract specifications and to meet the dimensions of the constructed wellways.
 - b. Vertical Transportation Equipment Supplier shall verify dimensions of wellways and access points prior to manufacturing trusses. An Arizona Registered Land Surveyor shall be employed by the Vertical Transportation Equipment Supplier to verify all existing wellway dimensions prior to design and fabrication of the escalators. The survey results shall be sealed by the Registered Land Surveyor and provided to Contractor and the Program/Project Manager for approval.
 5. In the event of a discrepancy, Vertical Transportation Equipment Supplier shall notify Contractor and the Program/Project Manager immediately, and shall not proceed with installation in the areas of discrepancy, until the discrepancy has been fully resolved, and Contractor has instructed Vertical Transportation Equipment Supplier to proceed. Failure of Vertical Transportation Equipment Supplier to report discrepancies shall constitute an acceptance of existing work as fit and proper for the execution and completion of Vertical Transportation Equipment Supplier's work.
- D. Requirements of Regulatory Agencies
 1. Vertical Transportation Equipment Supplier shall obtain and pay for all necessary permits and perform such tests as may be required for acceptance and approval of moving walks by jurisdictional agencies.

2. Vertical Transportation Equipment Supplier shall notify the proper inspectors to witness required testing.

E. Factory Visit

1. The Vertical Transportation Equipment Supplier shall provide for the costs of up to two (2) of Owner representatives, and up to two (2) representatives of the Program/Project Manager to visit the factory where the escalators are being manufactured, per contract, for each unit type.
2. The representative of the Program/Project Manager will dictate the length of time required to perform the factory test and will have the right to control the testing being conducted in the factory to his satisfaction.
3. The escalator shall be tested and inspected with its own designated controller. The Program/Project Manager and Owner representatives shall observe the testing of the controller operation and the testing of the safety devices in the escalator. The balustrade and handrails shall be completely assembled for these tests. The escalator shall be fully assembled and capable of operating with all steps installed, at either a 30 degree angle or horizontal in the factory, whichever is feasible.
4. The Vertical Transportation Equipment Supplier shall not ship the escalators without the approval of the Program/Project Manager and Owner after the conclusion of the factory visit.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Packing, Shipping, Handling, and Unloading:

1. Accept equipment, materials, and other Products on site in factory containers, bundles, and shipping skids.

B. Delivery and Acceptance at Site:

1. Deliver material in original packages, containers, skid loads, or bundles bearing brand names and identification of source of manufacture or supply.
2. Inspect deliveries for damage.

C. Storage and Protection:

1. Store materials inside under cover and in a dry location.
2. Protect from weather, direct sunlight, surface damage, corrosion, and construction traffic and activity.
3. Vertical Transportation Equipment Supplier shall make necessary provisions to protect systems from damage, deterioration, and environmental conditions during installations and until escalator systems are fully operative.

D. Handling:

1. Handle material to prevent damage to edges, ends, surfaces, and finishes.

1.10 SUBMITTALS

- A. General: Submittal shall contain sufficient detail to show full compliance with Contract Documents.
- B. Product Data:
 - 1. Submit manufacturer's product data for each product and material
 - 2. Indicate manufacturer, trade names, and model numbers, components, arrangement, optional and accessories being provided.
 - 3. Include applicable literature, catalog material or technical brochures.
 - 4. Include material and equipment specifications, sizes, types, dimensions, weights, rated capacities, and performance curves.
 - 5. Include utility requirements for wiring, piping, and service connection data, motor sizes complete with electrical characteristics.
- C. Shop Drawings:
 - 1. Seven (7) copies of the layout and shop drawings shall be provided by the contractor for review within thirty (30) days of notice to proceed.
 - 2. Surveys sealed by an Arizona Registered Land Surveyor demonstrating that the Vertical Transportation Equipment Supplier has confirmed the dimensional requirements of the new escalators to be installed, including but not limited to, vertical rise, locations from columns, wellway lengths and widths, pit depths, and location of intermediate supports shall be provided.
 - 3. All drawings, views and details shall be developed and presented in accordance with ANSI Y14.3 Multi and Sectional View Drawings.
 - 4. Drawings shall clearly reflect dimensional data for escalator wellways including cross references to building column lines and finish elevations depicted in the Contract Documents.
 - 5. Escalator layout shall be shown in three orthogonal views and shall include key dimensions, support details, power connection locations and power connection terminal points. General layout shall include a cross section taken through the escalator between the escalator work points. Step nosing radii at the upper and lower transitions shall be clearly dimensioned.
 - 6. Bolt torque settings, including thread lubricant specifications, for all field critical connections and adjustments shall be clearly indicated on the layout drawings. Bolt torques shown shall include, but not be limited to, the following:
 - a. End support leveling set screws/jack bolts
 - b. Intermediate support leveling set screws/jack bolts, as required
 - c. Truss split connection systems, as required for multiple section trusses
 - 7. Submit detail drawings, including sizes, tolerances, materials and part numbers for the following systems and/or components:
 - a. Escalator truss structure

- b. Step and step chain guidance track system and supports
- c. Escalator drive machine assembly including drive chains and/or gear transmission details
- d. Escalator service brake assembly, including brake torque data and curves
- e. Emergency and main shaft brake systems including brake torque data and curves
- f. Step chain assembly including pitch, link plates, pins, bushings and rollers
- g. Step assembly including axle(s), step tread, step riser, frames and rollers
- h. Handrail system including drive, cross section of profile, guides and tensioning devices
- i. Escalator supports including end supports, intermediate supports, fixed supports and slip supports as required.
- j. Balustrade system including decking, interior panels, skirt panels and related connections.
- k. Operating stations including emergency stop button, direction selection switches and labeling.
- l. Floorplates and floor plate frames, including adjustment details.
- m. Ceiling intersection and apex guards, where applicable.
- n. Electrical layout showing placement of lighting, light switches, receptacles, light fixtures, disconnect switches, and convenience outlets in machinery spaces, truss envelope, and pits.
- o. Safety Devices including, but not limited to, the following:
 - 1) Comb impact devices
 - 2) Handrail entry guards
 - 3) Broken drive chain switches, as applicable
 - 4) Broken step chain switches
 - 5) Skirt obstruction devices
 - 6) Missing step devices
 - 7) Missing and Deteriorated roller devices.
 - 8) Skirt Brushes
- 8. Shop drawings shall include complete schematic and connection diagrams for each controller and all electrical devices including a legend for components.
- 9. Controller information should include complete I/O list.
- 10. A narrative of the Variable Speed Operation shall be submitted for review. The narrative shall include detailed information including acceleration rate, sleep mode speed and detection distance. It shall include the Product Data for the detection system to be utilized. Mechanical shop drawings indicating the arrangement of the detection system shall also be provided.
- 11. All drawings shall reflect conditions as coordinated with the design by the design team members and reflect the coordinated and field measured wellway lengths, vertical rises, controller room locations/sizes, support

conditions, finish conditions and electrical requirements, and be provided electronically in an electronic format acceptable to PSHIA.

D. Installation and Rigging Plans:

1. Seven (7) copies of the installation and rigging plans shall be provided by the Contractor for review no later than six (6) weeks prior to start of installation.
2. Installation and rigging plans shall include both a narrative description of the installation sequence and sketches illustrating the path of egress through the facility. Sizes of openings in the facility shall be clearly indicated.
3. All loads imparted on the structure shall be shown.
4. Details shall be provided clearly depicting proposed connections of rigging equipment and means proposed to protect adjacent finishes.

E. Samples:

1. Submit [6] samples for the following:
 - a. Handrail – 6 lineal inch length of proposed handrail
 - b. Decking – 6 inch square sample of proposed decking material
 - c. Skirting – 6 inch square sample of proposed skirting material
 - d. Floor Plate – 6 inch square sample of proposed floor plate material
 - e. LED light fixtures – one (1) full operating length or unit.
2. Samples shall be clearly labeled to reflect:
 - a. Project Name
 - b. Contract Number
 - c. Description of Sample

F. Maintenance programs: within sixty (60) days after notice to proceed, and prior to installation, Vertical Transportation Equipment Supplier shall submit detailed interim and revenue service maintenance programs, showing functions to be performed and their scheduled frequency.

G. Operating and Maintenance Manuals: Prior to installation, Vertical Transportation Equipment Supplier shall submit seven (7) complete sets of operation and maintenance manuals for approval. After PSHIA approval and prior to the beginning of acceptance testing, twelve (12) sets of the approved manuals shall be provided by the Vertical Transportation Equipment Supplier. The manuals shall include the following:

1. Complete table of contents.
2. Complete instructions regarding operation and maintenance of equipment, including disassembly and assembly of drive system, handrail drive assembly, and track system. Included will be complete illustrated, exploded views of all assemblies, and a complete, illustrated, exploded view for identifying all system parts.

3. Complete nomenclature of replaceable parts, part numbers, current cost, and warehouse location. If product source is another vendor, Vertical Transportation Equipment Supplier shall include name and address of other vendor.
4. Sample copies of a proposed preventive maintenance chart.
5. Descriptions of safety devices.
6. Safety rules, tests, and procedures, including testing of all systems and subsystems.
7. Procedures for adjusting brake, handrail tension, handrail chain drive tension, step chain tension, track system, and mechanical components, including pictorials.
8. Instructions for removing floor plate, replacing comb segments, and removing and installing steps, and interior panels.
9. Troubleshooting techniques.
10. Detailed lubrication and cleaning schedule indicating weekly, monthly, quarterly, semiannual, and annual lubrication; and a description of each lubrication point, lubrication type, and specification.
11. Control and schematic electrical wiring diagrams of controller, including wiring of safety devices to connections with remote indication and control panels for each escalator and group of escalators. Complete I/O list shall also be provided.
12. Electrical layout showing placement of lighting, light switches, receptacles, light fixtures, disconnect switches, and convenience outlets in remote controller room, truss envelope, and pits.
13. Complete detailed drawings and wiring diagram of escalator fault-finding device and connection to annunciator panel.
14. As built drawings for final escalator installation, controller and truss wiring. Also provide As-built drawings in electronic format in AutoCad 2016 or other electronic format required by PSHIA.
15. In addition to the manual, an escalator installer's laptop used to interface with the controller shall be provided to PSHIA.
16. The manufacturer's complete Maintenance Control Program shall be provided in both hard copy and electronic format to PSHIA.

H. Certification

1. The Vertical Transportation Equipment Supplier shall be required to provide certification, in writing and signed by an officer of the organization, that PSHIA shall be provided with copies of any and all information, correspondence, bulletins, newsletters, manuals, techniques, procedures, drawings, sketches and any other documents related to maintenance, safety, operations, design changes, modifications, retrofits, etc., which relate to any part, component, equipment, system, subsystem, or material and services applicable to the escalator provided.
2. All of the above referenced shall be provided as it pertains to the original installation and for a period of ten (10) years after final acceptance of the last escalator provided under any contract.

3. The referenced material shall be provided within thirty (30) days of publication or internal distribution by the Vertical Transportation Equipment Supplier. The material, even if labeled PROPRIETARY, shall be delivered to the Engineer without prejudice or delay and at no additional cost.
 4. The entire manual shall be also provided in an electronic format on CD-ROM that is acceptable to PSHIA.
- I. Quality Assurance/Control Submittals
1. Design Data reflecting compliance with referenced Codes and Standards along with the custom requirements of this specification shall be submitted.
 2. Engineering Calculations
 - a. Motor Sizing Calculations
 - b. Truss Deflection Calculations
 - c. Step Chain Tensile Stress Calculations, including factor of safety
 - d. Step Chain Pin Pressure Calculations
 - e. Truss Support Point Reactions
 - f. Story drift and seismic reaction calculations.
 3. Test Reports
 - a. Step Fatigue Test certificates
 4. Certificates
 - a. Welding certifications to AWS D1.1 or CWB.
 - b. Step Chain Certificate of Breaking Strength
 5. Manufacturer's Instructions and Field Reports.
- J. MSDS and product data sheets: Shall be submitted with an index listing each product, along with the application method of the product, approximate quantity per escalator and the component the product is applied or associated with. The Installer shall allow six (6) weeks for review of MSDS.
- K. Provide copies of all Code Authority permit submittals to PSHIA and documentation showing when the permits are closed at the completion of the project.

1.11 ACCEPTANCE AND WARRANTY

- A. The Vertical Transportation Equipment Supplier shall warrant in writing that all equipment manufactured and installed under this specification, for a period of twelve (12) months from the date of Final Acceptance by PSHIA, be free of defects in design, materials, and workmanship, under normal use and service. Defective work shall be repaired or replaced at no additional cost to PSHIA. Warranty period for all escalators shall start when the deficiencies identified for the escalator are addressed and signed off by the Program/Project Manager and PSHIA.

- B. The warranty shall include materials and labor necessary to correct defects.
- C. Defects shall include, but not be limited to, noisy, rough, or substandard operation; loose, damaged, and missing parts; and fluid leaks.

1.12 GUARANTEES

- A. Notwithstanding the Specifications forming a part of this Contract, any inspection or approval of the Work by PSHIA, or the existence of any patent or trade name, the Vertical Transportation Equipment Supplier nevertheless unconditionally guarantees that the equipment furnished and installed hereunder shall be of the best quality, shall be fully fit for the purpose for which it is intended, and shall be of the heavy duty transit type in compliance with APTA guidelines and augmented per these contract documents.

1.13 PSHIA INSTRUCTION / DEMONSTRATION AND COORDINATION

- A. The Vertical Transportation Equipment Supplier shall provide eight (8) hours of off-site demonstration and instructions to a total of six (6) PSHIA and/or existing service personnel upon completion of the escalator installation. Instructions are to include safety procedures, proper operation of all equipment, and routine maintenance procedures. All instructions and demonstrations are to be video recorded and remain the property of PSHIA. All costs associated with this off-site training shall be the responsibility of the Vertical Transportation Equipment Supplier.
 - 1. Provide manuals for all material covered in the training program. This training will take place at the discretion of the Owner at any time prior to the end of the warranty period.
- B. Check operation of all the escalators with PSHIA personnel or designated representative present not more than one month before end of warranty period. Determine that operation systems and devices are functioning properly.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

- A. Vertical Transportation Equipment Supplier shall furnish and install heavy-duty escalators that shall comply with the requirements of these contract documents.
- B. All escalators supplied under this contract shall be the product of a single manufacturer.
- C. Acceptable Manufacturers – Manufacturers must manufacture within the continental United States or provide written guarantee for the life of the

equipment that replacement parts will be provided to PSHIA within 48 hours of request.

1. KONE Elevator Company
2. Otis Elevator Company
3. Schindler Elevator Company
4. ThyssenKrupp Elevator Company
5. Approved Equal

D. Escalators shall comply with the following Basis of Design requirements:

1. Vertical Rise: Shown on contract documents
2. Inclination: 30 degrees
3. Nominal Step Width: 40 inches (1000mm)
4. Speed: not to exceed 100 FPM
5. Number of Flat Steps:
 - a. minimum Three (3) Flat Steps (Top and Bottom)
6. Minimum Transition Radii:
 - a. Upper Landing: minimum 2.6m (8'-6")
 - b. Lower Landing: minimum 2.0m (6'-6 3/4")
7. Head Dimensions: As required to fit structures.
8. Static Brake Load: The load per step the total number of exposed steps on the incline:
 - a. 1000mm step: 306 kg (674lbs)
9. Dynamic Brake Load: The load per step running in down direction on exposed steps on the incline:
 - a. 1000mm step: 145 kg (320lbs)
10. Motor Duty Load: Continuous operations with a minimum step load per step (on incline only) as follows:
 - a. 1000mm step: 145 kg (320lbs)
11. Step Chain Load: is to be based on the step loads as follows:
 - a. 1000mm step: 145 kg (320lbs)

E. Controls and Safety Devices

1. Operating Controls:

- a. Escalators shall have key operated switches, accessible at both upper and lower landings, located on the exterior deck above the newel base. Operating controls for glass balustrade escalators may be mounted on posts in lieu of lower exterior decking subject to full conformance with governing Codes and acceptance of submitted designs from the supplier by the Program/Project Manager. Combination Emergency Stop Button / Start Switch shall be provided as manufactured by PTL or approved equal.
- b. Each keyed switch shall be clearly and permanently labeled, including starting and direction selection.
- c. Interlocks shall be provided to bring the escalator to a smooth stop, in either direction of travel, before a change of direction may be made.

Schneider Alternative PLC
AB is approved, see link

2. Safety Devices:

- a. Safety devices required by the latest edition of ANSI/ASME A17.1 shall be provided on each escalator.
- b. Safety devices shall be mounted in locations accessible for maintenance within escalators, and these devices shall be designed for ease of adjustment or reset. Devices shall be located so that operation is not affected by direct moisture and debris.
- c. If escalators are equipped with braking system dependent upon activation of springs, then springs shall be of guidance compression type. The use of weights or self-excitation of the brake release shall not be allowed.
- d. Disconnect switches capable of being locked in the "off" position shall be provided in both escalator pits, and at the drive of each escalator to prevent the starting of escalator from any other location.
- e. Combplate switches that detect the vertical tripping force shall be independent of the switches that detect the horizontal tripping force.
- f. A pit stop switch shall be provided in the top and bottom escalator pits which will, when used, stop the escalator or prevent starting.
- g. Deteriorated and Missing Roller Detector: Provide a device for detecting deteriorated and/or missing step and axle rollers on the left and right sides while the escalator is running with or without passengers or load. The roller detector shall be integrated into the safety circuit. The device shall be manually reset.
- h. In addition, a fault-finding device (diagnostic equipment) shall be provided, capable of producing indications of the following data:
 - 1) Date, time, and cause of all escalator stoppages and failures.
 - 2) A monitoring of drive motor temperature.
 - 3) Have a digital readout visible at the key start switch area.

F. Operating Controls / Emergency Stop Button:

1. Provide vandal resistant device(s) manufactured by PTL or approved equal.
2. Operating switches shall comply with Paragraph 2.01.E.1.
3. One (1) vandal resistant emergency stop button shall be located at each landing, accessible on the exterior deck cover for solid balustrade escalators and mounted in the upper newel quadrant or in a pedestal for glass balustrade escalators.

G. Balustrades and Skirt Panels

1. Glass Balustrades for Low Deck Escalators shall comply with the following:
 - a. Constructed of 3/8" (10 mm) minimum clear tempered safety glass.
2. Skirt panels with rounded joints shall be of type 316 Stainless Steel, solid construction, and shall be in conformance with A-17.1 Code. There shall be no laminations or square joints allowed.

3. Skirt Brushes along both sides of the skirt panel. Skirt brush must be installed at least one (1) inch above the nose of the step line. Brush material is to be flame retardant. Skirt brushes shall incorporate two (2) rows of bristles and intermediate sections shall be capable of being removed independently of the rest of the brush installation for access to motors or other sections of the truss interior.
4. Panels on exterior escalators shall have edges sealed against moisture.
5. Panels shall be constructed, when practical, in equal lengths for interchangeability.
6. Panels shall be attached to permit easy removal for inspection, lubrication, and adjustment of safety devices.
7. Panels shall be sized so that not more than two (2) persons shall be required to remove a panel, and without the aid of special handling equipment.
8. Panel fastener requirements: Panels shall be fastened to their respective supports or mating portions with tamper-proof, flathead machine screws.
9. When framework to which panels are fastened is less than one-quarter (1/4) of an inch thick, steel backup plates with a minimum one-quarter (1/4) of an inch thickness shall be added which have tapped holes or clearance holes where necessary.

H. Decking and Cladding:

1. Decking Shall be type 316 stainless steel, identical to balustrade, with minimum of 2mm thickness.
2. Decking between escalators shall be designed to support a live load of one hundred and seventy-five (175) pounds per square foot, without surface deflection and shall be of one piece in width and shall not require the installation of deck barricades along the incline in order to meet code requirements.
3. Paneling, decking, and other enclosures shall be supported on steel framework.
4. All decking is to be extended to finish walls and in one-piece widths.
5. All decking and cladding is to be provided with no exposed fasteners. Submit drawings for approval by the Program/Project Manager.
6. Truss cladding shall be provided by the Vertical Transportation Equipment Supplier on all sides and underside of escalator truss. Cladding shall be type 316 stainless steel unless otherwise specified elsewhere in these contract documents. Truss cladding finish shall be coordinated with: PSHIA/Architect.
7. All deck barricades shall be the responsibility of the Vertical Transportation Equipment Supplier. The design of the deck barricades shall be per PSHIA Standard as installed at the other PHX Sky Train Stations.
8. At the upper and lower ends of the escalators with common inner decks, additional PSHIA Standard signage shall be installed on stainless steel

pedestals, matching that used for the combination start/stop stations.
Pedestals shall be fabricated from bent stainless steel pipe/tube.

I. Escalator Lighting Fixtures:

1. Step demarcation lights (located below steps at both landings) shall be provided in accordance with code requirements. Each landing shall have a minimum of three (3) LED type lighting elements.
2. Combplate lighting fixtures shall be provided by LED type fixtures
3. Escalator shall be furnished and installed with maintenance lighting in each pit with quick start type PL compact fluorescent lamps as required for complete illumination of working spaces and specified areas within the interior of the escalator and its immediate surroundings. Upper and lower pits shall have internal lighting of 15-foot candles as a minimum. A main light switch shall be located at the entry to each wellway and/or pit. Vertical Transportation Equipment Supplier shall coordinate location with the Program/Project Manager and PSHIA.
4. Glass Balustrade / Low Deck Escalators shall be provided with under handrail lighting that shall be of the LED type. Lighting shall be of a color temperature determined by the Architect to coincide with lighting in the facility.

J. Electrical Equipment

1. Motors

- a. The driving motors shall be A.C. induction motors with solid-state starters. Voltage-480 V.A.C., 3-phase, Frequency - 60 Hertz.
- b. The motors shall be totally enclosed with external cooling fins.
- c. The motor protection class shall be equivalent to IP 55 Insulation group: F or higher.
- d. Driving motors and motor switchgear shall provide a smooth start.
- e. The motor shall be designed for operation(s) under a load as follows:
 - 1) 1000mm wide step: 145kg per step on the incline

K. Escalator Control System:

1. The escalator control equipment shall contain diagnostic capabilities as required for the ease of complete maintenance. The diagnostic system shall be an integral part of the controller and provide user-friendly interaction between the service person and the controls. All such systems shall be free from decaying circuits that must be periodically reprogrammed by the manufacturer.
2. Switchgear shall be mounted in NEMA 2 cabinets with labeled terminal strips.
3. Controller shall be based on SCADA compliant Programmable Automation Controller (PAC) system to control and monitor the status of the escalator.

- The PAC shall be designed to communicate in TCP/IP format over Ethernet or approved equal.
4. The PAC racks shall provide space for two (2) future single slot modules.
 5. The PAC shall store the last 99 faults, accessible via laptop connection, panel view or remote communications.
 6. Provide a copy of all working programs on approved computer medium as well as a printed program listing.
 7. The PAC shall have one dedicated serial port, which supports RS-232-C signals. It shall be accessible in ladder logic and provide support for Point to Point and Slave SCADA communication protocol systems. Alternatively, it must be usable for programming purposes or for access to remote programmers via modems.
 8. The main control switchgear of an escalator shall contain at least the following devices:
 - a. Lockable main switch thermal and magnetic motor protection starter for up and down travel, hour counter, auxiliary contactors, phase failure device, phase sequence monitor, and ground fault monitor.
 - b. The controller cabinet shall contain a permanently mounted full color view panel capable of providing fault and operating data.
 - c. The indication shall be locked automatically. Reset shall be done by a separate switch installed in the controller. The emergency stop shall not be locked.
 - d. All terminals shall have identification markings and all cables shall be provided with cable markers.
 - e. The controller shall be equipped a solid-state device, capable of starting motors smoothly and gradually, reducing inrush current and mechanical shock upon start up. Adjustable settings for accelerating time and starting torque shall be provided. The starter shall also contain auxiliary contacts and a thermal overload relay for motor protection.
 - f. Maintenance Receptacles: Electric power receptacles shall be furnished and installed in the upper and lower pits. Each receptacle shall be of the GFCI duplex type, waterproof, grounded, and rated for one hundred and twenty (120) volts at twenty (20) amperes. The receptacles in the pits shall be surface mounted on the walls, not less than thirty (30) inches from the floor.
 - g. Relays shall be provided with visual indication that they are energized.
 - h. Adjustable settings for accelerating time and starting torque shall be provided. The starter shall also contain auxiliary contacts and a thermal overload relay for motor protection.
 - i. Controllers in escalator pits shall have a flexible liquid tight connection of suitable length to permit removal for maintenance purposes.

- j. Controller shall be capable of operating the escalator in Variable Speed Operation as per ASME A17.1-2010 requirement 6.1.4.1.1
 - k. The controller shall utilize a graphic HMI with Ethernet for interface.
 - l. Provide dielectric floor mats in front of each controller.
- L. Remote Monitoring System: A Lift Net remote monitoring system shall be provided by the Installer and all escalators shall be connected to this system. The Lift Net remote monitoring system shall be capable of reporting real-time status of the escalators, i.e. running up/down normal operation or sleep mode operation, as well as the status of individual safety switches. It shall be capable of indicating and reporting the exact fault that would appear on the fault indicating devices on the escalators. In addition, the escalators shall be connected to the Honeywell Device Monitoring System (DMS) and the installer is responsible for providing all provisions necessary for connecting the escalator to the DMS as well as the Lift Net system. Connection to the DMS will be through contactors and connection to Lift Net may either be through Wi-Fi or Ethernet. This is to be coordinated with PSHIA IT Department.
- M. Maintenance Drive Unit: Means shall be provided for reduced speed maintenance operation that shall be controlled by a manual handset. When operated, the escalator shall run in the direction selected, at a speed of not more than 25% of rated speed. This speed shall be maintained when steps are removed for servicing. Escalator operation shall be continuous so long as an up or down button on the handset is being pressed.
- N. Fully Regenerative VVVF Drive Unit
 - 1. A fully regenerative VVVF drive unit shall be capable of controlling the speed of the escalator under no load, full load and sleep mode operation without adjustments for varying loading conditions. Drive shall be manufactured by or commonly used by the Installer for this type of escalator.
- O. Variable Speed Operation: Sleep mode operation shall comply with the following:
 - 1. The acceleration and deceleration rates of the escalators shall not exceed 1.0 ft/sec² (0.3 m/s²).
 - 2. The rated speed is not exceeded.
 - 3. The minimum speed of escalators shall not be less than 10 ft/min (0.05 m/s).
 - 4. The speed of the escalator shall not automatically vary during inspection operation mode.
 - 5. Passenger detection means (as provided in Paragraph P below), shall be provided at both landings of the escalator such that:

- a. Detection of any approaching passenger shall cause the escalator to accelerate to, or maintain the, full escalator speed in compliance with paragraphs 1 thru 4 above.
 - b. Detection of any approaching passenger shall occur sufficiently in advance of boarding to cause the escalator to attain full operating speed before a passenger walking at normal speed (270 fpm (1.35 m/s)) reaches the comb plate.
 - c. Passenger detection means shall remain active at the egress landing to detect any passenger approaching against the direction of escalator travel and shall cause the escalator to accelerate to full rated speed and sound an alarm bell at the approaching landing before the passenger reaches the combplate.
 6. Automatic deceleration shall not occur before a period of time has elapsed since the last passenger detection that is greater than 3 times the amount of time necessary to transfer a passenger between landings.
- P. Passenger Detection Means: Escalators shall be provided with four sets of Angled Infrared Photoelectric Proximity Detectors installed per Paragraph O above. They shall be installed in the lower newel cladding at both ends of the escalator in the vicinity of the handrail entry points. They shall be Radar detectors / transmitters or LT transmitters and LR receivers, Series 110 with stainless steel housings as manufactured by Telco Sensors or approved equal. 2-channel multiplexed photoelectric amplifiers, model PAB20 as manufactured by Telco Sensors or approved equal shall be provided as required for each escalator and associated number of transmitter/receiver sets.
1. Means shall be provided to detect failure of the passenger detection means and shall cause the escalator to operate at full rated speed only.
- Q. Truss Wiring and Conduit:
1. Galvanized rigid pipe and/or Liquid tight flexible metal conduit shall be used in the truss.
 2. In class 2 circuits, SO Cord may be used in lengths not to exceed three feet.
 3. Liquid tight flexible metal conduit must be CSA/UL approved and have an overall halogen free jacket.

2.02 MATERIALS

- A. Stainless Steel
1. Shapes and Bars: ASTM A-276, type 316, A-554 for tubes.
 2. Plate, Sheet, and Strip
 - a. Over one-eighth (1/8) of an inch: ASTM A264 with ASTM 240. Type 316 on A36 base.
 - b. Under one-eighth (1/8) of an inch: ASTM 167, Type 316.

B. Fasteners

1. Vertical Transportation Equipment Supplier shall provide nuts, bolts, washers, screws, and other fastenings necessary for proper erection and assembly of work.
2. Fasteners shall be compatible with materials being fastened. Fasteners shall be furnished with self-locking nuts or retaining rings (spring washers, toothed disks).
3. Fasteners shall be equal to or of greater corrosion resistance than the most corrosion resistant metals being fastened.

2.03 FINISHES

A. Stainless Steel: Decking - Brushed # 4 finish ASTM A-480. Truss Cladding shall be coordinated with the Architect.

B. Aluminum Castings and Extrusions: Commercial mill finish.

C. Galvanizing

1. Sheet Steel: ASTM A446, or A526, as applicable. Coating designation G185.
2. Other galvanizing: ASTM A123, ASTM A153, ASTM 385, or ASTM 386, as applicable.

D. Galvanizing Touch-up: Zinc dust coating, MIL-P-21035 or MIL-P-26915.

E. Paint and Corrosion Protection: Each escalator shall have the following minimum corrosion protection:

1. After welding, the truss shall be hot-dipped galvanized with a coating in accordance with ASTM A90. A 100% zinc thermal spray coating to ASNI/AWS C.18-93 is an acceptable alternative.
2. Cast metal parts such as gear housings, chain sprockets and return station half circles, shall be painted with a rust-inhibitive primer, zinc chromate coat after preparation by sandblasting.
3. Steel parts which are not specified to be galvanized shall be painted as follows:
 - a. Primer coat - two (2) mil (dry film thickness), minimum thickness.
 - b. Second finish coat - two (2) mil (dry film thickness), minimum thickness.
4. Bright or uncoated axles, shafts, etc. shall be protected by zinc chromate, or chrome plating.
5. Oil collector chutes and collection trays shall be fabricated of galvanized steel.
6. All shims shall be manufactured from stainless steel.

2.04 MECHANICAL EQUIPMENT

A. Tracks

1. Design and fabrication of tracks shall retain steps and running gear safely under load requirements and at the highest design speeds specified.
2. Vertical Transportation Equipment Supplier shall assemble and secure sections of track together for easy removal and replacement of defective sections. The system shall be adjustable, and welding of the tracks is not acceptable.
3. Design of the mechanical components shall provide for easy installation and removal without the dismantling of parts of the structure.
4. Track joints shall be smooth and free of burs and sharp edges.
5. Tracks shall be properly supported on trusses to provide correct alignment and smooth transition to return stations. The rolling surface of the passenger side track shall be a minimum thickness of 3mm. Return side track shall be a minimum thickness of 2mm.
6. The track radius shall be determined in conformance with these specifications and the following constraints:
7. The requirement for requisite number of flat steps shall be met.
8. Track loading and wheel size shall be such that interaction force between each wheel and track shall permit escalator to meet requirements specified.
9. The guiding system for the step chains and step wheels shall be of zinc plated or galvanized steel profiles with smooth and even running surfaces, and with the joints cut diagonally to the running direction. The guide profiles shall not be welded together at the joints.
10. A second, continuous guiding profile shall be provided above the step chain rollers so that the step chains are positively guided in the area of the escalator open to passengers
11. Transition radii shall be based on minimum 2.6m for the upper landing and 2.0m for the lower landing for steps on the passenger side of the escalator.
12. Systems including step chain rollers outside the step chain links and relying on stress relieving curves through the transitions shall include stress relieving curves on both the passenger and return sides of the track system at the transition curves.

B. Steps

1. The entire step assembly shall be treated with not less than one (1) coat of zinc chromate primer or iron phosphate and one (1) coat of powder coated enamel for corrosion-resistance.
2. Steps and their various attachments shall permit removal of steps without disturbing balustrades.
3. Sound deadening shall be applied to the underside of the steps.
4. Step rollers shall have polyurethane tires on hubs, sealed roller bearings, and a diameter of no less than four (4) inches. Step rollers shall not require any additional lubrication and must be rated for severe, heavy-duty service. Step roller bearings shall have an L10 rating of 100,000 hours.

5. Steps shall be constructed so as to be driven by step linkages to step rollers.
6. Vertical Transportation Equipment Supplier shall provide washers and nuts as follows:
 - a. Tap bolts: Lock washers
 - b. Through bolts: Lock nuts or Program/Project Manager approved equal.
7. Rated Loads:
 - a. In addition to the minimum requirements given in the Codes Vertical Transportation Equipment Supplier shall design the Steps for a minimum load of three hundred and twenty (320) lbs. (145 Kg) per forty (40) inch step with a safety factor of eight (8).
 - b. The steps shall carry the load under maximum concentric and eccentric loading conditions without distortion.

C. Step Chain

1. Vertical Transportation Equipment Supplier shall provide endless, roller-type step chains; one (1) on each side of step.
2. Step chains shall be of heat-treated steel construction, supported at intervals by linkage wheels.
3. A means to prevent steps from coming into physical contact with each other and to prevent chains from sagging or buckling shall be provided.
4. A means to maintain constant distance between step axles shall be provided.
5. An automatic tensioning device to maintain tension under load and to compensate for wear shall be provided. The device shall be located within the truss at the lower end.
6. A means for individual fine adjustment of tension for each linkage shall be provided.
7. Step chains shall be constructed to permit removal of segments as may be required for replacement purposes at a minimum of every 6-axle section. Each escalator shall have at least two one axle sections.
8. Support wheels spaced to distribute load and to guide linkage throughout run shall be provided. Rollers shall be constructed of polyurethane material, with diameter sufficient to provide reliability, maintainability, smoothness of motion, and to operate within noise level requirements specified. The chain rollers shall have polyurethane tires, sealed bearings, a diameter of not less than four (4) inches, must require no additional lubrication, and be mounted outside the chain link wheels, hubs and bearings shall have an L10 rating of 100,000 hours.
9. Wheels shall be affixed to permit rapid replacement.
10. Each pair of step chains shall be a matched set within manufacturing tolerances. Only precision, roller-fishplate chains of high-grade, heat-treated steel shall be used as step chains. The pins, axles, bushing, and rollers shall be hardened and ground.

11. Step chain and chain pins shall have a minimum diameter of at least five-eighths (5/8) of an inch. In addition, the diameter will be of a size so that surface pressure at engaging points will not exceed 30N/mm² (3,450 psi). This is to be based on the step loads as follows:
 - a. 1000mm wide step: 145Kg (320 lbs.) per step on the incline.
12. The safety factor shall be at least 6.
13. A test certificate for the chain-breaking load shall be provided.
14. A shielding device shall be provided to protect chain, track guides, and rollers against water, dirt, and debris.

D. Combplate Assemblies

1. Complete assemblies of wear resisting, non-corrosive metal material with exposed anti-slip surfaces shall be fabricated.
2. Combplate sections meeting the following requirements shall be provided:
 - a. Shall be removable to permit ease of replacement.
 - b. Shall be yellow in color for safety/demarcation.
 - c. Provisions for lateral and vertical fine adjustments shall be provided so that cleats of step treads pass between combteeth with minimum clearances.

E. Floor Plates

1. Shall have type 316 stainless steel frames at floor openings, designed to be supported on truss heads.
2. Shall be designed to cover entire area of upper and lower landings.
3. Shall be reinforced, as necessary, to be rigid and able to withstand a live load of two hundred and fifty (250) pounds per square foot with minimal deflection.
4. Shall be extruded aluminum in a ribbed pattern transverse to the escalator axis. Ribs shall be designed to provide maximum traction, and will be finished in the same manner as the combplates.
5. Shall be lightweight and removable for ease of access to machinery and maintenance areas below. Must be fabricated in sections of a size and weight capable of being handled easily by one (1) person. Fastening system is to be an integral part of the floor plate design.

F. Drive Machinery

1. Motor and drive mechanism shall be mounted within the truss envelope at the upper end. Shafts shall be designed for ease of assembly or disassembly using square keyways of proper sizing.
2. Gear Box Requirements:
 - a. Gear bearings shall be rated with an AFBMA L10 life of 200,000 hours and housed in an oil-tight, dust-proof case provided with a sight glass or dipstick method of determining oil level in the case. The case shall provide a convenient method of the draining oil.
 - b. Use synthetic lubricants, subject to PSHIA approval.

- c. Rotating parts shall be provided with a means for lubrication and retention of lubricants.
- d. Sealed bearings shall be used.
- e. Exposed, moving, drive elements shall be protected by metal housings, which shall provide access for lubrication of components.
- f. Provide a low oil sensor to prohibit starting of the escalator on automatic operation with low oil in the gearcase.
- 3. V-belt and tooth belt drives shall not be considered acceptable
- 4. Head-shaft bearings shall be rated for AFBMA L10, 200,000 hours.

G. Drip Pans

- 1. Galvanized, 3 mm steel, watertight drip pans for the entire length and width of trusses shall be provided. Drip pans shall be of sufficient strength to support a concentrated weight of five hundred (500) pounds at any place in the drip pan. They shall also be sloped for proper drainage and collection of lubricants as well as any moisture or water which may enter the escalator. They shall be constructed to prevent oil from leaking below the truss.
- 2. Oil water separators shall be provided on outdoor escalators only.
- 3. Drip pans of sufficient size to collect and maintain, within truss areas, oil and grease drippings from step linkage and all forms of loose debris that may be deposited in drip pans from steps at turn-around points at upper and lower portions of truss shall be provided. This system shall be separate from the water drain in order to prevent the discharge of lubricants.
- 4. Access to drip pans at lower landings of escalators for the purpose of cleaning drain catch basins shall be provided.

H. Handrails

1. General

- a. Handrails shall receive their motion from main escalator drive through direct gearings and drive shaft or drive chains, so that handrail and steps operate at the same speed in each direction of travel.
- b. A means to take up handrail slack using a tensioning device, where required, shall be located within escalators. In addition, a method of releasing the device for repair or removal of handrails shall be provided.
- c. Newels meeting the following requirements shall be provided:
 - 1) Newels shall be designed and constructed so that handrail shall return into newel end at a point inconspicuous and difficult for passengers to reach.
- 2. Handrails, handrail drive system, and guides shall be so designed and installed that handrail cannot be thrown off or disengaged while running, and special design attention shall be given to area where handrail passes from drive system to guides.

3. Handrail rollers shall have sealed bearings rated at AFBMA L10, 100,000 hours.
4. Friction drive sheaves and idlers shall be designed and positioned so that lubricant cannot reach surface of handrail. Marking and spotting of handrail by drive equipment shall not be permitted. Provide sealed bearings rated at AFBMA L10, 100,000 hours.
5. Handrail shall be a composite of either vulcanized rubber or approved equal with a synthetic fabric slider and shall be constructed with a steel cable tension member providing a minimum strength of 25kN over the splice area.
6. Handrail color shall be black.
7. Handrail guides shall be continuous on exposed portion of handrails, constructed of 316 stainless steel which shall not subject to corrosion nor pitting, and shall have a polished or specially coated, permanent finish to minimize frictional wear to under surface of handrail. On the unexposed portion, guiding shall be by adjustable rollers having sealed bearings, and set in a way so as not to cause wear on the handrail.
8. Handrail gearbox, if provided, shall have bearings rated at AFBMA L10, 200,000 hours.

I. Braking Requirements

1. Motor Brake

- a. Brake shall be capable of stopping and holding a descending escalator with a load on the exposed steps in the incline area of:
 - 1) 1000mm wide step 145kg (320 lbs.) Per step
- b. The brake coil shall be insulated to class F.
- c. A monitor shall be provided, and if brake lining becomes insufficient for safe usage, restart of escalator shall be prevented.

2. Step Band Lock

- a. Shall be manually applied and mechanically engaged to prevent movement of linkages, while escalator is disconnected from its power supply.
- b. Electrical interlock that shall prevent escalator drive motors from starting while step band lock is engaged shall be provided.

J. Trusses

1. General

- a. Trusses shall be sufficient total length to provide minimum number of flat steps required per code along with the transition radii indicated in the contract documents. The truss shall span the distance between the support points as indicated.
- b. Trusses shall be sufficient width to accommodate the width of the finished escalator.
- c. Trusses shall be designed to rest on the top and bottom support beams, and intermediate supports provided for each location.

- Vertical Transportation Equipment Supplier shall use 316 stainless steel shims for installation with a maximum shim height of 2 inches.
- d. Trusses shall be of ample strength to maintain alignment of tracks and moving parts, and so designed that they shall safely retain steps and running gear, and in case of failure of track systems, retain step mechanism within guides and envelope of the truss.
 - e. The truss shall be designed to support the dead weight of the escalator and a full passenger load.
 - f. The deflection of the loaded truss shall not exceed one one-thousandths (1/1000) of the span under a live load of 320 pounds per 40-inch step.
 - g. The slip joint slide bearings shall be fabricated using three thirty-seconds (3/32) of an inch thick glass filled TFE bearing surface, one sliding on the other. The expansion joint filler shall be rubber cork composition or neoprene strip.
 - h. Provide a permanent identification on the truss for the centerline at both ends of the escalator and in both transition curves.
 - i. Provide permanent mark reflecting track system working point distances to both ends of the escalator trusses.
 - j. No intermediate supports are permitted for spans less than 50 feet.
2. Field Splices and Connections
 - a. Field splices shall be rigid, non-deforming, and shall maintain alignment.
 - b. Holes for attaching balustrade securing brackets shall be punched.
 - c. Field modification shall not compromise the paint and corrosion protection specified in the contract documents.
 3. Access Panels
 - a. Access panels for access to escalator parts for inspection and maintenance shall be provided.
 4. Intermediate Supports (where indicated on contract documents and verified by the Vertical Transportation Equipment Supplier)
 - a. Support shall be stub column and beam type bolted to wellway structure. Stub columns may be welded or bolted to the truss.
 - b. Support trusses using intermediate supports described above shall be provided. No other attachments to structure shall be permitted. Truss mounts, including bolts, angles, shims, bearing pads, and spring supports, as required to align and install escalators shall be provided.
 5. Provisions are to be made, if required, within the truss for attaching any finish required to enclose the same.
- K. Step Chain Tensioning Device
1. An automatic tensioning device to maintain tension under load and to compensate for wear shall be provided. The device shall be located within the truss at the lower end.

2. A means for individual fine adjustment of tension for each linkage shall be provided.
3. A pointer and scale shall be provided to gauge step chain tensioning and wear.
4. Bearings: if used, shall be rated: AFBMA L10, 200,000 hours.

L. Lubrication System Requirements

1. Step Chain

- a. All parts, other than sealed items, requiring lubrication shall be designed for an automatic or remote lubricating system. The system shall operate only when escalator is running and the amount of lubrication shall be fully adjustable. A reservoir with a low oil signal to the controller, and a minimum capacity of five (5) liter shall be provided.
- b. System shall be positive acting, located in escalator pit.
- c. Reservoir level indications shall be provided where lubricants are contained within housings, supply tanks and larger filler cups.
- d. Automatic Lubrication System shall be as manufactured by Castrol Industrial or approved equal.

2. Miscellaneous Lubrication

- a. Vertical Transportation Equipment Supplier shall furnish and mount near the lubricating system in the escalator controller room, a framed lubrication chart for each escalator. The chart shall show the location of each lubrication point, type of lubricant to be used, and the frequency of lubrication.
- b. Bearings
 - 1) Sealed bearings shall be used where possible.
 - 2) Bearings requiring manual lubrication shall be furnished with fittings to accommodate the use of a pressure gun for lubrication.
 - 3) Self-lubricating bearings or material other than ball or roller type bearings may be used where practical.

3. Manual Lubrication

- a. Location of manual lubrication points shall be easily accessible and available.

M. Annunciator

1. Escalators shall be provided with voice annunciators at the upper and lower ends for audible warning messages. Audible messages shall be per PSHIA standard.

N. Traffic Lights / Indicators

1. Escalator users shall be informed by means of indicator lights of the predetermined running direction of the escalator.
2. Two (2) circular cut outs, minimum diameter two and three quarter (2 ¾) inches. Shall be provided in the upper and lower right hand balustrade newels, each containing an inset red and green light. The green light

shall be illuminated at the entrance for escalator running direction and the red lamp shall have a horizontal white stripe and shall be illuminated at the exiting end. No incandescent lamps shall be permitted.

O. Lock Cylinders

1. All locks and keys shall be as per Program/Project Manager approval and shall accommodate PSHIA Standard cores.
2. Vertical Transportation Equipment Supplier shall verify with the Program/Project Manager that the requirements for hardware have not been amended or superseded.
3. Vertical Transportation Equipment Supplier shall provide the Program/Project Manager with length, finish, and camming requirements of each cylinder required.

PART 3 EXECUTION

3.01 INSTALLATION

- A. Vertical Transportation Equipment Supplier shall install complete and operating escalators in accordance with manufacturer's instruction and approved shop drawings.
- B. Vertical Transportation Equipment Supplier shall provide all special tools to PSHIA.
- C. Escalators will be periodically inspected during the installation process by the Program/Project Manager and Owner/Owner's Representative. All requests made by the inspecting personnel are to be addressed by the installer to the satisfaction of the inspecting personnel.

3.02 FIELD TESTING

- A. General: After installation, the Vertical Transportation Equipment Supplier shall inspect and test each escalator and related equipment to the Program/Project Manager and PSHIA's satisfaction that operation of every part of the equipment complies with this specification and with applicable requirements of ASME/ANSI A17.1 including sound level criteria specified herein. Escalators will be inspected in accordance with the following:
 1. Vertical Transportation Equipment Supplier shall notify the Program/Project Manager seven (7) days prior to each separate scheduled test. Vertical Transportation Equipment Supplier shall perform testing in the presence of the Program/Project Manager. This test is in addition to those performed by The City of Phoenix Elevator Inspector.
 2. Vertical Transportation Equipment Supplier shall notify the appropriate local authorities having jurisdiction a minimum of seven (7) days in advance of final acceptance tests.

3. Vertical Transportation Equipment Supplier shall provide all instruments, materials, and labor required for tests specified herein.

B. Acceptance/Commissioning Testing Requirements

1. Testing shall be performed in accordance with ASME A17.2.3 procedures with the following additions or adaptations.
2. Vertical Transportation Equipment Supplier shall perform the following tests on each escalator without load:
 - a. Comb impact devices shall be tested and calibrated with an appropriate scale at both ends of the escalator in both the horizontal and vertical direction.
 - b. Brakes: Measure deceleration rate with no load over 5 consecutive stops in the down direction using test equipment designed to obtain this information.
 - c. Escalator shall produce no noise louder than sixty-five (65) decibels measured five (5) feet above the floor or stair level at the entrance combs at both ends with the escalator operating normally, either free running or under load. For multiple escalator installations, the noise measurements at each group shall be made with only the one (1) escalator unit under evaluation in operation. Ambient noise level shall not exceed forty-nine (49) decibels.
3. Vertical Transportation Equipment Supplier shall perform the following tests on each escalator under full load:
 - a. Each escalator shall have a full field load as specified in 2.01 B brake test performed on it. The stopping distance in the down direction shall meet all requirements of ASME A17.1.
 - b. Forty-eight test: the escalator shall operate continuously for 48 consecutive hours after the acceptance test with no faults. If any fault occurs that shuts the escalator down, the fault must be corrected and a new 24-hour test will begin.
4. If either the no load or full load brake tests fail, both tests must be repeated with the same torque setting on the brake for both no load and full load.
5. The functionality of the remote monitoring system, as described in these contract documents, shall be tested as part of these testing procedures.
6. Re-Inspection: If any equipment is found to be damaged or defective, or if the performance of the escalators does not conform to the requirements of the contract specifications or the Safety Code, no approval or acceptance of escalators shall be issued until all defects have been corrected. When the repairs and adjustments have been completed and the discrepancies corrected, the Engineer shall be notified and the escalators will be re-inspected. Rejected escalators shall not be used until they have been re-inspected and approved.

3.03 ADJUSTING, CLEANING AND PAINTING

- A. All equipment shall be adjusted prior to final testing and acceptance.
- B. Restore all exposed work soiled or damaged during installation to its original finish. Repair to match adjoining work prior to final acceptance.
- C. A thorough clean down of all escalators, externally and internally, shall be performed prior to escalators being operated for public use.

SECTION 15050

BASIC MECHANICAL MATERIALS AND METHODS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Common installation requirements for:
 - a. Piping systems.
 - b. Mechanical equipment.
 - 2. Requirements for the following:
 - a. Dielectric fittings.
 - b. Mechanical sleeve seals.
 - c. Sleeves.
 - d. Escutcheons.
 - e. Plumbing demolition.
 - f. Concrete bases for mechanical equipment.
 - g. Supports and anchorages for mechanical equipment.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01400 - Quality Requirements.
 - 3. Section 01732 - Cutting and Patching.
 - 4. Section 01736 - Selective Demolition.
 - 5. Section 03200 – Concrete Reinforcement.
 - 6. Section 03300 – Cast-in-Place Concrete.
 - 7. Section 05500 – Metal Fabrications.
 - 8. Section 07850 - Through Penetration Firestopping System.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. EPDM: Ethylene Propylene Diene M-class rubber.
 - 2. HVAC: Heating, Ventilating, and Air-Conditioning.
 - 3. NPS: Nominal Pipe Size.
 - a. DN: Diamètre nominal (European Equivalent).
- B. Definitions:
 - 1. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct chases, unheated spaces

immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

2. Exposed, Interior Installations: Exposed to view indoors.
 - a. Examples include finished occupied spaces and mechanical equipment rooms.
3. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions.
 - a. Examples include rooftop locations.
4. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants.
 - a. Examples include above ceilings and in chases.
5. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures.
 - a. Examples include installations within unheated shelters.

C. Reference Standards:

1. American Society of Mechanical Engineering (ASME):
 - a. ASME Boiler and Pressure Vessel Code, Section IX: Welding and Brazing Qualifications.
 - b. ASME B31.5 – Refrigeration Piping and Heat Transfer Components.
 - c. ASME B31.9 – Building Services Piping.
 - d. ASME B31.J – Standard Test Method for Determining Stress Intensification Factors (i-Factors) for Metallic Piping Components.
 - e. ASME B31.Q – Pipeline Personnel Qualification.
 - f. ANSI/ASME B1.20.1 Pipe Threads, General Purpose, Inch.
 - g. ASME B16.21 - Nonmetallic Flat Gaskets for Pipe Flanges.
2. American Welding Society (AWS):
 - a. AWS A5.8/A5.8M - Specification for Filler Metals for Brazing and Braze Welding.
 - b. AWS BHR – Brazing Handbook.
 - c. AWS D1.1/D1.1M - Structural Welding Code - Steel.
 - d. AWS D10.12M/D10.12 - Guide for Welding Mild Steel Pipe.
3. ASTM International (ASTM):
 - a. ASTM A 53/A 53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
 - b. ASTM B 32 - Standard Specification for Solder Metal.
 - c. ASTM B 813 - Standard Specification for Liquid and Paste Fluxes for Soldering Applications of Copper and Copper Alloy Tube.
 - d. ASTM B 828 - Standard Practice for Making Capillary Joints by Soldering of Copper Alloy Tube and Fittings.
4. City of Phoenix (COP):

- a. Phoenix Building Construction Code and Amendments.
- 5. Copper Development Association Inc. (CDA)
 - a. CDA A4015 - The Copper Tube Handbook.
- 6. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

- 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
- 2. Coordination Drawings:
 - a. Prepare and submit Coordination Drawings to the Program/Project Manager for approval.
 - 1) Show the following items for this Contract drawn to scale, and coordinate them with each other:
 - a) HVAC, plumbing, and fire suppression items.
 - b) Conduit routing plans.
 - c) Structural members.

1.04 SUBMITTALS

A. Action Submittals:

- 1. Submit the following to the Construction Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Shop Drawings:
 - 1) Coordination Drawings.
 - b. Certificates:
 - 1) Welding Certificates qualifying steel support welding procedures.
 - 2) Welding Certificates qualifying steel pipe welding procedures.
 - c. Special Procedure Submittals:
 - 1) Procedures to be used for pre-qualifying welders.
 - 2) Procedures to be used for pre-qualifying welding procedures.
 - d. Qualification Statements:
 - 1) Steel support welders' qualifications.
 - 2) Steel pipe welders' qualifications.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
 - 2. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - 3. Testing and Inspection Agency:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.
- B. Qualifications:
 - 1. Welder Qualifications:
 - a. Prior to beginning to weld steel supports and steel pipe, submit the procedures to be used for pre-qualifying the welders to the Program/Project Manager for approval.
 - b. Steel Support Welders:
 - 1) Only use welders, tackers, and welding operators demonstrating they are qualified to perform the types of work required by having passed the qualification tests prescribed in AWS D1.1/D1.1M for the procedures.
 - 2) Submit steel support welder qualifications certifying that the welders employed to perform steel support welding Work have been AWS certified within the previous 12 months to the Program/Project Manager for approval.
 - a) Include certified copies of qualification test records that indicate each welder, welding operator, and tacker employed to perform the Work has satisfactorily passed the AWS qualification tests for the required welding procedures and, if pertinent, has undergone recertification.

- c. Steel Pipe Welders:
 - 1) Qualify operators according to the requirements set forth in the ASME Boiler and Pressure Vessel Code, Section IX: Welding and Brazing Qualifications.
 - 2) Only use welders, tackers, and welding operators demonstrating they are qualified to perform the types of work required by having passed the qualification tests prescribed in AWS D1.1/D1.1M for the procedures.
 - 3) Submit steel pipe welder qualifications certifying that the welders employed to perform steel pipe welding Work have been AWS certified within the previous 12 months to the Program/Project Manager for approval.
 - (1) Include certified copies of qualification test records that indicate each welder, welding operator, and tacker employed to perform the Work has satisfactorily passed the AWS qualification tests for the required welding procedures and, if pertinent, has undergone recertification.

C. Certifications:

1. Welding Certificates:

- a. Prior to beginning to weld steel supports and steel pipe, submit the procedures to be used for pre-qualifying the welding procedures to the Program/Project Manager for approval.
- b. Steel Support Welding Certificates:
 - 1) For steel support welding procedures, other than those set forth in AWS D1.1/D1.1M, submit a copy of the welding procedure qualification test records.
- c. Steel Pipe Welding Certificates:
 - 1) Qualify processes according to the requirements set forth in the ASME Boiler and Pressure Vessel Code, Section IX: Welding and Brazing Qualifications.

PART 2 PRODUCTS

2.01 COMPONENTS

A. Design Criteria:

1. Piping Systems:

- a. Plans, schematics, and diagrams included in the Contract Drawings indicate the general location and arrangement of piping systems.

- 1) The indicated locations and arrangements were used to size pipe and calculate friction losses, expansion, pump sizing, and other design considerations.
 - 2) Install piping as indicated unless deviations to the layout are approved by the Program/Project Manager on Coordination Drawings.
 - b. Select system components with pressure ratings equal to or greater than system operating pressure.
 2. Steel Pipe Welding:
 - a. Weld steel pipe in compliance with the provisions specified in the ASME B31 Series of standards (Code for Pressure Piping).
 3. Mechanical Equipment Electrical Characteristics:
 - a. Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing by the Program/Project Manager and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified.
 - b. If minimum energy ratings or efficiencies are specified, provide equipment complying with these requirements.
- B. Materials:
1. Anchor Bolts:
 - a. Provide epoxy-coated anchor bolts complying with the requirements specified in Section 05500, Metal Fabrications.
 - 1) For factory-threaded pipe and pipe fittings, provide pipe threads complying with the requirements specified in ASME B1.20.1.
 2. Dielectric Fittings:
 - a. Provide combination dielectric fittings consisting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match the piping system materials.
 - b. Insulating Material:
 - 1) Provide insulating material suitable for the system fluid, pressure, and temperature.
 - c. Dielectric Unions:
 - 1) Provide factory-fabricated, dielectric union assemblies designed for a minimum working pressure of 250 psig at 180 degrees Fahrenheit.
 - d. Dielectric Flanges:
 - 1) Provide factory-fabricated, companion-flange assemblies designed for a minimum working pressure of either 150 or 300 psig as required to suit the system pressures.
 - e. Dielectric Couplings:

- 1) Provide galvanized steel dielectric couplings having inert and noncorrosive, thermoplastic linings; threaded ends; and designed for a minimum working pressure of 300-psig at 225 degrees Fahrenheit.
- f. Dielectric Nipples:
 - 1) Provided electroplated steel nipples having inert and noncorrosive, thermoplastic linings; plain, threaded, or grooved ends; and designed for a minimum working pressure of 300 psig at 225 degrees Fahrenheit.
3. Escutcheons and Floor Plates:
 - a. Provide manufactured wall and ceiling escutcheons and floor plates having an inside diameter sized to closely fit around the pipe, tube, and insulation of insulated piping, and an outside diameter that completely covers the opening.
 - b. One-Piece, Deep-Pattern Type:
 - 1) Provide deep-drawn, box-shaped one-piece brass escutcheons and floor plates having a polished chrome-plated finish.
 - c. One-Piece, Cast-Brass Type:
 - 1) Provide one-piece cast brass escutcheons and floor plates having a polished chrome-plated finish and a set screw.
 - d. Split-Casting, Cast-Brass Type:
 - 1) Provide split-cast brass escutcheons and floor plates having a polished chrome-plated finish and a concealed hinge and set screw.
4. Firestopping Materials:
 - a. Provide firestopping materials complying with the requirements specified in Section 07850 Through Penetration Firestopping System.
5. Leveling Grout:
 - a. Provide premixed, factory packaged grout recommended for interior and exterior applications by the manufacturer.
 - b. Design Mix:
 - 1) Provide non-shrink, nonmetallic, dry hydraulic-cement grout complying with the requirements for Grade B as specified in ASTM C 1107/C 1107M.
 - 2) Provide grout having a 28-day compressive strength of 5000 psi (34.5MPa).
 - 3) Provide post-hardening, volume-adjusting, non-staining, noncorrosive, nongaseous grout.
6. Joining Materials
 - a. For special joining materials not listed herein, provide joining materials as specified in other Division 15 Sections.

- b. Pipe Flange Gasket Materials:
 - 1) Unless the specific material is indicated to be otherwise, provide nonmetallic, flat, asbestos-free, pipe flange gasket materials complying with the requirements specified in ASME B16.21.
 - 2) Maximum Thickness: 1/8-inch, unless indicated otherwise.
- c. Plastic Pipe Flange Gasket:
 - 1) Unless indicated otherwise, provide the type and material of plastic pipe flange gasket, including bolts and nuts, as recommended by the piping system manufacturer.
- d. Solder Filler Metals:
 - 1) Provide solder filler metals consisting of lead-free alloys complying with the requirements specified in ASTM B 32, and including water-flushable flux complying with the requirements specified in ASTM B 813.
- e. Brazing Filler Metals:
 - 1) Unless otherwise indicated, provide BCuP Series or BAg1 brazing filler metals complying with the requirements specified in AWS A5.8/A5.8M.
- f. Welding Filler Metals:
 - 1) Provide welding filler metals complying with the requirements specified in AWS D10.12M/D10.12.
- g. Solvent Cements for Joining Plastic Piping:
 - 1) For ABS piping, provide solvents complying with the requirements specified in ASTM D 2235.
 - 2) For CPVC piping, provide solvents complying with the requirements specified in ASTM F 493.
 - 3) For PVC piping, provide solvents complying with the requirements specified in ASTM D 2564. Include primer according to ASTM F 656.
 - 4) For PVC to ABS piping transitions, provide solvents complying with the requirements specified in ASTM D 3138.
- 7. Mechanical Sleeve Seals:
 - a. Provide a modular sealing element unit to fill the annular space between a pipe and sleeve, and designed for field assembly.
 - b. Sealing Elements:
 - 1) Provide EPDM interlocking links shaped to fit the surface of the pipe.
 - 2) Include the type and number required for the pipe material and the size of the pipe.
 - c. Pressure Plates:
 - 1) Provide 2 stainless steel pressure plates for each sealing element.

- d. Connecting Bolts and Nuts:
 - 1) Provide stainless steel connecting of the length required to secure the pressure plates to the sealing elements.
 - 2) Include one bolt and nut set for each sealing element.
- 8. Pipe, Tube, and Fittings:
 - a. Provide pipe, tube, and fitting materials and use joining methods as specified in other Division 15 Sections.
 - b. Pipe Threads: ASME B1.20.1 for factory threaded pipe and pipe fittings.
- 9. Sleeves:
 - a. Galvanized Steel Sheet:
 - 1) Provide galvanized steel sheet sleeves fabricated from a round tube closed with a longitudinal welded joint.
 - 2) Minimum Wall Thickness: 0.0239-inch.
 - b. Steel Pipe:
 - 1) Provide galvanized Schedule 40 steel pipe sleeves having plain ends.
 - 2) Fabricated the pipe sleeves from Type E, Grade B steel complying with the requirements specified in ASTM A 53/A 53M.
 - c. Wall Pipe:
 - 1) Provide cast iron or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and, unless otherwise indicated, an integral waterstop.
 - d. Stack Sleeve Fittings:
 - 1) Provide manufactured, cast-iron stack sleeve fittings with an integral clamping flange.
 - a) For membrane flashing, include a clamping ring, bolts, and nuts.
 - b) Underdeck Clamp:
 - (1) Provide a clamping ring with set screws.

2.02 SOURCE QUALITY CONTROL

- A. Coordination of Other Tests and Inspections:
 - 1. Notify the code-required Approved Agency responsible for performing special inspections when smoke control systems, automatic shutoff for air distribution systems, smoke and fire dampers, medical gas and vacuum systems, or grease duct alternatives for this Contract are being installed and/or tested.
 - 2. Cooperate with the code-required Approved Agency when they are performing required material verifications and other special inspections.
 - a. Provide full access to the Work.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Verify final equipment locations for roughing-in.

3.02 PREPARATION

- A. Demolition/Removal:
 - 1. Plumbing Demolition:
 - a. Comply with the general demolition requirements and procedures specified in Section 01732, Cutting and Patching, and Section 01736, Selective Demolition.
 - b. Disconnect, demolish, and remove plumbing systems, equipment, and components indicated to be removed.
 - 1) Cap or plug remaining piping with the same or compatible piping material.
 - 2) Drain piping to be abandoned in place, and cap or plug the drained piping with the same or compatible piping material.
 - 3) Disconnect equipment to be removed, cap the services, and remove the equipment.
 - 4) Disconnect equipment to be removed and reinstalled, cap the services, and remove, clean, and store the equipment.
 - a) When appropriate, reinstall, reconnect, and make the equipment operational.
 - 5) Disconnect equipment to be removed and salvaged, cap the services, and remove the equipment and deliver it to the Owner.

3.03 INSTALLATION

- A. Piping System Installation:
 - 1. Install piping according to the requirements for the piping systems specified in other Division 15 Sections and the following:
 - a. Except in equipment rooms and service areas, install piping in concealed locations unless otherwise indicated.
 - b. Install both the piping indicated to be exposed and the piping in equipment rooms and service areas at right angles or parallel to building walls.
 - 1) Diagonal runs are prohibited unless specifically indicated otherwise.

- c. For piping installed above accessible ceilings, provide sufficient space to allow ceiling panel removal.
- d. Install piping so valves can be easily serviced.
- e. Install piping with the slopes indicated.
- f. Do not install piping so it sags or bends.
- g. At changes in direction and at branch connections, install fittings.
- h. Install piping so insulation installation is facilitated.
2. Install escutcheons for penetrations of walls, ceilings, and floors.
3. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.

B. Piping Connections

1. Unless otherwise indicated, make piping connections as follows:
 - a. In NPS 2 (DN 50) and smaller piping, install unions adjacent to each valve and at the final connection to each piece of equipment.
 - b. In NPS 2-1/2 (DN 65) and larger piping, install flanges adjacent to flanged valves and at final connection to each piece of equipment.
2. Dry Piping Systems:
 - a. Install dielectric unions and flanges to connect piping materials of dissimilar metals.
3. Wet Piping Systems:
 - a. Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

C. Piping Joint Construction:

1. Join pipe and fittings according to the requirements for the piping systems specified in other Division 15 Sections and the following:
 - a. Ream the ends of pipes and tubes, and remove burrs.
 - 1) Bevel the plain ends of steel pipe.
 - b. Remove scale, slag, dirt, and debris from the inside and outside of pipe and fittings before assembly.
2. Soldered Joints:
 - a. Construct soldered joints according to the requirements specified in ASTM B 828 or CDA A4015, The Copper Tube Handbook.
 - 1) Unless otherwise indicated, apply water-flushable flux complying with the requirements specified in ASTM B 813 to tube end.
 - 2) Provide lead-free solder alloy complying with the requirements specified in ASTM B 32.
3. Brazed Joints:
 - a. Construct brazed joints according to the requirements specified in "Pipe and Tube" Chapter of AWS BHR.

- b. Provide copper-phosphorus brazing filler metal complying with the requirements specified in AWS A5.8/A5.8M.
- 4. Threaded Joints:
 - a. Thread pipe with tapered pipe threads complying with the requirements specified in ASME B1.20.1.
 - 1) Cut threads full and clean using sharp dies.
 - 2) Ream threaded pipe ends to remove burrs and restore the full pipe inside diameter (ID).
 - b. Join threaded pipe, pipe fittings, and valves by applying appropriate tape or thread compound to the external pipe threads, unless dry seal threading is specified, and screwing the joints together.
 - c. Damaged Pipe or Pipe Fittings:
 - 1) Do not use pipe or pipe fittings with threads that are corroded or damaged.
 - 2) Do not use pipe sections that have cracked or open welds.
- 5. Welded Joints:
 - a. Construct welded joints according to the requirements specified in AWS D10.12M/D10.12.
 - b. Only use processes and welding operators qualified according to the requirements specified in Paragraphs 1.05.B and 1.05.C.
- 6. Flanged Joints:
 - a. Select the appropriate gasket material, size, type, and thickness for the service application.
 - b. Assemble the joint in accordance with the manufacturer's recommendations.
 - 1) Position the flange gasket concentrically in the joint.
 - 2) Provide suitable lubricants on the flange bolt threads.
- D. Aboveground Exterior Wall Pipe Penetrations:
 - 1. Seal aboveground exterior wall pipe penetrations using sleeves and mechanical sleeve seals.
 - a. When selecting the sleeve sizes, allow an annular clear space of 1 inch between the pipe and sleeve for installing the mechanical sleeve seals.
 - 1) For sleeves smaller than 6 inches (150mm) in diameter, install steel pipe.
 - 2) For sleeves 6 inches (150mm) and larger in diameter, install cast-iron "wall pipes".
 - 2. Seal the aboveground exterior wall pipe penetrations using mechanical sleeve seals.
 - a. When selecting the mechanical sleeve seal, select the type and number of sealing elements required for the pipe material and size.

- b. Position the pipe in the center of the sleeve.
 - c. Assemble the mechanical sleeve seals, and install the seals in the annular space between the pipe and sleeve.
 - d. Tighten the bolts against the pressure plates so the sealing elements expand and make a watertight seal.
- E. Underground Exterior Wall Pipe Penetrations:
 - 1. Provide wall pipes as sleeves for underground exterior wall pipe penetrations.
 - a. When selecting the wall pipe sizes, allow an annular clear space of 1 inch between the pipe and wall pipe for installing the mechanical sleeve seals.
 - 2. Seal the underground exterior wall pipe penetrations using mechanical sleeve seals.
 - a. When selecting the mechanical sleeve seal, select the type and number of sealing elements required for the pipe material and size.
 - b. Position the pipe in the center of the sleeve.
 - c. Assemble the mechanical sleeve seals, and install the seals in the annular space between the pipe and sleeve.
 - d. Tighten the bolts against the pressure plates so the sealing elements expand and make a watertight seal.
- F. Fire-Barrier Penetrations:
 - 1. Maintain the indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations.
 - 2. Seal pipe penetrations with firestop materials.
- G. Equipment Installation:
 - 1. Rough in the mechanical services for the equipment as specified in other Sections where the equipment roughing-in requirements are specified.
 - 2. When installing equipment, allow the maximum possible headroom unless specific mounting heights are indicated.
 - 3. In exposed interior spaces, install equipment level, plumb, and parallel and perpendicular to other building systems and components unless otherwise indicated.
 - 4. Install mechanical equipment to facilitate service, maintenance, and repair or replacement of components.
 - a. Connect equipment to facilitate ease of disconnection, and with minimum interference to other installations.
 - b. Extend grease fittings to accessible locations.
 - 5. When installing equipment, allow right of way to install piping at the required slope.

H. Concrete Bases:

1. Construct concrete bases of the dimensions indicated on the Contract Drawings or specified, but not less than 4 inches (100mm) larger in both directions than supported unit.
 - a. Provide 3000-psi 28-day compressive-strength concrete as specified in Section 03300, Cast-In-Place Concrete, and concrete reinforcement as specified in Section 03200, Concrete Reinforcement.
 - b. Connect the concrete base to the concrete floor by installing dowel rods.
 - 1) Unless otherwise indicated, install the dowel rods on 18-inch (450mm) centers around the full perimeter of the base.
2. Anchor supported equipment to the concrete base according to the equipment manufacturer's written instructions and applicable seismic codes.
 - a. Use the equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded to locate the anchorage devices.
 - b. Place and secure anchorage devices.
 - 1) Install epoxy-coated anchor bolts that extend through the concrete base and anchor into the structural concrete floor for supported equipment.
 - a) Install anchor bolts to the elevations required for proper attachment to the equipment.
 - b) Install anchor bolts according to the anchor-bolt manufacturer's written instructions.

I. Metal Supports and Anchorages:

1. Provide metal supports and anchorages to support and anchor mechanical materials and equipment at the location, alignment, and elevation required by the Contract Documents.
 - a. Accurately cut, fit, and place miscellaneous metal supports.
2. Field Welding:
 - a. Perform field welds in accordance with the requirements specified in AWS D1.1/D1.1M.

J. Wood Supports and Anchorages:

1. Provide wood supports and anchorages to support and anchor mechanical materials and equipment at the location, alignment, and elevation required by the Contract Documents.
 - a. Cut, fit, and place wood grounds, nailers, blocking, and anchorages.
 - b. Attach wood supports and anchorages to substrates as required to support applied loads.

2. Select fastener sizes that will not penetrate members if the opposite side will be exposed to view or will receive finish materials.
 - a. Tighten connections between members.
 - b. Install fasteners without splitting wood members.

K. Grouting

1. Mix and install leveling grout for equipment base bearing surfaces, pumps, and other equipment base plates and anchors.
2. Clean surfaces that will come into contact with grout.
3. Provide forms as required for placement of the grout.
4. Avoid air entrapment during placement of the grout.
5. Place grout to completely fill the equipment bases.
6. Place grout on concrete bases, and provide a smooth bearing surface for the equipment.
7. Place grout around anchors.
8. Cure placed grout.

3.04 REPAIR/RESTORATION

- A. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove the damaged or unserviceable portions and replace them with new products of equal capacity and quality.

3.05 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. During the period when mechanical systems are being installed and tested, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Construction Manager at Risk or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.

2. Inspections:

- a. Special inspections by the Approved Agency will be made for smoke control systems, automatic shutoff for air distribution systems, smoke and fire dampers, medical gas and vacuum systems, and grease duct alternatives if they are provided under this Contract.

SECTION 15052

BASIC PLUMBING MATERIALS AND METHODS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Piping materials and installation instructions common to most piping systems.
 - 2. Dielectric fittings.
 - 3. Mechanical sleeve seals.
 - 4. Sleeves.
 - 5. Escutcheons.
 - 6. Grout.
 - 7. Plumbing demolition.
 - 8. Equipment installation requirements common to equipment sections.
 - 9. Concrete bases.
 - 10. Supports and anchorages.

1.02 DEFINITIONS

- A. Finished Spaces: Spaces other than plumbing and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and plumbing equipment rooms
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.
- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

1.03 SUBMITTALS

- A. Welding certificates

1.04 QUALITY ASSURANCE

- A. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code—Steel."
- B. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
- C. Electrical Characteristics for Plumbing Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

PART 2 PRODUCTS

2.01 PIPE, TUBE, AND FITTINGS

- A. Refer to individual Division 15 piping Sections for pipe, tube, and fitting materials and joining methods.
- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.02 JOINING MATERIALS

- A. Refer to individual Division 15 piping Sections for special joining materials not listed below.
- B. Pipe-Flange Gasket Materials: ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
- C. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
- D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- E. Brazing Filler Metals: AWS A5.8, BCuP Series or BAg1, unless otherwise indicated.
- F. Welding Filler Metals: Comply with AWS D10.12.
- G. Solvent Cements for Joining Plastic Piping:

1. ABS Piping: ASTM D 2235.
2. CPVC Piping: ASTM F 493.
3. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
4. PVC to ABS Piping Transition: ASTM D 3138.

2.03 DIELECTRIC FITTINGS

- A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.
- B. Insulating Material: Suitable for system fluid, pressure, and temperature.
- C. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig minimum working pressure at 180 deg F.
- D. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.
- E. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.
- F. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F.

2.04 MECHANICAL SLEEVE SEALS

- A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
- B. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
- C. Pressure Plates: Stainless steel. Include two for each sealing element.
- D. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element

2.05 SLEEVES

- A. Galvanized-Steel Sheet: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.
- B. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.

- C. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
- D. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
 - 1. Underdeck Clamp: Clamping ring with set screws.

2.06 ESCUTCHEONS

- A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.
- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.
- C. One-Piece, Cast-Brass Type: With set screw.
 - 1. Finish: Polished chrome-plated
- D. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.
 - 1. Finish: Polished chrome-plated.

2.07 GROUT

- A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
 - 1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
 - 2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
 - 3. Packaging: Premixed and factory packaged.

PART 3 EXECUTION

3.01 PLUMBING DEMOLITION

- A. Refer to Division 1 Sections "Cutting and Patching" and "Selective Demolition" for general demolition requirements and procedures.
- B. Disconnect, demolish, and remove plumbing systems, equipment, and components indicated to be removed.
 - 1. Cap or plug remaining piping with same or compatible piping material.
 - 2. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
 - 3. Equipment to Be Removed: Disconnect and cap services and remove equipment.

4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
 5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.
- C. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.02 PIPING SYSTEMS – COMMON REQUIREMENTS

- A. Install piping according to the following requirements and Division 15 Sections specifying piping systems.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping to permit valve servicing.
- G. Install piping at indicated slopes.
- H. Install piping free of sags and bends.
- I. Install fittings for changes in direction and branch connections.
- J. Install piping to allow application of insulation.
- K. Select system components with pressure rating equal to or greater than system operating pressure.
- L. Install escutcheons for penetrations of walls, ceilings, and floors.

- M. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.
- N. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for **1-inch** annular clear space between pipe and sleeve for installing mechanical sleeve seals.
 - 1. Install steel pipe for sleeves smaller than 6 inches (150 mm) in diameter.
 - 2. Install cast-iron "wall pipes" for sleeves 6 inches (150 mm) and larger in diameter.
 - 3. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- O. Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
 - 1. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- P. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Division 7 Section "Through-Penetration Firestop Systems" for materials.
- Q. Verify final equipment locations for roughing-in.
- R. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

3.03 PIPING JOINT CONSTRUCTION

- A. Join pipe and fittings according to the following requirements and Division 15 Sections specifying piping systems.
- B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

- D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.
- F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- G. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
- H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.04 PIPING CONNECTIONS

- A. Make connections according to the following, unless otherwise indicated:
 - 1. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment
 - 2. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.
 - 3. Edit dielectric connection types in two subparagraphs below for each fluid.
 - 4. Dry Piping Systems: Install dielectric unions and flanges to connect piping materials of dissimilar metals.
 - 5. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

3.05 EQUIPMENT INSTALLATION – COMMON REQUIREMENTS

- A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.

- B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
- C. Install plumbing equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
- D. Install equipment to allow right of way for piping installed at required slope.

3.06 CONCRETE BASES

- A. Coordinate concrete work in this Article with Division 3 Section "Cast-in-Place Concrete" or "Cast-in-Place Concrete (Limited Applications)".
- B. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
 - 1. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
 - 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of the base
 - 3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
 - 4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
 - 6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
 - 7. Use 3000-psi 28-day compressive-strength concrete and reinforcement as specified in Division 3

3.07 ERECTION OF METAL SUPPORTS AND ANCHORAGES

- A. Refer to Division 5 Section "Metal Fabrications" for structural steel.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor plumbing materials and equipment.
- C. Field Welding: Comply with AWS D1.1.

3.08 ERECTION OF WOOD SUPPORTS AND ANCHORAGES

- A. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor plumbing materials and equipment.
- B. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.
- C. Attach to substrates as required to support applied loads.

3.09 GROUTING

- A. Mix and install grout for plumbing equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- B. Clean surfaces that will come into contact with grout.
- C. Provide forms as required for placement of grout.
- D. Avoid air entrapment during placement of grout.
- E. Place grout, completely filling equipment bases.
- F. Place grout on concrete bases and provide smooth bearing surface for equipment.
- G. Place grout around anchors.
- H. Cure placed grout.

SECTION 15053

BASIC HVAC MATERIALS AND METHODS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Piping materials and installation instructions common to most piping systems.
 - 2. Dielectric fittings.
 - 3. Mechanical sleeve seals.
 - 4. Sleeves.
 - 5. Escutcheons.
 - 6. Grout.
 - 7. Plumbing demolition.
 - 8. Equipment installation requirements common to equipment sections.
 - 9. Concrete bases.
 - 10. Supports and anchorages.

1.02 DEFINITIONS

- A. Finished Spaces: Spaces other than plumbing and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and plumbing equipment rooms
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.
- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

1.03 SUBMITTALS

- A. Welding certificates

1.04 QUALITY ASSURANCE

- A. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code—Steel."
- B. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
- C. Electrical Characteristics for HVAC Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

PART 2 PRODUCTS

2.01 PIPE, TUBE, AND FITTINGS

- A. Refer to individual Division 15 piping Sections for pipe, tube, and fitting materials and joining methods.
- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.02 JOINING MATERIALS

- A. Refer to individual Division 15 piping Sections for special joining materials not listed below.
- B. Pipe-Flange Gasket Materials: ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
- C. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
- D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- E. Brazing Filler Metals: AWS A5.8, BCuP Series or BAg1, unless otherwise indicated.
- F. Welding Filler Metals: Comply with AWS D10.12.
- G. Solvent Cements for Joining Plastic Piping:

1. ABS Piping: ASTM D 2235.
2. CPVC Piping: ASTM F 493.
3. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
4. PVC to ABS Piping Transition: ASTM D 3138.

2.03 DIELECTRIC FITTINGS

- A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.
- B. Insulating Material: Suitable for system fluid, pressure, and temperature.
- C. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig minimum working pressure at 180 deg F.
- D. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.
- E. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.
- F. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F.

2.04 MECHANICAL SLEEVE SEALS

- A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
- B. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
- C. Pressure Plates: Stainless steel. Include two for each sealing element.
- D. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element

2.05 SLEEVES

- A. Galvanized-Steel Sheet: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.
- B. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.

- C. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
- D. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
 - 1. Underdeck Clamp: Clamping ring with set screws.

2.06 ESCUTCHEONS

- A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.
- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.
- C. One-Piece, Cast-Brass Type: With set screw.
 - 1. Finish: Polished chrome-plated
- D. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.
 - 1. Finish: Polished chrome-plated.

2.07 GROUT

- A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
 - 1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
 - 2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
 - 3. Packaging: Premixed and factory packaged.

PART 3 EXECUTION

3.01 PIPING SYSTEMS – COMMON REQUIREMENTS

- A. Install piping according to the following requirements and Division 15 Sections specifying piping systems.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping to permit valve servicing.
- G. Install piping at indicated slopes.
- H. Install piping free of sags and bends.
- I. Install fittings for changes in direction and branch connections.
- J. Install piping to allow application of insulation.
- K. Select system components with pressure rating equal to or greater than system operating pressure.
- L. Install escutcheons for penetrations of walls, ceilings, and floors.
- M. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.
- N. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
 - 1. Install steel pipe for sleeves smaller than 6 inches (150 mm) in diameter.
 - 2. Install cast-iron "wall pipes" for sleeves 6 inches (150 mm) and larger in diameter.
 - 3. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- O. Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
 - 1. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

- P. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Division 7 Section "Through-Penetration Firestop Systems" for materials.
- Q. Verify final equipment locations for roughing-in.
- R. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

3.02 PIPING JOINT CONSTRUCTION

- A. Join pipe and fittings according to the following requirements and Division 15 Sections specifying piping systems.
- B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.
- F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- G. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
- H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.03 PIPING CONNECTIONS

- A. Make connections according to the following, unless otherwise indicated:
 - 1. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment
 - 2. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.
 - 3. Edit dielectric connection types in two subparagraphs below for each fluid.
 - 4. Dry Piping Systems: Install dielectric unions and flanges to connect piping materials of dissimilar metals.
 - 5. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

3.04 EQUIPMENT INSTALLATION – COMMON REQUIREMENTS

- A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.
- B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
- C. Install HVAC equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
- D. Install equipment to allow right of way for piping installed at required slope.

3.05 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
 - 1. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
 - 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of the base
 - 3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
 - 4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
 - 6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

7. Use 3000-psi 28-day compressive-strength concrete and reinforcement as specified in Division 3

3.06 ERECTION OF METAL SUPPORTS AND ANCHORAGES

- A. Refer to Division 5 Section "Metal Fabrications" for structural steel.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor plumbing materials and equipment.
- C. Field Welding: Comply with AWS D1.1.

3.07 ERECTION OF WOOD SUPPORTS AND ANCHORAGES

- A. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor HVAC materials and equipment.
- B. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.
- C. Attach to substrates as required to support applied loads.

3.08 GROUTING

- A. Mix and install grout for HVAC equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- B. Clean surfaces that will come into contact with grout.
- C. Provide forms as required for placement of grout.
- D. Avoid air entrapment during placement of grout.
- E. Place grout, completely filling equipment bases.
- F. Place grout on concrete bases and provide smooth bearing surface for equipment.
- G. Place grout around anchors.
- H. Cure placed grout.

SECTION 15060

HANGERS AND SUPPORTS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following:
 - a. Steel pipe hangers and supports.
 - b. Trapeze pipe hangers.
 - c. Metal framing systems.
 - d. Thermal-hanger shield inserts.
 - e. Fastener systems.
 - f. Equipment supports.
 - g. Grouting mechanical equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 05500 - Metal Fabrications.
 - 3. Section 15050 - Basic Mechanical Materials and Methods.
 - 4. Section 15070 - Mechanical Sound, Vibration, and Seismic Control.
 - 5. Section 15815 - Metal Ducts.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. NPS: Nominal Pipe Size.
 - a. DN: Diamètre nominal (European Equivalent).
- B. Definitions:
 - 1. Standard terminology for pipe hangers and supports defined in MSS SP-90 applies to the Work of this Section.
 - 2. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
- C. Reference Standards:
 - 1. American Society of Mechanical Engineers (ASME):
 - a. ASME B31.1 – Power Piping.
 - b. ASME B31.9 – Building Services Piping.

- c. ASME Boiler and Pressure Vessel Code, Section IX: Welding and Brazing Qualifications.
- 2. American Welding Society (AWS):
 - a. AWS D1.1/D1.1M Structural Welding Code - Steel.
- 3. ASTM International (ASTM):
 - a. ASTM A 36/A 36M Standard Specification for Carbon Structural Steel.
 - b. ASTM A 780 Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.
 - c. ASTM C 552 Standard Specification for Cellular Glass Thermal Insulation.
 - d. ASTM C 553 Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications.
 - e. ASTM C 1107/C 1107M Standard Specification for Packaged Dry, Hydraulic-Cement Grout.
- 4. Manufacturers Standardization Society (MSS):
 - a. MSS SP-58 - Pipe Hangers and Supports – Materials, Design, and Manufacture.
 - b. ANSI/MSS SP-69 - ANSI/MSS Edition Pipe Hangers and Supports – Selection and Application.
 - c. MSS SP-89 - Pipe Hangers and Supports – Fabrication and Installation Practices.
 - d. MSS SP-90 - Guidelines on Terminology for Pipe Hangers and Supports.
- 5. Metal Framing Manufacturing Association (MFMA):
 - a. MFMA-4 - Metal Framing Standards Publication.
 - b. MFMA-103 - Guidelines for the Use of Metal Framing.
- 6. The Society for Protective Coatings (SSPC):
 - a. SSPC Steel Structures Painting Manual.
 - 1) SSPC-PA 1 Shop, Field, and Maintenance Painting of Steel.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate the installation of the mechanical hangers and supports with the installation of mechanical piping and equipment.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:

- a. Product Data:
 - 1) Trapeze pipe hanger components.
 - 2) Metal framing systems.
 - 3) Steel pipe hangers and supports.
 - 4) Thermal-hanger shield inserts.
 - 5) Powder-actuated fastener systems.
- b. Shop Drawings:
 - 1) Trapeze pipe hangers.
 - 2) Metal framing systems.
 - 3) Equipment supports.
- c. Certificates:
 - 1) Welding Certificates qualifying steel support welding procedures.
- d. Special Procedure Submittals:
 - 1) Procedures to be used for pre-qualifying welders.
 - 2) Procedures to be used for pre-qualifying welding procedures.
- e. Qualification Statements:
 - 1) Steel support welders' qualifications.

1.05 QUALITY ASSURANCE

A. Qualifications:

1. Welder Qualifications:

- a. Prior to beginning to weld steel hangers and supports, submit the procedures to be used for pre-qualifying the welders to the Program/Project Manager for approval.
 - 1) Qualify operators according to the requirements set forth in the ASME Boiler and Pressure Vessel Code, Section IX: Welding and Brazing Qualifications.
 - 2) Only use welders, tackers, and welding operators demonstrating they are qualified to perform the types of work required by having passed the qualification tests prescribed in AWS D1.1/D1.1M for the procedures.
 - 3) Submit steel hanger and support welder qualifications certifying that the welders employed to perform steel support welding Work have been AWS certified within the previous 12 months to the Program/Project Manager for approval.
 - a) Include certified copies of qualification test records that indicate each welder, welding operator, and tacker employed to perform the Work has satisfactorily passed the AWS qualification tests for the required welding procedures and, if pertinent, has undergone recertification.

2. Professional Engineer Qualifications:

- a. Employ a licensed Professional Engineer, registered in the State of Arizona, having experience performing structural calculations.
- B. Certifications:
 - 1. Welding Certificates:
 - a. Prior to beginning to weld steel supports, submit the procedures to be used for pre-qualifying the welding procedures to the Program/Project Manager for approval.
 - b. Steel Support Welding Certificates:
 - 1) Qualify welding procedures according to the requirements set forth in the ASME Boiler and Pressure Vessel Code, Section IX: Welding and Brazing Qualifications.
 - 2) For steel support welding procedures, other than those set forth in AWS D1.1/D1.1M, submit a copy of the welding procedure qualification test records.

PART 2 PRODUCTS

2.01 MANUFACTURERS:

- A. Substitution Limitations:
 - 1. Subject to compliance with the requirements specified, manufacturers offering products that may be incorporated into the Work include the manufacturers listed.
- B. Product Options:
 - 1. Subject to compliance with requirements, provide products by one of the manufacturers listed.

2.02 DESIGN CRITERIA:

- A. Specific hanger and support requirements are typically specified in other Sections where the piping systems and equipment are specified.
 - 1. For pipe hanger selections and applications that are not specified in the piping system Sections, comply with the requirements specified in MSS SP-69.
 - 2. For trapeze pipe hanger selections and applications that are not specified in the piping system Sections, comply with the requirements specified in MSS SP-69.
 - 3. For metal framing system selections and applications that are not specified in the piping system Sections, comply with the requirements specified in MFMA-103.

B. Load Distribution:

1. Install hangers and supports so piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

C. Pipe Slopes:

1. Install hangers and supports so the indicated pipe slopes are achieved, and so the maximum pipe deflections allowed by ASME B31.1 for power piping and ASME B31.9 for building services piping are not exceeded.

D. Horizontal Piping Hangers and Supports:

1. Except as otherwise specified in other Sections specifying piping systems or indicated on the Contract Drawings, provide the following types of horizontal piping hangers and supports:
 - a. For suspension of non-insulated or insulated stationary pipes sized NPS 1/2 to NPS 30 (DN 15 to DN 750), provide adjustable, steel clevis hangers (MSS SP-58 Type 1).
 - b. For suspension of pipes sized NPS 4 to NPS 16 (DN 100 to DN 400) and requiring up to 4 inches of insulation due to 120 to 450 degree Fahrenheit contents, provide yoke-type pipe clamps (MSS SP-58 Type 2).
 - c. For suspension of pipes sized NPS 3/4 to NPS 24 (DN 20 to DN 600), having up to 4 inches of insulation, and requiring clamp flexibility, provide carbon or alloy steel, double bolt pipe clamps (MSS SP-58 Type 3).
 - d. For suspension of non-insulated stationary pipes sized NPS 1/2 to NPS 8 (DN 15 to DN 200), provide U-Bolts (MSS SP-58 Type 24).
 - e. For support of pipes sized NPS 4 to NPS 36 (DN 100 to DN 900) and having steel pipe base stanchion supports with cast-iron floor flanges, provide pipe saddle supports (MSS SP-58 Type 36).
 - f. For suspension of pipes sized NPS 1 to NPS 30 (DN 25 to DN 750) from 2 rods where longitudinal movement caused by expansion and contraction might occur, provide single pipe rolls (MSS SP-58 Type 41).
 - g. For support of pipes sized NPS 2 to NPS 42 (DN 50 to DN 1050) where longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary, provide complete pipe rolls (MSS SP-58 Type 44).

E. Vertical Piping Clamps:

1. Except as otherwise specified in other Sections specifying piping systems or indicated on the Contract Drawings, provide the following types of vertical piping clamps:

- a. For support of pipe risers sized NPS 3/4 to NPS 20 (DN 20 to DN 500), provide extension pipe or riser clamps (MSS SP-58 Type 8).
 - b. For support of pipe risers sized NPS 3/4 to NPS 20 (DN 20 to DN 500) where longer ends are required for riser clamps, provide carbon or alloy steel riser clamps (MSS SP-58 Type 42).
- F. Hanger-Rod Attachments:
 - 1. Except as otherwise specified in other Sections specifying piping systems or indicated on the Contract Drawings, provide the following types of hanger-rod attachments:
 - a. For adjustment up to 6 inches (150mm) due to heavy loads, provide steel turnbuckles (MSS SP-58 Type 13).
 - b. For piping installations with contents 120 to 450 degrees Fahrenheit (49 to 232 degrees Celsius), provide steel clevises (MSS SP-58 Type 14).
- G. Building Attachments:
 - 1. Except as otherwise specified in other Sections specifying piping systems or indicated on the Contract Drawings, provide the following types of building attachments:
 - a. For suspending pipe hangers from concrete ceilings, provide steel or malleable concrete inserts (MSS SP-58 Type 18).
 - b. For installations under roofs having bar-joists, provide top-beam C-clamps (MSS SP-58 Type 19) to attach hangers or supports to the top flange of the structural shape.
 - c. For attaching hangers or supports to the bottom flange of beams, channels, or angles, provide side-beam or channel clamps (MSS SP-58 Type 20).
 - d. For attaching hangers or supports to the center of the bottom flange of beams, provide center-beam clamps (MSS SP-58 Type 21).
 - e. For attaching hangers or supports to bottom of beams where the loads are considerable and the rod sizes are large, provide welded beam attachments (MSS SP-58 Type 22).
 - f. For attaching hangers or supports to structural shapes, provide C-clamps (MSS SP-58 Type 23).
 - g. For supporting pipes from below, or for suspending pipes from above using clips and rods, provide one of the following types of welded steel brackets selected according to the loads indicated:
 - 1) Light [750 pounds (340 kilograms)]: MSS SP-58 Type 31.
 - 2) Medium [1500 pounds (680 kilograms)]: MSS SP-58 Type 32.
 - 3) Heavy [3000 lb (1360 kg)]: MSS SP-58 Type 33.

- h. For attaching hangers or supports to the sides of steel or wooden beams, provide side beam brackets (MSS SP-58 Type 34).
 - i. For attaching hangers or supports to steel beams where flexibility at the beam is required, provide plate lugs (MSS SP-58 Type 57).
- H. Saddles and Shields:
 - 1. Except as otherwise specified in other Sections specifying piping systems or indicated on the Contract Drawings, provide the following types of saddles and shields:
 - a. To fill interior voids with insulation that matches adjoining insulation, provide steel pipe covering protection saddles (MSS SP-58 Type 39).
 - b. To prevent crushing the insulation, provide protection shields (MSS SP-58 Type 40) of the length recommended in writing by the protection shield manufacturer.
 - c. For supporting insulated pipe, provide thermal-hanger shield inserts.
- I. Spring Hangers and Supports:
 - 1. Except as otherwise specified in other Sections specifying piping systems or indicated on the Contract Drawings, provide the following types of spring hangers and supports:
 - a. For light loads where vertical movement does not exceed 1-1/4 inches (32mm), provide spring cushions (MSS SP-58 Type 48).
 - b. To equip Type 41 roll hangers with springs, provide spring-cushion roll hangers (MSS SP-58 Type 49).
 - c. To absorb expansion and contraction of the piping system from the base support, provide variable-spring base supports (MSS SP-58 Type 52).
- J. For piping and equipment hangers and supports that will not have a field applied finish, provide galvanized metallic coatings.
- K. Where attachments are in direct contact with copper tubing, apply nonmetallic coatings on the attachments to provide protection against electrolytic corrosion.
- L. For piping subject to scratching, provide padded hangers.
- M. Design supports for multiple pipes capable of supporting the combined weight of the supported systems, system contents, and test water.
- N. Design equipment supports capable of supporting the combined operating weight of the equipment, connected systems, and components supported.

- O. Design seismic-restraint hangers and supports for piping and equipment, and obtain approval of these special hangers and supports from the Authorities Having Jurisdiction.
- P. Where hangers and supports must be attached to concrete construction, provide powder-actuated fasteners or mechanical-expansion anchors instead of building attachments.

2.03 MANUFACTURED UNITS

- A. Vibration Isolation Devices:
 - 1. Provide vibration isolation devices complying with the requirements specified in Section 15070, Mechanical Sound, Vibration, and Seismic Control.
- B. Duct Hangers and Supports:
 - 1. Provide duct hangers and supports complying with the requirements specified in Section 15815, Metal Ducts.
- C. Pipe Hangers and Supports:
 - 1. Provide factory-fabricated steel pipe hangers and supports of Types 1 through 58 as specified in MSS SP-58.
 - 2. Galvanized, Metallic Coatings:
 - a. Provide pre-galvanized or hot dipped galvanizing coatings.
 - 3. Nonmetallic Coatings:
 - a. Provide plastic coatings, jackets, or liners.
 - 4. Padded Hangers:
 - a. Provide hangers with fiberglass or other pipe insulation pads or cushions to support the bearing surface of the piping.
 - 5. Manufacturers:
 - a. B-Line Systems, Inc., a division of Cooper Industries; www.b-line.com.
 - b. Globe Pipe Hanger Products, Inc.; www.globepipehanger.com.
 - c. Grinnell Mechanical Products, Tyco Fire Products, LP; www.grinnell.com.
 - d. National Pipe Hanger Corporation, www.nationalpipehanger.com.
 - e. Piping Technology and Products, Inc., www.pipingtech.com.
 - f. Approved equal.
 - 6. Submit Product Data for steel pipe hangers and supports to the Program/Project Manager for approval.
- D. Trapeze Pipe Hangers:
 - 1. Provide Type 59 shop or field fabricated pipe support assemblies as specified in MSS SP-69, made from structural-steel shapes, and having

hanger rods, nuts, saddles, and U-bolts complying with the requirements specified in MSS SP-58.

2. Submit Product Data for trapeze pipe hanger components to the Program/Project Manager for approval.
3. Submit Shop Drawings for the trapeze pipe hangers, signed and sealed by a qualified Professional Engineer, to the Program/Project Manager for approval.
 - a. Show fabrication and installation details.
4. Submit calculations for the trapeze pipe hangers, signed and sealed by a qualified Professional Engineer, to the Program/Project Manager for approval.

E. Metal Framing Systems:

1. Provide shop or field fabricated pipe support assemblies as specified in MFMA-4, made from steel channels and other components.
2. Coatings:
 - a. Provide the manufacturer's standard finish, unless bare metal surfaces are indicated in the Contract Documents.
 - b. Nonmetallic Coatings:
 - 1) Provide plastic coatings, jackets, or liners.
3. Manufacturers:
 - a. B-Line Systems, Inc., a division of Cooper Industries; www.b-line.com.
 - b. Power-Strut Division; Tyco International, Ltd., www.power-strut.com/.
 - c. Thomas & Betts Corporation, www.tnb.com.
 - d. Unistrut Corp.; Tyco International, Ltd.; www.unistrut.com.
4. Submit Product Data for metal framing system components to the Program/Project Manager for approval.
5. Submit Shop Drawings for the metal framing systems, signed and sealed by a qualified Professional Engineer, to the Program/Project Manager for approval.
 - a. Show fabrication and installation details.
6. Submit calculations for the metal framing systems, signed and sealed by a qualified Professional Engineer, to the Program/Project Manager for approval.

F. Thermal-Hanger Shield Inserts:

1. Provide sheet metal encased insulated hanger shield inserts.
2. Compressive Strength: 100 psig, minimum.
3. Insulation:
 - a. For cold piping, provide water-repellent treated calcium silicate complying with the requirements for Type I as specified in

- ASTM C 533, or cellular glass complying with the requirements for Type II as specified in ASTM C 552 with a vapor barrier.
- b. For hot piping, provide water-repellent treated calcium silicate complying with the requirements for Type I as specified in ASTM C 533, or cellular glass complying with the requirements for Type II as specified in ASTM C 552.
4. For Trapeze or Clamped Systems:
 - a. Provide inserts and shields that cover the entire circumference of the pipe.
 5. For Clevis or Band Hangers:
 - a. Provide inserts and shields that cover the lower 180 degrees of the pipe.
 6. Insert Length:
 - a. For piping operating below the ambient air temperature, provide inserts that extend 2 inches beyond the sheet metal shield.
 7. Manufacturers:
 - a. Carpenter & Paterson, Inc.; www.carpenterandpaterson.com.
 - b. ERICO/Michigan Hanger Co., www.erico.com.
 - c. Pipe Shields, Inc.; Piping Technology and Products, Inc.; www.pipingtech.com/PipeShields/.
 8. Submit Product Data for thermal-hanger shield inserts to the Program/Project Manager for approval.
- G. Fastener Systems
1. Verify the suitability of fasteners for use in lightweight concrete and concrete slabs less than 4 inches thick.
 2. Powder-Actuated Fasteners:
 - a. Provide threaded steel stud powder-actuated fasteners designed for use in hardened Portland cement concrete, and having pull-out, tension, and shear capacities appropriate for the loads supported and the building materials where they are used.
 - b. Manufacturers:
 - 1) Hilti, Inc.; www.hilti.com.
 - 2) ITW Ramset/Red Head, www.ramset-redhead.com.
 - 3) Masterset Fastening Systems, Inc.; www.simpsonanchors.com.
 - 4) Powers Fasteners, www.powers.com.
 - c. Submit Product Data for powder-actuated fastener systems to the Program/Project Manager for approval.
 3. Mechanical-Expansion Anchors:
 - a. Provide insert-wedge-type stainless steel mechanical expansion anchors designed for use in hardened Portland cement concrete, and

having pull-out, tension, and shear capacities appropriate for the loads supported and the building materials where they are used.

b. Manufacturers:

- 1) B-Line Systems, Inc., a division of Cooper Industries; www.b-line.com.
- 2) Hilti, Inc.; www.hilti.com.
- 3) ITW Ramset/Red Head, www.ramset-redhead.com.
- 4) Powers Fasteners, www.powers.com.

H. Equipment Supports:

1. Provide welded, shop or field fabricated equipment supports fabricated from structural-steel shapes.
2. Submit Shop Drawings for the equipment supports, signed and sealed by a qualified Professional Engineer, to the Program/Project Manager for approval.
 - a. Show fabrication and installation details.
3. Submit calculations for the equipment supports, signed and sealed by a qualified Professional Engineer, to the Program/Project Manager for approval.

2.04 MATERIALS:

A. Structural Steel:

1. Provide black and galvanized structural steel plates, shapes, and bars complying with the requirements specified in ASTM A 36/A 36M.
2. Tor trapeze hangers for pipe and equipment supports, provide structural-steel shapes and plates complying with the requirements specified in Section 05500, Metal Fabrications.

B. Grout:

1. Provide grout complying with the requirements specified in Section 15050, Basic Mechanical Materials and Methods.

C. Provide hangers and supports complete with the necessary inserts, bolts, rods, nuts, washers, and other accessories.

2.05 SHOP FABRICATION:

A. Metal Fabrications

1. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
2. Fit exposed connections together to form hairline joints.

- a. For connections that cannot be shop welded because of shipping size limitations, make provisions to weld the connections in the field.
3. Finish welds at exposed connections so no roughness shows after finishing, and the contours of welded surfaces match adjacent contours.

B. Equipment Supports:

1. Fabricate equipment supports from welded structural steel shapes.
2. Fabricate structural steel stands to suspend equipment from the overhead structure, or to support the equipment above the floor.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions:

1. Examine the locations to receive mechanical hangers and supports.

B. Evaluation and Assessment:

1. Verify that the locations to receive mechanical hangers and supports are ready for the Work of this Section.

3.02 PREPARATION

A. Protection of In-Place Conditions:

1. Protect the areas surrounding the locations to receive mechanical hangers and supports from damage resulting from installation of the hangers and supports.
2. Protect adjacent areas from weld spatter and paint stains.

B. Surface Preparation:

1. Grouting:
 - a. Grout surfaces indicated to receive grout as specified in Section 15050, Basic Mechanical Materials and Methods.

3.03 INSTALLATION

A. Steel Pipe Hangers:

1. Provide the hangers, supports, clamps, and attachments required to properly support piping from the building structure.
 - a. Comply with the requirements specified in MSS SP-69 and MSS SP-89.

B. Trapeze Pipe Hangers:

1. To support parallel runs of horizontal piping arranged and grouped together, provide field-fabricated trapeze pipe hangers that comply with the requirements specified in MSS SP-69 and MSS SP-89.
 - a. Field fabricate the trapeze pipe hangers from steel shapes complying with the requirements specified in ASTM A 36/A 36M and selected for the loads being supported.
 - 1) Weld steel according to the requirements specified in AWS D1.1/D1.1M.
 - b. Support pipes of various sizes together.
 - c. Space the trapeze pipe hangers for the smallest pipe size, or install intermediate supports for the smaller diameter pipes as specified for individual pipe hangers.
- C. Metal Framing Systems:
 1. Field-assemble metal framing systems to support parallel runs of piping grouped together.
- D. Thermal-Hanger Shields:
 1. Provide pipe hangers or shields for insulated piping.
- E. Fastener Systems:
 1. Install powder-actuated fasteners and mechanical-expansion anchors in concrete after the concrete is placed and completely cured.
 - a. To install powder-actuated fasteners, employ operators licensed by the powder-actuated tool manufacturer.
 - b. Install powder-actuated fasteners according to the powder-actuated tool manufacturer's operating manual.
 - c. Install mechanical-expansion anchors according to anchor manufacturer's written instructions.
- F. Building Attachments:
 1. Install building attachments within concrete slabs, or attach them to structural steel.
 - a. Install concrete inserts before the concrete is placed.
 - b. Fasten concrete inserts to the concrete forms, and install reinforcing bars through openings at top of inserts.
 2. Install additional attachments at concentrated loads, including at the following:
 - a. Valves, flanges, and strainers.
 - b. Pipe sized NPS 2-1/2 (DN 65) and larger.
 - c. Changes in direction of piping.

G. Equipment Support Installation:

1. Suspend equipment from the overhead structure, or support the equipment above the floor, on structural steel stands.
 - a. To prevent swaying, provide lateral bracing for equipment hangers and supports.
 - b. To provide a smooth bearing surface for equipment, place grout under equipment supports.

H. Insulated Piping:

1. Attach clamps and spacers to the insulated piping.
 - a. For piping operating above ambient air temperature, the clamps may project through the insulation.
 - b. For piping operating below ambient air temperature, provide thermal-hanger shield inserts with clamps sized to match the outside diameter (OD) of the insert.
 - c. Do not exceed the pipe stress limits specified in ASME B31.1 for power piping and in ASME B31.9 for building services piping.
2. Where insulation without vapor barrier is indicated, provide protection saddles (MSS SP-58 Type 39).
 - a. Fill interior voids with insulation that matches the adjoining insulation.
3. For cold piping with vapor barrier, provide protective shields (MSS SP-58 Type 40) spanning an arc of 180 degrees.
 - a. Provide shields having not less than the following dimensions for pipe:
 - 1) For pipe sizes NPS 1/4 to NPS 3-1/2 (DN 8 to DN 90): 12 inches long, and 0.048 inch thick.
 - 2) For pipe size NPS 4 (DN 100): 12 inches long, and 0.06 inch thick.
 - 3) For pipe sizes NPS 5 and NPS 6 (DN 125 and DN 150): 18 inches long, and 0.06 inch thick.
 - 4) For pipe sizes NPS 8 to NPS 14 (DN 200 to DN 350): 24 inches long, and 0.075 inch thick.
 - 5) For pipe sizes NPS 16 to NPS 24 (DN 400 to DN 600): 24 inches long, and 0.105 inch thick.
4. For pipe sizes NPS 8 (DN 200) and larger, include wood inserts.
5. Insert Material Length:
 - a. Provide insert at least as long as the protective shield.
6. Thermal-Hanger Shields:
 - a. Provide thermal-hanger shields with insulation the same thickness as the piping insulation.

I. Special Techniques:

1. Field Welding:

- a. Field weld connections on metal fabrications that cannot be shop welded because of shipping size limitations.
 - 1) Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2) Comply with the requirements for shielded metal arc welding procedures specified in AWS D1.1/D1.1M to insure the appearance and quality of welds, and the methods used in correcting welding work, are best practices.
 - 3) Obtain fusion without undercut or overlap.
 - 4) Remove welding flux immediately.
- b. Finish the welds at exposed connections so no roughness shows after finishing, and contours of welded surfaces match adjacent contours.
2. Thermal and Seismic Movement:
 - a. Install hangers and supports so controlled thermal and seismic movement of the piping systems can occur; the pipe is free to move between the pipe anchors; and the action of expansion joints, expansion loops, expansion bends, and similar units is facilitated.
 - b. To prevent swaying, provide lateral bracing for pipe hangers and supports.

3.04 REPAIR/RESTORATION

- A. Touch Up Painting:
 1. Provide the same materials used for shop painting.
 2. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 - a. Clean field welds and areas of abraded shop paint.
 - b. Paint the exposed areas immediately after erecting the hangers and supports.
 - c. Apply paint by brush or spray.
 - d. Provide a minimum dry film thickness of 2.0 mils.
- B. Galvanized Surfaces:
 1. Clean welds, bolted connections, and abraded areas; and apply galvanizing-repair paint as specified in ASTM A 780.

3.05 ADJUSTING

- A. Hanger Adjustments:
 1. Adjust hangers to distribute the loads on attachments equally, and to achieve indicated pipe slope.

SECTION 15065

MOTORS FOR MECHANICAL EQUIPMENT

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. General requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on alternating electric current (AC) power systems up to 600 Volts.
- B. Products Supplied But Not Installed Under This Section:
 - 1. The motors specified in this Section will be installed at the mechanical equipment manufacturer's factory, or will be shipped separately by the mechanical equipment manufacturer for field installation under other Sections.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AC: Alternating electric current.
- B. Reference Standards:
 - 1. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 2. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
 - 3. Institute of Electrical and Electronics Engineers (IEEE):
 - a. IEEE 841 – IEEE Standard for Petroleum and Chemical Industry-Premium-Efficiency, Severe-Duty, Totally Enclosed Fan-Cooled (TEFC) Squirrel Cage Induction Motors-Up to and Including 370 kW (500 hp).
 - 4. National Electrical Manufacturers Association (NEMA):
 - a. NEMA MG 1 – Motors and Generators.
 - 5. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate the features of motors, installed units, and accessory devices to be compatible with the following:
 - a. Motor controllers.
 - b. Torque, speed, and horsepower requirements of the load.

- c. Ratings and characteristics of the supply circuit and the required control sequence.
- d. Ambient and environmental conditions of the installation location.

PART 2 PRODUCTS

2.01 MOTORS

- A. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. National Electrical Code (NEC):
 - 1) Provide products and installation complying with the requirements specified for motors in NFPA 70.
- B. Performance:
 - 1. Motor Characteristics:
 - a. Duty:
 - 1) Provide motors rated for continuous duty at an ambient temperature of 40 degrees Celsius and at an altitude of 3300 feet (1000m) above sea level.
 - b. Capacity and Torque Characteristics:
 - 1) Provide motors having sufficient capacity and torque characteristics to start, accelerate, and operate the connected loads at the designated speeds, at the installed altitude and environment, with the indicated operating sequence, and without exceeding the nameplate ratings or considering the service factor.
- C. Design Criteria:
 - 1. Provide motors that comply with the requirements specified in this Section except when stricter requirements are specified in the Mechanical Equipment Schedules on the Contract Drawings or in other Sections.
 - 2. Unless otherwise indicated in the Contract Documents, provide motors that comply with the requirements specified in NEMA MG 1.
 - 3. For severe-duty motors, provide motors that comply with the requirements specified in IEEE 841.
- D. Materials:
 - 1. Polyphase Motors:
 - a. Provide polyphase medium induction motors that comply with the requirements for Design B specified in NEMA MG 1.
 - b. Efficiency:

- 1) Provide polyphase motors that are energy efficient as defined in NEMA MG 1.
- c. Service Factor:
 - 1) Provide polyphase motors having a service factor of 1.15.
- d. Multispeed Motors:
 - 1) Provide variable torque motors.
 - a) For motors having a 2:1 speed ratio, provide a consequent pole, single winding.
 - b) For motors having other than a 2:1 speed ratio, provide a separate winding for each speed.
- e. Multispeed Motors:
 - 1) Provide a separate winding for each speed.
- f. Rotor:
 - 1) Provide a random-wound, squirrel cage rotor.
- g. Bearings:
 - 1) Provide re-greasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
- h. Temperature Rise:
 - 1) Provide motors rated for a temperature rise matching their insulation rating.
- i. Insulation:
 - 1) Provide motors having Class F insulation.
- j. Code Letter Designation:
 - 1) For motors rated for 15 horsepower (HP) and larger, provide motors having either NEMA starting Code F or Code G.
 - 2) For motors rated at less than 15 horsepower (HP), provide motors having the manufacturer's standard starting characteristic.
- k. Enclosure Material:
 - 1) For motor frame sizes 324T and larger provide cast iron enclosures.
 - 2) For motor frame sizes smaller than 324T provide rolled steel enclosures.
2. Polyphase Motors Subject to Additional Requirements:
 - a. For motors used with reduced-voltage and multispeed controllers, match the wiring connection requirements for the controller with the required motor leads.
 - 1) Provide terminals suited to the control method in the motor terminal box.
 - b. For motors used with variable frequency controllers, coordinate the ratings, characteristics, and features with the controller manufacturer, and have them approved by the controller manufacturer and comply with the following requirements:
 - 1) Windings:
 - a) Provide windings of copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist

transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.

- 2) Energy-Efficient and Premium-Efficient Motors:
 - a) For energy-efficient and premium-efficient motors, provide motors rated for a Class B temperature rise, and having Class F insulation.
- 3) Inverter-Duty Motors:
 - a) For inverter-duty motors, provide motors rated for a Class F temperature rise, and having Class H insulation.
- 4) Thermal Protection:
 - a) Provide thermal protection complying with the requirements for thermally protected motors specified in NEMA MG 1.
- c. Severe-Duty Motors:
 - 1) Provide severe-duty motors complying with the requirements specified in IEEE 841, with a service factor of 1.15, minimum.
3. Single-Phase Motors:
 - a. For single-phase motors larger than 1/20 horsepower (HP) provide one of the following features to suit the starting torque and the requirements of the specific motor application:
 - 1) Permanent-split capacitor.
 - 2) Split phase.
 - 3) Capacitor start, inductor run.
 - 4) Capacitor start, capacitor run.
 - b. For single-phase motors 1/20 horsepower (HP) and smaller, provide the shaded-pole type.
 - c. Multispeed Motors:
 - 1) For multispeed motors, provide variable-torque, permanent-split-capacitor type.
 - d. Bearings:
 - 1) Provide pre-lubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
 - e. Thermal Protection:
 - 1) Provide internal protection that automatically opens the power supply circuit to the motor when the winding temperature exceeds a safe value calibrated to the temperature rating of the motor insulation.
 - 2) Provide a thermal-protection device that automatically resets when the motor temperature returns to the normal range.

SECTION 15070

MECHANICAL SOUND, VIBRATION, AND SEISMIC CONTROL

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Requirements for mechanical sound, vibration, and seismic controls, including the following:
 - a. Isolation pads.
 - b. Isolation mounts.
 - c. Restrained elastomeric isolation mounts.
 - d. Spring isolators.
 - e. Restrained spring isolators.
 - f. Housed spring mounts.
 - g. Elastomeric hangers.
 - h. Spring hangers.
 - i. Spring hangers with vertical-limit stops.
 - j. Pipe riser resilient supports.
 - k. Resilient pipe guides.
 - l. Channel support systems.
 - m. Restraint cables.
 - n. Hanger rod stiffeners.
 - o. Bushings for floor-mounted equipment anchor bolts.
 - p. Resilient isolation washers and bushings.
 - q. Anchor bolts.

B. Related Requirements:

1. Section 01330 - Submittal Procedures.
2. Section 01400 - Quality Requirements.
3. Section 07720 – Roof Accessories.
4. Section 15140 – Domestic Water Piping.

1.02 REFERENCES

A. Abbreviations and Acronyms:

1. HVAC: Heating, Ventilating, and Air-Conditioning.
2. ICC-ES: International Code Council – Evaluation Service.

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.

C. Reference Standards:

1. American Association of State Highway and Transportation Officials (AASHTO):
 - a. AASHTO M 251 - Plain and Laminated Elastomeric Bridge Bearings.
2. American Society of Civil Engineers (ASCE):
 - a. ASCE/SEI 7 – Minimum Design Loads for Buildings and Other Structures.
3. American Welding Society (AWS):

 - a. MSS SP-127 - Bracing for Piping Systems Seismic-Wind-Dynamic Design, Selection, Application.
7. Metal Framing Manufacturing Association (MFMA):
 - a. MFMA-4 - Metal Framing Standards Publication.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. 10 days before sound, vibration, and seismic controls are to be installed, give notice to those performing other construction work related to the installation, such as to those performing work that must be supported by or that will provide support of the sound, vibration, and seismic controls, to allow such items to be introduced or furnished before the controls are installed.
2. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.

B. Sequencing:

1. Sequence the installation of sound, vibration, and seismic controls to follow construction of supporting concrete and masonry load bearing walls and concrete foundations.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Vibration Isolators:
 - a) Vibration isolation pads.
 - b) Vibration isolation mounts.
 - c) Vibration isolation restrained mounts.
 - d) Spring isolators.
 - e) Restrained spring isolators.
 - f) Housed spring mounts.
 - g) Elastomeric hangers.
 - h) Spring hangers.
 - i) Spring hangers with vertical-limit stops.
 - j) Pipe riser resilient support.
 - k) Resilient pipe guides.
 - 2) Seismic-Restraint Devices:
 - a) Channel support systems.
 - b) Restraint cables.
 - c) Hanger rod stiffeners.
 - d) Bushings for floor-mounted equipment anchor bolts.
 - e) Resilient isolation washers and bushings.
 - f) Anchor bolts.
 - b. Certificates:
 - 1) Welding Certificates qualifying sound, vibration, and seismic control welding procedures.
 - c. Delegated Design Submittals:
 - 1) Methods for installing each seismic-restraint device or component approved by an acceptable agency.
 - d. Special Procedure Submittals:
 - 1) Seismic-restraint device preapprovals, independent test results, or calculations indicating maximum seismic-restraint ratings.
 - 2) Procedures to be used for pre-qualifying welders.
 - 3) Procedures to be used for pre-qualifying welding procedures.
 - e. Qualification Statements:

- 1) Professional Engineer's qualifications.
- 2) Sound, vibration, and seismic control welders' qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Load and Deflection Test Reports.
 - 2) Seismic-restraint device preapprovals, independent test results, or calculations indicating maximum seismic-restraint ratings.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.

B. Qualifications:

1. Code-Required Approved Agency for Performing Special Inspections:
 - a. To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency having the qualifications specified in Section 01400, Quality Requirements.
2. Testing and Inspection Agency Qualifications:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ an independent Testing and Inspection Agency having the qualifications specified in Section 01400, Quality Requirements
3. Professional Engineer Qualifications:
 - a. Employ a licensed Professional Engineer, registered in the State of Arizona, who has experience performing sound, vibration, and seismic calculations to design the sound, vibration, and seismic controls and to perform the required calculations.
 - b. Submit the Professional Engineer's qualifications to the Program Manager for approval.
4. Welder Qualifications:

- a. Prior to beginning to weld the sound, vibration, and seismic controls, submit the procedures to be used for pre-qualifying the welders to the Program/Project Manager for approval.
- b. Sound, Vibration, and Seismic Controls Welders:
 - 1) Only use welders, tackers, and welding operators demonstrating they are qualified to perform the types of work required by having passed the qualification tests prescribed in AWS D1.1/D1.1M for the procedures.
 - 2) Submit sound, vibration, and seismic controls welder qualifications certifying that the welders employed to perform steel support welding Work have been AWS certified within the previous 12 months to the Program/Project Manager for approval.
 - a) Include certified copies of qualification test records that indicate each welder, welding operator, and tacker employed to perform the Work has satisfactorily passed the AWS qualification tests for the required welding procedures and, if pertinent, has undergone recertification.

C. Certifications:

1. Welding Certificates:

- a. Prior to beginning to welding associated with the sound, vibration, and seismic controls, submit the procedures to be used for pre-qualifying the welding procedures to the Program/Project Manager for approval.
- b. Sound, Vibration, and Seismic Control Welding Certificates:
 - 1) For sound, vibration, and seismic control welding procedures, other than those set forth in AWS D1.1/D1.1M, submit a copy of the welding procedure qualification test records.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

- 1. Ensure that materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.
 - a. Deliver anchor rods and other anchorage items to be embedded in or attached to concrete, masonry, or other materials in ample time so that the Work is not delayed.
- 2. Ship small parts, such as bolts, nuts, washers, pins, fillers, and small connecting plates and anchors, in boxes, crates, or barrels.
 - a. Pack each length and diameter of bolt and each size of nut and washer separately.
 - b. Plainly mark an itemized list and description of the contents on the outside of each container.

- B. Storage and Handling Requirements:
 - 1. Store and handle sound, vibration, and seismic controls as recommended by the sign panel manufacturer.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Substitution Limitations:
 - 1. Subject to compliance with the requirements specified, manufacturers offering products that may be incorporated into the Work include the manufacturers listed.
- B. Product Options:
 - 1. Subject to compliance with requirements, provide products by one of the manufacturers listed.

2.02 REGULATORY REQUIREMENTS:

- A. Comply with the seismic-restraint requirements in the ICC International Building Code (IBC), unless the requirements in this Section are more stringent.
- B. Provide seismic-restraint devices having horizontal and vertical load testing and analysis showing the maximum seismic-restraint ratings.
 - 1. If available, provide seismic-restraint devices having bearing anchorages preapproved by the International Code Council – Evaluation Service (ICC-ES), or preapproved by another agency acceptable to the Authorities Having Jurisdiction (AHJ).
 - 2. If preapproved ratings are not available, seismic-restraint devices having bearing anchorage ratings based on independent testing are preferred to seismic-restraint devices whose ratings are based on calculations.
 - a. Calculations, including combining shear and tensile loads, to support seismic-restraint designs must be signed and sealed by a qualified Professional Engineer.
 - 3. Submit seismic-restraint device preapprovals, independent test results, or calculations indicating maximum seismic-restraint ratings to the Program/Project Manager for approval.
 - a. Vibration isolation and seismic-restraint calculations and details submitted to indicate compliance with performance requirements and design criteria must include analysis data signed and sealed by the qualified Professional Engineer responsible for their preparation.

2.03 PERFORMANCE

- A. Seismic-Restraint Loading:
 - 1. Provide seismic-restraint devices complying with the requirements for the following design parameters as defined in the International Building Code (IBC):
 - a. Site Class: D.
 - b. Assigned Seismic Use Group or Building Category: IV.
 - 1) Component Importance Factor: 1.5.
 - 2) Component Response Modification Factor: 1.5.
 - 3) Component Amplification Factor: 1.0.
 - 2. Design Spectral Response Acceleration at Short Periods (0.2 Second): 75 percent.
 - 3. Design Spectral Response Acceleration at 1-Second Period: 50 percent.

2.04 DESIGN CRITERIA

- A. The locations of HVAC and plumbing equipment are shown on the Contract Drawings.
- B. Seismic-Restraint Devices:
 - 1. Expansion-type anchor bolts for non-isolated equipment in excess of 10 horsepower (7.46 kW) are not permitted by SEI/ASCE 7.
 - 2. Provide seismic-restraint devices having the rated strengths, features, and applications defined in reports furnished by an agency acceptable to the Authorities Having Jurisdiction (AHJ).
 - 3. Structural Safety Factor:
 - a. Provide seismic-restraint device components having the strength in tension and shear, and a pullout force, at least 4 times the maximum seismic forces to which they will be subjected.
 - 4. Strength of Support and Seismic-Restraint Assemblies:
 - a. Where not indicated in the Contract Documents, select the sizes of components so their strength will be adequate to carry present and future static and seismic loads within the specified loading limits.
- C. Submit Product Data for the products proposed for the Work of this Section to the Program/Project Manager for approval.

2.05 MANUFACTURED UNITS

- A. Vibration Isolators:
 - 1. Vibration Isolation Pads:

- a. Provide vibration isolator pads fabricated from resilient material arranged in single or multiple layers of sufficient stiffness to ensure uniform loading over the pad area.
 - 1) Resilient Material: Oil- and water-resistant neoprene.
 - 2) Mold pads with a nonslip pattern.
 - b. Factory-cut the pads to sizes that match the requirements of the equipment supported, and provide galvanized-steel base plates.
 - c. For supported or suspended HVAC equipment, provide 1 inch thick neoprene pads.
 - d. For supported or suspended plumbing equipment, provide 1/2 inch thick neoprene pads.
2. Vibration Isolation Mounts:
- a. Provide double-deflection type vibration isolator mounts having a cast-ductile-iron or welded steel housing containing 2 separate and opposing, molded isolator elements that prevent a central threaded element and attachment hardware from contacting the housing during normal operation.
 - 1) Provide-molded isolator elements fabricated from oil-resistant rubber, hermetically sealed compressed fiberglass, or neoprene.
 - a) Neoprene:
 - (1) Provide shock-absorbing materials compounded according to the requirements specified in AASHTO M 251.
 - b. For bolting the mounts to the isolated equipment, provide a factory-drilled, encapsulated top plate; and for bolting the mounts to the structure provide a base plate.
 - c. Color-code the vibration isolator mounts to indicate the capacity range of each mount, or otherwise identify the capacity ranges.
3. Restrained Vibration Isolation Mounts:
- a. Provide all-directional mountings having seismic restraint, and consisting of a cast-ductile-iron or welded steel housing containing 2 separate and opposing, isolator elements that prevent a central threaded element and attachment hardware from contacting the housing during normal operation.
 - 1) Provide-isolator elements fabricated from oil-resistant rubber or neoprene.
 - a) Neoprene:
 - (1) Provide shock-absorbing materials compounded according to the requirements specified in AASHTO M 251.
4. Spring Isolators:

- a. Provide freestanding, laterally stable, open-spring isolators complying with the following requirements:
 - 1) Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at the rated load.
 - 2) Minimum Additional Travel: 50 percent of the required deflection at the rated load.
 - 3) Lateral Stiffness: More than 80 percent of the rated vertical stiffness.
 - 4) Overload Capacity: Capable of supporting 200 percent of the rated load, fully compressed, without deformation or failure.
 - b. Base Plates:
 - 1) For bolting the spring isolators to the structure, provide factory-drilled base plates having a 1/4-inch thick rubber isolator pad bonded to the underside of the base plate.
 - 2) Provide base plates that limit the floor load to 500 psig.
 - c. Top Plate and Adjustment Bolt:
 - 1) To fasten and level the isolated equipment to the spring isolator, provide a threaded top plate with an adjustment bolt and cap screw.
5. Restrained Spring Isolators:
- a. Provide freestanding, open-spring isolators with seismic or limit-stop restraint consisting of a steel housing with resilient vertical-limit stops that prevent the spring from extending when weight is removed, and that comply with the following requirements:
 - 1) Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at the rated load.
 - 2) Minimum Additional Travel: 50 percent of the required deflection at the rated load.
 - 3) Lateral Stiffness: More than 80 percent of the rated vertical stiffness.
 - 4) Overload Capacity: Capable of supporting 200 percent of the rated load, fully compressed, without deformation or failure.
 - 5) Minimum Deflection: 1.0 inch.
 - b. Base Plates:
 - 1) For bolting the spring isolators to the structure, provide factory-drilled base plates having a 1/4-inch thick neoprene or rubber isolator pad bonded to the underside of the base plate.
 - 2) Provide an adjustable equipment mounting and leveling bolt that is also capable of acting as blocking during installation.
 - c. Restraint:

- 1) Provide a seismic or limit stop as required by the equipment and the Authorities Having Jurisdiction (AHJ).
6. Housed Spring Mounts:
 - a. Provide housed spring isolators having integral seismic snubbers, and complying with the following requirements:
 - 1) Housing:
 - a) To provide all-directional seismic restraint, provide a ductile iron or steel housing.
 - 2) Base:
 - a) Provide a factory-drilled base for bolting the housed spring isolator to the structure.
 - 3) Snubbers:
 - a) To allow a maximum travel of 1/4-inch (6mm) up or down before a resilient collar is contacted, provide vertically adjustable snubbers.
7. Elastomeric Hangers:
 - a. Provide single or double-deflection type elastomeric hangers fitted with molded, oil-resistant elastomeric isolator elements bonded to steel housings that have threaded connections for hanger rods.
 - b. Color-code the elastomeric hangers to indicate the capacity range of each hanger, or otherwise identify the capacity ranges.
8. Spring Hangers:
 - a. Provide combination coil-spring and elastomeric-insert hangers complying with the following requirements, and having the spring and insert in compression:
 - 1) Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at the rated load.
 - 2) Minimum Additional Travel: 50 percent of the required deflection at the rated load.
 - 3) Lateral Stiffness: More than 80 percent of the rated vertical stiffness.
 - 4) Overload Capacity: Capable of supporting 200 percent of the rated load, fully compressed, without deformation or failure.
 - b. Frame:
 - 1) Provide a steel frame designed to connect to threaded hanger rods, and allow a maximum of 30 degrees of angular hanger rod misalignment without binding or reducing isolation efficiency.
 - c. Spring and Bushing Support:
 - 1) To support a spring and bushing projecting through the bottom of the frame, provide a molded, oil-resistant rubber or neoprene element in a steel-washer-reinforced cup.

- d. Hanger Rod Cap:
 - 1) To ensure concentricity between the hanger rod and the support spring coil, provide a self-centering hanger rod cap.
- 9. Spring Hangers with Vertical-Limit Stops:
 - a. Provide combination coil-spring and elastomeric-insert hangers complying with the following requirements, and having a vertical-limit stop and the spring and insert in compression:
 - 1) Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at the rated load.
 - 2) Minimum Additional Travel: 50 percent of the required deflection at the rated load.
 - 3) Lateral Stiffness: More than 80 percent of the rated vertical stiffness.
 - 4) Overload Capacity: Capable of supporting 200 percent of the rated load, fully compressed, without deformation or failure.
 - b. Frame:
 - 1) Provide a steel frame designed to connect to threaded hanger rods, and allow a maximum of 30 degrees of angular hanger rod misalignment without binding or reducing isolation efficiency.
 - c. Elastomeric Element:
 - 1) Provide a molded, oil-resistant rubber or neoprene element.
 - d. Adjustable Vertical Stop:
 - 1) On the lower threaded rod, provide a steel washer with a neoprene washer "up-stop".
 - e. Hanger Rod Cap:
 - 1) To ensure concentricity between the hanger rod and the support spring coil, provide a self-centering hanger rod cap.
- 10. Manufacturers:
 - a. Kinetics Noise Control, www.kineticsnoise.com.
 - b. Mason Industries, www.mason-ind.com.
 - c. Vibration Mountings & Controls, Inc., <https://www.thevmcgroup.com/>.
 - d. Approved equal.

B. Seismic-Restraint Devices:

- 1. Channel Support Systems:
 - a. Provide a shop- or field-fabricated support assembly complying with the requirements specified in MFMA-4, and fabricated from slotted steel channels.
 - 1) Provide accessories for attaching the channel support system to the braced component at one end, and to the building structure at the other end.

- 2) Provide the matching components with a corrosion-resistant coating.
 - 3) Provide a channel support system rated for the forces in tension, compression, and torsion as specified.
2. Restraint Cables:
 - a. Provide stainless steel cables complying with the requirements specified in ASTM A 492, and having end connections consisting of steel assemblies with thimbles, brackets, swivels, and bolts designed for restraining cable service.
 - b. For engaging the cable, provide a minimum of 2 clamping bolts.
3. Hanger Rod Stiffeners:
 - a. Provide a reinforcing steel angle clamped to the hanger rod.
4. Bushings for Floor-Mounted Equipment Anchor Bolts:
 - a. Provide neoprene bushings matched to the type and size of the anchor bolts and studs, and designed for rigid equipment mountings.
5. Resilient Isolation Washers and Bushings:
 - a. Provide one-piece, molded, oil- and water-resistant neoprene washers and bushings with a flat washer face.
6. Anchor Bolts:
 - a. Provide drilled-in and stud-wedge or female-wedge type anchor bolts having the strength required for the anchor when tested according to the requirements specified in ASTM E 488.
 - 1) For interior applications, provide zinc-coated steel anchor bolts.
 - 2) For exterior applications, provide stainless steel anchor bolts.
 - b. Minimum Anchor Bolt Length: 8 times the anchor bolt diameter.
7. Manufacturers:
 - a. B-Line Systems, Inc., a division of Cooper Industries; www.b-line.com.
 - b. Hilti, Inc.; www.hilti.com.
 - c. Kinetics Noise Control, www.kineticsnoise.com.
 - d. Mason Industries, www.mason-ind.com.
 - e. Unistrut Corp.; Tyco International, Ltd.; www.unistrut.com.
 - f. Approved equal.

2.06 ACCESSORIES

- A. Flexible Piping Connections:
 1. Provide flexible connections for piping complying with requirements specified in Section 15140, Domestic Water Piping.

2.07 SOURCE QUALITY CONTROL

- A. Coordination of Other Tests and Inspections:

1. Notify the code-required Approved Agency responsible for performing special inspections when sound, vibration, and seismic controls for this Contract are being fabricated and/or tested.
2. Cooperate with the code-required Approved Agency when they are performing required material verifications and other special inspections.
 - a. Provide full access to the Work.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Inspect the locations intended to receive sound, vibration, and seismic controls for deficiencies which would prevent proper execution of the work.
- B. Evaluation and Assessment:
 1. Do not proceed with sound, vibration, and seismic control installation until deficiencies discovered by the inspection are corrected to the satisfaction of the Program/Project Manager.

3.02 PREPARATION

- A. Surface Preparation:
 1. Pre-position anchors, anchor rods, and other embedded items in advance of new concrete pours whenever possible.

3.03 INSTALLATION

- A. Install seismic-restraint devices using methods approved by an evaluation service member of an agency acceptable to the Authorities Having Jurisdiction (AHJ).
 1. Submit the methods for installing each seismic-restraint device or component approved by an acceptable agency to the Program/Project Manager for information.
- B. Attachment to the Structure:
 1. If specific attachment is not indicated in the Contract Documents, anchor the bracing to the structure at the flanges of beams, at upper truss chords of bar joists, or at concrete members.
- C. Equipment Restraints:
 1. Where the clearance between an anchor and the adjacent surface exceeds 0.125 inch (3.2mm), provide resilient bolt isolation washers on the equipment anchor bolts.

D. Piping Restraints:

1. Provide piping restraints in accordance with the requirements specified in MSS SP-127.
2. Space lateral supports a maximum of 40 feet apart on center, and space longitudinal supports a maximum of 80 feet apart on center.
3. Brace each change of direction longer than 12 feet.
4. Multiple Pipe Supports:
 - a. Secure pipes to trapeze members with clamps approved for the application by an agency acceptable to the Authorities Having Jurisdiction (AHJ).

E. Hanger Rod Stiffeners:

1. Provide hanger rod stiffeners at locations indicated or scheduled on the Contract Drawings to receive them, and where required to prevent buckling of the hanger rods due to seismic forces.

F. Restraint Cables:

1. Install cables so they do not bend across the edges of adjacent equipment or the building structure.

G. Anchor Bolts:

1. Drilled-in Anchors:
 - a. Do not damage existing reinforcing or embedded items during coring or drilling.
 - 1) Prior to drilling holes for drilled-in anchors, locate the position of reinforcing steel and other embedded items.
 - 2) Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
 - 3) Notify the Program/Project Manager if reinforcing steel or other embedded items are encountered during drilling.
 - b. Do not drill holes in concrete or masonry until the concrete, mortar, or grout has achieved its full design strength.
2. Wedge Anchors:
 - a. Provide heavy-duty sleeve anchors with the sleeve fully engaged in the structural element to which anchor is to be fastened.
 - b. Protect wedge anchor threads from damage during anchor installation.
3. Torque anchors to the manufacturer's recommended torque, using a torque wrench.
4. Provide zinc-coated steel anchors for interior applications, and stainless-steel anchors for exterior applications.

5. For floor-mounted equipment, provide bushing assemblies for the anchor bolts arranged to provide resilient media between the anchor bolt and the mounting hole in the concrete base.

H. Special Techniques:

1. Accommodating Differential Seismic Motion:
 - a. Where piping crosses seismic joints, where adjacent sections or branches of piping are supported by different structural elements, and where piping equipment connections terminate so the connection to the equipment anchored to a different structural element than the one supporting the approaching piping, provide flexible connections in the piping.
2. Roof Curbs, Equipment Supports, and Roof Penetrations:
 - a. For the installation of roof curbs, equipment supports, and roof penetrations, comply with requirements specified in Section 07720, Roof Accessories.

3.04 REPAIR/RESTORATION

- A. Remove malfunctioning units, and replace them with new units.
1. Retest the new units as specified in Article 3.06.

3.05 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
1. During the period when sound, vibration, and seismic controls are being erected, the Testing and Inspection Agency and the code-required Approved Agency must perform testing and inspections.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing and inspection personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. Cooperate with the Testing and Inspection Agency and code-required Approved Agency to facilitate their testing and inspections.
 - c. Failure of the Testing and Inspection Agency or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
 2. Load and Deflection Test:
 - a. Test Procedure:
 - 1) Installed anchors and fasteners selected by Program/Project Manager will be tested.

- a) At least 4 of each type and size of anchor or fastener provided will be tested.
 - b) Unless post-connection testing has been approved, schedule the tests with the Program/Project Manager before connecting the anchorage device to the restrained component and at least 7 days prior to the testing.
 - 2) Verify that the test equipment has recently been calibrated by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ).
 - 3) Furnish temporary load-spreading members.
 - 4) Obtain the Program/Project Manager's approval before transmitting test loads to the structure under test.
 - 5) Apply 90 percent of the rated proof load of the device to the device.
 - 6) Measure the isolator restraint clearance.
 - 7) Measure the isolator deflection.
 - 8) Record the results in Load and Deflection Test Reports, and submit the test reports to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Tested devices that are within the specified parameters are acceptable.
- B. Non-Conforming Work
1. If a device fails the testing, modify all installations of the same type, and retest that type of device until satisfactory results are achieved.

3.06 ADJUSTING

- A. After the piping system is at its operating weight, adjust the isolators.
- B. After equipment installation is complete, adjust the limit stops so they are out of contact during normal operation.
 1. Adjust limit stops on restrained spring isolators to mount equipment at its normal operating height.
- C. Adjust the active height of spring isolators.
- D. Adjust restraints to permit free movement of equipment within the normal mode of operation.

SECTION 15071

VIBRATION AND SEISMIC CONTROLS FOR MECHANICAL SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Isolation pads.
 - 2. Isolation mounts.
 - 3. Restrained elastomeric isolation mounts.
 - 4. Restrained spring isolators.
 - 5. Housed spring mounts.
 - 6. Elastomeric hangers.
 - 7. Spring hangers.
 - 8. Spring hangers with vertical-limit stops.
 - 9. Pipe riser resilient supports.
 - 10. Resilient pipe guides.
 - 11. Restraining braces and cables.

1.02 PERFORMANCE REQUIREMENTS

- A. Seismic-Restraint Loading:
 - 1. Site Class as Defined in the IBC: D.
 - 2. Assigned Seismic Use Group or Building Category as Defined in the IBC: IV.
 - a. Component Importance Factor: 1.5.
 - b. Component Response Modification Factor: 1.5.
 - c. Component Amplification Factor: 1.0.
 - 3. Design Spectral Response Acceleration at Short Periods (0.2 Second): 75 percent.
 - 4. Design Spectral Response Acceleration at 1-Second Period: 50 percent.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Vibration Isolators:
 - a) Vibration isolation pads.
 - b) Vibration isolation mounts.
 - c) Vibration isolation restrained mounts.
 - d) Spring isolators.
 - e) Restrained spring isolators.

- f) Housed spring mounts.
 - g) Elastomeric hangers.
 - h) Spring hangers.
 - i) Spring hangers with vertical-limit stops.
 - j) Pipe riser resilient support.
 - k) Resilient pipe guides.
 - 2) Seismic-Restraint Devices:
 - a) Channel support systems.
 - b) Restraint cables.
 - c) Hanger rod stiffeners.
 - d) Bushings for floor-mounted equipment anchor bolts.
 - e) Resilient isolation washers and bushings.
 - f) Anchor bolts.
 - b. Certificates:
 - 1) Welding Certificates
 - c. Delegated Design Submittals:
 - 1) For vibration isolation and seismic-restraint calculations and details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - d. Qualification Statements:
 - 1) Professional Engineer's qualifications.
- B. Informational Submittals:
- 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Field Quality-Control Test Reports.

1.04 QUALITY ASSURANCE

- A. Comply with seismic-restraint requirements in the IBC unless requirements in this Section are more stringent.
- B. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code – Steel."
- C. Seismic-restraint devices shall have horizontal and vertical load testing and analysis and shall bear anchorage preapproval by ICC-ES, or preapproval by another agency acceptable to authorities having jurisdiction, showing maximum seismic-restraint ratings. Ratings based on independent testing are preferred to ratings based on calculations. If preapproved ratings are not available, submittals based on independent testing are preferred. Calculations (including combining shear and tensile loads) to support seismic-restraint designs must be signed and sealed by a qualified professional engineer.

PART 2 PRODUCTS

2.01 VIBRATION ISOLATORS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- C. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
 - 1. Kinetics Noise Control.
 - 2. Mason Industries.
 - 3. Vibration Mountings & Controls, Inc.
- D. Pads: Arranged in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a nonslip pattern and galvanized-steel baseplates, and factory cut to sizes that match requirements of supported equipment.
 - 1. Resilient Material: Oil- and water-resistant neoprene.
- E. Mounts: Double-deflection type, with molded, oil-resistant rubber, hermetically sealed compressed fiberglass, or neoprene isolator elements with factory-drilled, encapsulated top plate for bolting to equipment and with baseplate for bolting to structure. Color-code or otherwise identify to indicate capacity range.
 - 1. Materials: Cast-ductile-iron or welded steel housing containing two separate and opposing, oil-resistant rubber or neoprene elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.
 - 2. Neoprene: Shock-absorbing materials compounded according to the standard for bridge-bearing neoprene as defined by AASHTO.
- F. Restrained Mounts: All-directional mountings with seismic.
 - 1. Materials: Cast-ductile-iron or welded steel housing containing two separate and opposing, oil-resistant rubber or neoprene elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.
 - 2. Neoprene: Shock-absorbing materials compounded according to the standard for bridge-bearing neoprene as defined by AASHTO.
- G. Spring Isolators: Freestanding, laterally stable, open-spring isolators.
 - 1. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.

2. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 3. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 4. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 5. Baseplates: Factory drilled for bolting to structure and bonded to 1/4-inch-thick, rubber isolator pad attached to baseplate underside. Baseplates shall limit floor load to 500 psig.
 6. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.
- H. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic or limit-stop restraint.
1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to weight being removed; factory-drilled baseplate bonded to 1/4-inch-thick, neoprene or rubber isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.
 2. Restraint: Seismic or limit stop as required for equipment and authorities having jurisdiction.
 3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
- I. Housed Spring Mounts: Housed spring isolator with integral seismic snubbers.
1. Housing: Ductile-iron or steel housing to provide all-directional seismic restraint.
 2. Base: Factory drilled for bolting to structure.
 3. Snubbers: Vertically adjustable to allow a maximum of 1/4-inch (6-mm) travel up or down before contacting a resilient collar.
- J. Elastomeric Hangers: Single or double-deflection type, fitted with molded, oil-resistant elastomeric isolator elements bonded to steel housings with threaded connections for hanger rods. Color-code or otherwise identify to indicate capacity range.
- K. Spring Hangers: Combination coil-spring and elastomeric-insert hanger with spring and insert in compression.
1. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.

2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 6. Elastomeric Element: Molded, oil-resistant rubber or neoprene. Steel-washer-reinforced cup to support spring and bushing projecting through bottom of frame.
 7. Self-centering hanger rod cap to ensure concentricity between hanger rod and support spring coil.
- L. Spring Hangers with Vertical-Limit Stop: Combination coil-spring and elastomeric-insert hanger with spring and insert in compression and with a vertical-limit stop.
1. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.
 2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 6. Elastomeric Element: Molded, oil-resistant rubber or neoprene.
 7. Adjustable Vertical Stop: Steel washer with neoprene washer "up-stop" on lower threaded rod.
 8. Self-centering hanger rod cap to ensure concentricity between hanger rod and support spring coil.
- M. Pipe Riser Resilient Support: All-directional, acoustical pipe anchor consisting of 2 steel tubes separated by a minimum of 1/2-inch-thick neoprene. Include steel and neoprene vertical-limit stops arranged to prevent vertical travel in both directions. Design support for a maximum load on the isolation material of 500 psig and for equal resistance in all directions.
- N. Resilient Pipe Guides: Telescopic arrangement of 2 steel tubes or post and sleeve arrangement separated by a minimum of 1/2-inch-thick neoprene. Where clearances are not readily visible, a factory-set guide height with a shear pin to allow vertical motion due to pipe expansion and contraction shall be fitted. Shear pin shall be removable and reinsertable to allow for selection of pipe movement. Guides shall be capable of motion to meet location requirements

2.02 SEISMIC-RESTRAINT DEVICES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- C. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
 - 1. Cooper B-Line, Inc.; a division of Cooper Industries.
 - 2. Hilti, Inc.
 - 3. Kinetics Noise Control.
 - 4. Mason Industries.
 - 5. Unistrut; Tyco International, Ltd
- D. General Requirements for Restraint Components: Rated strengths, features, and applications shall be as defined in reports by an agency acceptable to authorities having jurisdiction.
 - 1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least four times the maximum seismic forces to which they will be subjected.
- E. Channel Support System: MFMA-3, shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; and rated in tension, compression, and torsion forces.
- F. Restraint Cables: ASTM A 492 stainless-steel cables with end connections made of steel assemblies with thimbles, brackets, swivel, and bolts designed for restraining cable service; and with a minimum of two clamping bolts for cable engagement.
- G. Hanger Rod Stiffener: Reinforcing steel angle clamped to hanger rod.
- H. Bushings for Floor-Mounted Equipment Anchor Bolts: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchor bolts and studs.
- I. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.
- J. Expansion-type anchor bolts are not permitted by SEI/ASCE 7 for nonisolated equipment in excess of 10 hp (7.46 kW).

- K. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488. Minimum length of eight times diameter.

PART 3 EXECUTION

3.01 APPLICATIONS

- A. Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application by an agency acceptable to authorities having jurisdiction.
- B. Indicate on Drawings, by details, schedules, or a combination of both, the locations where hanger rods for individual pipes and hanger rods for trapeze hangers require hanger rod stiffeners.
- C. Hanger Rod Stiffeners: Install hanger rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to seismic forces.
- D. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

3.02 VIBRATION-CONTROL AND SEISMIC-RESTRAINT DEVICE INSTALLATION

- A. Comply with requirements in Division 7 Section "Roof Accessories" for installation of roof curbs, equipment supports, and roof penetrations.
- B. Equipment Restraints:
 - 1. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch (3.2mm).
 - 2. Install seismic-restraint devices using methods approved by [an evaluation service member of an agency acceptable to authorities having jurisdiction providing required submittals for component.
- C. Piping Restraints:
 - 1. Comply with requirements in MSS SP-127.
 - 2. Space lateral supports a maximum of 40 feet o.c., and longitudinal supports a maximum of 80 feet o.c.
 - 3. Brace a change of direction longer than 12 feet.
- D. Install cables so they do not bend across edges of adjacent equipment or building structure.

- E. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction providing required submittals for component.
- F. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.
- G. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- H. Drilled-in Anchors:
 - 1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
 - 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
 - 3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
 - 4. Set anchors to manufacturer's recommended torque, using a torque wrench.
 - 5. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.03 ACCOMODATION OF DIFFERENTIAL SEISMIC MOTION

- A. Install flexible connections in piping where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where the connections terminate with connection to equipment that is anchored to a different structural element from the one supporting the connections as they approach equipment.
 - 1. Comply with requirements in Section 15140, Domestic Water Piping, for piping flexible connections.

3.04 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
 - 1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.

2. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless post connection testing has been approved), and with at least seven days' advance notice.
3. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
4. Test at least four of each type and size of installed anchors and fasteners selected by Architect.
5. Test to 90 percent of rated proof load of device.
6. Measure isolator restraint clearance.
7. Measure isolator deflection.
8. If a device fails test, modify all installations of same type and retest until satisfactory results are achieved.

C. Remove and replace malfunctioning units and retest as specified above.

D. Prepare test and inspection reports.

3.05 ADJUSTING

- A. Adjust isolators after piping system is at operating weight.
- B. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.
- C. Adjust active height of spring isolators.
- D. Adjust restraints to permit free movement of equipment within normal mode of operation.

3.06 VIBRATION-CONTROL AND SEISMIC-RESTRAINT DEVICE SCHEDULE

- A. Supported or Suspended Equipment steel:
 1. HVAC Equipment Location: See Contract Drawings.
 - a. Pads:
 - 1) Materials: Neoprene.
 - 2) Thickness: 1 inch.
 - b. Isolator Type: Restrained Spring Isolators.
 - 1) Minimum Deflection: 1.0 inches.
 - 2) Component Importance Factor: 1.5.
 - 3) Component Response Modification Factor: 1.5.
 - 4) Component Amplification Factor: 1.0.
 2. Plumbing Equipment Location: See Contract Drawings.
 - a. Pads:
 - 1) Materials: Neoprene.
 - 2) Thickness: 1 inch.
 - b. Isolator Type: Restrained Spring Isolators.

- 1) Minimum Deflection: 1.0 inches.
- 2) Component Importance Factor: 1.5.
- 3) Component Response Modification Factor: 1.5.
- 4) Component Amplification Factor: 1.0.

SECTION 15075

MECHANICAL IDENTIFICATION

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for identifying mechanical systems and equipment with the following labels:
 - a. Equipment labels.
 - b. Warning signs and labels.
 - c. Pipe labels.
 - d. Duct labels.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.

1.02 REFERENCES

- A. Reference Standards:
 - 1. American Society of Mechanical Engineers (ASME):
 - a. ASME A13.1 - Scheme for the Identification of Piping Systems.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Mechanical equipment labels.
 - 2) Warning signs and labels.
 - 3) Pipe labels.
 - 4) Duct labels.
 - b. Special Procedure Submittals:
 - 1) Mechanical Equipment Label Schedule.

PART 2 PRODUCTS

2.01 MECHANICAL IDENTIFICATION SYSTEMS

A. Description:

1. Regulatory Requirements:

a. Phoenix Building Construction Code:

- 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].

B. Performance:

1. Equipment Labels:

a. Plastic Labels for Equipment:

- 1) Provide plastic labels for equipment capable of withstanding temperatures up to 160 degrees Fahrenheit.

2. Warning Signs and Labels:

- a. Provide warning signs and labels capable of withstanding temperatures up to 160 degrees Fahrenheit.

3. Duct Labels:

- a. Provide duct labels capable of withstanding temperatures up to 160 degrees Fahrenheit.

4. Pipe Labels:

- a. Provide pipe labels and plastic tapes for bare pipes capable of withstanding temperatures up to 125 degrees Fahrenheit (52 degrees Celsius).
 - 1) Do not use pipe labels or plastic tapes for bare pipes conveying fluids at temperatures of 125 degrees Fahrenheit (52 degrees Celsius) or higher.

C. Design Criteria:

1. Mechanical Equipment Labels:

a. Label Content:

- 1) Provide equipment labels that include the mechanical equipment's Contract Drawing designation or unique equipment number, the Contract Drawing numbers where the equipment is indicated (plans, details, and schedules), and the Specification Section number and title where the equipment is specified.

b. Label Size:

- 1) Vary the length and width of metal equipment labels to accommodate the required label content, but do not provide metal equipment labels less than 2-1/2 inches by 3/4 inches in size.
- c. Letter Sizes:
 - 1) For viewing distances less than 24 inches, provide letters for the name of the units that are at least 1/4 inch high.
 - 2) For viewing distances between 24 inches and 72 inches, provide letters for the name of the units that are at least 1/2 inch high.
 - 3) For viewing distances greater than 72 inches, provide lettering proportionately larger than the lettering specified for the lesser viewing distances.
 - 4) Provide secondary lettering that is two-thirds to three-fourths the size of lettering for the name of the units.
- d. Label Colors:
 - 1) Provide equipment labels having the following color scheme:
 - a) Letter Color: Black.
 - b) Background Color: White.
- e. Mechanical Equipment Label Schedule:
 - 1) Prepare a Mechanical Equipment Label Schedule that includes each item of equipment to be labeled; printed on 8-1/2-by-11-inch bond paper.
 - 2) In the Mechanical Equipment Label Schedule, tabulate the equipment identification numbers, and identify the Contract Drawing numbers where the equipment is indicated (plans, details, and schedules), and the Specification Section number and title where the equipment is specified.
 - 3) Submit the Mechanical Equipment Label Schedule to the Program/Project manager for approval.
2. Warning Signs and Labels:
 - a. Label Content:
 - 1) Provide caution and warning information, and emergency notification instructions, on the warning signs and labels.
 - b. Label Size:
 - 1) Vary the length and width of metal equipment labels to accommodate the required label content, but do not provide metal equipment labels less than 2-1/2 inches by 3/4 inches in size.
 - c. Letter Sizes:
 - 1) For viewing distances less than 24 inches, provide letters for the name of the units that are at least 1/4 inch high.

- 2) For viewing distances between 24 inches and 72 inches, provide letters for the name of the units that are at least 1/2 inch high.
- 3) For viewing distances greater than 72 inches, provide lettering proportionately larger than the lettering specified for the lesser viewing distances.
- 4) Provide secondary lettering that is two-thirds to three-fourths the size of lettering for the name of the units.
- d. Sign and Label Colors:
 - 1) Provide warning signs and labels having the following color scheme:
 - a) Letter Color: Black.
 - b) Background Color: White.
3. Pipe Labels:
 - a. Provide preprinted, color-coded, manufactured pipe labels having lettering indicating the pipe service and showing the flow direction.
 - b. Label Content:
 - 1) Provide pipe labels that identify the pipe service using same designations or abbreviations as used on the Contract Drawings, and indicate the pipe size.
 - 2) Flow-Direction Arrows
 - a) Include either an arrow that is integral with the piping system service label and indicating the correct direction of flow in the pipe, or a separate flow arrow unit on each pipe to indicate the correct flow direction.
 - c. Letter Sizes:
 - 1) Provide letters for the labels' legends that are at least 1-1/2 inch high.
 - d. Label Colors:
 - 1) Provide pipe labels having the color schemes scheduled in Table 15075-1.

Table 15075-1 Pipe Label Color Schedule		
Pipe Contents	Background Color	Letter Color
Refrigerant	Blue	White
Domestic water	White	Yellow

Table 15075-1 Pipe Label Color Schedule		
Pipe Contents	Background Color	Letter Color
Sanitary waste and storm drainage	White	Red

4. Duct Labels:

a. Label Content:

- 1) Provide duct labels that identify the duct service using same designations or abbreviations as used on the Contract Drawings, and indicate the duct size.

b. Label Size:

- 1) Vary the length and width of metal equipment labels to accommodate the required label content, but do not provide metal equipment labels less than 2-1/2 inches by 3/4 inches in size.

c. Letter Sizes:

- 1) Provide letters for the labels' legends that are at least 1-1/2 inch high.
- 2) Flow-Direction Arrows
 - a) Include either an arrow that is integral with the piping system service label and indicating the correct direction of flow in the pipe, or a separate flow arrow unit on each pipe to indicate the correct flow direction.

d. Colors:

- 1) Provide duct labels having the following color scheme:
 - a) Letter Color: Black.
 - b) Background Color: White.
- 2) Provide air ducts having the color scheme scheduled in Table 15075-2.

Table 15075-2 Air Duct Label Color Schedule	
Duct Function	Duct Label Color
Cold-air supply ducts	Blue
Hot-air supply ducts	Yellow
Exhaust- air, outside-	Green

Table 15075-2 Air Duct Label Color Schedule	
Duct Function	Duct Label Color
air, relief- air, return- air, and mixed-air ducts	

5. Product Data:

- a. Submit manufacturers Product Data for each type of mechanical identification product proposed for the Work of this Section to the Program/Project Manager for approval.

D. Materials

1. Equipment Labels:

a. Metal Equipment Labels:

1) Material and Thickness:

- a) Provide brass equipment labels, a minimum of 0.032 inch thick, and having predrilled or stamped holes to accommodate attachment hardware.

2) Fasteners:

- a) Provide stainless-steel rivets or self-tapping screws.

3) Adhesive:

- a) Provide contact-type permanent adhesive, compatible with both the label and with the substrate.

b. Plastic Equipment Labels:

1) Material and Thickness:

- a) Provide 1/8 inch thick, multilayer, multicolor, plastic labels suitable for mechanical engraving, and having predrilled holes to accommodate attachment hardware.

2) Fasteners:

- a) Provide stainless-steel rivets or self-tapping screws.

3) Adhesive:

- a) Provide contact-type permanent adhesive, compatible with both the label and with the substrate.

2. Warning Signs and Labels:

a. Material and Thickness:

- 1) Provide 1/8 inch thick, multilayer, multicolor, plastic labels suitable for mechanical engraving, and having predrilled holes to accommodate attachment hardware.

b. Fasteners:

- 1) Provide stainless-steel rivets or self-tapping screws.
- c. Adhesive:
 - 1) Provide contact-type permanent adhesive, compatible with both the label and with the substrate.
3. Pipe Labels:
 - a. Pretensioned Pipe Labels:
 - 1) Provide semirigid plastic pipe labels precoiled and formed to cover the full circumference of the pipe, and capable of being attached to the pipe without fasteners or adhesive.
 - b. Self-Adhesive Pipe Labels:
 - 1) Provide printed plastic pipe labels having a contact-type, permanent-adhesive backing.
4. Duct Labels:
 - a. Material and Thickness:
 - 1) Provide 1/8 inch thick, multilayer, multicolor, plastic labels suitable for mechanical engraving, and having predrilled holes to accommodate attachment hardware.
 - b. Fasteners:
 - 1) Provide stainless-steel rivets or self-tapping screws.
 - c. Adhesive:
 - 1) Provide contact-type permanent adhesive, compatible with both the label and with the substrate.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Verify the identity of each item before installing identification products.

3.02 PREPARATION

- A. Surface Preparation:
 1. Clean piping and equipment surfaces of substances that could impair the bond of the identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.03 INSTALLATION

- A. Equipment Labels:

1. Install or permanently fasten equipment labels on each major item of mechanical equipment.
2. Locate equipment labels where they are visible and accessible.

B. Pipe Labels:

1. Provide pipe labels as follows where piping is exposed or above accessible ceilings in finished spaces; on piping in machine rooms; on piping in accessible maintenance spaces such as shafts, tunnels, and plenums; and on exterior piping in exposed locations:
 - a. Provide pipe labels near each valve and control device.
 - b. Provide pipe labels near each branch connection, excluding short takeoffs for fixtures and terminal units.
 - 1) Where the flow pattern is not obvious, mark each pipe at the branch.
 - c. Provide pipe labels near penetrations through walls, floors, ceilings, and inaccessible enclosures.
 - d. Provide pipe labels at access doors, manholes, and similar access points that permit a view of concealed piping.
 - e. Provide pipe labels near major equipment items, and at other points of origination and termination.
 - f. At intervals along each pipe run, provide pipe labels spaced a maximum of 50 feet apart.
 - 1) In areas of congested piping and equipment, reduce the maximum interval between the pipe labels to 25 feet.
 - g. Provide pipe labels on piping above removable acoustical ceilings.
 - 1) Omit the intermediately spaced labels.

C. Duct Labels:

1. Provide duct labels located near points where the ducts enter into concealed spaces, and at maximum intervals of 50 feet in each space where the ducts are exposed or concealed by a removable ceiling system.

3.04 MAINTENANCE

A. Operation and Maintenance Data:

1. Include the Equipment Label Schedule with the operation and maintenance data furnished in the Operations and Maintenance manuals provided under other Sections.

SECTION 15076

IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Equipment labels.
 - 2. Warning signs and labels.
 - 3. Pipe labels.

1.02 SUBMITTAL

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Equipment Labels
 - a) Metal Labels for Equipment
 - b) Plastic Labels for Equipment
 - c) Equipment Label Schedule
 - 2) Warning Signs and Labels
 - 3) Pipe Labels

PART 2 PRODUCTS

2.01 EQUIPMENT LABELS

- A. Metal Labels for Equipment:
 - 1. Material and Thickness: Brass, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
 - 2. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
 - 3. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches 1/2 inch for viewing distances up to 72 inches and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
 - 4. Fasteners: Stainless-steel rivets or self-tapping screws.
 - 5. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Plastic Labels for Equipment:

1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
 2. Letter Color: Black.
 3. Background Color: White.
 4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
 5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
 6. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches 1/2 inch for viewing distances up to 72 inches and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
 7. Fasteners: Stainless-steel rivets or self-tapping screws.
 8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- C. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.
- D. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.02 WARNING SIGNS AND LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- B. Letter Color: Black.
- C. Background Color: White.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches 1/2 inch for viewing distances up to 72 inches and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

- G. Fasteners: Stainless-steel rivets or self-tapping screws.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Label Content: Include caution and warning information, plus emergency notification instructions.

2.03 PIPE LABELS

- A. Do not use pipe labels or plastic tapes for bare pipes conveying fluids at temperatures of 125 deg F (52 deg C) or higher.
- B. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.
- C. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- D. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- E. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
 - 2. Lettering Size: At least 1-1/2 inches high

PART 3 EXECUTION

3.01 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.02 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

3.03 PIPE LABEL INSTALLATION

- A. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
1. Near each valve and control device.
 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
 3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
 4. At access doors, manholes, and similar access points that permit view of concealed piping.
 5. Near major equipment items and other points of origination and termination.
 6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
 7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.

B. Pipe Label Color Schedule:

1. Low-Pressure and Medium-Pressure Compressed-Air Piping:
 - a. Background Color: White.
 - b. Letter Color: Blue.
2. Domestic Water Piping:
 - a. Background Color: White.
 - b. Letter Color: Yellow.
3. Sanitary Waste and Storm Drainage Piping:
 - a. Background Color: White.
 - b. Letter Color: Red.

 - 4. Fasteners: Stainless-steel rivets or self-tapping screws.
 - 5. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

- B. Plastic Labels for Equipment:
 - 1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
 - 2. Letter Color: Black.
 - 3. Background Color: White.
 - 4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
 - 5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
 - 6. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches 1/2 inch for viewing distances up to 72 inches and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
 - 7. Fasteners: Stainless-steel rivets or self-tapping screws.
 - 8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- C. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.
- D. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.02 WARNING SIGNS AND LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- B. Letter Color: Black.
- C. Background Color: White.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches 1/2 inch for viewing distances up to 72 inches and

proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

- G. Fasteners: Stainless-steel rivets or self-tapping screws.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Label Content: Include caution and warning information, plus emergency notification instructions.

2.03 PIPE LABELS

- A. Do not use pipe labels or plastic tapes for bare pipes conveying fluids at temperatures of 125 deg F (52 deg C) or higher.
- B. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.
- C. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- D. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- E. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
 - 2. Lettering Size: At least 1-1/2 inches high.

2.04 DUCT LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- B. Letter Color: Black.
- C. Background Color: White.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.

- F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel rivets or self-tapping screws.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings, duct size, and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with duct system service lettering to accommodate both directions or as separate unit on each duct label to indicate flow direction.
 - 2. Lettering Size: At least 1-1/2 inches high.

PART 3 EXECUTION

3.01 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.02 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

3.03 PIPE LABEL INSTALLATION

- A. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
 - 1. Near each valve and control device.
 - 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
 - 3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
 - 4. At access doors, manholes, and similar access points that permit view of concealed piping.

5. Near major equipment items and other points of origination and termination.
6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.

- B. Pipe Label Color Schedule:
1. Heating Water Piping:
 2. Background Color: Red.
 3. Letter Color: White.
 4. Refrigerant Piping:
 5. Background Color: Blue.
 6. Letter Color: White.

3.04 DUCT LABEL INSTALLATION

- A. Install self-adhesive duct labels with permanent adhesive on air ducts in the following color codes:
1. Blue: For cold-air supply ducts.
 2. Yellow: For hot-air supply ducts.
 3. Green: For exhaust-, outside-, relief-, return-, and mixed-air ducts.
 4. ASME A13.1 Colors and Designs: For hazardous material exhaust.
- B. Locate labels near points where ducts enter into concealed spaces and at maximum intervals of 50 feet in each space where ducts are exposed or concealed by removable ceiling system.

SECTION 15080

MECHANICAL INSULATION

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following mechanical insulation materials and accessories:
 - a. Insulation Materials:
 - 1) Mineral-fiber.
 - 2) Polyolefin.
 - 3) Cellular glass.
 - 4) Flexible elastomeric.
 - b. Adhesives.
 - c. Mastics.
 - d. Sealants.
 - e. Field-applied jackets.
 - f. Tapes.
 - g. Securements.
 - h. Corner angles.
- B. Products Supplied But Not Installed Under This Section:
 - 1. Factory-applied jackets.
- C. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 07850 - Through Penetration Firestopping Systems.
 - 5. Section 09912 - Painting.
 - 6. Section 09960 - High-Performance Coatings.
 - 7. Section 15060 - Hangers and Supports.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ASJ: All-service vapor retarder jacket.
 - 2. CFC: Chlorofluorocarbons, a type of refrigerant chemical.
 - 3. FSK: Foil-scrim-kraft facing.
 - 4. HCFC: Hydrochlorofluorocarbons, a type of refrigerant chemical.
 - 5. HVAC: Heating, Ventilating, and Air-Conditioning.
 - 6. PVC: Polyvinyl-chloride.

7. SCAQMA: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside and San Bernardino counties.
8. UV: Ultraviolet.
9. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressure under normal conditions to significantly vaporize and enter the atmosphere.

B. Reference Standards:

1. American Society of Heating, Refrigerating, and Air-Conditioning Engineers, Inc. (ASHRAE):
 - a. ASHRAE/IESNA 90.1 - Energy Standard for Buildings Except Low-Rise Residential Buildings.
2. ASTM International (ASTM):
 - a. ASTM A 167 - Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.
 - b. ASTM A 240/A 240M - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
 - c. ASTM B 209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
 - d. ASTM B 209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate [Metric].
 - e. ASTM C 195 - Standard Specification for Mineral Fiber Thermal Insulating Cement.
 - f. ASTM C 534 - Standard Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.
 - g. ASTM C 552 - Standard Specification for Cellular Glass Thermal Insulation.
 - h. ASTM C 871 - Standard Test Methods for Chemical Analysis of Thermal Insulation Materials for Leachable Chloride, Fluoride, Silicate, and Sodium Ions.
 - i. ASTM C 921 – Standard Practice for Determining the Properties of Jacketing Materials for Thermal Insulation.
 - j. ASTM C 1136 - Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.
 - k. ASTM C 1427 - Standard Specification for Extruded Preformed Flexible Cellular Polyolefin Thermal Insulation in Sheet and Tubular Form.
 - l. ASTM D 1644 - Standard Test Methods for Nonvolatile Content of Varnishes.
 - m. ASTM D 1784 - Standard Specification for Rigid Polyvinyl Chloride (PVC) Compounds and Chlorinated Polyvinyl Chloride (CPVC) Compounds.

- n. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
- o. ASTM E 96/E 96M - Standard Test Methods for Water Vapor Transmission of Materials.
- 3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
- 5. National Fire Protection Association (NFPA):
 - a. NFPA 90A - Installation of Air-Conditioning and Ventilating Systems.
 - b. NFPA 90B - Installation of Warm Air Heating and Air-Conditioning Systems.
- 6. South Coast Air Quality Management District (SCAQMA):
 - a. SCAQMA Rule 1168 – Adhesive and Sealant Applications.
- 7. United States Government:
 - a. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.
 - b. United States Department of Defense (DOD):
 - 1) Military Specifications (MIL):
 - a) MIL-A-24179 - Adhesive, Flexible Unicellular - Plastic Thermal Insulation.
 - b) MIL-A-3316 - Adhesives, Fire-Resistant, Thermal Insulation.
 - c) MIL-C-20079 – Cloth, Glass; Tape, Textile Glass; and Thread, Glass and Wire-Reinforced Glass.
 - d) MIL-PRF-19565 - Coating Compounds, Thermal Insulation, Fire- and Water-Resistant, Vapor Barrier.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate the mechanical insulation with the size and location of the supports, hangers, and insulation shields specified in Section 15060, Hangers and Supports.
 - 2. Coordinate the clearance requirements for applying piping insulation with the piping and ductwork installers.
 - a. Before preparing piping and ductwork Shop Drawings, establish and maintain the clearance requirements for installing insulation and field-applied jackets and finishes, and for allowing space for maintenance.
 - 3. Coordinate the clearance requirements for applying equipment insulation with the equipment installers.
 - 4. Coordinate the installation of mechanical insulation with the installation and testing of heat tracing systems.
 - a. Comply with the requirements for the heat-tracing systems that apply to insulation.

B. Sequencing:

1. Apply insulation after pressure testing the mechanical systems; and, where applicable, after installing and testing heat tracing.
 - a. Insulation may be applied on segments of the mechanical systems that have satisfactory pressure test results.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Mineral-fiber insulation.
 - 2) Polyolefin insulation.
 - 3) Cellular glass pipe insulation.
 - 4) Flexible elastomeric insulation.
 - 5) Mineral-fiber insulating cement.
 - 6) Adhesives.
 - 7) Mastics.
 - 8) Sealants.
 - 9) Factory-applied jackets.
 - 10) Field-applied cloths.
 - 11) Field-applied jackets and fitting covers.
 - 12) Tapes.
 - 13) Securements.
 - 14) Corner angles.
 - b. Qualification Statements:
 - 1) Mechanical insulation installer's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Fire-Test-Response Test Reports.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:

- a. Obtain approval of the Work of this Section from the Authorities Having Jurisdiction (AHJ) in accordance with requirements of the Phoenix Building Construction Code and Amendments.
- B. Qualifications:
 - 1. Mechanical Insulation Installer's Qualifications:
 - a. Employ skilled mechanics who have successfully completed an apprenticeship program, or another craft training program, certified by the Department of Labor, Bureau of Apprenticeship and Training to install the mechanical insulation.
 - b. Submit the mechanical insulation installer's qualifications to the Program/Project Manager for approval.
- C. Certifications:
 - 1. Adhesives and Sealants Submittal:
 - a. For the adhesives used with the mechanical insulation, submit Product Data, including a printed statement of volatile organic compound (VOC) content and chemical components, signed by the product manufacturer, to the Program/Project Manager for information.
 - 1) Certify compliance with SCAQMA Rule 1168.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Furnish the insulation material in containers marked by the manufacturer with the appropriate ASTM International (ASTM) standard designation, type, and grade, and the maximum use temperature.
- B. Storage and Handling Requirements:
 - 1. Keep insulation materials dry during application and finishing.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 MECHANICAL INSULATION COMPONENTS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed, if manufacturers are listed.
 - 2. Substitution Limitations:

- a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.

B. Description:

1. Regulatory Requirements:

a. Phoenix Building Construction Code:

- 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].

b. Fire-Test-Response Characteristics:

- 1) For insulation materials to be installed where fire-performance characteristics are required, provide insulation materials having surface-burning characteristics as follows as determined when an independent Testing and Inspecting Agency acceptable to the Authorities Having Jurisdiction tests identical products in accordance with the requirements specified in ASTM E 84:
 - a) For Insulation Installed Indoors:
 - (1) Flame-Spread Index: 25 or less.
 - (2) Smoke-Developed Index: 50 or less.
 - b) For Insulation Installed Outdoors:
 - (1) Flame-Spread Index: 75 or less.
 - (2) Smoke-Developed Index: 150 or less.
- 2) Factory-label the insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with the appropriate markings of the applicable Testing and Inspecting Agency.
- 3) Submit verification Fire-Test-Response Test Reports to the Program/Project Manager for information.

2. Sustainability Requirements:

a. Volatile Organic Compounds (VOC) Content of Interior Adhesives and Sealants:

- 1) Provide interior adhesives, sealants, and primers for this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168:
 - a) Adhesives Primer for Plastic: Not more than 550 grams per Liter less water.
 - b) Fiberglass: Not more than 80 grams per Liter less water.
 - c) Plastic Cement Welding: Not more than 250 grams per Liter less water.
 - d) Plastic Foams: Not more than 50 grams per Liter less water.
 - e) Porous Material (Except Wood): Not more than 50 grams per Liter less water.

f) PVC Welding: Not more than 510 grams per Liter less water.

C. Design Criteria:

1. Hazardous Materials:

- a. Do not provide mechanical insulation products containing detectable asbestos, lead, mercury, or mercury compounds.
- b. Do not provide foam insulation materials manufactured using CFC or HCFC blowing agents during the manufacturing process.

2. Product Data:

- a. For each type of insulation, adhesive, and sealant specified, submit Product Data to the Program/Project Manager for approval.
 - 1) Include the thermal conductivity, thickness, and factory-applied or field-applied jackets, if any.

D. Materials:

1. Flexible Elastomeric Insulation:

- a. For plumbing applications, provide closed-cell, sponge- rubber or expanded-rubber materials complying with the requirements specified in ASTM C 534 as follows:
 - 1) For tubular materials, provide insulation complying with the requirements specified for Type I insulation.
 - 2) For sheet materials, provide insulation complying with the requirements specified for Type II insulation.

2. Mineral-Fiber Insulating Cement:

- a. For plumbing applications, provide insulating cement complying with the requirements specified in ASTM C 195.
- b. Manufacturers:
 - 1) Insulco, Division of MFS, Inc.; Triple I.
 - 2) P. K. Insulation Manufacturing Co., Inc.; Super-Stik.
 - 3) Approved equal.

3. Adhesives:

- a. Provide adhesives compatible with insulation materials, jackets, and substrates; and, unless otherwise indicated, suitable for bonding the insulation to itself and to the surfaces to be insulated.
- b. Cellular-Glass Adhesive:
 - 1) For plumbing applications, provide solvent-based resin adhesive having a service temperature range of minus 75 degrees Fahrenheit to plus 300 degrees Fahrenheit.
- c. Flexible Elastomeric and Polyolefin Adhesive:
 - 1) For plumbing applications, provide flexible elastomeric and polyolefin adhesives complying with the requirements for Type II, Class 1 adhesives specified in MIL-A-24179.
- d. Jacket Adhesive:
 - 1) For plumbing applications when bonding insulation jacket lap seams and joints, provide all-service jacket (ASJ) adhesive or foil-

- scrim-kraft (FSK) jacket adhesive complying with the requirements for Class 2, Grade A adhesives specified in MIL-A-3316.
- 2) For PVC jackets, provide adhesive that is compatible with the PVC jacket.
- e. Mineral-Fiber Adhesive:
 - 1) For HVAC applications, provide mineral-fiber adhesive complying with the requirements for Class 2, Grade A adhesives specified in MIL-A-3316.
- 4. Mastics:
 - a. Provide mastics that are compatible with the insulation materials, jackets, and substrates; and that comply with the requirements for Type II mastic specified in MIL-C-19565.
 - b. Vapor-Barrier Mastic:
 - 1) Provide water based vapor-barrier mastic suitable for indoor and outdoor use on below ambient services.
 - 2) For HVAC applications, provide white vapor-barrier mastic having the following physical properties:
 - a) Water Vapor Permeance:
 - (1) Provide mastic having a water vapor permeance of 0.013 perms at a dry film thickness of 43 mils when tested in accordance with the Procedure B specified in ASTM E 96/E 96M.
 - b) Service Temperature Range:
 - (1) Provide mastic having a service temperature range from minus 20 degrees Fahrenheit to plus 180 degrees Fahrenheit.
 - c) Solids Content:
 - (1) Provide mastic having a solids content of 59 percent by volume and 71 percent by weight when determined using the methods specified in ASTM D 1644.
- 5. Sealants:
 - a. Joint Sealants:
 - 1) Provide joint sealant materials that are compatible with the insulation materials, jackets, and substrates.
 - 2) For HVAC applications, provide white or gray permanently flexible, elastomeric sealant having a service temperature range from minus 100 degrees Fahrenheit to plus 300 degrees Fahrenheit.
 - 3) For plumbing applications, provide fire-resistant and water-resistant, flexible, elastomeric sealant having a service temperature range from minus 40 degrees Fahrenheit to plus 250 degrees Fahrenheit.
 - b. ASJ Flashing Sealants and PVC Jacket Flashing Sealants:

- 1) Provide white fire-resistant and water-resistant, flexible, elastomeric sealants that are compatible with the insulation materials, jackets, and substrates.
 - 2) Provide sealants having a service temperature range from minus 40 degrees Fahrenheit to plus 250 degrees Fahrenheit.
6. Factory-Applied Jackets:
 - a. The insulation system schedules indicate factory-applied jackets for various applications.
 - b. Where factory-applied jackets are indicated for various applications in the insulation system schedules, provide jackets complying with the following requirements for the appropriate jacket:
 - 1) All-Service Jackets (ASJ):
 - a) Provide factory-applied white, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing that complies with the requirements for Type I vapor retarders specified in ASTM C 1136.
 - 2) Self-Sealing All-Service Jackets (ASJ):
 - a) Provide factory-applied all-service jackets (ASJ) having self-sealing, pressure –sensitive, acrylic-based adhesive covered by a removable protective strip, similar to Owens Corning’s ASJ-SSL® pipe insulation, and that comply with the requirements for Type I vapor retarders specified in ASTM C 1136.
 - 3) Foil-Scrim-Kraft (FSK) Faced Jacket:
 - a) Provide factory-applied aluminum-foil, fiberglass-reinforced scrim jackets with kraft-paper backing that comply with the requirements for Type II vapor retarders specified in ASTM C 1136.
 - 4) Vinyl Jacket:
 - a) Provide factory-applied white vinyl jackets having a permeance of 1.3 perms when tested in accordance with the requirements of Procedure A specified in ASTM E 96/E 96M, and complying with the requirements specified in NFPA 90A and NFPA 90B.
7. Tapes:
 - a. All-Service Jacket (ASJ) Tape:
 - 1) Provide white vapor-retarder tape complying with the requirements specified in ASTM C 1136, matching the factory-applied jacket, having acrylic adhesive, and having the following features:
 - a) Width: 3 inches.
 - b) Thickness: 11.5 mils.
 - c) Adhesion: 90 ounces force per inch of width.
 - d) Elongation: 2 percent.
 - e) Tensile Strength: 40 pounds force per inch of width.

- b. Polyvinyl-Chloride (PVC) Tape:
 - 1) Provide white vapor-retarder tape matching the field-applied polyvinyl-chloride (PVC) jackets, having acrylic adhesive, suitable for indoor and outdoor applications, and having the following features:
 - a) Width: 2 inches.
 - b) Thickness: 6 mils.
 - c) Adhesion: 64 ounces force per inch of width.
 - d) Elongation: 500 percent
 - e) Tensile Strength: 18 pounds force per inch of width.
 - c. Foil-Scrim-Kraft (FSK) Tape:
 - 1) For HVAC applications only, provide foil-faced, vapor retarder tape complying with the requirements specified in ASTM C 1136, matching the factory-applied jacket, having acrylic adhesive, and having the following features:
 - a) Width: 3 inches.
 - b) Thickness: 11.5 mils.
 - c) Adhesion: 90 ounces force per inch of width.
 - d) Elongation: 2 percent.
 - e) Tensile Strength: 40 pounds force per inch of width.
 - d. Aluminum-Foil Tape:
 - 1) For plumbing applications only, provide vapor-retarder tape having acrylic adhesive.
8. Securements:
- a. Bands:
 - 1) Stainless Steel:
 - a) Provide 0.015-inch thick stainless steel bands complying with the requirements for Type 304 stainless steel specified in ASTM A 167 or ASTM A 240/A 240M, that are 1/2 inch wide, and that have a wing or closed seal.
 - (1) For HVAC applications only, Type 316 stainless steel bands may be provided.
 - 2) Aluminum:
 - a) Provide 0.020-inch thick aluminum Alloy 3003, 3005, 3105, or 5005 bands complying with the requirements for Temper H-14 aluminum specified in ASTM B 209 or ASTM B 209M, that are 1/2 inch wide, and that have a wing or closed seal.
 - 3) Springs:
 - a) For HVAC applications only, provide a twin spring set constructed of stainless steel with flat and slotted ends designed to accept metal bands.
 - (1) Provide springs sized by the manufacturer for the application.
 - b. Insulation Pins and Hangers:
 - 1) Capacitor-Discharge-Weld Pins:

- a) Provide copper- coated or zinc-coated steel pins, fully annealed for capacitor-discharge welding, of a length to suit the depth of the insulation indicated in the insulation schedules appended to the end of this Section, and having a shank diameter as follows:
 - (1) For HVAC applications only, provide a 0.106-inch-diameter shank.
 - (2) For plumbing applications only, provide a 0.135-inch-diameter shank.
- 2) Cupped-Head, Capacitor-Discharge-Weld Pins:
 - a) Provide copper- coated or zinc-coated steel pins, fully annealed for capacitor-discharge welding, of a length to suit the depth of the insulation indicated in the insulation schedules appended to the end of this Section, having an integral 1-1/2-inch galvanized carbon-steel washer, and having a shank diameter as follows:
 - (1) For HVAC applications only, provide a 0.106-inch-diameter shank.
 - (2) For plumbing applications only, provide a 0.135-inch-diameter shank.
 - 3) Insulation-Retaining Washers:
 - a) Provide self-locking washers formed from 0.016-inch-thick, stainless-steel sheet, having a beveled edge, and sized as required to hold the insulation securely in place, but not less than 1-1/2 inches in diameter.
 - b) For HVAC applications in exposed locations only, protect the ends with capped self-locking washers incorporating a spring steel insert to ensure the permanent retention of the cap.
- c. Staples:
 - 1) Provide stainless steel or Monel outward-clinching insulation staples that are nominally 3/4 inch wide.
- d. Wire:
 - 1) Provide 080-inch nickel-copper alloy wire, or soft annealed stainless steel wire.
- 9. Corner Angles:
 - a. Aluminum Corner Angles:
 - 1) For HVAC applications only, provide aluminum Alloy 3003, 3005, 3105, or 5005 corner angles complying with the requirements for Temper H-14 material specified in ASTM B 209 or ASTM B 209M.

2.02 ACCESSORIES

- A. Firestopping and Fire-Resistive Joint Sealers:
 - 1. Provide firestopping and fire-resistive joint sealers complying with the requirements specified in Section 07850, Through Penetration Firestopping Systems.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Verify that the systems and equipment to be insulated have been tested and are free of defects.
 - 2. Verify that the surfaces to be insulated are clean and dry.
- B. Evaluation and Assessment:
 - 1. Install the insulation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the mechanical insulation.
- B. Surface Preparation:
 - 1. Clean and dry the surfaces to receive insulation.
 - a. Remove materials that will adversely affect the application of the insulation.

3.03 INSTALLATION

- A. General Insulation Installation Requirements:
 - 1. For services above ambient, do not install insulation to the following:
 - a. Vibration-control devices.
 - b. Testing agency labels and stamps.
 - c. Nameplates and data plates.
 - d. Manholes.
 - e. Handholes.
 - f. Cleanouts.
 - 2. Install the insulation materials, forms, vapor barriers or retarders, and jackets required for each item of equipment and pipe system as specified in the insulation system schedules appended to the end of this Section; and install the insulation to the specified thicknesses.
 - a. Cut insulation in a manner that avoids compressing the insulation to more than 75 percent of its nominal thickness.
 - b. Install the insulation materials, accessories, and finishes so their surfaces are smooth, straight, even, and free of voids throughout the length of the equipment and piping, including fittings, valves, and specialties.
 - c. Install insulation with least number of joints practical.
 - d. Install insulation with its longitudinal seams at the top and bottom of horizontal runs.

- 1) To eliminate openings in the insulation that allow passage of air to the surface being insulated, seal longitudinal seams and end joints of flexible elastomeric insulation with the manufacturer's recommended adhesive.
 - e. Install multiple layers of insulation so their longitudinal and end seams are staggered.
 - f. Apply adhesives, mastics, and sealants at the manufacturer's recommended coverage rate, and to their recommended wet and dry film thicknesses.
 - g. Mix insulating cements using clean potable water unless the insulating cements are to be in contact with stainless-steel surfaces.
 - 1) For insulating cements in contact with stainless-steel surfaces, mix insulating cements using demineralized water.
 - h. Complete the installation and concealment of plastic materials as rapidly as possible in each area of construction.
3. Accessories:
 - a. Provide accessories compatible with the insulation materials and suitable for the service.
 - b. Install accessories that do not corrode, soften, or otherwise attack the insulation or jacket in either a wet or dry state.
 - c. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
4. Vapor Barrier:
 - a. Where vapor barrier is indicated, seal the joints, seams, and penetrations in the insulation at the hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1) Install insulation continuously through hangers and around anchor attachments.
 - 2) Extend insulation on anchor legs from the point of attachment to the supported item to the point of attachment to structure.
 - a) Taper the ends at the attachment to the structure, and seal the ends with vapor-barrier mastic.
 - 3) Provide insert materials, and install insulation to tightly join the insert.
 - a) Seal insulation to the insulation inserts with an adhesive or sealing compound recommended by the insulation material's manufacturer.
 - 4) Cover inserts with jacket material matching the adjacent pipe insulation.
 - a) Install shields over the jacket, and arrange the shields to protect the jacket from tears or punctures caused by hangers, supports, or the shield.
5. Factory-Applied Insulation Jackets:
 - a. Install insulation with factory-applied jackets as follows:
 - 1) Draw the jacket tight and smooth.

- 2) Cover circumferential joints with 3-inch-wide strips of the same material as the insulation jacket.
 - a) Secure the strips with adhesive and outward clinching staples spaced 4 inches on center along both edges of strip.
- 3) Overlap the jacket longitudinal seams at least 1-1/2 inches.
 - a) Install insulation with the longitudinal seams at the bottom of the pipe.
 - b) Clean and dry the surface to receive self-sealing laps.
 - c) Staple the laps with outward clinching staples along the edge at 2 inches on center.
 - (1) For below ambient services, apply vapor-barrier mastic over the staples.
- 4) Cover the joints and seams with tape as recommended by the insulation material's manufacturer to maintain vapor seal.
- 5) Where vapor barriers are indicated, apply vapor-barrier mastic on the seams and joints, and at the ends adjacent to pipe flanges and fittings.

B. Penetrations:

1. Roof Penetrations:
 - a. Install insulation at roof penetrations continuously through the roof penetrations.
 - b. Seal the penetrations using flashing sealant.
 - c. For applications requiring only indoor insulation, terminate the insulation above the roof surface, and using joint sealant seal the insulation.
 - d. For applications requiring both indoor and outdoor insulation, install the insulation for the outdoor applications so it is tightly joined to the ends of the indoor insulation.
 - 1) Seal the joint with joint sealant.
 - e. Extend the jacket of outdoor insulation outside the roof flashing at least 2 inches below the top of the roof flashing.
 - 1) Seal the jacket to the roof flashing with flashing sealant.
2. Underground Exterior Wall Penetrations:
 - a. At underground exterior wall penetrations, terminate the insulation flush with the sleeve seal.
 - b. Seal the terminations using flashing sealant.
3. Aboveground Exterior Wall Penetrations:
 - a. At aboveground exterior wall penetrations, install the insulation continuously through the wall penetrations.
 - 1) Seal the penetrations using flashing sealant.
 - b. For applications requiring only indoor insulation, terminate the insulation inside the wall surface, and seal the insulation with joint sealant.

- c. For applications requiring both indoor and outdoor insulation, install insulation for the outdoor applications so it is tightly joined to the ends of the indoor insulation, and seal the joint using joint sealant.
 - d. Extend the jacket of outdoor insulation outside the wall flashing, and overlap the wall flashing at least 2 inches.
 - 1) Seal the jacket to the wall flashing using flashing sealant.
 - 4. Interior Wall and Partition Penetrations:
 - a. Fire-Rated Penetrations:
 - 1) At interior wall and partition penetrations that are fire rated, install the insulation continuously through the penetrations of fire-rated walls and partition.
 - 2) Terminate the insulation at the fire damper sleeves for the fire-rated wall and partition penetrations.
 - 3) Externally insulate the damper sleeves to match the adjacent insulation, and overlap the duct insulation at least 2 inches.
 - 4) Install firestopping and fire-resistive joint sealers in accordance with the requirements specified in Section 07850, Through Penetration Firestopping Systems.
 - b. Penetrations Not Fire Rated:
 - 1) At interior wall and partition penetrations that are not fire rated, install the insulation continuously through the walls and partitions.
 - 5. Floor Penetrations:
 - a. Duct Floor Penetrations:
 - 1) For penetrations through assemblies that are not fire-rated, install the duct insulation continuously through the floor penetrations.
 - 2) For penetrations through fire-rated assemblies, terminate the duct insulation at the fire damper sleeves, and externally insulate the damper sleeve beyond the floor to match the adjacent duct insulation.
 - a) Overlap the damper sleeve and the duct insulation at least 2 inches.
 - b. Pipe Floor Penetrations:
 - 1) Install pipe insulation continuously through floor penetrations.
 - c. Seal the penetrations through fire-rated assemblies.
 - 1) Install firestopping and fire-resistive joint sealers in accordance with the requirements specified in Section 07850, Through Penetration Firestopping Systems.
- C. Pipe Insulation:
 - 1. Insulation on Fittings, Valves, Strainers, Flanges, and Unions:
 - a. Unless otherwise indicated in the Contract Documents, provide insulation over fittings, valves, strainers, flanges, unions, and other specialties maintaining continuous thermal and vapor-retarder integrity.
 - b. Pipe Elbows:

- 1) To insulate plumbing pipe elbows, provide preformed fitting insulation or mitered fittings made from the same material having the same density as the adjacent pipe insulation.
 - a) Butt each piece of insulation tightly against the adjoining piece, and bond them with adhesive.
 - b) Fill joints, seams, voids, and irregular surfaces with insulating cement, and finish the cement to a smooth, hard, and uniform contour even with the adjoining pipe insulation.
- 2) To insulate HVAC pipe elbows, provide mitered sections of pipe insulation.
 - a) Secure the insulation materials, and seal the seams with the manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- c. Tee Fittings:
 - 1) To insulate plumbing tee fittings, provide preformed fitting insulation or sectional pipe insulation made from the same material having the same thickness as provided for the adjacent pipe insulation.
 - a) Cut sectional pipe insulation to fit.
 - b) Butt each section closely to the next, and hold each in place with tie wire.
 - c) Bond the pieces using adhesive.
 - 2) To insulate HVAC tee fittings, provide mitered sections of pipe insulation.
 - a) Secure the insulation materials, and seal the seams with the manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- d. Valves:
 - 1) To insulate plumbing valves, provide preformed fitting insulation or sectional pipe insulation made from the same material having the same thickness as provided for the adjacent pipe insulation.
 - a) Overlap adjoining pipe insulation by not less than 2 times the thickness of the pipe insulation, or one pipe diameter, whichever is thicker.
 - b) Insulate up to and including the valve bonnets, and valve stuffing-box studs, bolts, and nuts.
 - c) Fill joints, seams, and irregular surfaces using insulating cement.
 - 2) To insulate HVAC valves and piping specialties, provide preformed covers manufactured from the same material as the pipe insulation.
 - a) If preformed covers are unavailable, provide cut sections of pipe and sheet insulation for valve or specialty body.

- (1) Arrange the insulation to permit access to the valve packing, and to allow valve operation without disturbing the insulation.
 - b) Secure the insulation to the valves and specialties, and the seal seams with the manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
 - e. Strainers:
 - 1) To insulate plumbing strainers, provide preformed fitting insulation or sectional pipe insulation made from the same material, density, and thickness as provided for the adjacent pipe insulation.
 - a) Overlap adjoining pipe insulation by not less than 2 times the thickness of the pipe insulation, or one pipe diameter, whichever is thicker.
 - b) Fill joints, seams, and irregular surfaces using insulating cement.
 - c) Insulate strainers so the strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket.
 - (1) Provide a removable reusable insulation cover.
 - (2) For below ambient services, provide a design that maintains the integrity of the vapor barrier.
 - f. Pipe Flanges and Unions:
 - 1) To insulate pipe flanges and unions, provide a section of oversized preformed pipe insulation.
 - 2) Overlap adjoining pipe insulation by not less than 2 times the thickness of the pipe insulation, or one pipe diameter, whichever is thicker.
 - g. Segmented Insulated Surfaces:
 - 1) Cover the segmented insulated surfaces with a layer of finishing cement, and coat the surface with mastic.
 - a) For below ambient services, provide vapor-barrier mastic.
 - b) For above ambient services, provide a breather mastic.
 - 2) Reinforce the mastic with fabric-reinforcing mesh.
 - 3) Trowel the mastic to a smooth and well-shaped contour.
 - 2. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install a fitted polyvinyl-chloride (PVC) cover over elbows, tees, strainers, valves, flanges, and unions.
 - a. Terminate the ends with polyvinyl-chloride (PVC) end caps.
 - b. Tape polyvinyl-chloride (PVC) covers to the adjoining insulation facing using PVC tape.
- D. Instrument Connections:
 - 1. Insulate the instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes, vessels, and equipment.

2. Shape the insulation at these connections by tapering it to and around the connection with insulating cement, and finish the insulation using finishing cement, mastic, and flashing sealant.

E. Field-Applied Jackets:

1. Where glass-cloth jackets are indicated, install the jackets directly over the bare insulation or insulation with factory-applied jackets.
 - a. Draw the jacket smooth and tight to the surface with a 2-inch overlap at the seams and joints.
 - b. Embed the glass cloth between two 0.062-inch-thick coats of lagging adhesive.
 - 1) Completely encapsulate the insulation in the coating, leaving no exposed insulation.
2. Where foil-scrim-kraft (FSK) jackets are indicated, install the jackets as follows:
 - a. Draw the jacket material smooth and tight.
 - b. Install lap or joint strips of the same material as the jacket.
 - c. Secure the jacket to the insulation with the manufacturer's recommended adhesive.
 - d. Install the jacket with 1-1/2-inch laps at the longitudinal seams and 3-inch-wide joint strips at the end joints.
 - e. Seal openings, punctures, and breaks in the vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
3. Where polyvinyl-chloride (PVC) jackets are indicated, install the jackets with a 1-inch overlap at the longitudinal seams and end joints.
 - a. For horizontal tank and vessel applications, install the jackets with the longitudinal seams along the top and bottom of tanks and vessels.
 - 1) Seal the seams with the manufacturer's recommended adhesive.
 - b. Apply 2 continuous beads of adhesive to the seams and joints, one bead under lap and the finish bead along seam and joint edge.
4. Where metal jackets are indicated, provide the jackets with a 2-inch overlap at the longitudinal seams and end joints
 - a. Overlap and arrange longitudinal seams to shed water.
 - b. Seal the end joints with a weatherproof sealant recommended by the insulation manufacturer.
 - c. Secure the jacket with stainless-steel bands 12 inches on center and at the end joints.

F. Special Techniques:

1. Finishes:
 - a. Finish insulation with the systems at operating conditions.
 - b. Metal Jackets:
 - 1) Do not field paint aluminum or stainless-steel jackets.
 - c. All-Service Jackets (ASJ):
 - 1) Paint the all-service jackets (ASJ) with 2 finish coats over a primer in accordance with the requirements specified in Section 09912,

Painting, Section 09960, High-Performance Coatings, and as follows:

- a) Provide a flat acrylic primer that is compatible with both the jacket material and the finish coat paint, and having a fungicidal agent added to render the jacket fabric mildew proof.
- b) Provide finish coats consisting of an interior, flat, latex-emulsion size.
- d. Flexible Elastomeric Thermal Insulation:
 - 1) After insulation adhesive has fully cured, apply 2 coats of the insulation manufacturer's recommended protective coating.
- e. Color:
 - 1) Provide final colors as selected by the Program/Project Manager.
 - 2) Vary the first and second coats to allow the Program/Project Manager to visually inspect the completed Work.

3.04 REPAIR/RESTORATION

- A. Repair damaged insulation facings by applying the same facing material used for the original installation over the damaged areas.
 - 1. Extend patches at least 4 inches beyond damaged areas.
 - 2. Adhere, staple, and seal patches in a manner similar to installing butt joints.
- B. Repair joint separations and cracking in insulation due to thermal movement.

3.05 CLEANING

- A. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 PROTECTION

- A. Take steps to ensure that installed mechanical insulation is protected during subsequent construction activities.

SECTION 15082

PLUMBING INSULATION

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section Includes:
 - 1. Insulation Materials:
 - a. Mineral-Fiber.
 - b. Polyolefin.
 - 2. Adhesives.
 - 3. Mastics.
 - 4. Sealants.
 - 5. Factory-applied jackets.
 - 6. Field-applied jackets.
 - 7. Tapes.
 - 8. Securements.
- B. Related Sections include the following:
 - 1. Division 15 Section "HVAC Insulation."

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Insulation Materials
 - a) Mineral-Fiber, Preformed Pipe Insulation.
 - b) Polyolefin.
 - 2) Insulating Cements
 - a) Mineral-Fiber Insulating Cement.
 - 3) Adhesives
 - a) Flexible Elastomeric and Polyolefin Adhesive
 - b) Mineral-Fiber Adhesive.
 - c) ASJ Adhesive.
 - d) PVC Jacket Adhesive.
 - 4) Mastics

- a) Vapor-Barrier Mastic.
- 5) Sealants
 - a) Joint Sealants.
 - b) ASJ Flashing Sealants and PVC Jacket Flashing Sealants.
- 6) Factory-Applied Jackets
 - a) ASJ.
- 7) Field-Applied Jackets
 - a) PVC Jacket.
- 8) Tapes
 - a) ASJ Tape.
 - b) PVC Tape.
 - c) Aluminum-Foil Tape.
- 9) Securements
 - a) Bands.
 - (1) Stainless Steel.
 - (2) Aluminum.
 - b) Insulation Pins and Hangers.
 - (1) Capacitor-Discharge-Weld Pins.
 - (2) Cupped-Head, Capacitor-Discharge-Weld Pins.
 - (3) Insulation-Retaining Washers.
 - c) Staples.
 - d) Wire.
- b. Qualification Statements:
 - 1) Installer's qualifications.

1.04 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- B. When fire-performance characteristics are important requirements, verify surface-burning characteristics of insulation materials by an independent testing agency and require test report submittals.
- C. Fire-Test-Response Characteristics: Insulation and related materials shall have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing and inspecting agency.
 - 1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
 - 2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.06 COORDINATION

- A. Coordinate size and location of supports, hangers, and insulation shields specified in Division 15 Section "Hangers and Supports."
- B. Coordinate clearance requirements with piping Installer for piping insulation application and equipment Installer for equipment insulation application. Before preparing piping Shop Drawings establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

1.07 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

PART 2 PRODUCTS

2.01 INSULATION MATERIALS

- A. Comply with requirements in Part 3 schedule articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Mineral-Fiber, Preformed Pipe Insulation:
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Fibrex Insulations Inc.; Coreplus 1200.
 - b. Johns Manville; Micro-Lok.
 - c. Knauf Insulation; 1000(Pipe Insulation.
 - d. Manson Insulation Inc.; Alley-K.
 - e. Owens Corning; Fiberglas Pipe Insulation.

- E. Polyolefin: Unicellular, polyethylene thermal plastic insulation. Comply with ASTM C 534 or ASTM C 1427, Type I, Grade 1 for tubular materials and Type II, Grade 1 for sheet materials.
 - 1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Armacell LLC; Tubolit.
 - b. Nomaco Inc.; IMCOLOCK, IMCOSHEET, NOMALOCK, and NOMAPLY.
 - c. RBX Corporation; Therma-cell.

2.02 INSULATING CEMENTS

- A. Mineral-Fiber Insulating Cement: Comply with ASTM C 195.
 - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Insulco, Division of MFS, Inc.; Triple I.
 - b. P. K. Insulation Mfg. Co., Inc.; Super-Stik.

2.03 ADHESIVES

- A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to it and to surfaces to be insulated, unless otherwise indicated.
- B. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.
- C. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
- D. ASJ Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
- E. PVC Jacket Adhesive: Compatible with PVC jacket.

2.04 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-C-19565C, Type II.
- B. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.

2.05 SEALANTS

- A. Joint Sealants:

1. Materials shall be compatible with insulation materials, jackets, and substrates.
 2. Permanently flexible, elastomeric sealant.
 3. Service Temperature Range: Minus 100 to plus 300 deg F.
 4. Color: White or gray.
- B. ASJ Flashing Sealants and PVC Jacket Flashing Sealants:
1. Materials shall be compatible with insulation materials, jackets, and substrates.
 2. Fire- and water-resistant, flexible, elastomeric sealant.
 3. Service Temperature Range: Minus 40 to plus 250 deg F.
 4. Color: White

2.06 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.

2.07 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
- B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming.

2.08 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
- B. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive. Suitable for indoor and outdoor applications.
- C. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.

2.09 SECUREMENTS

- A. Bands:
1. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304.
 2. Aluminum: ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 1/2 inch wide with wing or closed seal.

- B. Insulation Pins and Hangers:
 - 1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch-diameter shank, length to suit depth of insulation indicated.
 - 2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch-diameter shank, and length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
 - 3. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick, stainless-steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
- C. Staples: Outward-clinching insulation staples, nominal 3/4-inch-wide, stainless steel or Monel.
- D. Wire: 0.080-inch nickel-copper alloy soft-annealed, stainless steel.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation and other conditions affecting performance of insulation application.
 - 1. Verify that systems and equipment to be insulated have been tested and are free of defects.
 - 2. Verify that surfaces to be insulated are clean and dry.
 - 3. Proceed with installation only after unsatisfactory conditions have been corrected

3.02 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.03 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment and piping including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment and pipe system as specified in insulation system schedules.

- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during application and finishing.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.
- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.
 - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 - 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 - 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
 - 1. Draw jacket tight and smooth.
 - 2. Cover circumferential joints with 3-inch-wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
 - 3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.
 - 4. For below ambient services, apply vapor-barrier mastic over staples.

5. Cover joints and seams with tape as recommended by insulation material manufacturer to maintain vapor seal.
 6. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- P. For above ambient services, do not install insulation to the following:
1. Vibration-control devices.
 2. Testing agency labels and stamps.
 3. Nameplates and data plates.
 4. Manholes.
 5. Handholes.
 6. Cleanouts.

3.04 GENERAL PIPE INSTALLATION

- A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
- B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity, unless otherwise indicated.
 2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
 3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
 4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the

thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.

5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below ambient services, provide a design that maintains vapor barrier.
 6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below ambient services and a breather mastic for above ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
 8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
- C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes, vessels, and equipment. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

3.05 FIELD-APPLIED JACKET INSTALLATION

- A. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.
 1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

3.06 FINISHES

- A. Equipment and Pipe Insulation with ASJ Jacket Material: Paint jacket with paint system identified below and as specified in Division 9 painting Sections.

1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
 2. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.

3.07 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
1. Underground piping.
 2. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.08 INDOOR PIPING INSULATION SCHEDULE

- A. Domestic Hot and Recirculated Hot Water:
1. NPS 1-1/4 and Smaller: Insulation shall be the following:
 - a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1/2 inch thick.
 2. NPS 1-1/2 and Larger: Insulation shall be the following:
 - a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
- B. Roof Drain bodies, Roof Drain leaders, and Overflow Drain bodies:
1. All Pipe Sizes: Insulation shall be the following:
 - a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
- C. Exposed Sanitary Drains, Domestic Hot and Tempered Water Supply Piping, and Stops for Plumbing Fixtures for People with Disabilities (any fixture on plans identified as "ADA" or "handicap"):
1. All Pipe Sizes: Insulation shall be the following:
 - a. Polyolefin: 3/4 inch thick.

3.09 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Piping, Concealed:
 - 1. None.
- D. Piping, Exposed:
 - 1. PVC: 20 mils thick.

HVAC INSULATION

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section Includes:
 - 1. Insulation Materials:
 - a. Cellular glass.
 - b. Flexible elastomeric.
 - 2. Adhesives
 - 3. Mastics.
 - 4. Sealants.
 - 5. Factory-applied jackets.
 - 6. Field-applied jackets.
 - 7. Tapes.
 - 8. Securements.
 - 9. Corner angles.
- B. Related Sections include the following:
 - 1. Division 15 Section "Plumbing Insulation."
 - 2. Division 15 Section "Metal Ducts" for duct liners.

1.03 SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, thickness, and jackets (both factory and field applied, if any).
- B. Qualification Data: For qualified Installer.

1.04 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- B. Fire-Test-Response Characteristics: Insulation and related materials shall have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency

acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing and inspecting agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.06 COORDINATION

- A. Coordinate size and location of supports, hangers, and insulation shields specified in Division 15 Section "Hangers and Supports."
- B. Coordinate clearance requirements with piping Installer for piping insulation application, duct Installer for duct insulation application, and equipment Installer for equipment insulation application. Before preparing piping and ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

1.07 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 PRODUCTS

2.01 INSULATION MATERIALS

- A. Comply with requirements in Part 3 schedule articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 - 1. Preformed Pipe Insulation without Jacket: Comply with ASTM C 552, Type II, Class 1.
 - 2. Preformed Pipe Insulation with Factory-Applied ASJ-SSL: Comply with ASTM C 552, Type II, Class 2.
- G. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
- H. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.
- I. Cellular-Glass Adhesive: Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300 deg F.
- J. Flexible Elastomeric Adhesive: Comply with MIL-A-24179A, Type II, Class I.
- K. ASJ Adhesive and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
- L. PVC Jacket Adhesive: Compatible with PVC jacket.

2.02 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-C-19565C, Type II.
- B. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.
 - 1. Water-Vapor Permeance: ASTM E 96, Procedure B, 0.013 perms at 43-mil dry film thickness.
 - 2. Service Temperature Range: Minus 20 to plus 180 deg F.
 - 3. Solids Content: ASTM D 1644, 59 percent by volume and 71 percent by weight.

4. Color: White.

2.03 SEALANTS

- A. Joint Sealants:
 1. Materials shall be compatible with insulation materials, jackets, and substrates.
 2. Fire- and water-resistant, flexible, elastomeric sealant.
 3. Service Temperature Range: Minus 40 to plus 250 deg F.
- B. ASJ Flashing Sealants, and Vinyl, and PVC Jacket Flashing Sealants:
 1. Materials shall be compatible with insulation materials, jackets, and substrates.
 2. Fire- and water-resistant, flexible, elastomeric sealant.
 3. Service Temperature Range: Minus 40 to plus 250 deg F.
 4. Color: White.

2.04 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
 1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
 2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
 3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
 4. Vinyl Jacket: White vinyl with a permeance of 1.3 perms when tested according to ASTM E 96, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.05 FIELD-APPLIED CLOTHS

- A. Woven Glass-Fiber Fabric: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd.

2.06 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
- B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.

- C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
 - 1. Adhesive: As recommended by jacket material manufacturer.
 - 2. Color: White.
 - 3. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
 - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.
- D. Metal Jacket:
 - 1. Aluminum Jacket: Comply with ASTM B 209, Alloy 3003, 3005, 3105 or 5005, Temper H-14.
 - a. Factory cut and rolled to size.
 - b. Finish and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Outdoor Applications: 3-mil-thick, heat-bonded polyethylene and kraft paper.
 - d. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field-fabricate fitting covers only if factory-fabricated fitting covers are not available.

2.07 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
 - 1. Width: 3 inches.
 - 2. Thickness: 11.5 mils.
 - 3. Adhesion: 90 ounces force/inch in width.
 - 4. Elongation: 2 percent.
 - 5. Tensile Strength: 40 lbf/inch in width.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
 - 1. Width: 3 inches.
 - 2. Thickness: 6.5 mils.
 - 3. Adhesion: 90 ounces force/inch in width.

4. Elongation: 2 percent.
 5. Tensile Strength: 40 lbf/inch in width.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive. Suitable for indoor and outdoor applications.
1. Width: 2 inches.
 2. Thickness: 6 mils.
 3. Adhesion: 64 ounces force/inch in width.
 4. Elongation: 500 percent.
 5. Tensile Strength: 18 lbf/inch in width.

2.08 SECUREMENTS

- A. Bands:
1. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304 or Type 316; 0.015 inch thick, 1/2 inch wide with wing or closed seal.
 2. Aluminum: ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 1/2 inch wide with wing or closed seal.
 3. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.
- B. Insulation Pins and Hangers:
1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch-diameter shank, length to suit depth of insulation indicated.
 2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch-diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
 3. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick stainless-steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
 - a. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
- C. Staples: Outward-clinching insulation staples, nominal 3/4-inch-wide, stainless steel or Monel.
- D. Wire: 0.080-inch nickel-copper alloy soft-annealed, stainless steel.

2.09 CORNER ANGLES

- A. PVC Corner Angles: 30 mils thick, minimum 1 by 1 inch, PVC according to ASTM D 1784, Class 16354-C. White or color-coded to match adjacent surface.

- B. Aluminum Corner Angles: 0.040 inch thick, minimum 1 by 1 inch, aluminum according to ASTM B 209 , Alloy 3003, 3005, 3105 or 5005; Temper H-14.
- C. Stainless-Steel Corner Angles: 0.024 inch thick, minimum 1 by 1 inch, stainless steel according to ASTM A 167 or ASTM A 240/A 240M, Type 304 or 316.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation and other conditions affecting performance of insulation application.
 - 1. Verify that systems and equipment to be insulated have been tested and are free of defects.
 - 2. Verify that surfaces to be insulated are clean and dry.
 - 3. Proceed with installation only after unsatisfactory conditions have been corrected

3.02 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat-tracing that apply to insulation.
- C. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.03 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment and piping including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment, duct system, and pipe system as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during application and finishing.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.
- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.
 - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 - 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 - 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
 - 1. Draw jacket tight and smooth.
 - 2. Cover circumferential joints with 3-inch-wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
 - 3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.
 - 4. For below ambient services, apply vapor-barrier mastic over staples.
 - 5. Cover joints and seams with tape as recommended by insulation material manufacturer to maintain vapor seal.
 - 6. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.

- M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- P. For above ambient services, do not install insulation to the following:
 - 1. Vibration-control devices.
 - 2. Testing agency labels and stamps.
 - 3. Nameplates and data plates.
 - 4. Manholes.
 - 5. Handholes.
 - 6. Cleanouts.

3.04 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
 - 4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
 - 4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions. Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches.
 - 1. Comply with requirements in Division 7 Section "Through-Penetration Firestop Systems" for firestopping and fire-resistive joint sealers.
- F. Insulation Installation at Floor Penetrations:
 - 1. Duct: Install insulation continuously through floor penetrations that are not fire rated. For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches.
 - 2. Pipe: Install insulation continuously through floor penetrations.
 - 3. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 7 Section "Through-Penetration Firestop Systems."

3.05 FLEXIBLE ELASTOMERIC INSULATION INSTALLATION

- A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- B. Insulation Installation on Pipe Fittings and Elbows:
 - 1. Install mitered sections of pipe insulation.
 - 2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- C. Insulation Installation on Valves and Pipe Specialties:
 - 1. Install preformed valve covers manufactured of same material as pipe insulation when available.
 - 2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
 - 3. Install insulation to flanges as specified for flange insulation application.
 - 4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.06 FIELD-APPLIED JACKET INSTALLATION

- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.

1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
 2. Embed glass cloth between two 0.062-inch-thick coats of lagging adhesive.
 3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
1. Draw jacket material smooth and tight.
 2. Install lap or joint strips with same material as jacket.
 3. Secure jacket to insulation with manufacturer's recommended adhesive.
 4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch-wide joint strips at end joints.
 5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.
1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.

3.07 FINISHES

- A. Do not field paint aluminum or stainless-steel jackets.

3.08 DUCT INSULATION SCHEDULE, GENERAL

- A. Plenums and Ducts Requiring Insulation:
1. Indoor, concealed supply and outdoor air.
- B. Items Not Insulated:
1. Metal ducts with duct liner of sufficient thickness to comply with energy code and ASHRAE/IESNA 90.1.
 2. Factory-insulated flexible ducts.
 3. Factory-insulated plenums and casings.
 4. Flexible connectors.
 5. Vibration-control devices.
 6. Factory-insulated access panels and doors.

3.09 INDOOR DUCT AND PLENUM INSULATION SCHEDULE

- A. Concealed, round, rectangular, and flat-oval, supply-air duct insulation shall be the following:
 - 1. Cellular Glass Insulation: 1-1/2 inches nominal density.
- B. Concealed, outdoor-air plenum insulation shall be the following:
 - 1. Cellular Glass Insulation: 2 inches nominal density.

3.10 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
 - 1. Underground piping.
 - 2. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.11 INDOOR PIPING INSULATION SCHEDULE

- A. Refrigerant Suction and Hot-Gas Piping:
 - 1. All Pipe Sizes: Insulation shall be one of the following:
 - a. Flexible Elastomeric: 1 inch thick.
- B. Refrigerant Suction and Hot-Gas Flexible Tubing:
 - 1. All Pipe Sizes: Insulation shall be one of the following:
 - a. Flexible Elastomeric: 1 inch thick.
- C. Chilled Water Supply and Return, between 40 and 60 Deg F:
 - 1. All Pipe Sizes: Insulation shall be one of the following:
 - a. Cellular Glass: 1 inch thick.

3.12 OUTDOOR, ABOVE GROUND PIPING INSULATION SCHEDULE

- A. Chilled Water Supply and Return, between 40 and 60 Deg F:
 - 1. All Pipe Sizes: Insulation shall be one of the following:
 - a. Cellular Glass: 2 inches thick.

RFI
1876

Stations Outdoor
Refrigerant Piping
Insulation Thickness

Thickness also applies to outdoor above
ground refrigerant piping per RFI 1876

3.13 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Ducts and Plenums, Concealed or Exposed:
 - 1. None.
- D. Piping, Concealed:
 - 1. None.
- E. Piping, Exposed:
 - 1. PVC: 30 mils thick.

3.14 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Ducts and Plenums, Concealed or Exposed:
 - 1. Painted Aluminum, Smooth 0.032 inch thick.
- D. Piping, Concealed or Exposed:
 - 1. Painted Aluminum, Smooth ~~0.032 inch~~ thick.

0.016 inch per RFI

SECTION 15110

VALVES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following types of general duty valves and accessories:
 - a. Bronze ball valves.
 - b. Iron ball valves.
 - c. Iron, grooved-end butterfly valves.
 - d. Iron, grooved-end swing-check valves.
 - e. Chain wheels.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01732 - Cutting and Patching.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 01810 - Commissioning.
 - 6. Section 15075 - Mechanical Identification.
 - 7. Section 15995 - Commissioning of Mechanical Systems.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. CWP: Cold working pressure.
 - 2. EPDM: Ethylene propylene copolymer rubber.
 - 3. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.
 - 4. NPS: Nominal Pipe Size.
 - a. DN: Diamètre nominal (European Equivalent).
 - 5. PTFE: Polytetrafluoroethylene, a synthetic fluoropolymer also known by the DuPont brand name Teflon.
 - 6. SWP: Steam working pressure.
 - 7. TFE: Tetrafluoroethylene, a synthetic fluoropolymer.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
- C. Reference Standards:
 - 1. American Society of Mechanical Engineers (ASME):

- a. ANSI/ASME B16.1 – Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250.
- b. ANSI/ASME B16.10 – Face-to-Face and End-to-End Dimensions of Valves.
- c. ANSI/ASME B16.34 - Valves-Flanged, Threaded and Welding End.
- d. ANSI/ASME B31.1 - Power Piping.
- e. ANSI/ASME B31.9 - Building Services Piping.
2. American Water Works Association (AWWA):
 - a. ANSI/AWWA C606 – AWWA Standard for Grooved and Shouldered Joints.
3. ASTM International (ASTM):
 - a. ASTM A 126 - Standard Specification for Gray Iron Castings for Valves, Flanges, and Pipe Fittings.
 - b. ASTM A 536 - Standard Specification for Ductile Iron Castings.
4. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
5. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
6. Manufacturers Standardization Society (MSS):
 - a. MSS SP-45 - Bypass and Drain Connections.
 - b. MSS SP-67 - Butterfly Valves.
 - c. MSS SP-72 - Ball Valves with Flanged or Butt-Welding Ends for General Service.
 - d. MSS SP-110 - Ball Valves Treaded, Socket-Welding, Solder Joint, Grooved and Flared Ends.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordination Drawings:
 - a. Prepare and submit Coordination Drawings to the Program/Project Manager for approval.
 - 1) Show the following items for this Contract drawn to scale, and coordinate them with each other:
 - a) HVAC, plumbing, and fire suppression items.
 - b) Conduit routing plans.
 - c) Structural members.

1.04 SUBMITTALS

- A. Action Submittals:
 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:

- 1) Two-piece, full-port, bronze ball valves with bronze trim.
- 2) Three-piece, full-port, bronze ball valves with bronze trim.
- 3) Iron ball valves.
- 4) Iron, grooved-end butterfly valves.
- 5) Iron, grooved-end swing check valves.
- 6) Chain wheels.
- b. Shop Drawings:
 - 1) Coordination Drawings.

B. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the general purpose valves.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:
 - a. Obtain approval of the Work of this Section from the Authorities Having Jurisdiction (AHJ) in accordance with requirements of the Phoenix Building Construction Code and Amendments.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Prepare valves for shipping as follows:
 - a. Protect the valves' internal parts against rust and corrosion.
 - b. Protect the valves' threads, flange faces, grooves, and weld ends.
 - c. Set ball valves to the open position to minimize exposure of their functional surfaces.
 - d. Set butterfly valves to the closed position or slightly open position.
 - e. Block check valves in either the closed or open position.

B. Storage and Handling Requirements:

1. Take the following precautions during the storage of valves:
 - a. Maintain valve end protection.
 - b. Store valves indoors, and maintain the temperature higher than the ambient dew point.
 - 1) If valves must be stored outdoors, store the valves off the ground in watertight enclosures.
2. Use a sling to handle large valves.
 - a. Rig the slings so exposed parts are not damaged.
 - b. Do not use the valve's hand wheels or stems as lifting or rigging points.

- C. Packaging Waste Management:
 - 1. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
 - 2. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 VALVE ASSEMBLIES

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain each type of valve from single source from single manufacturer.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- C. Performance:
 - 1. Pressure and Temperature Ratings:
 - a. Provide valves having valve pressure and temperature ratings not less than those indicated in the Contract Documents, and as required for the system pressures and temperatures.
- D. Design Criteria:
 - 1. American Society of Mechanical Engineers (ASME) Compliance:
 - a. For ferrous valves, provide valves complying with the dimension and design criteria requirements specified in ANSI/ASME B16.10 and ANSI/ASME B16.34.
 - b. For power piping valves, provide valves complying with the requirements specified in ANSI/ASME B31.1.
 - c. For building services, provide piping valves complying with the requirements specified in ANSI/ASME B31.9.

2. Valve Sizes:
 - a. Unless otherwise indicated, provide valves of the same size as the upstream piping.
3. Valve Actuator Types:
 - a. Provide valve actuators for the following applications of the types specified:
 - 1) For quarter-turn valves having nominal pipe sizes of 8 inches and smaller [NPS 6 (DN 150)], provide hand levers.
 - 2) For quarter-turn valves having nominal pipe sizes of 8 inches and larger [NPS 8 (DN 200)], provide gear actuators.
 - 3) For valves other than quarter-turn types, provide hand wheels.
4. Valves in Insulated Piping:
 - a. For valves in insulated piping, provide valves having 2-inch (50mm) stem extensions.
 - b. Ball Valves:
 - 1) Provide insulated ball valves having an extended operating handle made from non-thermal-conductive material, and a protective sleeve that allows operation of the valve without breaking the vapor seal or disturbing the insulation.
 - c. Butterfly Valves:
 - 1) Provide insulated butterfly valves having an extended neck.
5. Valve-End Connections:
 - a. Flanged End Connections:
 - 1) For iron valves having flanged end connections, provide flanges complying with the requirements specified in ANSI/ASME B16.1.
 - b. Grooved End Connections:
 - 1) For valves having grooved end connections, provide valves having grooves complying with the requirements specified in ANSI/AWWA C606.
 - c. Valve End Selection:
 - 1) Except for wafer type valves, select valves having the type of end connections specified herein for the following applications:
 - a) Valves in Copper Tubing:
 - (1) For copper tubing having nominal pipe sizes of 2 inches [NPS 2 (DN 50)] and smaller, provide threaded ends except where an option to use solder-joint valve-ends is specified.
 - (2) For copper tubing having nominal pipe sizes of 2-1/2 inches to 4 inches [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)], provide flanged ends except where an option to use threaded valve-ends is specified.
 - (3) For copper tubing having nominal pipe sizes of 5 inches [NPS 5 (DN 125)] and larger, provide flanged ends.
 - b) Valves in Steel Piping:

- (1) For steel piping having nominal pipe sizes of 2 inches [NPS 2 (DN 50)] and smaller, provide threaded ends.
 - (2) For steel piping having nominal pipe sizes of 2-1/2 inches to 4 inches [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)], provide flanged ends except where an option to use threaded valve-ends is specified.
 - (3) For Steel Piping having nominal pipe sizes of 5 inches [NPS 5 (DN 125)] and larger, provide flanged ends.
 - c) Valves in Grooved-End Copper Tubing or Steel Piping:
 - (1) For valves in grooved-end copper tubing or steel piping, grooved valve ends may be provide.
6. Valve Bypass and Drain Connections:
 - a. Provide valve bypass and drain connections complying with the requirements specified in MSS SP-45.
7. Valve Applications:
 - a. Chilled-Water Valves:
 - 1) For chilled-water valves having nominal pipe sizes of 2 inches [NPS 2 (DN 50)] and smaller, provide the following types of valves:
 - a) Bronze Valves:
 - (1) Bronze valves having solder-joint ends instead of threaded ends may be provided.
 - b) Ball Valves:
 - (1) Two or three piece, fullport, bronze ball valves with bronze trim may be provided.
 - 2) For chilled-water valves having nominal pipe sizes of 2-1/2 inches [NPS 2-1/2 (DN 65)] and larger, provide the following types of valves:
 - a) Iron Valves:
 - (1) For chilled-water valves having nominal pipe sizes of 2-1/2 inches to 4 inches [NPS 2-1/2 to NPS 4 (DN 65 to DN 100)], iron valves having grooved ends instead of flanged ends may be provided.
 - b) Ball Valves:
 - (1) For chilled-water valves having nominal pipe sizes of 2-1/2 inches to 10 inches [NPS 2-1/2 to NPS 10 (DN 65 to DN 250)], provide Class 150 iron ball valves.
 - c) Butterfly Valves:
 - (1) For chilled-water valves having nominal pipe sizes of 2-1/2 inches to 12 inches [NPS 2-1/2 to NPS 10 (DN 65 to DN 300)], provide iron, grooved-end butterfly valves rated for 175 cold working pressure (CWP).
 - d) Check Valves:
 - (1) For chilled-water valves having nominal pipe sizes of 3 inches to 12 inches [NPS 2-1/2 to NPS 10 (DN 80 to

- DN 300)], provide iron, grooved-end check valves rated for 300 cold working pressure (CWP).
- b. If valve types for an application are not otherwise indicated in the Contract Documents, provide the following valve types:
 - 1) Shutoff Service:
 - a) Provide ball or butterfly valves for shutoff service.
 - 2) Dead-End Service:
 - a) Provide single-flange (lug) type butterfly valves for dead-end service.
 - 3) Throttling Service:
 - a) Provide ball or butterfly valves for throttling service.
 - 4) Pump-Discharge Check Valves:
 - a) For pump discharges having nominal pipe sizes of 2 inches [NPS 2 (DN 50)] and smaller, provide bronze swing check valves having a bronze disc.
 - b) For pump discharges having nominal pipe sizes of 2-1/2 inches [NPS 2-1/2 (DN 65)] and larger, provide iron swing check valves having a lever and weight or a spring; or provide iron center-guided, metal-seat or resilient-seat, check valves.
 - c. If valves with the specified steam working pressure (SWP) classes or cold working pressure (CWP) ratings are not available, the same types of valves with higher SWP classes or CWP ratings may be substituted.
8. Product Data:
- a. Submit Product Data for each type of valve indicated in the Contract Documents to the Program/Project Manager for approval.
- E. Materials:
- 1. Specialty Valves:
 - a. For specialty valves specified in other Sections and applicable only to specific piping applications, provide valves as specified in those other Sections.
 - 2. Bronze Ball Valves:
 - a. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim:
 - 1) Provide two-piece, full-port, bronze ball valves with bronze trim complying with the requirements specified in MSS SP-110.
 - 2) Steam Working Pressure (SWP) Rating:
 - a) Provide valves having a 150 psig (1035 kPa) steam working pressure (SWP).
 - 3) Cold Working Pressure (CWP) Rating:
 - a) Provide valves having a 600 psig (4140 kPa) cold working pressure (CWP).
 - 4) Body Design:
 - a) Provide valves having a two piece body design.
 - 5) Body Material:
 - a) Provide valves having bronze bodies.

- 6) Ends:
 - a) Provide valves having soldered ends.
- 7) Seats:
 - a) Provide valves having polytetrafluoroethylene (PTFE) or tetrafluoroethylene (TFE) seats.
- 8) Stems:
 - a) Provide valves having bronze stems.
- 9) Balls:
 - a) Provide valves having chrome-plated brass balls.
- 10) Ports:
 - a) Provide valves having full ports.
- 11) Manufacturers:
 - a) American Valve, Inc., <http://www.americanvalve.com>.
 - b) Conbraco Industries, Inc.; Apollo® Valves, <http://www.apollovalves.com>.
 - c) Crane Co.; Crane Valve Group; Crane Valves, <http://www.cranesupply.com/Products/Valves/Valves.aspx>.
 - d) Hammond Valve, <http://www.hammondvalve.com>.
 - e) Milwaukee Valve Company, <http://www.milwaukeevalve.com>.
 - f) NIBCO® INC., <http://www.nibco.com/cms.do>.
 - g) Red-White Valve Corporation, <https://www.redwhitevalvecorp.com/>.
 - h) Watts Regulator Co.; a division of Watts Water Technologies, Inc., <http://www.watts.com>.
 - i) Approved equal.
- b. Three-Piece, Full-Port, Bronze Ball Valves with Bronze Trim:
 - 1) Provide three-piece, full-port, bronze ball valves with bronze trim complying with the requirements specified in MSS SP-110.
 - 2) Steam Working Pressure (SWP) Rating:
 - a) Provide valves having a 150 psig (1035 kPa) steam working pressure (SWP).
 - 3) Cold Working Pressure (CWP) Rating:
 - a) Provide valves having a 600 psig (4140 kPa) cold working pressure (CWP).
 - 4) Body Design:
 - a) Provide valves having a three piece body design.
 - 5) Body Material:
 - a) Provide valves having bronze bodies.
 - 6) Ends:
 - a) Provide valves having soldered or grooved ends.
 - 7) Seats:
 - a) Provide valves having polytetrafluoroethylene (PTFE) or tetrafluoroethylene (TFE) seats.
 - 8) Stems:
 - a) Provide valves having bronze stems.

- 9) Balls:
 - a) Provide valves having chrome-plated brass balls.
- 10) Ports:
 - a) Provide valves having full ports.
- 11) Manufacturers:
 - a) Conbraco Industries, Inc.; Apollo® Valves, <http://www.apollovalves.com>.
 - b) DynaQuip Controls, <http://www.dynaquip.com>.
 - c) Hammond Valve, <http://www.hammondvalve.com>.
 - d) Milwaukee Valve Company, <http://www.milwaukeevalve.com>.
 - e) NIBCO® INC., <http://www.nibco.com/cms.do>.
 - f) Red-White Valve Corporation, <https://www.redwhitevalvecorp.com/>.
 - g) Approved equal.
- 3. Iron Ball Valves:
 - a. Provide Class 125, iron ball valves complying with the requirements specified in MSS SP-72.
 - b. Cold Working Pressure (CWP) Rating:
 - 1) Provide valves having a 200 psig (1380 kPa) cold working pressure (CWP).
 - c. Body Design:
 - 1) Provide valves having a split body design.
 - d. Body Material:
 - 1) Provide valves having bodies fabricated from gray iron complying with the requirements specified in ASTM A 126.
 - e. Ends:
 - 1) Provide valves having flanged or grooved ends.
 - f. Seats:
 - 1) Provide valves having polytetrafluoroethylene (PTFE) or tetrafluoroethylene (TFE) seats.
 - g. Stems:
 - 1) Provide valves having stainless steel stems.
 - h. Balls:
 - 1) Provide valves having stainless steel balls.
 - i. Ports:
 - 1) Provide valves having full ports.
 - j. Manufacturers:
 - 1) American Valve, Inc., <http://www.americanvalve.com>.
 - 2) Conbraco Industries, Inc.; Apollo® Valves, <http://www.apollovalves.com>.
 - 3) Kitz Corporation, <http://www.kitz.com>.
 - 4) Sure Flow Equipment Inc., <http://www.sureflowequipment.com>.
 - 5) Watts Regulator Co.; a division of Watts Water Technologies, Inc., <http://www.watts.com>.
 - 6) Approved equal.

4. Iron, Grooved-End Butterfly Valves:
 - a. Provide iron, grooved-end, 175 cold working pressure (1200 kPa) valves complying with the requirements for Type I butterfly valves specified in MSS SP-67:
 - 1) Body Material:
 - a) Provide valves having coated, ductile iron bodies.
 - 2) Stem:
 - a) Provide valves having a two-piece stainless steel stem.
 - 3) Disc:
 - a) Provide valves having coated, ductile iron valve discs.
 - 4) Seal:
 - a) Provide valves having ethylene propylene copolymer rubber (EPDM) seals.
 - 5) Manufacturers:
 - a) Kennedy Valve; a division of McWane, Inc., <http://www.kennedyvalve.com>.
 - b) Shurjoint Piping Products, <http://www.shurjoint.com>
 - c) Tyco Fire Products LP; Grinnell Mechanical Products, <http://www.grinnell.com>.
 - d) Victaulic Company, <http://www.victaulic.com>.
 - e) Approved equal.
5. Iron, Grooved-End Swing Check Valves:
 - a. Provide iron, grooved-end swing check valves.
 - 1) Cold Working Pressure (CWP) Rating:
 - a) Provide valves having a 300 psig (2070 kPa) cold working pressure (CWP).
 - b. Body Material:
 - 1) Provide valves having bodies fabricated from ductile iron complying with the requirements specified in ASTM A 536.
 - c. Seals:
 - 1) Provide valves having ethylene propylene copolymer rubber (EPDM) seals.
 - d. Discs:
 - 1) Provide valves having spring operated, ductile iron or stainless steel valve discs.
 - e. Manufacturers:
 - 1) Anvil International, Inc., <http://www.anvilintl.com>.
 - 2) Shurjoint Piping Products, <http://www.shurjoint.com>
 - 3) Tyco Fire Products LP; Grinnell Mechanical Products, <http://www.grinnell.com>.
 - 4) Victaulic Company, <http://www.victaulic.com>.
 - 5) Approved equal.

2.02 ACCESSORIES

A. Chain Wheels:

1. Provide a valve actuation assembly consisting of a sprocket rim, brackets, and a chain.
 - a. Brackets:
 - 1) Provide the type, number, and size of brackets and fasteners required to mount the actuator on the valve.
 - b. Attachment:
 - 1) Provide attachments for connection to ball and butterfly valve stems.
 - c. Sprocket Rim with Chain Guides:
 - 1) Provide ductile or cast iron sprocket rims with chain guides of the type and size required for the valve.
 - d. Chain:
 - 1) Provide hot-dip, galvanized steel chains of the size required to fit the sprocket rim.
 2. Manufacturers:
 - a. Babbitt Steam Specialty Co., <http://www.babbittsteam.com>.
 - b. Roto Hammer Industries, <http://www.rotohammerinc.com>.
 - c. Trumbull Industries, <http://www.trumbull.com>.
 - d. Approved equal.
- B. Valve Tags and Schedules:
1. For valve tags and schedules, provide tags and schedules complying with the requirements specified in Section 15075, Mechanical Identification.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
1. Make a thorough examination of the areas to receive the Work of this Section to verify there are ready for the installation of the general purpose valves.
- B. Evaluation and Assessment:
1. Prior to installing the general purpose valves, notify the Program/Project Manager in writing of defects discovered which could affect the satisfactory completion of the Work of this Section.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
1. Protect adjacent areas from damage resulting from installation of the general purpose valves.
- B. Demolition / Removal:
1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Locate valves to permit easy access, and provide separate support for the valves where necessary.
- B. Install valves in horizontal piping with their stems at or above the center of the pipe.
- C. Install valves in a position allowing for full stem movement.
- D. Swing Check Valves:
 - 1. Install swing check valves in the horizontal position, with hinge pin level and aligned for the proper direction of flow.
- E. Special Techniques:
 - 1. Chain Wheels:
 - a. For ball and butterfly valves having a nominal pipe size 4 inches [NPS 4 (DN 100)] and larger and more than 96 inches (2400mm) above the floor, provide chain wheels on the valve operators.
 - 1) Extend the chains to 60 inches (1520mm) above the finished floor.
- F. Systems Integration:
 - 1. At each piece of equipment, provide valves having unions or flanges; and arranged to allow service, maintenance, and equipment removal without the need to shut down the system.

3.04 REPAIR/RESTORATION

- A. Do not attempt to repair defective valves; replace defective valves with new valves.

3.05 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. Inspections:
 - a. Examine each valve interior for cleanliness, freedom from foreign matter, and corrosion.
 - b. Operate the valves in positions ranging from fully open to fully closed.
 - 1) Examine the guides and seats made accessible by such operations.
 - c. Examine the connections on the valve and mating pipe for form and cleanliness.
 - d. Examine mating flange faces for conditions that might cause leakage.
 - 1) Check the bolting for proper size, length, and material.
 - 2) Verify that the gasket is the proper size, that its material composition is suitable for service, and that it is free from defects and damage.

- B. Non-Conforming Work
 - 1. Replace valves if persistent leaking occurs.

3.06 SYSTEM STARTUP

- A. Commissioning:
 - 1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping system, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

3.07 ADJUSTING

- A. Adjust or replace valve packing after the piping systems have been tested and put into service, but before final adjusting and balancing.

3.08 CLEANING

- A. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.09 PROTECTION

- A. Take steps to insure that installed general purpose valves are protected during subsequent construction activities.

3.10 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Furnish operation and maintenance data for the general purpose valves for inclusion in emergency manuals and Operation and Maintenance Manuals as specified in Section 01780, Closeout Submittals.
 - 2. Submit the operation and maintenance data for the general purpose valves to the Program/Project Manager for information.

SECTION 15122

EXPANSION FITTINGS AND LOOPS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following types of expansion fittings and loops:
 - a. Flexible-hose packless expansion joints.
 - b. Grooved-joint expansion joints.
 - c. Alignment guides and anchors.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01732 - Cutting and Patching.
 - 4. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. EPDM: Ethylene propylene diene terpolymer M-class rubber.
- B. Reference Standards:
 - 1. American Society of Mechanical Engineers (ASME):
 - a. ASME B18.10 - Track Bolts and Nuts.
 - b. ASME B31.9 - Building Services Piping.
 - c. ASME BPVC-IX - ASME Boiler and Pressure Vessel Code - Section IX: Welding and Brazing Qualifications.
 - 2. ASTM International (ASTM):
 - a. ASTM A 36/A 36M - Standard Specification for Carbon Structural Steel.
 - b. ASTM A 53/A 53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
 - c. ASTM A 183 – Standard Specification for Carbon Steel Track Bolts and Nuts.
 - d. ASTM A 307 – Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength.
 - e. ASTM C 881/C 881M – Standard Specification for Epoxy-Resin-Base Bonding Systems for Concrete.
 - f. ASTM F 844 – Standard Specification for Washers, Steel, Plain (Flat), Unhardened for General Use.
 - 3. American Water Works Association (AWWA):
 - a. ANSI/AWWA C606 – AWWA Standard for Grooved and Shouldered Joints.

4. American Welding Society (AWS):
 - a. AWS D1.1/D1.1M - Structural Welding Code - Steel.
5. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
6. The Expansion Joint Manufacturers Association, Inc. (EJMA):
 - a. EJMA Standards.
7. Fluid Sealing Association (FSA):
 - a. FSA-NMEJ-702 – Rubber Flanged Non-Metallic Expansion Joint Installation, Maintenance and Storage.
8. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
9. Manufacturers Standardization Society (MSS):
 - a. ANSI/MSS SP-69 - ANSI/MSS Edition Pipe Hangers and Supports – Selection and Application.

1.03 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Flexible-Hose packless expansion joints.
 - 2) Grooved-joint expansion joints.
 - 3) Alignment guides.
 - 4) Anchors.
 - b. Shop Drawings:
 - 1) Anchor details.
 - 2) Alignment guide details.
 - c. Certificates:
 - 1) Mechanical expansion joint manufacturer's Certificates of Compliance.
 - d. Delegated Design Submittals:
 - 1) Calculations for thermal expansion of the piping systems, and as required for selecting and designing the expansion joints, loops, and swing connections.
 - e. Qualification Statements:
 - 1) Welding procedure specifications (WPS) test records.
 - 2) Welding Certificates.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:

- 1) Fastener manufacturer's written installation instructions.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Maintenance data for the expansion joints.

1.04 QUALITY ASSURANCE

A. Qualifications:

1. Welding Qualifications:

- a. Welding Procedure Specifications (WPS):
 - 1) Prior to beginning work that requires welding, submit the pre-qualifying welding procedures to the Program/Project Manager for approval.
 - 2) For all procedures, other than those set forth in AWS D1.1/D1.1M and ASME BPVC-IX, submit a copy of the welding procedure specifications (WPS) test records to the Program/Project Manager for approval.
- b. Welders' Qualifications:
 - 1) Prior to beginning work that requires welding, submit the procedures to be used for pre-qualifying welders to the Program/Project Manager for approval.
 - 2) Only use welders, tackers, and welding operators demonstrating they are qualified to perform the types of work required by having passed the qualification tests prescribed for the procedures in AWS D1.1/D1.1M and ASME BPVC-IX.
 - 3) Submit Welding Certificates certifying the welders employed to fabricate and to erect the Work of this Section have been certified by the American Welding Society (AWS) within the previous 12 months to the Program/Project Manager for approval.
 - a) Include certified copies of qualification test records and photographic identification indicating each welder, welding operator, and tacker employed to perform the Work has satisfactorily passed the AWS qualification tests for the required welding procedures and, if pertinent, has undergone recertification.

B. Certifications:

1. Manufacturer's Certificates of Compliance:

- a. For each type of mechanical expansion joint, submit Manufacturer's Certificates of Compliance wherein the manufacturer of these items certifies that they comply with the specified requirements, to the Program/Project Manager for approval.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Coordinate delivery to the Site of anchorages, setting drawings, diagrams, templates, instructions, and directions for installing anchorages.
 - 2. Ensure materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.
- B. Storage and Handling Requirements:
 - 1. Protect fastener products from dirt and corrosion by placing them in closed containers.
 - a. Store fastener products in a protected shelter, remove fastener components only as necessary, and promptly return unused fasteners to protected storage.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 EXPANSION FITTING AND LOOP ASSEMBLIES

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- C. Performance:
 - 1. Compatibility:
 - a. Provide products suitable for the piping's service fluids, materials, working pressures, and temperatures.
 - 2. Capability:

- a. Provide products capable of absorbing 200 percent of the maximum axial movement between anchors.
- D. Design Criteria:
 - 1. Product Data:
 - a. Obtain the manufacturer's Product Data for each type of product proposed for the Work of this Section.
 - 1) Prepare an Expansion Fittings and Loops Schedule that indicates the type, manufacturer's number, size, material, pressure rating, end connections, and location for each expansion joint.
 - b. Submit the Product Data to the Program/Project Manager for approval.
 - 2. Shop Drawings:
 - a. For each anchor and alignment guide, prepare Shop Drawings that include the following information:
 - 1) Anchor Details:
 - a) Detail the fabrication of each anchor indicated.
 - b) Show the dimensions and methods of assembly and attachment to the building structure.
 - 2) Alignment Guide Details:
 - a) Detail field assembly and attachment to the building structure.
 - b. Submit the Shop Drawings to the Program/Project Manager for approval.
 - 3. Calculations:
 - a. Calculate the thermal expansion requirements of the piping systems, and perform the design calculations required for selecting and designing the expansion joints, loops, and swing connections.
 - 1) For each anchor and alignment guide, prepare calculations required for the anchors and alignment guides to comply with the specified performance requirements and design criteria including analysis data signed and sealed by the qualified Professional Engineer responsible for performing the calculations.
 - b. Submit the calculations to the Program/Project Manager for approval.
- E. Materials:
 - 1. Packless Expansion Joints:
 - a. Flexible-Hose Packless Expansion Joints:
 - 1) Provide manufactured flexible-hose packless expansion joint assemblies having inlet and outlet elbow fittings, and 2 flexible-metal-hose legs joined by a long-radius, 180-degree return bend or a center section of flexible hose.
 - 2) Flexible Hose:
 - a) Provide corrugated-metal inner hoses and braided outer sheaths.
 - 3) Expansion Joints for Copper Tubing:

- a) For copper tubing having nominal pipe sizes of 2 inches (DN 50) and smaller, provide copper-alloy fittings with solder-joint end connections, and bronze hoses rated for 450 psig at 70 degrees Fahrenheit (3100kPa at 21 degrees Celsius) with single-braid bronze sheaths rated for 340 psig at 450 degrees Fahrenheit (2340kPa at 232 degrees Celsius).
 - 4) Expansion Joints for Steel Piping:
 - a) For steel piping having nominal pipe sizes of 2-1/2 inches (DN 65) to 6 inches (DN 150), provide expansion joints having carbon-steel fittings with grooved end connections.
 - b) Provide stainless-steel hoses and double-braid, stainless-steel sheaths rated for 275 psig (1900kPa) at 70 degrees Fahrenheit (21 degrees Celsius) and for 200 psig (1380kPa) at 600 degrees Fahrenheit at 315 degrees Celsius) ratings.
 - 5) Manufacturers:
 - a) Flex-Hose Co., Inc., <http://www.flexhose.com>.
 - b) Flexicraft Industries, <http://www.flexicraft.com>.
 - c) Flex-Pression Limited, <http://www.flexpression.com>.
 - d) Metraflex, Inc., <http://www.metraflex.com/index.php>.
 - e) Approved equal.
2. Grooved-Joint Expansion Joints:
 - a. Provide factory-assembled grooved-joint expansion joints consisting of several grooved-end pipe nipples, couplings, and grooved joints complying with the requirements for grooved joints specified in ANSI/AWWA C606.
 - b. Nipples:
 - 1) Provide galvanized pipe nipples with grooved ends complying with the requirements for Schedule 40, Type E or S, steel pipe specified in ASTM A 53/A 53M.
 - c. Couplings
 - 1) For each expansion joint, provide a minimum of 7 flexible type couplings sized for the steel-pipe dimensions.
 - a) Provide ferrous housing sections, ethylene propylene diene terpolymer M-class rubber (EPDM) gaskets suitable for cold and hot water, and bolts and nuts.
 - d. Manufacturers:
 - 1) Anvil International, Inc., a subsidiary of Mueller Water Products, Inc., <http://www.anvilintl.com>.
 - 2) Shurjoint Piping Products, <http://www.shurjoint.com/eng/>.
 - 3) Victaulic Company of America, <http://www.victaulic.com>.
 - 4) Approved equal.
3. Alignment Guides and Anchors:
 - a. Alignment Guides:
 - 1) Provide steel, factory-fabricated alignment guides consisting of a bolted two-section outer cylinder and base for attaching the

- alignment guides to the structure, and a two-section guiding spider for bolting the alignment guides to the pipe.
- 2) Manufacturers:
 - a) Advanced Thermal Systems, Inc., <http://www.advancedthermal.net>.
 - b) Flex-Hose Co., Inc., <http://www.flexhose.com>.
 - c) Flexicraft Industries, <http://www.flexicraft.com>.
 - d) Flex-Weld, Inc., <http://www.flex-weld.com>.
 - e) Hyspan Precision Products, Inc., <http://www.hyspan.com>
 - f) Metraflex, Inc., <http://www.metraflex.com/index.php>.
 - g) Approved equal.
 - b. Anchor Materials:
 - 1) Steel Shapes and Plates:
 - a) Provide steel shapes and plates complying with the requirements specified in ASTM A 36/A 36M.
 - 2) Bolts and Nuts:
 - a) Provide steel hex head bolts and nuts complying with the requirements specified in ASME B18.10 or ASTM A 183.
 - 3) Washers:
 - a) Provide plain, flat steel washers complying with the requirements specified in ASTM F 844.
 - 4) Mechanical Fasteners:
 - a) Provide expansion plug anchors designed for use in hardened Portland cement concrete, that have insert-wedge-type studs, and that have tension and shear capacities appropriate for the application.
 - (1) Studs:
 - (a) Provide threaded, zinc-coated carbon steel studs.
 - (2) Expansion Plugs:
 - (a) Provide zinc-coated steel expansion plugs.
 - (3) Washers and Nuts:
 - (a) Provide zinc-coated steel washers and nuts.
 - 5) Chemical Fasteners:
 - a) Provide chemical bonding-system type anchors designed for use in hardened Portland cement concrete, that have insert-type studs, and that have tension and shear capacities appropriate for the application.
 - (1) Bonding Material:
 - (a) Provide bonding material complying with the requirements for Type IV, Grade 3, two-component epoxy resin specified in ASTM C 881/C 881M, and that is suitable for the surface temperature of the hardened concrete where the fastener is to be installed.
 - (2) Studs:

- (a) Provide zinc-coated carbon steel studs complying with the requirements specified in ASTM A 307, and having a continuous thread unless otherwise indicated in the Contract Documents.
 - (3) Washers and Nuts:
 - (a) Provide zinc-coated steel washers and nuts.
- F. Shop Fabrication:
- 1. Fabricate steel anchors by welding steel shapes, plates, and bars in accordance with the requirements specified in ASME B31.9 and AWS D1.1/D1.1M.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Examine the elements and surfaces to receive expansion fittings and loops for compliance with the required clearances and other conditions affecting performance of the Work.
- B. Evaluation and Assessment:
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the expansion fittings and loops.
- B. Surface Preparation:
 - 1. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.
- C. Demolition/Removal:
 - 1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Expansion Joints:
 - 1. Provide expansion joints sized to match the size of the piping in which the expansion joint is installed.
 - 2. Packed-Type Expansion Joints:
 - a. Install packed-type expansion joints having packing suitable for the fluid service.

3. Metal-Bellows Expansion Joints:
 - a. Install metal-bellows expansion joints in accordance with the requirements specified in the EJMA Standards.
 4. Rubber Packless Expansion Joints:
 - a. Install rubber packless expansion joints in accordance with the requirements specified in FSA-NMEJ-702.
 5. Grooved-Joint Expansion Joints:
 - a. Install grooved-joint expansion joints to grooved-end steel piping.
- B. Pipe Loops and Swing Connections:
1. Install pipe loops cold-sprung in tension or compression as required to partly absorb the tension or compression produced during the anticipated change in temperature.
 2. Connect the risers and branch connections to the mains with at least 5 pipe fittings, including the tee in the main.
 3. Connect the risers and branch connections to the terminal units with at least 4 pipe fittings, including the tee in the riser.
 4. Connect the mains and branch connections to the terminal units with at least 4 pipe fittings, including the tee in the main.
- C. Alignment Guides and Anchors:
1. To guide expansion and to avoid end-loading and torsional stresses, provide alignment guides.
 2. Provide 2 alignment guides on each side of pipe expansion fittings and loops.
 - a. Install the alignment guides nearest to the expansion joint not more than 4 pipe diameters from the expansion joint.
 3. Attach alignment guides to the pipe, and secure the guides to building structure.
 4. Locate anchors so stresses exceeding those permitted by ASME B31.9 will be prevented, and so loading and stresses will not be transferred to the connected equipment.
 5. Anchor Attachments:
 - a. Anchor Attachment to Steel Pipe:
 - 1) Weld anchors to steel pipe in accordance with the requirements specified in ASME B31.9 and ASME BPVC-IX.
 - b. Anchor Attachment to Copper Tubing:
 - 1) Attach anchors to copper tubing using pipe hangers that are bolted to the anchor, and U-bolts complying with the requirements for Type 24 U-bolts specified in ANSI/MSS SP-69.
- D. Interface with Other Work:
1. Anchor Attachments:
 - a. Anchor Attachment to Steel Structural Members:

- 1) Attach anchors to steel structural members by welding in accordance with the requirements specified in ASME B31.9 and AWS D1.1/D1.1M.
- b. Anchor Attachment to Concrete Structural Members:
 - 1) Attach anchors to concrete structural members using fasteners.
 - a) Comply with the fastener manufacturer's installation instructions.
 - (1) Submit the fastener manufacturer's written installation instructions to the Program/Project Manager for information.

3.04 CLEANING

- A. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.05 PROTECTION

- A. Protect installed expansion fittings and loops during the remainder of the construction period to prevent damage from other construction work.

3.06 MAINTENANCE

- A. Submit maintenance data for the expansion joints for inclusion in Operation and Maintenance Manuals to the Program/Project Manager.

SECTION 15128

METERS AND GAGES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for meters and gages, including the following:
 - a. Bimetallic-actuated thermometers.
 - b. Liquid-in-glass thermometers.
 - c. Dial-type pressure gages.
 - d. Gage attachments.
 - e. Sight flow indicators.
 - f. Test plugs.
 - g. Test-plug kits.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 01810 - Commissioning.
 - 5. Section 15995 - Commissioning of Mechanical Systems.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. EPDM: Ethylene propylene diene terpolymer M-class rubber.
- B. Reference Standards:
 - 1. American Society of Mechanical Engineers (ASME):
 - a. ASME B1.1 – Unified Inch Screw Threads, (UN and UNR Thread Form).
 - b. ASME B1.20.1 – Pipe Threads, General Purpose (Inch)
 - c. ASME B40.100 – Pressure Gauges and Gauge Attachments.
 - d. ASME B40.200 – Thermometers, Direct Reading and Remote Reading.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate the layout and installation of the meters and gages with other construction including conduit, piping, equipment, and adjacent surfaces.
 - a. Maintain the required workspace clearances and required clearances for equipment access doors and panels.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Bimetallic-actuated thermometers.
 - 2) Metal-case, compact-style, liquid-in-glass thermometers.
 - 3) Metal-case, industrial-style, liquid-in-glass thermometers.
 - 4) Duct-thermometer mounting brackets.
 - 5) Thermowells.
 - 6) Pressure gages.
 - 7) Snubbers.
 - 8) Siphons.
 - 9) Ball valves.
 - 10) Test plugs.
 - 11) Test-plug kit.
 - 12) Sight flow indicators.
 - b. Shop Drawings:
 - 1) Wiring diagrams for power, signal, and control wiring.
 - c. Certificates:
 - 1) Manufacturer's Certificates of Compliance for each type of meter and gage.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Meter manufacturer's written installation instructions.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the meters and gages provided under this Section.

1.05 QUALITY ASSURANCE

A. Certifications:

1. Manufacturer's Certificates of Compliance:
 - a. For each type of meter and gage, submit Manufacturer's Certificates of Compliance wherein the manufacturer of these items certifies that

they comply with the specified requirements, to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Ensure materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.
 - 2. Inspect materials and equipment for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.
- B. Storage and Handling Requirements:
 - 1. Store the meters and gages indoors in a clean, dry space having a uniform temperature to prevent condensation.
 - 2. Protect the meters and gages from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 METERS AND GAGES

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- C. Performance:
 - 1. Accuracy:
 - a. Thermometers:

- 1) Bimetallic-Actuated Thermometers:
 - a) Provide bimetallic-actuated thermometers accurate to plus or minus 1 percent of the scale range.
 - 2) Metal-Case, Liquid-in-Glass Thermometers:
 - a) Provide metal-case, compact-style, liquid-in-glass thermometers accurate to plus or minus 1 percent of the scale range or one scale division, but not inaccurate to more than 1.5 percent of the scale range.
 - b. Pressure Gages:
 - 1) Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:
 - a) Provide direct-mounted, metal-case, dial-type pressure gages having Grade A accuracy, and accurate to plus or minus 1 percent of the middle half of the scale range.
- D. Design Criteria:
1. Install meters and gages adjacent to machines and equipment to allow service and maintenance of the meters, gages, machines, and equipment.
 2. Thermometers:
 - a. Thermometer Scale-Range Schedule:
 - 1) Chilled-Water Piping:
 - a) Provide thermometers for chilled-water piping having a scale range of 0 degrees Fahrenheit to 100 degrees Fahrenheit (Minus 20 degrees Celsius to plus 50 degrees Celsius).
 - 2) Air Ducts:
 - a) Provide thermometers for air ducts having a scale range of 0 degrees Fahrenheit to 150 degrees Fahrenheit (Minus 20 degrees Celsius to plus 70 degrees Celsius).
 - b. Install thermometers in the following locations:
 - 1) On the inlet and outlet of each hydronic zone.
 - 2) On the inlet and outlet of each hydronic coil in air-handling units.
 - 3) On the 2 inlets and 2 outlets of each hydronic heat exchanger.
 - 4) On the outside-air, return-air, supply-air, and mixed-air ducts.
 3. Pressure Gages:
 - a. Pressure Gage Scale-Range Schedule:
 - 1) Chilled-Water Piping:
 - a) Provide pressure gages for chilled-water piping having a scale range of 0 psi to 100 psi (0kPa to 600kPa).
 - b. Install pressure gages on the suction and discharge of each pump.
 4. Product Data:
 - a. Obtain Product Data for each type of product proposed for the Work of this Section.
 - b. Submit the Product Data to the Program/Project Manager for approval.
 5. Shop Drawings:
 - a. Prepare wiring diagrams for the power, signal, and control wiring to the meters and gages provided under this Section.

- b. Submit the wiring diagrams to the Program/Project Manager for approval.

E. Materials:

1. Bimetallic-Actuated Thermometers:

- a. Provide bimetallic-actuated thermometers complying with the requirements specified in ASME B40.200, and having the following features:
 - 1) Cases:
 - a) Provide liquid-filled and sealed type; stainless steel thermometer cases having a 5-inch (127mm) nominal diameter for the thermometers.
 - 2) Dials:
 - a) Provide non-reflective aluminum thermometer dials having scale markings and scales in degrees Fahrenheit and degrees Celsius permanently etched on the dials.
 - 3) Connectors:
 - a) Provide 1/2-inch (13mm) union joint, adjustable angle, rigid back and rigid bottom type thermometer connectors having unified-inch screw threads that comply with the requirements specified in ASME B1.1.
 - 4) Stems:
 - a) Provide 0.25-inch (6.4mm) or 0.375-inch (9.4mm) diameter stainless steel thermometer stems.
 - 5) Windows:
 - a) Provide plain glass thermometer windows.
 - 6) Rings:
 - a) Provide stainless steel thermometer rings.
 - 7) Element:
 - a) Provide bimetal thermometer coils.
 - 8) Pointers:
 - a) Provide dark-colored metal thermometer pointers.
 - b. Manufacturers:
 - 1) Ashcroft, Inc., <http://www.ashcroft.com>.
 - 2) H. O. Trerice Company, <http://www.trerice.com>.
 - 3) Watts Regulator Co., a Division of Watts Water Technologies Company, <http://www.watts.com>.
 - 4) Weiss Instruments, <http://www.weissinstruments.com>.
 - 5) Approved equal.
2. Metal-Case, Liquid-in-Glass Thermometers:
- a. Compact-Style Thermometers:
 - 1) Provide metal-case, compact-style, liquid-in-glass thermometers complying with the requirements specified in ASME B40.200, and having the following features:
 - a) Cases:

- (1) Unless otherwise indicated in the Contract Documents, provide cast aluminum back angle thermometer cases, having a 6-inch (152mm) nominal size.
- b) Tubes and Tube Backgrounds:
 - (1) Provide glass thermometer tubes having magnifying lens and blue or red organic liquid for indicating the temperature.
 - (2) Provide non-reflective aluminum tube backgrounds having scale markings graduated in degrees Fahrenheit and degrees Celsius permanently etched on the background.
- c) Windows:
 - (1) Provide glass or plastic thermometer windows.
- d) Stems:
 - (1) Provide aluminum or brass stems of a length to suit the thermometer installation.
 - (a) For air-duct installations, provide stems having a ventilated shroud.
 - (b) For thermowell installations, provide bare stems.
- e) Connectors:
 - (1) Provide 3/4-inch (19mm) thermometer connectors having unified-inch screw threads that comply with the requirements specified in ASME B1.1.
- 2) Manufacturers:
 - a) H. O. Trerice Company, <http://www.trerice.com>.
 - b) Approved equal.
- b. Industrial-Style Thermometers:
 - 1) Provide metal-case, industrial-style, liquid-in-glass thermometers complying with the requirements specified in ASME B40.200, and having the following features:
 - a) Case:
 - (1) Unless otherwise indicated in the Contract Documents, provide cast aluminum adjustable angle thermometer cases, having a 7-inch (178mm) nominal size.
 - b) Tubes and Tube Backgrounds:
 - (1) Provide glass thermometer tubes having magnifying lens and blue or red organic liquid for indicating the temperature.
 - (2) Provide non-reflective aluminum tube backgrounds having scale markings graduated in degrees Fahrenheit and degrees Celsius permanently etched on the background.
 - c) Windows:
 - (1) Provide glass thermometer windows.
 - d) Stems:
 - (1) Provide aluminum stems of a length to suit the thermometer installation.

- (a) For air-duct installations, provide stems having a ventilated shroud.
 - (b) For thermowell installations, provide bare stems.
 - e) Connectors:
 - (1) Provide 1-1/4-inch (32mm) thermometer connectors having unified-inch screw threads that comply with the requirements specified in ASME B1.1.
 - 2) Manufacturers:
 - a) Flo-Fab, Inc., <http://www.flofab.com/NewWeb/newflo/main.asp>.
 - b) Palmer Wahl Instrumentation Group, <http://www.palmerwahl.com>.
 - c) Tel-Tru Manufacturing Company, <http://www.teltru.com>.
 - d) H. O. Trerice Company, <http://www.trerice.com>.
 - e) Weiss Instruments, <http://www.weissinstruments.com>.
 - f) Approved equal.
- 3. Duct-Thermometer Mounting Brackets:
 - a. Provide flanged duct-thermometer mounting brackets having screw holes for attachment to air ducts, and designed to hold a thermometer stem.
- 4. Thermowells:
 - a. Provide pressure-tight thermowells complying with the requirements specified in ASME B40.200, having a socket-type fitting designed for insertion into a piping tee fitting, and unless a straight or tapered shank is indicated in the Contract Documents having a stepped shank.
 - 1) For use with copper tubing, provide copper nickel 90-10 (ASME B40.200 designation CNR) thermowells, or copper nickel 70-30 (ASME B40.200 designation CUNI) thermowells.
 - 2) For use with steel piping, provide corrosion-resistant steel (ASME B40.200 designation CRES) thermowells, or steel (ASME B40.200 designation CSA) thermowells.
 - b. Provide thermowells having the following additional features:
 - 1) External Threads:
 - a) Provide external pipe threads complying with the requirements for 1/2 inch (DN 15), 3/4 inch (DN 20), or 1 inch (DN 25) nominal pipe size threads specified in ASME B1.20.1.
 - 2) Internal Threads:
 - a) Provide internal pipe threads having 1/2 inch (13mm), 3/4 inch (19mm), or 1 inch (25mm) screw threads complying with the requirements specified in ASME B1.1.
 - 3) Bore:
 - a) Provide the bore diameter required to match the thermometer bulb or stem.
 - 4) Insertion Length:

- a) Provide the insertion length required to match the thermometer bulb or stem.
 - 5) Lagging Extension:
 - a) For insulated piping and tubing, provide a lagging extension on the thermowells.
 - 6) Bushings:
 - a) Provide bushings for changing the size of the thermowell's internal screw threads to accommodate the size of the thermometer connection.
 - c. Heat-Transfer Medium:
 - 1) Provide a heat-transfer medium for the thermowells consisting of a mixture of graphite and glycerin.
- 5. Pressure Gages:
 - a. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:
 - 1) Provide direct-mounted, metal-case, dial-type pressure gages complying with the requirements specified in ASME B40.100, and having the following additional features:
 - a) Cases:
 - (1) Provide cast aluminum or drawn steel solid-front, pressure relief type cases having a 6-inch (152mm) nominal diameter.
 - b) Pressure-Element Assemblies:
 - (1) Unless otherwise indicated in the Contract Documents, provide bourdon tube pressure elements.
 - c) Pressure Connections:
 - (1) Unless back-outlet pressure connections are indicated in the Contract Documents, provide brass bottom-outlet type pressure connections having 1/4 inch nominal pipe size pipe threads (DN 8) complying with the requirements specified in ASME B1.20.1.
 - d) Movements:
 - (1) Provide mechanical movements having a link to the pressure element and a connection to the pointer.
 - e) Dials:
 - (1) Provide non-reflective aluminum pressure gage dials having scale markings and scales graduated in psi (kPa) permanently etched on the dials.
 - f) Pointers:
 - (1) Provide dark-colored metal pointers.
 - g) Windows:
 - (1) Provide glass pressure gage windows.
 - h) Rings:
 - (1) Provide stainless steel pressure gage rings.
 - 2) Manufacturers:
 - a) AMETEK, Inc., <http://www.ametek.com>.

- b) Ashcroft, Inc., <http://www.ashcroft.com>.
 - c) Ernst Flow Industries, <http://www.ernstflow.com>.
 - d) Flo-Fab, Inc.,
<http://www.flofab.com/NewWeb/newflo/main.asp>.
 - e) H. O. Trerice Company, <http://www.trerice.com>.
 - f) Watts Regulator Co., a Division of Watts Water Technologies Company, <http://www.watts.com>.
 - g) Weiss Instruments, <http://www.weissinstruments.com>.
 - h) Approved equal.
6. Gage Attachments:
- a. Snubbers:
 - 1) Provide brass snubbers complying with the requirements specified in ASME B40.100, and having 1/4 inch nominal pipe size (DN 8) pipe threads complying with the requirements specified in ASME B1.20.1 and a piston-type surge-dampening device.
 - 2) For snubbers used on insulated piping, provide extensions.
 - b. Siphons:
 - 1) Provide siphons consisting of a loop-shaped section of brass pipe with 1/4 inch nominal pipe size (DN 8) pipe threads complying with the requirements specified in ASME B1.20.1.
 - c. Ball Valves:
 - 1) Provide brass ball valves having 1/4 inch nominal pipe size (DN 8) pipe threads complying with the requirements specified in ASME B1.20.1.
7. Sight Flow Indicators:
- a. Provide inline sight flow indicators designed for visual verification of flow, and each having a bronze or stainless-steel body, a sight glass and ball, a flapper or paddle wheel indicator, and threaded or flanged ends.
 - b. Pressure Rating:
 - 1) Provide sight flow indicators having a pressure rating of at least 125 psig (860kPa).
 - c. Temperature Rating:
 - 1) Provide sight flow indicators having a temperature rating of at least 200 degrees Fahrenheit (93 degrees Celsius).
 - d. End Connections:
 - 1) For sight flow indicators having nominal pipe sizes of 2 inches (DN 50) and smaller, provide threaded end connections.
 - 2) For sight flow indicators having nominal pipe sizes of 2-1/2 inches (DN 65) and larger, provide flanged end connections.
 - e. Manufacturers:
 - 1) Archon Industries, Inc., <http://www.archonind.com>.
 - 2) Dwyer Instruments, Inc., <http://www.dwyer-inst.com>.
 - 3) Brooks Instrument, <http://www.brooksinstrument.com>.
 - 4) John C. Ernst Co., Inc., <http://www.johnernst.com>.

- 5) Ernst Flow Industries, <http://www.ernstflow.com>.
 - 6) KOBOLD Instruments, Inc. – USA, <http://www.koboldusa.com>.
 - 7) OPW Engineered Systems, a Dover company, <http://www.opwglobal.com/opw-es>.
 - 8) Penberthy, Tyco Flow Control, <http://www.emerson.com/en-us/automation/valves-actuators-regulators/penberthy>.
 - 9) Approved equal.
8. Test Plugs:
- a. Provide test-station fittings designed for insertion into a piping tee fitting, and having the following additional features:
 - 1) Body:
 - a) Provide brass or stainless steel test plug bodies having core inserts and a gasketed and threaded cap.
 - b) For test plugs used on insulated piping, provide extended stems.
 - 2) Thread Size:
 - a) Provide test plugs having 1/4 inch nominal pipe size (DN 8) pipe threads complying with the requirements specified in ASME B1.20.1.
 - 3) Pressure and Temperature Rating:
 - a) Provide test plugs rated for at least 500 psig at 200 degrees Fahrenheit (3450kPa at 93 degrees Celsius).
 - 4) Core Inserts:
 - a) Provide test plugs fabricated from chlorosulfonated polyethylene synthetic and ethylene propylene diene terpolymer M-class (EPDM) self-sealing rubber.
 - b. Manufacturers:
 - 1) Flow Design, Inc., <http://www.flowdesign.com>.
 - 2) Global Metering Systems, <http://www.globalmeter.com>.
 - 3) Peterson Equipment Co., Inc., <http://www.petesplug.com/about.html>.
 - 4) Sisco Manufacturing Company, Inc., <http://sisco.b2bdd.net/>.
 - 5) H. O. Trerice Company, <http://www.trerice.com>.
 - 6) Watts Regulator Co., a Division of Watts Water Technologies Company, <http://www.watts.com>.
 - 7) Weiss Instruments, <http://www.weissinstruments.com>.
 - 8) Approved equal.

2.02 ACCESSORIES

- A. Test-Plug Kit:
1. Furnish one test-plug kit containing 2 thermometers, 1 pressure gage and adapter, and a carrying case.
 - a. Furnish the thermometer sensing elements, pressure gage, and adapter probes having diameters that fit the test plugs, and having a length sufficient to project into the piping.

- b. Low-Range Thermometer:
 - 1) Furnish a small, bimetallic insertion type thermometer having a 1-inch (25mm) to 2-inch (51mm) diameter dial and a tapered-end sensing element.
 - 2) Furnish a thermometer having a dial range of at least 25 degrees Fahrenheit to 125 degrees Fahrenheit (minus 4 degrees Celsius to plus 52 degrees Celsius).
- c. High-Range Thermometer:
 - 1) Furnish a small, bimetallic insertion type thermometer having a 1-inch (25mm) to 2-inch (51mm) diameter dial and a tapered-end sensing element.
 - 2) Furnish a thermometer having a dial range of at least 0 degrees Fahrenheit to 220 degrees Fahrenheit (minus 18 degrees Celsius to plus 104 degrees Celsius).
- d. Pressure Gage:
 - 1) Furnish a small, bourdon-tube insertion type pressure gage having a 2-inch (51mm) to 3-inch (76mm) diameter dial and probe.
 - 2) Furnish a pressure gage having a dial range of at least 0 psig to 200 psig (0kPa to 1380kPa).
- e. Carrying Case:
 - 1) Furnish a metal or plastic carrying case having formed instrument padding.
- 2. Manufacturers:
 - a. Flow Design, Inc., <http://www.flowdesign.com>.
 - b. Global Metering Systems, <http://www.globalmeter.com>.
 - c. Peterson Equipment Co., Inc., <http://www.petesplug.com/about.html>.
 - d. Sisco Manufacturing Company, Inc., <http://www.siscomfg.com>.
 - e. H. O. Trerice Company, <http://www.trerice.com>.
 - f. Watts Regulator Co., a Division of Watts Water Technologies Company, <http://www.watts.com>.
 - g. Weiss Instruments, <http://www.weissinstruments.com>.
 - h. Approved equal.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Examine the elements and surfaces to receive meters and gages for compliance with the required clearances and other conditions affecting performance of the Work.
- B. Evaluation and Assessment:
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the meters and gages.

3.03 INSTALLATION

- A. Install permanent indicators in accessible and readable positions on walls or brackets.
- B. For attachment of portable indicators, install connection fittings in accessible locations
- C. Thermowells:
 - 1. Provide thermowells sized to match the thermometer connectors.
 - a. Provide bushings if required to match the thermometers to the connector sizes.
 - 2. Install each thermowell in vertical position in a piping tee, and so their socket extends a minimum of 2 inches (51mm) into the fluid.
 - 3. For thermowells to be installed on insulated piping, provide extensions.
 - 4. Fill the thermowells with heat-transfer medium.
- D. Thermometers:
 - 1. Install direct-mounted thermometers in the thermowells, and adjust the vertical and tilted positions.
 - 2. Attach duct-thermometer mounting brackets in the walls of ducts using screws.
- E. Pressure Gages:
 - 1. Locate the pressure gages on the piping at the most readable position, and install direct-mounted pressure gages in piping tees.
 - 2. Install remote-mounted pressure gages on panels.
 - 3. For each pressure gage for fluids except steam, install a valve and snubber in the piping.
 - 4. For each pressure gage for steam, install a valve and syphon fitting in the piping.
- F. Test Plugs:
 - 1. Install test plugs in piping tees.

3.04 SYSTEM STARTUP

- A. Commissioning:
 - 1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping systems, equipment

sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

3.05 ADJUSTING

- A. After installing meters, calibrate the meters in accordance with the meter manufacturer's installation instructions.
 - 1. Submit the meter manufacturer's written installation instructions to the Program/Project Manager for information.
- B. Adjust the faces of meters and gages to the proper angle for best visibility.

3.06 CLEANING

- A. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 PROTECTION

- A. Protect installed meters and gages during the remainder of the construction period to prevent damage to the meters and gages from other construction work.

3.08 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Submit operation and maintenance data for the meters and gages provided under this Section to the Program/Project Manager for inclusion in Operation and Maintenance Manuals.

SECTION 15131

PLUMBING PUMPS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Materials
 - 2. Domestic Hot Water Circulating Pumps and Controls
- B. Related Sections:
 - 1. Basic Mechanical Materials and Methods: Section 15050.
 - 2. Hangers and Supports: Section 15060.
 - 3. Mechanical Identification: Section 15075
 - 4. Mechanical Insulation: Section 15080.
 - 5. Domestic Water Piping: Section 15140
 - 6. Sanitary Waste and Vent: Section 15150
 - 7. Electrical Power and Coordination: Division 16.

1.02 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM A 48, Specification for Gray Iron Castings.
- B. American Society of Mechanical Engineers (ASME) Pressure Vessel Code and Interpretations shall govern the quality and performance of certain Products as specified herein.
- C. Underwriters' Laboratories, Inc. (UL): Listings and Labels shall govern the quality and performance of certain Products as specified herein.

1.03 WARRANTY

- A. Provide manufacturer's warranty under provisions of Division 1 for pumps and motors.

1.04 MAINTENANCE

- A. Furnish complete service and maintenance pumps for one year from Date of Substantial Completion. Submit copy of service call work order or report, and include description of work performed.

1.05 SUBMITTALS

- A. Section 01330: Submittal Procedures: Submittal procedures.

- B. Product Data:
 - 1. Clearly mark the products and accessories being submitted.
 - 2. Submittals shall clearly indicate compliance with the “Reduction of Lead in Drinking Water Act” 2011
- C. Product Data: Submit product data for but not limited to the following items:
 - 1. Domestic hot Water Circulating Pumps
 - 2. Pump Specialties
- D. Plumbing Specialties: Submit manufacturers catalog information with sizes, capacities, rough-in requirements, service sizes and finishes
- E. Pumps: Include capacities, pump curves, equipment performance and electrical characteristics.
- F. Balancing Report: Include final balancing, adjusting and testing report as part of the Submittals in Section 15050.
- G. [Certificates: Buy America Act Certification.]

1.06 CLOSEOUT SUBMITTALS

- A. Section 01700 – Execution Requirements: Requirements for submittals
- B. Operation and Maintenance Data:
 - 1. Manufacturers of the products specified herein shall include complete instructions with their products giving directions for replacing renewable parts of their products as well as instructions for cleaning the finished surfaces of such products.
 - 2. Include above stated data as part of the submittals of Section 01700 and 15050.

1.07 QUALITY ASSURANCE

- A. Perform Work in accordance with **Phoenix** standard codes.
- B. Perform Work in accordance with **State Municipality of** <_____>
- C. Regulatory Agency Sustainability Approvals:]
- D. [Buy America Act:
 - 1. Except for those products which are exempt under the specific statutory waivers stipulated in 49 CFR 661, all other products supplied under this Section must comply with the requirements of the Buy America Act.]

- E. [Certifications: Buy America Act Certification; Provide written certification that the products provided under this Section meet the requirements of 49 CFR 661 Buy America Act.]

1.08 DELIVERY, STORAGE AND HANDLING

- A. Section 01600 – Product Requirements: Requirements for transporting, handling, storing and protecting products.
- B. Prepare pumps and accessories for shipment to prevent entry of foreign matter into product body.
- C. Store products in areas protected from weather, moisture, or possible damage; do not store products directly on ground; handle products to prevent damage to interior or exterior surfaces

1.09 COORDINATION

- A. Section 01300-Administrative Requirements: Requirements for coordination.

1.10 BASIS OF DESIGN AND ACCEPTABLE MANUFACTURERS

- A. Where a specific manufacturer or product is identified as the Basis of Design or listed first in a list of acceptable manufacturers, the overall project design is based on the identified manufacturer or product. If the Contractor elects to utilize a manufacturer or product which differs from the identified Basis of Design, the Contractor shall bear all efforts and costs of any design changes necessary in order to achieve finished work which is equal in character, performance, and quality to the original design depicted in the Contract Documents. Such changes shall include, but not necessarily be limited to: changes to ratings and/or features of other equipment, changes to material sizes and/or types, new material and/or equipment, and changes to structural and/or architectural features (including room sizes). Approval by the Engineer of a proposed item shall not relieve the Contractor of this responsibility.
- B. The listing of specific manufacturers is solely intended to identify reputable manufacturers who are known to provide quality products of the general type specified. Such listing is in no way intended to imply that the identified manufacturer's product(s) have been verified to satisfy the specified requirements, or to be equivalent to any identified Basis of Design manufacturer. Nor does such a listing imply acceptance of products which do not meet the specified requirements, ratings, features, dimensions, and functions as indicated.

PART 2 PRODUCTS

2.01 DOMESTIC HOT WATER CIRCULATING PUMPS

- A. Acceptable Manufacturers:
 - 1. Taco, Inc.; Model 003; [Model 005]
 - 2. Armstrong Pumps; S Series
 - 3. ITT Bell & Gossett; Series PL
- B. Domestic Hot Water Circulating Pump:
 - 1. Pump Design: UL Listed, direct drive, in-line, horizontal, self-lubricating, stainless steel body [lead-free bronze], stainless steel cartridge, EPDM – chlorine resistant O-rings and gaskets; sweat, threaded or union connections, 125 psi maximum operating pressure and 220°F maximum operating temperature.
 - 2. Shaft: Ceramic [alloy steel-copper].
 - 3. Impeller: Non-metallic.
 - 4. Pump Bearings: Carbon [oil lubricated sleeve].
 - 5. Motor: Permanent split capacitor, impedance protected, built-in thermal overload protection.

2.02 DOMESTIC HOT WATER CIRCULATING PUMPS - CONTROLS

- A. Acceptable Manufacturers:
 - 1. Taco, Inc.; Model #265-3
 - 2. Armstrong Pumps
 - 3. ITT Bell & Gossett
- B. Time clock: UL Listed; 7-day digital programmable timer, LCD readout, maximum 10 on/off settings, 100-hour capacitor back-up for power outages.
- C. Acceptable Manufacturers:
 - 1. Taco, Inc.; Model #563-2
 - 2. Honeywell; Model L4006
 - 3. ITT Bell & Gossett
- D. Aquastat: UL Listed; designed to main system temperatures between 95°F and 115°F, SPDT switch, 5°F fixed differential at mid-scale, pipe mounted.
- E. Acceptable Manufacturers (FOR USE WITH EMERGENCY FIXTURES):
 - 1. Honeywell; Model L6006C
- F. Aquastat: UL Listed; totally enclosed, designed to main system temperatures between 95°F and 115°F, SPDT switch, 5°F fixed differential at mid-scale, pipe mounted.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Section 01300-Administrative Requirements: Verification of existing conditions before starting work.
- B. Verify connections, size, and location are as indicated on Drawings.

3.02 PERFORMANCE

- A. Installation Instructions: Install those Products, as specified previously under PART 2 and not specifically covered for installation herein under PART 3, in strict accordance with manufacturer's installation instructions and at locations indicated on the Drawings.
- B. Equipment support and anchoring as specified in Section 15060.
- C. Electrical Interface: As specified in Section 15050.
- D. Equipment Start-Up: Perform equipment start-up and ensure its proper operation prior to acceptance of Work by the Engineer.

3.03 INSTALLATION

- A. Install pumps in accordance with drawings and manufacturer's instruction.
- B. Provide pumps to operate at specified system fluid temperatures without vapor binding and cavitation.
- C. Provide necessary piping, fittings, and valves as indicated on drawings.

3.04 INSTALLATION IN-LINE PUMPS

- A. Provide line sized ball valves, strainer and union on pump suction. Provide line sized ball valves, check valve and union on pump discharge. Where valves are included as an integral part of a packaged system omit valve installation.
- B. Refer to pump details for specific valves and piping accessories

3.05 FIELD QUALITY CONTROL

- A. Section 01700 – Execution Requirements: Field inspecting, testing, adjusting and balancing.
- B. Upon completion of installation, examine, adjust and test each pump for proper operation

SECTION 15140

DOMESTIC WATER PIPING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Requirements for domestic water piping inside buildings.

B. Related Requirements:

1. Section 01330 - Submittal Procedures.
2. Section 01732 - Cutting and Patching.
3. Section 01780 - Closeout Submittals.
4. Section 01810 - Commissioning.
5. Section 02316 - Trenching and Backfilling.
6. Section 15050 - Basic Mechanical Materials and Methods.
7. Section 15060 - Hangers and Supports.
8. Section 15145 - Domestic Water Piping Specialties.
9. Section 15410 - Plumbing Fixtures.
10. Section 15995 - Commissioning of Mechanical Systems.

1.02 REFERENCES

A. Abbreviations and Acronyms:

1. HVAC: Heating, Ventilating, and Air-Conditioning.
2. NPS: Nominal Pipe Size.
 - a. DN: Diamètre nominal (European Equivalent).

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.

C. Reference Standards:

1. American Society of Civil Engineers (ASCE):
 - a. ASCE/SEI 7 - Minimum Design Loads for Buildings and Other Structures.
2. American Society of Mechanical Engineers (ASME):
 - a. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings.
 - b. ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.

- c. ASME B16.24 - Cast Copper Alloy Pipe Flanges and Flanged Fittings.
- 3. ASTM International (ASTM):
 - a. ASTM B 88 - Standard Specification for Seamless Copper Water Tube.
 - b. ASTM B 88M - Standard Specification for Seamless Copper Water Tube (Metric).
- 4. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 5. Copper Development Association Inc. (CDA)
 - a. CDA A4015 - The Copper Tube Handbook.
- 6. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
- 7. Manufacturers Standardization Society (MSS):
 - a. MSS SP-69 - ANSI/MSS Edition Pipe Hangers and Supports – Selection and Application.
 - b. MSS SP-123 - Non-Ferrous Threaded and Solder-Joints Unions for Use With Copper Water Tube.
- 8. National Sanitation Foundation (NSF):
 - a. NSF 61 - Drinking Water System Components - Health Effects.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

- 1. Coordination Drawings:
 - a. Prepare and submit Coordination Drawings to the Program/Project Manager for approval.
 - 1) Show the following items for this Contract drawn to scale, and coordinate them with each other:
 - a) HVAC, plumbing, and fire suppression items.
 - b) Conduit routing plans.
 - c) Structural members.

1.04 SUBMITTALS

A. Action Submittals:

- 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Hard copper tube and fittings.
 - 2) Soft copper tube and fittings.

- 3) Transition couplings.
 - b. Shop Drawings:
 - 1) Coordination Drawings.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Leak Test Reports.
 - 2) Inspection Reports.
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Record Documentation:
 - 1) As-built drawings of the domestic water system.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Phoenix Building Construction Code:
 - a. Obtain approval of the Work of this Section from the Authorities Having Jurisdiction (AHJ) in accordance with requirements of the Phoenix Building Construction Code and Amendments.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Transport pipe materials and other products specified herein in a manner recommended by the respective manufacturers.
- B. Storage and Handling Requirements:
 - 1. Store and handle pipe materials and other products specified herein in a manner recommended by the respective manufacturers to prevent damage and defects from occurring.
 - 2. Protect pipe from impact shocks and free fall during handling.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 DOMESTIC WATER PIPING COMPONENTS

- A. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- B. Performance:
 - 1. Seismic Performance:
 - a. Provide soil, waste, and vent piping and supports capable of withstanding the effects of seismic events determined according to the requirements specified in ASCE / SEI 7.
- C. Design Criteria
 - 1. Piping System:
 - a. Plans, schematics, and diagrams included in the Contract Drawings indicate the general location and arrangement of piping systems.
 - 1) The indicated locations and arrangements were used to size pipe calculate friction losses, and for compliance with other design considerations.
 - 2) Install piping as indicated unless deviations to the layout are approved by the Program/Project Manager on Coordination Drawings.
 - b. Working Pressure:
 - 1) Unless otherwise indicated, provide components and installations capable of producing a domestic water piping system with a 125 psig minimum working pressure rating:
 - c. Pipe and Fittings:
 - 1) Unless otherwise indicated, provide transition and special fittings having pressure ratings at least equal to the piping rating.
 - 2) On aboveground piping, flanges may be provided unless otherwise indicated.
 - 3) On aboveground copper tubing, extruded-tee connections and brazed joints may be provided unless otherwise indicated.
 - 4) For domestic water piping under building slabs and sized NPS 4 (DN 100) and smaller on the house side of the water meter,

- provide Type K (Type B) soft copper tube and copper pressure fittings.
- 5) No joints are allowed below slabs.
 - 6) For all sizes of aboveground domestic water piping, provide Type L (Type B) hard copper tube, copper pressure fittings; and soldered joints.
 - 7) For aboveground pressure piping transitions, provide couplings or other manufactured fittings the same size as, and having a pressure rating at least equal to, the piping to be joined.
 - a) Ensure that the ends of the transition couplings are compatible with the piping to be joined.
- d. Valves:
- 1) The types of valves to be provided are typically indicated on the Contract Drawings.
 - 2) Where specific valve types are not indicated, provide the following:
 - a) Shutoff Duty:
 - (1) For NPS 4 (DN 100) piping and smaller, provide bronze ball valves.
 - b) Drain Duty:
 - (1) Provide hose-end drain valves.
- e. Shutoff Valves:
- 1) Install shutoff valve close to the water main on each branch and riser serving plumbing fixtures or equipment, on each water supply to equipment, and on each water supply to plumbing fixtures that do not have supply stops.
 - a) For NPS 2 (DN 50) piping and smaller, provide ball valves.
 - b) For NPS 2-1/2 (DN 65) piping and larger, provide butterfly or ball valves.
- f. Drain Valves:
- 1) Provide drain valves for equipment at the base of each water riser, at the low points in horizontal piping, and where required to drain water piping.
 - a) Install hose-end drain valves at low points in water mains, risers, and branches.
 - b) Install stop-and-waste drain valves where indicated.
2. Product Data:
- a. Submit Product Data for the products proposed for the Work of this Section to the Program/Project Manager for approval.

D. Materials

1. Copper Tube:

- a. Hard Copper Tube:
 - 1) Provide hard copper water tube complying with the requirements for drawn temper, Type L (Type B) tube as specified in ASTM B 88 (ASTM B 88M).
 - 2) Copper Pressure Fittings:
 - a) Provide solder-joint fittings fabricated from cast-copper-alloy complying with the requirements specified in ASME B16.18, or from wrought-copper complying with the requirements specified in ASME B16.22.
 - (1) Furnish wrought-copper fittings if indicated on the Contract Drawings.
 - 3) Bronze Flanges:
 - a) Provide bronze flanges complying with the requirements specified for Class 150 in ASME B16.24, with solder-joint ends.
 - (1) Furnish Class 300 flanges if required to match piping.
 - 4) Copper Unions:
 - a) Provide cast-copper-alloy, hexagonal-stock body unions complying with the requirements specified in MSS SP-123, with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.
- b. Soft Copper Tube:
 - 1) Provide soft copper water tube complying with the requirements for annealed temper, Type K (Type A) tube as specified in ASTM B 88 (ASTM B 88M).
 - 2) Copper Pressure Fittings:
 - a) Provide solder-joint fittings fabricated from cast-copper-alloy complying with the requirements specified in ASME B16.18, or from wrought-copper complying with the requirements specified in ASME B16.22.
 - (1) Furnish wrought-copper fittings if indicated on the Contract Drawings.
 - 3) Copper Unions:
 - a) Provide cast-copper-alloy, hexagonal-stock body unions complying with the requirements specified in MSS SP-123, with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.
- 2. Mechanical Sleeve Seals:
 - a. Provide mechanical sleeve seals as specified in Section 15050, Basic Mechanical Materials and Methods.
- 3. Sleeves:

- a. Provide sleeves as specified in Section 15050, Basic Mechanical Materials and Methods.
- 4. Transition Couplings:
 - a. Provide couplings or other manufactured fittings.

2.02 ACCESSORIES

- A. Drain Valves:
 - 1. Provide drain valves as specified in Section 15145, Domestic Water Piping Specialties

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Verify final equipment locations for roughing-in.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the domestic water system.
- B. Surface Preparation:
 - 1. Perform excavation, trenching, and backfilling, if required, as specified in Section 02316, Trenching and Backfilling.
- C. Demolition/Removal:
 - 1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Install piping in accordance with the requirements specified in Section 15050, Basic Mechanical Materials and Methods.
 - 1. Install copper tubing under the building slab in accordance with the requirements specified in CDA A4015, The Copper Tube Handbook.
- B. Install cast-iron sleeves with water stops and mechanical sleeve seals at each service pipe penetration through foundation walls.
 - 1. Select the number of interlocking rubber links required to make installation watertight.

- C. Inside the building at each domestic water service entrance, provide a shutoff valve, a hose-end drain valve, a strainer, a pressure gage, and a test tee with a valve.
- D. Install horizontal domestic water piping with a 0.25 percent downward slope toward drain, and install vertical domestic water piping plumb.
- E. Hanger and Supports:
 - 1. Install supports in accordance with the requirements specified in Section 15060, Hangers and Supports.
 - 2. Support vertical piping and tubing at the base and at each floor.
 - 3. For double-rod hangers, the rod diameter may be reduced 1 size down to a minimum of 3/8 inch (10 mm).
 - 4. For horizontal copper tubing, install hangers with the following maximum horizontal spacing and minimum rod diameters:
 - a. For NPS 3/4 (DN 20) and smaller pipe, provide hangers with 3/8-inch (10mm) rods spaced 60 inches (1500mm) apart.
 - b. For NPS 1 and NPS 1-1/4 (DN 25 and DN 32) pipe, provide hangers with 3/8-inch (10mm) rods spaced 72 inches (1800mm) apart.
 - c. For NPS 1-1/2 and NPS 2 (DN 40 and DN 50) pipe, provide hangers with 3/8-inch (10mm) rods spaced 96 inches (2400mm) apart.
 - d. For NPS 2-1/2 (DN 65) pipe, provide hangers with 1/2-inch (13mm) rods spaced 108 inches (2700 mm) apart.
 - e. For NPS 3 to NPS 5 (DN 80 to DN 125) pipe, provide hangers with 1/2-inch (13mm) rods spaced 10 feet (3m) apart.
 - f. For NPS 6 (DN 150) pipe, provide hangers with 5/8-inch (16mm) rods spaced 10 feet (3m) apart.
 - 5. For vertical copper tubing, provide supports spaced every 10 feet (3m).
 - 6. Support piping and tubing not listed herein according to the requirements specified in MSS SP-69 and the manufacturer's written instructions.
- F. Interface with Other Work:
 - 1. Connections:
 - a. Install piping adjacent to equipment and machines so service and maintenance are allowed.
 - b. Connect domestic water piping to exterior water-service piping using a transition fitting to join dissimilar piping materials.
 - c. Connect the domestic water piping to the water-service piping using a shutoff valve, and extend and connect the domestic water piping to the following:
 - 1) Water Heaters:

- a) Provide cold-water supply and hot-water outlet piping of the sizes indicated, but not smaller than the sizes of the water heater connections.
- 2) Plumbing Fixtures:
 - a) Provide cold water and hot water supply piping of the sizes indicated, but not smaller than required by applicable plumbing code.
 - b) Install plumbing fixtures as specified in Section 15410, Plumbing Fixtures.
- 3) Equipment:
 - a) Provide cold water and hot water supply piping as indicated, but not smaller than equipment connections.
 - b) Provide a shutoff valve and union for each connection.
 - c) Provide flanges instead of unions for NPS 2-1/2 (DN 65) and larger.

G. Systems Integration:

- 1. Rough-in domestic water piping for the water-meter installation according to the utility company's requirements.

3.04 REPAIR/RESTORATION

- A. Repair leaks and defects with new materials, and retest the repaired piping or a portion thereof until satisfactory results are obtained.

3.05 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. Site Tests:

a. Leak Test:

1) Test Procedure:

- a) Test domestic water piping for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired.
 - (1) If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
 - (2) Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved.
 - (3) Expose work that was covered or concealed before it was tested.

- b) Fill domestic water piping with water.
 - (1) Check the components to determine that they are not air bound and that the piping is full of water.
 - c) Cap and subject the piping to a static water pressure of 50 psig (345 kPa) above the operating pressure, without exceeding the pressure rating of the piping system materials.
 - d) Isolate the test source, and allow it to stand for 4 hours.
 - e) Prepare Leak Test Reports, and describe corrective action required to repair any leaks discovered.
 - (1) Submit the Leak Test Reports to the Program/Project Manager for information.
 - 2) Acceptance Criteria:
 - a) Visible leaks and/or loss in test pressure constitute defects that must be repaired.
2. Inspections:
- a. Do not enclose, cover, or put piping into operation until it has been inspected and approved by the Authorities Having Jurisdiction.
 - b. During installation of domestic water piping, notify the Authorities Having Jurisdiction at least 24 hours before required inspections must be made.
 - 1) Perform the inspections in the presence of the Authorities Having Jurisdiction.
 - c. Roughing-in Inspection:
 - 1) After the roughing-in of the piping takes place but before the fixtures are set, arrange for an inspection of the piping before it is concealed or closed-in.
 - d. Final Inspection:
 - 1) Arrange a final inspection for the Authorities Having Jurisdiction to observe the tests specified, and to ensure compliance with the specified requirements.
 - e. Inspection Reports:
 - 1) Prepare inspection reports, have them signed by the Authorities Having Jurisdiction, and submit them to the Program/Project Manager for information.
 - f. As-Built Documents:
 - 1) Prepare as-built drawings of the domestic water system, and submit them to the Program/Project Manager for information.

B. Non-Conforming Work

- 1. If the Authorities Having Jurisdiction determine that the piping does not pass the testing or inspections, make the required corrections and arrange for a re-inspection.

3.06 SYSTEM STARTUP

- A. Disinfection:
 - 1. Clean and disinfect potable domestic water piping using purging and disinfecting procedures prescribed by the Authorities Having Jurisdiction.
 - a. Submit water samples in sterile bottles to the Authorities Having Jurisdiction.
 - b. Repeat procedures if biological examination shows contamination.
 - c. Prepare and submit reports of purging and disinfecting activities.
- B. Commissioning:
 - 1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping system, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

3.07 CLEANING

- A. Waste Management:
 - 1. Properly and legally dispose of excess disinfection chemicals.
 - 2. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

END OF SECTION

SECTION 15145

DOMESTIC WATER PIPING SPECIALTIES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Requirements for the following plumbing specialties:
 - a. Backflow preventers.
 - b. Balancing valves.
 - c. Wheel-handle wall hydrants.
 - d. Trap seal primer valves.
 - e. Drain valves.
 - f. Cleanouts.
 - g. Floor drains.
 - h. Roof drains.
 - i. Miscellaneous piping specialties.

B. Related Requirements:

1. Section 01330 - Submittal Procedures.
2. Section 01360 - Sustainable Design Requirements.
3. Section 01732 - Cutting and Patching.
4. Section 01780 - Closeout Submittals.
5. Section 01810 – Commissioning.
6. Section 02316 - Trenching and Backfilling.
7. Section 07620 - Sheet Metal Flashing and Trim.
8. Section 15050 - Basic Mechanical Materials and Methods.
9. Section 15110 - Valves.
10. Section 15128 - Meters and Gages.
11. Section 15140 - Domestic Water Piping.
12. Section 15995 - Commissioning of Mechanical Systems.

1.02 REFERENCES

A. Abbreviations and Acronyms:

1. AC: Alternating electric current.
2. CWP: Cold working pressure.
3. FDA: Federal Department of Agriculture.
4. NPS: Nominal Pipe Size.
 - a. DN: Diamètre nominal (European Equivalent).
5. OS&Y: Outside screw and yoke.

6. PVBA: Pressure vacuum breaker assembly.

B. Definitions:

1. For the electrical Work associated with the domestic water piping specialties provided under this Section, standard terminology defined in NFPA 70 applies.
2. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.

C. Reference Standards:

1. American Society of Civil Engineers (ASCE):
 - a. ASCE / SEI 7 - Minimum Design Loads for Buildings and Other Structures.
2. American Society of Mechanical Engineers (ASME):
 - a. ASME A112.1.2 - Air Gaps in Plumbing Systems (For Plumbing Fixtures and Water-Connected Receptors).
 - b. ANSI/ASTM A112.6.3 - Floor and Trench Drains.
 - c. ASME A112.6.4 – Roof, Deck, and Balcony Drains.
 - d. ASME A112.18.1/CSA B125.1 - Plumbing Supply Fittings.
 - e. ASME A112.21.2M – Roof Drains.
 - f. ASME A112.21.3M - Hydrants for Utility and Maintenance Use.
 - g. ASME A112.36.2M – Cleanouts.
 - h. ASME B1.20.7 - Hose Coupling Screw Threads, Inch.
 - i. ASME B31.9 - Building Services Piping.
3. American Society of Sanitary Engineers (ASSE):
 - a. ANSI/ASSE 1001 - Performance Requirements for Atmospheric Type Vacuum Breakers.
 - b. ANSI/ASSE 1010 - Performance Requirements for Water Hammer Arresters.
 - c. ANSI/ASSE 1011 - Hose Connection Vacuum Breakers.
 - d. ANSI/ASSE 1012 - Performance Requirements for Backflow Preventers with an Intermediate Atmospheric Vent.
 - e. ANSI/ASSE 1013 - Performance Requirements for Reduced Pressure Principle Backflow Preventers and Reduced Pressure Fire Protection Principle Backflow Preventers.
 - f. ANSI/ASSE 1015 - Performance Requirements for Double Check Backflow Prevention Assemblies and Double Check Fire Protection Backflow Prevention Assemblies.
 - g. ANSI/ASSE 1018 - Trap Seal Primer Valves - Potable Water Supplied.
 - h. ANSI/ASSE 1020 - Pressure Vacuum Breakers Assembly.

13. Underwriters Laboratories, Inc. (UL):
 - a. UL 486A-486B - Wire Connectors.
 - b. UL Online Certifications Directory, <https://www.ul.com/ul-databases-and-directories/>.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordination Drawings:

- a. Prepare and submit Coordination Drawings to the Program/Project Manager for approval.
 - 1) Show the following items for this Contract drawn to scale, and coordinate them with each other:
 - a) HVAC, plumbing, and fire suppression items.
 - b) Conduit routing plans.
 - c) Structural members.
 - 2) Include power, signal, and control wiring diagrams.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:

- a. Product Data:
 - 1) Hose bibs.
 - 2) Open drains.
 - 3) Fixed air-gap fittings.
 - 4) Stack flashing fittings.
 - 5) Vent terminals.
 - 6) Floor and trench drains.
 - 7) Piping joining materials.
- b. Shop Drawings:
 - 1) Coordination Drawings.
- c. Certificates:
 - 1) Electrical Listing and Labeling.
- d. Special Procedure Submittals:
 - 1) Field Test Reports of purging and disinfecting activities.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Vent flashing sleeve manufacturer's written installation instructions.
 - 2) Roof drain manufacturer's written installation instructions.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Maintenance Contracts:
 - 1) Backflow preventer maintenance contracts.
 - 2) Trap seal primer valves and system maintenance contracts.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:
 - a. Obtain approval of the Work of this Section from the Authorities Having Jurisdiction (AHJ) in accordance with requirements of the Phoenix Building Construction Code and Amendments.

B. Certifications:

1. Electrical Listing and Labeling:
 - a. Provide electrical components, devices, and accessories that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.
2. Piping Material Certification:
 - a. Provide plumbing specialties that bear the label, stamp, or other markings of the testing agency specified.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Transport domestic water piping specialties in a manner recommended by the respective manufacturers.
- B. Storage and Handling Requirements:
 - 1. Store and handle domestic water piping specialties in a manner recommended by the respective manufacturers to prevent damage and defects from occurring.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 DOMESTIC WATER PIPING SPECIALTIES

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. NSF International (NSF) Compliance:
 - 1) For potable domestic water plumbing specialties, comply with the requirements specified in Sections 1 through 9 of NSF/ANSI 61.
- C. Performance:
 - 1. Seismic Performance:

- a. Provide soil, waste, and vent piping and supports capable of withstanding the effects of seismic events determined according to the requirements specified in ASCE / SEI 7.

D. Design Criteria

1. Piping Systems:

- a. The Contract Drawings indicate the general arrangement of piping, fittings, and specialties.
 - 1) Plans, schematics, and diagrams included in the Contract Drawings indicate the sizes, profiles, and/or dimensional requirements of the plumbing specialties based on the specific system indicated.
 - 2) The indicated locations and arrangements may need to be modified based on the specific system provided and other design considerations.
 - 3) Install domestic water piping specialties as indicated unless deviations to the installation are approved by the Program/Project Manager on Coordination Drawings.
- b. Working Pressure:
 - 1) Unless otherwise indicated, provide components and installations capable of producing a domestic water piping system with a 125 psig minimum working pressure rating:
- c. Piping Materials and Installation:
 - 1) Comply with the requirements for piping materials and installation specified in ASME B31.9.

2. Product Data:

- a. Prepare Product Data for the domestic water piping system components to be provided under this Section, including the rated capacities and shipping, installed, and operating weights of system components.
 - 1) Indicate the materials, finishes, dimensions, required clearances, and methods of assembly of the components; and the piping and wiring connections for the following:
 - a) Drain valves and hose bibbs.
 - b) Floor drains.
 - c) Vent caps, vent terminals, and roof flashing assemblies.
- b. Submit the Product Data for the domestic water piping system to the Program/Project Manager for approval.

E. Materials:

1. Drain Valves:

- a. Hose-End Drain Valves:

- 1) Provide 3/4-inch nominal pipe size ball valves complying with the requirements specified in MSS SP-110, and rated for 400 psig minimum cold working pressure (CWP).
 - a) Provide a two-piece, copper-alloy body with a standard port, a chrome-plated brass ball, replaceable seats and seals, a blowout-proof stem, and a vinyl-covered steel handle for each valve.
 - b) Inlet:
 - (1) Provide a threaded or solder joint inlet.
 - c) Outlet:
 - (1) Provide a short-threaded nipple having garden-hose threads complying with the requirements specified in ASME B1.20.7 and a cap.
- b. Hose-End Drain Valves:
 - 1) Provide Class 125 gate valves complying with the requirements specified in MSS SP-80, and having a bronze body complying with the requirements specified in ASTM B 62.
 - a) Inlet:
 - (1) Provide a 3/4-inch nominal pipe size threaded or solder joint inlet.
 - b) Outlet:
 - (1) Provide an outlet having garden-hose threads complying with the requirements specified in ASME B1.20.7 and a cap.
 - 2) Hose bibbs are unacceptable for this application.
- c. Hose Bibbs:
 - 1) Provide bronze body hose bibbs having a replaceable seat disc complying with the requirements specified in ASME A112.18.1/CSA B125.1 for compression-type faucets.
 - a) Provide either a 1/2-inch or a 3/4-inch nominal pipe size threaded or solder-joint inlet designed for a pressure of at least 125 psig.
 - b) Provide an integral non-removable, drainable hose-connection vacuum breaker having garden-hose threads complying with the requirements specified in ASME B1.20.7 on the outlet.
 - 2) Finishes:
 - a) For equipment rooms, provide hose bibbs having a rough bronze, chrome, or nickel plated finish.
 - b) For service areas, provide hose bibbs having a chrome or nickel plated finish.

- c) For finished rooms, provide hose bibbs having a chrome or nickel plated finish.
- 3) Provide an integral wall flange with each chrome- or nickel-plated hose bibb.
- d. Floor-Drain Inlet Fittings:
 - 1) Provide cast iron floor-drain inlet fittings having a threaded inlet and a threaded or spigot outlet and a trap seal primer valve connection.
- e. Fixed Air-Gap Fittings:
 - 1) Provide manufactured cast-iron or bronze fixed air-gap drainage fittings with a semi-open top having threads or a device to secure the drainage inlet piping in the top, and a bottom spigot or threaded outlet larger than the top inlet.
 - 2) Provide a design complying with the requirements specified in ASME A112.1.2 that ensures a fixed air gap between the installed inlet and outlet piping.
- f. Stack Flashing Fittings:
 - 1) Provide counterflashing-type, cast-iron stack flashing fittings having a bottom recess for terminating the roof membrane, and a threaded or hub top for extending the vent pipe.
- g. Vent Terminals:
 - 1) Provide commercially manufactured vent terminals, shop-fabricated or field-fabricated, constructed from galvanized steel, copper, or lead-coated copper.
 - 2) Provide a frost-proof assembly, sized to provide a 1-inch enclosed air space between the outside of the pipe and the inside of the flashing collar extension, and having counterflashing.
- h. Cleanouts:
 - 1) Floor and Wall Cleanouts:
 - a) Provide cleanouts complying with the requirements specified in ASME A112.36.2M.
 - b) Body or Ferrule and Housing:
 - (1) Provide floor cleanouts having a cast-iron body or ferrule having a threaded outlet connection, and a cast-iron adjustable housing.
 - c) Closure:
 - (1) Provide a brass closure plug having straight threads, a gasket, and a clamping device.
 - d) Frame and Cover:
 - (1) Provide a round nickel-bronze, copper alloy frame and cover.

- 2) Manufacturers:
 - (1) Josam Company, www.josam.com
 - (2) Sioux Chief Manufacturing Co., Inc., <http://www.siuoxchief.com>.
 - (3) Smith, Jay R. Mfg. Co., www.jrsmith.com
 - (4) Tyler Pipe; Wade Div., www.tylerpipe.com
 - (5) Watts Drainage Products Inc., www.watts.com
 - (6) Zurn Plumbing Products Group., www.zurn.com
 - (7) Approved equal.
- i. Floor and Trench Drains:
 - 1) Provide floor and trench drains complying with the requirements specified in ANSI/ASTM A112.6.3, and having a gray iron body with a round top and a bottom outlet, a cast iron trap, a clamping device, and a seepage flange.
 - a) An inlet fitting, sediment bucket, and lining for exposed surfaces and interior are not required.
 - 2) Finish:
 - a) For the top of the drain body and the strainer, provide a nickel bronze finish.
 - 3) Manufacturers:
 - a) Josam Company, www.josam.com
 - b) Sioux Chief Manufacturing Co., Inc., <http://www.siuoxchief.com>.
 - c) Smith, Jay R. Mfg. Co., www.jrsmith.com
 - d) Tyler Pipe; Wade Div., www.tylerpipe.com
 - e) Watts Drainage Products Inc., www.watts.com
 - f) Zurn Industries, Inc., Jonespec Div., <http://www.zurn.com/products/finish-plumbing>.
 - g) *Zurn Industries, Inc., Specification Drainage Operation*, www.zurn.com/media-library/web_documents/.../floordrains/fd-combined-pdf.aspx
 - h) Approved equal.

2.02 ACCESSORIES

- A. Flashing:
 1. Provide flashing complying with the requirements specified in Section 07620, Sheet Metal Flashing and Trim.
 - a. Fabricate flashing from a single piece, unless large pans, sumps, or other drainage shapes are required.
 - b. Fabricate flashing, and required pans, sumps, and other drainage shapes.

2. Pipe Flashing:
 - a. Provide sleeve type pipe flashing matching the pipe size, and having a minimum length of 10 inches and a skirt or flange extending at least 8 inches around the pipe.
 3. Sleeve Flashing:
 - a. Provide flat sheet sleeve flashing having a skirt or flange extending at least 8 inches around the sleeve.
 4. Embedded Specialty Flashing:
 - a. Provide flat sheet embedded specialty flashing having a skirt or flange extending at least 8 inches around the specialty.
- B. General-Duty Valves:
1. Provide general-duty ball, butterfly, check, gate, and globe valves complying with the requirements specified in Section 15110, Valves.
- C. Meters and Gages
1. Provide meters and gages complying with the requirements specified in Section 15128, Meters and Gages.
- D. Piping Joining Materials:
1. Provide piping joining materials complying with the requirements specified in Section 15050, Basic Mechanical Materials and Methods.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
1. Examine the elements and surfaces to receive domestic water piping specialties for compliance with the installation tolerances, required clearances, and other conditions affecting performance of the Work.
- B. Evaluation and Assessment:
1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
1. Protect adjacent areas from damage resulting from installation of the domestic water piping specialties.
- B. Surface Preparation:

1. Perform excavating, trenching, and backfilling operations for domestic water piping in accordance with the requirements specified in Section 02316, Trenching and Backfilling.

C. Demolition/Removal:

1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

A. Basic Domestic Water Piping Specialty Installation Requirements:

1. For wall-hanging plumbing specialties having supports specified, attach the supports to the building substrate and fasten the wall-hanging plumbing specialties securely to the supports.
2. For wall-hanging plumbing specialties having no supports specified, fasten the plumbing specialties directly to the building wall construction.
3. Fasten recessed-type plumbing specialties to reinforcement built into walls.
4. For piping adjacent to equipment, install the piping to allow access for service and maintenance.
5. Pressure Regulators:
 - a. Provide inlet and outlet shutoff valves and a balance valve bypass for pressure regulators, and provide pressure gages on both the pressure regulator inlet and outlet.
6. Strainers:
 - a. Provide strainers on the supply side of each control valve, pressure regulator, and solenoid valve.
7. Expansion Joints:
 - a. Provide expansion joints on vertical risers, stacks, and conductors if indicated in the Contract Documents.
8. Traps:
 - a. Provide traps on plumbing specialty drain outlets.
 - b. Omit traps on indirect waste drains unless a trap is indicated in the Contract Documents.
9. Escutcheons:
 - a. In exposed finished locations and within cabinets and millwork, provide escutcheons complying with the requirements specified in Section 15050, Basic Mechanical Materials and Methods, at wall, floor, and ceiling penetrations.
 - b. If required to conceal protruding pipe fittings, provide deep-pattern escutcheons.

B. Cleanouts:

1. Provide a cleanout at each change in the direction of piping greater than 45 degrees, and at the base of each vertical soil and waste stack.
2. For piping up to 4-inch nominal pipe size, provide a cleanout at intervals not greater than 50 feet apart.
3. For piping larger than 4-inch nominal pipe size, provide a cleanout at intervals not greater than 100 feet apart.
4. Unless otherwise indicated in the Contract Documents, install cleanouts in aboveground piping and building drain piping as follows:
 - a. For drainage piping up to 4-inch nominal pipe size, provide cleanouts the same size as the drainage piping.
 - b. For drainage piping larger than 4-inch nominal pipe size, provide 4-inch nominal pipe size cleanouts unless a larger cleanout is indicated in the Contract Documents.
5. For floor cleanouts associated with piping installed below floors, provide cleanout deck plates installed so their top is flush with finished floor.
6. For cleanouts located in concealed piping, provide cleanout wall access covers of the types indicated in the Contract Documents installed so their frames and covers are flush with the finished wall.

C. Vents:

1. Provide air vents at piping high points.
2. For each vent pipe passing through the roof, provide frost-proof vent caps.
 - a. Maintain a 1-inch clearance between the vent pipe and the roof substrate.

D. Floor Drains:

1. At the low points of surface areas to be drained, provide floor drains.
 - a. Unless otherwise indicated in the Contract Documents, set the floor drain grates flush with finished floor.
2. Position floor drains for easy access and maintenance.
3. Provide a floor-drain flashing collar or flange installed so no leakage occurs between the drain and the adjoining flooring.
 - a. Maintain the integrity of waterproof membranes if they are penetrated.
4. Unless otherwise indicated in the Contract Documents, provide individual traps for floor drains connected to the sanitary building drain.

E. Valves:

1. In each water supply to plumbing specialties, provide an individual shutoff valve.
 - a. Install the shutoff valves in accessible locations.

2. If a specific type of valve is not indicated in the Contract Documents, provide a ball, gate, or globe valve.

F. Special Techniques:

1. Flashing:

- a. For pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane, provide sheet flashing.
 - 1) Set flashing installed on floors and roofs in a solid coating of bituminous cement.
 - 2) Secure flashing into sleeves and specialty clamping rings or devices.
- b. For piping passing through roofs, provide flashing having counterflashing or commercially made flashing fittings complying with the requirements specified in Section 07620, Sheet Metal Flashing and Trim.
 - 1) For vent pipes passing through roofs, extend the flashing up the vent pipe and turn it down into the pipe, or secure the flashing into cast-iron sleeves having a calking recess.
- c. Provide flashing and pans, sumps, and other drainage shapes.

2. Electrical Work:

- a. Connect plumbing specialties and devices that require power in accordance with the electrical requirements specified in other appropriate Sections.
- b. Electrically ground equipment.
- c. Tighten electrical connectors and terminals according to the manufacturer's published torque-tightening values.
 - 1) If the manufacturer's torque values are not furnished, use those specified in UL 486A-486B.

G. Interface with Other Work:

1. Piping System Connections:

- a. Connect the domestic water piping specialties to the piping specified under other Sections as indicated in the Contract Documents.
- b. Comply with the requirements specified in Section 15050, Basic Mechanical Materials and Methods, for pipe joining materials, joint construction, and other basic mechanical installation requirements.
 - 1) Additional piping installation requirements are specified in other Sections.

3.04 SYSTEM STARTUP

A. Disinfection:

1. Clean and disinfect potable domestic water piping specialties using the purging and disinfecting procedures prescribed in Section 15140, Domestic Water Piping, and by the Authorities Having Jurisdiction.
 - a. Submit water samples in sterile bottles to the Authorities Having Jurisdiction.
 - b. Repeat procedures if biological examination shows contamination.
 - c. Prepare and submit Field Test Reports of purging and disinfecting activities.

B. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping system, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

3.05 ADJUSTING

- A. Adjust trap seal primer valves so they furnish the proper flow.

3.06 CLEANING

A. Waste Management:

1. Properly and legally dispose of excess disinfection chemicals.
2. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 PROTECTION

- A. Protect installed drains during the remainder of the construction period to avoid clogging the drains with dirt or debris, and to prevent damage to the drains from traffic or other construction work.
- B. Place plugs in the ends of uncompleted piping at the end of each day or when work stops.

3.08 MAINTENANCE

A. Maintenance Contracts:

1. Furnish maintenance contracts for the following domestic water plumbing specialties for insertion in maintenance manuals:
 - a. Backflow preventers.
 - b. Trap seal primer valves and systems.

2. Submit the maintenance contracts to the Program/Project Manager.

SECTION 15150

SANITARY WASTE AND VENT PIPING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for soil and waste sanitary drainage and vent piping inside buildings.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01732 - Cutting and Patching.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 01810 - Commissioning.
 - 6. Section 02531 - Wastewater System.
 - 7. Section 15050 - Basic Mechanical Materials and Methods.
 - 8. Section 15060 - Hangers and Supports.
 - 9. Section 15070 - Mechanical Sound, Vibration, and Seismic Control.
 - 10. Section 15155 - Sanitary Waste Piping Specialties.
 - 11. Section 15995 - Commissioning of Mechanical Systems.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. NPS: Nominal Pipe Size.
 - a. DN: Diamètre nominal (European Equivalent).
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.

 - b. CISPI 301 - Standard Specification for Hubless Cast Iron Soil Pipe and Fittings for Sanitary and Storm Drain, Waste, and Vent Piping Applications.
 - c. CISPI 310 - Standard Specification for Coupling for Use in Connection with Hubless Cast Iron Soil Pipe and Fittings for Sanitary and Storm Drain, Waste, and Vent Piping Applications.
- 4. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 5. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
- 6. Manufacturers Standardization Society (MSS):
 - a. MSS SP-58 - Pipe Hangers and Supports – Materials, Design, and Manufacture.
 - b. MSS SP-69 - ANSI/MSS Edition Pipe Hangers and Supports – Selection and Application.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

- 1. Test and Inspection Coordination:
 - a. Coordinate with the Program/Project Manager and the Authorities Having Jurisdiction to insure they have been notified sufficiently early to allow ample time for them to schedule and perform the testing and inspections required by them prior to incorporating items requiring testing or inspection into the Work.
 - 1) During installation, notify the Authorities Having Jurisdiction at least 24 hours before tests and inspections must be made.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Cast-iron pipe and fittings.
 - 2) Couplings.
 - b. Shop Drawings:
 - 1) Soil, waste, and vent piping system.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Gasket manufacturer's written instructions for the use of lubricants, cements, and other installation requirements
 - b. Site Quality Control Submittals:
 - 1) Code compliance test reports.
 - 2) Inspection reports.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Record Documentation:
 - 1) As-built drawings of the drainage and vent piping system.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:
 - a. Obtain approval of the Work of this Section from the Authorities Having Jurisdiction (AHJ) in accordance with requirements of the Phoenix Building Construction Code and Amendments.

B. Certifications:

1. Piping Material Certification:
 - a. Provide piping materials that bear the label, stamp, or other markings of the testing agency specified.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Transport pipe materials and other products specified herein in a manner recommended by the respective manufacturers.
- B. Storage and Handling Requirements:
 - 1. Store and handle pipe materials and other products specified herein in a manner recommended by the respective manufacturers to prevent damage and defects from occurring.
 - 2. Protect pipe from impact shocks and free fall during handling.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 SANITARY WASTE AND VENT PIPING COMPONENTS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified, manufacturers offering products that may be incorporated into the Work include the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with requirements, provide products by one of the manufacturers listed.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- C. Performance:
 - 1. Seismic Performance:
 - a. Provide soil, waste, and vent piping and supports capable of withstanding the effects of seismic events determined according to the requirements specified in ASCE / SEI 7.

D. Design Criteria:

1. Piping System:

- a. Plans, schematics, and diagrams included in the Contract Drawings indicate the general location and arrangement of piping systems.
 - 1) The indicated locations and arrangements were used to size pipe calculate friction losses, and for compliance with other design considerations.
 - 2) Install piping as indicated unless deviations to the layout are approved by the Program/Project Manager on Coordination Drawings.
- b. Working Pressure:
 - 1) Unless otherwise indicated, provide components and installations capable of producing a sanitary waste and vent piping system with a 10-foot head of water minimum working pressure rating:
- c. Piping Applications:
 - 1) For soil, waste, and vent piping used for both aboveground and underground applications, provide the following piping materials in each size range indicated:
 - a) For pipes having nominal pipe sizes of 1-1/4-inch NPS (DN 32) and 1-1/2-inch NPS (DN 40), provide 1-1/2-inch NPS (DN 40), hubless, cast-iron soil piping, and one of the following:
 - (1) Heavy-duty couplings.
 - (2) Compact couplings.
 - b) For pipes having nominal pipe sizes of 2-inch NPS (DN 50) and 4-inch NPS (DN 100), provide hubless, cast-iron soil piping, and one of the following:
 - (1) Heavy-duty couplings.
 - (2) Compact couplings.
 - c) For underground non-pressure piping, provide flexible transition couplings.

2. Product Data:

- a. Submit Product Data for the products proposed for the Work of this Section to the Program/Project Manager for approval.

3. Shop Drawings:

- a. Submit Shop Drawings of the soil, waste, and vent piping system, to the Program/Project Manager for approval.
 - 1) Include plans and details.

E. Materials:

1. Cast-Iron Pipe and Fittings:

- a. Pipe:

- 1) Provide hubless cast-iron pipe and fittings complying with the requirements specified in ASTM A 888 or CISPI 301.
- b. Couplings:
 - 1) Provide couplings complying with the requirements specified in ASTM C 1277; and consisting of an assembly of a metal housing, corrosion-resistant fasteners, and rubber sleeve with an integral, center pipe stop.
 - a) Rubber Sleeves:
 - (1) Provide rubber sleeves complying with the requirements specified in ASTM C 564.
 - 2) Heavy-Duty Couplings:
 - a) Provide heavy-duty couplings consisting of a stainless-steel shield, stainless-steel bands, and a sleeve.
 - (1) Fabricate the heavy-duty couplings from Type 304 stainless-steel complying with the requirements specified in ASTM A 666.
 - (2) For pipes having nominal pipe sizes from 1-1/2 inches (DN 40) to 4 inches (DN 100), provide heavy-duty couplings having a 3-inch- wide shield with 4 bands.
 - (3) For pipes having nominal pipe sizes from 5 inches to 10 inches, provide heavy-duty couplings having a 4-inch- wide shield with 6 bands.
 - 3) Compact Couplings:
 - a) Provide compact couplings complying with the requirements specified in ASTM A 167 or CISPI 310, and consisting of a stainless-steel corrugated shield, stainless-steel bands, and a sleeve.
 - (1) Fabricate the compact couplings from Type 301 stainless-steel complying with the requirements specified in ASTM A 666.
 - (2) For pipes having nominal pipe sizes from 1-1/2 inches (DN 40) to 4 inches (DN 100), provide compact couplings having a 2-1/8-inch- wide shield with 2 bands.
 - 4) Flexible Transition Couplings:
 - a) Provide flexible transition couplings complying with the requirements specified in ASTM C 1173, and having an elastomeric sleeve.
 - (1) Include ends of the same sizes as the piping to be joined, and include a corrosion-resistant metal band on each end.

2.02 ACCESSORIES

- A. Pipe Hanger and Supports:
 - 1. Provide pipe hangers and support devices complying with the requirements specified in Section 15060, Hangers and Supports.
- B. Seismic-Restraint Devices:
 - 1. Provide seismic-restraint devices as specified in Section 15070, Mechanical Sound, Vibration, and Seismic Control.
- C. Sanitary Waste Piping Specialties:
 - 1. Provide sanitary waste piping specialties as specified in Section 15155, Sanitary Waste Piping Specialties.
- D. Wall Penetration Systems:
 - 1. Provide wall penetration systems complying with the requirements specified in Section 15050, Basic Mechanical Materials and Methods.

PART 3 EXECUTION

3.01 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the sanitary waste and vent system.
- B. Surface Preparation:
 - 1. Perform excavating, trenching, and backfilling operations for sanitary waste piping in accordance with the requirements specified in Section 02316, Trenching and Backfilling.
- C. Demolition/Removal:
 - 1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.02 INSTALLATION

- A. Hangers and Supports:
 - 1. Install hangers and supports for the piping in accordance with the requirements specified in Section 15060 - Hangers and Supports, and the following:
 - a. Vertical Piping:
 - 1) Support vertical piping and tubing at the base and at each floor.

- 2) Provide extension pipe or riser clamps (MSS SP-58 Type 8) or carbon or alloy steel riser clamps (MSS SP-58 Type 42).
 - b. Individual Horizontal Piping Runs:
 - 1) For individual straight piping runs 100 feet and less, provide adjustable, steel clevis hangers (MSS SP-58 Type 1).
 - 2) For individual straight piping runs longer than 100 feet, provide adjustable roller hangers (MSS SP-58 Type 43).
 - c. Multiple Horizontal Piping Runs:
 - 1) For multiple straight piping runs 100 feet and longer, provide complete pipe rolls (MSS SP-58 Type 44).
 - 2) Support the pipe rolls on a trapeze.
2. For double-rod hangers, the rod diameter may be reduced 1 size down to a minimum of 3/8 inch (10 mm).
3. Install seismic restraints on piping in accordance with the requirements specified in Section 15071, Vibration and Seismic Controls for Mechanical Systems.
4. Maximum Hanger Spans:
 - a. For vertical cast-iron soil piping, provide supports spaced every 15 feet (4.57m).
 - b. For horizontal cast-iron soil piping, install hangers with the maximum horizontal spacing and minimum rod diameters specified in Table 15150-1.

Table 15150-1 Maximum Horizontal Hanger Spacing and Minimum Rod Diameters		
Nominal Pipe Size(s)	Maximum Horizontal Hanger Spacing ⁽¹⁾	Minimum Rod Diameter
NPS 1-1/2 and NPS 2 (DN 40 and DN 50)	60 inches (1.5m)	3/8 inch (10mm)
NPS 3 (DN 80)	60 inches (1.5m)	1/2 inch (13mm)
NPS 4 (DN 100)	60 inches (1.5m)	5/8 inch (16mm)

5. Support piping and tubing not listed herein according to the requirements specified in MSS SP-69 and the manufacturer's written instructions.

B. Piping:

1. Install cast-iron soil piping in accordance with Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings", in the CISPI Cast Iron Soil Pipe and

Fittings Handbook and the requirements specified in Section 15050, Basic Mechanical Materials and Methods

- a. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends.
 - 1) If the change in the direction of flow is from horizontal to vertical on vertical stacks, sanitary tees and short-sweep 1/4 bends may be provided.
 - 2) If 2 fixtures are installed back to back or side by side with a common drain pipe, provide long-turn, double Y-branch and 1/8-bend fittings.
 - 3) On vent lines, straight tees, elbows, and crosses may be provided.
 - 4) Do not change the direction of flow more than 90 degrees.
 - 5) Use the proper sizes of standard increasers and reducers if pipes of different sizes are connected.
 - 6) Reducing the size of drainage piping in the direction of flow is prohibited.
2. Soil and Waste Drainage and Vent Piping Slopes:
 - a. Unless otherwise indicated, provide soil and waste drainage and vent piping at the following minimum slopes:
 - 1) Building Sanitary Drain:
 - a) For piping NPS 3 and smaller, slope sanitary drainage piping 2 percent downward in the direction of flow.
 - b) For piping NPS 4 and larger; slope sanitary drainage piping 1 percent downward in the direction of flow.
 - 2) Horizontal Sanitary Drainage Piping:
 - a) Slope sanitary drainage piping 2 percent downward in the direction of flow.
 - 3) Vent Piping:
 - a) Slope vent piping 1 percent downward in the direction of a vertical fixture vent or toward a vent stack.
3. Buried Building Soil and Waste Drainage and Vent Piping:
 - a. Install buried building sanitary piping true to the grades and alignment indicated on the Contract Drawings, with unbroken continuity of the invert.
 - b. Lay buried building sanitary drainage piping beginning at the low point of each system.
 - c. Place the hub ends of the piping upstream.
 - d. Install required gaskets according to the manufacturer's written instructions for the use of lubricants, cements, and other installation requirements.

- 1) Submit the gasket manufacturer's written instructions for the use of lubricants, cements, and other installation requirements to the Program/Project Manager for information.
 - e. Maintain a swab in the piping, and pull the swab past each joint as it is completed.
 4. Wall Penetrations:
 - a. Install a wall-penetration fitting system at each service pipe penetration through the foundation wall.
 - 1) Make the wall-penetration fitting system installation watertight.
 - a) Install a cast-iron sleeve having a water stop and a mechanical sleeve seal at each service pipe penetration through foundation wall.
 - b) Select the number of interlocking rubber links required to make the installation watertight.
 - b. Sleeves are not required for cast iron soil piping passing through a concrete slab-on-grade if the slab does not have membrane waterproofing.
 5. Cleanouts:
 - a. Install cleanouts at grade, and extend each cleanout to where the building sanitary drains connect to the building sanitary sewers.
- C. Joints:
1. Comply with the basic requirements for piping joint construction specified in Section 15050, Basic Mechanical Materials and Methods.
 2. Cast Iron Soil Piping Joints:
 - a. For cast iron soil piping, provide joints complying with the requirements specified in Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings" of the CISPI Cast Iron Soil Pipe and Fittings Handbook.
 - b. Hubless Joints:
 - 1) For hubless joints, provide rubber gaskets and sleeves or clamps.
- D. Special Techniques:
1. For piping subject to sewage backflow, provide backwater valves.
 - a. For horizontal piping, provide normally closed type backwater valves unless otherwise indicated in the Contract Documents.
 2. For site sanitary sewer piping, comply with the requirements specified in Section 02531, Wastewater System.
- E. Interface with Other Work:
1. Exterior Sanitary Sewerage Piping:

- a. Connect the soil and waste piping to the Site sanitary sewerage piping exterior to the building.
- b. To join dissimilar piping materials, provide transition fittings.

3.03 REPAIR/RESTORATION

- A. Repair leaks and defects with new materials, and retest the repaired piping or a portion thereof until satisfactory results are obtained.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. Perform the tests and inspections specified herein in the presence of the Authorities Having Jurisdiction.
 - 2. Site Tests:
 - a. Code Compliance Test:
 - 1) Test Procedure:
 - a) Test sanitary drainage and vent piping according to the procedures specified by the Authorities Having Jurisdiction.
 - b) Prepare test reports, document corrective actions taken if required, and have the test reports signed by the Authorities Having Jurisdiction.
 - (1) Submit the test reports to the Program/Project Manager for information.
 - 2) Acceptance Criteria:
 - a) Sanitary drainage and vent piping complying with the requirements of the Authorities Having Jurisdiction, as attested to by approval signatures of the Authorities Having Jurisdiction on the test reports, pass the Code Compliance Test.
 - 3. Inspections:
 - 1) During installation, notify the Authorities Having Jurisdiction at least 24 hours before inspections must be made.
 - 2) Do not enclose, cover, or put piping into operation until it is inspected and approved by the Authorities Having Jurisdiction.
 - b. Roughing-in Inspection:
 - 1) Arrange for an inspection of the piping before concealing or closing-in after piping roughing-in and before setting fixtures.
 - c. Final Inspection:
 - 1) Arrange for a final inspection by the Authorities Having Jurisdiction to observe the tests specified herein and to ensure compliance with requirements.

d. Inspection Reports:

- 1) Prepare inspection reports, have them signed by the Authorities Having Jurisdiction, and submit them to the Program/Project Manager for information.

B. Non-Conforming Work

1. If the Authorities Having Jurisdiction find the piping does not pass the tests or inspections, make required corrections and arrange for a re-inspection.

3.05 SYSTEM STARTUP

A. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping system, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

3.06 CLEANING

- A. Clean the interior of sanitary waste and vent piping by removing dirt and debris as the Work progresses.
- B. Waste Management:
1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 CLOSEOUT ACTIVITIES

A. As-Built Documents:

1. Prepare as-built drawings of the drainage and vent piping system, and submit them to the Program/Project Manager for information.

3.08 PROTECTION

- A. At the end of each workday and whenever the sanitary waste and vent piping Work stops, place plugs in the ends of uncompleted piping to prevent dirt and debris from entering the piping.
- B. Protect installed drains during the remainder of the construction period to prevent the drains from becoming clogged with dirt and debris, and to prevent damage from traffic and construction work.

SECTION 15155

SANITARY WASTE PIPING SPECIALTIES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following sanitary waste piping specialties:
 - a. Cleanouts.
 - b. Floor drains.
 - c. Roof flashing assemblies.
 - d. Miscellaneous sanitary drainage piping specialties.
 - e. Flashing materials.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01732 - Cutting and Patching.
 - 3. Section 01810 – Commissioning.
 - 4. Section 02316 - Trenching and Backfilling.
 - 5. Section 07620 - Sheet Metal Flashing and Trim.
 - 6. Section 15050 - Basic Mechanical Materials and Methods.
 - 7. Section 15150 - Sanitary Waste and Vent Piping.
 - 8. Section 15995 - Commissioning of Mechanical Systems.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. NPS: Nominal Pipe Size.
 - a. DN: Diamètre nominal (European Equivalent).
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
- C. Reference Standards:
 - 1. American Society of Civil Engineers (ASCE):
 - a. ASCE / SEI 7 - Minimum Design Loads for Buildings and Other Structures.
 - 2. American Society of Mechanical Engineers (ASME):

- a. ASME A112.1.2 - Air Gaps in Plumbing Systems (For Plumbing Fixtures and Water-Connected Receptors).
 - b. ANSI/ASME A112.6.3 - Floor and Trench Drains.
 - c. ASME A112.36.2M – Cleanouts.
3. ASTM International (ASTM):
 - a. ASTM A 74 - Standard Specification for Cast Iron Soil Pipe and Fittings.
 - b. ASTM B 32 - Standard Specification for Solder Metal.
 - c. ASTM B 749 - Standard Specification for Lead and Lead Alloy Strip, Sheet and Plate Products.
4. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
5. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
6. The Society for Protective Coatings (SSPC):
 - a. SSPC-Paint 33 – Coal Tar Mastic, Cold Applied.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordination Drawings:
 - a. Prepare and submit Coordination Drawings to the Program/Project Manager for approval.
 - 1) Show the following items for this Contract drawn to scale, and coordinate them with each other:
 - a) HVAC, plumbing, and fire suppression items.
 - b) Conduit routing plans.
 - c) Structural members.

1.04 SUBMITTALS

- A. Action Submittals:
 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Cleanouts
 - 2) Floor Drains
 - 3) Roof Flashing Assemblies
 - 4) Miscellaneous Sanitary Drainage Piping Specialties
 - 5) Flashing Materials

- b. Shop Drawings:
 - 1) Coordination Drawings.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Phoenix Building Construction Code:
 - a. Obtain approval of the Work of this Section from the Authorities Having Jurisdiction (AHJ) in accordance with requirements of the Phoenix Building Construction Code and Amendments.
- B. Certifications:
 - 1. Piping Material Certification:
 - a. Provide piping specialties that bear the label, stamp, or other markings of the testing agency specified.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Transport sanitary waste piping specialties in a manner recommended by the respective manufacturers.
- B. Storage and Handling Requirements:
 - 1. Store and handle sanitary waste piping specialties in a manner recommended by the respective manufacturers to prevent damage and defects from occurring.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 SANITARY WASTE PIPING SPECIALTIES

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified, manufacturers offering products that may be incorporated into the Work include the manufacturers listed.
 - 2. Substitution Limitations:

- a. Subject to compliance with requirements, provide products by one of the manufacturers listed.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- C. Performance:
 - 1. Seismic Performance:
 - a. Provide sanitary waste piping specialties and supports capable of withstanding the effects of seismic events determined according to the requirements specified in ASCE / SEI 7.
- D. Design Criteria:
 - 1. Piping System:
 - a. The Contract Drawings indicate the general arrangement of piping, fittings, and specialties.
 - 1) Plans, schematics, and diagrams included in the Contract Drawings indicate the sizes, profiles, and/or dimensional requirements of the plumbing specialties based on the specific system indicated.
 - 2) The indicated locations and arrangements may need to be modified based on the specific system provided and other design considerations.
 - 3) Install sanitary waste piping specialties as indicated unless deviations to the installation are approved by the Program/Project Manager on the Coordination Drawings.
 - b. Working Pressure:
 - 1) Unless otherwise indicated, provide components and installations capable of producing a sanitary waste and vent piping system with a 10-foot head of water minimum working pressure rating:
 - 2. Floor Cleanout Top Loading Classification:
 - a. In vehicle traffic areas, provide floor cleanouts classified for Extra Heavy Duty top loading.
 - b. In all areas other than vehicle traffic areas, provide floor cleanouts classified for Light Duty top loading.
 - 3. Product Data:

- a. Prepare Product Data, including the rated capacities, operating characteristics, and accessories for grease interceptors, for the following products:
 - 1) Cleanouts.
 - 2) Floor drains.
 - 3) Roof flashing assemblies.
 - 4) Miscellaneous sanitary drainage piping specialties.
 - 5) Flashing materials.
 - b. Submit the Product Data to the Program/Project Manager for approval:
- E. Materials:
- 1. Cleanouts:
 - a. Exposed Cleanouts:
 - 1) Provide exposed cleanouts complying with the requirements for cast-iron cleanouts for cleanout test tees specified in ASME A112.36.2M, and of the same size as the connected drainage piping.
 - 2) Body:
 - a) Provide hubless, cast-iron soil pipe test tee bodies matching the connected piping.
 - 3) Closure:
 - a) Provide a countersunk, cast-iron closure plug the same size as or not more than one size smaller than the cleanout size.
 - 4) Manufacturers:
 - a) Josam Company, www.josam.com
 - b) MIFAB, Inc., www.mifab.com
 - c) Smith, Jay R. Mfg. Co., www.jrsmith.com
 - d) Tyler Pipe; Wade Div., www.tylerpipe.com
 - e) Watts Drainage Products Inc., www.watts.com
 - f) Zurn Plumbing Products Group., www.zurn.com
 - g) Approved equal.
 - b. Floor Cleanouts:
 - 1) Provide adjustable housing type floor cleanouts complying with the requirements for adjustable housing cleanouts specified in ASME A112.36.2M; and of the same size as the connected drainage branch, except not larger than the 4-inch size.
 - 2) Body or Ferrule and Housing:
 - a) Provide floor cleanouts having a cast-iron body or ferrule having a threaded outlet connection, and a cast-iron adjustable housing.
 - 3) Closure:

- a) Provide a cast-iron closure plug having a clamping device.
- 4) Frame and Cover:
 - a) Provide a round nickel-bronze, copper alloy frame and cover.
- 5) Riser:
 - a) Provide a service class, cast-iron drainage pipe fitting and a riser pipe complying with the requirements specified in ASTM A 74 to the cleanout frame and cover.
- 6) Manufacturers:
 - a) Josam Company, www.josam.com.
 - b) Oatey, www.oatey.com.
 - c) Sioux Chief Manufacturing Company, Inc., www.siouxchief.com.
 - d) Smith, Jay R. Mfg. Co., www.jrsmith.com.
 - e) Tyler Pipe; Wade Div., www.tylerpipe.com.
 - f) Watts Drainage Products Inc., www.watts.com.
 - g) Zurn Plumbing Products Group., www.zurn.com.
 - h) Approved equal.
- c. Wall Cleanouts:
 - 1) Provide cast-iron wall cleanouts complying with the requirements for wall cleanouts specified in ASME A112.36.2M, and of the same size as the connected drainage piping.
 - 2) Body:
 - a) Provide hubless, cast-iron soil pipe test tee bodies matching the connected piping.
 - 3) Closure:
 - a) Provide a countersunk, brass closure plug the same size as or not more than one size smaller than the cleanout size.
 - 4) Wall Access Frame and Cover:
 - a) Provide a round, nickel-bronze, copper-alloy, or stainless-steel wall-installation frame and cover.
 - 5) Manufacturers:
 - a) Josam Company, www.josam.com
 - b) MIFAB, Inc., www.mifab.com
 - c) Smith, Jay R. Mfg. Co., www.jrsmith.com
 - d) Tyler Pipe; Wade Div., www.tylerpipe.com
 - e) Watts Drainage Products Inc., www.watts.com
 - f) Zurn Plumbing Products Group., www.zurn.com
 - g) Approved equal.
- 2. Floor Drains:
 - a. Provide cast-iron floor drains complying with the requirements specified in ASME A112.6.3, and having a floor drain pattern.

- b. Body:
 - 1) Provide bottom outlet gray iron floor drain bodies.
 - 2) Provide a seepage flange, an anchor flange, and a clamping device for each floor drain.
- c. Manufacturers:
 - 1) Commercial Enameling Co., <https://www.cecosinks.com/>.
 - 2) Josam Company, www.josam.com
 - 3) MIFAB, Inc., www.mifab.com
 - 4) Smith, Jay R. Mfg. Co., www.jrsmith.com
 - 5) Tyler Pipe; Wade Div., www.tylerpipe.com
 - 6) Watts Drainage Products Inc., www.watts.com
 - 7) Zurn Plumbing Products Group., www.zurn.com
 - 8) Approved equal.
- 3. Air-Gap Fittings:
 - a. Provide air-gap fittings complying with the requirements specified in ASME A112.1.2, and designed to ensure a fixed, positive air gap between the installed inlet and outlet piping.
 - b. Provide air-gap fittings the same size as the connected waste piping, and having an inlet large enough for the associated indirect waste piping.
 - c. Body:
 - 1) Provide bronze or cast iron air-gap fitting bodies.
 - 2) Provide an inlet opening in the top of the body, and outlet larger than the inlet.
- 4. Sleeve Flashing Devices:
 - a. For pipe floor penetrations of floor membranes, provide manufactured cast-iron fittings having a clamping device that forms a sleeve sized to fit closely to the riser or stack piping.
 - 1) In the top of the fitting, provide a galvanized-steel pipe extension that will extend 2 inches above the finished floor.
 - 2) In the bottom of the fitting, provide a galvanized-steel pipe extension that will extend through the floor slab.
- F. Shop Fabrication:
 - 1. Fabricate sheet flashing from lead sheets.
 - a. Unless large pans, sumps, or other drainage shapes are required, fabricate flashing from a single piece of lead sheet.
 - b. If joining lead sheets is required, join the sheets in accordance with the following criteria:
 - 1) For lead sheets that are 0.0938 inch thick or thicker and that weigh at least 6.0 pounds per square foot, provide burn joints.

- 2) For lead sheets 0.0625 inch thick or thicker and weighing at least 4.0 pounds per square foot, provide solder joints.

2.02 ACCESSORIES

A. Sheet Flashing:

1. Flashing Materials:

- a. Fabricate flashing from lead sheets.
 - b. Lead Sheet:
 - 1) Provide Type L51121, copper bearing lead sheet complying with the requirements specified in ASTM B 749.
 - 2) Unless otherwise indicated in the Contract Documents, provide lead sheet having the following minimum weights and thicknesses for the applications listed:
 - a) General Use:
 - (1) Weight: 4.0 pounds per square foot.
 - (2) Thickness: 0.0625 inch.
 - b) Vent Pipe Flashing:
 - (1) Weight: 3.0 pounds per square foot.
 - (2) Thickness: 0.0469 inch.
 - c) Burning:
 - (1) Weight: 6.0 pounds per square foot.
 - (2) Thickness: 0.0938 inch.
 - c. Fasteners:
 - 1) Provide fasteners made from metal compatible with the material and substrate being fastened.
 - d. Metal Accessories:
 - 1) Provide sheet metal strips, clamps, anchoring devices, and similar accessory units required for installing the sanitary waste piping specialties.
 - 2) Provide metal accessories matching or compatible with the material of the specialties being installed.
 - e. Solder:
 - 1) Provide lead-free alloy solder complying with the requirements specified in ASTM B 32.
 - f. Coatings:
 - 1) Provide solvent-type, bituminous mastic complying with the requirements specified in SSPC-Paint 33.
- #### 2. Pipe Flashing:
- a. Provide sleeve type pipe flashing matching the pipe size, having a minimum length of 10 inches, and having a skirt or flange extending at least 8 inches around the pipe.

3. Sleeve Flashing:
 - a. Provide flat sheet sleeve flashing having a skirt or flange extending at least 8 inches around the sleeve.
4. Embedded Specialty Flashing:
 - a. Provide flat sheet embedded specialty flashing having a skirt or flange extending at least 8 inches around the specialty.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Examine the elements and surfaces to receive sanitary waste piping specialties for compliance with the installation tolerances, required clearances, and other conditions affecting performance of the Work.
- B. Evaluation and Assessment:
 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the sanitary waste system.
- B. Surface Preparation:
 1. Perform excavating, trenching, and backfilling operations for sanitary waste piping specialties in accordance with the requirements specified in Section 02316, Trenching and Backfilling.
- C. Demolition/Removal:
 1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Basic Sanitary Waste Piping Specialty Installation Requirements:
 1. For wall-hanging plumbing specialties having supports specified, attach the supports to the building substrate and fasten the wall-hanging plumbing specialties securely to the supports.
 2. For wall-hanging plumbing specialties having no supports specified, fasten the plumbing specialties directly to the building wall construction.

3. Fasten recessed-type plumbing specialties to reinforcement built into walls.
4. For piping adjacent to equipment, install the piping to allow access for service and maintenance.
5. Traps:
 - a. Unless otherwise indicated in the Contract Documents, provide individual traps for floor drains connected to the sanitary building drain.
 - 1) Provide traps on plumbing specialty drain outlets.
 - 2) Omit traps on indirect wastes unless a trap is indicated in the Contract Documents.
 - b. Backwater valves are not required.
6. Escutcheons:
 - a. In exposed finished locations and within cabinets and millwork, provide escutcheons complying with the requirements specified in Section 15050, Basic Mechanical Materials and Methods, at wall, floor, and ceiling penetrations.
 - b. If required to conceal protruding pipe fittings, provide deep-pattern escutcheons.

B. Cleanouts:

1. For aboveground piping and building drain piping, unless otherwise indicated in the Contract Documents provide cleanouts according to the following:
 - a. Size:
 - 1) For drainage piping up to a nominal pipe size of NPS 4, provide cleanouts the same size as the drainage piping.
 - 2) For drainage piping larger than nominal pipe size of NPS 4, provide NPS 4 cleanouts unless a larger cleanout is indicated in the Contract Documents.
 - b. Provide a cleanout at each piping change in direction greater than 45 degrees.
 - c. Cleanouts in Long Piping Runs:
 - 1) For piping having nominal pipe sizes of NPS 4 and smaller, provide cleanouts spaced a maximum of 50 feet apart along the piping run.
 - 2) For piping having nominal pipe sizes larger than NPS 4, provide cleanouts spaced a maximum of 100 feet apart along the piping run.
 - d. Provide a cleanout at the base of each vertical soil and waste stack.
2. For piping below floors, provide floor cleanouts having cleanout deck plates installed flush with the top of the finished floor.

3. For concealed piping, provide cleanouts having wall access covers of the types indicated in the Contract Documents, and install each frame and cover flush with the finished wall.

C. Floor Drains:

1. Provide floor drains at low points of surface areas to be drained.
2. Set the floor drains below the elevation of the surrounding finished floor to allow for floor drainage.
3. Unless otherwise indicated in the Contract Documents, set the grates of the floor drains flush with finished floor.
 - a. Depress the floor slope in the drainage area to the grates in accordance with the following criteria:
 - 1) For drainage radii 30 inches or less, provide a depression producing a floor slope equivalent to 1 percent, but the total depression must not be less than 1/4 inch deep.
 - 2) For drainage radii 30 inches to 60 inches, provide a depression producing a floor slope equivalent to 1 percent.
 - 3) For drainage radii 30 inches or larger, provide a depression producing a floor slope equivalent to 1 percent, but the total depression must not be greater than 1 inch deep.
4. Provide a floor-drain flashing collar or flange so no leakage occurs between the drain and the adjoining flooring.
5. Where waterproof membranes are penetrated by floor drains, maintain the integrity of the waterproof roofing.
6. For floor drains that require a trap-seal primer connection, provide floor-drain trap-seal primer fittings that are the same size as the floor drain inlet unless the trap has trap-seal primer connection.
 - a. Install the floor-drain trap-seal primer fittings on the inlet to floor drains
7. Position floor drains for easy access and maintenance.

D. Air-Gap Fittings:

1. For draining-type backflow preventers and indirect-waste piping discharges into the sanitary drainage system, provide air-gap fittings.

E. Special Techniques:

1. Flashing:
 - a. For pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane, provide sheet flashing.
 - 1) Set flashing installed on floors and roofs in a solid coating of bituminous cement.
 - 2) Secure flashing into sleeves and specialty clamping rings or devices.

- b. For piping passing through roofs, provide flashing having counterflashing or commercially made flashing fittings complying with the requirements specified in Section 07620, Sheet Metal Flashing and Trim.
 - 1) For vent pipes passing through roofs, extend the flashing up the vent pipe and turn it down into the pipe, or secure the flashing into cast-iron sleeves having a calking recess.
 - c. For sanitary stack vents and vent stacks that extend through the roof, provide roof flashing assemblies and flashing fittings.
 - d. For stacks and risers passing through floors with waterproof membrane, provide a sleeve flashing device.
- F. Interface with Other Work:
- 1. Piping System Connections:
 - a. Connect the sanitary waste piping specialties to the piping specified under other Sections as indicated in the Contract Documents.
 - b. Comply with the requirements specified in Section 15050, Basic Mechanical Materials and Methods, for pipe joining materials, joint construction, and other basic mechanical installation requirements.
 - 1) Additional piping installation requirements are specified in other Sections.
- G. Systems Integration:
- 1. Sanitary Waste System:
 - a. Connect the sanitary waste piping specialties provided under this Section to the sanitary waste piping provided under Section 15150, Sanitary Waste and Vent Piping, and test the completed system as specified therein.

3.04 SYSTEM STARTUP

- A. Commissioning:
- 1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping system, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

3.05 PROTECTION

- A. Protect installed drains during the remainder of the construction period to avoid clogging the drains with dirt or debris, and to prevent damage to the drains from traffic or other construction work.

- B. Place plugs in the ends of uncompleted piping at the end of each day or when work stops.

SECTION 15160

STORM DRAINAGE PIPING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following storm drainage piping and fittings within buildings:
 - a. Pipe, tube, and fittings.
 - b. Special pipe fittings.
 - 2. Storm sewer and drainage piping at the Site, but outside the facilities, buildings, or structures is specified in Section 02630, Storm Drainage.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01732 - Cutting and Patching.
 - 3. Section 01810 - Commissioning.
 - 4. Section 02316 - Trenching and Backfilling.
 - 5. Section 02630 - Storm Drainage.
 - 6. Section 15050 - Basic Mechanical Materials and Methods.
 - 7. Section 15060 - Hangers and Supports.
 - 8. Section 15070 - Mechanical Sound, Vibration, and Seismic Control.
 - 9. Section 15080 - Mechanical Insulation.
 - 10. Section 15165 – Storm Drainage Piping Specialties.
 - 11. Section 15995 - Commissioning of Mechanical Systems.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 2. NPS: Nominal Pipe Size.
 - a. DN: Diamètre nominal (European Equivalent).
 - 3. PVC: Polyvinyl-chloride.

4. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.

C. Reference Standards:

1. American Society of Civil Engineers (ASCE):
 - a. ASCE / SEI 7 - Minimum Design Loads for Buildings and Other Structures.
2. American Water Works Association (AWWA):
 - a. AWWA C110/A21.10 - American National Standard for Ductile-Iron and Gray-Iron Fittings, 3 inch through 48 inch (76 mm Through 1,219 mm), for Water.
 - b. AWWA C111/A21.11 - American National Standard for Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
 - c. AWWA C153/A21.53 - American National Standard for Ductile-Iron Compact Fittings, 3 In. (76 mm) Through 64 In. (1,600 mm), for Water Service.
 - d. AWWA C606 – AWWA Standard for Grooved and Shouldered Joints.
3. ASTM International (ASTM):
 - a. ASTM A 888 - Standard Specification for Hubless Cast Iron Soil Pipe and Fittings for Sanitary and Storm Drain, Waste, and Vent Piping Applications.
 - b. ASTM C 564 - Standard Specification for Rubber Gaskets for Cast Iron Soil Pipe and Fittings.
 - c. ASTM C 1173 - Standard Specification for Flexible Transition Couplings for Underground Piping Systems.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

- 1. Test and Inspection Coordination:
 - a. Coordinate with the Program/Project Manager and the Authorities Having Jurisdiction to insure they have been notified sufficiently early to allow ample time for them to schedule and perform the testing and

inspections required by them prior to incorporating items requiring testing or inspection into the Work.

- 1) During installation, notify the Authorities Having Jurisdiction at least 24 hours before tests and inspections must be made.
2. Coordination Drawings:
 - a. Prepare and submit Coordination Drawings to the Program/Project Manager for approval.
 - 1) Show the following items for this Contract drawn to scale, and coordinate them with each other:
 - a) HVAC, plumbing, and fire suppression items.
 - b) Conduit routing plans.
 - c) Structural members.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Hubless cast iron soil pipe and fittings.
 - 2) Standard, shielded, stainless steel couplings.
 - 3) Flexible non-pressure pipe couplings.
 - 4) Shielded non-pressure pipe couplings.
 - 5) Wall-penetration fittings.
 - b. Shop Drawings:
 - 1) Controlled- flow storm drainage system.
 - 2) Coordination Drawings.
 - c. Delegated Design Submittals:
 - 1) Calculations for the controlled-flow storm drainage system.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Site Quality Control Submittals:
 - 1) Leak test reports.
 - 2) Inspection reports.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Record Documentation:

- 1) As-built drawings of the storm drainage system.
- b. Sustainable Design Closeout Documentation:
 - 1) Low-Emitting Materials: Adhesives & Sealants, Submittal for sealants and sealant primers.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 1. Phoenix Building Construction Code:
 - a. Obtain approval of the Work of this Section from the Authorities Having Jurisdiction (AHJ) in accordance with requirements of the Phoenix Building Construction Code and Amendments.
- B. Sustainability Standards Certifications:
 1. Adhesives and Sealants Submittal:
 - a. For the sealants and sealant primers used within the storm drainage system, submit Product Data, including a printed statement of volatile organic compound (VOC) content and chemical components, signed by the product manufacturer certifying that these products qualify the Project to claim Low-Emitting Materials: Adhesives & Sealants, to the Program/Project Manager for information.
 - 1) Certify compliance with SCAQMD Rule 1168.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Transport pipe materials and other products specified herein in a manner recommended by the respective manufacturers.
- B. Storage and Handling Requirements:
 1. Store and handle pipe materials and other products specified herein in a manner recommended by the respective manufacturers to prevent damage and defects from occurring.
 2. Protect pipe from impact shocks and free fall during handling.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 STORM DRAINAGE PIPING COMPONENTS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified, manufacturers offering products that may be incorporated into the Work include the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with requirements, provide products by one of the manufacturers listed.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - 2. Sustainability Requirements:
 - a. Volatile Organic Compounds (VOC) Content of Interior Adhesives:
 - 1) Provide interior adhesives and adhesive primers for this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168:
 - a) PVC Welding: Not more than 510 grams per Liter less water.
 - b) Adhesive Primer for Plastic: Not more than 550 grams per Liter less water.
- C. Performance:
 - 1. Seismic Performance:
 - a. Provide soil, waste, and vent piping and supports capable of withstanding the effects of seismic events determined according to the requirements specified in ASCE / SEI 7.
- D. Design Criteria:
 - 1. Piping System:
 - a. Plans, schematics, and diagrams included in the Contract Drawings indicate the general location and arrangement of piping systems.

- 1) The indicated locations and arrangements were used to size pipe calculate friction losses, and for compliance with other design considerations.
 - 2) Install piping as indicated unless deviations to the layout are approved by the Program/Project Manager on Coordination Drawings.
 - b. Working Pressure:
 - 1) Unless otherwise indicated, provide components and installations capable of producing a storm drainage piping system with a 10-foot head of water minimum working pressure rating.
 - c. Pipe Class:
 - 1) Provide Service class soil pipe and fittings, gaskets, and gasketed joints for all sizes of aboveground and underground storm drainage piping.
 2. Product Data:
 - a. Submit Product Data for each product provided under this Section to the Program/Project Manager for approval.
 3. Shop Drawings:
 - a. Submit Shop Drawings of the controlled-flow storm drainage system, to the Program/Project Manager for approval.
 - 1) Include plans and details.
 4. Calculations:
 - a. Submit calculations for the controlled-flow storm drainage system to the Program/Project Manager for approval.
- E. Materials:
1. Soil Pipe and Fittings:
 - a. Pipe and Fittings:
 - 1) Except for pipe embedded in concrete columns, provide hubless cast iron soil pipe and fittings complying with the requirements specified in ASTM A 888 or CISPI 301.
 - 2) For pipe embedded in concrete columns, provide Schedule 80 polyvinyl-chloride (PVC) pipe and fittings complying with the requirements specified in ASTM D 2665 and ASTM F 891.
 - a) Fittings:
 - (1) Provide socket fittings complying with the requirements specified in ASTM D 2665, and manufactured in drain, waste, and vent patterns to fit Schedule 80 pipe in accordance with the requirements specified in ASTM D 3311.
 - b. Shielded Couplings:

24th St Station Storm
Drainage Sleeve Material

- 1) Provide shielded couplings complying with the requirements specified in ASTM C 1277, and consisting of an assembly of a metal shield or housing, corrosion-resistant fasteners, and a rubber sleeve with an integral, center pipe stop.
 - 2) Standard, Shielded, Stainless-Steel Couplings:
 - a) Provide standard, shielded, stainless steel couplings complying with the requirements specified in CISPI 310, consisting of a stainless steel corrugated shield; stainless-steel bands and tightening devices; and a rubber sleeve complying with the requirements specified in ASTM C 564.
 - b) Manufacturers:
 - (1) ANACO, www.anaco-husky.com/
 - (2) Fernco, Inc., www.fernco.com.
 - (3) Mission Rubber Co., www.missionrubber.com.
 - (4) Tyler Pipe; Soil Pipe Division, www.tylerpipe.com.
 - (5) Approved equal.
2. Special Pipe Fittings:
- a. Flexible Non-Pressure Pipe Couplings:
 - 1) Provide flexible non-pressure pipe couplings complying with the requirements specified in ASTM C 1173, and consisting of elastomeric, sleeve-type, couplings of the reducing or transition pattern and a corrosion-resistant-metal tension band and tightening mechanism on each end.
 - a) Include shear rings.
 - b) Provide ends the same size as the piping to be joined.
 - 2) Sleeve Materials:
 - a) For cast iron soil pipes, provide rubber sleeves complying with the requirements specified in ASTM C 564.
 - 3) Manufacturers:
 - a) Dallas Specialty & Mfg. Co., www.dallasspecialty.com.
 - b) Fernco, Inc., www.fernco.com.
 - c) Mission Rubber Co., www.missionrubber.com.
 - d) NDS, Inc., www.ndspro.com.
 - e) Approved equal.
 - b. Shielded Non-Pressure Pipe Couplings:
 - 1) Provide shielded non-pressure pipe couplings complying with the requirements specified in ASTM C 1460, and consisting of elastomeric or rubber sleeves with a full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.
 - 2) Manufacturers:
 - a) Cascade Waterworks Mfg. Co., www.cascademfg.com.

- b) Mission Rubber Co., www.missionrubber.com.
 - c) Approved equal.
- c. Wall-Penetration Fittings:
 - 1) Provide compound, ductile-iron coupling fittings having sleeves and flexing sections designed for up to 20-degree deflection, gaskets, and restrained-joint ends complying with AWWA C110/A21.10 or AWWA C153/A21.53.
 - a) Include ductile-iron glands, rubber gaskets, and steel bolts complying with the requirements specified in AWWA C111/A21.11.
 - 2) Manufacturers:
 - a) SIGMA Corp., www.sigmaco.com.
 - b) Approved equal.
- d. Transition Couplings:
 - 1) Provide transition couplings consisting of a fitting or device designed for joining piping of different materials or having small differences in diameter.
 - a) Provide end connections the same size as and compatible with the pipes to be joined.
 - 2) Fitting-Type Transition Couplings:
 - a) Provide manufactured pipe couplings, or specified-piping system fittings.
 - 3) Unshielded, Non-Pressure Transition Couplings:
 - a) Provide elastomeric, sleeve-type, reducing or transition pattern couplings complying with the requirements specified in ASTM C 1173, and having a shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.
 - b) Sleeves:
 - (1) For cast-iron soil pipes, provide rubber sleeves complying with the requirements specified in ASTM C 564.
 - (2) For plastic pipes, provide elastomeric seals complying with the requirements specified in ASTM F 477, or polyvinyl-chloride sleeves complying with the requirements specified in ASTM D 5926.
 - (3) For dissimilar pipes, provide polyvinyl-chloride sleeves complying with the requirements specified in ASTM D 5926, or sleeves manufactured from another material compatible with the pipe materials being joined.

2.02 ACCESSORIES

- A. Cleanouts:
 - 1. Provide cleanouts complying with the requirements specified in Section 15165, Storm Drainage Piping Specialties.
- B. Pipe Hangers and Supports:
 - 1. Provide pipe hangers and supports complying with the requirements specified in Section 15060, Hangers and Supports.
- C. Pipe Insulation:
 - 1. Provide rigid insulation complying with the requirements specified in Section 15080, Mechanical Insulation.
 - 2. All storm drain piping, if used for downspouts in columns, wrap with 1" fiberglass.
- D. Seismic-Restraint Devices:
 - 1. Provide seismic-restraint devices complying with the requirements specified in Section 15070, Mechanical Sound, Vibration, and Seismic Control.
- E. Storm Drainage Piping Specialties:
 - 1. Provide storm drainage piping specialties complying with the requirements specified in Section 15165, Storm Drainage Piping Specialties.

PART 3 EXECUTION

3.01 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the storm drainage system.
- B. Surface Preparation:
 - 1. Perform excavating, trenching, and backfilling operations for storm drainage piping in accordance with the requirements specified in Section 02316, Trenching and Backfilling.
- C. Demolition/Removal:
 - 1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.02 INSTALLATION

A. Hangers and Supports:

1. Install hangers and supports for piping in accordance with the requirements specified in Section 15060 - Hangers and Supports, and the following:
 - a. Vertical Piping:
 - 1) Support vertical piping and tubing at the base and at each floor.
 - 2) Provide extension pipe or riser clamps (MSS SP-58 Type 8) or carbon or alloy steel riser clamps (MSS SP-58 Type 42).
 - b. Horizontal Individual Piping Runs:
 - 1) For individual straight piping runs 100 feet and less, provide adjustable, steel clevis hangers (MSS SP-58 Type 1).
 - 2) For individual straight piping runs longer than 100 feet, provide adjustable roller hangers (MSS SP-58 Type 43).
 - c. Horizontal Multiple Piping Runs:
 - 1) For multiple straight piping runs 100 feet and longer, provide complete pipe rolls (MSS SP-58 Type 44).
 - 2) Support pipe rolls on trapezes.
 - d. For double-rod hangers having 3/8-inch minimum rods, the rod diameter may be reduced 1 size.
2. Install seismic restraints on piping in accordance with the requirements specified in Section 15071, Vibration and Seismic Controls for Mechanical Systems.
3. Maximum Hanger Spans:
 - a. Install supports for vertical cast-iron soil piping every 15 feet.
 - b. Install hangers for cast-iron soil piping with the maximum horizontal spacing and minimum rod diameters specified in Table 15160-1.

Table 15160-1 Maximum Horizontal Hanger Spacing and Minimum Rod Diameters		
Nominal Pipe Size(s)	Maximum Horizontal Hanger Spacing¹	Minimum Rod Diameter
NPS 1-1/2 and NPS 2	60 inches	3/8 inch
NPS 3	60 inches	1/2 inch
NPS 4 and NPS 5	60 inches	5/8 inch
NPS 6	60 inches	3/4 inch
NPS 8 to NPS 12	60 inches	7/8 inch

Table 15160-1 Maximum Horizontal Hanger Spacing and Minimum Rod Diameters		
Nominal Pipe Size(s)	Maximum Horizontal Hanger Spacing ¹	Minimum Rod Diameter
1. Spacing for 10-foot lengths may be increased to 10 feet. Spacing for fittings is limited to 60 inches.		

B. Piping:

1. Make changes in direction for storm drainage piping using appropriate branches, bends, and long-sweep bends.
 - a. Do not change the direction of flow more than 90 degrees.
 - b. Use the proper sizes of standard increasers and reducers if pipes of different sizes are connected.
 - c. Reducing the size of drainage piping in the direction of flow is prohibited.
2. Unless otherwise indicated in the Contract Documents, flanges and unions may be used on aboveground pressure piping.
3. Cast-Iron Soil Piping:
 - a. Provide cast-iron soil piping everywhere in the building, except within concrete columns, in accordance with the requirements specified in Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings", in the CISPI Cast Iron Soil Pipe and Fittings Handbook.
 - 1) Basic piping installation requirements are specified in Section 15050, Basic Mechanical Materials and Methods.
 - a) Coupled Pipe Joints:
 - (1) Join hubless cast-iron soil piping coupled joints according to the requirements specified in CISPI 310 and the CISPI Cast Iron Soil Pipe and Fittings Handbook.
 - b) Grooved Joints:
 - (1) Cut groove ends of pipe, and assemble the grooved ends of pipes, grooved-end fittings, and grooved-end-piping couplings in accordance with the requirements specified in AWWA C606.
4. Polyvinyl-Chloride Piping:
 - a. For rainwater leaders embedded within concrete columns, provide polyvinyl-chloride piping wrapped in 1-inch thick rigid insulation Section 15080, Mechanical Insulation.
5. Storm Drainage Piping Slopes:
 - a. Unless otherwise indicated in the Contract Documents, provide storm drainage piping at the following minimum slopes:

- 1) Building Storm Drain:
 - a) For piping NPS 3 and smaller, slope storm drainage piping 1 percent downward in the direction of flow.
 - b) For piping NPS 4 and larger; slope storm drainage piping 1 percent downward in the direction of flow.
 - 2) Horizontal Storm Drainage Piping:
 - a) Slope storm drainage piping 2 percent downward in the direction of flow.
 6. Buried Building Storm Drainage Piping:
 - a. Install buried building storm drainage piping true to the grades and alignment indicated on the Contract Drawings, with unbroken continuity of the invert.
 - b. Lay buried building storm drainage piping beginning at the low point of each system.
 - c. Place the hub ends of the piping upstream.
 - d. Install required gaskets according to manufacturer's written instructions for the use of lubricants, cements, and other installation requirements.
 - e. Maintain a swab in the piping, and pull the swab past each joint as it is completed.
 7. Wall Penetrations:
 - a. Install a wall-penetration fitting system at each service pipe penetration through the foundation wall.
 - 1) Make the wall-penetration fitting system installation watertight.
 - b. Sleeves are not required for cast iron soil piping passing through a concrete slab-on-grade if the slab does not have membrane waterproofing.
 8. Cleanouts:
 - a. Install cleanouts at grade, and extend each cleanout to where the building storm drains connect to the building storm sewers.
 - b. Install a cleanout fitting with a closure plug inside the building in the storm drainage force-main piping.
- C. Interface with Other Work:
1. If indicated on the Contract Drawings, connect interior storm drainage piping to the exterior storm drainage piping provided under Section 02630, Storm Drainage.
 - a. Provide transition fittings to join dissimilar piping materials.
 2. Connect storm drainage piping to roof drains and storm drainage piping specialties provided under Section 15165, Storm Drainage Piping Specialties.

D. Systems Integration:

1. Storm Drainage System:

- a. After the storm drainage piping provided under this Section is connected to the storm sewer and drainage piping outside the facility, building, or structure, and to the facility storm drainage piping specialties, test and inspect the completed system as specified herein.

3.03 REPAIR/RESTORATION

- A. Repair leaks and defects with new materials, and retest the repaired piping or a portion thereof until satisfactory results are obtained.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. Site Tests:

- a. Test storm drainage piping according to the procedures of the Authorities Having Jurisdiction, or in the absence of published procedures, as follows:
 - 1) Test new piping and parts of existing piping that have been altered, extended, or repaired for leaks and defects.
 - a) If the testing is performed in segments, submit separate reports for each test, complete with a diagram of the portion of the piping tested.
 - 2) Leave new, altered, extended, or replaced storm drainage piping uncovered and unconcealed until it has been tested and approved.
 - a) Expose work that was covered or concealed before it was tested.

b. Leak Test:

1) Test Procedure:

- a) Upon completion of storm drainage piping roughing-in, test the storm drainage piping.
- b) Close openings in the piping system, and fill the system with water to the point of overflow, but not less than to produce a 10-foot head of water.
- c) Inspect the joints for leaks.
- d) Prepare leak test reports, and document corrective action if required.
 - (1) Submit the leak test reports to the Program/Project Manager for information.

2) Acceptance Criteria:

- a) From 15 minutes before the inspection starts to completion of the inspection, the water level must not drop.
 - b) The joints may not show signs of leakage.
- 2. Inspections:
 - a. Perform the inspections specified herein in the presence of the Authorities Having Jurisdiction.
 - 1) Do not enclose, cover, or put piping into operation until it is inspected and approved by the Authorities Having Jurisdiction.
 - b. Roughing-in Inspection:
 - 1) Arrange for an inspection of the piping before concealing or closing-in after piping roughing-in.
 - c. Final Inspection:
 - 1) Arrange for a final inspection by the Authorities Having Jurisdiction to observe the tests specified herein and to ensure compliance with the specified requirements.
 - d. Inspection Reports:
 - 1) Prepare inspection reports documenting the inspections, and have them signed by the Authorities Having Jurisdiction.
 - a) Submit the inspection reports to the Program/Project Manager for information.

B. Non-Conforming Work

- 1. If the Authorities Having Jurisdiction find the piping does not pass the tests or inspections, make required corrections and arrange for a re-inspection.

3.05 SYSTEM STARTUP

A. Commissioning:

- 1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping system, equipment sound control, and equipment vibration control work pertinent to the Work of this Section.

3.06 CLEANING

- A. Clean the interior of storm drainage piping by removing dirt and debris as the Work progresses.**
- B. Waste Management:**
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 CLOSEOUT ACTIVITIES

A. As-Built Documents:

1. Prepare as-built drawings of the storm drainage system, and submit them to the Program/Project Manager for information.

3.08 PROTECTION

- A. Protect installed drains during the remainder of the construction period to prevent the drains from becoming clogged with dirt and debris, and to prevent damage from traffic and construction work.
- B. At the end of each workday and whenever the storm drainage piping Work stops, place plugs in the ends of uncompleted piping to prevent dirt and debris from entering the piping.

SECTION 15165

STORM DRAINAGE PIPING SPECIALTIES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for storm drainage piping specialties for facilities, buildings, or structures, and including the following:
 - a. Cleanouts.
 - b. Roof drains.
 - c. Downspout boots.
 - d. Conductor nozzles.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01732 - Cutting and Patching.
 - 3. Section 01810 – Commissioning.
 - 4. Section 02316 - Trenching and Backfilling.
 - 5. Section 15050 - Basic Mechanical Materials and Methods.
 - 6. Section 15160 - Storm Drainage Piping.
 - 7. Section 15995 - Commissioning of Mechanical Systems.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. NPS - Nominal Pipe Size.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
- C. Reference Standards:
 - 1. American Society of Civil Engineers (ASCE):
 - a. ASCE / SEI 7 - Minimum Design Loads for Buildings and Other Structures.
 - 2. American Society of Mechanical Engineers (ASME):
 - a. ANSI/ASTM A112.6.3 - Floor and Trench Drains.
 - b. ASME A112.36.2M – Cleanouts.
 - 3. ASTM International (ASTM):

- a. ASTM A 74 - Standard Specification for Cast Iron Soil Pipe and Fittings.
- b. ASTM B 32 - Standard Specification for Solder Metal.
- c. ASTM B 749 - Standard Specification for Lead and Lead Alloy Strip, Sheet and Plate Products.
- 4. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 5. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordination Drawings:
 - a. Prepare and submit Coordination Drawings to the Program/Project Manager for approval.
 - 1) Show the following items for this Contract drawn to scale, and coordinate them with each other:
 - a) HVAC, plumbing, and fire suppression items.
 - b) Conduit routing plans.
 - c) Structural members.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Cleanouts
 - 2) Roof Drains
 - 3) Downspout boots.
 - 4) Conductor nozzles.
 - 5) Pipe flashing.
 - 6) Sleeve flashing.
 - 7) Embedded specialty flashing.
 - b. Shop Drawings:
 - 1) Coordination Drawings.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:
 - a. Obtain approval of the Work of this Section from the Authorities Having Jurisdiction (AHJ) in accordance with requirements of the Phoenix Building Construction Code and Amendments.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Transport storm drainage piping specialties in a manner recommended by the respective manufacturers.
- B. Storage and Handling Requirements:
 1. Store and handle storm drainage piping specialties in a manner recommended by the respective manufacturers to prevent damage and defects from occurring.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

- A. Manufacturers:
 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified, manufacturers offering products that may be incorporated into the Work include the manufacturers listed.
 2. Substitution Limitations:
 - a. Subject to compliance with requirements, provide products by one of the manufacturers listed.
- B. Description:
 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- C. Performance:

1. Seismic Performance:
 - a. Provide storm drainage piping and supports capable of withstanding the effects of seismic events determined according to the requirements specified in ASCE / SEI 7.

D. Design Criteria:

1. Piping Systems:
 - a. The Contract Drawings indicate the general arrangement of piping, fittings, and specialties.
 - 1) Plans, schematics, and diagrams included in the Contract Drawings indicate the sizes, profiles, and/or dimensional requirements of the plumbing specialties based on the specific system indicated.
 - 2) The indicated locations and arrangements may need to be modified based on the specific system provided and other design considerations.
 - 3) Install storm drainage-piping specialties as indicated unless deviations to the installation are approved by the Program/Project Manager on Coordination Drawings.
 - b. Working Pressure:
 - 1) Unless otherwise indicated, provide components and installations capable of producing a storm drainage-piping system with a 10-foot head of water minimum working pressure rating:
2. Product Data:
 - a. Submit Product Data for each product provided under this Section to the Program Manager for approval.

E. Materials:

1. Cleanouts:
 - a. Exposed Cast-Iron Cleanouts:
 - 1) Provide exposed cast-iron cleanouts complying with the requirements specified in ASME A112.36.2M for cleanout test tees, and having a hubless cast-iron soil pipe test tee as required to match connected piping.
 - a) Size: Furnish the same size exposed cast-iron cleanouts as the connected drainage piping.
 - b) Closure: Countersunk, cast-iron plug.
 - c) Closure Plug Size: Same as or not more than one size smaller than the cleanout size.
 - 2) Manufacturers:
 - a) Josam Company; Josam Div., www.josam.com.
 - b) MIFAB, Inc., www.mifab.com.

- c) Jay R. Smith Mfg. Co.; Division of Smith Industries, Inc., www.jrsmith.com.
 - d) Tyler Pipe; Wade Div., www.tylerpipe.com.
 - e) Watts Water Technologies, Inc., www.watts.com.
 - f) Zurn Industries, LLC, www.Zurn.com.
 - g) Approved equal.
 - b. Cast-Iron Floor Cleanouts:
 - 1) Provide cast-iron soil pipe with cast-iron ferrule type floor cleanouts complying with the requirements specified in ASME A112.36.2M for adjustable housing cleanouts, and having a cast iron body or ferrule, adjustable cast iron housing, and a clamping device.
 - a) Size: Furnish the same size floor cleanouts as the connected branch.
 - b) Outlet Connection: Threaded.
 - c) Closure: Cast-iron plug.
 - d) Frame and Cover Material and Finish: Nickel-bronze, copper alloy.
 - e) Frame and Cover Shape: Round
 - 2) Manufacturers:
 - a) Josam Company; Josam Div., www.josam.com.
 - b) Oatey, <https://www.oatey.com/>.
 - c) Sioux Chief Manufacturing Company, Inc., www.siouxchief.com.
 - d) Jay R. Smith Mfg. Co.; Division of Smith Industries, Inc., www.jrsmith.com.
 - e) Tyler Pipe; Wade Div., www.tylerpipe.com.
 - f) Watts Water Technologies, Inc., www.watts.com.
 - g) Zurn Industries, LLC, www.Zurn.com.
 - h) Approved equal.
- 2. Roof Drains:
 - a. Cast-Iron Roof Drains:
 - 1) Provide roof drains complying with the requirements specified in ANSI/ASTM A112.6.3, and having a cast-iron body, a polyethylene dome, a combination flashing ring and gravel stop, extension collars, and an underdeck clamp.
 - a) Pattern: Roof drain.
 - b) Outlet: Bottom.
 - 2) Manufacturers:
 - a) Josam Company; Josam Div., www.josam.com.
 - b) MIFAB, Inc., www.mifab.com.

- c) Jay R. Smith Mfg. Co.; Division of Smith Industries, Inc., www.jrsmith.com.
 - d) Tyler Pipe; Wade Div., www.tylerpipe.com.
 - e) Watts Water Technologies, Inc., www.watts.com.
 - f) Zurn Industries, LLC, www.Zurn.com.
 - g) Approved equal.
- 3. Downspout Boots:
 - a. Provide cast-iron soil pipe downspout boots complying with the requirements specified in ASTM A 74, for Service class, hub-and-spigot, cast-iron soil pipe.
 - b. Size:
 - 1) Furnish downspout boots the same size or larger than the connected downspout.
- 4. Conductor Nozzles:
 - a. Provide bronze body conductor nozzles with threaded inlets and bronze wall flanges with mounting holes.
 - b. Size:
 - 1) Furnish the same size conductor nozzles as the connected conductor.

2.02 ACCESSORIES

- A. Sheet Flashing:
 - 1. Fabricate flashing from lead sheets.
 - a. Provide Type L51121, copper bearing lead sheet complying with the requirements specified in ASTM B 749.
 - b. Unless large pans, sumps, or other drainage shapes are required, fabricate flashing from a single piece of lead sheet.
 - c. If joining lead sheets is required, join the sheets in accordance with the following:
 - 1) For lead sheets that are 0.0938 inch thick or thicker and that weigh at least 6.0 pounds per square foot, provide burn joints.
 - 2) For lead sheets 0.0625 inch thick or thicker and weighing at least 4.0 pounds per square foot, provide solder joints.
 - d. Fasteners:
 - 1) Provide fasteners made from metal compatible with the material and substrate being fastened.
 - e. Metal Accessories:
 - 1) Provide sheet metal strips, clamps, anchoring devices, and similar accessory units required for installing the storm drainage piping specialties.

- 2) Provide metal accessories matching or compatible with the material of the specialties being installed.
- f. Solder:
 - 1) Provide lead-free alloy solder complying with the requirements specified in ASTM B 32.
2. Pipe Flashing:
 - a. Provide sleeve type pipe flashing matching the pipe size, having a minimum length of 10 inches, and having a skirt or flange extending at least 8 inches around the pipe.
3. Sleeve Flashing:
 - a. Provide flat sheet sleeve flashing having a skirt or flange extending at least 8 inches around the sleeve.
4. Embedded Specialty Flashing:
 - a. Provide flat sheet embedded specialty flashing having a skirt or flange extending at least 8 inches around the specialty.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Examine the elements and surfaces to receive storm drainage piping specialties for compliance with the installation tolerances, required clearances, and other conditions affecting performance of the Work.
- B. Evaluation and Assessment:
 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the storm drainage system.
- B. Surface Preparation:
 1. Perform excavating, trenching, and backfilling operations for storm drainage piping in accordance with the requirements specified in Section 02316, Trenching and Backfilling.
- C. Demolition/Removal:
 1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Basic Storm Drainage Piping Specialty Installation Requirements:
 - 1. For piping adjacent to equipment, install the piping to allow access for service and maintenance.
 - 2. Escutcheons:
 - a. In exposed finished locations and within cabinets and millwork, provide escutcheons complying with the requirements specified in Section 15050, Basic Mechanical Materials and Methods, at wall, floor, and ceiling penetrations.
 - b. Provide deep-pattern escutcheons if required to conceal protruding pipe fittings.
- B. Cleanouts:
 - 1. For aboveground piping and building drain piping, unless otherwise indicated in the Contract Documents provide cleanouts according to the following:
 - a. Size:
 - 1) For drainage piping up to a nominal pipe size of NPS 4, provide cleanouts the same size as the drainage piping.
 - 2) For drainage piping larger than nominal pipe size of NPS 4, provide NPS 4 cleanouts unless a larger cleanout is indicated in the Contract Documents.
 - b. Provide a cleanout at each piping change in direction greater than 45 degrees.
 - c. Cleanouts in Long Piping Runs:
 - 1) For piping having nominal pipe sizes of NPS 4 and smaller, provide cleanouts spaced a maximum of 50 feet apart along the piping run.
 - 2) For piping having nominal pipe sizes larger than NPS 4, provide cleanouts spaced a maximum of 100 feet apart along the piping run.
 - d. Provide a cleanout at the base of each vertical soil and waste stack.
 - 2. For piping below floors, provide floor cleanouts having cleanout deck plates installed flush with the top of the finished floor.
 - 3. For concealed piping, provide cleanouts having wall access covers of the types indicated in the Contract Documents, and install each frame and cover flush with the finished wall.
- C. Roof Drains:
 - 1. Provide roof drains at low points of roof areas in accordance with the roof membrane manufacturer's written installation instructions.

- a. Where waterproof membranes are penetrated by roof drains, maintain the integrity of the waterproof roofing.
 - 1) Install roof drain flashing collars or flanges so there will be no leakage between the drain and the adjoining roofing.
 - b. Position roof drains for easy access and maintenance.
- D. Risers and Stacks:
 - 1. For each riser and stack passing through floors with waterproof membrane, provide a sleeve flashing device complying with the requirements specified in Section 15050, Basic Mechanical Materials and Methods.
- E. Downspout Boots:
 - 1. Provide downspout boots at grade with the top of the hub 12 inches above grade.
- F. Conductor Nozzles:
 - 1. Provide conductor nozzles at the exposed bottom of conductors where they spill onto grade.
- G. Special Techniques:
 - 1. Sheet Flashing:
 - a. For pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane, provide sheet flashing.
 - 1) Set flashing installed on floors and roofs in a solid coating of bituminous cement.
 - 2) Secure flashing into sleeves and specialty clamping rings or devices.
- H. Interface with Other Work:
 - 1. Piping System Connections:
 - a. For piping joining materials, joint construction, and basic installation requirements, comply with the requirements specified in Section 15050, Basic Mechanical Materials and Methods and other applicable Division 15 Sections.
 - 1) Additional piping installation requirements are specified in other Sections.
- I. Systems Integration:
 - 1. Storm Drainage System:
 - a. Connect the storm drainage piping specialties provided under this Section to the storm drainage piping provided under Section 15160,

Storm Drainage Piping, and test the completed system as specified therein.

3.04 SYSTEM STARTUP

A. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping system, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

3.05 PROTECTION

- A. Protect installed drains during the remainder of the construction period to avoid clogging the drains with dirt or debris, and to prevent damage to the drains from traffic or other construction work.
- B. Place plugs in the ends of uncompleted piping at the end of each day or when work stops.

SECTION 15182

HYDRONIC PIPING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for pipe and fitting materials, joining methods, special-duty valves, and specialties for the following piping:
 - a. Chilled-water piping.
 - b. Condenser-water piping.
 - c. Makeup-water piping.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01732 - Cutting and Patching.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 01810 - Commissioning.
 - 6. Section 15060 - Hangers and Supports.
 - 7. Section 15070 - Mechanical Sound, Vibration, and Seismic Control.
 - 8. Section 15075 - Mechanical Identification.
 - 9. Section 15110 - Valves.
 - 10. Section 15122 - Expansion Fittings and Loops.
 - 11. Section 15122 - Meters and Gages.
 - 12. Section 15187 - Heating and Cooling Pumps.
 - 13. Section 15900 - HVAC Instrumentation and Controls.
 - 14. Section 15995 - Commissioning of Mechanical Systems.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. CWP: Cold working pressure.
 - 2. EPDM: Ethylene propylene diene terpolymer M-class rubber.
 - 3. EPT: Ethylene propylene terpolymer.
 - 4. NPS: Nominal Pipe Size.
 - a. DN: Diamètre nominal (European Equivalent).
 - 5. PTFE: Polytetrafluoroethylene.
 - 6. PVC: Polyvinyl-chloride.
 - 7. RTRF: Reinforced thermosetting resin (fiberglass) fittings.
 - 8. RTRP: Reinforced thermosetting resin (fiberglass) pipe.
 - 9. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside, and San Bernardino counties in California.

10. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
2. Commissioning Authority (CA): An independent agent engaged by the Phoenix Sky Harbor International Airport to direct and coordinate the commissioning process for the Project, and to approve the Work requiring commissioning.
3. Schrader Valve: A valve having a valve stem into which a valve core, consisting of a poppet valve assisted by a spring, is threaded.
4. Working Pressure: Working pressure is equal to the relief pressure plus the static height of the system and pumping head.

C. Reference Standards:

1. American Society of Mechanical Engineers (ASME):
 - a. ANSI/ASME B1.20.1 - Pipe Threads, General Purpose, Inch.
 - b. ASME B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250.
 - c. ASME B16.3 - Malleable Iron Threaded Fittings: Classes 150 and 300.
 - d. ASME B16.4 - Gray Iron Threaded Fittings: (Classes 125 and 250).
 - e. ASME B16.5 - Pipe Flanges and Flanged Fittings: NPS 1/2 through NPS 24 Metric/Inch Standard.
 - f. ASME B16.21 - Nonmetallic Flat Gaskets for Pipe Flanges.
 - g. ANSI/ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.
 - h. ASME B16.39 - Malleable Iron Threaded Pipe Unions: Classes 150, 250, and 300.

 - a. Phoenix Building Construction Code and Amendments.
5. Copper Development Association Inc. (CDA)

- a. CDA A4015 - The Copper Tube Handbook.
- 6. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
- 7. Manufacturers Standardization Society (MSS):
 - a. MSS SP-58 - Pipe Hangers and Supports – Materials, Design, and Manufacture.
- 8. South Coast Air Quality Management District (SCAQMD):
 - a. SCAQMD Rule 1168 – Adhesive and Sealant Applications.
- 9. United States Government:
 - a. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordination Drawings:
 - a. Prepare and submit Coordination Drawings to the Program/Project Manager for approval.
 - 1) Show the following items for this Contract drawn to scale, and coordinate them with each other:
 - a) HVAC, plumbing, and fire suppression items.
 - b) Conduit routing plans.
 - c) Structural members.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Pressure-seal fittings.
 - 2) Valves and flow and pressure drop curves.
 - 3) Air control devices.
 - 4) Chemical treatment.
 - 5) Hydronic specialties.
 - 6) Reinforced thermosetting resin (fiberglass) piping and fittings.
 - b. Shop Drawings:
 - 1) Coordination Drawings.
 - 2) Hydronic piping layout.
 - c. Qualification Statements:
 - 1) Qualifications of the pressure-sealed joint installers.
 - 2) Welding procedure specifications (WPS) test records.
 - 3) Welding Certificates.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Copy of the analysis of the water available at the Site.
 - b. Manufacturer's Instructions:
 - 1) Grooved joint pipe and coupling manufacturer's written installation instructions.
 - 2) Fiberglass pipe manufacturer's written installation instructions.
 - c. Site Quality Control Submittals:
 - 1) Hydrostatic Test Reports.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Air control devices.
 - 2) Hydronic specialties.
 - 3) Special-duty valves.

D. Maintenance Material Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Extra Stock Materials:
 - 1) Water-Treatment Chemicals:
 - a) Furnish enough water-treatment chemicals for preventive maintenance for one year from date of Substantial Completion.

1.05 QUALITY ASSURANCE

A. Qualifications:

1. Hydronic Piping Installer's Qualifications:
 - a. Pressure-Sealed Joint Installers:
 - 1) Employ installers certified by the pressure-seal joint manufacturer as having been trained and qualified to join piping with pressure-seal pipe couplings and fittings.
 - 2) Submit the qualifications of the pressure-sealed joint installers to the Program/Project Manager for approval.
2. Welding Qualifications:
 - a. Welding Procedure Specifications (WPS):
 - 1) Prior to beginning work that requires welding, submit the pre-qualifying welding procedures to the Program/Project Manager for approval.

- 2) For all procedures, other than those set forth in AWS D1.1/D1.1M and ASME BPVC-IX, submit a copy of the welding procedure specifications (WPS) test records to the Program/Project Manager for approval.
 - a) Employ procedures complying with the requirements specified in the ASME B31 Series of standards.
- b. Welders' Qualifications:
 - 1) Prior to beginning work that requires welding, submit the procedures to be used for pre-qualifying welders to the Program/Project Manager for approval.
 - 2) Only use welders, tackers, and welding operators demonstrating they are qualified to perform the types of work required by having passed the qualification tests prescribed for the procedures in AWS D1.1/D1.1M and ASME BPVC-IX.
 - 3) Submit Welding Certificates certifying the welders employed to fabricate and to erect the Work of this Section have been certified by the American Welding Society (AWS) within the previous 12 months to the Program/Project Manager for approval.
 - a) Include certified copies of qualification test records and photographic identification indicating each welder, welding operator, and tacker employed to perform the Work has satisfactorily passed the AWS qualification tests for the required welding procedures and, if pertinent, has undergone recertification.

B. Certifications:

1. ASME Labels:

- a. Provide safety valves and pressure vessels that bear the appropriate ASME label.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Transport pipe materials and other products specified herein in a manner recommended by the respective manufacturers.

B. Storage and Handling Requirements:

1. Store and handle pipe materials and other products specified herein in a manner recommended by the respective manufacturers to prevent damage and defects from occurring.
2. Protect pipe from impact shocks and free fall during handling.

C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

- A. Existing Conditions:
 - 1. Water Analysis:
 - a. To determine the water quality available at the Site, prepare or obtain an analysis of the water.
 - b. Submit a copy of the water analysis to the Program/Project Manager for information.

PART 2 PRODUCTS

2.01 HYDRONIC PIPING SYSTEMS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - 2. Sustainability Requirements:
 - a. Volatile Organic Compounds (VOC) Content of Interior Sealants:
 - 1) Provide interior solvent cements and adhesive primers for this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168:
 - a) PVC Welding: Not more than 510 grams per Liter less water.
 - b) CPVC Welding: Not more than 490 grams per Liter less water.
 - c) ABS Welding: Not more than 325 grams per Liter less water.
 - d) Adhesive Primers for Plastic: Not more than 550 grams per Liter less water.
 - e) Metal to Metal: Not more than 30 grams per Liter less water.
 - f) Fiberglass: Not more than 80 grams per Liter less water.
- C. Design Criteria:

1. The Contract Drawings indicate the general location and arrangement of the hydronic piping system.
 - a. The plans, schematics, and diagrams indicate the piping locations and arrangements used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations.
 - b. Install the hydronic piping as indicated unless deviations to the installation are approved by the Program/Project Manager on the Coordination Drawings.
 - 1) The indicated locations and arrangements may need to be modified based on the specific systems provided and other design considerations.
2. Provide materials and products, and install the hydronic piping and accessories, in accordance with the requirements specified in ASME B31.9.
3. Working Pressures and Temperatures:
 - a. Select system components so they have pressure ratings equal to or greater than the system operating pressure.
 - b. Provide piping components and an installation capable of withstanding the minimum working pressures and temperatures indicated in this Section for the following hydronic piping systems:
 - 1) Chilled-Water Piping:
 - a) The minimum working pressure and temperature for chilled-water piping systems is 125 psig (863kPa) at 200 degrees Fahrenheit (93 degrees Celsius).
 - 2) Condenser-Water Piping:
 - a) The minimum working pressure and temperature for condenser-water piping systems is 125 psig (863kPa) 150 degrees Fahrenheit (66 degrees Celsius).
 - 3) Makeup-Water Piping:
 - a) The minimum working pressure and temperature for makeup - water piping systems is 80 psig (552kPa) 150 degrees Fahrenheit (66 degrees Celsius).
4. Piping Applications:
 - a. Chilled-Water and Condenser-Water Piping:
 - 1) For aboveground, chilled-water piping having nominal pipe sizes of 2 inches (DN 50) and smaller, provide one of the following systems of piping:
 - a) Drawn-temper Type L (B) copper tubing, wrought-copper fittings, and pressure-seal joints.
 - b) Schedule 40 steel pipe, Class 150 malleable-iron fittings, cast-iron flanges and flanged fittings, and threaded joints.
 - 2) For aboveground, chilled-water and condenser-water piping having nominal pipe sizes of 2-1/2 inches (DN 65) and larger, provide one of the following systems of piping:

- a) Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
- b) Schedule 40 steel pipe, grooved mechanical joint coupling and fittings, and grooved mechanical joints.
- 3) Underground Chilled Water, 2-inch and Smaller Pipe and Fittings: Underground chilled water supply and return piping shall be pre-insulated, pre-fabricated type, composed of integral sealed units of HDPE (2" Size) and PVC (1-1/2" or smaller) outer jacket, polyurethane foam insulation, and copper carrier pipe manufactured by: Perma-Pipe Rovanco Copper Pipe System, Thermal Pipe Systems, Thermacore Copper-Therm, or equal.
 - a) Outer Jacket (1-1/2" and Smaller Pipe): Seamless PVC plastic outer jacket extruded from Type I, Grade I, polyvinyl chloride, per ASTM D1784. See Table 1 for minimum wall thickness.
 - b) Outer Jacket (2" Pipe): Seamless High-Density Polyethylene (HDPE) per ASTM D1248 and D3350. Type III, Category 5, Class C. No overwrap or sprayed jacketing will be allowed. See Table 1 for minimum jacket thickness.
 - c) Carrier Pipe: ASTM B88, Type "K" Copper tubing.
 - d) Insulation: Polyurethane foam completely filling annular space between carrier pipe and outer jacket. In-place density shall be 1.9 to 2.1 pcf, with a "K" factor of 0.1 BTU/ (hour) (square foot) (degrees F/in) at 73 degrees F, and a closed cell content of 90 percent. Exposed insulation at unit ends shall be sealed with a factory-applied end seal. Minimum 1-inch thick insulation (nominal).
 - e) End Seals: Factory installed water tight end seals by the fitting and pipe manufacturer. Suitable for service ad pressure of the system. Surfaces shall be smooth and free of voids. "Painted on" end seals are not allowed.
 - f) Fittings: ANSI B16.22 wrought copper fittings. Soldered joints shall be provided with silver solder or brazing alloys with melting points at or above 1,100 °F. Tin-lead solders, with melting points less than 1,100 °F, are not permitted.
 - g) Field Joints: Carrier pipe ends shall be brazed and insulated with pre-fabricated rigid insulating half shells covered by insulating jacket or injected insulation after installation of jacket. O-Ring fittings are not allowed.
 - h) Preparation and installation of all field joints shall be observed and approved by pre-insulated pipe manufacturer's authorized representative and Project Inspector.
 - i) Thrust Blocks: Suitably sized concrete thrust blocks shall be installed at changes in direction, both vertical and horizontal, changes in pipe size, dead ends, and valves.

- j) Anchors: Where indicated on Drawings, install anchor plates attached to the carrier pipe and sealed to pipe jacketing per pipe manufacturer's recommendations.
- 4) Underground Chilled Water, 2-1/2-inch and Large Pipe and Fittings: Underground chilled water supply and return piping shall be pre-insulated, prefabricated-pipe type, composed of integral sealed units of HDPE outer jacket, polyurethane foam insulation and black steel carrier pipe manufactured by: Perma Pipe, Rovanco, Thermal Pipe Systems "Heat-Tite", Thermacor "Ferro-Therm", or equal.
 - a) Outer Jacket: Seamless High-Density Polyethylene (HDPE) per ASTM D1248 and D3350. Type III, Category 5, Class C. No overwrap or sprayed jacketing will be allowed. Tape shall not be allowed to serve as a jacket. The HDPE jacket shall be pressure tested for watertight integrity. See Table 1 for minimum jacket thickness.
 - b) Carrier Pipe: ASTM A53, Grade B, Schedule 40, black steel pipe.
 - c) Insulation: Polyurethane foam completely filling annular space between carrier pipe and outer jacket to a minimum thickness of 1 inch. In-place density shall be 1.9 to 2.1 0.14 BTU/ (hour) (square foot) degrees F/in) at 73 degrees F, and a closed cell content of 90 to 95 percent. Exposed insulation at unit ends shall be sealed with factory-applied end seal.
 - d) End Seals: Furnish factory installed watertight end seals by the jacket and carrier pipe manufacturer suitable for services and pressure of the system. Surfaces shall be smooth and free of voids. "Painted on" end seals are not allowed.
 - e) Fittings: Factory fabricated and pre-insulated with polyurethane foam insulation. Insulation shall be protected with a HDPE jacket of same thickness and quality as that of straight units of pre-insulated pipe. Miters on HDPE jacket at fittings shall be as strong as pipe outer jacket.
 - f) Expansion Elbows and Loops: Prefabricated elbows, expansion loops and tees shall be furnished where expansion compensation is indicated on the Drawings. Pre-insulated fittings that must provide compensation for pipe expansion or contraction shall be installed in a suitably sized jacket and insulated with flexible polyurethane foam insulation. Straight units adjoining expansion fittings shall also be insulated with flexible polyurethane foam insulation to compensate for lateral pipe movement. Expansion loops and elbows shall be properly designed in accordance with stress limits indicated by ANSI B31.1 Code for Pressure Piping.

- g) Thrust Blocks: Suitably sized concrete thrust blocks shall be installed at changes in direction, both vertical and horizontal, changes in pipe size, dead ends, and valves.
- h) Anchors: Prefabricated plate anchors shall be furnished where indicated on Drawings and shall consist of a steel plate welded to carrier pipe and sealed to outer jacket.
- i) Field Joints: Field joints between prefabricated units shall be installed in the following manner:
 - (1) Split or full round HDPE sleeve shall be slid over end of unit before connection of carrier pipe. Connect carrier pipe and hydrostatically test as specified.
 - (2) Center HDPE sleeves over joint area and hold in position with fiberglass tape, mix polyurethane foam components and pour into cavity according to instructions provided by manufacturer.
 - (3) Trim cured polyurethane foam flush with jacket sleeve. Center heat-actuated shrink blanket over jacket sleeve and jacket of adjoining units to provide double layer protection. Using a soft orange flame from a propane torch, work flame from center toward one end, moving rapidly back and forth and around shrink blanket. Air pockets shall be removed and worked out from under shrink blanket. At field joints with expansion provisions, wrap pipe with flexible polyurethane foam insulation and hold in place with tape and complete joint in same manner per prior instructions.
 - (4) Preparation and installation of field joints shall be observed and approved by the pre-insulated pipe manufacturer's authorized representative and the Project Inspector.
- j) Valves: Refer to Section 15053: Basic HVAC Materials and Methods. Provide valve stem extension and valve boxes.

MINIMUM THICKNESS OF HDPE JACKETS

TABLE 1	
PIPE SIZE (INCHES)	JACKET THICKNESS (INCHES)
2	0.070
2-1/2	0.070
3	0.080
4	0.080
5	0.100

6	0.100
8	0.120
10	0.120
12	0.170
14	0.200

- b. Makeup-Water Piping:
 - 1) For aboveground makeup-water piping, provide drawn-temper Type L (B) copper tubing, wrought-copper fittings, and soldered joints.
- c. Condensate-Drain Piping:
 - 1) For condensate-drain piping, provide drawn-temper Type M (C) copper tubing, wrought-copper fittings, and soldered joints.
- d. Air-Vent Piping:
 - 1) Inlet:
 - a) For inlet air-vent piping, provide the same piping as the service where the air-vent piping is installed, and having metal-to-plastic transition fittings for plastic piping systems in accordance with the piping manufacturer's written instructions.
 - 2) Outlet:
 - a) For outlet air-vent piping, provide annealed-temper Type K (A) copper tubing with soldered or flared joints.
- 5. Valve Applications:
 - a. Shutoff-Duty Valves:
 - 1) Install shutoff-duty valves at each branch connection to supply mains, and at the supply connection to each piece of equipment.
 - b. Balancing Valves:
 - 1) Install calibrated-orifice, balancing valves in the return pipe of each cooling terminal.
 - c. Check Valves:
 - 1) Install check valves at each pump discharge and elsewhere as required to control the flow direction.
 - d. Pressure-Reducing Valves:
 - 1) Install pressure-reducing valves at the makeup-water connections to regulate system fill pressure.
- 6. Product Data:
 - a. Obtain the manufacturer's Product Data for each of the following types of products and equipment:
 - 1) Pressure-seal fittings.
 - 2) Valves, including flow and pressure drop curves for calibrated-orifice balancing valves and automatic flow-control valves based on the manufacturer's testing.
 - 3) Air control devices.

- 4) Chemical treatment.
 - 5) Hydronic specialties.
 - 6) Reinforced thermosetting resin (fiberglass) piping and fittings.
 - b. Submit the Product Data to the Program/Project Manager for approval.
- 7. Shop Drawings:
 - a. Prepare Shop Drawings of the hydronic piping layout at a scale of 1/8 inch equals 1 foot, and detail the fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of these items to the building structure.
 - 1) Detail the location of anchors, alignment guides, and expansion joints and loops
 - b. Submit the Shop Drawings to the Program/Project Manager for approval.
- D. Materials:
 - 1. Copper Tube and Fittings:
 - a. Drawn-Temper Copper Tubing:
 - 1) Provide copper tubing complying with the requirements for Type L (Type B) drawn-temper copper tubing specified in ASTM B 88 (ASTM B 88M).
 - b. Annealed-Temper Copper Tubing:
 - 1) Provide copper tubing complying with the requirements for Type K (Type A) annealed -temper copper tubing specified in ASTM B 88 (ASTM B 88M).
 - c. DWV Copper Tubing:
 - 1) Provide copper tubing complying with the requirements for Type DWV copper tubing specified in ASTM B 306.
 - d. Wrought-Copper Fittings:
 - 1) Provide wrought-copper fittings complying with the requirements specified in ASME B16.22.
 - 2) Grooved-End Copper Fittings:
 - a) Provide grooved-end copper fittings complying with the requirements for copper tubes specified in ASTM B 75 (ASTM B 75M) or complying with the requirements for bronze castings specified in ASTM B 584.
 - 3) Grooved-End-Tube Couplings:
 - a) Unless otherwise indicated in the Contract Documents, provide rigid pattern grooved-end-tube copper couplings having ductile-iron housings with keys matching the pipe and fitting grooves, pre-lubricated ethylene propylene diene terpolymer M-class rubber (EPDM) gaskets rated for at least 230 degrees Fahrenheit (110 degrees Celsius) for use with the housings, and steel bolts and nuts.
 - 4) Smooth joint or "roughneck" type fittings are unacceptable.
 - 5) Manufacturers:

- a) Anvil International, Inc., a subsidiary of Mueller Water Products, Inc., <http://www.anvilintl.com>.
 - b) S. P. Fittings; a division of Star Pipe Products, <http://www.starpipeproducts.com>.
 - c) Victaulic Company of America, <http://www.victaulic.com>.
 - d) Approved equal.
2. Copper or Bronze Pressure-Seal Fittings:
 - a. Provide copper or bronze pressure-seal fittings rated for a working pressure of at least 200 psig (1379kPa) at 250 degrees Fahrenheit (121 degrees Celsius) and having a copper housing and ethylene propylene diene terpolymer M-class rubber (EPDM) O-rings and pipe stops.
 - b. Tools:
 - 1) Furnish the pressure-seal fitting manufacturer's special tools required for installing the pressure-seal fittings.
 - c. Manufacturers:
 - 1) Stadler-Viega, <http://www.viega.net>.
 - 2) Approved equal.
3. Steel Pipe and Fittings:
 - a. Steel Pipe:
 - 1) Provide black steel pipe and fittings complying with the requirements specified in ASTM A 53/A 53M, and having plain ends.
 - 2) Provide steel pipe and fittings of the types, grades, and wall thicknesses indicated in Subparagraph 2.01.C.4.
 - b. Cast-Iron Threaded Fittings:
 - 1) Provide cast-iron threaded fittings complying with the requirements specified in ASME B16.4.
 - 2) Provide Class 125 and Class 250 cast-iron fittings as indicated in Subparagraph 2.01.C.4.
 - c. Malleable-Iron Threaded Fittings:
 - 1) Provide malleable-iron threaded fittings complying with the requirements specified in ASME B16.3.
 - 2) Provide Class 150 and Class 300 malleable-iron fittings as indicated in Subparagraph 2.01.C.4.
 - d. Malleable-Iron Unions:
 - 1) Provide malleable-iron unions complying with the requirements specified in ASME B16.39.
 - 2) Provide Class 150, Class 250, and Class 300 malleable-iron unions as indicated in Subparagraph 2.01.C.4.
 - e. Cast-Iron Pipe Flanges and Flanged Fittings:
 - 1) Provide raised ground face cast-iron pipe flanges and flanged fittings complying with the requirements specified in ASME B16.1, and having spot faced bolt holes.

- 2) Provide Class 25, Class 125, and Class 250 cast-iron pipe flanges and flanged fittings as indicated in Subparagraph 2.01.C.4.
- f. Wrought-Steel Fittings:
 - 1) Provide wrought-steel fittings complying with the requirements specified in ASTM A 234/A 234M, and having a wall thickness matching the wall thickness of the adjoining pipe.
- g. Wrought Cast-Steel and Forged-Steel Flanges and Flanged Fittings:
 - 1) Provide wrought cast-steel and forged-steel flanges and flanged fittings complying with the requirements specified in ASME B16.5, and including the bolts, nuts, and gaskets of the following material group, end connections, and facings:
 - a) Material Group: 1.1.
 - b) End Connections: Butt welding.
 - c) Facings: Raised face.
- h. Grooved Mechanical-Joint Fittings and Couplings:
 - 1) Joint Fittings:
 - a) Provide grooved mechanical-joint fittings of the following types:
 - (1) Provide ductile iron joint fittings complying with the requirements for Grade 65-45-12 ductile iron specified in ASTM A 536, Grade 65-45-12 ductile iron
 - (2) Provide malleable iron joint fittings complying with the requirements for Grade 32510 malleable iron specified in ASTM A 47/A 47M.
 - (3) Provide fabricated steel joint fittings complying with the requirements for Type F, E, or S, Grade B steel specified in ASTM A 53/A 53M.
 - (4) Provide steel joint fittings complying with the requirements for Grade B steel specified in ASTM A 106/A 106M, having grooves or shoulders constructed to accept grooved-end couplings, and having nuts, bolts, locking pins, locking toggles, or lugs to secure the grooved pipe and fittings.
 - 2) Couplings:
 - a) Provide grooved mechanical-joint couplings having a ductile-iron or malleable-iron housing; a synthetic rubber gasket of the central cavity pressure-responsive design; and nuts, bolts, locking pins, locking toggles, or lugs to secure the grooved pipe and fittings.
 - 3) Smooth joint or "roughneck" type fittings are unacceptable.
 - 4) Manufacturers:
 - a) Anvil International, Inc., a subsidiary of Mueller Water Products, Inc., <http://www.anvilintl.com>.
 - b) Central Sprinkler Company; a division of Tyco Fire & Building Products, <http://www.tyco-fire.com>.

- c) National Fittings, Inc.
 - d) S. P. Fittings; a division of Star Pipe Products, <http://www.starpipeproducts.com>.
 - e) Victaulic Company of America, <http://www.victaulic.com>.
 - f) Approved equal.
 - i. Steel Pressure-Seal Fittings:
 - 1) Provide steel pressure-seal fittings having a rated working-pressure of at least 300 psig (2070kPa) at 230 degrees Fahrenheit (110 degrees Celsius).
 - a) Housing:
 - (1) Provide steel pressure-seal fittings having steel housings.
 - b) O-Rings and Pipe Stop:
 - (1) Provide steel pressure-seal fittings having ethylene propylene diene terpolymer M-class rubber (EPDM) O-rings and pipe stop.
 - 2) Tools:
 - a) Furnish the manufacturer's special tool required for installing the steel pressure-seal fittings.
 - j. Manufacturers:
 - a) Victaulic Company of America, <http://www.victaulic.com>.
 - b) Approved equal.
 - k. Steel Pipe Nipples:
 - 1) Provide steel pipe nipples complying with the requirements specified in ASTM A 733, and made of same materials and having the same wall thicknesses as the pipe in which they are installed.
- 4. Fiberglass Pipe and Fittings:
 - a. Fiberglass Pipe:
 - 1) Provide reinforced thermosetting resin (fiberglass) pipe (RTRP) complying with the requirements specified in ASTM D 2996.
 - b. Fiberglass Fittings:
 - 1) Provide either compression or spray-up/contact molded reinforced thermosetting resin (fiberglass) fittings (RTRF) fabricated from the same material and having the same pressure class and joining method as the pipe.
 - c. Fiberglass Flanges:
 - 1) Provide reinforced thermosetting resin (fiberglass) flanges complying with the requirements specified in ASTM D 4024.
 - 2) Gaskets:
 - a) Provide full-face gaskets suitable for the service, having a minimum thickness of 1/8 inch (3.2mm), and a durometer hardness of in the 60 to 70 range.
 - 3) Hardware:
 - a) Provide hex head bolts complying with the requirements for Grade B bolts specified in ASTM A 307 and washers.
- 5. Joining Materials:

- a. Pipe-Flange Gasket Materials:
 - 1) Provide nonmetallic, flat, asbestos free pipe-flange gaskets complying with the requirements specified in ASME B16.21, and suitable for the chemical and thermal conditions of the piping system contents.
 - a) Thickness:
 - (1) Unless the gasket thickness or specific material is indicated in the Contract Documents, provide pipe-flange gaskets no more than 1/8 inch (3.2mm) thick.
 - b) Full-Face Type:
 - (1) For flat-face, Class 125, cast-iron and cast-bronze flanges, provide full-face type pipe-flange gaskets.
 - c) Narrow-Face Type:
 - (1) For raised-face, Class 250, cast-iron and steel flanges, provide narrow -face type pipe-flange gaskets.
- b. Flange Bolts and Nuts:
 - 1) Unless otherwise indicated in the Contract Documents, provide carbon steel flange bolts and nuts complying with the requirements specified in ASME B18.2.1.
- c. Solder Filler Metals:
 - 1) Provide solder filler metals complying with the requirements for lead-free alloys specified in ASTM B 32.
 - 2) Provide water-flushable flux complying with the requirements specified in ASTM B 813.
- d. Brazing Filler Metals:
 - 1) Provide brazing filler metals complying with the requirements specified in ANSI/AWS A5.8/A5.8M.
 - a) For joining copper with copper, provide BCuP Series copper-phosphorus alloy brazing filler metals.
 - b) For joining copper with bronze or steel, provide BAg-1 silver alloy brazing filler metals.
- e. Welding Filler Metals:
 - 1) Provide welding filler metals complying with the requirements specified in ANSI/AWS D10.12M/D10.12, and appropriate for the wall thickness and chemical analysis of the steel pipe being welded.
- f. Fiberglass Pipe Adhesive:
 - 1) Provide adhesive for joining fiberglass pipe furnished or recommended by the fiberglass pipe manufacturer.
- g. Gasket Material:
 - 1) Provide the thickness, material, and type of gasket material suitable for the fluid to be handled and for the working temperatures and pressures.

6. Dielectric Fittings:
 - a. Provide combination dielectric fittings fabricated from copper-alloy and ferrous materials; and having threaded, solder-joint, plain, or weld-neck end connections that match the piping system materials.
 - b. Insulating Material:
 - 1) Provide insulating material suitable for the system fluid, pressure, and temperature.
 - c. Dielectric Unions:
 - 1) Provide factory-fabricated dielectric union assemblies rated for a working pressure of at least 250 psig (1725kPa) at 180 degrees Fahrenheit (82 degrees Celsius).
 - 2) Manufacturers:
 - a) Capitol Manufacturing Company, <http://www.capitolcamco.com>.
 - b) Central Plastics Company, <http://www.centralplastics.com>.
 - c) Hart Industries International, Inc., <http://www.hartindustries.com>.
 - d) Watts Regulator Co.; a division of Watts Water Technologies, Inc., <http://www.watts.com>.
 - e) Zurn Plumbing Products Group; AquaSpec Commercial Products Division, <http://www.zurn.com>.
 - f) Approved equal.
 - d. Dielectric Flanges:
 - 1) Provide factory-fabricated companion-flange assemblies rated for working pressures of at least 150 psig (1035kPa) or 300 psig (2070kPa) as required to suit the system pressures.
 - 2) Manufacturers:
 - a) Capitol Manufacturing Company, <http://www.capitolcamco.com>.
 - b) Central Plastics Company, <http://www.centralplastics.com>.
 - c) Watts Regulator Co.; a division of Watts Water Technologies, Inc., <http://www.watts.com>.
 - d) Approved equal.
 - e. Dielectric-Flange Kits:
 - 1) Provide companion-flange assemblies designed for field assembly, and that include flanges, full-face- or ring-type neoprene or phenolic gaskets, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
 - 2) The separate companion flanges and steel bolts and nuts must be rated for working pressures of at least 150 psig (1035kPa) or 300 psig (2070kPa) where required to suit system pressures.
 - 3) Manufacturers:
 - a) Advance Products and Systems, Inc., <http://www.apsonline.com/index.html>.

- b) Calpico, Inc.,
http://www.calpicoinc.com/uploads/wall_sleeves.pdf.
 - c) Central Plastics Company, <http://www.centralplastics.com>.
 - d) Pipeline Seal and Insulator, Inc., <http://www.pipelineal.com>.
 - e) Approved equal.
 - f. Dielectric Couplings:
 - 1) Provide galvanized-steel dielectric couplings having inert and noncorrosive thermoplastic linings, threaded ends, and that are rated for a working pressure of at least 300 psig (2070kPa) at 225 degrees Fahrenheit (107 degrees Celsius).
 - 2) Manufacturers:
 - a) Calpico, Inc.,
http://www.calpicoinc.com/uploads/wall_sleeves.pdf.
 - b) Lochinvar Corporation, <http://www.lochinvar.com>.
 - c) Approved equal.
 - g. Dielectric Nipples:
 - 1) Provide electroplated steel nipples having inert and noncorrosive, thermoplastic linings; plain, threaded, or grooved ends; and that are rated for a working pressure of at least 300 psig (2070kPa) at 225 degrees Fahrenheit (107 degrees Celsius).
 - 2) Manufacturers:
 - a) Perfection Corporation (Elster Perfection); a subsidiary of American Meter Company, <https://www.elster-perfection.com/>.
 - b) Precision Plumbing Products, Inc., <http://www.pppinc.net>.
 - c) Sioux Chief Manufacturing Company, Inc.,
<http://www.siouxchief.com>.
 - d) Victaulic Company of America, <http://www.victaulic.com>.
 - e) Approved equal.
- 7. Valves:
 - a. Check, Ball, and Butterfly Valves:
 - 1) Provide check, ball, and butterfly valves complying with requirements specified in Section 15110, Valves.
 - b. Automatic Temperature-Control Valves, Actuators, and Sensors:
 - 1) Provide automatic temperature-control valves, actuators, and sensors complying with requirements specified in Section 15900, HVAC Instrumentation and Controls.
 - c. Bronze, Calibrated-Orifice, Balancing Valves:
 - 1) Provide bronze, calibrated-orifice, balancing valves having the following additional features:
 - a) Bodies:
 - (1) Provide bronze balancing ball or plug type valves having a calibrated orifice or venturi.
 - b) Balls:
 - (1) Provide balancing valves having brass or stainless-steel balls.

- c) Plugs:
 - (1) Provide balancing valves having resin plugs.
- d) Seats:
 - (1) Provide balancing valves having polytetrafluoroethylene (PTFE) seats.
- e) End Connections:
 - (1) Provide balancing valves having threaded or socket end connections.
- f) Pressure Gage Connections:
 - (1) Provide balancing valves having integral seals for portable differential pressure meter connections.
- g) Handle Style:
 - (1) Provide balancing valves having lever type handles with a memory stop to retain a set position.
- h) Cold Working Pressure (CWP) Rating:
 - (1) Provide balancing valves having a cold working pressure of at least 125 psig (860kPa).
- i) Operating Temperature:
 - (1) Provide balancing valves having an operating temperature not greater than 250 degrees Fahrenheit (121 degrees Celsius).
- 2) Manufacturers:
 - a) Armstrong Pumps, Inc., <http://www.pumpproducts.com/armstrong-m-10.html>.
 - b) Bell & Gossett Domestic Pump; a division of ITT Industries, <http://www.bellgossett.com>.
 - c) Flow Design, Inc., <http://www.flowdesign.com>.
 - d) Gerand Engineering Co., <http://www.gerandengineeringco.com>.
 - e) Griswold Controls, <http://www.griswoldcontrols.com>.
 - f) Taco, Inc., <http://www.taco-hvac.com>.
 - g) Approved equal.
- d. Cast-Iron or Steel, Calibrated-Orifice, Balancing Valves:
 - 1) Provide cast-iron or steel, calibrated-orifice, balancing valves having the following additional features:
 - a) Bodies:
 - (1) Provide cast-iron or steel body, ball, plug, or globe pattern balancing valves having a calibrated orifice or venturi.
 - b) Balls:
 - (1) Provide balancing valves having brass or stainless-steel balls.
 - c) Stem Seals:
 - (1) Provide balancing valves having ethylene propylene diene terpolymer M-class rubber (EPDM) O-ring stem seals.
 - d) Discs:

- (1) Provide balancing valves having glass and carbon-filled polytetrafluoroethylene (PTFE) discs.
- e) Seats:
 - (1) Provide balancing valves having polytetrafluoroethylene (PTFE) seats.
- f) End Connections:
 - (1) Provide balancing valves having flanged or grooved end connections.
- g) Pressure Gage Connections:
 - (1) Provide balancing valves having integral seals for portable differential pressure meter connections.
- h) Handle Style:
 - (1) Provide balancing valves having lever type handles with a memory stop to retain a set position.
- i) Cold Working Pressure (CWP) Rating:
 - (1) Provide balancing valves having a cold working pressure of at least 125 psig (860kPa).
- j) Operating Temperature:
 - (1) Provide balancing valves having an operating temperature not greater than 250 degrees Fahrenheit (121 degrees Celsius).
- 2) Manufacturers:
 - a) Armstrong Pumps, Inc., <http://www.armstrongpumps.com>.
 - b) Bell & Gossett Domestic Pump; a division of ITT Industries, <http://www.bellgossett.com>.
 - c) Flow Design, Inc., <http://www.flowdesign.com>.
 - d) Gerand Engineering Co., <http://www.gerandengineeringco.com>.
 - e) Griswold Controls, <http://www.griswoldcontrols.com>.
 - f) Approved equal.
- e. Diaphragm-Operated, Pressure-Reducing Valves:
 - 1) Provide diaphragm-operated, pressure-reducing valves having the following additional features:
 - a) Bodies:
 - (1) Provide pressure-reducing valves having bronze or brass bodies.
 - b) Discs:
 - (1) Provide pressure-reducing valves having glass and carbon-filled Polytetrafluoroethylene (PTFE) discs.
 - c) Seats:
 - (1) Provide pressure-reducing valves having brass seats.
 - d) Stem Seals:
 - (1) Provide pressure-reducing valves having ethylene propylene diene terpolymer M-class rubber (EPDM) O-ring stem seals.

- e) Diaphragms:
 - (1) Provide pressure-reducing valves having ethylene propylene terpolymer (EPT) diaphragms.
- f) Provide pressure-reducing valves having a low inlet-pressure check valve.
- g) Inlet Strainers:
 - (1) Provide pressure-reducing valves having bronze inlet strainers, removable without having to shut down the system.
- h) Valve Seats and Stems:
 - (1) Provide pressure-reducing valves having noncorrosive valve seats and stems.
- i) Valve Size, Capacity, and Operating Pressure:
 - (1) Provide pressure-reducing valves selected to suit the system in which they are to be installed, and having the operating pressure and capacity factory set but field adjustable.
- 2) Manufacturers:
 - a) Amtrol, Inc., <http://www.amtrol.com/index.htm>.
 - b) Armstrong Pumps, Inc., <http://www.armstrongpumps.com>.
 - c) Bell & Gossett Domestic Pump; a division of ITT Industries, <http://www.bellgossett.com>.
 - d) Apollo Valves, manufactured by Conbraco Industries, Inc., <http://www.apollovalves.com>.
 - e) Spence Engineering Company, Inc., <http://www.spenceengineering.com>.
 - f) Watts Regulator Co.; a division of Watts Water Technologies, Inc., <http://www.watts.com>.
 - g) Approved equal.
- f. Automatic Flow-Control Valves:
 - 1) Provide automatic flow-control valves having the following additional features:
 - a) Bodies:
 - (1) Provide automatic flow-control valves having brass or ferrous metal bodies.
 - b) Piston and Spring Assemblies:
 - (1) Provide automatic flow-control valves having stainless steel, tamper proof, self-cleaning, and removable piston and spring assemblies.
 - c) Combination Assemblies:
 - (1) Provide a bronze or brass-alloy ball valve in combination automatic flow-control valve assemblies.
 - d) Identification Tags:
 - (1) Provide automatic flow-control valves marked with the zone identification, valve number, and flow rate.

- e) Size:
 - (1) Provide automatic flow-control valves having the same size as the pipe in which they are installed.
- f) Performance:
 - (1) Provide automatic flow-control valves that maintain a constant flow, plus or minus 5 percent over the system pressure fluctuations.
- g) Cold Working Pressure (CWP) Rating:
 - (1) Provide automatic flow-control valves having a cold working pressure of at least 175 psig (1207kPa).
- h) Operating Temperature:
 - (1) Provide automatic flow-control valves having an operating temperature not greater than 200 degrees Fahrenheit (93 degrees Celsius).
- 2) Manufacturers:
 - a) Flow Design, Inc., <http://www.flowdesign.com>.
 - b) Griswold Controls, <http://www.griswoldcontrols.com>.
 - c) Approved equal.
- 8. Air Control Devices:
 - a. Manual Air Vents:
 - 1) Provide manual air vents having the following additional features:
 - a) Bodies:
 - (1) Provide manual air vents having bronze bodies.
 - b) Internal Parts:
 - (1) Provide manual air vents having nonferrous internal parts.
 - c) Operators:
 - (1) Provide manual air vents having screwdriver or thumbscrew operators.
 - d) Inlet Connections:
 - (1) Provide manual air vents having 1/2 inch (DN 15) nominal pipe size inlet connections.
 - e) Discharge Connections:
 - (1) Provide manual air vents having 1/8 inch (DN 6) nominal pipe size discharge connections.
 - f) Cold Working Pressure (CWP) Rating:
 - (1) Provide manual air vents having a cold working pressure of at least 150 psig (1035kPa).
 - g) Operating Temperature:
 - (1) Provide manual air vents having an operating temperature not greater than 225 degrees Fahrenheit (107 degrees Celsius).
 - b. Automatic Air Vents:
 - 1) Provide automatic air vents having the following additional features:
 - a) Bodies:

- (1) Provide automatic air vents having bronze or cast-iron bodies.
 - b) Internal Parts:
 - (1) Provide automatic air vents having nonferrous internal parts.
 - c) Operators:
 - (1) Provide automatic air vents having noncorrosive metal float operators.
 - d) Inlet Connections:
 - (1) Provide automatic air vents having 1/2 inch (DN 15) nominal pipe size inlet connections.
 - e) Discharge Connections:
 - (1) Provide automatic air vents having 1/4 inch (DN 8) nominal pipe size discharge connections.
 - f) Cold Working Pressure (CWP) Rating:
 - (1) Provide automatic air vents having a cold working pressure of at least 150 psig (1035kPa).
 - g) Operating Temperature:
 - (1) Provide manual air vents having an operating temperature not greater than 240 degrees Fahrenheit (116 degrees Celsius).
- c. Expansion Tanks:
- 1) Provide the following general features with all expansion tanks provided under this Section:
 - a) Tanks:
 - (1) Provide a welded steel tank rated for a working pressure of 125 psig (860kPa) and a maximum operating temperature of 375 degrees Fahrenheit (191 degrees Celsius) and having taps in the bottom of the tank for a tank fitting and taps in end of the tank for a gage glass.
 - (2) Provide factory-tested tanks having taps fabricated and labeled in accordance with the requirements specified in ASME BPVC-VIII.
 - b) Air-Control Tank Fittings:
 - (1) Provide an air-control tank fitting sized for the compression-tank diameter.
 - (2) Provide tank fittings designed for a working pressure of 125 psig (860kPa) and a maximum operating temperature of 250 degrees Fahrenheit (121 degrees Celsius).
 - (3) For 100-gallon (379L) units only, provide an air-control tank fitting having a cast-iron body, a copper-plated tube, a brass vent tube plug, and a stainless-steel ball check.
 - c) Tank Drain Fittings:

- (1) Provide tank drain fittings designed and constructed to admit air to the compression tank, drain water, and close off the system.
 - (2) Provide tank drain fittings having a brass body, nonferrous internal parts.
 - (3) Provide tank drain fittings designed for a working pressure of 125 psig (860kPa) and a maximum operating temperature of 240 degrees Fahrenheit (116 degrees Celsius).
- d) Gage Glasses:
 - (1) Provide a full height 3/4-inch (20mm) diameter gage glass having dual manual shutoff valves and a slotted-metal glass guard.
- 2) Bladder-Type Expansion Tanks:
 - a) Provide bladder-type expansion tanks having the following additional features:
 - (1) Tanks:
 - (a) Provide bladder-type welded steel expansion tanks rated for a working pressure of 125 psig (860kPa) and a maximum operating temperature 375 degrees Fahrenheit (191 degrees Celsius).
 - (b) Provide factory-tested tanks having taps fabricated and supports installed and labeled in accordance with the requirements specified in ASME BPVC-VIII.
 - (2) Bladders:
 - (a) Provide bladder-type expansion tanks having their bladders securely sealed into the tank to separate the air charge from the system water to maintain the required expansion capacity.
 - (3) Air-Charge Fittings:
 - (a) Provide bladder-type expansion tanks having a stainless-steel Schrader valve with ethylene propylene diene terpolymer M-class rubber (EPDM) seats.
- 3) Tangential-Type Air Separators:
 - a) Provide tangential-type air separators having the following additional features:
 - (1) Tanks:
 - (a) Provide welded steel tangential-type air separators having constructed and labeled in accordance with ASME requirements and having a minimum working pressure of 125 psig (860kPa) and a maximum operating temperature of 375 degrees Fahrenheit (191 degrees Celsius).
 - (2) Air Collector Tubes:

- (a) Provide tangential-type air separators having perforated stainless steel air collector tubes, designed and constructed to direct released air into an expansion tank.
 - (3) Tangential Inlet and Outlet Connections:
 - (a) For tangential-type air separators having nominal pipe sizes of 2 inches (DN 50) and smaller, provide threaded tangential inlet and outlet connections.
 - (b) For tangential-type air separators having nominal pipe sizes of 2-1/2 inches (DN 65) and larger, provide; flanged tangential inlet and outlet connections.
 - (4) Blowdown Connections:
 - (a) Provide tangential-type air separators having threaded blowdown connections.
 - (5) Size:
 - (a) Provide tangential-type air separators of the size matching the system flow capacity.
- 4) Inline Air Separators:
 - a) Provide inline air separators having the following additional features:
 - (1) Tanks:
 - (a) Provide inline air separators having one-piece cast iron tanks with an integral weir designed and constructed to decelerate the system flow so air separation is maximized.
 - (2) Working Pressure:
 - (a) Provide inline air separators having a maximum working pressure of 175 psig (1207kPa).
 - (3) Operating Temperature:
 - (a) Provide inline air separators having a maximum operating temperature of 300 degrees Fahrenheit (149 degrees Celsius).
- 5) Manufacturers:
 - a) Amtrol, Inc., <http://www.amtrol.com/index.htm>.
 - b) Armstrong Pumps, Inc., <http://www.pumpproducts.com/armstrong-m-10.html>.
 - c) Bell & Gossett Domestic Pump; a division of ITT Industries, <http://www.bellgossett.com>.
 - d) Approved equal.
- 9. Chemical Treatment:
 - a. Bypass Chemical Feeders:
 - 1) Provide welded steel bypass chemical feeders having a fill funnel and inlet, outlet, and drain valves.
 - 2) Capacity:

- a) Provide bypass chemical feeders having a 5 gallon (19L) capacity.
 - 3) Working Pressure:
 - a) Provide bypass chemical feeders having a working pressure of 125 psig (860kPa).
 - 4) Chemicals:
 - a) To prevent an accumulation of scale and corrosion in piping and connected equipment, provide chemicals, specially formulated based on an analysis of the makeup water, for the bypass chemical feeders.
- 10. Hydronic Piping Specialties:
 - a. Y-Pattern Strainers:
 - 1) Provide Y-pattern strainers having the following additional features:
 - a) Bodies:
 - (1) Provide Y-pattern strainers having cast iron bodies complying with the requirements for Class B cast iron specified in ASTM A 126, and having a bolted cover and bottom drain connection.
 - b) End Connections:
 - (1) For Y-pattern strainers having nominal pipe sizes of 2 inches (DN 50) and smaller, provide threaded end connections.
 - (2) For Y-pattern strainers having nominal pipe sizes of 2-1/2 inches (DN 65) and larger, provide flanged end connections.
 - c) Strainer Screens:
 - (1) Provide Y-pattern strainers having 40-mesh startup strainer screens and perforated stainless-steel basket screens having a 50 percent free area.
 - d) Cold Working Pressure (CWP) Rating:
 - (1) Provide balancing valves having a cold working pressure of at least 125 psig (860kPa).
 - b. Flexible Connectors:
 - 1) Provide spherical flexible connectors having the following additional features:
 - a) Bodies:
 - (1) Provide flexible connectors having fiber-reinforced rubber bodies.
 - b) End Connections:
 - (1) Provide flexible connectors having steel flange end connections drilled to align with Class 150 and Class 300 steel flanges.
 - c) Performance:

- (1) Provide flexible connectors capable functioning normally when misaligned.
 - d) Cold Working Pressure (CWP) Rating:
 - (1) Provide balancing valves having a cold working pressure of 150 psig (1035kPa).
 - e) Operating Temperature:
 - (1) Provide flexible connectors having an operating temperature not greater than 250 degrees Fahrenheit (121 degrees Celsius).
- E. Shop Fabrication:
 - 1. Fabricate and stamp air separators and expansion tanks in accordance with the requirements specified in ASME BPVC-VIII.

2.02 ACCESSORIES

- A. Expansion Fittings:
 - 1. Provide expansion fittings complying with the requirements specified in Section 15122, Expansion Fittings and Loops.
- B. Pumps:
 - 1. Provide pumps, pump motors, and accessories complying with the requirements specified in Section 15187, Heating and Cooling Pumps.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Examine the elements and surfaces to receive hydronic piping for compliance with the installation tolerances, required clearances, and other conditions affecting performance of the Work.
- B. Evaluation and Assessment:
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the hydronic piping.
- B. Surface Preparation:
 - 1. For piping penetrations of walls, ceilings, and floors, install sleeves.
- C. Demolition/Removal:

1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Install in accordance with manufacturer's instructions under observation of manufacturer's technical representative.
- B. Manufacturer's technical representative shall determine if handling, storage and installation is being performed in accordance with manufacturer's recommendations and is to be present during critical periods of installation and testing of system. Before Substantial Completion, deliver to the ARCHITECT a certificate from manufacturer stating the installation is satisfactory and was performed in accordance with manufacturer's recommendations.
- C. Inspections and Tests:
 1. Welding Inspection: In accordance with Section 15053.
 2. Pressure Testing: In accordance with Section 15053 and following:
 - a. Test at ~~200 psi~~. Maintain test pressure for at least 4 hours, observed by the Project Inspector, to prove tightness without leaks.
 3. Field Joint Inspection:
 - a. Verify installation of insulation at all field joints. Installation of field applied insulation and jackets shall be observed by the Project Inspector.
4. Video Recording of Underground Installation:
 - a. Prior to backfill, the CONTRACTOR shall video record the entire extent of the underground piping installation. The video recording shall also note depths, and locations of fittings.
 - b. The video recording shall be developed on a 12 cm, DVD disk. Provide (3) copies of the DVD recording to the Project Inspector for approval by the ARCHITECT, prior to backfill.
 - c. Provide (1) copy of the DVD recording within the underground piping "as-built" drawing submittal package.
- F. Backfill: For excavation, fill, import and export of materials refer to Section 02316, Trenching and Backfilling.
 1. Immediately after piping is installed in trench, a partial backfill shall be provided in middle of each unit leaving joints exposed for inspection before hydrostatic tests. After all thrust blocks are installed, a hydrostatic test shall be performed.
 2. After hydrostatic testing, final backfill of selected earth shall be hand-packed and hand-tamped to 12-inch minimum over top of jacket. Remainder of backfill shall be free of large boulders, rocks over 6-inch

in diameter, frozen earth, or foreign matter. Do not furnish wheeled or tracked vehicles for tamping of backfill.

- D. Detectable Warning Tape: Provide and install detectable marking tape along buried piping per Section 15077, Identification for HVAC Piping and Equipment.
- E. Hangers and Supports:
1. Provide hanger, support, and anchor devices complying with the requirements specified in Section 15060, Hangers and Supports.
 2. Provide seismic restraints complying with the requirements specified in Section 15070, Mechanical Sound, Vibration, and Seismic Control.
 3. Types of Supports:
 - a. For individual horizontal pipes less than 20 feet (6m) long, provide adjustable steel clevis hangers.
 - b. For individual horizontal pipes 20 feet (6m) or longer, provide adjustable roller hangers and spring hangers.
 - c. For multiple horizontal pipes 20 feet (6 m) or longer, provide pipe rollers complying with the requirements for Type 44 rollers specified in MSS SP-58, and supported on a trapeze.
 - d. For supporting vertical runs, provide spring hangers.
 - e. For hangers and supports in direct contact with copper pipe, provide copper-clad hangers and supports.
 4. Hangers for Steel Piping:
 - a. For a 3/4 inch (DN 20) nominal steel pipe size, do not space pipe hangers more than 7 feet (2.1m) apart, and do not provide hanger rods less than 1/4 inch (6.4mm) in diameter.
 - b. For a 1 inch (DN 25) nominal steel pipe size, do not space pipe hangers more than 7 feet (2.1m) apart, and do not provide hanger rods less than 1/4 inch (6.4mm) in diameter.
 - c. For a 1-1/2 inch (DN 40) nominal steel pipe size, do not space pipe hangers more than 9 feet (2.7m) apart, and do not provide hanger rods less than 3/8 inch (10mm) in diameter.
 - d. For a 2 inch (DN 50) nominal steel pipe size, do not space pipe hangers more than 10 feet (3.0m) apart, and do not provide hanger rods less than 3/8 inch (10mm) in diameter.
 - e. For a 2-1/2 inch (DN 65) nominal steel pipe size, do not space pipe hangers more than 11 feet (3.4m) apart, and do not provide hanger rods less than 3/8 inch (10mm) in diameter.
 - f. For a 3 inch (DN 65) nominal steel pipe size, do not space pipe hangers more than 12 feet (3.7m) apart, and do not provide hanger rods less than 3/8 inch (10mm) in diameter.
 - g. For a 4 inch (DN 100) nominal steel pipe size, do not space pipe hangers more than 14 feet (4.3m) apart, and do not provide hanger rods less than 1/2 inch (13mm) in diameter.

- h. For a 6 inch (DN 150) nominal steel pipe size, do not space pipe hangers more than 17 feet (5.2m) apart, and do not provide hanger rods less than 1/2 inch (13mm) in diameter.
 - i. For an 8 inch (DN 200) nominal steel pipe size, do not space pipe hangers more than 19 feet (5.8m) apart, and do not provide hanger rods less than 5/8 inch (16mm) in diameter.
 - 5. Hangers for Drawn-Temper Copper Piping:
 - a. For a 3/4 inch (DN 20) nominal drawn-temper copper pipe size, do not space pipe hangers more than 5 feet (1.5m) apart, and do not provide hanger rods less than 1/4 inch (6.4mm) in diameter.
 - b. For a 1 inch (DN 25) nominal drawn-temper copper pipe size, do not space pipe hangers more than 6 feet (1.8m) apart, and do not provide hanger rods less than 1/4 inch (6.4mm) in diameter.
 - c. For a 1-1/2 inch (DN 40) nominal drawn-temper copper pipe size, do not space pipe hangers more than 8 feet (2.4m) apart, and do not provide hanger rods less than 3/8 inch (10mm) in diameter.
 - d. For a 2 inch (DN 50) nominal drawn-temper copper pipe size, do not space pipe hangers more than 8 feet (2.4m) apart, and do not provide hanger rods less than 3/8 inch (10mm) in diameter.
 - e. For a 2-1/2 inch (DN 65) nominal drawn-temper copper pipe size, do not space pipe hangers more than 9 feet (2.7m) apart, and do not provide hanger rods less than 3/8 inch (10mm) in diameter.
 - f. For a 3 inch (DN 80) nominal drawn-temper copper pipe size, do not space pipe hangers more than 10 feet (3.0m) apart, and do not provide hanger rods less than 3/8 inch (10mm) in diameter.
 - 6. Support vertical runs at the roof, at each floor, and at 10-foot (3m) intervals between floors.

F. Piping:

- 1. Except in equipment rooms and service areas, install piping in concealed locations unless otherwise indicated in the Contract Documents.
 - a. In equipment rooms and service areas, install piping exposed and either at right angles or parallel to building walls.
 - b. Unless specifically indicated otherwise in the Contract Documents, diagonal runs are prohibited.
 - c. When installing piping above accessible ceilings, allow sufficient space to remove the ceiling panels.
- 2. Install piping so installed valves can be serviced.
- 3. Install piping free of sags and bends, and so it has the slopes indicated in the Contract Documents.
 - a. Install piping at a uniform grade of 0.2 percent upward in the direction of flow.
- 4. Install groups of pipes parallel to each other, and space the pipes so insulation can be applied and installed valves can be serviced.
 - a. When installing piping to be insulated, allow sufficient space to install or apply the insulation.

5. For changes in direction and branch connections, provide fittings.
 - a. For installing branch connections to mains, provide tee fittings in the main pipe, and connect the branch connected to the bottom of the main pipe.
 - b. For up-feed risers, connect the branch to the top of the main pipe.
6. Pipe Unions:
 - a. For piping having nominal pipe sizes of 2 inches (DN 50) and smaller, for piping adjacent to valves, at the final connections of equipment, and elsewhere when indicated in the Contract Documents, provide pipe unions.
7. Pipe Flanges:
 - a. For piping having nominal pipe sizes of 2-1/2 inches (DN 65) and larger, at the final connections of equipment, and elsewhere when indicated in the Contract Documents, provide pipe flanges.
8. To reduce pipe sizes, provide eccentric reducer fittings installed with the level side up.
9. Expansion:
 - a. To protect piping from damage due to expansion, provide expansion loops, expansion joints, anchors, and pipe alignment guides for the piping in accordance with the requirements specified in Section 15122, Expansion Fittings and Loops.
10. Piping Penetrations:
 - a. For piping penetrations of exterior concrete walls and slabs, provide sleeve seals.
 - b. For piping penetrations of walls, ceilings, and floors, provide escutcheons.
11. Drains:
 - a. At low points in the piping system mains and elsewhere as required for system drainage, provide drains consisting of a tee fitting, and a ball valve, a short-threaded nipple, and a pipe cap having 3/4 inch (DN 20) nominal pipe sizes.
12. Strainers:
 - a. On the inlet side of each control valve, pressure-reducing valve, solenoid valve, in-line pump, and elsewhere as indicated in the Contract Documents, provide strainers.
 - 1) For strainers having a nominal pipe size 2 inch (DN 50), provide a nipple and ball valve having 3/4 inch (DN 20) nominal pipe sizes in the blowdown connection.
 - 2) For strainers having a nominal pipe size smaller than 2 inch (DN 50), provide a nipple and ball valve matching the size of the strainer blowoff connection.

G. Pipe Joints:

1. Ream the ends of pipes and tubes, and remove burrs.
 - a. Bevel the plain ends of steel pipe.

2. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
3. Soldered Joints:
 - a. Unless otherwise indicated in the Contract Documents, apply water-flushable flux complying with the requirements specified in ASTM B 813 to the tube end.
 - b. Construct the soldered joints in accordance with the requirements specified in ASTM B 828 or CDA A4015, using lead-free solder alloy complying with the requirements specified in ASTM B 32.
4. Brazed Joints:
 - a. Construct the brazed joints in accordance with the requirements specified in Chapter 35, Pipe and Tubing, of the 5th Edition of the AWS Brazing Handbook, using copper-phosphorus brazing filler metal complying with the requirements specified in ANSI/AWS A5.8/A5.8M.
5. Threaded Joints:
 - a. Thread the pipe with tapered pipe threads in accordance with the requirements specified in ANSI/ASME B1.20.1.
 - 1) Cut the threads full and clean using sharp dies.
 - b. Ream the threaded pipe ends to remove burrs and restore the full inside diameter of the pipe.
 - c. Join the threaded pipe fittings and valves as follows:
 - 1) Unless dry seal threading is specified, apply appropriate tape or thread compound to the external pipe threads.
 - 2) Damaged Threads:
 - a) Do not use pipe or pipe fittings with threads that are corroded or damaged.
 - b) Do not use pipe sections that have cracked or open welds.
6. Welded Joints:
 - a. Construct welded joints in accordance with the requirements specified in ANSI/AWS D10.12M/D10.12, using qualified processes and welding operators as specified in Subparagraph 1.05.A.2.
7. Flanged Joints:
 - a. Select gasket material of the size, type, and thickness appropriate for the service application.
 - b. Install the gasket so it is concentrically positioned.
 - c. Use suitable lubricants on the bolt threads and bolt the flanges together.
8. Fiberglass Bonded Joints:
 - a. Prepare fiberglass pipe ends and fittings, apply adhesive, and join the pipe and fittings in accordance with the fiberglass pipe manufacturer's installation instructions.
 - 1) Submit the fiberglass pipe manufacturer's written installation instructions to the Program/Project Manager for information.
9. Grooved Joints:

- a. Cut or roll grooves in the ends of the pipe based on the pipe and coupling manufacturer's instructions for the pipe wall thickness.
 - 1) Submit the grooved joint pipe and coupling manufacturer's written installation instructions for the pipe wall thickness to the Program/Project Manager for information.
- b. Assemble grooved joints using a coupling and gaskets, lubricant, and bolts.
- c. Provide grooved-end fittings, and rigid, grooved-end-pipe couplings.
- 10. Mechanically Formed, Copper-Tube-Outlet Joints:
 - a. In lieu of tee fittings in copper pipe, mechanically formed, copper-tube-outlet joints may be provided.
 - b. Join mechanically formed, copper-tube-outlet joints using the manufacturer-recommended tool and procedure, and braze the joints.
- 11. Pressure-Sealed Joints:
 - a. Provide pressure-sealed joints by using the manufacturer-recommended tool and procedure.
 - b. Leave the insertion marks on the pipe after assembly.

H. Hydronic Specialties:

- 1. Provide automatic air vents at the high points of system piping in mechanical equipment rooms only.
- 2. Provide manual vents at heat-transfer coils and elsewhere as required for venting air.
- 3. Install in-line air separators in pump suction lines.
 - a. For air separators having nominal pipe sizes of 2 inches (DN 50) and larger, provide a drain valve.
- 4. Provide bypass chemical feeders in each hydronic system at the locations indicated in the Contract Drawings, and in an upright position with the top of the funnel not more than 48 inches (1200mm) above the floor.
 - a. Install the chemical feeders in a bypass line having a nominal pipe size of at least 3/4 inch (DN 20), from the main; and having a full-size, full-port, ball valve in the main between the bypass connections.
 - b. Install a pipe having a nominal pipe size of at least 3/4 inch (DN 20) from the chemical feeder drain to the nearest equipment drain, and provide a full-size, full-port, ball valve in the drain line.
- 5. Install expansion tanks above the air separator.
 - a. Install the tank fitting in tank bottom and charge the tank.
 - b. To establish the proper water level in the tank, use the manual vent during the initial fill.
 - c. Install the tank fittings that are shipped loose.
 - d. Support the tank from the floor or from the structure above with supports having sufficient strength to carry the weight of the tank, piping connections, fittings, and the water filling a full tank.
 - 1) Do not overload building components and structural members.

I. Terminal Equipment Connections:

1. Size the supply and return piping connections the same as or larger than the equipment connections.
2. Install control valves in accessible locations close to the connected equipment.
3. Install bypass piping having a globe valve around the control valve.
 - a. If parallel control valves are installed, only one bypass is required.
4. Install ports for pressure gages and thermometers at the coil inlet and outlet connections in accordance with the requirements specified in Section 15122, Meters and Gages.

J. Special Techniques:

1. Chemical Treatment:

- a. Perform an analysis of the makeup water to determine the type and quantities of chemical treatment needed to keep the system free of scale, corrosion, and fouling; and to maintain the following water characteristics:
 - 1) pH: 9.0 to 10.5.
 - 2) "P" Alkalinity: 100 to 500 parts per million.
 - 3) Boron: 100 to 200 parts per million.
 - 4) Chemical Oxygen Demand: 100 parts per million maximum.
 - 5) Corrosion Inhibitor:
 - a) Sodium Nitrate: 1000 to 1500 parts per million.
 - 6) Soluble Copper: 0.20 parts per million maximum.
 - 7) Tolyriazole Copper and Yellow Metal Corrosion Inhibitor: 10 parts per million minimum.
 - 8) Total Suspended Solids: 10 parts per million maximum.
 - 9) Ammonia: 20 parts per million maximum.
 - 10) Free Caustic Alkalinity: 20 parts per million maximum.
 - 11) Microbiological Limits:
 - a) Total Aerobic Plate Count: 1000 organisms per milliliter maximum.
 - b) Total Anaerobic Plate Count: 100 organisms per milliliter maximum.
 - c) Nitrate Reducers: 100 organisms per milliliter.
 - d) Sulfate Reducers: 0 organisms per milliliter maximum.
 - e) Iron Bacteria: 0 organisms per milliliter maximum.
- b. Fill the system with fresh water and add liquid alkaline compound with emulsifying agents and detergents to remove grease and petroleum products from the piping.
 - 1) Circulate the solution for a minimum of 24 hours; then drain the system, clean the strainer screens, and refill the system with fresh water.
- c. Add the initial chemical treatment and maintain the water quality within the ranges specified for the first year of operation.

K. Systems Integration:

1. Provide valves in accordance with the requirements specified in Section 1511, Valves.
2. Piping Identification:
 - a. Identify the piping in accordance with the requirements specified in Section 15075, Mechanical Identification.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. Prepare hydronic piping for testing in accordance with the requirements specified in ASME B31.9 and as follows:
 - a. Leave joints, including welds, uninsulated and exposed for examination during the testing.
 - b. Provide temporary restraints for expansion joints that cannot sustain the reactions due to the test pressure.
 - 1) If temporary restraints are impractical, isolate the expansion joints from the testing.
 - c. Flush the hydronic piping systems with clean water; then remove and clean or replace the strainer screens.
 - d. Isolate equipment from the piping.
 - 1) If a valve is used to isolate the equipment, ensure that the valve closure is capable of sealing against the applied test pressure without damaging to valve.
 - 2) Install blinds in flanged joints to isolate equipment.
 - e. Install a safety valve, set at a pressure no more than one-third higher than the test pressure, to protect against damage by expanding liquid or another source of overpressure during the testing.
2. Hydrostatic Test:
 - a. Test Procedure:
 - 1) Use ambient temperature water as a testing medium unless there is risk of damage due to freezing.
 - a) Another liquid that is safe for workers and compatible with the piping may be used.
 - 2) Use the vents installed at the high points of the system to release air while filling system with the testing medium.
 - 3) Isolate the expansion tanks to determine and verify that the hydronic system is completely full of water.
 - 4) Subject piping system to a hydrostatic test pressure that is not less than 1.5 times the system's working pressure.
 - a) Do not allow the test pressure to exceed the maximum pressure for any vessel, pump, valve, or other component in system under test.
 - b) Verify that the stress due to the pressure at the bottom of vertical runs does not exceed 90 percent of the specified minimum yield strength, or 1.7 times the "SE" value in Appendix A of ASME B31.9.

- 5) After the hydrostatic test pressure has been applied for at least 10 minutes, examine the piping, joints, and connections for leakage.
 - 6) Use drains installed at low points to completely drain the test medium from the system.
 - 7) Prepare a written test report documenting the testing and submit these Hydrostatic Test Reports to the Program/Project Manager for information.
- b. Acceptance Criteria:
- 1) Leaks in the hydronic piping system are unacceptable.

B. Non-Conforming Work

1. Eliminate leaks by tightening, repairing, or replacing components, and repeat the hydrostatic test until there are no leaks.

3.05 SYSTEM STARTUP

A. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping system, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

B. Perform the following actions before operating the system:

1. Fully open the manual valves.
2. Inspect the pumps for proper rotation.
3. Set the makeup pressure-reducing valves for the required system pressure.
4. Inspect the air vents at the high points of the system; and determine if the automatic types are installed and operating freely, and the manual types bleed air completely.
5. Set the temperature controls so all coils are calling for full flow.
6. Inspect and set the operating temperatures of the hydronic equipment, such as boilers, chillers, cooling towers, to the specified values.
7. Verify motors and bearings have been properly lubricated.

3.06 CLEANING

A. Waste Management:

1. Properly and legally dispose of excess water treatment chemicals.
2. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 PROTECTION

- A. Protect installed hydronic piping from damage and wear during the remainder of the construction period.

3.08 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Submit operation and maintenance data for the air control devices, hydronic specialties, and special-duty valves to the Program/Project Manager for inclusion in emergency and Operation and Maintenance Manuals as specified in Section 01780, Closeout Submittals.
- B. Water-Treatment Chemicals:
 - 1. Furnish enough chemicals sufficient for the initial system startup, and for preventive maintenance for one year from the date of Substantial Completion.

3.09 DEMONSTRATION AND TRAINING

- A. The CONTRACTOR shall provide a minimum of four (4) hours of demonstration and training to Aviation Maintenance and Operations Personnel covering the following items:
 - 1. Field joint preparation and installation.
 - 2. Installation of field applied insulation.
 - 3. Installation and repair of HDPE and PVC jackets.
 - 4. Testing of installed field joints to ensure water tight installation.

Rev. No.	Rev. Date	RFC/CN/CO	Section(s) Affected	Comments
0	10/06/2017	N/A	All	First edition.
1	08/08/2018	RFI-0310	Edited 2.01.C.4. and 3.03.F; Added 3.03.A,B,C and 3.09.	Updated for underground chilled water piping.

SECTION 15186

REFRIGERANT PIPING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for refrigerant piping used for air-conditioning applications.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01732 - Cutting and Patching.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 01810 - Commissioning.
 - 6. Section 08311 - Access Doors and Frames.
 - 7. Section 15050 - Basic Mechanical Materials and Methods.
 - 8. Section 15060 - Hangers and Supports.
 - 9. Section 15075 - Mechanical Identification.
 - 10. Section 15900 - HVAC Instrumentation and Controls.
 - 11. Section 15995 - Commissioning of Mechanical Systems.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. GRC: Hot dipped galvanized rigid steel conduit.
 - 2. NPS: Nominal Pipe Size.
 - a. DN: Diamètre nominal (European Equivalent).
 - 3. PTFE: Polytetrafluoroethylene.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Commissioning Authority (CA): An independent agent engaged by the Phoenix Sky Harbor International Airport to direct and coordinate the commissioning process for the Project, and to approve the Work requiring commissioning.
 - 3. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in

29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.

C. Reference Standards:

1. Air-Conditioning, Heating, and Refrigeration Institute (AHRI):
 - a. ANSI/AHRI 495 – Standard for Performance Rating of Refrigerant Liquid Receivers.
 - b. ANSI/AHRI 730 – Standard for Flow-Capacity Rating of Suction-Line Filters and Suction-Line Filter-Driers.
 - c. ANSI/AHRI 750 – Standard for Thermostatic Refrigerant Expansion Valves.
 - d. ANSI/AHRI 760 – Standard for Performance Rating of Solenoid Valves for Use with Volatile Refrigerants.
2. American Society of Heating, Refrigerating and Air- Conditioning Engineers, Inc. (ASHRAE):
 - a. ASHRAE 15 – Safety Standard for Refrigeration Systems.
 - b. ASHRAE 34 – Designation and Safety Classification of Refrigerants.
3. American Society of Mechanical Engineers (ASME):
 - a. ANSI/ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.
 - b. ASME B31.5 – Refrigeration Piping and Heat Transfer Components.
 - c. ASME BPVC-IV - Boiler and Pressure Vessel Code - Section IV: Heating Boilers.
 - d. ASME BPVC-IX - Boiler and Pressure Vessel Code - Section IX: Welding and Brazing Qualifications.
4. ASTM International (ASTM):
 - a. ASTM B 32 - Standard Specification for Solder Metal.
 - b. ASTM B 280 - Standard Specification for Seamless Copper Tube for Air Conditioning and Refrigeration Field Service.
 - c. ASTM B 828 – Standard Practice for Making Capillary Joints by Soldering of Copper and Copper Alloy Tube and Fittings.
5. American Welding Society (AWS):
 - a. ANSI/AWS A5.8/A5.8M - Specification for Filler Metals for Brazing and Braze Welding.
 - b. AWS Brazing Handbook, 5th Edition.
6. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
7. Copper Development Association Inc. (CDA)
 - a. CDA A4015 - The Copper Tube Handbook.
8. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.

9. Manufacturers Standardization Society (MSS):
 - a. MSS SP-58 - Pipe Hangers and Supports – Materials, Design, and Manufacture.
10. National Electrical Manufacturers Association (NEMA):
 - a. NEMA 250 – Enclosures for Electrical Equipment (1000 Volts Maximum)
11. Underwriters Laboratories, Inc. (UL):
 - a. UL 429 – UL Standard for Safety Electrically Operated Valves.
12. United States Government:
 - a. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1910 Occupational Health and Safety Standards.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate the size and location of roof curbs, equipment supports, and roof penetrations.

1.04 SUBMITTALS

- A. Action Submittals:
 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Thermostatic expansion valves.
 - 2) Solenoid valves.
 - 3) Hot-gas bypass valves.
 - 4) Filter dryers.
 - 5) Strainers.
 - 6) Pressure-regulating valves.
 - b. Qualification Statements:
 - 1) Welding procedure specifications (WPS) test records.
 - 2) Welding Certificates.
- B. Informational Submittals:
 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Adjustments instructions.
 - b. Site Quality Control Submittals:
 - 1) Refrigerant Piping Test Reports.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the refrigerant valves and piping specialties.

1.05 QUALITY ASSURANCE

A. Qualifications:

1. Welding Qualifications:

- a. Welding Procedure Specifications (WPS):
 - 1) Prior to beginning work that requires welding, submit the pre-qualifying welding procedures to the Program/Project Manager for approval.
 - 2) For all procedures, other than those set forth in ASME BPVC-IX, submit a copy of the welding procedure specifications (WPS) test records to the Program/Project Manager for approval.
- b. Welders' Qualifications:
 - 1) Prior to beginning work that requires welding, submit the procedures to be used for pre-qualifying welders to the Program/Project Manager for approval.
 - 2) Only use welders, tackers, and welding operators demonstrating they are qualified to perform the types of work required by having passed the qualification tests prescribed for the procedures in ASME BPVC-IX.
 - 3) Submit Welding Certificates certifying the welders employed to fabricate and to erect the Work of this Section have been certified by the American Welding Society (AWS) within the previous 12 months to the Program/Project Manager for approval.
 - a) Include certified copies of qualification test records and photographic identification indicating each welder, welding operator, and tacker employed to perform the Work has satisfactorily passed the AWS qualification tests for the required welding procedures and, if pertinent, has undergone recertification.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Transport pipe materials and other products specified herein in a manner recommended by the respective manufacturers.

B. Storage and Handling Requirements:

1. Store and handle pipe materials and other products specified herein in a manner recommended by the respective manufacturers to prevent damage and defects from occurring.
2. Protect pipe from impact shocks and free fall during handling.
3. Store piping in a clean and protected area with end caps in place to ensure that interior and exterior of the piping are clean at the time of installation.

C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 REFRIGERANT PIPING SYSTEMS

A. Manufacturers:

1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.

B. Description:

1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].

C. Performance:

1. Provide refrigerant piping capable of withstanding the refrigerant line test pressures specified in Table 15186-1 when conveying the refrigerants listed.

**Table 15186-1 Refrigerant Line Test Pressures**

Refrigerant	Suction Lines for Air- Conditioning Applications	Suction Lines for Heat-Pump Applications	Hot-Gas and Liquid Lines
R-134a	115 psig (793kPa)	225 psig (1551kPa)	225 psig (1551kPa)
R-407C	230 psig (1586kPa)	380 psig (2620kPa)	380 psig (2620kPa)
R-410A	300 psig (2068kPa)	535 psig (3689kPa)	535 psig (3689kPa)

D. Design Criteria:

1. The plans, schematics, and diagrams on the Contract Drawings indicate the general location and arrangement of the piping systems.
 - a. The locations and arrangements indicated were used to size the pipe and calculate friction loss, expansion, pump sizing, and other design considerations.
 - b. Install piping as indicated on the Contract Drawings unless deviations to that layout have been approved on Shop Drawings.
2. Select system components having pressure ratings equal to or greater than the system operating pressure.
3. Provide refrigerant piping complying with the requirements specified in ASHRAE 15 and ASME B31.5.
 - a. Piping for Refrigerants R-134A, R-407C, and R-410A:
 - 1) Conventional Air-Conditioning Piping:
 - a) For conventional air-conditioning suction lines having nominal pipe sizes of 4 inches (DN 100) and smaller, provide Type ACR drawn-temper copper tubing and wrought-copper fittings with brazed or soldered joints.
 - 2) Hot-Gas and Liquid Lines, and Heat-Pump Piping:
 - a) For hot-gas and liquid lines, and for heat-pump suction lines, provide Type ACR annealed-temper copper tubing and wrought-copper fittings with brazed or soldered joints.
 - 3) Safety-Relief-Valve Discharge Piping:
 - a) For safety-relief-valve discharge piping, provide Type ACR drawn-temper copper tubing and wrought-copper fittings with soldered joints.
4. Product Data:

- a. Obtain the manufacturer's Product Data for each type of valve and refrigerant piping specialty in the following list, including the pressure drop for the item based on manufacturer's test data:
 - 1) Thermostatic expansion valves.
 - 2) Solenoid valves.
 - 3) Hot-gas bypass valves.
 - 4) Filter dryers.
 - 5) Strainers.
 - 6) Pressure-regulating valves.
 - b. Submit the Product Data to the Program/Project Manager for approval.
- E. Operation:
 - 1. Operation Sequences:
 - a. The Sequence of Operation for the mechanical systems is indicated on the Contract Drawings.
- F. Materials:
 - 1. Copper Tube and Fittings:
 - a. Copper Tube:
 - 1) Provide copper tube complying with the requirements for Type ACR specified in ASTM B 280.
 - b. Wrought-Copper Fittings:
 - 1) Provide wrought-copper fittings complying with the requirements specified in ANSI/ASME B16.22.
 - c. Wrought-Copper Unions:
 - 1) Provide wrought-copper unions complying with the requirements specified in ANSI/ASME B16.22.
 - d. Solder Filler Metals:
 - 1) Provide solder filler metals complying with the requirements specified in ASTM B 32.
 - 2) To join copper socket fittings on copper pipe, provide 95-5 tin antimony or alloy HB solder.
 - e. Brazing Filler Metals:
 - 1) Provide brazing filler metals complying with the requirements specified in ANSI/AWS A5.8/A5.8M.
 - f. Flexible Connectors for Copper Tube and Fittings:
 - 1) For copper tube and fittings, provide flexible connectors having the following features and performance characteristics:
 - a) Body:

- (1) Provide flexible connectors having a body consisting of a tin-bronze bellows with a woven, flexible, tinned-bronze-wire-reinforced protective jacket.
- b) End Connections:
 - (1) Provide flexible connectors having socket ends.
- c) Offset Performance:
 - (1) Provide flexible connectors capable of misalignment in an assembly that is at least 7 inches (180mm) long of at least 3/4-inch (20mm).
- d) Pressure Rating:
 - (1) Provide flexible connectors that have been successfully factory-tested to pressures of at least 500 psig (3450kPa).
- e) Maximum Operating Temperature:
 - (1) Provide flexible connectors capable of operation at temperatures up to and including 250 degrees Fahrenheit (121 degrees Celsius).
- g. Flexible Connectors for Steel Pipe and Fittings:
 - 1) For steel pipe and fittings, provide flexible connectors having the following features and performance characteristics:
 - a) Body:
 - (1) Provide flexible connectors having a body consisting of a stainless-steel bellows with a woven, flexible, stainless-steel-wire-reinforced protective jacket.
 - b) End Connections:
 - (1) For nominal pipe sizes of 2 inches (DN 50) and smaller, provide flexible connectors having threaded-end connections.
 - (2) For nominal pipe sizes of 2-1/2 inches (DN 50) and larger, provide flexible connectors having flanged-end connections.
 - c) Offset Performance:
 - (1) Provide flexible connectors capable of misalignment in an assembly that is at least 7 inches (180mm) long of at least 3/4-inch (20mm).
 - d) Pressure Rating:
 - (1) Provide flexible connectors that have been successfully factory-tested to pressures of at least 500 psig (3450kPa).
 - e) Maximum Operating Temperature:
 - (1) Provide flexible connectors capable of operation at temperatures up to and including 250 degrees Fahrenheit (121 degrees Celsius).

2. Valves and Specialties:

a. Diaphragm Packless Valves:

- 1) Provide diaphragm packless globe valves having a straight-through or angle pattern, and the following features and performance characteristics:
 - a) Body and Bonnet:
 - (1) Provide valves having a forged brass or cast bronze body and bonnet.
 - b) Diaphragm:
 - (1) Provide valves having a phosphor bronze and stainless steel diaphragm with a stainless-steel spring.
 - c) Operator:
 - (1) Provide valves having a rising stem and hand wheel.
 - d) Seat:
 - (1) Provide valves having a nylon seat.
 - e) End Connections:
 - (1) Provide valves having socket, union, or flanged end connections.
 - f) Working Pressure Rating:
 - (1) Provide valves rated for a working pressure of 500 psig (3450kPa).
 - g) Maximum Operating Temperature:
 - (1) Provide valves rated for a maximum operating temperature of 275 degrees Fahrenheit (135 degrees Celsius).

b. Packed-Angle Valves:

- 1) Provide packed-angle valves having the following features and performance characteristics:
 - a) Body and Bonnet:
 - (1) Provide valves having a forged brass or cast bronze body and bonnet.
 - b) Packing:
 - (1) Provide valves having molded stem packing and back seating.
 - (a) Provide packing that is replaceable under pressure.
 - c) Operator:
 - (1) Provide valves having a rising stem operator.
 - d) Seat:
 - (1) Provide valves having a non-rotating, self-aligning polytetrafluoroethylene (PTFE) seat.
 - e) Seal Cap:

- (1) Provide valves having a forged-brass or valox hex seal cap.
- f) End Connections:
 - (1) Provide valves having socket, union, threaded, or flanged end connections.
- g) Working Pressure Rating:
 - (1) Provide valves rated for a working pressure of 500 psig (3450kPa).
- h) Maximum Operating Temperature:
 - (1) Provide valves rated for a maximum operating temperature of 275 degrees Fahrenheit (135 degrees Celsius).
- c. Check Valves:
 - 1) Provide check valves having the following features and performance characteristics:
 - a) Body:
 - (1) Provide check valves having a ductile iron, forged brass or cast bronze globe pattern body.
 - b) Bonnet:
 - (1) Provide check valves having a bolted ductile iron, forged brass or cast bronze bonnet, or having a brass hex plug.
 - c) Piston:
 - (1) Provide check valves having a piston with a removable polytetrafluoroethylene (PTFE) seat.
 - d) Closing Spring:
 - (1) Provide check valves having a stainless steel closing spring.
 - e) Manual Opening Stem:
 - (1) Provide check valves having a manual opening stem with a seal cap, a plated-steel stem, and a graphite seal.
 - f) End Connections:
 - (1) Provide check valves having socket, union, threaded, or flanged end connections.
 - g) Maximum Opening Pressure:
 - (1) Provide check valves requiring an opening pressure of not more than 0.50 psig (3.4kPa).
 - h) Working Pressure Rating:
 - (1) Provide check valves rated for a working pressure of 500 psig (3450kPa).
 - i) Maximum Operating Temperature:

- (1) Provide check valves rated for a maximum operating temperature of 275 degrees Fahrenheit (135 degrees Celsius).
- d. Service Valves:
 - 1) Provide service valves having the following features and performance characteristics:
 - a) Body:
 - (1) Provide service valves having a forged brass body with a brass cap including a key end for removing the core.
 - b) Core:
 - (1) Provide service valves having a removable ball-type check valve core with a stainless-steel spring.
 - c) Seat:
 - (1) Provide service valves having a polytetrafluoroethylene (PTFE) seat.
 - d) End Connections:
 - (1) Provide service valves having copper spring end connections.
 - e) Working Pressure Rating:
 - (1) Provide service valves rated for a working pressure of 500 psig (3450kPa).
- e. Solenoid Valves:
 - 1) Provide factory-mounted solenoid valves that comply with the requirements specified in ANSI/AHRI 760 and UL 429 as an integral part of the split-system cooling units, and that are listed and labeled by a Nationally Recognized Testing Laboratory (NRTL), and that have the following features and performance characteristics:
 - a) Body and Bonnet:
 - (1) Provide solenoid valves having a plated steel body and bonnet.
 - b) Solenoid Tube, Plunger, Closing Spring, and Seat Orifice:
 - (1) Provide solenoid valves having stainless steel solenoid tubes, plungers, closing springs, and seat orifices.
 - c) Seat:
 - (1) Provide solenoid valves having a polytetrafluoroethylene (PTFE) seat.
 - d) End Connections:
 - (1) Provide solenoid valves having threaded end connections.
 - e) Electrical:

- (1) Provide a molded, watertight, 24-Volt DC or 115-Volt AC coil mounted in an enclosure complying with the requirements for the location specified in NEMA 250, and a 1/2-inch (16-GRC) conduit adapter.
- f) Working Pressure Rating:
 - (1) Provide solenoid valves rated for a working pressure of 400 psig (2760kPa).
- g) Maximum Operating Temperature:
 - (1) Provide solenoid valves rated for a maximum operating temperature of 240 degrees Fahrenheit (116 degrees Celsius).
- h) Manual Operators:
 - (1) Provide manual operators for the solenoid valves.
- f. Safety Relief Valves:
 - 1) Provide safety relief valves that comply with the requirements specified in ASME BPVC-IV, that are listed and labeled by a Nationally Recognized Testing Laboratory (NRTL), and that have the following features and performance characteristics:
 - a) Body and Bonnet:
 - (1) Provide valves having a ductile iron and steel body and bonnet with neoprene O-ring seals.
 - b) Piston, Closing Spring, and Seat Insert:
 - (1) Provide valves having stainless steel pistons, closing springs, and seat inserts.
 - c) Seat Disc:
 - (1) Provide valves having a polytetrafluoroethylene (PTFE) seat disc.
 - d) End Connections:
 - (1) Provide valves having threaded end connections.
 - e) Working Pressure Rating:
 - (1) Provide valves rated for a working pressure of 400 psig (2760kPa).
 - f) Maximum Operating Temperature:
 - (1) Provide valves rated for a maximum operating temperature of 240 degrees Fahrenheit (116 degrees Celsius).
- g. Thermostatic Expansion Valves:
 - 1) Provide thermostatic expansion valves that comply with the requirements specified in ANSI/AHRI 750, and that have the following features and performance characteristics:
 - a) Body, Bonnet, and Seal Cap:

- (1) Provide thermostatic expansion valves having a forged brass or steel body, bonnet, and seal cap.
- b) Diaphragm, Piston, Closing Spring, and Seat Insert:
 - (1) Provide thermostatic expansion valves having stainless steel diaphragms, pistons, closing springs, and seat inserts.
- c) Packing and Gaskets:
 - (1) Provide thermostatic expansion valves having non-asbestos packing and gaskets.
- d) Capillary and Bulb:
 - (1) Provide thermostatic expansion valves having copper tubing capillary and bulb filled with a refrigerant charge.
- e) Suction Temperature:
 - (1) Provide thermostatic expansion valves rated for a suction temperature of 40 degrees Fahrenheit (4.4 degrees Celsius).
- f) Superheat:
 - (1) Provide thermostatic expansion valves adjustable to accommodate superheat.
- g) For heat-pump applications, provide thermostatic expansion valves designed for reverse-flow.
- h) End Connections:
 - (1) Provide valves having socket, flare, or threaded union end connections.
- i) Working Pressure Rating:
 - (1) Provide valves rated for a working pressure of 450 psig (3100kPa).
- h. Hot-Gas Bypass Valves:
 - 1) Provide hot-gas bypass valves that comply with the requirements specified in UL 429, that are listed and labeled by a Nationally Recognized Testing Laboratory (NRTL), and that have the following features and performance characteristics:
 - a) Body, Bonnet, and Seal Cap:
 - (1) Provide hot-gas bypass valves having a ductile iron or steel body, bonnet, and seal cap.
 - b) Diaphragm, Piston, Closing Spring, and Seat Insert:
 - (1) Provide hot-gas bypass valves having stainless steel diaphragms, pistons, closing springs, and seat inserts.
 - c) Packing and Gaskets:
 - (1) Provide hot-gas bypass valves having non-asbestos packing and gaskets.

- d) Solenoid Tube, Plunger, Closing Spring, and Seat Orifice:
 - (1) Provide hot-gas bypass valves having stainless steel solenoid tubes, plungers, closing springs, and seat orifices.
- e) Seat:
 - (1) Provide hot-gas bypass valves having a polytetrafluoroethylene (PTFE) seat.
- f) Equalizer:
 - (1) Provide hot-gas bypass valves having an internal equalizer.
- g) Electrical:
 - (1) Provide a molded, watertight, 115-Volt AC coil mounted in an enclosure complying with the requirements for the location specified in NEMA 250, and a 1/2-inch (16-GRC) conduit adapter.
- h) End Connections:
 - (1) Provide hot-gas bypass valves having socket end connections.
- i) Throttling Range:
 - (1) Provide hot-gas bypass valves having a maximum throttling range of 5 psig (34kPa).
- j) Working Pressure Rating:
 - (1) Provide valves rated for a working pressure of 500 psig (3450kPa).
- k) Maximum Operating Temperature:
 - (1) Provide valves rated for a maximum operating temperature of 240 degrees Fahrenheit (116 degrees Celsius).
- i. Straight-Type Strainers:
 - 1) Provide straight-type strainers that have the following features and performance characteristics:
 - a) Body:
 - (1) Provide straight-type strainers having welded steel bodies with a corrosion-resistant coating.
 - b) Screen:
 - (1) Provide straight-type strainers having 100-mesh stainless steel screens.
 - c) End Connections:
 - (1) Provide strainers having socket or flare end connections.
 - d) Working Pressure Rating:

- (1) Provide strainers rated for a working pressure of 500 psig (3450kPa).
- e) Maximum Operating Temperature:
 - (1) Provide strainers rated for a maximum operating temperature of 275 degrees Fahrenheit (135 degrees Celsius).
- j. Angle-Type Strainers:
 - 1) Provide angle-type strainers that have the following features and performance characteristics:
 - a) Body:
 - (1) Provide angle-type strainers having a forged brass or cast bronze body.
 - b) Drain Plug:
 - (1) Provide angle-type strainers having a brass hex drain plug.
 - c) Screen:
 - (1) Provide angle-type strainers having 100-mesh monel screens.
 - d) End Connections:
 - (1) Provide strainers having socket or flare end connections.
 - e) Working Pressure Rating:
 - (1) Provide strainers rated for a working pressure of 500 psig (3450kPa).
 - f) Maximum Operating Temperature:
 - (1) Provide strainers rated for a maximum operating temperature of 275 degrees Fahrenheit (135 degrees Celsius).
- k. Moisture/Liquid Indicators:
 - 1) Provide moisture/liquid indicators that have the following features and performance characteristics:
 - a) Body:
 - (1) Provide moisture/liquid indicators having a forged brass body.
 - b) Window:
 - (1) Provide moisture/liquid indicators having a replaceable, clear, fused glass window and a filter screen to protect the indicating element.
 - c) Indicator:
 - (1) Provide moisture/liquid indicators having a color coded indicator to show the moisture content in ppm.
 - d) Minimum Moisture Indicator Sensitivity:

- (1) Provide moisture/liquid indicators capable of indicating moisture above 60 ppm.
- e) End Connections:
 - (1) Provide moisture/liquid indicators having socket or flare end connections.
- f) Working Pressure Rating:
 - (1) Provide moisture/liquid indicators rated for a working pressure of 500 psig (3450kPa).
- g) Maximum Operating Temperature:
 - (1) Provide moisture/liquid indicators rated for a maximum operating temperature of 240 degrees Fahrenheit (116 degrees Celsius).
- I. Replaceable-Core Filter Dryers:
 - 1) Provide replaceable-core filter dryers that comply with the requirements specified in ANSI/AHRI 730, and that have the following features and performance characteristics:
 - a) Body and Cover:
 - (1) Provide replaceable-core filter dryers having a painted-steel shell with a ductile-iron cover, stainless-steel screws, and neoprene gaskets.
 - b) Filter Media:
 - (1) Provide replaceable-core filter dryers having 10 micron, pleated filter media with integral end rings, and a stainless-steel support.
 - c) Desiccant Media:
 - (1) Provide replaceable-core filter dryers having activated alumina desiccant.
 - d) For heat-pump applications, provide replaceable-core filter dryers designed for reverse-flow.
 - e) End Connections:
 - (1) Provide replaceable-core filter dryers having socket end connections.
 - f) Access Ports:
 - (1) For suction-line filter dryers, provide replaceable-core filter dryers having 1/4 inch (DN 8) nominal pipe size connections at both the entering and leaving sides for pressure differential measurement.
 - g) Maximum Pressure Loss:
 - (1) Provide replaceable-core filter dryers having a maximum pressure loss of 2 psig (14kPa).
 - h) Rated Flow:

- (1) Provide replaceable-core filter dryers rated for the flow scheduled on the Contract Drawings.
- i) Working Pressure Rating:
 - (1) Provide replaceable-core filter dryers rated for a working pressure of 500 psig (3450kPa).
- j) Maximum Operating Temperature:
 - (1) Provide replaceable-core filter dryers rated for a maximum operating temperature of 240 degrees Fahrenheit (116 degrees Celsius).
- m. Permanent Filter Dryers:
 - 1) Provide permanent filter dryers that comply with the requirements specified in ANSI/AHRI 730, and that have the following features and performance characteristics:
 - a) Body and Cover:
 - (1) Provide permanent filter dryers having a painted-steel shell.
 - b) Filter Media:
 - (1) Provide permanent filter dryers having 10 micron, pleated filter media with integral end rings, and a stainless-steel support.
 - c) Desiccant Media:
 - (1) Provide permanent filter dryers having activated alumina desiccant.
 - a) For heat-pump applications, provide permanent filter dryers designed for reverse-flow.
 - b) End Connections:
 - (1) Provide permanent filter dryers having socket end connections.
 - c) Access Ports:
 - (1) For suction-line filter dryers, provide permanent filter dryers having 1/4 inch (DN 8) nominal pipe size connections at both the entering and leaving sides for pressure differential measurement.
 - d) Maximum Pressure Loss:
 - (1) Provide permanent filter dryers having a maximum pressure loss of 2 psig (14kPa).
 - e) Rated Flow:
 - (1) Provide permanent filter dryers rated for the flow scheduled on the Contract Drawings.
 - f) Working Pressure Rating:

- (1) Provide permanent filter dryers rated for a working pressure of 500 psig (3450kPa).
 - g) Maximum Operating Temperature:
 - (1) Provide permanent filter dryers rated for a maximum operating temperature of 240 degrees Fahrenheit (116 degrees Celsius).
 - n. Liquid Accumulators:
 - 1) Provide liquid accumulators that comply with the requirements specified in ANSI/AHRI 495, and that have the following features and performance characteristics:
 - a) Body:
 - (1) Provide liquid accumulators having welded steel bodies with a corrosion-resistant coating.
 - b) End Connections:
 - (1) Provide liquid accumulators having socket or threaded end connections.
 - c) Working Pressure Rating:
 - (1) Provide liquid accumulators rated for a working pressure of 500 psig (3450kPa).
 - d) Maximum Operating Temperature:
 - (1) Provide liquid accumulators rated for a maximum operating temperature of 275 degrees Fahrenheit (135 degrees Celsius).
- 3. Refrigerants:
 - a. Provide the following refrigerants where indicated on the Contract Drawings:
 - 1) R-134a
 - a) Provide R-134a refrigerant complying with the requirements for tetrafluoroethane specified in ASHRAE 34.
 - 2) R-407C
 - a) Provide R-407C refrigerant complying with the requirements for difluoromethane/pentafluoroethane/1,1,1,2-tetrafluoroethane specified in ASHRAE 34.
 - 3) R-410A
 - a) Provide R-410A refrigerant complying with the requirements for pentafluoroethane/difluoromethane specified in ASHRAE 34.
 - b. Manufacturers:
 - 1) DuPont Company; Fluorochemicals Div,
http://www2.dupont.com/Directories/en_RU/Products_Services_Index/Chemicals/Fluorochemicals.html.

- 2) Honeywell, Inc.; Genetron Refrigerants, www51.honeywell.com.
- 3) INEOS Fluor Americas LLC, <https://www.ineos.com/>.
- 4) Approved equal.

2.02 ACCESSORIES

A. Hangers and Supports:

1. Provide hanger, support, and anchor products complying with the requirements specified in Section 15060, Hangers and Supports.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions:

1. Examine the elements and surfaces to receive refrigerant piping for compliance with the installation tolerances, required clearances, and other conditions affecting performance of the Work.

B. Evaluation and Assessment:

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Protection of In-Place Conditions:

1. Protect adjacent areas from damage resulting from installation of the refrigerant piping.

B. Surface Preparation:

1. For piping penetrations of walls, ceilings, and floors, install sleeves.

C. Demolition/Removal:

1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

A. Hangers and Supports:

1. For individual horizontal runs less than 20 feet (6m) long, provide adjustable steel clevis hangers.
2. For individual horizontal runs 20 feet (6m) or longer, provide roller hangers and spring hangers.

3. For multiple horizontal piping 20 feet (6m) or longer, provide Type 44 pipe rollers complying with the requirements specified in MSS SP-58 supported on a trapeze.
4. To support vertical runs, provide spring hangers.
5. For hangers and supports in direct contact with copper pipe, provide copper-clad hangers and supports.
6. Install hangers for copper tubing at the spacing and having the rod sizes specified in Table 15186-1:

Table 15186-2 Spacing and Rod Sizes for Copper Tubing Hangers		
Nominal Pipe Size (inches)	Maximum Span	Minimum Rod Size
1/2 (DN 15)	5 feet (1.5m)	1/4 inch (6.4mm)
5/8 (DN 18)	5 feet (1.5m)	1/4 inch (6.4mm)
1 (DN 25)	6 feet (1.8m)	1/4 inch (6.4mm)
1-1/4 (DN 32)	8 feet (2.4m)	3/8 inch (9.5mm)
1-1/2 (DN 40)	8 feet (2.4m)	3/8 inch (9.5mm)
2 (DN 50)	8 feet (2.4m)	3/8 inch (9.5mm)
2-1/2 (DN 65)	9 feet (2.7m)	3/8 inch (9.5 mm)

7. Support multi-floor vertical runs at least at each floor.

B. Piping:

1. Install the refrigerant piping in accordance with the requirements specified in ASHRAE 15.
2. Except in equipment rooms and service areas, install piping in concealed locations unless otherwise indicated in the Contract Documents.
 - a. Install the piping that is indicated to be exposed and the piping in equipment rooms and service areas at right angles or parallel to the building walls.
 - 1) Diagonal runs are prohibited unless specifically indicated otherwise in the Contract Documents.
 - b. When piping is installed above accessible ceilings, allow sufficient space to remove the ceiling panel.
3. When piping is installed adjacent to machines, allow space for service and maintenance.
4. Install piping free of sags and bends.
5. At changes in direction and branch connections, install fittings.

6. Install piping runs as short and as direct as possible, with the minimum number of joints, elbows, and fittings.
7. Arrange piping to allow inspection and service of refrigeration equipment.
 - a. Install valves and specialties in accessible locations to allow for service and inspection.
 - b. If valves or equipment requiring maintenance is concealed behind finished surfaces, install access doors or panels in accordance with the requirements specified in Section 08311, Access Doors and Frames.
8. Where refrigerant piping is installed belowground, provide protective conduit.
9. In locations where refrigerant piping is exposed to mechanical injury, install the refrigerant piping in rigid or flexible conduit.
10. Slope the refrigerant piping as follows:
 - a. Install horizontal hot-gas discharge piping with a uniform slope downward away from the compressor.
 - b. Install horizontal suction lines with a uniform slope downward to the compressor.
 - c. To entrain oil in vertical runs, install traps and double risers.
 - d. Liquid lines may be installed level.
11. When brazing or soldering, remove solenoid-valve coils and sight glasses, valve stems, seats, packing, and accessible internal parts of refrigerant specialties.
 - a. Do not apply heat near expansion-valve bulbs.
12. Before installing steel refrigerant piping, clean the pipe and fittings using the following procedures:
 - a. Shot blast the interior of the piping.
 - b. Remove coarse particles of dirt and dust by drawing a clean, lintless cloth through the tubing using a wire or electrician's tape.
 - c. Draw a clean, lintless cloth saturated with trichloroethylene through the tube or pipe.
 - 1) Continue this procedure until the cloth is not discolored by dirt.
 - d. Draw a clean, lintless cloth, saturated with compressor oil and then squeezed dry, through the tube or pipe to remove the remaining lint.
 - 1) Inspect the tube or pipe visually for remaining dirt and lint.
 - e. Finally, draw a clean, dry, lintless cloth through the tube or pipe.
 - f. Safety-relief-valve discharge piping is not required to be cleaned, but is required to be open to allow unrestricted flow.
13. Install piping so there is adequate clearance between the pipe and the adjacent walls and hangers, and between pipes to allow insulation to be installed.

14. Identify refrigerant piping and valves in accordance with the requirements specified in Section 15075, Mechanical Identification.
15. For piping penetrations of walls, ceilings, and floors, install sleeves and escutcheons complying with the requirements for sleeves and escutcheons specified in Section 15050, Basic Mechanical Materials and Methods.
16. For piping penetrations of exterior concrete walls and slabs, install sleeve seals complying with the requirements for sleeve seals specified in Section 15050, Basic Mechanical Materials and Methods.

C. Pipe Joints:

1. Ream the ends of pipes and tubes and to remove burrs.
2. Bevel the plain ends of steel pipe.
3. Remove scale, slag, dirt, and debris from the inside and outside of the pipe and fittings before assembly.
4. To prevent scale formation during brazing or welding of steel pipe, fill the steel pipe and fittings with an inert gas such as nitrogen or carbon dioxide.
5. Soldered Joints:
 - a. Construct soldered joints in accordance with the requirements specified in ASTM B 828 or CDA A4015.
6. Brazed Joints:
 - a. Construct brazed joints in accordance with the requirements specified in the "Pipe and Tube" Chapter of the AWS Brazing Handbook, 5th Edition.
 - b. For joining copper socket fittings with copper pipe, provide Type BcuP, copper-phosphorus alloy.
 - c. For joining copper with bronze or steel, provide Type BAg, cadmium-free silver alloy.

D. Valves and Specialties:

1. Install diaphragm packless or packed-angle valves in the suction and discharge lines of the compressor.
2. Install service valves for gage taps at both the inlet and outlet of hot-gas bypass valves and strainers if they are not an integral part of the valves and strainers.
3. If compressor suction line will be exposed to air temperatures less than 75 degrees Fahrenheit (24 degrees Celsius) during compressor operation, install a check valve at the compressor discharge and a liquid accumulator at the compressor suction connection.
4. Unless otherwise indicated in the Contract Documents, install diaphragm packless or packed-angle valves on both the inlet and outlet side of filter dryers.

5. Install a full-sized, three-valve bypass around the filter dryers.
6. Install solenoid valves upstream from each expansion valve and hot-gas bypass valve.
 - a. For solenoid valves in horizontal lines, install the valves with the coil at the top.
7. Install thermostatic expansion valves as close as possible to the distributors on evaporators.
 - a. Install the valve so the diaphragm case is warmer than bulb.
 - b. Secure the bulb to a clean, straight, horizontal section of the suction line using two bulb straps.
 - 1) Do not mount the bulb in a trap or at the bottom of the line.
 - c. If external equalizer lines are required, make the connection where it will reflect the suction-line pressure at the bulb location.
8. Install safety relief valves wherever required by ASME BPVC-IV.
 - a. Pipe the safety-relief-valve discharge line to the outside in accordance with the requirements specified in ASHRAE 15.
9. Install moisture/liquid indicators in the liquid line at the inlet of the thermostatic expansion valve, or at the inlet of the evaporator coil capillary tube.
10. Install strainers upstream from and adjacent to the following items unless they are furnished as an integral assembly for the device being protected:
 - a. Solenoid valves.
 - b. Thermostatic expansion valves.
 - c. Hot-gas bypass valves.
 - d. Compressors.
11. Install filter dryers in the liquid line between the compressor and the thermostatic expansion valve, and in the suction line at the compressor.
12. Install receivers sized to accommodate the pump-down charge.
13. Install flexible connectors at the compressors.

E. Systems Integration:

1. For solenoid valve controllers and control wiring, comply with the requirements specified in Section 15900, HVAC Instrumentation and Controls.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. Refrigerant Piping Test:
 - a. Test Procedure:
 - 1) Perform testing in compliance with the requirements specified in Chapter VI of ASME B31.5.

- 2) Test refrigerant piping, specialties, and receivers.
 - a) Isolate compressor, condenser, evaporator, and safety devices from the test pressure if they are not rated above the test pressure.
 - 3) Test high- pressure and low-pressure side piping of each system separately at not less than the pressures indicated in Paragraph 2.01.C.
 - a) Fill the system with nitrogen to the required test pressure.
 - b) The system must maintain the test pressure at the manifold gage for the duration of test.
 - c) Test the joints and fittings using an electronic leak detector or by brushing a small amount of soap and glycerin solution over joints.
 - 4) Prepare a written test report documenting the testing, and submit these Refrigerant Piping Test Reports to the Program/Project Manager for information.
- b. Acceptance Criteria:
- 1) Leaking joints are unacceptable.

B. Non-Conforming Work

1. Remake leaking joints using new material, and retest the remade joints until satisfactory results are achieved.

3.05 SYSTEM STARTUP

A. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping system, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

B. System Charging:

1. Charge the refrigerant piping system using the following procedure:
 - a. Install the core in the filter dryers after the leak test, but before evacuation.
 - b. Evacuate the entire refrigerant system using a vacuum pump to 500 micrometers (67Pa).
 - 1) If vacuum the holds for 12 hours, the system is ready for charging.
 - c. Break the vacuum using refrigerant gas, allowing the pressure to build up to 2 psig (14kPa).
 - d. Charge the system using a new filter-dryer core in the charging line.

3.06 ADJUSTING

- A. Submit the manufacturer's written adjustments instructions to the Program/Project Manager for information.
- B. Adjust adjustable thermostatic expansion valves to obtain the proper evaporator superheat.
- C. Adjust the high- pressure and low-pressure switch settings to prevent short cycling in response to fluctuating suction pressures.
- D. Adjust the set-point temperature of the air-conditioning or chilled-water controllers to the system design temperature.
- E. Before operating the refrigeration system, perform the following adjustments in accordance with the manufacturer's written instructions:
 - 1. Open the shutoff valves in the condenser water circuit.
 - 2. Verify that the compressor oil level is correct.
 - 3. Open the compressor suction and discharge valves.
 - 4. Open the refrigerant valves, except bypass valves, that are used for other purposes.
 - 5. Check the open compressor-motor alignment, and verify that the motors and bearings have been properly lubricated.
- F. After the system has been adjusted and after the design flow rates and pressures are established, replace the core of the replaceable filter dryer.

3.07 CLEANING

- A. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.08 PROTECTION

- A. Protect installed refrigerant piping from damage and wear during the remainder of the construction period.

3.09 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Submit operation and maintenance data for the refrigerant valves and piping specialties to the Program/Project Manager for inclusion in

emergency and Operation and Maintenance Manuals as specified in
Section 01780, Closeout Submittals.

SECTION 15187

HEATING & COOLING PUMPS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following types of heating and cooling pumps:
 - a. Close-coupled, in-line centrifugal pumps.
 - b. Automatic condensate pump units.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01770 - Closeout Procedures.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 01810 – Commissioning.
 - 6. Section 15060 - Hangers and Supports.
 - 7. Section 15065 - Motors for Mechanical Equipment.
 - 8. Section 15070 - Mechanical Sound, Vibration, and Seismic Controls.
 - 9. Section 15065 - Motors for Mechanical Equipment.
 - 10. Section 15995 - Commissioning of Mechanical Systems.
 - 11. Section 16061 - Electrical Grounding and Bonding.
 - 12. Section 16120 - Conductors and Cables.

1.02 REFERENCES

- A. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Commissioning Authority (CA): An independent agent engaged by the Phoenix Sky Harbor International Airport to direct and coordinate the commissioning process for the Project, and to approve the Work requiring commissioning.
- B. Reference Standards:
 - 1. ASTM International (ASTM):
 - a. ASTM B 584 - Standard Specification for Copper Alloy Sand Castings for General Applications.
 - 2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 3. Hydraulic Institute (HI):
 - a. ANSI/HI 1.1-1.2 – American National Standard for Centrifugal Pumps for Nomenclature and Definitions.

- b. ANSI/HI 1.3 – American National Standard for Rotodynamic (Centrifugal) Pumps for Design and Application.
- c. ANSI/HI 1.4 – American National Standard for Centrifugal Pumps for Installation, Operation, and Maintenance.
- 4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
- 5. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
- 6. Underwriters Laboratories, Inc. (UL):
 - a. UL 778 – Standard for Motor-Operated Water Pumps.
 - b. UL Online Certifications Directory, <http://wwwu.com/regulators>.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

- 1. Coordination Drawings:
 - a. Prepare and submit Coordination Drawings to the Program/Project Manager for approval.
 - 1) Show the following items for this Contract drawn to scale, and coordinate them with each other:
 - a) HVAC, plumbing, and fire suppression items.
 - b) Conduit routing plans.
 - c) Structural members.

1.04 SUBMITTALS

A. Action Submittals:

- 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Hydronic heating and cooling pumps.
 - b. Shop Drawings:
 - 1) Coordination Drawings.
 - 2) Hydronic heating and cooling pumps.
 - 3) Wiring diagrams for the hydronic heating and cooling pumps.

B. Informational Submittals:

- 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Pump and coupling manufacturers' written instructions for aligning the pump and motor shafts and the piping connections.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Pumps.

D. Maintenance Material Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish the following spare parts matching the products installed, and packaged for storage by having a protective coverings and labels identifying the contents.
 - a) Mechanical Seals:
 - (1) Furnish 1 mechanical seal for each pump provided as the Work of this Section.

1.05 QUALITY ASSURANCE

A. Certifications:

1. Electrical Listing and Labeling:
 - a. Provide electrical components, devices, and accessories that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Manufacturer's Preparation for Shipping Motors:

- a. Clean flanges and exposed machined metal surfaces, and treat them with an anticorrosion compound after assembly and testing.
 - b. Protect flanges, pipe openings, and nozzles with wooden flange covers or with screwed-in plugs.
- B. Storage and Handling Requirements:
 - 1. Store the pumps in a dry location.
 - 2. During storage, retain protective covers on flanges and protective coatings.
 - 3. Protect bearings and couplings against damage from sand, grit, and other foreign matter.
 - 4. Comply with the pump manufacturer's rigging instructions.
 - a. Submit the pump manufacturer's written rigging instructions to the Program/Project Manager for approval.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 HEATING AND COOLING PUMP EQUIPMENT

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain heating and cooling pumps, components, and accessories within the same product category from a single source from a single manufacturer.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. National Electrical Code (NEC):

- 1) Provide products and installation complying with the requirements specified for enclosed switches and circuit breakers in NFPA 70.
- C. Performance:
 1. Pump Capacities and Characteristics:
 - a. Provide hydronic heating and cooling pumps having the capacities, characteristics, and accessories indicated in the Mechanical Equipment Schedule on the Contract Drawings.
- D. Design Criteria:
 1. Hydronic Heating and Cooling Pumps:
 - a. The Contract Drawings indicate the general arrangement of hydronic heating and cooling pumps.
 - 1) Plans, schematics, and diagrams included in the Contract Drawings indicate the sizes, profiles, and/or dimensional requirements of the hydronic heating and cooling pumps based on the specific system indicated in the Contract Documents.
 - 2) The indicated locations and arrangements may need to be modified based on the specific system provided and other design considerations.
 - 3) Install the hydronic heating and cooling pumps as indicated unless deviations to the installation are approved by the Program/Project Manager on Coordination Drawings.
 - b. Provide motor-operated water pumps designed in accordance with the requirements specified in UL 778.
 - c. Motors:
 - 1) Provide motors complying with the requirements specified in Section 15065, Motors for Mechanical Equipment.
 - d. Product Data:
 - 1) Obtain Product Data for the hydronic heating and cooling pumps that includes certified performance curves and rated capacities, operating characteristics, furnished specialties, final impeller dimensions, and the accessories for each type of product indicated.
 - a) Indicate the pump's operating point on the curves.
 - 2) Submit the Product Data for the hydronic heating and cooling pumps to the Program/Project Manager for approval.
 - e. Shop Drawings:
 - 1) Prepare Shop Drawings for the hydronic heating and cooling pumps that show the pump layout and connections.
 - a) Include setting drawings with templates for installing the foundation and anchor bolts and other anchorages.
 - 2) Prepare wiring diagrams showing the power, signal, and control wiring.

- 3) Submit the Shop Drawings and wiring diagrams for the hydronic heating and cooling pumps to the Program/Project Manager for approval.

E. Materials:

1. Close-Coupled, In-Line Centrifugal Pumps:
 - a. Provide factory-assembled and factory-tested, overhung-impeller, close-coupled, in-line centrifugal pumps as defined and specified in ANSI/HI 1.1-1.2 and ANSI/HI 1.3; and designed for installation with pump and motor shafts mounted horizontally or vertically.
 - b. Pump Rating:
 - 1) Provide pumps rated for a minimum working pressure of 175 psig (1204kPa), and a continuous water temperature of 200 degrees Fahrenheit (93 degrees Celsius).
 - c. Pump Construction:
 - 1) Casing:
 - a) Provide pumps having a radially split, cast iron casing with replaceable bronze wear rings, threaded gage tappings at the inlet and outlet, and threaded companion-flange connections.
 - 2) Impeller:
 - a) Provide pumps having a cast bronze impeller cast in accordance with the requirements specified in ASTM B 584; and statically and dynamically balanced, keyed to the pump shaft, and secured with a locking cap screw.
 - b) Trim the impeller to match the specified performance.
 - 3) Pump Shaft:
 - a) Provide pumps having a stainless steel pump shaft.
 - 4) Packing Seal:
 - a) Provide pumps having a stuffing box having a minimum of 4 rings of graphite-impregnated braided yarn with a bronze lantern ring between center two graphite rings, and a bronze packing gland.
 - 5) Pump Bearings:
 - a) Provide pumps having oil-lubricated, bronze-journal or thrust type pump bearings.
 - d. Motor:
 - 1) Unless otherwise indicated in the Contract Documents, provide pumps having a single speed motor complying with the requirements specified in Section 15065, Motors for Mechanical Equipment, rigidly mounted to the pump casing, and having grease-lubricated ball bearings.
 - e. Manufacturers:
 - 1) Armstrong Pumps Inc., <http://www.armstrongpumps.com>.
 - 2) Bell & Gossett; Division of ITT Corporation, <http://www.bellgossett.com>.

Per 0658, the spec variances noted in the submittal are acceptable

- 3) Grundfos Pumps Corporation, <http://www.grundfos.us>.
- 4) PACO Pumps,
<http://www.pacopumps.com/homepages/PacoHome.asp>.
- 5) Taco, Inc., <http://www.taco-hvac.com>.
- 6) Approved equal.
2. Automatic Condensate Pump Units:
 - a. Provide packaged units complete with a corrosion-resistant pump, a plastic tank with a cover, and automatic controls.
 - 1) Include a factory-installed or field-installed check valve, and an electrical power cord at least 72 inches long (1800mm) with a plug.
 - b. Manufacturers:
 - 1) Aurora Pump, Division of Pentair Pump Group,
<http://www.aurorapump.com>.
 - 2) Beckett Corporation, <http://www.beckettpumps.com>.
 - 3) Flowserve Corporation, Div. of Ingersoll-Dresser Pumps,
<http://www.flowserve.com>.
 - 4) Hartell Pumps Div., Milton Roy Co., <http://www.hartell.com>.
 - 5) Little Giant Pump Co., Subsidiary of Tecumseh Products Co.,
<http://www.lgpc.com>.
 - 6) Marshall Engineered Products Company (MEPCO),
<http://www.mepcolc.com>.
 - 7) Approved equal.
3. Pump Specialty Fittings:
 - a. Suction Diffusers:
 - 1) Provide angle pattern suction diffusers having a 175 psig (1204kPa) pressure rating, a cast-iron body and end cap, a pump-inlet fitting, bronze startup and bronze or stainless-steel permanent strainers, bronze or stainless-steel straightening vanes, a drain plug, and a factory-fabricated support.
 - b. Triple-Duty Valves:
 - 1) Provide angle or straight pattern triple-duty valves having a 175 psig (1204kPa) pressure rating, a cast-iron body, a pump-discharge fitting, a drain plug, and having bronze-fitted shutoff, balancing, and check valve features.
 - a) For flow measurement, provide brass gage ports having an integral check valve and an orifice.

2.02 ACCESSORIES

- A. Hangers and Supports:
 1. Provide hanger and support materials complying with the requirements specified in Section 15060, Hangers and Supports.
- B. Vibration Isolation Devices:

1. Provide vibration isolation devices complying with the requirements specified in Section 15070, Mechanical Sound, Vibration, and Seismic Controls.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Examine equipment foundations and anchor-bolt locations to verify compliance with installation tolerances and requirements, and other conditions affecting the performance of the Work.
 2. Before installing the pumps, examine the rough-in for piping systems to verify the actual locations of the piping connections.
 3. Examine the foundations and walls where pumps are to be installed to verify that conditions are suitable.
- B. Evaluation and Assessment:
 1. Proceed to install the pumps only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the heating and cooling pumps.
- B. Surface Preparation:
 1. Install continuous-thread hanger rods and spring hangers having a vertical-limit stop of sufficient size to support the pump weight.

3.03 INSTALLATION

- A. Pumps:
 1. Install pumps in accordance with the requirements specified in ANSI/HI 1.4.
 2. Install pumps so access for periodic maintenance has been provided, including for the removal of motors, impellers, couplings, and accessories.
 3. Support pumps and piping independently so the weight of piping is not supported by the pumps, and the weight of pumps is not supported by piping.
 - a. Provide fabricated brackets and supports as required.
 - b. Suspend vertically mounted, in-line centrifugal pumps independent of their piping.
 4. Install the pumps on the hanger rods and spring hangers so their motors and pump shafts are vertical.

- B. Automatic Condensate Pump Units:
 - 1. For collecting condensate, install automatic condensate pump units, and extend their piping to an open drain.
- C. Alignment:
 - 1. After setting the pumps on their foundations, and the grout has been set, the foundation bolts have been tightened, and piping connections have been made, align the pump and motor shafts and the piping connections in accordance with the pump and coupling manufacturers' instructions.
 - a. Submit the pump and coupling manufacturers' written instructions for aligning the pump and motor shafts and the piping connections to the Program/Project Manager for information.
 - 2. Use the methods specified in ANSI/HI 1.3 to adjust the angular and offset alignment of the pump and motor shafts.
- D. Connections:
 - 1. To connect piping to pumps, install valves that are the same size as the piping connected to the pumps.
 - a. Install suction and discharge pipes having sizes equal to or greater than the diameter of the pump nozzles.
 - b. On the discharge side of each pump, install a triple-duty valve.
 - c. On the suction side of each pump, install a suction diffuser and a shutoff valve.
 - 2. Base-Mounted Pumps:
 - a. On the suction and discharge sides of base-mounted pumps, install flexible connectors between the pump casing and the valves.
 - 3. Automatic Condensate Pump Units:
 - a. On each condensate pump unit discharge, install a check valve and a ball valve.
- E. Special Techniques:
 - 1. Pressure Gages:
 - a. At integral pressure-gage tapings on the pump suction and discharge lines, install a pressure gage; or install a single gage having a multiple input selector valve.
- F. Systems Integration:
 - 1. Piping Connections:
 - a. Install piping in accordance with the requirements specified in other Sections where the piping is specified.
 - 1) Install piping adjacent to the machines to allow room for servicing and maintaining the equipment.
 - 2. Electrical Connections:
 - a. Connect wiring in accordance with the requirements specified in Section 16120, Conductors and Cables.
 - 1) Install electrical connections for power, controls, and devices.

- b. Ground the pump equipment in accordance with the requirements specified in Section 16061, Electrical Grounding and Bonding.

3.04 SYSTEM STARTUP

- A. Commissioning:
 1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping system, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.
- B. Engage a factory-authorized service representative to perform the startup service.
 1. Complete the installation and startup checks in accordance with the manufacturer's written instructions.
 2. Check the piping connections for tightness.
 3. Clean the strainers on the suction piping.
 4. Perform the following startup checks for each pump before starting the pump:
 - a. Verify bearing have been properly lubricated.
 - b. Verify that the pump is free to rotate by hand, and that pumps for handling hot liquid are free to rotate with the pump hot and cold.
 - 1) If the pump is bound or drags, do not operate it until the cause of the trouble is determined and corrected.
 - c. Verify that the pump is rotating in the correct direction.
 5. Prime the pump by opening the suction valves and closing the drains, and prepare the pump for operation.
 6. Start the pump motor.
 7. Open the discharge valve slowly.

3.05 CLEANING

- A. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 CLOSEOUT ACTIVITIES

- A. Training:
 1. Engage a factory-authorized service representative to train the Owner's maintenance personnel to adjust, operate, and maintain the hydronic heating and cooling pumps in accordance with the requirements specified in Section 01770, Closeout Procedures.

3.07 PROTECTION

- A. Protect installed hydronic heating and cooling pumps from damage and wear during the remainder of the construction period.

3.08 MAINTENANCE

- A. Operation and Maintenance Data:
1. Submit operation and maintenance data for the hydronic heating and cooling pumps to the Program/Project Manager for inclusion in emergency and Operation and Maintenance Manuals as specified in Section 01780, Closeout Submittals.

SECTION 15188

HVAC WATER TREATMENT

PART 1 GENERAL

1.01 STIPULATIONS

- A. The specifications sections "General Conditions of Contract," "Special Conditions" and "Division 1 – General Requirements" form a part of this section by this reference thereto and shall have the same force and effect as if printed herewith in full.

1.02 SUMMARY

- A. Section Includes:
 - 1. System cleaner.
 - 2. Closed system treatment: Chilled water.
 - 3. Steam system treatment.
 - 4. Condenser water system treatment.
 - 5. Open system treatment.
 - 6. Chemical feeder equipment including associated feeders, pumps, tanks, controls, meters and valves.
 - 7. Test equipment.
 - 8. Water Filtration Sand
 - a. Chilled water
 - b. Condenser water
- B. Related Sections:
 - 1. Section 15065 – Motors for Mechanical Equipment: Product requirements for motors for placement by this section.
 - 2. Division 16 - Equipment Wiring Connections: Execution requirements for electrical connections specified by this section.

1.03 REFERENCES

- A. National Electrical Manufacturers Association:
 - 1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

1.04 PERFORMANCE REQUIREMENTS

- A. Provide system to treat water available at project site to maintain characteristics of water in closed, steam and open systems appropriate to each system as recommended by Water Treatment manufacturer.

1.05 SUBMITTALS

- A. Shop Drawings: Indicate dimensions, system schematic, equipment locations, and controls schematics, electrical characteristics and connection requirements.
- B. Product Data: Submit chemical treatment materials, chemicals, and equipment including electrical characteristics and connection requirements.
- C. Manufacturer's Installation Instructions: Submit placement of equipment in systems, piping configuration, and connection requirements.
- D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.
- E. Manufacturers Field Reports: Indicate start-up of treatment systems when completed and operating properly. Indicate analysis of system water after cleaning and after treatment.

1.06 CLOSEOUT SUBMITTALS

- A. Project Record Documents: Record actual locations of equipment and piping, including sampling points and location of chemical injectors.
- B. Operation and Maintenance Data: Submit data on chemical feed pumps, agitators, and other equipment including spare parts lists, procedures, and treatment programs. Include step by step instructions on test procedures including target concentrations. Also include instructions for operation and maintenance, cleaning, and unit schematic diagrams.

1.07 QUALITY ASSURANCE

- A. Perform Work in accordance with State of Pennsylvania Department of Environmental Protection standard for addition of non-potable chemicals to building systems and for discharge to public sewers.

1.08 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience, and with service facilities within 100 miles of Project with their own water analysis laboratories and full-time service personnel.
- B. Installer: Company specializing in performing Work of this section with minimum three years documented experience approved by manufacturer.

1.09 FIELD MEASUREMENTS

- A. Verify field measurements prior to fabrication.

1.10 MAINTENANCE SERVICE

- A. Furnish technical service visits, twice a month, for one year starting at Date of Substantial Completion, to perform field inspections and make water analysis of each system on site. Detail findings in writing on proper practices, chemical treating requirements and corrective actions needed. Submit two copies of field service report after each visit. Prior to each visit, contractor will provide advance notice of 48 hours as to the time and date of the next service visit. This ensures that microbiological dual assay slides for tower and chilled water systems will have adequate time to develop for discussion. At the close of each service visit, contractor will provide an electronic service report documenting the results of that service visit, actions taken, and any support required from staff to resolve open issues.
- B. Perform monthly testing of cooling tower water for legionella pneumophila. Submit report stating bacteria count per milliliter and results from previous test.
- C. Furnish laboratory and technical assistance services during this maintenance period.
- D. Furnish on-site inspections of equipment during scheduled or emergency shutdown to properly evaluate success of water treatment program and make recommendations in writing based upon these inspections. Contractor will physically inspect heat exchangers, boilers and chillers annually to document the condition of this equipment. A detailed report will be provided to owner for each inspection completed.

1.11 MAINTENANCE MATERIALS

- A. Furnish chemicals for treatment and testing during warranty period.

PART 2 PRODUCTS

2.01 SYSTEM CLEANER

- A. Manufacturers:
 - 1. MIOX
 - 2. Water Treatment by Design (WTBD)
 - 3. Arc water Treatment
 - 4. Barclay Water Management
 - 5. Klenzoid
 - 6. Or equal as approved by the Professional.

- B. Product Description: Liquid alkaline compound with emulsifying agents and detergents to remove grease and petroleum products.
- C. Biocide.

2.02 CLOSED SYSTEM TREATMENT (WATER)

- A. Manufacturers:
 - 1. MIOX
 - 2. Water Treatment by Design (WTBD)
 - 3. Arc water Treatment
 - 4. Barclay Water Management
 - 5. Klenzoid
 - 6. Or equal as approved by the Professional.
- B. Molybdate product can be used at (100-150 PPM), OR Nitrite at (400-800PPM- Chilled Water and 800-1000 PPM Hot Water)
- C. Chilled Water Biocide - Chilled water systems will be treated (4) times per year with a non-oxidizing biocide (gluteraldehyde) treatment.
- D. Bacteria levels must be less than 100 CFU's at all times.
- E. Bypass bag filter feeder is required: FTF-5DB
- F. Azole must be > 10 ppm at all times to protect yellow metals.

2.03 CONDENSER WATER SYSTEM TREATMENT (COOLING TOWERS)

- A. Manufacturers:
 - 1. MIOX
 - 2. Water Treatment by Design (WTBD)
 - 3. Arc Water Treatment
 - 4. Barclay Water Management
 - 5. Klenzoid
 - 6. Or equal as approved by the Professional.
- B. Corrosion/Scale Inhibitor –
 - 1. Organic based program with supported by a polymer (for calcium phosphate stabilization), phosphonate/PBTC (for calcium carbonate stabilization and additional corrosion protection) and azole (tolytriazole or benzotriazole).
 - 2. The products and control ranges have been specified in the bid forms.
 - 3. Product will provide a minimum of 5 ppm of phosphonate (PBTC), 25 ppm of polymer (for calcium phosphate inhibition) and 3 ppm of azole in the cooling tower.
- C. Cooling tower oxidizing biocide

1. Liquid stabilized bromine-based chemistry.
 2. Product will be fed to achieve a minimum of 1 ppm free residual chlorine for a minimum of 1 hour.
- D. Cooling tower non-oxidizing biocide – please select a gluteraldehyde based biocide. Product will be fed (2) times per week at 120 ppm.
- E. Bacteria levels must be maintained at less than 10,000 CFU's at all times.

2.04 BY-PASS (POT) FEEDER

- A. Manufacturers:
1. Neptune
 2. Water Treatment by Design (WTBD)
 3. Arc Water Treatment
 4. Barclay Water Management
 5. Klenzoid
 6. Or equal as approved by the Professional.
- B. 5-gallon filter/feeder with legs includes body and basket, bag, 1-micron, quick opening cap for working pressure of 300 psig.

2.05 SOLUTION METERING PUMP

- A. Manufacturers:
1. LMI Milton Roy
 2. Lutz Jesco America Corp.
 3. Neptune Pump Company
 4. Walchem
 5. Or equal as approved by the Professional.
- B. Positive displacement, diaphragm pump with adjustable flow rate, thermoplastic construction, continuous-duty fully enclosed electric motor and drive, and built-in relief valve.
- C. Electrical Characteristics:
1. 120 volts, single phase, 60 Hz.
 2. Cord and Plug: Furnish unit with 6-foot cord and plug for connection to electric wiring system including grounding connector.

2.06 CORROSION COUPONS

- A. Provide mild steel and copper corrosion coupons for each system having a corrosion coupon rack. Coupon racks shall be provided for any systems that do not currently have this equipment in place. Analyze one (1) set of copper and steel corrosion coupons on a 90-day schedule for open condenser systems and a 180-day schedule for -loop systems. Both pitting and general corrosion rates shall be reported. The coupon report shall contain photographs

of the coupon as removed from the rack and after cleaning. Return the used coupons to the Agency personnel with the coupon report. Any new coupon racks shall include a flow rate indicator, and/or a calibrated flow restrictor designed to maintain a flow rate not to exceed 3 feet per second and a 12-inch long horizontally oriented steel pipe spool piece.

2.07 SOLUTION TANKS

- A. Manufacturers:
 - 1. MIOX
 - 2. Water Treatment by Design (WTBD)
 - 3. Arc Water Treatment
 - 4. Barclay Water Management
 - 5. Klenzoid
 - 6. Or equal as approved by the Professional.
- B. Stationary OSHA approved 50-gallon capacity, polyethylene, self-supporting, 5-gallon graduated markings; molded fiberglass cover with recess for mounting pump, agitator, and liquid level switch.
- C. Double wall spill containment tanks with MSDS sheets physically attached, corrosion resistant with at least 120% times the holding capacity of chemical solution tanks, one for each chemical.
- D. Contractor shall insure that delivery personal have proper safety equipment when completing chemical transfers. Any transfer containers used during this process shall be removed from the site once the transfer has been completed. If any empty chemical containers from the Contractor are on site during this delivery, they will also be removed.

2.08 AGITATOR

- A. Manufacturers:
 - 1. MIOX
 - 2. Ingersoll Rand
 - 3. Water Treatment by Design (WTBD)
 - 4. Arc Water Treatment
 - 5. Klenzoid
 - 6. Or equal as approved by the Professional.
- B. Low RPM, totally enclosed electric motor, stainless steel clamp and motor mount, 4-inch diameter coated Type 316 stainless steel propeller.
- C. Electrical Characteristics:
 - 1. 120 volts, single phase, 60 Hz.
 - 2. Cord and Plug: Furnish unit with 12-foot cord and plug for connection to electric wiring system including grounding connector.

2.09 LIQUID LEVEL SWITCH

- A. Manufacturers:
 - 1. MIOX
 - 2. Water Treatment by Design (WTBD)
 - 3. Arc Water Treatment
 - 4. Barclay Water Management
 - 5. Klenzoid
 - 6. Or equal as approved by the Professional.
- B. Polypropylene housing with integrally mounted PVC air trap, receptacles for connection to metering pump, and low-level alarm.

2.10 CONDUCTIVITY CONTROLLER

- A. Manufacturers:
 - 1. MIOX
 - 2. Water Treatment by Design (WTBD)
 - 3. Arc Water Treatment
 - 4. Barclay Water Management
 - 5. Klenzoid
 - 6. Or equal as approved by the Professional.
- B. Packaged monitor controller with solid state circuiting, five percent accuracy, linear dial adjustment, built-in calibration switch, on-off switch and light, control function light, output to control circuit.
- C. Chemical feed equipment shall be able to provide the following equipment with these capabilities:
 - 1. Remote automation and control of existing Condenser Water system via Ethernet and or phone line.
 - 2. Capability to present live data 24/7 and alarming capabilities.
 - 3. Capability to control inhibitor feed using a fluorescent dye technology monitoring live ppm of product 24/7 at all times must be an option for both Boiler and Cooling Water feed systems.
 - 4. Automatic Boiler Surface Blowdown Controllers are required with motorized ball valves, plumbing sensors, and orifice unions for each steam boiler. All controllers must have the above capabilities.

2.11 WATER METER

- A. Manufacturers:
 - 1. MIOX
 - 2. Water Treatment by Design (WTBD)
 - 3. Arc Water Treatment
 - 4. Barclay Water Management
 - 5. Klenzoid

6. Or equal as approved by the Professional.

- B. Displacement type cold-water meter with sealed, tamper-proof magnetic drive, impulse contact register.

2.12 SOLENOID VALVES

- A. Manufacturers:

1. MIOX
2. Water Treatment by Design (WTBD)
3. Arc Water Treatment
4. Barclay Water Management
5. Klenzoid
6. Or equal as approved by the Professional.

- B. Forged brass body globe pattern, normally open or closed as required, general-purpose solenoid enclosure, and continuous duty coil.

- C. Electronic timers, infinitely adjustable over full range, 150 second and five minute range, mounted together in cabinet with hands-off-automatic switches and status lights.

2.13 TEST EQUIPMENT

- A. Furnish white enamel test cabinet with local and fluorescent light, capable of accommodating 4 - 10 ml zeroing titration burettes and associated reagents.

- B. Furnish following test kits:

1. Alkalinity titration test kit.
2. Chloride titration test kit.
3. Sulfite titration test kit.
4. Total hardness titration test kit.
5. Low phosphate test kit.
6. Conductivity bridge, range 0 - 10,000 micro-ohms.
7. Creosol red pH slide, complete with reagent.
8. Portable electronic conductivity meter capable of measuring ORP and pH.
9. High nitrite test kit.
10. Digital colorimeter

2.14 WATER FILTRATION SAND

- A. Manufacturers:

1. AmeriWater.
2. Nalco (UltraSand series.)
3. Or equal as approved by the Professional.

- B. System Data

1. General

- a. Location: Shippensburg, PA
2. Condenser Water Performance
 - a. Design condenser water circulation flow: 9,000 gpm
 - b. Design temperature differential across towers: 10 deg F
 - c. Cycles of concentration: 3
 - d. Cooling tower
 - 1) three cells
 - 2) approx. 844,000 cfm total
3. Chilled Water Performance
 - a. Design chilled water volume: 2 million gal

C. Sand Filtration System

1. Sand filtration system shall be rated for:
 - a. Condenser water: 0.5 micron particle removal.
 - b. Chilled water: 0.25 micron particle removal.
2. Filter shall be comprised of #304 Stainless Steel tank(s) ASME labeled with a Type L copper manifold, copper control tubing, stainless steel skid and circulating pump.
3. Filter shall operate continuously removing suspended particles from water until either a set pressure drop across the filter bed is reached or twenty four hours has elapsed. At either point filter shall automatically backwash for 10 minutes on each vessel sequentially for condenser water and 5 minutes for chilled water. After backwash cycle, filter shall automatically return to original filtration mode.
4. The selection and sizing of the filtration system shall be based on and account for the condenser water (CW) system tonnage, the CW system design circulation rate, the CW design temperature drop across the tower and the cycles of concentration. The selection and sizing of the filtration system shall be based on and account for the chilled water (CHW) system design circulation rate. Filter system sizing shall also consider the local air quality, cooling tower air flow rates in CFM and the local water chemistry.
5. Provide Particle Distribution Analysis and calculations from three previous users where the criteria described in this spec were met. Include tower tonnage, tower water circulation rate, temperature drop across the tower, filter sand size and filtration rate. Note % of tower water circulation rate being filtered in each case. Include facility name, address, contacts and phone numbers. Analysis shall be on independent third party laboratory letter head.
6. Filter shall be designed to provide
 - a. Condenser water: 0.5 micron filtration by utilizing ultrafine sand with an effective size of not more than 0.16 millimeters.
 - b. Chilled water: 0.25 micron filtration by utilizing ultrafine sand with an effective size of not more than 0.10 millimeters.
7. Filter design flow rate shall be greater than 20 gpm per square foot of surface area.

8. Filter shall be sized to remove 50% by count or more of the 0.5 micron particles and 80% by count or more of the 2 microns particles typically found in the circulating cooling water, within 30 days of startup.
9. Natural quartz media shall meet AWWA B-100, ANSI, and NSF-61 standards for consistently uniform and chemically inert filter media. Crushed or ground media is not acceptable.
10. Filter system shall be rated for:
 - a. Condenser water: 70 psig inlet pressure to filter pump.
 - b. Chilled water: 70 psig inlet pressure to filter pump.
11. Tanks shall be #304 Stainless Steel rated for 300 psig operating pressure for chilled water and 200 psig operating pressure for condenser water and fabricated and labeled ASME.
12. Manifold shall be Type L copper.
13. Lower distributor will be of "V Notch" design which dislodges sand particles during backwash. Drilled hole design not acceptable.
14. Components:
 - a. Media shall be natural Quartz multimedia that is certified as to quality by NSF-61 standards. Crushed or ground media is not acceptable.
 - b. Valves shall be Johnson Controls two-piece brass ball type with EPDM stem seals, blowout proof stem design, stainless steel ball and stem, PTFE seats. Valves shall be actuated with individual 24V electric motors on each valve. The drain valve(s) shall be spring return normally closed.
 - c. Filter shall be equipped with two pressure gauges. The gauges shall have a stainless steel casing, with brass internals and be liquid filled. The minimum face size shall be no less than 2-1/2". One gauge marked (IN) shall be connected to the filter discharge and the second gauge marked (OUT) shall be connected to the outlet side of the filter. Both gauges shall be mounted to a support panel that shall be mounted above the filter control.
 - d. Backwash flow control shall be rated for full backwash flow with backwash water from 25 PSIG to 80 PSIG. The filter system shall use for backwash:
 - 1) Condenser water: condenser water.
 - 2) Chilled water: city water.
 - e. Filter pump
 - 1) Cast iron
 - 2) Close coupled with mechanical seal.
 - 3) Pump motor
 - a) 208V
 - b) Maximum motor HP: 5 for condenser water and 5 HP for chilled water
 - c) TEFC
 - d) Service factor of not less than 1.15.
 - f. Filter shall be mounted on a stainless steel skid

- g. PLC filter control shall be compatible with the existing BAS and shall have a NEMA 4X enclosure and shall contain the following:
 - 1) A 24 hour timer to force backwash once per day.
 - 2) A pressure differential switch which is factory set to initiate backwash at set pressure differential across the filter bed.
 - 3) A manual override switch, of a momentary contact design, mounted on the control box door.
 - 4) A program timer shall be designed to control the duration of the backwash cycle. It shall be engaged by either the 24 hour timer, pressure differential switch, or the manual override button.
 - 5) A light mounted on the outside of the panel door.
 - 6) A non-resettable backwash counter mounted on the outside of the panel door to indicate the number of times the filter has backwashed.
 - 7) A motor starter and disconnect.
 - 8) Step down transformers to convert 3 phase power to 115 volts AC to operate control components.
 - 9) Output contacts
 - a) Pump status
 - b) Backwash count
 - 10) Interlocks to disable sand filtration system
 - 11) The entire industrial control package shall be UL listed

PART 3 EXECUTION

3.01 PREPARATION

- A. Operate, fill, start and vent new piping systems prior to cleaning. Use water meter to record capacity in each system. Place terminal control valves in open position during cleaning.

3.02 CLEANING

- A. Concentration: Liquid Alkaline Cleaner
 - 1. As recommended by manufacturer.
 - 2. One pound per 100 gallons of water contained in the system.
 - 3. One pound per 100 gallons of water for hot systems and one pound per 50 gallons of water for cold systems.
 - 4. Fill steam boilers only with cleaner and water.
- B. New Hot Water Heating Systems:
 - 1. Apply heat while circulating, slowly raising temperature to 160 degrees F and maintain for 12 hours minimum.
 - 2. Remove heat and circulate to 100 degrees F or less; drain systems as quickly as possible and refill with clean water.
 - 3. Circulate for 6 hours at design temperatures, then drain.
 - 4. Refill with clean water and repeat until system cleaner is removed.

- C. New Chilled Water Systems:
 - 1. Circulate for 48 hours, then drain systems as quickly as possible.
 - 2. Refill with clean water, circulate for 24 hours, then drain.
 - 3. Refill with clean water and repeat until system cleaner is removed.
- D. New Steam Systems:
 - 1. Apply heat, slowly raising boiler temperature to 160 degrees F and maintain for 12 hours minimum.
 - 2. Cool, then drain as quickly as possible.
 - 3. Refill with clean water, drain, refill and check for sludge.
 - 4. Repeat until system is free of sludge.
 - 5. Apply heat to produce steam for piping system and maintain for 8 hours minimum. Bypass traps and waste condensate.
- E. Use neutralizer agents on recommendation of system cleaner supplier and acceptance of the Professional.
- F. Flush open systems with clean water for one hour minimum. Drain completely and refill.
- G. Remove, clean, and replace pump strainer screens.
- H. Remove, clean, and replace temporary system strainer screens.
- I. Inspect, remove sludge, and flush low points with clean water after cleaning process is completed. Include disassembly of components as required.
- J. After cleaning process is completed and system free of sludge, replace temporary system strainers with spool pieces.

3.03 CLOSED SYSTEM TREATMENT

- A. Provide one bypass feeder on each new system. Install isolating and drain valves and interconnecting piping. Install around balancing valve downstream of circulating pumps as indicated on Drawings.
- B. Introduce closed system treatment through bypass feeder when required or indicated by test.
- C. Install 3/4 inch water coupon rack around circulating pumps with space for four test specimens.

3.04 STEAM SYSTEM TREATMENT

- A. Provide boiler feed tanks to each boiler along with a separate Sulfite feed to the deaerator tank. All chemical feed pumps will be electrically tied into the dedicated boiler feedwater pump for chemical feeds proportionally to feedwater makeup.

3.05 CONDENSER WATER SYSTEMS (COOLING TOWERS)

- A. Provide automatic condenser water control systems for inhibitor feed, blow-down, and two alternating biocide feeds.
 - 1. Provide meter activated inhibitor application.
 - 2. Provide conductivity activated blow-down.
 - 3. Provide meter fed biocide with blow-down locked out to ensure biocide retention time.
- B. Incorporate solid state integrated circuits and digital LED displays, in NEMA 250 Type 12 steel enclosure. Provide lockable door with gaskets.
- C. Base dissolved solids control on conductivity and include:
 - 1. LED digital readout display (micro-ohm/cm).
 - 2. Temperature compensated sensor probe adaptable to sample stream manifold.
 - 3. High, low, normal conductance indicator lights (LED).
 - 4. High or low conductance alarm light (flash or steady switch), trip points field adjustable. Furnish flash or steady switch with silence position.
 - 5. Illuminated legend indicating "ALARM" whenever alarm condition exists.
 - 6. Hand-off-automatic switch for solenoid bleed valve.
 - 7. Illuminated legend indicating "BLEED" when valve is operated.
 - 8. Adjustable hysteresis or dead-band (internal).
- D. Base inhibitor feed control on make-up volume and include:
 - 1. Solid state counter (1-15 field selectable).
 - 2. Solid state timer (adjustable 1/4 to 5 minutes).
 - 3. Test switch.
 - 4. Hand-off-automatic switch for chemical pump.
 - 5. Illuminated legend indicating "FEED" when pump is activated.
 - 6. Solid state lockout timer (adjustable 1/4 to 3 hours) and indicator light. Lockout timer to deactivate pump and activate alarm circuits.
 - 7. Panel total (quantity of makeup), Electro-mechanical type.
- E. Biocide programmer to include:
 - 1. 24-hour timers with 14 day skip feature.
 - 2. Precision solid state bleed lockout timer (0-9 hours) and biocide pump timer (0 - 2-1/4 hours), clock controlled.
 - 3. Solid state alternator to enable use of two different formulations.
 - 4. Digital display of time of day (24 hours).
 - 5. LED display of day of week (14 days).
 - 6. Fast and slow clock set controls (internal).
 - 7. Battery back-up so clock is not disturbed by power outages, quartz timekeeping accuracy.
 - 8. Hand-off-automatic switches for biocide pumps.
 - 9. Illuminated legend indicating "BIOCIDE A" or "BIOCIDE B" when pump is activated.

- F. Provide water meter on system make-up, wired to control system.
- G. Provide solution pumps to feed sequestering agent and corrosion inhibitor from solution tank into condenser water supply to tower. Provide agitator in accordance with treatment supplier's recommendations.
- H. Provide conductivity controller to sample condenser water and operate solenoid bleed valve and piping to blow-down controller. Wire sampler to open when condenser water pump is operating.
- I. Introduce biocide to tower by continuous feed with solution pump or solenoid valve on tank (chlorine).
- J. Provide liquid level switch in each solution tank to de-activate solution pump and agitator, and signal mechanical alarm system; refer to Section 23 09 00.
- K. Install 3/4 inch water coupon rack around circulating pumps with space for 4 test specimens.

3.06 DEMONSTRATION

- A. Furnish eight hour training course for operating personnel, instruction to include installation, care, maintenance, testing, and operation of water treatment systems. Arrange course at startup of systems.

3.07 INSTALLATION

- A. Sand Filtration System
 - 1. Place vessels as shown in installation drawing and level. Use manifold as guide for spacing.
 - 2. Install upper and lower manifolds as per manufacturer's instructions.
 - 3. Install piping between manifold and pumps. Connect control tubing to valves and manifold according to manufacturer's instructions.
 - 4. Connect electrical power to control panel and control to pumps according to local electrical codes and wiring diagram supplied by manufacturer.
 - 5. Install media according to manufacturer's instructions.

3.08 STARTUP AND TESTING

- A. Sand Filtration System
 - 1. Startup by factory authorized agent shall be provided.
 - 2. Submit cooling water particle analysis reports showing frequency and volume of particles within the following micron size ranges: 0.5 to 1, 1 to 5, 5 to 10, 10 to 15, 15 to 20, and 20 and larger at time of startup.
 - 3. Submit cooling water particle analysis reports showing frequency and volume of particles within the following micron size ranges: 0.5 to 1, 1 to 5, 5 to 10, 10 to 15, 15 to 20, and 20 and larger 30 days after startup.

4. Submit report analyzing results from both particle analyses confirming that system meets performance specifications called out above.

SECTION 15410

PLUMBING FIXTURES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for plumbing fixtures and related components.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01732 - Cutting and Patching.
 - 3. Section 01810 – Commissioning.
 - 4. Section 07920 – Joint Sealants.
 - 5. Section 15050 – Basic Mechanical Materials and Methods.
 - 6. Section 15110 – Valves.
 - 7. Section 15995 - Commissioning of Mechanical Systems.

1.02 REFERENCES

- A. Definitions:
 - 1. Accessible Fixture: A plumbing fixture that can be approached, entered, and used by people with disabilities.
 - 2. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 3. Fitting: A device that controls the flow of water into or out of a plumbing fixture.
 - a. Fittings specified in this Section include supplies and stops, faucets and spouts, shower heads and tub spouts, drains and tailpieces, and traps and waste pipes.
 - b. Piping and general-duty valves are included where indicated in this Section.
 - 4. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.

- B. Reference Standards:

1. The International Association of Plumbing and Mechanical Officials (IAPMO)/American National Standards Institute (ANSI):
 - a. IAPMO/ANSI Z124.5 - Plastic Toilet (Water Closets) Seats.
2. American Society of Mechanical Engineers (ASME):
 - a. ASME A112.6.1M – Floor Affixed Supports for Off-the-Floor Plumbing Fixtures for Public Use.
 - b. ASME A112.6.3 – Floor and Trench Drains.
 - c. ASME A112.18.1/CSA B125.1 – Plumbing Supply Fittings.
 - d. ASME A112.18.3 - Performance Requirements for Backflow Protection Devices and Systems in Plumbing Fixture Fittings.
 - e. ASME A112.19.1/CSA B45.2 - Enamelled Cast Iron and Enamelled Steel Plumbing Fixtures.
 - f. ASME A112.19.2/CSA B45.1 - Ceramic Plumbing Fixtures.
 - g. ASME A112.19.3 - Stainless Steel Plumbing Fixtures (Designed for Residential Use).
 - h. ASME A112.19.4M –Porcelain Enameled Formed Steel Plumbing Fixtures.
 - i. ASME A112.19.5 - Trim for Water-Closet Bowls, Tanks, and Urinals.
 - j. ASME B1.20.1 - Pipe Threads, General Purpose, Inch.
 - k. ASME B1.20.7 - Hose Coupling Screw Threads, Inch.
3. American Society of Sanitary Engineers (ASSE):
 - a. ANSI/ASSE 1001 - Performance Requirements for Atmospheric Type Vacuum Breakers.
 - b. ANSI/ASSE 1011 - Hose Connection Vacuum Breakers.
 - c. ANSI/ASSE 1014 - Performance Requirements for Backflow Prevention Devices for Hand-Held Showers.
 - d. ANSI/ASSE 1015 - Performance Requirements for Double Check Backflow Prevention Assemblies and Double Check Fire Protection Backflow Prevention Assemblies.
 - e. ANSI/ASSE 1016 - Performance Requirements for Automatic Compensating Valves for Individual Showers and Tub/Shower Combinations.
 - f. ASSE 1025 Performance Requirements for Diverters for Plumbing Faucets with Hose Spray, Anti-Siphon Type, Residential Applications [*withdrawn 2006*].
 - g. ASSE 1037 Performance Requirements for Pressurized Flushing Devices (Flushometers) for Plumbing Fixtures.
4. ASTM International (ASTM):
 - a. ASTM D 3901 - Standard Specification for Garden Hose [*withdrawn 1997*].

- b. ASTM F 409 - Standard Specification for Thermoplastic Accessible and Replaceable Plastic Tube and Tubular Fittings.
 - c. ASTM F 444 Standard Consumer Safety Specification for Scald-Preventing Devices and Systems in Bathing Areas.
 - d. ASTM F 445. Standard Consumer safety Specification for Thermal-Shock-Preventing Devices and Systems in Showering Areas.
- 5. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 6. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
 - b. ICC/A117.1 - Accessible and Usable Buildings and Facilities.
- 7. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
- 8. NSF International (NSF):
 - a. NSF/ANSI 2 - Food Equipment.
 - b. NSF/ANSI 61 - Drinking Water System Components - Health Effects.
- 9. Underwriters Laboratories, Inc. (UL):
 - a. UL 486A-486B - Wire Connectors.
 - b. UL 1951 - Standard for Safety Electric Plumbing Accessories.
- 10. United States Government:
 - a. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1910 Occupational Health and Safety Standards.
 - b. United States Code (U.S.C.):
 - 1) 42 U.S.C. Section 4151 et seq.
 - a) Architectural Barriers Act, Public Law 90-480.
 - 2) 42 U.S.C. Section 12101 et seq.
 - a) Americans with Disabilities Act (ADA), Public Law 101-336.
 - 3) 42 U.S.C. Section 13201 et seq.
 - a) Energy Policy Act, Public Law 102-486.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

- 1. Coordinate the roughing-in and final plumbing fixture locations, and verify that the fixtures can be installed in accordance with the original design and referenced standards.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal

Procedures:

- a. Product Data:
 - 1) Lavatory faucets.
 - 2) Toilet seats.
 - 3) Fixture supports.
 - 4) Water closets.
 - 5) Urinals.
 - 6) Lavatories.
 - 7) Sinks.
 - 8) Thermostatic Control Valves (at Lavatories)
- b. Shop Drawings:
 - 1) Power wiring.
 - 2) Signal wiring.
 - 3) Control wiring.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal

Procedures:

- a. Manufacturer's Instructions:
 - 1) Plumbing fixture manufacturers' written installation instructions.

1.05 QUALITY ASSURANCE

A. Certifications:

1. Electrical Listing and Labeling:
 - a. Provide electrical components, devices, and accessories that are listed and labeled for the location the product is installed in, and the application intended, by a Nationally Recognized Testing Laboratory (NRTL), as defined in Article 100 of NFPA 70, acceptable to the Authorities Having Jurisdiction (AHJ), unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.

- b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Deliver all materials in the manufacturer's original packaging.
 - 2. Thoroughly inspect the materials upon receipt, and report damaged material to the delivering carrier.
- B. Storage and Handling Requirements:
 - 1. Store materials in dry, protected, well-vented area.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 PLUMBING FIXTURES

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain plumbing fixtures, faucets, and other components in each category from a single manufacturer and through one source.
 - a) If fixtures, faucets, or other components are not available from a single manufacturer, obtain similar products from other manufacturers specified for that category.
- B. Description:
 - 1. Regulatory Requirements:

- a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. NSF International (NSF) Compliance:
 - 1) For plumbing fixture materials that will be in contact with potable water, comply with the requirements specified in NSF/ANSI 61.
 - c. Accessibility Laws and Regulations:
 - 1) Comply with the applicable accessibility laws and regulations for plumbing fixtures for people with disabilities, including, but not limited to, the following:
 - a) ICC/A117.1.
 - b) Architectural Barriers Act, Public Law 90-480.
 - c) Americans with Disabilities Act (ADA), Public Law 101-336.
 - d. Conservation Regulations:
 - 1) Comply with the applicable conservation laws and regulations for water flow and consumption rates for plumbing fixtures, including, but not limited to, the following:
 - a) Energy Policy Act, Public Law 102-486.
- C. Design Criteria:
- 1. The Contract Drawings indicate the general arrangement of piping, fittings, and specialties.
 - 2. Select combinations of fixtures and trim, faucets, fittings, and other components that are compatible.
 - 3. Plumbing Fixtures:
 - a. Provide plumbing fixtures complying with the following applicable standards and other requirements specified:
 - 1) Enameled, Cast-Iron Fixtures:
 - a) Provide enameled, cast-iron fixtures complying with the requirements specified in ASME A112.19.2/CSA B45.1.
 - 2) Hand Sinks:
 - a) Provide hand sinks complying with the construction requirements specified in NSF/ANSI 2.
 - 3) Porcelain-Enameled, Formed-Steel Fixtures:
 - a) Provide porcelain-enameled, formed-steel fixtures complying with the requirements specified in ASME A112.19.4M.
 - 4) Stainless-Steel Fixtures Other Than Service Sinks:
 - a) Provide stainless-steel fixtures other than service sinks complying with the requirements specified in ASME A112.19.3.

- 5) Vitreous-China Fixtures:
 - a) Provide vitreous-china fixtures complying with the requirements specified in ASME A112.19.2/CSA B45.1.
- 6) Water-Closet, Flush Valve, Tank Trim:
 - a) Provide water-closet, flush valve, tank trim complying with the requirements specified in ASME A112.19.5.
- 7) Water-Closet, Flushometer Tank Trim:
 - a) Provide water-closet, flushometer tank trim complying with the requirements specified in ASSE 1037.
4. Lavatory and Sink Faucets:
 - a. For lavatory and sink faucets, comply with the requirements specified in the following standards as applicable to the item and other requirements specified:
 - 1) Backflow Protection Devices:
 - a) For faucets having side spray and for faucets having hose-thread outlets, provide backflow protection devices complying with the requirements specified in ASME A112.18.3.
 - 2) Diverter Valves:
 - a) For faucets having hose spray, provide diverter valves complying with the requirements specified in ASSE 1025.
 - 3) Faucet Hoses:
 - a) Provide faucet hoses complying with the requirements specified in ASTM D 3901.
 - 4) Faucets:
 - a) Provide faucets complying with the requirements specified in ASME A112.18.1/CSA B125.1.
 - 5) Hose-Connection Vacuum Breakers:
 - a) Provide hose-connection vacuum breakers complying with the requirements specified in ANSI/ASSE 1011.
 - 6) Hose-Coupling Threads:
 - a) Provide hose-coupling having threads complying with the requirements specified in ASME B1.20.7
 - 7) Vacuum Breakers:
 - a) Provide integral, atmospheric vacuum breakers complying with the requirements specified in ANSI/ASSE 1001.
 - 8) NSF International Materials (previously the National Sanitation Foundation):
 - a) Provide materials that will come into contact potable water complying with the requirements specified in NSF/ANSI 61.
 - 9) Pipe Threads:

- a) Provide pipe threads complying with the requirements specified in ASME B1.20.1.
- 10) Sensor-Actuated Faucets and Electrical Devices:
 - a) Provide sensor-actuated faucets and electrical devices complying with the requirements specified in UL 1951.
- 11) Supply and Drain Fittings:
 - a) Provide supply and drain fittings complying with the requirements specified in ASME A112.18.1/CSA B125.1.
- 5. Shower Faucets:
 - a. For shower faucets, comply with the requirements specified in the following standards as applicable to the item and other requirements specified:
 - 1) Backflow Protection Devices for Hand-Held Showers:
 - a) Provide backflow protection devices for hand-held showers complying with the requirements specified in ASME A112.18.3.
 - 2) Combination, Pressure-Equalizing and Thermostatic-Control Antiscald Faucets:
 - a) Provide combination, pressure-equalizing and thermostatic-control antiscald faucets complying with the requirements specified in ANSI/ASSE 1016.
 - 3) Faucets:
 - a) Provide faucets complying with the requirements specified in ASME A112.18.1/CSA B125.1.
 - 4) Hand-Held Showers:
 - a) Provide hand-held showers complying with the requirements specified in ANSI/ASSE 1014.
 - 5) High-Temperature-Limit Controls for Thermal-Shock-Preventing Devices:
 - a) For thermal-shock-preventing devices, provide high-temperature-limit controls complying with the requirements specified in ASTM F 445.
 - 6) Hose-Coupling Threads:
 - a) Provide hose-couplings having threads complying with the requirements specified in ASME B1.20.7.
 - 7) Manual-Control Antiscald Faucets:
 - a) Provide manual-control antiscald faucets complying with the requirements specified in ASTM F 444.
 - 8) Pipe Threads:
 - a) Provide pipes threads complying with the requirements specified in ASME B1.20.1.

- 9) Pressure-Equalizing-Control Antiscald Faucets:
 - a) Provide pressure-equalizing-control antiscald faucets complying with the requirements specified in ASTM F 444 and ANSI/ASSE 1016.
- 10) Thermostatic-Control Antiscald Faucets:
 - a) Provide thermostatic-control antiscald faucets complying with the requirements specified in ASTM F 444 and ANSI/ASSE 1016.
6. Miscellaneous Fittings:
 - a. For miscellaneous fittings, comply with the requirements specified in the following standards as applicable to the item and other requirements specified:
 - 1) Atmospheric Vacuum Breakers:
 - a) Provide atmospheric vacuum breakers complying with the requirements specified in ANSI/ASSE 1001.
 - 2) Brass and Copper Supplies:
 - a) Provide Brass and Copper Supplies complying with the requirements specified in ASME A112.18.1/CSA B125.1.
 - 3) Manual-Operation Flushometers:
 - a) Provide manual-operation flushometers complying with the requirements specified in ASSE 1037.
 - 4) Plastic Tubular Fittings and Piping:
 - a) Provide plastic tubular fittings and piping complying with the requirements specified in ASTM F 409.
 - 5) Sensor-Operation Flushometers:
 - a) Provide sensor-operated flushometers complying with the requirements specified in ASSE 1037 and UL 1951.
 - 6) Tubular Brass Drainage Fittings and Piping:
 - a) Provide tubular brass drainage fittings and piping complying with the requirements specified in ASME A112.18.1/CSA B125.1.
7. Miscellaneous Components:
 - a. For miscellaneous components, comply with the requirements specified in the following standards as applicable to the item and other requirements specified:
 - 1) Floor Drains:
 - a) Provide floor drains complying with the requirements specified in ASME A112.6.3.
 - 2) Hose-Coupling Threads:
 - a) Provide hose-coupling threads complying with the requirements specified in ASME B1.20.7.

- 3) Off-Floor Fixture Supports:
 - a) Provide off-floor fixture supports complying with the requirements specified in ASME A112.6.1M.
- 4) Pipe Threads:
 - a) Provide pipe threads complying with the requirements specified in ASME B1.20.1.
- 5) Plastic Toilet Seats:
 - a) Provide plastic toilet seats complying with the requirements specified in IAPMO/ANSI Z124.5.
- 6) Supply and Drain Protective Shielding Guards:
 - a) Provide supply and drain protective shielding guards complying with the requirements specified in ICC A117.1.
8. Product Data:
 - a. Obtain the manufacturer's Product Data for the following products proposed for the Work of this Section:
 - 1) Lavatory faucets.
 - 2) Toilet Seats.
 - 3) Fixture Supports.
 - 4) Water Closets.
 - 5) Urinals.
 - 6) Lavatories.
 - 7) Sinks.
 - b. Submit the Product Data to the Program/Project Manager for approval.
9. Shop Drawings:
 - a. Prepare wiring diagrams for the following wiring, differentiating between manufacturer-installed and field-installed wiring:
 - 1) Power wiring.
 - 2) Signal wiring.
 - 3) Control wiring.
 - b. Submit the Shop Drawings to the Program/Project Manager for approval.

D. Materials:

1. Lavatory Faucets:
 - a. Provide lavatory faucets that include hot-water and cold-water indicators.
 - b. Coordinate the faucet inlets with the supplies and fixture holes and the faucet outlet with the spout and fixture receptor.
 - c. Provide the models, capacities, and other characteristics as indicated in the Plumbing Fixture Schedule on the Contract Drawings.
 - d. Manufacturers:

- 1) American Standard, www.americanstandard-us.com.
 - 2) Grohe America, <https://www.faucetdirect.com/grohe>.
 - 3) Sloan, www.sloanvalve.com.
 - 4) Symmons, www.symmons.com.
 - 5) Approved equal.
2. Sink Faucet:
 - a. Provide sink faucets that include hot- and cold-water indicators.
 - b. Coordinate the faucet inlets with the supplies and fixture holes and the faucet outlet with the spout and fixture receptor.
 - c. Provide the models, capacities, and other characteristics as indicated in the Plumbing Fixture Schedule on the Contract Drawings.
 - d. Manufacturers:
 - 1) Chicago Faucet Co., www.chicagofaucets.com
 - 2) Elkay Manufacturing Co., www.elkay.com
 - 3) Geberit Manufacturing Inc., www.us.geberit.com
 - 4) Sloan, www.sloanvalve.com
 - 5) Approved equal.
3. Flushometers:
 - a. Provide flushometers having a cast-brass body with corrosion-resistant internal components, a control stop with a check valve, a vacuum breaker, and copper or brass tubing.
 - b. On exposed parts, provide a polished chrome-plated finish.
 - c. Provide the models, capacities, and other characteristics as indicated in the Plumbing Fixture Schedule on the Contract Drawings.
 - d. Manufacturers:
 - 1) Sloan, www.sloanvalve.com
 - 2) Zurn, www.zurn.com.
 - 3) Approved equal.
4. Toilet Seats:
 - a. Provide solid plastic toilet seats.
 - b. Provide the models, capacities, and other characteristics as indicated in the Plumbing Fixture Schedule on the Contract Drawings.
 - c. Manufacturers:
 - 1) Bemis, www.bemisseats.com.
 - 2) Centoco, www.centoco.com.
 - 3) Church, www.churchseats.com.
 - 4) Approved equal.
5. Protective Shielding Guards:
 - a. Provide manufactured, plastic coverings for hot-water supply, and trap and drain, piping complying with requirements specified in the Americans with Disabilities Act (ADA).

- b. Manufacturers:
 - 1) Delta Faucet Company, Scald-Gard, <http://www.deltafaucet.com>.
 - 2) Truebro, www.trubro.com.
 - 3) Approved equal.
- 6. Fixture Supports:
 - a. Urinal Supports:
 - 1) Provide Type I urinal carriers having fixture support plates and a coupling with seal and fixture bolts and hardware matching the fixture.
 - a) Include steel uprights with feet.
 - b. Lavatory Supports:
 - 1) Provide Type II, lavatory carriers having concealed arms and tie rods.
 - a) Include steel uprights with feet.
 - 2) Manufacturers:
 - a) Jay R. Smith, Mfg. Co., www.jrsmith.com.
 - b) Approved equal.
 - c. Accessible Fixture Supports:
 - 1) Provide accessible fixture supports that include rectangular steel uprights
- 7. Water Closets:
 - a. Provide accessible floor-mounting and standard height floor-mounting, floor-outlet, vitreous-china water closet fixtures designed for gravity-type tank operation.
 - b. Provide the models, capacities, and other characteristics as indicated in the Plumbing Fixture Schedule on the Contract Drawings.
 - c. Manufacturers:
 - 1) American Standard. www.americanstandard-us.com.
 - 2) Eljer, www.eljer.com.
 - 3) Approved equal.
- 8. Urinals:
 - a. Provide accessible wall-hanging, back-outlet, vitreous-china urinal fixtures designed for flushometer valve operation.
 - b. Provide the models, capacities, and other characteristics as indicated in the Plumbing Fixture Schedule on the Contract Drawings.
 - c. Manufacturers:
 - 1) American Standard. www.americanstandard-us.com.
 - 2) Eljer, www.eljer.com.
 - 3) Approved equal.
- 9. Lavatories:

- a. Provide accessible, self-rimming, counter-mounting vitreous-china lavatory fixtures
 - b. Provide the models, capacities, and other characteristics as indicated in the Plumbing Fixture Schedule on the Contract Drawings.
 - c. Manufacturers:
 - 1) American Standard. www.americanstandard-us.com.
 - 2) Eljer, www.eljer.com.
 - 3) Approved equal.
10. Sinks:
- a. Where "S-1" is indicated on the Contract Drawings, provide self-rimming, vitreous china hand wash sinks.
 - b. Provide the models, capacities, and other characteristics as indicated in the Plumbing Fixture Schedule on the Contract Drawings.
 - c. Manufacturers:
 - 1) American Standard. www.americanstandard-us.com.
 - 2) Elkay Manufacturing Co., www.elkay.com.
 - 3) Eljer, www.eljer.com.
 - 4) Approved equal.

2.02 ACCESSORIES

- A. Valves:
 - 1. For general-duty valves, provide valves complying with the requirements specified in Section 15110, Valves.
- B. Escutcheons:
 - 1. Provide escutcheons complying with the requirements for escutcheons specified in Section 15050, Basic Mechanical Materials and Methods.
- C. Grouts:
 - 1. Provide grout complying with the requirements specified in Section 15050, Basic Mechanical Materials and Methods.
- D. Sealants:
 - 1. Provide sealant and sealant installation complying with the requirements specified in Section 07920, Joint Sealants.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:

1. Before installing plumbing fixtures, examine the roughing-in Work for water and for waste piping systems and supports to verify the actual locations and sizes of the piping connections, and to verify that the locations and types of supports match those indicated on the Contract Drawings.
 - a. If roughing-in data are not indicated on the Contract Drawings, use the manufacturer's roughing-in data.
 2. Examine walls, floors, and cabinets where fixtures are to be installed for suitable conditions.
- B. Evaluation and Assessment:
1. Proceed to install the plumbing fixtures only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
1. Protect adjacent areas from damage resulting from installation of the plumbing fixtures.
- B. Demolition/Removal:
1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Assemble the plumbing fixtures, trim, fittings, and other components in accordance with the requirements specified in the plumbing fixture manufacturers' installation instructions.
1. Install fixtures level and plumb in accordance with the manufacturers' instructions and roughing-in drawings.
 2. Submit the plumbing fixture manufacturers' written installation instructions to the Program/Project Manager for information.
- B. Wall-Hanging Fixtures:
1. For wall-hanging fixtures, install off-floor supports affixed to the building substrate
 - a. For back-outlet fixtures, provide carrier supports having a waste fitting and seal.
 - b. For fixtures with tubular waste piping, provide carrier supports without waste fittings.
 - c. For accessible fixtures, provide chair-type carrier supports having rectangular steel uprights.

2. Install back-outlet, wall-hanging fixtures onto waste fitting seals, and attach them to the supports.
 3. Install wall-hanging fixtures having tubular waste piping attached to the supports.
- C. Floor-Mounted Fixtures:
1. Install floor-mounting fixtures on closet flanges or other attachments to the piping or building substrate.
- D. Counter-Mounted Fixtures:
1. Install counter-mounting fixtures in and attached to the casework.
- E. Piping:
1. Piping installation requirements are specified in other Sections.
 2. Supply and Waste Connections to Plumbing Fixtures
 - a. To connect fixtures, provide water supplies, stops, risers, traps, and waste piping.
 - b. Provide the size of fittings required to match the fixtures.
 - c. Connect fixtures to the plumbing piping..
 3. Water-Supply Piping:
 - a. Install water-supply piping with a stop on each supply to each fixture to be connected to water distribution piping.
 - b. Attach the supplies to supports or the substrate within pipe spaces behind the fixtures.
 - c. Install stops in locations where they can be easily reached for operation.
 - 1) If stops are not specified with the fixture, provide a ball, gate, or globe valve in lieu of the stops.
 4. Waste Piping:
 - a. Install trap and tubular waste piping on the drain outlet of each fixture to be directly connected to sanitary drainage system.
 - b. Install tubular waste piping on the drain outlet of each fixture to be indirectly connected to the drainage system.
- F. Valves and Fittings:
1. For accessible water closets and urinals, install flushometer valves with the handle mounted on the wide side of the compartment.
 - a. Install other actuators in locations that are easy for people with disabilities to reach.
 2. If faucets are not available with the required rates and patterns, install faucet-spout fittings having the specified flow rates and patterns in the faucet spouts, and include adapters if required.

3. Install water-supply, flow-control fittings with specified flow rates in the fixture supplies at the stop valves.
4. If faucets are not available with the required rates and patterns, install faucet, flow-control fittings having the specified flow rates and patterns in the faucet spouts, and include adapters if required.
5. Install shower, flow-control fittings having the specified maximum flow rates in shower arms.
6. Except for fixtures with integral traps and on indirect wastes, install traps on the fixture outlets, unless otherwise indicated in the Contract Documents.

G. Disposers:

1. Provide a disposer in the outlet of sinks indicated to have a disposer
2. Install the switch for the disposer where indicated in the Contract Documents, or if a location is not indicated in the Contract Documents install the switch for the disposer in the wall adjacent to the sink.

H. Escutcheons:

1. At piping wall and ceiling penetrations in exposed, finished locations and within cabinets and millwork, install escutcheons.
2. If required to conceal protruding fittings, provide deep-pattern escutcheons.

I. Basins:

1. Set basins in a leveling bed of cement grout.

J. Joints between Fixtures and Walls, Floors, and Counters:

1. Seal the joints between fixtures and walls, floors, and counters using a sanitary-type, one-part, mildew-resistant, silicone sealant.
2. Match the sealant color to the fixture color.

K. Toilet Seats:

1. Install toilet seats on water closets

L. Special Techniques:

1. Grounding Equipment:
 - a. Ground equipment.
 - b. Tighten electrical connectors and terminals according to the manufacturer's published torque-tightening values.
 - 1) If the manufacturer's torque values are not indicated in the manufacturer's published material, use the torque values specified in UL 486A-UL 486B.

M. Systems Integration:

1. Connect water supplies from the water distribution piping to the fixtures.
2. Connect drain piping from the fixtures to the drainage piping.
3. Supply and Waste Connections to Fixtures and Equipment Specified in Other Sections:
 - a. To connect fixtures and equipment, provide the water supplies, stops, risers, traps, and waste piping specified.
 - b. Provide the size of fittings required to match the fixtures and equipment.
 - c. Connect fixtures and equipment to the plumbing piping.

3.04 REPAIR/RESTORATION

- A. Replace the washers and seals of leaking and dripping faucets and stops.

3.05 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. Operational Test:
 - a. Test Procedure:
 - 1) After the water systems are pressurized, test the installed fixtures for proper operation.
 - 2) Replace malfunctioning fixtures and components, then retest the replacements.
 - b. Acceptance Criteria:
 - 1) Repeat procedure until units operate properly.
2. Inspections:
 - a. Inspect installed fixtures for damage.
 - b. Verify that the fixtures installed are of the categories and types specified for the locations where they are installed.
 - c. Check that the fixtures are complete with trim, faucets, fittings, and other specified components.

B. Non-Conforming Work

1. Replace damaged fixtures and components with undamaged fixtures and components at no increase in the Contract Price.

3.06 SYSTEM STARTUP

A. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping systems, ductwork,

air handlers, air conditioning (AC) and heat pump (HP) packaged units, air terminal units, heat exchangers, the building automation system, fire and smoke dampers, indoor air quality, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

- A. Install fresh batteries in sensor-operated mechanisms that require batteries.

3.07 ADJUSTING

- A. Operate and adjust the faucets and controls.
 - 1. Replace damaged and malfunctioning fixtures, fittings, and controls.
- B. Operate and adjust disposers and controls.
 - 1. Replace damaged and malfunctioning units and controls.
- C. Adjust the water pressure at faucets, shower valves, and flushometer valves to produce the proper flow and stream.

3.08 CLEANING

- A. Clean fixtures, faucets, and other fittings using the manufacturers' recommended cleaning methods and materials.
 - 1. Remove faucet spouts and strainers, remove sediment and debris, and then reinstall strainers and spouts.
 - 2. Remove sediment and debris from drains.
- B. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.09 PROTECTION

- A. Provide protective coverings for installed fixtures and fittings.
- B. Do not allow the fixtures to be used as temporary facilities unless prior approval in writing is obtained from the Program/Project Manager.

3.10 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Furnish operation and maintenance data for the plumbing fixtures for inclusion in Operation and Maintenance manuals as specified in Section 01780, Closeout Submittals.

2. Submit the operation and maintenance data for the plumbing fixtures to the Program/Project Manager for information.

SECTION 15425

DRINKING FOUNTAINS AND WATER COOLERS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for water coolers and related components, including the following:
 - a. Pressure water coolers.
 - b. Fixture supports.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01732 - Cutting and Patching.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 07920 – Joint Sealants.
 - 6. Section 15050 – Basic Mechanical Materials and Methods.
 - 7. Section 15060 – Hangers and Supports.
 - 8. Section 15110 – Valves.
 - 9. Section 15140 – Domestic Water Piping.
 - 10. Section 15150 – Sanitary Waste and Vent Piping.
 - 11. Section 16061 – Electrical Grounding and Bonding.
 - 12. Section 16120 – Conductors and Cables.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AC: Alternating electric current.
 - 2. EPA: United States Environmental Protection Agency (EPA).
 - 3. NPS: Nominal Pipe Size.
 - a. DN: Diamètre nominal (European Equivalent).
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Accessible Water Cooler: A fixture that can be approached and used by people with disabilities.
 - 3. Drinking Fountain: A fixture having a nozzle for delivering a stream of water for drinking.
 - 4. Fitting: A device that controls the flow of water into or out of a plumbing fixture.

5. Fixture: A drinking fountain or water cooler, unless another one is specifically indicated.
6. Remote Water Cooler: Electrically powered equipment for generating cooled drinking water.
7. Water Cooler: Electrically powered fixture for generating and delivering cooled drinking water.

C. Reference Standards:

1. American Society of Mechanical Engineers (ASME):
 - a. ANSI/ASME A112.6.1M – Floor Affixed Supports for Off-the-Floor Plumbing Fixtures for Public Use.
 - b. ANSI/ASME A112.18.2/CSA B125.2 – Plumbing Waste Fittings.
 - c. ANSI/ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.
 - d. ASME B16.24 - Cast Copper Alloy Pipe Flanges and Flanged Fittings: Classes 150, 300, 600, 900, 1500, and 2500.
2. American Society of Heating, Refrigerating and Air- Conditioning Engineers, Inc. (ASHRAE):
 - a. ANSI/ASHRAE Standard 18 – Methods of Testing for Rating Drinking-Water Coolers with Self-Contained Mechanical Refrigeration.
 - b. ASHRAE Standard 34 – Designation and Safety Classification of Refrigerants.
3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
 - b. ICC/A117.1 - Accessible and Usable Buildings and Facilities.
5. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
6. NSF International (NSF):
 - a. NSF/ANSI 42 - Drinking Water Treatment Units - Aesthetic Effects.
 - b. NSF/ANSI 53 - Drinking Water Treatment Units - Health Effects.
 - c. NSF/ANSI 61 - Drinking Water System Components - Health Effects.
7. United States Government:
 - a. Environmental Protection Agency (EPA):
 - 1) 40 CFR 141 National Primary Drinking Water Regulations.
 - b. United States Code (U.S.C.):
 - 1) 42 U.S.C. Section 300f et seq.
 - a) Safe Drinking Water Act, Public Law 104-182.
 - 2) 42 U.S.C. Section 4151 et seq.
 - a) Architectural Barriers Act, Public Law 90-480.
 - 3) 42 U.S.C. Section 12101 et seq.
 - a) Americans with Disabilities Act (ADA), Public Law 101-336.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordination Drawings:
 - a. Prepare and submit Coordination Drawings to the Program/Project Manager for approval.
 - 1) Show the following items for this Contract drawn to scale, and coordinate them with each other:
 - a) HVAC, plumbing, and fire suppression items.
 - b) Conduit routing plans.
 - c) Structural members.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Pressure water coolers.
 - 2) Fixture supports.
 - b. Shop Drawings:
 - 1) Coordination Drawings.
 - 2) Power, signal, and control wiring diagrams.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Drinking fountain and water cooler manufacturer's written handling instructions.
 - 2) Drinking fountain and water cooler manufacturer's written cleaning instructions.
 - b. Site Quality Control Submittals:
 - 1) Water Cooler Test results.
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the drinking fountains and water coolers.
- D. Maintenance Material Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Extra Stock Materials:
 - 1) Furnish extra stock materials that match the products installed in the following quantities, and package the extra stock materials with a protective covering for storage identified with labels describing the contents of the packages:
 - a) Filter Cartridges:
 - (1) For each type and size of filter cartridge installed, furnish spare filter cartridges equal to 10 percent of the filter cartridge installed, but not less than one of each type and size.

1.05 QUALITY ASSURANCE

A. Certifications:

1. Electrical Listing and Labeling:
 - a. Provide electrical components, devices, and accessories that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver all materials in the manufacturer's original packaging.
 - a. Clean flanges and exposed machined metal surfaces, and treat them with an anticorrosion compound after assembly and testing.
 - b. Protect flanges and pipe openings with wooden flange covers or with screwed-in plugs.

2. Thoroughly inspect the materials upon receipt, and report damaged material to the delivering carrier.
- B. Storage and Handling Requirements:
 1. During storage, retain protective covers on flanges and protective coatings.
 2. Protect bearings and couplings against damage from sand, grit, and other foreign matter.
 3. Comply with the drinking fountain and water cooler manufacturer's handling instructions.
 - a. Submit the drinking fountain and water cooler manufacturer's written handling instructions to the Program/Project Manager for information.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 DRINKING FOUNTAIN AND WATER COOLER EQUIPMENT

- A. Manufacturers:
 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. Accessibility Regulations:
 - 1) For drinking fountain and water cooler fixtures for people with disabilities, provide accessible water coolers complying with the regulations and requirements specified in ICC/A117.1, Public Law 90-480, and Public Law 101-336.
 - 2) For drinking fountain and water cooler fixtures intended for children, install the fixtures at the height required by the Authorities Having Jurisdiction.

- c. Health and Sanitary Regulations:
 - 1) For the drinking fountain and water cooler fixture materials that will be in contact with potable water, comply with the requirements specified in NSF/ANSI 61.
 - 2) Refrigerants:
 - a) Provide refrigerants complying with the requirements for water cooler refrigerants specified in ASHRAE 34.
 - (1) Unless otherwise indicated in the Contract Documents, provide HFC 134a (tetrafluoromethane) refrigerant.
 - 3) Cyst and Lead Filtration:
 - a) Comply with the requirements specified in NSF 42 and NSF 53 for cyst and lead reduction to below United States Environmental Protection Agency (EPA) standards codified in the Safe Drinking Water Act and 40 CFR 141.
- C. Performance:
 - 1. Capacity:
 - a. Provide a cooling system capable of supplying 8 gallons per hour (0.0084L/s) of cooled water at 50 degrees Fahrenheit (10 degrees Celsius) when supplied with 80 degrees Fahrenheit (27 degrees Celsius) inlet water in an ambient air temperature of 110 degrees Fahrenheit (32 degrees Celsius).
- D. Design Criteria:
 - 1. Provide drinking fountains and water coolers complying with the requirements for the type and style classifications provided as specified in ANSI/ASHRAE Standard 18.
 - 2. The Contract Drawings indicate the general arrangement of the drinking fountain and water cooler piping, fittings, and specialties.
 - 3. Supports:
 - a. For wall-mounting drinking fountain and water cooler fixtures, provide carrier off-floor supports unless otherwise indicated in the Contract Documents.
 - b. For recessed water coolers, provide mounting frames unless otherwise indicated in the Contract Documents.
 - c. For freestanding and pedestal drinking fountains, set the drinking fountains on the floor.
 - d. For remote water coolers, set the water coolers on floor unless otherwise indicated in the Contract Documents.
 - 4. Product Data:
 - a. Obtain the manufacturer's Product Data for each drinking fountain and water cooler fixture indicated to be provided in the Contract Documents.
 - 1) Ensure that the specific fixtures and their rated capacities, furnished specialties, and accessories are clearly indicated in the Product Data.

- 2) Indicate the type of refrigerant being provided.
 - b. Submit the Product Data for each drinking fountain and water cooler fixture to the Program/Project Manager for approval.
5. Shop Drawings:
 - 1) Prepare Shop Drawings that diagram the power, signal, and control wiring for drinking fountains and water coolers.
 - 2) Submit the Shop Drawings for the drinking fountains and water coolers to the Program/Project Manager for approval.

E. Materials:

1. Pressure Water Coolers:
 - a. Provide accessible water coolers complying with the requirements for Type PB, pressure with bubbler, and Style RE, recessed water cooler, water coolers specified in ARI 1010, and having a bi-level for adult and child-mounting heights.
 - 1) Cabinet:
 - a) Provide all stainless steel water cooler cabinets.
 - 2) Bubbler:
 - a) Provide 1 bubbler located on the deck of each water cooler unit.
 - b) Provide bubblers having an adjustable stream regulator.
 - 3) Control:
 - a) Provide a push bar control for operating the water cooler.
 - 4) Supply:
 - a) Provide 3/8-inch nominal pipe size [NPS 3/8 (DN 10)] supply connections having a ball, gate, or globe valve.
 - b) For locations exposed to view, provide chrome-plated brass or copper tubes, fittings, and valves.
 - c) For concealed locations, provide plain copper tubes, fittings, and valves.
 - 5) Filter:
 - a) Provide 1 or more water filters complying with the requirements specified in NSF 42 and NSF 53 for cyst and lead reduction to below United States Environmental Protection Agency (EPA) standards, and having a capacity sized for the unit peak flow rate.
 - 6) Drain:
 - a) For each water cooler unit, provide 1 grid drain having at least a 1-1/4-inch nominal pipe size [NPS 1-1/4 (DN 32)] horizontal waste line, and a trap complying with the requirements specified in ANSI/ASME A112.18.2/CSA B125.2.
 - 7) Cooling System:
 - a) Provide an electric cooling system consisting of a hermetically sealed compressor, cooling coil, air-cooled condensing unit, corrosion-resistant tubing, refrigerant, corrosion-resistant-metal storage tank, and an adjustable thermostat.

- b) Power Supply:
 - (1) Provide a 120-Volts AC, single phase, 60 Hertz cooling system power supply designed to deliver 1/5 horsepower.
 - 8) Ventilation Grilles:
 - a) Provide a stainless steel ventilation grille located below the fountain on each water cooler.
 - 9) Supports:
 - a) Provide a mounting frame for attaching the water cooler to the substrate.
 - b. Manufacturers:
 - 1) Elkay Manufacturing Co., <http://www.elkay.com>.
 - 2) Halsey Taylor, <http://www.halseytaylor.com>.
 - 3) Haws Corporation, <http://www.hawesco.com>.
 - 4) Oasis Corporation, a Division of Sunroc Corporation, <http://www.oasiscoolers.com>.
 - 5) Approved equal.
- 2. Fixture Supports:
 - a. Provide water cooler carriers complying with the requirements specified in ANSI/ASME A112.6.1M; and including vertical steel uprights having feet and tie rods, and bearing plates having mounting studs matching the fixture to be supported.
 - b. Type I:
 - 1) Provide hanger-type carriers having 2 vertical uprights.
 - c. Type II:
 - 1) Provide bi-level, hanger-type carriers having 3 vertical uprights.
 - d. Supports for Accessible Fixtures:
 - 1) Provide supports for accessible fixtures that include rectangular, vertical, steel uprights instead of steel pipe uprights.
 - e. Manufacturers:
 - 1) Josam Co., <http://www.josam.com>.
 - 2) MIFAB Manufacturing, Inc., <http://www.mifab.com>.
 - 3) Jay R. Smith Mfg. Co., <http://www.jrsmith.com>.
 - 4) Tyler Pipe, Wade Division, <http://www.wadedrains.com>.
 - 5) Watts Drainage Products Inc.; a div. of Watts Industries, Inc., <http://www.watts.com/pro/products.asp?catId=67>.
 - 6) Zurn Plumbing Products Group; Specification Drainage Operation, <http://www.zurn.com>.
 - 7) Approved equal.

2.02 ACCESSORIES

- A. Hangers and Supports:
 - 1. Provide pipe hangers and supports complying with the requirements specified in Section 15060, Hangers and Supports.
- B. Domestic Water Piping:

1. Provide domestic water piping complying with the requirements specified in Section 15140, Domestic Water Piping.
- C. Sanitary Waste and Vent Piping:
 1. Provide sanitary waste and vent piping complying with the requirements specified in Section 15150, Sanitary Waste and Vent Piping.
- D. Valves:
 1. Provide valves complying with the requirements specified in Section 15110, Valves.
- E. Escutcheons:
 1. Provide escutcheons complying with the requirements specified in Section 15050, Basic Mechanical Materials and Methods.
- F. Sealants:
 1. Provide sealants complying with the requirements specified in Section 07920, Joint Sealants.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Before installing the drinking fountains and water coolers, examine the roughing-in Work for water and for waste piping systems to verify the actual locations and sizes of the piping connections match those indicated on the Contract Drawings.
 - a. If roughing-in data are not indicated on the Contract Drawings, use the manufacturer's roughing-in data.
 2. Examine walls and floors where drinking fountains and water coolers are to be installed for suitable conditions.
- B. Evaluation and Assessment:
 1. Proceed to install the drinking fountains and water coolers only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the drinking fountains and water coolers.
- B. Demolition/Removal:
 1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Fixture Supports:
 - 1. For wall-mounted drinking fountain and water cooler fixtures, affix off-floor supports to the building substrate, and attach the wall-mounted fixtures to the off-floor supports unless otherwise indicated in the Contract Documents.
 - 2. For recessed water coolers, affix mounting frames to the building construction, and attach the recessed water coolers to the mounting frames unless otherwise indicated in the Contract Documents.
 - 3. Install the drinking fountain and water cooler fixtures level and plumb.
- B. Interface with Other Work:
 - 1. Wall Penetrations:
 - a. In exposed, finished locations, provide pipe escutcheons at wall penetrations.
 - 1) Where required to conceal protruding pipe fittings, provide deep-pattern escutcheons.
 - 2. Wall and Floor Interfaces
 - a. Seal the joints between drinking fountain and water cooler fixtures and walls and floors using sanitary-type, one-part, mildew-resistant, silicone sealant.
 - b. Match the sealant color to the fixture color.
- C. Systems Integration:
 - 1. Piping Connections:
 - a. Install piping in accordance with the requirements specified in other Sections where the piping is specified.
 - 1) Provide the size pipe fittings as required to match the drinking fountain and water cooler fixtures.
 - b. Water Supply Piping:
 - 1) Connect the drinking fountain and water cooler fixtures with the water supplies, stops, and risers.
 - 2) Install a shutoff valve on the water-supply piping to each drinking fountain and water cooler fixture to be connected to the water distribution piping.
 - a) Provide ball, gate, or globe valves.
 - b) Install the valves in locations where they can be easily reached for operation.
 - c. Waste Piping:
 - 1) Connect the drinking fountain and water cooler fixtures with the traps, soil, waste, and vent piping.
 - 2) Install the trap and waste piping on the drain outlet of each drinking fountain and water cooler fixture to be connected to sanitary drainage system.
 - 2. Electrical Connections:

- a. Power, Signal, and Control Wiring:
 - 1) Connect the wiring in accordance with the requirements specified in Section 16120, Conductors and Cables.
- b. Electrical Grounding:
 - 1) Ground the drinking fountain and water cooler equipment in accordance with the requirements specified in Section 16061, Electrical Grounding and Bonding.

3.04 REPAIR/RESTORATION

- A. Repair damaged finishes so they match the original finishes.

3.05 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. Water Cooler Test:
 - a. Test Procedure:
 - 1) After the electrical circuitry for the drinking fountain and water cooler equipment has been energized, test the drinking fountain and water cooler equipment for compliance with the requirements specified herein.
 - a) Test and adjust the controls and safeties.
 - 2) Record the test results in writing, and submit these Water Cooler Test results to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Drinking fountain and water cooler equipment complying with the requirements specified herein pass the Water Cooler Test.
 - 2. Inspections:
 - a. After completing installation of each drinking fountain and water cooler fixture, inspect the installed unit.
- B. Non-Conforming Work
 - 1. Remove and replace malfunctioning units, and retest the replacement units as specified herein.

3.06 ADJUSTING

- A. Adjust the fixture flow regulators so the proper flow and stream height are produced.
- B. Adjust the water cooler temperature settings so the proper temperatures are produced.

3.07 CLEANING

- A. Remove paint splatters and other spots, dirt, and debris from the installed drinking fountains and water coolers.

- B. After installing the drinking fountains and water coolers, clean them in accordance with their manufacturer's cleaning instructions.
 - 1. Submit the drinking fountain and water cooler manufacturer's written cleaning instructions to the Program/Project manager for information.
- C. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.08 PROTECTION

- A. Protect installed drinking fountains and water coolers from damage and wear during the remainder of the construction period.

3.09 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Submit operation and maintenance data for the drinking fountains and water coolers to the Program/Project Manager for inclusion in emergency and Operation and Maintenance Manuals as specified in Section 01780, Closeout Submittals.

END OF SECTION

SECTION 15485

ELECTRIC DOMESTIC WATER HEATERS

PART 1 - GENERAL

1.01 SUMMARY

- A. This Section includes the following:
 - 1. Commercial electric booster heaters.

1.02 SUBMITTALS

- A. Product Data: For each type and size of water heater indicated. Include rated capacities, operating characteristics, furnished specialties, and accessories.
- B. Shop Drawings: Diagram power, signal, and control wiring.
- C. Operation and maintenance data.
- D. Warranty.

1.03 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. ASHRAE/IESNA-90.1-2004 Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2004.
- C. ASME Compliance: Where ASME-code construction is indicated, fabricate and label commercial water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- D. Comply with NSF 61, "Drinking Water System Components - Health Effects; Sections 1 through 9" for all components that will be in contact with potable water.

1.04 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of electric water heaters that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Structural failures including storage tank and supports.
 - b. Faulty operation of controls.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal use.
2. Warranty Period(s): From date of Substantial Completion:
 - a. Electric Water Heaters: Five years.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers specified.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.02 COMMERCIAL ELECTRIC BOOSTER HEATERS

- A. Commercial Electric Booster Heaters: Comply with UL 1453 requirements for booster-type water heaters.
 1. Manufacturers:
 - a. Bradford White Corporation.
 - b. Rheem Water Heater Div.; Rheem Manufacturing Company.
 - c. Ruud Water Heater Div.; Rheem Manufacturing Company.
 - d. Smith, A. O. Water Products Company.
 2. Storage-Tank Construction: Corrosion-resistant metal or steel.
 - a. Tappings: ASME B1.20.1 pipe thread.
 - b. Pressure Rating: 150 psig.
 - c. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.
 3. Factory-Installed Storage-Tank Appurtenances:
 - a. Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
 - b. Insulation: Comply with ASHRAE/IESNA 90.1.

- c. Jacket: Rectangular shaped, with stainless-steel front panel, unless otherwise indicated.
 - d. Heating Element: Electric, screw-in immersion type.
 - e. Temperature Control: Adjustable thermostat with setting as listed on drawings.
 - f. Safety Controls: High-temperature-limit and low-water cutoff devices or systems.
 - g. Relief Valve: ASME rated and stamped and complying with ASME PTC 25.3, combination temperature and pressure relief valve. Include relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select relief valve with sensing element that extends into storage tank.
4. Special Requirements: NSF 5 construction with brackets for wall installation.
5. Capacity and Characteristics:
- a. Capacity and characteristics as scheduled on drawings.

PART 3 - EXECUTION

3.01 WATER HEATER INSTALLATION

- A. Install commercial water heaters on wall as shown on plans.
- B. Install water heaters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
- C. Install combination temperature and pressure relief valves in top portion of storage tanks. Use relief valves with sensing elements that extend into tanks. Extend commercial, water-heater, relief-valve outlet, with drain piping same as domestic water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.
- D. Install water heater drain piping as indirect waste to spill by positive air gap into open drains or over floor drains.
- E. Install piping-type heat traps on inlet and outlet piping of water heater storage tanks without integral or fitting-type heat traps.
- F. Fill water heaters with water.

3.02 CONNECTIONS

- A. Install piping adjacent to water heaters to allow service and maintenance. Arrange piping for easy removal of water heaters.
- B. Ground equipment according to Division 16 Section "Grounding and Bonding."
- C. Connect wiring according to Division 16 Section "Conductors and Cables."

3.03 FIELD QUALITY CONTROL

- A. Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including connections.
- B. Perform the following field tests and inspections:
 - 1. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Operational Test: After electrical circuitry has been energized, confirm proper operation.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Remove and replace water heaters that do not pass tests and inspections and retest as specified above.

3.04 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain commercial electric water heaters. Refer to Division 1 Section "Demonstration and Training."

SECTION 15623

CENTRIFUGAL WATER CHILLERS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for packaged, water-cooled, electric-motor-driven, centrifugal water chillers.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 – Sustainable Design Requirements.
 - 3. Section 01770 - Closeout Procedures.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 01810 – Commissioning.
 - 6. Section 03100 - Concrete Forms and Accessories.
 - 7. Section 03200 - Concrete Reinforcement.
 - 8. Section 03300 - Cast-In-Place Concrete.
 - 9. Section 15070 – Mechanical Sound, Vibration, and Seismic Control.
 - 10. Section 15182 – Hydronic Piping.
 - 11. Section 15186 – Refrigerant Piping.
 - 12. Section 15995 - Commissioning of Mechanical Systems.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AC: Alternating electric current.
 - 2. BACnet: Building automation and control networks.
 - 3. BAS: Building automation system.
 - 4. dBA: Decibels; a weighted scale for measuring sound pressure in decibels that uses filters to reduce the contributions of low and high frequency sound referred to as the “A” weighted sound pressure level, referenced to the A-weighting filter curve defined in IEC 61672.
 - 5. GFI: Ground fault interrupt.
 - 6. TEAO: Totally enclosed air over.
 - 7. TENV: Totally enclosed non-ventilating.
- B. Definitions:
 - 1. British Thermal Unit or Btu: A measure of energy defined as the amount of heat required to raise the temperature of one pound of water one-degree Fahrenheit.

2. COP: Coefficient of performance; the ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.
3. EER: Energy-efficiency ratio; the ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of Watts at any given set of rating conditions.
4. IPLV: Integrated part-load value; a single number part-load efficiency figure of merit calculated in accordance with the method defined by AHRI 550/590 and referenced to AHRI standard rating conditions.
5. kW/Ton: The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons at any given set of rating conditions.
6. NPLV: Nonstandard part-load value; a single number part-load efficiency figure of merit calculated in accordance with the method defined by AHRI 550/590 and intended for operating conditions other than the AHRI standard rating conditions.
7. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with the Program/Project Manager, the Phoenix Sky Harbor International Airport, and others to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency and the City, prior to incorporating items requiring testing by them into the Work.
 - a. Notify the Program/Project Manager 14 days in advance of factory performance testing.
2. Coordination Drawings:
 - a. Prepare Coordination Drawings, including floor plans and other details drawn to scale, which show the following items coordinated with each other using input from the installers of the items involved:
 - 1) Structural supports.
 - 2) Piping roughing-in requirements.
 - 3) Wiring roughing-in requirements, including spaces reserved for electrical equipment.
 - 4) Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.
 - 5) Coordinate the sizes and locations of concrete bases with the actual equipment provided.
 - 6) Coordinate the sizes, locations, and anchoring attachments of structural-steel support members, if any, with the actual equipment provided.
 - b. Submit the Coordination Drawings to the Program/Project Manager for approval.

B. Sequencing:

1. Install concrete bases and anchorage devices prior to installing the centrifugal water chillers.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Centrifugal water chiller.
 - b. Shop Drawings:
 - 1) Centrifugal water chillers.
 - c. Certificates:

1) Seismic Qualification Certificates.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:

a. Manufacturer's Instructions:

- 1) Manufacturer's recommended clearances for service and maintenance.
- 2) Centrifugal water chiller manufacturer's published installation instructions.
- 3) Centrifugal water chiller manufacturer's written installation and startup checks.

b. Source Quality Control Submittals:

- 1) Source quality-control test reports.

c. Manufacturer's Reports:

- 1) Startup service report.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:

a. Operation and Maintenance Data:

- 1) Operation and maintenance data for the centrifugal water chillers.

b. Warranty Documentation:

- 1) Centrifugal Water Chillers Warranty.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Arrange for obtaining the permits and schedule the inspections needed to install, commission, and startup the centrifugal water chillers system.

- a. After award of Contract, submit the centrifugal water chillers manufacturer's compliance review documents for the system to the Program/Project Manager and the Authorities Having Jurisdiction for approval.

B. Certifications:

1. Seismic Qualification Certificates:

- a. Have the manufacturer prepare Seismic Qualification Certificates certifying that the centrifugal water chillers, accessories, and components will withstand the seismic forces defined in Section 15070, Mechanical Sound, Vibration, and Seismic Control.

- 1) Indicate whether withstand certification is based on an actual test of the assembled components, or on calculations.

- 2) Include a dimensioned outline drawing of each equipment unit identifying the center of gravity, and locating and describing the mounting and anchorage provisions.
- 3) Include a detailed description of the equipment anchorage devices on which the certification is based, and their installation requirements.
- b. Submit the Seismic Qualification Certificates to the Program/Project Manager for approval.
2. Air-Conditioning, Heating, and Refrigeration Institute (AHRI) Certification:
 - a. Factory-test the centrifugal water chillers and their components in accordance with the requirements of the Air-Conditioning, Heating, and Refrigeration Institute (AHRI) Certification Program in order to have the centrifugal water chillers listed and labeled by the AHRI.
 - 1) Provide centrifugal water chillers that have been tested and certified in accordance with the requirements of the AHRI Water Chilling Packages (Air Cooled) Certification Program specified in AHRI General OM, AHRI OM 550/590, and AHRI 550/590.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Ship the water chillers from the factory fully charged with refrigerant, and filled with oil.
- B. Storage and Handling Requirements:
 1. Furnish instructions in English for storing and protecting the centrifugal water chiller system equipment and components.
 2. Prior to installation, remove obstructions and debris from inside the piping systems.
- C. Packaging Waste Management:
 1. Remove shipping, blocking, and bracing materials.
 - a. Remove the loose packing materials and protective wrapping such as shrink-wrap, wood crating, and packing from the centrifugal water chillers as required.
 2. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

- A. Manufacturer Warranty:
 1. Centrifugal Water Chillers Warranty:

- a. Warrant the centrifugal water chillers against defects within the 5-year period after the Date of Substantial Completion:
 - 1) Submit a Centrifugal Water Chillers Warranty on the centrifugal water chiller manufacturer's standard or customized form, without monetary limitation, in which the centrifugal water chiller manufacturer agrees to replace centrifugal water chillers that fail in materials or workmanship within the specified warranty period to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 CENTRIFUGAL WATER CHILLER SYSTEMS

- A. Manufacturers:
 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - b. Manufacturers:
 - 1) York, <http://www.johnsoncontrols.com>.
 - 2) McQuay International, <http://www.mcquay.com>.
 - 3) Trane, <http://www.trane.com>.
 - 4) Approved equal.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. American Society of Heating, Refrigerating and Air Conditioning Engineers, Inc. (ASHRAE) Compliance:
 - 1) Provide centrifugal water chillers complying with the requirements of the safety code for mechanical refrigeration specified in ANSI/ASHRAE 15.
 - 2) Provide centrifugal water chillers complying with the applicable requirements in Section 6, Heating, Ventilating, and Air-Conditioning, of ASHRAE/IESNA 90.1-2004.
 - c. American Society of Mechanical Engineers (ASME) Compliance:

- 1) Provide centrifugal water chiller heat exchangers fabricated and stamped in compliance with ASME BPVC-VIII-1, ASME BPVC-IX, and ASME BPVC-LABEL.
 - a) Provide evaporators that have been tested and stamped in accordance with the requirements specified in the ASME Boiler and Pressure Vessel Code.
- d. National Electrical Code (NEC):
 - 1) Provide electrical products and installation complying with the requirements specified in NFPA 70.

C. Performance:

1. Capacities and Characteristics:

- a. Provide magnetic bearings centrifugal water chillers having the capacities, characteristics, and accessories indicated in the Mechanical Equipment Schedule on the Contract Drawings.
- b. Full-Load Efficiency:
 - 1) Coefficient of Performance (COP): x.xx.
- c. Part-Load Efficiency:
 - 1) Integrated Part-Load Value (IPLV): x.xx.
- d. Low Ambient Operation:
 - 1) Provide centrifugal water chillers designed for operation down to 0 degrees Fahrenheit (minus 18 degrees Celsius).
- e. High Ambient Operation:
 - 1) Provide centrifugal water chillers designed for operation up to 115 degrees Fahrenheit (46 degrees Celsius).
- f. Evaporator Configuration:
 - 1) Provide centrifugal water chillers having an evaporator configuration integral to the chiller.
- g. Evaporator & Condenser Pressure Rating:
 - 1) Provide centrifugal water chillers having an evaporator pressure rating of 300 psig.
- h. Evaporator & Condenser Fluid Type:
 - 1) Provide centrifugal water chillers designed to use water as the evaporator & condenser fluid.
- i. Design Evaporator Fluid Flow Rate:
 - 1) Provide centrifugal water chillers designed for an evaporator fluid flow rate of 513 gallons per minute.
- j. Minimum Evaporator Fluid Flow Rate:
 - 1) Provide centrifugal water chillers designed for a minimum evaporator fluid flow rate of XXX gallons per minute.
- k. Evaporator Entering-Fluid Temperature:
 - 1) Provide centrifugal water chillers designed for an evaporator entering-fluid temperature of 58 degrees Fahrenheit.

- I. Evaporator Leaving-Fluid Temperature:
 - 1) Provide centrifugal water chillers designed for an evaporator leaving-fluid temperature of 44 degrees Fahrenheit.
- m. Evaporator Fluid Pressure Drop:
 - 1) Provide centrifugal water chillers designed for an evaporator fluid pressure drop of 16.3 feet of head.
- n. Evaporator Fouling Factor:
 - 1) Provide centrifugal water chillers designed using an evaporator fouling factor of 0.0001 square foot-hour-degree Fahrenheit per British thermal unit ($\text{ft}^2 \times \text{hr.} \times ^\circ\text{F} / \text{Btu}$).
- o. Condenser Entering-Fluid Temperature:
 - 1) Provide centrifugal water chillers designed for a condenser entering-fluid temperature of 85 degrees Fahrenheit.
- p. Condenser Leaving-Fluid Temperature:
 - 1) Provide centrifugal water chillers designed for a condenser leaving-fluid temperature of 95 degrees Fahrenheit.
- q. Site Altitude:
 - 1) Provide centrifugal water chillers designed to operate at an altitude of 1100 feet above mean sea level.
- r. Number of Refrigeration Circuits:
 - 1) Provide centrifugal water chillers designed to have x refrigeration circuits.
- s. Compressor Rated Load Amperes:
 - 1) Provide centrifugal water chiller compressors rated for a load of xx Amperes.
- t. Compressor Locked-Rotor Amperes:
 - 1) Provide centrifugal water chiller compressors rated for a locked-rotor load of xxx Amperes.
- u. Controls Power Connection:
 - 1) Provide centrifugal water chillers having their controls power connection fed through an integral transformer.
 - 2) Controls Power Input:
 - a) Provide centrifugal water chiller controls having a power input of x.x Ampere.
 - 3) Controls Minimum Circuit Ampacity:
 - a) Provide centrifugal water chiller control circuits having an ampacity of at least xx Amperes.
 - 4) Controls Maximum Overcurrent Protection Device:
 - a) Provide centrifugal water chiller controls having an overcurrent protection device rated for no more than xx Amperes.
 - 5) Controls Electrical Characteristics:

- a) Provide centrifugal water chiller controls designed to operate on single phase, 60 Hertz, 120-Volts AC power.
 - v. Chiller Power Input:
 - 1) Provide centrifugal water chillers designed for a power input of 159.7 kilowatts.
 - w. Chiller Minimum Circuit Ampacity:
 - 1) Provide centrifugal water chiller circuits having an ampacity of not less than 262 Amperes.
 - x. Chiller Maximum Overcurrent Protection Device:
 - 1) Provide centrifugal water chillers having an overcurrent protection device rated for no more than 450 Amperes.
 - y. Chiller Electrical Characteristics:
 - 1) Provide centrifugal water chillers designed to operate on three - phase, 60 Hertz, 480-Volts AC power.
 - z. Noise Rating:
 - 1) Provide centrifugal water chillers having a noise rating of 92 dBA when measured in accordance with the method specified in ANSI/AHRI 370.
 - 2. Seismic Performance:
 - a. Provide centrifugal water chillers capable of withstanding the effects of earthquake motions determined in accordance with the procedures specified in ASCE/SEI 7.
 - 1) The phrase "capable of withstanding" is hereby defined to mean the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event.
 - b. Fabricate the base, frame, and attachment to water chiller components so they are strong enough to resist movement during a seismic event when the water chiller base is anchored to the field support structure.
- D. Design Criteria:
- 1. Provide factory-assembled and run-tested water chillers complete with a base and frame, a condenser casing, compressors, compressor motors and motor controllers, evaporators, condenser coils, condenser fans and motors, electrical power, controls, and accessories. The entire chiller package shall be UL listed.
 - 2. AHRI Rating:
 - a. Rate the water chiller performance in accordance with the requirements specified in AHRI 550/590.
 - 3. Product Data:

- a. Obtain the centrifugal water chiller manufacturer's Product Data, including refrigerant information, rated capacities, operating characteristics, furnished specialties, accessories, and the following:
 - 1) Performance at AHRI standard conditions and at the conditions specified herein.
 - 2) Performance at AHRI standard unloading conditions.
 - 3) Minimum evaporator flow rate.
 - 4) Refrigerant capacity of the water chiller.
 - 5) Oil capacity of the water chiller.
 - 6) Fluid capacity of the evaporator.
 - 7) Characteristics of the safety relief valves.
 - 8) Minimum entering condenser-air temperature.
 - 9) Performance at varying capacity with constant design entering condenser-air temperature.
 - a) Indicate the performance for different entering condenser-air temperatures for varying capacity from the design capacity to the minimum capacity in 10-degree Fahrenheit (6-degree Celsius) increments.
 - b. Submit the Product Data for the centrifugal water chillers to the Program/Project Manager for approval.
4. Shop Drawings:
- a. Prepare Shop Drawings for the centrifugal water chillers that include a complete set of the centrifugal water chiller manufacturer's drawings of the water chiller assemblies, control panels, sections and elevations, and unit isolation.
 - 1) Include the assembled unit's dimensions, weight, and load distribution.
 - 2) Include the required clearances for maintenance and operation.
 - 3) Include the size and location of piping and wiring connections.
 - 4) Include wiring diagrams for power, signal, and control wiring.
 - b. Submit the Shop Drawings for the centrifugal water chillers to the Program/Project Manager for approval.
- E. Operation:
1. Controls:
 - a. Provide stand-alone, microprocessor-based controls.
 - b. Control Enclosure:
 - 1) Provide an enclosure sharing space with the electrical power devices, or provide a separate enclosure of matching the construction of the electrical power enclosure.
 - c. Operator Interface:
 - 1) Provide an operator interface consisting of either a keypad or pressure-sensitive touch screen.

- 2) Display:
 - a) Provide either a multiple-character, backlit, liquid-crystal display, or light-emitting diodes, capable of displaying the following information:
 - (1) The date and time.
 - (2) Operating or alarm status.
 - (3) Operating hours.
 - (4) The outside-air temperature, if required for a chilled-water reset.
 - (5) The temperature and pressure of the operating set points.
 - (6) The entering and leaving temperatures of the chilled water.
 - (7) The refrigerant pressures in the evaporator and condenser.
 - (8) The saturation temperature in the evaporator and condenser.
 - (9) No cooling load condition.
 - (10) Elapsed time meter (compressor run status).
 - (11) Pump status.
 - (12) Anti-recycling timer status.
 - (13) Percent of maximum motor amperage.
 - (14) Current-limit set point.
 - (15) Number of compressor starts.
- d. Control Functions:
 - 1) Provide controls capable of setting/controlling the following functions:
 - a) Manual or automatic startup and shutdown time schedule.
 - b) Entering and leaving chilled-water temperatures, control set points, and motor load limit.
 - (1) Reset the chilled-water leaving temperature based on the outside-air temperature.
 - c) Current limit and demand limit.
 - d) External water chiller emergency stop.
 - e) Anti-recycling timer.
 - f) Automatic lead-lag switching.
- e. Manual-Reset Safety Controls:
 - 1) Provide controls capable of shutting down the water chiller and requiring a manual reset: when the following conditions occur:
 - a) Low evaporator pressure or high condenser pressure.
 - b) Low chilled-water temperature.
 - c) Refrigerant high pressure.
 - d) High or low oil pressure.
 - e) High oil temperature.

- f) Loss of chilled-water flow.
 - g) Control device failure.
 - f. Building Automation System Interface:
 - 1) To enable the building automation system (BAS) to monitor, control, and display water chiller status and alarms, provide factory-installed hardware and software.
 - 1) Building Automation and Control Networks (BACnet):
 - a) To enable the building automation system (BAS) operator to remotely control and monitor the water chiller from an operator workstation, provide a communication interface with the building automation system complying with the requirements specified in ANSI/ASHRAE 135.
 - b) Make the control features and monitoring points displayed locally at the water chiller control panel available through the building automation system (BAS).
- F. Components:
 - 1. Cabinet:
 - a. Cabinet Base:
 - 1) Provide a galvanized-steel cabinet base extending around the perimeter of the water chiller.
 - 2) Secure the frame, compressors, and evaporator to the cabinet base so a single-piece unit results.
 - b. Cabinet Frame:
 - 1) Provide a rigid galvanized-steel cabinet frame secured to the cabinet base, and designed to support the cabinet, condenser, control panel, and other chiller components not directly supported from the cabinet base.
 - c. Cabinet Casing:
 - 1) Provide a galvanized steel cabinet casing.
 - d. Cabinet Finish:
 - 1) Coat the cabinet base, cabinet frame, and cabinet casing with a corrosion-resistant coating capable of withstanding a 500-hour salt-spray test performed in accordance with the method specified in ASTM B 117.
 - e. Sound-Reduction Package:
 - 1) To reduce the sound level of the centrifugal water chillers without affecting their performance, provide a sound-reduction package consisting of an acoustic enclosure around the compressors and reduced-speed fans having acoustic treatments.
 - f. Security Package:
 - 1) To furnish additional protection of the centrifugal water chiller compressors, evaporator, and condenser coils and to furnish

- access for service, provide a security package consisting of removable security grilles having fasteners.
- 2) Coat the grilles to provide corrosion resistance.
2. Compressors:
- a. Provide multi-stage direct drive centrifugal type compressors powered by high speed electric motors.
 - b. A cast aluminum, fully shrouded impeller shall be mounted directly to the motor shaft.
 - c. The impeller shall be designed for balanced thrust, dynamically balanced and overspeed tested for smooth, vibration-free operation.
 - d. Compressor castings shall be designed for 235 psig working pressure and hydrostatically pressure tested at 355 psig for HFC R-134A units.
 - e. Capacity Control:
 - 1) Capacity control shall be achieved by the combined use of variable speed and variable diffuser geometry to provide fully modulating control from maximum to minimum load while maintaining constant chiller leaving water temperature.
3. Compressor Motors:
- a. The motor shall be a semi-hermetic, oil free, permanent magnet type directly coupled to the compressor.
 - b. The motor shall be bolted to a cast iron adapter plate mounted on the compressor to provide factory alignment of the shaft.
 - c. The motor shaft shall be supported on active magnetic radial and thrust bearings.
 - d. Magnetic bearing control shall be equipped with auto vibration reduction and balancing systems. During a power failure event, the magnetic bearings shall remain active throughout the compressor coast down.
 - e. Rolling element bearings shall be provided as a backup to the magnetic bearings designed for emergency touch down situations.
 - f. Motor stator and rotor shall be equipped with a pressure driven refrigerant cooling loop to maintain acceptable operating temperatures.
4. Variable Speed Drive:
- a. A variable speed drive shall be factory installed on the chiller. It will vary the compressor motor speed by controlling the frequency and voltage of the electrical power to the motor. The capacity control logic shall automatically adjust motor speed and compressor diffuser geometry for maximum part-load efficiency by analyzing information fed to it by sensors located throughout the chiller.
 - b. Drive shall be PWM type utilizing IGBT's with a power factor of 0.97 or better at all loads and speeds.
 - c. The variable speed drive shall be unit mounted in a NEMA 1 enclosure with all power and control wiring between the drive and chiller factory installed.

- d. Field power wiring shall be a single point connection and electrical lugs for incoming power wiring will be provided.
- 5. Refrigeration:
 - a. Refrigerant:
 - 1) Provide HFC R-134A refrigerant classified in accordance with the requirements for Safety Group A1 specified in ANSI/ASHRAE 34.
 - b. Refrigerant Flow Control:
 - 1) Refrigerant flow to the evaporator shall be controlled by a variable orifice for improving unloading capabilities. The variable orifice control shall automatically adjust to maintain proper refrigerant level in the condenser and evaporator. This shall be controlled by monitoring refrigerant liquid level in the condenser, assuring optimal sub-cooler performance.
 - 2) Provide parts exposed to refrigerants that are fully compatible with the refrigerants, and rate pressure components for the refrigerant pressures.
- 6. Evaporators:
 - a. Provide a shell-and-tube evaporator, hybrid falling film type designed for 235 psig working pressure on the refrigerant side.
 - b. Shell and Tube Evaporator Design:
 - 1) Provide a direct-expansion, shell-and-tube evaporator design having fluid flowing through the shell and refrigerant flowing through the tubes within the shell.
 - 2) Shell:
 - a) Shell shall be fabricated from rolled carbon steel plate with fusion welded seams; have carbon steel tube sheets, drilled and reamed to accommodate the tubes; and intermediate tube supports spaced no more than four feet apart. The refrigerant side shall be designed, tested and stamped in accordance with ASME Boiler and Pressure Vessel Code, Section VIII- Division 1.
 - 3) Tube:
 - a) Tubes shall be high-efficiency, internally and externally enhanced type having plain copper lands at all intermediate tube supports to provide maximum tube wall thickness at the support area. Each tube shall be roller expanded into the tube sheets providing a leak-proof seal, and be individually replaceable. Water velocity through the tubes shall not exceed 12 fps. A liquid level sight glass will be located on the side of the shell to aid in determining proper refrigerant charge. A suction baffle eliminator will be located above the tube bundle to prevent liquid refrigerant carryover to the compressor. The evaporator shall have a refrigerant relief device sized to meet

- the requirements of ASHRAE 15 Safety Code for Mechanical Refrigeration.
- b) Provide individually replaceable copper tubes having an enhanced fin design that is expanded into tube sheets.
 - c. Water boxes shall be removable to permit tube cleaning and replacement. Stub-out water connections having Victaulic grooves shall be provided. Water boxes shall be designed for 150psi (10.3 bar) design working pressure and tested at 225 psig (15.5 bar). Vent and drain connections with plugs will be provided on each water box. Low flow protection shall be provided by a thermal-type flow sensor, factory mounted in the water nozzle connection and wired to the chiller control center.
 - d. Low Ambient Temperature Controls (Heater):
 - 1) Provide a factory-installed and factory-wired electric heater having integral controls designed to protect the evaporator down to 0 degrees Fahrenheit (minus 18 degrees Celsius).
 - e. High Ambient Temperature Controls:
 - 1) Provide high ambient temperature controls that include field-mounted discharge pressure transducers designed for operation up to 115 degrees Fahrenheit (46 degrees Celsius).
7. Water-cooled Condensers:
- a. Condenser shall be of the shell-and-tube type, designed for 235 psig working pressure on the refrigerant side.
 - b. Shell shall be fabricated from rolled carbon steel plate with fusion welded seams; have carbon steel tube sheets, drilled and reamed to accommodate the tubes; and intermediate tube supports spaced no more than four feet apart.
 - c. The refrigerant side shall be designed, tested and stamped in accordance with ASME Boiler and Pressure Vessel Code, Section VIII- Division 1.
 - d. Tubes shall be high-efficiency, internally and externally enhanced type having plain copper lands at all intermediate tube supports to provide maximum tube wall thickness at the support area. Each tube shall be roller expanded into the tube sheets providing a leak-proof seal, and be individually replaceable. Water velocity through the tubes shall not exceed 12 fps.
 - e. Water boxes shall be removable to permit tube cleaning and replacement. Stub-out water connections having ANSI/AWWA C-606 grooves will be provided. Water boxes shall be designed for 150 psi (10.3 bar) design working pressure and tested at 225 psig (15.5 bar). Vent and drain connections with plugs will be provided on each water box.

8. Electrical Power:
 - a. Provide a single-point field power connection to the water chiller necessary to furnish electrical power for the factory-installed and factory-wired switches, motor controllers, transformers, and other electrical devices.
 - b. Enclosure:
 - 1) House the centrifugal water chiller field power connection in a unit-mounted, NEMA Type 3R enclosure complying with the requirements specified in NEMA 250, and having a hinged access door with a lock and key or padlock and key.
 - 2) Provide raceway for factory wiring located outside of an enclosure.
 - c. Wiring Identification:
 - 1) Number and color-code the wiring to match the identification indicated in the approved wiring diagram.
 - d. Disconnecting Means:
 - 1) Field Power Interface Disconnecting Means:
 - a) Provide a heavy-duty, nonfused disconnect switch complying with the requirements specified in NEMA KS 1, and connected to the field power interface.
 - 2) Branch Power Circuit Disconnecting Means:
 - a) Provide one of the following disconnecting means for each branch power circuit to each motor and to the controls:
 - (1) Provide a heavy-duty, fusible switch complying with the requirements specified in NEMA KS 1, and having rejection-type fuse clips rated for the size of the fuses.
 - (a) Select and size the fuses in accordance with the requirements for providing Type 2 protection specified in IEC 60947-4-1.
 - (2) Provide a heavy-duty, non-fusible switch complying with the requirements specified in NEMA KS 1.
 - (3) Provide a motor-circuit protector (circuit breaker) complying with the requirements specified in NEMA AB 1, and having a field-adjustable, short-circuit trip coordinated with the motor locked-rotor amperes.
 - e. Motor Overcurrent Protection:
 - 1) Provide motors each having overcurrent protection.
 - f. Overload Relays:
 - 1) Provide overload relays sized in accordance with the requirements specified in UL 1995, or that are an integral component of the water chiller control microprocessor.
 - g. Phase-Failure and Under Voltage:

- 1) Provide solid-state phase-failure and under voltage sensing having adjustable settings.
 - h. Power Factor Correction:
 - 1) Provide power factor correction capacitors to correct the power factor to 0.95 at full load.
 - i. Transformers:
 - 1) Provide a unit-mounted transformer having primary and secondary fuses, and sized with enough capacity to operate the electrical load plus spare capacity.
 - a) Provide power for unit-mounted controls where indicated in the Contract Documents.
 - b) Provide a power unit-mounted, ground fault interrupt (GFI) duplex receptacle.
 - j. Control Relays:
 - 1) Provide auxiliary and adjustable time-delay control relays.
 - k. Indications:
 - 1) For the water chiller electrical power supply, provide indication of the following parameters:
 - a) Current, phase to phase, for all three phases.
 - b) Voltage, phase to phase and phase to neutral for all three phases.
 - c) Three-phase real power (kilowatts).
 - d) Three-phase reactive power (kilovolt amperes reactive).
 - e) Power factor.
 - f) Running log of total power versus time (kilowatt hours).
 - g) Fault log, having the time and date of each fault.
9. Thermal Insulation:
 - a. Factory-apply thermal insulation over the cold surfaces of the water chiller components.
 - b. Provide closed-cell, flexible elastomeric, thermal insulation complying with the requirements specified in ASTM C 534.
 - 1) For tubular materials, provide Type I thermal insulation.
 - 2) For sheet materials, provide Type II thermal insulation.
 - c. Thermal Insulation Thickness:
 - 1) Provide 3/4-inch thick (18mm) thermal insulation.
 - d. Thermal Insulation Adhesive:
 - 1) Provide the thermal insulation adhesive recommended by the insulation manufacturer.
 - 2) Apply thermal insulation adhesive to 100 percent of the insulation contact surface.
 - 3) Seal the seams and joints.
 - e. Apply a protective coating to the exposed surfaces of the insulation.

2.02 ACCESSORIES

- A. Flow Switches:
 - 1. Provide factory-furnished, chilled-water and condenser-water flow switches for field installation.
- B. Pressure Gages:
 - 1. For each refrigeration circuit, provide individual compressor suction and discharge pressure gages having shutoff valves.
- C. Isolators:
 - 1. Provide factory-furnished neoprene isolators for field installation.

2.03 SOURCE QUALITY CONTROL

- A. Tests and Inspections:
 - 1. Products and components specified in this Section require advance examination or testing in accordance with the methods specified herein, or as required by the Program/Project Manager.
 - a. Fourteen days before the tests will be performed, provide advance notice of the tests to the Program/Project Manager to give the Program/Project Manager and the Approved Agency the opportunity to observe the tests.
 - b. Prepare source quality control test reports documenting the results of the source quality control tests, and submit them to the Program/Project manager for information.
 - 2. Functional Test:
 - a. Test Procedure:
 - 1) Before shipping the centrifugal water chillers to the Site, perform a functional test of the water chillers.
 - b. Acceptance Criteria:
 - 1) Centrifugal water chillers that properly perform the functions specified pass the Functional Test.
 - 3. Performance Test:
 - a. Test Procedure:
 - 1) Before shipping the centrifugal water chillers to the Site, perform a performance test of the water chillers in accordance with the methods specified in AHRI 550/590.
 - 2) Allow the Program/Project Manager access to the place where the centrifugal water chillers are being performance tested.
 - b. Acceptance Criteria:
 - 1) Centrifugal water chillers that properly perform as specified in AHRI 550/590 for the type of unit tested pass the Performance Test.

4. Evaporator Test:
 - a. Test Procedure:
 - 1) Factory test and inspect the centrifugal water chiller evaporator in accordance with the requirements specified in ASME BPVC-VIII-1.
 - b. Acceptance Criteria:
 - 1) Centrifugal water chillers that comply with the requirements for stamping the evaporator with the American Society of Mechanical Engineers (ASME) label pass the Evaporator Test.
5. Sound Power Level Test:
 - a. Test Procedure:
 - 1) For centrifugal water chillers located outdoors, determine the sound power level rating in accordance with the procedure specified in ANSI/AHRI 370.
 - b. Acceptance Criteria:
 - 1) Centrifugal water chillers having properly determined sound power level rating complying with the specified requirement pass the Sound Power Level Test.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Before installing the centrifugal water chillers, examine the roughing-in for equipment support, anchor-bolt sizes and locations, piping, and electrical connections at the installation location to verify the actual locations, sizes, and other conditions affecting the centrifugal water chiller performance, maintenance, and operations.
 - a. Centrifugal water chiller locations indicated on the Contract Drawings are approximate.
 - b. Determine the exact locations before roughing-in piping and electrical connections.
- B. Evaluation and Assessment:
 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the centrifugal water chillers.

B. Surface Preparation:

1. Concrete Bases:

- a. If concrete pads are required to support the centrifugal water chillers, provide flat concrete pads constructed in accordance with the seismic-restraint requirements specified in Section 15060, Hangers and Supports.
 - 1) Provide 4-inch high reinforced concrete bases with chamfered edges to support the walk-in medium-voltage substation switchgear.
 - 2) Extend the base no less than 4 inches in all directions beyond the maximum dimensions of the centrifugal water chillers, unless otherwise indicated on the Contract Drawings, or unless required for seismic anchor support.
 - 3) Provide concrete formwork as specified in Section 03100, Concrete Forms and Accessories; concrete reinforcement as specified in Section 03200, Concrete Reinforcement; and concreting as specified in Section 03300, Cast-In-Place Concrete, that comply with the requirements for concrete bases.
 - 4) Install dowel rods to connect the concrete housekeeping pad to the concrete floor slab.
 - a) Unless otherwise indicated in the Contract Drawings, install dowel rods on 18-inch (450mm) centers around the full perimeter of concrete slab.
- b. Place and secure anchorage devices.
 - 1) Design each fastener and support in accordance with the seismic-restraint requirements specified in Section 15070, Mechanical Sound, Vibration, and Seismic Control, to carry the load indicated by seismic requirements and according to seismic-restraint details.
 - 2) Install anchor bolts to the elevations required for proper attachment to the centrifugal water chillers.
 - a) Install epoxy-coated anchor bolts that extend through the concrete base and anchor into the structural concrete floor.
 - b) Use setting drawings, templates, diagrams, instructions, and directions for the items to be embedded to properly locate these items.
 - c) Cast anchor-bolt inserts into the concrete bases.

3.03 INSTALLATION

A. Equipment Mounting:

1. Install the centrifugal water chillers on the support structure indicated on the Contract Drawings.

- a. If concrete pads are required to support the centrifugal water chillers, install the water chiller on the concrete bases using elastomeric pads.
 - b. Comply with the requirements for vibration isolation devices specified in Section 15070, Mechanical Sound, Vibration, and Seismic Control.
 - 1) Minimum Deflection:
 - a) Provide vibration isolation devices having a minimum deflection of 1/4 inch (6mm).
 2. Maintain the manufacturer's recommended clearances for service and maintenance.
 - a. Submit the manufacturer's recommended clearances for service and maintenance to the Program/Project manager for information.
- B. Install the centrifugal water chillers in accordance with the manufacturer's installation instructions.
1. Submit the centrifugal water chiller manufacturer's published installation instructions to the Program/Project Manager for information.
 2. If the centrifugal water chiller was not factory-charged with refrigerant or if the chiller did not receive the required lubrication at the factory, charge the water chiller with refrigerant and fill the appropriate lubrication fittings with oil.
 3. Install the separate devices furnished by the centrifugal water chiller manufacturer, and not factory-installed.
- C. Systems Integration:
1. Connections:
 - a. Piping Connections:
 - 1) The Contract Drawings indicate the general arrangement of piping, fittings, and specialties.
 - a) For water piping, comply with requirements specified in Section 15182, Hydronic Piping.
 - b) For refrigerant piping, comply with requirements specified in Section 15186, Refrigerant Piping
 - b. Install the piping adjacent to the chiller so space for service and maintenance is furnished.
 - c. Evaporator Fluid Connections:
 - 1) Connect the evaporator fluid connections to the evaporator inlet using a shutoff valve, a strainer, a flexible connector, a thermometer, and a plugged tee having a pressure gage.
 - 2) Connect the evaporator fluid connections to the evaporator outlet using a shutoff valve, a balancing valve, a flexible connector, a flow switch, a thermometer, a plugged tee having a pressure gage, and a drain connection having a valve.

- 3) Make the evaporator fluid connections to the water chiller using a flange.
- d. Refrigerant Pressure Relief Valve Connections:
 - 1) For water chillers installed indoors, extend the vent piping to the outside without valves or restrictions.
 - 2) Provide refrigerant pressure relief valve connections that comply with the requirements specified in ANSI/ASHRAE 15.
- e. Connect a union and drain pipe to each drain connection, and extend the pipe the full size of connection to the drain as shown on the Contract Drawings.
- f. If required, provide a shutoff valve at each connection.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 1. Inspections:
 - a. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assemblies, installations, and connections.
- B. Manufacturer Services:
 1. Engage a factory-authorized service representative to perform the startup service.

3.05 SYSTEM STARTUP

- A. Commissioning:
 1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping systems, ductwork, air handlers, air conditioning (AC) and heat pump (HP) packaged units, air terminal units, heat exchangers, the building automation system, fire and smoke dampers, indoor air quality, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.
- B. The start-up and commissioning team, and the Program/Project Manager, will perform the operational tests to confirm system performance.
- C. Submit the centrifugal water chiller manufacturer's written installation and startup checks to the Program/Project Manager for information.
 1. Complete the installation and startup checks for the centrifugal water chillers in accordance with the centrifugal water chiller manufacturer's written instructions, and perform the following activities:

- a. Verify that the refrigerant charge is sufficient, and that the water chiller has been leak tested.
 - b. Verify that the pumps are installed and are functional.
 - c. Verify that the thermometers and gages are installed.
 - d. Operate the water chiller for the run-in period.
 - e. Verify proper motor rotation.
 - f. Verify the static deflection of the vibration isolators, including the deflection of the vibration isolators during water chiller startup and shutdown.
 - g. Verify and record the performance of the chilled-water flow, low-temperature, and high-temperature interlocks.
 - h. Verify and record the performance of the water chiller protection devices.
- D. Prepare a written startup service report that records the results of the tests and inspections.
- 1. Submit the startup service report to the Program/Project Manager.

3.06 ADJUSTING

- A. Test and adjust the centrifugal water chiller controls and safeties.
- 1. Replace damaged or malfunctioning controls and equipment.

3.07 CLEANING

- A. Waste Management:
- 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.08 CLOSEOUT ACTIVITIES

- A. Training:
- 1. Engage a factory-authorized field service representative to train the Owner's maintenance personnel to adjust, operate, and maintain the centrifugal water chillers in accordance with the requirements specified in Section 01770, Closeout Procedures.

3.09 PROTECTION

- A. Take steps to ensure that installed centrifugal water chillers are protected during subsequent construction activities.
- 1. Using the units for temporary purposes during construction is unacceptable.

3.10 MAINTENANCE

A. Operation and Maintenance Data:

1. Submit operation and maintenance data for the centrifugal water chillers to the Program/Project Manager for inclusion in emergency and Operation and Maintenance Manuals as specified in Section 01780, Closeout Submittals.

SECTION 15640

COOLING TOWERS

PART 1 GENERAL

1.1 STIPULATIONS

- A. The specifications sections "General Conditions of Contract," "Special Conditions" and "Division 1 – General Requirements" form a part of this section by this reference thereto and shall have the same force and effect as if printed herewith in full.

1.2 SUMMARY

- A. Section includes packaged cooling tower with structure, casing, fill and basin, controls, heaters fans, motors and drive equipment, condensing water inlet and outlet with internal distribution and ladder and handrails.
- B. Related Sections:
 - 1. Section 03300 - Cast-In-Place Concrete: Execution requirements for concrete bases specified by this section.
 - 2. Section 15065 - Motors for Mechanical Equipment: Product requirements for electric drive motors for placement by this section.
 - 3. Section 15060 - Hangers and Supports for HVAC Piping and Equipment: Execution requirements for steel support bases specified by this section.
 - 4. Section 15070 – Mechanical Sound, Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for vibration isolators for placement by this section.
 - 5. Section 15182 - Hydronic Piping: Product requirements for condenser water piping for placement by this section.
 - 6. Section 15188 - HVAC Water Treatment: Product and execution requirements for cooling tower water chemical treatment equipment.
 - 7. Section 16061 – Electrical Grounding and Bonding: Execution requirements for electrical connections specified by this section.

1.3 REFERENCES

- A. American Bearing Manufacturers Association:
 - 1. ABMA 9 - Load Ratings and Fatigue Life for Ball Bearings.
 - 2. ABMA 11 - Load Ratings and Fatigue Life for Roller Bearings.
- B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
 - 1. ASHRAE 90.1 - Energy Standard for Buildings Except Low-Rise Residential Buildings.

- C. American Society of Mechanical Engineers:
 - 1. ASME PTC 23 - Atmospheric Water Cooling Equipment.
- D. ASTM International:
 - 1. ASTM A90/A90M - Standard Test Method for Weight Mass of Coating on Iron and Steel Articles with Zinc or Zinc-Alloy Coatings.
 - 2. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
- E. Cooling Technology Institute:
 - 1. CTI - Acceptance Test Code.
 - 2. CTI 201 - Certification Standard for Commercial Water Cooling Towers.
- F. National Electrical Manufacturers Association:
 - 1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

1.4 SUBMITTALS

- A. Section 01330 - Submittal Procedures: Submittal procedures.
- B. Shop Drawings: Indicate structural steel supports including dimensions and locations for mounting-bolt holes.
- C. Product Data: Submit rated capacities, dimensions, weights and point loads, accessories, required clearances, electrical requirements and wiring diagrams, and location and size of field connections. Submit schematic indicating capacity controls. Submit performance curve plotting leaving water temperature against wet bulb temperature.
- D. Field Test Reports: Indicate compliance with specified performance.
- E. Manufacturer's Certificate: Certify cooling tower performance meets or exceeds specified requirements.
- F. Manufacturer's Field Reports: Submit start-up report. Indicate compliance with field test.

1.5 CLOSEOUT SUBMITTALS

- A. Section 01770 - Closeout Procedures & Section 01780 – Closeout Submittals.
- B. Operation and Maintenance Data: Submit start-up instructions, maintenance data, parts lists, controls, and accessories.

1.6 QUALITY ASSURANCE

- A. Construction and rating in accordance with CTI Acceptance Test Code and CTI 201.
- B. Performance Ratings: Required performance not less than prescribed by ASHRAE 90.1 when tested in accordance with CTI Acceptance Test Code and CTI 201.

1.7 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum fifteen years documented experience.
- B. Installer: Company specializing in performing work of this section with minimum five years' experience.

1.8 PRE-INSTALLATION MEETINGS

- A. Section 01316 - Administrative Requirements: Pre-installation meeting.
- B. Convene minimum one week prior to commencing work of this section.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Follow manufacturer's installation instructions for rigging, unloading, and transporting units.
- B. Match mark disassembled components. Reinforce, brace and pack for shipment per applicable commerce requirements. Seal open ends subject to detrimental conditions with removable closures.
- C. Mark packed materials for identification. Show on shipping invoice, crate, box, carton or component identification, the Department's purchase order number and consignee's name and shipping address.
- D. Notify Department within 24 hours of shipment of equipment. The following information shall be supplied: shipping date, carrier PRO number, truck number, quantity, weights, items shipped, and estimated time of arrival.

1.10 FIELD MEASUREMENTS

- A. Verify field measurements prior to fabrication.

1.11 WARRANTY

- A. Section 01780 - Closeout Submittals: Product warranties and product bonds.
- B. Upon completion, the manufacturer shall issue a written warranty, duly authorized, covering the following:
 - 1. The cooling tower structure and internal components shall be warranted against defects in material and workmanship and the systems shall meet operating conditions, capacity, and performance for the greater period of 18 months from the shipment of materials or 12 months from beneficial use by Department. The mechanical equipment and motors shall be warranted for 5 years from beneficial use. If either the unit or accessories fail to meet operating requirements or if failure of a part occurs during this warranty period, rework or replace items to meet the contract requirements at no cost to the Department.
- C. The Department reserves the option to request thermal or sound performance test per CTI Standards throughout the warranty period.

1.12 MAINTENANCE SERVICE

- A. Section 01770 - Closeout Procedures & Section 01780 – Closeout Submittals.: Requirements for maintenance service.

1.13 EXTRA MATERIALS

- A. Section 01770 - Closeout Procedures & Section 01780 – Closeout Submittals – Spare parts and maintenance products.
- B. Manufacturer shall furnish the Department with a complete set of the recommended spare parts. Include one change of gear drive oil, two spray nozzles for each cell and two gaskets for each access door.
- C. Provide two sets of any special tools required or recommended by Manufacturer for field maintenance.

PART 2 PRODUCTS

2.1 COOLING TOWERS

- A. Manufacturers:
 - 1. Marley.
 - 2. Baltimore Aircoil.
 - 3. Evapco.

- B. Product Description: factory assembled, sectional, cross-flow design, with fan and motor assemblies, built with pan, casing, fill and drift eliminators.

2.2 STEEL COOLING TOWERS

A. General:

1. Completely factory assembled, piped and wired, requiring no field assembly, with the exception of field installed accessories.
2. Suitable for installation in the space conditions indicated on drawings, including clearance for installation, operation, maintenance, and air flow into and out of tower. Cooling tower manufacturer shall certify tower for space conditions given.
3. The load and location of required cooling tower supports shall be provided by this manufacturer. Manufacturer shall design cooling tower and provide materials necessary for attachment to dunnage steel.
4. Vibration isolators shall be at least 1" thick neoprene pads located at points approved by manufacturer.
5. Tower design and materials of construction, including fill, shall have a design life expectancy of not less than 10 years for the geographical location and atmospheric conditions of the installation. Towers shall be bolted or with continuously welded basin construction. Spot welded construction is not permitted. Towers shall be designed for wind load as required by BOCA and in accordance with authorities having jurisdiction.
6. Except as noted, all components shall be PVC, galvanized steel, stainless steel, or FRP.
7. PVC fill shall be cross-corrugated 20 mil (before forming) thick sheets. Fill shall withstand a continuous 120oF continuous water temp, and a 130oF maximum water temperature. The fill shall be impervious to rot, decay, fungus and biological attack. Maximum flame spread and smoke developed ratings of 25 & 50 respectively.
8. PVC eliminators and louvers shall be 15 mil thick with maximum flame spread and smoke developed ratings of 25 & 50 respectively. Triple- pass drift eliminators shall be used.
9. Fans and drives: Except as noted, airflow shall be manually adjustable in the field through adjustable pitch fan blades. Fans shall be statically balanced in factory and properly supported to prevent damage in shipment and rigging. Drive shall be designed for minimum 150 percent of motor horsepower. Provide galvanized steel, stainless steel, or FRP guards for fans and drives. Acceptable fan and drives include:
 - a. Propeller fans: Cast aluminum. Fan blades shall connect to hubs using stainless steel Grade 8 bolts or approved alternate.
 - b. Gear drives: Right angled type suitable for cooling tower duty, provide oil level indicator and reservoir with fill and drain connections which shall be extended to the fan deck level for access. A five-year maintenance warranty shall be provided for gear drives. First oil change to be

provided by manufacturer. Gear drives will not require an external oil pump or require an electric internal pump. Vibration switch to be mounted on or near fan drive and shall disable motor in the event of a trip.

10. Distribution orifices and spray nozzles: Plastic, individually removable for cleaning or replacement, capable of passing a 1/4" sphere (minimum 5/16" opening).
11. Provide stainless steel distribution basin or corrosion resistant plastic distribution system to distribute water evenly over the tower fill. Provide two compartment water basins (or other engineered means) to provide balanced distribution flow across entire out-board face at reduced (50%) flow rate. Provide details of flow reduction method with proposal.
12. Fan and drive guards: Provide OSHA approved guards and screens around fans, drives and motors as necessary to protect people outside tower from injury due to moving parts. Provide warnings on access doors to caution operations as to hazards of moving parts.
13. Ladders, platforms, hand rails and access doors: Provide as necessary for ready access to all components, including balancing valves, hot water distribution basins or nozzles, cold water basin and all components located within it, motor lubrication fittings, gear oil level indicators, oil fill connections, oil drain valves, power band, etc. Gear oil level must be readable from the outside of the cell and/or during operation. Follow local, town, and state codes. Ladders shall extend to within 12" of access level (roof or platform). Ladder to fan deck shall be aluminum, with 1-1/4" steel pipe handrail around fan deck. Ladders, platforms and handrail shall conform to all OSHA requirements, including cages if ladders exceed 20 ft height or if shown on drawings. Provide access doors on both sides of casing and interior platforms to allow access through the interior of one tower cell to the adjacent tower cells. A galvanized steel access door shall be located on both endwalls for entry into the cold-water basin and fan plenum area. Access doors shall be operable from inside as well as outside the tower.
14. Connection points and cooling tower structure shall withstand forces imposed by rigging equipment of 2g horizontal and 3g vertical magnitudes with no compromise to the structural integrity of any components. The calculations shall be performed with the tower in the condition it will be delivered. Eye bolts or other approved means shall be provided for four-point rigging of tower.

B. Double flow, Cross flow, vertical discharge type:

1. Cold water basin: Welded 304 stainless steel for all components, including collection basin bottom and sides, flanged inlet connections as shown on drawings, bolts and nuts. Basin to be set up to drain by gravity to location approved by Department. Condenser water headers and distribution system shall be internal to the cooling tower structure with external flanged

connections. All connections to system piping to be provided with 150# ANSI flanges. Basin freeboard to be minimum 18.”

2. Balancing valves: Suitable for balancing flow to each warm water basin or for balancing to obtain required distribution, and for tight shutoff at 25 psig inlet pressure. Provide balancing valves with flanged connections and position locking devices.
3. Accessories: Provide fan cylinder or casing extension for overall tower height as shown on drawings, vibration switch, and removable stainless-steel covers for hot water basins and inlet screens.

C. Sound Attenuation:

1. Materials shall be of galvanized steel and weather resistant matting or approved equal.
2. Provide corrosion resistant, factory fabricated transition section from fan outlet to attenuator base. Transition must be able to provide required clearances for piping and supports on top of tower. Refer to Drawing M-8 (attached) for pipe routing and support requirements.
3. Provide brackets and all hardware to mount to cooling tower. If mounting brackets and metal at tower support points are dissimilar, provide means to prevent galvanic action.
4. Provide instructions to contractor for assembly and rigging.
5. Cooling tower structure shall be provided from the factory able to adequately support piping, fittings, valves and sound attenuator assemblies as indicated on drawings and required within specifications without requiring field modification or steel re-enforcement by contractor.

D. Performance:

1. Design

BASE BID	
Number of Cells	2
Total Flow, gpm	900 per cell
Entering Water Temp, °F	95
Leaving Water Temp, °F	85
Design Inlet Wet Bulb, °F	73
Max pressure at inlet flange, ft	By Manufacturer
Maximum Motor HP	20.0 HP
Motor HP (Supplied)	By Manufacturer
Max. Fan tip Speed	13,000 FPM
Maximum drift (as % of scheduled flow)	.xxx %
Weight	By Manufacturer

Dimensions	By Manufacturer (Max width is 18ft – 1.5in) (Max length is 14ft –3 in)
------------	--

2. Noise: Airborne noise emitted by the cooling tower with all cells operating at full speed with any noise attenuating devices in place shall not exceed the following sound pressure levels in dBA re. 0.0002 microbar for a free and unobstructed environment. Provide A-weighted and octave band values for each for each side and top of cooling tower. Maximum values are as follows:
 - a. xx dBA at 50 ft from air inlet faces
 - b. xx dBA at 50 ft from air discharge
 - c. xx dBA at 50 ft from cased (solid) faces

2.3 ELECTRICAL CHARACTERISTICS AND COMPONENTS

- A. Electrical Characteristics: In accordance with Division 16 and the following:
 1. 480 volts, three phase, 60 Hz.
- B. Motors: In accordance with Section 15065.
 1. Motors shall be TEFC (Totally-Enclosed-Fan-Cooled), NEMA T frame, NEMA F1 assembly.
- C. Disconnect Switch: Factory-mount on equipment.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Verify support is ready to accept tower.
- B. Verify dimensions of support are as shown on shop drawings.

3.2 INSTALLATION

- A. Install tower on steel dunnage in accordance with manufacturer's published instructions.
- B. Install tower on vibration isolators. Refer to Section 15070.
- C. Install condenser water piping with flanged connections to tower. Pitch condenser water supply to tower and condenser water suction away from tower. Refer to Section 15182.

- D. Install make-up water piping with flanged or union connections to tower. Pitch to tower. Refer to Section 15140.
- E. Install overflow, bleed, and drain, to concrete sump.
- F. Install Work in accordance with all Pennsylvania and Municipality of Shippensburg codes and standards.

3.3 FIELD QUALITY CONTROL

- A. Section 01770 - Closeout Procedures: Field inspecting, testing, adjusting, and balancing.
- B. Cleaning: Clean inside of the cooling tower thoroughly before filling with water for start-up. Clean factory finished surfaces. Repair any marred or scratched surfaces with manufacturer's epoxy or re-galvanizing touch-up paint approved by Department.
- C. Test for capacity under actual operating conditions per CTI Standards using an independent testing agency to verify compliance with the performance requirements. The test shall be performed on site after the tower is functional. The Department will notify the manufacturer of the date of the test. Provide supervisory personnel to witness the test.
 - 1. Should the test indicate failure to fully comply with performance requirements, modify as required and retest to demonstrate specified performance. Submit modifications for approval. Any approved modifications and retesting will be made at no cost to the Department.
- D. Sound performance compliance test: Test will be conducted by the Department's Acoustical Consultant. Test will establish compliance or non-compliance with "Sound design criteria" as specified in Performance Section. Test shall be performed on site after tower is functional. Advise Department and Professional two weeks prior to test date.
 - 1. Should test fail to meet specified performance, modify as required and retest to demonstrate specified performance. Submit modifications for approval make any modifications as approved or directed at no additional cost to the Department.

3.4 MANUFACTURER'S FIELD SERVICES

- A. Section 01400 - Quality Requirements: Manufacturers' field services.
- B. Supervise rigging, hoisting, and installation; include five eight-hour days per tower.

- C. Inspect tower after installation and submit report prior to start-up, verifying installation is in accordance with specifications and manufacturers recommendations.
- D. If alternate gear drive is used other than Marley's geared speed reducer, the first 5-years, including parts and labor, are to be provided by the cooling tower manufacturer. Frequency of oil changes are to be per the gear drive manufacturer's IOM lubrication specifications.

3.5 ADJUSTING

- A. Section 01770 - Closeout Procedures: Testing, adjusting, and balancing.
- B. Adjust bleed, control settings and airflow.

3.6 DEMONSTRATION AND TRAINING

- A. Section 01770 - Closeout Procedures: Requirements for demonstration and training.
- B. Demonstrate starting, maintenance and operation of tower.

3.7 SCHEDULES

- A. See drawings.

SECTION 15725

MODULAR INDOOR CENTRAL-STATION AIR-HANDLING UNITS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for variable-air-volume, single-zone air-handling units.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 01810 - Commissioning.
 - 5. Section 03300 - Cast-In-Place Concrete.
 - 6. Section 15065 - Motors for Mechanical Equipment.
 - 7. Section 15070 - Mechanical Sound, Vibration, and Seismic Control.
 - 8. Section 15075 - Mechanical Identification.
 - 9. Section 15182 - Hydronic Piping.
 - 10. Section 15815 - Metal Ducts.
 - 11. Section 15820 - Duct Accessories.
 - 12. Section 15950 - Testing, Adjusting, and Balancing.
 - 13. Section 15995 - Commissioning of Mechanical Systems.
 - 14. Section 16061 - Electrical Grounding and Bonding.
 - 15. Section 16075 - Electrical Identification.
 - 16. Section 16120 - Conductors and Cables.
 - 17. Section 16123 - Control-Voltage Power Cables.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ABS: Acrylonitrile butadiene styrene.
 - 2. APD: Air pressure drop.
 - 3. BMS: Basic mapping support.
 - 4. ETL: Electrical testing laboratory.
 - 5. GFI: Ground fault interrupter.
 - 6. HDPE: High density polyethylene.
 - 7. IGBT: Insulated gate bipolar transistor,
 - 8. LAN: Local area network.
 - 9. LED: Light emitting diode.
 - 10. MPT: Male pipe thread.
 - 11. NPS: Nominal pipe size.
 - 12. NRC: Sound absorption coefficient.
 - 13. PID: Proportional-integral-derivative.

14. psig: Pounds per square inch gauge.
15. PWM: Pulse width modulation.
16. STC: Sound transmission coefficient.
17. UV: Ultraviolet.
18. VFC: Voltage frequency converter.
19. VFD: Variable frequency drive.
20. w. c.: Water column.
21. w. g.: Water gauge.

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
2. Commissioning Authority (CA): An independent agent engaged by the Phoenix Sky Harbor International Airport to direct and coordinate the commissioning process for the Project, and to approve the Work requiring commissioning.
3. dB SWL: Sound power level in decibels, and is a logarithmic measure of the sound power in comparison to a specific reference level, generally a very low base level of Watts, 10^{-12} Watts.
4. Minimum Efficiency Reporting Value (MERV): A value from 1 to 16 that along with an associated air velocity represents the efficiency of a filter, and which is based on testing using different particle sizes, 1 of 7 approved flow velocities, and the required number of repeat cycles as specified in ASHRAE 52.2.
 - a. The flow velocity used to determine a MERV value must be stated with the MERV value for the MERV number to be meaningful.
 - b. The higher the MERV number, the higher the velocity.
5. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.
6. RS-485: A Telecommunications Industry Association (TIA) recommended standard for multipoint communications using two twisted-pairs defined in ANSI/TIA/EIA 485-A.

C. Reference Standards:

1. Air-Conditioning, Heating, and Refrigeration Institute (AHRI):

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

- 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
- 2. Coordination Drawings:
 - a. Prepare Coordination Drawings, including floor plans and other details drawn to scale, which show the following items coordinated with each other using input from the installers of the items involved:
 - 1) Mechanical-room layouts showing the relationships between the equipment components and the adjacent structural and mechanical elements.
 - a) The equipment provided must not exceed the dimensions of the unit used as the basis for design in the Contract Drawings.
 - b) Coordinate the sizes and locations of concrete bases with the actual equipment provided.
 - c) Coordinate sizes and locations of structural-steel support members, if any, with the actual equipment provided.
 - 2) The locations, types, and weights of equipment supports.
 - 3) Field measurements.
 - b. Submit the Coordination Drawings to the Program/Project Manager for approval

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Modular indoor central-station air handling units.
 - b. Shop Drawings:
 - 1) Coordination Drawings.
 - c. Certificates:
 - 1) Seismic Qualification Certificates.
 - d. Delegated Design Submittals:
 - 1) Signed and sealed fabrication details and calculations.
 - e. Special Procedure Submittals:
 - 1) Construction IAQ Management Plan
 - f. Qualification Statements:
 - 1) Modular indoor central-station air handling unit manufacturer's qualifications.
 - 2) Air-to-air energy recovery heat wheel manufacturer's qualifications.
 - 3) Professional Engineer's qualifications.
 - 4) Testing Agency's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Casing deflection test results to verify compliance with the casing deflection criteria
 - b. Manufacturer's Instructions:
 - 1) Manufacturer's written installation and startup check instructions.
 - c. Source Quality Control Submittals:
 - 1) Fan Sound-Power Level Rating Test Quality Control Report.
 - 2) Fan Performance Rating Test Quality Control Report.
 - 3) Water Coil Test Quality Control Report.
 - 4) Sound Absorption Test Quality Control Report.
 - d. Site Quality Control Submittals:
 - 1) Field Quality-Control Report for the Leak Test.
 - 2) Field Quality-Control Report for the Fan Operational Test.
 - 3) Field Quality-Control Report for the Pre-Filter Operational Test.
 - 4) Field Quality-Control Report for the Carbon Filters Operational Test.
 - 5) Field Quality-Control Report for the Dusting and Final Filter Operational Test.

- 6) Field Quality-Control Report for the Transmission Loss Test.
- 7) Field Quality-Control Report for the Sound Absorption Test.
- e. Manufacturer's Reports:
 - 1) Manufacturer's balance report.
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Hard copies and an electronic copy of the operation and maintenance data for the modular indoor central-station air handling units.
- D. Maintenance Material Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish spare parts that match the products installed in the following quantities, and package the spare parts with a protective covering for storage identified with labels describing the contents of the packages:
 - a) Filters:
 - (1) Furnish 1 set of filters for each modular indoor central-station air handling unit.
 - b) Pre-Filters:
 - (1) Furnish 1 spare set of pre-filters.
 - c) Dusting and Final Filters:
 - (1) Furnish one spare set of final and dusting filters.
 - d) Gaskets:
 - (1) Furnish 1 set of gaskets for each access door.
 - e) Fan Belts:
 - (1) Furnish 1 set of fan belts for each modular indoor central-station air handling unit.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky

- Harbor International Airport's agent will employ an independent Approved Agency.
- c. Periodic Special Inspections will be performed during the installation of medium-voltage wire, cable, and accessories.
2. Testing and Inspection Agencies:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.
- B. Qualifications:
1. Modular Indoor Central-Station Air Handling Unit Manufacturer's Qualifications:
 - a. Procure modular indoor central-station air handling unit equipment and air-to-air energy recovery heat wheels that have been manufactured in an ISO 9001 accredited manufacturing facility.
 - b. Submit the modular indoor central-station air handling unit manufacturer's and air-to-air energy recovery heat wheel manufacturer's qualifications to the Program/Project Manager for information.
 2. Professional Engineer's Qualifications:
 - a. Engage a qualified Professional Engineer registered in the State of Arizona to perform vibration isolation and seismic restraint analysis required for the modular indoor central-station air handling systems.
 - b. Submit the Professional Engineer's credentials to the Program/Project Manager for information.
 3. Testing Agency's Qualifications:
 - a. Employ an independent Testing Agency that is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, that is acceptable to the Authorities Having Jurisdiction (AHJ), and that has the experience and capability to conduct the testing specified herein.
 - 1) Testing Agency's Field Supervisor:
 - a) The Testing Agency's field supervisor to supervise onsite field quality control testing must be currently certified by the National Institute for Certification in Engineering Technologies (NICET) in accordance with the requirements specified in the Industrial Instrumentation Engineering Technology Industrial Instrumentation Program Detail Manual.
 - 2) Submit the qualifications of the Testing Agency, including the Testing Agency field supervisor's qualifications, to the Program/Project Manager for approval.
- C. Certifications:
1. Air-Conditioning, Heating, and Refrigeration Institute (AHRI) Certification:

- a. Factory-test the modular indoor central-station air-handling units and their components in accordance with the requirements of the Air-Conditioning, Heating, and Refrigeration Institute (AHRI) Certification Program in order to have the modular indoor central-station air-handling units listed and labeled by the AHRI.
 - 1) Provide central-station air-handling units that have been tested and certified in accordance with the requirements of the AHRI Central Station Air-Handling Units Certification Program specified in AHRI General OM, AHRI OM-430, and ANSI/AHRI 430.
 - 2) Provide coils for the central-station air-handling units that have been tested and certified in accordance with the requirements of the AHRI Forced Circulation Air-Heating and Air-Cooling Coils Certification Program specified in AHRI General OM, AHRI OM-410, and ANSI/AHRI 410.
2. Air Movement and Control Association International, Inc. (AMCA)
Licensed Products:
 - a. Provide only fans licensed to bear the AMCA seals by having participated in the AMCA Certified Ratings Program for sound and air performance.
 - 1) Comply with the procedures and testing requirements for performance rating fans specified in AMCA 11, AMCA 211, and AMCA 311.
 - 2) Provide only fans labeled with the AMCA Certified Ratings Seal.
3. Listing and Labeling of Electrical Components, Devices, and Accessories:
 - a. Provide electrical components, devices, and accessories that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.
4. Listing and Labeling of Air Handling Equipment:

- a. Provide air handler equipment that is listed and labeled by CSA International (CSA), Underwriters Laboratories, Inc. (UL), or another electrical testing laboratory (ETL) as complying with their requirements applicable to complete custom air handler units.
 - 1) Provide air handler units listed as a complete unit by CSA International (CSA), a Nationally Recognized Testing Laboratory (NRTL), or an electrical testing laboratory (ETL).
 - a) Individual component listing is not acceptable.
 - 2) Provide UL-recognized energy recovery wheels bearing the UL mark.
- 5. Seismic Qualification Certificates:
 - a. Prepare Seismic Qualification Certificates certifying that the modular indoor central-station air handling units, accessories, and components will withstand the seismic forces defined in Section 16071, Seismic Controls.
 - 1) Indicate whether withstand certification is based on an actual test of the assembled components, or on calculations.
 - 2) Include a dimensioned outline drawing of each equipment unit identifying the center of gravity, and locating and describing the mounting and anchorage provisions.
 - 3) Include a detailed description of the equipment anchorage devices on which the certification is based, and their installation requirements.
 - b. Submit the Seismic Qualification Certificates to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Package and protect materials to limit field repairs.
 - a. Deliver pre-finished products in a manner that will prevent material damage and deterioration or contamination from the elements.
 - b. Provide protective wrapping on pre-finished aluminum products.
 - c. Ship fan and drive shafts with a protective coating of lubricating oil.
 - 2. Units too large to be shipped by truck in a single piece may be shipped to site in sections.
 - 3. Deliver the modular indoor central-station air handling products to the Site on a factory base rail, and encapsulated in poly shrink wrap a minimum of 6 mils thick.
- B. Storage and Handling Requirements:
 - 1. Store and protect the modular indoor central-station air handling units in a clean dry place.
 - a. Protect the modular indoor central-station air handling units from the elements and construction traffic.

- b. Handle the modular indoor central-station air handling units carefully to avoid damage to the enclosures, components, and finish.
 2. Store and handle pre-finished products in a manner that will prevent material damage and deterioration or contamination from the elements.

C. Packaging Waste Management:

1. Remove shipping, blocking, and bracing materials.
 - a. Remove loose packing materials from inside the modular indoor central-station air handling unit.
 2. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 MODULAR INDOOR CENTRAL-STATION AIR HANDLING UNIT ASSEMBLIES

A. Manufacturers:

1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed:
 - 1) Energy Labs, <https://www.energylabs.com/web2/index.html>.
 - 2) Buffalo Air Handling, <http://www.buffaloair.com>.
 - 3) Climate Craft, <http://www.climatecraft.com>.
 - 4) Governair, <http://www.governair.com>.
 - 5) Huntair, Inc., a CES Group Company, <http://www.huntair.com>.
 - 6) Scott Springfield Mfg. Inc., <http://www.scottspringfield.com/MainHome.aspx>.
 - 7) Approved equal.
2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - 1) Any equipment substituted for the units specified in equipment schedules or otherwise on the Contract Drawings as the basis of design for this Contract must be fully equivalent to the unit specified, including unit dimensions.
 - 2) The dimensions of substituted equipment cannot exceed the dimensions of the unit specified in any direction.

B. Description:

1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC

International Building Code (IBC) as Amended by the City of Phoenix].

- b. National Electrical Code (NEC):
 - 1) Provide products and installation complying with requirements specified in NFPA 70.
 - 2) Provide wiring complying with the requirements specified in NFPA 70.

C. Performance:

1. Structural Performance:

- a. Provide modular indoor central-station air handling units having self-supporting casing panels capable of withstanding 133 percent of the internal static pressures indicated for the unit, without panel joints exceeding a deflection of $L/200$ where "L" is the unsupported span length within the completed casings.
- b. Unit Casings:
 - 1) At 1.5 times the operating pressure, the casing deflection must be less than or equal to $1/240$ inch.
 - a) If the unit's casings are incapable of limiting deflection to $1/240$ at 1.5 times the operating pressure, have the manufacturer provide additional internal reinforcement to comply with this deflection criteria.
 - b) To verify the casings' compliance with the deflection criteria, submit the results of a casing deflection test to the Program/Project Manager for information.
 - 2) Design the unit casing so it has a leakage rate not greater than 0.75 percent on both positive and negative pressure sections at 8 inches w. c.
- c. Base:
 - 1) The frame must comply with a deflection criterion of $1/240$ for an unsupported span.
- d. Coils:
 - 1) Provide coils that have been tested up to 315 psig, and that are suitable for operation at 250 psig.
 - 2) Do not allow the coils to function as structural components of the unit.

2. Dampers:

- a. Provide dampers having a leakage rate not exceeding 2 percent of the air quantity passing the damper when its face velocity through the damper is 2000 feet per minute (10m/s) and the pressure differential is 4 inches w. g. (1000Pa) and the measurement is taken in accordance with the method specified in ANSI/AMCA 500-D.

3. Filters:

- a. Provide commercial standard size 2" thick class 2 MERV 8 pre-filters, 12" thick class 2 MERV 13 final filters.

4. Air Purification System:

- a. Provide factory installed Global Plasma Solutions i-MOD air purification system in the unit behind the chilled water cooling coils.
 - 5. Fire-Hazard Classification:
 - a. Casing Insulation Fire and Smoke Hazard Rating:
 - 1) Provide casing insulation and accessories including sealants having a composite fire and smoke hazard rating of 25/50 when measured in accordance with the requirements specified in ASTM E 84 and UL 723.
 - 6. Seismic Performance:
 - a. Provide modular indoor central-station air handling units capable of withstanding the effects of earthquake motions determined in accordance with the procedures specified in ASCE/SEI 7.
 - 1) The phrase "capable of withstanding" is hereby defined to mean the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event.
- D. Design Criteria:
- 1. Provide factory-assembled modular indoor central-station air handling units having the configurations and dimensions indicated on the Contract Drawings.
 - a. Provide modular indoor central-station air handling equipment having fan wall-type technology that requires an arrangement of 4 direct driven plenum fans constructed in accordance with the Air Movement and Control Association, Inc. (AMCA) requirements in AMCA 200 and AMCA 201 for the duty specified.
 - 1) Select a fan wall system that delivers the specified airflow quantity at the specified operating total static pressure and fan/motor speed.
 - a) Provide a fan wall system consisting of multiple fan and motor "cubes" spaced in the airway tunnel to produce a uniform air flow and velocity profile across the entire airway tunnel cross section.
 - b) Each fan/motor shall have its own VFD.
 - 2) Flow Measuring System:
 - a) Provide a flow measuring system consisting of a flow measuring station having 4 static pressure taps and 4 total pressure tubes located at the throat of the fan inlet cone, and that indicates the air flow in cubic feet per minute (CFM).
 - b) Provide a flow measuring system that has no effect on fan performance.
 - b. Design the units so they can be supported by a concrete housekeeping pad.
 - c. The Contract Drawings indicate the general arrangement of piping, fittings, and specialties.

2. Provide modular indoor central-station air handling units complying with the scheduled performance for airflow rates, static pressure, and sound value.
 - a. The coil and filter face velocities scheduled are maximums, so design the air handling units not to be exceed these values.
 - b. Design the air handling units to have coil flow rates and pressure drops within 10 percent of the specified values.
3. NFPA Compliance:
 - a. Provide modular indoor central-station air handling units complying with the requirements for design, fabrication, and installation of air-handling units and components specified in NFPA 90A.
4. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. (ASHRAE) Compliance:
 - a. Provide modular indoor central-station air handling units complying with the applicable requirements specified in Section 5 "Systems and Equipment" and Section 7 "Construction and Startup" in ASHRAE 62.1-2004.
 - b. Provide modular indoor central-station air handling units complying with the applicable requirements specified in Section 6 "Heating, Ventilating, and Air-Conditioning of ASHRAE/IESNA 90.1-2004.
5. Access Panels and Access Doors:
 - a. Provide access panels and access doors at the following locations:
 - 1) Fan Section:
 - a) Provide access doors and inspection and access panels.
 - 2) Access Section:
 - a) Provide access doors.
 - 3) Coil Section:
 - a) Provide inspection and access panels.
 - 4) Damper Section:
 - a) Provide inspection and access panels.
 - 5) Filter Section:
 - a) Provide access doors large enough to allow periodic removal and installation of filters.
 - 6) Mixing Section:
 - a) Provide access doors.
6. Vibration Isolation and Seismic Restraint Design:
 - a. Employ a qualified Professional Engineer to design vibration isolation and seismic restraints complying with the performance requirements and design criteria, including comprehensive analysis data signed and sealed by the Professional Engineer responsible for their preparation.
 - 1) Vibration Isolation Base Details:
 - a) Have the Professional Engineer detail fabrication, including anchorages and attachments to the structure and to the supported equipment.

- (1) Include adjustable motor bases, rails, and frames for equipment mounting.
- 2) Design Calculations:
 - a) Have the Professional Engineer calculate the requirements for selecting vibration isolators and seismic restraints, and for designing vibration isolation bases.
 - b. Submit the signed and sealed fabrication details and calculations to the Program/Project Manager for approval.
7. Arrange the air-handling units so there is access space around the units for service and maintenance.
8. Product Data:
 - a. For each air-handling unit indicated in the Contract Documents, obtain the manufacturer's Product Data that includes the following information:
 - 1) Unit dimensions and weights, including the center of gravity of all sections.
 - a) Include equipment drawings that show plans and elevations to scale, and the location of components.
 - b) Include setting drawings, templates, diagrams, instructions, and directions for the items to be embedded.
 - c) Indicate the clearances required for service of the equipment.
 - 2) Cabinet material, metal thickness, finishes, insulation, construction details, and accessories.
 - 3) Fans:
 - a) Certified fan-performance curves that indicate the system operating conditions.
 - b) Certified fan-sound power ratings.
 - (1) Provide equipment sound levels at the inlet, discharge, and radiated.
 - c) A static pressure summary clearly indicating the internal and external pressures for the equipment.
 - d) Fan construction and accessories.
 - (1) Furnish internal vibration isolation selections as part of the Product Data.
 - e) The manufacturer's coil selections indicating compliance with the requirements specified in ANSI/AHRI 410.
 - (1) Clearly indicate the materials of construction, fluid properties, and pressure drops.
 - f) Filter information, including the initial air pressure drop (APD), recommended final APD, dust spot efficiency, media, and frame description.
 - g) Motor ratings, electrical characteristics, and motor efficiencies.
 - h) Requirements for power supply wiring, including diagrams clearly indicating factory-installed and field-installed wiring.

- 4) Certified coil-performance ratings indicating system operating conditions.
- 5) Dampers, including housings, linkages, and operators.
- 6) Filters and their performance characteristics.

E. Materials:

1. Unit Casings:

- a. Provide unit casings for the modular indoor central-station air handling units consisting of 2-inch thick double-wall acoustic roof and wall panels.
 - 1) In all sections except fan sections, provide unit casings consisting of a 16-gauge galvanized steel exterior casing wall and a solid interior wash down liner fabricated from at least 22-gauge steel.
 - a) Within fan sections, provide perforated liner.
 - 2) Between the liner and insulation, provide an offset film liner.
 - 3) Forming:
 - a) Form the walls, roofs, and floors so they each have at least two breaks at each joint.
 - 4) Mechanically fasten the panel seams using sheet metal screws or pop rivets on 8-inch centers, and caulk the seams with clear water-resistant silicone sealant.
 - a) Provide a clean flush unit exterior by turning the wall seams inward.
 - 5) Airstream Surfaces:
 - a) For surfaces in contact with the airstream, provide surfaces complying with the requirements specified in ASHRAE 62.1-2004.

b. Base:

- 1) Provide the modular indoor central-station air handling units with a structural C-channel perimeter base having intermediate channel and angle support.
 - a) For units that exceed 24 feet in length, provide at least an 8 inch base rail.
- 2) Provide a 14-gauge aluminum tread plate floor having fully welded seams for the base.
 - a) Verify the integrity of the floor by subjecting floor welds to a dye penetrant test.
 - b) Floors that are attached with screws or adhesive sealants are unacceptable.
- 3) Insulate the base using 2-inch polyurethane foam.
- 4) Provide a base pan having an integral 1.5-inch water dam, including all floor penetrations.
- 5) Provide the base with a minimum of 4 removable welded structural lifting lugs per section.
- 6) Provide 1-1/4- inch auxiliary drains downstream of the cooling coil.
- 7) Extend connections through the unit base, and cap them.

- c. Casing Insulation and Adhesive:
 - 1) Provide 2-inch casing insulation complying with the requirements for Type II fibrous glass duct lining insulation specified in ASTM C 1071, and having a minimum density of 3 pounds per cubic foot, a minimum conductivity factor of 0.23 British thermal unit-inches per square foot per hour per degree Fahrenheit (Btu-in/hr-ft²·°F), and a minimum insulation sound absorption coefficient of 1.05.
 - 2) Using adhesive and mechanical fasteners, factory-apply the casing insulation to the internal surface of section panels downstream from, and including, the cooling-coil section.
 - a) Liner Adhesive:
 - (1) Provide liner adhesive complying with the requirements for Type I adhesive specified in ASTM C 916.
 - b) Mechanical Fasteners:
 - (1) Provide galvanized steel mechanical fasteners suitable for adhesive attachment, mechanical attachment, or welding attachment to the duct without damaging the liner and without causing leakage in the cabinet when they are applied as recommended by the manufacturer.
 - c) Coat the air-stream surface of the liner materials applied in this location with a temperature-resistant coating, or depending on service-air velocity face the air-stream surface of the liner materials applied in this location with a plain or coated fibrous mat or fabric.
- d. Inspection and Access Panels and Access Doors:
 - 1) Inspection and Access Panels:
 - a) Provide double walled access panels having a 16 gauge galvanized steel exterior panel and a 22-gauge solid interior panel.
 - b) Fasteners:
 - (1) For panel lift-out operation, provide 2 or more camlock type fasteners.
 - (2) Provide an arrangement allowing the inspection and access panels to be opened against an air-pressure differential.
 - c) Gasket:
 - (1) Provide neoprene gaskets applied around the entire perimeter of each panel frame.
 - d) Size:
 - (1) Provide inspection and access panels that are large enough to allow inspection and maintenance of the air-handling unit's internal components.
 - 2) Access Doors:

- a) Provide double walled access doors having a 16 gauge galvanized steel exterior panel and a 22-gauge solid interior panel.
 - (1) Provide access doors having the same thickness as the wall.
 - b) Door Frames:
 - (1) Provide reinforced door frames so that the openings remain square during manufacturing and installation.
 - (2) Door frames formed from the casing wall are unacceptable.
 - c) Windows:
 - (1) In each fan and filter section access door, provide a double-glazed, wire-reinforced safety glass window at least 10 inches round, having an air space between the panes, and sealed with interior and exterior rubber seals.
 - d) Hinges and Latches:
 - (1) Provide a minimum of 2 ball-bearing hinges or stainless-steel piano hinges, and 2 wedge-lever-type latches that are operable from both inside and outside for each door.
 - (2) Arrange the doors so they can be opened against an air-pressure differential.
 - (3) In the event the unit size does not allow for in-swing doors on positive pressure compartments, provide a safety pressure relief latch.
 - e) Gaskets:
 - (1) Provide a double gasket arrangement having a neoprene "knife edge" seal and a 3/4-inch automotive bulb seal to continuously seal each access door.
 - (a) Seals requiring pop rivets or screwed attachments are unacceptable.
 - f) Door Size:
 - (1) Provide door openings that are at least 24 inches by 72 inches, height permitting.
 - g) Handles:
 - (1) Provide a minimum of 2 glass-reinforced Ultramid nylon handles for each door.
 - (2) Provide handles that are operable from either side of the door.
 - (3) Provide fan section doors having a tool operated locking device that is part of the handle.
 - (4) Each fan section door must be wide enough to allow the removal of the fan motor.
 - h) Provide a 1-1/4-inch test port at each access door.
- 3) Service Light:

- a) Provide 100 Watt vaporproof light fixtures having a switched junction box located inside adjacent to the door.
 - b) Locations:
 - (1) Provide a service light for [each section accessed by a door.
 - e. Condensate Drain Pans:
 - 1) To collect condensate from cooling coils, including coil piping connections, coil headers, and return bends, and to direct water toward drain connections, provide condensate drain pans that are fabricated from single-wall, stainless-steel sheet, are an integral part of the floor plating, and have a 2 percent slope in at least 2 planes.
 - a) Length:
 - (1) Extend drain pans downstream from the leaving face to a length complying with the length requirements specified in ASHRAE 62.1-2004.
 - b) Depth:
 - (1) Provide drain pans that are at least 2 inches (50mm) deep.
 - 2) Drain Connection:
 - a) Provide a drain connection located at the lowest point of each pan, and sized to prevent overflows.
 - b) Terminate the drain connections with a threaded nipple on both ends of the pan.
 - c) Connection Size:
 - (1) Provide at least a 1 inch (DN 25) nominal pipe size drain connection.
 - 3) For units with stacked coils, provide an intermediate drain pan to collect condensate from the top coil.
 - f. Air-Handling-Unit Mounting Frame:
 - 1) Provide welded formed galvanized-steel channel or structural channel supports, designed for low deflection, and having integral lifting lugs.
 - 2) Seismic Fabrication Requirements:
 - a) Provide mounting bases and the attachments to the air-handling unit sections, accessories, and components having reinforcement strong enough to withstand the seismic forces defined in Section 15070, Mechanical Sound, Vibration, and Seismic Control, when air-handling unit frame is anchored to the building structure.
2. Fan, Drive, and Motor Section:
- a. Fan and Drive Assemblies:
 - 1) Provide statically and dynamically balanced fan and drive assemblies designed for continuous operation at the maximum-rated fan speed and motor horsepower.

- 2) Fan and Drive Shafts:
 - a) Provide fan and drive shafts designed for continuous operation at the maximum-rated fan speed and motor horsepower, and having field-adjustable alignment.
 - (1) Provide turned, ground, and polished hot-rolled steel shafts having a keyway.
 - (2) Provide fan and drive shafts designed to operate at no more than 70 percent of the first critical speed at the top of the fan's speed range.
- b. Plenum Fan Housings:
 - 1) Provide steel plenum fan housing frames and panels fabricated without the fan scroll and volute housing.
 - a) Provide multiple centrifugal plenum direct drive fans complying with the requirements for AMCA Arrangement 4 specified in AMCA 99, and having an aluminum wheel.
 - b) Provide at least Class II supply fans.
 - c) Provide fans tested in accordance with AMCA 211 and AMCA 311, and that comply with the requirements of the AMCA air performance and sound Certified Ratings Programs.
 - d) Provide continuously welded, die-formed airfoil type fan blades designed for maximum efficiency and quiet operation.
 - (1) Partial welding on airfoil blades is unacceptable.
 - e) Provide fan impellers that are statically and dynamically balanced, and provide complete fan assemblies that have been test balanced at operating speed prior to shipment.
 - (1) Submit the manufacturer's balance report to the Owner.
 - f) Provide fully enclosed metal belt guard s for the plenum fans.
 - g) Provide a full wheel screen and inlet screen fabricated from galvanized expanded metal.
 - h) The minimum acceptable fan sizes are the sizes scheduled in the Mechanical Equipment Schedule on the Contract Drawings.
 - 2) Manufacturers:
 - a) Energy Labs
 - b) Approved equal.
- c. Fan Shaft Bearings:
 - 1) Grease-Lubricated Bearings:
 - a) Provide self-aligning, pillow-block-type, ball or roller bearings rated for a minimum life (L-10) in excess of 200,000 hours at the maximum operating speed.
 - b) Provide an adapter mount and two-piece, cast-iron housing for the grease-lubricated bearings having grease lines
- d. Internal Vibration Isolation and Seismic Control:

- 1) Provide fans that are factory-mounted with the manufacturer's standard restrained vibration isolation mounting devices having a minimum static deflection of 2 inches (50mm).
- 2) Seismic Fabrication Requirements:
 - a) For fan sections, internal mounting frames and attachments to fans, fan housings, motors, casings, accessories, and other fan section components having their fan-mounting frames and air-handling-unit mounting frames anchored to the building structure, provide reinforcement strong enough to withstand the seismic forces defined in Section 15070, Mechanical Sound, Vibration, and Seismic Control.
- 3) Provide fans and motors mounted on a welded structural steel epoxy coated isolation base.
 - a) Formed metal isolation bases are unacceptable.
- 4) Provide at least 4 seismically restrained isolators.
 - a) The minimum isolation efficiency acceptable is 98 percent.
- 5) For fans which will travel more than 1/4 inch when operating, provide spring thrust restraints.
 - a) Size and adjust the springs so the assembly floats at the design operating condition.
- e. Motor:
 - 1) Provide motors complying with the NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 15065, Motors for Mechanical Equipment.
 - a) Provide motors tested and rated to Test Method B specified in IEEE 112 and Part 12.53 "Machine Sound (Medium Induction Motors)" in NEMA MG 1.
 - 2) Enclosure Type:
 - a) Provide totally enclosed, fan cooled enclosures.
 - 3) Provide NEMA Premium (TM) efficient motors complying with the requirements defined for Design B in NEMA MG 1, and insulated for 40 degrees Celsius ambient continuous duty conditions.
 - 4) Motor Sizes:
 - a) Provide at least the size motor indicated on the Contract Drawings.
 - (1) If the motor size is not indicated on the Contract Drawings, provide a motor large enough so the driven load will not require the motor to operate in a service factor range above 1.0.
 - 5) Motor Service Factor:
 - a) Provide motors rated for a motor service factor of 1.15.
 - 6) Mount the motors on an adjustable motor mount base.
 - a) For motors 20 horsepower and greater, provide a dual bolt slide adjustment base.

- 7) Controllers, Electrical Devices, and Wiring:
 - a) Provide controllers, electrical devices, and wiring complying with requirements for electrical devices and connections specified in other Sections.
- 8) Provide unit-mounted disconnect switches on the exterior of the unit.
- f. Variable Frequency Controllers:
 - 1) Provide dual variable frequency controllers complying with the requirements specified in NEMA ICS 2, and having an insulated gate bipolar transistor (IGBT), pulse width modulation (PWM), and a voltage frequency converter (VFC).
 - a) Provide dual variable frequency controllers that have been listed and labeled as a complete unit, and that are arranged to variable the speed for a 3-phase induction motor complying with the requirements for Design B motors specified in NEMA MG 1 by adjusting the output voltage and frequency.
 - b) For each drive, provide dual variable frequency controllers that are capable of driving the motor and horsepower configuration selected.
 - (1) For each duplex unit, provide an alternation method for normal operation to allow the selection of the primary controller under normal conditions.
 - (2) Interlock the dual primary variable frequency controllers so that, in the event of a failure of the primary controller, the load is automatically switched from the primary variable frequency controller over to the other variable frequency controller in the pair without operator input.
 - (3) Configure each unit so it can be locked out for maintenance, removal, or replacement without interrupting operation of the second unit in the pair.
 - 2) Output Rating:
 - a) Provide dual variable frequency controllers having output a 3-phase; 6 Hertz to 60 Hertz output, with the voltage proportional to the frequency throughout voltage range.
 - 3) Unit Operating Requirements:
 - a) Provide variable frequency controllers having an input AC voltage tolerance of 380 Volts to 500 Volts, plus or minus 10 percent.
 - b) Provide variable frequency controllers having an input frequency tolerance of 50/60 Hertz, plus or minus 6 percent.
 - c) Minimum Efficiency:
 - (1) Provide variable frequency controllers having a full load minimum efficiency of 96 percent at 60 Hertz.
 - d) Minimum Displacement Primary-Side Power Factor:

- (1) Provide variable frequency controllers having a minimum displacement primary-side power factor of 96 percent.
- e) Overload Capability:
 - (1) Provide variable frequency controllers having an overload capability of 1.1 times the base load current for 60 seconds, and 2.0 times the base load current for 3 seconds.
- f) Starting Torque:
 - (1) Provide variable frequency controllers having a starting torque 100 percent of the rated torque, or as indicated in the Contract Documents.
- g) Speed Regulation:
 - (1) Provide variable frequency controllers having a speed regulation of plus or minus 1 percent.
- 4) Provide an isolated control interface to allow the controller to follow the control signal over an 11:1 speed range.
- 5) Internal Adjustability Capabilities:
 - a) Minimum Speed:
 - (1) Provide variable frequency controllers having a minimum speed of 5 percent to 25 percent of the maximum revolutions per minute (rpm).
 - b) Maximum Speed:
 - (1) Provide variable frequency controllers having a maximum speed of 80 percent to 100 percent of the maximum revolutions per minute (rpm).
 - c) Acceleration:
 - (1) Provide variable frequency controllers having an acceleration within the range 2 seconds to 22 seconds.
 - d) Deceleration:
 - (1) Provide variable frequency controllers having a deceleration within the range 2 seconds to 22 seconds.
 - e) Current Limit:
 - (1) Provide variable frequency controllers having a current limit of 50 percent minimum to 110 percent maximum of the current rating.
- 6) Self-Protection and Reliability Features:
 - a) Input Transient Protection:
 - (1) Provide variable frequency controllers having input transient protection provided by means of surge suppressors.
 - b) Trips:
 - (1) Provide variable frequency controllers having undervoltage and overvoltage trips; and inverter overtemperature, overload, and overcurrent trips.

- (2) Provide variable frequency controllers having instantaneous line-to-line and line-to-ground overcurrent trips.
- c) Motor Overload Relays:
 - (1) Provide variable frequency controllers having adjustable motor overload relays capable of performance complying with the requirements for Class 20 performance specified in NEMA ICS 2.
- d) Notch Filter:
 - (1) Provide variable frequency controllers having a notch filter to prevent operation of the controller-motor-load combination at a natural frequency of the combination.
- e) Loss-of-Phase Protection:
 - (1) Provide variable frequency controllers having loss-of-phase protection.
- f) Reverse-Phase Protection:
 - (1) Provide variable frequency controllers having reverse-phase protection.
- g) Short-Circuit Protection:
 - (1) Provide variable frequency controllers having short-circuit protection.
- h) Motor Overtemperature Fault:
 - (1) Provide variable frequency controllers having motor overtemperature fault protection.
- 7) Automatic Reset/Restart:
 - a) Provide variable frequency controllers having an automatic reset/restart function that attempts 3 restarts after a controller fault or on return of power after an interruption and before shutting down for a manual reset or fault correction.
 - b) Provide a bi-directional auto-speed search capable of starting into rotating loads spinning in either direction, and returning the motor to the set speed in the proper direction, without damage to the controller, motor, or load.
- 8) Power-Interruption Protection:
 - a) Provide variable frequency controllers having power-interruption protection that prevents the motor from re-energizing after a power interruption until the motor has stopped.
- 9) Torque Boost:
 - a) Provide variable frequency controllers having a torque boost feature that automatically varies the starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.
- 10) Motor Temperature Compensation at Slow Speeds:

- a) To protect self-cooled, fan-ventilated motors against high temperatures, provide variable frequency controllers that compensate for the motor temperatures at slow speeds by adjusting the current fallback based on the output frequency.
- 11) Status Lights:
 - a) Provide door-mounted light emitting diode (LED) status lights that indicate the following conditions:
 - (1) Power on.
 - (2) Run.
 - (3) Overvoltage.
 - (4) Line fault.
 - (5) Overcurrent.
 - (6) External fault.
- 12) Panel-Mounted Operator Station:
 - a) Provide variable frequency controllers having a panel-mounted operator station with start-stop and auto-manual selector switches having a manual-speed-control potentiometer and elapsed time meter.
 - b) Provide meters or digital readout devices, and a selector switch mounted flush in the controller door, that are connected so the following controller parameters will be indicated:
 - (1) Output frequency (Hertz).
 - (2) Motor speed (rpm).
 - (3) Motor status (running, stop, fault).
 - (4) Motor current (Amperes).
 - (5) Motor torque (percent).
 - (6) Fault or alarming status (code).
 - (7) Proportional-integral-derivative (PID) feedback signal (percent).
 - (8) DC-link voltage (Volts direct current).
 - (9) Set-point frequency (Hertz).
 - (10) Motor output voltage (volts).
- 13) Control Signal Interface:
 - a) Electric Input Signal Interface:
 - (1) Provide variable frequency controllers having a minimum of 2 analog inputs (0 Volts to 10 Volts or 0/4-20 milliamperes) and 6 programmable digital inputs.
 - b) Provide variable frequency controllers having remote signal inputs capable of accepting any of the following speed-setting input signals from the control system:
 - (1) 0 Volts DC to 10 Volts DC.
 - (2) 0-20 milliamperes or 4-20 milliamperes.
 - (3) Potentiometer using up/down digital inputs.
 - (4) Fixed frequencies using digital inputs.
 - (5) RS485 inputs.

- (6) Keypad display inputs from local manual operation.
- c) Provide variable frequency controllers having an output signal interface, with a minimum of 1 analog output signal (0/4-20 milliamperes), which can be programmed to accept any of the following:
 - (1) Output frequency (Hertz).
 - (2) Output current (load).
 - (3) DC-link voltage (Volts direct current).
 - (4) Motor torque (percent).
 - (5) Motor speed (rpm).
 - (6) Set-point frequency (Hertz).
- d) Provide variable frequency controllers having a remote indication interface, with a minimum of 2 dry circuit relay outputs (120 Volts AC, 1 Ampere), for remote indication of the following conditions:
 - (1) Motor running.
 - (2) Set-point speed reached.
 - (3) Fault and warning indication (overtemperature or overcurrent).
 - (4) High- speed or low-speed limits reached.
- 14) Communications:
 - a) Provide variable frequency controllers having an RS485 interface complying with the requirements specified in ANSI/TIA/EIA 485-A, and that allows a voltage frequency converter (VFC) to be used with an external system within a multidrop local area network (LAN) configuration.
 - (1) The interface must allow all parameter settings of the voltage frequency converter (VFC) to be programmed via the basic mapping support (BMS) control.
 - (a) Provide the capability for the voltage frequency converter (VFC) to retain these settings within the nonvolatile memory.
- 15) Integral Disconnecting Means:
 - a) Provide an instantaneous-trip circuit breaker with a lockable handle that complies with the requirements specified in NEMA AB 1.
- 16) Variable Frequency Controller Accessories:
 - a) Factory-install the variable frequency controller accessory devices in the controller enclosure unless otherwise indicated in the Contract Documents.
 - b) Push-Button Stations, Pilot Lights, and Selector Switches:
 - (1) Provide heavy-duty type push-button stations, pilot lights, and selector switches complying with the requirements specified in NEMA ICS 2.
 - c) Standard Displays:

- (1) Provide variable frequency controllers having the following standard displays:
 - (a) Output frequency (Hertz).
 - (b) Set-point frequency (Hertz).
 - (c) Motor current (amperes).
 - (d) DC-link voltage (Volts direct current).
 - (e) Motor torque (percent).
 - (f) Motor speed (rpm).
 - (g) Motor output voltage (Volts).
3. Coil Section:
 - a. Provide coil sections complying with the requirements specified in ANSI/AHRI 410.
 - 1) Fabricate the coil section so the coil can be removed and replaced for maintenance, and to allow in-place access for service and maintenance of the coils.
 - 2) Fully enclose the coils within the casing
 - b. Coils:
 - 1) Provide coils fabricated from tube having an outside diameter of at least 5/8 inches, tube walls at least 0.20 inch thick, and return bends of 0.25 inch.
 - a) Provide cooling coils having a stainless steel casing.
 - b) Provide heating coils having a galvanized casing.
 - 2) Mount the coils on angle racks that allow the coils to be individually removed.
 - a) Provide cooling coils fabricated from Type 304 stainless steel.
 - b) Provide heating coils fabricated from galvanized steel.
 - c. Coil Fins:
 - 1) Provide 0.0075-inch thick aluminum coil fins spaced so there are no more than 10 fins per inch.
 - d. Coil Connections:
 - 1) Provide red brass coil connections having male pipe threads.
 - 2) Extend the coil connections through the unit casing.
 - a) Provide grommet seals where the coils penetrate the casing, and completely seal off the internal sides of the coil penetrations.
 - e. Coil Drain Pans:
 - 1) Provide continuously welded 16 gauge stainless steel drain pans, double sloped for positive drainage, under all cooling coils.
 - a) Provide cooling coil drain pans that extend fully under the cooling coil header and return bends.
 - 2) For stacked coil configurations, provide intermediate drain pans fabricated from the same material as the primary drain pan, and interconnect the intermediate drain pans using 1-inch copper drain line.
 - f. Drain and Vent Connections:

- 1) Provide coils that are fully drainable.
- 2) Provide a drain and vent connection on each coil, and extend the drain and vent connection to the outside of the unit casing.
4. Air Filtration Section:
 - a. Provide an air filtration section complying with the requirements specified in NFPA 90A.
 - 1) Provide an air filtration section having a minimum arrestance in accordance with the requirements specified in ANSI/ASHRAE 52.1, and a minimum efficiency reporting value (MERV) in accordance with the requirements specified in ANSI/ASHRAE 52.2.
 - 2) Provide filter holding frames arranged to have a flat or angular orientation that allows the filters to be removed from one side or to be lifted out from the access plenum.
 - 3) Provide access doors on both sides of the unit.
 - b. Pre-Filters:
 - 1) Provide pleated, disposable pre-filters having a minimum efficiency reporting value (MERV) of 8, and having at least the efficiency and area as scheduled on the Contract Drawings.
 - a) Each filter consists of non-woven synthetic media, a support grid, and a frame.
 - b) Provide filters listed as UL Class II filters.
 - 2) Provide prefabricated galvanized rack to install the pre-filters on.
 - a) Where upstream access is available, provide filters that lift out.
 - b) Where upstream access is unavailable, provide filters that slide out.
 - c. Dusting and Final Filters:
 - 1) Provide dusting filters having a minimum efficiency reporting value (MERV) of 8 downstream from the sorbent.
 - 2) Provide final filters as scheduled on the Contract Drawings.
 - a) Provide high performance, deep pleated, totally rigid and disposable final filters having a minimum efficiency reporting value (MERV) of 13.
 - b) Provide final filters consisting of filter media of high density microfine glass fibers laminated to a non-woven synthetic backing and having a media support grid, contour stabilizers, and a galvanized enclosing frame.
 - c) Provide filters listed as UL Class II filters.
 - 3) Provide final filters installed in a factory-fabricated 16 gauge galvanized steel frame fitted with gaskets and having heavy duty positive sealing fasteners.
 - d. Filter Gage:
 - 1) Provide a filter gauge having a signal gauge for each bank of filters to indicate when the filters need to be changed out.

- 2) Flush mount the filter gauge within the casing.
 - a) Surface mounted gauges are unacceptable.
- 3) Provide a sensing probe and shut off valve for each gauge.
- 4) Manufacturers:
 - a) Dwyer Instruments, Inc., Series 2000, Magnehelic®, <http://www.dwyer-inst.com>.
 - b) Approved equal.
5. Electrical Requirements:
 - a. Wiring:
 - 1) Provide a junction box at each motor for the air handler.
 - 2) Provide wiring from the variable frequency drives (VFD) to the motors complying with the wiring requirements specified in other Sections.
 - b. Lighting:
 - 1) Provide a light within each service section.
 - a) Provide lights having vapour proof enclosures with guards.
 - b) Wire the lights to a single switch mounted 48 inches above the installed level of the equipment.
 - 2) Provide a ground fault interrupter (GFI) duplex service receptacle adjacent to the supply fan.
 - 3) Provide lights and service receptacles that remain powered when the unit disconnect is open.
 - 4) Provide a fused disconnect device for the light circuit.
 - c. Raceway:
 - 1) Provide a 1-inch conduit raceway the entire length of the unit having a junction box for the control wiring in each section.
 - 2) Clearly label the conduit for use by the temperature controls installer.
6. Dampers:
 - a. Provide dampers designed to minimize air leakage by means of overlapping seals.
 - b. Damper Frames:
 - 1) Provide damper frames constructed from extruded aluminum having at least a 12 gauge thickness.
 - c. Damper Blades:
 - 1) Provide 6-inch wide damper blades having a single unit airfoil design, and constructed from extruded aluminum having at least a 12 gauge thickness.
 - d. Pivot Rods:
 - 1) Provide extruded aluminum pivot rods having a 7/8-inch hexagon cross section, and that interlock into the blade section.
 - e. Bearings:
 - 1) Provide damper bearings designed to eliminate metal to metal contact.

- 2) Provide double seal type bearings having a Celcon inner bearing fixed to a hexagon headed aluminium pivot rod that rotates within a polycarbonate outer bearing that has been inserted into the damper frame to prevent the outer bearing from rotating.
- f. Blade Hardware and Linkage:
 - 1) Provide non-corrosive, reinforced cadmium plated steel hardware.
 - 2) Install the blade hardware and linkage within the frame so it is not exposed to the air stream.
 - 3) For multiple damper assemblies, provide jackshaft assemblies.
- g. Electronic Damper Operators:
 - 1) Provide direct-coupled type electronic damper operators designed for at least 60,000 full-stroke cycles at the rated torque.
 - 2) Damper Position Indicators:
 - a) Provide electronic damper position indicators having a visual scale indicating the percent of travel, and a 2-Volts DC to 10-Volts DC feedback signal.
 - 3) Operator Motors:
 - a) Provide operator motors complying with the requirements specified for the NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors in Section 15065, Motors for Mechanical Equipment.
 - b) Provide operator motors sized to have sufficient reserve power to provide a smooth modulating action or a two-position action.
 - c) Gear Trains:
 - (1) Provide permanent split-capacitor or shaded-pole type: gear trains that are completely oil immersed and sealed.
 - (2) Equip spring-return motors with an integral spiral-spring mechanism placed in housings designed so the mechanism can be easily removed for service or adjustment of the limit switches, auxiliary switches, or feedback potentiometer.
 - 4) Nonspring-Return Motors:
 - a) If providing nonspring-return motors for dampers larger than 25 Square feet (2.3m²), size the motor for a running torque of 150 inch-pounds-force (16.9Nm) and a breakaway torque of 300 inch-pounds-force (33.9Nm).
 - 5) Spring-Return Motors:
 - a) If providing spring-return motors for dampers larger than 25 Square feet (2.3m²), size the motor for a running and breakaway torque of 150 inch-pounds-force (16.9Nm).
 - 6) Torque Calculations:
 - a) Calculate the required running torque for the damper size as follows:
 - (1) Parallel-Blade Damper with Edge Seals:

- (a) For parallel-blade dampers having edge seals, provide 7 inch·pounds·force per square foot (86.8kg·cm/m²) of damper.
 - (2) Opposed-Blade Damper with Edge Seals:
 - (a) For opposed-blade dampers with edge seals, provide 5 inch·pounds·force per square foot (62kg·cm/m²) of damper.
 - (3) Parallel-Blade Damper without Edge Seals:
 - (a) For parallel-blade dampers without edge seals, provide 4 inch·pounds·force per square foot (49.6kg·cm/m²) of damper.
 - (4) Opposed-Blade Damper without Edge Seals:
 - (a) For opposed-blade dampers without edge seals, provide 3 inch·pounds·force per square foot (37.2kg·cm/m²) of damper.
 - b) For dampers having pressure drops of 2 inches w. g. to 3 inches w. g. (500Pa to 750Pa), or face velocities of 1000 feet per minute to 2500 feet per minute (5m/s to 13m/s), increase the running torque by 1.5 inch·pounds·force per square foot.
 - c) For dampers having pressure drops of 3 inches w. g. to 4 inches w. g. (750Pa to 1000 Pa), or face velocities of 2500 feet per minute to 3000 feet per minute (13m/s to 15m/s), increase the running torque by 2.0 inch·pounds·force per square foot.
- 7) Coupling:
 - a) Provide electronic damper operators having couplings consisting of a V-bolt and a V-shaped, toothed cradle.
 - 8) Overload Protection:
 - a) Provide electronic damper operators having electronic overload or digital rotation-sensing circuitry.
 - 9) Fail-Safe Operation:
 - a) Provide a mechanical, spring-return mechanism having an external, manual gear release on the nonspring-return actuators.
 - 10) Power Requirements:
 - a) For two-position spring return motors, provide 24-Volts AC power.
 - b) For modulating motors, provide maximum power of 10 voltamperes at 24 Volts AC or 8 Watts at 24-Volts DC.
 - 11) Proportional and Feedback Signals:
 - a) Provide electronic damper operators having a 2 Volts DC to 10 Volts DC or 4 milliamperes to 20 milliamperes proportional signal, and a 2 Volts DC to 10 Volts DC position feedback signal.
 - 12) Temperature Rating:

- a) Provide electronic damper operators having a temperature rating of 40 degrees Fahrenheit to 104 degrees Fahrenheit (5 degrees Celsius to 40 degrees Celsius).
 - 13) Run Time:
 - a) Provide electronic damper operators having a run time of 12 seconds to open, and 5 seconds to close.
- F. Assembly:
 - 1. Shop Fabrication:
 - a. Field fabrication of the units or their components is unacceptable.
 - 1) Install the specified components at the factory.
 - b. Seismic Fabrication Requirements:
 - 1) Fabricate the coil section, internal mounting frame and its attachment to the coils, and other coil section components with reinforcement that is strong enough to withstand the seismic forces defined in Section 15070, Mechanical Sound, Vibration, and Seismic Control, when the coil-mounting frame and air-handling-unit mounting frame are anchored to the building structure.
- G. Finishes:
 - 1. Provide casing finishes successfully tested in accordance with the requirements for finishes exposed to a salt spray for 500 hours specified in ASTM B 117.
 - 2. Primer Materials:
 - a. Provide a zero induction epoxy prime coat.
 - 3. Finish Materials:
 - a. Provide a non-isocynate acrylic finish coat.
 - 4. Shop Finishing Methods:
 - a. Steel and Galvanized-Steel Casings:
 - 1) Immediately after cleaning and pre-treating steel and galvanized-steel casings, apply the manufacturer's standard two-coat, baked-on enamel finish at the factory.
 - a) Finish the units in the manufacturer's standard color.
 - 2) Chemically cure the system to assure a hard, chemical resistant surface with strong color stability, UV resistance, and gloss protection.
 - 3) Provide a minimum dry finish thickness of 4 mils.

2.02 SOURCE QUALITY CONTROL

- A. Tests and Inspections:
 - 1. Materials specified in this Section require advance examination or testing in accordance with the methods specified herein, or as required by the Program/Project Manager.

- a. Before the tests will be performed, provide advance notice of the tests to the Program/Project Manager to give the Program/Project Manager and the Approved Agency the opportunity to observe the tests.
2. Fan Sound-Power Level Rating Test:
 - a. Test Procedure:
 - 1) Test the fans in accordance with the requirements specified in ANSI/AMCA 300.
 - 2) Calculate the fan sound ratings in accordance with the requirements specified in ANSI/AMCA 301.
 - 3) Submit a quality control report for the Fan Sound-Power Level Rating Test to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Fans complying with the specified sound ratings criteria pass the Fan Performance Rating Test.
3. Fan Performance Rating Test:
 - a. Test Procedure:
 - 1) Factory-test fan performance for airflow, pressure, power, air density, rotation speed, and efficiency.
 - 2) Rate the fan performance in accordance with the requirements specified in ANSI/AMCA 210 / ANSI/ASHRAE 51.
 - 3) Submit a quality control report for the Fan Performance Rating Test to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Fans complying with the specified certified aerodynamic performance rating criteria pass the Fan Performance Rating Test.
4. Water Coil Test:
 - a. Test Procedure:
 - 1) Factory test the coils to 315 psig (2070kPa) performance in accordance with the requirements specified in ANSI/AHRI 410 and ANSI/ASHRAE 33.
 - 2) Submit a quality control report for the Water Coil Test to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Coils that have been tested up to 315 psig, and that are suitable for operation at 250 psig pass the Water Coil Test.
5. Sound Absorption Test:
 - a. Test Procedure:
 - 1) Test the casing panels in accordance the requirements for sound absorption specified in ASTM C 423 for the 2-inch wall construction.
 - 2) Test the casing panels in accordance the requirements for transmission loss specified in ASTM E 90 for the 2-inch wall construction.

- 3) Submit a quality control report for the Sound Absorption Test to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Casing panels having a minimum sound absorption coefficient (NRC) of 0.95 and a sound transmission coefficient (STC) of 35 or greater pass the Sound Absorption Test.
- B. Coordination of Other Tests and Inspections:
 1. Notify the code-required Approved Agency responsible for performing special inspections when modular indoor central-station air handling units for this Contract are being fabricated and/or tested.
 2. Cooperate with the code-required Approved Agency when they are performing required material verifications and other special inspections.
 - a. Provide full access to the Work.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. With the modular indoor central-station air handling unit installer present, examine the areas and conditions where the modular indoor central-station air handling units will be installed for compliance with the requirements for installation tolerances and other conditions affecting the modular indoor central-station air handling unit performance.
 2. Examine the roughing-in for the steam, hydronic, and condensate drainage piping systems and electrical services to verify the actual locations of connections before installation of the modular indoor central-station air handling units.
- B. Evaluation and Assessment:
 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the modular indoor central-station air handling units.
- B. Surface Preparation:
 1. Concrete Bases:
 - a. Provide flat concrete pads to support each modular indoor central-station air handling unit.
 - 1) Provide 4-inch high reinforced concrete bases with chamfered edges to support the walk-in medium-voltage substation switchgear.

- 2) Extend the base no less than 4 inches in all directions beyond the maximum dimensions of the modular indoor central-station air handling unit, unless otherwise indicated on the Contract Drawings, or unless required for seismic anchor support.
 - b. Place and secure anchorage devices.
 - 1) Design each fastener and support in accordance with the seismic-restraint requirements specified in Section 15070, Mechanical Sound, Vibration, and Seismic Control, to carry the load indicated by seismic requirements and according to seismic-restraint details.
 - 2) Install anchor bolts to the elevations required for proper attachment to the modular indoor central-station air handling units.
 - a) Install epoxy-coated anchor bolts that extend through the concrete base and anchor into the structural concrete floor.
 - b) Use setting drawings, templates, diagrams, instructions, and directions for the items to be embedded to properly locate these items.
 - c) Cast anchor-bolt inserts into the concrete bases.
 - c. Construct the concrete bases in accordance with the seismic-restraint requirements specified in Section 15060, Hangers and Supports.
 - 1) Install dowel rods to connect the concrete base to the concrete floor.
 - a) Unless otherwise indicated in the Contract Documents, install the dowel rods on 18 inches (450mm) apart on center around the full perimeter of concrete base.
 - 2) Provide concrete formwork as specified in Section 03100, Concrete Forms and Accessories; concrete reinforcement as specified in Section 03200, Concrete Reinforcement; and concreting as specified in Section 03300, Cast-In-Place Concrete, that comply with the requirements for concrete bases.
- C. Demolition/Removal:
1. Installation Pathway:
 - a. Remove and replace building components and structures to provide a pathway for moving the modular indoor central-station air handling unit components into place.

3.03 INSTALLATION

- A. Equipment Mounting:
1. Install the modular indoor central-station air handling units on the concrete bases using elastomeric pads.
 - a. Install a galvanized-steel plate to equally distribute the weight of the air handling units over the elastomeric pad.
 - b. Secure the air handling units to the anchor bolts installed in the concrete bases.

- B. Filters:
 - 1. Install the filter-gage, static-pressure taps upstream and downstream of filters.
 - 2. Mount filter gages on the outside of the filter housing or filter plenum in an accessible position.
 - 3. Provide the filter gages on filter banks, and install them with separate static-pressure taps upstream and downstream of the filters.
- C. Condensate Drain Pans:
 - 1. Connect 1-1/4 nominal pipe size (DN 32), copper tubing complying with the requirements for Type M (Type C) tubing specified in ASTM B 88, (ASTM B 88M) to the condensate drain pans.
 - 2. Extend the condensate drain tubing to the nearest equipment or floor drain.
 - 3. Construct a deep trap at the connection to drain pan, and install cleanouts at changes in direction.
- D. Special Techniques:
 - 1. Do not operate the fan system until the proper filters, whether temporary or permanent, are in place.
 - 2. Identification:
 - a. Identify piping, ductwork, and other mechanical components in accordance with the requirements specified in Section 15075, Mechanical Identification.
 - b. Identify field-installed wiring and components and provide warning signs in accordance with the requirements specified in Section 16075, Electrical Identification.
- E. Systems Integration:
 - 1. For piping, comply with requirements specified for the appropriate types in other Sections.
 - a. Install the piping adjacent to air-handling unit so access for service and maintenance are allowed.
 - b. For piping connected to air-handling units mounted on vibration isolators, provide flexible connectors.
 - 2. Chilled-Water Piping:
 - a. Provide chilled-water piping complying with the applicable requirements in specified in Section 15182, Hydronic Piping.
 - b. Install a shutoff valve and a union or flange at each coil supply connection.
 - c. Install a balancing valve and a union or flange at each coil return connection.
 - 3. Ductwork:
 - a. Connect ducts to the air-handling units by providing flexible connections.

- b. Comply with requirements specified in Section 15815, Metal Ducts, and Section 15820, Duct Accessories.
- 4. Grounding:
 - a. Ground the modular indoor central-station air handling unit equipment in accordance with the requirements specified in Section 16061, Electrical Grounding and Bonding.
- 5. Electrical Wiring:
 - a. Connect the modular indoor central-station air handling unit power wiring in accordance with the requirements specified in Section 16120, Conductors and Cables.
 - b. Connect the modular indoor central-station air handling unit control wiring in accordance with the requirements specified in Section 16123, Control-Voltage Power Cables.

3.04 SITE QUALITY CONTROL

- A. Tests and Inspections:
 - 1. During the period when modular indoor central-station air handling units are being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing and inspection of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - 1) Periodic Special Inspections will be performed during the installation of modular indoor central-station air handling units.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency and/or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
 - 2. Testing Agency Responsibilities:
 - a. Field Quality-Control Reports:
 - 1) Have the Testing Agency employed by the Contractor perform the tests specified herein, and prepare a certified written Field Quality Control Report for each test conducted to record the following information pertaining to the test:
 - a) The modular indoor central-station air handling units included in the testing.
 - b) Test procedures used to perform the testing.
 - c) Test results that comply with the requirements specified.

- d) Test results that do not comply with the specified requirements, and corrective action taken to achieve compliance with the requirements.
 - (1) Note deficiencies detected, the remedial action taken, and observations after remedial action.
 - b. Furnish test instruments that have been calibrated within the last 12 months, traceable to standards of the National Institute of Standards and Technology (NIST), and adequate for making positive observation of the test results.
 - 1) Make the calibration records available for examination upon request.
 - c. Test Labeling:
 - 1) Have the Testing Agency attach a label or tag to each tested component indicating satisfactory completion of the tests for that component.
 - a) On satisfactory completion of the testing of each unit, have the Testing Agency attach a dated and signed "Satisfactory Test" label to the tested unit.
- B. Site Tests and Inspections:
 - 1. Leak Test:
 - a. Test Procedure:
 - 1) After installation of the , have the Testing Agency fill the water coils with water, and test the coils and connections for leaks.
 - b. Acceptance Criteria:
 - 1) Water coils that do not leak pass the Leak Test.
 - 2. Fan Operational Test:
 - a. Test Procedure:
 - 1) After the electrical circuitry has been energized, have the Testing Agency start the units to confirm the proper motor rotation and unit operation.
 - b. Acceptance Criteria:
 - 1) Air handling units that have fans that rotate properly and operate as specified pass the Fan Operational Test.
 - 3. Pre-Filter Operational Test:
 - a. Test Procedure:
 - 1) Have the Testing Agency operate the filters to demonstrate their compliance with the specified requirements.
 - 2) Test for leakage of unfiltered air while the system is operating.
 - b. Acceptance Criteria:
 - 1) Air handling units having filters complying with the requirements specified and that do not leak unfiltered air while the system is operating pass the Pre-Filter Operational Test.
 - 4. Dusting and Final Filter Operational Test:
 - a. Test Procedure:

- 1) Have the Testing Agency pressurize the dusting or final filter housing to a minimum of 3 inches w. g. (750Pa), or to the designed operating pressure, whichever is higher; and test the housing joints, door seals, and sealing edges of filter for air leaks in accordance with the pressure-decay method specified in ANSI/ASME N510.
 - b. Acceptance Criteria:
 - 1) Filter housing that do not leak air pass the Dusting and Final Filter Operational Test
5. Transmission Loss Test:
 - a. Test Procedure:
 - 1) Have the Testing Agency test the equipment casing in accordance with the requirements for transmission loss specified in ASTM E 90.
 - b. Acceptance Criteria:
 - 1) Equipment casings complying with the scheduled sound performance pass the Transmission Loss Test.
6. Sound Absorption Test:
 - a. Test Procedure:
 - 1) Have the Testing Agency test the equipment casing in accordance with the requirements for sound absorption specified in ASTM C 423.
 - b. Acceptance Criteria:
 - 1) Equipment casings complying with the scheduled sound performance pass the Sound Absorption Test.
7. Inspections:
 - a. Examine the casing insulation materials and filter media before installing the air-handling unit.

C. Non-Conforming Work

1. Air-handling unit or components will be considered defective if the unit or components do not pass the specified tests and inspections.
2. Reject insulation materials and filter media that are wet, moisture damaged, or mold damaged.

D. Manufacturer Services:

1. Engage a factory-authorized service representative to inspect, test, and adjust the modular indoor central-station air handling units' components, assemblies, and equipment installations, including connections.

3.05 SYSTEM STARTUP

A. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping systems, ductwork,

air handlers, air conditioning (AC) and heat pump (HP) packaged units, air terminal units, heat exchangers, the building automation system, fire and smoke dampers, indoor air quality, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

B. Factory-Authorized Startup Service:

1. Engage a factory-authorized service representative to perform the startup activities for the Work of this Section.
2. Installation and Startup Checks:
 - a. Complete installation and startup checks in accordance with the manufacturer's written instructions.
 - 1) Submit the manufacturer's written installation and startup check instructions to the Program/Project Manager for information.
 - b. Verify that shipping, blocking, and bracing have been removed.
 - c. Verify that each modular indoor central-station air handling unit is secure on its mountings and supporting devices, and that connections to piping, ducts, and electrical systems are complete.
 - 1) Verify that the proper thermal-overload protection is installed for the motors, controllers, and switches.
 - d. Verify that the motor rotation direction is correct, fan wheels freely rotation, and bearing operation is smooth.
 - 1) Reconnect the fan drive system, align the belts, and install belt guards.
 - e. Verify that bearings, pulleys, belts, and other moving parts are lubricated with the factory-recommended lubricants.
 - f. Verify that the zone dampers for each zone open and close fully.
 - g. Verify that face-and-bypass dampers provide full face flow.
 - h. Verify that outdoor-air and return-air mixing dampers open and close, and maintain the minimum outdoor-air setting.
 - i. Comb coil fins to ensure their parallel orientation.
 - j. Verify that proper thermal-overload protection is installed for the electric coils.
 - k. Furnish and install new, clean filters.
 - l. Verify that the manual and automatic volume control dampers and the fire and smoke dampers in the connected duct systems are in the fully open position.
3. Starting Procedures:
 - a. Energize the motor; and verify the proper operation of the motor, drive system, and fan wheel.
 - 1) Adjust the fan to the indicated rpm.
 - 2) Replace fan and motor pulleys as required to achieve the design conditions.
 - b. Measure and record the motor's electrical voltage and amperage values.

- c. Manually operate the dampers from the fully closed to the fully open position, and record fan performance.
 - 1) Adjust damper linkages for proper damper operation.

3.06 ADJUSTING

- A. Test, adjust, and balance the air-handling system in accordance with the requirements specified in Section 15950, Testing, Adjusting, and Balancing.
- B. Test and adjust the controls and safeties.
 - 1. Replace damaged and malfunctioning controls and equipment.

3.07 CLEANING

- A. After completing installation and testing, adjusting, and balancing of the air-handling units and air-distribution systems, and after completing startup service; clean the air-handling units internally to remove foreign material and construction dirt and dust.
 - 1. Clean fan wheels, cabinets, dampers, coils, and filter housings; and install new, clean filters.
- A. Replace temporary filters used during construction and testing, with new, clean filters.
- B. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.08 CLOSEOUT ACTIVITIES

- A. Training:
 - 1. Engage a factory-authorized service representative to train the Owner's maintenance personnel to adjust, operate, and maintain the air-handling units in accordance with the requirements specified in Section 01770, Closeout Procedures.

3.09 PROTECTION

- A. Take steps to ensure that installed modular indoor central-station air handling units are protected during subsequent construction activities.
 - 1. Using the units for temporary purposes during construction is unacceptable.

3.10 MAINTENANCE

- A. Operation and Maintenance Data:

1. Furnish operation and maintenance data for the split-system air-conditioning units and components for inclusion in emergency and operation and maintenance manuals as specified in Section 01780, Closeout Submittals.
 - a. Include instructions for lubrication, filter replacement, belt adjustment and motor maintenance; and a spare parts list and a wiring diagram.
2. Submit both hard copies and an electronic copy of the operation and maintenance data for the modular indoor central-station air handling units and components to the Program/Project Manager for information.

SECTION 15731

SPLIT SYSTEM AIR CONDITIONING UNITS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for split-system air-conditioning units consisting of separate evaporator-fan and compressor-condenser components.
 - a. Units are designed for exposed or concealed mounting, and may or may not be connected to ducts.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01770 - Closeout Procedures.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 01810 - Commissioning.
 - 6. Section 03100 - Concrete Forms and Accessories.
 - 7. Section 03200 - Concrete Reinforcement.
 - 8. Section 03300 - Cast-In-Place Concrete.
 - 9. Section 07720 - Roof Accessories.
 - 10. Section 15065 - Motors for Mechanical Equipment.
 - 11. Section 15070 - Mechanical Sound, Vibration, and Seismic Control.
 - 12. Section 15815 - Metal Ducts.
 - 13. Section 15820 - Duct Accessories.
 - 14. Section 15900 - HVAC Instrumentation and Controls.
 - 15. Section 15995 - Commissioning of Mechanical Systems.
 - 16. Section 16061 - Electrical Grounding and Bonding.
 - 17. Section 16120 - Conductors and Cables.
 - 18. Section 16123 - Control-Voltage Power Cables.
 - 19. Section 16140 - Wiring Devices.
 - 20. Section 16410 - Enclosed Switches and Circuit Breakers.
 - 21. Section 16420 - Enclosed Controllers.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AC: Air conditioning.
 - 2. CA: Commissioning Authority.
 - 3. HP: Heat pumps.
 - 4. MERV: Minimum Efficiency Reporting Value.
- B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
2. Minimum Efficiency Reporting Value (MERV): A value from 1 to 16 that along with an associated air velocity represents the efficiency of a filter, and which is based on testing using different particle sizes, 1 of 7 approved flow velocities, and the required number of repeat cycles as specified in ASHRAE 52.2.
 - a. The flow velocity used to determine a MERV value must be stated with the MERV value for the MERV number to be meaningful.
 - b. The higher the MERV number, the higher the velocity.

C. Reference Standards:

1. The Air-Conditioning, Heating, and Refrigeration Institute (AHRI):
 - a. AHRI 210/240 – Standard for Performance Rating of Unitary Air-Conditioning and Air Source Heat Pump Equipment.
2. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. (ASHRAE):
 - a. ASHRAE 52.2 – Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size.
 - b. ASHRAE 62.1-2004 – Ventilation for Acceptable Indoor Air Quality.
 - c. ASHRAE/IESNA 90.1-2004 – Energy Standard for Buildings Except Low-Rise Residential Buildings.
3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
5. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, the Commissioning Authority, and the City, prior to incorporating items requiring testing by them into the Work.
2. Coordinate the layout and installation of split system air conditioning units and components with other construction that penetrates roofs, walls ceilings, and floors, or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces.

3. Coordinate the sizes and locations of concrete bases with the actual ground and floor mounted equipment provided.
4. Coordinate the size, location, and connection details of the actual roof, ceiling, and wall mounted equipment provided with the roof curbs, equipment supports, and roof penetrations specified in Section 07720, Roof Accessories.

B. Sequencing:

1. Provide required concrete bases and anchorage devices prior to installing the air-conditioning equipment.
2. Provide required wall, ceiling, or roof supports prior to installing the air-conditioning equipment.

C. Scheduling:

1. Schedule the installation of the split system air conditioning units so delays to other construction in the delivery path of the equipment are minimized.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Concealed Evaporator-Fan Components.
 - 2) Floor-Mounting, Evaporator-Fan Components.
 - 3) Wall-Mounting, Evaporator-Fan Components.
 - 4) Ceiling-Mounting, Evaporator-Fan Components.
 - 5) Air-Cooled, Compressor-Condenser Components.
 - 6) Water-Cooled, Compressor-Condenser Components:
 - 7) Thermostats.
 - 8) Automatic-reset timers.
 - 9) Refrigerant line kits.
 - b. Shop Drawings:
 - 1) Split-system units and related equipment.
 - 2) Setting drawings, templates, diagrams, instructions, and directions for placing and securing anchorage devices.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Manufacturer's written installation and startup check instructions.
 - b. Site Quality Control Submittals:

- 1) Factory-authorized service representative's certified leak test reports.
 - 2) Factory-authorized service representative's certified operational test reports.
 - 3) Factory-authorized service representative's certified inspection reports.
- C. Closeout Submittals:
1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the split-system air-conditioning units and components.
 - b. Warranty Documentation:
 - 1) Split System Air Conditioning Unit Warranty.
- D. Maintenance Material Submittals:
1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish spare parts that match the products installed in the following quantities, and package the spare parts with a protective covering for storage identified with labels describing the contents of the packages:
 - a) Filters:
 - (1) Furnish 1 set of filters for each split system air conditioning unit.
 - b) Fan Belts:
 - (1) Furnish 1 set of fan belts for each split system air conditioning unit.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - c. Periodic Special Inspections will be performed during the installation of medium-voltage wire, cable, and accessories.

2. Testing and Inspection Agencies:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Certifications:

1. Listing and Labeling of Electrical Components, Devices, and Accessories:
 - a. Provide electrical components, devices, and accessories that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Package and protect materials to limit field repairs.
 - a. Deliver pre-finished products in a manner that will prevent material damage and deterioration or contamination from the elements.
 - b. Provide protective wrapping on pre-finished aluminum products.

B. Storage and Handling Requirements:

1. Store and handle pre-finished products in a manner that will prevent material damage and deterioration or contamination from the elements.

C. Packaging Waste Management:

1. Remove loose packing materials from inside the split system air conditioning unit components.
2. Inspect for and remove shipping bolts, blocks, and tie-down straps.

3. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

- A. Extended Correction Period:
 1. Warrant the split system air conditioning units' materials and workmanship against failures within the 5 year period after the Date of Substantial Completion:
 2. Submit the written Split System Air Conditioning Unit Warranty on the manufacturer's standard form in which the manufacturer agrees to repair or replace components of the split-system air-conditioning units that fail in materials or workmanship within specified warranty period to the Program/Project Manager for approval.
 - a. Have the manufacturer's standard form signed by the Contractor and manufacturer.

PART 2 PRODUCTS

2.01 MANUFACTURED SPLIT SYSTEM AIR CONDITIONING UNITS

- A. Manufacturers:
 1. Manufacturer List:
 - a. Carrier Air Conditioning, Div. of Carrier Corporation, www.corp.carrier.com.
 - b. First Company Products, www.firstco.com.
 - c. Friedrich Air Conditioning Company, www.friedrich.com
 - d. Koldwave, Inc., a Mestek Company, <http://www.koldwave.com>.
 - e. Lennox Industries Inc., www.lennox.com
 - f. Mitsubishi Electric, HVAC Advanced Products Division, www.mehvac.com.
 - g. Sanyo HVAC, Division of Sanyo Commercial Solutions, Sanyo Electric Company, Ltd., <http://www.sanyohvac.com>.
 - h. Tadiran Air Conditioners, Ltd.; Member of Carrier Corporation, www.tadiran-appl.com.
 - i. Trane Company (The); Unitary Products Group, www.trane.com.
 - j. York International Corp., Division of Johnson Controls, Inc., www.johnsoncontrols.com.
 - k. Approved equal.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 1. Regulatory Requirements:

- a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- C. Performance:
 - 1. Air-Cooled and Water-Cooled Compressor-Condensers:
 - a. Minimum Energy Efficiency:
 - 1) Provide air-cooled, compressor-condenser having at least the energy efficiency specified in ASHRAE/IESNA 90.1-2007.
- D. Design Criteria:
 - 1. The Contract Drawings indicate the general arrangement of the mechanical equipment; of piping, fittings, and specialties; and of ducts.
 - a. Product Selection for Restricted Space:
 - 1) The Contract Drawings indicate the size, profiles, and dimensional requirements of split-system units based on the specific system indicated on the Contract Drawings.
 - 2) Provide split-system units, components, and accessories capable of fitting within the indicated dimensions.
 - 2. Seismic Control:
 - a. Design each fastener and support in accordance with the seismic-restraint requirements specified in Section 15070, Mechanical Sound, Vibration, and Seismic Control, to carry the load indicated by seismic requirements and according to seismic-restraint details.
 - 3. Product Data:
 - a. For each type of split-system unit component indicated in the Contract Documents, submit Product Data to the Program/Project Manager for approval.
 - 1) Include the rated capacities, furnished specialties, accessories, dimensions, and finishes of their products.
 - 2) Include performance data in terms of capacities, outlet velocities, static pressures, sound power characteristics, motor requirements, and electrical characteristics.
 - 4. Shop Drawings:
 - a. For each split-system unit and related equipment, submit Shop Drawings to the Program/Project Manager for approval.
 - 1) Include wiring diagrams of the power, signal, and control wiring.
- E. Operation:
 - 1. Operation Sequences:
 - a. Provide split system air conditioning units that follow the sequence of operation indicated on the Contract Drawings.
- F. Materials:

1. Concealed Evaporator-Fan Components:
 - a. Chassis:
 - 1) For the evaporator fans, provide galvanized steel chassis having flanged edges, removable panels for servicing, and insulation on the back of the panel.
 - 2) Insulation:
 - a) Line the duct with glass-fiber insulation facing.
 - 3) Drain Pans:
 - a) Provide insulated galvanized steel drain pans complying with the requirements specified in ASHRAE 62.1-2004, and that have a drain connection.
 - 4) Airstream Surfaces:
 - a) Provide surfaces in contact with the airstream complying with the requirements specified in ASHRAE 62.1-2004.
 - b. Refrigerant Coils:
 - 1) Provide refrigerant coils complying with the requirements specified in AHRI 210/240, fabricated from copper tube with mechanically bonded aluminum fins, and having a thermal-expansion valve.
 - c. Water Coils:
 - 1) Provide water coils fabricated from copper tubing with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5mm) apart; and having a two-position control valve.
 - a) Provide water coils leak tested underwater to 300 psig (2070kPa) without failure.
 - d. Electric Coils:
 - 1) Provide helical electric coils fabricated from nickel-chrome, resistance-wire heating elements with refractory ceramic support bushings, an automatic-reset thermal cutout, built-in magnetic contactors, a manual-reset thermal cutout, an airflow proving device, and one-time fuses in a terminal box for overcurrent protection.
 - e. Fan:
 - 1) Provide fans consisting of a forward-curved, double-width wheel of galvanized steel directly connected to the fan motor.
 - 2) Fan Motors:
 - a) Provide multi-tapped, multispeed fan motors complying with the requirements specified in Section 15065, Motors for Mechanical Equipment, and having internal thermal protection and permanent lubrication.
 - f. Filters:
 - 1) Provide 1-inch (25mm) thick disposable filters having MERV ratings of 6 or higher, and having with fiberboard frames.
 - g. Wiring Terminations:
 - 1) Connect the motors to the chassis wiring with plug connections.
2. Wall-Mounting, Evaporator-Fan Components:

- a. Cabinet:
 - 1) Provide enameled steel cabinets of a color selected by the Program/Project Manager, and having removable panels on the front and ends and discharge drain pans with a drain connection.
 - 2) Airstream Surfaces:
 - a) Provide surfaces in contact with the airstream complying with the requirements specified in ASHRAE 62.1-2004.
 - b) Drain Pans and Drain Connection:
 - (1) Provide drain pans having a drain connection and complying with the requirements specified in ASHRAE 62.1-2004.
- b. Refrigerant Coils:
 - 1) Provide refrigerant coils complying with the requirements specified in AHRI 210/240, fabricated from copper tube with mechanically bonded aluminum fins, and having a thermal-expansion valve.
- c. Electric Coils:
 - 1) If heating is required, provide helical electric coils fabricated from nickel-chrome, resistance-wire heating elements with refractory ceramic support bushings, an automatic-reset thermal cutout, built-in magnetic contactors, a manual-reset thermal cutout, an airflow proving device, and one-time fuses in a terminal box for overcurrent protection.
- d. Fan:
 - 1) Provide direct drive, centrifugal fans.
 - 2) Fan Motors:
 - a) Provide multi-tapped, multispeed fan motors complying with the requirements specified in Section 15065, Motors for Mechanical Equipment, and having internal thermal protection and permanent lubrication.
- e. Filters:
 - 1) Provide disposable filters having MERV ratings of 6 or higher.
- 3. Ceiling-Mounting, Evaporator-Fan Components:
 - a. Cabinet:
 - 1) Provide enameled steel cabinets of a color selected by the Program/Project Manager, and having removable panels on the front and ends and discharge drain pans with a drain connection.
 - 2) Airstream Surfaces:
 - a) Provide surfaces in contact with the airstream complying with the requirements specified in ASHRAE 62.1-2004.
 - b) Drain Pans and Drain Connection:
 - (1) Provide drain pans having a drain connection and complying with the requirements specified in ASHRAE 62.1-2007.
 - b. Refrigerant Coils:

- 1) Provide refrigerant coils complying with the requirements specified in AHRI 210/240, fabricated from copper tube with mechanically bonded aluminum fins, and having a thermal-expansion valve.
- c. Electric Coils:
 - 1) If heating is required, provide helical electric coils fabricated from nickel-chrome, resistance-wire heating elements with refractory ceramic support bushings, an automatic-reset thermal cutout, built-in magnetic contactors, a manual-reset thermal cutout, an airflow proving device, and one-time fuses in a terminal box for overcurrent protection.
- d. Fan:
 - 1) Provide direct drive, centrifugal fans with power-induced outside air and an integral condensate pump.
 - 2) Fan Motors:
 - a) Provide multi-tapped, multispeed fan motors complying with the requirements specified in Section 15065, Motors for Mechanical Equipment, and having internal thermal protection and permanent lubrication.
- e. Filters:
 - 1) Provide disposable filters having MERV ratings of 6 or higher.
4. Air-Cooled, Compressor-Condenser Components:
 - a. Compressor-Condenser Casing:
 - 1) Provide steel compressor-condenser casings with a baked enamel finish of a color selected by the Program/Project Manager, and having removable panels for access to controls, weep holes for water drainage, and mounting holes in the base.
 - 2) Provide brass service valves, fittings, and gage ports on the exterior of the casing.
 - b. Compressor:
 - 1) Provide hermetically sealed reciprocating type compressors having crankcase heaters, and mounted on vibration isolation.
 - 2) Provide two-speed compressor motors having thermal- and current-sensitive overload devices, a start capacitor, a relay, a contactor, a manual-reset high-pressure switch, and an automatic-reset low-pressure switch.
 - 3) Refrigerant: R-407C or R-410A.
 - 4) Refrigerant: R-407C or R-410A.
 - c. Refrigerant Coils:
 - 1) Provide refrigerant coils complying with the requirements specified in AHRI 210/240, fabricated from copper tube with mechanically bonded aluminum fins, and having a liquid subcooler.
 - d. Heat Pump Components:
 - 1) For heat pump units, provide a reversing valve and low-temperature air cut-off thermostat for the heat pump.
 - e. Fan:

- 1) Provide an aluminum-propeller type fan directly connected to the fan motor.
- f. Motor:
 - 1) Provide a permanently lubricated fan motor having integral thermal-overload protection.
- g. Low Ambient Kit:
 - 1) Provide a low ambient kit permitting operation down to 45 degrees Fahrenheit (7 degrees Celsius).
- h. Mounting Base:
 - 1) Provide a polyethylene mounting base for the compressor-condenser.

2.02 ACCESSORIES

- A. Air Conditioning Controls:
 1. To control for the split system air conditioning units, provide equipment complying with the requirements specified in Section 15900, HVAC Instrumentation and Controls.
 2. Provide an air conditioning sequence of operation complying with the requirements indicated on the Contract Drawings.
- B. Thermostats:
 1. Provide a wireless infrared thermostat having the following features functioning remotely to control the compressor and evaporator fan:
 - a. Compressor time delay.
 - b. 24-hour time control of the system stop and start.
 - c. Liquid-crystal display indicating the temperature, set-point temperature, time setting, operating mode, and fan speed.
 - d. Fan-speed selection, including auto setting.
- C. Automatic-Reset Timers:
 1. Provide an automatic-reset timer to prevent rapid cycling of the compressor.
- D. Refrigerant Line Kits:
 1. Provide soft-annealed copper suction and liquid lines that have been factory cleaned, dried, pressurized, and sealed.
 - a. Provide a factory-insulated suction line with flared fittings at both ends.
 2. Flexible Duct Connectors:
 - a. Provide flexible duct connectors complying with the requirements specified in Section 15820, Duct Accessories.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:

1. Examine the elements and surfaces to receive split system air conditioning unit components for compliance with installation tolerances and other conditions affecting the performance of the Work.
2. Examine split system air conditioning unit components before installation.

B. Evaluation and Assessment:

1. Proceed with installation only after unsatisfactory conditions have been corrected.
2. Reject split system air conditioning unit components that are damaged or rusted.

3.02 PREPARATION

A. Protection of In-Place Conditions:

1. Protect adjacent areas from damage resulting from installation of the split system air conditioning unit components.

B. Surface Preparation:

1. Concrete Bases:

- a. For ground-mounted, compressor-condensers, provide flat concrete pads to support each condenser.
 - 1) Provide 4-inch (100mm) high reinforced concrete bases with chamfered edges to support the condenser.
 - 2) Extend the base no less than 4 inches (100mm) in all directions beyond the maximum dimensions of the condenser, unless otherwise indicated on the Contract Drawings.
 - 3) Provide concrete formwork as specified in Section 03100, Concrete Forms and Accessories; concrete reinforcement as specified in Section 03200, Concrete Reinforcement; and concreting as specified in Section 03300, Cast-In-Place Concrete, that comply with the requirements for concrete bases.
- b. For ground-mounted, compressor-condensers, install anchor bolts to the elevations required for proper attachment to the condensers.
 - 1) Place and secure anchorage devices.
 - a) Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded to properly locate these items.
 - b) Cast anchor-bolt inserts into the concrete bases.
 - 2) Submit the setting drawings, templates, diagrams, instructions, and directions for placing and securing anchorage devices to the Program/Project Manager for information.

C. Demolition / Removal:

1. Installation Pathway:

- a. Remove and replace building components and structures to provide a pathway for moving the split system air conditioning unit components into place.

3.03 INSTALLATION

- A. Install evaporator-fan components using the manufacturer's standard mounting devices securely fastened to the building structure.
 1. Install split system air conditioning units level and plumb.
- B. Provide seismic restraints as required.
 1. Install compressor-condenser components on restrained, spring isolators with a minimum static deflection of 1 inch (25mm) in accordance with the requirements specified in Section 15070, Mechanical Sound, Vibration, and Seismic Control.
- C. Floor-Mounting, Evaporator-Fan Components:
 1. Install ground-mounting, compressor-condenser components on a polyethylene mounting base.
 2. Lift the floor-mounting, evaporator-fan components into position on the concrete base.
 3. Temporary Lifting Provisions:
 - a. Once the floor-mounting, evaporator-fan components have been placed on the concrete base, remove temporary lifting eyes, channels, and brackets, and temporary blocking for moving parts from the evaporator-fan and components.
 4. Anchor the floor-mounting, evaporator-fan components to the concrete pad with cast in place anchor bolts.
- D. Roof-Mounting Compressor-Condenser Components:
 1. Install roof-mounting compressor-condenser components on equipment supports in accordance with the requirements specified in specified in Section 07720, Roof Accessories.
 2. Anchor units to supports with removable, cadmium-plated fasteners.
- E. Refrigerant Tubing:
 1. Install and connect pre-charged refrigerant tubing to the air conditioning component's quick-connect fittings.
 2. Install tubing so access to the unit is allowed.
- F. Systems Integration:
 1. Piping Connections:
 - a. Piping installation requirements are specified in other Sections.
 - 1) Install piping adjacent to the units so access for service and maintenance is allowed.
 - b. Water Coil Connections:

- 1) For units having hot-water coils, provide water coil connections complying with the requirements specified in Section 15182, Hydronic Piping.
 - a) Connect water coils to the supply and return coil connections with a shut off-duty valve and union or flange on the supply connection, and having a throttling-duty valve and union or flange on the return connection.
- c. Remote Water-Cooled Condenser Connections:
 - 1) For units having remote water-cooled condensers, provide water coil connections complying with the requirements specified in Section 15182, Hydronic Piping.
 - a) Connect water coils to the supply and return coil connections with a shut off-duty valve and union or flange on the supply connection, and having a throttling-duty valve and union or flange on the return connection.
2. Duct Connections:
 - a. Duct installation requirements are specified in Section 15815, Metal Ducts.
 - b. For units connected to ducts, connect supply and return ducts to the split-system air-conditioning units using flexible duct connectors.
3. Electrical Connections:
 - a. Ground the equipment in accordance with the requirements specified in Section 16061, Electrical Grounding and Bonding.
 - b. Install power and control wiring and switches for the split system air conditioning unit components in accordance with the requirements specified in Section 16120, Conductors and Cables, Section 16123, Control-Voltage Power Cables, Section 16140, Wiring Devices, Section 15410, Enclosed Switches and Circuit Breakers, and Section 15420, Enclosed Controllers.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 1. During the period when split system air conditioning units are being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing and inspection of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - 1) Periodic Special Inspections will be performed during the installation of split system air conditioning units.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in

- materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
- c. Failure of the Testing and Inspection Agency and/or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
- 2. Leak Test:
 - a. Test Procedure:
 - 1) After the split system air conditioning units are installed, charge the system, and have a factory-authorized service representative test/assist in testing the system for leaks.
 - 2) Have the factory-authorized service representative prepare and submit certified test reports documenting the leak testing to the Program/Project Manager for information:
 - b. Acceptance Criteria:
 - 1) Split system air conditioning units whose components the factory-authorized service representative deems to show no signs of leakage pass the Leak Test.
 - 3. Operational Test:
 - a. Test Procedure:
 - 1) After electrical circuitry has been installed and energized, have a factory-authorized service representative start the split system air conditioning units, and confirm proper motor rotation and unit operation.
 - 2) Have the factory-authorized service representative prepare and submit certified test reports documenting the operational testing to the Program/Project Manager for information:
 - b. Acceptance Criteria:
 - 1) Split system air conditioning units which the factory-authorized service representative deems to be operating normally pass the Operational Test.
- B. Non-Conforming Work
 - 1. Remove malfunctioning units, replace the malfunctioning units with acceptable units, and retest the replacement units as specified herein.
 - a. Replace damaged and malfunctioning controls and equipment.
 - 2. Repair leaks, and retest the repaired units until no leaks exist.
 - C. Manufacturer Services:
 - 1. Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and the equipment installation, including connections.
 - a. Have the factory-authorized service representative submit the results of the inspections, tests, and adjustments to the Program/Project Manager in writing.

2. Engage a factory-authorized service representative to inspect field-assembled components and the equipment installation, including connections, and to assist in testing.
 - a. Have the factory-authorized service representative submit the results of the inspections to the Program/Project Manager in writing.

3.05 SYSTEM STARTUP

- A. Commissioning:
 1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping systems, ductwork, air handlers, air conditioning (AC) and heat pump (HP) packaged units, air terminal units, heat exchangers, the building automation system, fire and smoke dampers, indoor air quality, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.
- B. Factory-Authorized Startup Service:
 1. Engage a factory-authorized service representative to perform the startup activities for the Work of this Section.
 - a. Complete installation and startup checks in accordance with the manufacturer's written instructions.
 - b. Submit the manufacturer's written installation and startup check instructions to the Program/Project Manager for information.

3.06 ADJUSTING

- A. Test and adjust controls and safeties.

3.07 CLEANING

- A. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.08 CLOSEOUT ACTIVITIES

- A. Training:
 1. Engage a factory-authorized service representative to train the Owner's maintenance personnel to adjust, operate, and maintain the air-handling units in accordance with the requirements specified in Section 01770, Closeout Procedures.

3.09 PROTECTION

- A. Take steps to ensure that installed split system air conditioning units are protected during subsequent construction activities.

3.10 MAINTENANCE

- A. Operation and Maintenance Data:
1. Furnish operation and maintenance data for the split-system air-conditioning units and components for inclusion in emergency and operation and maintenance manuals as specified in Section 01780, Closeout Submittals.
 2. Submit the operation and maintenance data for the split-system air-conditioning units and components to the Program/Project Manager for information.

SECTION 15763

FAN-COIL UNITS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for fan-coil units and accessories.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 01810 - Commissioning.
 - 5. Section 15065 - Motors for Mechanical Equipment.
 - 6. Section 15070 - Mechanical Sound, Vibration, and Seismic Control.
 - 7. Section 15820 - Duct Accessories.
 - 8. Section 15900 - HVAC Instrumentation and Controls.
 - 9. Section 15995 - Commissioning of Mechanical Systems.
 - 10. Section 16061 - Electrical Grounding and Bonding.
 - 11. Section 16120 - Conductors and Cables.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ADA: Americans with Disabilities Act.
 - 2. BACnet: Building automation and control networks.
 - 3. BAS: Building automation system.
 - 4. CWP: Cold working pressure.
 - 5. DDC: Direct digital control.
 - 6. HVAC: Heating, Ventilating, and Air-Conditioning.
 - 7. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 8. MERV: Minimum efficiency reporting value.
 - 9. PTFE: Polytetrafluoroethylene.
 - 10. TFE: Tetrafluoroethylene, a synthetic fluoropolymer.
- B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
2. Commissioning Authority (CA): An independent agent engaged by the Phoenix Sky Harbor International Airport to direct and coordinate the commissioning process for the Project, and to approve the Work requiring commissioning.
3. Minimum Efficiency Reporting Value (MERV): A value from 1 to 16 that along with an associated air velocity represents the efficiency of a filter, and which is based on testing using different particle sizes, 1 of 7 approved flow velocities, and the required number of repeat cycles as specified in ASHRAE 52.2.
 - a. The flow velocity used to determine a MERV value must be stated with the MERV value for the MERV number to be meaningful.
 - b. The higher the MERV number, the higher the velocity.

C. Reference Standards:

1. The Air-Conditioning, Heating, and Refrigeration Institute (AHRI):
 - a. ANSI/AHRI 440 – Standard for Performance Rating of Room Fan-Coils.
2. American Society of Civil Engineers (ASCE)/Structural Engineering Institute (SEI):
 - a. ASCE/SEI 7 - Minimum Design Loads for Buildings and Other Structures.
3. American Society of Mechanical Engineers (ASME):
 - a. ANSI/ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.
4. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. (ASHRAE)/Illuminating Engineering Society of North America (IESNA):
 - a. ANSI/ASHRAE 33 – Methods of Testing Forced Circulation Air Cooling and Air Heating Coils.
 - b. ANSI/ASHRAE 52.1 - Gravimetric and Dust-Spot Procedures for Testing Air-Cleaning Devices Used in General Ventilation for Removing Particulate Matter [*withdrawn*].
 - c. ANSI/ASHRAE 52.2 – Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size.
 - d. ASHRAE 62.1-2004 – Ventilation for Acceptable Indoor Air Quality.
 - e. ASHRAE/IESNA 90.1-2004 – Energy Standard for Buildings Except Low-Rise Residential Buildings.
5. ASTM International (ASTM):
 - a. ASTM A 126 - Standard Specification for Gray Iron Castings for Valves, Flanges, and Pipe Fittings.
 - b. ASTM B 88 - Standard Specification for Seamless Copper Water Tube.

- c. ASTM B 88M - Standard Specification for Seamless Copper Water Tube [Metric].
- d. ASTM C 916 - Standard Specification for Adhesives for Duct Thermal Insulation.
- e. ASTM C 1071 - Standard Specification for Fibrous Glass Duct Lining Insulation (Thermal and Sound Absorbing Material).
- f. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
- 6. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 7. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
- 8. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
 - b. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems.
- 9. Underwriters Laboratories, Inc. (UL):
 - a. UL 1995 – Heating and Cooling Equipment.
- 10. U. S. Government:
 - a. Department of Justice:
 - 1) 28 CFR 36 – Nondiscrimination on the Basis of Disability by Public Accommodations and in Commercial Facilities.
 - a) ADA Standards for Accessible Design.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
 - 2. Coordinate the layout and installation of the fan-coil units and suspension system components with other construction that penetrates or is supported by the ceilings, including light fixtures, HVAC equipment, fire-suppression system components, and partition assemblies.
 - 3. Coordination Drawings:
 - a. Prepare Coordination Drawings including floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from the installers of the items involved:
 - 1) Ceiling suspension components.
 - 2) Structural members to which the fan-coil units will be attached.
 - 3) Method of attaching the hangers to the building structure.

- 4) Size and location of the initial access modules for the acoustical tile.
- 5) Items penetrating the finished ceiling, including the following:
 - a) Lighting fixtures.
 - b) Air outlets and inlets.
 - c) Speakers.
 - d) Sprinklers.
 - e) Access panels.
- b. Submit the Coordination Drawings to the Program/Project manager for approval.
4. Coordinate the sizes and locations of wall sleeves for the outdoor-air intake.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Fan-coil units.
 - 2) BAS interface equipment.
 - b. Shop Drawings:
 - 1) Coordination Drawings.
 - 2) Shop Drawings for the fan-coil units, including wiring diagrams.
 - c. Certificates:
 - 1) Seismic Qualification Certificates.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Operational Test Reports.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the fan-coil units and components.
 - b. Warranty Documentation:
 - 1) Special warranty specified in this Section.

D. Maintenance Material Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish spare parts that match the products installed in the following quantities, and package the spare parts with a protective covering for storage identified with labels describing the contents of the packages:
 - a) Fan-Coil Unit Filters:
 - (1) Furnish 2 sets of filters for each filter installed.
 - b) Fan Belts:
 - (1) Furnish 2 sets of fan belts for each fan-coil unit installed.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - c. Periodic Special Inspections will be performed during the installation of medium-voltage wire, cable, and accessories.
2. Testing and Inspection Agencies:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Certifications:

1. Listing and Labeling of Electrical Components, Devices, and Accessories:
 - a. Provide electrical components, devices, and accessories that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.

- 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.
2. Seismic Qualification Certificates:
 - a. Prepare Seismic Qualification Certificates certifying that the fan-coil units, accessories, and components will withstand the seismic forces defined in Section 15070, Mechanical Sound, Vibration, and Seismic Control.
 - 1) Indicate whether withstand certification is based on an actual test of the assembled components, or on calculations.
 - 2) Include a dimensioned outline drawing of each equipment unit identifying the center of gravity, and locating and describing the mounting and anchorage provisions.
 - 3) Include a detailed description of the equipment anchorage devices on which the certification is based, and their installation requirements.
 - b. Submit the Seismic Qualification Certificates to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Package and protect materials to limit field repairs.
 - a. Deliver pre-finished products in a manner that will prevent material damage and deterioration or contamination from the elements.
 - b. Provide protective wrapping on pre-finished aluminum products.
- B. Storage and Handling Requirements:
 1. Store and handle pre-finished products in a manner that will prevent material damage and deterioration or contamination from the elements.
- C. Packaging Waste Management:
 1. Remove loose packing materials from inside the fan-coil units.
 2. Inspect for and remove shipping bolts, blocks, and tie-down straps.
 3. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

A. Fan-Coil Unit Warranty:

1. Warrant the fan-coil units against defects within the 5-year period after the Date of Substantial Completion:
 - a. Submit a Fan-Coil Units Warranty on the fan-coil unit manufacturer's standard or customized form, without monetary limitation, in which the fan-coil unit manufacturer agrees to replace fan motors, condensing units, and evaporator coils that fail in materials or workmanship within the specified warranty period to the Program/Project Manager for approval.
 - b. Failures include, but are not limited to, the following:
 - 1) Fan motor failure.
 - 2) Evaporator coil leaks.

PART 2 PRODUCTS

2.01 FAN-COIL UNIT EQUIPMENT

A. Manufacturers:

1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - b. Manufacturers:
 - 1) Carrier Corporation, <http://www.carrier.com>.
 - 2) Environmental Technologies, Inc., <http://www.enviro-tec.com/index.html>.
 - 3) International Environmental Corporation, <http://www.iec-okc.com>.
 - 4) McQuay International, <http://www.mcquay.com.hk/mcquay-international/>.
 - 5) Trane, <http://www.trane.com/commercial>.
 - 6) YORK International Corporation, <http://www.johnsoncontrols.com>.
 - 7) Approved equal.
2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.

B. Description:

1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].

C. Performance:

1. Capacities and Characteristics:
 - a. Provide units having the capacities, characteristics, and accessories indicated in the Mechanical Equipment Schedule on the Contract Drawings.
2. Fire-Hazard Classification:
 - a. Coil Section Insulation:
 - 1) Provide insulation and adhesive for the coil section having a combined maximum flame-spread index of 25 and smoke-developed index of 50 when measured in accordance with the method specified in ASTM E 84.
3. Seismic Performance:
 - a. Provide fan-coil units capable of withstanding the effects of earthquake motions determined in accordance with the procedures specified in ASCE/SEI 7.
 - 1) The phrase "capable of withstanding" is hereby defined to mean the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event.

D. Design Criteria:

1. Provide factory-packaged and factory-tested fan-coil units rated in accordance with the requirements specified in ANSI/AHRI 440, ASHRAE 33, and UL 1995.
2. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. (ASHRAE) Compliance:
 - a. Provide fan-coil units complying with the applicable requirements specified in Section 5 "Systems and Equipment" and Section 7 "Construction and Startup" in ASHRAE 62.1-2004.
 - 1) Airstream Surfaces:
 - a) For surfaces in contact with the airstream, comply with requirements specified in ASHRAE 62.1-2004.
 - b. Provide fan-coil units complying with the applicable requirements specified in Section 6 "Heating, Ventilating, and Air-Conditioning in ASHRAE/IESNA 90.1-2004.
3. Control Devices:
 - a. Provide the control devices indicated on the Contract Drawings and specified in Section 15900, HVAC Instrumentation and Controls.
 - 1) Basic Unit Controls:
 - a) Provide the basic unit controls indicated on the Control Drawings.
 - 2) Direct Digital Control (DDC) Terminal Controller:
 - a) Provide a direct digital control (DDC) terminal controller complying with the direct digital control (DDC) control requirements indicated on the Control Drawings.
4. Electrical Connection:

- a. Provide factory-wired motors and controls designed for a single electrical connection.
 - 5. Product Data:
 - a. Obtain the fan-coil unit manufacturer's Product Data for the fan-coil units, including the rated capacities, operating characteristics, furnished specialties, and accessories of their products.
 - b. Submit the Product Data to the Program/Project Manager for approval.
 - 6. Shop Drawings:
 - a. Prepare Shop Drawings for the fan-coil units that detail the equipment assemblies, and that indicate the dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1) Wiring Diagrams:
 - a) Prepare wiring diagrams showing the power, signal, and control wiring.
 - 2) Include perimeter moldings for exposed or partially exposed cabinets.
 - b. Submit the Shop Drawings to the Program/Project Manager for approval.
- E. Operation:
- 1. Operation Sequences:
 - a. Provide fan-coil units that follow the sequence of operation indicated on the Contract Drawings.
- F. Materials:
- 1. Coil Section Insulation:
 - a. Provide 1/2-inch (13mm) thick, coated glass fiber insulation complying with the requirements specified in ASTM C 1071, and attached with adhesive complying with the requirements specified in ASTM C 916.
 - 2. Main and Auxiliary Drain Pans:
 - a. Provide removable insulated galvanized steel drain pans having plastic liners.
 - b. Fabricate the drain pans and drain connections in accordance with the requirements specified in ASHRAE 62.1-2004.
 - 3. Chassis:
 - a. Where the chassis will be exposed to moisture, provide a galvanized steel chassis.
 - b. Provide leveling screws for floor-mounted units.
 - 4. Cabinet:
 - a. Provide steel cabinets having a baked-enamel paint finish of the color selected by Program/Project Manager from the manufacturer's standard range.
 - 1) Vertical Unit Front Panels:

- a) For vertical units, provide removable, steel front panels having an integral stamped discharge grille and channel-formed edges, cam fasteners, and insulation on the back of the panel.
 - 2) Horizontal Unit Bottom Panels:
 - a) For horizontal units, provide bottom panels with integral stamped discharge grilles fastened to the unit with cam fasteners and hinges, and attached with a safety chain.
 - b. Stack Unit Discharge and Return Grilles:
 - 1) For stack-type fan-coil units, provide an aluminum double-deflection discharge grille, and a louvered-type or panel-type return grille.
 - a) Provide grilles having a color selected by the Program/Project Manager from the manufacturer's standard colors.
 - 2) Provide return grilles that provide access to the fan-coil unit for maintenance.
 - c. For recessing the fan-coil units into ceilings or walls, provide steel recessing flanges.
- 5. Outdoor-Air Wall Box:
 - a. For fan-coil units having outdoor-air intakes, provide rain-resistant outdoor-air wall boxes fabricated from aluminum at least 0.1265 inch (3.2mm) thick, and that include a louver and box having integral eliminators and bird screens.
 - 1) Louver Configuration:
 - a) Provide horizontal, rain-resistant louvers.
 - 2) Louver Material:
 - a) Provide aluminum louvers.
 - 3) Bird Screen:
 - a) Provide 1/2-inch (13mm) mesh bird screens on the interior side of the louver.
 - 4) Decorative Grille:
 - a) Provide decorative grilles on the outside of the intake.
 - 5) Finish:
 - a) Provide a baked enamel finish of a color selected by the Program/Project Manager from the manufacturer's standard colors applied to the outdoor-air wall boxes.
- 6. Outdoor-Air Damper:
 - a. For wall-mounted, vertical, exposed units, provide outdoor-air dampers having galvanized steel blades with edge and end seals and nylon bearings.
 - b. Provide electronic, modulating actuators for the outdoor-air dampers.
- 7. Filters:
 - a. Provide filters having the thickness specified in the Fan-Coil-Unit Schedule on the Contract Drawings, an arrestance in accordance with the minimum requirements specified in ANSI/ASHRAE 52.1, and a

- minimum efficiency reporting value (MERV) in accordance with the requirements specified in ANSI/ASHRAE 52.2.
- b. Provide glass fiber treated filters with adhesive having an 80 percent arrestance and a 13 MERV rating.
- 8. Hydronic Coils:
 - a. Provide hydronic coils fabricated from copper tube having mechanically bonded aluminum fins spaced no closer together than 0.1 inch (2.5mm), and rated for a minimum working pressure of 200 psig (1378kPa) and a maximum entering-water temperature of 220 degrees Fahrenheit (104 degrees Celsius).
 - 1) Include a manual air vent and a drain valve.
- 9. Electric-Resistance Heating Coils:
 - a. Provide electric-resistance heating coils fabricated from nickel-chromium heating wire, free of expansion noise and hum.
 - b. Mount the electric-resistance heating coils in ceramic inserts in a galvanized steel housing.
 - c. For overcurrent protection, provide fuses in a terminal box.
 - d. For high-temperature protection, provide limit controls.
 - e. Terminate the heating coils elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.
- 10. Fan and Motor Board:
 - a. Provide removable fan and motor boards.
 - b. Fan:
 - 1) Provide forward curved, double width, centrifugal fans directly connected to the motor; and having thermoplastic or painted-steel wheels, and aluminum, painted-steel, or galvanized-steel fan scrolls.
 - c. Motor:
 - 1) Provide permanently lubricated, multispeed; resiliently mounted motors complying with the requirements specified in Section 15065, Motors for Mechanical Equipment.
 - a) Mount the motors on motor boards
 - d. Wiring Terminations:
 - 1) Provide motors connected to the chassis wiring using plug connections.
- 11. Factory, Hydronic Piping Package:
 - a. For fan coil units having a factory installed piping package, provide hydronic piping consisting of copper tube complying with the requirements for Type L copper specified in ASTM B 88, (ASTM B 88M, Type B), wrought-copper fittings, and brazed joints.
 - 1) Label the piping to indicate the service, the inlet, and the outlet.
 - b. Provide a two-way or three-way, modulating control valve for the chilled-water coil.
 - c. Hose Kits:

- 1) Provide 24-inch (600mm) long hoses having a diameter at least equal to the fan-coil-unit connection size.
- 2) Provide hoses rated for a working pressure of at least 400 psig (2758kPa), and operating temperatures from 33 degrees Fahrenheit to 211 degrees Fahrenheit (0.5 degrees Celsius to 99 degrees Celsius).
- 3) Tag the hoses to indicate the equipment designations.
- d. Ball Valves:
 - 1) Provide two-piece, bronze body ball valves having a full-port, chrome-plated bronze ball, polytetrafluoroethylene (PTFE) or TFE seats, and a blowout-proof stem.
 - 2) Provide ball valves having a cold working pressure (CWP) rating of at least 600 psig (4140kPa).
- e. Balancing Valves:
 - 1) Provide ball type, bronze body balancing valves equipped with a memory stop to retain a set position, and having a calibrated orifice or venturi, connections for a portable differential pressure meter with integral seals, and threaded ends.
 - 2) Provide balancing valves rated for a working pressure of 125 psig (860kPa), and a maximum operating temperature of 250 degrees Fahrenheit (121 degrees Celsius).
- f. Automatic Flow-Control Valve:
 - 1) Provide automatic flow-control valves having a brass or ferrous-metal body and a removable, corrosion-resistant, tamperproof, self-cleaning piston spring that has been factory-set to maintain the indicated flow constant, within plus or minus 10 percent, over a differential pressure range of 2 psig to 80 psig (13.8kPa to 552kPa).
 - 2) Provide automatic flow-control valves rated for a working pressure of 300 psig (2070kPa) at 250 degrees Fahrenheit (121 degrees Celsius).
- g. Strainers:
 - 1) Provide Y-pattern hydronic strainers having a cast-iron body complying with the requirements for Class B castings specified in ASTM A 126, and threaded connections, a bolted cover, a perforated stainless-steel basket, and a bottom drain connection.
 - a) In the drain connection, provide a hose-end having a nominal pipe size of at least 1/2 inch (DN 15) and a full-port, ball-type blowdown valve.
 - 2) Provide strainers rated for a working pressure of 125 psig (860kPa).
- h. Unions:
 - 1) Provide wrought copper unions complying with the requirements specified in ANSI/ASME B16.22.
- i. Risers:

- 1) Provide risers consisting of copper pipe complying with the requirements for Type L copper specified in ASTM B 88, (ASTM B 88M, Type B) having a hose and ball valve for system flushing.
12. BAS Interface Equipment:
 - a. Provide interface relays to accommodate the scheduled operation.
 - b. Provide an interface relay to provide indication of fault at the central workstation.
 - c. Provide a BACnet or LonWorks interface for the central building automation system (BAS) workstation to allow the following functions to be performed, accomplished, or monitored as appropriate:
 - 1) Adjust set points.
 - 2) Fan-coil-unit start, stop, and operating status.
 - 3) Data inquiry, including outdoor-air damper position, supply- and room-air temperature.
 - 4) Occupied and unoccupied schedules.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Examine the areas where fan-coil units will be installed to verify their compliance with the requirements for installation tolerances and other conditions affecting performance.
 2. Examine the roughing-in of piping and electrical connections to verify their actual locations before installing the fan-coil-units.
 3. Verify the locations of thermostats, humidistats, and other exposed control sensors indicated on the Contract Drawings and room details before installation.
- B. Evaluation and Assessment:
 1. Proceed installing the fan-coil units only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the fan-coil units.

3.03 INSTALLATION

- A. Install the fan-coil units in accordance with the requirements specified in NFPA 90A.
 1. Install the fan-coil units level and plumb.

- B. Suspend horizontal, suspended fan-coil units from the structure using elastomeric hangers.
 - 1. Provide vibration isolators in accordance with the requirements specified in Section 15070, Mechanical Sound, Vibration, and Seismic Control.
- C. Install thermostats, humidistats, and other exposed control sensors and devices 48 inches (1220mm) above the finished floor in compliance with requirements for handicap installations specified in the ADA Standards for Accessible Design.
- D. Systems Integration:
 - 1. Piping Connections:
 - a. The Contract Drawings indicate the general arrangement of piping, fittings, and specialties.
 - 1) Piping installation requirements are specified in other Sections.
 - b. Specific connection requirements are as follows:
 - 1) Install piping adjacent to the machinery to allow service and maintenance.
 - 2) Connect piping to the factory hydronic piping of the fan-coil-unit package.
 - a) Install the piping package if it has been shipped loose.
 - 3) Connect the condensate drains to indirect waste.
 - a) Install a condensate trap having adequate depth to seal against the pressure of the fan.
 - b) Install cleanouts in the piping at changes of direction.
 - 2. Ductwork Connections:
 - a. Connect supply and return ducts to the fan-coil units using flexible duct connectors complying with the requirements specified in Section 15820, Duct Accessories.
 - 1) Comply with the safety requirements for duct connections specified in UL 1995.
 - 3. Electrical Connections:
 - a. Ground the fan-coil equipment in accordance with the requirements specified in Section 16061, Electrical Grounding and Bonding.
 - b. Connect the wiring to the fan-coil equipment in accordance with the requirements specified in Section 16120, Conductors and Cables.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. During the period when fan-coil units are being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing and inspection of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing

personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.

- 1) Periodic Special Inspections will be performed during the installation of fan-coil units.
- b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
- c. Failure of the Testing and Inspection Agency and/or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.

B. Non-Conforming Work

1. Remove and replace malfunctioning units and retest as specified in this Section.

3.05 SYSTEM STARTUP

A. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping systems, ductwork, air handlers, air conditioning (AC) and heat pump (HP) packaged units, air terminal units, heat exchangers, the building automation system, fire and smoke dampers, indoor air quality, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

B. Install new filters in each fan-coil unit within the 2 weeks after the date of Substantial Completion.

C. Operational Test:

1. After the electrical circuitry has been energized, start the units to confirm the proper motor rotation and unit operation.
2. Operate the electric heating elements through each stage to verify their proper operation and electrical connections.
3. Test and adjust the fan-coil unit controls and safety devices.
 - a. Replace damaged and malfunctioning controls and equipment.
4. Prepare test reports to document the operational test, and submit these Operational Test Reports to the Program/Project Manager for information.

3.06 ADJUSTING

A. Adjust initial temperature and humidity set points.

B. Occupancy Adjustments:

1. When requested within 12 months of the date of Substantial Completion, provide on-site assistance to adjust the system to suit occupied conditions.
2. Provide up to 2 visits to the Site during other-than-normal occupancy hours for this purpose.

3.07 CLEANING

A. Waste Management:

1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.08 CLOSEOUT ACTIVITIES

A. Training:

1. Engage a factory-authorized service representative to train the Owner's maintenance personnel to adjust, operate, and maintain the fan-coil units in accordance with the requirements specified in Section 01770, Closeout Procedures.

3.09 PROTECTION

- A. Take steps to ensure that installed fan-coil units are protected during subsequent construction activities.

3.10 MAINTENANCE

A. Operation and Maintenance Data:

1. Furnish operation and maintenance data for the fan-coil units and components for inclusion in emergency and operation and maintenance manuals as specified in Section 01780, Closeout Submittals.
 - a. Include maintenance schedules and repair part lists for motors, coils, integral controls, and filters.
2. Submit the operation and maintenance data for the fan-coil units and components to the Program/Project Manager for information.

SECTION 15815

METAL DUCTS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Requirements for metal ducts for supply, return, outside, and exhaust air distribution systems in pressure classes from minus 2-inch water gauge to plus 10-inch water gauge.
 - a. Metal ducts include the following:
 - 1) Rectangular and round ducts and fittings.
 - 2) Single-wall, round spiral-seam ducts and formed fittings.
 - 3) Duct liner.
 - 4) Polyvinyl-chloride (PVC) coated metal ducts.

B. Related Requirements:

1. Section 01330 - Submittal Procedures.
2. Section 01360 - Sustainable Design Requirements.
3. Section 01810 – Commissioning.
4. Section 01732 - Cutting and Patching.
5. Section 07850 - Through Penetration Firestopping Systems.
6. Section 15820 - Duct Accessories.
7. Section 15995 - Commissioning of Mechanical Systems.

1.02 REFERENCES

A. Abbreviations and Acronyms:

1. PVC: Polyvinyl-chloride.
2. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside, and San Bernardino counties.
3. VOC: Volatile organic compounds.
4. w. g.: Water gauge.

B. Definitions:

1. Volatile Organic Compounds (VOC): Generally meant to refer to organic chemical compounds having high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.

C. Reference Standards:

1. ASTM International (ASTM):

- a. ASTM A 36/A 36M - Standard Specification for Carbon Structural Steel.
- b. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
- c. ASTM B 209 - Standard Specification for Aluminum and Aluminum Alloy Sheet and Plate.
- d. ASTM C 916 - Standard Specification for Adhesives for Duct Thermal Insulation.
- e. ASTM C 1071 - Standard Specification for Fibrous Glass Duct Lining Insulation (Thermal and Sound Absorbing Material).
- f. ASTM D 2582 - Standard Test Method for Puncture-Propagation Tear Resistance of Plastic Film and Thin Sheeting.
- g. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
4. National Fire Protection Association (NFPA):
 - a. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems.
 - b. NFPA 90B - Standard for the Installation of Warm Air Heating and Air-Conditioning Systems.
5. National Air Duct Cleaners Association (NADCA):
 - a. NADCA General Specifications for the Cleaning of Commercial Heating, Ventilating and Air Conditioning Systems.
6. North American Insulation Manufacturers Association (NAIMA):
 - a. NAIMA AH124 - Fibrous Glass Duct Linear Standard.
7. NUSIG/Badger Industries:
 - a. National Uniform Seismic Installation Guidelines (NUSIG).
8. Sheet Metal and Air Conditioning Contractors' National Association (SMACNA):
 - a. ANSI/SMACNA 001 - Seismic Restraint Manual: Guidelines for Mechanical Systems.
 - b. ANSI/SMACNA 006 - HVAC Duct Construction Standards--Metal and Flexible.
 - c. SMACNA 1143 - HVAC Air Duct Leakage Test Manual.
 - d. SMACNA Duct Cleanliness for New Construction Guidelines.
9. South Coast Air Quality Management District (SCAQMD):

- a. SCAQMD Rule 1168 – Adhesive and Sealant Applications.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
 - a. Furnish 7 days advance notice of testing.
2. Coordinate the metal duct layout and installation with the layout and installation of suspended ceilings, fire- and smoke-control dampers, lighting, and similar finished work.
3. Coordination Drawings:
 - a. Prepare and submit Coordination Drawings to the Program/Project Manager for approval.
 - 1) Prepare plans for tight areas, such as mechanical rooms, drawn to scale, on which the following items are shown and coordinated with each other, based on input from the installers of the items involved:
 - a) Other systems installed in same space as ducts.
 - b) Mechanical and electrical equipment, and other miscellaneous items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and similar items.
 - 2) Show the following items for this Contract drawn to scale, and coordinate them with each other:
 - a) HVAC, plumbing, and fire suppression items.
 - b) Conduit routing plans.
 - c) Structural members.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Metal duct sheet metal materials.
 - 2) Metal duct reinforcement shapes and plates:
 - 3) Metal duct tie rods.
 - 4) Duct liner:

- 5) Metal duct sealant materials.
 - 6) Polyvinyl-chloride (PVC) coated rectangular and round ducts.
 - b. Shop Drawings:
 - 1) Metal duct system layout and construction details.
 - 2) Coordination Drawings.
 - c. Delegated Design Submittals:
 - 1) Supporting calculations for significant changes proposed to the designed layout or configuration of the duct system.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Metal duct installation instructions.
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Record Documentation:
 - 1) As-built drawings of the metal duct system.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - 2. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - 3. Testing and Inspection Agency:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City

of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Package and protect materials to limit field repairs.
 - a. Deliver pre-finished products in a manner that will prevent material damage and deterioration or contamination from the elements.
 - b. Provide protective wrapping on pre-finished aluminum products.
- B. Storage and Handling Requirements:
 - 1. Store and handle pre-finished products in a manner that will prevent material damage and deterioration or contamination from the elements.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 COMPONENTS

- A. Manufacturers:
 - 1. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 - 1. Regulatory Requirements:
 - a. NFPA Compliance:
 - 1) Comply with the installation requirements specified in NFPA 90A and NFPA 90B.
 - b. Seismic Requirements:
 - 1) Provide hangers and braces for the metal ducts designed to withstand, without damage to the equipment, the seismic forces specified in the applicable building codes.
 - a) Comply with the requirements specified in ANSI/SMACNA 001 or NUSIG.
- C. Performance:
 - 1. Duct Static-Pressure Classes:

- a. Unless otherwise indicated in the Contract Documents, construct the metal ducts according to the following static-pressure classes:
 - 1) Supply Ducts (after Air Terminal Units): 2 inches w. g.
 - 2) Return Ducts (Negative Pressure): 2 inches w. g.
 - 3) Exhaust Ducts (Negative Pressure): 2 inches w. g.
- D. Design Criteria:
 - 1. Design Standard:
 - a. For acceptable materials, material thicknesses, and duct construction methods, comply with the requirements specified in ANSI/SMACNA 006, unless otherwise indicated.
 - b. Product Data:
 - 1) Submit Product Data and the manufacturer's installation instructions for the products proposed for the Work of this Section, including the manufacturer's product specifications, details of construction relative to materials, dimensions of individual components, profiles, and finishes.
 - 2. Duct System Design:
 - a. The duct system design indicated in the Contract Documents has preselected the type and size of air-moving and air-distribution equipment and of other air system components.
 - 1) The Contract Drawings indicate the size, profiles, and dimensional requirements of metal ducts, which are based on the HVAC system requirements.
 - 2) Significant changes proposed to the designed layout or configuration of the duct system must be submitted to and specifically approved in writing by the Program/Project Manager prior to beginning the installation of the revised components.
 - a) Accompany requests for layout modifications with calculations showing that the proposed layout will provide the original design results without increasing system total pressure.
 - b. Shop Drawings:
 - 1) Submit Shop Drawings of the metal duct system showing the system layout and construction details to the Program/Project Manager for approval prior to fabrication.
 - 2) Significant changes proposed to the designed layout or configuration of the duct system must be submitted to and specifically approved in writing by the Program/Project Manager prior to beginning the installation of the revised components.
 - a) Accompany requests for layout modifications with calculations showing that the proposed layout will provide the original design results without increasing system total pressure.

E. Materials:

1. Metal Duct Sheet Metal Materials:

- a. Provide sheet metal materials free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- b. Galvanized Sheet Steel:
 - 1) Provide lock-forming quality galvanized sheet steel complying with the requirements specified in ASTM A 653/A 653M for sheets having a G60 coating.
 - 2) For surfaces exposed to view, provide ducts having a mill-phosphatized finish.
 - 3) For underground installation, provide polyvinyl-chloride (PVC) coated rectangular and round ducts.
- c. Aluminum Sheets:
 - 1) Provide aluminum sheets complying with the requirements specified for Alloy 3003, temper H14 sheets in ASTM B 209.
 - a) For concealed ducts, provide aluminum sheets having a mill finish.
 - b) For exposed ducts, provide aluminum sheets having a standard, 1-side bright finish.

2. Metal Duct Reinforcement Shapes and Plates:

- a. Where reinforcement shapes and plates are installed on galvanized sheet metal ducts, provide galvanized-steel reinforcement.

3. Metal Duct Tie Rods:

- a. Provide galvanized steel tie rods having the following minimum diameters:
 - 1) For lengths 36 inches or less: 1/4 inch.
 - 2) For lengths longer than 36 inches: 3/8 inch.

4. Metal Duct Sealant Materials:

- a. Joint and Seam Tape:
 - 1) Provide glass-fiber-reinforced fabric joint and seam tape 2 inches wide.
- b. Tape Sealing System:
 - 1) Provide woven-fiber tape impregnated with gypsum mineral compound and modified acrylic/silicone activator to react exothermically with the tape to form a hard, durable, airtight seal.

F. Fabrication:

- 1. Unless otherwise indicated, construct ducts according to the requirements specified in ANSI/SMACNA 006.
 - a. Fabricate all ducts from galvanized steel.
- 2. Rectangular Duct Fabrication:

- a. Fabricate rectangular ducts, elbows, transitions, offsets, branch connections, and other construction according to ANSI/SMACNA 006, complying with the requirements for metal thickness, reinforcing types and intervals, tie-rod applications, and joint types and intervals.
 - 1) Lengths:
 - a) Fabricate rectangular ducts in lengths appropriate to the reinforcement and rigidity class required for pressure class.
 - 2) Deflection:
 - a) Do not allow duct systems to exceed the deflection limits specified in ANSI/SMACNA 006.
 - b. Cross Breaking or Cross Beading:
 - 1) Except for lined ducts, cross break or cross bead duct sides that are 19 inches and larger and 0.0359 inch thick or less with more than 10 square feet of non-braced panel area.
3. Round Duct and Fitting Fabrication:
- a. Round, Longitudinal-Seam and Spiral Lock-Seam Ducts:
 - 1) Fabricate supply ducts from galvanized steel according to the requirements specified in ANSI/SMACNA 006.
 - b. Duct Joints:
 - 1) For ducts up to 20 inches in diameter, provide interior, center-beaded slip couplings, sealed before and after fastening, and attached with sheet metal screws.
 - 2) For ducts 21 to 72 inches in diameter, provide three-piece, gasketed, flanged joints consisting of 2 internal flanges with sealant and 1 external closure band with a gasket.
 - c. 90-Degree Tees and Laterals, and Conical Tees:
 - 1) Fabricate 90-degree tees and laterals, and conical tees according to the requirements specified in ANSI/SMACNA 006, providing the metal thicknesses specified for longitudinal-seam straight ducts.
 - d. Diverging-Flow Fittings:
 - 1) Fabricate diverging-flow fittings with a reduced entrance to branch taps, and with no excess material projecting from the fitting onto the branch tap entrance.
 - e. Elbows:
 - 1) Fabricate elbows using die-formed, gored, pleated, or mitered construction.
 - a) Fabricate the bend radius of die-formed, gored, and pleated elbows 1-1/2 times the duct diameter.
 - b) For die-formed elbows up to 8 Inches in diameter and all pressures, fabricate the elbows from 0.040 inch thick material using 2-piece welded construction.

- c) For round gored elbows, fabricate the elbows from material the same thickness as for non-elbow fittings as specified herein.
- 2) Unless the elbow construction type is indicated otherwise, fabricate elbows as follows:
 - a) Round Mitered Elbows:
 - (1) For pressure classes from minus 2 inches w. g. to plus 2 inches w. g., provide welded construction and the following metal thickness:
 - (a) For Ducts 3 to 36 Inches in Diameter: 0.034 inch.
 - (b) For Ducts 37 to 50 Inches in Diameter: 0.040 inch.
 - (2) For pressure classes from 2 inches w. g. to 10 inches w. g., provide welded construction and the following metal thicknesses:
 - (a) For Ducts 3 to 26 Inches in Diameter: 0.034 inch.
 - (b) For Ducts 27 to 50 Inches in Diameter: 0.040 inch.
 - b) Round Elbows:
 - (1) For round elbows 8 Inches and less in diameter, fabricate the elbows only as follows:
 - (a) For 45-degree and 90-degree elbows, fabricate die-formed or pleated elbows.
 - (b) For 30-degree and 60-degree elbows fabricate pleated elbows.
 - (c) Fabricate nonstandard bend-angle configurations or nonstandard diameter elbows with gored construction.
 - (2) For round elbows 9 through 14 Inches in diameter, fabricate the elbows only as follows:
 - (a) For 30-degree, 45-degree, 60-degree, and 90-degree elbows, fabricate gored or pleated elbows, unless space restrictions require mitered elbows.
 - (b) Fabricate nonstandard bend-angle configurations or nonstandard diameter elbows with gored construction.
 - (3) For round elbows larger than 14 Inches in diameter, fabricate gored elbows, unless space restrictions require mitered elbows.

2.02 ACCESSORIES

A. Hangers and Supports:

- 1. Provide hangers and supports complying with the requirements specified in Section 15060, Hangers and Supports.
- 2. Building Attachments:

- a. For building attachments, provide concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for the construction materials to which the hangers are being attached.
 - 1) For standard-weight aggregate concretes or for slabs more than 4 inches thick, provide powder-actuated concrete fasteners.
 - a) Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches thick.
- 3. Hanger Materials:
 - a. Provide galvanized sheet steel or threaded steel rod for hangers.
 - 1) Hangers Installed in Corrosive Atmospheres:
 - a) Provide electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.
 - 2) Strap and Rod Sizes:
 - a) For steel sheet width and thickness, and for steel rod diameters, provide straps and rods sized in accordance with the requirements specified in ANSI/SMACNA 006.
 - 3) For galvanized-steel straps attached to aluminum ducts, paint contact surfaces with zinc-chromate primer.
- 4. Duct Attachments:
 - a. Provide sheet metal screws, blind rivets, or self-tapping metal screws compatible with the duct materials.
- 5. Trapeze and Riser Supports:
 - a. Provide steel shapes complying with the requirements specified in ASTM A 36/A 36M.
 - 1) For galvanized-steel ducts, provide supports fabricated from galvanized-steel shapes and plates.
 - 2) For aluminum ducts, provide supports fabricated from aluminum support materials unless the materials are electrolytically separated from the ducts.
- B. Fire and Smoke Dampers:
 - 1. Provide fire and smoke dampers complying with the requirements specified in Section 15820, Duct Accessories.
- C. Firestopping Materials:
 - 1. Provide firestopping materials complying with the requirements specified in Section 07850, Through-Penetration Firestopping Systems.
- D. Flexible Connectors:

1. Provide flexible connectors complying with the requirements specified in Section 15820, Duct Accessories.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Make a thorough examination of the areas to receive the Work of this Section to verify there are ready for the installation of the metal ducts.
- B. Evaluation and Assessment:
 1. Prior to installing the metal ducts, notify the Program/Project Manager in writing of defects discovered which could affect the satisfactory completion of the Work of this Section.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the metal duct systems.
- B. Surface Preparation:
 1. Install concrete inserts for hangers and supports before placing concrete.
 2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
 - a. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches thick.
- C. Demolition/Removal:
 1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Unless otherwise indicated, install ducts according to the requirements specified in ANSI/SMACNA 006.
 1. Install round ducts in lengths not less than 12 feet, unless the duct is interrupted by fittings.
 2. Install ducts with the fewest possible joints.
 3. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to the building lines.
 - a. Avoid diagonal runs.

4. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of the building.
 5. Install ducts with a clearance of 1 inch, plus an allowance for the insulation thickness.
 6. For underground installation, provide only polyvinyl-chloride (PVC) coated metal ductwork.
- B. Fittings:
1. For changes in direction, size, and shape, and for connections, install fabricated fittings.
 2. For underground installation, provide only polyvinyl-chloride (PVC) coated metal ductwork fittings.
- C. Connections:
1. Install couplings tight to the duct wall surface, and with a minimum of projections into the duct.
 - a. Secure couplings with sheet metal screws, and provide a minimum of 3 screws in each coupling.
 - b. Install screws at intervals of 12 inches.
 2. Make connections to equipment using flexible connectors in accordance with the requirements specified in Section 15820, Duct Accessories.
 3. When making connections for branch, outlet and inlet, and terminal units, comply with the requirements specified in ANSI/SMACNA 006.
 - a. For branch ductwork connections, provide only conical duct taps.
- D. Sealing Joints and Seams:
1. Seal duct seams and joints according to the requirements specified in ANSI/SMACNA 006 for the indicated duct pressure class.
 2. Seal ducts before external insulation is applied.
 3. Before inserting connectors, apply sealant to male ends; and after inserting the connectors cover the entire joint and sheet metal screws with sealant.
- E. Hanging and Supporting Metal Ducts:
1. Support horizontal ducts within 24 inches of each elbow and within 48 inches of each branch intersection.
 2. Support vertical ducts at a maximum spacing of 16 feet, and at each floor.
 3. Install upper attachments to structures with an allowable load not exceeding one-fourth of the failure (proof-test) load.
- F. Finished Spaces:
1. Conceal ducts from view in finished spaces.

2. Do not encase horizontal runs in solid partitions unless this is specifically indicated in the Contract Documents.

G. Electrical Equipment Spaces:

1. Route metal ducts to avoid passing through transformer vaults and other electrical equipment spaces and enclosures.

H. Penetration of Non-Fire-Rated Partitions:

1. Where metal ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, conceal the spaces between the construction openings and the ducts or duct insulation with sheet metal flanges the same metal thickness as the metal ducts.
 - a. Overlap the openings on the 4 sides by at least 1-1/2 inches.

I. Penetration of Fire-Rated Partitions:

1. Where metal ducts pass through fire-rated interior partitions and exterior walls, install appropriately rated fire dampers, sleeves, and firestopping sealant in accordance with the requirements specified in Section 15820, Duct Accessories, and Section 07850, Through-Penetration Firestopping Systems.

3.04 SYSTEM STARTUP

A. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the ductwork, the building automation system, fire and smoke dampers, indoor air quality, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

3.05 RE-INSTALLATION

- A. Remove and reinstall ceiling sections to gain access to the metal ducts during the cleaning process.

3.06 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. Leakage Test Procedure:

- a. Field leakage tests will be performed according to the test methods specified in SMACNA 1143.
 - 1) For round and flat-oval ducts, requirements for Leakage Class 3 will be complied with.

- 2) For rectangular ducts in pressure classes lower than and equal to 2-inch w. g. for both positive and negative pressures, requirements for Leakage Class 12 will be complied with.
 - 3) For rectangular ducts in pressure classes from 2 inches w. g. to 10 inches w. g. for both positive and negative pressures, requirements for Leakage Class 6 will be complied with.
 - b. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
 - c. Tests will be conducted at static pressures equal to the maximum design pressure of the system or section being tested.
 - 1) If pressure classes are not indicated, the entire system will be tested at the maximum system design pressure.
 - 2) Do not pressurize systems above the maximum design operating pressure.
 - d. Test reports will be prepared.
 2. Acceptance Criteria:
 - a. Metal ducts in compliance with the maximum allowable leakage limits specified in SMACNA 1143 for the applicable test method performed will be acceptable.
 3. Inspections:
 - a. Inspections in accordance with the requirements specified in SMACNA 1143 will be performed:
- B. Non-Conforming Work
1. Remake leaking joints, and retest the remade joints until the leakage is equal to or less than the maximum allowable.

3.07 CLEANING

- A. Mechanical Cleaning Methodology:
1. Clean metal duct systems using mechanical cleaning methods that extract contaminants from within the duct systems, and remove contaminants from the building in accordance with the requirements specified in SMACNA Duct Cleanliness for New Construction.
 - a. Use vacuum-collection devices that are operated continuously during cleaning.
 - b. Connect the vacuum device to the downstream end of duct sections, so areas being cleaned are under negative pressure.
 2. Use mechanical agitation to dislodge debris adhered to the interior duct surfaces without damaging the integrity of the metal ducts, duct liner, and duct accessories.

3. Clean coils and coil drain pans according to the requirements specified in the NADCA General Specifications for the Cleaning of Commercial Heating, Ventilating and Air Conditioning Systems.
 - a. Keep drain pan operational during the cleaning.
 - b. Rinse coils with clean water to remove latent residues and cleaning materials, and comb and straighten fins.
- B. Mark the position of dampers and air-directional mechanical devices before cleaning, and perform cleaning before air balancing occurs.
- C. For physical and mechanical entry into the ducts and to inspect the ducts, use the service openings as required.
 1. Create other openings complying with duct standards.
 2. Disconnect flexible ducts as required to facilitate cleaning and inspection.
- D. Vent the vacuuming system to the outside.
 1. Locate the exhaust away and downwind from air intakes and other points of entry into the building.
 2. Furnish filtration to contain debris removed from the HVAC systems.
- E. Clean the following metal duct systems by removing surface contaminants and deposits:
 1. Air outlets and inlets, including registers, grilles, and diffusers.
 2. Supply, return, and exhaust fans, including the fan housings, plenums except ceiling supply and return plenums, scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
 3. Internal surfaces of air-handling units and components, including the mixing box, coil section, condensate drain pans, filters and filter sections, and condensate collectors and drains.
 4. Coils and related components.
 5. Return-air ducts, dampers, and actuators, except in ceiling plenums and mechanical equipment rooms.
 6. Supply-air ducts, dampers, actuators, and turning vanes.

3.08 CLOSEOUT ACTIVITIES

- A. Record Documentation:
 1. Prepare as-built drawings of the metal duct system, including all duct accessories; and submit them to the Program/Project Manager.

3.09 PROTECTION

- A. Corrosion Protection:

1. Paint the 24 inches upstream of registers and grilles on the interiors of metal ducts that do not have duct liner.
 - a. Apply 1 coat of flat black, latex finish coat over a compatible galvanized-steel primer.
- B. Protect duct interiors from the elements and foreign materials until the building is enclosed.

SECTION 15820

DUCT ACCESSORIES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Requirements for the following duct accessories:
 - a. Backdraft dampers.
 - b. Volume dampers.
 - c. Motorized control dampers.
 - d. Combination fire and smoke dampers.
 - e. Turning vanes.
 - f. Duct-mounted access doors.
 - g. Flexible connectors.
 - h. Flexible ducts.
 - i. Duct accessory hardware.

B. Related Requirements:

1. Section 01330 - Submittal Procedures.
2. Section 01360 - Sustainable Design Requirements.
3. Section 01780 - Closeout Submittals.
4. Section 01810 - Commissioning.
5. Section 13851 - Fire Alarm.
6. Section 15065 - Motors for Mechanical Equipment.
7. Section 15075 - Mechanical Identification.
8. Section 15815 - Metal Ducts.
9. Section 15950 - Testing, Adjusting, and Balancing.
10. Section 15995 - Commissioning of Mechanical Systems.

1.02 REFERENCES

A. Abbreviations and Acronyms:

1. CFM: Cubic feet per minute.
2. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside, and San Bernardino counties in California.
3. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.

4. w. g.: Water gauge.

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.

C. Reference Standards:

1. Air Movement and Control Association International, Inc. (AMCA):
 - a. AMCA 11 – Certified Ratings Program Operating Manual.
 - b. ANSI/AMCA 500-D – Laboratory Methods of Testing Dampers for Rating.
 - c. ANSI/AMCA 500-L – Laboratory Methods of Testing Louvers for Rating.
 - d. AMCA 511 - Certified Ratings Program – Product Rating Manual for Air Control Devices.
2. ASTM International (ASTM):
 - a. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvanealed) by the Hot-Dip Process.
 - b. ASTM B 209 – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
5. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
 - b. NFPA 90A – Standard for the Installation of Air-Conditioning and Ventilating Systems.
 - c. NFPA 90B - Standard for the Installation of Warm Air Heating and Air-Conditioning Systems.
6. Sheet Metal and Air Conditioning Contractors' National Association (SMACNA):
 - a. ANSI/SMACNA 006 - HVAC Duct Construction Standards--Metal and Flexible.
7. South Coast Air Quality Management District (SCAQMD):
 - a. SCAQMD Rule 1168 – Adhesive and Sealant Applications.
8. Underwriters Laboratories, Inc. (UL):
 - a. UL 181 – Standard for Factory-Made Air Ducts and Air Connectors.
 - b. UL 555 – Standard for Fire Dampers.

- c. UL 555S – Standard for Smoke Dampers.
- 9. United States Government:
 - a. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate with the Program/Project Manager, the Phoenix Sky Harbor International Airport, and others to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
 - 2. Coordinate the installation of duct accessories with the installation of the ducts provided under Section 15815, Metal Ducts.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Backdraft dampers.
 - 2) Volume dampers.
 - 3) Motorized control dampers.
 - 4) Combination fire and smoke dampers.
 - 5) Turning vanes.
 - 6) Duct-mounting access doors.
 - 7) Flexible connectors.
 - 8) Flexible ducts.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Combination fire and smoke damper manufacturer's written installation instructions.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
2. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - c. Periodic Special Inspections will be performed during the installation of the smoke control systems, smoke dampers, and fire dampers.
3. Testing and Inspection Agencies:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Certifications:

1. Listing and Labeling:
 - a. Combination Fire and Smoke Dampers:
 - 1) Provide components, devices, and accessories that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - a) Provide products marked with their intended use or classification.
 - b) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.

- (1) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - 2) Provide fire dampers labeled for a 1-1/2-hour rating in accordance with the requirements specified in UL 555.
 - 3) Provide smoke dampers labeled in accordance with the requirements specified in UL 555S.
2. Air Movement and Control Association International, Inc. (AMCA) Licensed Products:
 - a. Motorized Control Dampers:
 - 1) Provide only motorized control dampers that have been licensed to bear the AMCA seals by having participated in the AMCA Certified Ratings Program.
 - a) Comply with the procedures and testing requirements for performance rating fans specified in AMCA 11, AMCA 511, ANSI/AMCA 500-D, and ANSI/AMCA 500-L.
 - b) Provide only motorized control dampers labeled with the AMCA Certified Ratings Seals.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Package and protect materials to limit field repairs.
 - a. Deliver pre-finished products in a manner that will prevent material damage and deterioration or contamination from the elements.
 - b. Provide protective wrapping on pre-finished aluminum products.
- B. Storage and Handling Requirements:
 1. Store and handle pre-finished products in a manner that will prevent material damage and deterioration or contamination from the elements.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 DUCT ACCESSORY EQUIPMENT

- A. Manufacturers:
 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.

2. Substitution Limitations:

- a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.

B. Description:

1. Regulatory Requirements:

a. Phoenix Building Construction Code:

- 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].

2. Sustainability Requirements:

a. Volatile Organic Compounds (VOC) Content of Interior Sealants:

- 1) Provide interior sealants and sealant primers for this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168:
 - a) Multipurpose Construction Adhesives: Not more than 70 grams per Liter less water.
 - b) PVC Welding: Not more than 510 grams per Liter less water.
 - c) Adhesive Primer for Plastic: Not more than 550 grams per Liter less water.
 - d) Contact Adhesive: Not more than 80 grams per Liter less water.
 - e) Special Purpose Contact Adhesive: Not more than 250 grams per Liter less water.
 - f) Sheet Applied Rubber Lining Applications: Not more than 850 grams per Liter less water.
 - g) Metal to Metal: Not more than 30 grams per Liter less water.
 - h) Plastic Foams: Not more than 50 grams per Liter less water.
 - i) Fiberglass: Not more than 90 grams per Liter less water.
 - j) Sealant Primers for Nonporous Substrates: Not more than 250 grams per Liter less water.

C. Performance:

1. Motorized Control Dampers:

a. Operating Temperature Range:

- 1) Provide motorized control dampers capable of operating within the temperature range from minus 40 degrees Fahrenheit to plus 200 degrees Fahrenheit.

b. Leakage Rating:

- 1) Provide motorized control dampers rated for a leakage of less than 10 cubic feet per minute per square foot of damper area when tested in accordance with the methods specified in ANSI/AMCA 500-D at a differential pressure of 4 inches w. g. and when the damper is being held by a torque of 50 inch-pounds-force.

D. Design Criteria:

1. Materials and Methods:

- a. Unless otherwise indicated in the Contract Documents, comply with the requirements for acceptable materials, material thicknesses, and duct construction methods specified in ANSI/SMACNA 006.
- b. Provide duct accessories fabricated from materials suited to the duct materials.
 - 1) Provide galvanized-steel accessories in galvanized-steel ducts, and aluminum accessories in aluminum ducts.

2. Combination Fire and Smoke Damper Motors:

- a. Spring-Return Damper Motors:
 - 1) Size spring-return motors for combination fire and smoke dampers to have a running torque rating of 150 inch-pounds-force, and for a breakaway torque rating of 150 inch-pounds-force.
- b. Nonspring-Return Motors:
 - 1) Size nonspring-return motors for combination fire and smoke dampers to have a running torque rating of 150 inch-pounds-force, and for a breakaway torque rating of 300 inch-pounds-force.

3. Flexible Ducts:

- a. Provide flexible ducts designed in accordance with the following design criteria:
 - 1) Pressure Rating:
 - a) Provide flexible ducts designed for applications within the 10-inch w. g. positive to 1.0-inch w. g. negative pressure range.
 - 2) Air Velocity:
 - a) Provide flexible ducts designed to accommodate maximum air velocities of 4000 feet per minute.
 - 3) Temperature Range:
 - a) Provide flexible ducts designed for applications within the minus 10 degrees Fahrenheit to plus 160 degrees Fahrenheit temperature range.

4. Product Data:

- a. Prepare Product Data for the following duct accessories including rated capacities furnished accessories for each type of product indicated:
 - 1) Backdraft dampers.
 - 2) Volume dampers.
 - 3) Motorized control dampers.
 - 4) Combination fire and smoke dampers.
 - 5) Turning vanes.
 - 6) Duct-mounting access doors.
 - 7) Flexible connectors.
 - 8) Flexible ducts.

E. Materials:

1. Galvanized Sheet Steel:
 - a. Provide lock-forming quality galvanized sheet steel complying with the requirements specified for steel having a G60 coating designation in ASTM A 653/A 653M.
 - b. For surfaces exposed to view, provide sheets having a mill-phosphatized finish.
2. Aluminum Sheets:
 - a. Provide aluminum sheets complying with the requirements specified for Alloy 3003, Temper H14 aluminum in ASTM B 209.
 - 1) For concealed ducts provide aluminum sheets having a mill finish.
 - 2) For exposed ducts, provide aluminum sheets having a standard, 1-side bright finish.
3. Reinforcement Shapes and Plates:
 - a. Where reinforcement is required for galvanized sheet metal ducts, provide galvanized-steel reinforcement.
 - b. Where reinforcement is required for aluminum and stainless-steel ducts, provide reinforcement compatible with these materials.
4. Tie Rods:
 - a. Provide galvanized steel tie rods
 - 1) For tie rod lengths 36 inches or less, provide tie rods having diameters of at least 1/4 inch.
 - 2) For tie rod lengths longer than 36 inches, provide tie rods having diameters of at least 3/8 inch

F. Product Types:

1. Backdraft Dampers:
 - a. Provide multiple-blade, parallel action gravity balanced backdraft dampers having center-pivoted blades no more than 6 inches wide and sealed edges.

- 1) Assemble the backdraft dampers' steel ball bearings and axles so the dampers perform in a rattle-free manner.
 - 2) Provide backdraft dampers having a 90-degree stop.
 - 3) Provide an adjustment device to permit setting the backdraft dampers for varying differential static pressures.
- b. Frame:
 - 1) Fabricate the backdraft damper frames and mounting flanges from 0.052-inch thick, galvanized sheet steel.
 - a) Weld the corners of the frames and mounting flanges.
- c. Blades:
 - 1) Fabricate the backdraft damper blades from 0.025-inch thick, roll-formed aluminum.
- d. Blade Seals:
 - 1) Fabricate the backdraft damper blade seals from neoprene.
- e. Blade Axles:
 - 1) Fabricate the backdraft damper blade axels from galvanized steel.
- f. Tie Bars and Brackets:
 - 1) Fabricate the backdraft damper tie bars and brackets from aluminum.
- g. Return Spring:
 - 1) Provide a return spring having an adjustable tension for the backdraft damper.
- h. Manufacturers:
 - 1) Air Balance, Inc., www.airbalance.com
 - 2) American Warming and Ventilating, www.awv.com
 - 3) CESCO Products, www.cescoproducts.com
 - 4) Duro Dyne Corp., www.durodyne.com
 - 5) Greenheck, www.greenheck.com
 - 6) Penn Ventilation Company, Inc., <https://www.pennbarry.com/>
 - 7) Approved equal.
2. Volume Dampers:
 - a. Provide factory-fabricated volume dampers suitable for horizontal or vertical applications, and having the required hardware and accessories.
 - 1) Provide multiple-blade or single-blade, parallel-blade or opposed-blade designs as indicated on the Contract Drawings.
 - 2) Stiffen the damper blades to provide stability.
 - 3) Provide a locking device to hold single-blade dampers in a fixed position without vibration.

- 4) Where damper components penetrate the duct, close the duct penetrations so the duct seal is consistent with the requirements for the pressure class of the duct.
- b. Higher Pressure Classes:
 - 1) For volume dampers intended for pressures of 3-inch w. g. or higher, provide axles extending the full length of the damper blades and having bearings at both ends of the operating shaft.
 - a) Provide end bearings or other appropriate seals for the ducts.
- c. Standard Volume Dampers:
 - 1) For volume dampers having a standard leakage rating, mount the linkage outside the airstream.
 - 2) Frames:
 - a) Fabricate frames for standard volume dampers from hat-shaped, galvanized sheet steel channels at least 0.064 inch thick, and miter and weld the frames' corners.
 - (1) For frames indicated to be attached to walls on the Contract Drawings, provide frames with flanges.
 - (2) For frames indicated to be installed in ducts, provide flangeless frames.
 - 3) Blades:
 - a) Fabricate the standard volume dampers' blades from 0.050-inch thick extruded aluminum.
 - 4) Blade Axles:
 - a) Fabricate the standard volume dampers' blade axels from galvanized steel.
 - 5) Bearings:
 - a) Fabricate the standard volume dampers' bearings from oil-impregnated bronze.
 - 6) Tie Bars and Brackets:
 - a) Fabricate the standard volume dampers' tie bars and brackets from aluminum.
- d. Low-Leakage Volume Dampers:
 - 1) For volume dampers having a low leakage rating, mount the linkage outside the airstream.
 - 2) Steel Low-Leakage Volume Dampers:
 - a) Frames:
 - (1) Fabricate the low-leakage volume damper frames from angle-shaped, galvanized sheet steel channels that are at least 0.064 inch thick.
 - (a) For frames indicated to be attached to walls on the Contract Drawings, provide frames with flanges.

- (b) For frames indicated to be installed in ducts on the Contract Drawings, provide flangeless frames.
 - (2) Miter and weld the corners of the frames and mounting flanges.
- b) Blades:
 - (1) Fabricate the low-leakage volume damper blades from 0.064 inch thick, roll-formed galvanized sheet steel.
- 3) Aluminum Low-Leakage Volume Dampers:
 - a) Frames
 - (1) Fabricate the low-leakage volume damper frames from angle-shaped, aluminum sheet channels that are at least 0.10 inch thick.
 - (a) For frames indicated to be attached to walls on the Contract Drawings, provide frames with flanges.
 - (b) For frames indicated to be installed in ducts, provide flangeless frames.
 - b) Blades:
 - (1) Fabricate the low-leakage volume damper blades from 0.050 inch thick extruded aluminum.
- 4) Blade Axles:
 - a) Fabricate the low-leakage volume dampers' blades from galvanized steel.
- 5) Bearings:
 - a) Provide either thrust or ball bearings having a stainless-steel sleeve.
- 6) Blade Seals:
 - a) Fabricate the low-leakage volume dampers' blade seals from neoprene.
- 7) Jamb Seals:
 - a) Fabricate the low-leakage volume dampers' jamb seals from cambered stainless steel.
- 8) Tie Bars and Brackets:
 - a) Fabricate the standard volume dampers' tie bars and brackets from aluminum.
- e. Multiple-Damper Jackshafts:
 - 1) Provide jackshafts consisting of a 1-inch diameter, galvanized-steel pipe rotating within a pipe-bearing assembly mounted on supports at each mullion and at each end of multiple-damper assemblies.
- f. Multiple-Damper Linkage Mountings:

- 1) Provide the length and number of mountings appropriate to connect the linkage of each damper in a multiple-damper assembly.
- g. Damper Hardware:
 - 1) Provide zinc-plated hardware having a die-cast core and a 3/4-inch hexagon locking nut.
 - 2) Provide a dial and handle fabricated from 3/32-inch thick zinc-plated steel.
 - 3) Provide a center hole to suit the damper operating-rod size.
 - 4) For mounting volume dampers on insulated duct, provide elevated platforms.
- h. Manufacturers:
 - 1) Air Balance, Inc., www.airbalance.com.
 - 2) American Warming and Ventilating, www.awv.com.
 - 3) METALAIRE, Inc., www.metalaire.com.
 - 4) Nailor Industries Inc., www.nailor.com.
 - 5) Approved equal.
3. Motorized Control Dampers:
 - a. Provide opposed-blade motorized control dampers.
 - b. Frames:
 - 1) Provide motorized control damper frames fabricated from at least 0.1084-inch thick galvanized steel, and having holes for duct mounting.
 - c. Blades:
 - 1) Provide motorized control damper blades fabricated from at least 0.0635-inch thick galvanized steel, and having a maximum blade width of 8 inches.
 - 2) Provide closed-cell neoprene edging.
 - d. Blade Axles:
 - 1) Secure the motorized control damper blades to 1/2-inch diameter, zinc-plated axles using zinc-plated hardware.
 - e. Bearings:
 - 1) Provide thrust bearings at each end of every motorized control damper blade.
 - f. Blade Seals:
 - 1) Provide motorized control damper blade bearings fabricated from nylon.
 - 2) Provide motorized control damper blade end seal bearings fabricated from spring-stainless-steel, against which the damper blade ends seal.
 - g. Damper Hardware:

- 1) Provide blade-linkage hardware fabricated from zinc-plated steel and brass.
- h. Manufacturers:
 - 1) Air Balance, Inc., www.airbalance.com
 - 2) American Warming and Ventilating, www.awv.com
 - 3) CESCO Products, www.cescoproducts.com
 - 4) Duro Dyne Corp., www.durodyne.com
 - 5) Greenheck, www.greenheck.com
 - 6) METALAIRES, Inc., www.metalaire.com
 - 7) Nailor Industries Inc., www.nailor.com
 - 8) Penn Ventilation Company, Inc., <https://www.pennbarry.com/>
 - 9) Approved equal.
4. Combination Fire and Smoke Dampers:
 - a. Provide combination fire and smoke dampers having replaceable fusible links rated for 165 degrees Fahrenheit.
 - b. Frame and Blades:
 - 1) Provide combination fire and smoke damper frames and blades fabricated from 0.064-inch thick galvanized sheet steel.
 - c. Mounting Sleeves:
 - 1) Provide factory-installed, 0.052-inch thick, galvanized sheet steel mounting sleeves having a length to suit the wall or floor application.
 - d. Damper Motors:
 - 1) Provide modulating damper motors complying with requirements specified in Section 15065, Motors for Mechanical Equipment, and having two-position action.
 - a) Permanent-Split-Capacitor or Shaded-Pole Motors:
 - (1) Provide permanent-split-capacitor or shaded-pole motors having oil-immersed and sealed gear trains.
 - b) Spring-Return Motors:
 - (1) Where indicated on the Contract Drawings, provide spring-return motors equipped with an integral spiral-spring mechanism.
 - (2) Enclose the entire spring mechanism in a removable housing designed for service or adjustments.
 - c) Nonspring-Return Motors:
 - (1) For dampers larger than 25 square feet, provide nonspring-return motors
 - 2) Motors in Outside-Air Intakes:
 - a) Equip motors in outside-air intakes with O-ring gaskets designed to make the motors weatherproof.

- b) Equip motors in outside-air intakes with internal heaters to permit normal operation at minus 40 degrees Fahrenheit.
 - e. Electrical Power:
 - 1) Provide combination fire and smoke damper motors designed to operate on a 115-Volt, single phase, 60 Hertz power source.
 - f. Manufacturers:
 - 1) Air Balance, Inc., www.airbalance.com.
 - 2) CESCO Products, www.cescoproducts.com.
 - 3) Greenheck, www.greenheck.com.
 - 4) Ruskin Company, www.ruskin.com.
 - 5) Approved equal.
- 5. Turning Vanes:
 - a. Provide turning vanes complying with the requirements specified in ANSI/SMACNA 006 for vanes and vane runners.
 - b. Provide vane runners that automatically align the vanes.
 - c. Manufactured Turning Vanes:
 - 1) Provide turning vanes consisting of 1-1/2-inch wide, double-vane, curved blades fabricated from galvanized sheet steel, and set 3/4 inch apart on center.
 - 2) Provide turning vanes supported by bars set 2 inches apart on center perpendicular to the blades.
 - 3) Provide turning vanes set into vane runners suitable for duct mounting.
 - d. Manufacturers:
 - 1) Ductmate Industries, Inc., www.ductmate.com.
 - 2) Duro Dyne Corp., www.durodyne.com.
 - 3) METALAIRE, Inc., www.metalaire.com.
 - 4) Approved equal.
- 6. Duct-Mounted Access Doors:
 - a. Provide duct-mounted access doors fabricated to be airtight and suitable for the duct pressure class.
 - b. Rectangular Doors:
 - 1) Provide double-wall, duct mounted rectangular doors fabricated from galvanized sheet metal and having insulation fill.
 - 2) Door Thickness:
 - a) Provide doors having the thickness indicated for duct pressure class.
 - 3) Frames:
 - a) Provide doors having a galvanized sheet steel frame having bend-over tabs and foam gaskets.
 - 4) Vision Panels:

- a) Where indicated on the Contract Drawings, provide a vision panel.
- 5) Hardware:
 - a) Provide 1-inch by 1-inch butt or piano hinges and cam style latches.
 - b) Provide the number of hinges and locks as follows:
 - (1) For doors less than 12 inches square, provide 2 sash locks to secure the door.
 - (2) For doors up to 18 inches square, provide 2 hinges and 2 sash locks.
 - (3) For doors up to 24 inches by 48 inches, provide 3 hinges and 2 compression latches.
- 6) Manufacturers:
 - a) American Warming and Ventilating, www.awv.com.
 - b) CESCO Products, www.cescoproducts.com.
 - c) Ductmate Industries, Inc., www.ductmate.com.
 - d) Greenheck, www.greenheck.com.
 - e) McGill AirFlow Corporation, www.mcgillairflow.com.
 - f) Nailor Industries Inc., www.nailor.com.
 - g) Ventfabrics, Inc., www.ventfabrics.com.
 - h) Approved equal.
- c. Round Doors:
 - 1) Provide double-wall, duct mounting round doors fabricated from galvanized sheet metal and having insulation fill.
 - 2) Door Thickness:
 - a) Provide 1-inch thick doors.
 - 3) Frames:
 - a) Provide galvanized sheet steel spin-in notched frames.
 - 4) Hardware:
 - a) Provide cam latches.
 - 5) Manufacturers:
 - a) Ductmate Industries, Inc., www.ductmate.com.
 - b) Flexmaster U.S.A., Inc., www.flexmasterusa.com.
 - c) Approved equal.
- 7. Flexible Connectors:
 - a. Provide flexible connectors fabricated from flame-retardant or noncombustible fabrics, coatings, and adhesives complying with the requirements for Class 1 materials specified in UL 181.
 - b. Flexible Connector Fabric:
 - 1) Provide glass fabric, double coated with neoprene, and weighing not less than 26 ounces per square yard.

- 2) Tensile Strength:
 - a) Provide flexible connector fabric having a minimum tensile strength of 480 pounds-force per inch in the warp direction, and 360 pounds-force per inch in the filling direction.
- 3) Service Temperature:
 - a) Provide flexible connector fabric capable of withstanding service temperatures between minus 40 degrees Fahrenheit to plus 200 degrees Fahrenheit.
- c. Manufacturers:
 - 1) Ductmate Industries, Inc., www.ductmate.com.
 - 2) Duro Dyne Corp., www.durodyne.com.
 - 3) Ventfabrics, Inc., www.ventfabrics.com.
 - 4) Approved equal.
- 8. Flexible Ducts:
 - a. Provide insulated-duct connectors consisting of 2-ply vinyl film supported by helically wound, spring-steel wire; and having fibrous-glass insulation and a polyethylene vapor barrier film.
 - b. Provide flexible ducts complying with the requirements for Class 1 ducts specified in UL 181.
 - c. Manufacturers:
 - 1) Flexmaster U.S.A., Inc., www.flexmasterusa.com.
 - 2) Hart & Cooley, Inc., www.hartandcooley.com.
 - 3) Approved equal.

2.02 ACCESSORIES

- A. Instrument Test Holes:
 - 1. Provide instrument test holes fabricated from either cast iron or cast aluminum to suit the duct material, of a length to suit the duct insulation thickness, and having a screw cap and gasket.
 - 2. Size the instrument test holes to allow insertion of a pitot tube and other testing instruments.
- B. Adhesives:
 - 1. Provide high strength, quick setting, neoprene based, waterproof, adhesives that are resistant to gasoline and grease.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:

1. Make a thorough examination of the areas to receive the Work of this Section to verify there are ready for the installation of the duct accessories.

B. Evaluation and Assessment:

1. Prior to installing the duct accessories, notify the Program/Project Manager in writing of defects discovered which could affect the satisfactory completion of the Work of this Section.

3.02 PREPARATION

A. Protection of In-Place Conditions:

1. Protect adjacent areas from damage resulting from installation of the duct accessories.

3.03 INSTALLATION

- A. Install duct accessories in accordance with the requirements specified in NFPA 90A and NFPA 90B, and according to the applicable details for metal ducts in ANSI/SMACNA 006.

B. Backdraft Dampers:

1. Install backdraft dampers on exhaust fans and exhaust ducts nearest to the outside, and where indicated in the Contract Documents.

C. Volume Dampers:

1. Install volume dampers in ducts with liner.
2. Take measures to avoid damaging the duct liner.

D. Balancing Dampers:

1. Provide balancing dampers required for air balancing at the points in the supply, return, and exhaust systems where branches lead from larger ducts.
2. Install balancing dampers at least 2 duct widths from the branch takeoff.

E. Test Holes:

1. Provide test holes at fan inlets and outlets, where required for testing and balancing purposes, and elsewhere as indicated in the Contract Documents.

F. Combination Fire and Smoke Dampers:

1. Install combination fire and smoke dampers in accordance with the manufacturer's UL-approved written instructions.

2. Submit the combination fire and smoke damper manufacturer's written installation instructions to the Program/Project Manager for information.

G. Duct Access Doors:

1. Install duct access doors to allow accessories and terminal units to be inspected, adjusted, and maintained as follows:
 - a. On both sides of duct coils.
 - b. Downstream from volume dampers and equipment.
 - c. Adjacent to combination fire and smoke dampers to provide access to reset or reinstall fusible links.
 - d. On the sides of ducts where adequate clearance is available.
2. Install rectangular, duct-mounted access doors of the following sizes for the application indicated:
 - a. One-Hand or Inspection Access: 8 inches by 5 inches.
 - b. Two-Hand Access: 12 inches by 6 inches.
 - c. Head and Hand Access: 18 inches by 10 inches.
 - d. Head and Shoulders Access: 21 inches by 14 inches.
 - e. Body Access: 25 inches by 14 inches.
 - f. Body Plus Ladder Access: 25 inches by 17 inches.
3. Label the access doors in accordance with the requirements specified in Section 15075, Mechanical Identification.

H. Flexible Connectors:

1. Install flexible connectors immediately adjacent to equipment mounted in ducts and that is associated with fans and motorized equipment supported by vibration isolators.
 - a. For fans developing static pressures of 5-inch w. g. and higher, cover the flexible connectors with loaded vinyl sheet held in place with metal straps.

I. Flexible Ducts:

1. Connect terminal units to supply ducts directly or with lengths of flexible duct no more than 12 inches long.
2. Do not use flexible ducts to change directions.
3. Connect diffusers to low pressure ducts with lengths of flexible duct no more than 60 inches long clamped or strapped in place.
4. Connect flexible ducts to metal ducts using draw bands.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. During the period when duct accessories are being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
 2. Testing, Adjusting, and Balancing:
 - a. Test Procedure:
 - 1) For testing, adjusting, and balancing procedures, comply with the requirements specified in Section 15950, Testing, Adjusting, and Balancing.
 - a) Test and adjust controls and safeties.
 - b. Acceptance Criteria:
 - 1) Refer to the acceptance criteria specified in Section 15950, Testing, Adjusting, and Balancing.
 3. Inspections:
 - a. The code-required Approved Agency must perform Special Inspections of smoke control systems, including combination fire and smoke dampers and motorized control dampers provided under this Section; and of automatic shutoff systems for air distribution systems provided under Section 13851, Fire Alarm.
- B. Non-Conforming Work
1. Remove malfunctioning units, replace the malfunctioning units with acceptable units, and retest the replacement units as specified herein.
 - a. Replace damaged and malfunctioning controls and equipment.

3.05 SYSTEM STARTUP

A. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995,

Commissioning of Mechanical Systems, for the ductwork, the building automation system, fire and smoke dampers, indoor air quality, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

3.06 ADJUSTING

- A. Adjust duct accessories to ensure proper settings.
- B. Combination Fire and Smoke Dampers:
 - 1. Adjust combination fire and smoke dampers to ensure proper action.
- C. Manual-Volume Dampers:
 - 1. The final positioning of manual-volume dampers is specified in Section 15950, Testing, Adjusting, and Balancing.

3.07 CLEANING

- A. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.08 PROTECTION

- A. Take steps to insure that installed duct accessories are protected during subsequent construction activities.

SECTION 15835

POWER VENTILATORS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following types of power ventilators:
 - a. In-line centrifugal fans.
 - b. Centrifugal roof ventilators.
 - c. Upblast propeller roof exhaust fans.
 - d. Propeller fans.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01770 - Closeout Procedures.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 01810 – Commissioning.
 - 6. Section 07720 - Roof Accessories.
 - 7. Section 15065 - Motors for Mechanical Equipment.
 - 8. Section 15070 - Mechanical Sound, Vibration, and Seismic Control.
 - 9. Section 15075 - Mechanical Identification.
 - 10. Section 15060 - Hangers and Supports.
 - 11. Section 15815 - Metal Ducts.
 - 12. Section 15820 - Duct Accessories.
 - 13. Section 15950 - Testing, Adjusting, and Balancing.
 - 14. Section 15995 - Commissioning of Mechanical Systems.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. MSL: Mean sea level.
 - 2. RPM: Revolutions per minute.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
- C. Reference Standards:
 - 1. Air Movement and Control Association International, Inc. (AMCA):

- a. AMCA 11 – Certified Ratings Program Operating Manual.
- b. AMCA 99 – Standards Handbook.
- c. ANSI/AMCA 210 / ANSI/ASHRAE 51 – Laboratory Methods of Testing Fans for Certified Aerodynamic Performance Rating.
- d. AMCA 211 - Certified Ratings Program – Product Rating Manual for Fan Air Performance.
- e. ANSI/AMCA 300 – Reverberant Room Method for Sound Testing of Fans.
- f. ANSI/AMCA 301 – Methods for Calculating Fan Sound Ratings from Laboratory Test Data.
- g. AMCA 311 - Certified Ratings Program – Product Rating Manual for Fan Sound Performance.
2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
4. National Electrical Manufacturers Association (NEMA):
 - a. NEMA MG 1 – Motors and Generators.
5. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
6. Underwriters Laboratories, Inc. (UL):
 - a. UL 486A-486B – Wire Connectors.
 - b. UL 705 – Standard for Power Ventilators.
 - c. UL Online Certifications Directory,

 - a. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1910 Occupational Health and Safety Standards.
 - 2) 29 CFR 1926 Safety and Health Regulations for Construction.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with the Program/Project Manager, the Phoenix Sky Harbor International Airport, and others to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
2. Coordinate the installation of power ventilators with the size and location of structural-steel support members.

3. Coordinate the installation of power ventilators with the installation of roof curbs, equipment supports, and roof penetrations provided under Section 07720, Roof Accessories.

B. Sequencing:

1. Provide required anchorage devices and wall, ceiling, and roof supports prior to installing the power ventilator equipment.
2. Provide electrical power to the installed power ventilator equipment so startup and testing activities are not delayed.

C. Scheduling:

1. Schedule the installation of the power ventilator equipment so delays to other construction are minimized.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Power ventilators.
 - b. Shop Drawings:
 - 1) Power ventilators.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Power ventilator manufacturer's printed installation instructions.
 - 2) Power ventilator manufacturer's printed cleaning instructions.
 - b. Source Quality Control Submittals:
 - 1) Sound Test results.
 - 2) Fan Performance Rating Testing results.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the power ventilators.

D. Maintenance Material Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish spare power ventilator products that match the products installed in the following quantities, and package the spare parts with a protective covering for storage identified with labels describing the contents of the packages:
 - a) Belts:
 - (1) Furnish an additional quantity of belts, equal to 1 set of belts for each belt-driven unit installed under this Contract, for future use as spare parts.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
2. Testing and Inspection Agency:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Certifications:

1. Electrical Listing and Labeling:
 - a. Provide electrical components, devices, and accessories that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.

- 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.
 2. Air Movement and Control Association International, Inc. (AMCA) Licensed Products:
 - a. Provide only products licensed to bear the AMCA seals by having participated in the AMCA Certified Ratings Program.
 - 1) Comply with the procedures and testing requirements for performance rating fans specified in AMCA 11, AMCA 211, and AMCA 311.
 - 2) Provide only fans labeled with the AMCA Certified Ratings Seal.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver fans as factory-assembled units to the extent allowable by shipping limitations, and having protective crating and covering.
- B. Storage and Handling Requirements:
 1. Lift and support units from the manufacturer's designated lifting or supporting points.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

- A. Manufacturers:
 1. Manufacturer List:
 - a. Greenheck Fan Corporation, www.greenheck.com.

- b. JenncoFan, Division of Soler & Palau Ventilation Group, www.jencofan.com.
 - c. Loren Cook Company, www.lorencook.com.
 - d. Penn Barry, www.pennbarry.com.
 - e. Approved equal.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. National Electrical Code (NEC):
 - 1) Provide electrical products and installation complying with requirements specified in NFPA 70.
- C. Performance:
 - 1. Capacities:
 - a. Provide power ventilators having the capacities and other characteristics listed in the Mechanical Equipment Schedule on the Contract Drawings.
 - 2. Air Movement and Control Association International, Inc. (AMCA) Compliance:
 - a. Provide power ventilators complying with the performance requirements for fan classification specified by the Air Movement and Control Association International, Inc. (AMCA).
 - b. Operating Limits:
 - 1) Classify power ventilators according to the requirements specified in AMCA 99 for their operating limits.
 - c. Fan Performance Ratings:
 - 1) Establish the power ventilator flow rate, pressure, power, air density, speed of rotation, and efficiency in accordance with the requirements specified in AMCA 210.
 - 2) Base air ratings on the actual Site elevation of 4400 feet above MSL.
 - d. Sound-Power Level Ratings:

- 1) Provide power ventilators having sound-power levels complying with the requirements specified in ANSI/AMCA 301.

D. Design Criteria:

1. Design Standard:

- a. Provide power ventilators complying with the requirements specified in UL 705.

2. National Electrical Manufacturers Association (NEMA) Compliance:

- a. Provide power ventilators having motors and electrical accessories complying with the requirements specified in applicable NEMA standards.

b. Motors:

- 1) Provide motors complying with the requirements specified in Section 15065, Motors for Mechanical Equipment, and having guarded dripproof type enclosures.
 - a) Unless otherwise indicated, provide motors complying with the requirements specified in NEMA MG 1.

3. Product Data:

- a. Prepare Product Data for the power ventilators listing rated capacities, furnished specialties, and accessories for each type of product indicated, and that includes the following information:
 - 1) Certified fan performance curves having the system operating conditions indicated.
 - 2) Certified fan sound-power ratings.
 - 3) Motor ratings, electrical characteristics, and motor and electrical accessories.
 - 4) Material gages, finishes, and color charts.
 - 5) Damper information, including housings, linkages, and operators.
- b. Submit the Product Data for the power ventilators to the Program/Project Manager for approval.

4. Shop Drawings:

- a. Prepare Shop Drawings for the power ventilators indicating installation and mounting details.
- b. Submit the Shop Drawings for the power ventilators to the Program/Project Manager for approval.

E. Equipment:

1. In-Line Centrifugal Fans:

- a. Provide in-line, direct-driven centrifugal fans consisting of a housing, a fan wheel, outlet guide vanes, a fan shaft, bearings, a motor and it's disconnect switch, a drive assembly, mounting brackets, and the specified accessories.

- b. Housing:
 - 1) Provide a split, spun aluminum housing having aluminum straightening vanes, inlet and outlet flanges, and a support bracket adaptable to floor, side wall, or ceiling mounting.
- c. Fan Wheels:
 - 1) Provide a fan wheel consisting of aluminum airfoil blades welded to an aluminum hub.
- d. Direct-Driven Units:
 - 1) Provide direct-driven units having a motor encased in a housing mounted outside of the airstream, and factory-wired to a disconnect switch located on the outside of fan housing.
- e. Accessories:
 - 1) Companion Flanges:
 - a) Provide companion flanges for the inlet and outlet duct connections.
 - 2) Fan Guards:
 - a) Provide fan guards consisting of a 1/2-inch by 1-inch galvanized steel mesh mounted in a removable frame.
 - b) For units not connected to ductwork, provide a guard for the inlet or outlet.
 - 3) Motor and Drive Cover (Belt Guard):
 - a) Provide epoxy-coated steel motor and drive cover.
- 2. Direct Drive Centrifugal Roof Exhaust Fans:
 - a. Spun aluminum, roof mounted, direct driven, down-blast centrifugal exhaust ventilator, with components as indicated and specified. Sizes, performances, and accessories shall be as indicated on equipment schedules on Drawings. Also, provide accessories for proper operation and balancing of fans in accordance with design intent and sequence of operation.
 - b. Housing:
 - 1) The fan shall be of bolted and welded construction utilizing corrosion resistant fasteners. The spun aluminum structural components shall be constructed of minimum 16 gage marine alloy aluminum, bolted to a rigid aluminum support structure. The aluminum base shall have continuously welded curb cap corners for maximum leak protection. The discharge baffle shall have a rolled bead for added strength. An integral conduit chase shall be provided through curb cap and into motor compartment to facilitate wiring connections. The motor shall be enclosed in a weather-tight compartment, separated from exhaust airstream. Unit

shall bear an engraved aluminum nameplate and shall be shipped in ISTA Transit Tested Certified packaging.

- c. Fan Wheel:
 - 1) Wheel shall be centrifugal backward inclined, constructed of 100 percent aluminum, including a precision machined cast aluminum hub. An aerodynamic aluminum inlet cone shall be provided for maximum performance and efficiency. Wheel shall be balanced in accordance with AMCA Standard 204, Balance Quality and Vibration Levels for Fans.
- d. Motor:
 - 1) Motor shall be a DC electronic commutation type motor (ECM) specially designed for fan applications.
 - 2) Motor shall be heavy-duty type with permanently lubricated sealed bearings and furnished at specified voltage, phase, and enclosure.
 - 3) Motor shall be speed controllable down to 20% of full speed. Speed shall be controlled by either a potentiometer dial mounted at the motor or by a 0-10 VDC signal.
 - 4) Motor shall be a minimum of 85% efficient at all speeds.

2.02 SOURCE QUALITY CONTROL

- A. Tests and Inspections:
 - 1. Sound Test:
 - a. Test Procedure:
 - 1) Factory-test the fans in accordance with the requirements specified in ANSI/AMCA 300.
 - 2) Submit the Sound Test results to the Program/Project Manager for approval.
 - b. Acceptance Criteria:
 - 1) Fans within with the sound operating limits specified for the fan classification pass the Sound Test.
 - 2. Fan Performance Rating Tests:
 - a. Test Procedure:
 - 1) Determine the flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests and ratings in accordance with the requirements specified in ANSI/AMCA 210.
 - 2) Submit the Fan Performance Rating Testing results to the Program/Project Manager for approval.
 - b. Acceptance Criteria:

- 1) Fans complying with the operating limits specified for the fan classification and the requirements specified in the Mechanical Equipment Schedule on the Contract Drawings pass the Fan Performance Rating Tests.
- B. Coordination of Other Tests and Inspections:
 1. Notify the code-required Approved Agency responsible for performing special inspections when power ventilators for this Contract are being assembled and/or tested.
 2. Cooperate with the code-required Approved Agency when they are performing required material verifications and other special inspections.
 - a. Provide full access to the Work.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Examine the elements and surfaces to receive power ventilator components for compliance with installation tolerances and other conditions affecting the performance of the Work.
 2. Examine the power ventilators before installation.
- B. Evaluation and Assessment:
 1. Proceed with installation only after unsatisfactory conditions have been corrected.
 2. Reject power ventilators that are damaged or rusted.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the power ventilators.

3.03 INSTALLATION

- A. Install power ventilators level and plumb in accordance with the manufacturer's printed installation instructions at the locations indicated on the Contract Drawings.
 1. Submit the power ventilator manufacturer's printed installation instructions to the Program/Project Manager for information.

- B. Support power ventilators using restrained spring isolators complying with the requirements specified in Section 15060, Hangers and Supports, and having a static deflection of 1 inch.
- C. Wall-Mounted Ventilators:
 - 1. Secure wall-mounted fans to a sleeved mounting frame with cadmium-plated hardware.
- D. Ceiling Mounted Ventilators:
 - 1. Suspend units from the structure using threaded steel rods and spring hangers complying with the requirements specified in Section 15060, Hangers and Supports.
- E. Suspended Ventilators:
 - 1. Support suspended units from the structure using threaded steel rods and spring hangers complying with the requirements specified in Section 15060, Hangers and Supports.
 - 2. In seismic zones, restrain support suspended units in accordance with the requirements specified in Section 15070, Mechanical Sound, Vibration, and Seismic Control.
- F. Install units allowing clearances for service and maintenance.
- G. Label power ventilator units in accordance with the requirements specified in Section 15075, Mechanical Identification.
- H. Interface with Other Work:
 - 1. Ductwork Connections:
 - a. The Contract Drawings indicate the general arrangement of ducts and duct accessories.
 - b. Duct installation and connection requirements are specified in Section 15815, Metal Ducts, and Section 15820, Duct Accessories.
 - 1) Make final duct connections with flexible connectors.
 - a) Flexible connectors are specified in Section 15820, Duct Accessories.
 - c. When installing ducts that are adjacent to power ventilators, allow clearances for service and maintenance.
 - 2. Electrical Connections:
 - a. Provide electrical connections as indicated in the manufacturer's instructions.
 - b. Ground power ventilation equipment.
 - c. Tighten electrical connectors and terminals according to the manufacturer's published torque-tightening values.

- 1) If the manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. During the period when power ventilators are being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
2. Testing, Adjusting, and Balancing:
 - a. Test Procedure:
 - 1) For testing, adjusting, and balancing procedures, comply with the requirements specified in Section 15950, Testing, Adjusting, and Balancing.
 - a) Test and adjust controls and safeties.
 - b. Acceptance Criteria:
 - 1) Refer to the acceptance criteria specified in Section 15950, Testing, Adjusting, and Balancing.
3. Inspections:
 - a. The code-required Approved Agency must perform Special Inspections of smoke control systems, including fans; and of automatic shutoff systems for air distribution systems.

B. Non-Conforming Work

1. Remove malfunctioning units, replace the malfunctioning units with acceptable units, and retest the replacement units as specified herein.
 - a. Replace damaged and malfunctioning controls and equipment.

3.05 SYSTEM STARTUP

A. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the ductwork, the building automation system, fire and smoke dampers, indoor air quality, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

B. Equipment Startup Checks:

1. Verify that shipping, blocking, and bracing are removed.
2. Verify that each unit is secure on its mountings and supporting devices, and that connection to ducts and of electrical components are complete.
3. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
4. Verify that cleaning and adjusting are complete.
5. Disconnect the fan drive from the motor, and verify proper motor rotation direction, fan wheel free rotation, and smooth bearing operation.
6. Reconnect the fan drive system, align and adjust the belts, and install the belt guards.
7. Verify lubrication for bearings and other moving parts has been provided.
8. In connected ductwork systems, verify that the manual and automatic volume control and the fire and smoke dampers are in the fully open position.
9. Disable automatic temperature-control operators.

C. Starting Procedure:

1. Energize the motor, and adjust the fan to the indicated rpm.
2. Measure and record the motor voltage and amperage.

D. Operational Test:

1. After the electrical circuitry has been energized, start the units to confirm proper motor rotation and unit operation.
2. Remove malfunctioning units, replace the removed units with new units, and retest the replacement units.

E. Shut the unit down, and reconnect the automatic temperature-control operators.

F. Replace fan and motor pulleys as required to achieve the design airflow.

G. Repair, or remove and replace, malfunctioning units.

1. Retest replacement units as specified herein after repairs are made or replacements are provided.

3.06 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Adjust belt tension.
- C. Lubricate bearings.

3.07 CLEANING

- A. After the power ventilator installation is complete, internally clean the fans according to the manufacturer's written instructions.
 1. Remove foreign material and construction debris.
 2. Vacuum the fan wheel and cabinet.
 3. Submit the power ventilator manufacturer's printed cleaning instructions to the Program/Project Manager for information.
- B. After the power ventilator installation is complete, including the outlet fitting and other devices, inspect the exposed finish.
 1. Remove burrs, dirt, and construction debris; and repair damaged finishes.
- C. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.08 CLOSEOUT ACTIVITIES

- A. Training:
 1. Engage a factory-authorized service representative to train the Owner's maintenance personnel to adjust, operate, and maintain the power ventilators in accordance with the requirements specified in Section 01770, Closeout Procedures.
 - a. Train the Owner's maintenance personnel to understand the procedures and schedules for starting and stopping, troubleshooting, servicing, and maintaining the equipment and schedules.
 - b. Review the data in the emergency and Operation and Maintenance Manuals furnished as specified in Section 01780, Closeout Submittals.

3.09 PROTECTION

- A. Take steps to ensure that installed power ventilators are protected during subsequent construction activities.

3.10 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Submit operation and maintenance data for the power ventilators to the Program/Project Manager for inclusion in emergency and Operation and Maintenance Manuals as specified in Section 01780, Closeout Submittals.

SECTION 15855

DIFFUSERS, REGISTERS, AND GRILLES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for ceiling and wall mounted diffusers, registers and grilles.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 15820 – Duct Accessories.

1.02 REFERENCES

- A. Reference Standards:
 - 1. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. (ASHRAE):
 - a. ANSI/ASHRAE 70 - Method of Testing for Rating the Performance of Air Outlets and Inlets.
 - 2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate the diffuser, register, and grille layout and installation with the layout and installation of duct, suspended ceilings, fire- and smoke-control dampers, lighting, and similar finished work.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Data sheets.
 - 2) Diffuser, Register, and Grille Schedule

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Ensure materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.
 - 2. Inspect materials and equipment for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.
- B. Storage and Handling Requirements:
 - 1. Prevent contact with materials which may cause discoloration or staining.
- C. Packaging Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- C. Performance:
 - 1. Verification of Performance:
 - a. Provide diffusers, registers, and grilles provided as the Work of this Section that have been rated in accordance with the requirements specified in ANSI/ASHRAE 70.
- D. Design Criteria:

1. The Contract Drawings indicate the general arrangement of ducts, fittings, and accessories.
 - a. Air outlet and inlet locations to achieve the design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop have been indicated on the Contract Drawings.
 - b. Whenever practicable, locate the ceiling-mounted outlets and inlets in their final position where indicated on the Contract Drawings.
2. Product Data:
 - a. Submit Product Data for the products provided as the Work of this Section to the Program/Project Manager for approval, including the following information:
 - 1) Data Sheets:
 - a) Furnish a data sheet for each product provided as the Work of this Section indicating the materials of construction, the finish, mounting details, and performance data that indicates the throw and drop, static-pressure drop, and noise ratings.
 - 2) Diffuser, Register, and Grille Schedule:
 - a) Furnish a Diffuser, Register, and Grille Schedule that indicates the Contract Drawing designation, the room location, quantity, model number, size, and accessories furnished for all products provided as the Work of this Section.

E. Materials:

1. Grilles and Registers:
 - a. Adjustable Bar Grilles and Registers:
 - 1) Provide adjustable bar grilles and registers having the Model Number, capacities, and/or characteristics specified in the Diffuser and Register Schedule on the Contract Drawings.
 - 2) Manufacturers:
 - a) Krueger, www.krueger-hvac.com.
 - b) Price Industries, www.price-hvac.com.
 - c) Titus, www.titus-hvac.com.
 - d) Approved equal.
 - b. Fixed Face Ceiling Return Grilles:
 - 1) Provide fixed face ceiling return grilles having the Model Number, capacities, and/or characteristics specified in the Diffuser and Register Schedule on the Contract Drawings.
 - 2) Manufacturers:
 - a) Krueger, www.krueger-hvac.com.
 - b) Price Industries, www.price-hvac.com.
 - c) Titus, www.titus-hvac.com.
 - d) Approved equal.

- c. Fixed Face Sidewall Return Grille.
 - 1) Provide fixed face sidewall return grilles having the Model Number, capacities, and/or characteristics specified in the Diffuser and Register Schedule on the Contract Drawings.
 - 2) Manufacturers:
 - a) Krueger, www.krueger-hvac.com.
 - b) Price Industries, www.price-hvac.com.
 - c) Titus, www.titus-hvac.com.
 - d) Approved equal.
- 2. Ceiling Diffuser Outlets:
 - a. Rectangular, Round and Square Ceiling Diffusers:
 - 1) Provide rectangular, round and square ceiling diffusers having the Model Number, capacities, and/or characteristics specified in the Diffuser and Register Schedule on the Contract Drawings.
 - 2) Manufacturers:
 - a) Krueger, www.krueger-hvac.com.
 - b) Price Industries, www.price-hvac.com.
 - c) Titus, www.titus-hvac.com.
 - d) Approved equal.

2.02 ACCESSORIES

- A. Combination Fire and Smoke Dampers and Volume-Control Dampers:
 - 1. Combination fire and smoke dampers and volume-control dampers not integral to diffusers, registers, and grilles are specified in Section 15820, Duct Accessories.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Examine the areas where diffusers, registers, and grilles are to be installed for compliance with the requirements for installation tolerances and other conditions affecting performance of the equipment.
 - a. Where architectural features or other items conflict with the installation, notify the Program/Project Manager for a determination of final location.
- B. Evaluation and Assessment:
 - 1. Do not proceed to install diffusers, registers, and grilles until unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the diffusers, registers, and grilles.

3.03 INSTALLATION

- A. Install diffusers, registers, and grilles to be level and plumb.
- B. Ceiling-Mounted Outlets and Inlets:
 - 1. For units installed in lay-in ceiling panels, locate the units in the center of the panel.
- C. Interface with Other Work:
 - 1. Install diffusers, registers, and grilles so their connections to ducts are airtight, and easy access for servicing and maintaining dampers and other similar duct accessories is provided.

3.04 ADJUSTING

- A. After the diffusers, registers, and grilles are installed but before starting air balancing procedures, adjust the diffusers, registers, and grilles so the air patterns indicated in the Contract Documents are achieved, or adjust the diffusers, registers, and grilles as directed by the Program/Project Manager.

3.05 CLEANING

- A. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 PROTECTION

- A. Take steps to ensure that the installed diffusers, registers, and grilles are protected during subsequent construction activities.

SECTION 15861

AIR FILTERS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for air filters and accessories, including the following types:
 - a. Flat panel filters.
 - b. Pleated panel filters.
 - c. Supported bag filters.
 - d. V-bank cell filters.
 - e. Front- and rear-access filter frames.
 - f. Side-service housings.
 - g. Filter gages.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 – Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. HVAC: Heating, ventilating, and air-conditioning.
 - 2. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside, and San Bernardino counties in California.
 - 3. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
 - 4. w. g.: Water gauge.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Minimum Efficiency Reporting Value (MERV): A value from 1 to 16 that along with an associated air velocity represents the efficiency of a filter, and which is based on testing using different particle sizes, 1 of 7 approved flow velocities, and the required number of repeat cycles as specified in ASHRAE 52.2.
 - a. The flow velocity used to determine a MERV value must be stated with the MERV value for the MERV number to be meaningful.

- b. The higher the MERV number, the higher the velocity.

C. Reference Standards:

1. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. (ASHRAE):
 - a. ANSI/ASHRAE 52.1 - Gravimetric and Dust-Spot Procedures for Testing Air-Cleaning Devices Used in General Ventilation for Removing Particulate Matter [*withdrawn*].
 - b. ANSI/ASHRAE 52.2 – Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size.
 - c. ASHRAE 62.1-2004 – Ventilation for Acceptable Indoor Air Quality.
2. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
 - b. NFPA 90A – Standard for Installation of Air-Conditioning and Ventilating Systems.
 - c. NFPA 90B - Standard for Installation of Warm Air Heating and Air-Conditioning Systems.
3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
5. Sheet Metal and Air Conditioning Contractors' National Association (SMACNA):
 - a. SMACNA IAQ Guidelines for Occupied Buildings Under Construction.
6. South Coast Air Quality Management District (SCAQMD):
 - a. SCAQMD Rule 1168 – Adhesive and Sealant Applications.
7. Underwriters Laboratories, Inc. (UL):
 - a. UL 900 – Standard for Air Filters.
8. United States Government:
 - a. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate filter installations with duct and air-handling-unit installations.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:

- 1) Flat panel filters.
 - 2) Pleated panel filters.
 - 3) Supported bag filters.
 - 4) V-bank cell filters.
 - 5) Front-access and rear-access filter frames.
 - 6) Side-service housings.
 - 7) Diaphragm-type filter gages.
 - 8) Manometer-type filter gages.
 - b. Shop Drawings:
 - 1) Air filters.
 - 2) Air filter wiring diagrams.
- B. Informational Submittals:
 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Site Quality Control Submittals:
 - 1) Leak Test and Inspection Reports.
- C. Closeout Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for each type of filter and rack.
- D. Maintenance Material Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Extra Stock Materials:
 - 1) Furnish extra stock materials that match the products installed in the following quantities, and package the extra stock materials with a protective covering for storage identified with labels describing the contents of the packages:
 - a) Filters:
 - (1) Furnish 1 complete set of filters for each filter bank.
 - (2) If a system includes prefilters, provide only prefilters.
 - b) Red Oil:
 - (1) Furnish 1 container of red oil for inclined manometer filter gages.

1.05 QUALITY ASSURANCE

- A. Certifications:
 1. Listing and Labeling of Electrical Components, Devices, and Accessories:
 - a. Provide electrical components, devices, and accessories that are listed and labeled as defined in Article 100 of NFPA 70 by a testing

agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.

- 1) Provide products marked with their intended use or classification.
- 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver filter materials in their original, unopened containers bearing the name of the manufacturer, product identification, and reference to third party testing, such as testing by FM Approvals LLC (FM) or Underwriters Laboratories, Inc. (UL).
- B. Storage and Handling Requirements:
 1. Store the filter materials inside under cover, off the ground, and in a dry location.
 - a. Protect filter materials from physical damage and from deterioration due to moisture, soiling, and other sources.
 2. Comply with the filter material manufacturer's written instructions for handling, storing, and protecting the material during installation.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 AIR FILTER ASSEMBLIES

- A. Manufacturers:
 1. Manufacturer List:

- a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
- 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - 2. Sustainability Requirements:
 - a. Indoor Air Quality (IAQ):
 - 1) Provide air filters that comply with the minimum indoor air quality (IAQ) requirements specified in Section 4 - Outdoor Air Quality, Section 5 - Systems and Equipment, and Section 7 - Construction and Startup, in ASHRAE 62.1-2004 for minimum ventilation rates, surfaces in contact with the airstream, particulate and gaseous filtration, and equipment access.
 - 2) Prepare and implement a Construction IAQ Management Plan that complies with the requirements specified in SMACNA IAQ Guidelines for Occupied Buildings Under Construction.
 - a) Protect absorptive materials installed or stored onsite from moisture damage.
 - b) For permanently installed air handlers used during construction, provide filtration media having a Minimum Efficiency Reporting Value (MERV) of 8 determined in accordance with the method specified in ANSI/ASHRAE 52.2 at each return grille.
 - b. Volatile Organic Compounds (VOC) Content of Interior Adhesives and Sealants:
 - 1) Provide interior adhesives, sealants, and adhesive and sealant primers for this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168:
 - a) Contact Adhesive: Not more than 80 grams per Liter less water.
 - b) Fiberglass Adhesives: Not more than 80 grams per Liter less water.
- C. Performance:
- 1. Arrestance:

- a. Provide air filters having the specified arrestance when tested and rated as specified in ASHRAE 52.1
 - 2. Minimum Efficiency Reporting Value (MERV):
 - a. Provide air filters having the specified minimum efficiency reporting value (MERV) when tested and rated as specified in ASHRAE 52.2.
- D. Design Criteria:
 - 1. Air Filter Unit Class:
 - a. Provide air filters complying with the requirements for Class 1 and Class 2 filters specified in UL 900.
 - 2. Air Filter Sizes:
 - a. Provide air filters of the sizes indicated in the Mechanical Equipment Schedule on the Contract Drawings.
 - 3. Product Data:
 - a. Obtain the manufacturer's Product Data for each type of product proposed for the Work of this Contract.
 - 1) Include dimensions; operating characteristics; the required clearances and access space; the rated flow capacity, including the initial and final pressure drops at the rated airflow; the efficiency and test method measuring the efficiency; the fire classification; the furnished specialties; and the accessories for each model indicated.
 - b. Submit the manufacturer's Product Data to the Program/Project Manager for approval.
 - 4. Shop Drawings:
 - a. Prepare Shop Drawings for the air filters.
 - 1) Include plans, elevations, sections, details, and attachments to other work.
 - a) Show filter rack assemblies, dimensions, materials, and methods of assembly of components.
 - b) Include setting drawings, templates, and the requirements for installing anchor bolts and anchorages.
 - b. Prepare wiring diagrams for the power, signal, and control wiring for the air filters.
 - c. Submit the Shop Drawings and wiring diagrams to the Program/Project Manager for approval.
- E. Manufactured Units:
 - 1. Flat Panel Filters:
 - a. Provide factory-fabricated, self-supported, flat, non-pleated, panel-type, carbon impregnated with potassium, disposable air filters having holding frames.
 - b. Media:
 - 1) Provide interlaced glass or synthetic fibers coated with nonflammable adhesive and an antimicrobial agent, and that is impregnated with activated carbon with potassium.

- 2) Provide a metal retainer on both the upstream side and downstream side of the media.
- c. Filter-Media Frame:
 - 1) Provide a hinged, galvanized steel filter-media frame having a metal grid on the outlet side and a steel rod grid on inlet side, and having pull and retaining handles sealed or bonded to the media.
- d. Mounting Frames:
 - 1) Provide welded galvanized steel mounting frames having gaskets and fasteners, and that are suitable for bolting together into built-up filter banks.
- e. Manufacturers:
 - 1) AAF International, <http://www.aafintl.com>.
 - 2) CLARCOR Air Filtration Products, Inc., Airguard®, <http://www.airguard.com>.
 - 3) Camfil Farr, <https://www.camfil.us/Products/>.
 - 4) Filtration Group, <http://www.filtrationgroup.com>.
 - 5) Koch Filter Corporation, <http://www.kochfilter.com>.
 - 6) Purafil, Inc., <http://www.purafil.com/index.aspx>.
 - 7) Approved equal.
2. Pleated Panel Filters:
 - a. Provide factory-fabricated, self-supported, extended-surface, pleated, panel-type, disposable air filters having holding frames.
 - b. Media:
 - 1) Provide interlaced glass or synthetic fibers coated with nonflammable adhesive and an antimicrobial agent.
 - 2) Provide separators bonded to the media to maintain the pleat configuration.
 - 3) Provide a welded wire grid on the downstream side of the media to maintain the pleat.
 - 4) Bond the media to the filter-media frame to prevent air bypass.
 - 5) Provide support members on the upstream and downstream sides to maintain the pleat spacing.
 - c. Filter-Media Frame:
 - 1) Provide cardboard filter-media frames with perforated metal retainers sealed or bonded to the media.
 - d. Mounting Frames:
 - 1) Provide welded galvanized steel mounting frames having gaskets and fasteners, and that are suitable for bolting together into built-up filter banks.
 - e. Capacities and Characteristics:
 - 1) Efficiency:
 - a) Provide pleated panel filters having an efficiency of 90 percent on particles 20 micrometers and larger at 500 feet per minute (2.5m/s).
 - 2) Arrestance:

- a) Provide pleated panel filters having an arrestance of 85 percent when tested in accordance with the method specified in ASHRAE 52.1.
 - 3) Minimum Efficiency Reporting Value (MERV) Rating:
 - a) Provide pleated panel filters having a minimum efficiency reporting value (MERV) of 13 when tested in accordance with the method specified in ASHRAE 52.2.
 - f. Manufacturers:
 - 1) AAF International, <http://www.aafintl.com>.
 - 2) CLARCOR Air Filtration Products, Inc., Airguard®, <http://www.airguard.com>.
 - 3) Camfil Farr, <https://www.camfil.us/Products/>.
 - 4) Filtration Group, <http://www.filtrationgroup.com>.
 - 5) Koch Filter Corporation, <http://www.kochfilter.com>.
 - 6) Purafil, Inc., <http://www.purafil.com/index.aspx>.
 - 7) Approved equal.
3. Supported Bag Filters:
- a. Provide factory-fabricated, dry, extended-surface, self-supported bag filters having holding frames in steel, basket-type retainers.
 - b. Media:
 - 1) Provide fibrous material constructed so individual pleats are maintained in a tapered form under the rated-airflow conditions by flexible internal supports.
 - 2) Provide media coated with an antimicrobial agent.
 - c. Filter-Media Frames:
 - 1) Provide galvanized steel filter-media frames.
 - d. Mounting Frames:
 - 1) Provide welded galvanized steel mounting frames having gaskets and fasteners, and that are suitable for bolting together into built-up filter banks.
 - e. Capacities and Characteristics:
 - 1) Arrestance:
 - a) Provide supported bag filters having an arrestance of 85 percent when tested in accordance with the method specified in ASHRAE 52.1.
 - 2) Minimum Efficiency Reporting Value (MERV) Rating:
 - a) Provide supported bag filters having a minimum efficiency reporting value (MERV) of 8 when tested in accordance with the method specified in ASHRAE 52.2.
 - f. Manufacturers:
 - 1) AAF International, <http://www.aafintl.com>.
 - 2) CLARCOR Air Filtration Products, Inc., Airguard®, <http://www.airguard.com>.
 - 3) Camfil Farr, <https://www.camfil.us/Products/>.
 - 4) Filtration Group, <http://www.filtrationgroup.com>.

- 5) Koch Filter Corporation, <http://www.kochfilter.com>.
 - 6) Purafil, Inc., <http://www.purafil.com/index.aspx>.
 - 7) Approved equal.
4. V-Bank Cell Filters:
- a. Provide factory-fabricated, adhesive-coated, disposable, packaged air filters having their media angled with respect to the airflow, and having holding frames.
 - b. Media:
 - 1) Provide fibrous material constructed so individual pleats are maintained in tapered form under the rated-airflow conditions by flexible internal supports.
 - 2) Provide media coated with an antimicrobial agent.
 - c. Filter-Media Frames:
 - 1) Provide galvanized steel filter-media frames.
 - d. Mounting Frames:
 - 1) Provide welded galvanized steel mounting frames having gaskets and fasteners, and that are suitable for bolting together into built-up filter banks.
 - e. Capacities and Characteristics:
 - 1) Arrestance:
 - a) Provide V-bank cell filters having an arrestance of 85 percent when tested in accordance with the method specified in ASHRAE 52.1.
 - 2) Minimum Efficiency Reporting Value (MERV) Rating:
 - a) Provide V-bank cell filters having a minimum efficiency reporting value (MERV) of 8 when tested in accordance with the method specified in ASHRAE 52.2.
 - f. Manufacturers:
 - 1) AAF International, <http://www.aafintl.com>.
 - 2) CLARCOR Air Filtration Products, Inc., Airguard®, <http://www.airguard.com>.
 - 3) Camfil Farr, <https://www.camfil.us/Products/>.
 - 4) Filtration Group, <http://www.filtrationgroup.com>.
 - 5) Koch Filter Corporation, <http://www.kochfilter.com>.
 - 6) Purafil, Inc., <http://www.purafil.com/index.aspx>.
 - 7) Approved equal.

2.02 ACCESSORIES

- A. Front-Access and Rear-Access Filter Frames:
1. Framing System:
 - a. Provide galvanized-steel framing members having access for either upstream (front) or downstream (rear) filter servicing.
 - b. Cut the galvanized-steel framing members to size, and pre-punch the framing members for assembly into modules.

- c. Vertically support the filters to prevent deflection of the horizontal members without interfering with either filter installation or operation.
 2. Prefilters:
 - a. Incorporate a separate track for prefilters that are removable from either the front or back, and that has spring clips.
 3. Sealing:
 - a. Provide a factory-installed, positive-sealing device for each row of filters that ensures a seal between the gasketed filter elements, and prevents bypass of unfiltered air.
 4. Manufacturers:
 - a. AAF International, <http://www.aafintl.com>.
 - b. CLARCOR Air Filtration Products, Inc., Airguard®, <http://www.airguard.com>.
 - c. Camfil Farr, <https://www.camfil.us/Products/>.
 - d. Filtration Group, <http://www.filtrationgroup.com>.
 - e. Koch Filter Corporation, <http://www.kochfilter.com>.
 - f. Purafil, Inc., <http://www.purafil.com/index.aspx>.
 - g. Approved equal.
- B. Side-Service Housings:
 1. Provide factory-assembled, side-service housings constructed of galvanized steel, and having flanges to connect to the duct or casing system.
 2. Prefilters:
 - a. Provide integral tracks that accommodate 2-inch (50mm-) deep, disposable filters.
 3. Access Doors:
 - a. Provide hinged access doors having continuous gaskets on their perimeters and positive-locking devices.
 - b. Arrange the access doors so the filter cartridges can be loaded from either access door.
 4. Sealing:
 - a. Incorporate positive-sealing gasket material on channels to seal the top and bottom of the filter cartridge frames and to prevent bypass of unfiltered air.
 5. Manufacturers:
 - a. AAF International, <http://www.aafintl.com>.
 - b. CLARCOR Air Filtration Products, Inc., Airguard®, <http://www.airguard.com>.
 - c. Camfil Farr, <https://www.camfil.us/Products/>.
 - d. Filtration Group, <http://www.filtrationgroup.com>.
 - e. Koch Filter Corporation, <http://www.kochfilter.com>.
 - f. Purafil, Inc., <http://www.purafil.com/index.aspx>.
 - g. Approved equal.
- C. Filter Gages:

1. Diaphragm-Type Filter Gages:
 - a. Provide diaphragm-type filter gages having a dial and pointer in a metal case, vent valves, black figures on a white background, a front recalibration adjustment, and the following additional features:
 - 1) Diameter:
 - a) Provide filter gages having 4-1/2-inch (115mm) diameter.
 - 2) Scale Range:
 - a) For filter media having a recommended final resistance of 0.5-Inch w. g. (125Pa) or less, provide filter gages having a scale range or 0 inch w. g. to 0.5 inch w. g. (0Pa to 125Pa).
 - b) For filter media having a recommended final resistance of 0.5 inch w. g. to 1.0 Inch w. g. (125Pa to 250Pa) or less, provide filter gages having a scale range or 0 inch w. g. to 1.0 inch w. g. (0Pa to 250Pa).
 - c) For filter media having a recommended final resistance of 1.0 inch w. g. to 2.0 Inch w. g. (250Pa to 500Pa) or less, provide filter gages having a scale range or 0 inch w. g. to 2.0 inch w. g. (0Pa to 500Pa).
 - d) For filter media having a recommended final resistance of 2.0 inch w. g. to 3.0 Inch w. g. (500Pa to 750Pa) or less, provide filter gages having a scale range or 0 inch w. g. to 3.0 inch w. g. (0Pa to 750Pa).
 - e) For filter media having a recommended final resistance of 3.0 inch w. g. to 4.0 Inch w. g. (750Pa to 1000Pa) or less, provide filter gages having a scale range or 0 inch w. g. to 4.0 inch w. g. (0Pa to 1000Pa).
2. Manometer-Type Filter Gages:
 - a. Provide molded plastic manometer-type filter gages having an epoxy-coated aluminum scale and logarithmic-curve tube gage with an integral leveling gage, and graduated to read from 0- to 3.0-inch w. g. (0Pa to 750Pa), and accurate within 3 percent of the full scale range.
3. Accessories:
 - a. Provide static-pressure tips, tubing, gage connections, and mounting brackets.
4. Manufacturers:
 - a. CLARCOR Air Filtration Products, Inc., Airguard®, <http://www.airguard.com>.
 - b. Dwyer Instruments, Inc., <http://www.dwyer-inst.com>.
 - c. Approved equal.

PART 3 EXECUTION

3.01 INSTALLATION

- A. Install the air filters in accordance with the requirements specified in NFPA 90A and NFPA 90B, as applicable.

- B. Position each filter unit so clearance for normal service and maintenance is provided.
 - 1. Anchor filter holding frames to the substrate.
- C. Install filters in position to prevent the passage of unfiltered air.
- D. Filter Gages:
 - 1. Install a filter gage for each filter bank.
 - a. Install filter-gage, static-pressure taps upstream and downstream from the filters.
 - b. Install the filter gages on the filter banks using separate static-pressure taps upstream and downstream from the filters.
 - c. Mount the filter gages on the outside of the filter housing or filter plenum in an accessible position.
 - 2. Adjust and level inclined gages.
- E. Special Techniques:
 - 1. Do not operate fan system until temporary or permanent filters are in place.
 - 2. Replace temporary filters used during construction and testing with new, clean filters.

3.02 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. Leak Test:
 - a. Test Procedure:
 - 1) While the system is operating, check the system for leakage of unfiltered air.
 - 2) Prepare test and inspection reports for the Leak Test, and submit them to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Systems showing no leakage of unfiltered air pass the Leak Test.
- B. Non-Conforming Work
 - 1. An air filter will be considered defective if it does not pass the tests and inspections.
- C. Manufacturer Services:
 - 1. Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

3.03 SYSTEM STARTUP

- A. Operate automatic roll filters to demonstrate they comply with the specified requirements.

3.04 CLEANING

- A. After completing the installation, testing, adjusting, and balancing of air-handling and air-distribution systems, clean their filter housings and install new filter media.
- B. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.05 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Furnish operation and maintenance data for each type of filter and rack for inclusion in emergency and operation and maintenance manuals as specified in Section 01780, Closeout Submittals.
 - 2. Submit the operation and maintenance data for the filters and racks and components to the Program/Project Manager for information.

SECTION 15900

HVAC INSTRUMENTATION AND CONTROLS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Requirements for instrumentation and control equipment for heating, ventilating, and air-conditioning (HVAC) systems and components, including the control components for terminal heating and cooling units not supplied with factory-wired controls.

B. Related Requirements:

1. Section 01330 - Submittal Procedures.
2. Section 01360 - Sustainable Design Requirements.
3. Section 01770 - Closeout Procedures.
4. Section 01780 - Closeout Submittals.
5. Section 01810 - Commissioning.
6. Section 15815 - Metal Ducts.
7. Section 15820 - Duct Accessories.
8. Section 16120 - Conductors and Cables.
9. Section 16123 - Control-Voltage Power Cables.
10. Section 16130 - Raceway and Boxes.
11. Section 15995 – Commissioning of Mechanical Systems.

1.02 REFERENCES

A. Abbreviations and Acronyms:

1. BACnet: Building automation and control networks.
2. CFM: Cubic feet per minute.
3. HVAC: Heating, Ventilating, and Air-Conditioning.
4. w. g.: Water gauge.

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
2. Internet: A global system of interconnected computer networks that use the standard Internet Protocol Suite (TCP/IP) to serve a multitude of users worldwide.

3. Intranet: A private computer network that uses Internet Protocol technologies to securely share any part of an organization's information or operational systems within that organization.

C. Reference Standards:

1. Air Movement and Control Association International, Inc. (AMCA):
 - a. AMCA 11 – Certified Ratings Program Operating Manual.
 - b. AMCA 511 - Certified Ratings Program – Product Rating Manual for Air Control Devices.
 - c. ANSI/AMCA 500-D – Laboratory Methods of Testing Dampers for Rating.
 - d. ANSI/AMCA 500-L – Laboratory Methods of Testing Louvers for Rating.
2. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. (ASHRAE):
 - a. ANSI/ASHRAE 135 – A Data Communications Protocol for Building Automation and Control Networks (BACnet).
 - b. ANSI/ASHRAE 135.1 – Method of Test for Conformance to BACnet.
3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
5. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
 - b. NFPA 90A – Standard for the Installation of Air-Conditioning and Ventilating Systems.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
2. Coordinate the items furnished, and interfaces, connection points, and methods with the appropriate Subcontractors to ensure a complete and operable system is provided.
 - a. Coordinate the locations of thermostats, temperature sensors, and other exposed control sensors with the Contract Drawings and room details before installation.

- b. Take responsibility for control wiring, final connections, wiring methods and coordination to provide a source of power as required.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:

a. Product Data:

- 1) Web server computers and monitors.
- 2) Web server software.
- 3) Electronic sensors.
- 4) Temperature sensors.
- 5) Electric actuator motors.
- 6) Damper actuators.
- 7) Dampers.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:

a. Manufacturer's Instructions:

- 1) Heating, ventilating, and air-conditioning (HVAC) instrumentation and control system manufacturers' written installation instructions.

b. Site Quality Control Submittals:

- 1) Calibration Test reports.
- 2) Operational Test reports.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:

a. Operation and Maintenance Data:

- 1) Heating, ventilating, and air-conditioning (HVAC) system instrumentation and control operation and maintenance data.

b. Software:

- 1) Backup copies of the user interface software.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Listing and Labeling of Electrical Components, Devices, and Accessories:

- a. Provide electrical components, devices, and accessories that are listed and labeled as defined in Article 100 of NFPA 70 by a testing

agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.

- 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.
2. Special Inspections:
- a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - c. Periodic Special Inspections will be performed during the installation of medium-voltage wire, cable, and accessories.
3. Testing and Inspection Agencies:
- a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Certifications:

1. Air Movement and Control Association International, Inc. (AMCA)
Licensed Products:
 - a. Motorized Control Dampers:

- 1) Provide only motorized control dampers that have been licensed to bear the AMCA seals by having participated in the AMCA Certified Ratings Program.
 - a) Comply with the procedures and testing requirements for performance rating fans specified in AMCA 11, AMCA 511, ANSI/AMCA 500-D, and ANSI/AMCA 500-L.
 - b) Provide only motorized control dampers labeled with the AMCA Certified Ratings Seals.

1.06 STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Ensure materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.
- B. Storage and Handling Requirements:
 1. Keep each heating, ventilating, and air-conditioning (HVAC) instrument and control in its package or otherwise protected until it is time to install it.
 2. Do not remove surface protection, such as plastic film and smudge covers, until the last possible moment.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 HVAC INSTRUMENTATION AND CONTROL SYSTEMS

- A. Manufacturers:
 1. Manufacturer List:
 - a. Alerton, www.alerton.com.
 - b. Delta Controls Corp., www.deltacontrols.com.
 - c. Johnson Controls, Inc., www.johnsoncontrols.com.
 - d. Schneider Electric, <https://www.schneider-electric.com>.
 - e. Approved equal.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 1. Regulatory Requirements:

- a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. National Electrical Code (NEC):
 - 1) Provide electrical products and installation complying with requirements specified in NFPA 70.
- C. Performance:
- 1. Provide a new control system that is capable of total integration with the existing Johnson Controls, Inc. facility infrastructure systems, and providing user access to all system data, either locally over a secure Intranet within the building, or by remote access by a standard web browser over the Internet.
 - 2. Damper Operating Temperature Range:
 - a. Provide dampers capable of operating within the operating temperature range from minus 40 degrees Fahrenheit to plus 200 degrees Fahrenheit.
- D. Design Criteria:
- 1. The Contract Drawings are diagrammatic, and only indicate the general arrangement of the mechanical controls, equipment; piping, fittings, ducts, and specialties.
 - 2. Provide a complete and operating heating, ventilating, and air-conditioning (HVAC) control system utilizing direct digital controls (DDC) as shown on the Contract Drawings and described herein.
 - a. Provide all additional hardware and software required for the specific application.
 - b. Provide a heating, ventilating, and air-conditioning (HVAC) instrumentation and control system designed in accordance with the requirements for the BACnet standard specified in ANSI/ASHRAE 135.
 - 3. Hardware and Software:
 - a. Provide a new web server computer at the Site having the most current edition of the control manufacturer's web server software installed.
 - 4. Product Data:
 - a. Prepare Product Data for the products proposed for the Work of this Section, including the manufacturer's technical literature for each control device indicated, labeled with the setting or adjustable range of control.

- 1) Indicate dimensions, capacities, performance characteristics, electrical characteristics, finishes for materials, and installation and startup instructions for each type of product indicated.
- b. Submit the Product Data to the Program/Project Manager for approval.

E. Components:

1. Web Server Computers, Monitors, and Software:

a. Web Server Computers:

- 1) Provide computers for the web server complying with the following minimum requirements:
- 2) Processors:
 - a) Provide Pentium 4 processors in the computers having a 1 Gigahertz (GHz) processing speed and 512 Megabytes (MB) of random access memory.
- 3) Ethernet Ports:
 - a) Provide at a minimum two 10/100 Ethernet connection ports.

b. Web Server Computer Monitors:

- 1) Provide computer monitors for the web server complying with the following minimum requirements:
- 2) Monitor Screen Resolution:
 - a) Provide computer monitors having at a minimum a screen resolution of 1024 pixels by 768 pixels (16bit).

c. Web Server Software:

- 1) Provide Microsoft Windows-based user interface software compatible with Microsoft Windows XP pro Edition software and/or compatible with Microsoft Windows 2003 Web Server software.
 - a) Third party viewing software, such as 'Close-Up' or 'PC Anywhere' is unacceptable.
 - b) All software platforms shall be submitted to and approved by the Airport prior to purchase.
- 2) Submit backup copies of the user interface software to the Program/Project Manager.

2. Sensors:

a. Electronic Sensors:

- 1) Provide vibration and corrosion resistant electronic sensors suitable for wall mounting.

b. Temperature Sensors:

- 1) Provide thermistor type temperature sensors having the following properties and/or features:
 - a) Accuracy:

- (1) Provide temperature sensors having an accuracy of plus or minus 0.5 degrees Fahrenheit at the calibration point.
 - b) Wire:
 - (1) Provide twisted, shielded-pair cable.
 - c) Outside-Air Sensors:
 - (1) Provide watertight, inlet fitting outside-air sensors shielded from direct sunlight.
 - d) Room Security Sensors:
 - (1) Provide room security sensors having a stainless-steel cover plate with an insulated back and security screws.
- 3. Actuators:
 - a. Electric Actuator Motors:
 - 1) Provide electric motors sized to have sufficient reserve power to operate either with a smooth modulating action or with two-position action.
 - b. Damper actuators:
 - 1) Provide spring return type damper actuators.
 - 2) Provide direct-mount type two position or proportional electric actuators sized to provide a minimum of 5 inch-pounds of torque per square foot of damper area.
- 4. Dampers:
 - a. Provide AMCA-rated, opposed-blade design control dampers.
 - b. Damper Frame:
 - 1) Provide galvanized steel damper frames a minimum of 0.1084 inch thick, and having holes for duct mounting.
 - c. Damper Blades:
 - 1) Provide galvanized steel damper blades a minimum of 0.0635 inch thick, and having a maximum blade width of 8 inches.
 - 2) Using zinc-plated hardware, secure the damper blades to 1/2-inch diameter, zinc-plated axles having nylon blade bearings, blade-linkage hardware of zinc-plated steel and brass, ends sealed against spring-stainless-steel blade bearings, and thrust bearings at each end of every blade.
 - 3) For standard applications, provide optional closed-cell neoprene edging.
 - 4) For low-leakage applications, provide parallel-blade or opposed-blade design damper blades having inflatable seal blade edging, or replaceable rubber seals, rated for leakage when tested in accordance with the requirements specified in ANSI/AMCA 500-D of less than 10 cubic feet per minute (cfm) per square foot of damper area at a differential pressure of 4 inches w. g. when the damper is being held by a torque of 50 inch-pounds-force.

2.02 ACCESSORIES

- A. Cable Trays:
 - 1. Provide cable trays complying with the requirements specified in Section 16134, Cable Trays.
- B. Control Cable:
 - 1. For control wiring, provide electronic cable complying with the requirements specified in Section 16123, Control-Voltage Power Cables.
 - a. Plenum rated cable is unacceptable.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Verify the location of thermostats and other exposed control sensors with the Contract Drawings and room details before installing the instrumentation and controls.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the heating, ventilating, and air-conditioning (HVAC) instrumentation and control system.

3.03 INSTALLATION

- A. Install the heating, ventilating, and air-conditioning (HVAC) instrumentation and control system in accordance with the requirements specified in NFPA 90A, and the manufacturer's installation instructions.
 - 1. Install heating, ventilating, and air-conditioning (HVAC) instrumentation and control equipment level and plumb.
 - 2. Submit the heating, ventilating, and air-conditioning (HVAC) instrumentation and control system manufacturers' written installation instructions to the Program/Project Manager for information.
- B. Thermostats:
 - 1. Locate the thermostats 48 inches above the floor.
 - 2. For thermostats installed in the following locations, provide guards on the thermostats:
 - a. In public areas.
 - b. Where indicated on the Contract Drawings.

C. Dampers:

1. Install automatic dampers in accordance with the appropriate requirements specified in Section 15820, Duct Accessories.
2. Install damper motors on the outside of duct in warm areas, not in locations exposed to outdoor temperatures.
3. Install duct volume-control dampers in accordance with the appropriate requirements specified in other Sections specifying air ducts, including Section 15815, Metal Ducts, and Section 15820, Duct Accessories.

D. Special Techniques:

1. Refrigerant Equipment:

- a. Install refrigerant instrument wells, valves, and other accessories in accordance with the appropriate requirements specified in Section 15186, Refrigerant Piping.
 - 1) Install piping adjacent to the equipment in a location that will allow for service and maintenance of the equipment.

2. Identification:

- a. To identify control components, install labels and nameplates in accordance with the appropriate requirements specified in Section 15075, Mechanical Identification.
 - 1) Except for local individual room control cables, number-code or color-code the conductors for future identification and service of the control system.

E. Systems Integration:

1. For line and low voltage wiring and raceway, comply with the following requirements for the appropriate item:
 - a. Install raceways, boxes, and cabinets in accordance with the appropriate requirements specified in Section 16130, Raceway and Boxes.
 - b. Install electronic signal and communication cables in accordance with the appropriate requirements specified in Section 16123, Control-Voltage Power Cables.
 - c. Install building wire and cable in accordance with the appropriate requirements specified in Section 16120, Conductors and Cables.
 - d. Install cable trays in accordance with the appropriate requirements specified in Section 16134, Cable Trays.
2. Except in mechanical rooms and areas where other conduit and piping are exposed, conceal the cable.
3. Install exposed cable in raceway painted white for ease of identification in the field.

4. Where several cables follow a common path, bundle and harness multi-conductor instrument cable in lieu of running single cables.
5. For flexible conductors bridging cabinets and doors, fasten the conductors along the hinge side of the cabinet or door.
 - a. Protect the flexible conductors against abrasion.
 - b. Tie and support the conductors.
6. Ground heating, ventilating, and air-conditioning (HVAC) instrumentation and control equipment in accordance with the requirements specified in 16061, Electrical Grounding and Bonding.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. During the period when the heating, ventilating, and air-conditioning (HVAC) instrumentation and control system is being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing and inspection of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - 1) Periodic Special Inspections will be performed during the installation of the heating, ventilating, and air-conditioning (HVAC) instrumentation and control system.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency and/or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
2. Calibration Test:
 - a. Test Procedure:
 - 1) Test the calibration of the heating, ventilating, and air-conditioning (HVAC) controllers by disconnecting the input sensors, and stimulating operation using a compatible signal generator.
 - a) Adjust, calibrate, and fine tune circuits and equipment to achieve the sequence of operation specified.
 - 2) Prepare and submit certified test reports documenting the calibration testing to the Program/Project Manager for information:
 - b. Acceptance Criteria:

- 1) Heating, ventilating, and air-conditioning (HVAC) instruments and controls having proper calibration pass the Calibration Test.
3. Operational Test:
 - a. Test Procedure:
 - 1) After installing the heating, ventilating, and air-conditioning (HVAC) instrumentation and control system, and after its electrical circuitry has been energized, start instrumentation and control units to confirm their proper unit operation and compliance with the requirements specified.
 - a) Start, test, and adjust the control systems.
 - b) Demonstrate compliance with the specified requirements, including calibration and testing, and control sequences.
 - 2) Prepare and submit certified test reports documenting the operational testing to the Program/Project Manager for information:
 - b. Acceptance Criteria:
 - 1) Heating, ventilating, and air-conditioning (HVAC) instruments and controls operating normally pass the Operational Test.

B. Non-Conforming Work

1. Remove malfunctioning units, replace the malfunctioning units with acceptable units, and retest the replacement units as specified herein.
 - a. Replace damaged and malfunctioning controls and equipment.

3.05 SYSTEM STARTUP

A. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the ductwork, the building automation system, fire and smoke dampers, indoor air quality, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

3.06 ADJUSTING

A. Test and adjust controls and safeties.

B. Occupancy Adjustments:

1. When requested by Owner within one year of the date of Substantial Completion, furnish up to 3 Site visits to adjust and calibrate components, and to assist the Owner's personnel to make program changes and adjust sensors and controls to suit actual conditions.

3.07 CLEANING

A. Waste Management:

1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.08 CLOSEOUT ACTIVITIES

A. Training:

1. Train the Owner's maintenance personnel to adjust, operate, and maintain the heating, ventilating, and air-conditioning (HVAC) instrumentation and control system in accordance with the requirements specified in Section 01770, Closeout Procedures.

3.09 PROTECTION

- A. Take steps to ensure that installed heating, ventilating, and air-conditioning (HVAC) system instrumentation and controls are protected during subsequent construction activities.

3.10 MAINTENANCE

A. Operation and Maintenance Data:

1. Furnish operation and maintenance data for the heating, ventilating, and air-conditioning (HVAC) system instrumentation and controls for inclusion in emergency and operation and maintenance manuals as specified in Section 01780, Closeout Submittals.
2. Submit the operation and maintenance data for the heating, ventilating, and air-conditioning (HVAC) system instrumentation and controls to the Program/Project Manager for information.

TESTING, ADJUSTING, AND BALANCING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for testing, adjusting, and balancing the heating, ventilating, and air-conditioning (HVAC) systems.
- B. Related Requirements:
 - 1. Section 01316 - Project Meetings.
 - 2. Section 01330 - Submittal Procedures.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 01810 - Commissioning.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. BAS: Building Automation System.
 - 2. CA: Commissioning Authority.
 - 3. HVAC: Heating, Ventilating, and Air-Conditioning.
 - 4. RA: Return air.
 - 5. SA: Supply air.
 - 6. TAB: Testing, Adjusting, and Balancing.

 - 1. Air Movement and Control Association International, Inc. (AMCA):
 - a. AMCA 201 – Fans and Systems.
 - 2. American Society of Heating, Refrigerating, and Air-Conditioning Engineers, Inc. (ASHRAE):
 - a. ANSI/ASHRAE 111 – Measurement, Testing, Adjusting, and Balancing of Building HVAC Systems.
 - 3. Associated Air Balance Council (AABC).
 - a. AABC National Standards for Total System Balance.
 - b. AABC Test and Balance Procedures.
 - 4. National Environmental Balancing Bureau (NEBB):
 - a. NEBB Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems.
 - 5. Sheet Metal and Air Conditioning Contractors' National Association (SMACNA):
 - a. SMACNA HVAC Systems–Duct Design.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the testing, adjusting, and balancing of mechanical systems and equipment with the commissioning activities performed by the Commissioning Authority (CA) under Section 01810, Commissioning.
 - a. Prior to performing testing and balance for each given area, have the required pre-functional checklists, calibrations, startup, and selected functional tests of the systems completed and approved by the Commissioning Authority (CA).
2. Coordinate the testing, adjusting, and balancing of mechanical systems and equipment with the Test and Balance Engineer.
 - a. Furnish the unique instruments needed for setting terminal unit boxes, such as a handheld control system interface, to the Test and Balance Engineer for use around the building during testing and balance activities, and instruct the Test and Balance Engineer to properly use the instruments if required.
 - b. Either furnish a qualified technician to assist the Test and Balance Engineer to operate controls while he or she is performing testing and balance activities, or provide sufficient training for the Test and Balance Engineer so he or she can operate systems without assistance.
3. Coordinate the efforts of the factory-authorized service representatives for systems and equipment, heating, ventilating, and air-conditioning (HVAC) controls installers, and other mechanics to operate the HVAC systems and equipment to support and assist testing, adjusting, and balancing (TAB) activities.
4. Partial Owner Occupancy:
 - a. The Owner may occupy completed areas of the building before the date of Substantial Completion.
 - b. Cooperate fully with the Owner during testing, adjusting, and balancing (TAB) operations to minimize conflicts with the Owner's operations.

B. Pre-Installation Meetings:

1. Prior to beginning testing and balance activities, convene a meeting with the Commissioning Authority (CA) in accordance with the requirements specified in Section 01316, Project Meetings; and review the Testing, Adjusting, and Balancing (TAB) Plan to determine the capabilities of the control system regarding completion of the testing and balance activities.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Special Procedure Submittals:
 - 1) Preliminary outline of the Testing, Adjusting, and Balancing (TAB) Plan.
 - 2) Testing, Adjusting, and Balancing (TAB) Plan.
 - 3) Reports of discrepancies, deficient or uncompleted work by others, contract interpretation requests, and lists of completed tests.
 - b. Qualification Statements:
 - 1) Test and Balance Engineer's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Fan and Outlet Testing, Adjusting, and Balancing (TAB) Field Test Reports.
 - 2) Motor Testing, Adjusting, and Balancing (TAB) Field Test Reports.
 - 3) Temperature-Control Testing, Adjusting, and Balancing (TAB) Field Test Reports.
 - 4) Draft Final Testing, Adjusting, and Balancing (TAB) Report.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) National Project Performance Guarantee.
 - b. Record Documentation:
 - 1) Final Testing, Adjusting, and Balancing (TAB) Report.

1.05 QUALITY ASSURANCE

A. Qualifications:

1. Test and Balance Engineer's Qualifications:
 - a. Engage a Test and Balance Engineer certified by the Associated Air Balance Council (AABC) to perform the testing, adjusting, and balancing (TAB) required under this Section.

- b. At least 6 weeks prior to starting testing and balancing Work, submit the Test and Balance Engineer's qualifications to the Program/Project Manager for approval.
 - 1) Include the names of contractors and facility managers of recent projects on which the Site technician was the lead.

1.06 WARRANTY

A. Special Warranty:

1. National Project Performance Guarantee:

- a. Furnish a guarantee on the appropriate forms from the AABC National Standards for Total System Balance stating that Associated Air Balance Council (AABC) will assist in completing the requirements of the Contract Documents if the Test and Balance Engineer fails to comply with the Contract Documents.

PART 2 PRODUCTS

NOT USED

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions:

- 1. Examine system and equipment installations to verify that they are complete; and that the testing, cleaning, adjusting, and commissioning specified in other Sections have been performed.
 - a. Examine the heating, ventilating, and air-conditioning (HVAC) system and equipment installations to verify that the indicated balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers, are properly installed; and that their locations are accessible and appropriate for effective balancing and for efficient system and equipment operation.
 - b. Examine the heating, ventilating, and air-conditioning (HVAC) equipment to ensure that clean filters have been installed, bearings are greased, belts are aligned and tight, and controls are functioning and the equipment is ready for operation.
 - c. Examine heat-transfer coils to ensure that piping connections are correct and fins are clean and straight.
 - d. Examine equipment safety interlocks and controls to verify proper installation and operation.

- e. Examine plenum ceilings used for supply air to verify they are airtight.
 - 1) Verify that pipe penetrations and other holes are sealed.
- f. Examine automatic temperature system components to verify the following:
 - 1) Dampers, valves, and other control devices are operated by the intended controller.
 - 2) Dampers and valves are in the position indicated by the controller.
 - 3) The integrity of the dampers allows free and full damper operation, and maintains the tightness of fully closed and fully open positions.
 - 4) Thermostats are located so the adverse effects of sunlight, drafts, and cold walls are avoided.
 - 5) Sensors are located so only the intended conditions are sensed.
 - 6) The sequence of operation for the control modes is in accordance with the requirements specified in the Contract Documents.
 - 7) Controller set points are at the indicated values.
 - 8) Interlocked systems are operating properly.
 - 9) The changeover from heating to cooling mode occurs according to the indicated values.
- 2. Complete system readiness checks, and prepare system readiness reports, to verify the following:
 - a. Permanent electrical power wiring is complete.
 - b. Automatic temperature-control systems are operational.
 - c. Equipment and duct access doors are securely closed.
 - d. Balance, smoke, and fire dampers are open.
 - e. Ceilings are installed in critical areas where air-pattern adjustments are required, and access to balancing devices is provided.
 - f. Windows and doors can be closed so the indicated conditions for system operations can be met.
- 3. Examine systems to identify functional deficiencies that cannot be corrected by adjusting and balancing.

3.02 PREPARATION

- A. Testing, Adjusting, and Balancing (TAB) Plan:
 - 1. At least 6 weeks prior to starting the testing and balance Work for this Contract and after the Test and Balance Engineer has some familiarity with the control system, prepare a preliminary outline of the Testing, Adjusting, and Balancing (TAB) Plan describing the approach contemplated for each system and component, and submit this outline to the Commissioning Authority (CA), the Program/Project Manager, and the controls Subcontractor to solicit their comments.

2. After receiving comments regarding the preliminary outline of the Testing, Adjusting, and Balancing (TAB) Plan, develop a Testing, Adjusting, and Balancing (TAB) Plan that includes, but is not limited to, the following information:
 - a. Certification that Test and Balance Engineer has reviewed Contract Documents and systems with the Program/Project Manager and the Subcontractors to sufficiently understand the design intent of each system.
 - b. An explanation of the intended use of the building control system.
 - 1) The controls Subcontractor must comment on the feasibility of the Testing, Adjusting, and Balancing (TAB) Plan.
 - c. Field checkout sheets and logs listing each piece of equipment to be tested, adjusted, and balanced, and including the data cells to be completed for each.
 - d. A discussion of the notations and markings that will be made on the duct and piping drawings during the testing, adjusting, and balancing (TAB) process.
 - e. Final test report forms to be used.
 - 1) To report test results, use the standard forms from AABC National Standards for Total System Balance.
 - f. The following detailed step-by-step procedures for testing and balance Work for each system:
 - 1) Terminal flow calibration for each terminal type.
 - 2) Diffuser proportioning.
 - 3) Branch/submain proportioning.
 - 4) Calculating total flow.
 - 5) Rechecking.
 - 6) Diversity issues.
 - 7) Expected problems and solutions, and similar issues.
 - 8) Discussion of the criteria for using air flow straighteners or relocating flow stations and sensors.
 - 9) Discussion of the criteria for using straighteners or relocating flow stations and sensors on the water side.
 - g. A list of air flow, water flow, sound level, system capacity, and efficiency measurements to be performed; and a description of specific test procedures, parameters, and formulas to be used.
 - h. Details of how total flow will be determined:
 - 1) Air:
 - a) Sum of terminal flows via building automation system (BAS) calibrated readings, or via hood readings of terminals, supply

air (SA) and return air (RA) pitot traverse, and supply air (SA) or return air (RA) flow stations.

2) Water:

- a) Pump curves, circuit setters, flow stations, ultrasonic, and similar items.
- i. Types and identification of measurement instruments to be used, and the most recent calibration date for each instrument.
- j. Specific procedures to ensure, and methods to verify that, both the air side and water side are operating at the lowest possible pressures.
- k. Confirmation that the Test and Balance Engineer understands outside air ventilation criteria under all conditions.
- l. Whether and how minimum requirements for outside air will be verified and set, and at what level such as for the total building, for zones, or similar levels.
- m. Details of how building static and exhaust fan/relief damper capacity will be determined.
- n. Proposed selection points for sound measurements, and sound measurement methods.
- o. Details of methods for making specified coil or other system plant capacity measurements.
- p. Details of testing and balance Work to be done in phases such as by floor, or similar delineations; and of areas to be built out later.
- q. Details regarding specified deferred or seasonal testing and balance Work.
- r. Details of specified false loading of systems to complete testing and balance Work.
- s. Details of exhaust fan balancing and capacity verifications, including required room pressure differentials.
- t. Details of required interstitial cavity differential pressure measurements and calculations.
- u. The plan, including the scope and frequency, for using hand-written field technician logs to record discrepancies, deficient or uncompleted work by others, contract interpretation requests, and lists of completed tests.
- v. The plan, including the scope and frequency, for formal progress reports.
- w. The plan, including the scope, frequency, and distribution for formal deficiency reports.
- 1) Have the testing and balancing field technicians maintain a running log of events and issues.

- 2) Submit handwritten reports of discrepancies, deficient or uncompleted work by others, contract interpretation requests, and lists of completed tests to Commissioning Authority and the Program/Project Manager at least twice a week.
3. Prepare a Testing, Adjusting, and Balancing (TAB) Plan that includes strategies and step-by-step procedures for testing, adjusting, and balancing the mechanical equipment and systems provided under this Contract.
4. Examine the Contract Documents to become familiar with the Contract requirements, and to discover the conditions in the systems' and equipment designs that may preclude proper testing, adjusting, and balancing (TAB) of the systems and equipment.
 - a. Verify that balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers, required by the Contract Documents are installed.
 - 1) Verify that these balancing devices are accessible, there are sufficient quantities of balancing devices for efficient system and equipment operation, and that the balancing devices are located in appropriate locations for effective balancing.
 - b. Examine design data, including heating, ventilating, and air-conditioning (HVAC) system descriptions, statements of design assumptions for environmental conditions and systems' output, and statements of philosophies and assumptions about HVAC system and equipment controls.
 - c. Examine approved submittal data for the heating, ventilating, and air-conditioning (HVAC) systems and equipment.
 - 1) Examine equipment performance data, including fan and pump curves.
 - 2) Relate the performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
 - a) Calculate system effect factors that reduce the performance ratings of HVAC equipment when it is installed under conditions different from those represented when the equipment was performance tested at the factory.
 - (1) To calculate system effects for air systems, use the tables and charts in Sections 7 through 10 of AMCA 201, or in Sections 5 and 6 of SMACNA HVAC Systems – Duct Design.

- b) Compare this data with the design data and installed conditions.
 - 3) Examine system and equipment test reports.
 - d. Examine the Project Record Documents specified in Section 01780, Closeout Submittals.
- 5. Within 30 days from the Notice-to-Proceed, submit the Testing, Adjusting, and Balancing (TAB) Plan, including a complete set of TAB report forms intended for use on this Contract, to the Program/Project Manager for approval.
- B. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from testing and balancing mechanical equipment.
- C. Demolition/Removal:
 - 1. For installing test probes, cut insulation, ducts, pipes, and equipment cabinets to the minimum extent necessary to allow procedures to be adequately performed.

3.03 REPAIR/RESTORATION

- A. After testing and balancing, close the probe holes and patch the insulation with new materials identical to those removed.
- B. Restore the vapor barrier and finish in accordance with the requirements specified in Section 15080, Mechanical Insulation.

3.04 TESTING, ADJUSTING, AND BALANCING MECHANICAL SYSTEMS

- A. Perform testing, adjusting, and balancing procedures on each system in accordance with the procedures specified in AABC National Standards for Total System Balance, AABC Test and Balance Procedures, and this Section.
- B. Testing, Adjusting, and Balancing (TAB) Field Reports:
 - 1. Observe and record system reactions to changes in conditions.
 - 2. Record default set points if they are different from the values indicated in the Contract Documents.
 - a. Submit set point and parameter changes made, and problems and discrepancies identified, during testing and balance Work which affect the control system setup and operation to the controls Subcontractor in writing.
 - 3. Report deficiencies discovered before and during performance of the testing, adjusting, and balancing (TAB) procedures.

- a. During testing, adjusting, and balancing (TAB), report temperature regulation adjustments required within the automatic temperature-control system.
 4. Testing, Adjusting, and Balancing (TAB) Report Forms:
 - a. To report test results, use the standard forms from AABC National Standards for Total System Balance.
 5. Testing, Adjusting, and Balancing (TAB) Report Certification:
 - a. Have the Test and Balance Engineer certify that he or she has reviewed the field data in order to validate the accuracy of the data; has prepared the testing, adjusting, and balancing (TAB) reports; and has complied both in accordance with the approved Testing, Adjusting, and Balancing (TAB) Plan and the procedures specified and referenced in this Section.
 6. Have the Test and Balance Engineer prepare and certify Testing, Adjusting, and Balancing (TAB) Field Reports on the approved forms, and submit these reports to the Program/Project Manager for information.
- C. Testing and Balancing Air Systems:
 1. Obtain the manufacturer's outlet factors and recommended testing procedures.
 - a. Prepare schematic diagrams of the air systems' "as-built" duct layouts.
 - b. Crosscheck the summation of the required outlet volumes with the required fan volumes.
 2. Locate the start-stop and disconnect switches, electrical interlocks, and motor starters.
 - a. Verify that the motor starters are equipped with properly sized thermal protection.
 - b. Verify that the dampers are set to the proper position to achieve the desired airflow path.
 - c. Verify that there are no airflow blockages.
 - d. Verify that condensate drains are properly connected and functioning.
 - e. Verify that air-handling unit components are properly sealed.
 - f. Verify that the air duct system is proper sealed.
 3. Determine the airflow patterns from the outside-air louvers and dampers and the return-air dampers and exhaust-air dampers, through the supply-fan discharge and mixing dampers.
 - a. Determine the best locations in main and branch ducts for accurate duct airflow measurements.
 4. Constant-Volume Air Systems:

- a. Adjust fans, within the maximum allowable fan speed listed by the fan manufacturer, to deliver the total airflows indicated in the Contract Documents.
 - 1) Determine the actual static pressure as follows:
 - a) Measure the outlet static pressure as far downstream from the fan as practicable but upstream from restrictions in the ducts such as elbows and transitions.
 - (1) Measure the static pressure directly at the fan outlet or through the flexible connection.
 - b) For single-inlet fans, measure the inlet static pressure in the inlet duct as near to the fan as possible, but upstream from the flexible connection and downstream from duct restrictions.
 - 2) Measure the static pressure across each component that makes up the air-handling system.
 - 3) Compare the design data to the installed conditions and determine variations in design static pressures versus actual static pressures.
 - a) Compare the actual system effect factors with the calculated system effect factors to identify where variations occur.
 - 4) Recommend corrective action to align the actual conditions to design conditions.
 - a) Obtain the Program/Project Manager approval before adjusting fan speeds higher or lower than the indicated speed.
 - (1) Adjust pulley sizes, motor sizes, and electrical connections to facilitate fan-speed changes.
 - (2) Do not make fan-speed adjustments that overload the motor.
 - b) Consult equipment manufacturers regarding fan-speed safety factors.
 - 5) To ensure that no overload will occur, modulate dampers and measure fan-motor amperage.
 - a) Determine the maximum required brake horsepower by measuring the amperage in full cooling, full heating, economizer, and other operating modes.
- b. Adjust volume dampers for the main duct, submain ducts, and major branch ducts within the specified tolerances to achieve the airflows indicated in the Contract Documents.
 - 1) Measure the static pressure at a point downstream from the balancing damper, and adjust the volume dampers until the proper static pressure is achieved.

- 2) Continue adjusting submain and branch ducts within the specified tolerances to the airflows indicated in the Contract Documents.
 - 3) After all submain and branch ducts have been adjusted, re-measure each submain and branch duct.
 - c. Determine the static pressure at terminal outlets and inlets without making adjustments.
 - 1) Determine the static pressure at terminal outlets using either a direct-reading hood to measure the pressure, or the outlet manufacturer's written instructions and calculating factors.
 - d. Adjust the terminal outlets and inlets for each space to the airflow values indicated in the Contract Documents within the specified tolerances.
 - 1) Adjust the airflow using volume dampers instead of extractors and the dampers at the air terminals.
 - 2) Adjust each outlet within the same room or space to the indicated airflow within the specified tolerances without generating noise above the levels specified in the Contract Documents.
 5. Have the Test and Balance Engineer prepare and certify test reports for both the fans and the outlets on the approved forms, and submit these Fan and Outlet Testing, Adjusting, and Balancing (TAB) Field Test Reports to the Program/Project Manager for information.

D. Testing Motors:

1. Test motors 1/2 horsepower and larger at the final balanced conditions, and record the following data:
 - a. Motor manufacturer, model number, and serial number.
 - b. Motor horsepower rating.
 - c. Motor revolutions per minute (rpm).
 - d. Efficiency rating.
 - e. Nameplate and measured voltage of each phase.
 - f. Nameplate and measured amperage of each phase.
 - g. Starter thermal-protection-element rating.
2. Have the Test and Balance Engineer prepare and certify test reports for the motors on the approved forms, and submit these Motor Testing, Adjusting, and Balancing (TAB) Field Test Reports to the Program/Project Manager for information.

E. Testing Temperature Controls:

1. Temperature Measurement:
 - a. To prove correctness of the final temperature settings, measure the indoor wet-bulb and dry-bulb temperatures in each separately controlled zone every other hour during 2 successive eight-hour days.

- 1) Measure the indoor wet-bulb and dry-bulb temperatures when the building or zone is occupied.
 - b. Measure the outside-air, wet-bulb and dry-bulb temperatures.
 2. Temperature-Control Verification:
 - a. Verify the transmitter and controller locations, and note conditions that could adversely affect control functions.
 - b. Verify that the temperature controllers have been calibrated and commissioned.
 - c. Record the controller settings, and note variances between the set points and the actual measurements.
 - d. Verify the operation of limiting controllers, including high-temperature and low-temperature controllers.
 - e. Verify the free travel and proper operation of control devices, such as damper and valve operators.
 - f. Verify the proper sequence of operation of the control devices.
 - 1) Note the air pressures and device positions, and correlate them with the airflow and water flow measurements.
 - 2) Note the speed of the response to the input changes.
 - g. Verify the proper interaction of electrically operated switch transducers.
 - h. Verify the proper interaction of interlock and lockout systems.
 - i. Record the voltages of the power supply and controller output.
 - 1) Determine whether the system operates on a grounded or non-grounded power supply.
 - j. Verify the proper operation of electric actuators that require a spring return for proper fail-safe operations.
 3. Have the Test and Balance Engineer prepare and certify test reports for the temperature controls on the approved forms, and submit these Temperature-Control Testing, Adjusting, and Balancing (TAB) Field Test Reports to the Program/Project Manager for information.
- F. To show the final settings, mark equipment and balancing device settings, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, using paint or another suitable permanent identification material.

3.05 CLOSEOUT ACTIVITIES

- A. Final Testing, Adjusting, and Balancing (TAB) Report:
1. Within 2 weeks of the completion of the testing, adjusting, and balancing of the mechanical equipment and systems, prepare a draft Final Testing,

- Adjusting, and Balancing (TAB) Report, and submit a copy to the Commissioning Authority (CA) and the Program/Project Manager.
- a. Include a full explanation of the methodology, assumptions, and results in a clear format, designating uncommon abbreviations and column headings, in the report.
 - b. Follow latest and most rigorous reporting recommendations in AABC National Standards for Total System Balance, NEEB Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems, or ASHRAE 111 to compile the report.
2. After the equipment and systems have been tested, adjusted, and balanced, prepare a Final Testing, Adjusting, and Balancing (TAB) Report that includes the following information:
- a. Field report data certified by the Test and Balance Engineer.
 - b. Fan curves.
 - c. Manufacturers' test data.
 - d. Field test reports prepared by the system and equipment installers.
 - e. Other information relative to equipment performance.
 - f. Include drawings marked to indicate where traverse and other critical measurements were taken, and cross referenced to locations in the Final Testing, Adjusting, and Balancing (TAB) Report.
3. Do not include Shop Drawings and Product Data in the Final Testing, Adjusting, and Balancing (TAB) Report.
4. Report Format:
- a. Prepare a typewritten, or computer printer-generated, report using a letter-quality font on standard bond paper that includes the following items:
 - 1) A title page.
 - 2) The name and address of the Test and Balance Technician or Test and Balance Engineer.
 - 3) The Project and Contract names.
 - 4) The Project and Contract locations.
 - 5) The Program/Project Manager's name and address.
 - 6) The Design Professional's name and address.
 - 7) The Contractor's name and address.
 - 8) The report date.
 - 9) A certification sheet in the front of the binder signed and sealed by the certified Test and Balance Engineer to certify the report.
 - 10) A Table of Contents having the total number of pages defined for each section of the report.
 - a) Number each page in the report.
 - 11) A summary of the report contents, including the following:

- a) Indicated performance versus final performance.
 - b) Notable characteristics of the systems.
 - c) A description of the system operation sequence if it varies from operation sequence in the Contract Documents.
- 12) A list of the instruments used for performing the testing, adjusting, and balancing procedures, and proof of proper calibration of the instruments.
- 13) Testing, Adjusting, and Balancing (TAB) Report Forms completed with form titles and entries.
- 14) System Diagrams:
 - a) Include schematic layouts of the air distribution systems.
 - b) Depict each air distribution system using a single-line diagram that includes the following information:
 - (1) Quantities of outside, supply, return, and exhaust airflows.
 - (2) Duct, outlet, and inlet sizes.
 - (3) Balancing stations.
 - (4) The position of balancing devices.
- 15) Nomenclature sheets for each item of equipment.
- 16) Data for terminal units, including the manufacturer, type, size, and fittings.
- 17) Notes to explain why certain final data in the body of reports varies from indicated values.
- 18) Test conditions for the fan and pump performance forms, including the following:
 - a) Settings for the outside-air dampers, return-air dampers, and exhaust-air dampers.
 - b) Condition of filters.
 - c) Cooling coil wet-bulb and dry-bulb conditions.
 - d) Settings for the fan drive.
 - e) Settings for the supply-air, static-pressure controller.
 - f) Operating conditions of other systems that affect performance.
- 5. Submit the Final Testing, Adjusting, and Balancing (TAB) Report, having details as in the draft, to the Program/Project Manager and Commissioning Authority (CA) for information.
 - a. Include gathered data requested by the Commissioning Authority, but not furnished in draft reports.

B. Training:

- 1. After the Test and Balance Engineer has completed the testing and balancing Work, have him or her furnish 24 hours of instruction for the Owner's staff, to include the following topics:

- a. A review of the Final Testing, Adjusting, and Balancing (TAB) Report to explain the layout and meanings of each data type.
- b. A discussion of outstanding deficient items in the control, ducting, or design that may affect proper delivery of air or water.
- c. Identification and discussion of terminal units, duct runs, diffusers, coils, fans, and pumps that are close to or are not meeting specified design capacity.
- d. A discussion of temporary settings and steps to finalize areas which are not completed.
- e. Other salient information that may be useful for facility operations, relative to testing and balance Work.
- f.

SECTION 15995

COMMISSIONING OF MECHANICAL SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for commissioning the mechanical systems listed in Section 01810, Commissioning.
 - 2. Requirements for demonstrating the operation of the mechanical systems listed in Section 01810, Commissioning.
 - 3. Requirements for providing training to the Owner's personnel for the mechanical systems listed in Section 01810, Commissioning.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01770 - Closeout Procedures.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 01810 - Commissioning.
 - 6. Section 15950 - Testing, Adjusting, and Balancing.
 - 7. Section 16080 - Electrical Testing.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. BAS: Building Automation System.
 - 2. CA: Commissioning Authority.
 - 3. CFM: Cubic feet per minute.
 - 4. DB: Dry bulb.
 - 5. DDC: Direct digital control.
 - 6. DP: Double pole.
 - 7. HVAC: Heating, Ventilating, and Air-Conditioning.
 - 8. OSA: Outside air.
 - 9. P/T: Pressure transmitter.
 - 10. RA: Return air.
 - 11. SA: Supply air.
 - 12. SAT: Supply air temperature.
- B. Definitions:
 - 1. Calculated Point: A virtual point generated by calculations using other point values.

2. Commissioning: A systematic process to ensure that the Phoenix Sky Harbor International Airport's building systems perform interactively according to the design intent and operational needs of the Owner.
 - a. The commissioning process encompasses and coordinates the system documentation, equipment startup, control system calibration, testing and balancing, performance testing, and training.
3. Commissioning Authority (CA): An independent agent engaged by the Phoenix Sky Harbor International Airport to direct and coordinate the commissioning process for the Project, and to approve the Work requiring commissioning.
 - a. The Commissioning Authority (CA) is not otherwise associated with the Design Consultant or the Contractor.
 - b. The Commissioning Authority (CA) directs and coordinates the day-to-day commissioning activities without assuming oversight responsibilities.
 - c. The Commissioning Authority (CA) reports directly to the Program/Project Manager.
4. Commissioning Plan: An overall plan, developed before or after award of the Contract, that provides the structure, schedule, and coordination planning for the commissioning process.
5. Commissioning Team: A group of stakeholders that includes the following members who work together to fulfill contractual commissioning responsibilities under the Contract:
 - a. The Commissioning Authority (CA).
 - b. The Program/Project Manager.
 - c. The Facilities Manager (FM).
 - d. The Contractor.
 - e. The Contractor's Subcontractors whose equipment and systems will be commissioned, and who typically include the plumbing, HVAC, and fire suppression Subcontractors; the electrical and communications Subcontractors, the HVAC test and balance Subcontractor, the Building Automation System (BAS) Subcontractor, and other specialty system Subcontractors.
 - f. The Design Consultant.
6. Control Point or Set Point: A point that controls equipment, and can have its set point changed, including points for outside air (OSA), supply air temperature (SAT), and similar items.
7. Intermediate Point: A point whose value is used to make a calculation, which then controls equipment; for example, space temperatures that are averaged to a virtual point to control reset.
8. Monitoring Point: A point that does not control or contribute to the control of equipment, but that is used for operation, maintenance, or performance verification.

C. Reference Standards:

1. Associated Air Balance Council (AABC):

- a. AABC National Standards for Total System Balance.
2. AABC Commissioning Group (AGC):
 - a. AGC Commissioning Guideline.
3. American Society of Heating, Refrigerating, and Air-Conditioning Engineers, Inc. (ASHRAE):
 - a. ASHRAE Guideline 1.1-2008 - HVAC&R Technical Requirements for the Commissioning Process (*Supersedes ASHRAE Guideline 1-1996*).
 - b. ANSI/ASHRAE 111 – Measurement, Testing, Adjusting, and Balancing of Building HVAC Systems.
4. National Environmental Balancing Bureau (NEBB):
 - a. NEBB Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Commissioning requires participation not only of the Contractor, but also of the mechanical and mechanical controls Subcontractors and Suppliers, to ensure that systems are operating in a manner consistent with the requirements specified in the Contract Documents.
 - a. General commissioning and coordination requirements are specified in Section 01810, Commissioning.
 - 1) Familiarize the mechanical Subcontractors with the requirements specified in Section 01810, Commissioning, and the Commissioning Plan issued by the Commissioning Authority.
 - 2) In each purchase order or subcontract written, include the requirements for submittal data, commissioning documentation, Operation and Maintenance data, and demonstration and training services required for performing commissioning activities.
 - b. Coordinate the commissioning activities with the testing, adjusting, and balancing of mechanical systems and equipment performed by the Test and Balance Engineer under Section 15950, Testing, Adjusting, and Balancing.
 - 1) Have the Commissioning Authority (CA) complete and approve the required pre-functional checklists, calibrations, startup, and selected functional tests of the systems for each given area prior to performing testing and balance activities.
2. Take responsibility for coordinating and scheduling the training specified in Section 01770, Closeout Procedures, and Section 01810, Commissioning; and ultimately for ensuring that the training is completed in accordance with the requirements specified.

B. Pre-Installation Meetings:

1. Commissioning Scoping Meeting:

- a. Within 60 days of commencement of construction, the Commissioning Authority (CA) will schedule, plan, and conduct a Commissioning Scoping Meeting with the entire commissioning team for this Contract in attendance.
 - b. Information gathered from this meeting will allow the Commissioning Authority (CA) to update the Commissioning Plan to its "final" version, which will be distributed to all parties in attendance.
 2. Miscellaneous Meetings:
 - a. Other meetings besides the Commissioning Scoping Meeting will be planned and conducted by the Commissioning Authority (CA) as construction progresses.
 - 1) These miscellaneous meetings will cover coordination, deficiency resolution, and planning issues with particular Subcontractors.
 - 2) The Commissioning Authority (CA) will plan these meetings, and will minimize unnecessary time being spent by Subcontractors.
 - 3) These miscellaneous meetings may be held monthly, until the final 3 months of construction when they may be held as frequently as one per week.
 3. Meeting Minutes:
 - a. The Commissioning Authority (CA) will prepare and distribute meeting minutes to all parties in attendance at commissioning meetings.
- C. Scheduling:
 1. Prepare a preliminary schedule for the start and completion of mechanical pipe and duct system testing, flushing and cleaning, mechanical equipment startup, and testing and balancing for use by the Commissioning Authority (CA).
 - a. Submit this preliminary schedule, and schedule updates as appropriate, for this mechanical Work to the Program/Project Manager and the Commissioning Authority (CA) for approval.

1.04 SUBMITTALS

- A. Submit Product Data, Shop Drawing, and Operation and Maintenance Manual submittals of equipment to be commissioned to the Commissioning Authority as specified in Section 01810, Commissioning.
- B. Prior to submitting normal Operation and Maintenance Manual submittals, submit additional requested documentation to the Commissioning Authority to enable development of the startup and functional testing procedures.
 1. Submittal documentation includes, but is not limited to, detailed manufacturer installation and startup, operating, troubleshooting, and maintenance procedures; full details of Owner-contracted tests; fan and pump curves; full factory testing reports, if any; and warranty information, including clearly defined actions that are the responsibility of the Owner in order to keep warranties in force.

- a. Include installation, startup, and checkout materials shipped with the equipment provided, and field checkout forms to be used by factory or field technicians.
 - b. The Commissioning Authority may request further documentation necessary for the commissioning process.
2. Requests for data may be made prior to, concurrent with, or following normal submittals.

C. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Shop Drawings:
 - 1) Sequences of Operation drawings.
 - 2) Control drawings.
 - b. Certificates:
 - 1) Certification that the control system programming is complete and in accordance with the Contract Documents.
 - c. Delegated Design Submittals:
 - 1) Preliminary schedule, and schedule updates, for mechanical Work.
 - d. Special Procedure Submittals:
 - 1) Product Data, Shop Drawing, and Operation and Maintenance Manual submittals of equipment to be commissioned.
 - 2) Additional documentation requested by the Commissioning Authority.

D. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Controls training manuals.
 - b. Record Documentation:
 - 1) As-built drawings showing the commissioned mechanical equipment and systems.

1.05 WARRANTY

A. Manufacturer Warranties:

1. Determine the specific requirements necessary to maintain the validity of the warranties for mechanical equipment and systems to be commissioned by contacting and coordinating activities with the manufacturers of the mechanical equipment and systems to be commissioned and those responsible for actions required to maintain the warranties in effect.

B. Warranty Period:

1. During the warranty periods for the mechanical equipment and systems to be commissioned, correct deficiencies and make necessary adjustments to the mechanical equipment and systems, Operation and Maintenance Manuals, and Record Documentation.
 - a. Address applicable issues identified during seasonal testing.

PART 2 PRODUCTS

NOT USED

PART 3 EXECUTION

3.01 COMMISSIONING MECHANICAL EQUIPMENT AND SYSTEMS

A. Mechanical and Mechanical Controls Subcontractors Commissioning Responsibilities:

1. The mechanical and mechanical controls Subcontractors, or the Contractor if there are no mechanical and/or mechanical controls Subcontractors, are required to execute the commissioning responsibilities assigned to them by the Contract Documents, including, but not limited to, the following:
 - a. Furnishing an itemized cost for providing the services to commission mechanical systems for inclusion in the in the Guaranteed Maximum Price (GMP).
 - b. Attending the commissioning scoping meeting and other meetings necessary to facilitate the commissioning process for this Contract.
 - c. Supporting the Commissioning Authority (CA) through all phases of the commissioning process.
 - 1) The mechanical and mechanical controls Subcontractors are responsible for working with the Commissioning Authority according to the protocols established in the Commissioning Plan.
 - 2) The mechanical and mechanical controls Subcontractors are responsible for furnishing sufficient notice to the Program/Project Manager, the Owner, and the Commissioning Authority (CA) regarding the completion schedule for the pre-functional checklists and the startup of the mechanical and mechanical controls equipment and systems.
 - a) Furnish notice ahead of the time when pipe and duct system testing, flushing, cleaning, and testing and balancing, and the startup of each piece of equipment will occur.
 - b) Take responsibility for notifying the Program/Project Manager, the Owner, and the Commissioning Authority (CA) when commissioning activities not yet performed or not yet scheduled will delay construction.

- c) Be proactive to ensure that commissioning processes are executed, and that the Commissioning Authority (CA) has the scheduling information needed to efficiently execute the commissioning process.
- d. Supporting the Test and Balance Engineer by helping to place heating, ventilating, and air-conditioning (HVAC) equipment and systems into operation, and keeping the equipment and systems in continuous operation as required during each work day the testing and balancing and commissioning is performed.
 - 1) To allow air measurements and air balancing, provide test holes in ducts and plenums where directed by the Test and Balance Engineer, and provide approved plugs.
 - 2) For testing and balancing, and for commissioning tests, provide temperature and pressure taps in accordance with the requirements specified in the Contract Documents.
 - 3) Install a pressure transmitter (P/T) plug at each water sensor that is an input point to the control system.
 - 4) Beyond the control points necessary to execute the documented control sequences, provide the monitoring, control, and virtual points specified in Section 15950, Testing, Adjusting, and Balancing.
- e. Written Work Products:
 - 1) The mechanical and mechanical controls Subcontractors are responsible for furnishing the written work products specified in Section 01810, Commissioning, including the procedures to be executed as part of initial checkout and other input for developing the Startup Plans, and executed (filled in and signed) initial checkout, startup, and pre-functional checklists.
 - a) Prior to the functional performance testing to be performed in accordance with the process specified in Section 01810, Commissioning, prepare a written plan that indicates the step-by-step procedures required to test, check, and adjust the control system; and that includes the following information for each type of equipment controlled by automatic controls:
 - (1) System name.
 - (2) A list of devices.
 - (3) Step-by-step procedures for testing each controller after installation, including the following information:
 - (a) The process for verifying hardware and wiring have been properly installed.
 - (b) The process for downloading programs to local controllers, and for verifying they are addressed correctly.
 - (c) The process for performing operational checks of each controlled component.

- (d) The plan and process for calibrating valve and damper actuators and sensors.
 - (e) A description of expected field adjustments for transmitters, controllers, and control actuators in the event control responses fall outside expected values.
- (4) A copy of the log and field checkout sheets to document the process.
 - (a) Include a place in the log for the initial and final values read during the calibration of each point, and clearly indicate when the sensor or controller has passed and is operating within the Contract parameters.
 - (5) A description of the instrumentation required for testing.
- b) Coordinate with the Commissioning Authority (CA) and Test and Balance Engineer to determine which systems must be tested, and which tests must be performed on them, prior to using the control system for the testing and balancing Work.
- 2) If the Specifications, control drawings, or equipment documentation furnish insufficient information to allow detailed testing procedures to be written, then with assistance from the Program/Project Manager furnish clarification of the operation and control of the equipment to be commissioned to the Commissioning Authority (CA).
- 3) Using the manufacturer's startup procedures and pre-functional checklists from the Commissioning Authority, develop initial checkout and full Startup Plans for mechanical equipment and systems to be commissioned in accordance with the requirements specified in Section 01810, Commissioning.
 - a) Submit the initial checkout and full Startup Plans to the Commissioning Authority for review and approval prior to startup of the equipment or system.
- 4) Provide assistance to the Commissioning Authority for preparing functional performance test procedures.
 - a) Review the test procedures to ensure their feasibility, safety, and protection of equipment; and furnish in writing the necessary alarm limits to be used during the tests.
- f. Furnishing the mechanical and mechanical controls testing equipment required to perform the commissioning procedures indicated in the Contract Documents.
- g. Executing the tasks listed on the approved pre-functional checklists and performing the startup tests.
 - 1) Provide skilled technicians to execute the starting of equipment and to execute functional performance tests.
 - a) Ensure that the technicians are available and present during agreed upon schedules, and for a sufficient time to complete the necessary tests, adjustments, and problem solving.

- 2) Prior to performing the functional testing for each piece of equipment or system but after the checkout of each controlled device, equipment, and system has been completed, submit a signed and dated certification to Commissioning Authority and Program/Project Manager certifying that the control system programming is complete and in accordance with the Contract Documents, except for functional testing requirements.
 - h. Under the direction of the Commissioning Authority (CA), performing the functional performance tests (FPT) and executing seasonal or deferred functional performance testing, witnessed by the Commissioning Authority, in accordance with the requirements specified in the Contract Documents.
 - 1) Provide skilled technicians to perform the functional performance testing under the direction of the Commissioning Authority for the equipment specified in Section 15950, Testing, Adjusting, and Balancing, and Section 01810, Commissioning.
 - 2) Assist the Commissioning Authority in interpreting monitoring data as necessary.
 - 3) Execute the control system trend logs specified in Section 15950, Testing, Adjusting, and Balancing, and Section 16080, Electrical Testing.
 - i. Correcting deficiencies, meaning differences between the specified and observed performance as interpreted by the Commissioning Authority, in the tested equipment and systems; and retesting the equipment and systems after corrections have been made.
- B. Mechanical Controls Subcontractors Commissioning Responsibilities:
 1. The mechanical controls Suppliers and vendors are required to execute the commissioning responsibilities assigned to them by the Contract Documents, including, but not limited to, the following:
 - a. Furnishing requested Submittal data, including detailed startup procedures, and specifying specific responsibilities of the Owner required for maintaining the equipment warranties in force.
 - 1) Sequences of Operation:
 - a) Submit Sequences of Operation drawings to the Program/Project Manager for approval that include complete detailed sequences of operation for each piece of equipment, regardless of the completeness and clarity of the sequences in specifications, and include at a minimum the following information:
 - (1) An overview narrative of the system, generally describing the system=s purpose, components, and function.
 - (2) Interactions and interlocks with other systems.
 - (3) A detailed delineation of control between packaged controls and the Building Automation System (BAS) that

- lists what points the BAS only monitors, and what BAS points are control points and are adjustable.
- (4) Written sequences of control for packaged controlled equipment.
 - (a) Manufacturer's stock sequences may be included, but normally require additional narrative.
 - (5) Startup sequences.
 - (6) Warm up mode sequences.
 - (7) Normal operating mode sequences.
 - (8) Unoccupied mode sequences.
 - (9) Shutdown sequences.
 - (10) Capacity control sequences and equipment staging.
 - (11) Temperature and pressure control:
 - (a) Include setbacks, setups, resets, and similar items.
 - (12) Detailed sequences for control strategies, including, but not limited to, economizer control, optimum start/stop, staging, optimization, demand limiting, and similar items.
 - (13) Effects of power equipment failure, and standby component functions.
 - (14) Sequences for alarms and emergency shut downs.
 - (15) Seasonal operational differences and recommendations.
 - (16) Initial and recommended values for adjustable settings, set points and parameters typically set or adjusted by operating staff and other control settings or fixed values, delays, and similar items that will be useful during testing and operation of equipment.
 - (17) Schedules, if they are known.
- b) To facilitate referencing in testing procedures, write sequences in small statements, each having a number for reference.
 - (1) For a given system, do not repeat numbers for different sequence sections, unless the sections are numbered.
- 2) Control Drawings:
- a) Submit control drawings to the Program/Project Manager for approval that include at a minimum the following information:
 - (1) A key to abbreviations used.
 - (2) Graphic schematic depictions of the systems and each component.
 - (3) Schematics that include the system and component layout of equipment that the control system monitors, enables, or controls, even if the equipment is primarily controlled by packaged or integral controls.
 - b) Provide a full points list, and keep the Commissioning Authority informed of changes in the list during programming and setup.

- c) Include at a minimum the following information for each point:
 - (1) Controlled system.
 - (2) Point abbreviation.
 - (3) Point description:
 - (4) Dry bulb (DB) temperature, airflow, and similar information.
 - (5) Display unit.
 - (6) Control point or set point (Yes/No):
 - (7) Monitoring point (Yes/No):
 - (8) Intermediate point (Yes/No):
 - (9) Calculated point (Yes/No):
 - b. Furnishing assistance during equipment testing.
 - c. Furnishing costs to include in the Guaranteed Maximum Price (GMP) for special tools and instruments only available from the equipment Suppliers or vendors, that are specific to a piece of equipment, as required by the Specifications, and required for testing the equipment according to the Contract Documents, except for stand-alone data logging equipment that may be used by the Commissioning Authority (CA).
 - d. Furnishing information requested by the Commissioning Authority (CA) regarding the sequences of operation and testing procedures for equipment.
 - e. Reviewing and approving test procedures for equipment installed by factory representatives.
- C. Mechanical Equipment and Systems Supplier's Commissioning Responsibilities:
 - 1. The mechanical Suppliers and vendors are required to execute the commissioning responsibilities assigned to them by the Contract Documents, including, but not limited to, the following:
 - a. Furnishing requested Submittal data, including detailed startup procedures, and specifying specific responsibilities of the Owner required for maintaining the equipment warranties in force.
 - b. Furnishing assistance during equipment testing.
 - c. Furnishing costs to include in the Guaranteed Maximum Price (GMP) for special tools and instruments only available from the equipment Suppliers or vendors, that are specific to a piece of equipment, as required by the Specifications, and required for testing the equipment according to the Contract Documents, except for stand-alone data logging equipment that may be used by the Commissioning Authority (CA).
 - d. Furnishing information requested by the Commissioning Authority (CA) regarding the sequences of operation and testing procedures for equipment.
 - e. Reviewing and approving test procedures for equipment installed by factory representatives.

3.02 SYSTEM STARTUP

- A. Prior to system startup, complete the mechanical systems and sub-systems so the systems and sub-systems are fully functional, and meet the performance and design requirements of the Contract Documents.
 - 1. Commissioning procedures and functional testing do not relieve or lessen this responsibility, or shift this responsibility in whole or in part to the Commissioning Authority or the Owner.
 - 2. Address current punch list items before performing functional testing.
 - a. Complete air and water testing and balancing, and remedy discrepancies and problems discovered, before performing functional testing of air-related or water-related electrical systems.
 - 3. Test, adjust, and balance heating, ventilating, and air-conditioning (HVAC) systems in accordance with the requirements specified in Section 15950, Testing, Adjusting and Balancing.
 - a. Conduct functional performance tests and checks on the original testing and balancing as specified for testing and balancing in Section 15950, Testing, Adjusting, and Balancing.
- B. Initial Checkout Process and Startup:
 - 1. The mechanical Subcontractors are responsible for following the startup and initial checkout procedures specified in Section 01810, Commissioning, for mechanical equipment and systems, except for the building automation control system, provided under this Contract.
 - a. During initial checkout process and startup, execute and document the mechanical-related portions of the pre-functional checklists provided by the Commissioning Authority for commissioned equipment and systems.
 - b. Perform and clearly document completed startup and system operational checkout procedures, and submit a copy to the Commissioning Authority.
- C. Functional Testing:
 - 1. A complete list of systems to be commissioned, and a description of the process is specified in Section 01810, Commissioning.
 - a. Have the Commissioning Authority (CA) at a minimum perform the startup and checkout activities listed in Section 01810, Commissioning, for the chillers; pumps; cooling towers; boilers; piping systems; ductwork; variable frequency drives; air handlers; packaged air conditioning and heat pumps; air terminal units; unit heaters; heat exchangers; computer room units; fume hoods; lab room pressures; specialty fans; testing, adjusting, and balancing work; chemical treatment systems; the building automation system (BAS); fire and smoke dampers; indoor air quality; equipment sound control; equipment vibration control; egress pressurization, service water

- heaters; service water booster pumps; refrigeration systems; and medical gas systems work pertinent to the Work of this Section.
- b. Specific details of the required functional performance tests are specified in Section 01810, Commissioning; Section 15950, Testing, Adjusting, and Balancing; and in other mechanical Sections.
- c. Specific details regarding non-conformance issues relating to pre-functional checklists and tests are specified in Section 01810, Commissioning.
- 2. Begin functional testing of each mechanical equipment item or system when the equipment item or system is completed.
 - a. At the discretion of the Commissioning Authority (CA) and the Program/Project Manager, functional testing may proceed prior to completion of the system or sub-systems.
 - b. Beginning testing of a system before it is completed does not relieve the Contractor from fully completing the system, or executing pre-functional checklists, as early as possible.
 - c. Specific details regarding deferred testing are specified in Section 01810, Commissioning.

3.03 CLOSEOUT ACTIVITIES

- A. The Commissioning Authority is responsible for overseeing and approving the content and adequacy of the training provided to the Owner's personnel for commissioned mechanical equipment and systems.
- B. Mechanical Subcontractors:
 - 1. The mechanical Subcontractors are responsible for performing the following training-related functions after the functional testing is complete, unless otherwise approved by the Owner in writing:
 - a. For each major piece of equipment, engage an appropriate expert and qualified trainer to furnish the instruction for the Owner's operating staff and demonstrate the equipment as specified.
 - 1) The trainer may be the startup technician for the piece of equipment, the installing Subcontractor, or a trade or manufacturer's representative.
 - 2) The trainer must possess practical building operating expertise and in-depth knowledge of the specific piece of equipment's modes of operation.
 - 3) More than 1 trainer may be required to demonstrate or furnish training for a piece of equipment.
 - b. At least 2 weeks before the training and demonstration are scheduled to occur, submit an outline describing the training to be furnished as specified in Section 01810, Commissioning.
 - c. For each mechanical system, subsystem, or piece of equipment to be commissioned, provide the Owner's designated personnel with a comprehensive orientation and a training session, or training sessions,

designed to furnish an understanding of the systems and their operation and maintenance as specified in Section 01770, Closeout Procedures.

- 1) Begin the training with classroom sessions, if necessary, followed by hands-on training on each piece of equipment or system designed to illustrate the equipment's or system's various modes of operation, including startup, shutdown, fire or smoke alarm, power failure, and similar modes.

C. Controls Subcontractors:

1. The controls Subcontractors are responsible for training designated Owner personnel to clearly and completely understand the capabilities of facility control system.
 - a. The Program/Project Manager will indicate the number of Owner's personnel who will attend the training.
 - 1) If no notice of the number of attendees is provided, provide materials and training for a minimum of 4 people for each session.
2. Unless otherwise approved by the Program/Project Manager in writing, the controls Subcontractors are responsible for performing the following training-related functions after the functional testing is complete:
 - a. Besides the controls training sessions, the controls Subcontractor must attend other training sessions when requested to discuss the interaction of the controls systems as they relate to the equipment being discussed in the other training sessions.
 - b. At least 4 weeks before the training is planned to occur, submit a draft training plan to the Commissioning Authority (CA) in accordance with requirements specified in Section 01770, Closeout Procedures and Section 01810, Commissioning.
- c. Controls Instructors:
 - 1) Employ controls instructors that are knowledgeable of the system and its use in buildings.
 - 2) For onsite sessions, use the most qualified controls instructors.
 - 3) Prior to scheduling training, submit the controls instructors' resumes to the Program/Project Manager for approval of the instructor.
- d. Tailor the training sessions to the needs and skill-level of the trainees.
- e. Training Manuals:
 - 1) For each attendee, furnish the standard operating manual for the system and special training manuals approved by the Commissioning Authority (CA).
 - a) Furnish manuals that include a detailed description of the subject matter for each session.
 - (1) Include the applicable portion of the Operation and Maintenance Manuals for the items for which training is being provided.

- (2) Include copies of all hand-outs, slides, overheads, audiovisual presentations, and similar materials that are not included in the Operation & Maintenance Manuals.
- b) Furnish manuals that include control sequences and a definitions section that fully describes relevant words used in the manuals and in the software displays.
- c) Furnish 3 extra copies of each training manual for inclusion with the operation and maintenance data for the item.
- f. Demonstrate the use of the system technical manual, and furnish 3 additional copies with the Operation and Maintenance Manual submittals.
- g. Furnish 3 separate training sessions as follows:
 - 1) Training Session I - Control System:
 - a) Furnish 8 hours of actual training.
 - b) The training may be held onsite, or in the Supplier's facility. If the training is held offsite, the training may occur prior to final completion of the system's installation.
 - c) Upon completion of the training, each student must be capable of performing elementary operations and of describing the general hardware architecture and functionality of the system using appropriate documentation.
 - 2) Training Session II - Building Systems:
 - a) Furnish 8 hours of actual hands-on training.
 - b) The training must be held onsite after the commissioning of the system has been completed.
 - c) Include instruction on the specific hardware configuration of installed systems in the building, and specific instruction for operating the total system installed, including HVAC systems, lighting controls, and interfaces with security and communication systems.
 - d) Include instruction on security levels, alarms, system startup, shutdown, power outage and restart routines, changing set points, alarms and other typical changed parameter, overrides, freeze protection, manual operation of equipment, optional control strategies that can be considered, energy saving strategies and set points that, if changed will adversely affect energy consumption, energy accounting, procedures for obtaining vendor assistance, and similar parameters.
 - e) Include instruction on trending and monitoring features such as values, change of state, totalization, and similar items; and include setting up, executing, downloading, viewing both tabular and graphic features, and printing trends.
 - (1) Have trainees actually set-up trends while the trainer is present.

- f) Include instruction on using remote access to the system via phone lines or networks.
 - g) Include instruction on using a keypad or plug-in laptop computer at the zone level.
 - h) Include instruction on setting up and changing an air terminal unit controller.
 - i) Include instruction on graphics generation.
 - j) Include instruction on point database entry and modifications.
 - k) When applicable, include instruction on understanding direct digital control (DDC) field panel operating programming.
 - l) Discuss every screen, allowing time for questions.
 - 3) Training Session III – Follow-up Training:
 - a) Furnish 8 hours of actual training.
 - b) The training must be held onsite 6 months after occupancy.
 - c) Structure the session to address specific topics that trainees need to discuss, and to answer questions concerning operation of the control system.
- D. Demonstration:
 - 1. Engage the mechanical Subcontractor to fully explain and demonstrate the operation, function, and overrides of local packaged controls not controlled by the central control system to the Owner's designated personnel.
 - a. During the demonstration, if the system fails to perform in accordance with the requirements of the Operation and Maintenance Manual or the sequence of operations, repair or adjust the system as necessary, and repeat the demonstration.
- E. Training of Owner Personnel:
 - 1. Duration of Training:
 - a. Furnish training lasting as long as specified in Section 01770, Closeout Procedures.
 - 2. Classroom Sessions:
 - a. Design training sessions to follow the Table of Contents of the Operation and Maintenance Manuals for the subject equipment, and whenever possible illustrate the use of the Operation and Maintenance Manuals for reference.
 - 1) Use the format and training agenda included in ASHRAE Guideline 1.1-2008.
 - 2) Use overhead projections, slides, video/audio-taped material, as appropriate, in classroom sessions.
 - 3) Refer to the printed installation, operation, and maintenance instruction material included in the Operation and Maintenance Manual for the equipment or system.
 - 4) Review the written operation and maintenance instructions, emphasizing safe and proper operating requirements,

- preventative maintenance, special tools needed, and spare parts inventory suggestions.
- 5) Teach students the startup, shutdown, seasonal changeover, and emergency procedures as applicable, and operation of the equipment or system in all possible modes.
- 6) Discuss relevant health and safety issues and concerns.
- 7) Discuss warranties and guarantees.
- 8) Describe common troubleshooting problems and solutions.
- 9) Discuss peculiarities of the equipment installation or operation.
- 10) Discuss the explanatory information included in the Operation and Maintenance Manuals, and the location of plans and manuals in the facility.
- 3. Hands-On Training
 - a. Furnish hands-on training that includes startup and operation in all modes, including, but not limited to, manual operation, shut-down, and emergency operation procedures, if any.
 - b. Furnish hands-on maintenance training for each piece of equipment.
- F. Record Documentation
 - 1. During construction, prepare and maintain as-built red-line drawings on copies of the Contract Drawings, and prepare final computer-generated as-built drawings to be used as coordination drawings.
 - a. List and clearly identify the locations of static and differential pressure sensors (air, water, and building pressure) on as-built duct and piping drawings.
 - b. List and clearly identify the locations of the air-flow stations on the record drawings.
 - 2. Update the as-built drawings after completion of the commissioning activities, excluding the deferred functional testing.
 - 3. Submit the final computer-generated as-built drawings showing the commissioned mechanical equipment and systems to the Program/Project Manager.

3.04 MAINTENANCE

- A. Operation and Maintenance Manuals:
 - 1. Prepare Operation and Maintenance Manuals in accordance with the requirements specified in the Contract Documents.
 - a. The mechanical Subcontractors, controls Subcontractors, and equipment Suppliers are responsible for compiling and preparing documentation for the mechanical equipment and systems and controls provided under this Contract for inclusion in the Operation and Maintenance Manuals.
 - 1) Prior to training the Owner's personnel, the mechanical Subcontractors, controls Subcontractors, and equipment Suppliers are responsible for furnishing documentation to the

Contractor for inclusion in the Operation and Maintenance Manuals in accordance with requirements of Section 01780, Closeout Submittals.

- b. In addition to documentation specified elsewhere in the Contract Documents, the controls Subcontractor must compile and organize, at a minimum, the following additional data for the control system:
 - 1) In binders separate from the Operation and Maintenance Manuals, 3 copies of the controls training manuals.
 - 2) In the Operation and Maintenance Manuals, include the following additional information:
 - a) Specific instructions on how to perform and apply functions, modes, and similar features mentioned in the controls training sections of this Section, and other features of the system.
 - (1) Include step-by-step instructions.
 - (2) Include indexes and a clear table of contents.
 - (3) Include a detailed technical manual for programming and customizing control loops and algorithms.
 - b) A full set of as-built control drawings.
 - c) A full as-built sequence of operations for each piece of equipment.
 - d) A full points list.
 - (1) In addition to the updated points list required in the original submittals, include a listing of rooms having the following information for each room:
 - (a) Floor.
 - (b) Room number.
 - (c) Room name.
 - (d) Air handler unit identification.
 - (e) Reference drawing number.
 - (f) Air terminal unit tag identification.
 - (g) Heating and/or cooling valve tag identification.
 - (h) Minimum cubic feet per minute (cfm).
 - (i) Maximum cubic feet per minute (cfm).
 - e) A full printout of schedules and set points after testing and acceptance of the system has been completed.
 - f) A full printout of the as-built software program.
 - g) An electronic copy of the entire program for this facility on a compact disk.
 - h) An as-built floor plan and mechanical drawings having system sensors and thermostats shown complete with control system designations.
 - i) Maintenance instructions, including sensor calibration requirements and methods, categorized by sensor type and other similar designations.

- j) Control equipment component submittals, parts lists, and similar information.
- k) Warranty requirements.
- l) Copies of checkout tests and calibrations performed by the Contractor, not including commissioning tests.
- 3) Furnish field checkout sheets and trend logs to the Commissioning Authority (CA) for inclusion in the Commissioning Record Book.
 - a) Insert the data in manuals consisting of labeled 3-ring binders with indexed tabs that organize and subdivide the data in the following order by using permanently labeled tabs:
 - (1) Sequences of operation.
 - (2) Control drawings.
 - (3) Points lists.
 - (4) Controller/module data.
 - (5) Thermostats and timers.
 - (6) Sensors and double pole (DP) switches.
 - (7) Valves and valve actuators.
 - (8) Dampers and damper actuators.
 - (9) Program setups consisting of software program printouts.
- 4) Submit the controls training manuals to the Program/Project Manager and the Commissioning Authority (CA) for review.
- 2. Submit a copy of the Operation and Maintenance Manuals and submittals for the mechanical equipment and systems and controls to be commissioned, as specified in the Contract Documents, to the Commissioning Authority for review.
 - a. Review of commissioning related sections of the Operation and Maintenance Manuals will be completed by both the Program/Project Manager and the Commissioning Authority (CA).
- 3. The mechanical and controls Subcontractors are responsible for clarifying and updating the control drawings and sequences of operation originally furnished to the as-built conditions.

SECTION 16050

BASIC ELECTRICAL MATERIALS AND METHODS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following basic electrical materials and methods:
 - a. Electrical equipment coordination and installation.
 - b. Sleeves for raceways and cables.
 - c. Sleeve seals.
 - d. Grout.
 - e. Common electrical installation requirements.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01732 - Cutting and Patching.
 - 3. Section 01736 - Selective Demolition.
 - 4. Section 07850 - Through Penetration Firestopping Systems.
 - 5. Section 07920 - Joint Sealants.
 - 6. Section 08311 - Access Doors and Frames.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. EPDM: Ethylene-propylene-diene terpolymer rubber.
 - 2. HVAC: Heating, Ventilating, and Air-Conditioning.
 - 3. NBR: Acrylonitrile-butadiene rubber.
- B. Reference Standards:
 - 1. ASTM International (ASTM):
 - a. ASTM A 53/A 53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
 - b. ASTM C 138/C 138M - Standard Test Method for Density (Unit Weight), Yield, and Air Content (Gravimetric) of Concrete.
 - c. ASTM C 173/C 173M - Standard Test Method for Air Content of Freshly Mixed Concrete by the Volumetric Method.
 - d. ASTM C 231 - Standard Test Method for Air Content of Freshly Mixed Concrete by the Pressure Method.
 - e. ASTM C 1107/C 1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).
 - 2. City of Phoenix (COP):

- a. Phoenix Building Construction Code and Amendments.
- 3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
- 4. National Electrical Contractors Association (NECA):
 - a. NECA 1 - Standard Practices for Good Workmanship in Electrical Construction

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

- 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
- 2. Coordination Drawings:
 - a. Prepare and submit Coordination Drawings to the Program/Project Manager for approval.
 - 1) Show the following items for this Contract drawn to scale, and coordinate them with each other:
 - a) HVAC, plumbing, and fire suppression items.
 - b) Conduit routing plans.
 - c) Structural members.
- 3. Coordinate the arrangement, mounting, and support of electrical equipment to achieve the following:
 - a. To allow maximum possible headroom, unless specific mounting heights that reduce headroom are indicated.
 - b. To provide for ease of disconnecting the equipment, with minimum interference to other installations.
 - c. To allow right of way for piping and conduit installed at the required slope.
 - d. So connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions, and clear of the working and access space of other equipment.
- 4. Coordinate installation of the required supporting devices.
- 5. Coordinate the location of access panels and doors for electrical items that are behind finished surfaces or otherwise concealed.
 - a. Access doors and panels are specified in Section 08311, Access Doors and Frames.

6. Coordinate sleeve selection and application with the selection and application of firestopping specified in Section 07850, Through Penetration Firestopping Systems.

B. Sequencing:

1. Provide sleeves for electrical penetrations through concrete slabs and walls during the erection of the slabs and walls.
 - a. Set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Construction Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Sleeves for raceways and cables.
 - 2) Sleeve seals.
 - 3) Grout.
 - b. Shop Drawings:
 - 1) Coordination Drawings.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
2. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.

3. Testing and Inspection Agency:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

PART 2 PRODUCTS

2.01 DESIGN CRITERIA

- A. Product Data:
 1. Submit manufacturer's Product Data and installation instructions for each proposed material and accessory to the Program/Project Manager for approval.

2.02 MATERIALS:

- A. Sleeves for Raceways and Cables:
 1. Steel Pipe Sleeves:
 - a. Provide galvanized steel pipe sleeves complying with the requirements specified for Type E, Grade B, Schedule 40 pipe in ASTM A 53/A 53M, and having plain ends.
 2. Cast-Iron Pipe Sleeves:
 - a. Unless otherwise indicated, provide cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop.
 3. Sleeves for Rectangular Openings:
 - a. Provide galvanized sheet steel sleeves for rectangular openings.
 - b. Minimum Metal Thickness:
 - 1) For a sleeve cross-section rectangle perimeter less than 50 inches with no side more than 16 inches, provide a metal thickness not less than 0.052 inch.
- B. Sleeve Seals:
 1. Provide a modular sealing device, designed for field assembly, to fill the annular space between the sleeve and raceway or cable
 2. Sealing Elements:
 - a. Provide EPDM or NBR interlocking links shaped to fit the surface of the cable or conduit.
 - 1) Provide the type and number required for the material and size of the raceway or cable.
 3. Pressure Plates:

- a. Provide 2 stainless steel pressure plates for each sealing element.
4. Connecting Bolts and Nuts:
 - a. Provide carbon steel connecting bolts and nuts with corrosion-resistant coatings of length required to secure the pressure plates to the sealing elements.
 - b. Provide one connecting bolt and nut for each sealing element.
5. Manufacturers:
 - a. Advance Products & Systems, Inc., www.apsonline.com.
 - b. Calpico, Inc., www.calpicoinc.com.
 - c. Metraflex Co., www.metralflex.com.
 - d. GPT Industries, <https://www.gptindustries.com>.
 - e. Manufacturer providing an equivalent product approved by the Program/Project Manager.

C. Grout:

1. Nonmetallic, Shrinkage-Resistant Grout:
 - a. Provide factory-packaged, nonmetallic aggregate, shrinkage-resistant grout complying with the requirements specified in ASTM C 1107/C 1107M.
 - b. Provide grout, that when mixed with water, will produce a noncorrosive, non-staining material with a consistency suitable for the application, and a 30-minute working time.

2.03 SOURCE QUALITY CONTROL

A. Coordination of Other Tests and Inspections:

1. Notify the code-required Approved Agency responsible for performing special inspections when the ground fault protection system; switchboards, panelboards, motor control centers and other equipment rated 100 Amperes or more, or over 600 Volts; single phase transformers rated 100 kVA or more and three phase transformers rated 300 kVA or more; conductors rated at 1000 Amperes or more and conductors rated over 600 Volts; and emergency and standby power systems including switchboards, panelboards, distribution boards, transfer equipment, power sources, conductors, fire pumps, exhaust fans, and ventilation fans for this Contract are being installed and/or tested.
2. Cooperate with the code-required Approved Agency when they are performing required material verifications and other special inspections.
 - a. Provide full access to the Work.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Verify final equipment locations for roughing-in.

3.02 PREPARATION

- A. Demolition/Removal:
 - 1. Electrical Demolition:
 - a. Comply with the general demolition requirements and procedures specified in Section 01732, Cutting and Patching, and Section 01736, Selective Demolition.
 - b. Disconnect, demolish, and remove electrical systems, equipment, and components indicated to be removed.

3.03 INSTALLATION

- A. Comply with the requirements specified in NECA 1.
- B. Equipment:
 - 1. Install equipment so service, maintenance, and repair or replacement of components, both of the electrical equipment itself and of other nearby installations, can be readily performed.
 - 2. Connect equipment in a manner so disconnecting it in the future will result in minimum interference with other items in the vicinity.
- C. Mounting Heights:
 - 1. For suspended items, measure the mounting heights indicated in the Contract Documents to the bottom of the unit.
 - 2. For wall-mounting items, measure the mounting heights indicated in the Contract Documents to the center of the unit.
 - 3. Headroom Maintenance:
 - a. If mounting heights or other location criteria are not indicated in the Contract Documents, arrange and install components and equipment to provide the maximum possible headroom consistent with other requirements.
- D. Installing Sleeves for Electrical Penetrations:
 - 1. Electrical penetrations occur when raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.

2. Provide pipe sleeves for electrical penetrations unless the penetration arrangement requires a rectangular sleeved opening.
 - a. Cut the sleeves to length so the mounted sleeves are flush with both surfaces of the wall.
 - b. For sleeves installed in floors, extend the sleeve 2 inches above the finished floor level.
 - c. Unless indicated otherwise in the Contract Documents, size pipe sleeves to provide a 1/4-inch annular clear space between the sleeve and the raceway or cable.
 - d. For electrical penetrations through concrete slabs and walls, provide sleeves for the penetrations unless core-drilled holes or formed openings are provided.
3. For electrical penetrations through fire-rated floor and wall assemblies, provide sleeves for the penetrations, unless openings compatible with the firestop system used are fabricated during construction of the floor or wall.
4. For penetrations of concrete and masonry, seal the space outside of the sleeves with grout.
 - a. Promptly pack grout solidly between the sleeve and the wall so no voids remain.
 - b. Tool exposed surfaces smooth.
 - c. Protect the grout while it cures.
5. For interior electrical penetrations of non-fire-rated walls and floors, seal the annular space between the sleeve and the raceway or cable using joint sealant appropriate for the size, depth, and location of the joint in accordance with the requirements specified in Section 07920, Joint Sealants.
6. For raceway and cable penetrations of fire-rated walls, partitions, ceilings, and floors, maintain the original fire rating indicated in the Contract Documents.
 - a. Provide raceway and cable penetration sleeves, and seal the sleeves with firestop materials in accordance with the requirements of Section 07850, Through Penetration Firestopping Systems.
7. For electrical penetrations of roofs, provide flexible boot-type flashing "roof-penetration sleeves" applied in coordination with the roofing work to seal individual raceway and cable penetrations.
8. For aboveground electrical penetrations of exterior walls, provide steel pipe sleeves and mechanical sleeve seals to seal the penetration.
 - a. Select a sleeve sized to create a 1-inch annular clear space between the raceway or cable and the sleeve to allow installation of the mechanical sleeve seals.
9. For underground electrical penetrations of exterior walls, provide cast-iron pipe sleeves.

- a. Select a sleeve sized to create a 1-inch annular clear space between the raceway or cable and the sleeve to allow installation of the mechanical sleeve seals.
- E. Installing Sleeve Seals for Electrical Penetrations:
 1. Provide sleeve seals to seal exterior wall penetrations.
 2. Provide the type and number of sealing elements recommended by the sleeve seal manufacturer for the raceway or cable size and material.
 - a. Position the raceway or cable in the center of the sleeve.
 - b. Assemble the mechanical sleeve seals, and install them in the annular space between the raceway or cable and the sleeve.
 - c. Tighten the bolts against the pressure plates that cause the sealing elements to expand and make a watertight seal.
- F. Special Techniques:
 1. Firestopping:
 - a. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore the original fire-resistance rating of the assembly.
 - b. Provide firestopping materials complying with the requirements specified in Section 07850, Through Penetration Firestopping Systems
- G. Interface with Other Work:
 1. Right of Way:
 - a. Give right-of-way to piping systems so they can be installed at a required slope.

SECTION 16055

OVERCURRENT PROTECTIVE DEVICE COORDINATION

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for computer-based, fault-current and overcurrent protective device coordination studies.
 - 2. Requirements for protective devices set based on results of a protective device coordination study.
 - a. Coordination of series-rated devices is permitted where indicated on the Contract Drawings.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. RMS: Root-mean-square.
- B. Definitions:
 - 1. X/R Ratio: The ratio of electrical reactance to electrical resistance in the electrical power supply.
- C. Reference Standards:
 - 1. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 2. Institute of Electrical and Electronics Engineers (IEEE):
 - a. IEEE 141 - IEEE Recommended Practice for Electric Power Distribution for Industrial Plants (Red Book).
 - b. IEEE 242 - IEEE Recommended Practice for Protection and Coordination of Industrial and Commercial Power Systems (IEEE Buff Book).
 - c. IEEE 399 - IEEE Recommended Practice for Power Systems Analysis (Brown Book).
 - d. IEEE 1015 - IEEE Recommended Practice for Applying Low-Voltage Circuit Breakers Used in Industrial and Commercial Power Systems (Blue Book).
 - e. IEEE C37.20.1 - Standard for Metal-Enclosed Low-Voltage Power Circuit Breaker Switchgear.
 - f. IEEE C37.46 - American National Standard Specifications for Power Fuses and Fuse Disconnecting.

- g. IEEE C57.12.00 - IEEE Standard for Standard General Requirements for Liquid-Immersed Distribution Power and Regulating Transformers.
- h. ANSI/IEEE C57.12.10 - Transformers - 230 kV and Below, 833/958 through 8333/10 417 kVA, Single-Phase, and 750/862 through 60 000/80 000/100 000 kVA, Three-Phase without Load Tap Changing; and 3750/4687 through 60 000/80 000/100 000 kVA with Load Tap Changing – Safety Requirements.
- i. IEEE C57.12.22 – Transformers - Pad-Mounted, Compartmental-Type, Self-Cooled, Three-Phase Distribution Transformers with High-Volt Bushings, 2500 kVA and Smaller: High-Volt, 34 500 Grd Y/19 920 Volts and Below; Low Voltage, 480 Volts and Below.
- j. ANSI/IEEE C57.12.40 – IEEE Standard Requirements for Secondary Network Transformers, Subway and Vault Types (Liquid Immersed).
- k. IEEE C57.96 - IEEE Guide for Loading Dry Type Distribution and Power Transformers.
- l. IEEE 1584 – IEEE Guide for Performing Arc-Flash Hazard Calculations.
- 3. National Electrical Manufacturers Association (NEMA):
 - a. NEMA MG 1 - Motors and Generators.
- 4. Insulated Cable Engineers Association (ICEA):
 - a. ICEA P-32-382 - Short-Circuit Characteristics of Insulated Cable.
 - b. ICEA P-45-482 - Short-Circuit Performance of Metallic Shielding and Sheaths.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Sequencing:
 - 1. Relevant Submittals for equipment provided under other Sections of this Contract, including the Product Data for its overcurrent protective devices, must be prepared prior to the performance of the studies required under this Section.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Construction Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Computer software program to be used for the studies.
 - b. Certificates:
 - 1) Software certification for the coordination-study and fault-current-study computer software programs.
 - c. Special Procedure Submittals:
 - 1) Fault-Current Study Report.
 - 2) Equipment Fault-Current Evaluation Report.
 - 3) Coordination-Study Report.

- 4) Data sheets for setting the overcurrent protective devices.
- 5) Arc Flash Study and Labels
- d. Qualification Statements:
 - 1) Coordination-study specialist's qualifications.
 - 2) Professional Engineer's qualifications.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
- B. Qualifications:
 - 1. Coordination-Study Specialist's Qualifications:
 - a. Employ an entity experienced in applying computer software to the development of fault-current and overcurrent protective device coordination studies, and who has performed successful studies on electrical distribution systems of similar magnitude and using similar devices to those provided under this Contract.
 - b. Submit the coordination-study specialist's qualifications to the Program/Project Manager for approval.
 - 2. Professional Engineer's Qualifications:
 - a. Employ a Professional Engineer, licensed in the State of Arizona, to be responsible for the supervising the preparation of the fault-current and overcurrent protective device coordination study.
 - b. Submit the Professional Engineer's qualifications to the Program/Project Manager for approval.
- C. Certifications:
 - 1. Software Certification:
 - a. For the coordination-study and fault-current-study computer software programs, submit software certification certifying that the software complies with the requirements specified in IEEE 399 to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 COORDINATION STUDIES

- A. Design Criteria:
 - 1. Perform the elements of the Fault-Current Study and the Overcurrent Protective Device Coordination Study under the direct supervision and control of the Professional Engineer.
 - 2. Perform fault-current and overcurrent protective device coordination study elements under the direct supervision and control of the Professional Engineer.

3. Perform Arc-Flash Study and equipment labels under the direct supervision and control of the Professional Engineer.
4. Comply with the requirements specified in IEEE 399 for general study procedures.
5. Comply with the requirements specified in IEEE 242 for short-circuit currents and coordination time intervals.
6. Overcurrent Protective Devices:
 - a. Examine the overcurrent protective device Submittals furnished under this Contract to verify compliance with the electrical distribution system coordination requirements and other conditions affecting performance.
 - 1) The devices to be coordinated are indicated on the Contract Drawings.
 - 2) Proceed with the coordination study only after relevant equipment submittals have been assembled.
 - 3) Overcurrent protective devices that have not been submitted and approved prior to the coordination study may not be used in study.
7. Power System Data:
 - a. Gather and tabulate the following power system input data for the systems indicated on the Contract Drawings to support preparation of the coordination study:
 - 1) Product Data:
 - a) Obtain Product Data for the overcurrent protective devices specified in other Sections that are required for preparing the overcurrent protective device coordination studies.
 - b) Use equipment designation tags consistent with the electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
 - 2) Impedance of the utility service entrance.
 - 3) Electrical Distribution System Diagram:
 - a) Obtain an electrical distribution system diagram in both hard-copy and electronic formats showing the following:
 - (1) Circuit-breaker and fuse-current ratings and types.
 - (2) Relays and associated power and current transformer ratings and ratios.
 - (3) Transformer kilovolt amperes, primary and secondary voltages, connection type, impedance, and X/R ratios.
 - (4) Cables:
 - (a) Indicate conduit material, sizes of conductors, conductor material, insulation, and length.
 - (5) Busway ampacity and impedance.
 - (6) Motor horsepower, and the code letter designation in accordance with the requirements specified in NEMA MG 1.

- 4) Data sheets to supplement the electrical distribution system diagram, cross-referenced with tag numbers on the diagram, and showing the following:
 - a) Special load considerations, including starting inrush currents and frequent starting and stopping.
 - b) Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.
 - c) Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
 - d) Ratings, types, and settings of the utility company's overcurrent protective devices.
 - e) Special overcurrent protective device settings or types stipulated by the utility company.
 - f) Time-current-characteristic curves of devices indicated to be coordinated.
 - g) Manufacturer, frame size, interrupting rating in amperes rms symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.
 - h) Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.
 - i) Panelboards, switchboards, motor-control center ampacity, and interrupting rating in Amperes rms symmetrical.
8. Computer Software Program:
 - a. To perform the studies, furnish and use computer programs that are nationally distributed and widely used to perform studies of the type required by this Section.
 - 1) Manual calculations are not acceptable.
 - 2) Software algorithms in the programs must comply with the requirements of the standards and guides specified within this Section.
 - b. Furnish computer software programs complying with the requirements specified in IEEE 399, and that have the following features:
 - 1) Capable of plotting and diagramming time-current-characteristic curves as part of their output.
 - 2) Capable of reporting device settings and ratings of all overcurrent protective devices.
 - 3) Capable of demonstrating selective coordination by computer-generated, time-current coordination plots.
 - 4) The fault-current-study computer software program must include the following analytical features as listed in IEEE 399:
 - a) Mandatory.
 - b) Very desirable.
 - c) Desirable.

- 5) The computer software programs optionally may include provisions for assessing the following features:
 - a) Arcing faults.
 - b) Simultaneous faults.
 - c) Explicit negative sequence.
 - d) Mutual coupling in zero sequence.
 - c. Fault-Current Study and Coordination Study Computer Software Developers include the following:
 - 1) CYME International T & D, Inc., www.cyme.com.
 - 2) EDSA Corporation, Inc., www.edsa.com.
 - 3) ESA, Inc./EasyPower, www.easypower.com.
 - 4) Operation Technology, Inc., <http://etap.com>.
 - 5) SKM Systems Analysis, Inc., www.skm.com.
 - 6) Approved equal.
 - d. Submit Product Data for the computer software program(s) to be used for the studies to the Program/Project Manager for approval.
 9. After the approval process for system protective devices has been completed, submit the following items to the Program/Project Manager for approval:
 - a. Coordination-study input data, including completed computer program input data sheets.
 - b. Study and Equipment Evaluation Reports.
 - c. Coordination-Study Report.

B. Fault-Current Study:

 1. Perform the Fault-Current Study using an approved computer software program.
 2. Calculate the maximum available short-circuit current in amperes rms symmetrical at the circuit-breaker positions of the electrical power distribution system.
 - a. Perform the calculation for a current immediately after initiation and for a three-phase bolted short circuit at each of the following in the system:
 - 1) Switchgear and switchboard bus.
 - 2) Motor-control center.
 - 3) Distribution panelboard.
 - 4) Branch circuit panelboard.
 3. Study the electrical distribution system from normal and alternate power sources throughout the electrical distribution system of the Project.
 - a. Include studies of system-switching configurations, and alternate operations, that could result in maximum fault conditions.
 4. Calculate momentary and interrupting duties on the basis of maximum available fault current.
 5. Perform calculations to verify the interrupting ratings of the overcurrent protective devices in accordance with the requirements specified in IEEE 141 and IEEE 242 for the following:
 - a. Transformers:

- 1) Transformers, 230 kV and below, complying with the requirements specified in ANSI/IEEE C57.12.10.
- 2) Pad-mounted, compartmental-type, self-cooled, three-phase distribution transformers complying with the requirements specified in IEEE C57.12.22.
- 3) Secondary network transformers, subway and vault types (liquid immersed), complying with the requirements specified in ANSI/IEEE C57.12.40.
- 4) Liquid-immersed distribution power and regulating transformers complying with the requirements specified in IEEE C57.12.00.
- 5) Dry type distribution and power transformers complying with the requirements specified in IEEE C57.96.
- b. Low-Voltage Circuit Breakers:
 - 1) Low-voltage circuit breakers complying with the requirements specified in IEEE 1015 and IEEE C37.20.1.
- c. Low-Voltage Fuses:
 - 1) Low-voltage fuses complying with the requirements specified in IEEE C37.46.
6. Fault-Current and Arc-Flash Study Report:
 - a. Prepare a Fault-Current Study Report showing the calculated X/R ratios and equipment interrupting rating (1/2-cycle) fault currents on the electrical distribution system diagram.
 - b. After the approval process for system protective devices has been completed, submit the Fault-Current Study Report to the Program/Project Manager for approval.
7. Equipment Fault-Current Evaluation Report:
 - a. Prepare a Fault-Current Equipment Evaluation Report.
 - b. For 600 Volt overcurrent protective devices, ensure that the interrupting ratings are equal to or higher than the calculated 1/2-cycle symmetrical fault current.
 - c. For devices and equipment rated for asymmetrical fault current, apply the multiplication factors listed in the standards to the 1/2-cycle symmetrical fault current.
 - d. Verify the adequacy of the phase conductors at the maximum three-phase bolted fault currents.
 - e. Verify the adequacy of the equipment grounding conductors and grounding electrode conductors at the maximum ground-fault currents.
 - f. Ensure that the short-circuit withstand ratings are equal to or higher than the calculated 1/2-cycle symmetrical fault current.
 - g. After the approval process for system protective devices has been completed, submit the Fault-Current Equipment Evaluation Report to the Program/Project Manager for approval.
- C. Overcurrent Protective Device Coordination Study:
 1. Perform an Overcurrent Protective Device Coordination Study using an approved computer software program, and in accordance with the requirements specified in IEEE 399.

2. Comply with the recommendations for fault currents and time intervals in IEEE 141.
3. Transformer Primary Overcurrent Protective Devices:
 - a. The transformer primary overcurrent protective devices may not operate in response to the following:
 - 1) Inrush current when first energized.
 - 2) Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
 - 3) Permissible transformer overloads in accordance with the requirements specified in IEEE C57.96 if required by unusual loading or emergency conditions.
 - b. For fault currents, transformer primary overcurrent protective device settings must protect transformers according to IEEE C57.12.00.
4. Conductor Protection:
 - a. Protect cables against damage from fault currents in accordance with the requirements specified in ICEA P-32-382 and ICEA P-45-482, and the conductor melting curves in IEEE 242.
 - b. Demonstrate that the equipment withstands the maximum short-circuit current for a time equivalent to the tripping time of the primary relay protection or total clearing time of the fuse.
 - c. To determine the temperatures that damage the insulation, use curves from the cable manufacturers or from listed standards indicating the conductor size and short-circuit current.
5. Coordination-Study Report:
 - a. Prepare a written Coordination-Study Report using the results of the Fault-Current Study, and after the approval process for system protective devices has been completed submit the Coordination-Study Report to the Program/Project Manager for approval.
 - 1) Calculate the maximum and minimum 1/2-cycle short-circuit currents.
 - 2) Calculate the maximum and minimum interrupting duty (5 cycles to 2 seconds) short-circuit currents.
 - 3) Calculate the maximum and minimum ground-fault currents.
 - b. Include the coordination-study input data, including completed computer program input data sheets, in the Coordination-Study Report.
 - c. Indicate the following results of the coordination study in the Coordination-Study Report:
 - 1) Settings selected for overcurrent protective devices in tabular format, including the following information:
 - a) Device tag.
 - b) Relay-current transformer ratios; and tap, time-dial, and instantaneous-pickup values.
 - c) Circuit-breaker sensor rating; and long-time, short-time, and instantaneous settings.
 - d) Fuse-current rating and type.

- e) Ground-fault relay-pickup and time-delay settings.
- 2) Coordination Curves:
 - a) Prepare coordination curves to determine the settings of the overcurrent protective devices required to achieve selective coordination.
 - b) Graphically illustrate that adequate time separation exists between the devices installed in series, including the power utility company's upstream devices.
 - c) Prepare separate sets of curves for the switching schemes and for emergency periods where the power source is local generation.
 - d) Show the following information on the coordination curves:
 - (1) Device tag.
 - (2) Voltage and current ratio for curves.
 - (3) Three-phase and single-phase damage points for each transformer.
 - (4) No damage, melting, and clearing curves for fuses.
 - (5) Cable damage curves.
 - (6) Transformer inrush points.
 - (7) Maximum fault-current cutoff point.
- D. Data Sheets for Setting the Overcurrent Protective Devices:
 - 1. Prepare completed data sheets for setting the overcurrent protective devices, and submit them to the Program/Project Manager for information.
- E. ARC FLASH HAZARD ANALYSIS
 - 1. The arc flash hazard analysis shall be performed according to the IEEE 1584 equations that are presented in NFPA70E-2015, Annex D. The arc flash hazard analysis shall be performed in conjunction with the short-circuit analysis and the protective device time-current coordination analysis.
 - 2. The flash protection boundary and the incident energy shall be calculated at significant locations in the electrical distribution system (switchboards, switchgear, motor-control centers, panelboards, busway and splitters) where work could be performed on energized parts.
 - 3. Circuits 120V or less where available bolted short circuit current is less than 10 kA may be omitted from the computer model and will be assumed to have a hazard risk category 0 per NFPA 70E Table 130.7(C)(9)(a), including footnote 3.
 - 4. Circuits 120V or less fed by transformers 30 kVA or less may be omitted from the computer model and will be assumed to have a hazard risk category 0 per IEEE 1584.

5. Working distances shall be based on IEEE 1584. The calculated arc flash protection boundary shall be determined using those working distances.
6. When appropriate, the short circuit calculations and the clearing times of the phase overcurrent devices will be retrieved from the short-circuit and coordination study model. Ground overcurrent relays should not be taken into consideration when determining the clearing time when performing incident energy calculations
7. The short-circuit calculations and the corresponding incident energy calculations for multiple system scenarios must be compared and the greatest incident energy must be uniquely reported for each equipment location in a single table. Calculations must be performed to represent the maximum and minimum contributions of fault current magnitude for normal and emergency operating conditions. The minimum calculation will assume that the utility contribution is at a minimum. Conversely, the maximum calculation will assume a maximum contribution from the utility. Calculations shall take into consideration the parallel operation of synchronous generators with the electric utility, where applicable as well as any stand-by generator applications.
8. The Arc-Flash Hazard Analysis shall be performed utilizing mutually agreed upon facility operational conditions, and the final report shall describe, when applicable, how these conditions differ from worst-case bolted fault conditions.
9. The incident energy calculations must consider the accumulation of energy over time when performing arc flash calculations on buses with multiple sources. Iterative calculations must take into account the changing current contributions, as the sources are interrupted or decremented with time. Fault contribution from motors should be decremented as follows:
10. Fault contribution from induction motors should not be considered beyond 5 cycles.
11. For each piece of ANSI rated equipment with an enclosed main device, two calculations shall be made. A calculation shall be made for the main cubicle, sides, or rear; and shall be based on a device located upstream of the equipment to clear the arcing fault. A second calculation shall be made for the front cubicles and shall be based on the equipment's main device to clear the arcing fault. For all other non-ANSI rated equipment, only one calculation shall be required and it shall be based on a device located upstream of the equipment to clear the arcing fault.

12. When performing incident energy calculations on the line side of a main breaker (as required per above), the line side and load side contributions must be included in the fault calculation.
13. Mis-coordination should be checked amongst all devices within the branch containing the immediate protective device upstream of the calculation location and the calculation should utilize the fastest device to compute the incident energy for the corresponding location.
14. Arc Flash calculations shall be based on actual overcurrent protective device clearing time. A maximum clearing time of 2 seconds will be used based on IEEE 1584-2002 section B.1.2. Where it is not physically possible to move outside of the flash protection boundary in less than 2 seconds during an arc flash event, a maximum clearing time based on the specific location shall be utilized.
15. Provide the following:
 - a. Results of the Arc-Flash Hazard Analysis shall be submitted in tabular form, and shall include device or bus name, bolted fault and arcing fault current levels, flash protection boundary distances, working distances, personal-protective equipment classes and AFIE (Arc Flash Incident Energy) levels.
 - b. The Arc-Flash Hazard Analysis shall report incident energy values based on recommended device settings for equipment within the scope of the study.
 - c. The Arc-Flash Hazard Analysis may include recommendations to reduce AFIE levels and enhance worker safety.
- 16.

PART 3 EXECUTION

3.01 ARC FLASH SIGNAGE

1. Provide a machine printed 4-inch x 4-inch (nominal) thermal transfer type label of high adhesion polyester for each location identified in the arc flash study. Labels for equipment located outdoors shall include UV resistant laminate.
2. Labels shall include the following machine printed information (hand lettering is not acceptable): equipment name, flash hazard boundary, incident energy, boundaries for shock hazard, limited approach, and restricted approach, PPE (personal protective equipment) category and date.

3. One label shall be required at each applicable section of switchgear, switchboard, or motor control center; and each 480-volt disconnect switch, 480-volt control panel or panelboard. For service entrance equipment provide label for line side and load side.

SECTION 16061

ELECTRICAL GROUNDING AND BONDING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for connecting, energizing, testing, cleaning, and protecting grounding and bonding systems.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01780 - Closeout Submittals.
 - 3. Section 02300 - Earthwork.
 - 4. Section 02316 - Trenching and Backfilling.
 - 5. Section 16050 - Basic Electrical Materials and Methods.
 - 6. Section 16080 - Electrical Testing.
 - 7. Section 16130 – Raceway and Boxes.

1.02 REFERENCE STANDARDS:

- A. American Public Works Association (APWA):
 - 1. APWA Public Works Management Practices Manual.
- B. ASTM International (ASTM):
 - 1. ASTM B 1 - Standard Specification for Hard-Drawn Copper Wire.
 - 2. ASTM B 8 - Standard Specification for Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard, or Soft.
 - 3. ASTM C 65 - Standard Guide for Determination of the Thermal Resistance of Low-Density Blanket-Type Mineral Fiber Insulation.
 - 4. ASTM D 5 - Standard Test Method for Penetration of Bituminous Materials.
 - 5. ASTM D 149 - Standard Test Method for Dielectric Breakdown Voltage and Dielectric Strength of Solid Electrical Insulating Materials at Commercial Power Frequencies.
 - 6. ASTM D 257 - Standard Test Methods for D-C Resistance or Conductance of Insulating Materials.
 - 7. ASTM D 570 - Standard Test Method for Water Absorption of Plastics.
- C. National Fire Protection Association (NFPA):
 - 1. NFPA 70 - National Electrical Code (NEC).
- D. National Electrical Manufacturing Association (NEMA):
 - 1. NEMA TC-2 - Electrical Polyvinyl Chloride (PVC) Tubing and Conduit.

2. NEMA TC-3 - Polyvinyl Chloride (PVC) Fittings for Use with Rigid PVC Conduit and Tubing.
3. NEMA TC-14 - Reinforced Thermosetting Resin Conduit (RTRC) and Fittings.
4. NEMA WC-7 - Cross-Linked-Thermosetting-Polyethylene-Insulated Wire and Cable for the Transmission and Distribution of Electrical Energy.

E. Underwriter's Laboratories, Inc. (UL):

1. UL 467 - Standard for Grounding and Bonding Equipment.
2. UL 486A-486B - Wire Connectors.
3. UL 486C - Standard for Splicing Wire Connections.
4. UL 486D - Standard for Insulated Wire Connector Systems for Underground Use or in Damp or Wet Locations.
5. UL 486E - Standard for Equipment Wiring Terminals for Use with Aluminum and/or Copper Conductors.

1.03 COORDINATION:

- A. Coordinate the Work of this Section with the locations for grounding connections of electrical conduit and boxes, equipment, lighting fixtures, motors, transformers, and isolated ground receptacles requiring grounding under this Contract.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Manufacturers catalog cuts.
 - b. Shop Drawings:
 - 1) Ground well grid installation in unpaved areas.
 - 2) Ground well grid installation in paved areas.
 - 3) Ground bus installation.
 - c. Samples:
 - 1) Ground wire.
 - d. Certificates:
 - 1) Testing agency product certification.
 - e. Qualification Statements:
 - 1) System installers' qualifications.
 - 2) Installation supervisors' resumes.

B. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:

- a. Operation and Maintenance Data:
 - 1) Operation and Maintenance Manuals.
- b. Record Documentation:
 - 1) Record drawings showing the actual installed elevations and locations of grounding cables and rods for both concealed and exposed work.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. All grounding and bonding Work must comply with the requirements of NFPA 70, the National Electrical Code.
 - 2. Within 60 days of the Contract award, submit the Submittals required by Section 16050, Basic Electrical Materials and Methods, to the Program/Project Manager for approval:
 - a. Include Product Data and Catalog Cuts for all products provided, and describe the usage of each product.
- B. Qualifications:
 - 1. Installer Qualifications:
 - a. Employ installers who specialize in the work of this Section, and who can demonstrate a minimum of 3 years documented experience.
 - b. Submit the system installers' qualifications.
 - 2. Supervisor's Qualifications:
 - a. Employ supervisor to supervise the installation work who are skilled licensed electricians.
 - b. Submit the installation supervisors' resumes.
- C. Certifications:
 - 1. Testing Agency Product Certification:
 - a. Verify product quality by certifying products as meeting the requirements of Underwriters Laboratories, Inc. (UL).
 - a) Provide products listed and labeled by UL.
 - b. Testing agency product certification must include agency listing and labeling, either by a printed mark on the data or by a separate listing card.
 - 1) If an item does not have this quality assurance verification, provide a written statement from the product manufacturer indicating why not; such manufacturer's statements are subject to the approval of the Owner and the Program/Project Manager.
- D. Site Samples:
 - 1. Submit 8 inch long Samples of the types of ground wire to be used to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Transport materials, both onsite and from the Contractor's storage to the Site, in accordance with the recommendations of the respective manufacturers.
- B. Storage and Handling Requirements:
 - 1. Store materials, both on and off the Site, in accordance with manufacturer's written instructions.
 - 2. Store products indoors on blocking or pallets.

PART 2 PRODUCTS

2.01 COMPONENTS

- A. Conduit and Conduit Fittings:
 - 1. For conduit and conduit fittings that enclose single ground wires without accompanying circuit conductors provide one of the following:
 - a. Schedule 80, non-metallic conduit and fittings conforming to the requirements of Section 16131, Conduit and Tubing, and the conduit additionally conforming to the requirements of NEMA TC-2, and the fittings additionally conforming to the requirements of NEMA TC-3.
 - b. Fiberglass reinforced plastic (FRP) conduit and fittings conforming to the requirements of NEMA TC-14 and Section 16131, Conduit and Tubing.
 - 2. For other conduit and conduit fittings, provide conduit of the types specified or indicated and that conform to the requirements of Section 16131, Conduit and Tubing.
- B. Wire:
 - 1. Bare Ground Wire:
 - a. For Number 6 or larger bare ground wire sizes, provide soft drawn copper, Class A or Class B, stranded wire meeting the requirements of ASTM B 8.
 - b. For Number 8 or smaller bare ground wire sizes, provide soft drawn solid copper wire meeting the requirements of ASTM B 1.
 - 2. Insulated Ground Wire:
 - a. For Number 10 or larger insulated ground wire sizes, provide type XHHW insulated Class B copper stranded wire rated for 600 volts that conforms to the requirements of NEMA WC-7, and is green in color.
 - b. For Number 12 or smaller insulated ground wire sizes, provide type XHHW insulated solid copper wire rated for 600 volts that conforms to NEMA WC-7, and is green in color.
- C. Clamps and Non-Welded Connectors:

1. Provide bronze or brass clamps and connectors that are UL listed for use below grade.
 - a. All bolts and other material must be bronze or brass, plated steel screws are unacceptable.
 - b. Fabricate multi-bolt, solderless compression clamps from high strength electrical bronze, and provide silicon bronze clamping bolts and hardware.
2. Provide bolts, nuts, lock-washers, and similar hardware designed not to damage ground wire.
3. Manufacturers:
 - a. Acceptable manufacturers of clamps and connectors include the following:
 - 1) IlSCO, www.ilsco.com.
 - 2) Framatone Connectors Inc. (FCI), Burndy, <http://portal.fciconnec.com>.
 - 3) Approved equal.

D. Ground Rods:

1. Provide UL listed, sectional ground rods fabricated using a molten weld casting process to copper clad a medium carbon steel core
2. Diameter: 3/4 inch.
3. Length: 10 feet.
 - a. To obtain longer length rods, join rod sections using copper clad rod couplers.

E. Concrete Protective Boxes (Ground Wells):

1. Provide precast concrete boxes with flush cast iron covers rated for heavy traffic areas and having slots for conduit entrances.
 - a. Minimum size: 10-inch diameter by twelve inches high.
 - b. Cover legend: Provide the cast-in legend "GROUND" in the cast iron covers provided.
2. Within 60 days of the Contract award, submit the following to the Program/Project Manager for approval:
 - a. Shop Drawings for the ground well grid installation in unpaved areas.
 - b. Shop Drawings for the ground well grid installation in paved areas.

2.02 DESCRIPTION:

A. Regulatory Requirements:

1. Ground the conduit systems, metal enclosures, equipment frames, motors, and receptacles in accordance with Article 250 of NFPA 70, Grounding.
 - a. Ground all metallic conduits, wiring channels, and armored cables continuously from outlet to outlet, and from outlets to cabinets, junction boxes, or pull boxes.

- 1) Bond each run of raceways to form a continuous path for ground faults from end to end.
 - 2) When liquid tight flexible metal conduit sizes larger than 1-inch or flexible metal conduit are installed, provide external bond wires.
 - b. Grounding Bushings:
 - 1) Provide all 1-inch or larger metallic conduits with grounding bushings unless they enter metallic enclosures via integral threaded hubs.
 - 2) Provide grounding bushings for conduits entering the bottom of freestanding equipment.
 - 3) Bond wire from every grounding bushing to the equipment ground stud or ground bus in the enclosure.
 - 4) Bond the grounding bushings to ground studs or ground buses in the enclosures.
 - c. Provide insulated, Type XHHW internal equipment ground wire in all conduits.
 - 1) Bond the internal wire to all pullboxes, junction boxes, equipment enclosures, and other enclosures as required by NFPA 70.
 2. Equipment Grounds:
 - a. Design all feeders and branch circuits to include an equipment grounding conductor consisting of a copper wire within a raceway or cable and sized as specified herein.
 - 1) Where conductors are run in parallel in multiple raceways, run the equipment grounding conductor in parallel to the related conductors.
 - 2) Size each of the parallel equipment grounding conductors on the basis of the ampere rating of the circuit overcurrent protecting device.
 - b. Ground enclosing cases, mounting frames, rack mounted components, rack struts, switches, breakers, control panels, motors, and other electrical or electrically operated equipment by providing an equipment grounding conductor with phase conductors from an established equipment ground source.
- B. Design Criteria
1. Design the electrical system installation to conform to Article 300 of NFPA 70, Wiring Methods, and to other applicable articles of NFPA 70 governing methods of wiring.
 2. Ground Wire Sizes:
 - a. The minimum size for bonding jumpers, equipment ground conductors, grounding electrode conductors, and ground grid conductors is as follows:
 - 1) Under 600 volts:
 - a) Provide Number 10 AWG, minimum.
 - 2) Over 600 volts:

- a) For transformers, provide Number 2 AWG ground wire, minimum.
 - b) For motors, provide Number 4 AWG ground wire, minimum.
- b. When the ground wire size is not specified or indicated on the Contract Drawings, provide wire sized in accordance with the requirements of NFPA 70.
- 3. Ground Buses:
 - a. Size ground buses to carry 100 percent of the rating or setting of the largest over current device in the circuit(s) ahead of the equipment, conduit, or other item, and as indicated on the Contract Drawings.
 - b. Within 60 days of the Contract award, submit Shop Drawings for ground bus installations to the Program/Project Manager for approval.

2.03 ACCESSORIES

A. Exothermic Welding Kits:

- 1. Provide molds, thermite packages, and other material for exothermic welds that are rated to carry 100 percent of the cable ratings, and which are letter-coded exothermic welded type.
- 2. Provide all items such as tees, crosses, splices, and cable connections necessary for connecting ground and bonding cables to the following items:
 - a. Ground rods.
 - b. Reinforcing steel bars.
 - c. Ground-bus.
 - d. Structural steel.
 - e. Water pipe.
 - f. Bonding to the main-ground-grid.
- 3. Manufacturers:
 - a. Provide all exothermic welding molds, thermite packages, and other material used throughout the Work from a single manufacturer.
 - b. Acceptable manufacturers of exothermic welded connector are as follows:
 - 1) Electric Railway Improvement Company (ERICO), Cadweld®, www.erico.com.
 - 2) Continental Industries, Inc., Thermoweld®, www.conind.com.
 - 3) Approved equal.

B. Coating Compound:

- 1. Provide permanently pliable, moldable, un-backed, black rubber based coating materials for covering or coating grounding clamps and connectors.
- 2. Coating Physical Properties:
 - a. Solids/Density: 100 percent; 12 pounds per gallon.
 - b. Penetration: Within 90 to 130 when tested in accordance with ASTM D 5.

- c. Water Absorption: 0.10 percent, maximum, when tested in accordance with ASTM D 570.
 - d. Dielectric Strength: 500 volts/mil when tested in accordance with ASTM D 149.
 - e. Volume Resistivity: 2,000 megohm-inches, or 5,000 megohms-cm, when tested in accordance with ASTM D 257.
 - f. Service Temperature: Minus 40 degrees to 160 degrees Fahrenheit; and having no melting point; flammability, or slow burning when tested in accordance with ASTM C 653.
 - g. Chemical Resistance:
 - 1) Resistant to alcohol, water, aqueous hydrochloride, and sodium hydroxide.
 - 2) Dissolved by carbon tetrachloride, naphtha gasoline, mineral spirits, and benzene.
 - h. Cohesive/Adhesive: Adheres to metals, concrete, and itself.
- C. Underground Warning Tape:
- 1. Provide underground warning tape fabricated from polyethylene material with one-inch high, minimum, overcoated printed warning message lettering.
 - a. Tape thickness: 4 mils, minimum.
 - b. Graphic Message: "CAUTION - BURIED ELECTRIC LINE".
 - c. Tape Background Color: Red per the APWA Uniform Color Code as described in the APWA Public Works Management Practices Manual.
 - 2. Manufacturers:
 - a. Acceptable manufacturers of underground warning tape include the following:
 - 1) Signmark Division, Brady USA, Inc., Item No.11296, www.bradycorp.com.
 - 2) Seton, www.seton.com.
 - 3) Approved equal.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
- 1. The Contract Drawings are generally indicative of the Work, but due to their small scale, it is not possible to indicate some offsets and fittings required nor the minor structural obstructions that may be encountered.
 - a. Perform field measurements to discover offsets and fitting requirements not shown.
 - b. Locate all on-site utilities and other obstructions in the area of construction, and verify that interferences will not occur.
- B. Evaluation and Assessment:

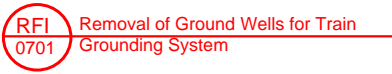

1. Layout electrical work to suit actual field conditions and in accordance with accepted standard practice.

3.02 SURFACE PREPARATION:

- A. Perform required earthwork including excavation, backfill, and compaction, as specified in Section 02300, Earthwork, and Section 02316, Trenching and Backfilling.

3.03 INSTALLATION

- A. Install each ground system and connection so it is mechanically secure and electrically continuous.
- B. Ground Grids:
 1. Installing Ground Rods:
 - a. Drive ground rods head to 6 inches below grade by using a ground rod cap to protect the head of the rod.
 - 1) If the top of the rod is damaged during driving operations, cut it off.
 2. Installing Ground Wells: 
 - a. Install a concrete protective box for the ground well flush with the grade and 4 inches above the top of the ground rod designated on the Contract Drawings.
 3. Installing Ground Wires:
 - a. Excavate the trenches for the ground grid cables, and lay the ground cable in the trenches from ground rod to ground rod without splice, and from one side of the grid to the other as shown on the Contract Drawings.
 - 1) Lay the ground grid cables cable allowing 10 percent slack.
 - 2) Form 12-inch minimum radius bends at changes in direction.
 - 3) At intersections, place cables so they diverge 60 degrees or more from other cables at the intersection.
 - 4) Connect service entrance grounds directly to the ground grids without splices in the cable.
 - b. Route connecting cables from the ground grid in the trenches to buildings and structures.
 - 1) Route exposed cables parallel to the building lines, except for bends; form all bends with a 12-inch minimum radius.
 - 2) Wherever the cable breaks grade, provide schedule 80 conduit from 2-feet below finished grade to 3-feet above finished grade for protection; and provide conduit at other points where the cable may be subject to damage.
 - c. Clamp the conduit to the building structure's wall at the ends and at intervals not to exceed 5 feet.

- 1) Whenever cable exits from the conduit, clamp the cable to the wall at intervals not to exceed 5 feet and at each entrance to equipment.
 - 2) Allow a 1/4 inch space between ground cables, conduit, and the surface it is mounted on.
 - d. Remove any damaged or kinked cable.
 - e. Weld ground wires to the ground rods and equipment connections.
 - 1) Follow the procedures of the exothermic welding kits manufacturer.
 - 2) Prior to welding ground wires to the ground rods and equipment connections perform the following:
 - a) Clean the proposed welding area of combustible and flammable materials; and block access to personnel to protect them from harm; and provide a shield to prevent damage to other materials.
 - b) Clean insulation from ground wire for a distance of 12 inches, and clean the exposed wire to a bright finish.
 - c) Clean paint, grease, and other similar insulating materials from contact points.
 - d) Inspect the molds for damage; and discard any faulty mold or any molds used over 40 times.
 - 3) Exothermically weld the ground wires to the ground rods as shown on the Contract Drawings, including to ground rods at grid crossings, to ground rods at grid intersections on the sides of the ground grid, and at all equipment connections.
 - 4) After completing the welding, replace the insulation removed from insulated wires, and coat connections and the area around connections with coating compound.
 - a) Coating Thickness: 1/8-inch, minimum.
 - b) Make sure the coating is free from pin-holes and holidays.
4. Equipment Ground Buses:
 - a. Whenever several pieces of equipment, other than service grounds, require external bond wires in an area, provide an equipment ground bus.
 - b. Wherever 5 or more conduits enter a box or enclosure, provide an equipment ground bus.
 - 1) Connect all equipment ground wires and conduit bond wires within the box or enclosure to a single ground stud or single common ground bus.
5. Make all connections to electrical equipment and ground buses with compression, two-hole lugs and studs.
 - a. Clean paint, grease, and other similar insulating materials from the contact points for the ground lugs and studs.
 - b. Clean all wires to a bright finish prior to construction the connections.

6. After inspection by Program/Project Manager and Owner's representative, backfill the direct buried cables and around ground rod protectors.
 - a. Begin backfilling with clean washed sand to 6 inches above the ground rods or to the depth shown on the Contract Drawings, whichever is greater.
 - b. Backfill using select fill in accordance with the requirements of Section 02300, Earthwork.
 - c. Slope the finish grade away from ground rods at a slope of 1 inch in 18 inches for a distance of 27 inches from the rods in all directions.
7. Install marker tape above buried cables as indicated on the Contract Drawings.

C. Interface with Other Work:

1. Equipment Grounds:

- a. Install equipment grounds in spaces accessible to authorized personnel only.
- b. Equipment Grounding Connectors:
 - 1) Only use approved grounding connectors.
 - a) Terminate grounds with closed lugs with star washers on both sides and a 1/4-20 bolt and nut, minimum; spade lugs are not allowed.
 - b) For portable electrical equipment, provide electric cords having an equipment grounding conductor and a NEMA and UL approved cord cap.
 - 2) Do not install grounding lugs on flanges, mounting screws, or standoffs in switches, distribution boxes, or panels.
 - 3) Cover or coat grounding clamps and connectors with coating compound.
- c. Equipment Grounding Conductors:
 - 1) Unless using multi-conductor cable, run equipment grounding conductors inside the same conduit or wiring channel enclosing the power conductors.
 - 2) In multi-conductor cable, locate grounding conductor inside the sheath or cable.
 - 3) Do not use a system neutral or a current carrying conductor as the equipment grounding conductor.
 - a) Do not ground the electrical and electronic equipment neutral to chassis, racks, equipment ground conductor, or any non-current carrying conductor on the equipment.
- d. Grounding Lighting Fixtures:
 - 1) Provide the housing of each lighting fixture with a separate, factory-installed grounding device and ground conductor.
 - 2) Use the factory-installed grounding device for connecting a separate grounding conductor meeting applicable grounding requirements of NFPA 70 (NEC) to the fixture.

- a) Provide a green covered grounding conductor of the same wire gauge as the two power feed wires.
 - b) Provide a continuous ground for the fixture construction.
- e. Grounding Motors:
 - 1) Install equipment grounding wire within conduit supplying power to motor.
 - 2) Install bonding connectors across the liquid tight flexible conduit supplying motors.
- f. Grounding and Bonding Pumps:
 - 1) Provide a bond from each pump to its motor using a conductor equal in size to the motor circuit equipment grounding conductors.
- g. Grounding Transformers:
 - 1) If a transformer is a separately derived system as defined in NFPA 70, provide a ground wire in both the primary and secondary conduits; and bond both metallic wires and conduits to the nearest effectively grounded metallic water pipe or nearest effectively grounded structural steel column.
 - 2) Provide an additional bond between cold and hot water pipes located near a transformer bond connection.
- h. Grounding Isolated Ground Receptacles:
 - 1) Ground the receptacle grounding terminal via an insulated equipment grounding conductor routed with the circuit conductors within the raceway.
 - a) This grounding conductor may pass through one or more panelboards without being connected to the panelboard grounding terminal in order to terminate directly at an equipment grounding conductor terminal of the applicable separately derived system or service within the same building or structure.
 - 2) Use of isolated equipment grounding conductors does not remove the requirement for grounding the raceway system and outlet box.
- 2. Grounding Electrical Conduit and Boxes:
 - a. Clean paint, grease, and such other insulating materials from the contact points of grounds.
 - b. Secure grounds to boxes in such a manner that each system is electrically continuous from the point of service to each outlet.
 - c. Terminate conduits using double locknuts and bushings.
 - 1) Unless a conduit run enters a metallic enclosure via integral threaded hubs, provide the conduit run with two locknuts.

3.04 REPAIR

- A. Replace any finished exothermic welded splice connections that inspections find to be defective.
 - 1. Refer to Subparagraph 3.05.A.2.b for types of defective exothermic welded splice connections.

3.05 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. Site Testing:

- a. Prior to energizing any system, test the resistance to ground for the system in accordance with Section 16080, Electrical Testing.
 - 1) Perform a continuity test from all utilization and distribution equipment to the ground grid on a run-by-run basis.
 - 2) All tests shall conform to IEEE 142 and shall be acceptable less than 5 ohms.

2. Inspection:

- a. Prior to completion of the Work of this Section, inspect the items provided for conformity to the Contract Drawings and Specifications.
 - 1) Leave in-place "made grounds" open until they have been inspected and approved by the Program/Project Manager.
 - 2) Clean the surfaces involved in "made grounds" before connecting the grounds, and finish the installation with touch up painting or another protective coating to prevent corrosion.
- b. Inspect finished exothermic welded connections for the following defects:
 - 1) Conductors appear within the splice area.
 - 2) Top of splice risers are below conductors.
 - 3) Surfaces exhibiting more than 20 percent slag material.
 - 4) Surfaces with over slag material that has flowed into conductors.
 - 5) Mold blowouts.
 - 6) Excessive porosity.
 - a) Small pores less than 1/32 inch are permitted.
- c. Prepare and submit record drawings showing the actual installed elevations and locations of grounding cables and rods for both concealed and exposed work provided under this Contract.

3.06 PROTECTION

- A. Protect finished insulated wires from being painted.
- B. Protect all ground grid wells from damage during paving and landscaping.
- C. Protect all ground grid installations and ground wires from damage during the work of other Sections.

3.07 MAINTENANCE

- A. In accordance with Section 01780, Closeout Submittals, submit Operation and Maintenance Manuals that include Product Data for the products provided under this Section and the record drawings.

SECTION 16070

HANGERS AND SUPPORTS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for hangers and supports for electrical equipment and systems, including the following:
 - a. Hangers.
 - b. Supports.
 - c. Concrete bases.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 03100 - Concrete Forms and Accessories.
 - 3. Section 03200 - Concrete Reinforcement.
 - 4. Section 03300 - Cast-In-Place Concrete.
 - 5. Section 05500 - Metal Fabrications.
 - 6. Section 09912 - Painting

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. EMT: Electrical metallic tubing.
 - 2. IMC: Intermediate metal conduit.
 - 3. RMC: Rigid metal conduit.
- B. Reference Standards:
 - 1. American Welding Society (AWS):
 - a. AWS D1.1/D1.1M – Structural Welding Code-Steel.
 - 2. ASTM International (ASTM):
 - a. ASTM A 36/A 36M – Standard Specification for Carbon Structural Steel.
 - b. ASTM A 325 - Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength.
 - c. ASTM A 780 – Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.
 - 3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 4. Metal Framing Manufacturing Association (MFMA):
 - a. MFMA-4 - Metal Framing Standards Publication.
 - 5. Manufacturers Standardization Society (MSS):
 - a. MSS SP-58 - Pipe Hangers and Supports – Materials, Design, and Manufacture.

- b. ANSI/MSS SP-69 - ANSI/MSS Edition Pipe Hangers and Supports – Selection and Application.
- 6. National Electrical Contractors Association (NECA):
 - a. NECA 1 - Standard Practices for Good Workmanship in Electrical Construction
 - b. NECA 101 - Standard for Installing Steel Conduit (Rigid, IMC, EMT).
- 7. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code.
- 8. Society for Protective Coatings (SSPC):
 - a. SSPC-PA 1 – Shop, Field and Maintenance Painting.
 - b. SSPC-PS Guide 1.00 - Guide for Selecting Oil Base Painting Systems.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate the size and location of concrete bases.
 - 2. Coordinate the installation of roof curbs, equipment supports, and roof penetrations-with the roofing installer.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Construction Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Steel slotted support systems.
 - 2) Nonmetallic slotted support systems.
 - 3) Trapeze hanger components.
 - 4) Steel slotted channel system components.
 - 5) Nonmetallic slotted channel system components.
 - 6) Equipment support components.
 - b. Shop Drawings:
 - 1) Trapeze hangers.
 - 2) Steel slotted channel systems.
 - 3) Nonmetallic slotted channel systems.
 - 4) Equipment supports.
 - c. Qualification Statements:
 - 1) Welding procedure qualification test records.
 - 2) Welding Certificates.
 - 3) Professional Engineer's qualifications.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
- B. Qualifications:
 1. Welding Qualifications:
 - a. Prior to beginning work that requires welding, submit the procedures to be used for pre-qualifying welders and welding procedures to the Program/Project Manager for approval.
 - 1) For all procedures, other than those set forth in AWS D1.1/D1.1M, submit a copy of the welding procedure qualification test records.
 - b. Only use welders, tackers, and welding operators demonstrating they are qualified to perform the types of work required by having passed the qualification tests prescribed in AWS D1.1/D1.1M, for the procedures.
 - 1) Submit Welding Certificates certifying the welders employed to fabricate and to install the Work of this Section have been AWS certified within the previous 12 months to the Program/Project Manager for approval.
 - a) Include certified copies of qualification test records and photographic identification indicating each welder, welding operator, and tacker employed to perform the Work has satisfactorily passed the AWS qualification tests for the required welding procedures and, if pertinent, has undergone recertification.
 2. Professional Engineer's Qualifications:
 - a. Employ a licensed Professional Engineer, registered in the State of Arizona, having experience performing electrical hanger and support calculations.
 - b. Submit the Professional Engineer's qualifications to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Substitution Limitations:
 1. Subject to compliance with the requirements specified, manufacturers offering products that may be incorporated into the Work include the manufacturers listed.
- B. Product Options:
 1. Subject to compliance with requirements, provide products by one of the manufacturers listed.

2.02 DESIGN CRITERIA

- A. Structural Requirements:
 - 1. Provide electrical hangers and supports to be structurally adequate in tension, shear, and pullout force to resist the maximum loads calculated or imposed for this Contract, with a minimum structural safety factor of 5 times the applied force.
- B. Design supports for multiple raceways, including employing a qualified Professional Engineer to perform a comprehensive engineering analysis, using the performance requirements and design criteria specified.
- C. Design supports for multiple raceways to be capable of supporting the combined weight of the supported systems and their contents.
- D. Design equipment supports capable of supporting the combined operating weight of the supported equipment and the connected systems and components.
- E. Shop Drawings:
 - 1. Submit Shop Drawings for the trapeze hangers, steel slotted channel systems, nonmetallic slotted channel systems, and equipment supports proposed for the Work of this Section to the Program/Project Manager for approval.
 - a. Submit Product Data for the components of each item.
 - b. Show fabrication and installation details.
 - c. Include calculations.
 - d. Have the Shop Drawings signed and sealed by a qualified Professional Engineer.

2.03 SYSTEMS

- A. Steel Slotted Support Systems:
 - 1. Provide factory-fabricated hanger and support components for field assembly complying with the requirements specified in MFMA-4.
 - 2. Metallic Coatings:
 - a. If metallic coatings are indicated in the Contract Documents, hot-dip galvanize the components after fabrication in accordance with the requirements specified in MFMA-4.
 - 3. Nonmetallic Coatings:
 - a. If nonmetallic coatings are indicated in the Contract Documents, apply the manufacturer's standard PVC, polyurethane, or polyester coating applied in accordance with the requirements specified in MFMA-4.
 - 4. Painted Coatings:

- a. If painted coatings are indicated in the Contract Documents, apply the manufacturer's standard painted coating in accordance with the requirements specified in MFMA-4.
 5. Channel Dimensions:
 - a. Select channel dimensions to comply with the applicable load criteria.
 6. Manufacturers:
 - a. Allied Tube & Conduit, www.alliedtube.com.
 - b. B-Line Systems, Inc., a division of Cooper Industries; www.b-line.com.
 - c. ERICO/Michigan Hanger Co., www.erico.com.
 - d. Thomas & Betts Corporation, www.tnb.com.
 - e. Unistrut Corp.; Tyco International, Ltd.; www.unistrut.com.
 - f. Wesanco, Inc., www.wesanco.com.
 - g. Approved equal.
 7. Submit Product Data for the steel slotted support systems proposed for the Work of this Section to the Program/Project Manager for approval.
- B. Nonmetallic Slotted Support Systems:
 1. Provide structural-grade, factory-formed, glass-fiber-resin channels and angles with 9/16-inch diameter holes in at least one surface spaced a maximum of 8 inches apart on center.
 2. Fittings and Accessories:
 - a. Provide products manufactured by the channel and angle manufacturer, and designed for use with those items.
 3. Rated Strength:
 - a. Provide components selected to comply with the applicable load criteria.
 4. Manufacturers:
 - a. Allied Tube & Conduit., www.alliedtube.com.
 - b. B-Line Systems, Inc., a division of Cooper Industries; www.b-line.com.
 - c. www.b-line.com.
 - d. Fabco Plastics Wholesale Limited., www.fabcoplastics.com.
 - e. Seasafe, Inc., www.seasafe.com.
 - f. Approved equal.
 5. Submit Product Data for the nonmetallic slotted support systems proposed for the Work of this Section to the Program/Project Manager for approval.
- C. Raceway and Cable Supports:
 1. Provide raceway and cable supports complying with the requirements specified in NECA 1 and NECA 101.
- D. Conduit and Cable Support Devices:
 1. Provide steel and malleable-iron hangers, clamps, and associated fittings, designed for the types and sizes of raceway or cable to be supported.

E. Support for Conductors in Vertical Conduit:

1. For non-armored electrical conductors or cables in riser conduits, provide a factory-fabricated assembly consisting of a threaded body and insulating wedging plug or plugs, or conduit riser grips, as required or indicated on the Contract Drawings.
 - a. Threaded Body and Wedging Plug(s):
 - 1) Provide plugs having a malleable iron body, and conductor gripping pieces of the number, size, and shape required to suit the conductors or cables supported.
 - 2) Manufacturers:
 - a) Producto Electric Corporation, Peco, www.pecoelect.com.
 - b) EGS Electrical Group, O-Z/Gedney Corporation, www.o-zgedney.com.
 - c) Approved equal.
 - b. Conduit Riser Grips:
 - 1) Provide ring type, double weave, tin coated bronze conduit riser grips sized as required to accommodate the number of conductors indicated on the Contract Drawings.
 - 2) Manufacturers:
 - a) Hubbell, Inc., Kellems® Wire Management Products, www.hubbell-wiring.com.
 - b) Leviton Manufacturing Company, Inc., www.leviton.com.
 - c) Approved equal.

F. Fabricated Metal Equipment Support Assemblies:

1. Shop- or field-fabricate metal equipment support assemblies by welding or bolting, structural-steel shapes to fit the dimensions of the equipment supported.
 - a. Provide steel shapes and plates complying with the requirements specified in Section 05500, Metal Fabrications.

2.04 MATERIALS:

A. Structural Steel for Fabricated Supports and Restraints:

1. Provide black and galvanized steel plates, shapes, and bars complying with the requirements specified in ASTM A 36/A 36M as required for the fabricated supports and restraints.

B. Concrete Inserts:

1. Provide steel or malleable-iron, slotted support system inserts complying with MFMA-4 or MSS SP-58, and similar to MSS SP-58 Type 18.

C. Concrete Materials:

1. Concrete Formwork:
 - a. Provide concrete formwork complying with the requirements specified in Section 03100, Concrete Forms and Accessories.

2. Concrete Reinforcing:
 - a. Provide concrete reinforcing complying with the requirements specified in Section 03200, Concrete Reinforcement.
3. Concrete:
 - a. Provide concrete complying with the requirements specified in Section 03300, Cast-In-Place Concrete.
- D. Clamps for Attachment to Steel Structural Elements:
 1. For attachment to steel structural elements, provide a type of clamp specified in MSS SP-58 as suitable for the attached structural element.
- E. Through Bolts:
 1. Provide hex head, high strength structural type bolts complying with the requirements specified in ASTM A 325.
- F. Toggle Bolts:
 1. Provide all-steel spring head type toggle bolts.
- G. Hanger Rods:
 1. Provide threaded steel hanger rods.
- H. Mounting, Anchoring, and Attachment Components:
 1. Provide the following items for fastening electrical items or their supports to building surfaces:
 - a. Powder-Actuated Fasteners:
 - 1) For use in hardened Portland cement concrete, steel, or wood, provide threaded-steel powder-actuated studs having tension, shear, and pullout capacities appropriate for the loads supported and the building materials in which the powder-actuated stud is used.
 - 2) Manufacturers:
 - a) Hilti, Inc., www.hilti.com.
 - b) ITW Ramset/Red Head, www.ramset-redhead.com.
 - c) MKT Fastening, LLC, <https://www.mktfastening.com/>.
 - d) Masterset Fastening Systems, Inc., www.simpsonanchors.com.
 - e) Approved equal.
 - b. Mechanical-Expansion Anchors:
 - 1) For use in hardened Portland cement concrete, provide insert-wedge-type, zinc-coated steel expansion anchors, with tension, shear, and pullout capacities appropriate for loads supported and the building materials in which the expansion anchor is used.
 - 2) Manufacturers:
 - a) B-Line Systems, Inc., a division of Cooper Industries; www.b-line.com.

- b) Empire Tool and Manufacturing Co., Inc.,
www.empiretool.com.
- c) Hilti, Inc.; www.hilti.com.
- d) ITW Ramset/Red Head, www.ramset-redhead.com.
- e) MKT Fastening, LLC, <https://www.mktfastening.com/>.
- f) Approved equal.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Examine the locations to receive electrical hangers and supports.
- B. Evaluation and Assessment:
 - 1. Verify that the locations to receive electrical hangers and supports are ready for the Work of this Section.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect areas surrounding the locations to receive electrical hangers and supports from damage resulting from installation of the hangers and supports.
 - 2. Protect adjacent areas from weld spatter and paint stains.

3.03 INSTALLATION

- A. Installing Hangers and Supports:
 - 1. Comply with NECA 1 and NECA 101 requirements for installing hangers and supports for electrical equipment and systems except as otherwise specified.
 - a. If the requirements specified in this Section are stricter, comply with the stricter requirements.
 - 2. Raceway and Cable Support Methods:
 - a. Maximum Support Spacing for Raceway:
 - 1) Space supports for EMT, IMC, and RMC as scheduled in NECA 1, where Table 1.
 - a) In addition to the methods specified in NECA 1, NFPA 70 permits EMT, IMC, and RMC to be supported by openings through structure members.
 - b. Minimum Hanger Rod Size for Raceway:
 - 1) Provide a minimum rod size of 1/4 inch in diameter.
 - c. Multiple Raceways or Cables:
 - 1) For multiple raceways or cables, install trapeze-type supports fabricated from steel slotted support system components sized so

- the capacity can be increased by at least 25 percent in the future without exceeding the specified design load limits.
- 2) Secure raceways and cables to the supports with two-bolt conduit clamps.
 - d. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch and smaller raceways serving branch circuits and communication systems above suspended ceilings and for fastening raceways to trapeze supports.
3. Strength of Support Assemblies:
 - a. Where the sizes of components are not indicated, select component sizes so their strength will be adequate to carry present and future static loads within the specified loading limits.
 - b. Use a minimum static design load for determining the strength of support assemblies consisting of the weight of the supported components plus 200 pounds.
 4. Mounting and Anchorage of Surface-Mounted Equipment and Components:
 - a. Anchor and fasten electrical items and their supports to the building structural elements using the following methods unless otherwise indicated by Code:
 - 1) For surface mounting equipment and components on wood, provide lag screws or through bolts.
 - 2) For surface mounting equipment and components on new concrete, provide concrete inserts and bolts.
 - 3) For surface mounting equipment and components on masonry, provide approved toggle-type bolts on hollow masonry units, and expansion anchor fasteners on solid masonry units.
 - 4) For surface mounting equipment and components on existing concrete, provide expansion anchor fasteners.
 - a) In lieu of expansion anchors, powder-actuated driven threaded studs with lock washers and nuts may be provided in existing standard-weight concrete 4 inches or more thick.
 - (1) Do not use powder-actuated driven threaded studs for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches thick.
 - 5) For surface mounting equipment and components on steel, provide beam clamps complying with the requirements specified in MSS SP-69 (MSS Types 19, 21, 23, 25, or 27).
 - 6) For surface mounting equipment and components on light steel, provide sheet metal screws.
 - 7) For surface mounting equipment and components on hollow walls and nonstructural building surfaces, provide slotted-channel racks attached to the substrate by means that meet seismic-restraint strength and anchorage requirements.

- a) Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks.
5. When drilling holes for expansion anchors in concrete, select locations and depths that avoid reinforcing bars.
- B. Installing Fabricated Metal Supports:
 1. For site-fabricated metal supports, comply with the installation requirements specified in Section 05500, Metal Fabrications.
 2. Cut, fit, and place miscellaneous metal supports accurately in the proper location, alignment, and elevation to support and anchor the electrical materials and equipment.
 3. Perform field welding in accordance with the requirements specified in, AWS D1.1/D1.1M.
- C. Constructing Concrete Bases:
 1. Construct concrete bases of the dimensions indicated in the Contract Documents, but not less than 4 inches larger in both directions than the supported unit, and so anchors will be a minimum of 10 bolt diameters from the edge of the base.
 2. Unless otherwise noted on the Contract Drawings, provide concrete having a 28-day compressive-strength of 3000 psi.
 3. Anchor equipment to the concrete base.
 - a. Place and secure anchorage devices.
 - 1) Furnish the supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions with the items to be embedded.
 - b. Install anchor bolts to the elevations required for proper attachment to supported equipment.
 - c. Install anchor bolts according to the anchor-bolt manufacturer's written instructions.

3.04 REPAIR/RESTORATION

- A. Touchup Painting:
 1. Clean field welds and abraded areas of shop paint.
 2. Paint exposed areas immediately after erecting hangers and supports using the same materials as used for shop painting.
 - a. Comply with the requirements specified in SSPC-PA 1 for touching up field-painted surfaces.
 3. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.
- B. Touchup Painting:

1. Comply with requirements specified in Section 09912, Painting, for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.
- C. Galvanized Surfaces:
1. Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint in accordance with the requirements specified in ASTM A 780.

SECTION 16075

ELECTRICAL IDENTIFICATION

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for identification of electrical components, including raceways, cables and conductors, and equipment.
 - 2. Requirements for warning labels and signs, including both above- and underground applications.
 - 3. Requirements for electrical instruction signs and other miscellaneous identification products.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 09912 - Painting.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. NRTL: Nationally recognized testing agency.
 - 2. UPS: Uninterrupted power system.
 - 3. UV: Ultra violet radiation.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.
 - 3. UV-Stabilized: Formulated so ultra violet radiation does not degrade the material so stabilized; generally required for materials susceptible to such degradation that are continuously exposed to exterior sunlight.
- C. Reference Standards:
 - 1. ASTM International (ASTM):
 - a. ASTM D 638 - Standard Test Method for Tensile Properties of Plastics.
 - 2. American National Standards Institute (ANSI).

- a. ANSI A13.1 – American National Standard Scheme for the Identification of Piping Systems.
 - b. ANSI Z535.1 - American National Standard Safety Color Code.
 - c. ANSI Z535.3 - American National Standard Criteria for Safety Symbols.
 - d. ANSI Z535.4 - American National Standard Product Safety Signs and Labels.
 - e. ANSI 535.5 - American National Standard Accident Prevention Tags.
3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
5. Institute of Electrical and Electronics Engineers (IEEE):
 - a. ANSI/IEEE C2 – National Electrical Safety Code.
6. National Fire Protection Association (NFPA).
 - a. NFPA 70 – National Electrical Code.
7. National Electrical Manufacturers Association (NEMA):
 - a. NEMA 250 – Enclosures for Electrical Equipment (1000 Volts Maximum).
8. United States Government:
 - a. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1910 Occupational Health and Safety Standards.
 - 2) 29 CFR 1926 Safety and Health Regulations for Construction.
9. Underwriters Laboratory (UL):
 - a. UL 94 - Standard for Tests for Flammability of Plastic Materials for Parts in Devices and Appliances.
 - b. UL 969 – Standard for Marking and Labeling Systems

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, the Contract Drawings, Shop Drawings, manufacturer's wiring diagrams, and Operation and Maintenance Manuals; and with those required by codes, standards, and OSHA 29 CFR 1910.145.
 - a. Use consistent designations throughout Work of this Contract.
 2. Coordinate the installation of identifying devices with the location of access panels and doors.
- B. Sequencing:
 1. Install identifying devices before installing acoustical ceilings and similar concealment.
 2. Coordinate the installation of identifying devices with the completion of covering and painting surfaces where the devices are to be applied.

- a. Apply identification devices to surfaces that require a finish after completing the finish work.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Power raceway identification materials.
 - 2) Power and control cable identification materials.
 - 3) Conductor identification materials.
 - 4) Floor marking tape.
 - 5) Underground line warning tape.
 - 6) Warning labels and signs.
 - 7) Instruction signs.
 - 8) Equipment identification labels.
 - 9) Cable ties.
 - 10) Paint.
 - 11) Fasteners.
 - b. Samples:
 - 1) Samples of each type of label and sign.
 - c. Delegated Design Submittals:
 - 1) Index of Nomenclature of Electrical Equipment and System Components.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.

B. Site Samples:

1. To illustrate the size, colors, lettering style, mounting provisions, and graphic features of identification products, submit Samples of each type of label and sign to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 PRODUCT TYPES

A. Manufacturers:

1. Substitution Limitations:
 - a. Provide the standard products of a manufacturer regularly engaged in the manufacture of electrical identification products.

2. Product Options:
 - a. Product Data:
 - 1) Submit manufacturers Product Data for the electrical identification products proposed for the Work of this Section to the Program/Project Manager for approval.
- B. Regulatory Requirements:
 1. Comply with all codes, ordinances, regulations, and other legal requirements of public authorities, which bear on performance of the Work of this Section, including among others the following:
 - a. Phoenix Building Construction Code and Amendments.
- C. Design Criteria:
 1. Design the electrical identification system for this Contract in accordance with the requirements specified in the following codes, regulations, and standards:
 - a. ANSI A13.1 for pipe identification.
 - b. ANSI/IEEE C2, the National Electrical Safety Code.
 - c. ANSI Z535.4 for safety signs and labels.
 - d. NFPA 70, the National Electric Code.
 - e. OSHA 29 CFR 1910.144, "Safety Color Code for Marking Physical Hazards", and 29 CFR 1910.145 "Specifications for Accident Preventions Signs and Tags".
 2. Index of Nomenclature of Electrical Equipment and System Components:
 - a. Prepare an Index of Nomenclature of Electrical Equipment and System Components listing all of the nomenclature used in identification signs and labels.
 - b. Submit the Index of Nomenclature of Electrical Equipment and System Components to the Program/Project Manager for approval.
- D. Materials:
 1. Power Raceway Identification Materials:
 - a. Legends:
 - 1) Provide letters for legends with the minimum sizes and color field lengths in accordance with the requirements specified in ANSI A13.1 for each raceway size.
 - 2) For raceways carrying circuits at 600 Volts or less, provide white letters on a black field.
 - a) Indicate the voltage in the legend.
 - b. For raceways carrying circuits at 600 V or less, provide one of the following:
 - 1) Self-Adhesive Vinyl Labels:
 - a) Provide preprinted, flexible labels laminated with a clear, weather- and chemical-resistant coating, and having a matching wraparound adhesive tape for securing the ends of the legend label.

- b) Provide adhesive-attached labeling materials, including the label stocks, laminating adhesives, and inks used by label printers, complying with the requirements specified in UL 969.
 - 2) Snap-Around Labels:
 - a) Provide slit, pre-tensioned, flexible, preprinted, color-coded acrylic sleeves, with a diameter sized to suit the diameter of the raceway or cable it identifies, and designed to stay in place by the gripping action of the sleeve.
 - 3) Snap-Around, Color-Coding Bands:
 - a) Provide slit, pre-tensioned, flexible, solid-colored acrylic sleeve, 2 inches long, with a diameter sized to suit the diameter of the raceway or cable it identifies, and to stay in place by the gripping action of the sleeve.
 - b) Marker for Tags:
 - (1) Provide the permanent, waterproof, black ink marker recommended by the tag manufacturer.
 - c) Marker for Tags:
 - (1) Provide the machine-printed, permanent, waterproof, black ink marker recommended by the printer manufacturer.
- 2. Power and Control Cable Identification Materials:
 - a. Legends:
 - 1) Provide letters for legends with the minimum sizes and color field lengths in accordance with the requirements specified in ANSI A13.1 for each raceway size.
 - b. Self-Adhesive Vinyl Labels:
 - 1) Provide preprinted, flexible labels laminated with a clear, weather- and chemical-resistant coating, and having matching wraparound adhesive tape for securing the ends of the legend label.
 - 2) Provide adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, complying with the requirements specified in UL 969.
 - c. Snap-Around Labels:
 - 1) Provide slit, pre-tensioned, flexible, preprinted, color-coded acrylic sleeves, with a diameter sized to suit the diameter of the raceway or cable it identifies, and designed to stay in place by the gripping action of the sleeve.
 - d. Snap-Around, Color-Coding Bands:
 - 1) Provide slit, pre-tensioned, flexible, solid-colored acrylic sleeve, 2 inches long, with a diameter sized to suit the diameter of the raceway or cable it identifies, and to stay in place by the gripping action of the sleeve.
- 3. Conductor Identification Materials:
 - a. Color-Coding Conductor Tape:
 - 1) Provide color-coded, self-adhesive vinyl conductor tape not less than 3 mils thick by 1 to 2 inches wide.

- b. Self-Adhesive Vinyl Labels:
 - 1) Provide preprinted, flexible labels laminated with a clear, weather- and chemical-resistant coating, and having matching wraparound adhesive tape for securing the ends of the legend label.
 - 2) Provide adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, complying with the requirements specified in UL 969.
- c. Snap-Around Labels:
 - 1) Provide slit, pre-tensioned, flexible, preprinted, color-coded acrylic sleeves, with a diameter sized to suit the diameter of the raceway or cable it identifies, and designed to stay in place by the gripping action of the sleeve.
- d. Snap-Around, Color-Coding Bands:
 - 1) Provide slit, pre-tensioned, flexible, solid-colored acrylic sleeve, 2 inches long, with a diameter sized to suit the diameter of the raceway or cable it identifies, and to stay in place by the gripping action of the sleeve.
- e. Marker Tapes:
 - 1) Provide vinyl or vinyl-cloth, self-adhesive wraparound type tape, with a circuit identification legend machine printed onto the tape by thermal transfer or an equivalent process.
- 4. Floor Marking Tape:
 - a. For marking floors, provide 2-inch wide, 5-mil pressure-sensitive vinyl tape, with black and white stripes and a clear vinyl overlay.
- 5. Underground Line Warning Tape:
 - a. Tape:
 - 1) Provide tape recommended by the manufacturer for the method of installation and suitable to identify and locate underground electrical and communications utility lines.
 - 2) Provide chemically inert tape and ink materials not subject to degradation when exposed to acids, alkalis, and other destructive substances commonly found in soils.
 - a) Print permanent legends on the tape that will not be damaged by burial operations.
 - 3) Provide tape colors and inscriptions complying with the requirements of ANSI Z535.1, ANSI Z535.3, ANSI Z535.4, and ANSI 535.5.
 - a) Red-Colored Tape Inscriptions:
 - (1) ELECTRIC LINE.
 - (2) HIGH VOLTAGE.
 - b) Orange-Colored Tape Inscriptions:
 - (1) TELEPHONE CABLE.
 - (2) CATV CABLE.
 - (3) COMMUNICATIONS CABLE.
 - (4) OPTICAL FIBER CABLE.
- 6. Warning Labels and Signs:

- a. Provide preprinted baked-enamel aluminum warning labels and signs, having the colors, legend, and size required for the application in accordance with the requirements specified in NFPA 70 and 29 CFR 1910.145, 145 "Specifications for Accident Prevention Signs and Tags".
 - 1) For mounting, punch or drill the warning labels and signs for fasteners in the corners, and install 1/4-inch grommets.
 - 2) Provide warning labels and signs having a nominal size of 7 inches by 10 inches.
 - b. Legends:
 - 1) Warning label and sign legends include, but are not limited to, the following:
 - a) Multiple Power Source Warning:
 - (1) DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES.
 - b) Workspace Clearance Warning:
 - (1) WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 36 INCHES.
7. Instruction Signs:
- a. Provide engraved, laminated acrylic or melamine plastic instruction signs, a minimum of 1/16 inch thick for signs up to 20 square inches and 1/8 inch thick for larger sizes.
 - b. Frame the instruction signs with a mitered acrylic molding, and punched or drilled for mechanical fasteners arranged for attachment at applicable equipment.
 - c. Legend:
 - 1) Provide an engraved legend with black letters on a white face.
8. Equipment Identification Labels:
- a. Provide self-adhesive, engraved, laminated acrylic or melamine labels having white letters a minimum of 3/8 inch high on a dark-gray background.
9. Cable Ties:
- a. General-Purpose Cable Ties:
 - 1) Provide one piece, fungus inert, self-extinguishing, self-locking, Type 6/6 nylon cable ties.
 - a) Minimum Width: 3/16 inch.
 - b) Tensile Strength: 12,000 psi at 73 degrees Fahrenheit when measured in accordance with the requirements specified in ASTM D 638.
 - c) Temperature Range: Minus 40 to plus 185 degrees Fahrenheit.
 - d) Color: Black, except where used for color-coding.
 - b. UV-Stabilized Cable Ties:

- 1) Provide one piece, fungus inert, self-extinguishing, self-locking, Type 6/6 nylon cable ties designed for continuous exposure to exterior sunlight.
 - a) Minimum Width: 3/16 inch.
 - b) Tensile Strength: 12,000 psi at 73 degrees Fahrenheit when measured in accordance with the requirements specified in ASTM D 638.
 - c) Temperature Range: Minus 40 to plus 185 degrees Fahrenheit.
 - d) Color: Black.
- c. Plenum-Rated Cable Ties:
 - 1) Provide one piece, self-extinguishing, self-locking, cable ties designed for continuous exposure to exterior sunlight.
 - a) Minimum Width: 3/16 inch.
 - b) Tensile Strength: 7000 psi at 73 degrees Fahrenheit when measured in accordance with the requirements specified in ASTM D 638.
 - c) Temperature Range: Minus 50 to plus 284 degrees Fahrenheit.
 - d) Flame Rating: 94V-0 when measured in accordance with the requirements specified in UL 94.
 - e) Color: Black.

2.02 ACCESSORIES

- A. Paint:
 1. Provide paint materials complying with the requirements specified in Section 09912, Painting.
 2. Select the paint system applicable for the surface material and location, either exterior or interior.
- B. Fasteners:
 1. Provide self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers for labels and signs.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Verify the identity of each item before installing identification products.

3.02 PREPARATION

- A. Surface Preparation:
 1. Self-Adhesive Identification Products:

- a. Before applying self-adhesive identification products, clean the surfaces where the identification device is to be applied using materials and methods recommended by the manufacturer of identification device.

3.03 INSTALLATION

- A. Location:
 1. Install identification materials and devices at locations most convenient for viewing the identification device without interference with the operation and maintenance of equipment.
- B. Self-Adhesive and Non-Adhesive Identification Products:
 1. Attach self-adhesive identification products after properly cleaning the surface.
 2. Attach signs and plastic labels that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.
- C. System Identification Color-Coding Bands for Raceways and Cables:
 1. Ensure that each color-coding band completely encircles the cable or conduit.
 2. Place adjacent bands of two-color markings in contact, side by side.
 3. Locate bands at changes in direction, at penetrations of walls and floors, at 50-foot maximum intervals in straight runs, and at 25-foot maximum intervals in congested areas.
- D. Cable Ties:
 1. For attaching tags, provide general-purpose type cable ties, except as follows:
 - a. For outdoor applications, provide UV-stabilized nylon cable ties.
 - b. For spaces handling environmental air, provide plenum rated cable ties.
- E. Underground-Line Warning Tape:
 1. During trench backfilling, install continuous underground-line warning tape directly above line at an elevation 6 to 8 inches below the finished grade.
 2. Use multiple tapes where the width of multiple lines installed in a common trench or concrete envelope exceeds 16 inches overall.
- F. Painted Identification:
 1. For surface preparation and paint application requirements, comply with the requirements specified in Section 09912, Painting.

3.04 IDENTIFICATION SCHEDULE

- A. Accessible Raceways and Metal-Clad Cables, 600 V or Less, for Service, Feeder, and Branch Circuits More Than 30 A, and 120 V to Ground:

1. Identify accessible raceways and metal-clad cables, 600 V or less, for service, feeder, and branch circuits more than 30A, and 120V to ground with self-adhesive vinyl labels installed at 10-foot maximum intervals.
- B. Accessible Raceways and Cables within Buildings:
 1. Identify the covers of each junction and pull box of the emergency power, power, and uninterrupted power systems with self-adhesive vinyl labels having the system voltage and the following wiring system legend as appropriate:
 - a. Emergency Power.
 - b. Power.
 - c. UPS.
- C. Power-Circuit Conductor 600 V or Less:
 1. For 600 V or less power-circuit conductors in vaults, pull and junction boxes, manholes, and handholes, provide color-coding conductor tape to identify the phase.
 - a. Factory-apply the color to the tape, or if the Authorities Having Jurisdiction permit, field-apply the color for sizes larger than 8 AWG.
 - 1) Field-Applied, Color-Coding Conductor Tape:
 - a) Apply field-applied, color-coding conductor tape in half-lapped turns for a minimum distance of 6 inches from terminal points and in boxes where splices or taps are made.
 - b) Apply the last 2 turns of tape with no tension to prevent possible unwinding.
 - c) Locate the bands so factory cable markings are not obscured.
 2. For color-coding the phase and voltage level for 600 V or less ungrounded service feeder and branch-circuit conductors, provide the following colors:
 - a. Colors for 208/120-V Circuits:
 - 1) Phase A: Black.
 - 2) Phase B: Red.
 - 3) Phase C: Blue.
 - b. Colors for 480/277-V Circuits:
 - 1) Phase A: Brown.
 - 2) Phase B: Orange.
 - 3) Phase C: Yellow.
- D. Power-Circuit Conductor Greater than 600 V:
 1. For power-circuit conductor greater than 600 V in vaults, pull and junction boxes, manholes, and handholes, provide nonmetallic plastic tag holders with adhesive-backed phase tags, and separate tags with the circuit designation.
- E. Conductors to Be Extended in the Future:
 1. For conductors to be extended in the future, attach write-on tags to the conductors and list the source.

- F. Auxiliary Electrical Systems Conductors:
 - 1. Identify field-installed alarm, control, and signal connections.
 - 2. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points.
 - a. Provide identification by system and circuit designation.
 - 3. Provide a system of marker tape designations that is uniform and consistent with the system used by the manufacturer for factory-installed connections.
 - 4. Coordinate identification with the Contract Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual.
- G. Locations of Underground Lines:
 - 1. For power, lighting, communication, and control wiring, and for optical fiber cable, provide underground-line warning tape.
 - 2. Provide underground-line warning tape for both direct-buried cables and cables in raceway.
- H. Workspace Indication:
 - 1. Provide floor marking tape to show the working clearances in the direction of access to live parts.
 - 2. Unless otherwise indicated, the workspaces and working clearances are as specified in NFPA 70 and 29 CFR 1926.403(i)(1), "Working Space about Electrical Equipment".
 - 3. Do not provide floor marking tape at flush-mounted panelboards and similar equipment in finished spaces.
- I. Warning Labels for Indoor Cabinets, Boxes, and Enclosures:
 - 1. For indoor cabinets, boxes, and enclosures for power and lighting, provide baked-enamel warning signs and labels complying with the requirements specified in 29 CFR 1910.145, "Specifications for Accident Prevention Signs and Tags".
 - a. Identify system voltage with black letters on an orange background.
 - 2. Apply the warning signs and labels to the exterior of doors, covers, or other access means.
 - 3. For equipment with multiple power or control sources including, but not limited to, the following, apply the warning signs and labels to the door or cover of the equipment:
 - a. Power transfer switches.
 - b. Controls with external control power connections.
- J. Operating Instruction Signs:
 - 1. To facilitate proper operation and maintenance of electrical systems and the items to which they connect, provide instruction signs.
 - 2. Where instructions are needed for system or equipment operation, provide instruction signs with an approved legend.

- K. Emergency Operating Instruction Signs:
 - 1. For emergency instructions at equipment used for power transfer, provide instruction signs with a white legend on a red background with minimum 3/8-inch-high letters.
- L. Equipment Identification Labels:
 - 1. On each unit of equipment, provide a unique label designation consistent with the wiring diagrams, schedules, and the Operation and Maintenance Manual.
 - a. Unless the equipment is provided with its own identification, provide labels for the power, lighting, control, communication, signal, monitoring, and alarm systems.
 - b. Apply labels to disconnect switches and protection equipment, central or master units, control panels, control stations, terminal cabinets, and the racks for each system.
 - 2. Labeling Instructions:
 - a. Indoor Equipment:
 - 1) Provide self-adhesive, engraved, laminated acrylic or melamine labels.
 - 2) Unless otherwise indicated, provide a single line of text with 1/2-inch high letters on a 1-1/2-inch high label; if two lines of text are required, use labels 2 inches high.
 - b. Outdoor Equipment:
 - 1) Provide engraved, laminated acrylic or melamine labels.
 - c. Elevated Components:
 - 1) Increase the sizes of labels and letters to those appropriate for recognition of the information from the floor.
 - d. Unless the labels are self-adhesive, fasten the labels with appropriate mechanical fasteners that do not change the NEMA or NRTL rating of the enclosure as specified in NEMA 250 or other applicable NRTL standards.
 - 3. Equipment to Be Labeled:
 - a. Individual Sections or NFPA 70 may require labeling the following items:
 - 1) Panelboards:
 - a) Provide a typewritten directory of the circuits in the location provided by the panelboard manufacturer.
 - b) Provide self-adhesive, engraved, laminated acrylic or melamine labels to identify panelboards.
 - 2) Enclosures and electrical cabinets.
 - 3) Access doors and panels for concealed electrical items.
 - 4) Switchboards.
 - 5) Transformers:
 - a) Provide a label that includes the tag designation shown on the Contract Drawings for the transformer, feeder, and panelboards, or equipment supplied by the secondary.

- 6) Emergency system boxes and enclosures.
- 7) Motor-control centers.
- 8) Enclosed switches.
- 9) Enclosed circuit breakers.
- 10) Enclosed controllers.
- 11) Push-button stations.
- 12) Power transfer equipment.
- 13) Contactors.
- 14) Remote-controlled switches, dimmer modules, and control devices.
- 15) Battery-inverter units.
- 16) Battery racks.
- 17) Monitoring and control equipment.

SECTION 16076

COMMUNICATIONS IDENTIFICATION

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for providing identifying labels for communications backbone, riser, and horizontal cabling.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. CAAN: Capital Asset Account Number.
 - 2. CFN: Consecutive Fiber Numbering sequence.
 - 3. HH: Handhole(s).
 - 4. IDF: Intermediate Distribution Frame.
 - 5. MDF: Main Distribution Frame.
 - 6. MH: Maintenance holes or manholes.
 - 7. PVC: Polyvinyl Chloride.
 - 8. RPP: Reverse Pair Positioning.
 - 9. TSB: Technical Systems Bulletin.
- B. Definitions:
 - 1. Multimode Optical Fiber: An optical fiber that carries only many paths of light.
 - 2. Singlemode Optical Fiber: An optical fiber that carries only one path of light.
- C. Reference Standards:
 - 1. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 2. Phoenix Sky Harbor International Airport (PSHIA):
 - a. PSHIA Premises Distribution System Standards:
 - 1) PSHIA Communication Network and Infrastructure Systems Design.
 - 3. Telecommunications Industry Association/Electronic Industries Association (TIA/EIA):
 - a. ANSI/TIA/EIA-568-B.1 - Commercial Building Telecommunications Cabling Standard – Part 1: General Requirements.
 - 4. Telecommunications Industry Association (TIA):

- a. ANSI/TIA-606-A – Administrative Standard for Commercial Telecommunications Infrastructure.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Communication identification products.
 - b. Qualification Statements:
 - 1) Communication identification installer's qualifications.

1.04 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
- B. Qualifications:
 - 1. Communication Identification Installer's Qualifications:
 - a. Employ an installation team certified by the manufacturer as having completed the necessary training to complete their part of the installation.
 - b. Submit resumes for the entire team, including documentation of completed training courses.

PART 2 PRODUCTS

2.01 LABELS

- A. Manufacturers:
 - 1. Substitution Limitations:
 - a. Comply with the substitution requirements specified in Section 16702, Basic Communications Materials and Methods.
 - 2. Product Options:
 - a. Comply with the product option requirements specified in Section 16702, Basic Communications Materials and Methods.
- B. Design Criteria:
 - 1. Comply with the requirements specified in the PSHIA Premises Distribution System Standards.
 - 2. Provide labeling complying with the requirements specified herein and, where applicable, with the requirements specified in ANSI/TIA-606-A.

- a. Submit Product Data for the communication identification products proposed for the Work of this Section to the Program/Project Manager for approval.
- 3. Conflicts
 - a. If conflicts between referenced requirements arise, comply with the one establishing the more stringent requirements.
 - b. If conflicts between referenced requirements and the Contract Documents arise, comply with the one establishing the more stringent requirements.

C. Materials:

- 1. Fiber Optic Cable Labels:
 - a. Provide fiber optic cable labels consisting of either a stainless steel or a plastic type tag with a steel or plastic tie wrap for attaching the label to the cable.
 - 1) If plastic labels are provided, provide yellow and black labels having a self-laminating cover for use with pre-printed labels.
 - b. Provide tags and tie wraps approved for both interior and exterior use.
 - 1) For indoor use, provide white tie wraps.
 - 2) For outdoor use, provide black tie wraps.
 - c. Provide riser rated labels and tie wraps where required.
 - d. Manufacturers:
 - 1) Panduit, Type PST-FO, self-laminating, GMV4 Rigid Vinyl, www.panduit.com.
 - 2) Approved equal.
- 2. Fiber Optic Warning Tags:
 - a. Provide polyvinyl chloride (PVC) fiber optic warning tags capable of being snapped onto the cable sheath.
 - b. Provide orange fiber optic warning tags with large black letters.
 - c. Manufacturers:
 - 1) Panduit, Type PCV-FOR, www.panduit.com.
 - 2) Approved equal.
- 3. Fiber Optic Termination Housing Labels:
 - a. Provide one piece, full size, laser printable, self-adhesive label sheets capable of being adhered to the plastic panel provided by the termination housing manufacturer on the inside of the enclosure door.
 - 1) Cut the label sheet to 8.5-inch by 11-inch size.
 - b. Furnish a laser printer, and print the labels in a black 10 point, Helvetica font on a color-coded background sheet, or an approved equivalent.
 - 1) For singlemode optical fiber labels, provide yellow background sheets.
 - 2) For multimode optical fiber labels, provide orange background sheets.
- 4. Copper Cable Termination Housing Labels:

- a. Furnish an electronic label maker to produce labels for the terminals, printed in black on a white background, using a 10 point, Helvetica font, or an approved equivalent.
5. Copper Cable Labels:
 - a. Provide copper cable labels consisting of either a stainless steel or a plastic type tag with a steel or plastic tie wrap for attaching the label to the cable.
 - 1) If plastic labels are provided, provide grey labels having a write on surface.
 - b. Provide tags and tie wraps approved for both interior and exterior use.
 - 1) For indoor use, provide white tie wraps.
 - 2) For outdoor use, provide black tie wraps.
 - c. Provide riser rated labels and tie wraps where required.
 - d. Manufacturers:
 - 1) Panduit, Type CM4S-L8, www.panduit.com.
 - 2) Approved equal.

PART 3 EXECUTION

3.01 APPLICATION

- A. Cable Labeling:
 1. Provide cable labels as indicated on the Contract Drawings, and on the following:
 - a. Jack face plates.
 - b. Cables inside back boxes, junction boxes, access points, and manholes/handholes.
 - c. Cables above the terminations in the Intermediate Distribution Frame (IDF) and Main Distribution Frame (MDF).
 - d. Patch panels, and when the cable is not in conduit every 50 feet on the cable.
- B. Conduit Labeling:
 1. Label conduit every 50 feet, and at the origination and destination of the conduit.
- C. Fiber Optic Cable Termination Cabinet/Housing Labeling:
 1. Label fiber optic termination housings inside the enclosure door by adhering a label sheet to the plastic panel provided by the termination housing manufacturer.
 2. Always place the panels for the singlemode optical fiber housing connector first and to the immediate left hand side of the housing, then place the multimode optical fiber connector panels.
 - a. Apply this sequence to both singlemode and multimode strands in the same cable (Hybrid), or in separate cables.

- b. In wall-mounted housings, always place the singlemode optical fiber connectors in the very topmost position, followed by the multimode optical fiber connectors.
3. In each terminal housing, provide only one labeling sheet to identify the fiber optic strands.
 - a. Do not provide multiple labels on a single door.
4. Provide housing labels containing the Capital Asset Account Number (CAAN) for the building (Source) where the fiber optic cable originates, the CAAN for the building (Destination) where the fiber optic strands terminate and the MDF/IDF identification number where the Destination housing is located.
5. Number the fiber strands consistent with the Consecutive Fiber Numbering (CFN) sequence identified in ANSI/TIA/EIA-568-B.1.
 - a. Provide this fiber strand numbering sequence at each terminated end of the fiber optic cable.
 - b. Do not roll fiber optic strands, a procedure identified in ANSI/TIA/EIA-568-B.1 as Reverse Pair Positioning (RPP).
6. Label fiber optic housings containing vertical connector panels as follows:
 - a. Label the fiber strand occupying fiber port number 1 in the upper most left position of the first duplex bulkhead connector installed in the connector panel placed in the first slot on the left side of the housing as fiber strand number 1 (Blue).
 - b. Label the fiber strand occupying fiber port number 2 of the same duplex bulkhead connector installed in the connector panel as fiber strand number 2 (Orange).
 - 1) This number 2 port is located to the immediate right of fiber port number 1.
 - c. Number the remaining fiber optic strands consecutively left to right, and top to bottom.
7. Label fiber optic housings containing horizontal connector panels as follows:
 - a. Label the fiber strand occupying fiber port number 1 in the uppermost top left position of the first duplex bulkhead connector installed in the connector panel placed in the upper most left slot of the housing as fiber strand number 1 (Blue).
 - b. Label the fiber strand occupying fiber port number 2 of the same duplex bulkhead connector installed in the connector panel as fiber strand number 2 (Orange).
 - 1) The number 2 port is located immediately below fiber port number 1.
 - c. Number the remaining fiber optic strands consecutively left to right, and top to bottom.
8. Fiber Optic Splice Shelf Labeling:
 - a. Label fiber optic splice shelves and drawers sequentially from top to bottom.

- b. Identify the fiber splices using an adhesive backed single sheet of labeling stock printed using a laser printer, and trimmed to fit the inside door of the splice shelf.
- c. Identify the splice tray, position number, and the fiber strand spliced at that location in tabular form.
- d. Include the cable number, the fiber optic strand number, and the strand type.

D. Fiber Optic Cable Sheath Labeling:

- 1. As a minimum, label the sheathes of fiber optic cables located inside buildings within 12 inches of the fiber termination housing, the point at which the cable enters and/or exits the room, and at one mid-point location when the cable is installed in a cable tray or ladder.
 - a. Provide fiber optic cable sheath labels containing the cable type, total strand count of the cable, the origination and destination Capital Asset Account Numbers (CAAN), Rack, Panel, and Fiber Count.
 - b. Additional sheath labels may be installed at the request of the Program/Project Manager.
- 2. Label the sheaths of fiber optic cables located in maintenance holes (MH) and handholes (HH) in at least one location that is visible from grade level.
 - a. Label maintenance holes (MH) and handholes (HH) containing splice closures on each side of the splice closure in a location visible from grade level.
- 3. In manholes and handholes that contain a splice, attach labels to each cable in the fiber optic cable sheath.
 - a. In manhole/handhole units, provide a minimum of 2 labels, or 3 labels if the path crosses multiple manholes/handholes, with the following:
 - 1) For Label 1, indicate the Manhole/Handhole Origination > Fiber Type/Origination Capital Asset Account Number (CAAN) / Rack / Panel / Fiber Count.
 - 2) For Label 2, indicate the Fiber Type/Origination Capital Asset Account Number (CAAN) / Rack / Panel / Fiber Count > Fiber Type / Destination Capital Asset Account Number (CAAN) / Rack / Panel / Fiber Count.
 - 3) For Label 3, indicate the Manhole Origination > Manhole Destination (if applicable).
 - b. If the path crosses multiple manholes/handholes, provide a minimum of 3 labels.

E. Copper Cable Termination Housing Labeling:

- 1. Label building entrance terminals with the name of the building, the building Capital Asset Account Number (CAAN), the cable pair numbers entering the terminal, and the cable pair number exiting the terminal (if applicable).
- 2. Place the labels on the wall above the terminal housing.
 - a. Do not label the terminal housing itself.

F. Copper Cable Sheath Labeling

1. As a minimum, label the sheathes of copper cables located inside buildings within 12 inches of the copper termination block, the point at which the cable enters and/or exits the room, and at one mid-point location when the cable is installed in a cable tray or ladder.
 - a. Additional sheath labels may be installed at the request of Program/Project Manager.
2. Label the sheaths of copper cables located in manholes (MH) and handholes (HH) in at least one location that is visible from grade level.
 - a. Label maintenance holes (MH) and handholes (HH) containing splice closures on each side of the splice closure in a location visible from grade level.
3. On the copper cable sheath labels, indicate the type of cable, the cable number, the cable pair count, and if applicable the number of dead cable pairs.

SECTION 16080

ELECTRICAL TESTING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for acceptance testing of the new and modified electrical system, wiring, equipment, and grounding as indicated in the Contract Documents.
- B. Related Requirements:
 - 1. Section 01330 – Submittals.

1.02 REFERENCE STANDARDS:

- A. InterNational Electrical Testing Association (NETA):
 - 1. ANSI/NETA ATS – Standard for Acceptance Testing Specifications for Electrical Power Equipment and Systems.
 - 2. ANSI/NETA ETT - Standard for Certification of Electrical Testing Technicians.
- B. National Institute for Certification in Engineering Technologies (NICET), www.nicet.org:
 - 1. NICET Industrial Instrumentation Engineering Technology Industrial Instrumentation Program Detail Manual.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and/or perform the required testing performed by the Electrical Testing Laboratory (ETL), the Approved Agency, and the City of Phoenix, prior to incorporating items requiring testing by them into the Work.
- B. Sequencing:
 - 1. Equipment Electrical Testing Schedule:
 - a. Prior to performing electrical testing, prepare an Equipment Testing Schedule indicating the equipment to be tested, test equipment to be used, and the sequence of the tests.
 - b. Submit the Equipment Testing Schedule to the Program/Project manager for approval.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Delegated Design Submittals:
 - 1) Equipment Electrical Testing Schedule.
 - b. Special Procedure Submittals:
 - 1) Tests Data Forms.
 - c. Qualification Statements:
 - 1) Electrical Testing Laboratory (ETL) qualifications:
 - 2) Electrical Testing Laboratory's Field Supervisor's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Field Verification Reports.
 - b. Manufacturer's Instructions:
 - 1) Manufacturer's installation, operation, and starting instructions for the equipment and systems to be tested.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
2. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.

B. Qualifications:

1. Electrical Testing Laboratory (ETL) Qualifications:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City

- of Phoenix, employ a member company of the InterNational Electrical Testing Association (NETA) or an independent nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7 having the experience and capability to conduct the testing required, not affiliated with the equipment manufacturer, and acceptable to the Authorities Having Jurisdiction.
- b. Submit the qualifications of the Electrical Testing Laboratory (ETL) to the Program/Project Manager for approval.
2. Electrical Testing Laboratory's Field Supervisor's Qualifications:
- a. To supervise the onsite testing specified, designate a person to be the Electrical Testing Laboratory's Field Supervisor who is currently certified by the InterNational Electrical Testing Association (NETA) in accordance with the requirements specified in ANSI/NETA ETT or the National Institute for Certification in Engineering Technologies (NICET) in accordance with the requirements specified in the NICET Industrial Instrumentation Engineering Technology Industrial Instrumentation Program Detail Manual.
 - b. Submit the qualifications of the Electrical Testing Laboratory's Field Supervisor to the Program/Project Manager for approval.
3. The Electrical Testing Laboratory (ETL) or testing personnel may be accepted or rejected based upon, but not limited to, the testing equipment intended to be used and/or the qualifications of the firm and personnel.

PART 2 PRODUCTS

NOT USED

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Verify the correctness of the wiring by visually comparing the conductor connections with the connection diagrams.
 - a. Note or indicate wiring deviations from the wiring indicated in the Contract Documents.
 - b. Note any damage, missing parts, or incomplete work.
- B. Pre-Installation Testing:
 - 1. Verify that the electrical Work to be tested is free from improper grounds, short circuits, and overloads.
 - 2. Perform individual circuit continuity checks by using electrical circuit testers.
- C. Evaluation and Assessment:

1. Only begin acceptance testing after the verification of conditions and the correction of non-conformances affecting the testing have been completed.
 - a. Record the dates on which corrective actions to remedy non-conformances are completed, and revise the Equipment Electrical Testing Schedule if necessary.

3.02 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. Site Tests:

- a. During the installation of electrical equipment, the Electrical Testing Laboratory (ETL) and the code-required Approved Agency must perform routine and other testing.
 - 1) Advise the Electrical Testing Laboratory (ETL) and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
- b. Have all of the electrical testing performed witnessed by the Program/Project Manager.
- c. The Electrical Testing Laboratory (ETL) and the code-required Approved Agency will perform additional materials testing due to changes in materials or proportions requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - 1) Inspections and testing performed exclusively for the convenience of the Contractor are the sole responsibility of the Contractor.
- d. Failure of the Electrical Testing Laboratory (ETL) or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.

2. Acceptance Testing:

- a. Have the Electrical Testing Laboratory (ETL) perform the acceptance testing and verification specified herein.
 - 1) Furnish termination and test equipment calibrated in accordance with the traceability requirements of the National Institute of Standards and Testing (NIST).
 - a) Submit a copy of the termination and test equipment calibration documents, and certification that the equipment calibration meets NIST standards and has been calibrated at least once in the previous calendar year.
 - 2) Test the electrical equipment provided under this Contract, including electrical distribution equipment and grounding.
 - 3) Test motorized equipment for acceptance and to verify conformance with the requirements of the Contract Documents.

- b. Tests Data Forms:
 - 1) Prior to performing electrical testing, prepare Tests Data Forms for recording the test results.
 - 2) Submit the Tests Data Forms to the Program/Project Manager for approval.
- c. Test Procedure:
 - 1) Perform the electrical testing in accordance with NETA standards.
 - a) Perform testing to assure that electrical equipment specified to be tested will operate within both industry and the manufacturer's published tolerances, and will perform safely.
 - 2) Conduct the three-point Fall of Potential ground test in accordance with IEEE 142 by using equipment from one of the following:
 - a) Megger®, www.biddlemegger.com
 - b) Associated Research, www.asresearch.com
 - c) Approved equal.
 - 3) Field Verification Reports:
 - a) Record test result data to be used as a baseline for future tests and maintenance.
 - b) After each inspection and test and within one week of the completion of each test, promptly submit a certified copy of a field verification report to the Program/Project Manager for information.
 - c) Include the following in each report:
 - (1) Summary of electrical testing for the Contract.
 - (2) Description of the equipment and ground loops tested.
 - (3) Description of the test and test procedures.
 - (4) Test results.
 - (5) Conclusions and recommendations.
 - (6) Completed test forms, including witness's signatures.
 - (7) List of test equipment and calibration documents.
 - (8) Date and time of the testing.
 - (9) Include the following data tabulated for each piece of equipment:
 - (a) Circuit number.
 - (b) Equipment or motor name and tag number, where applicable.
 - (c) Nameplate full-load-ampere rating.
 - (d) Motor service factor.
 - (e) Motor ambient temperature rating.
 - (f) Overload relay rating.
 - (g) Measured full load current.
 - (h) Measured discharge pressure (where applicable).
 - (i) Measured flow rate (where applicable).
 - (j) Infrared testing.
- d. Acceptance Criteria:

- 1) All grounding shall be acceptable less than 5 ohms.
- 2) Equipment operating within IEEE 142 industry and manufacturer's published tolerances and performing safely will be acceptable.

B. Non-Conforming Work

1. Equipment for which acceptable data has not been submitted, or has been submitted but rejected, is deemed to be unacceptable and not meeting the requirements of this Contract.

C. Manufacturer Services:

1. Where required to maintain the validity of the manufacturers' warranties, employ the manufacturer's and Supplier's starting personnel to perform testing and/or perform equipment startup.
 - a. Confirm with manufacturer that the electrical testing specified under this Contract will not void any warranties.

3.03 SYSTEM STARTUP

- A. Install equipment that has acceptable test data.
- B. Prior to starting equipment or systems, obtain and review the manufacturer's installation, operation, and starting instructions.
 1. Submit the manufacturer's installation, operation, and starting instructions for the equipment and systems to be tested to the Program/Project Manager for information.
- C. Verify the correctness of the wiring by actual electrical operation of electrical and mechanical devices in both manual and automatic modes of operation.

SECTION 16081

COMMUNICATIONS TESTING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for testing communications backbone, riser, and horizontal cabling, and for communications field verification services required to perform the specified testing and inspections.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 16712 – Communications Backbone Cabling.
 - 3. Section 16713 – Communications Horizontal Cabling.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ACR: Attenuation to Crosstalk Ratio.
 - 2. AWG: American Wire Gauge.
 - 3. ELFEXT: Equal Level Far End Crosstalk.
 - 4. FDDI: Fiber Distributed Data Interface.
 - 5. FEXT: Far End Crosstalk.
 - 6. NEXT: Near End Crosstalk.
 - 7. OTDR: Optical Time-Domain Reflectometer.
 - 8. PSELFEXT: Power Sum Equal Level Far End Crosstalk.
 - 9. PVC: Polyvinyl Chloride.
 - 10. RCDD: Registered Communications Distribution Designer.
 - 11. TSB: Technical Systems Bulletin.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Connection: The joint made by mating 2 fibers terminated with remateable duplex SC connectors or ST connectors.
 - 3. Multimode Optical Fiber: An optical fiber that carries only many paths of light.
 - 4. Singlemode Optical Fiber: An optical fiber that carries only one path of light.
- C. Reference Standards:
 - 1. American National Standards Institute (ANSI):

- a. ANSI X3T9.5 – FDDI (Fiber Distributed Data Interface) Standard containing physical specifications.
2. Building Industry Consulting Services International (BICSI):
 - a. BICSI TDMM - Telecommunications Distribution Methods Manual.
 - b. BICSI OSPDRM – Outside Plant Design Manual.
3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
4. InterNational Committee for Information Technology Standards (INCITS):
 - a. ANSI/INCITS 231 – Information Systems – Fibre Distributed Data Interface (FDDI) – Physical Layer Protocol (PHY-2).
5. International Standards Organization/International Electromechanical Commission (ISO/IEC):
 - a. ISO 9001 – Quality Management Systems – Requirements.
 - b. ISO/IEC 11801 –International Standard for Information Technology – Generic Cabling for Customer Premises.
6. Phoenix Sky Harbor International Airport (PSHIA):
 - a. PSHIA Premises Distribution System Standards:
 - 1) PSHIA Communication Network and Infrastructure Systems Design.
7. Telecommunications Industry Association/Electronic Industries Association (TIA/EIA):
 - a. ANSI/TIA/EIA-568-B.1 - Commercial Building Telecommunications Cabling Standard – Part 1: General Requirements.
 - b. ANSI/TIA/EIA-568-B.2 - Commercial Building Telecommunications Cabling Standard – Part 2: Balanced Twisted Pair Cabling Components.
 - c. ANSI/TIA/EIA-568-B.3 – Optical Fiber Cabling Components Standard.
8. National Institute of Standards and Testing (NIST):
 - a. NIST Policy on Traceability.
 - b. NIST Standard Reference Material (SRM).
9. Telecommunications Industry Association (TIA):
 - a. ANSI/TIA-455-78-B - FOTP-78 - IEC 60793-1-40 Optical Fibres Part 1-40: Measurement Methods and Text Procedures – Attenuation.
 - b. TIA-569-B – Commercial Building Standard for Telecommunications Pathways.
 - c. ANSI/TIA-606-A – Administrative Standard for Commercial Telecommunications Infrastructure.
 - d. TSB-140 – Additional Guidelines for Field Test Length, Loss and Polarity of Optical Fibers.
10. Underwriters Laboratories, Inc. (UL):
 - a. UL 2196 – Tests for Fire Resistive Cables.
 - b. UL-Field Test Instruments Verified to TIA/EIA 568-B.2 and 568-B.2.1.
 - c. UL Qualification Tests and Follow-Up Service Requirements.
 - d. UL Product Directories.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Cooperate with the Program/Project Manager, or its designee, to facilitate the oversight of the testing services.
 - a. Notify the Program/Project Manager at least 2 weeks prior to the expected time of operations requiring inspection and testing services.
 - 1) When tests or inspections cannot be performed after such notice, notify the Program/Project Manager.
 - b. Oversight by the Owner in no way relieves the Contractor's obligations to perform the Work of the Contract.
2. Cooperate with laboratory personnel, and provide access to the Work.
3. Provide incidental labor and facilities to provide access to work to be tested, to facilitate tests and inspections, and for storage of test equipment.

B. Scheduling:

1. Provide communications field verification services in a timely manner for acceptance testing of the installation.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Certificates:
 - 1) Copies of the termination and test equipment calibration documents, and certification that the equipment calibration meets NIST standards.
 - b. Delegated Design Submittals:
 - 1) Communications Systems Testing Plan.
 - c. Qualification Statements:
 - 1) Qualifications of the Communication System Field Verification Team.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Certified copies of the field verification reports.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
 2. Code Compliance Testing:
 - a. Unless otherwise provided in the Contract Documents, responsibility for arranging for the inspections and tests required by codes or ordinances and which are made by a legally constituted authority, or by an Authority Having Jurisdiction responsible for plan approval for the Site, is the Contractor's.
 3. Communications Systems Testing Plan:
 - a. Develop a Communications Systems Testing Plan, and submit it to the Program/Project Manager for approval.
 - 1) Include a list of the termination and test equipment to be used to perform work.
- B. Qualifications:
1. Communication System Field Verification Team's Qualifications:
 - a. Employ a Communication System Field Verification Team certified by the communications equipment manufacturers as having completed the necessary training to complete the field verification activities specified herein.
 - 1) The Communication Testing Agency must employ a BICSI Registered Communications Distribution Designer (RCDD) who will be responsible for the onsite supervision of the Communication System Field Verification Team.
 - 2) The communications equipment field verification team must demonstrate their knowledge and compliance with all applicable BICSI, TIA/EIA, UL, and NFPA standards and codes.
 - b. Submit the qualifications of the Communication System Field Verification Team, including resumes that include documentation of completed training courses.
- C. Certifications:
1. Underwriters Laboratories, Inc. (UL) Listing:
 - a. Provide both non-shielded plenum and non-shielded nonplenum copper cable that is UL[®] listed for fire safety.
 2. ISO 9001 Certification:
 - a. Provide both non-shielded plenum and non-shielded nonplenum copper cable that is ISO 9001 certified.

PART 2 PRODUCTS

2.01 COMMUNICATIONS SYSTEMS

- A. Performance:
1. Attenuation:

- a. The general attenuation equation for any link segment is as follows:
 - 1) Link Attenuation equals Cable Attenuation plus Connection Attenuation plus Fusion Splice Attenuation.
 - 2) 62.5 μ m Multimode Attenuation Coefficients:
 - a) Cable Attenuation: Cable Length (km) times either 3.75dB/km at 850nm or 1.5dB/km at 1300nm.
 - b) Connection Attenuation (ST connectors): 0.75dB for each connector pair.
 - c) Fusion Splice Attenuation: Splices times 0.30dB.
 - 3) 8 μ m Single Mode Attenuation Coefficients:
 - a) Cable Attenuation: Cable Length (km) times either 1.0dB/km at 1310nm or 1.0dB/km at 1550nm.
 - b) Connection Attenuation (SC connectors): 0.75dB for each connector pair.
 - c) Fusion Splice Attenuation: Splices times 0.30dB.
 - b. If lower maximum attenuation values are specified by the chosen manufacturer, then take responsibility for meeting those maximum attenuation values specified by the manufacturer.
- B. Design Criteria:
- 1. Comply with the requirements specified in the PSHIA Premises Distribution System Standards, and the following:
 - a. ANSI/INCITS 231 (ANSI X3T9.5).
 - b. ANSI/TIA-606-A.
 - c. BICSI OSPDRM.
 - d. BICSI TDMM.
 - e. ISO/IEC 11801.
 - f. TIA-569-B.
 - g. TSB-140.
 - 2. Conflicts:
 - a. If conflicts between referenced requirements arise, comply with the one establishing the more stringent requirements.
 - b. If conflicts between referenced requirements and the Contract Documents arise, comply with the one establishing the more stringent requirements.
- C. Materials:
- 1. Telecommunications Building Wiring:
 - a. Communications Backbone Cabling:
 - 1) Provide communications backbone cabling complying with the requirements specified in Section 16712, Communications Backbone Cabling.
 - b. Communications Horizontal Cabling:
 - 1) Provide communications horizontal cabling complying with the requirements specified in Section 16713, Communications Horizontal Cabling.

PART 3 EXECUTION

3.01 REPAIR/RESTORATION

- A. Bring Category 6 pairs not meeting the requirements of the standards into compliance at no increase in Contract Price.
- B. Bring optical fiber cable links not meeting the requirements of the standards into compliance at no increase in Contract Price.

3.02 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. Site Tests:
 - a. Perform the testing and verification specified herein.
 - 1) Furnish termination and test equipment calibrated in accordance with the traceability requirements of the National Institute of Standards and Testing (NIST).
 - 2) Submit a copy of the termination and test equipment calibration documents, and certification that the equipment calibration meets NIST standards and has been calibrated at least once in the previous calendar year.
 - b. Have all of the communications testing performed witnessed by the Program/Project Manager.
 - c. Inspections and testing performed exclusively for the convenience of the Contractor are the sole responsibility of the Contractor.
 - 2. Field Verification Reports:
 - a. After each inspection and test, promptly submit a certified copy of the field verification report to the Program/Project Manager within one week of completion of each test.
 - 1) Include the following in each report:
 - a) Date Issued.
 - b) Project and Contract title and number.
 - c) Contract phase of testing.
 - d) Field verification tester's name, address, and telephone number.
 - e) Name of the inspector, and job number.
 - f) Date and time of the sampling or inspection.
 - g) Record of the temperature and weather conditions.
 - h) Date of the test.
 - i) Identification of applicable Specification Section.
 - j) Location of the test in the Contract.
 - k) Cable identification, where applicable.
 - l) Type of inspection or test.
 - m) Results of the tests, and compliance with Contract Documents.

- n) Interpretation of the test results.
3. Category 6 Cable Test:
- a. Test Procedure:
- 1) Test Category 6 cable runs as outlined in ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and ANSI/TIA/EIA-568-B.3 for full conformance to the requirements specified for Category 6 cable in these standards and in the Contract Documents.
 - a) At a minimum, furnish a UL-Certified Level III test set complying with the requirements specified to perform the testing.
 - 2) Indicate the following information in the field verification report:
 - a) Length.
 - b) Wire map.
 - c) Characteristic impedance.
 - d) Attenuation.
 - e) Propagation delay.
 - f) Delay skew.
 - g) Return loss.
 - h) Near-End Crosstalk (NEXT).
 - i) Far-End Crosstalk (FEXT).
 - j) Equal-Level Far-End Crosstalk (ELFEXT).
 - k) Power Sum Equal-Level Far-End Crosstalk (PSELFEXT).
 - l) Attenuation to Crosstalk Ratio (ACR).
 - 3) Category 6 Cable Electrical Characteristics:
 - a) Verify that the Category 6 cables provided have the electrical characteristics listed in Table 16081-8.

Table 16081-8 - Category 6 Cable Electrical Characteristics	
Characteristic	Acceptable Value(s)
Mutual capacitance	47.8 nF/m
Characteristic impedance	($\pm 3\%$) of 100 Ohms 1-550 MHz
Maximum DC resistance	9.83 Ohms/100m)
Positive attenuation to crosstalk ratio (ACR)	Out to 395 MHz-km

- 4) Category 6 Cables Frequency Response:
 - a) Verify that the Category 6 cables provided meet or exceed the electrical characteristics indicated in Table 16081-9.

**Table 16081-9 - Category 6 Cable Electrical Characteristics**

Frequency (MHz)	Attenuation dB/100m	NEXT (dB)	PS NEXT (dB)	ELFEXT (dB)	PS ELFEXT	Return Loss
0.772	1.6	76.0	74.0	70.0	67.0	‡
1	1.8	74.3	72.3	67.8	64.8	20
4	3.6	65.3	63.3	55.7	52.7	23
8	5.1	60.8	58.8	49.7	46.7	24.5
10	5.8	59.3	57.3	47.8	44.8	25
16	7.3	56.3	54.3	43.7	40.7	25
20	8.2	54.8	52.8	41.7	38.7	25
25	9.2	53.3	51.3	39.8	36.8	24
31.25	10.4	51.9	49.9	37.9	34.9	24
62.5	15.0	47.4	45.4	31.8	28.8	22
100	19.3	44.3	42.3	27.8	24.8	20
200	28.3	39.8	37.8	21.7	18.7	18
250	32.1	38.3	36.3	19.8	16.8	17
300	35.6	37.2	35.2	18.2	15.2	17
350	38.9	36.2	34.2	16.9	13.9	16
400	42.0	35.3	33.3	15.7	12.7	16
450	45.0	34.5	32.5	14.7	11.7	16
500	47.9	33.8	31.8	13.8	10.8	15
550	50.6	33.2	31.2	12.9	9.9	15

- 5) Submit complete end to end test results to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) To be acceptable, both ends of the Category 6 cable runs must pass ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and ANSI/TIA/EIA-568-B.3 acceptance requirements.
4. Optical Time-Domain Reflectometer (OTDR) Test:
 - a. Test Procedure:

- 1) Prior to installation of the optical fiber cable, test the cable while it is still on the reel with an optical time-domain reflectometer (OTDR).
- 2) In the completed end to end system, test all fibers by performing a bidirectional end to end OTDR trace in accordance with the requirements specified in ANSI/TIA-455-78-B.
 - a) Only use the optical time-domain reflectometer (OTDR) to determine the length of the cable and the attenuation of that cable.
 - b) Use a power meter to determine the overall link attenuation, including the connectors.
 - c) Measure the system loss for multimode fibers at 850 and 1300 nanometers, and for single mode fibers at 1310 and 1550 nanometers.
- 3) Calculate the loss numbers for the installed link by taking the sum of the bidirectional measurements and dividing that sum by 2.
 - a) Calculate the acquired loss statement only for the cable, and do not include the connectors as part of the calculated loss.
- 4) Submit documentation of the test to the point of contact to the Program/Project Manager for information.
- b. Acceptance Criteria:
 - 1) Fiber optic cables having a loss equal to or less than the maximum allowable loss, which equals the allowable cable loss per kilometer times the length of the fiber in the link measured in kilometers, are acceptable.
5. Light Meter and Source Test:
 - a. Test Procedure:
 - 1) Test optical fiber cable with power meters.
 - 2) Unless the manufacture requires bi-directional testing to comply with warranty requirements, test the multimode inter-building and composite link segments in one direction at both 850-nm and 1300-nm wavelengths.
 - 3) Unless the manufacture requires bi-directional testing to comply with warranty requirements, test the singlemode inter-building and composite link segments in one direction at both 1310-nm and 1550-nm wavelengths.
 - b. Acceptance Criteria:
 - 1) Fiber links having a loss equal to or less than the maximum allowable loss, which equals the allowable cable loss per kilometer times the length of the fiber in the link measured in kilometers plus 0.75dB per connector pair plus 0.3dB per fusion splice, are acceptable.
6. Inspections:
 - a. At a minimum, the Program/Project Manager, or its designated representative, will perform random and unannounced onsite reviews during the installation of copper cable.

- a) Conformance test 100 to 400 pair non-shielded plenum copper cable to verify compliance with the electrical requirements specified in ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and ANSI/TIA/EIA-568-B.3 for Category 3 cables.
- b) Verify that the non-shielded plenum copper cable meets or exceeds the electrical specifications listed in Tables 16081-2, Table 16081-3, and Table 16081-4.

Table 16081-2 - Non-Shielded Plenum Copper Cable Electrical Characteristics	
Characteristic	Acceptable Value(s)
Maximum DC Resistance	28.6 Ω /1,000 feet (9.38 Ω /100m)
Maximum DC Resistance Unbalanced	5 percent
Maximum Capacitance Unbalanced (pair to ground)	1,000 pF/1000 feet (328pF/m)
Mutual Capacitance @ 1kHz, maximum	16 nF/1000 feet (5.2nF/100 m)

Table 16081-3 - Non-Shielded Plenum Copper Cable Attenuation (dB/100m [328 feet])	
Frequency	Attenuation (Max.)
1.00 MHz	7 dB
4.00 MHz	15 dB
10.00 MHz	26 dB
16.00 MHz	35 dB

Table 16081-4- Non-Shielded Plenum Copper Cable Worst Pair Near-End Crosstalk (NEXT) (dB/100m [328 ft])	
Frequency	Pair-To-Pair NEXT
1.0 MHz	41 dB
4.0 MHz	32 dB
10.0 MHz	26 dB
16.0 MHz	23 dB

- 1) Non-Shielded Nonplenum Copper Cable:

- a) Conformance test 25 to 1800 pair non-shielded nonplenum copper cable to verify compliance with the electrical requirements specified in ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and ANSI/TIA/EIA-568-B.3 for Category 3 cables.
- b) Verify that the non-shielded nonplenum copper cable meets or exceeds the electrical specifications listed in Tables 16081-5, Table 16081-6, and Table 16081-7.

Table 16081-5 - Non-Shielded Nonplenum Copper Cable Resistance and Capacitance

Type of Resistance or Capacitance	Acceptable Value(s)
Maximum DC Resistance	28.6 Ω /1,000 feet (9.4 Ω /100m)
Maximum DC Resistance Unbalanced	5 percent
Maximum Capacitance Unbalanced (pair to ground)	1,000 pF/1000 feet (328 pF/m)
Mutual Capacitance at 1kHz, maximum	18 nF/1000 feet (5.9 nF/100 m)

Table 16081-6- Non-Shielded Nonplenum Copper Cable Attenuation (dB/100 m [328 ft.])

Frequency	Attenuation (Max.)
1.00 MHz	2.3 dB
4.00 MHz	4.9 dB
10.00 MHz	8.5 dB
16.00 MHz	12 dB

Table 16081-7- Non-Shielded Nonplenum Copper Cable Worst Pair Near-End Crosstalk [NEXT] (dB/100m [328 ft])

Frequency	Pair-To-Pair NEXT
1.0 MHz	13.8 dB
4.0 MHz	11.2 dB
10.0 MHz	10.2 dB
16.0 MHz	9.2 dB

- 1) Submit documentation of the test to the Program/Project Manager for information.

3.03 SYSTEM STARTUP

- A. Provide system startup as specified in Section 16702, Basic Communications Materials and Methods.

SECTION 16120

CONDUCTORS AND CABLES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for building wires and cables rated 600 V and less.
 - 2. Requirements for connectors, splices, and terminations rated 600 V and less.
 - 3. Requirements for sleeves and sleeve seals for cables.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 02316 - Trenching and Backfilling.
 - 3. Section 07850 – Through Penetration Firestopping Systems.
 - 4. Section 07920 – Joint Sealants.
 - 5. Section 16061 - Electrical Grounding and Bonding.
 - 6. Section 16071 –Seismic Controls.
 - 7. Section 16075 – Electrical Identification.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. EPDM: Ethylene-propylene-diene terpolymer rubber.
 - 2. NRTL: Nationally recognized testing laboratory.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
- C. Reference Standards:
 - 1. ASTM International (ASTM):
 - a. ASTM A 53/A 53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
 - 2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
 - 4. InterNational Electrical Testing Association (NETA):
 - a. ANSI/NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment and Systems.
 - 5. National Electrical Manufacturers Association (NEMA)

- a. ANSI/NEMA WC 70 - Nonshielded Power Cables Rated 2000 Volts or Less for the Distribution of Electrical Energy.
- 6. National Fire Protection Association (NFPA).
 - a. NFPA 70 – National Electrical Code (NEC).
- 7. Underwriters Laboratories, Inc. (UL).
 - a. UL 486A- UL 486B – Wire Connectors.
- 8. United States Government:
 - a. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1910 Occupational Health and Safety Standards.

1.03 SUBMITTALS

A. Action Submittals:

- 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Copper conductors.
 - 2) Multiconductor cables.
 - 3) Connectors and splices.
 - 4) Steel pipe sleeves.
 - 5) Cast-iron pipe sleeves.
 - 6) Sleeves for rectangular openings.
 - 7) Sleeve seals.
 - b. Certificates:
 - 1) NETA Certificates for the conductors and cables.
 - c. Qualification Statements:
 - 1) Electrical Testing Laboratory's qualifications.
 - 2) Electrical Testing Laboratory Field Supervisor's qualifications

B. Informational Submittals:

- 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Conductors and Cables Test Report.
 - 2) Certified copy of the Record of Infrared Scanning.

1.04 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

- 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- 2. Special Inspections:

- a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
- B. Qualifications:
 - 1. Electrical Testing Laboratory (ETL) Qualifications:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, employ a member company of the InterNational Electrical Testing Association (NETA) or an independent nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7 having the experience and capability to conduct the testing required, and acceptable to the Authorities Having Jurisdiction.
 - b. Submit the qualifications of the Electrical Testing Laboratory (ETL) to the Program/Project Manager for approval.
 - 2. Electrical Testing Laboratory's Field Supervisor's Qualifications:
 - a. To supervise the onsite testing specified, designate a person to be the Electrical Testing Laboratory's Field Supervisor who is currently certified by the InterNational Electrical Testing Association (NETA) or the National Institute for Certification in Engineering Technologies (NICET).
 - b. Submit the qualifications of the Electrical Testing Laboratory's Field Supervisor to the Program/Project Manager for approval.
- C. Certifications:
 - 1. Electrical Listing and Labeling:
 - a. Provide conductor products that are listed and labeled as defined in Article 100 of NFPA 70 by Underwriters Laboratory, or certified as meeting the standards of UL by the Electrical Testing Laboratory (ETL) acceptable to the Authorities Having Jurisdiction (AHJ), for the location the product is installed in and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended location and/or application.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.

- a) Such evidence may consist of either a printed mark on the data or a separate listing card.

PART 2 PRODUCTS

2.01 PRODUCT TYPES

A. Manufacturers:

1. Substitution Limitations:

- a. The manufacturers and specific part numbers listed in this Section are provided as an aid in the construction process and are not meant to preclude other manufacturers that may be qualified to provide electrical conductor and cable products.
- b. Other manufacturers with comparable qualifications may be proposed but are subject to review as an approved equal.
- c. Provide the standard products of a manufacturer regularly engaged in the manufacture of electrical conductor and cable products.

2. Product Options:

a. Product Data:

- 1) Submit manufacturers Product Data for the conductor and cable products proposed for the Work of this Section to the Program/Project Manager for approval.

B. Regulatory Requirements:

- 1. Comply with all codes, ordinances, regulations, and other legal requirements of public authorities, which bear on performance of the Work of this Section, including among others the following:
 - a. Phoenix Building Construction Code and Amendments.

C. Design Criteria:

- 1. Provide conductors and cables complying with the requirements specified in NFPA 70, and specified for the individual products.
- 2. Conductor Material Requirements by Application:
 - a. Feeders:
 - 1) For No. 10 AWG and smaller sizes, provide solid copper conductors.
 - 2) For No. 8 AWG and larger sizes, provide stranded copper conductors.
 - b. Branch Circuits:
 - 1) For No. 10 AWG and smaller sizes, provide solid copper conductors.
 - 2) For No. 8 AWG and larger sizes, provide stranded copper conductors.
- 3. Conductor Insulation and Multiconductor Requirements:
 - a. Service Entrances:
 - 1) Provide Type XHHW single conductors in raceway.

- b. Concealed Feeders:
 - 1) For feeders concealed in ceilings, walls, partitions, or crawlspaces, provide Type XHHW single conductors in raceway.
 - 2) For feeders concealed in concrete, below slabs-on-grade, and underground, provide Type XHHW single conductors in raceway.
- c. Concealed Branch Circuits:
 - 1) For branch circuits concealed in ceilings, walls, or partitions, provide Type THHN-THWN single conductors in raceway.
 - 2) For branch circuits concealed in concrete, below slabs-on-grade, and underground, provide Type XHHW single conductors in raceway.
- d. Cord Drops and Portable Appliance Connections:
 - 1) Provide Type SO hard service cord with a stainless-steel, wire-mesh, strain relief device at terminations to suit the application.
- e. Class 1 Control Circuits:
 - 1) Provide Type THHN-THWN conductors in raceway.
- 4. Coordinate the selection and application of sleeves for cables with the selection and application of the firestopping materials specified in Section 07850, Through-Penetration Firestopping Systems.

D. Materials:

- 1. Conductors and Cables:
 - a. Copper Conductors:
 - 1) Provide copper conductors complying with the requirements specified in NEMA WC 70.
 - 2) Conductor Insulation:
 - a) Provide insulation for copper conductors complying with the requirements for Types THW, THHN-THWN, XHHW, and SO specified in NEMA WC 70.
 - b. Multiconductor Cables:
 - 1) Provide multiconductor cable complying with the requirements for Type SO with a ground wire specified in NEMA WC 70.
 - c. Manufacturers:
 - 1) Alcan Products Corporation; Alcan Cable Division, <http://www.stabiloy.com/cablepublic/en-US>.
 - 2) Leviton Company, www.leviton.com.
 - 3) General Cable Corporation, www.generalcable.com.
 - 4) Southwire Company, www.southwire.com.
 - 5) Approved equal.
- 2. Connectors and Splices:
 - a. Provide factory-fabricated connectors and splices of the size, ampacity rating, material, type, and class for the application and service indicated in the Contract Documents.
 - b. Manufacturers:
 - 1) AFC Cable Systems, Inc., www.afcweb.com
 - 2) Hubbell Power Systems, Inc., www.hubbellpowersystems.com

- 3) EGS/O-Z/Gedney, www.o-zgedney.com.
 - 4) 3M; Electrical Products Division. www.3m.com
 - 5) Tyco Electronics Corp., <http://www.te.com/usa-en/home.html>.
 - 6) Approved equal.
3. Sleeves for Cables:
- a. Steel Pipe Sleeves:
 - 1) Provide Schedule 40, galvanized steel pipe sleeves with plain ends complying with the requirements specified for Type E, Grade B steel in ASTM A 53/A 53M.
 - b. Cast-Iron Pipe Sleeves:
 - 1) Unless otherwise indicated in the Contract Documents, provide cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and an integral waterstop.
 - c. Sleeves for Rectangular Openings:
 - 1) Provide galvanized sheet steel, a minimum 0.052 (1.3mm) thick or as otherwise indicated, and of a length to suit the application.
4. Sleeve Seals:
- a. To fill the annular space between sleeves and cables, provide a modular sealing device designed for field assembly.
 - b. Sealing Elements:
 - 1) Provide EPDM interlocking links shaped to fit the surface of the cable or conduit.
 - 2) Provide the type and number of sealing elements required for the material and size of the raceway or cable.
 - c. Pressure Plates:
 - 1) Provide 2 carbon steel pressure plates for each sealing element.
 - d. Connecting Bolts and Nuts:
 - 1) Provide carbon steel bolts and nuts having a corrosion-resistant coating, and of the length required to secure the pressure plates to the sealing elements.
 - 2) Provide one set of bolts and nuts for each sealing element.
 - e. Manufacturers:
 - 1) Advance Products & Systems, Inc., www.apsonline.com.
 - 2) Calpico, Inc., www.calpicoinc.com.
 - 3) Metraflex Co., www.metraflex.com.
 - 4) GPT, www.pipeline-seal.com.
 - 5) Approved equal.

2.02 ACCESSORIES

- A. Firestopping Materials:
1. Provide firestopping materials complying with the requirements specified in Section 07850, Through-Penetration Firestopping Systems.
- B. Joint Sealant:

1. Provide joint sealant complying with the requirements specified in Section 07850, Joint Sealants.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions:

1. Inspect all conduits, junction boxes, electrical vaults, and handholes to verify that they are clean, that they do not have burrs, that conduits are properly aligned, and that they are complete.
 - a. Ensure that on all conduits without threaded hubs, two locknuts are installed.
 - b. Ensure that in all conduits with wires larger than No. 10, bushings are installed.
 - c. Ensure that grounding bushings and fittings are installed at all places specified in Section 16061, Electrical Grounding and Bonding.
 - d. Verify that proper sized boxes are installed.
2. Verify that boxes and conduit fittings conform to the bending requirements specified in Article 314 of NFPA 70 (NEC).

B. Evaluation and Assessment:

1. Do not begin installing wiring until other work which might cause damage to the wires, cables, or conduits has been completed.
 - a. Correct deficiencies in conduits, junction boxes, electrical vaults, and handholes that have been discovered by inspection.

3.02 PREPARATION

A. Protection of In-Place Conditions:

1. Protect adjacent areas from damage resulting from installation of the conductors and cables.
2. Take the necessary precautions to prevent water, dirt, or other foreign material from accumulating in the conduits during the execution of wiring work.

B. Surface Preparation:

1. Perform excavation, trenching, and backfilling, if required, as specified in Section 02316, Trenching and Backfilling.
2. Prepare conduits to receive wire and cable.
 - a. Swab the conduits with a nylon brush and steel mandrel.
 - b. Pre-lubricate the conduits for which the pulling tension calculations are based on a coefficient of friction less than that of a dry conduit.
3. Verify that pulling calculations have been made and are available for long conduit runs and pulls as indicated in this Section.

4. Verify that a means of controlling the pulling tension on the wire or cable is installed on the mechanical assist devices furnished for pulling cable.

3.03 INSTALLATION

A. Conductors and Cables:

1. Unless otherwise indicated in the Contract Documents, conceal cables in finished walls, ceilings, and floors.
2. Pulling Cable:
 - a. Furnish a means for pulling cables, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage the cables or raceway.
 - b. Provide a manufacturer-approved pulling compound or lubricant where necessary.
 - 1) The compound provided must not deteriorate the conductor or insulation.
 - c. When pulling cable, do not exceed the manufacturer's recommended maximum pulling tensions and sidewall pressure values.
3. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours where possible.
4. Identify and color-code conductors and cables in accordance with the requirements specified in Section 16075, Electrical Identification.
5. Support cables in accordance with the requirements specified in Section 16070, Hangers and Supports, and Section 16071 –Seismic Controls.

B. Connections:

1. Make splices and taps that are compatible with the conductor material, and that possess equivalent or better mechanical strength and insulation ratings than un-spliced conductors.
 - a. For aluminum conductors, provide oxide inhibitor in each splice and tap conductor.
2. Tighten electrical connectors and terminals according to the manufacturer's published torque-tightening values.
 - a. If the manufacturer's torque values are not indicated, tighten the electrical connectors and terminals in accordance with the requirements specified in UL 486A and UL 486B.
3. Wiring at Outlets:
 - a. Install conductors at each outlet having at least 6 inches of slack.

C. Special Techniques:

1. Sleeves for Electrical Penetrations:
 - a. Set sleeves for electrical penetrations in cast-in-place concrete, masonry walls, and other structural components as they are constructed.
 - 1) Install the sleeves during the erection of concrete slabs and walls.

- b. Provide pipe sleeves unless the penetration arrangement requires a rectangular sleeved opening.
 - 1) For rectangle sleeves having perimeters less than 50 inches and having no side greater than 16 inches, provide 0.052-inch thick sleeves.
 - 2) For rectangle sleeves having perimeters equal to or greater than 50 inches and having one or more sides greater than 16 inches, provide 0.138 -inch thick sleeves.
 - 3) Size pipe sleeves to provide 1/4-inch annular clear space between the sleeve and the cable unless sleeve seal is to be installed or seismic criteria require different clearance.
- c. For sleeves mounted in walls, cut the sleeves to length flush with both wall surfaces.
- d. For sleeves mounted in floors, extend the sleeves 2 inches above finished floor level.
- e. Seal the space outside sleeves with grout for penetrations of concrete and masonry, and with approved joint compound for gypsum board assemblies.
- f. Interior Penetrations of Non-Fire-Rated Walls and Floors:
 - 1) Seal the annular space between the sleeve and cable using joint sealant appropriate for size, depth, and location of the joint.
- g. Fire-Rated-Assembly Penetrations:
 - 1) At cable penetrations of fire-rated walls, partitions, ceilings, and floors, maintain the fire rating indicated in the Contract Documents.
 - 2) Install sleeves, and seal the penetration with firestopping materials as specified in Section 07850, Through-Penetration Firestopping Systems, to restore original fire-resistance rating of the assembly.
- h. Aboveground Exterior-Wall Penetrations:
 - 1) For electrical penetrations through aboveground exterior walls, provide sleeves and mechanical sleeve seals to seal the penetration.
 - 2) Size the sleeves to allow for a 1-inch annular clear space between the pipe and sleeve for installing the mechanical sleeve seals.
- i. Underground Exterior-Wall Penetrations:
 - 1) For electrical penetrations through underground exterior walls, provide cast-iron "wall pipes".
 - 2) Size the wall pipes to allow for a 1-inch annular clear space between the cable and wall pipe for installing mechanical sleeve seals.
- 2. Sleeve Seals for Sleeves:
 - a. To seal underground exterior-wall penetrations, provide sleeve seals.
 - b. Provide the type and number of sealing elements recommended by the manufacturer for the cable material and size.
 - c. Position the cable in the center of the sleeve.

- d. Assemble the mechanical sleeve seals, and install it in the annular space between the cable and sleeve.
 - e. Tighten the seals bolts against pressure plates to cause the sealing elements to expand and make a watertight seal.
- D. Interface with Other Work:
 - 1. Concrete Slabs and Walls:
 - a. Unless core-drilled holes or formed openings have been provided in concrete slabs and walls for electrical penetrations, provide sleeves for the penetrations.
 - 2. Fire-Rated Assemblies:
 - a. For electrical penetrations of fire-rated floor and wall assemblies, unless openings compatible with the firestopping system used are fabricated during construction of the floor or wall, provide sleeves.
 - 3. Roof-Penetrations:
 - a. For penetrations by individual electrical cables through roofs, provide flexible boot-type flashing units applied in coordination with the roofing Work to seal the penetrations.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. Perform each visual and mechanical inspection and electrical test specified in ANSI/NETA ATS for conductors and cables.
 - a. Submit NETA Certificates for the conductors and cables that certify compliance with required NETA test results to the Program/Project Manager for information.
 - 2. Site Tests:
 - a. After installing conductors and cables, and before electrical circuitry has been energized, test the service entrance and feeder conductors, and conductors feeding the following critical equipment and services for compliance with the requirements specified:
 - 1) Panelboards.
 - 2) Switchboards.
 - 3) Motor control centers.
 - b. Perform the electrical testing specified for conductors and cables in Section 16080, Electrical Testing.
 - c. Conductors and Cables Test Report:
 - 1) Prepare a written Conductors and Cables Test Report to record the following:
 - a) Test procedures used.
 - b) Test results that comply with the requirements specified.
 - c) Test results that do not comply with the requirements specified, and corrective action taken to achieve compliance with the requirements.

- 2) Submit the Conductors and Cables Test Report to the Program/Project Manager for information.
3. Inspections:
 - a. Infrared Scanning:
 - 1) Instrument:
 - a) Furnish an infrared scanning device designed to measure temperature or to detect significant deviations from normal values.
 - (1) Submit a copy of the calibration record for the device to the Program/Project Manager for information.
 - 2) Initial Scan:
 - a) After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each splice in 3 AWG and larger cables and conductors.
 - b) Remove the box and equipment covers so splices are accessible to the portable scanner.
 - 3) Follow-up Infrared Scanning:
 - a) 11 months after the date of Substantial Completion, perform a follow-up infrared scan of each splice.
 - 4) Record of Infrared Scanning:
 - a) Prepare a certified report that identifies splices checked and that describes scanning results.
 - b) Record deficiencies detected, remedial action taken, and observations after remedial action in the report.
 - 5) Submit a certified copy of the Record of Infrared Scanning to the Program/Project Manager for information.

B. Non-Conforming Work

1. Remove and replace malfunctioning units, and have the replacements retested as specified herein.

SECTION 16121

MEDIUM-VOLTAGE WIRE, CABLE, AND ACCESSORIES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for cables and related splices, terminations, and accessories for medium-voltage electrical distribution systems.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01780 - Closeout Submittals.
 - 3. Section 02316 - Trenching and Backfilling.
 - 4. Section 07850 - Through-Penetration Firestopping Systems.
 - 5. Section 16050 - Basic Electrical Materials and Methods.
 - 6. Section 16061 - Electrical Grounding and Bonding.
 - 7. Section 16075 - Electrical Identification.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. EPDM: Ethylene propylene diene M-class rubber.
 - 2. PVC: Polyvinyl-chloride.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Intumescent: A substance that swells as a result of heat exposure, thus increasing its volume and decreasing its density.
 - 3. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.
- C. Reference Standards:
 - 1. The Association of Edison Illuminating Companies (AEIC):
 - a. AEIC CS8 – Specification for Extruded Dielectric Shielded Power Cables Rated 5 through 46 kV.
 - 2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.

3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
4. Insulated Cable Engineers Association, Inc. (ICEA):
 - a. ICEA S-97-682 – Standard for Utility Shielded Power Cables Rated 5 Through 46 kV.
 - b. ICEA T-31-610 – Test Method for Conducting Longitudinal Water Penetration Resistance Tests on Blocked Conductors.
5. Institute of Electrical and Electronic Engineers (IEEE):
 - a. IEEE C2 – National Electric Safety Code.
 - b. IEEE 48 – IEEE Standard Test Procedures and Requirements for Alternating-Current Cable Terminations 2.5kV Through 765 kV.
 - c. IEEE 386 – IEEE Standard for Separable Insulated Connector Systems for Power Distribution Systems Above 600 V.
 - d. IEEE 404 – IEEE Standard for Extruded and Laminated Dielectric Shielded Cable Joints Rated 2500 V to 500 000 V.
 - e. IEEE 576 – IEEE Recommended Practice for Installation, Termination, and Testing of Insulated Power Cable as Used in Industrial and Commercial Applications.
6. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
7. InterNational Electrical Testing Association (NETA):
 - a. ANSI/NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment and Systems.
 - b. ANSI/NETA ETT - Standard for Certification of Electrical Testing Technicians.
8. National Electrical Manufacturing Association (NEMA):
 - a. ANSI/NEMA WC 74/ICEA S-93-639 - 5-46 kV Shielded Power Cable for Use in the Transmission and Distribution of Electric Energy.
9. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code (NEC).
10. Underwriters Laboratories, Inc. (UL):
 - a. UL 1072 – Standard for Safety Medium-Voltage Power Cables.
11. United States Government:
 - a. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1910 Occupational Health and Safety Standards.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved

Agency, and the City, prior to incorporating items requiring testing by them into the Work.

B. Sequencing:

1. Install and clean raceway, conduit, and ductbank for medium-voltage cables, and excavate trenches for direct-burial medium-voltage cables, prior to installing the medium-voltage cables.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Medium-voltage cables.
 - 2) Splice kits.
 - 3) Shielded-cable terminations.
 - 4) Terminations at distribution points.
 - 5) Load-break cable terminators.
 - 6) Dead-break cable terminators.
 - 7) Dead-front terminal junctions.
 - 8) Surge Arrestors.
 - 9) Test-point fault indicators.
 - b. Samples:
 - 1) Samples of each type of medium-voltage cable.
 - c. Certificates:
 - 1) Electrical Listing and Labeling.
 - 2) Manufacturer's Material Certificates for each type of cable and accessory.
 - d. Qualification Statements:
 - 1) Medium-voltage cable installer's qualifications.
 - 2) Testing Agency's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Splicing kit manufacturer's recommended types, and detailed instructions for installing the splicing products.
 - b. Source Quality Control Submittals:
 - 1) Medium-Voltage Cable Test reports.
 - 2) Water-Penetration Resistance Test reports.
 - c. Site Quality Control Submittals:
 - 1) NETA Certificates for the medium-voltage conductors and cables.

C. Maintenance Material Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Tools:
 - 1) Tool set, including the shotgun hot stick with an energized terminal indicator, fault-indicator test tool, and carrying case

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - c. Periodic Special Inspections will be performed during the installation of medium-voltage wire, cable, and accessories.
2. Testing and Inspection Agencies:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Qualifications:

1. Medium-Voltage Cable Installer's Qualifications:
 - a. Engage a cable splicer, trained and certified by the splice material manufacturer, to install, splice, and terminate the medium-voltage cable.
 - b. Submit the medium-voltage cable installer's qualifications to the Program/Project Manager for approval.
2. Testing Agency's Qualifications:
 - a. Employ a Testing Agency that is a member company of the InterNational Electrical Testing Association, or a nationally recognized testing laboratory (NRTL), that is acceptable to the Authorities Having Jurisdiction (AHJ), and that has the experience and capability to conduct the testing specified herein.
 - 1) Testing Agency's Field Supervisor:
 - a) The Testing Agency's field supervisor to supervise onsite field quality control testing must be currently certified by the

InterNational Electrical Testing Association (NETA) or the National Institute for Certification in Engineering Technologies (NICET).

- 2) Submit the qualifications of the Testing Agency, including the Testing Agency field supervisor's qualifications, to the Program/Project Manager for approval.

C. Certifications:

1. Electrical Listing and Labeling:

- a. Provide products that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
- b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

2. Manufacturer's Material Certificates of Compliance:

- a. Submit material certificates, signed by the manufacturers, to the Program/Project Manager that certify each type of cable and accessory complies with the specified requirements, including compliance with the referenced standards and the type designations within the standards:

D. Site Samples:

1. Submit 16-inch long Samples of each type of medium-voltage cable to be provided under this Section to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Inspect materials and equipment for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.

B. Storage and Handling Requirements:

1. Handle materials in accordance with the manufacturer's written instructions.
2. Store all products, whether on-site or off-site, indoors on blocking or pallets.
3. Follow the manufacturer's written instructions for storing the items.
4. Store electrical products under cover in heated warehouses or in enclosed buildings that provide protection from the weather on all sides and are equipped with auxiliary heat.

1.07 SITE CONDITIONS

A. Existing Conditions:

1. Interruption of Existing Electric Service:
 - a. Do not interrupt electric service to facilities occupied by the Owner or others unless permitted under the following conditions, and then only after arranging to provide temporary electric service according to the requirements indicated:
 - 1) Notify the Program/Project Manager no fewer than 2 days in advance of the proposed interruption of electric service.
 - 2) Do not interrupt electric service without the Program/Project Manager's written permission.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

A. Manufacturers:

1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain cables and accessories through one source from a single manufacturer.

B. Description:

1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. National Electrical Code (NEC) and Other Codes:

- 1) Provide products and installation complying with requirements specified for medium-voltage wire, cable, and accessories in NFPA 70 and IEEE C2.

C. Performance:

1. Cables:

- a. Provide medium-voltage cables complying with the performance requirements specified in UL 1072, AEIC CS8, ANSI/NEMA WC 74/ICEA S-93-639, and ICEA S-97-682.

D. Design Criteria:

1. Cables:

- a. Provide medium-voltage cables complying with the design requirements specified in UL 1072, AEIC CS8, ANSI/NEMA WC 74/ICEA S-93-639, and ICEA S-97-682.

2. Shielded-Cable Terminations:

- a. Provide shielded-cable terminations complying with the requirements for the following classes as specified in IEEE 48:

1) Class 1 Terminations:

- a) Modular type, furnished as a kit, with a stress-relief tube; multiple, molded-silicone rubber, insulator modules; a shield ground strap; and a compression-type connector.
- b) Modular type, furnished as a kit, with a stress-relief shield terminator; multiple-wet-process, porcelain, insulator modules; a shield ground strap; and a compression-type connector.
- c) Heat-shrink type with heat-shrink inner stress control and outer non-tracking tubes; multiple, molded, non-tracking skirt modules; and a compression-type connector.

2) Class 1 Terminations, Indoors:

- a) Kit with a stress-relief tube, a non-tracking insulator tube, a shield ground strap, a compression-type connector, and an end seal.

3) Class 2 Terminations, Indoors:

- a) Kit with a stress-relief tube, a non-tracking insulator tube, a shield ground strap, and a compression-type connector.
 - (1) Include silicone-rubber tape, a cold-shrink-rubber sleeve, or a heat-shrink plastic-sleeve moisture seal for the end of the insulation whether or not it is supplied with the kits.

4) Class 3 Terminations:

- a) Kit with a stress cone and a compression-type connector.

3. Separable Connector Systems:

- a. Provide insulated separable connectors complying with the requirements specified in IEEE 386, and designed to accommodate the cable voltage and to seal against the intrusion of moisture.

4. Product Data:

- a. Submit manufacturers Product Data for each type of medium-voltage cable product proposed for the Work of this Section to the Program/Project Manager for approval.
 - 1) Include splices and terminations for the cables, and cable accessories.

E. Materials:

1. Medium-Voltage Cables:

- a. Provide medium-voltage cables complying with the following requirements:
 - 1) Cable Type:
 - a) Provide cables complying with the requirements for MV105 type cable as specified in UL 1072.
 - 2) Conductors:
 - a) Provide copper conductors.
 - 3) Conductor Stranding:
 - a) Provide cables having compressed round, concentric lay, Class B conductor stranding.
 - 4) Strand Filling:
 - a) Fill the conductor interstices of the medium-voltage cables with impermeable compound that complies with the following requirements:
 - (1) Voltage Rating: 15 kV.
 - (2) Insulation Thickness: 133 percent insulation level.
 - 5) Conductor Insulation:
 - a) Insulate the medium-voltage cable conductors with ethylene-propylene rubber complying with the following requirements:
 - (1) Voltage Rating: 15 kV.
 - (2) Insulation Thickness: 133 percent insulation level.
 - 6) Shielding:
 - a) Provide copper tape shielding on the medium-voltage cables, helically applied over a semiconducting insulation shield.
 - 7) Shielding and Jacket:
 - a) Provide corrugated copper drain wires embedded in an extruded, chlorinated, polyethylene jacket on the medium-voltage cables.
 - 8) Cable Jacket:
 - a) Provide a sunlight-resistant PVC cable jacket on the medium-voltage cables.
- b. Manufacturers:
 - 1) General Cable Technologies Corporation, www.generalcable.com/GeneralCable.
 - 2) The Okonite Company, www.okonite.com.
 - 3) Prismian Energy. Cables and Systems, www.prysmian.com.
 - 4) Southwire Company, www.southwire.com.

5) Approved Equal.

2.02 ACCESSORIES

A. Splice Kits:

1. Connectors and Splice Kits:

- a. Provide connectors and splice kits complying with the requirements specified in EEE 404; of the type recommended by the cable or splicing kit manufacturer for the application.

2. Splicing Products:

- a. Provide the following types of splicing products as recommended, in writing, by the splicing kit manufacturer for the specific sizes, ratings, and configurations of the cable conductors:
 - 1) Combination tape and cold-shrink-rubber sleeve kit with re-jacketing by cast-epoxy-resin encasement or other waterproof, abrasion-resistant material.
 - 2) Heat-shrink splicing kit of uniform, cross-section, polymeric construction with outer heat-shrink jacket.
 - 3) Premolded, cold-shrink-rubber, in-line splicing kit.
 - 4) Premolded EPDM splicing body kit with cable joint sealed by interference fit of mating parts and cable.
- b. Include all components required for a complete splice.
- c. Submit the splicing kit manufacturer recommended types, and detailed instructions for installing the splicing products, to the Program/Project Manager for information.
- d. Manufacturers:
 - 1) Engineered Products Company (EPCO), www.engproducts.com.
 - 2) G&W Electric Company, www.gwelec.com.
 - 3) MP Husky, www.mphusky.com.
 - 4) Tyco Electronics, Raychem Products, www.raychemsupply.com/Raychem.
 - 5) RTE Industrial Components, www.rtecomponents.com.
 - 6) Adalet, a Scott Fetzer Company, www.adalet.com.
 - 7) Thomas & Betts Corporation, www.tnb.com.
 - 8) Thomas & Betts Corporation/Elastimold, www.tnb.com/ps/util.
 - 9) 3M; Electrical Products Division, <http://solutions.3m.com/wps>.
 - 10) Approved Equal.

B. Solid Terminations:

1. Shielded-Cable Terminations:

- a. Provide shielded-cable terminations having the insulation class equivalent to that of the cable being terminated.
 - 1) Include a shield ground strap for shielded cable terminations.
- b. Manufacturers:
 - 1) Engineered Products Company (EPCO), www.engproducts.com.

- 2) G&W Electric Company, www.gwelec.com.
- 3) MP Husky, www.mphusky.com.
- 4) Tyco Electronics, Raychem Products, www.raychemsupply.com/Raychem.
- 5) RTE Industrial Components, www.rtecomponents.com.
- 6) Adalet, a Scott Fetzer Company, www.adalet.com.
- 7) Thomas & Betts Corporation, www.tnb.com.
- 8) Thomas & Betts Corporation/Elastimold, www.tnb.com/ps/util.
- 9) 3M; Electrical Products Division, <http://solutions.3m.com/wps>.
- 10) Approved Equal.

C. Surge Arrestors

1. Surge Arrestors:
 - a. Provide surge arrestors that conform to IEEE Std 386-2006.
 - b. Manufacturers:
 - 1) Engineered Products Company (EPCO), www.engproducts.com.
 - 2) G&W Electric Company, www.gwelec.com.
 - 3) MP Husky, www.mphusky.com.
 - 4) Tyco Electronics, Raychem Products, www.raychemsupply.com/Raychem.
 - 5) RTE Industrial Components, www.rtecomponents.com.
 - 6) Adalet, a Scott Fetzer Company, www.adalet.com.
 - 7) Thomas & Betts Corporation, www.tnb.com.
 - 8) Thomas & Betts Corporation/Elastimold, www.tnb.com/ps/util.
 - 9) 3M; Electrical Products Division, <http://solutions.3m.com/wps>.
 - 10) Approved Equal.

D. Separable Insulated Connectors:

1. Provide modular disconnecting, single-pole, cable terminators with matching, stationary, plug-in, dead-front terminals.
2. Terminations at Distribution Points:
 - a. For distribution points, provide modular type terminations consisting of terminators installed on cables, and of modular, dead-front, terminal junctions for the interconnecting cables.
3. Load-Break Cable Terminators:
 - a. For load-break cable terminators, provide elbow-type units with a 200 Amp load make/break and a continuous-current rating; coordinated with the insulation diameter, conductor size, and material of the cable being terminated.
 - b. Include a test point on the terminator body that is capacitance coupled.
4. Dead-Break Cable Terminators:
 - a. For dead-break cable terminators, provide an elbow-type unit with a 600 Amp continuous-current rating designed for de-energized

- disconnecting and connecting, and coordinated with the insulation diameter, conductor size, and material of the cable being terminated.
- b. Include a test point on the terminator body that is capacitance coupled.
- 5. Dead-Front Terminal Junctions:
 - a. For dead-front terminal junctions, provide modular bracket-mounted groups of stationary terminals that mate and match with specified cable terminators.
 - b. Provide two-, three-, or four-terminal units as indicated in the Contract Documents, and having fully rated, insulated, watertight conductor connections between the terminals and a grounding lug.
 - c. Provide terminals complete with the manufacturer's standard accessory stands, stainless-steel mounting brackets, and attaching hardware.
 - d. Protective Cap:
 - 1) Provide an insulating, electrostatic-shielding, water-sealing protective cap with a drain wire.
 - e. Feed-Through Accessory Units:
 - 1) Provide portable, two-terminal, removable dead-front junctions arranged for mounting on an accessory stand of the stationary terminal junction.
 - f. Grounding Kit:
 - 1) Provide a grounding kit consisting of jumpered elbows, portable feed-through accessory units, protective caps, test rods suitable for concurrently grounding the 3 phases of the feeders, and a carrying case.
 - g. Standoff Insulator:
 - 1) Provide portable, single removable dead-front terminals for mounting on an accessory stand of the stationary terminal junction.
 - a) Provide insulators suitable for fully insulated isolation of the energized cable-elbow terminators.
- 6. Test-Point Fault Indicators:
 - a. Provide test-point fault indicators having the applicable current-trip ratings, arranged for installation in the test points of the load-break separable connectors, and complete with self-resetting indicators capable of being installed with a shotgun hot stick and of being tested with test tool.
- 7. Tool Set:
 - a. Furnish a shotgun hot stick with an energized terminal indicator, a fault-indicator test tool, and a carrying case.
 - b. Submit the tool set to the Program/Project Manager at the completion of medium-voltage wire and cable.
- 8. Manufacturers:
 - a. Engineered Products Company (EPCO), www.engproducts.com.

- b. G&W Electric Company, www.gwelec.com.
 - c. MP Husky, www.mphusky.com.
 - d. Tyco Electronics, Raychem Products, www.raychemsupply.com/Raychem.
 - e. RTE Industrial Components, www.rtecomponents.com.
 - f. Adalet, a Scott Fetzer Company, www.adalet.com.
 - g. Thomas & Betts Corporation, www.tnb.com.
 - h. Thomas & Betts Corporation/Elastimold, www.tnb.com/ps/util.
 - i. 3M; Electrical Products Division, <http://solutions.3m.com/wps>.
 - j. Approved Equal.
- E. Arc-Proofing Materials:
- 1. Tape for the First Course on Metal Objects:
 - a. Provide corrosion-protective, moisture-resistant, polyvinyl-chloride (PVC) pipe-wrapping tape 10 mils thick.
 - 2. Arc-Proofing Tape:
 - a. Provide flexible, conformable, fireproof tape that is intumescent to 0.3 inch thick and compatible with the cable jacket.
 - 3. Glass-Cloth Tape:
 - a. Provide pressure-sensitive adhesive type, 1/2 inch wide.
- F. Fault Indicators:
- 1. Indicators:
 - a. Provide automatically reset fault indicators having an inrush restraint feature, and arranged to clamp to the cable sheath and provide a display after a fault has occurred in the cable.
 - 1) Provide an instrument that is not affected by heat, moisture, and corrosive conditions; and that is recommended by the manufacturer for the installation conditions.
 - 2. Resetting Tool:
 - a. Provide a resetting tool designed for use with the fault indicators, and a moisture-resistant storage and carrying case.

2.03 SOURCE QUALITY CONTROL

- A. Tests and Inspections:
- 1. Materials specified in this Section require advance examination or laboratory testing according to the methods referenced herein, or as required by the Program/Project Manager.
 - 2. Medium-Voltage Cable Test:
 - a. Test Procedure:
 - 1) Prior to shipping medium-voltage cables to the Site, test the cables in accordance with the procedures specified in ICEA S-97-682.
 - 2) Document the testing, and prepare and submit certified test reports to the Program/Project manager for information.

- b. Acceptance Criteria:
 - 1) Shielded power cables complying with the requirements specified in ICEA S-97-682 pass the Shielded Cable Test, and may be shipped to the Site.
 - 3. Water-Penetration Resistance Test:
 - a. Test Procedure:
 - 1) Test strand-filled or sealed conductors for water-penetration resistance in accordance with the procedures specified in ICEA T-31-610 using a test pressure of 5 psig.
 - 2) Document the testing, and prepare and submit certified test reports to the Program/Project manager for information.
 - b. Acceptance Criteria:
 - 1) Strand-filled cables complying with the requirements specified in ICEA T-31-610 pass the Water-Penetration Resistance Test, and may be shipped to the Site.
 - 4. Inspections:
 - a. Prior to shipping medium-voltage cables to the Site, inspect the cables in accordance with the procedures specified in ICEA S-97-682.
- B. Non-Conforming Work:
- 1. Do not ship non-conforming materials to the Site.
- C. Coordination of Other Tests and Inspections:
- 1. Notify the code-required Approved Agency responsible for performing special inspections when medium-voltage cables for this Contract are being manufactured and/or tested.
 - 2. Cooperate with the code-required Approved Agency when they are performing required material verifications and other special inspections.
 - a. Provide full access to the Work.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
- 1. Inspect all conduits, junction boxes, electrical vaults, and handholes to verify that they are clean, that they do not have burrs, that conduits are properly aligned, and that they are complete.
 - a. Ensure that on conduits without threaded hubs, two locknuts are installed.
 - b. Ensure that in all conduits with wires larger than No. 10, bushings are installed.
 - c. Ensure that grounding bushings and fittings are installed at all places specified in Section 16061, Electrical Grounding and Bonding.
 - d. Verify that proper sized boxes are installed.

2. Verify that boxes and conduit fittings conform to the bending requirements specified in Article 314 of NFPA 70 (NEC).

B. Evaluation and Assessment:

1. Do not begin installing wiring until other work which might cause damage to the wires, cables, or conduits has been completed.
 - a. Correct deficiencies in conduits, junction boxes, electrical vaults, and handholes that have been discovered by inspection.

3.02 PREPARATION

A. Protection of In-Place Conditions:

1. Protect adjacent areas from damage resulting from installation of the medium-voltage cables.
2. Take the necessary precautions to prevent water, dirt, or other foreign material from accumulating in the conduits during the execution of wiring work.

B. Surface Preparation:

1. Perform excavation, trenching, and backfilling, if required, as specified in Section 02316, Trenching and Backfilling.
 - a. For medium-voltage cables that will be direct-buried within a trench, prepare, level, and tamp a 3-inch bed of sand.
2. Prepare conduits to receive wire and cable.
 - a. Swab the conduits with a nylon brush and steel mandrel.
 - b. Pre-lubricate the conduits for which the pulling tension calculations are based on a coefficient of friction less than that of a dry conduit.
3. Verify that pulling calculations have been made and are available for long conduit runs and pulls as indicated in this Section.
4. Verify that a means of controlling the pulling tension on the wire or cable is installed on the mechanical assist devices furnished for pulling cable.

3.03 INSTALLATION

A. Install medium-voltage cables in accordance with the requirements specified in IEEE 576.

1. At pull points and where indicated on the Contract Drawings, install medium-voltage cable splices using standard kits.
2. Install terminations at the ends of conductors, and seal multi-conductor cable ends using standard kits.
3. In manholes, handholes, pull boxes, junction boxes, and cable vaults, train medium-voltage cables around the walls by the longest route from the entry to the exit, and support cables at intervals adequate to prevent sag.
4. Support medium-voltage cables in accordance with the requirements specified in Section 16050, Basic Electrical Materials and Methods.

5. Install exposed cables parallel and perpendicular to the surfaces of exposed structural members, and follow the surface contours wherever possible.
 6. Provide surge arrestors on all cable terminations that conform to IEEE Std 386-2006.
- B. Pulling Conductors:
1. Do not exceed the manufacturer's recommended maximum pulling tensions and sidewall pressure values.
 2. Where necessary, use manufacturer-approved pulling compound or lubricant that will not deteriorate the conductor or insulation.
 3. Use pulling means, including fish tape, cable, rope, and basket-weave cable grips that will not damage the cables and raceways.
 4. Do not use rope hitches for a pulling attachment to the cable.
- C. Separable Insulated-Connector Components:
1. Where indicated on the Contract Drawings, install separable insulated-connector components as follows:
 - a. Protective Caps:
 - 1) Install protective caps at each terminal junction, with one on each terminal to which no feeder is indicated to be connected.
 - b. Portable Feed-Through Accessory:
 - 1) Install 3 portable feed-through accessories.
 - c. Standoff Insulator:
 - 1) Install 3 standoff insulators.
- D. Arc Proofing:
1. Unless otherwise indicated, arc proof medium-voltage cable at locations not protected by conduit, cable tray, direct burial, or termination materials.
 2. In addition to following the arc-proofing tape manufacturer's written instructions, apply arc proofing as follows:
 - a. Clean the cable sheath.
 - b. Wrap metallic cable components with 10-mil pipe-wrapping tape.
 - c. Smooth surface contours with electrical insulation putty.
 - d. Apply arc-proofing tape in 1 half-lapped layer with the coated side toward the cable.
 - e. Band arc-proofing tape with 1 inch wide bands of half-lapped, adhesive, glass-cloth tape 2 inches apart on center.
- E. Grounding:
1. Ground the shields of shielded medium-voltage cable at terminations, splices, and separable insulated connectors.
 - a. Ground the metal bodies of terminators, splices, cable and separable insulated-connector fittings, and hardware.
- F. Fault Indicators:

1. Install fault indicators on each phase wherever indicated on the Contract Drawings.

G. Special Techniques:

1. Firestopping:
 - a. Seal around medium-voltage cables passing through fire-rated elements in accordance with the requirements specified in Section 07850, Through-Penetration Firestopping Systems.
2. Identification:
 - a. Identify medium-voltage cables in accordance with the requirements specified in Section 16075, Electrical Identification.
 - 1) Install permanent markers at the ends of cable runs, changes in direction, and buried splices.
 - 2) Install "buried-cable" warning tape 12 inches above buried medium-voltage cables.

H. Interface with Other Work:

1. Separate buried medium-voltage cables crossing other cables or piping by a minimum of 4 inches of tamped earth.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. During the period when concrete is being placed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials or proportions requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
2. InterNational Electrical Testing Association (NETA) Tests:
 - a. Provide NETA Tests on all existing medium voltage cables feeders A1, A2, A3, and P1 and on all new feeders A4 and A5.
 - b. Test Procedure:
 - 1) After installing medium-voltage cables but before the electrical circuitry has been energized, have the Testing Agency perform

- each electrical test specified in ANSI/NETA ATS for conductors and cables.
- 2) Submit NETA Certificates for the medium-voltage conductors and cables that certify compliance with required NETA test results to the Program/Project Manager for information.
 - c. Acceptance Criteria:
 - 1) Medium-voltage cables complying with the requirements specified in ANSI/NETA ATS pass the NETA Tests.
 3. Inspections:
 - a. Each visual and mechanical inspection specified in ANSI/NETA ATS for conductors and cables will be performed.
- B. Non-Conforming Work
1. Remove malfunctioning units, replace them with new and acceptable material, and retest the replacements materials as specified herein.

SECTION 16123

CONTROL-VOLTAGE POWER CABLES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for control voltage power cables, including the following:
 - a. Unshielded twisted pair (UTP) cabling.
 - b. Low-voltage control cabling.
 - c. Control-circuit conductors.
 - d. Identification products.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 02316 - Trenching and Backfilling.
 - 3. Section 07850 – Through Penetration Firestopping System.
 - 4. Section 16061 – Electrical Grounding and Bonding.
 - 5. Section 16075 – Electrical Identification.
 - 6. Section 16130 – Raceways and Boxes.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. DC: Direct current.
 - 2. EMI: Electromagnetic interference.
 - 3. HVAC: Heating ventilation and air conditioning.
 - 4. IDC: Insulation displacement connector.
 - 5. NRTL: Nationally recognized testing laboratory.
 - 6. PVC: Polyvinyl chloride.
 - 7. RCCD: Registered Communications Distribution Designer.
 - 8. UTP: Unshielded twisted pair.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control and signaling power-limited circuits.
 - 3. Open Cabling: Passing telecommunications cabling through open space; for instance, between the studs of a wall cavity.
- C. Reference Standards:
 - 1. American National Standards Institute (ANSI):

- a. ANSI/J-STD-607-A – Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications.
2. ASTM International (ASTM):
 - a. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
3. Building Industry Consulting Services International (BICSI):
 - a. BICSI ITSIMM - Information Transport Systems Installation Methods Manual.
 - b. BICSI TDMM - Telecommunications Distribution Methods Manual.
4. Insulated Cable Engineers Association, Inc. (ICEA):
 - a. ANSI/ICEA S-90-661 - ICEA Standard for Individually Unshielded Twisted Pair Indoor Cables (with or without an Overall Shield) for Use in General Purpose and LAN Communication Wiring Systems.
5. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code (NEC).
 - b. NFPA 262 - Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces.
6. National Electrical Contractors Association (NECA):
 - a. NECA 1 – Standard Practices for Good Workmanship in Electrical Construction.
7. Telecommunications Industry Association/Electronic Industries Association (TIA/EIA):
 - a. ANSI/TIA/EIA-568-B.1 - Commercial Building Telecommunications Cabling Standard – Part 1: General Requirements.
 - b. ANSI/TIA/EIA-568-B.2 - Commercial Building Telecommunications Cabling Standard – Part 2: Balanced Twisted Pair Cabling Components.
 - c. ANSI/TIA/EIA-568-B.3 – Optical Fiber Cabling Components Standard.
 - d. ANSI/TIA/EIA-606-A – Administration Standard for Commercial Telecommunications Infrastructure.
8. Telecommunications Industry Association (TIA):
 - a. TIA-526-14-A – OFSTP-14 Optical Power Loss Measurements of Installed Multimode Fiber Cable Plant.
 - b. TIA-569-B – Commercial Building Standard for Telecommunications Pathways.
9. Underwriters Laboratories, Inc. (UL):
 - a. UL 83 – Thermoplastic-Insulated Wires and Cables.
 - b. UL 444 - Communications Cables.
 - c. UL 969 – Standard for Marking and Labeling Systems.
 - d. UL 1581 – Reference Standard for Electrical Wires, Cables, and Flexible Cords.

1.03 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Support of open cabling.
 - 2) Conduit and boxes.
 - 3) Unshielded twisted pair (UTP) cable.
 - 4) Unshielded twisted pair (UTP) cable hardware.
 - 5) Low-voltage control paired cable.
 - 6) Low-voltage control plenum-rated, paired cable.
 - 7) Control-circuit conductors.
 - b. Shop Drawings:
 - 1) Cable tray layout.
 - c. Delegated Design Submittals:
 - 1) Cable tray load calculations.
 - d. Qualification Statements:
 - 1) Electrical Testing Laboratory (ETL) qualifications.
 - 2) Electrical Testing Laboratory's Field Supervisor's qualifications.
- B. Informational Submittals:
 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Control-Voltage Power Cables Test and Inspection Reports

1.04 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 2. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
- B. Qualifications:
 1. Electrical Testing Laboratory (ETL) Qualifications:

- a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, employ a member company of the InterNational Electrical Testing Association or an independent nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7 having the experience and capability to conduct the testing required, and acceptable to the Authorities Having Jurisdiction.
 - b. Submit the qualifications of the Electrical Testing Laboratory (ETL) to the Program/Project Manager for approval.
 - 2. Electrical Testing Laboratory's Field Supervisor's Qualifications:
 - a. To supervise the onsite testing specified, designate a person to be the Electrical Testing Laboratory's Field Supervisor who is currently certified by the Building Industry Consulting Services International (BICSI) as a Registered Communications Distribution Designer (RCCD).
 - b. Submit the qualifications of the Electrical Testing Laboratory's Field Supervisor to the Program/Project Manager for approval.
- C. Certifications:
 - 1. Electrical Control-Voltage Power Cable Certification:
 - a. Provide products that are listed and labeled as defined in Article 100 of NFPA 70 by Underwriters Laboratory, or certified as meeting the standards of UL by the Electrical Testing Laboratory (ETL) acceptable to the Authorities Having Jurisdiction (AHJ), for the location the product is installed in and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended location and/or application.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Test cables upon receipt at the Site.
 - a. Test each pair of unshielded twisted pair (UTP) cable for open and short circuits.

1.06 SITE CONDITIONS

- A. Ambient Conditions:

1. Do not deliver or install unshielded twisted pair (UTP) and optical fiber cables and connecting materials until wet work in spaces is complete and dry, and a temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
2. Cold-Weather Installation:
 - a. Bring cable to room temperature before de-reeling.
 - b. Do not use heat lamps for heating.

PART 2 PRODUCTS

2.01 PRODUCT TYPES

- A. Manufacturers:
 1. Substitution Limitations:
 - a. The manufacturers and specific part numbers listed in this Section are provided as an aid in the construction process and are not meant to preclude other manufacturers that may be qualified to provide electrical conductor and cable products.
 - b. Other manufacturers with comparable qualifications may be proposed but are subject to review as an approved equal.
 - c. Provide the standard products of a manufacturer regularly engaged in the manufacture of electrical conductor and cable products.
 2. Product Options:
 - a. Product Data:
 - 1) Submit manufacturers Product Data for the conductor and cable products proposed for the Work of this Section to the Program/Project Manager for approval.
- B. Regulatory Requirements:
 1. Comply with all codes, ordinances, regulations, and other legal requirements of public authorities, which bear on performance of the Work of this Section, including among others the following:
 - a. Phoenix Building Construction Code and Amendments.
- C. Performance:
 1. Surface-Burning Characteristics:
 - a. Provide control-voltage power cables complying with the following surface-burning characteristics as determined by having a qualified testing agency test identical products in accordance with the requirements specified in ASTM E 84:
 - 1) Flame-Spread Index: 25 or less.
 - 2) Smoke-Developed Index: 50 or less.
 - b. Identify products with appropriate markings of the applicable testing agency.

D. Design Criteria:

1. For sizing pull-boxes, determining the allowable length of conduit and the number of bends between pull points, comply with the requirements specified in TIA-569-B.
2. Load Calculations:
 - a. Prepare cable tray load calculations to show that dead and live loads do not exceed the manufacturer's rating for the tray and its support elements.
3. Shop Drawings:
 - a. Prepare Shop Drawings of the cable tray layout showing the cable tray route in a scale drawing with the relationships between the tray and adjacent structural, electrical, and mechanical elements indicated; and include the following:
 - 1) Vertical and horizontal offsets and transitions.
 - 2) Clearances for access above and to side of cable trays.
 - 3) Vertical elevation of cable trays above the floor or bottom of ceiling structure.
4. Submit the Shop Drawings and load calculations to the Program/Project Manager for approval.

E. Materials:

1. Pathways:
 - a. Support of Open Cabling:
 - 1) Provide support for Category 6 cabling, labeled by a nationally recognized testing laboratory (NRTL), and designed to prevent degradation of cable performance and pinch points that could damage the cable.
 - 2) Support brackets with cable tie slots designed so cable ties can be fastened to the brackets, such as the following:
 - a) Lacing bars, spools, J-hooks, and D-rings.
 - b) Straps and other devices.
 - b. Conduit and Boxes:
 - 1) Provide conduits and boxes complying with the requirements specified in Section 16130, Raceways and Boxes.
 - a) Do not use flexible metal conduit.
 - b) Provide outlet boxes no smaller than 2 inches wide, 3 inches high, and 2-1/2 inches deep.
2. Backboards:
 - a. Provide 3/4 inch thick, fire-retardant treated plywood backboards, sized 48 inches wide by 96-inches long.
3. Unshielded Twisted Pair (UTP) Cable:
 - a. Provide 100-ohm, four-pair, unshielded twisted pair (UTP) cable complying with the requirements for Category 6 cable specified in TIA/EIA-568-B.2, and formed into 25-pair binder groups covered with a blue thermoplastic jacket.

- 1) Provide unshielded twisted pair (UTP) cable having the mechanical properties specified in ICEA S-90-661.
- 2) Provide unshielded twisted pair (UTP) cable complying with the performance requirements specified in TIA/EIA-568-B.1.
- 3) Provide products to be listed and labeled by a nationally recognized testing laboratory (NRTL) acceptable to the Authorities Having Jurisdiction as complying with the requirements specified in UL 444 and NFPA 70 for the following types:
 - a) Communications, General Purpose: Type CM or Type CMG.
 - b) Communications, Plenum Rated: Type CMP, complying with the requirements specified in NFPA 262.
 - c) Multipurpose: Type MP or Type MPG.
 - d) Multipurpose, Plenum Rated: Type MPP, complying with the requirements specified in NFPA 262.
- b. Manufacturers:
 - 1) Belden CDT Inc.; Electronics Division, www.belden.com
 - 2) Berk-Tek. www.berktek.com.
 - 3) CommScope, Inc., www.commscope.com
 - 4) Prysmian Group, <https://na.prysmiangroup.com/>.
 - 5) Genesis Cable Products; Honeywell International, Inc., www.genescable.com
 - 6) Superior Essex Inc., www.superioressex.com
 - 7) 3M; Electrical Products Division. www.3m.com
 - 8) Tyco Electronics Corp., www.te.com
4. Unshielded Twisted Pair (UTP) Cable Hardware:
 - a. Provide unshielded twisted pair (UTP) cable connecting hardware of the insulation displacement connector (IDC) type, using modules designed for punch-down caps or tools.
 - 1) Provide connecting hardware of the same category or higher for terminating cables.
 - b. Connecting Blocks:
 - 1) Provide 110 style blocks for the number of Category 6 cables terminated on the block, plus 25 percent spares.
 - 2) Provide connecting blocks integral with the connector bodies, including plugs and jacks, where indicated in the Construction Documents.
 - c. Manufacturers:
 - 1) American Technology Systems Industries, Inc.
 - 2) Dynacom Corporation, www.dynacomcorp.com
 - 3) Hubbell Premise Wiring, www.hubbell-premise.com
 - 4) KRONE Incorporated, www.adckrone.com
 - 5) Leviton Voice & Data Division, www.leviton.com
 - 6) Molex Premise Networks, www.molexpn.com
 - 7) Panduit Corp., www.panduit.com
 - 8) Siemon Co. (The)., www.siemon.com

- 9) Tyco Electronics Corp., www.te.com
- 5. Low-Voltage Control Cable:
 - a. Paired Cable:
 - 1) Provide paired cable complying with the requirements for Type CMG specified in NFPA 70, and consisting of one pair, twisted, 16 AWG, stranded (19x29) tinned-copper conductors, unshielded, and PVC insulated and PVC jacketed.
 - 2) Flame Resistance:
 - a) Provide paired cable complying with the requirements for flame resistance specified in UL 1581.
 - b. Plenum-Rated, Paired Cable:
 - 1) Provide plenum-rated, paired cable complying with the requirements for Type CMP specified in NFPA 70, and consisting of one pair, twisted, 16 AWG, stranded (19x29) tinned-copper conductors, unshielded, and PVC insulated and PVC jacketed.
 - 2) Flame Resistance:
 - a) Provide paired cable complying with the requirements for flame resistance specified in NFPA 262.
 - c. Control-Circuit Conductors:
 - 1) Class 1 Control Circuits:
 - a) Provide stranded copper conductor in raceway complying with the requirements for Type THHN-THWN specified in UL 83.
 - 2) Class 2 Control Circuits:
 - a) Provide stranded copper conductor in raceway complying with the requirements for Type THHN-THWN specified in UL 83.
 - 3) Class 3 Remote-Control and Signal Circuits:
 - a) Provide stranded copper conductor complying with the requirements for Type TW or Type TF specified in UL 83.

2.02 ACCESSORIES

- A. Identification Products:
 - 1. Provide identification products complying with the requirements specified in Section 16080, Electrical Identification.
 - a. Comply with the requirements specified in UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.
 - 2. Manufacturers:
 - a. Brady Corporation, www.bradyid.com
 - b. HellermannTyton, www.hellermannntyton.us
 - c. Kroy LLC., www.kroy.com
 - d. Panduit Corp., www.panduit.com

2.03 SOURCE QUALITY CONTROL

- A. Tests and Inspections:
 - 1. Materials specified in this Section require advance examination or laboratory testing according to the methods referenced herein, or as required by the Program/Project Manager.
 - a. Engage a qualified testing agency to evaluate the cables.
 - 2. Unshielded Twisted Pair and Optical Fiber Cable Reel Test:
 - a. Test Procedure:
 - 1) Factory-test unshielded twisted pairs (UTP) and optical fiber cables on reels in accordance with the requirements specified in ANSI/TIA/EIA-568-B.1.
 - 2) Prepare test and inspection reports, and submit them to the Program/Project manager for information.
 - b. Acceptance Criteria:
 - 1) Cable will be considered defective if it does not pass test and inspections.
 - 3. Unshielded Twisted Pair Test:
 - a. Test Procedure:
 - 1) Factory-test UTP cables in accordance with the requirements specified in ANSI/TIA/EIA-568-B.2.
 - 2) Prepare test and inspection reports, and submit them to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Cable will be considered defective if it does not pass the test and inspections.
 - 4. Multimode Optical Fiber Cable Test:
 - a. Test Procedure:
 - 1) Factory-test multimode optical fiber cables in accordance with the requirements specified in TIA-526-14-A and ANSI/TIA/EIA-568-B.3.
 - 2) Prepare test and inspection reports, and submit them to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Cable will be considered defective if it does not pass tests and inspections.
- B. Coordination of Other Tests and Inspections:
 - 1. Notify the code-required Approved Agency responsible for performing special inspections when control-voltage power cables for this Contract are being installed and/or tested.
 - 2. Cooperate with the code-required Approved Agency when they are performing required material verifications and other special inspections.
 - a. Provide full access to the Work.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Inspect all conduits, junction boxes, electrical vaults, and handholes to verify that they are clean, that they do not have burrs, that conduits are properly aligned, and that they are complete.
 - a. Ensure that on all conduits without threaded hubs, two locknuts are installed.
 - b. Ensure that in all conduits with wires larger than No. 10, bushings are installed.
 - c. Ensure that grounding bushings and fittings are installed at all places specified in Section 16061, Electrical Grounding and Bonding.
 - d. Verify that proper sized boxes are installed.
 - 2. Verify that boxes and conduit fittings conform to the bending requirements specified in Article 314 of NFPA 70 (NEC).
- B. Evaluation and Assessment:
 - 1. Do not begin installing wiring until other work which might cause damage to the wires, cables, or conduits has been completed.
 - a. Correct deficiencies in conduits, junction boxes, electrical vaults, and handholes that have been discovered by inspection.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the control-voltage power cables.
 - 2. Take the necessary precautions to prevent water, dirt, or other foreign material from accumulating in the conduits during the execution of wiring work.
- B. Surface Preparation:
 - 1. Perform excavation, trenching, and backfilling, if required, as specified in Section 02316, Trenching and Backfilling.
 - 2. Prepare conduits to receive wire and cable.
 - a. Swab the conduits with a nylon brush and steel mandrel.
 - b. Pre-lubricate the conduits for which the pulling tension calculations are based on a coefficient of friction less than that of a dry conduit.
 - 3. Verify that pulling calculations have been made and are available for long conduit runs and pulls as indicated in this Section.
 - 4. Verify that a means of controlling the pulling tension on the wire or cable is installed on the mechanical assist devices furnished for pulling cable.

3.03 INSTALLATION

- A. Backboards:
 - 1. Install backboards with the 96-inch dimension vertical.
 - 2. Butt adjacent sheets tightly together, and form smooth gap-free corners and joints.
- B. Pathways:
 - 1. Install conduits and wireways in accordance with the requirements specified in Section 16130, Raceways and Boxes.
 - a. Provide manufactured conduit sweeps and long-radius elbows, if possible.
 - 2. Pathway Installation in Equipment Rooms:
 - a. If a single piece of plywood is installed, position conduit ends adjacent to a corner on the backboard; or if multiple sheets of plywood are installed around the perimeter walls of the room position conduit ends in the corner of room.
 - 1) If conduits cannot be located in these positions, install cable trays to route cables.
 - 2) If the conduits enter the room from overhead, secure the conduits to the backboard.
 - b. Extend conduits 3 inches (75 mm) above the finished floor (AFF).
 - c. Provide grounding bushings on metal conduits, and connect the grounding bushings to the grounding system via grounding conductor.
- C. Conductors and Cables:
 - 1. Furnish and install conductors and cables in accordance with the requirements specified in NECA 1, ANSI/TIA/EIA-568-B.1, and Chapter 6, "Cable Termination Practices", in BICSI ITSIMM.
 - 2. Terminate all conductors.
 - a. Do not allow cable containing un-terminated elements.
 - b. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels.
 - 3. Do not splice cables.
 - a. Do not splice cable between termination, tap, or junction points.
 - 4. Secure and support cables at intervals not exceeding 30 inches; and not more than 6 inches from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
 - 5. Bundle, lace, and train conductors to terminal points without exceeding the manufacturer's limitations on bending radii, but not less than the radii specified in the "Cabling Termination Practices" Chapter in BICSI ITSIM.
 - a. Provide lacing bars and distribution spools.
 - 6. Do not install bruised, kinked, scored, deformed, or abraded cable.
 - a. Remove and discard cable damaged during installation, and replace it with new cable.
 - 7. Pulling Cable:

- a. Pull cable in accordance with the requirements specified in Chapter 4, "Pulling Cable", in BICSI ITSIMM.
 - b. Monitor cable pull tensions.
- D. Unshielded Twisted Pair (UTP) Cable:
 1. Furnish and install unshielded twisted pair (UTP) cable in accordance with the requirements specified in ANSI/TIA/EIA-568-B.2.
 2. Install 110-style insulation displacement connector (IDC) termination hardware unless otherwise indicated.
 3. Do not untwist unshielded twisted pair (UTP) cables more than 1/2 inch from the point of termination to maintain cable geometry.
- E. Control-Circuit Conductors:
 1. Install control-circuit wiring in raceways.
 2. Comply with the requirements specified in Section 16130, Raceways and Boxes.
- F. Separation from Electromagnetic interference (EMI) Sources:
 1. Comply with BICSI TDM and TIA-569-B recommendations for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
 2. Between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment, provide separation as follows:
 - a. For electrical equipment having ratings less than 2 kVA, provide a minimum separation of 5 inches.
 - b. For electrical equipment having ratings between 2 kVA and 5 kVA, provide a minimum separation of 12 inches.
 - c. For electrical equipment having ratings more than 5 kVA, provide a minimum separation of 24 inches.
 3. Between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment, provide separation as follows:
 - a. For electrical equipment having ratings less than 2 kVA, provide a minimum separation of 2-1/2 inches.
 - b. For electrical equipment having ratings between 2 kVA and 5 kVA, provide a minimum separation of 6 inches.
 - c. For electrical equipment having ratings more than 5 kVA, provide a minimum separation of 12 inches.
 4. Between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures, provide separation as follows:
 - a. For electrical equipment having ratings less than 2 kVA, there is no requirement.
 - b. For electrical equipment having ratings between 2 kVA and 5 kVA, provide a minimum separation of 3 inches.

- c. For electrical equipment having ratings more than 5 kVA, provide a minimum separation of 6 inches.
 - 5. Between cables and electrical motors and transformers rated 5 kVA or 5 HP and larger, provide a minimum separation of 48 inches.
 - 6. Between cables and fluorescent fixtures, provide a minimum separation of 5 inches.
- G. Control Circuit Conductors:
 - 1. Provide control circuit conductors not less than the following minimum sizes for the applications indicated:
 - a. For Class 1 remote-control and signal circuits, provide 14 AWG conductors, minimum.
 - b. For Class 2 low-energy, remote-control, and signal circuits, provide 16 AWG conductors, minimum.
 - c. For Class 3 low-energy, remote-control, alarm, and signal circuits, provide 12 AWG conductors, minimum.
- H. Grounding:
 - 1. For data communication wiring, provide grounding complying with requirements specified in ANSI/J-STD-607-A and with the "Grounding, Bonding, and Electrical Protection" Chapter in BICSI TDMM.
 - 2. For low-voltage wiring and cabling, provide grounding complying with requirements specified in Section 16061, Electrical Grounding and Bonding.
- I. Special Techniques:
 - 1. Firestopping:
 - a. Provide firestopping complying with requirements specified in Section 07850, Through-Penetration Firestopping Systems, and with the following:
 - 1) Comply with the requirements specified in Annex A, "Firestopping" of TIA-569-B.
 - 2) Comply with the requirements specified in the "Firestopping Systems" Article of BICSI TDMM.
 - 2. Identification:
 - a. Identify system components, wiring, and cabling according to accordance with the requirements specified in ANSI/TIA/EIA-606-A.
 - b. Provide system component, wiring, and cabling identification complying with requirements specified in Section 16075, Electrical Identification.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. Site Tests:

- a. Have the Electrical Testing Laboratory (ETL) perform the electrical testing specified for control-voltage power cables in Section 16080, Electrical Testing, and the testing specified herein:
 - 1) Test the cables after termination, but before cross connection.
 - 2) Have the Electrical Testing Laboratory (ETL) furnish test instruments that meet or exceed the applicable requirements specified in ANSI/TIA/EIA-568-B.2.
 - a) Perform tests with a tester that complies with the performance requirements in the "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in the "Measurement Accuracy (Informative)" Annex.
 - b) Use only test cords and adapters that are qualified by the test equipment manufacturer for the channel or link test configuration.
 - b. Unshielded Twisted Pair (UTP) Cabling Tests:
 - 1) Test Procedure:
 - a) Test unshielded twisted pair (UTP) cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors.
 - b) Document the data for each measurement.
 - 2) Acceptance Criteria:
 - a) Unshielded twisted pair (UTP) cabling complying with the performance requirements specified in TIA/EIA-568-B.1, having the proper polarity between conductors, and not having shorts, opens, intermittent faults will be acceptable.
 - c. Connection Block Test:
 - 1) Test Procedure:
 - a) Test the operation of the shorting bars in connection blocks.
 - b) Document the data for each measurement.
 - 2) Acceptance Criteria:
 - a) Connection blocks operating as designed by the manufacturer will be acceptable.
2. Inspections:
 - a. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
 - 1) Inspect cabling terminations to confirm the color-coding for pin assignments, and inspect cabling connections to confirm compliance with requirements specified in ANSI/TIA/EIA-568-B.1.
 - b. Visually inspect unshielded twisted pair (UTP) and optical fiber cable jacket materials for UL or third-party certification markings.
 3. Prepare Control-Voltage Power Cables Test and Inspection Reports.
 - a. Document the data for each measurement.
 - b. Print the data for submission to the Program/Project Manager in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide, or transfer the data directly from the instrument to the computer, save it as a text file, and print it, but in either case submit

the Control-Voltage Power Cables Test and Inspection Reports to the Program/Project Manager for information.

B. Non-Conforming Work

1. End-to-end cabling will be considered defective if it does not pass the specified tests and inspections.

SECTION 16130

RACEWAY AND BOXES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for providing, energizing, and testing conduit, tubing, and fittings for communication lines and electrical transmission, distribution and service lines.
 - 2. Requirements for providing, connecting, cleaning and protecting electrical pull boxes and junction boxes.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01400 - Quality Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 02582 – Underground Ducts and Manholes.
 - 5. Section 07850 – Through Penetration Firestopping Systems.
 - 6. Section 16061 – Electrical Grounding and Bonding.
 - 7. Section 16070 – Hangers and Supports.
 - 8. Section 16071 – Seismic Controls.
 - 9. Section 16120 – Conductors and Cables.

1.02 REFERENCES

- A. Acronyms and Abbreviations
 - 1. EMT: Electrical metallic tubing.
 - 2. FMC: Flexible metal conduit.
 - 3. HVAC: Heating, Ventilating, and Air-Conditioning.
 - 4. IMC: Intermediate metal conduit.
 - 5. LFMC: Liquid-tight flexible metal conduit.
 - 6. LFNC: Liquid -tight flexible nonmetallic conduit.
 - 7. NBR: Acrylonitrile-butadiene rubber.
 - 8. PVC: Polyvinyl chloride.
 - 9. RGS: Rigid galvanized steel conduit.
 - 10. RNC: Rigid nonmetallic conduit.
- B. Definitions:
 - 1. Standard terminology for raceway and boxes defined in NFPA 70, IEEE C2, and in other reference documents applies to the Work of this Section unless otherwise stated, specified, or noted.
 - 2. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.

3. Withstand: The cabinet or enclosure will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will retain its enclosure characteristics, including its interior accessibility, after the seismic event.

C. Reference Standards:

1. American National Standards Institute (ANSI):
 - a. ANSI C80.1 – American National Standard for Electrical Rigid Steel Conduit (ERSC).
 - b. ANSI C80.3 - American National Standard for Steel Electrical Metallic Tubing (EMT).
 - c. ANCI C80.5 - American National Standard for Electrical Rigid Aluminum Conduit (ERAC).
 - d. ANSI C80.6 - American National Standard for Electrical Intermediate Metal Conduit (EIMC).
2. ASTM International (ASTM):
 - a. ASTM A 53/A 53M: Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
 - b. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - c. ASTM C 1077 - Standard Practice for Laboratories Testing Concrete and Concretes for Use in Construction and Criteria for Laboratory Evaluation.
 - d. ASTM D 2582 - Standard Test Method for Puncture-Propagation Tear Resistance of Plastic Film and Thin Sheeting.
3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
4. Institute of Electrical and Electronics Engineers (IEEE):
 - a. IEEE C2– National Electrical Safety Code®.
5. International Organization for Standardization (ISO):
 - a. ISO 9000 – Quality Management Systems – Fundamentals and Vocabulary.
 - b. ISO 10012 - Measurement Management Systems -- Requirements for Measurement Processes and Measuring Equipment.
6. National Electrical Manufacturers Association (NEMA):
 - a. NEMA RN 1 – Polyvinyl-Chloride (PVC) Externally Coated Galvanized Rigid Steel Conduit and Intermediate Metal Conduit.
 - b. ANSI/NEMA FB 1 – Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit, Electrical Metallic Tubing and Cable.
 - c. NEMA TC 2 – Electrical Polyvinyl Chloride (PVC) Tubing and Conduit.
 - d. NEMA TC 3 – Polyvinyl Chloride (PVC) Fittings for Use with Rigid PVC Conduit and Tubing.
 - e. ANSI/NEMA OS 1 – Sheet-Steel Outlet Boxes, Device Boxes, Covers, and Box Supports.

- f. ANSI/NEMA OS 2 - Nonmetallic Outlet Boxes, Device Boxes, Covers and Box Supports.
 - g. NEMA 250 – Enclosures for Electrical Equipment (1000 Volts Maximum).
- 7. National Electrical Contractors Association (NECA):
 - a. ANSI/NECA 1 – Standard Practice of Good Workmanship in Electrical Contracting (ANSI).
- 8. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code (NEC).
- 9. Society of Cable Telecommunications Engineers (SCTE)
 - a. SCTE 77 – Specification for Underground Enclosure Integrity.
- 10. Underwriters Laboratories, Inc. (UL):
 - a. UL 6 – Electrical Rigid Metal Conduit.
 - b. UL 498 – Attachment Plugs and Receptacles.
 - c. UL 360 – Liquid-Tight Flexible Steel Conduit.
 - d. UL 514A – Metallic Outlet Boxes.
 - e. UL 514B – Fittings for Conduit and Outlet Boxes.
 - f. UL 797 – Electrical Metallic Tubing.
 - g. UL 886 – Standard for Safety Outlet Boxes and Fittings for Use in Hazardous (Classified) Locations.
 - h. UL 1242 – Electrical Intermediate Conduit.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

- 1. Coordination Drawings:
 - a. Prepare and submit Coordination Drawings to the Program/Project Manager for approval.
 - 1) Show the following items for this Contract drawn to scale, and coordinate them with each other:
 - a) Conduit routing plans.
 - b) HVAC, plumbing, and fire suppression items.
 - c) Structural members.

1.04 SUBMITTALS

A. Action Submittals:

- 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Rigid Polyvinyl Chloride (PVC) conduit.
 - 2) Non-metallic conduit solvent.
 - 3) Electrical Metallic Tubing (EMT).
 - 4) Intermediate Metal Conduit (IMC).
 - 5) Plastic coated rigid galvanized steel conduit.
 - 6) Liquid-tight flexible metal conduit.

- 7) Rigid Galvanized Steel conduit (RGS).
 - 8) Fittings for non-metallic conduit systems.
 - 9) Fittings for metallic conduit systems.
 - 10) Conduit spacers.
 - 11) Heat shrink tubing.
 - 12) Wall and floor penetration seals.
 - 13) Cast outlet boxes for general purpose applications used with steel conduit systems.
 - 14) Cast outlet boxes for general purpose applications used with coated conduit systems.
 - 15) Sheet metal boxes for general purpose applications.
 - 16) Outlet boxes for hazardous locations.
 - 17) Pull boxes for hazardous locations.
 - 18) Equipment and control device enclosures for all areas except outdoor and corrosive locations.
 - 19) Equipment and control device enclosures for outdoor locations.
 - 20) Equipment and control device enclosures for corrosive locations.
 - 21) Ground lug/bus bar.
 - 22) Cold galvanize coating.
 - b. Shop Drawings:
 - 1) Plans, elevations, sections, details, and attachments to other work.
 - 2) Coordination Drawings.
 - 3) Proposed departures from the original design.
 - c. Certificates:
 - 1) Electrical component, device, and accessory certification.
 - 2) Manufacturer seismic qualification certification.
 - d. Delegated Design Submittals:
 - 1) List of the materials proposed to satisfy the requirements of this Section.
 - e. Qualification Statements:
 - 1) Qualifications of the installers.
 - 2) Qualifications of the licensed electricians.
 - 3) Qualifications of the Electrical Testing Laboratory (ETL).
- B. Informational Submittals:
1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Factory test reports as specified for the products provided under this Section.
 - b. Manufacturer's Reports:
 - 1) Manufacturer's comprehensive calculations.
- C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Record Documentation:
 - 1) As-built Record Drawings.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 1. Perform the Work of this Section in accordance with the requirements specified in NFPA 70 (NEC), and to other applicable state, local, and national governing codes and regulatory requirements.
 2. All items installed from utility service poles to the main service panels must be approved by the serving utility, whether electrical service or telephone service.
 - a. To facilitate power utility approval of the items installed from the utility's service poles to the main service panels as specified in Subparagraph 1.05.A.2, submit 4 more copies of the conduit submittals than the number required by Section 01330, Submittal Procedures.
 3. Phoenix Building Construction Code:
 - a. Within buildings, perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
- B. Qualifications:
 1. Installer Qualifications:
 - a. Employ an installation firm with a minimum of 3 years documented experience installing conduit and tubing similar in type and scope to that required by this Contract to install the Work of this Section.
 - b. Employ skilled licensed electricians to supervise the Work of this Section.
 - c. Submit information verifying the installer's and licensed electrician's qualifications to the Program/Project Manager for approval.
 2. Electrical Testing Laboratory (ETL) Qualifications:
 - a. The City will employ an independent testing agency, qualified as specified in Section 01400, Quality Requirements Phoenix to perform the testing required by this Section.
- C. Certifications:
 1. Electrical Component, Device, and Accessory Certification:
 - a. Provide products that are listed and labeled as defined in Article 100 of NFPA 70 by Underwriters Laboratory, approved by Factory Mutual, or certified as meeting the standards of UL by the Electrical Testing Laboratory (ETL) acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these

nationally recognized testing laboratories are not available or unless standards do not exist for the products.

- 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.
2. Manufacturer Seismic Qualification Certification:
- a. Submit certification that the enclosures and cabinets, and their mounting provisions including those for internal components, will withstand the seismic forces defined in Section 16071, Seismic Controls.
 - 1) Basis for Certification:
 - a) Indicate whether withstand certification is based on an actual test of the assembled components or on calculations.
 - 2) Include the following:
 - a) Dimensioned outline drawings of equipment units identifying the center of gravity.
 - (1) Locate and describe mounting and anchorage provisions.
 - b) Detailed description of the equipment anchorage devices on which the certification is based, and their installation requirements.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver materials and equipment in a clean condition.
 - a. Provide packaging that plugs, caps, or otherwise seals openings both during shipping and temporary storage.
2. Provide equipment needed for unloading operations, and have such equipment on the Site to perform unloading work when the material and equipment is delivered.
 - a. If possible, clearly identify pick-points or lift-points on electrical equipment crating and packaging.
 - b. In the absence of pick-points or lift-points on equipment crating and packaging, identify pick-points or lift-points on the equipment itself.
 - c. When unloading materials and equipment, provide special lifting harnesses or apparatus as required by the manufacturers.

3. Inspect materials and equipment for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.
- B. Storage and Handling Requirements:
 1. Handle materials and equipment in accordance with the manufacturer's written instructions.
 2. Store all products whether on-site or off-site, indoors on blocking or pallets.
 3. Follow the manufacturer's written instructions for storing the items.
 4. Except for electrical conduit, store electrical equipment and products under cover in heated warehouses or in enclosed buildings that provide protection from the weather on all sides and are equipped with auxiliary heat.

PART 2 PRODUCTS

2.01 MANUFACTURERS:

- A. Substitution Limitations:
 1. The use of trade names within the Contract Documents is intended to establish the basis of design and to illustrate the constructability and level of quality required.
 2. The use of trade names is not intended to exclude other manufacturers whose products are equivalent to those named, subject to compliance with the Contract requirements.

2.02 REGULATORY REQUIREMENTS:

- A. Install the electrical Work of this Section in conformance to the wiring methods general requirements of Article 300 in NFPA 70 (NEC), and to all other applicable Articles of NFPA 70 governing wiring methods.
 1. Cut conduit and wireway square, and ream the cut ends according to the requirements of NFPA 70 (NEC) to deburr the openings so that they are not restricted more than cuts made by the material manufacturer.
- B. Within the areas labeled as "hazardous" on the Contract Drawings, only provide equipment, fittings, and wiring as indicated which are approved for Class 1, Division 1, Group D or Class II, Division 1, Group F locations as required by NFPA 70 (NEC) for the type of area in question and as specifically designed for this type of hazardous use.

2.03 DESIGN CRITERIA:

- A. Provide conduit of the type and material shown in Table 16130-1 for the application indicated, or as indicated on the Contract Drawings.

1. In a given location, provide only the type of conduit indicated or scheduled for that location except as modified by Subparagraphs 2.03.A.2, 2.03.A.3, 2.03.A.4, and 2.03.A.5.
2. For conduits embedded in concrete, use rigid galvanized steel (RGS) conduit.
3. Intermediate metal conduit (IMC) and fittings meeting the requirements of Subparagraph 2.04.G.2 may be used wherever rigid galvanized steel is specified.
4. For wall and floor penetrations, use only metallic raceways.
5. Use PVC coated flexible metal conduit and fittings in exposed areas.
6. On conduit that is installed outside, provide a second equipment ground conductor and use fittings with a built-in ground lug for bonding.
7. Provide flexible conduit only to the extent permitted by NFPA 70 (NEC).
 - a. In flexible conduits that do not have an integral ground wire, install a green insulated wire in addition to the neutral wire for grounding purposes.
 - 1) Form a "J" or "S" hook with a drip loop to allow flexibility.
 - 2) Provide a second equipment grounding conductor on outside conduit and provide fittings with built-in ground lug for bonding.
 - b. In exposed areas, use PVC coated flexible metal conduit and fittings.
 - c. Use flexible metal conduit or liquid tight flexible metal conduit for final connection to recessed lighting fixtures and rotating and vibrating equipment.
 - 1) Rotating and vibrating equipment includes such items as transformers, motors, solenoid valves, pressure switches, limit switches, generators, engine-mounted devices, and pipe-mounted devices.
 - 2) For motor connections, do not use a flexible conduit length exceeding 18 inches,
 - 3) For equipment connections, do not use a flexible conduit length exceeding 36 inches.
 - 4) For lighting fixture connections, do not use a flexible conduit length exceeding 72-inches.

Table 16130-1 CONDUIT SYSTEM SELECTION

Location	Condition 1	Condition 2	Conduit Type	Size (Minimum) ¹
Under-Ground	Encased (Red Concrete)	Bends, over 45 degrees in length	PVC Coated Rigid Galvanized Steel or Fiberglass-Reinforced Plastic	1 Inch
		Conduit Risers	PVC Coated Rigid Galvanized Steel	1 Inch

		Conduit within 6-inches of exit from encasement	PVC Coated Rigid Galvanized Steel	1 Inch
		Other	As indicated on the Contract Drawings	1 Inch
Above-Ground	Outside	Wet locations	PVC Coated Rigid Galvanized Steel or Intermediate Metal Conduit	3/4 Inch
		Other	Rigid Galvanized steel or Intermediate Metal Conduit	3/4 Inch
	Inside	Within 6-inches of floor	PVC Coated Rigid Galvanized Steel	3/4 Inch
		Above suspended ceilings	Electrical Metal Tubing	3/4 Inch
		Recess Mounted Lighting Fixtures and Rotating or Vibrating Equipment	Flexible Metal Conduit or Liquid-Tight Flexible Metal Conduit	3/4 Inch
		Concealed in Wall	Electrical Metal Tubing	3/4 Inch
		Feeders	Rigid Galvanized Steel	2" and Greater
	Other	Rigid Galvanized Steel	3/4 Inch	
1 No conduit smaller than 3/4-inch trade size is permitted unless indicated otherwise on the approved Shop Drawings.				

- B. Provide conduit fittings made of material identical to that of the conduit system with which they are used.
1. Provide fittings and apparatus as required to construct the approved electrical design.
 - a. Running threads on conduit are not permitted.
 - 1) Where couplings and connectors are required for metal conduits, use approved threaded couplings, compression fittings, and threaded connectors.

- b. Provide conduit unions where necessary to complete a conduit run when neither conduit end can be turned.
 - c. Where conduit and raceway runs cross building expansion joints, make provision for expansion in the conduit and raceway runs.
 - d. Provide sealing fittings with drain fittings in all lower runs and vertical runs.
 - e. Provide sealing covers for junction boxes where required.
 - f. Provide weatherproof conduit hubs on all conduit connections exterior to the building, and on instruments, process equipment, and pump motors.
- C. Product Data:
 - 1. Submit a list of the materials proposed to satisfy the requirements of this Section to the Program/Project Manager for approval.
 - 2. Submit the manufacturer's comprehensive calculations used to determine size requirements for the boxes to the Program/Project Manager for approval.
 - 3. Submit Product Data and catalog cuts of the materials and equipment proposed to be used to satisfy the requirements of this Section to the Program/Project Manager for approval.
 - a. Clearly indicate the usage of each product on the submittal
 - b. Include Product Data for the equipment and material provided under this Section with the Operation and Maintenance Manuals submitted in accordance with the requirements of Section 01780, Closeout Submittals, at Contract closeout.
- D. Shop Drawings:
 - 1. Submit Shop Drawings of the proposed raceway system including plans, elevations, sections, details, and attachments to other work to the Program/Project Manager for approval.

2.04 MANUFACTURED UNITS

- A. Cast Outlet Boxes for General Purpose Applications:
 - 1. For Use with Steel Conduit Systems:
 - a. For use with steel conduit systems, provide small cast steel or cast malleable iron outlet boxes with threaded hubs that meet the NEMA 250 requirements for Type 12 enclosures.
 - b. If covers are indicated or specified, provide cast steel or cast malleable iron covers with neoprene gaskets.
 - 1) Provide captive Type 316 stainless steel mounting screws for the covers.
 - c. If fixture hangers are indicated or specified, provide ball type cast steel or cast malleable iron fixture hangers with neoprene gaskets.
 - 1) Provide captive Type 316 stainless steel mounting screws for the fixture hangers.
 - d. Finish:

- 1) Provide outlet boxes, covers, and hangers with an electroplated zinc coating, followed first by a dichromatic prime, and then by an aluminum polymer finish coating conforming to NEMA FB 1.
 - e. Manufacturers:
 - 1) EGS/Appleton Electric, www.appletonelec.com.
 - 2) EGS/O-Z/Gedney, www.o-zgedney.com.
 - 3) Approved equal.
 2. For Use with Coated Conduit Systems:
 - a. When boxes for use with coated conduit systems are indicated or specified, provide cast outlet boxes as specified for steel conduit systems, but having coatings as specified for the system.
 - 1) Provide a 40 mils thick PVC coating conforming to the requirements of NEMA RN 1 outside, and a 2 mils thick fusion-bonded blue, red, or green urethane coating inside.
 - a) Insure that the color of the PVC coating is uniform throughout the Work of this Contract.
 - 2) For internally threaded openings in the box, provide a 40 mil thick plastic sleeve extending one pipe diameter or 2 inches, whichever is less, beyond the openings with an inside sleeve diameter equal to the outside diameter of the conduit or pipe used.
 - b. Manufacturers:
 - 1) Thomas & Betts, Ocal®, <http://www.tnb.com/pub/en/node/152>.
 - 2) Robroy Industries, www.robroy.com.
- B. Conduit Fittings:
 1. Fittings for Non-Metallic Conduit Systems:
 - a. Provide high impact non-metallic fittings conforming to same requirements as for the non-metallic conduit as specified in Paragraph 2.04.H.
 - b. Non-Metallic Conduit Expansion Fittings:
 - 1) Provide a two-piece nonmetallic, noncorrosive, nonconductive, UL listed expansion fitting.
 - c. Manufacturers:
 - 1) Lamson & Sessions, Carlon®, www.carlon.com.
 - 2) Queen City Plastics, Inc., www.queencityplastics.com.
 - 3) Manhattan Wire, Inc., www.manhattanwire.com
 - 4) Approved equal.
 2. Fittings for Metallic Conduit Systems:
 - a. Construct conduit bodies/fittings from cast malleable iron or cast steel.
 - 1) Provide threaded or compression fittings of the same material of the conduit.
 - b. For PVC coated raceway systems, provide PVC coated fittings of cast malleable iron or cast steel from the same manufacturer that provides the uncoated conduit bodies/fittings.
 - c. Conduit Outlet Bodies:

- 1) Provide malleable iron threaded entry type conduit outlet bodies with neoprene gaskets and cast steel conduit.
- 2) Manufacturers:
 - a) EGS/Appleton Electric, www.appletonelec.com.
 - b) EGS/O-Z/Gedney, www.o-zgedney.com.
 - c) Approved equal.
- d. Conduit Expansion Joints:
 - 1) Provide telescoping sleeve type galvanized, weatherproof, and vapor tight conduit expansion joints designed for 2-inch beyond structural expansion with an insulated bushing and lead-wool packing.
 - 2) Manufacturers:
 - a) EGS/Appleton Electric, www.appletonelec.com.
 - b) EGS/O-Z/Gedney, www.o-zgedney.com.
 - c) Approved equal.
- e. Conduit Unions:
 - 1) Provide conduit unions capable of completing a conduit run when neither conduit end can be turned.
 - 2) Manufacturers:
 - a) EGS/Appleton Electric, UNF and UNY Unions, www.appletonelec.com.
 - b) Thomas and Betts Company, Erickson® Coupling, <http://www.tnb.com/pub/en/node/152>
 - c) Approved equal.
- f. Conduit Outlet Boxes:
 - 1) Provide malleable or cast iron conduit outlet boxes conforming to the requirements of UL 886, and having a cover with O-rings to keep out moisture.
 - 2) Manufacturers:
 - a) EGS/Appleton Electric, GRF outlets and covers, www.appletonelec.com.
 - b) EGS/O-Z Gedney, www.o-zgedney.com.
 - c) Approved equal.
- g. Conduit Device Boxes:
 - 1) Provide malleable iron conduit device boxes with internal grounding screws and conforming to the requirements of UL 498 and UL 514A.
 - 2) Manufacturers:
 - a) EGS/Appleton Electric, FD device boxes, www.appletonelec.com.
 - b) EGS/O-Z Gedney, www.o-zgedney.com.
 - c) Approved equal.
- h. Conduit Sealing Fittings:
 - 1) Provide triple-coated, malleable iron conduit sealing fittings.
 - a) Coat the conduit sealing fittings with zinc electroplate, dichromate, and an epoxy powder coat.

- 2) Provide drain fittings in conduit sealing fittings where required.
 - 3) Provide sealing covers for junction boxes where required.
 - 4) Acceptable Manufacturers:
 - a) EGS/Appleton Electric, www.appletonelec.com.
 - (1) Sealing hubs: ES.
 - (2) Sealing fittings: EYSEF, EYSDEF, and EYD.
 - b) EGS/O-Z Gedney, www.o-zgedney.com.
 - c) Approved equal.
- C. Conduit Spacers
1. Provide non-metallic, interlocking type conduit spacers which snap together to join any combination of intermediate and base units together, both vertically and horizontally.
 2. Manufacturers:
 - a. Underground Devices Inc., www.udevices.com.
 - b. The George-Ingraham Corp.
 - c. Approved equal.
- D. Equipment and Control Device Enclosures:
1. For all areas except outdoor and corrosive locations, provide enclosures with hinged doors that meet the NEMA 250 requirements for Type 1 enclosures, depending on Contract requirements.
 - a. Enclosure Cabinet:
 - 1) Provide sheet steel boxes having continuously welded seams, ground smooth.
 - 2) Provide enclosures having no holes or knockouts.
 - b. Enclosure Door:
 - 1) Provide overlapping sheet steel hinged doors, having a continuous hinge with a removable heavy gauge hinge pin and door clamps with screws to provide a watertight seal or to exclude liquids and contaminants.
 - 2) Provide a means of bonding on the door.
 - c. Door Gasket:
 - 1) Provide an oil resistant door gasket for each box.
 - d. Security:
 - 1) Provide a mechanism for padlocking the enclosure.
 - e. Finish:
 - 1) Provide polyester powder coating applied over phosphatized surfaces.
 - 2) Color: ANSI Z55.1 Number 61 gray.
 - f. Manufacturers:
 - 1) Hoffman, Single-Door NEMA Type 4 Enclosures or NEMA Type 12 and NEMA Type 13 Enclosures, www.hoffmanonline.com.
 - 2) Approved equal.
 2. For outdoor locations, provide enclosures with covers that meet the NEMA 250 requirements for NEMA Type 3R enclosures, and as follows.
 - a. Enclosure Body:

- 1) Fabricate enclosures from galvanized steel sheets; and provide a drip shield on the top, and seam-free sides, fronts, and backs.
- b. Covers:
 - 1) Provide a removable slip-on cover with plated steel captivated screws along the bottom edge for each enclosure.
- c. Security:
 - 1) Provide a mechanism for padlocking the enclosure.
- d. Finish:
 - 1) Provide polyester powder coating applied over phosphatized surfaces.
 - 2) Color: ANSI Z55.1 Number 61 gray.
- e. Manufacturers:
 - 1) Hoffman, Screw Cover Type 3R Enclosures, www.hoffmanonline.com.
 - 2) Or Equal.
3. For corrosive locations, provide enclosures that meet the NEMA 250 requirements for NEMA Type 4X enclosures, and as follows:
 - a. Enclosure Cabinet:
 - 1) For wall mounted enclosures, fabricate enclosure bodies from 14 gauge Type 304 or Type 316L stainless steel sheets; and having continuously welded seams, ground smooth.
 - 2) For floor mounted enclosures, fabricate enclosure bodies from 12 gauge Type 304 stainless steel sheets and enclosure backs from 10 gauge Type 304 stainless steel sheets; and having continuously welded seams, ground smooth.
 - a) Provide stainless steel floor stands, if required.
 - b) Provide stainless steel lifting eyes.
 - 3) Provide a grounding stud on the enclosure body.
 - 4) Provide enclosures having no holes or knockouts.
 - b. Enclosure Doors:
 - 1) For wall mounted enclosures, provide a removable hinged door fabricated from 14 gauge Type 304 or Type 316L stainless steel sheets; and having a rolled lip on three sides and a continuous stainless steel hinge with a removable hinge pin on the fourth side.
 - a) Provide a stainless steel door clamp assembly that assures a watertight seal.
 - 2) For floor mounted enclosures, provide either doors similar to those specified for wall mounted enclosures, or 14 gauge Type 304 stainless steel hinged doors with concealed die-cast hinges that allow 180 degree door opening and easy door removal.
 - 3) Provide a means of bonding on the door.
 - c. Door Gasket:
 - 1) Provide a seamless, foam-in-place, oil-resistant door gasket for each enclosure.
 - d. Security:

- 1) Provide a mechanism for padlocking the enclosure.
 - e. Finish:
 - 1) Provide enclosures with unpainted, Number 4 brushed finish surfaces.
 - f. Manufacturers:
 - 1) Hoffman, Stainless Steel NEMA Type 4X Enclosures and General Purpose Stainless Steel Two-Door Floor-Mount NEMA Type 4X Enclosures, www.hoffmanonline.com.
 - 2) Approved equal.
- E. Ground Lug/Bus Bar:
 1. Provide a copper ground lug or a 1/4-inch by 2-inch copper bus bar in large pull and junction boxes.
- F. Heat Shrink Tubing
 1. Provide all-weather corrosion resistant vinyl plastic heat shrink tubing designed for application on the exterior of metallic conduit to protect against galvanic action, moisture or other deteriorating contaminants.
 2. Manufacturers:
 - a. Tyco Electronics, Raychem, www.raychem.com.
 - b. Manhattan Wire, Inc., www.manhattanwire.com
 - c. Approved equal.
- G. Metallic Conduit:
 1. Electrical Metallic Tubing (EMT):
 - a. Provide electrical metallic tubing (EMT) conforming to the requirements of Article 358 in NFPA 70 (NEC) for materials and uses, ANSI C80.3 and UL 797.
 - b. Provide galvanized steel tubing conduit lengths bearing the manufacturer's trademark.
 - c. Manufacturers:
 - 1) Atkore International, <http://www.atkore.com/brand/conduit/>
 - 2) Wheatland Tube Company, Division of John Maneely Company, www.wheatland.com.
 - 3) Approved equal.
 2. Intermediate Metal Conduit (IMC):
 - a. Provide intermediate metal conduit (IMC) conforming to the requirements of Article 342 in NFPA 70 (NEC) for materials and uses, ANSI C80.6 and UL 1242.
 - b. Fabricate intermediate metal conduit (IMC) from high strength low alloy sheet steel meeting the requirements for ASTM A 568 piping, galvanized inside and outside, and protected against corrosion by a dichromate rinse or a zinc chromate coating.
 - c. Provide conduit furnished in 10-foot minimum lengths with both ends threaded and one end fitted with a coupling.
 - d. Manufacturers:
 - 1) Atkore International, <http://www.atkore.com/brand/conduit/>

- 2) Wheatland Tube Company, Division of John Maneely Company,
www.wheatland.com.
 - 3) Approved equal.
3. Plastic Coated Rigid Galvanized Steel Conduit:
 - a. Provide plastic coated rigid galvanized steel conduit bearing the UL label.
 - b. Provide base conduit of rigid hot-dip galvanized steel conduit as specified in Subparagraph 2.04.G.5, and of the type indicated, specified, or scheduled to be coated.
 - c. Apply plastic coating in accordance with the following:
 - 1) Apply a 40-mil thick PVC coating on the outside and a 2-mil thick fusion-bonded blue, red, or green urethane coating on the inside, both coatings conforming to the requirements of NEMA RN 1.
 - 2) Have the same manufacturer who produces the hot dip galvanized base conduit factory-apply the plastic coating.
 - 3) Provide plastic coating of one uniform color on all plastic coated rigid galvanized steel conduit provided for this Contract.
 - d. Provide 40-mil thick plastic sleeves to protect internally threaded conduit openings.
 - 1) Provide sleeves with an inside diameter equal to the outside diameter of the conduit/pipe protected by it; and extending either one pipe diameter or 2-inches, whichever is less, beyond the opening.
 - e. Manufacturers:
 - 1) Atkore International, <http://www.atkore.com/brand/conduit/>.
 - 2) Robroy Industries/Perma-Cote, www.permacote.com.
 - 3) Approved equal
4. Liquidtight Flexible Metal Conduit (LFMC):
 - a. Provide PVC coated flexible metal conduit conforming to the requirements of Article 350 of NFPA 70 (NEC) for materials and uses and ANSI/UL 360.
 - b. Provide conduit with interlocking spiral strip construction capable of bending to a minimum radius of five times its diameter without deforming the spiral strips both inside and outside of the conduit.
 - 1) Provide conduit with a flexible, galvanized, interlocking spiral strip steel core jacketed with smooth, liquid-tight polyvinyl chloride designed to withstand temperatures from minus 40 degrees Celsius to plus 60 degrees Celsius.
 - c. Finish the interior and exterior of flexible conduit smooth and free from burrs, sharp edges, and other defects that may injure wires; and place the manufacturer's trademark on each length.
 - d. Furnish an integral continuous copper ground in 1/2-inch through 1-1/4-inch PVC coated flexible metal conduit.
 - e. Manufacturers
 - 1) Electri-Flex Company, Liqueflex®, Type LA, www.electriflex.com.

- 2) ANAMET Electrical, Inc., Anaconda Sealtite®,
www.anacondasealtite.com.
- 3) Approved equal.
5. Rigid Galvanized Steel Conduit (RGS):
 - a. Provide rigid galvanized steel conduit (RGS) conforming to the requirements of Article 344 of NFPA 70 (NEC) for materials and uses, ANSI C80.1, and UL 6.
 - b. Fabricate the RGS from mild steel piping, galvanized or sherardized inside and outside, and protected against corrosion by a dichromate rinse or a zinc chromate coating.
 - c. Provide defect free conduit bearing the UL label, and furnished in 10-foot minimum lengths with both ends threaded and one end fitted with a coupling.
 - 1) Provide tapered NTP 3/4 inch per foot threads complying with ANSI/ASME B1.20.1.
 - d. Manufacturers:
 - 1) Atkore International, <http://www.atkore.com/brand/conduit/>.
 - 2) Wheatland Tube Company, Division of John Maneely Company, www.wheatland.com.
 - 3) Approved equal.

H. Non-Metallic Conduit:

1. Electrical Plastic Tubing and Conduit:
 - a. Rigid Polyvinyl Chloride (PVC) Conduit:
 - 1) Provide high impact PVC conduit conforming to the requirements of NEMA TC 2 at 90 degrees Celsius, and made from compounds conforming to the requirements of ASTM D 1784.
 - a) For indoor use, provide Schedule 40 conduit.
 - b) For encasement in concrete, provide Schedule 40, Type EB or Type DB, conduit tubing.
 - c) Use material that at 78 degrees Fahrenheit has a tensile strength exceeding 5500 psi, a flexural strength exceeding 11,000 psi, and a compressive strength exceeding 800 psi,
 - 2) Provide PVC conduits that are UL listed, labeled, or approved for both underground and above ground use.
 - b. Manufacturers:
 - 1) Lamson & Sessions, Carlon®, www.carlon.com.
 - 2) Queen City Plastics, Inc., www.queencityplastics.com.
 - 3) Manhattan Wire, Inc., www.manhattanwire.com
 - 4) Approved equal.
2. Non-Metallic Conduit Solvent:
 - a. Provide solvent for non-metallic conduit joints from the same manufacturer as the conduit and conforming to the requirements of ASTM D 2564.

- I. Outlet Boxes for Hazardous Locations:
 - 1. For hazardous locations, provide junction boxes and covers that comply with the requirements of UL 886, and are sized according to the installation and NFPA 70 (NEC) requirements.
 - 2. For suspended type or surface mounted conduit runs in hazardous locations, provide outlet boxes having a threaded cover and the proper size and number of tapped conduit hub openings.
 - a. Outlet Box Body:
 - 1) Fabricate outlet box bodies from iron alloy, electrogalvanized and coated with aluminum acrylic paint.
 - 2) Provide threaded access openings that can either accommodate threaded covers that create a seal against the hazard, or that allow the outlet box depth to be increased by using threaded extensions.
 - 3) Provide taper-threaded hubs in the box capable of accommodating threaded rigid or IMC conduit, and having smooth integral hub bushings to protect conductor insulation during wire pulling.
 - 4) Provide an internal ground screw.
 - b. Outlet Box Covers:
 - 1) Provide copper-free aluminum threaded covers with cast “ears”, recesses, or other means to facilitate tightening and removing the cover.
 - a) Provide a neoprene O-ring with the cover.
 - 2) If required, in lieu of providing standard covers provide threaded sealing covers having a removable threaded plug to allow the enclosure to be filled with sealing compound.
 - 3) If required, in lieu of providing standard covers provide threaded covers or canopies capable of mounting pendant type lighting fixtures.
 - 3. Manufacturers:
 - a. Cooper Crouse Hinds Company, GUA and GUR Series Outlet Boxes, www.crouse-hinds.com.
 - b. Approved equal.
- J. Pull Boxes for Hazardous Locations:
 - 1. For hazardous locations, provide pull boxes and covers that comply with the requirements of UL 886, and are sized according to installation and NFPA 70 (NEC) requirements.
 - a. Pull Box Body:
 - 1) Provide copper-free aluminum or iron alloy bodies capable of being factory or field drilled and tapped for conduit entries of the proper size and number.
 - 2) Machine enclosures to accommodate field installed mounting plates.
 - 3) Provide an internal ground lug.
 - b. Pull Box Cover:

- 1) Provide threaded, bolted, or hinged and bolted covers, fabricated from copper-free aluminum or iron alloy, as required.
 - a) Provide bolts for attaching bolted covers.
 - b) Provide hinges for hinged covers.
 - 2) Provide a neoprene gasket with each cover.
 - c. Manufacturers:
 - 1) Cooper Crouse Hinds Company, GUB and EJB Series Junction Boxes, www.crouse-hinds.com.
 - 2) Approved equal.
- K. Sheet Metal Boxes for General Purpose Applications:
 1. For general purpose applications in dry locations, provide small sheet steel pull and terminal boxes and covers that meet the NEMA 250 requirements for NEMA Type 12 enclosures with continuously welded and ground smooth seams, and having no holes or knockouts.
 - a. Cover:
 - 1) Provide overlapping sheet steel screw covers with captivated screws for each box.
 - 2) Provide a means of bonding on the cover.
 - b. Gasket: Provide an oil resistant cover gasket for each box.
 - c. Mounting Brackets:
 - 1) Provide 12 gauge steel wall-mounting brackets.
 - d. Finish:
 - 1) Provide polyester powder coating applied over phosphatized surfaces.
 - 2) Color: ANSI Z55.1 Number 61 gray.
 2. Manufacturers:
 - a. Hoffman, Screw Cover SC Junction Boxes, www.hoffmanonline.com.
 - b. Approved equal.
- L. Wall and Floor Penetration Seals
 1. Provide watertight mechanical seals capable of holding up to 20 psig, and sealing against water, soil, and backfill material.
 2. Manufacturers:
 - a. Pipeline Seal & Insulator, Inc., Thunderline/Link-Seal, www.linkseal.com.
 - b. Flexicraft Industries, PipeSeal, <http://flexicraft.com>.
 - c. Approved equal.

2.05 FINISHES

- A. Cold Galvanized Coating:
 1. Provide a cold galvanized coating to provide protection against corrosion by forming an insoluble zinc salt barrier from a cathodic reaction when the coating is damaged by abrasion and exposed to weather.
 - a. Provide a single component pre-mixed liquid organic zinc compound producing 95 percent zinc in the dry film.

- b. Provide a coating that bonds to clean iron, steel, or aluminum through electrochemical action.
 2. Acceptable Manufacturers:
 - a. ZRC. Worldwide, www.zrcworldwide.com.
 - b. Approved equal.

2.06 SOURCE QUALITY CONTROL

- A. Tests:
 1. Submit factory test reports as specified for the products in this Section to the Program/Project Manager for information.

PART 3 EXECUTION

3.01 INSTALLERS

- A. Install the work of this Section only under the supervision of licensed electricians.

3.02 EXAMINATION

- A. Verification of Conditions:
 1. Although the Contract Drawings are generally indicative of the Work, take field measurements to verify actual conditions.
 - a. Due to the small scale of the Contract Drawings it is not possible to indicate all offsets, fittings, and apparatus required or the minor structural obstructions that may be encountered during the Work.
 2. Verify that conduit stub-ups to be mated with electrical boxes and enclosures are the correct type and size, and are at the proper location.
 3. Inspect the condition of existing conduit that is required for the Work of this Section.
 4. Obtain roughing-in dimensions of electrically operated equipment, including equipment being installed by both electrical and other construction trades.
 - a. Set conduit and boxes only after receiving approved dimensions and checking such equipment locations.
 5. Layout the electrical work of this Section to suit actual field measurements.
- B. Evaluation and Assessment:
 1. After carefully investigating structural and finish conditions and other in-place construction work, prepare and submit detailed Shop Drawings showing proposed departures from the original design due to field conditions or other causes.
 - a. Layout the electrical work according to accepted standard electrical trade practice to suit actual field measurements.

- b. Arrange the electrical work to consider existing conditions and to preserve access to other equipment, rooms, areas, and similar features of the construction.
- c. Include plan and profile views of duct banks.
- d. Indicate the location and details of conflicting utility construction and slopes.
- e. Submit these Shop Drawings to the Program/Project Manager for approval prior to performing the Work of this Section.

3.03 PREPARATION

- A. Hangers and Supports:
 1. Install auxiliary support structures, anchors, and fasteners as specified in Section 16070, Hangers and Supports.
 - a. Mount or suspend conduit and wireway systems directly on structural members of the structures and walls.
 - b. Securely attach anchors into walls.
 2. At all conduit attachments, allow space between the mounting surfaces and the conduit by providing U-channel supports, clamp-backs, or spacers.
 3. Attach wall-mounted conduit runs close to the walls following the contour of the walls, parallel to the walls and other lines except at bends.
- B. Structure Penetrations:
 1. Make penetrations in existing concrete structures by core-drilling.
 - a. Drill the penetrations true, clean, and free from spalling.
 2. At penetrations through fire rated floors, walls, and similar assemblies, provide approved firestopping as specified in Section 07850, Through Penetration Firestopping Systems.
 3. Make floor penetrations as detailed on the Contract Drawings.
 - a. Seal all conduit penetrations through floor slabs on grade in buildings with a floor penetration seal.
 4. Install a wall penetration seal at all wall penetrations.
 - a. Size wall penetrations to accommodate the conduit outside diameter plus either 1/4 inch or a hole allowance to allow the installation of the wall penetration seal.
 5. For conduits that enter rooms from concrete floors or masonry, provide corrosion protection by using an RGS or PVC coated conduit that extends from 12 inches inside the concrete or masonry to at least 6 inches into the room.

3.04 INSTALLATION

- A. Comply with NECA 1 for installation requirements applicable to the products, except where requirements on the Contract Drawings or herein are stricter.

- B. Fabricate and install conduit and wireway systems in accordance with accepted electrical trade standard practice.
1. Conduit Bends:
 - a. Avoid bending conduits as much as possible and practical.
 - 1) If bends are made, use an approved conduit bending tool or machine to make the bends.
 - b. Install not more than the equivalent of three 90-degree bends in any conduit run except for communication conduits, for which fewer bends are allowed.
 2. Pull Wires:
 - a. Install pull wires in empty raceways.
 - 1) Use monofilament plastic line with not less than 200 pound tensile strength.
 - 2) Leave at least 12 inches of slack at each end of pull wire.
 - 3) For 3/4-inch trade size and smaller, install raceways in maximum lengths of 50 feet.
 - 4) For 1-inch trade size and larger, install raceways in maximum lengths of 75 feet.
 - 5) Install pull wires with a maximum of two 90-degree bends or equivalent for each length of raceway, unless the Contract Drawings show stricter requirements.
 - a) Where necessary to comply with this requirement, separate lengths with pull or junction boxes or terminations at distribution frames or cabinets.
 3. All conduit shall be painted to meet Aviation Design Standards for electrical, fire alarm, communications, and control conduits.
 4. Raceway Sealing Fittings:
 - a. Install raceway sealing fittings at suitable, approved, and accessible locations, and fill them with a listed sealing compound.
 - 1) For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces.
 - 2) Install raceway fittings where conduits pass from warm to cold locations, such as at boundaries of refrigerated spaces and where otherwise required by NFPA 70.
 5. Expansion Joint Fittings for Rigid Non-Metallic Conduit:
 - a. Where the environmental temperature changes for rigid non-metallic conduit may exceed 30 degrees Fahrenheit, install expansion joint fittings in each aboveground run having a straight-run length exceeding 25 feet.
 - 1) Install expansion joint fittings for each of the following locations, and provide the type and quantity of fittings that will accommodate the temperature change listed for the location:
 - a) Outdoor Locations Not Exposed to Direct Sunlight: 125 degree Fahrenheit temperature change.
 - b) Attics: 135 degree Fahrenheit temperature change.

- b. Install fittings that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per degree Fahrenheit of temperature change.
 - c. Install each expansion joint fitting with the position, mounting, and piston setting selected according to the manufacturer's written instructions for conditions at the specific location at the time of installation.
 - 6. Installing Rigid Galvanized Steel (RGS) and PVC Coated Conduit:
 - a. Install RGS and PVC coated conduit using methods and techniques recommended by the conduit manufacturer.
 - b. Threading Conduit:
 - 1) Field thread the conduits in accordance with the manufacturer's instructions.
 - a) For PVC coated conduit, first neatly cut the coating off at the proposed end of the threads using a cylindrical guide, oversized to fit over the plastic coating.
 - b) Do not damage or remove the coating beyond the proposed end of the threads.
 - 2) Once the threading operation is complete, protect the newly cut threads against corrosion by applying a "sealing" compound as recommended by the manufacturer.
 - c. Assembling Rigid Galvanized Steel (RGS) and PVC Coated Conduit Fittings:
 - 1) Use PVC coated conduit bodies, clamps, supports, accessories, and fittings with coated conduit systems.
 - 2) Just prior to assembling each conduit joint, apply the conduit manufacturer's touch-up compound to the end of the conduit in the area normally covered by the fitting sleeve.
 - 3) Use cloth or other material over strap type wrenches to protect the coating while tightening conduits.
 - 7. Locations Subject to Moisture or Vibration:
 - a. At locations subject to moisture or vibration, use insulating bushings to protect conductors, including conductors smaller than No. 4 AWG.
 - 8. Crossing Structural Expansion Joints
 - a. Where conduit crosses expansion joints, provide weather tight expansion and deflection fittings and bonding jumpers.
 - 1) Arrange the raceways to cross building expansion joints perpendicular to the expansion fittings and exceed 2" beyond the maximum structural expansion joint.
 - 2) Support expansion conduit from either side of the expansion joint to allow movement of the joint and not impede on the structural expansion joint.

C. Exposed Work:

1. In exposed work, run conduit and raceway parallel to centerlines and structure surfaces; or perpendicular to centerlines where required, with right angle turns consisting of symmetrical bends or fittings.
2. Maintain at least 6 inches clearance between conduit and raceway runs and pipes, ducts, and flues of mechanical systems.
3. If a portion of a metallic conduit run, whether plastic-coated or not, extends above grade or is otherwise exposed to personnel, ensure that the conduit is properly bonded to an equipment grounding conductor at both ends.
4. Install the equipment grounding conductor either inside or outside the box.

D. Concealed Work:

1. When performing electrical work in concealed spaces, provide the same quality workmanship as in exposed work.
2. Conceal conduits and raceways in the structure's construction where practicable unless otherwise indicated on the Contract Drawings or required by the Program/Project Manager.
 - a. Group conduit and raceway runs in concealed work as much as practical to avoid congesting the concealed spaces.
 - b. Do not weaken the structure by excessive or unnecessary cutting.
 - 1) Only make cuts into the structure's construction in conformance to the applicable building codes.
3. Conduits and Raceways Embedded in Concrete Slabs:
 - a. Separate multiple conduits encased together by not less than 2 inches of concrete.
 - b. Locate conduit installed in floor slabs within the reinforced area of the slab.
 - 1) Run conduit larger than 1 inch trade size parallel or at right angles to the main reinforcement.
 - 2) Where conduit is perpendicular to reinforcement, place conduit close to the slab supports.
 - c. Where conduit crosses expansion joints, provide weather tight expansion and deflection fittings and bonding jumpers.
 - 1) Arrange the raceways to cross building expansion joints perpendicular to the expansion fittings that exceed 2" beyond the expansion joint.
 - d. Before rising above the floor, change from electrical metallic tubing to rigid nonmetallic conduit, Type -40-PVC, rigid steel conduit, or intermediate metal conduit.
4. Below Grade Conduit:
 - a. Install below grade conduit in conformance with the requirements of Section 02582, Underground Ducts and Manholes.
 - 1) For conduits that pass under building support walls, provide a minimum of 3 inches of concrete encasement all around.
 - 2) For underground and concrete encased duct banks, provide non-metallic conduit spacers.

- a) Provide sufficient space to allow pouring the concrete envelope without displacing or shifting the individual conduits.
 - b) Encased duct banks shall be provided with red dye.
 - b. Install conduit spacers at intervals not exceeding 5 feet.
- E. Hazardous Locations:
 - 1. In hazardous locations, engage at least 5 full threads on conduit connections to couplings and fitting hubs.
 - a. Coat the threads with a sealing compound that makes the connections gas tight.
 - 2. Properly install sealing fittings at all locations required in accordance with code regulations.
- F. Junction Boxes and Pull Boxes:
 - 1. General Purpose Applications:
 - a. For general purpose applications in dry locations, provide small sheet steel pull and terminal boxes that meet the NEMA 250 requirements for NEMA Type 12.
 - b. Provide boxes that are fabricated from the same type of material as the conduit with which the boxes are used.
 - 2. Hazardous Locations:
 - a. Provide junction boxes rated for the hazard classification of the area where they are installed, whether explosion proof, dust-ignition proof, rain-tight, wet locations, watertight, or other classification.
- G. Equipment and Control Device Enclosures:
 - 1. For all areas except outdoor and corrosive locations, provide enclosures that meet the NEMA 250 requirements for Type 1 enclosures, depending on Contract requirements.
 - 2. For outdoor locations, provide enclosures with covers that meet the NEMA 250 requirements for NEMA Type 3R enclosures.
 - 3. For corrosive locations, provide enclosures that meet the NEMA 250 requirements for NEMA Type 4X enclosures.
- H. Boxes for Electrical Outlets and Devices:
 - 1. Install boxes for electrical outlets and devices level and plumb within 1/16-inch of vertical or horizontal over the length of the box.
 - 2. Install device boxes at a uniform height as indicated on the Contract Drawings.
 - a. Mount all adjacent boxes in alignment at the same mounting height.
 - b. Mount outlet boxes for equipment within 18-inches of the equipment power connection.
 - 3. Do not install flush mounting boxes back-to-back in walls.
 - a. Provide a minimum separation of 6 inches (150 mm).
 - b. Provide a minimum separation of 24inches (600 mm) s in acoustic rated walls.

4. When installing boxes outside or to exposed conduit in unfinished areas, provide cast boxes.
 - a. Mount these boxes on spacers to be 1/8-inch from wall unless box has built-in raised pads to perform the same function.
5. When installing boxes for single devices, two devices, or wall outlets, install 4-inch square boxes with appropriate plaster rings.
 - a. Space boxes on opposite sides of the wall 6 inches apart.
 - b. Set plaster rings flush or to protrude less than 1/16-inch from the wall.
 - c. Openings for boxes in finished walls must be within 1/16-inch of the box.
 - 1) Correct all oversize openings in accordance with the specifications for the wall material.
6. Support cast boxes for outlet and device using one of the following methods:
 - a. Mount the boxes directly to the structure using 4 or more anchors.
 - 1) Attach mounting screws to feet located outside of the box interior.
 - 2) Provide 1/4-inch spacers behind the boxes unless the box has raised pads.
 - b. Attach the box to two 1-inch or larger conduits which are supported within 12-inches of the box.
 - c. Attach the box to two 1-inch or larger conduits which exit from a poured concrete floor no further than 18-inches from the box.
- I. Boxes for Other than Electrical Outlets and Devices:
 1. Accurately punch holes for conduit openings using a hydraulic punch and punches sized for the conduit to be installed.
 2. Install a conduit breather in the top of the box and a conduit drain fitting in the bottom of all boxes not located in bone-dry areas that are at least 100 feet from a hose-bib.
 3. Support boxes for other than electrical outlets and devices using one of the following methods:
 - a. Mount the boxes directly to the structure using 4 or more anchors.
 - 1) Attach mounting screws to feet located outside of the box interior. or seal the screw holes to prevent water penetration.
 - 2) Provide 1/4-inch spacers behind the boxes unless the box has raised pads.
 - b. Attach the box to two 1-inch or larger conduits which are supported within 12-inches of the box.
 - c. Attach the box to two 1-inch or larger conduits which exit from a poured concrete floor no further than 18-inches from the box.
 - d. Mount the box on U-channel and structural supports.
- J. Interface with Other Work:
 1. Wiring:
 - a. Install wiring and cable in conduit and boxes as indicated in Section 16120, Conductors and Cables.

- b. Prior to the installation of any wire, verify that the conduit is clean and free of debris.
 2. Ground conduit and boxes in conformance with Section 16060, Grounding and Bonding.
 - a. Install a separate ground conductor for 1-1/2-inch through 4-inch PVC coated flexible metal conduit.

3.05 REPAIR/RESTORATION

- A. Touch up damaged coatings on electrical boxes and enclosures
 1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
 2. Repair damage to PVC or paint finishes with matching touchup coating recommended by manufacturer.

3.06 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 1. Site Tests:
 - a. Test all boxes to verify that they are properly connected to the grounding system.
 2. Inspections:
 - a. Inspect installed conduit runs for obstructions, proper support, proper grounding, and completeness.
 - b. Record the actual installed elevations and locations of conduit and tubing on as-built record drawings specified in Section 01780, Closeout Submittals.
 - c. Inspect flush boxes to verify that the opening between the box and the wall finish is less than 1/16-inch.
 - d. Inspect flush boxes to verify that each box is flush with the wall, or protrudes less than 1/16-inch, and is not set behind the wall surface.
 - e. Inspect surface mounted boxes to verify that they are level and plumb within 1/16-inch as specified.
 - f. Record the actual installed elevations and locations of duct banks and the as-found locations of conflicting utility lines on the as-built record drawings specified in Section 01780, Closeout Submittals, and submit the record drawings.
 - g. Record the actual installed elevations and locations of pull and junction boxes on as-built record drawings specified in Section 01780, Closeout Submittals.
- B. Non-Conforming Work
 1. Do not install crushed or deformed conduit, and remove crushed or deformed conduit from the Site.

3.07 CLEANING

- A. Remove dirt, debris, and other obstructions from existing conduit required for the Work of this Section by blowing out and mandreling the conduits as applicable.
- B. Waste Management and Disposal:
 - 1. As the electrical work is completed during the Contract, and at intervals as directed by the Program/Project Manager, clear the Site of all rubbish or debris, and of extraneous materials.
 - 2. Dispose of waste materials off-site in a legal manner.

3.08 PROTECTION

- A. Provide final protection and maintain conditions that ensure coatings, finishes, and cabinets are without damage or deterioration at time of Substantial Completion.

SECTION 16134

CABLE TRAYS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for cable trays and accessories of the following types:
 - a. Center hung cable trays.
 - b. Ladder cable trays.
 - c. Trough cable trays.
 - d. Corrugated solid bottom cable trays.
 - e. Channel cable trays.
 - f. Wire basket cable support systems.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01732 - Cutting and Patching.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 07842 - Fire-Resistive Joint Systems.
 - 6. Section 07850 - Through Penetration Firestopping Systems.
 - 7. Section 16061 - Electrical Grounding and Bonding.
 - 8. Section 16062 - Communications Grounding and Bonding.
 - 9. Section 16070 - Hangers and Supports.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. EGC: Equipment Ground Conductor.
 - 2. HDGAF: Hot dipped galvanized after fabrication.
 - 3. PGSTL: Milled galvanized steel.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.

3. Wire Basket Support Systems: Wire supports including, but not limited to, straight sections of continuous wire mesh, and field formed horizontal and vertical bends, tees, drop outs, supports, and accessories.

C. Reference Standards:

1. ASTM International (ASTM):
 - a. ASTM A 123/A 123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
 - b. ASTM A 510 – Standard Specification for General Requirements for Wire Rods and Coarse Round Wire, Carbon Steel.
 - c. ASTM A 510M – Standard Specification for General Requirements for Wire Rods and Coarse Round Wire, Carbon Steel [Metric].
 - d. ASTM A 580/A 580M – Standard Specification for Stainless Steel Wire.
 - e. ASTM A 641/A 641M – Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire.
 - f. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - g. ASTM A 924/A 924M - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.
 - h. ASTM B 633 – Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel.
 - i. ASTM B 766 - Standard Specification for Electrodeposited Coatings of Cadmium.
 - j. ASTM D 769 – Standard Specification for Black Synthetic Iron Oxide.
2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
4. National Electrical Contractors Association (NECA):
 - a. NECA 1 - Standard Practice of Good Workmanship in Electrical Contracting.
 - b. ANSI/NECA/NEMA 105 – Standard for Installing Metal Cable Tray Systems.
5. National Electrical Manufacturers Association (NEMA):
 - a. NEMA VE 1 - Metal Cable Tray Systems.
 - b. NEMA VE 2 - Cable Tray Installation Guidelines.
6. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
 - b. NFPA 70B – Recommended Practice for Electrical Equipment Maintenance.
7. SAE International™ (SAE):
 - a. SAE J405 – Chemical Composition of SAE Wrought Stainless Steels.

8. Underwriters Laboratories, Inc. (UL):
 - a. UL Online Certifications Directory, <https://www.ul.com/ul-databases-and-directories/>.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate cable tray installation with the other electrical Work so the installation of cable tray runway is properly interfaced with and does not delay the other work.
 2. Coordination Drawings:
 - a. Prepare and submit Coordination Drawings to the Program/Project Manager for approval.
 - 1) Prepare plans for tight areas, such as electrical rooms, drawn to scale, on which the following items are shown and coordinated with each other, based on input from the installers of the items involved:
 - a) Other systems installed in same space as cable trays.
 - b) Mechanical and electrical equipment, and other miscellaneous items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and similar items.
 - 2) Show the following items for this Contract drawn to scale, and coordinate them with each other:
 - a) HVAC, plumbing, and fire suppression items.
 - b) Conduit routing plans.
 - c) Structural members.

1.04 SUBMITTALS

- A. Action Submittals:
 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Cable trays, fittings, and accessories.
 - b. Shop Drawings:
 - 1) Coordination Drawings.
 - 2) System layout drawings.
 - c. Certificates:
 - 1) Electrical listing and labeling quality verification.
- B. Informational Submittals:
 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:

- 1) Cable tray manufacturer's instructions for storing, handling, protecting, and examining the cable trays.
 - 2) Cable tray manufacturer's installation instructions.
 - 3) Wire basket cable support system manufacturer's instructions for field-forming fittings.
 - b. Manufacturer's Reports:
 - 1) Manufacturer's test reports.
- C. Closeout Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Record Documentation:
 - 1) As-built drawings recording the actual routing of the cable trays and the locations of supports.

1.05 QUALITY ASSURANCE

- A. Certifications:
 1. Electrical Listing and Labeling:
 - a. The cable tray products, particularly splicing assemblies, must meet the requirements of Underwriters Laboratories Inc.[®].
 - 1) Provide products that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 2) Provide products marked with their intended use or classification.
 - a) The UL Mark on the product will be accepted as evidence of compliance.
 - b. Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - 1) Such evidence may consist of either a printed mark on the data or a separate listing card.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver wire basket wire support systems and components carefully to avoid breakage, bending, and scoring finishes.
- B. Storage and Handling Requirements:
 1. Examine, store, handle, and protect cable trays and accessories as recommended by the cable tray manufacturer.

- a. Submit the cable tray manufacturer's instructions for storing, handling, protecting, and examining the cable trays to the Program/Project Manager for information.
 2. Store cable trays and accessories in their original cartons, and in a clean dry space.
 3. Protect cable trays from the weather and construction traffic.
- C. Packaging Waste Management:
1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 CABLE TRAY WIRE SUPPORT SYSTEMS

- A. Manufacturers:
1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. National Electrical Code (NEC):
 - 1) Provide products and installation complying with the requirements specified for construction and installation of cable tray and cable channel systems in Article 318 in NFPA 70.
- C. Design Criteria:
1. Locations and Arrangements:
 - a. The plans, schematics, and diagrams on the Contract Drawings indicate the general location and arrangement of the cable tray systems.
 - 1) The locations and arrangements shown indicate the general route of the cable tray systems, and the data presented is as accurate as preliminary surveys and planning can determine until the final equipment selection is made.

- b. The exact routing, locations, distances, and levels will be governed by actual field conditions and final equipment selections.
 - 1) Allow sufficient space around the cable trays to permit access for installing and maintaining cables.
 - 2) Install the cable tray systems as indicated unless deviations to the layout are approved by the Program/Project Manager on the Coordination Drawings.
 - 2. Working (Allowable) Load Capacity:
 - a. Except for channel type cable trays and wire basket type cable support systems, provide cable trays designed so the working load capacities and spans are in compliance with the requirements specified in section 4.8, section 5.2, and Table 1 in NEMA VE 1.
 - b. NEMA Load/Class Designations:
 - 1) Provide ladder type cable trays, trough type cable trays, and corrugated solid bottom type cable trays having NEMA Load/Class designations of 12A, 12B, 12C, 20A, 20B, or 20C as indicated on the Contract Drawings.
 - c. Provide cable trays designed so the tray deflections do not exceed the manufacturers published engineering data for the Project's cable tray working load capacity and minimum support span requirements.
 - 3. Safety Factor:
 - a. Except for channel type cable trays and wire basket type cable support systems, provide cable trays designed using a minimum load capacity safety factor of 5 in accordance with the requirements specified in Design Manual.
 - 4. Product Data:
 - a. Prepare Product Data for the cable trays, fittings, and accessories including, but not limited to, the types of cable trays, materials, finishes, dimensions including inside depths, connector assemblies, clamp assemblies, connector plates, splice plates, and splice bars.
 - b. Submit the Product Data to the Program/Project Manager for approval.
 - 5. Shop Drawings:
 - a. Prepare Shop Drawings consisting of system layout drawings showing accurately scaled components, part numbers, tray types, dimensions, NEMA class, support points, finishes, connector assemblies, clamp assemblies, brackets, splice plates, splice bars, grounding clamps, hold down plates, and accessories.
 - b. Submit the Shop Drawings to the Program/Project Manager for approval.
- D. Materials:
 - 1. Provide cable trays fabricated from the materials indicated on the Contract Drawings and in compliance with the requirements specified in section 4.1 and section 4.2 of NEMA VE 1.
 - 2. Wire Materials and Finishes:

- a. Provide cable tray sections, fittings, and accessories fabricated from corrosion resistant metal wire materials or metal wire materials with a factory applied corrosion resistant finish as follows:
 - 1) Electro-Plated Galvanized Steel Wire:
 - a) Fabricate straight sections from carbon steel wire complying with the mechanical properties specified for Grade 1008 steel in ASTM A 510 at a minimum, and that are electro-plated with zinc in accordance with the requirements for a Type III Finish and an SC-1 Service Condition specified in ASTM B 633.
 - 2) Hot Dipped Galvanized Steel Wire:
 - a) Fabricate straight sections from carbon steel wire complying with the mechanical properties specified for Grade 1008 steel in ASTM A 510 at a minimum, and that are hot dipped galvanized after fabrication in accordance with the requirements specified in ASTM A 123/A 123M.
 - 3) Pre-Galvanized Carbon Steel Wire:
 - a) Fabricate straight sections from pre-galvanized carbon steel wire complying at a minimum with the mechanical properties specified in ASTM A 641/A 641M.
 - 4) Stainless Steel Wire:
 - a) Fabricate straight sections and accessories from SAE Type 304L (UNS S30403) and SAE Type 316L (UNS S31603) stainless steel wire complying with the composition requirements specified in SAE J405, and complying with the mechanical properties specified in ASTM A 580/A 580M at a minimum.
 - 5) Black Oxide Finish:
 - a) Manufacture certain steel support accessories and miscellaneous hardware to have a black oxide finish complying with the requirements specified in ASTM D 769.
 - 6) Black Powder Coat Finish:
 - a) Powder coat steel straight sections with an average black paint thickness within the range of 1.2 mils (30 microns) to 3.0 mils (75 microns).

E. Cable Tray Types:

- 1. Center Hung Cable Trays:
 - a. Provide prefabricated metal cable tray structures consisting of one longitudinal center hung rail with individual rungs.
 - 1) Construct cable tray rails and rungs from copper free aluminum Alloy 6063.
 - 2) Construct fittings and accessories from a corrosion resistant aluminum alloy that is compatible with aluminum Alloy 6063, such as Alloy 5052 or Alloy 3003.
 - b. Lengths of Straight Sections:

- 1) Provide actual cable tray lengths and quantities as indicated on the Contract Drawings.
 - a) The manufacturer's standard lengths of must include 10 feet (actual 118-1/2 inches) and 12 feet (actual 142-1/2 inches), not including their connectors if they are attached.
- 2) Provide straight section lengths that are greater than or equal to the support span length.
- 3) Provide straight section lengths so that at most only one splice joint occurs between any two cable tray supports.
- c. Tray Widths:
 - 1) Provide actual cable tray widths as indicated on the Contract Drawings.
 - 2) The manufacturer's standard ladder tray selections must include full width and half width bottom rung configurations.
 - a) The manufacturer's standard widths must include 6 inches, 9 inches, 12 inches, 18 inches, and 24 inches in compliance with the requirements specified in Section 4.3.3 of NEMA VE 1.
- d. Center Rails:
 - 1) Provide cable tray center rails consisting of a 1-1/2 inches wide by 3.76 inches high hollow aluminum Alloy 6063 tube.
- e. Rungs:
 - 1) Provide rungs consisting at a minimum of a 5/8 inch wide by 5/8 inch deep hollow aluminum Alloy 6063 tube with a reinforcing rib as specified by the manufacturer.
 - 2) Weld the rungs to the center rail so each rung is welded in at least 2 places in accordance with the manufacturer's specifications.
 - a) Do not attach standard tray rungs to the center rail by mechanical means.
 - 3) Rung Height:
 - a) Provide actual rung heights as indicated on the Contract Drawings.
 - (1) The manufacturer's standard cable tray rung heights must include 3 inches, 4 inches, or 6 inches in compliance with the requirements specified in Section 4.3.4.2 of NEMA VE 1.
 - 4) Rung Spacing:
 - a) Space rungs on straight tray sections 6 inches, 9 inches, or 12 inches apart on center as indicated on the Contract Drawings.
 - (1) The manufacturer's standard rung spacing must include 6 inches, 9 inches, or 12 inches.
 - b) Do not allow the distance between rungs on fittings to exceed the rung spacing and tolerances for straight tray.
- f. Tray Fittings:

- 1) Provide the types and quantities of tray fittings indicated on the Contract Drawings.
- 2) Fabricate cable tray fittings from the same material as the straight tray sections.
- g. Connectors:
 - 1) Provide one tray connector with hardware for each straight tray section.
 - 2) Connector Hardware:
 - a) Provide zinc plated 3/8-inch diameter hex bolts and serrated-face flanged hex nuts which do not need a washer.
 - b) Protect the connector hardware finish against corrosion.
 - 3) Connector Splices:
 - a) Provide connector splices having an electrical resistance of less than 0.00033 ohms.
 - 4) Expansion Connectors:
 - a) Provide expansion connectors capable of providing for tray expansion of at least 1 inch greater than structure expansion joint, and located as shown on the Contract Drawings or as required to prevent damage to the tray system from thermal expansion and contraction in accordance with NEMA VE-1.
 - b) Install grounding bonding jumpers at all expansion connectors.
- h. Manufacturers:
 - 1) Cablofil/Legrand®, PW Industries, <http://www.pwindustries.com>.
 - 2) Approved equal.
2. Ladder Cable Trays:
 - a. Provide prefabricated metal cable tray structures consisting of 2 longitudinal side members connected by individual transverse members or individual rungs.
 - 1) The manufacturer's standard ladder cable tray selections must include both flange in and flange out configurations.
 - 2) For ladder type cable trays indicated to receive a mill galvanized (PGSTL) coating on the Contract Drawings, apply the coating at the steel mill in accordance with the requirements specified in ASTM A 924/A 924M and ASTM A 653/A 653M.
 - 3) For ladder type cable trays indicated to receive a hot dipped galvanized finish after fabrication (HDGAF) on the Contract Drawings, apply the coating in accordance with the requirements specified in ASTM A 123/A 123M.
 - b. Lengths of Straight Sections:
 - 1) Provide actual cable tray lengths and quantities as indicated on the Contract Drawings.
 - a) The manufacturer's standard lengths must include 12 feet and 20 feet, not including their connectors if they are attached.

- 2) Provide straight section lengths that are greater than or equal to the support span length.
- 3) Provide straight section lengths so that at most only one splice joint occurs between any 2 cable tray supports.
- c. Tray Widths:
 - 1) Provide actual cable tray widths as indicated on the Contract Drawings.
 - 2) The manufacturer's standard ladder tray selections must include full width and half width bottom rung configurations.
 - a) The manufacturer's standard widths must include 6 inches, 9 inches, 12 inches, 18 inches, 24 inches, 30 inches, and 36 inches in compliance with the requirements specified in Section 4.3.3.1 of NEMA VE 1.
- d. Side Rail Height:
 - 1) Provide actual side rail heights as indicated on the Contract Drawings.
 - a) The manufacturer's standard side rail heights must include 3 inches, 4 inches, 6 inches, and 7 inches in compliance with the requirements specified in Section 4.3.4.3 of NEMA VE 1.
- e. Side Channels:
 - 1) Provide side channel members configured as 'C' channels having a top flange measuring at least 1-inch.
- f. Rungs:
 - 1) Provide rungs that are a minimum of 1 inch wide.
 - 2) Weld the rungs to the side rails.
 - a) Do not attach standard tray rungs to the side rails by mechanical means.
 - 3) Fabricate the rungs from the same material as the side rails.
 - 4) Rung Spacing:
 - a) Space rungs on straight tray sections 6 inches, 9 inches, or 12 inches apart on center as indicated on the Contract Drawings.
 - (1) The manufacturer's standard rung spacing must include 6 inches, 9 inches, or 12 inches.
 - b) Do not allow the distance between rungs on fittings to exceed the rung spacing and tolerances for straight tray as measured at the center of the fitting.
- g. Tray Fittings:
 - 1) Provide the types and quantities of tray fittings indicated on the Contract Drawings.
 - a) Fittings for tangent sections of NEMA Class 12A, NEMA Class 12B, or NEMA Class 12C trays, must be at least 2 inches.
 - b) Fittings for tangent sections of NEMA Class 20A, NEMA Class 20B, or NEMA Class 20C trays, must be at least 5 inches.
 - 2) Fabricate cable tray fittings from the same material as the straight tray sections.

- 3) The manufacturer's standard fittings must include at a minimum the following types:
 - a) Horizontal elbow fittings for 30-degree, 45-degree, 60-degree, and 90-degree angles.
 - b) Vertical elbow fittings for 30-degree, 45-degree, 60-degree, and 90-degree angles with inside and outside radius options.
 - c) Horizontal adjustable elbow fittings having an adjustable angle.
 - d) Horizontal and vertical tee fittings having a branch at a 90-degree angle.
 - e) Horizontal wye fittings having a branch at a 45-degree angle.
 - f) Horizontal and vertical cross fittings having branches at 90-degree angles.
 - g) Horizontal Reducers:
 - (1) Straight Type:
 - (a) Reducer fitting having 2 symmetrical offsets from the centerline of the fitting.
 - (2) Right Hand Type:
 - (a) Reducer having a straight side on right side of the fitting when viewed from the large tray width side.
 - (3) Left Hand Type:
 - (a) Reducer having a straight side on left side of the fitting when viewed from the large tray width side.
 - h) Fitting Radius:
 - (1) Provide fittings having a nominal bend radius of [12][24][36] inches measured on the smallest side as indicated on the Contract Drawings.
 - (2) Provide fittings having a bend radius appropriate for the allowable bending radius of the cables to be installed in the fitting.
 - (3) The manufacturer's standard fitting radii must include 12-inch, 24-inch, 36-inch, and 48-inch radii in accordance with the requirements specified in NEMA VE 1.
- h. Connectors:
 - 1) Connector Hardware:
 - a) Provide 3/8-inch diameter truss head, ribbed neck steel screws having a Phillips recess and free spinning, lock type steel nuts which do not need a washer.
 - b) Protect the connector hardware finish against corrosion.
 - (1) Provide connector hardware either of steel that has been cadmium plated with a yellow chromate finish complying with the requirements specified for Class 5, Type II coatings in ASTM B 766, or Type 316 stainless steel.
 - 2) Connector Splices:

- a) Provide connector splices having an electrical resistance of less than 0.00033 ohms.
- 3) Expansion Connectors:
 - a) Provide expansion connectors capable of providing for tray expansion of at least 1 inch, and located as shown on the Contract Drawings or as required to prevent damage to the tray system from thermal expansion and contraction.
 - b) Install grounding bonding jumpers at all adjustable connectors and expansion connectors.
- i. Manufacturers:
 - 1) Cablofil/Legrand®, PW Industries, <http://www.pwindustries.com>.
 - 2) Approved equal.
- 3. Trough Cable Trays:
 - a. Provide fabricated metal structures greater than 4 inches in width, and consisting of integral or separate longitudinal side rails and a bottom having openings sufficient for the passage of air.
 - 1) For trough type cable trays indicated to receive a mill galvanized (PGSTL) coating on the Contract Drawings, apply the coating at the steel mill in accordance with the requirements specified in ASTM A 924/A 924M and ASTM A 653/A 653M.
 - 2) For trough type cable trays indicated to receive a hot dipped galvanized finish after fabrication (HDGAF) on the Contract Drawings, apply the coating in accordance with the requirements specified in ASTM A 123/A 123M.
 - 3) For trough type cable trays indicated to be aluminum (ALUM) on the Contract Drawings, construct the cable trays from copper free aluminum Alloy 6063-T6.
 - a) Construct fittings and accessories from a corrosion resistant aluminum alloy that is compatible with aluminum Alloy 6063, such as Alloy 5052 or Alloy 3003.
 - b. Lengths of Straight Sections:
 - 1) Provide actual cable tray lengths and quantities as indicated on the Contract Drawings.
 - a) The manufacturer's standard lengths must include 12 feet and 20 feet, not including their connectors if they are attached.
 - 2) Provide straight section lengths that are greater than or equal to the support span length.
 - 3) Provide straight section lengths so that at most only one splice joint occurs between any 2 cable tray supports.
 - c. Tray Widths:
 - 1) Provide actual cable tray widths as indicated on the Contract Drawings.
 - 2) The manufacturer's standard widths must include 6 inches, 9 inches, 12 inches, 18 inches, 24 inches, 30 inches, and 36 inches

- in compliance with the requirements specified in Section 4.3.3.1 of NEMA VE 1.
- d. Side Rail Height:
 - 1) Provide actual side rail heights as indicated on the Contract Drawings.
 - a) The manufacturer's standard side rail heights must include 4 inches, 5 inches, 6 inches, and 7 inches in compliance with the requirements specified in Section 4.3.4.3 of NEMA VE 1.
 - e. Transverse Elements:
 - 1) Provide trough cable tray having no more than 4 inches of open space between transverse elements in the direction parallel to the side rails.
 - f. Troughs:
 - 1) Rung Style Troughs:
 - a) Provide rung style troughs having the manufacturer's standard rung spacing.
 - (1) For aluminum trays, the manufacturer's standard rungs must include 4-inch wide channels, and the manufacturer's standard rung spacing must include rungs spaced 8 inches apart on center.
 - (2) For steel trays, the manufacturer's standard rungs must include 1-1/4-inch wide channels, and the manufacturer's standard rung spacing must include rungs spaced 5 inches apart on center.
 - (3) For fittings, provide space rungs spaced 5 inches apart on center.
 - b) Weld the rungs to the side rails.
 - 2) Ventilated, Corrugated Bottom Style Troughs:
 - a) Provide ventilated, corrugated bottom style troughs having the manufacturer's standard ventilated corrugated bottoms welded to the side rails.
 - (1) The manufacturer's standard ventilated, corrugated bottom style troughs must include 3/8-inch wide by 1-1/4-inch long ventilation slots spaced on 1-1/2-inch centers across the tray width, and spaced along the length of the tray 2.19 inches apart on center.
 - (2) Provide 0.5-inch high corrugated bottoms having 0.875-inch top cable supporting ribs spaced along the length of the tray 2.19 inches apart on center.
 - g. Tray Fittings:
 - 1) Provide the types and quantities of tray fittings indicated on the Contract Drawings.
 - 2) Fabricate cable tray fittings from the same material as the straight tray sections.

- 3) The manufacturer's standard fittings must include at a minimum the following types:
 - a) Horizontal elbow fittings for 30-degree, 45-degree, 60-degree, and 90-degree angles.
 - b) Vertical elbow fittings for 30-degree, 45-degree, 60-degree, and 90-degree angles with inside and outside radius options.
 - c) Horizontal adjustable elbow fittings having an adjustable angle.
 - d) Horizontal and vertical tee fittings having a branch at a 90-degree angle.
 - e) Horizontal wye fittings having a branch at a 45-degree angle.
 - f) Horizontal and vertical cross fittings having branches at 90-degree angles.
 - g) Horizontal Reducers:
 - (1) Straight Type:
 - (a) Reducer fitting having 2 symmetrical offsets from the centerline of the fitting.
 - (2) Right Hand Type:
 - (a) Reducer having a straight side on right side of the fitting when viewed from the large tray width side.
 - (3) Left Hand Type:
 - (a) Reducer having a straight side on left side of the fitting when viewed from the large tray width side.
- 4) Fitting Radius:
 - a) Provide fittings having a nominal bend radius of 12 inches measured on the smallest side as indicated on the Contract Drawings.
 - b) Provide fittings having a bend radius appropriate for the allowable bending radius of the cables to be installed in the fitting.
 - c) The manufacturer's standard fitting radii must comply with the specified working (allowable) load capacity requirements.
- h. Connectors:
 - 1) Connector Hardware:
 - a) Provide 3/8-inch diameter truss head, ribbed neck steel screws having a Phillips recess and free spinning, lock type steel nuts which do not need a washer.
 - b) Protect the connector hardware finish against corrosion.
 - (1) Provide connector hardware either of steel that has been cadmium plated with a yellow chromate finish complying with the requirements specified for Class 5, Type II coatings in ASTM B 766, or Type 316 stainless steel.
 - 2) Connector Splices:
 - a) Provide connector splices having an electrical resistance of less than 0.00033 ohms.

- 3) Expansion Connectors:
 - a) Provide expansion connectors capable of providing for tray expansion of at least 1 inch, and located as shown on the Contract Drawings or as required to prevent damage to the tray system from thermal expansion and contraction.
 - b) Install grounding bonding jumpers at all adjustable connectors and expansion connectors.
- i. Manufacturers:
 - 1) Cablofil/Legrand®, PW Industries, <http://www.pwindustries.com>.
 - a) Mill galvanized steel: PW Industries 05-2C31.
 - b) Hot dipped galvanized after fabrication steel: PW Industries 05-1C31.
 - 2) Approved equal.
4. Corrugated Solid Bottom Cable Trays:
 - a. Provide prefabricated metal cable tray structures consisting of a solid corrugated bottom having no openings and 2 integral or separate longitudinal side rails.
 - 1) Provide corrugated solid bottoms having no more than 1-5/16 inch space between corrugations.
 - 2) For corrugated solid bottom type cable trays indicated to receive a mill galvanized (PGSTL) coating on the Contract Drawings, apply the coating at the steel mill in accordance with the requirements specified in ASTM A 924/A 924M and ASTM A 653/A 653M.
 - 3) For corrugated solid bottom type cable trays indicated to receive a hot dipped galvanized finish after fabrication (HDGAF) on the Contract Drawings, apply the coating in accordance with the requirements specified in ASTM A 123/A 123M.
 - 4) For corrugated solid bottom type cable trays indicated to be aluminum (ALUM) on the Contract Drawings, construct the cable trays from copper free aluminum Alloy 6063-T6.
 - a) Construct fittings and accessories from a corrosion resistant aluminum alloy that is compatible with aluminum Alloy 6063, such as Alloy 5052 or Alloy 3003.
 - b. Length of Straight Sections:
 - 1) Provide actual cable tray lengths and quantities as indicated on the Contract Drawings.
 - a) The manufacturer's standard lengths must include 12 feet and 20 feet, not including their connectors if they are attached.
 - 2) Provide straight section lengths that are greater than or equal to the support span length.
 - 3) Provide straight section lengths so that at most only one splice joint occurs between any 2 cable tray supports.
 - c. Tray Widths:
 - 1) Provide actual cable tray widths as indicated on the Contract Drawings.

- 2) The manufacturer's standard ladder tray selections must include full width and half width bottom rung configurations.
 - a) The manufacturer's standard widths must include 6 inches, 9 inches, 12 inches, 18 inches, 24 inches, 30 inches, and 36 inches in compliance with the requirements specified in Section 4.3.3.1 of NEMA VE 1.
- d. Side Rail Height:
 - 1) Provide actual side rail heights as indicated on the Contract Drawings.
 - a) The manufacturer's standard side rail heights must include 4 inches, 5 inches, 6 inches, and 7 inches in compliance with the requirements specified in Section 4.3.4.3 of NEMA VE 1.
- e. Side Channels:
 - 1) Provide side channel members configured as 'C' channels having a top flange measuring at least 1-inch.
- f. Tray Bottoms:
 - 1) Provide corrugated solid bottom cable trays having the manufacturer's standard solid corrugated bottoms welded to the side rails.
 - a) Provide 0.5-inch high corrugated bottoms having 0.875-inch top cable supporting ribs spaced along the length of the tray 2.19 inches apart on center.
- g. Tray Fittings:
 - 1) Provide the types and quantities of tray fittings indicated on the Contract Drawings.
 - 2) Fabricate cable tray fittings from the same material as the straight tray sections.
 - 3) The manufacturer's standard fittings must include at a minimum the following types:
 - a) Horizontal elbow fittings for 30-degree, 45-degree, 60-degree, and 90-degree angles.
 - b) Vertical elbow fittings for 30-degree, 45-degree, 60-degree, and 90-degree angles with inside and outside radius options.
 - c) Horizontal adjustable elbow fittings having an adjustable angle.
 - d) Horizontal and vertical tee fittings having a branch at a 90-degree angle.
 - e) Horizontal wye fittings having a branch at a 45-degree angle.
 - f) Horizontal and vertical cross fittings having branches at 90-degree angles.
 - g) Horizontal Reducers:
 - (1) Straight Type:
 - (a) Reducer fitting having 2 symmetrical offsets from the centerline of the fitting.
 - (2) Right Hand Type:

- (a) Reducer having a straight side on right side of the fitting when viewed from the large tray width side.
 - (3) Left Hand Type:
 - (a) Reducer having a straight side on left side of the fitting when viewed from the large tray width side.
 - 4) Fitting Radii:
 - a) Provide fittings having a nominal bend radius of 12 inches measured on the smallest side as indicated on the Contract Drawings.
 - b) Provide fittings having a bend radius appropriate for the allowable bending radius of the cables to be installed in the fitting.
 - c) The manufacturer's standard fitting radii must include 12-inch, 24-inch, 36-inch, and 48-inch radii in accordance with the requirements specified in NEMA VE 1.
 - h. Connectors:
 - 1) Connector Hardware:
 - a) Provide 3/8-inch diameter truss head, ribbed neck steel screws having a Phillips recess and free spinning, lock type steel nuts which do not need a washer.
 - b) Protect the connector hardware finish against corrosion.
 - (1) Provide connector hardware either of steel that has been cadmium plated with a yellow chromate finish complying with the requirements specified for Class 5, Type II coatings in ASTM B 766, or Type 316 stainless steel.
 - 2) Connector Splices:
 - a) Provide connector splices having an electrical resistance of less than 0.00033 ohms.
 - 3) Expansion Connectors:
 - a) Provide expansion connectors capable of providing for tray expansion of at least 1 inch, and located as shown on the Contract Drawings or as required to prevent damage to the tray system from thermal expansion and contraction.
 - b) Install grounding bonding jumpers at all adjustable connectors and expansion connectors.
 - i. Manufacturers:
 - 1) Cablofil/Legrand®, PW Industries, <http://www.pwindustries.com>.
 - a) Mill galvanized steel: PW Industries B360.
 - b) Hot dipped galvanized after fabrication steel: PW Industries A360.
 - c) Aluminum: PW Industries 5720.
 - 2) Approved equal.
- 5. Channel Cable Trays:

- a. Provide prefabricated metal cable tray structures consisting of a one piece ventilated bottom or solid bottom channel section, or both, not exceeding 6 inches in width.
 - 1) For channel cable trays indicated to receive a mill galvanized (PGSTL) coating on the Contract Drawings, apply the coating at the steel mill in accordance with the requirements specified in ASTM A 924/A 924M and ASTM A 653/A 653M.
 - 2) For channel cable trays indicated to receive a hot dipped galvanized finish after fabrication (HDGAF) on the Contract Drawings, apply the coating in accordance with the requirements specified in ASTM A 123/A 123M.
 - 3) For channel cable trays indicated to be aluminum (ALUM) on the Contract Drawings, construct the cable trays from copper free aluminum Alloy 6063-T6.
 - a) Construct fittings and accessories from a corrosion resistant aluminum alloy that is compatible with aluminum Alloy 6063, such as Alloy 5052 or Alloy 3003.
- b. Lengths of Straight Sections:
 - 1) Provide actual cable tray lengths and quantities as indicated on the Contract Drawings.
 - a) The manufacturer's standard lengths of must include 12 feet, not including their connectors if they are attached.
- c. Tray Widths:
 - 1) Provide actual cable tray widths as indicated on the Contract Drawings.
 - 2) The manufacturer's standard widths must include 3 inches, 4 inches, and 6 inches.
- d. Outside Depths:
 - 1) Provide actual cable tray outside depths as indicated on the Contract Drawings.
 - 2) The manufacturer's standard outside depths must include 1-3/4 inches.
- e. Channel Fittings:
 - 1) Provide the types and quantities of channel fittings indicated on the Contract Drawings.
 - a) Fittings for tangent sections of channel fittings must be at least 2 inches.
 - 2) Fabricate cable tray fittings from the same material as the straight tray sections.
 - 3) The manufacturer's standard fittings must include at a minimum the following types:
 - a) Horizontal elbow fittings for 30-degree, 45-degree, 60-degree, and 90-degree angles.
 - b) Vertical elbow fittings for 30-degree, 45-degree, 60-degree, and 90-degree angles with inside and outside radius options.

- c) Horizontal tee fittings having a branch at a 90-degree angle.
 - d) Horizontal cross fittings having branches at 90-degree angles.
 - f. Fitting Radii:
 - 1) Fitting Radii:
 - a) Provide fittings having a nominal bend radius of 12 inches measured on the smallest side as indicated on the Contract Drawings.
 - b) The manufacturer's standard fitting radii must include 12-inch, 24-inch, and 36-inch radii in accordance with the requirements specified in NEMA VE 1.
 - g. Connectors:
 - 1) Connector Hardware:
 - a) Provide 3/8-inch diameter truss head, ribbed neck steel screws having a Phillips recess and free spinning, lock type steel nuts which do not need a washer.
 - b) Protect the connector hardware finish against corrosion.
 - (1) Provide connector hardware either of steel that has been cadmium plated with a yellow chromate finish complying with the requirements specified for Class 5, Type II coatings in ASTM B 766, or Type 316 stainless steel.
 - 2) Expansion Connectors:
 - a) Provide expansion connectors capable of providing for tray expansion of at least 1 inch, and located as shown on the Contract Drawings or as required to prevent damage to the tray system from thermal expansion and contraction.
 - b) Install grounding bonding jumpers at all adjustable connectors and expansion connectors.
 - h. Manufacturers:
 - 1) Cablofil/Legrand®, PW Industries, <http://www.pwindustries.com>.
 - a) Mill galvanized steel: PW Industries 2508-03.
 - b) Hot dipped galvanized after fabrication steel: PW Industries 1508-03.
 - c) Aluminum: PW Industries 5508-03.
 - 2) Approved equal.
- 6. Wire Basket Cable Support Systems:
 - a. Provide wire basket cable support systems for communications cabling consisting of high strength steel wires formed into a standard 2-inch by-4 inch wire mesh pattern having the intersecting wires welded together.
 - 1) For carbon steel wire mesh sections, provide wire having a diameter of at least 0.196 inch (5mm).
 - 2) For stainless steel wire mesh sections, provide wire having a diameter of at least 4.5mm.
 - b. Straight Sections:

- 1) For all tray sizes, provide wire basket straight sections having a continuous longitudinal top wire safety edge that is kinked and T-welded.
- 2) Provide wire basket straight sections having at least one longitudinal bottom wire along entire length of the section.
- c. Lengths of Straight Sections:
 - 1) Provide actual cable tray lengths and quantities as indicated on the Contract Drawings.
 - 2) The manufacturer's standard straight lengths of must include 118-inch long sections, not including their connectors if they are attached.
- d. Depths:
 - 1) Provide actual cable tray depths as indicated on the Contract Drawings.
 - a) The manufacturer's standard usable wire basket cable support loading depths must include 1 inch, 2 inches, 4 inches, and 6 inches.
- e. Tray Widths:
 - 1) Provide actual cable tray widths as indicated on the Contract Drawings.
 - 2) The manufacturer's standard usable widths associated with loading depths indicated must include the following:
 - a) The manufacturer's standard widths for wire basket cable supports having a 1-inch usable loading depths must include 4 inches, 6 inches, 8 inches, and 12 inches.
 - b) The manufacturer's standard widths for wire basket cable supports having a 2-inch usable loading depths must include 2 inches, 4 inches, 6 inches, 8 inches, 12 inches, 16 inches, 18 inches, 20 inches, 24 inches, 30 inches, and 32 inches.
 - c) The manufacturer's standard widths for wire basket cable supports having a 4-inch usable loading depths must include 4 inches, 6 inches, 8 inches, 12 inches, 16 inches, 18 inches, 20 inches, 24 inches, and 30 inches.
 - d) The manufacturer's standard widths for wire basket cable supports having a 6-inch usable loading depths must include 8 inches, 12 inches, 16 inches, 18 inches, 20 inches, and 24 inches.
- f. Tray Fittings:
 - 1) Provide the types and quantities of tray fittings indicated on the Contract Drawings.
 - 2) Field-form fittings from straight sections in accordance with the manufacturer's instructions.
 - a) Submit the wire basket cable support system manufacturer's instructions for field-forming fittings to the Program/Project Manager for information.

- 3) Fitting Radius:
 - a) Provide fittings having a bend radius appropriate for the allowable bending radius of the cables to be installed in the fitting.
- g. Manufacturers:
 - 1) Cooper B-Line, Inc., <http://www.b-line.com>.
 - 2) Cablofil/Legrand®, PW Industries, <http://www.cablofil.com>.
 - 3) Approved equal.

A. Fabrication:

- 1. Fabricate the cable trays to have rounded edges and smooth surfaces in compliance with the applicable standards specified.

2.02 ACCESSORIES

A. Covers:

- 1. Provide cable trays having tray covers where indicated on the Contract Drawings.
 - a. The manufacturers standard tray covers must include flat covers with no side flanges, flat covers with side flanges, louvered flat covers with no side flanges, louvered flat covers with side flanges, and 15 degree peaked covers with side flanges.
 - b. The manufacturers standard tray covers for fittings must be available with the same configuration as covers for straight trays.
- 2. Provide covers for the trays fabricated from the same material as the straight trays and fittings at exterior locations, or as indicated on the Contract Drawings.
- 3. Provide the standard manufacturer's hardware required to hold the covers to the cable tray sections.
 - a. Provide "Clip Type" clamps on indoor, horizontal cable trays.
 - b. Provide heavy duty "Strap Type" clamps on outdoor and vertical cable tray sections.

B. Divider Strips:

- 1. Provide divider strips where indicated on the Contract Drawings.
- 2. Attach divider strips to the cable tray rungs in the field using standard manufacturer-supplied hardware.
- 3. Provide divider strips fabricated from the same material as the straight tray and fittings, or as indicated on the Contract Drawings.

C. Blind End Plates:

- 1. Provide blind end plates where indicated on the Contract Drawings.
- 2. Provide blind end plates fabricated from the same material as the straight tray and fitting, or as indicated on the Contract Drawings.

D. Cable Dropouts:

1. Provide cable dropouts where indicated on the Contract Drawings.
 2. Provide cable dropouts fabricated from the same material as the straight tray and fitting, or as indicated on the Contract Drawings.
- E. Wall Penetration Sleeves:
1. For the wall penetrations indicated on the Contract Drawings, provide wall penetration sleeves designed for a single run of cable tray having a standard overall tray width and depth, and complying with the requirements specified in Section 16050, Basic Electrical Materials and Methods.
 - a. Hot dip galvanize the wall penetration sleeves' steel, after fabrication in accordance with the requirements specified in ASTM A 123/A 123M.
- F. Firestopping System:
1. Provide through-penetration firestopping materials complying with the requirements specified in Section 07850, Through Penetration Firestopping Systems, for the Underwriters Laboratories, Inc. (UL) XHEZ Category Code, or fire-resistive joint systems complying with the requirements specified in Section 07842, Fire-Resistive Joint Systems, for the Underwriters Laboratories, Inc. (UL) XHBN Category Code.
- G. Conduit and Pipe Clamps:
1. Provide standard manufacturer-designed conduit and pipe clamps and/or brackets as required by code to clamp conduit and pipe.
- H. Hangers and Supports:
1. Provide hangers and supports as specified in Section 16070, Hangers and Supports.
 - a. Provide center support hangers, trapeze hangers, or wall brackets as recommended by the cable tray manufacturer.
 - b. Support trapeze hangers or center support hangers using 3/8 inch diameter rods as specified.
- I. Wire Basket Support System Accessories:
1. Provide special accessories required to protect, support, and install the wire basket support systems.

2.03 SOURCE QUALITY CONTROL

- A. Manufacturer Services:
1. Have the manufacturer test the cable trays under the "worst case" loading conditions outlined in this Specification in accordance with the requirements specified in NEMA VE 1, have these tests witnessed by an independent testing laboratory, and prepare test reports documenting the results of the tests.

2. Submit the manufacturer's test reports to the Program/Project Manager for information.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Field-verify the dimensions, routing, and other information related to the cable tray systems indicated on the Contract Drawings.
 2. Although the Contract Drawings are generally indicative of the Work, take field measurements to verify actual conditions.
 - a. Due to the small scale of the Contract Drawings it is not possible to indicate all offsets, fittings, and apparatus required or the minor structural obstructions that may be encountered during the Work.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the cable tray systems.
- B. Surface Preparation:
 1. Provide cable tray supports at the locations shown in NEMA VE 2, and space the supports no more than 10 feet apart.
 - a. Install auxiliary support structures, anchors, and fasteners as specified in Section 16070, Hangers and Supports.
- C. Demolition/Removal:
 1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Install the cable trays at the locations indicated in the Contract Drawings, in accordance with the cable tray manufacturer's installation instructions, and in accordance with the requirements specified for installing cable tray systems in NFPA 70, NFPA 70B, NECA 1, and ANSI/NECA/NEMA 105.
 1. Do not install damaged equipment.
 2. Install metallic cable tray in accordance with the additional requirements specified in NEMA VE 1 and NEMA VE 2.
 3. Provide expansion connectors where required.
 4. Submit the cable tray manufacturer's preparation and installation instructions, including application conditions and limitations of use stipulated by the product testing agency, to the Program/Project Manager for information.

B. Elevation:

1. Install straight cable tray sections, fittings, and accessories at the height from the floor to the bottom of the cable tray indicated on the Contract Drawings.

C. Special Techniques:

1. Grounding:

- a. Provide a continuous ground from section to section and from the cable tray to the building ground in accordance with the requirements specified in Section 16061, Electrical Grounding and Bonding, or Section 16062, Communications Grounding and Bonding, as applicable.
- b. Provide cable tray systems capable of being used as an equipment grounding conductor in accordance with the requirements specified in Article 392-7(b) of NFPA 70.
 - 1) When using powder coated wire basket cable trays as an equipment ground conductor (EGC), the powder coat paint must be completely removed at all contact points of the splice/ground bolt attachment.
- c. Mark the cable tray sections and fittings to show the minimum cross sectional area in accordance with the requirements specified in Article 392-7 of NFPA 70.
- d. Construct bonding jumpers from laminated aluminum or insulated copper wire with a minimum ampere rating in accordance with the requirements specified in Article 250-95 of NFPA 70 as follows, or as indicated on the Contract Drawings:
 - 1) Center Hung Type Cable Tray: 1000 rated amperes.
 - 2) Ladder Type Cable Tray: 200 rated amperes.
 - 3) Trough Type Cable Tray: 200 rated amperes.
 - 4) Corrugated Solid Bottom Type Cable Tray: 200 rated amperes.

D. Interface with Other Work:

1. Fire-Rated Wall Penetrations:

- a. For wall penetration sleeves in fire rated locations, provide a sufficient firestopping system to furnish a 2-hour fire rated wall.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. Bonding and Grounding Continuity Test:

a. Test Procedure:

- 1) Test wire basket support systems to ensure electrical continuity of bonding and grounding connections, and to demonstrate compliance with specified maximum grounding resistance.
- 2) Perform the testing in accordance with the test methods specified in Chapter 21 of NFPA 70B.

- b. Acceptance Criteria:
 - 1) Cable trays represented by test results complying with the requirements specified in Section 16062, Communications Grounding and Bonding, for the maximum grounding resistance pass the Bonding and Grounding Continuity Test.
 - a) Circuits displaying electrical discontinuities fail the Bonding and Grounding Continuity Test.
 - 2. Inspections:
 - a. As-Built Documents:
 - 1) Prepare as-built drawings recording the actual routing of the cable trays and the locations of supports, and submit them to the Program/Project Manager for information.
- B. Non-Conforming Work
 - 1. Cable trays will be considered defective if they do not pass the specified inspections and tests.
 - 2. Where possible, correct malfunctioning units onsite, and retest the corrected units to demonstrate compliance with the specified requirements; otherwise, replace malfunctioning units with new units and retest the replacement units.

3.05 CLEANING

- A. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 PROTECTION

- A. Take steps to ensure that installed cable trays are protected during subsequent construction activities.

SECTION 16140

WIRING DEVICES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following types of wiring devices:
 - a. Receptacles, receptacles with integral GFCI, and associated device plates.
 - b. Twist-locking receptacles.
 - c. Wall-box motion sensors.
 - d. Isolated-ground receptacles.
 - e. Snap switches.
 - f. Wall-switch and exterior occupancy sensors.
 - g. Communications outlets.
 - h. Pendant cord-connector devices.
 - i. Cord and plug sets.
 - j. Floor service outlets, and multi-outlet assemblies.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01780 - Closeout Submittals.
 - 3. Section 16075 – Electrical Identification.
 - 4. Section 16080 - Electrical Testing.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. GFCI: Ground-fault circuit interrupter.
 - 2. LED: Light emitting diode.
 - 3. PVC: Polyvinyl chloride.
 - 4. TVSS: Transient voltage surge suppressor.
 - 5. UTP: Unshielded twisted pair.
- B. Definitions:
 - 1. Pigtail: A short lead used to connect a device to a branch-circuit conductor.
- C. Reference Standards:
 - 1. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 2. Institute of Electrical and Electronics Engineers (IEEE):
 - a. IEEE 602 - IEEE Recommended Practice for Electric Systems in Health Care Facilities.

3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
4. InterNational Electrical Testing Association (NETA):
 - a. ANSI/NETA ETT - Standard for Certification of Electrical Testing Technicians.
5. National Electrical Manufacturers Association (NEMA):
 - a. NEMA WD 1 - General Color Requirements for Wiring Devices.
 - b. ANSI/NEMA WD 6 - Wiring Devices—Dimensional Requirements.
6. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
7. National Electrical Contractors Association (NECA):
 - a. NECA 1 - Standard Practices for Good Workmanship in Electrical Construction
8. Telecommunications Industry Association/Electronic Industries Association (TIA/EIA):
 - a. ANSI/TIA/EIA-568-B.1 - Commercial Building Telecommunications Cabling Standard – Part 1: General Requirements.
9. Underwriters Laboratories, Inc. (UL):
 - a. UL 20 - Standard for Safety for General-Use Snap Switches.
 - b. UL 498 - Standard for Attachment Plugs and Receptacles.
 - c. UL 943 - Standard for Safety for Ground-Fault Circuit-Interrupters.
 - d. UL 1436 - Standard for Outlet Circuit Testers and Similar Indicating Devices.
 - e. UL 1863 - Standard for Communications-Circuit Accessories.
 - f. UL Online Certifications Directory,
<https://www.ul.com/ul-databases-and-directories/>.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
 2. Coordinate the required supporting wiring, raceway, and box sizes with the wiring devices.
 3. Receptacles for Owner-Furnished Equipment:
 - a. Coordinate with the Program/Project Manager to provide receptacles that match the plug configurations of Owner-furnished equipment.
 - b. Cord and Plug Sets:
 - 1) Coordinate equipment requirements so the cord and plug sets match the receptacles.

B. Sequencing:

1. Install the required supporting raceway and boxes prior to the scheduled installation of the wiring devices.
2. Install wiring devices after all wall preparation, including painting, is complete.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:

a. Product Data:

- 1) Convenience receptacles.
- 2) Hospital-grade, duplex convenience receptacles.
- 3) Duplex ground-fault circuit interrupter (GFCI) receptacles.
- 4) Isolated-ground, duplex convenience receptacles.
- 5) Twist-locking receptacles.
- 6) Pendant cord-connector devices.
- 7) Cord and plug sets.
- 8) General-use snap switches.
- 9) Pilot light switches.
- 10) Key-operated switches.
- 11) Single-pole, double-throw, momentary contact, center-off switches.
- 12) Wall-switch sensors.
- 13) Long-range wall-switch sensors.
- 14) Telephone outlet.
- 15) Wall plates.
- 16) Wet-location, weatherproof cover plates.
- 17) Power receptacle floor service fittings.
- 18) Voice and data communication outlet floor service fittings.
- 19) Multioutlet assemblies.

b. Shop Drawings:

- 1) List of legends.
- 2) Materials and process to be used for pre-marking wall plates.

c. Qualification Statements:

- 1) Testing Agency's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:

a. Site Quality Control Submittals:

- 1) Field quality-control test reports.

- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Wiring devices.
- D. Maintenance Material Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish spare parts that match the products installed in the following quantities, and package the spare parts with a protective covering for storage identified with labels describing the contents of the packages:
 - a) Floor Service Outlet Assemblies:
 - (1) Furnish a number of floor service outlet assemblies equal 1 for every 10 installed, but no fewer than 1.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - c. Periodic Special Inspections will be performed during the installation of medium-voltage wire, cable, and accessories.
 - 2. Testing and Inspection Agencies:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.
- B. Qualifications:
 - 1. Testing Agency's Qualifications:
 - a. Employ a Testing Agency that is a member company of the InterNational Electrical Testing Association, or a nationally recognized testing laboratory (NRTL), that is acceptable to the Authorities Having

Jurisdiction (AHJ), and that has the experience and capability to conduct the testing specified herein.

- 1) Testing Agency's Field Supervisor:
 - a) The Testing Agency's field supervisor to supervise onsite field quality control testing must be currently certified by the InterNational Electrical Testing Association (NETA) or the National Institute for Certification in Engineering Technologies (NICET).
- 2) Submit the qualifications of the Testing Agency, including the Testing Agency field supervisor's qualifications, to the Program/Project Manager for approval.

C. Certifications:

1. Electrical Listing and Labeling:
 - a. Provide products that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Ensure materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.
2. Inspect materials and equipment for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.

B. Storage and Handling Requirements:

1. Keep each wiring device in its package or otherwise protected until it is time to connect conductors.

2. Do not remove surface protection, such as plastic film and smudge covers, until the last possible moment.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

A. Manufacturers:

1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain each type of wiring device and associated wall plate from a single source from single manufacturer.
 - 2) Insofar as they are available, obtain all wiring devices and associated wall plates from a single manufacturer and one source.

B. Description:

1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. National Electrical Code (NEC):
 - 1) Provide products and installation complying with requirements specified for wiring devices in NFPA 70.

C. Design Criteria:

1. Color:
 - a. The catalog numbers of wiring device given in this Section do not designate device color.
 - b. For wiring devices connected to normal power system, provide grey colored devices for the public spaces and ivory colored devices for the non-public spaces unless otherwise indicated or required by NFPA 70 or the device listing.
 - c. For wiring devices connected to an emergency power system, provide red colored devices.
 - d. For transient voltage surge suppressor (TVSS) devices, provide blue colored devices.
 - e. For isolated-ground receptacles, provide orange colored receptacles.
2. Cover Plates

- a. Shall be stainless steel unless otherwise noted.
 - b. Shall be provided with permanent, typed label including branch circuit number. Provide white label with black lettering for normal power and red lettering for emergency power.
 - 3. Product Data:
 - a. For each type of wiring device indicated, submit Product Data to the Program/Project Manager for approval.
 - 4. Shop Drawings:
 - a. Submit Shop Drawings that include a list of legends, and a description of the materials and process to be used for pre-marking wall plates to the Program/Project Manager for approval.
- D. Materials:
 - 1. Straight Blade Receptacles:
 - a. Convenience Receptacles:
 - 1) Provide 125 Volt, 20 Ampere convenience receptacles complying with the requirements specified in NEMA WD 1 and UL 498, and with the requirements for configuration 5-20R specified in NEMA WD 6.
 - 2) Manufacturers:
 - a) Cooper Wiring Devices, a division of Cooper Industries, Inc.; 5351 (single), 5352 (duplex); www.cooperwiringdevices.com.
 - b) Hubbell Incorporated, Wiring Device-Kellems; HBL5351 (single), CR5352 (duplex); www.hubbell-wiring.com.
 - c) Leviton Manufacturing Company, Inc.; 5891 (single), 5352 (duplex); www.leviton.com.
 - d) Pass & Seymour/Legrand; 5351 Series (single), 5352 Series (duplex); www.passandseymour.com.
 - e) Approved equal.
 - 2. Ground-Fault Circuit Interrupter (GFCI) Receptacles:
 - a. Provide straight blade, feed-through type ground-fault circuit interrupter (GFCI) receptacles complying with the requirements specified in NEMA WD 1, NEMA WD 6, and UL 498; and with the requirements for Class A receptacles specified in UL 943.
 - b. Provide ground-fault circuit interrupter (GFCI) receptacles that include an indicator light that lights up when the device is tripped by a ground fault.
 - c. Duplex Ground-Fault Circuit Interrupter (GFCI) Convenience Receptacles:
 - 1) Provide 125 Volt, 20 Ampere feed-through type duplex GFCI convenience receptacles.
 - 2) Manufacturers:
 - a) Cooper Wiring Devices, a division of Cooper Industries, Inc.; GF20 Series; www.cooperwiringdevices.com.
 - b) Pass & Seymour/Legrand; 2084; www.passandseymour.com.

- c) Approved equal.
- d. Isolated-Ground, Duplex Convenience Receptacles:
 - 1) Provide straight blade, 125 Volt, 20 Ampere isolated-ground, duplex convenience receptacles complying with the requirements for configuration 5-20R specified in NEMA WD 6.
 - a) For equipment grounding contacts, provide a green grounding screw terminal on the device inherently isolated electrically from the mounting strap.
 - b) Provide receptacles with isolation integral to the receptacle construction, and not dependent on removable parts.
 - 2) Manufacturers:
 - a) Cooper Wiring Devices, a division of Cooper Industries, Inc.; IG5362BLS; www.cooperwiringdevices.com.
 - b) Hubbell Incorporated Wiring Device-Kellems; IG5362SA; www.hubbell-wiring.com.
 - c) Leviton Manufacturing Company, Inc.; 5380-IG; www.leviton.com.
 - d) Approved equal.
- 3. Twist-Locking Receptacles:
 - a. Provide single, 125 Volt, 20 Ampere twist-locking convenience receptacles complying with the requirements specified in NEMA WD 1 and UL 498, and with the requirements for configuration 5-20R specified in NEMA WD 6.
 - b. Manufacturers:
 - 1) Cooper Wiring Devices, a division of Cooper Industries, Inc.; L520R Series; www.cooperwiringdevices.com.
 - 2) Hubbell Incorporated Wiring Device-Kellems; HBL2310; www.hubbell-wiring.com.
 - 3) Leviton Manufacturing Company, Inc.; 2310; www.leviton.com.
 - 4) Pass & Seymour/Legrand; L520-R; www.passandseymour.com.
 - 5) Approved equal.
- 4. Pendant Cord-Connector Devices:
 - a. Provide heavy-duty grade pendant cord-connector devices having a matching, locking-type plug and receptacle body; and complying with the requirements for configurations L5-20P and L5-20R specified in NEMA WD 6.
 - 1) Body:
 - a) Provide nylon devices having screw-open cable-gripping jaws and a provision for attaching an external cable grip.
 - 2) External Cable Grip:
 - a) Provide an external type woven wire-mesh cable grip made of high-strength galvanized-steel wire strand, matched to the cable diameter, and having an attachment provision designed for the corresponding connector.
- 5. Cord and Plug Sets:

- a. Provide cord and plug sets that match the voltage and current ratings and the number of conductors to the requirements of the equipment being connected.
 - 1) Cord:
 - a) Provide rubber-insulated cords having stranded-copper conductors with Type SOW-A jacket, a green-insulated grounding conductor, and having ampacity equal to the equipment-rating ampacity plus a minimum of 30 percent.
 - 2) Plug:
 - a) Provide plugs having a nylon body and integral cable-clamping jaws.
 - b) Match the cord and receptacle type to the connection.
6. Snap Switches:
 - a. General-Use Snap Switches:
 - 1) Provide 120/277 Volt, 20 Ampere snap switches complying with the requirements specified in NEMA WD 1 and UL 20.
 - 2) Manufacturers:
 - 1) Cooper Wiring Devices, a division of Cooper Industries, Inc.; 2221 (single pole), 2222 (two pole), 2223 (three way), 2224 (four way); www.cooperwiringdevices.com.
 - 2) Hubbell Incorporated Wiring Device-Kellems; CS1221 (single pole), CS1222 (two pole), CS1223 (three way), CS1224 (four way); www.hubbell-wiring.com.
 - 3) Leviton Manufacturing Company, Inc.; 1221-2 (single pole), 1222-2 (two pole), 1223-2 (three way), 1224-2 (four way); www.leviton.com.
 - 4) Pass & Seymour; 20AC1 Series (single pole), PS20AC2 Series (two pole), 20AC3 Series (three way), 20AC4 Series (four way); www.passandseymour.com.
 - 5) Approved equal.
 - b. Pilot Light Switches:
 - 1) Provide 120/277 Volt, 20 Ampere snap switches complying with the requirements specified in NEMA WD 1 and UL 20.
 - 2) Provide single pole pilot light switches having a neon-lighted handle that is illuminated when the switch is in the "ON" position.
 - 3) Manufacturers:
 - a) Cooper Wiring Devices, a division of Cooper Industries, Inc.; 2221PL for 120 V and 277 V; www.cooperwiringdevices.com.
 - b) Hubbell Incorporated Wiring Device-Kellems; HBL1221PL for 120 V and 277 V; www.hubbell-wiring.com.
 - c) Leviton Manufacturing Company, Inc.; 1221-PLR for 120 V, 1221-7PLR for 277 V; www.leviton.com.
 - d) Pass & Seymour; PS20AC1RPL for 120 V; www.passandseymour.com.
 - e) Approved equal.
 - c. Key-Operated Switches:

- 1) Provide 120/277 Volt, 20 Ampere snap switches complying with the requirements specified in NEMA WD 1 and UL 20.
- 2) Provide single pole key-operated switches having a factory-supplied key in lieu of a switch handle.
- 3) Manufacturers:
 - a) Cooper Wiring Devices, a division of Cooper Industries, Inc.; 2221L; www.cooperwiringdevices.com.
 - b) Hubbell Incorporated Wiring Device-Kellems; HBL1221L; www.hubbell-wiring.com.
 - c) Leviton Manufacturing Company, Inc.; 1221-2L; www.leviton.com.
 - d) Pass & Seymour; PS20AC1KL; www.passandseymour.com.
 - e) Approved equal.
- d. Single-Pole, Double-Throw, Momentary Contact, Center-Off Switches:
 - 1) Provide single pole, double throw 120/277 Volt, 20 Ampere momentary contact, center-off switches suitable for use with mechanically held lighting contactors.
 - 2) Manufacturers:
 - a) Cooper Wiring Devices, a division of Cooper Industries, Inc.; 1995; www.cooperwiringdevices.com.
 - b) Hubbell Incorporated Wiring Device-Kellems; HBL1557; www.hubbell-wiring.com.
 - c) Leviton Manufacturing Company, Inc.; 1257; www.leviton.com.
 - d) Pass & Seymour; 1251 Series; www.passandseymour.com.
 - e) Approved equal.
7. Occupancy Sensors:
 - a. Wall-Switch Sensors:
 - 1) Provide 120/277 Volt, passive-infrared type wall-switch sensors having an adjustable time delay of up to 30 minutes, a 180-degree field of view, and a minimum coverage area of 900 square feet.
 - 2) Manufacturers:
 - a) Cooper Wiring Devices, a division of Cooper Industries, Inc.; 6111 for 120 V, 6117 for 277 V; www.cooperwiringdevices.com.
 - b) Hubbell Incorporated Wiring Device-Kellems; WS1277Series www.hubbell-wiring.com.
 - c) Leviton Manufacturing Company, Inc.; ODS 10-ID Series; www.leviton.com.
 - d) Pass & Seymour; WSP200; www.passandseymour.com.
 - e) Watt Stopper; WS-200, <http://www.wattstopper.com>.
 - f) Approved equal.
 - b. Long-Range Wall-Switch Sensors:
 - 1) Provide 120/277 Volt, dual technology long-range wall-switch sensors with both passive-infrared- and ultrasonic-type sensing and having an adjustable time delay of up to 30 minutes, a 110-

- degree field of view, and a minimum coverage area of 1200 square feet.
- 2) Manufacturers:
 - a) Hubbell Incorporated Wiring Device-Kellems; ATD1600WRP; www.hubbell-wiring.com.
 - b) Leviton Manufacturing Company, Inc.; ODW12-MRW; www.leviton.com.
 - c) Watt Stopper; DT-200 Series, <http://www.wattstopper.com>.
 - d) Approved equal.
 8. Communications Outlets:
 - a. Telephone Outlet:
 - 1) Provide single RJ-45 jack telephone outlets capable of terminating 100-ohm, balanced, four-pair unshielded twisted pairs (UTP) complying with the requirements for Category 5e cable specified in ANSI/TIA/EIA-568-B.1, and complying with the requirements specified in UL 1863.
 - 2) Manufacturers:
 - a) Cooper Wiring Devices, a division of Cooper Industries, Inc.; 3560-4; www.cooperwiringdevices.com.
 - b) Leviton Manufacturing Company, Inc.; 40649; www.leviton.com.
 - c) Approved equal.
 - a. Wall Plates:
 - a. Provide single and combination types of wall plates to match the corresponding wiring devices.
 - 1) Plate-Securing Screws:
 - a) Provide metal screws having a head color to match the plate finish for securing the wall plates.
 - 2) Material for Finished Spaces:
 - a) Provide 0.035 –inch thick, satin-finished stainless steel wall plates for finished spaces.
 - 3) Material for Unfinished Spaces:
 - a) Provide galvanized steel wall plates for unfinished spaces.
 - 4) Material for Damp Locations:
 - a) Provide cast aluminum wall plates having a spring-loaded lift cover, and listed and labeled by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for use in "wet locations".
 - b. Wet-Location, Weatherproof Cover Plates:
 - 1) Provide die-cast aluminum wall plates complying with the requirements for NEMA type 3R enclosures specified in NEMA 250b while in use weather-resistant, and having a lockable cover.
 10. Floor Service Fittings:

- a. Provide floor service fittings having a rectangular solid brass service plate having a satin finish, and designed for the appropriate service, whether power receptacles or voice and data communications outlets.
 - 1) Provide modular, flush-type, dual-service units suitable for the wiring method used.
 - b. Compartments:
 - 1) Provide a barrier to separate power from voice and data communication cabling.
 - c. Power Receptacle:
 - 1) Provide power receptacle floor service fittings complying with the requirements for configuration 5-20R specified in NEMA WD 6.
 - 2) Unless otherwise indicated, provide units with a gray finish.
 - d. Voice and Data Communication Outlet:
 - 1) Provide voice and data communication outlet floor service fittings having 2 modular, keyed, color-coded, RJ-45 jacks suitable for Category 5e unshielded twisted pair (UTP) cable.
11. Multioutlet Assemblies:
- a. Components of Assemblies:
 - 1) Provide products from a single manufacturer designed for use as a complete, matching assembly of raceways and receptacles.
 - b. Raceway Material:
 - 1) Provide polyvinyl chloride (PVC) raceway.
 - c. Wire:
 - 1) Provide 12AWG wire.
 - d. Manufacturers:
 - 1) Hubbell Incorporated Wiring Device-Kellems; www.hubbell-wiring.com.
 - 2) Wiremold /Legrand, www.wiremold.com.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Verify that the locations to receive wiring devices are ready for the Work of this Section.
 - a. Examine the locations to receive the wiring devices.
 - b. Although the Contract Drawings are generally indicative of the Work, field-verify the actual conditions.
 - 1) Due to the small scale of the Contract Drawings it is not possible to indicate minor structural obstructions or relocations that may be encountered during the Work.
 - 2. Verify that electrical boxes and enclosures to be mated with the wiring devices are the correct type and size, and are at the proper location.
- B. Evaluation and Assessment:

1. Only begin the Work of this Section after the verification of conditions and the correction of non-conformances affecting the wiring devices have been completed.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the wiring devices.
- B. Surface Preparation:
 1. For device boxes installed in brick or block walls, do not allow the cover plate to cross a joint unless the joint has been troweled flush with the face of the wall.
- C. Demolition/Removal:
 1. Do not cut holes for boxes with routers that are guided by riding against the outside of the boxes.

3.03 INSTALLATION

- A. Install the wiring devices in accordance with the requirements specified in NECA 1, including the mounting heights listed in that standard, unless otherwise noted.
- B. Arrangement of Devices:
 1. Unless otherwise indicated, mount wiring devices flush, with the long dimension vertical and with the grounding terminal of receptacles on top.
 2. Group adjacent switches under single, multigang wall plates.
 3. Receptacle Orientation:
 - a. Install the ground pin of vertically mounted receptacles down, and of horizontally mounted receptacles to the right.
- C. Device Installation:
 1. Connect devices to branch circuits using pigtails that are not less than 6 inches in length.
 2. When there is a choice, use side wiring with binding-head screw terminals.
 - a. Wrap solid conductor tightly clockwise, 2/3 to 3/4 of the way around the terminal screw.
 3. Use a torque screwdriver when a torque is recommended or required by the manufacturer.
 4. When conductors larger than 12AWG are installed on 15- or 20-Amp circuits, splice 12AWG pigtails for the device connections.
 5. Tighten unused terminal screws on the device.
 6. When mounting into metal boxes, remove the fiber or plastic washers used to hold device mounting screws in yokes, allowing metal-to-metal contact.

D. Conductors:

1. Do not strip insulation from conductors until just before they are spliced or terminated on devices.
2. Strip insulation evenly around the conductor using tools designed for the purpose.
 - a. Avoid scoring or nicking the solid wire, or cutting strands from stranded wire.
3. Provide free conductors at outlets for devices of the length complying with the requirements specified in Article 300 of NFPA 70, without pigtails.
4. Only connect equipment grounding contacts to the green grounding screw terminal of the device.

E. Device Plates:

1. In accordance with the requirements specified in IEEE 602, do not use oversized or extra-deep plates.

F. Special Techniques:

1. Identification:
 - a. Identify wiring devices in accordance with the requirements specified in Section 16075, Electrical Identification.
 - 1) Receptacles:
 - a) Identify the panelboard and circuit number from which the receptacle is served.
 - 2) Provide hot, stamped or engraved machine printing with black-filled lettering on the face of the plate, and durable wire markers or tags inside outlet boxes.

G. Interface with Other Work:

1. When standard device plates do not fit flush or do not cover the rough wall opening, have the wall finishes repaired, and remount the outlet boxes.

3.04 REPAIR/RESTORATION

- A. Replace devices that have been in temporary use during construction, or that show signs that they were installed before building finishing operations were complete.

3.05 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. During the period when wiring devices are being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing and inspection of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing

personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.

- 1) Periodic Special Inspections will be performed during the installation of seismic controls.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency and/or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
2. Wiring Device Testing:
- a. Test Procedure:
 - 1) Comply with the requirements specified in Section 16080, Electrical Testing.
 - 2) Test Instruments:
 - a) Furnish test instruments that comply with the requirements specified in UL 1436 for performing the testing.
 - b) Instruments for Testing Convenience Receptacles:
 - (1) Furnish digital wiring analyzers having either digital readout or illuminated LED measurement indicators.
 - 3) Perform diagnostic tests to find damaged conductors, high resistance at the circuit breaker, poor connections, inadequate fault current path, defective devices, and similar problems.
 - a) Determine the line voltage.
 - b) Determine the percent voltage drop under 15 Ampere load.
 - c) Determine the ground impedance.
 - d) Determine the GFCI tripping values.
 - 4) Prepare field quality-control test reports to document the test results, and submit them to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Line Voltage:
 - a) The acceptable range for line voltage is 105 Volts to 132 Volts.
 - 2) Percent Voltage Drop under 15 Ampere Load:
 - a) A voltage drop of 6 percent or higher under a 15 Ampere load is unacceptable.
 - 3) Ground Impedance:
 - a) Ground impedance values up to 2 Ohms are acceptable.
 - 4) Ground-Fault Circuit Interrupter (GFCI) Trip:
 - a) The ground-fault circuit interrupter (GFCI) tripping values specified in UL 1436 and UL 943 are acceptable.

3. Inspections:

- a. Convenience Receptacle Inspections:
 - 1) Using the test plug, verify that each device and its outlet box are securely mounted.

B. Non-Conforming Work

- 1. When Work is determined to be non-conforming, correct circuit conditions, remove malfunctioning units and replace the malfunctioning units with new ones, and retest the devices as specified herein.

3.06 ADJUSTING

- A. Adjust the locations of floor service outlets to suit the arrangement of partitions and furnishings.

3.07 PROTECTION

- A. Take steps to ensure that devices and their boxes are protected during construction activities.
 - 1. Do not place wall finish materials over device boxes.
 - 2. Keep outlet boxes free of plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other material that may contaminate the raceway system, conductors, and cables.

3.08 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Furnish operation and maintenance data for the wiring devices that includes labeling conditions in all manufacturers' packing label warnings and instruction manuals.
 - 2. Submit the operation and maintenance data for the wiring devices to the Program/Project Manager for information.

SECTION 16145

LIGHTING CONTROL DEVICES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following lighting control devices:
 - a. Time switches.
 - b. Indoor occupancy sensors.
 - c. Lighting contactors.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01770 - Closeout Procedures.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 16075 – Electrical Identification.
 - 5. Section 16120 - Conductors and Cables.
 - 6. Section 16130 - Raceway and Boxes.
 - 7. Section 16140 - Wiring Devices.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AC: Alternating electric current.
 - 2. BAS: Building automation system.
 - 3. DC: Direct electric current.
 - 4. LED: Light-emitting diode.
 - 5. PIR: Passive infrared.
 - 6. SPDT: Single pole, double throw.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. High-Inrush Ballast: A ballast having a 15 percent or less total harmonic distortion of the normal load current.
- C. Reference Standards:
 - 1. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 2. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
 - 3. National Electrical Contractors Association (NECA):

- a. ANSI/NECA 1 - Standard Practice of Good Workmanship in Electrical Contracting.
- 4. National Electrical Manufacturers Association (NEMA):
 - a. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
 - a. NEMA ICS 2 – Industrial Control and Systems Controllers, Contactors and Overload Relays Rated 600 Volts.
- 5. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
- 6. Underwriters Laboratories, Inc. (UL):
 - a. UL 508 - Standard for Industrial Control Equipment.
 - b. UL 773A – Standard for Nonindustrial Photoelectric Switches for Lighting Control.
 - c. UL 917 - Standard for Clock-Operated Switches.
 - d. UL Online Certifications Directory,
<http://www.ul.com/regulators/quickguide.html>.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate the layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression system, and partition assemblies.
 - 2. Coordinate the required supporting wiring, raceway, and box sizes with the lighting control devices.
- B. Sequencing:
 - 1. Install the required supporting raceway and boxes prior to the scheduled installation of the lighting control devices.
 - 2. Install lighting control devices after all wall preparation, including painting, is complete.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Time switches.
 - 2) Indoor occupancy sensors.
 - 3) Lighting contactors.
 - 4) Power wiring.
 - 5) Class 1 control cables.
 - 6) Class 2 and Class 3 control cables:

- b. Shop Drawings:
 - 1) Occupancy and light-level sensors.
- c. Certificates:
 - 1) Electrical listing and labeling.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Sensor manufacturer's written instructions for the sensors.
 - 2) Lighting control device manufacturer's written instructions for sizing the conductors.
 - 3) Conductor manufacturer's written instructions for separating the conductors.
 - b. Site Quality Control Submittals:
 - 1) Field quality-control test reports.
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Lighting control devices.

1.05 QUALITY ASSURANCE

- A. Certifications:
 - 1. Electrical Listing and Labeling:
 - a. Provide products that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Ensure materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.
- B. Storage and Handling Requirements:
 - 1. Keep each wiring device in its package or otherwise protected until it is time to connect conductors.
 - 2. Do not remove surface protection, such as plastic film and smudge covers, until the last possible moment.

PART 2 PRODUCTS

2.01 LIGHTING CONTROL COMPONENTS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. National Electrical Code (NEC):
 - 1) Provide products and installation complying with requirements specified for wiring devices in NFPA 70.
- C. Design Criteria:
 - 1. Product Data:
 - a. Submit manufacturers Product Data for each type of lighting control device product proposed for the Work of this Section to the Program/Project Manager for approval.
 - 2. Shop Drawings:
 - a. Submit Shop Drawings for occupancy and light-level sensors showing installation details, including interconnection diagrams showing field-installed wiring, to the Program/Project Manager for approval.
- D. Materials:

1. Time Switches:
 - a. Provide a type of electromechanical-dial time switch complying with the requirements specified in UL 917, and having an astronomic time dial that makes the time switch self-adjusting for seasonal changes and automatically adjusts on-off times as the days grow shorter or longer.
 - b. Eight-Day Program:
 - 1) Provide time switches having an eight-day program uniquely programmable for each weekday and holidays.
 - a) Include provisions for a skip-a-day mode.
 - c. Reserve Carryover Mechanism:
 - 1) Provide time switches having wound-spring a reserve carryover mechanism to keep time during power failures.
 - a) Provide a reserve carryover mechanism capable of keeping time for a minimum of 16 hours.
 - d. Contact Configuration:
 - 1) Provide single pole, double throw (SPDT) time switch contacts.
 - e. Contact Rating:
 - 1) Provide contacts rated for 30-Amperes inductive or resistive current, 240-Volt AC voltage.
 - f. Circuitry:
 - 1) Provide time switches having circuitry allowing connection of a photoelectric relay as a substitute for the on-off function of a program.
 - g. Manufacturers:
 - 1) Area Lighting Research, Inc., Tyco Electronics, <http://energy.tycoelectronics.com>.
 - 2) Grässlin Controls Corporation; part of Intermatic, Inc., www.intermatic.com/products/grasslin.aspx.
 - 3) Leviton Manufacturing Company, Inc., www.leviton.com.
 - 4) Philips Lightolier®, a Koninklijke Philips Electronics N.V. Brand, www.lightolier.com.
 - 5) Lithonia Lighting®, a division of Acuity Brands Lighting, Inc., www.lithonia.com.
 - 6) Paragon® Electrical Products; Invensys Controls, www.icca.invensys.com/paragon/inndex.htm.
 - 7) Square D; a brand of Schneider Electric, www.schneider-electric.us.
 - 8) TORK®, NSi Industries, LLC, www.tork.com.
 - 9) Touch-Plate® Technologies, www.touchplate.com.
 - 10) Watt Stopper, <http://www.wattstopper.com>.
 - 11) Approved equal.
2. Indoor Occupancy Sensors:
 - a. Provide wall- or ceiling-mounting, solid-state indoor occupancy sensors complying with the requirements specified in UL 773A, and having a separate relay unit.

- 1) Operation:
 - a) Unless otherwise indicated, provide indoor occupancy sensors that turn the lights on when the covered area is occupied, and that turn the lights off when the covered area is unoccupied.
 - (1) For turning the lights off, provide a time delay adjustable over a minimum range of 1 to 15 minutes.
- 2) Sensor Output:
 - a) Provide indoor occupancy sensors having contacts rated to operate the connected relay.
- 3) Relay Unit:
 - a) Power the sensor from the relay unit.
 - (1) Provide a 24-Volts DC, 150-milliampere, Class 2 power source as defined by NFPA 70 to supply power to the sensor.
 - b) Provide the relay unit with dry contacts rated for a ballast load of 20-Amperes at 120- and 277-Volts AC, for 13-Amperes tungsten at 120-Volts AC, and for 1 horsepower at 120-Volts AC.
- 4) Mounting:
 - a) Sensor:
 - (1) Provide a sensor suitable for mounting in any position on a standard outlet box.
 - b) Relay:
 - (1) Provide a relay externally mounted through a 1/2-inch knockout in a standard electrical enclosure.
 - c) Time-Delay and Sensitivity Adjustments:
 - (1) Mount the time-delay and sensitivity adjustments recessed and concealed behind a hinged door.
- 5) Indicator:
 - a) To show when motion is being detected during testing and normal operation of the sensor, provide a light-emitting diode (LED).
- 6) Bypass Switch:
 - a) Provide a bypass switch capable of performing an override of the on function in case of sensor failure.
- b. Dual-Technology Type Indoor Occupancy Sensors:
 - 1) Provide ceiling mounting dual-technology type indoor occupancy sensors capable of detecting occupancy by using a combination of passive infrared (PIR) and ultrasonic detection methods in the area of coverage.
 - a) Provide dual-technology type indoor occupancy sensors capable of allowing the particular technology or combination of technologies that control the on-off functions to be selectable in the field by operating the controls on the unit.
 - 2) Sensitivity Adjustment:

- a) Provide separate sensitivity adjustment for each sensing technology.
 - 3) Detector Sensitivity:
 - a) Provide dual-technology type indoor occupancy sensors capable of detecting occurrences of 6-inch-minimum movement of any portion of a human body that presents a target of not less than 36 square inches, and of detecting a person of average size and weight moving not less than 12 inches in either a horizontal or a vertical direction at an approximate speed of 12 inches per second.
 - 4) Detection Coverage (Standard Room):
 - a) Provide dual-technology type indoor occupancy sensors capable of detecting occupancy anywhere within a circular area of 1000 square feet when mounted on a 96-inch-high ceiling.
- c. Manufacturers:
 - 1) Hubbell Incorporated, www.hubbell.com.
 - 2) Leviton Manufacturing Company, Inc., www.leviton.com.
 - 3) Lithonia Lighting®, a division of Acuity Brands Lighting, Inc., www.lithonia.com.
 - 4) Cooper Industries, Inc., <http://greengate.coopercontrol.com/cooperControls>.
 - 5) RAB Lighting, Inc., www.rabweb.com.
 - 6) Sensor Switch®, an Acuity Brands Company, www.sensorswitch.com.
 - 7) TORK®, NSi Industries, LLC, www.tork.com.
 - 8) Watt Stopper, <http://www.wattstopper.com>.
 - 9) Approved equal.
- 3. Architectural Control Processor Modules
 - a. Control Processor Modules
 - 1) The Architectural Control Processor shall be the Unison Paradigm Series, P-ACP Control Processor as manufactured by Electronic Theatre Controls, Inc., or equal.
 - 2) Mechanical
 - a) The Architectural Control Processor (ACP) assembly shall be designed for use in DRd Series Power Enclosures and ERn Series Control Enclosures.
 - b) The processor shall utilize microprocessor based, solid state technology to provide multi-scene lighting and building control.
 - c) ACP module electronics shall be contained in a plug-in assembly.
 - (1) The module shall be housed in a formed steel body and contain no discrete wire connections.
 - (a) No tools shall be required for module removal or insertion.

- 3) The ACP shall be convection cooled.
- 4) User Interface
 - a) The ACP shall utilize a backlit liquid crystal display capable of graphics and eight lines of text.
 - b) The ACP shall provide an alpha-numeric keypad for data entry and navigation
 - c) The ACP shall provide a touch-sensitive control wheel for navigation.
 - d) The ACP shall provide shortcut buttons to assist in navigation, selection, and data entry.
 - e) The ACP keypad, buttons, and wheel shall be backlit for use in low-light conditions.
 - (1) The backlight shall have a user selectable time out, including no time out.
- 5) The ACP shall provide a front-panel RJ45 receptacle for Ethernet connection to the processor for configuration, live control, and web-browser-based system access.
 - a) The RJ-45 receptacle shall be secured behind the locking door.
- 6) The ACP shall provide a Secure Digital (SD) Removable Media slot on the front panel for transfer of configuration data.
 - a) The SD slot shall be secured behind the locking door.
- 7) The ACP shall provide a Universal Serial Bus (USB) port on the front panel for transfer of configuration data.
 - a) The USB port shall be secured behind the locking door.
- 8) Architectural Lighting System configuration and program information shall be stored in flash memory, which does not require battery backup.
 - a) The ACP shall provide a Compact Flash (CF) Card as backup flash memory and storage.
 - b) The CF Card is located in the back of the ACP, and can be accessed only by removing the ACP.
 - c) The ACP data can be exchanged by inserting the CF card into another ACP.
- b. Electrical
 - 1) The ACP shall require no discrete wiring connections; all wiring shall be terminated into Dimming or Control Enclosure.
 - 2) The ACP shall require low-voltage power supplied by the Dimming or Control enclosure.
 - 3) The ACP shall be hot-swap capable.
 - 4) The ACP shall support Echelon LonTalk with LinkPower communications with control stations and other remote devices, including button stations, button/fader stations, Touchscreen stations, sensors, and third party LonMARK compliant products.
 - a) The LinkPower network shall utilize polarity-independent, low-voltage Class II twisted pair wiring, type Belden 8471

- (unshielded) or Belden 8719 (shielded) or equivalent. One # 14 AWG drain wire will be required for system not using grounded metal conduit. Touchscreen stations, interface stations and portable stations connectors will also require (2) #16 AWG wires.
- b) The LinkPower network shall be topology free. Network wiring may be bus, loop, home run, star or any combination of these.
 - c) Link power wiring shall permit a total wire run of 1640 ft. (500m) without a repeater. Repeater option modules shall be available to increase wiring maximums in increments of 1640 ft. (500m)
 - d) Link power wiring between stations shall not exceed 1313 ft. (400m).
- 5) The ACP shall support 10/100BaseTX, auto MDI/MDIX, 802.3af compliant Ethernet networking using TCP/IP, ESTA BSR E1.17 Advanced Control Networks (ACN) and ESTA BSR E1.31 (sACN) Protocols for internal communication and integration with third-party equipment.
 - 6) The ACP shall support EIA-RS232 serial protocol for bi-directional command and communication with third-party equipment.
 - 7) The ACP shall support two discrete ESTA DMX512A ports, configurable as input or output ports.*
 - a) *When used in a Dimming Enclosure, the second port is always an output port.
 - 8) The ACP shall provide four onboard dry contact closure inputs for integration with third-party products.
 - 9) The ACP shall provide four onboard contact closure outputs, rated at 1A@30VDC, for integration with third-party equipment.
- c. Functional
- 1) Capacity
 - a) Shall support 1024 channels of control
 - b) Shall support 2 physical DMX ports, each of which may be configured as an input or output
 - 2) System
 - a) Runtime application shall utilize support Net3 system interoperability
 - b) System shall support the use of Network Time Protocol for real time clock synchronization
 - c) System shall support remote firmware upload an over Ethernet connection from a connected PC running the Light Designer software or another connected processor.
 - d) System shall support local firmware upload from removable media (SD Card, USB Flash Drive)
 - 3) Diagnostics
 - a) Shall output an Event log
 - b) Standard log shall store a fixed-length history of recent activity

- c) Separate critical log shall only store important messages (such as boot-up settings)
- 4) Configuration Data
 - a) Configuration Data can be uploaded over an Ethernet connection from a PC running Light Designer application
 - b) Configuration Data can be retrieved from another Paradigm Processor
 - c) A Paradigm Processor shall make its configuration data available for retrieval by another Processor as a backup/recovery mechanism
 - d) Configuration Data shall be stored on solid-state media that can be removed to facilitate transfer between Processor units
 - e) Configuration Data may be loaded to and from removable media access provided on front panel
 - f) Configuration Data for the entire System shall be available for download from any single Processor
 - g) Shall store configuration data for Dimming enclosure processors and shall make available for download
- 5) Scalability
 - a) Adding additional Processors to a System shall proportionately increase its overall capabilities up to a maximum project size
 - b) The maximum number of Processors configured as a project shall be at least 12. The use of a Central Control Processor (P-CCS) shall allow for larger system sizes up to 72 processors
 - c) Multiple Processors shall utilize the Ethernet network to remain time synchronized and share control information
 - d) Multiple Processors shall utilize the Ethernet network to maintain configuration data synchronization as modifications are made
 - e) Failure of a single Processor shall not prohibit continuing operation of the remaining Processors
 - f) It shall be possible for multiple Systems to coexist on the same physical network with logical isolation between Systems
- 6) Local User Interface
 - a) Shall provide access to Processor setup (IP address)
 - b) Shall provide access to Processor status and diagnostics
 - c) Where the Processor is installed within a Dimming enclosure, shall provide access to Dimming enclosure setup, status and diagnostics
 - d) Shall provide control functionality for Control Channels, Zones, Fixtures, Groups, Presets, Macros, Walls and Sequences within the current configuration.
 - e) Shall provide functionality to schedule astronomical and real-time events (add/edit/delete)

- f) Shall allow for display of local DMX information
- g) Shall allow for transfer of log files to local removable media
- h) Shall allow to perform firmware upgrades for connected Dimming enclosures
- i) Shall allow for transfer of configuration to and from Dimming enclosures using removable media
- j) Shall allow for transfer of configuration to and from LCD Stations using removable media
- k) Shall allow for binding of Stations
- 7) Access Controls
 - a) There shall be 2 user accounts - Administrator, and User with separate password protection
 - b) Account and password settings shall be local to each Processor
 - c) Access Controls shall be applied to certain areas of the Paradigm Local User Interface and Web Interface
- 8) Web User Interface
 - a) Shall be an internal web server accessible via Ethernet port
 - b) Shall support common web browsers on Windows and Mac platforms
 - c) Shall provide functionality to Activate and Deactivate Presets
 - d) Shall provide functionality to schedule timed events (add/delete)
 - e) Shall display status information
 - f) Shall display log files
 - g) Shall allow for configuration of Processor settings (date, time)
 - h) Shall allow for upload and download of configuration data
 - i) There shall be links to other web-enabled devices in the System, including other Paradigm Processors
- 9) Stations
 - a) Stations shall be connected to a Paradigm Processor via a LinkPower network or Ethernet
 - b) Station discovery and binding shall be accomplished from the Local User Interface or Light Designer
- 10) Net3 and ACN Devices
 - a) Paradigm Processors shall provide DMX-Net3 gateway functionality
 - b) Net3 devices shall be connected to and controlled from the Processor via Ethernet
 - c) It shall be possible to send and receive Macro triggers defined within the System configuration via Net3
 - d) There shall be support for a maximum of 1024 Streaming ACN outputs configured to a maximum of 12 universes per Processor
- 11) Operation

- a) When contained in a dimming enclosure, a snapshot of the dimming enclosure output data shall be stored in persistent memory so that hardware can access it for immediate output on boot
 - b) DMX output refresh rate shall be configurable
 - c) There shall be support for 16-bit DMX Attributes
 - d) DMX inputs may be patched to DMX and Streaming ACN outputs as external sources
 - e) Streaming ACN inputs shall be patched to DMX outputs (gateway) as external sources
 - f) Where there are multiple external sources then priority and HTP shall be used to perform arbitration
 - g) External and internal sources shall be arbitrated based on user-selection of standard or custom rules
 - h) On Preset Record, the values of Attributes within the Preset shall be updated to reflect the current output
 - i) The total output may be the combination of many different Presets running concurrently
 - j) There shall be no hard limit on number of concurrent cross fades
 - k) Multiple Presets controlling the same Attribute shall first interact based on priority and second based on Latest Takes Precedence (LTP) or Highest Takes Precedence (HTP)
 - l) LTP and HTP operation shall be supported simultaneously and interact (at the same priority) using HTP
 - m) Settings due to LTP Presets may be automatically discarded from operation when overridden
 - n) It shall be possible to specify that a Preset or Attribute Control will persist when overridden
 - o) A Preset may be designated as an HTP Override and shall cause HTP values to be discarded
 - p) It shall be possible to modify the rate of a Preset (Cross fades, Effects) from a Control within the System
 - q) Each Preset shall have a status that can be Activated, Deactivated or Altered
 - r) Preset status may be set based on matching levels in the current output as an option
 - s) On startup, the System shall be capable of automatically executing timed events within the previous 24 hours to synchronize its initial output state with the current time of day
- 12) Serial Input/Output
- a) RS232 shall support 8-bit word length, parity selection and 1 or 2 stop bits
 - b) RS232 shall support baud rates from 4800 to 115,200 bps
 - c) Serial input and output messages are fully customizable

- d) Serial output messages can be generated by any Control or Event.
- 4. Unison ERn Series Control Enclosures
 - a. Control Enclosures
 - 1) The control enclosure shall be the Unison ERn Series Control Enclosure as manufactured by Electronic Theatre Controls, Inc., or equal.
 - b. Mechanical
 - 1) The External Processing enclosure shall be a surface mounted panel constructed of 18 gauge formed steel panels with a hinged, lockable full-height door containing an integral electrostatic air filter.
 - a) The enclosure door shall have an opening to allow limited access to the control module face panel.
 - b) Enclosures shall be convection cooled without the use of fans.
 - c. Control Enclosures shall be sized to accept one or two Control Processors and one or two Station Power Modules, including various options and accessories.
 - 1) The Control Enclosure for a single control processor (ERn2) shall support a single Station Power Supply module; The Control Enclosure for 2 control processors (ERn4) shall support a quantity of 2 modules.
 - d. All enclosure components shall be properly treated and finished.
 - 1) Exterior surfaces shall be finished in fine textured, scratch resistant, powder based epoxy paint.
 - 2) Enclosure(s) shall also be available in a 19" rack mounted (RM) version.
 - a) Rack-mounted version shall have an independent enclosure suspension kit, with a full height, locking door/cover attached to the kit.
 - b) Rack-mounted version shall have an opening to access the control module face panel, and openings to view indicators on option modules.
 - 3) Enclosure dimensions and weights (without modules) shall not exceed:
 - a) ERn2 - 15" W x 9" H, 10" D, 15 lb
 - b) ERn2-RM - 19" W 11"H 10" D, 20 lb.
 - c) ERn4 - 15" W x 14" H x 10" D, 20 lb.
 - d) ERn4-RM - 19" W x 16" H x 10" D, 25 lb.
 - 4) Top, bottom, and side knockouts shall facilitate conduit entry.
 - 5) Enclosures shall be designed to allow easy insertion and removal of all control and option modules without the use of tools.
 - a) Supports shall be provided for precise alignment of modules into power and signal connector blocks.
 - b) With modules removed, enclosures shall provide clear front access to all power and control wire terminations.

- e. Option Modules
 - 1) Ethernet Switch
 - a) The Control Enclosure shall support an optional 5-port Ethernet Switch, with at least 4 ports supplying Power over Ethernet (PoE).
 - b) The Ethernet Switch module shall be 100BaseTX, auto MDI/MDIX, 802.3af PSE compliant.
 - c) The Ethernet Switch module shall contain power, status, and activity indicators. All indicators shall be visible when the enclosure door is open for both rack and wall mounted ERn.
 - 2) Redundant Power Supply (RRPS)
 - a) The Control Enclosure shall support an optional redundant power supply which shall automatically provide power to the control electronics upon failure or removal of the primary power supply.
 - b) The redundant power supply shall assert itself seamlessly without a loss of power to the control electronics.
 - c) The redundant power supply shall seamlessly remove itself when the primary power supply is reengaged.
 - d) The redundant power supply shall provide visible indication that it is active.
 - 3) Station Bus Repeaters (ERn4 only)
 - a) The Control Enclosure shall support an optional module to expand the station bus length an additional 400 meters, and the station count an additional 30 stations (60 maximum per processor/enclosure)
 - b) Wall-mount and 19" Rack-Mount versions shall also be available to support mid-span insertion away from the Control Enclosure.
 - 4) Station Bus Dual Repeaters (ERn4 only)
 - a) The Control Enclosure shall support an optional module to expand the station bus length to two additional 400 meter segments (a total of 1200 meters from a single enclosure, and the station count to 60 stations (60 maximum per processor/enclosure).
 - b) Wall-mount and 19" Rack-Mount versions shall also be available to support mid-span insertion away from the Control Enclosure.
 - 5) Accessories
 - a) RideThru Option (RTO)
 - (1) The Control Enclosure shall support an optional, short-term back-up power source for the control electronics.
 - (2) RideThru Option (RTO) provides power for controls electronics during brief power outages or drop outs.
 - (3) The short-term back-up power source shall automatically engage upon the loss of normal power, seamlessly

transitioning the supply power for the control electronics power to itself.

- (4) The short-term back-up power supply shall detect the return of normal power, and seamlessly return the control electronics to normal power.

- (5) The short-term back-up power source shall support the control electronics for at least 10 seconds.

b) BatteryPack Option (BPO)

- (1) The Control Enclosure shall support an optional, long-term back-up power source for the control electronics.

- (2) The long-term back-up power source shall automatically engage upon the loss of normal power, seamlessly transitioning the supply power for the control electronics power to itself.

- (3) The long-term back-up power source shall supply power to the control electronics for at least 90 minutes.

- (4) The long-term back-up power supply shall detect the return of normal power, and seamlessly return the control electronics to normal power.

- (5) A test switch/indicator shall be available without opening the rack door or removal of any modules/components.

f. Electrical

- 1) External Processing enclosures shall be available in 100, 120, 230 and 240 volt, single-phase configurations.

- 2) External Processing enclosures shall be completely pre-wired by the manufacturer. The contractor shall provide input and control wiring.

- 3) External Processing enclosures shall be designed to support the following wire terminations:

- a) AC (single phase)
- b) Echelon link power (Belden 8471 or equivalent)
- c) 24Vdc (2- 16AWG Wire)
- d) DMX512A Port A (In or Out) (Belden 9729 or equivalent)
- e) DMX512A Port B (In or Out) (Belden 9729 or equivalent)
- f) RS232 Serial In/Out (Belden 9729 or equivalent)
- g) Unshielded Twisted Pair (UTP) Category 5 Ethernet
- h) Contact Closure In (14AWG to 26AWG Wire)
- i) Contact Closure Out (14AWG to 26AWG Wire)
 - (1) Contact Closure Out shall provide 1A @ 30vDC

- 4) Station Power Modules

- a) Station power supply modules shall provide LinkPower for at 32 stations and 1.5A@24VDC of Auxiliary (AUX) power.

- b) Station power repeater modules shall provide LinkPower for 30 stations and 1.5A@24VDC of Auxiliary (AUX) power.

- c) Station power module shall support over-current/short protection for LinkPower and Aux. LinkPower shall support fault detection on each leg of the balanced data bus.
 - 5) All control wire connections shall be terminated via factory provided connectors.
 - g. Thermal
 - 1) Ambient room temperature: 0-40°C / 32-104°F
 - 2) Ambient humidity: 10-90% non-condensing
- 5. Button and Fader Stations
 - a. Stations
 - 1) Button Stations
 - a) The Lighting Control Stations shall be the Unison Heritage UH Series Control Stations as manufactured by Electronic Theatre Controls, Inc., or equal.
 - b) Mechanical
 - (1) Unison Heritage Button stations shall operate using up to ten programmable buttons.
 - (2) All button stations shall be available with white, cream, ivory, gray or black faceplates, and buttons.
 - (a) Manufacturer's standard colors shall conform to the RAL CLASSIC Standard.
 - (3) Stations shall have indicator lights at each button or fader.
 - (a) Indicators shall be comprised of red, green and blue LED's
 - (b) Indicator color and state (steady On, Blink, Off) shall be configured in software, and shall operate relative to the button or fader it is associated with.
 - (4) All faceplates shall be designed for flush or surface mounting.
 - (5) Station faceplates shall be constructed of ABS plastic and shall use no visible means of attachment.
 - (6) Station faceplates shall be indelibly marked for each button or fader function.
 - (7) The manufacturer shall supply back boxes for flush mounted half gang stations and for all surface mounted stations.
 - (8) All Button stations shall be designed to accept the infrared signal from a remote hand-held IR transmitter.
 - (a) The stations shall have a 60° reception angle and shall operate reliably within a 45' distance.
 - (9) IR Transmitters shall be available in five or ten button configurations.
 - (a) IR transmitters shall be mounted in a hand-held black plastic controller.

- (b) Transmitter dimensions shall be 1.875" wide, 6.625" long and 0.60" deep.
- c) Electrical
 - (1) Unison control station wiring shall be an Echelon® Link power network.
 - (a) Link power shall utilize low-voltage Class II unshielded twisted pair, type Belden 8471 or equivalent, and one #14 ESD drain wire (when not installed in grounded metal conduit).
 - (b) Network wiring may be bus, loop, home run, star or any combination of these.
 - (c) Wiring termination connectors shall be provided with all stations.
 - (2) Button Stations shall offer the following Regular markings
 - (a) UL and cUL LISTED
 - (b) CE Market
 - (c) RHoS and WEE Compliant
- d) Functional
 - (1) The Unison Paradigm Control System shall be designed to allow control of lighting and associated systems via Button, Button/Fader, and Interface or Astronomical time clock controls. System shall allow the programming of presets, sequences, macros and time clock events.
 - (a) System presets shall be programmable via Button stations, Touchscreen stations, and LightDesigner software.
 - (b) Presets shall have a discrete fade time, programmable from zero to 1,000 hours with a resolution of one millisecond.
 - (c) Presets shall be selectable via button, fader, IR transmitter, time clock event, macro activation or switch interface stations.
 - (2) System macros and sequences shall be programmable via LightDesigner system software.
 - (a) Macro and sequence steps shall provide user selectable steps, and allow the application of conditional logic.
 - (b) Macro and sequences shall be activated by button, time clock event or LightDesigner software.
 - (3) System time clock events shall be programmable via LightDesigner system software, the processor user interface, or the internal web server.

- (a) Time clock events shall be assigned to system day types. Standard day types include: anyway, weekday, weekend, Sunday, Monday, Tuesday, Wednesday, Thursday, Friday and Saturday. System shall support programming of additional custom or special day types.
 - (b) Time clock events shall be activated based on sunrise, sunset, time of day or periodic event. System shall automatically compensate for regions using a fully configurable daylight saving time.
 - (4) Control components shall be designed to operate default or custom system functions. Components shall operate default functions unless re-assigned via LightDesigner, the software-based configuration program.
 - (a) Optional button functions include: preset selection, manual mode activation, record mode activation, station lockout, raise, lower, macro activation, or room join/separate.
 - (b) Optional fader functions include manual master control, individual zone control, fade rate control or preset master control.
 - (5) Stations (Button and Button/Fader) shall allow programming of station and component electronic lockout levels via LightDesigner.
- 2) Fader Stations
 - a) The Lighting Control Stations shall be the Unison Heritage UH Series Control Stations as manufactured by Electronic Theatre Controls, Inc., or equal.
 - b) Mechanical
 - (1) Unison Heritage Fader Stations shall operate using up to sixteen programmable faders and twelve programmable buttons.
 - (2) All fader stations shall be available with white, cream, ivory, gray or black faceplates, fader knobs, and buttons.
 - (a) Manufacturer's standard colors shall conform to the RAL CLASSIC Standard.
 - (3) Fader stations shall utilize standard 45-millimeter slide potentiometers.
 - (4) Stations shall have indicators lights at each button or fader.
 - (a) Indicators shall be comprised of red, green and blue LED's

- (b) Indicator color and state (steady On, Blink, Off) shall be configured in software, and shall operate relative to the button or fader it is associated with.
- (5) All faceplates shall be designed for flush or surface mounting.
- (6) Station faceplates shall be constructed of ABS plastic and shall use no visible means of attachment.
- (7) Station faceplates shall be indelibly marked for each button or fader function.
- (8) The manufacturer shall supply back boxes for flush mounted half gang stations and for all surface mounted stations.
- (9) Fader stations shall be designed to accept the infrared signal from a remote hand-held IR transmitter.
 - (a) The stations shall have a 60° reception angle and shall operate reliably within a 45' distance.
- (10) IR Transmitters shall be available in five or ten button configurations.
 - (a) IR transmitters shall be mounted in a hand-held black plastic controller.
 - (b) Transmitter dimensions shall be 1.875" wide, 6.625" long and 0.60" deep.
- c) Electrical
 - (1) Unison control station wiring shall be an Echelon® Link power network.
 - (a) Link power shall utilize low-voltage Class II unshielded twisted pair, type Belden 8471 or equivalent, and one #14 ESD drain wire (when not installed in grounded metal conduit).
 - (b) Touchscreen and Interface stations shall also require (2) #16 AWG stranded wires for 24Vdc operating power. 24Vdc wiring shall be topology free.
 - (c) Network wiring may be bus, loop, home run, star or any combination of these.
 - (d) Wiring termination connectors shall be provided with all stations.
 - (2) Fader Stations shall offer the following Regular markings
 - (a) UL and cUL LISTED
 - (b) CE Market
 - (c) RHoS and WEE Compliant
- d) Functional

- (1) The Unison Paradigm Control System shall be designed to allow control of lighting and associated systems via Button, Button/Fader, and Interface, or Astronomical time clock controls. System shall allow the programming of presets, sequences, macros and time clock events.
 - (a) System presets shall be programmable via Button, Button/Fader, Touchscreen, or LightDesigner software.
 - (b) Presets shall have a discrete fade time, programmable from zero to 1,000 hours with a resolution of one millisecond.
 - (c) Presets shall be selectable via button, fader, IR transmitter, time clock event, macro activation or switch interface stations.
- (2) System macros and sequences shall be programmable via LightDesigner system software.
 - (a) Macro and sequence steps shall provide user selectable steps, and allow the application of conditional logic.
 - (b) Macro and sequences shall be activated by button, time clock event or LightDesigner software.
- (3) System time clock events shall be programmable via LightDesigner system software, the processor user interface, or the internal web server.
 - (a) Time clock events shall be assigned to system day types. Standard day types include: anyway, weekday, weekend, Sunday, Monday, Tuesday, Wednesday, Thursday, Friday and Saturday. System shall support programming of additional custom or special day types.
 - (b) Time clock events shall be activated based on sunrise, sunset, time of day or periodic event. System shall automatically compensate for regions using a fully configurable daylight saving time.
- (4) Control components shall be designed to operate default or custom system functions. Components shall operate default functions unless re-assigned via LightDesigner, the software-based configuration program.
 - (a) Optional button functions include: preset selection, manual mode activation, record mode activation, station lockout, raise, lower, macro activation, or room join/separate.

- (b) Optional fader functions include manual master control, individual zone control, fade rate control or preset master control.
 - (5) Stations (Button and Button/Fader) shall allow programming of station and component electronic lockout levels via LightDesigner.
- 3) Locking Covers
 - a) The Lighting Control Station Locking Covers shall be the Unison Heritage UH Series as manufactured by Electronic Theatre Controls, Inc., or equal.
 - b) Mechanical
 - (1) Locking covers shall be available in Sliding Locking for flush mount applications and Hinged Locking for flush and surface mount applications
 - (2) Sliding Locking Covers shall
 - (a) Be available with white, cream, ivory, gray or black faceplates.
 - (b) Be constructed of Extruded Aluminum with ABS plastic end caps
 - (c) Provide a smoked Plexiglas window to allow for viewing control status and use of IR remote without opening cover
 - (3) Hinged locking covers shall:
 - (a) Be available in standard black powder coat finish
 - (b) Be constructed of 18-gauge steel and finished in standard black powder coat paint, or custom color as specified.
 - (c) Provide a clear Plexiglas window to allow for viewing control status and use of IR remote without opening cover
 - (d) Use internal Hinge that is not accessible when the cover is closed
 - (4) Standard colors shall conform to the RAL CLASSIC Standard.
 - (5) Locking covers of the same type shall be keyed alike
 - (6) The manufacturer shall supply back boxes for all hinged locking covers
 - c) Functional
 - (1) All locking covers shall utilize 90-degree locking mechanisms
 - (a) Keys shall be held captive in locks when covers are unlocked.

- (2) Locking covers shall allow for easy viewing of system status without opening the cover
 - (3) Locking covers shall support IR remote activation of configured system functions without opening door
- 6. Lighting Control System Configuration and Control Software
 - a. Configuration and Control Software
 - 1) System Configuration
 - a) The Architectural Control System Configuration software shall be the Unison Paradigm LightDesigner as manufactured by Electronic Theatre Controls, Inc., or equal.
 - b) Definitions
 - (1) A System is the configuration of one or more Paradigm Processors
 - (2) A Fixture is a controllable entity with one or more Attributes
 - (3) An Attribute is a parameter of control such as Intensity, Pan or Gobo select
 - (4) A Group is a selection of Fixtures that can be stored and recalled
 - (5) A Space is defined area where other System objects reside. A Space defines the scope of Control for other objects.
 - (6) Room Combine is functionality enabling the scope of control to vary in a pre-defined way based on the current status of a moveable Wall or Walls
 - (7) A Control is a single point of input to the System (e.g. Button, Fader, SerialPort
 - (8) An Indicator is a single point of feedback from the System (e.g. LED, Label on LCD)
 - (9) A Station has an arrangement of Controls and Indicators
 - (10) A Page stores the assignment of function to Controls and Indicators of a particular Station and their properties (e.g. lockout threshold)
 - (11) Actions are items of functionality that can occur within a running Paradigm system in response to events (e.g. button presses, timed events)
 - (12) Preset is a container of Attribute settings (levels) and timings that can be stored and recalled
 - (13) A Sequence is a series of connected steps referencing Presets along with additional timing information

- (14) Effects are Attribute settings that result in continually varying levels following a specified curve and using additional timing parameters (e.g. period, offset)
 - (15) Palette is a container of Attribute settings (levels) that can be referenced from Presets, allowing a change in the Palette to globally modify referenced Presets.
 - (16) Macros are user-defined operations built up as a sequence of Actions that can be recalled
 - (17) Binding is the process of associating a logical instance of a device within the configuration with a physical device discovered at runtime
- c) Environment
- (1) Shall be possible to work with multiple System configurations simultaneously
 - (2) There shall be clipboard functionality (cut, copy, paste) for entire objects (e.g. Presets, Stations), settings (e.g. Attribute levels) and text
 - (3) There shall be undo and redo functionality where persistent changes are made to the System configuration (but not application settings or playback state)
 - (4) There shall be an auto-backup feature
 - (5) The application interface shall be based around (i) a tree-view; (ii) a workspace area; (iii) a properties inspector; (iv) item selector.
 - (6) It shall be possible to represent data about the workspace area graphically (plan) or in tabular form
 - (7) Plan views shall support zoom
 - (8) Plan views shall support a layout grid with user-defined spacing and color with associated snap-to-grid functionality
 - (9) The properties inspector shall be used to view and modify the properties of one or multiple objects
 - (10) There shall be 2 modes of operation that expose progressively more in-depth functionality (Normal/Advanced)
 - (11) It shall be possible to enter User-configurable names in any language supported by their operating system (e.g. encoded as UTF8)
 - (12) User-configurable names shall be limited to 64 display characters each
 - (13) There shall be provision for help functionality to be accessed from within the application

- d) System Configuration
 - (1) It shall be possible to create Spaces
 - (2) It shall be possible to add Fixtures by selecting a Fixture Template from the provided library and create custom Fixtures
 - (3) It shall be possible to add Stations by selecting a Station Definition from the provided library and create custom Stations
 - (4) It shall be possible to create a System based on data imported from a defined documentation format (e.g. CSV, XML)
 - (5) It shall be possible to export System configuration data to a defined documentation format (e.g. CSV, XML)
 - (6) There shall be a wizard to assist with the initial setup of a System including Project data entry, Space creation, network configuration, and zone creation.
 - (7) There shall be a straightforward process for the assignment of Fixtures and Stations to particular Processors
 - (8) There shall be a 2-dimensional plan view that displays the layout of Spaces
 - (9) A Space shall be displayed as a user-configurable polygon with straight edges
 - (10) The plan shall display Fixtures and Stations located within Spaces
 - (11) The plan shall display Walls between Spaces and their current state (open, closed)
 - (12) Items displayed on the plan may be arranged using standard graphical interaction methods (e.g. drag-and-drop)
 - (13) It shall be possible to import images JPEG, BMP and GIF formats as a background image to the plan view
 - (14) It shall be possible to create Walls that accomplish Room Combine between Spaces
 - (15) It shall be possible to import Load Schedules, Equipment Lists and Presets from a spreadsheet to automatically create system objects and configuration parameters.
- e) Fixture Configuration
 - (1) There shall be functionality to patch Fixtures to DMX and Streaming ACN
 - (2) There shall be support for Fixtures with split patches (e.g. VL5)

- (3) There shall be support for multiply-patching a Fixture
- (4) It shall be possible to swap pan and tilt axes for a moving-light Fixture
- (5) It shall be possible to specify a minimum and maximum value for an Attribute
- (6) It shall be possible to specify a minimum fade time for an Attribute
- (7) It shall be possible to invert the range of values for an Attribute
- (8) It shall be possible to specify a default value for an Attribute
- (9) It shall be possible to specify a dimmer curve for an intensity Attribute
- f) Design and Simulation
 - (1) There shall be a tabular view of Fixture Attributes within Spaces
 - (2) There shall be control of Zones (as a type of Fixture)
 - (3) There shall be control of LED arrays (as a type of Fixture)
 - (4) There shall be control of moving lights (as a type of Fixture)
 - (5) There shall be independent control of every Attribute of a Fixture
 - (6) Appropriate graphical controls shall be provided for non-intensity Attributes (e.g. color picker)
 - (7) It shall be possible to create Groups as a selection shortcut
 - (8) The plan shall show the current status of Room Combine
 - (9) The plan shall show simulation feedback for Fixtures in a graphical form
 - (10) Feedback values for Attributes shall be displayed in terms of real-world units where an appropriate real-world unit and mapping is available (e.g. pan in degrees)
 - (11) Control events may be simulated by clicking on a representation of the Station in at least the plan view
 - (12) The simulation may be linked to the actual online System to synchronize playback and inject control events (live control)
- g) Presets
 - (1) There shall be provision to record a Preset based on current Attribute settings
 - (2) There shall be a display of Presets that affect Fixtures in the Space being worked with and their activation status

- (3) A Preset may store a reference to a Palette as an Attribute setting
- (4) Presets may be displayed and modified in tabular form (spreadsheet)
- (5) Timing in Presets may be set on an individual Attribute basis
- (6) Timing settings shall include a fade time, a delay time and a fade profile
- (7) All Presets may include split timing
- (8) Presets may be applied in a Latest Takes Precedence (LTP) or Highest Takes Precedence (HTP) manner
- (9) It shall be possible for all Presets to include Effects
- (10) Each Effect shall have a Curve and parameters (to include size, period, offset and repeat count)
- (11) There shall be support for a flicker effect
- (12) There shall be a provision to create Sequences from Presets
- (13) It shall be possible for a Sequence to be displayed and modified as a timeline display
- (14) It shall be possible for any step of a Sequence to trigger a defined Action
- (15) The end state of a Sequence shall be user configurable (e.g. release, loop, hold at end)
- h) Stations and Events
 - (1) Can assign functionality (Actions) to Controls and Indicators on a Page for a particular Station
 - (2) Stations may have multiple Pages that can be switched between at runtime
 - (3) Controls shall have a configurable event handler (Script) that determines the nature of the control (e.g. momentary vs. maintained button)
 - (4) Actions initiated from a Station shall, by default, be restricted to affecting the Space containing the Station
 - (5) A Control may be configured so that the Actions it triggers behave as if initiated from a specified Space anywhere in the System
 - (6) Controls shall have a priority that is used when performing operations (e.g. preset activation, fader attribute control)
 - (7) It shall be possible to specify timed events (including repeat intervals hourly, daily, weekly, etc.)
 - (8) It shall be possible to specify astronomical timed events

- (9) Serial (e.g. RS232, Ethernet) input data shall be treated as a Control event and shall be handled through use of Script (standard or custom)
- (10) There shall be support for Occupancy functions using proximity sensors connected via Echelon LonTalk or a Contact Interface
- (11) There shall be support for Daylight Harvesting functions using photo sensors connected via Echelon LonTalk or a Fader Interface.
- (12) There shall be Override functionality that can be applied to any Control or Event
- (13) There shall be Lock Out functionality for Controls using 3 distinct lockout variables
- (14) Direct control of Attributes can be assigned to Controls (e.g. buttons, faders)
- (15) Mastering of Intensity for Fixtures, Groups or Presets can be assigned to Controls
- (16) There shall be extensible support for third-party LonMark devices
- (17) A physical Lon native Station that is portable may automatically bind to different logical Stations within the configuration based on an established physical LON connection
- (18) There shall be an option to assign default functionality to Controls and Indicators of a Station automatically when it is added to the configuration and update it as the configuration changes
- (19) There shall be an option to generate a graphical configuration for a Touchscreen automatically based on the current configuration and update it as the configuration changes
- (20) It shall be possible to import .ics files for display of holidays or other notable dates
- i) Actions
 - (1) There shall be a standard Action for toggling the Intensity Attribute of a Fixture or Group (Fixture Toggle)
 - (2) There shall be standard Actions for recalling Presets (Preset Recall)
 - (3) There shall be a standard Action for recording a Preset (Preset Record)
 - (4) There shall be standard Actions for controlling Sequences (Timeline Control)

- (5) There shall be standard Actions for changing Wall state (Wall Toggle)
 - (6) There shall be a standard Action for raising or lowering the intensity setting of a Fixture or Group
 - (7) There shall be a standard Action for raising or lowering the intensity setting of a Preset
 - (8) There shall be a standard Action that activates Faders within its scope (Manual)
 - (9) There shall be a standard Action that activates Faders on a target station and locks out other Stations within its scope (Take Control)
 - (10) There shall be a standard Action for setting lock out variables for a Station, within a Space or System-wide (Lock Out)
 - (11) There shall be a standard Action for enabling and disabling Overrides
 - (12) There shall be a standard Action for recalling a Macro (Call Macro, Macro Toggle)
 - (13) There shall be a standard Action for turning Off a particular Fixture, Group or Fixtures within a Space (Off)
 - (14) There shall be a standard Action for controlling Fixture or Group Intensity levels from a Fader
 - (15) There shall be a standard Action for controlling Preset Intensity levels from a Fader
 - (16) There shall be a standard Action for mastering Fixture or Group Intensity levels from a Fader
 - (17) There shall be a standard Action for modifying Preset fade times from a Fader
 - (18) There shall be a standard Action for modifying Preset rate from a Fader
 - (19) There shall be an equivalent standard Indicator behavior for every standard Action
 - (20) Qualified users may create custom Actions
- j) Macros
- (1) Users can create, store and recall Macros that are sequences of Actions (standard or custom)
 - (2) Macros may define separate sequences to occur when turned on and off (toggle)
 - (3) Macros may incorporate conditional statements based on current status of the System (e.g. comparisons such as $x > y$)

- (4) Conditional statements may be combinations of several simpler statements using logical operators (AND, OR)
- k) Script
 - (1) There shall be a mechanism for defining custom functionality using a scripting language
 - (2) The behaviors of Controls and Indicators may be customized through the use of Script
 - (3) Script may be used to define custom functionality (Actions) within the System
 - (4) Script shall allow new functionality to be defined in a manner that is reusable in different Systems
 - (5) Script shall support logical and arithmetic operations
 - (6) Script shall support direct access to System data using names
 - (7) Script shall support creating, reading and writing to persistent System-wide variables (registered variables)
 - (8) Script shall support timer functionality including the capability to cancel a running timer
 - (9) Script shall support logging functionality
 - (10) Standard functionality may be implemented as Scripts that will not be user modifiable
 - (11) A Custom Script may be copied from a suitable Standard Script to provide a starting point
 - (12) Script shall support reading data directly from connected interfaces (e.g. LON NVs, ACN properties, DMX inputs)
 - (13) Script shall support writing data directly to connected interfaces (e.g. LON NVs, ACN properties, DMX outputs, Serial ports)
 - (14) Script shall allow parsing of data (e.g. reading 8 contact inputs as individual bits from a byte of data)
- l) Network
 - (1) Shall display a topological view of Paradigm Processors and connected Stations
 - (2) Can associate a particular Station with a Paradigm Processor
 - (3) Shall report online status of Paradigm Processors and Stations
 - (4) Shall allow for configuration of network properties (IP) of Paradigm Processors
 - (5) Shall allow for upload of configuration data to all or individual Paradigm Processors

- (6) Shall allow for download of configuration data from Paradigm Processors
 - (7) Shall allow for download of logging data from Paradigm Processors
 - (8) Shall provide for performing firmware upgrades to Paradigm Processors
 - (9) Shall allow to perform firmware upgrades for Dimming enclosures using Paradigm Processors as proxies
 - (10) Shall allow for transfer of configuration to and from LCD Stations using Paradigm Processors as proxies
 - (11) Shall allow for discovery and binding of Stations
 - (12) There shall be a mode in which configuration changes are propagated to Processors as they occur without interrupting operation (live edit)
 - m) Reports
 - (1) It shall be possible to generate tabular reports and customize their layout and appearance
 - (2) It shall be possible to print reports
 - (3) It shall be possible to export reports to file (e.g. CSV)
 - (4) There shall be reports for Presets
 - (5) There shall be reports for Fixtures
 - (6) There shall be reports for Stations
 - (7) There shall be reports for Processors
 - (8) There shall be reports for Macros
 - n) Resources
 - (1) The installed package shall include a set of LCD Design Themes
 - (2) Effect Curves, Fade Profiles and Dimmer Curves shall use a common format and allow custom variants to be generated by the user
 - (3) Additional Fixture Templates may be defined by the user (custom Fixtures)
 - (4) Additional Station Definitions may be defined by the user (custom Stations)
 - o) Mosaic
 - (1) It shall be possible to add Mosaic systems to the configuration for triggering and status monitoring
 - (2) There shall be standard Actions and Indicator behaviors for Mosaic integration via Ethernet
- 2) Touchscreen Station Configuration

- a) The Architectural Control System Touchscreen Configuration software shall be the Unison Paradigm ControlDesigner as manufactured by Electronic Theatre Controls, Inc., or equal.
- b) The Unison Paradigm ControlDesigner software program shall be an application software package that facilitates off-line Unison Paradigm Touchscreen station configuration.
 - (1) Software setup shall include Configuration and Design Wizards, to create a graphical representation of a control environment.
 - (2) The software program shall be downloadable from the manufacturer's website free of charge.
- c) Functions
 - (1) Provides functionality to create and modify Pages for display on a specific type of LCD Station
 - (2) There shall be a wizard to assist with the creation of Pages
 - (3) A single configuration for an LCD Station shall be defined as a set of one or more Pages
 - (4) Each Page shall have a background that may incorporate multiple images or animations
 - (5) Pop-ups can be shown/hidden over any Page in a Configuration and more than one Popup can be shown at once
 - (6) Pages may have multiple design elements that may be Controls, Indicators or both
 - (7) Design elements shall have a user-defined size, position and z-order that cannot be changed from within the System
 - (8) Each design element shall have between 1 and 256 states, each of which can have a distinct appearance
 - (9) The appearance of a state can be taken from a Theme or imported image file
 - (10) There shall be support for import of at least JPG, PNG and GIF image formats
 - (11) Transparency shall be supported
 - (12) Animated images shall be supported
 - (13) Transitions between states of design elements can be animated
 - (14) Page transitions can be animated
 - (15) Design elements shall have a visibility group and threshold

- (16) Design elements that are Controls shall have a lockout group and threshold
- (17) All text shall have a user-definable font family, size, color and alignment
- (18) There shall be at least the following types of design elements
 - (a) Label
 - (b) Level Indicator
 - (c) Button
 - (d) Fader (straight and curved)
 - (e) Clock (analogue and digital)
 - (f) Numeric Keypad
 - (g) Tab widget
 - (h) Color Picker
 - (i) Error table
- (19) Themes shall define a collection of consistent appearances and sounds for design elements
- (20) It shall be possible to change the Theme used for a particular Station without modifying the underlying design elements
- (21) There shall be tools to assist with the creation of new Themes
- (22) Shall allow sounds to be associated with a particular Page
- (23) Shall allow sounds to be associated with state transitions of particular design elements
- (24) Sounds may be used to provide Touchscreen interaction feedback
- (25) A Page can be designated as the Stations inactivity Page
- (26) A Page can have a lockout group and threshold
- (27) A Tab can have a visibility group and threshold
- (28) There shall be a visualization interface for Page creation and editing
- (29) Standard graphical interaction methods (drag-and-drop) shall be used to arrange design elements on Pages
- (30) There shall be a layout grid with user-defined spacing and color with associated snap-to-grid functionality
- (31) It shall be possible to reuse the graphical layout of a configuration independent of any assigned functionality
- (32) The LCD Design functionality shall be part of a separate application that can be used alongside Light Designer
- (33) Pop-ups can be any fixed size up to the Page size

- (34) Pop-ups will have a fixed position on screen (but may move when being shown/hidden)
- 3) Minimum Computer Requirements
 - a) The software shall require the following minimum requirements:
 - (1) Windows 8, Windows 7 or Windows XP SP2 operating system
 - (2) 2 GHz Pentium 4 or better
 - (3) A minimum of 1 GB system memory
 - (4) A minimum of 1 GB hard drive space
 - (5) OpenGL graphics acceleration with a monitor capable of displaying at least 1024 x 768 screen resolution
 - (6) Keyboard and mouse
- 7. Wall Mount Relay Panel
 - a. General
 - 1) The wall mount relay panel shall be the Echo Relay Panel Feedthrough as manufactured by Electronic Theatre Controls, Inc., or equal. Panels shall be UL Listed (UL508 FILE #E92154) and CSA Approved, and shall be so labeled when delivered.
 - 2) The 24-relay panel shall consist of any quantity between one and twenty-four 20-amp relays, single- or double pole as required, control electronics, sub-panel, and enclosure.
 - 3) The 48-relay panel shall consist of up to forty-eight 20-amp relays, single- or double pole as required, a single control electronics, sub-panel, and enclosure.
 - b. Mechanical
 - 1) The small panel shall be 26.25" (622 cm) high by 17" (432 cm) wide and 6.3" (161 cm) deep and weigh no more than 45 pounds (20.5 kg). The large panel shall be 47.27" (1201 cm) high by 17" (432 cm) wide and 6.3" (161 cm) deep and weigh no more than 81 pounds (36.8 kg).
 - 2) It shall be constructed of 16-gauge steel. All panel components shall be properly treated, primed and finished in fine-textured, scratch resistant paint. The entire unit shall surface mount.
 - 3) Equally sized top, bottom, and side removable knockout panels shall facilitate conduit entry, with an internal pass-through plenum for side-by-side or top-to-bottom mounting. The front panel shall be easily removable as well for full front access to input, output and data connections.
 - 4) The unit shall ship with a cover complete with a locking door, allowing controlled access to the Class 2 wiring only.
 - 5) Optional center-pin reject security screws shall be available for all accessible screws.
 - 6) The panel enclosure shall be available separately from the sub-panel containing the control electronics to allow for pre-

installation. The panel shall be UL Listed to be available in this configuration.

c. Electrical

- 1) The panel control electronics shall operate on single phase, two wire + ground, 120, 230V, or 277V AC 60Hz, at an amperage sufficient to power the panel (8 amps max). Standard fault current protection shall be 5,000 AIC.
- 2) The individual relays shall be mechanically latching and capable of switching 20A at up to 300V circuits with no derating required for inductive lighting loads.
- 3) Optional dual space 277/480V 2 pole relay shall be mechanically latching and capable of switching 20A at up to 500V circuits.
- 4) Each relay shall have an integral manual override switch with on/off status indication.
- 5) The relay shall have the following minimum ratings:
 - a) 14000A Short Circuit Current Rating at 277V
 - b) 1500A short circuit current
 - c) 5000V RMS isolation
 - d) 300,000 mechanical cycles (600,000 operations)
 - e) 30,000 cycles inductive, Tungsten or motor
 - f) 20,000 cycles electronic (LED)
- 6) The panel shall be capable of switching all relays on or off at once, or in a user-selectable delay period of 0.1 to 60 seconds, in 0.1 second increments, per relay.
- 7) All line terminals shall accept 10-14 AWG wire. The control wiring shall land on a removable header for easy contractor installation (On-board DMX, stations and Emergency Input terminations).
- 8) A voltage barrier shall be available to separate relays carrying different voltages in the same panel. The barrier shall be capable of installation, without tools, between any two relays, and shall allow up to eight barriers per panel (4 per side).

d. Functional

- 1) Panel setup shall be user programmable. The control interface shall provide the following relay setup features (per circuit):
 - a) Type (1 pole, 2 pole, or 3 pole)
 - b) Name
 - c) Circuit Number
 - d) DMX address
 - e) sACN address (network enabled panels only)
 - f) Space Number
 - g) Circuit Mode
 - (1) Normal (priority and HTP based activation and dimming)
 - (2) Latch-lock
 - (3) Fluorescent

- (4) DALI
 - h) On threshold level
 - i) Off threshold level
 - j) Include in UL924 emergency activation
 - k) Allow Manual
- 2) Relay panels shall support discrete addressing of each relay. Panels that are restricted to use of start address with sequential addressing and cannot assign each 0-10V output control to any internal relay shall not be acceptable
- 3) The panel shall be capable of switching all relays on or off at once, or in a user-selectable delay per relay using a period of 0.1 to 60 seconds, in 0.1 second increments
- 4) Control electronics shall report the following information per branch circuit:
 - a) Relay state (Open/Closed)
- 5) Built in Control shall include:
 - a) Ability to record up to 16 presets in each space from the control panel, connected control stations, or timed events
 - b) Presets shall be programmable by recording current levels (as set by DMX or connected control stations), by entering levels on the control panel directly, manually selecting relay state on each relay or a combination of these methods. From the control panel, stations, or timed events it shall be possible to record values for up to 16 zones per space.
 - c) Up to 8 spaces in a single rack for total of up to 16 spaces shall be supported per system or system subnet
 - d) Indication of an active preset shall be visible on the control panel display.
 - e) One 16-step sequence per space for power up and power down routines
 - f) The panel shall have a UL924-listed contact input for use in Emergency Lighting systems. The panel shall respond to the contact input by setting included relays to "on", while setting non-emergency relays "off". Each relay can be selected for activation upon contact input.
 - g) Upon Data loss the system shall provide options to hold last look infinitely or hold for a configured time period set by the installing technician then fade/switch to the input of the next available priority.
 - h) Control electronics shall respond directly to control stations for zone, preset, and sequence control. Systems that require secondary control systems for this functionality are not acceptable.

- i) After power loss, electronics shall be capable of holding the system in its previous state until new level data (DMX, architectural presets, sequences and zones, or local overrides) is received to make each relay change state.
- 6) The control of lighting and associated systems via real time and Astronomical clock controls.
 - a) The relay panel shall allow the activation of presets, sequence, and zone programming of up to 50 time clock events via a built in real and astronomical timeclock.
 - b) System time events shall be programmable via the control panel.
 - (1) Time clock events shall be assigned to system day types. Standard day types include: everyday, weekday, weekend, Sunday, Monday, Tuesday, Wednesday, Thursday, Friday and Saturday.
 - (2) Time clock events shall be activated based on sunrise, sunset, time of day or periodic event.
 - (3) System shall automatically compensate for regions using a fully configurable daylight saving time.
 - (4) Presets shall be assigned to events at the time clock.
 - c) The time clock shall support event override
 - (1) It shall be possible to override the timed event schedule from the face panel of the time clock
 - d) The time clock shall support timed event hold
 - (1) It shall be possible to hold a timed event from the face panel of the processor
 - (2) Timed event hold shall meet California Title 24 requirements
- 7) The panel shall receive ESTA DMX512-A control protocol. Addressing shall be set via the user interface button keypad with any relay being patched to any DMX control address.
 - a) 2,500V of optical isolation shall be provided between the DMX512 inputs and the control electronics as well as between control and power components.
 - b) The relays shall respond to control changes (DMX or Stations) in less than 25 milliseconds. DMX512 update speed shall be 40Hz.
 - c) Setting changes shall be able to be made across all, some, or just one selected relay in a single action from the face panel
 - d) DMX data loss shall allow for levels/relays to be held for ever or for a specified time before switching to a lower priority source
 - e) Initial Panel setup

- (1) The relay panel shall automatically detect the type of relay or dimmer installed in each location without need for manual configuration of the physical arrangement.
 - (2) Quick rack setup shall be available to apply address settings across all circuits for rack number, DMX Start Address, sACN universe, and sACN start address.
 - (3) Emergency Setup Menu shall provide optional delays when emergency is activated or deactivated, and option to turn off non-emergency circuits shall be available. Record function shall allow circuits that are turned on to be added to the emergency setting.
 - e. Relay Panel Accessories
 - 1) Ethernet Option shall provide advanced control of relays over streaming ACN (sACN) and transmit relay state, control override to web browser based interface or central monitoring interface
 - 2) A Low Voltage 0-10V Dimming Option shall link each of the 24 0-10V outputs with a relay circuit in the panel. Each output shall support up to 400mA of current sink for support of at least 50 LED drivers of fluorescent ballasts
 - 3) A Contact Input Option shall allow 24 dry contact inputs to be linked for direct or group relay control, to activate a preset, or to activate a sequence. Controller software shall allow for normally open maintained, normally closed maintained, or momentary toggle.
 - 4) A DALI Control Option shall provide 24 control loops of broadcast DALI control with each loop controlling up to 64 ballasts. An external DALI loop power supply shall also be provided.
 - 5) A RideThru Option shall provide short-term power backup of control electronics by automatically engaging when power is lost, and recharging when normal power is present
 - 6) A Tamperproof Hardware Kit shall include center reject Torx head screws to prevent access to panel interior by unqualified individuals
 - 7) Main Breaker options shall be available as shown in Section G.2
 - f. Thermal
 - 1) The panel shall be convection cooled. Panels that require the use of cooling fans shall not be acceptable
 - 2) The panel shall operate safely in an environment having an ambient temperature between 32°F (0°C) and 104°F (40°C), and humidity between 5-95% (non-condensing).
8. Wall-Box Dimmers, Wall-Switch Occupancy Sensors, and Manual Light Switches:

- a. Provide wall-box dimmers, wall-switch occupancy sensors, and manual light switches complying with the requirements specified in Section 16140, Wiring Devices.
- 9. Conductors and Cables:
 - a. Power Wiring:
 - 1) Provide power wiring not smaller than 12AWG complying with the requirements specified in Section 16120, Conductors and Cables, but not smaller than 12AWG.
 - b. Class 1 Control Cables:
 - 1) Provide multiconductor Class 1 control cables complying with the requirements specified in Section 16120, Conductors and Cables, and having stranded-copper conductors not smaller than 14AWG.
 - c. Class 2 and Class 3 Control Cables:
 - 1) Provide multiconductor Class 2 and 3 control cables complying with the requirements specified in Section 16120, Conductors and Cables, and having stranded-copper conductors not smaller than 18AWG.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Verify that the locations to receive lighting control devices are ready for the Work of this Section.
 - a. Examine the locations to receive the lighting control devices.
 - b. Although the Contract Drawings are generally indicative of the Work, field-verify the actual conditions.
 - 1) Due to the small scale of the Contract Drawings it is not possible to indicate minor structural obstructions or relocations that may be encountered during the Work.
 - 2. Verify that electrical boxes and enclosures to be mated with the lighting control devices are the correct type and size, and are at the proper location.
- B. Evaluation and Assessment:
 - 1. Only begin the Work of this Section after the verification of conditions and the correction of non-conformances affecting the wiring devices have been completed.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the lighting control devices.

3.03 INSTALLATION

A. Installing Sensors:

1. Install sensors in locations and aim them so they achieve not less than 90 percent coverage of the areas indicated in the Contract Documents.
2. Do not exceed the coverage limits specified in the sensor manufacturer's written instructions.
 - a. Submit the sensor manufacturer's written instructions for the sensors to the Program/Project Manager for information.

B. Installing Contactors:

1. Unless the contactors are installed in an enclosure with factory-installed vibration isolators, mount electrically held lighting contactors with elastomeric isolator pads to eliminate structure-borne vibration.

C. Installing Wiring:

1. Unless otherwise indicated, size the conductors for the lighting control devices according to the lighting control device manufacturer's written instructions.
 - a. Submit the lighting control device manufacturer's written instructions for sizing the conductors to the Program/Project Manager for information.
2. Wiring Method:
 - a. Provide wiring complying with the requirements specified in Section 16120, Conductors and Cables.
 - 1) Provide power wiring not smaller than 12AWG to the supply side of remote-control power sources.
 - b. Provide conduit complying with the requirements specified in Section 16130, Raceway and Boxes; and having a minimum size of 1/2 inch.
3. Wiring within Enclosures:
 - a. Provide wiring within enclosures complying with the requirements specified in ANSI/NECA 1.
 - b. Separate power-limited and nonpower-limited conductors according to the conductor manufacturer's written instructions.
 - 1) Submit the conductor manufacturer's written instructions for separating the conductors to the Program/Project Manager for information.
4. Splices, Taps, and Terminations:
 - a. Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

D. Special Techniques:

1. Identification:
 - a. Identify lighting control devices in accordance with the requirements specified in Section 16075, Electrical Identification.
 - 1) Identify controlled circuits in the lighting contactors.

- 2) Identify the circuits or luminaries controlled by the occupancy sensors at each sensor.
 - b. Label time switches and contactors with a unique designation.
- E. Systems Integration:
 1. Wiring:
 - a. Install wiring and cable as indicated in Section 16120, Conductors and Cables.
 - b. Prior to the installation of any wire, verify that the conduit is clean and free of debris.
 2. Ground lighting control devices in conformance with Section 16060, Grounding and Bonding.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 1. Operational Test:
 - a. Test Procedure:
 - 1) After installing the time switches and sensors, and after electrical circuitry has been energized, test the time switches and sensors for compliance with specified requirements
 - 2) Prepare field quality-control test reports to document the test results, and submit them to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Lighting control devices that fail tests and inspections are considered to be defective, non-conforming work.
 2. Inspections:
 - a. After installing the time switches and sensors, and after electrical circuitry has been energized, inspect the time switches and sensors for compliance with specified requirements.
- B. Non-Conforming Work
 1. When Work is determined to be non-conforming, correct circuit conditions, remove malfunctioning units and replace the malfunctioning units with new ones, and retest the devices as specified herein.

3.05 SYSTEM STARTUP

- A. After installing time switches and sensors, and after electrical circuitry has been energized, adjust the time switches and sensors to comply with the specified requirements.
 1. Verify operation of each lighting control device, and adjust the time delays.

3.06 ADJUSTING

- A. Occupancy Adjustments:

1. When requested within 12 months of the date of Substantial Completion, provide on-site assistance to adjust the sensors to suit occupied conditions.
2. Provide up to 2 visits to the Site during other-than-normal occupancy hours for this purpose.

3.07 CLOSEOUT ACTIVITIES

A. Training:

1. Engage a factory-authorized service representative to train the Owner's maintenance personnel to adjust, operate, and maintain the lighting control devices in accordance with the requirements specified in Section 01770, Closeout Procedures.

3.08 PROTECTION

A. Take steps to ensure that lighting control devices and their boxes are protected during construction activities.

1. Do not place wall finish materials over device boxes.
2. Keep outlet boxes free of plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other material that may contaminate the raceway system, conductors, and cables.

3.09 MAINTENANCE

A. Operation and Maintenance Data:

1. Furnish operation and maintenance data for the lighting control devices for inclusion in the emergency and operation and maintenance manuals.
 - a. Submit the operation and maintenance data for the lighting control devices to the Program/Project Manager for information.

SECTION 16234

DIESEL ELECTRIC GENERATORS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for packaged engine-generator sets for supplying emergency power, and that have the following features:
 - a. Diesel engine.
 - b. Unit-mounted cooling system.
 - c. Unit-mounted control and monitoring.
 - d. Performance enhancements for sensitive loads.
 - e. Load banks.
 - f. Outdoor enclosure.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01770 - Closeout Procedures.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 03100 - Concrete Forms and Accessories.
 - 6. Section 03200 - Concrete Reinforcement.
 - 7. Section 03300 - Cast-In-Place Concrete.
 - 8. Section 07720 - Roof Accessories.
 - 9. Section 13453 - Supervisory Control and Data Acquisition (SCADA).
 - 10. Section 15065 - Motors for Mechanical Equipment.
 - 11. Section 15075 - Mechanical Identification.
 - 12. Section 15182 - Hydronic Piping.
 - 13. Section 16061 - Electrical Grounding and Bonding.
 - 14. Section 16070 - Hangers and Supports.
 - 15. Section 16075 - Electrical Identification.
 - 16. Section 16120 - Conductors and Cables.
 - 17. Section 16497 - Automatic Transfer Switches.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AC: Alternating electric current.
 - 2. dBA: Decibels, referenced to the A-weighting filter curve defined in IEC 61672.
 - 3. CA: Commissioning Authority.
 - 4. DC: Direct electrical current.
 - 5. GFCI: Ground-fault circuit interrupter.

6. HVAC: Heating, Ventilating, and Air-Conditioning.
7. LED: Light emitting diode.
8. LP: Liquid petroleum.
9. SCADA: Supervisory control and data acquisition.
10. w. g.: Water gauge.

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
2. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.
3. Operational Bandwidth: The total variation from the lowest to the highest value of a parameter over the range of conditions indicated, expressed as a percentage of the nominal value of the parameter.

C. Reference Standards:

1. American Society of Civil Engineers (ASCE)/Structural Engineering Institute (SEI):
 - a. ASCE/SEI 7 - Minimum Design Loads for Buildings and Other Structures.
2. The Association for Manufacturing Technology (AMT):
 - a. AMT B15.1 – Safety Standards for Mechanical Power Transmission Apparatus.
3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
4. Institute of Electrical and Electronics Engineers (IEEE):
 - a. IEEE 115 – IEEE Guide: Test Procedures for Synchronous Machines.
5. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
6. InterNational Electrical Testing Association (NETA):
 - a. ANSI/NETA ATS – Standard for Acceptance Testing Specifications for Electrical Power Equipment and Systems.
 - b. ANSI/NETA ETT - Standard for Certification of Electrical Testing Technicians.
7. International Electrotechnical Commission (IEC):
 - a. IEC 61672 – Electroacoustics – Sound Level Meters – Part 2: Pattern Evaluation Tests.
8. National Electrical Manufacturers Association (NEMA):
 - a. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

- b. NEMA ICS 6 - Industrial Control and Systems: Enclosures.
- c. NEMA MG 1 – Motors and Generators.
- 9. National Institute of Standards and Technology (NIST):
 - a. Standards Services Division,
<http://ts.nist.gov/standards/accreditation/index.cfm>:
- 10. National Fire Protection Association (NFPA):
 - a. NFPA 30 – Flammable and Combustible Liquids Code.
 - b. NFPA 37 – Standard for Installation and Use of Stationary Combustion Engines and Gas Turbines.
 - c. NFPA 70 – National Electrical Code® (NEC).
 - d. NFPA 99 – Health Care Facilities Code.
 - e. NFPA 110 - Standard for Emergency and Standby Power Systems.
- 11. National Institute for Certification in Engineering Technologies (NICET),
www.nicet.org:
 - a. Industrial Instrumentation Engineering Technology Industrial Instrumentation Program Detail Manual.
- 12. Underwriters Laboratories, Inc. (UL):
 - a. UL 142 - Standard for Steel Aboveground Tanks for Flammable and Combustible Liquids.
 - b. UL 1236 – Standard for Battery Chargers for Charging Engine-Starter Batteries.
 - c. UL 2200 - Standard for Stationary Engine Generator Assemblies.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, the Commissioning Authority, and the City, prior to incorporating items requiring testing by them into the Work.
 - 2. Coordinate the size and location of concrete bases for the packaged engine generators.
 - 3. Coordinate the size and location of roof curbs, equipment supports, and roof penetrations for remote radiators.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Diesel electric generators.
 - b. Shop Drawings:

- 1) Diesel electric generator outline plan and elevation drawings..
 - 2) Vibration isolation base details.
 - 3) Wiring diagrams for the diesel electric generators.
 - c. Delegated Design Submittals:
 - 1) Design Calculations.
 - d. Qualification Statements:
 - 1) Diesel electric generator installer's qualifications.
 - 2) Diesel electric generator manufacturer's qualifications.
 - 3) Testing Agency's qualifications.
 - 4) Professional Engineer's credentials.
- B. Informational Submittals:
 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Packaged engine generator manufacturers' written installation and alignment instructions.
 - b. Source Quality Control Submittals:
 - 1) Summary of the Prototype-Unit Test.
 - 2) Certified Test Reports for equivalent components and accessories.
 - 3) Certified Summary of Performance Tests.
 - 4) Certification of Torsional Vibration Compatibility.
 - c. Site Quality Control Submittals:
 - 1) Field Quality-Control Report for the NETA Acceptance Testing.
 - 2) Field Quality-Control Report for the NFPA 110 Acceptance Test.
 - 3) Field Quality-Control Report for the Battery Tests.
 - 4) Field Quality-Control Report for the Battery-Charger Tests.
 - 5) Field Quality-Control Report for the System Integrity Tests.
 - 6) Field Quality-Control Report for the Exhaust-System Back-Pressure Test.
 - 7) Field Quality-Control Report for the Exhaust Emissions Test.
 - 8) Field Quality-Control Report for the Voltage and Frequency Transient Stability Tests.
 - 9) Field Quality-Control Report for the Harmonic-Content Tests.
 - 10) Field Quality-Control Report for the Noise Level Tests.
 - 11) Field Quality-Control Report for the Leak Test.
 - 12) Field Quality-Control Report for the Operational Test.
 - 13) Field Quality-Control Report for the Infrared Scanning.
 - 14) Calibration record for the infrared scanning device.
- C. Closeout Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Maintenance Contracts:

- 1) Diesel Electric Generator Maintenance Service Agreement.
 - b. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the packaged engine generators and accessories.
 - c. Warranty Documentation:
 - 1) Packaged Engine Generator Warranty.
- D. Maintenance Material Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish spare interior lighting products that match the products installed, and packaged for storage by having a protective coverings and labels identifying the contents.
 - a) Fuses:
 - (1) For each type and rating of fuse installed, furnish 1 spare fuse for every 10 fuses installed, but not less than one of each type and rating.
 - b) Indicator Lamps:
 - (1) For each type of indicator lamp installed, furnish 2 spare indicator lamps for every 6 indicator lamps installed, but not less than 2 of each type.
 - c) Filters:
 - (1) Furnish one spare set each of the lubricating oil, fuel, and combustion-air filters for the diesel electric generators.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - c. Periodic Special Inspections will be performed during the installation of diesel electric generators and accessories.
 - 2. Testing and Inspection Agencies:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ

both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Qualifications:

1. Diesel Electric Generator Installer's Qualifications:
 - a. To install the diesel electric generators, employ a manufacturer's authorized representative trained and approved for installation of the units provided under this Contract.
 - b. Maintenance Proximity:
 - 1) The installer's place of business must not be located more than 4 hours' normal travel time from the Site.
 - c. Submit the diesel electric generator installer's qualifications to the Program/Project Manager for approval.
2. Diesel Electric Generator Manufacturer's Qualifications:
 - a. Procure products from a qualified manufacturer.
 - b. Procure products from a manufacturer that maintains a service center, within 200 miles (321km) of the Site, capable of providing training, parts, and emergency maintenance repairs.
 - c. Submit the diesel electric generator manufacturer's qualifications to the Program/Project Manager for approval.
3. Testing Agency's Qualifications:
 - a. Employ an independent Testing Agency that is a member company of the InterNational Electrical Testing Association, or a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, that is acceptable to the Authorities Having Jurisdiction (AHJ), and that has the experience and capability to conduct the testing specified herein.
 - 1) Testing Agency's Field Supervisor:
 - a) The Testing Agency's field supervisor to supervise onsite field quality control testing must be currently certified by the InterNational Electrical Testing Association (NETA) in accordance with the requirements specified in ANSI/NETA ETT, or by the National Institute for Certification in Engineering Technologies (NICET) in accordance with the requirements specified in the Industrial Instrumentation Engineering Technology Industrial Instrumentation Program Detail Manual.
 - 2) Submit the qualifications of the Testing Agency, including the Testing Agency field supervisor's qualifications, to the Program/Project Manager for approval.
4. Professional Engineer's Qualifications:
 - a. Engage a qualified Professional Engineer registered in the State of Arizona to perform vibration isolation analysis required for the diesel electric generator systems.
 - b. Submit the Professional Engineer's credentials to the Program/Project Manager for information.

C. Certifications:

1. Electrical Listing and Labeling:

- a. Provide electrical components, devices, and accessories that are listed and labeled for the location the product is installed in, and the application intended, by a Nationally Recognized Testing Laboratory (NRTL), as defined in Article 100 of NFPA 70, acceptable to the Authorities Having Jurisdiction (AHJ), unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
- b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Package and protect materials to limit field repairs.
 - a. Deliver pre-finished products in a manner that will prevent material damage and deterioration or contamination from the elements.

B. Storage and Handling Requirements:

1. Store and handle products in a manner that will prevent material damage and deterioration or contamination from the elements.

C. Packaging Waste Management:

1. Inspect for and remove shipping bolts, blocks, and tie-down straps.
2. Remove loose packing and flammable materials from inside the diesel electric generators.
3. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

A. Ambient Conditions:

1. Provide an engine-generator system capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of performance:
 - a. Ambient Temperature:
 - 1) Provide an engine-generator system capable of operating within the range 5 degrees Celsius to 40 degrees Celsius.
 - b. Altitude:
 - 1) Provide an engine-generator system capable of operating from sea level up to 3000 feet (1000m) above sea level.
- B. Existing Conditions:
 1. Interruption of Existing Electric Service:
 - a. Do not interrupt electric service to facilities occupied by the Owner or others unless permitted under the following conditions, and then only after arranging to provide temporary electric service according to the requirements indicated:
 - 1) Notify the Program/Project Manager no fewer than 2 weeks in advance of the proposed interruption of electric service.
 - 2) Do not interrupt electric service without the Program/Project Manager's written permission.

1.08 WARRANTY

- A. Manufacturer Warranty:
 1. Packaged Engine Generator Warranty:
 - a. Warrant the packaged engine generators against defects within the 5-year period after the Date of Substantial Completion:
 - 1) Submit a Packaged Engine Generator Warranty on the packaged engine generator manufacturer's standard form, without monetary limitation, in which the packaged engine generator manufacturer agrees to repair or replace packaged engine generators and associated auxiliary components that fail in materials or workmanship within the specified warranty period to include parts, labor, and mileage to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 DIESEL ELECTRIC GENERATOR ASSEMBLIES

- A. Manufacturers:
 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide the Basis-of-Design product indicated on the Contract Drawings or a comparable product manufactured by one of the manufacturers listed.
 - b. Manufacturers:
 - 1) Caterpillar; Engine Division, <http://www.cat.com/engines>

- 2) Generac Power Systems, Inc., <http://www.generac.com>.
- 3) Onan/Cummins Power Generation; Industrial Business Group, <https://power.cummins.com/>.
- 4) Approved equal.
2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain each diesel electric generator and associated components from a single source and single manufacturer.
- B. Description:
 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. National Electrical Code (NEC):
 - 1) Provide products and installation complying with the requirements specified for diesel electric generators in NFPA 70.
 - c. Engine Exhaust Emissions:
 - 1) Comply with the applicable state and local government requirements regulating engine exhaust emissions.
 - d. Noise Emission:
 - 1) Provide products and installation complying with the applicable state and local government requirements for maximum noise level at the facility due to sound emitted by generator sets, including engine, engine exhaust, engine cooling-air intake and discharge, and other components of installation.
 - e. Fuel Oil Storage:
 - 1) Comply with fuel oil storage containment requirements of the Authorities Having Jurisdiction.
- C. Performance:
 1. Capacities and Characteristics:
 - a. Power Output Ratings:
 - 1) Provide diesel electric generators having the nominal ratings indicated in the Contract Documents, and having the capability to operate as a unit as evidenced by the records of the prototype testing required under this Section.
 - b. Output Connections:
 - 1) Provide diesel electric generators having three-phase, four wire output connections.
 2. Generator-Set Performance:

- a. Steady-State Voltage Operational Bandwidth:
 - 1) Provide diesel electric generators having a steady-state voltage operational bandwidth of 3 percent of the rated output voltage from no load to full load.
 - b. Transient Voltage Performance:
 - 1) Provide diesel electric generators having not more than a 20 percent variation in transient voltage for a 50 percent step-load increase or decrease.
 - a) The voltage must recover and remain within the steady-state operating band within 3 seconds.
 - c. Steady-State Frequency Operational Bandwidth:
 - 1) Provide diesel electric generators having a steady-state frequency operational bandwidth of 0.5 percent of the rated frequency from no load to full load.
 - d. Steady-State Frequency Stability:
 - 1) Provide diesel electric generators having no random speed variations outside the steady-state operational band, and no hunting or surging of speed, when the system is operating at any constant load within the rated load.
 - e. Transient Frequency Performance:
 - 1) Provide diesel electric generators having less than a 5 percent variation in transient frequency for a 50 percent step-load increase or decrease.
 - a) The frequency must recover and remain within the steady-state operating band within 5 seconds.
 - f. Output Waveform:
 - 1) Provide diesel electric generators having harmonic waveform output content, measured line to line or line to neutral, not exceeding 5 percent in total or 3 percent for single harmonics, at no load.
 - 2) Provide diesel electric generators having a telephone influence factor not exceeding 50 percent when determined in accordance with the method specified in NEMA MG 1.
 - g. Sustained Short-Circuit Current:
 - 1) For a 3-phase, bolted short circuit at the system output terminals, provide diesel electric generator systems supplying a minimum of 250 percent of the rated full-load current for not less than 10 seconds, and then clear the fault automatically, without damage to the generator system components.
 - h. Start Time:
 - 1) Provide diesel electric generators having start times complying with the system requirements for Type 10 systems specified in NFPA 110.
3. Generator-Set Performance for Sensitive Loads:

- a. Oversizing the generator compared with the rated power output of the engine is permissible to provide the specified performance.
 - 1) Nameplate Data for Oversized Generator:
 - a) Provide nameplate data for oversized generators showing the ratings required by the Contract Documents rather than the ratings that would normally be applied to the size generator installed.
- b. Steady-State Voltage Operational Bandwidth:
 - 1) Provide diesel electric generators having a steady-state voltage operational bandwidth of 1 percent of the rated output voltage from no load to full load.
- c. Transient Voltage Performance:
 - 1) Provide diesel electric generators having not more than a 10 percent variation in transient voltage for a 50 percent step-load increase or decrease.
 - a) The voltage must recover and remain within the steady-state operating band within 0.5 second.
- d. Steady-State Frequency Operational Bandwidth:
 - 1) Provide diesel electric generators having a steady-state frequency operational bandwidth of plus or minus 0.25 percent of the rated frequency from no load to full load.
- e. Steady-State Frequency Stability:
 - 1) Provide diesel electric generators having no random speed variations outside the steady-state operational band, and no hunting or surging of speed, when the system is operating at any constant load within the rated load.
- f. Transient Frequency Performance:
 - 1) Provide diesel electric generators having less than a 2-Hertz variation in transient frequency for a 50 percent step-load increase or decrease.
 - a) The frequency must recover and remain within the steady-state operating band within 3 seconds.
- g. Output Waveform:
 - 1) Provide diesel electric generators having harmonic waveform output content, measured line to neutral, not exceeding 2 percent in total with no slot ripple, at no load.
 - 2) Provide diesel electric generators having a telephone influence factor not exceeding 50 percent when determined in accordance with the method specified in NEMA MG 1.
- h. Sustained Short-Circuit Current:
 - 1) For a 3-phase, bolted short circuit at the system output terminals, provide diesel electric generator systems supplying a minimum of 300 percent of the rated full-load current for not less than 10 seconds, and then clear the fault automatically, without damage to the winding insulation or other system components.

- i. Excitation System:
 - 1) Provide diesel electric generators having performance that is unaffected by voltage distortion caused by nonlinear loads.
 - a) Provide permanent magnet excitation for the power source to the voltage regulator.
 - a. Start Time:
 - 1) Provide diesel electric generators having start times complying with the system requirements for Type 10 systems specified in NFPA 110.
- D. Design Criteria:
- 1. Provide factory-assembled and factory-tested diesel electric generators complying with the requirements specified in AMT B15.1, NFPA 37, and UL 2200.
 - 2. Provide diesel electric generators complying with the requirements for Level 1 emergency power supply systems specified in NFPA 110.
 - 3. Locate the packaged engine generators so access for periodic maintenance is provided, without having to remove connections or accessories.
 - a. Maintain the minimum clearances and workspace at the equipment in accordance with the manufacturer's written instructions and the requirements specified in NFPA 70.
 - 4. Vibration Isolation Design:
 - a. Employ a qualified Professional Engineer to prepare data for vibration isolators for engine skid mounts; and to design vibration isolation complying with the performance requirements and design criteria signed and sealed by the Professional Engineer responsible for their preparation.
 - 1) Vibration Isolation Base Details:
 - a) Have the Professional Engineer detail the fabrication, of the anchorages and attachments to the structure and to the supported equipment, including preparing Shop Drawings signed and sealed by the Professional Engineer responsible for their preparation.
 - (1) Include setting drawings, templates, diagrams, instructions, and directions for placing and securing anchorage devices.
 - (2) Include base weights.
 - 2) Design Calculations:
 - a) Have the Professional Engineer calculate the requirements for selecting vibration isolators, including preparing comprehensive analysis data based on testing and engineering analysis of the manufacturer's standard units in assemblies similar to those to be provided under this Contract and signed and sealed by the Professional Engineer

- responsible for their preparation, and design the vibration isolation bases.
 - b. Submit the signed and sealed fabrication details and design calculations to the Program/Project Manager for approval.
- 5. Piping Systems:
 - a. Plans, schematics, and diagrams included in the Contract Drawings indicate the general location and arrangement of piping systems.
 - 1) The indicated locations and arrangements were used to size pipe, calculate friction losses, and for compliance with other design considerations.
 - 2) Install piping as indicated unless deviations to the layout are approved by the Program/Project Manager.
- 6. Product Data:
 - a. Obtain the manufacturer's Product Data for each type of packaged engine generator specified.
 - 1) Include the diesel electric generator's rated capacities, operating characteristics, and furnished specialties and accessories.
 - 2) Include the Thermal damage curve for generator.
 - 3) Include the Time-current characteristic curves for generator protective device.
 - b. Submit the Product Data to the Program/Project Manager for approval.
- 7. Shop Drawings:
 - a. Prepare Shop Drawings for the diesel electric generators that detail equipment assemblies and indicate the dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1) Furnish a dimensioned outline plan and elevation drawings of the engine-generator set and other components specified.
 - b. Wiring Diagrams:
 - 1) Furnish power, signal, and control wiring diagrams for the diesel electric generators.
 - c. Submit the Shop Drawings and wiring diagrams to the Program/Project Manager for approval.
- E. Operation:
 - 1. Controls:
 - a. Configuration:
 - 1) Group the operating and safety indications, protective devices, basic system controls, and engine gages in a common control and monitoring panel mounted on the generator set.
 - a) Use mounting method that isolate the control panel from generator-set vibration.
 - b. Indicating and Protective Devices and Controls:

- 1) Provide the indicating and protective devices and controls required for a Level 1 system as specified in NFPA 110 and as follow:
 - a) AC voltmeter.
 - b) AC ammeter.
 - c) AC frequency meter.
 - d) DC voltmeter (alternator battery charging).
 - e) Engine-coolant temperature gage.
 - f) Engine lubricating-oil pressure gage.
 - g) Running-time meter.
 - h) Ammeter-voltmeter, phase-selector switch(es).
 - i) Generator-voltage adjusting rheostat.
 - j) Fuel tank derangement alarm.
 - k) Fuel tank high-level shutdown of fuel supply alarm.
 - l) Generator overload.
- c. Supporting Devices:
 - 1) Provide the sensors, transducers, terminals, relays, and other devices necessary to support the operation of the diesel electric generators, and include the wiring required to support the specified items.
 - 2) Unless otherwise indicated in the Contract Documents, locate the sensors and other supporting items on the engine or generator.
- d. Connection to Data Link:
 - 1) For each alarm and status indication, provide connections for data-link transmission of indications to remote data terminals.
 - 2) Data system connections to terminals are specified in Section 13453, Supervisory Control and Data Acquisition (SCADA).
 - 3) Data system shall connect to Airport existing Honey-Well remote generator monitoring system.
- e. Common Remote Audible Alarm:
 - 1) Provide a common remote audible alarm complying with the requirements for Level 1 systems specified in NFPA 110, and include the following necessary contacts and terminals in the control and monitoring panel:
 - a) Overcrank shutdown.
 - b) Coolant low-temperature alarm.
 - c) Control switch not in auto position.
 - d) Battery-charger malfunction alarm.
 - e) Battery low-voltage alarm.
- f. Remote Alarm Annunciator:
 - 1) Provide a remote alarm annunciator complying with the requirements specified in NFPA 99.

- 2) Provide an LED labeled with the proper alarm conditions to identify each alarm event, and provide a common audible signal that will sound for each alarm condition.
- 3) Provide a silencing switch in the face of the panel that silences the signal without altering the visual indication.
- 4) Connect the remote alarm annunciator so that after an alarm is silenced, clearing of initiating condition will reactivate alarm until silencing switch is reset.
- 5) Provide a surface- mounting or flush-mounting type cabinet and faceplate to suit the mounting conditions indicated in the Contract Documents.
- g. Remote Emergency-Stop Switch:
 - 1) Unless otherwise indicated in the Contract Documents, provide a flush, wall mounted, and labeled remote emergency-stop switch.
 - 2) Provide protection for the push button so it cannot be accidentally operated.
2. Operation Sequences:
 - a. Automatic Starting System Sequence of Operation:
 - 1) When the mode-selector switch on the control and monitoring panel is in the automatic position, the remote-control contacts in one or more separate automatic transfer switches must initiate the starting and stopping of the generator set.
 - a) When the mode-selector switch is switched to the on position, the generator set must start.
 - b) The off position of same switch must initiate generator-set shutdown.
 - c) When the generator set is running, specified system or equipment failures or derangements must automatically shut down the generator set and initiate alarms.
 - d) Operation of a remote emergency-stop switch must also shut down the generator set.

F. Components:

1. Mounting Frame:
 - a. Provide mounting frames that maintain the alignment of mounted components without depending on the concrete foundation, and that have lifting attachments.
 - b. Rigging Diagram:
 - 1) Provide a rigging diagram inscribed on a metal plate permanently attached to the mounting frame to indicate the location and lifting capacity of each lifting attachment and the generator-set center of gravity.
2. Engine:
 - a. Fuel:
 - 1) Provide an engine capable of running on Grade DF-2 fuel oil.
 - b. Rated Engine Speed:

- 1) Provide an engine rated for an engine speed of 1800 revolutions per minute.
- c. Maximum Piston Speed:
 - 1) Provide a four-cycle engine having a maximum piston speed of 2250 feet per minute (11.4m/s).
- d. Engine Lubrication System:
 - 1) Provide a lubrication system for the engine having the following items mounted on the engine or skid:
 - a) Filter and Strainer:
 - (1) Provide filter and strainer rated for removal of 90 percent of particles 5 micrometers and smaller while passing full flow.
 - b) Thermostatic Control Valve:
 - (1) Provide a thermostatic control valve designed to control the flow in the system in order to maintain the optimum oil temperature.
 - (a) Provide a thermostatic control valve capable accommodating the full flow, and designed to be fail-safe.
 - c) Crankcase Drain:
 - (1) Provide a crankcase drain arranged for complete gravity drainage of the crankcase to an easily removable container with no disassembly, and without the need for pumps, siphons, special tools, or appliances.
 - e. Engine Fuel System:
 - 1) Main Fuel Pump:
 - a) Provide a main fuel pump, mounted on the engine, that ensures adequate primary fuel flow under starting and load conditions.
 - 2) Relief-Bypass Valve:
 - a) Provide a relief-bypass valve that automatically regulates the pressure in the fuel line and returns excess fuel to source.
 - f. Coolant Jacket Heater:
 - 1) Provide an electric-immersion type coolant jacket heater complying with the requirements for Level 1 equipment specified in NFPA 110 for the heater capacity, and factory-installed in the coolant jacket system.
 - g. Governor:
 - 1) Provide an adjustable isochronous governor having speed sensing.
 - h. Cooling System:
 - 1) Provide a closed loop, liquid cooled cooling system having a radiator factory-mounted on the engine-generator-set mounting frame and an integral engine-driven coolant pump.
 - a) Coolant:

- (1) Provide system coolant consisting of a solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by the engine manufacturer.
- b) Size of Radiator:
 - (1) Provide a radiator sized adequately to contain the expansion of the total system coolant from a cold start to a 110 percent load condition.
- c) Temperature Control:
 - (1) Provide a self-contained, thermostatic-control valve that modulates the coolant flow automatically to maintain the optimum constant coolant temperature recommended by the engine manufacturer.
- d) Coolant Hose:
 - (1) Provide a flexible coolant hose assembly having an inside surface of nonporous rubber and an outer covering of aging- resistant, ultraviolet- resistant, and abrasion-resistant fabric.
 - (2) Rating:
 - (a) Provide a cooling system rated for a maximum working pressure of 50 psig (345kPa) with the coolant at 180 degrees Fahrenheit (82 degrees Celsius), and that is noncollapsible under a vacuum.
 - (3) End Fittings:
 - (a) Provide flanges or steel pipe nipples having clamps to suit the piping and equipment connections.
- i. Muffler/Silencer:
 - 1) Provide a critical type muffler/silencer, sized as recommended by the engine manufacturer, and selected so the exhaust piping system does not exceed the engine manufacturer's engine backpressure requirements.
 - a) Provide a muffler/silencer providing sound attenuation of at least 12 decibels at 500 Hertz.
 - b) Provide a muffler/silencer providing a sound level measured at a distance of 10 feet (3m) from the exhaust discharge after installation is complete of 85 dBA or less.
- j. Air-Intake Filter:
 - 1) Provide a heavy-duty, engine-mounted air cleaner having a replaceable dry-filter element and a "blocked filter" indicator.
- k. Starting System:
 - 1) Provide a 24-Volt electric starting system having a negative ground.
 - a) Components:
 - (1) Provide starting system components sized so they will not be damaged during a full engine-cranking cycle at the

maximum ambient temperature specified in Subparagraph 1.07.A.1.a.1.

- b) Cranking Motor:
 - (1) Provide a heavy-duty cranking motor unit that automatically engages and releases from the engine flywheel without binding.
- c) Cranking Cycle:
 - (1) Provide the cranking cycle complying with the requirements specified in NFPA 110 for the system level.
- d) Battery:
 - (1) Provide a battery having adequate capacity within ambient temperature range specified in Subparagraph 1.07.A.1.a.1 to provide the specified cranking cycle at least twice without recharging.
- e) Battery Cable:
 - (1) Provide a battery cable sized as recommended by the engine manufacturer for the cable length indicated.
 - (a) Include the required interconnecting conductors and connection accessories.
- f) Battery Compartment:
 - (1) Provide a factory-fabricated battery compartment made from metal having an acid-resistant finish and thermal insulation.
 - (a) Include the accessories required to support and fasten the batteries in place.
- g) Battery-Charging Alternator:
 - (1) Provide a factory-mounted battery-charging alternator on the engine having solid-state voltage regulation and a minimum continuous rating of 35 Amperes.
- h) Battery Charger:
 - (1) Provide a current-limiting, automatic-equalizing and float-charging type battery charger, complying with the requirements specified in UL 1236, and that includes the following features:
 - (a) Operation:
 - i. Provide a battery charger providing an equalizing-charging rate of 10 Amperes initiated automatically after the battery has lost charge until an adjustable equalizing voltage is achieved at the battery terminals.
 - ii. Include provisions that, once an equalizing voltage is achieved at the battery terminals, then automatically switch the unit to a lower float-charging mode and continue its operation in that mode until the battery is discharged again.

- (b) Automatic Temperature Compensation:
 - i. Provide a battery charger that adjusts float and equalize voltages for variations in ambient temperature from minus 40 degrees Celsius to plus 60 degrees Celsius to prevent overcharging at high temperatures and undercharging at low temperatures.
 - (c) Automatic Voltage Regulation:
 - i. Provide a battery charger that maintains constant output voltage regardless of input voltage variations up to plus or minus 10 percent.
 - (d) Ammeter and Voltmeter:
 - i. Provide a battery charger that has an ammeter and a voltmeter flush-mounted in the door.
 - ii. Provide meters that indicate the charging rates.
 - (e) Safety Functions:
 - i. Provide a battery charger capable of sensing abnormally low battery voltage and of closing contacts providing a low battery voltage indication on the control and monitoring panel.
 - ii. Provide a battery charger capable of sensing high battery voltage and the loss of the AC input or the DC output of the battery charger.
 - iii. Provide a battery charger capable under either condition of closing contacts that provide a battery-charger malfunction indication at the system control and monitoring panel.
 - (f) Enclosure and Mounting:
 - i. Provide a factory mounted cabinet complying with the requirements for a NEMA Type 1 enclosure specified in NEMA 250 for the battery charger.
- 3. Fuel Oil Storage:
 - a. Provide storage for fuel oil complying with the requirements specified in NFPA 30.
 - b. Base-Mounted Fuel Oil Tanks:
 - 1) Provide factory-installed and factory-piped base-mounted fuel oil tanks complying with the requirements specified in UL 142, and having the following features:
 - a) Tank Level Indicators:
 - (1) Provide fuel oil tanks having tank level indicators.
 - b) Capacity:
 - (1) Provide fuel oil tanks capable of holding fuel for 24 hours' continuous operation at 100 percent of the rated power output of the generator.
 - c) Fill Cap:

- (1) Provide vandal-resistant fill caps.
 - d) Monitoring. Provide fuel level monitoring through Aviation Veeder-Root monitoring system including low, low-low, and high alarms.
- 4. Generator Overcurrent and Fault Protection:
 - a. Generator Disconnect Switch:
 - 1) Provide a 100 percent rated molded-case type disconnect switch.
 - a) Rating:
 - (1) Provide the disconnect switch rating matched to the generator output rating.
 - b) Shunt Trip:
 - (1) Provide a shunt trip connected to the trip switch when signaled by the generator protector or by other protective devices.
 - b. Generator Protector:
 - 1) Provide a microprocessor-based generator protector unit that continuously monitors the current level in each phase of the generator output, integrates the generator heating effect over time, and predicts when thermal damage of the alternator will occur.
 - a) When signaled by the generator protector or other generator-set protective devices, a shunt-trip device in the generator disconnect switch must open the switch to disconnect the generator from load circuits.
 - 2) Provide a generator protector that performs the following functions:
 - a) Provide a generator protector that initiates a generator overload alarm when the generator has operated at an overload equivalent to 110 percent of full-rated load for 60 seconds.
 - (1) Integrate the indication for this alarm with other generator-set malfunction alarms.
 - b) Provide a generator protector that, under single or three-phase fault conditions, regulates the generator to 300 percent of the rated full-load current for up to 10 seconds.
 - c) Provide a generator protector that, as the overcurrent heating effect on the generator approaches the thermal damage point of the unit, switches the excitation system off, opens the generator disconnect device, and shuts down the generator set.
 - d) Provide a generator protector that senses the clearing of a fault by other overcurrent devices, and controls the recovery of the rated voltage to avoid overshoot.
 - 3) Ground-Fault Indication:

- a) Provide ground-fault indication that complies with the requirements for "Emergency System" signals for ground-fault specified in NFPA 70.
 - (1) Integrate the ground-fault alarm indication with other generator-set alarm indications.
- 5. Generator, Exciter, and Voltage Regulator:
 - a. Provide generator, exciter, and voltage regulator that complies with the requirements specified in NEMA MG 1.
 - b. Drive:
 - 1) Provide a generator drive shaft directly connected to the engine shaft.
 - 2) Provide a generator drive that rotates the exciter integrally with the generator rotor.
 - c. Electrical Insulation:
 - 1) Provide Class H or Class F electrical insulation.
 - d. Stator-Winding Leads:
 - 1) Provide stator-winding leads brought to the terminal box to permit future reconnection for other voltages if required.
 - e. Provide a generator, exciter, and voltage regulator designed and constructed to prevent mechanical, electrical, and thermal damage due to vibration, overspeed up to 125 percent of the generator rating, and heat during operation at 110 percent of the rated capacity.
 - f. Enclosure:
 - 1) Provide a drip proof enclosure for the generator, exciter, and voltage regulator.
 - g. Instrument Transformers:
 - 1) Provide instrument transformers mounted within the generator enclosure.
 - h. Voltage Regulator:
 - 1) Provide a solid-state type voltage regulator, separate from the exciter, that provides the performance specified in this Section.
 - 2) Provide an adjusting rheostat on the control and monitoring panel capable of providing a plus or minus 5 percent adjustment of the output-voltage operating band.
 - i. Windings:
 - 1) Provide a two-thirds pitch stator winding and a fully linked amortisseur winding.
 - j. Subtransient Reactance:
 - 1) Provide a generator, exciter, and voltage regulator having a maximum Subtransient reactance of 12 percent.
- 6. Load Bank:
 - a. Provide permanent, outdoor, weatherproof, remote-controlled, forced-air-cooled, resistive load bank units capable of providing a balanced 3-phase, delta-connected load to the generator set at 80 percent of the

rated-system capacity, when operating with an 80 percent lagging power factor.

- 1) The load bank unit may be composed of separate resistive load banks controlled by a common control panel.
- 2) The load bank unit must be capable of selective control of the load in 25 percent steps, and with minimum step changes of approximately 5 and 10 percent of the load available.
- b. Resistive Load Elements:
 - 1) Provide double insulated corrosion-resistant chromium alloy resistive load elements having ceramic and steel supports, and designed for repetitive on-off cycling.
 - a) Mount the elements in removable aluminized-steel heater cases.
- c. Load-Bank Heat Dissipation:
 - 1) Provide integral fans having totally enclosed motor that provide a uniform cooling airflow through the load elements.
 - a) Provide airflow and coil operating current so, at the maximum load and with the ambient temperature at the upper end of specified range, the load-bank elements operate at not more than 50 percent of the maximum continuous temperature rating of the resistance elements.
- d. Load Element Switching:
 - 1) Provide remote-controlled contactors to switch groups of load elements.
 - a) Provide contactor coils rated at 120 Volts.
 - b) Locate the contactors in a separate enclosure complying with the requirements for NEMA Type 3R enclosures specified in NEMA 250, within the load-bank enclosure and accessible from the exterior through hinged doors having tumbler locks.
- e. Contactor Enclosures:
 - 1) Provide contactor enclosures that are heated by thermostatically controlled strip heaters to prevent condensation.
- f. Load-Bank Enclosures:
 - 1) Provide load-bank enclosures complying with the requirements for NEMA Type 3R enclosures specified in NEMA 250, and with the requirements specified in NEMA ICS 6.
 - 2) Provide load-bank enclosures having louvers at the cooling-air intake and discharge openings that prevent the entry of rain and snow.
 - 3) Provide screens having 1/2-inch (13mm) square, galvanized-steel mesh at the airflow openings.
- g. Protective Devices:
 - a) Provide fuses for the power input circuits to the load banks selected to coordinate with the generator circuit breaker.
 - (1) Locate the fuse blocks in the contactor enclosure.

- (2) Provide cooling airflow and overtemperature sensors that automatically shut down and lock out the load bank until they are manually reset.
 - (3) Provide safety interlocks on access panels and doors that disconnect the load power, control, and heater circuits.
 - (4) Provide fan motors that are separately protected by overload and short-circuit devices.
 - (5) Provide short-circuit devices consisting of noninterchangeable fuses having a 200,000-Ampere interrupting capacity.
 - 2) Remote-Control Panels:
 - a) Provide remote-control panels that are separate from the load bank in enclosures complying with the requirements for NEMA Type 3 enclosures specified in NEMA 250 having a control power switch and pilot light, and switches controlling groups of load elements.
 - 3) Control Sequence:
 - a) Control panels may be preset for adjustable single-step loading of the generator during automatic exercising.
- h. Outdoor Generator-Set Enclosure:
 - 1) Provide vandal-resistant, weatherproof steel housings that are wind resistant up to 100 miles per hour (160km/h).
 - a) Where multiple panels are provided, they must be lockable and provide adequate access to the components requiring maintenance.
 - b) Provide panels that are removable by one person without tools.
 - c) Mount the instruments and controls within the enclosures.
- i. Engine Cooling Airflow through Enclosure:
 - 1) Provide a cooling airflow through the enclosure to maintain the temperature rise of system components within the required limits when the unit operates at 110 percent of the rated load for 2 hours with the ambient temperature at the top of the range specified in the system service conditions.
 - a) Louvers:
 - (1) Provide louvers for the fixed-engine, cooling-air inlet and discharge.
 - (2) Provide stormproof and drainable louvers that prevent the entry of rain and snow.
 - b) Automatic Dampers:
 - (1) Provide automatic dampers at the engine cooling-air inlet and discharge.
 - (2) Provide dampers that can be closed to reduce the enclosure heat loss in cold weather when the unit is not operating.

- j. Interior Lights with Switch:
 - 1) Provide factory-wired, vapor proof-type interior light fixtures arranged within the housing to illuminate the controls and the accessible interior, and arranged to allow for external electrical connections.
 - a) When a remote source is available for operation, provide an alternating electric current (AC) lighting system and connection point.
 - b) When a remote source and generator are both unavailable for operation, provide a direct electrical current (DC) lighting system.
- k. Convenience Outlets:
 - 1) Provide factory-wired, ground-fault circuit interrupter convenience outlets arranged for external electrical connection.
- 7. Motors:
 - a. Provide motors complying with the requirements specified in Section 15065, Motors for Mechanical Equipment.
 - 1) Motor Sizes:
 - a) Provide the minimum size as indicated in the Contract Documents.
 - (1) If the motor sizes are not indicated, provide motors large enough so the driven load will not require the motor to operate in a service factor range above 1.0.
 - 2) Controllers, Electrical Devices, and Wiring:
 - a) Provide motor controllers, electrical devices, and connections as specified in other Sections.
- 8. Vibration Isolation Devices:
 - a. Elastomeric Isolator Pads:
 - 1) Provide oil-resistant and water-resistant natural rubber vibration isolator pads, arranged in 2 layers, molded with a nonslip pattern, and having galvanized-steel baseplates of sufficient stiffness to provide uniform loading over the pad area.
 - a) Provide natural rubber having a durometer rating of 50.
 - b) Provide elastomeric isolator pads having a minimum deflection of 1 inch (25mm).
 - 2) Factory-cut the vibration isolator pads to sizes that match the requirements of the supported equipment.
 - b. Restrained Spring Isolators:
 - 1) Provide freestanding, steel, open-spring isolators having seismic restraints.
 - a) Housings:
 - (1) Provide steel housings having resilient vertical-limit stops to prevent spring extension due to wind loads or if weight is removed, factory-drilled baseplates bonded to 1/4 inch (6mm) thick elastomeric isolator pads attached to the

underside of the baseplates, and adjustable equipment mounting and leveling bolts that act as blocking during installation.

- b) Outside Spring Diameters:
 - (1) Provide outside spring having diameters not less than 80 percent of the compressed height of the spring at the rated load.
 - c) Minimum Additional Travel:
 - (1) Provide restrained spring isolators capable of additional travel equal to at least 50 percent of the required deflection at the rated load.
 - d) Lateral Stiffness:
 - (1) Provide restrained spring isolators having more than 80 percent of the rated vertical stiffness.
 - e) Overload Capacity:
 - (1) Provide restrained spring isolators capable of supporting 200 percent of the rated load without deformation or failure when fully compressed.
9. Nameplates:
- a. For each major system component, provide nameplates to identify the manufacturer's name and address, and the model and serial number of the component.
- G. Finishes:
- 1. Enclosures and Components:
 - a. For indoor and outdoor enclosures and components, provide the manufacturer's standard finish applied over a corrosion-resistant pretreatment and a compatible primer.

2.02 ACCESSORIES

- A. Roof Curbs, Equipment Supports, and Roof Penetrations:
 - 1. Provide roof curbs, equipment supports, and roof penetrations for remote radiators complying with the requirements specified in Section 07720, Roof Accessories.
- B. Piping Materials:
 - 1. Provide flexible connectors and steel piping materials complying with the requirements specified in Section 15182, Hydronic Piping.

2.03 SOURCE QUALITY CONTROL

- A. Tests and Inspections:
 - 1. Materials specified in this Section require advance examination or testing in accordance with the methods specified herein, or as required by the Program/Project Manager.

- a. Fourteen days before the tests will be performed, provide advance notice of the tests to the Program/Project Manager to give the Program/Project Manager and the Approved Agency the opportunity to observe the tests.
2. Prototype Testing:
 - a. Factory-test a prototype engine-generator set of the same engine model to be provided under this Section, constructed of identical or equivalent components, and equipped with identical or equivalent accessories.
 - b. Test Procedure:
 - 1) Test the prototype engine-generator set in accordance with the procedures for Level 1 Energy Converters specified in NFPA 110, and in accordance with the procedures specified in IEEE 115.
 - c. Acceptance Criteria:
 - 1) Submit a certified Summary of the Prototype-Unit Test report to the Program/Project Manager for information.
3. Project-Specific Equipment Tests:
 - a. Test Procedure:
 - 1) Before shipping the diesel electric generator equipment, have the manufacturer perform the following factory-tests of the engine-generator set and other system components and accessories manufactured specifically for this Contract at the rated load and power factor, prepare certified test reports documenting the results of the tests, and within 10 days of the completion of the test submit the test reports to the Program/Project Manager for information:
 - a) Test the components and accessories that will be furnished with the unit to be provided that are not identical to those on the prototype tested to demonstrate their compatibility and reliability.
 - b) Run the diesel electric generators at full load.
 - c) Run the diesel electric generators at maximum power.
 - d) Test the diesel electric generator's voltage regulation.
 - e) Test the diesel electric generator's transient and steady-state governing.
 - f) Test the diesel electric generator's single-step load pickup.
 - g) Test the diesel electric generator's safety shutdown.
 - b. Acceptance Criteria:
 - 1) Submit the following information to the Program/Project Manager for information:
 - a) Certified Test Reports for Equivalent Components and Accessories:
 - (1) For components and accessories that are equivalent, but not identical, to those tested on prototype unit, prepare certified test reports.

- b) Certified Summary of Performance Tests:
 - (1) Prepare a Certified Summary of Performance Tests to certify compliance with the specified requirement to meet the performance criteria for sensitive loads.
 - (a) Show evidence that the units to be shipped for this Contract comply with the specified requirements.
 - (b) Include a report of the sound generation.
 - (c) Include a report of the exhaust emissions showing compliance with applicable regulations.
 - (2) Certification of Torsional Vibration Compatibility:
 - (a) Certify that the units comply with the torsional vibration compatibility requirements specified in NFPA 110.
- B. Coordination of Other Tests and Inspections:
 - 1. Notify the code-required Approved Agency responsible for performing special inspections when switchgear for this Contract are being fabricated and/or tested.
 - 2. Cooperate with the code-required Approved Agency when they are performing required material verifications and other special inspections.
 - a. Provide full access to the Work.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. With the diesel electric generator installer present, examine the areas, equipment bases, and conditions where the diesel electric generators will be installed for compliance with the requirements for installation and other conditions affecting the packaged engine-generator performance.
 - 2. Examine the roughing-in of piping and electrical connections to verify their actual locations before installing the packaged engine-generator units.
- B. Evaluation and Assessment:
 - 1. Proceed installing the diesel electric generators only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the diesel electric generators.
- B. Surface Preparation:
 - 1. Concrete Bases:
 - a. Provide flat concrete pads to support the diesel electric generators.

- 1) Provide 4-inch high reinforced concrete bases with chamfered edges to support the diesel electric generators.
- 2) Extend the base no less than 3 inches in all directions beyond the maximum dimensions of the diesel electric generators, unless otherwise indicated on the Contract Drawings, or unless required otherwise specified.
- b. Construct the concrete bases in accordance with Section 03200, Concrete Reinforcement.
 - 1) Provide concrete formwork as specified in Section 03100, Concrete Forms and Accessories; concrete reinforcement as specified in Section 03200, Concrete Reinforcement; and concreting as specified in Section 03300, Cast-In-Place Concrete, that comply with the requirements for concrete bases.
- c. Place and secure anchorage devices.
 - 1) Use setting drawings, templates, diagrams, instructions, and directions for the items to be embedded to properly locate these items.
 - 2) Install anchor bolts to the elevations required for proper attachment to the diesel electric generators.
 - 3) Cast anchor-bolt inserts into the concrete bases.

3.03 INSTALLATION

- A. Install the packaged engine generators in accordance with manufacturers' installation and alignment instructions and with the requirements specified in NFPA 110.
 1. Submit the packaged engine generator manufacturers' written installation and alignment instructions to the Program/Project Manager for information.
- B. Install packaged engine generator with elastomeric isolator pads on the concrete base.
 1. Secure the engine generator sets to anchor bolts installed in the concrete bases.
- C. Engine Mufflers:
 1. Install the engine muffler, and connect it via flexible connectors to Schedule 40, black steel piping having welded joints and the same diameter as the muffler outlet.
 - a. Installation the flexible connectors and steel piping materials in accordance with the requirements specified in Section 15182, Hydronic Piping.
 2. Install Schedule 40, black steel condensate drain piping with welded joints to the muffler drain outlet, and having the full size of the drain connection with a shutoff valve and stainless-steel flexible connectors.

- a. Installation the flexible connectors and steel piping materials in accordance with the requirements specified in Section 15182, Hydronic Piping.
 3. Install thimbles at walls.
 4. Provide remote shut off in accordance with City of Phoenix and Aviation requirements. Location of remote shut off shall be coordinated with Aviation prior to installation.
 5. Provide platform around generator to conform to OSHA 1910 that shall be a minimum of 3' wide.
- D. Special Techniques:
 1. Electrical Wiring:
 - a. Install electrical devices furnished by the equipment manufacturers but not specified to be factory mounted.
 2. Identification:
 - a. Identify piping, ductwork, and other mechanical components in accordance with the requirements specified in Section 15075, Mechanical Identification.
 - b. Identify field-installed wiring and components and provide warning signs in accordance with the requirements specified in Section 16075, Electrical Identification.
 - c. Electrical systems shall be identified by color including normal, life safety, optional stand-by, and legally required stand-by in accordance with NFPA 70 and Aviation standard.
- E. Interface with Other Work:
 1. Install piping in accordance with the requirements specified in other Sections
 - a. Connect fuel, cooling-system, and exhaust-system piping adjacent to the packaged engine generator so access for service and maintenance is maintained.
 - b. Provide flexible connectors to connect the cooling-system water piping to the engine-generator sets and the heat exchangers, and to connect the engine exhaust pipes to the engines.
- F. Systems Integration:
 1. Ground the packaged engine generator equipment in accordance with the requirements specified in Section 16061, Electrical Grounding and Bonding.
 2. Connect the packaged engine generator wiring in accordance with the requirements specified in Section 16120, Conductors and Cables.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:

1. During the period when diesel electric generators are being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials or proportions requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
2. Testing Agency Responsibilities:
 - a. Field Quality-Control Reports:
 - 1) Have the Testing Agency employed by the Contractor perform the tests specified herein, and prepare a certified written Field Quality-Control Report for each test conducted to record the following information pertaining to the test:
 - a) The diesel electric generators included in the testing.
 - b) Test procedures used to perform the testing.
 - c) Test results that comply with the requirements specified.
 - d) Test results that do not comply with the specified requirements, and corrective action taken to achieve compliance with the requirements.
 - (1) Note deficiencies detected, the remedial action taken, and observations after remedial action.
 - 2) Have the Testing Agency record the adjustable relay settings and measured insulation resistances, time delays, and other values and observations in the Field Quality-Control Reports.
 - b. Coordinate the Site tests with the tests for transfer switches provided under Section 16497, Automatic Transfer Switches, and run the tests concurrently.
 - c. Furnish test instruments that have been calibrated within the last 12 months, traceable to standards of NIST, and adequate for making positive observation of the test results.
 - 1) Make the calibration records available for examination upon request.
 - d. Test Labeling:
 - 1) Have the Testing Agency attach a label or tag to each tested component indicating satisfactory completion of the tests for that component.

- a) On satisfactory completion of the testing of each unit, have the Testing Agency attach a dated and signed "Satisfactory Test" label to the tested unit.
- B. Tests and Inspections:
 1. NETA Acceptance Testing:
 - a. Test Procedure:
 - 1) After the diesel electric generators are installed and the electrical circuitry has been energized, have the Testing Agency perform each electrical test for "AC Generators and for Emergency Systems" specified in ANSI/NETA ATS.
 - 2) Have the Testing Agency prepare a certified NETA Acceptance Testing Field Quality Control Report that identifies the diesel electric generators included and documents the NETA acceptance testing, and submit the Report to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Testing Agency certification of compliance with the test parameters specified in ANSI/NETA ATS constitutes acceptance of the NETA Acceptance Testing.
 2. NFPA 110 Acceptance Test:
 - a. Test Procedure:
 - 1) After the diesel electric generators are installed and the electrical circuitry has been energized, have the Testing Agency perform the specified in NFPA 110 that are additional to those specified herein, including, but not limited to, the single-step full-load pickup test.
 - b. Acceptance Criteria:
 - 1) Testing Agency certification of compliance with the test parameters specified in NFPA 110 constitutes acceptance of the NFPA 110 Acceptance Test.
 3. Battery Tests:
 - a. Test Procedure:
 - 1) After the diesel electric generators are installed and the electrical circuitry has been energized, have the Testing Agency equalize the charging of the battery cells in accordance with the manufacturer's written instructions.
 - 2) Record individual cell voltages.
 - 3) Measure the charging voltage and voltages between available battery terminals for full-charging and float-charging conditions.
 - a) Check the electrolyte level and specific gravity under both conditions.
 - 4) Test the contact integrity of all connectors.
 - a) Perform an integrity load test and a capacity load test for the battery.

- 5) Verify the acceptance of charge for each element of the battery after discharge.
 - b. Acceptance Criteria:
 - 1) Verify that measurements are within manufacturer's specifications.
4. Battery-Charger Tests:
 - a. Test Procedure:
 - 1) After the diesel electric generators are installed and the electrical circuitry has been energized, have the Testing Agency verify the specified rates of charge for both equalizing and float-charging conditions.
 - b. Acceptance Criteria:
 - 1) Battery-chargers having the specified rates of charge for both equalizing and float-charging conditions pass the Battery-Charger Tests.
5. System Integrity Tests:
 - a. Test Procedure:
 - 1) After the diesel electric generators are installed and the electrical circuitry has been energized, have the Testing Agency methodically verify the proper installation, connection, and integrity of each element of the engine-generator system before and during system operation.
 - 2) Check for air, exhaust, and fluid leaks.
 - b. Acceptance Criteria:
 - 1) Diesel electric generators having each element the properly installed, connected, and having integrity before and during system operation pass the System Integrity Tests.
6. Exhaust-System Back-Pressure Test:
 - a. Test Procedure:
 - 1) After the diesel electric generators are installed and the electrical circuitry has been energized, have the Testing Agency use a manometer with a scale exceeding 40 inches w. g. (120kPa) connected to the exhaust line close to the engine exhaust manifold to verify that the back pressure at the full-rated load is within the manufacturer's written allowable limits for the engine.
 - b. Acceptance Criteria:
 - 1) Exhaust systems having back pressures verified to be within the manufacturer's written allowable limits at the full-rated load for the engine pass the Exhaust-System Back-Pressure Test.
7. Exhaust Emissions Test:
 - a. Test Procedure:
 - 1) After the diesel electric generators are installed and the electrical circuitry has been energized, have the Testing Agency verify that the exhaust emissions comply with the applicable government test criteria.
 - b. Acceptance Criteria:

- 1) Exhausts whose emissions complying with the applicable government test criteria pass the Exhaust Emissions Test.
8. Voltage and Frequency Transient Stability Tests:
 - a. Test Procedure:
 - 1) After the diesel electric generators are installed and the electrical circuitry has been energized, have the Testing Agency use a recording oscilloscope to measure the voltage and frequency transients for 50 percent and 100 percent step-load increases and decreases, and to verify that the performance is as specified.
 - b. Acceptance Criteria:
 - 1) Diesel electric generators whose voltage and frequency transients performance is as specified pass the Voltage and Frequency Transient Stability Tests.
9. Harmonic-Content Tests:
 - a. Test Procedure:
 - 1) After the diesel electric generators are installed and the electrical circuitry has been energized, have the Testing Agency measure the harmonic content of the output voltage under 25 percent and at 100 percent of the rated linear load, and verify that the harmonic content is within specified limits.
 - b. Acceptance Criteria:
 - 1) Diesel electric generators whose output voltage harmonic content is within specified limits pass the Harmonic-Content Tests.
10. Noise Level Tests:
 - a. Test Procedure:
 - 1) After the diesel electric generators are installed and the electrical circuitry has been energized, have the Testing Agency measure the A-weighted level of noise emanating from the generator-set installation, including the engine exhaust and cooling-air intake and discharge, at 4 locations within the area of the generator, and compare the measured levels with the specified values.
 - b. Acceptance Criteria:
 - 1) Diesel electric generators whose noise level is within the limits specified pass the Noise Level Tests.
11. Leak Test:
 - a. Test Procedure:
 - 1) After the diesel electric generators are installed and the electrical circuitry has been energized, have the Testing Agency charge the system, and test it for leaks.
 - b. Acceptance Criteria:
 - 1) Repair the leaks discovered, and retest repaired units until no leaks exist.
12. Operational Test:
 - a. Test Procedure:

- 1) After the diesel electric generators are installed and the electrical circuitry has been energized, have the Testing Agency start the units to confirm the proper motor rotation and unit operation.
 - b. Acceptance Criteria:
 - 1) Diesel electric generators operating normally as specified pass the Operational Test.
13. Infrared Scanning:
 - a. Test Procedure:
 - 1) Instruments and Equipment:
 - a) Have the Testing Agency furnish and use a portable infrared scanning device designed to measure temperature or to detect significant deviations from normal values.
 - b) Have the Testing Agency submit a calibration record for the infrared scanning device to the Program/Project manager for information.
 - 2) Initial Infrared Scanning:
 - a) After Substantial Completion, but not more than 60 days after Final Acceptance, have the Testing Agency perform an infrared scan of each power wiring termination and each bus connection.
 - b) Remove the access panels so terminations and connections are accessible to the portable infrared scanner.
 - 3) Follow-up Infrared Scanning:
 - a) Have the Testing Agency perform an additional follow-up infrared scan of each termination and each bus connection 11 months after the date of Substantial Completion.
 - 4) Have the Testing Agency prepare a certified Field Quality Control Report that identifies the terminations and connections checked and describes the infrared scanning results, and have the Testing Agency submit the report to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Significant deviations from normal temperature values are cause for the enclosed switch or circuit breaker under test to fail the infrared scan.
- C. Non-Conforming Work
 1. Correct deficiencies identified by the tests and observations, and retest the corrected units until the specified requirements are complied with.
 2. Remove malfunctioning units, and replace them with conforming replacement units.
 - a. Replace damaged and malfunctioning controls and equipment.
 - b. Retest the replacement units as specified herein.
- D. Manufacturer Services:

- 4- Engage a factory-authorized service representative to inspect the diesel electric generator components, connections, and equipment installation, and to assist in testing.

3.05 SYSTEM STARTUP

A. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 15995, Commissioning of Mechanical Systems, for the piping systems, ductwork, air handlers, air conditioning (AC) and heat pump (HP) packaged units, air terminal units, heat exchangers, the building automation system, fire and smoke dampers, indoor air quality, equipment sound control, equipment vibration control, and testing, adjusting and balancing work pertinent to the Work of this Section.

3.06 ADJUSTING

- #### A. Test and adjust controls and safeties.

3.07 CLEANING

A. Waste Management:

1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.08 CLOSEOUT ACTIVITIES

A. Training:

1. Engage a factory-authorized service representative to train the Owner's maintenance personnel to adjust, operate, and maintain diesel electric generators in accordance with the requirements specified in Section 01770, Closeout Procedures.

3.09 PROTECTION

- #### A. Take steps to insure that installed diesel electric generators are protected during subsequent construction activities.

3.10 MAINTENANCE

A. Operation and Maintenance Data:

1. Furnish operation and maintenance data for the packaged engine generators and accessories for inclusion in emergency and Operation and Maintenance manuals as specified in Section 01780, Closeout Submittals.
 - a. Include a list of tools and replacement items recommended to be stored at the Site for ready access.

- 1) Include part and drawing numbers, current unit prices, and a source of supply.
 2. Submit the operation and maintenance data for the packaged engine generators and accessories to the Program/Project Manager for information.
- A. Initial Maintenance Service:
1. Beginning at Substantial Completion, provide 12 months of full maintenance service to be performed by skilled employees of the manufacturer's designated service organization.
 2. Provide quarterly exercising of the equipment to check for proper starting, load transfer, and running under load.
 3. Provide routine preventive maintenance as recommended by the manufacturer, and adjusting as required for proper operation.
 4. Provide parts and supplies that are the same as those used in the manufacture and installation of the original equipment.
 5. Submit an executed Diesel Electric Generator Maintenance Service Agreement to the Program/Project Manager.

SECTION 16264

STATIC UNINTERRUPTIBLE POWER SUPPLY

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Requirements for 3-phase, on-line, double-conversion, static-type uninterruptible power supply (UPS) units having the following features:
 - a. Surge suppression.
 - b. Input harmonics reduction.
 - c. Rectifier-charger.
 - d. Inverter.
 - e. Static bypass transfer switch.
 - f. Battery and battery disconnect device.
 - g. Internal automatic/manual bypass, plus an external make before break maintenance bypass/isolation switch.
 - h. Remote uninterruptible power supply (UPS) monitoring provisions.
 - i. Battery monitoring.
 - j. Remote monitoring.

B. Related Requirements:

1. Section 01330 - Submittal Procedures.
2. Section 01360 - Sustainable Design Requirements.
3. Section 01770 - Closeout Procedures.
4. Section 01780 - Closeout Submittals.
5. Section 01810 - Commissioning.
6. Section 03100 - Concrete Forms and Accessories.
7. Section 03200 - Concrete Reinforcement.
8. Section 03300 - Cast-In-Place Concrete.
9. Section 13453 - Supervisory Control and Data Acquisition (SCADA).
10. Section 16070 - Hangers and Supports.
11. Section 16071 - Seismic Controls.
12. Section 16995 - Commissioning of Electrical Systems.

1.02 REFERENCES

A. Abbreviations and Acronyms:

1. AC: Alternating electric current.
2. dBA: Decibels, referenced to the A-weighting filter curve defined in IEC 61672.
3. EMI: Electromagnetic interference.
4. LCD: Liquid-crystal display.
5. LED: Light emitting diode.

6. RMS: Root-mean-square.
7. THD: Total harmonic distortion.
8. UPS: Uninterruptible power supply.

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
2. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.
3. RMS: Total harmonic distortion value of alternating voltage, which is the square root of the mean value of the square of the voltage values during a complete cycle.
4. RS-232: A Telecommunications Industry Association (TIA) recommended standard for asynchronous serial data communications between terminal devices.
5. X/R Ratio: The ratio of electrical reactance to electrical resistance in the electrical power supply.

C. Reference Standards:

1. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
2. Institute of Electrical and Electronics Engineers (IEEE):
 - a. IEEE C62.41.1 – IEEE Guide on the Surges Environment in Low-Voltage (1000 V and Less) AC Power Circuits.
 - b. IEEE C62.41.2 – IEEE Recommended Practice on Characterization of Surges in Low-Voltage (1000 V and Less) AC Power Circuits.
3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
4. InterNational Electrical Testing Association (NETA):
 - a. ANSI/NETA ATS – Standard for Acceptance Testing Specifications for Electrical Power Equipment and Systems.
 - b. ANSI/NETA ETT - Standard for Certification of Electrical Testing Technicians.
5. National Electrical Manufacturers Association (NEMA):
 - a. NEMA PB 2 – Deadfront Distribution Switchboards.
6. National Institute for Certification in Engineering Technologies (NICET), www.nicet.org:
 - a. Industrial Instrumentation Engineering Technology Industrial Instrumentation Program Detail Manual.
7. National Fire Protection Association (NFPA):

- a. NFPA 70 – National Electrical Code® (NEC).
8. National Institute of Standards and Technology (NIST):
 - a. Standards Services Division,
<http://ts.nist.gov/standards/accreditation/index.cfm>:
9. Telecommunications Industry Association (TIA):
 - a. ANSI/TIA 232-F – Interface Between Data Terminal Equipment and Data Circuit-Terminating Equipment Employing Serial Binary Data Interchange.
10. Underwriters Laboratories, Inc. (UL):
 - a. UL 891- Switchboards.
 - b. UL 1778 - Uninterruptible Power Systems.
11. United States Government:
 - a. Federal Communication Commission (FCC):
 - 1) 47 CFR 15 Radio Frequency Devices.
 - b. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1910 Occupational Health and Safety Standards.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Enclosures.
 - 2) Rectifier-chargers.
 - 3) Inverters.
 - 4) Static bypass transfer switches.
 - 5) Batteries.
 - 6) Controls and indications.
 - 7) Maintenance bypass/isolation switches.
 - 8) Equipment for remote monitoring of the uninterruptible power supply (UPS).
 - 9) Basic battery monitoring equipment.
 - 10) Additional battery monitoring items.
 - 11) Battery-cycle warranty monitoring equipment.

- b. Shop Drawings:
 - 1) Static uninterruptible power supplies.
 - 2) Wiring diagrams.
 - c. Certificates:
 - 1) Certificates of Compliance for each type of uninterruptible power supply (UPS) equipment.
 - 2) Seismic Qualification Certificates.
 - d. Qualification Statements:
 - 1) Qualifications of the power quality specialist.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Static uninterruptible power supply manufacturer's written installation instructions.
 - 2) Battery manufacturer's written charging instructions.
 - b. Site Quality Control Submittals:
 - 1) Field Quality Control Performance Test Report.
 - c. Manufacturer's Reports:
 - 1) Manufacturer certified factory test reports documenting the results of the equipment tests.
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the static uninterruptible power supplies and accessories.
 - b. Warranty Documentation:
 - 1) Static Uninterruptible Power Supply Warranty.
 - c. Record Documentation:
 - 1) Individual cell voltages of the batteries.
 - d. Software:
 - 1) Documentation and backup copies of the software for remote monitoring of the uninterruptible power supply (UPS) system.
 - 2) Documentation and backup copies of the software for storing and analyzing battery data.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Special Inspections:

- a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - c. Periodic Special Inspections will be performed during the installation of static uninterruptible power supplies and accessories.
 - 2. Testing and Inspection Agencies:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.
- B. Qualifications:
- 1. Power Quality Specialist's Qualifications:
 - a. Employ engineering technician or a registered electrical Professional Engineer, at a minimum currently certified as a NICET Level 4 technician by the National Institute for Certification in Engineering Technologies (NICET) in accordance with the requirements for, specified in the Industrial Instrumentation Engineering Technology Industrial Instrumentation Program Detail Manual, and experienced in performance testing UPS installations and in performing power quality surveys similar to that required under this Section.
 - b. Submit the qualifications of the power quality specialist to the Program/Project Manager for approval.
 - 2. Testing Agency's Qualifications:
 - a. Employ an independent Testing Agency that is a member company of the InterNational Electrical Testing Association, or a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, that is acceptable to the Authorities Having Jurisdiction (AHJ), and that has the experience and capability to conduct the testing specified herein.
 - 1) Testing Agency's Field Supervisor:
 - a) The Testing Agency's field supervisor to supervise onsite field quality control testing must be currently certified by the InterNational Electrical Testing Association (NETA) in accordance with the requirements specified in ANSI/NETA ETT.
 - 2) Submit the qualifications of the Testing Agency, including the Testing Agency field supervisor's qualifications, to the Program/Project Manager for approval.

C. Certifications:

1. Manufacturer's Certificates of Compliance:
 - a. For each type of uninterruptible power supply (UPS) equipment, submit Manufacturer's Certificates of Compliance wherein the manufacturer of these items certifies that they comply with the specified requirements, to the Program/Project Manager for approval.
2. Electrical Listing and Labeling:
 - a. Provide electrical components, devices, and accessories that are listed and labeled for the location the product is installed in, and the application intended, by a Nationally Recognized Testing Laboratory (NRTL), as defined in Article 100 of NFPA 70, acceptable to the Authorities Having Jurisdiction (AHJ), unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.
3. Seismic Qualification Certificates:
 - a. Have the manufacturer prepare Seismic Qualification Certificates certifying that the uninterruptible power supply (UPS) equipment is capable of withstand the seismic forces defined in Section 16071, Seismic Controls.
 - 1) Indicate whether withstand certification is based on an actual test of the assembled components, or on calculations.
 - 2) Include a dimensioned outline drawing of each equipment unit identifying the center of gravity, and locating and describing the mounting and anchorage provisions.
 - 3) Include a detailed description of the equipment anchorage devices on which the certification is based, and their installation requirements.
 - b. Submit the Seismic Qualification Certificates to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Package and protect materials to limit field repairs.

- a. Deliver pre-finished products in a manner that will prevent material damage and deterioration or contamination from the elements.
- B. Storage and Handling Requirements:
 - 1. Store and handle products in a manner that will prevent material damage and deterioration or contamination from the elements.
- C. Packaging Waste Management:
 - 1. Inspect for and remove shipping bolts, blocks, and tie-down straps.
 - 2. Remove loose packing and flammable materials from inside the uninterruptible power supply (UPS) equipment.
 - 3. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

- A. Ambient Conditions:
 - 1. Provide an uninterruptible power supply (UPS) equipment capable of operating continuously in the following environmental conditions without mechanical or electrical damage or degradation of operating capability, except for battery performance.
 - a. Ambient Temperature:
 - 1) Provide uninterruptible power supply (UPS) electronic components capable of operating within the range 32 degrees Fahrenheit to 104 degrees Fahrenheit.
 - 2) Provide uninterruptible power supply (UPS) batteries capable of operating within the range 41 degrees Fahrenheit to 95 degrees Fahrenheit.
 - b. Relative Humidity:
 - 1) Provide uninterruptible power supply (UPS) electronic components capable of operating within the non-condensing relative humidity range of 0 percent to 95 percent.
 - c. Altitude:
 - 1) Provide uninterruptible power supply (UPS) equipment capable of operating from sea level up to 4000 feet (1216m) above sea level.

1.08 WARRANTY

- A. Manufacturer Warranty:
 - 1. Static Uninterruptible Power Supply Warranty:
 - a. Warrant the static uninterruptible power supply fully against defects within the 1-year period after the Date of Substantial Completion:
 - 1) Submit a Static Uninterruptible Power Supply Warranty on the static uninterruptible power supply manufacturer's standard form, without monetary limitation including for parts, labor, and travel, in

which the static uninterruptible power supply manufacturer agrees to repair or replace static uninterruptible power supplies and associated auxiliary components that fail in materials or workmanship within the specified warranty period to the Program/Project Manager for approval.

B. Special Warranty:

1. Value Regulated Battery Warranty:

a. Warrant the value regulated batteries fully against defects within the 3-year period after the Date of Substantial Completion:

- 1) Submit a Value Regulated Battery Warranty on the value regulated battery manufacturer's standard form, without monetary limitation, in which the value regulated battery manufacturer agrees to repair or replace value regulated batteries that fail in materials or workmanship within the specified warranty period to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 STATIC UNINTERRUPTIBLE POWER SUPPLY SYSTEMS

A. Manufacturers:

1. Manufacturer List:

a. Subject to compliance with the requirements specified herein, provide the Basis-of-Design product indicated in the Contract Documents or a comparable product manufactured by one of the manufacturers listed.

b. Manufacturers:

- 1) Liebert Corporation, Basis-of-Design Product: "NX" Series UPS System, <https://www.vertivco.com/en-us/products/brands/liebert/>.
- 2) Approved equal.

2. Substitution Limitations:

a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.

B. Description:

1. Regulatory Requirements:

a. Phoenix Building Construction Code:

- 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].

b. National Electrical Code (NEC):

- 1) Provide products and installation complying with the requirements specified for static uninterruptible power supplies in NFPA 70.

c. Electromagnetic Interference (EMI) Emissions:

- 1) Provide the Work of this Section in accordance with the Federal Communication Commission (FCC) Rules and Regulations and with the requirements for Class A equipment specified in 47 CFR 15.

C. Performance:

1. Provide static uninterruptible power supplies that perform as specified herein while supplying the rated full-load current, composed of any combination of linear and nonlinear loads, up to 100 percent of the nonlinear load with a load crest factor of 3.0, under the following conditions or combinations of the following conditions:
 - a. The inverter is switched to battery source.
 - b. Steady-state ac input voltage deviates up to plus or minus 10 percent from the nominal voltage.
 - c. Steady-state input frequency deviates up to plus or minus 5 percent from the nominal frequency.
 - d. The total harmonic distortion (THD) of the input voltage is 15 percent or more with a minimum crest factor of 3.0, and the largest single harmonic component is a minimum of 5 percent of the fundamental value.
 - e. The load is 100 percent unbalanced continuously.
2. Minimum Duration of Supply:
 - a. If a battery is the sole energy source supplying the rated full UPS load current at 80 percent power factor, provide static uninterruptible power supplies capable of supply power for 15 minutes.
3. Input Voltage Tolerance:
 - a. Provide static uninterruptible power supplies having system steady-state and transient output performance that remains within the specified tolerances when the steady-state alternating electric current (AC) input voltage varies plus 10 percent, minus 20 percent from the nominal voltage.
4. Overall Uninterruptible Power Supply (UPS) Efficiency:
 - a. Provide static uninterruptible power supplies having an overall efficiency equal to or greater than 94 percent at 100 percent load, 94 percent at 75 percent load, and 94 percent at 50 percent load.
5. Maximum Acoustical Noise:
 - a. Provide static uninterruptible power supplies having a maximum acoustical noise of 80 pounds, using "A" weighting, emanating from any uninterruptible power supply component under any condition of normal operation, measured 10 feet from the nearest surface of the component enclosure.
6. Maximum Energizing Inrush Current:
 - a. Provide static uninterruptible power supplies having a maximum energizing inrush current 8 times the full-load current.
7. Maximum Alternating Current (AC) Output-Voltage Regulation:

- a. For loads up to 50 percent unbalanced, provide static uninterruptible power supplies providing maximum alternating electric current (AC) output-voltage regulation of plus or minus 2 percent over the full range of the battery voltage.
8. Output Frequency:
 - a. Provide static uninterruptible power supplies providing an output frequency of 60 Hertz, plus or minus 0.5 percent over the full range of the input voltage, load, and battery voltage.
9. Harmonic Distortion Limitation:
 - a. Provide static uninterruptible power supplies that limit harmonic distortion of the input current to the uninterruptible power supply (UPS) as follows:
 - 1) Provide either a tuned harmonic filter or an arrangement of rectifier-charger circuits that limit the total harmonic distortion (THD) to a maximum of 10 percent at the rated full UPS load current for power sources with an X/R ratio between 2 and 30.
10. Maximum Harmonic Content of Output-Voltage Waveform:
 - a. Provide static uninterruptible power supplies that provide a maximum total harmonic content of 5 percent RMS of the output-voltage waveform, and 3 percent RMS for any single harmonic, for a 100 percent rated nonlinear load current with a load crest factor of 3.0.
11. Minimum Overload Capacity of Uninterruptible Power Supply (UPS) at the Rated Voltage:
 - a. Provide static uninterruptible power supplies that provide a minimum overload capacity of the uninterruptible power supply (UPS) at the rated voltage of 125 percent of the rated full load for 10 minutes, and 150 percent for 30 seconds in all operating modes.
12. Maximum Output-Voltage Transient Excursions from Rated Value:
 - a. Provide static uninterruptible power supplies that keep the voltage within the percentages of the rated value listed below, and that recover to and remain within plus or minus 2 percent of that value within 100 milliseconds, for the following instantaneous load changes stated as percentages of the rated full uninterruptible power supply (UPS) load:
 - 1) 50 Percent: Plus or minus 5 percent.
 - 2) 100 Percent: Plus or minus 5 percent.
 - 3) Loss of Alternating Current (AC) Input Power: Plus or minus 1 percent.
 - 4) Restoration of Alternating Current (AC) Input Power: Plus or minus 1 percent.
13. Input Power Factor:
 - a. Provide static uninterruptible power supplies providing a minimum input power factor of 0.85 lagging when the supply voltage and current are at the nominal rated values, and the uninterruptible power supply (UPS) is supplying the rated full-load current.
14. Seismic Performance:

- a. Provide static uninterruptible power supplies that include the seismic anchoring certified for the local seismic zone application.
- D. Design Criteria:
 - 1. Provide static uninterruptible power supply (UPS) systems that are listed and labeled under UL 1778 by a Nationally Recognized Testing Laboratory (NRTL), and comply with the following design requirements:
 - a. Electronic Equipment:
 - 1) Provide uninterruptible power supply (UPS) systems having solid-state electronic devices with hermetically sealed, semiconductor elements.
 - a) The electronic devices include the rectifier-charger, inverter, static bypass transfer switch, and system controls.
 - b. Control Assemblies:
 - 1) Provide control assemblies mounted on modular plug-ins, and that are readily accessible for maintenance.
 - c. Surge Suppression:
 - 1) Provide surge suppression that protects the internal uninterruptible power supply (UPS) components from surges that enter at each alternating current (AC) power input connection, including the main disconnect switch, the static bypass transfer switch, and the maintenance bypass/isolation switch.
 - a) Protect rectifier-charger, inverter, controls, and output components.
 - b) Provide factory-installed surge suppressors tested in accordance with the requirements specified in IEEE C62.41.1 and with the requirements for Category B suppressors specified in IEEE C62.41.2.
 - (1) Additional Surge Protection:
 - (a) Protect internal UPS components from low-frequency, high-energy voltage surges described in IEEE C62.41.1 and IEEE C62.41.2.
 - (b) Design the circuits connecting with external power sources and select circuit elements, conductors, conventional surge suppressors, and rectifier components and controls so input assemblies will have adequate mechanical strength and thermal and current-carrying capacity to withstand the stresses imposed by 40 Hertz, 180 percent voltage surges described in IEEE C62.41.1 and IEEE C62.41.2.
 - d. Maintainability Features:
 - 1) Mount the rectifier-charger and inverter sections and the static bypass transfer switch on modular plug-ins that are readily accessible for maintenance.
 - e. Seismic-Restraint Design:

- 1) Provide uninterruptible power supply (UPS) assemblies, subassemblies, and components, including the fastenings and supports, mounting, and anchorage devices for them, that are designed and fabricated to withstand static and seismic forces.
 - f. Output Circuit Neutral Bus, Conductor, and Terminal Ampacity:
 - 1) Provide output circuit neutral buses, conductors, and terminals rated for at least the phase current times a multiple of 1.73.
 2. Product Data:
 - a. Obtain the manufacturer's Product Data for each type of static uninterruptible power supply specified.
 - 1) Include data on the static uninterruptible power supply features, components, ratings, and performance.
 - b. Submit the Product Data to the Program/Project Manager for approval.
 3. Shop Drawings:
 - a. Prepare Shop Drawings for the static uninterruptible power supplies that include plans, elevations, sections, details, and attachments to other work.
 - 1) Detail equipment assemblies; and indicate the dimensions, weights, loads, components, and location and size of each field connection.
 - 2) Show the access, workspace, and clearance requirements.
 - 3) Furnish details of the control panels.
 - 4) Show the battery arrangement.
 - b. Wiring Diagrams:
 - 1) Furnish power, signal, and control wiring diagrams for the static uninterruptible power supply.
 - c. Submit the Shop Drawings and wiring diagrams to the Program/Project Manager for approval.
- E. Operation Sequences:
 1. Automatic Operation:
 - a. Normal Conditions:
 - 1) Under normal automatic operation, supply the load with power flowing from the normal power input terminals, through the rectifier-charger and inverter, with the battery connected in parallel with the rectifier-charger output.
 - b. Abnormal Supply Conditions:
 - 1) If the normal supply deviates from the specified and adjustable voltage, voltage waveform, or frequency limits, supply energy from the battery to maintain a constant, regulated inverter power output to the load without switching or disturbance.
 - 2) If normal power fails, supply energy from the battery through the inverter to maintain supply-regulated power to the load without switching or disturbance.

- 3) When power is restored at the normal supply terminals of the system, the external source must be automatically synchronized by controls with the inverter before transferring the load.
 - a) The rectifier-charger must then supply power to the load through the inverter and simultaneously recharge the battery.
 - 4) If the battery becomes discharged and normal supply is available, the rectifier-charger must charge the battery.
 - a) On reaching full charge, the rectifier-charger must automatically shift to float-charge mode.
 - 5) If any element of the uninterruptible power supply (UPS) system fails and power is available at the normal supply terminals of the system, the static bypass transfer switch must switch the load to the normal alternating current (AC) supply circuit without disturbance or interruption.
 - 6) If a fault occurs in the system supplied by the uninterruptible power supply (UPS), and current flows in excess of the overload rating of the UPS system, the static bypass transfer switch must operate to bypass the fault current to the normal alternating current (AC) supply circuit for fault clearing.
 - 7) When the fault has cleared, the static bypass transfer switch must return the load to the uninterruptible power supply (UPS) system.
 - 8) If the battery is disconnected, the uninterruptible power supply (UPS) must continue to supply power to the load with no degradation of its regulation of voltage and frequency of the output bus.
2. Manual Operation:
 - a. Turning the inverter off must cause the static bypass transfer switch to transfer the load directly to the normal alternating current (AC) supply circuit without disturbance or interruption.
 - b. Turning the inverter on must cause the static bypass transfer switch to transfer the load to the inverter.
 3. Maintenance Bypass/Isolation Switch Operation:
 - a. Provide a maintenance bypass/isolation switch interlocked so it cannot be operated unless the static bypass transfer switch is in the bypass mode.
 - b. Provide a maintenance bypass/isolation switch that allows manual selection from among the following 3 conditions without interrupting the supply to the load during switching:
 - 1) Full Isolation:
 - a) When full isolation is selected, supply the load bypassing the uninterruptible power supply (UPS).
 - b) The normal uninterruptible power supply (UPS) alternating current (AC) input circuit, static bypass transfer switch, and UPS load terminals must be completely disconnected from external circuits.
 - 2) Maintenance Bypass:

- a) When maintenance bypass is selected, supply the load, bypassing the uninterruptible power supply (UPS)
 - (1) Energize the uninterruptible power supply (UPS) alternating current (AC) supply terminals to permit operational checking, but isolate system load terminals from the load.
 - 3) Normal:
 - a) When normal is selected, energize the normal uninterruptible power supply (UPS) alternating current (AC) supply terminals and supply the load through either the static bypass transfer switch and the UPS rectifier-charger and inverter, or the battery and the inverter.
- F. Materials:
 - 1. Enclosures:
 - a. Unless otherwise indicated in the Contract Documents, provide enclosures complying with the requirements for NEMA Type 1 enclosures specified in NEMA 250.
 - b. Uninterruptible Power Supply (UPS) Cabinet Ventilation:
 - 1) Provide redundant fans or blowers that draw in ambient air near the bottom of the cabinet and discharge it near the top rear.
 - 2. Rectifier-Chargers:
 - a. Capacity:
 - 1) Provide rectifier-chargers adequate to supply the inverter during the rated full output load conditions and simultaneously recharge the battery from a fully discharged condition to 95 percent of the full charge within 10 times the rated discharge time for the duration of supply under battery power at the full load.
 - b. Output Ripple:
 - 1) Provide rectifier-chargers limiting the output ripple by filtering the output to less than 0.5 percent of the rated current, peak to peak.
 - c. Control Circuits:
 - 1) Provide rectifier-chargers having control circuits that are immune to frequency variations within the rated frequency ranges of the normal and emergency power sources.
 - 2) Response Time:
 - a) Provide rectifier-chargers having field-adjustable response times to maximize compatibility with the local generator-set power source.
 - d. Battery Float-Charging Conditions:
 - 1) Provide rectifier-chargers having battery float-charging provisions complying with the battery manufacturer's written instructions for the battery terminal voltage and charging current required for maximum battery life.
 - 3. Inverters:
 - a. Provide a pulse-width modulated inverter having a sinusoidal output.

- 1) Provide a bypass phase synchronization window adjustment to optimize compatibility with the local engine-generator-set power source.
4. Static Bypass Transfer Switches:
 - a. Provide solid-state switching devices capable of providing uninterrupted transfer.
 - 1) Provide a contactor or electrically operated circuit breaker to automatically provide electrical isolation for the switch.
 - b. Switch Rating:
 - 1) Provide a static bypass transfer switch capable of providing continuous duty at least at the rated full uninterruptible power supply (UPS) load current.
5. Batteries:
 - a. Provide valve-regulated, premium, heavy-duty, recombinant, lead-calcium battery units that have been factory-assembled in an isolated compartment or in a separate matching cabinet, complete with a battery disconnect switch.
 - 1) Arrange the battery units for drawout removal of the battery assembly from the cabinet for testing and inspection.
 - b. Seismic-Restraint Design:
 - 1) Provide battery racks, cabinets, assemblies, subassemblies, and components, including the fastenings and supports, mounting, and anchorage devices for them, that are designed and fabricated to withstand static and seismic forces.
6. Controls and Indications:
 - a. Provide group displays, indicating devices, and basic system controls on a common control panel mounted on the front of uninterruptible power supply (UPS) enclosure.
 - 1) Provide indications capable of displaying plain-language messages on a digital LCD or LED.
 - 2) Alarms include audible signals and visual displays.
 - b. Provide at least the following displays, indicating devices, and controls:
 - 1) Indicating Devices:
 - a) Quantitative Indications:
 - (1) Input voltage, each phase, line to line.
 - (2) Input current, each phase, line to line.
 - (3) Bypass input voltage, each phase, line to line.
 - (4) Bypass input frequency.
 - (5) System output voltage, each phase, line to line.
 - (6) System output current, each phase.
 - (7) System output frequency.
 - (8) Direct current (DC) bus voltage.
 - (9) Battery current and direction (charge/discharge).
 - (10) Elapsed time discharging battery.
 - b) Basic Status Condition Indications:

- (1) Normal operation.
- (2) Load-on bypass.
- (3) Load-on battery.
- (4) Inverter off.
- (5) Alarm condition.
- c) Alarm Indications:
 - (1) Bypass alternating current (AC) input overvoltage or undervoltage.
 - (2) Bypass alternating current (AC) input overfrequency or underfrequency.
 - (3) Bypass alternating current (AC) input and inverter out of synchronization.
 - (4) Bypass alternating current (AC) input wrong-phase rotation.
 - (5) Bypass alternating current (AC) input single-phase condition.
 - (6) Bypass alternating current (AC) input filter fuse blown.
 - (7) Internal frequency standard in use.
 - (8) Battery system alarm.
 - (9) Control power failure.
 - (10) Fan failure.
 - (11) Uninterruptible power supply (UPS) overload.
 - (12) Battery-charging control faulty.
 - (13) Input overvoltage or undervoltage.
 - (14) Input transformer overtemperature.
 - (15) Input circuit breaker tripped.
 - (16) Input wrong-phase rotation.
 - (17) Input single-phase condition.
 - (18) Approaching end of battery operation.
 - (19) Battery undervoltage shutdown.
 - (20) Maximum battery voltage.
 - (21) Inverter fuse blown.
 - (22) Inverter transformer overtemperature.
 - (23) Inverter overtemperature.
 - (24) Static bypass transfer switch overtemperature.
 - (25) Inverter power supply fault.
 - (26) Inverter transistors out of saturation.
 - (27) Identification of faulty inverter section/leg.
 - (28) Inverter output overvoltage or undervoltage.
 - (29) Uninterruptible power supply (UPS) overload shutdown.
 - (30) Inverter current sensor fault.
 - (31) Inverter output contactor open.
 - (32) Inverter current limit.
- 2) Controls:
 - a) Inverter on-off.
 - b) Uninterruptible power supply (UPS) start.

- c) Battery test.
 - d) Alarm silence/reset.
 - e) Output-voltage adjustment.
 - 3) Provide the sensors, transducers, terminals, relays, and wiring required to support the listed displays, indicating devices, and controls.
 - c. Provide dry-form "C" contacts for remote indication of the following conditions:
 - 1) Uninterruptible power supply (UPS) on battery.
 - 2) Uninterruptible power supply (UPS) on-line.
 - 3) Uninterruptible power supply (UPS) load-on bypass.
 - 4) Uninterruptible power supply (UPS) in alarm condition.
 - 5) Uninterruptible power supply (UPS) off (maintenance bypass closed).
 - d. Emergency Power Off Switch:
 - 1) Provide an emergency power off switch capable of being locally operated and being activated by external dry contacts.
7. Maintenance Bypass/Isolation Switches:
- a. Provide a manually operated switch or an arrangement of switching devices having a mechanically actuated contact mechanism arranged to route the flow of power to the load around the rectifier-charger, inverter, and static bypass transfer switch.
 - 1) Electrically and mechanically interlock the switch to prevent interrupting power to the load when switching to the bypass mode.
 - a) Connect the switch so it electrically isolates other uninterruptible power supply (UPS) components to permit safe servicing.
 - b. Provide a maintenance bypass/isolation switch complying with the requirements specified in NEMA PB 2 and UL 891.
 - c. Switch Rating:
 - 1) Provide a maintenance bypass/isolation switch rated for continuous duty at the rated full uninterruptible power supply (UPS) load current.
 - d. Mounting Provisions:
 - 1) Mount the maintenance bypass/isolation switch inside the system cabinet.
 - e. Provide a key interlock that requires the maintenance bypass/isolation switch to be unlocked before switching from the normal position with a key that is released only when the uninterruptible power supply (UPS) is bypassed by the static bypass transfer switch.
 - 1) Provide a lock designed specifically for mechanical and electrical component interlocking.
8. Equipment for Remote Monitoring of the Uninterruptible Power Supply (UPS):
- a. Provide a communication module in the unit's control panel that provides the capability to remotely monitor the status, parameters, and

alarms specified in Subparagraph 2.01.F.6 by a remote computer, and that includes the following features:

- 1) Connectors and network interface units or modems for data transmission via an RS-232 link.
 - a) Provide software designed for controlling and monitoring uninterruptible power supply (UPS) functions, and to provide on-screen explanations, interpretations, diagnosis, action guidance, and instructions for the use of the monitoring indications and development of meaningful reports.
 - (1) Provide software designed to permit storage and analysis of power-line transient records.
 - (2) Designs for the Windows applications, software, and the remote computer are not provided under this Section.
 - b) Software and Hardware:
 - (1) Provide software and hardware that is compatible with that specified in Section 13453, Supervisory Control and Data Acquisition (SCADA).
 - (2) Submit documentation and backup copies of the software for remote monitoring of the uninterruptible power supply (UPS) system to the Program/Project Manager.
 - c) The remote computer and the connecting signal wiring are not provided under this Section.
9. Basic Battery Monitoring Equipment:
 - a. Battery Ground-Fault Detector:
 - 1) Provide a battery ground-fault detector that initiates an alarm when the resistance to ground of the positive or negative bus of the battery is less than 5000 ohms.
 - b. Smoke/High-Temperature Detector:
 - 1) Provide a battery compartment smoke/high-temperature detector that initiates an alarm when smoke or a temperature greater than 75 degrees Celsius occurs within the compartment.
 - c. Annunciation of Alarms:
 - 1) To communicate alarm/status information, annunciate the alarms at the uninterruptible power supply (UPS) control panel and over a network interface.
 - d. Manufacturers:
 - 1) Albercorp, "BOS" System, <http://www.alber.com>.
 - 2) Approved equal.
10. Additional Battery Monitoring Items:
 - a. Provide monitoring features and components that include the following:
 - 1) Provide factory-wired sensing leads to the cell and battery terminals, and to the cell temperature sensors.
 - 2) Provide connections for data transmission via an RS-232 link, network interface, and external signal wiring to a remote computer.

- a) The external signal wiring and remote computer are not provided under this Section.
 - 3) Provide computer-based software designed to store and analyze battery data.
 - a) Provide software capable of compiling reports on individual-cell parameters and total battery performance trends, and of providing data for scheduling and prioritizing battery maintenance.
 - b) Submit documentation and backup copies of the software for storing and analyzing battery data to the Program/Project Manager.
 - b. Performance:
 - 1) Provide monitoring features and components that automatically measure and electronically record the following parameters on a routine schedule and during battery discharge events.
 - a) During discharge events, record measurements timed to the nearest second, including measurements of the following parameters:
 - (1) Total battery voltage and ambient temperature.
 - (2) Individual-cell voltage, impedance, and temperature.
 - (3) During battery-discharging events such as utility outages, measure battery and cell voltages timed to the nearest second.
11. Battery-Cycle Warranty Monitoring Equipment:
- a. Provide an electronic device, acceptable to the battery manufacturer as a basis for warranty action, for monitoring the charge-discharge cycle history of batteries covered by cycle-life warranties.
 - b. Performance:
 - 1) Provide battery-cycle warranty monitoring that automatically measures and records each discharge event, classifies it according to its duration category, totals the discharges according to the warranty criteria, and displays the remaining warranted battery life on the front panel display.
 - c. Provide battery-cycle warranty monitoring that includes the following additional monitoring functions and features:
 - 1) Measuring and Recording:
 - a) Measure and record the total voltage at the battery terminals, and initiate an alarm for excursions outside the proper float-voltage level.
 - (1) Monitors:
 - (a) Measure and record the ambient temperature at the battery, and initiate an alarm if the temperature deviates from the normally acceptable range.
 - (2) Keypad on Device Front Panel:

- (a) Provide a keypad on the device front panel that provides access to the monitored data using front panel display.
- (3) Alarm Contacts:
 - (a) Provide alarm contacts arranged to initiate local or remote alarms for battery discharge events, and abnormal battery voltage or temperature.
- (4) Memory:
 - (a) Provide memory capable of storing the recorded data in nonvolatile electronic memory.
- (5) RS-232 Port:
 - (a) Provide an RS-232 port that permits data to be downloaded to a portable computer.
- (6) Modem:
 - (a) Provide a modem that makes measurements and recorded data accessible to a remote computer via a network connection.

2.02 SOURCE QUALITY CONTROL

A. Tests and Inspections:

- 1. Materials specified in this Section require advance examination or testing in accordance with the methods specified herein, or as required by the Program/Project Manager.
 - a. Fourteen days before the tests will be performed, provide advance notice of the tests to the Program/Project Manager to give the Program/Project Manager and the Approved Agency the opportunity to observe the tests.

B. Manufacturer Services:

- 1. Equipment Tests:
 - 1) Before shipping the static uninterruptible power supply equipment, have the manufacturer perform the following factory-tests of the complete static uninterruptible power supply manufactured specifically for this Contract:
 - a) Test and demonstration all specified functions, controls, indicators, sensors, and protective devices.
 - b) Run the static uninterruptible power supply at full load.
 - c) Test the transient-load response.
 - d) Perform an overload test.
 - e) Perform a power failure test.
 - 2) Have the manufacturer prepare certified factory test reports documenting the results of the equipment tests, and include the following information in the test reports:
 - a) Description of input source and output loads used.

- b) Description of actions required to simulate source load variation and various operating conditions and malfunctions.
 - c) List of indications, parameter values, and system responses considered satisfactory for each test action, and including a tabulation of the actual observations during test.
 - d) List of instruments and equipment used in factory tests.
 - 3) After the unit has been factory-tested, have the manufacturer submit the factory test reports to the Program/Project Manager for information:
- C. Coordination of Other Tests and Inspections:
 - 1. Notify the code-required Approved Agency responsible for performing special inspections when switchgear for this Contract are being fabricated and/or tested.
 - 2. Cooperate with the code-required Approved Agency when they are performing required material verifications and other special inspections.
 - a. Provide full access to the Work.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. With the static uninterruptible power supply installer present, examine the areas, equipment bases, and conditions where the static uninterruptible power supplies will be installed for compliance with the requirements for installation and other conditions affecting the static uninterruptible power supply performance.
- B. Evaluation and Assessment:
 - 1. Proceed installing the static uninterruptible power supply only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the static uninterruptible power supplies.
- B. Surface Preparation:
 - 1. Concrete Bases:
 - a. Provide flat concrete pads to support the static uninterruptible power supplies.
 - 1) Provide 4-inch high reinforced concrete bases with chamfered edges to support the static uninterruptible power supplies.
 - 2) Extend the base no less than 3 inches in all directions beyond the maximum dimensions of the static uninterruptible power supplies,

- unless otherwise indicated on the Contract Drawings, or unless required for seismic anchor support.
- b. Construct the concrete bases in accordance with the seismic-restraint requirements specified in Section 16070, Hangers and Supports.
 - 1) Provide concrete formwork as specified in Section 03100, Concrete Forms and Accessories; concrete reinforcement as specified in Section 03200, Concrete Reinforcement; and concreting as specified in Section 03300, Cast-In-Place Concrete, that comply with the requirements for concrete bases.
 - c. Place and secure anchorage devices.
 - 1) Design each fastener and support in accordance with the seismic-restraint requirements specified in Section 16071, Seismic Controls, to carry the load indicated by seismic requirements and according to seismic-restraint details.
 - 2) Use setting drawings, templates, diagrams, instructions, and directions for the items to be embedded to properly locate these items.
 - 3) Install anchor bolts to the elevations required for proper attachment to the static uninterruptible power supplies.
 - 4) Cast anchor-bolt inserts into the concrete bases.

3.03 INSTALLATION

- A. Equipment Mounting:
 - 1. Install the static uninterruptible power (UPS) supplies on concrete bases.
 - 2. Maintain the minimum clearances and workspace at the equipment in accordance with the requirements specified in NFPA 70 and the manufacturer's written installation instructions.
 - a. Submit the static uninterruptible power supply manufacturer's written installation instructions to the Program/Project manager for information.
- B. Connections:
 - 1. Interconnect the static uninterruptible power (UPS) supply system components.
- C. Special Techniques:
 - 1. Grounding:
 - a. Separately Derived Systems:
 - 1) If the static uninterruptible power (UPS) supply system is not part of a listed power supply for a data-processing room, comply with the requirements for connecting to grounding electrodes and for bonding to metallic piping near isolation transformers specified in NFPA 70.
 - b. Battery Equalization:

- c. Equalize the charging of the battery cells in accordance with the manufacturer's written instructions.
 - 1) Submit the battery manufacturer's written charging instructions to the Program/Project manager for information.
 - d. Record the individual cell voltages.
 - 1) Submit the individual cell voltages of the batteries to the Program/Project manager for information.
 - 2. Identification:
 - a. Identify field-installed wiring and components and provide warning signs in accordance with the requirements specified in Section 16075, Electrical Identification.
- D. Systems Integration:
- 1. Unless otherwise indicated in the Contract Documents, make the connections to the supply and load circuits in accordance with the manufacturer's wiring diagrams.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
- 1. During the period when static uninterruptible power (UPS) supply system is being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials or proportions requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
 - 2. Testing Agency Responsibilities:
 - a. Field Quality-Control Reports:
 - 1) Have the Testing Agency employed by the Contractor perform the tests specified herein, and prepare a certified written Field Quality Control Report for each test conducted to record the following information pertaining to the test:
 - a) The static uninterruptible power (UPS) supplies included in the testing.
 - b) Test procedures used to perform the testing.

- c) Test results that comply with the requirements specified.
 - d) Test results that do not comply with the specified requirements, and corrective action taken to achieve compliance with the requirements.
 - (1) Note deficiencies detected, the remedial action taken, and observations after remedial action.
 - b. Furnish test instruments that have been calibrated within the last 12 months, traceable to standards of the National Institute of Standards and Technology (NIST), and adequate for making positive observation of the test results.
 - 1) Make the calibration records available for examination upon request.
 - c. Test Labeling:
 - 1) Have the Testing Agency attach a label or tag to each tested component indicating satisfactory completion of the tests for that component.
 - a) On satisfactory completion of the testing of each unit, have the Testing Agency attach a dated and signed "Satisfactory Test" label to the tested unit.
 - 3. Performance Test:
 - a. Test Procedure:
 - 1) Have the Testing Agency perform performance tests to verify compliance with the performance requirements specified in Paragraph 2.01.C.
 - 2) Have the Testing Agency document and summarize the test results in a Field Quality Control Performance Test Report.
 - b. Acceptance Criteria:
 - 1) Compare the performance test results with the performance requirements specified herein, and provide justification and resolution of differences if the values do not agree.
 - 4. Inspections:
 - a. Have the Testing Agency perform inspections.
- B. Non-Conforming Work
- 1. Correct deficiencies identified by the tests and observations, and retest the corrected units until the specified requirements are complied with.
 - 2. Remove malfunctioning units, and replace them with conforming replacement units.
 - a. Replace damaged and malfunctioning controls and equipment.
 - b. Retest the replacement units as specified herein.
- C. Manufacturer Services:
- 1. Engage a factory-authorized service representative to inspect the static uninterruptible power (UPS) supply components, connections, and equipment installation, including connections, and to assist in testing.

3.05 SYSTEM STARTUP

A. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 16995, Commissioning of Electrical Systems, for the sweep or scheduled lighting controls, daylight dimming controls, lighting occupancy sensors, power quality, security systems, emergency power systems, uninterruptible power supply (UPS) systems, fire and smoke alarms, fire protection systems, communications systems, and public address/paging work pertinent to the Work of this Section.

3.06 ADJUSTING

- #### A. Test and adjust controls and safeties.

3.07 CLEANING

A. Waste Management:

1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.08 CLOSEOUT ACTIVITIES

A. Training:

1. Engage a factory-authorized service representative to train the Owner's maintenance personnel to adjust, operate, and maintain static uninterruptible power supplies in accordance with the requirements specified in Section 01770, Closeout Procedures.

3.09 PROTECTION

- #### A. Take steps to ensure that installed static uninterruptible power supplies are protected during subsequent construction activities.

3.10 MAINTENANCE

A. Operation and Maintenance Data:

1. Furnish operation and maintenance data for the static uninterruptible power supplies and accessories for inclusion in emergency and Operation and Maintenance manuals as specified in Section 01780, Closeout Submittals.
2. Submit the operation and maintenance data for the static uninterruptible power supplies and accessories to the Program/Project Manager for information.

SECTION 16289

TRANSIENT VOLTAGE SUPPRESSION

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for field-mounted transient voltage surge suppressors (TVSS) for low-voltage (120 Volt to 600 Volt) power distribution and control equipment.
 - 2. For devices having integral transient voltage surge suppressors (TVSS), refer to Section 16140, Wiring Devices; Section 16441, Switchboards; and Section 16442, Panelboards.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 16080 – Electrical Testing.
 - 5. Section 16140 - Wiring Devices.
 - 6. Section 16441 - Switchboards.
 - 7. Section 16442 - Panelboards.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AC: Alternating electric current.
 - 2. SVR: Suppressed voltage rating.
 - 3. TVSS: Transient voltage surge suppressor(s), both singular and plural; also, transient voltage surge suppression.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.
- C. Reference Standards:
 - 1. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.

2. Institute of Electrical and Electronics Engineers (IEEE):
 - a. IEEE C62.41.2 – IEEE Recommended Practice on Characterization of Surges in Low-Voltage (1000 V and Less) AC Power Circuits.
 - b. IEEE C62.45 - IEEE Recommended Practice on Surge Testing for Equipment Connected to Low-Voltage (1000 V and Less) AC Power Circuits.
3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
4. InterNational Electrical Testing Association (NETA):
 - a. ANSI/NETA ETT - Standard for Certification of Electrical Testing Technicians.
5. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
6. National Electrical Manufacturers Association (NEMA):
 - a. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
 - b. NEMA LS 1 – Low-Voltage Surge-Protection (LVSP) Devices.
7. Underwriters Laboratories, Inc. (UL):
 - a. UL 1283 – Standard for Safety for Electromagnetic Interference Filters.
 - b. UL 1449 - Standard for Surge Protective Devices.
 - c. UL Online Certifications Directory,
<https://www.ul.com/ul-databases-and-directories/>.
8. United States Government:
 - a. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1910 Occupational Health and Safety Standards.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate the location of field-mounted transient voltage surge suppression (TVSS) devices with other equipment and the structure to allow adequate clearances for maintenance.

1.04 SUBMITTALS

- A. Action Submittals:
 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Service entrance suppressors.
 - 2) Panelboard suppressors.
 - 3) Transient voltage surge suppression (TVSS) device enclosures.
 - b. Certificates:

- 1) Manufacturer's Certificates of Compliance for the transient voltage surge suppression (TVSS) devices.
 - c. Qualification Statements:
 - 1) Testing Agency's qualifications.
- B. Informational Submittals:
 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Transient voltage surge suppression (TVSS) device manufacturer's written recommendations and instructions
 - b. Site Quality Control Submittals:
 - 1) Field Quality-Control Report.
 - 2) Factory-authorized service representative report.
- C. Closeout Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the transient voltage surge suppression (TVSS) devices.
 - b. Warranty Documentation:
 - 1) Transient Voltage Surge Suppression (TVSS) Devices Warranty.
- D. Maintenance Material Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish extra replaceable protection modules matching the products installed, and packaged for storage by having a protective coverings and labels identifying the contents.
 - a) For each size and type of replaceable protection module, provide 1 spare module.

1.05 QUALITY ASSURANCE

- A. Qualifications:
 1. Testing Agency's Qualifications:
 - a. Employ an independent Testing Agency that is a member company of the InterNational Electrical Testing Association, or a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, that is acceptable to the Authorities Having Jurisdiction (AHJ), and that has the experience and capability to conduct the testing specified herein.
 - 1) Testing Agency's Field Supervisor:

- a) The Testing Agency's field supervisor to supervise onsite field quality control testing must be currently certified by the InterNational Electrical Testing Association (NETA) in accordance with ANSI/NETA ETT, or by the National Institute for Certification in Engineering Technologies (NICET).
- 2) Submit the qualifications of the Testing Agency, including the Testing Agency field supervisor's qualifications, to the Program/Project Manager for approval.

B. Certifications:

1. Electrical Listing and Labeling:
 - a. Provide products that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.
2. Manufacturer's Certificates of Compliance:
 - a. Submit the transient voltage surge suppression (TVSS) device manufacturer's Certificates of Compliance, certifying that the TVSS devices being provided comply with the specified requirements, to the Program/Project Manager for approval.
 - 1) Include evidence of the complete TVSS devices compliance with the specified performance requirements.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Ensure materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.
2. Inspect materials and equipment for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.

- B. Storage and Handling Requirements:
 - 1. Handle materials and equipment in accordance with the manufacturer's written instructions.
 - 2. Follow the manufacturer's written instructions for storing the items.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

- A. Extended Correction Period:
 - 1. Warrant the transient voltage surge suppression (TVSS) devices' materials and workmanship against failures within the 5 year period after the Date of Substantial Completion:
 - 2. Submit the written Transient Voltage Surge Suppression (TVSS) Devices Warranty on the manufacturer's standard form in which the manufacturer agrees to repair or replace components of manufactured transient voltage surge suppression (TVSS) devices that fail in materials or workmanship within the specified warranty period to the Program/Project Manager for approval.
 - a. Have the manufacturer's standard form signed by the Contractor and manufacturer.

PART 2 PRODUCTS

2.01 TRANSIENT VOLTAGE SUPPRESSION SYSTEMS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. National Electrical Code (NEC):

- 1) Provide products and installation complying with requirements specified for transient voltage surge suppression (TVSS) devices in NFPA 70.

C. Performance:

1. Service Conditions:

- a. Unless otherwise indicated in the Contract Documents, provide transient voltage surge suppression (TVSS) devices rated for continuous operation under the following conditions:
 - 1) Maximum Continuous Operating Voltage:
 - a) Provide transient voltage surge suppression (TVSS) devices capable of operating at a maximum continuous operating voltage of not less than 115 percent of the nominal system operating voltage.
 - 2) Operating Temperature:
 - a) Provide transient voltage surge suppression (TVSS) devices capable of operating at temperatures of 30 degrees Fahrenheit to 120 degrees Fahrenheit.
 - 3) Humidity:
 - a) Provide transient voltage surge suppression (TVSS) devices capable of operating under conditions of 0 to 85 percent non-condensing relative humidity.
 - 4) Altitude:
 - a) Provide transient voltage surge suppression (TVSS) devices capable of operating at elevations less than 20,000 feet above sea level.

D. Design Criteria:

1. Provide transient voltage surge suppression (TVSS) devices complying with the requirements specified in IEEE C62.41.2, NEMA LS 1, UL 1283, and UL 1449.
2. Product Data:
 - a. Submit Product Data for each type of product indicated to the Program/Project Manager for approval.
 - 1) Include the transient voltage surge suppression (TVSS) devices rated capacities, operating weights, electrical characteristics, furnished specialties, and accessories.

E. Materials:

1. Service Entrance Suppressors:
 - a. Surge Protection Devices:
 - 1) Provide surge protection devices complying with the requirements specified in UL 1449, and having the following features:
 - a) Non-modular design.
 - b) Fuses rated at 200 kiloamperes interrupting capacity.
 - c) Bolted compression lugs for internal wiring.

- d) Integral disconnect switch.
- e) Redundant suppression circuits.
- f) Redundant replaceable modules.
- g) Arrangement having copper bus bars and bolted connections to phase buses, neutral bus, and ground bus.
- h) Arrangement having wire connections for phase buses, neutral bus, and ground bus.
- i) LED indicator lights for indicating the power and protection status.
- j) An audible alarm, with a silencing switch, to indicate when protection has failed.
- k) Form-C contacts, one normally open and one normally closed, rated at 5 Amperes and 250 Volts AC for remote monitoring of protection status.
 - (1) Provide contacts that reverse on the failure of any surge diversion module, or on the opening of any current-limiting device.
 - (2) Coordinate the requirements for the contacts with the building power monitoring and control system requirements.
- l) A four-digit, transient-event counter set to totalize transient surges.
- b. Peak Single-Impulse Surge Current Rating:
 - 1) Provide service entrance suppressors having a peak single-impulse surge current rating of 160 kiloamperes per mode and 320 kiloamperes per phase.
- c. Minimum Single Impulse Current Ratings:
 - 1) Provide service entrance suppressors having the following minimum single impulse current ratings, using an 8 microsecond by 20 microsecond waveform as described in IEEE C62.41.2.
 - a) Line to Neutral: 70,000 Amperes.
 - b) Line to Ground: 70,000 Amperes.
 - c) Neutral to Ground: 50,000 Amperes.
- d. Protection Modes and Suppressed Voltage Rating (SVR):
 - 1) Provide service entrance suppressors having the following protection modes and suppressed voltage rating (SVR), as defined in UL 1449, for grounded wye circuits having 480Y/277 Volt, 3-phase, 4-wire circuits:
 - a) Line to Neutral: 800 Volts for 480Y/277 Volts.
 - b) Line to Ground: 800 Volts for 480Y/277 Volts.
 - c) Neutral to Ground: 800 Volts for 480Y/277 Volts.
- e. Manufacturers:
 - 1) Raycap – AC Data Solutions, <https://www.raycap.com/surge-protection/dc-protection/ac-data-dc-products/>.
 - 2) Leviton Manufacturing Company, Inc., <http://www.leviton.com>.

- 3) Liebert Corporation; a division of Emerson Network Power,
<https://www.vertivco.com/en-us/products/brands/liebert/>.
- 4) Approved equal.
2. Panelboard Suppressors:
 - a. Surge Protection Devices:
 - 1) Provide surge protection devices complying with the requirements specified in UL 1449, and having the following features:
 - a) Non-modular design.
 - b) A short-circuit current rating complying with the requirements specified in UL 1449, and matching or exceeding the panelboard short-circuit rating and redundant suppression circuits.
 - (1) Provide individually fused metal-oxide varistors.
 - c) Fuses rated at 200 kiloamperes interrupting capacity.
 - d) Bolted compression lugs for internal wiring.
 - e) Integral disconnect switch.
 - f) Redundant suppression circuits.
 - g) Redundant replaceable modules.
 - h) Arrangement with wire connections to phase buses, neutral bus, and ground bus.
 - i) LED indicator lights for indicating the power and protection status.
 - j) An audible alarm, with a silencing switch, to indicate when protection has failed.
 - k) Form-C contacts, one normally open and one normally closed, rated at 5 Amperes and 250 Volts AC for remote monitoring of protection status.
 - (1) Provide contacts that reverse on the failure of any surge diversion module, or on the opening of any current-limiting device.
 - (2) Coordinate the requirements for the contacts with the building power monitoring and control system requirements.
 - l) A four-digit, transient-event counter set to totalize transient surges.
 - b. Peak Single-Impulse Surge Current Rating:
 - 1) Provide panelboard suppressors having a peak single-impulse surge current rating of 160 kiloamperes per mode and 320 kiloamperes per phase.
 - c. Minimum Single Impulse Current Ratings:
 - 1) Provide panelboard suppressors having the following minimum single impulse current ratings, using an 8 microsecond by 20 microsecond waveform as described in IEEE C62.41.2.
 - a) Line to Neutral: 70,000 Amperes.
 - b) Line to Ground: 70,000 Amperes.

- c) Neutral to Ground: 50,000 Amperes.
 - d. Protection Modes and Suppressed Voltage Rating (SVR):
 - 1) Provide panelboard suppressors having the following protection modes and suppressed voltage rating (SVR), as defined in UL 1449, for grounded wye circuits having 208Y/120 Volt, 3-phase, 4-wire circuits:
 - a) Line to Neutral: 400 Volts for 208Y/277 Volts.
 - b) Line to Ground: 400 Volts for 208Y/277 Volts.
 - c) Neutral to Ground: 400 Volts for 208Y/277 Volts.
 - e. Manufacturers:
 - 1) Advanced Protection Technologies Inc. (APT), www.apttvss.com.
 - 2) Leviton Manufacturing Company, Inc., <http://www.leviton.com>.
 - 3) Liebert Corporation; a division of Emerson Network Power, <https://www.vertivco.com/en-us/products/brands/liebert/>.
 - 4) Approved equal.
- 3. Enclosures:
 - a. Indoor Enclosures:
 - 1) Provide indoor enclosures complying with the requirements for NEMA Type 1 enclosures specified in NEMA 250.
 - b. Outdoor Enclosures:
 - 1) Provide outdoor enclosures complying with the requirements for NEMA Type 3R enclosures specified in NEMA 250.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Examine the locations to receive the transient voltage surge suppression (TVSS) devices for compliance with requirements affecting performance of the Work.
 - 2. Examine transient voltage surge suppression (TVSS) devices before installation.
- B. Evaluation and Assessment:
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.
 - 2. Reject transient voltage surge suppression (TVSS) devices that are damaged.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the transient voltage surge suppression (TVSS) devices.

3.03 INSTALLATION

- A. Install transient voltage surge suppression (TVSS) devices in accordance with the manufacturer's written recommendations and installation instructions.
 - 1. Submit the transient voltage surge suppression (TVSS) device manufacturer's written recommendations and installation instructions to the Program/Project Manager for information.
- B. Service Entrance Transient Voltage Surge Suppression (TVSS):
 - 1. Install transient voltage surge suppression (TVSS) devices at service entrances on the load side, with the ground lead bonded to the service entrance ground.
- C. Panelboard and Auxiliary Panel Transient Voltage Surge Suppression (TVSS):
 - 1. Install transient voltage surge suppression (TVSS) devices for panelboards and auxiliary panels so the conductors or buses between the suppressor and the points of attachment are as short and straight as possible.
 - a. Do not exceed the manufacturer's recommended lead length.
 - b. Do not bond the neutral and the ground.
 - 2. Unless otherwise indicated in the Contract Documents, provide multiple, 30 Ampere circuit breakers as a dedicated disconnecting means for the transient voltage surge suppression (TVSS) devices.
- D. Systems Integration:
 - 1. For connecting the transient voltage surge suppression (TVSS) devices to the distribution system, comply with the manufacturer's written recommendation regarding conductor and circuit-breaker sizes.
 - a. Match the circuit-breaker size to the conductor size.
 - b. Coordinate the connections with the requirements shown on the Contract Drawings.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. Do not perform insulation resistance tests of the distribution wiring equipment, as specified in Section 16080, Electrical Testing, with the transient voltage surge suppression (TVSS) devices installed.
 - a. Disconnect the TVSS before conducting the insulation resistance tests, and reconnect the TVSS immediately after the testing is over.
 - 2. Testing Agency Responsibilities:
 - 1) Have the Testing Agency employed by the Contractor perform the tests specified herein, and prepare a certified written Field Quality-Control Report for each test conducted to record the following information pertaining to the test:

- a) The transient voltage surge suppression (TVSS) devices included in the testing.
 - b) Test procedures used to perform the testing.
 - c) Test results that comply with the requirements specified.
 - d) Test results that do not comply with the specified requirements, and corrective action taken to achieve compliance with the requirements.
 - (1) Note deficiencies detected, the remedial action taken, and observations after remedial action.
- 3. Transient Voltage Surge Suppression (TVSS) Test:
 - a. Test Procedure:
 - 1) Test each transient voltage surge suppression (TVSS) device in accordance with the requirements specified in IEEE C62.45.
 - b. Acceptance Criteria:
 - 1) Transient voltage surge suppression (TVSS) devices complying with the requirements acceptance criteria specified in IEEE C62.45 pass the Transient Voltage Surge Suppression (TVSS) Test.
- B. Non-Conforming Work
 - 1. Transient voltage surge suppression (TVSS) devices will be considered to be defective if they do not pass the specified tests and inspections.
- C. Manufacturer Services:
 - 1. Manufacturer's Field Service:
 - a. Engage a factory-authorized service representative to inspect, test, and adjust the transient voltage surge suppression (TVSS) components, assemblies, and equipment installations, including connections.
 - 1) Have the factory-authorized service representative verify the installation of the electrical wiring complies with the manufacturer's written installation requirements.
 - b. Have the factory-authorized service representative submit a report documenting his work to the Program/Project Manager for information.

3.05 SYSTEM STARTUP

- A. Do not energize or connect service entrance equipment or panelboards to their sources until the transient voltage surge suppression (TVSS) devices are installed and connected.

3.06 CLEANING

- A. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 CLOSEOUT ACTIVITIES

- A. Training:
 - 1. Engage a factory-authorized service representative to train the Owner's maintenance personnel to maintain the transient voltage surge suppression (TVSS) devices.

3.08 PROTECTION

- A. Take steps to ensure that installed transient voltage surge suppression (TVSS) devices are protected during subsequent construction activities.

3.09 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Furnish operation and maintenance data for transient voltage surge suppression (TVSS) devices for inclusion in emergency and operation and maintenance manuals as specified in Section 01780, Closeout Submittals.
 - 2. Submit the operation and maintenance data for the transient voltage surge suppression (TVSS) devices to the Program/Project Manager for information.

SECTION 16410

ENCLOSED SWITCHES AND CIRCUIT BREAKERS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following enclosed switches and circuit breakers, and their enclosures:
 - a. Molded-case switches.
 - 1) Fusible switches.
 - 2) Nonfusible switches.
 - 3) Shunt trip switches.
 - b. Molded-case circuit breakers (MCCBs).
 - c. Enclosures for switches and circuit breakers.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01780 - Closeout Submittals.
 - 3. Section 16055 – Overcurrent Protective Device Coordination.
 - 4. Section 16075 – Electrical Identification.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AC: Alternating electric current.
 - 2. MCCB: Molded-case circuit breaker.
 - 3. NC: Normally closed.
 - 4. NO: Normally open.
 - 5. NRTL: Nationally Recognized Testing Laboratory.
 - 6. SPDT: Single pole, double throw.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.
- C. Reference Standards:

1. American Society of Civil Engineers (ASCE)/Structural Engineering Institute (SEI):
 - a. ASCE/SEI 7 - Minimum Design Loads for Buildings and Other Structures.
2. American Society of Mechanical Engineers (ASME):
 - a. ASME A17.1 - Safety Code for Elevators and Escalators.
3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
5. InterNational Electrical Testing Association (NETA):
 - a. ANSI/NETA ATS – Standard for Acceptance Testing Specifications for Electrical Power Equipment and Systems.
 - b. ANSI/NETA ETT - Standard for Certification of Electrical Testing Technicians.
6. National Electrical Contractors Association (NECA):
 - a. NECA 1 - Standard Practice of Good Workmanship in Electrical Contracting.
7. National Electrical Manufacturers Association (NEMA):
 - a. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
 - b. NEMA AB 3 – Molded Case Circuit Breakers and Their Application.
 - c. NEMA KS 1 – Enclosed and Miscellaneous Distribution Equipment Switches (600 Volts Maximum).
8. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
9. Underwriters Laboratories, Inc. (UL):
 - a. UL 50 – Standard for Enclosures for Electrical Equipment.
 - b. UL 98 – Enclosed and Dead-Front Switches.
 - c. UL 489 – Molded-Case Circuit Breakers, Molded-Case Switches, and Circuit-Breaker Enclosures.
10. United States Government:
 - a. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1910 Occupational Health and Safety Standards.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Fusible switches.
 - 2) Nonfusible switches.
 - 3) Shunt trip switches.
 - 4) Molded-case circuit breakers.
 - 5) Enclosures.
 - b. Shop Drawings:
 - 1) Enclosed switches and circuit breakers.
 - c. Certificates:
 - 1) Electrical Listing and Labeling.
 - 2) Certification of compliance with the inspection parameters specified in ANSI/NETA ATS.
 - d. Qualification Statements:
 - 1) Qualifications of the Testing Agency.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Site Quality Control Submittals:
 - 1) Calibration record for the infrared scanning device.
 - 2) NETA Acceptance Testing Field Quality Control Report.
 - 3) Infrared Scanning Field Quality Control Report.
 - b. Manufacturer's Reports:
 - 1) Manufacturer's field service report.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for enclosed switches and circuit breakers.

D. Maintenance Material Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish spare parts that match the products installed in the following quantities, and package the spare parts with a protective

covering for storage identified with labels describing the contents of the packages:

- a) Fuses:
 - (1) Furnish a number of fuses for fused switches equal to 10 percent of quantity installed for each size and type, but no fewer than 3 of each size and type.
- b. Tools:
 - 1) Fuse Pullers:
 - a) Provide 2 fuse pullers for each size and type of fuse.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

- 1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - c. Periodic Special Inspections will be performed during the installation of enclosed switches and circuit breakers.
- 2. Testing and Inspection Agencies:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Qualifications:

- 1. Testing Agency's Qualifications:
 - a. Employ an independent Testing Agency that is a member company of the InterNational Electrical Testing Association, or a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, that is acceptable to the Authorities Having Jurisdiction (AHJ), and that has the experience and capability to conduct the testing specified herein.
 - 1) Testing Agency's Field Supervisor:
 - a) The Testing Agency's field supervisor to supervise onsite field quality control testing must be currently certified by the InterNational Electrical Testing Association (NETA) in accordance with the requirements specified in ANSI/NETA ETT.

- 2) Submit the qualifications of the Testing Agency, including the Testing Agency field supervisor's qualifications, to the Program/Project Manager for approval.

C. Certifications:

1. Electrical Listing and Labeling:

- a. Provide electrical components, devices, and accessories that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
- b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Ensure materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.
2. Inspect materials and equipment for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.

B. Storage and Handling Requirements:

1. Keep each enclosed switch and circuit breaker in its package or otherwise protected until it is time to connect conductors.

PART 2 PRODUCTS

2.01 ENCLOSED SWITCHES AND CIRCUIT BREAKERS

A. Manufacturers:

1. Manufacturer List:

- a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
- 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain enclosed switches and circuit breakers, overcurrent protective devices, components, and accessories within same product category from single source from single manufacturer.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. National Electrical Code (NEC):
 - 1) Provide products and installation complying with the requirements specified for enclosed switches and circuit breakers in NFPA 70.
- C. Performance:
 - 1. Service Conditions:
 - a. Unless otherwise indicated, provide enclosed switches and circuit breakers rated for continuous operation under the following conditions:
 - 1) Ambient Temperature:
 - a) Not outside the range from 22 degrees Fahrenheit (minus 6 degrees Celsius) to plus 104 degrees Fahrenheit (plus 40 degrees Celsius).
 - 2) Altitude:
 - a) Not exceeding 6600 feet (2000m) above sea level.
- D. Design Criteria:
 - 1. Product Selection for Restricted Space:
 - a. The Contract Drawings indicate the maximum dimensions for enclosed switches and circuit breakers, including clearances between enclosures and adjacent surfaces and other items.
 - b. Provide enclosed switches and circuit breakers capable of fitting within the indicated maximum dimensions.
 - 2. Product Data:
 - a. Prepare Product Data for each type of enclosed switch, circuit breaker, accessory, and component indicated in the contract Documents, including dimensioned elevations, sections, weights, and the manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

- 1) For enclosure types other than NEMA Type 1, indicate the enclosure types and furnish details.
- 2) Include current and voltage ratings.
- 3) Include short-circuit current ratings (interrupting and withstand, as appropriate).
- 4) Include evidence of a Nationally Recognized Testing Laboratory (NRTL) listing for the series rating of installed devices.
- 5) Detail the features, characteristics, ratings, and factory settings of individual overcurrent protective devices, accessories, and auxiliary components.
- 6) Include time-current coordination curves (average melt) for each type and rating of overcurrent protective device.
 - a) Include the selectable ranges for each type of overcurrent protective device.
- b. Submit the Product Data for each type of enclosed switch, circuit breaker, accessory, and component to the Program/Project Manager for approval.
3. Shop Drawings:
 - a. Prepare Shop Drawings for enclosed switches and circuit breakers, including plans, elevations, sections, details, and attachments to other work.
 - 1) Wiring Diagrams
 - a) For power, signal, and control wiring furnish wiring diagrams.
 - b. Submit the Shop Drawings for the enclosed switches and circuit breakers to the Program/Project Manager for approval.

E. Materials:

1. Fusible Switches:
 - a. Provide fusible switches having the pole quantities, and voltage and ampere ratings, as indicated on the Contract Drawings.
 - b. Type GD Fusible Switches:
 - 1) Provide general duty, single throw, horsepower rated fusible switches complying with the requirements specified in UL 98 and NEMA KS 1, having cartridge fuse interiors to accommodate the specified fuses, a lockable handle with the capability to accept 2 padlocks, and interlocked with the cover in the closed position.
 - 2) Provide fusible switches rated for 240 Volts AC and 800 Amperes and smaller.
 - 3) Provide fuses having the ampere ratings indicated on the Contract Drawings.
 - c. Type HD Fusible Switches:
 - 1) Provide heavy duty, single throw, horsepower rated fusible switches complying with the requirements specified in UL 98 and NEMA KS 1, having clips or bolt pads to accommodate the specified fuses, a lockable handle with the capability to accept 3 padlocks, and interlocked with the cover in the closed position.

- 2) Provide fusible switches rated for 600 Volts AC and 1200 Amperes and smaller.
- 3) Provide fuses having the ampere ratings indicated on the Contract Drawings.
- d. Accessories:
 - 1) Equipment Ground Kit:
 - a) Provide an internally mounted equipment ground kit labeled by a Nationally Recognized Testing Laboratory for copper and aluminum ground conductors.
 - 2) Neutral Kit:
 - a) Provide an internally mounted, insulated neutral kit capable of being grounded and bonded.
 - b) Provide a neutral kit labeled by a Nationally Recognized Testing Laboratory for copper and aluminum neutral conductors.
 - 3) Isolated Ground Kit:
 - a) Provide an internally mounted, insulated isolated ground kit capable of being grounded and bonded.
 - b) Provide an internally mounted, insulated isolated ground kit labeled by a Nationally Recognized Testing Laboratory for copper and aluminum neutral conductors.
 - 4) Class R Fuse Kit:
 - a) Provide a Class R fuse kit that ensures rejection of other fuse types when Class R fuses are specified.
 - 5) Auxiliary Contact Kit:
 - a) Provide 2 NO/NC (Form "C") auxiliary contact(s), arranged to activate before the switch blades open.
 - 6) Hookstick Handle:
 - a) Provide a handle that allows the use of a hookstick to operate the handle.
 - 7) Lugs:
 - a) Provide compression type lugs, suitable for the number, size, and material of conductors.
 - 8) Service-Rated Switches:
 - a) Provide service-rated switches that are labeled for use as service equipment.
- e. Manufacturers:
 - 1) Eaton Corporation, Cutler-Hammer,
<http://www.eaton.com/EatonCom/ProductsServices/Cutler-Hammer/index.htm>.
 - 2) General Electric Company; GE Consumer & Industrial - Electrical Distribution,
http://www.geindustrial.com/cwc/electrical_homepage.htm.
 - 3) Siemens Industry, INC., Siemens Energy & Automation, Inc.,
<https://www.schneider-electric.us/>.

- 4) Schneider Electric, Square D, <http://www.schneider-electric.us>.
- 5) Approved equal.
2. Nonfusible Switches:
 - a. Provide nonfusible switches having the pole quantities, and voltage and ampere ratings, as indicated on the Contract Drawings.
 - b. Type GD Nonfusible Switches:
 - 1) Provide general duty, single throw, horsepower rated fusible switches complying with the requirements specified in UL 98 and NEMA KS 1, a lockable handle with the capability to accept 2 padlocks, and interlocked with the cover in the closed position.
 - 2) Provide nonfusible switches rated for 600 Amperes and smaller.
 - c. Type HD Nonfusible Switches:
 - 1) Provide heavy duty, single throw, horsepower rated nonfusible switches complying with the requirements specified in UL 98 and NEMA KS 1, a lockable handle with the capability to accept 3 padlocks, and interlocked with the cover in the closed position.
 - 2) Provide fusible switches rated for 600 Volts AC and 1200 Amperes and smaller.
 - d. Accessories:
 - 1) Equipment Ground Kit:
 - a) Provide an internally mounted equipment ground kit labeled by a Nationally Recognized Testing Laboratory for copper and aluminum ground conductors.
 - 2) Neutral Kit:
 - a) Provide an internally mounted, insulated neutral kit capable of being grounded and bonded.
 - b) Provide a neutral kit labeled by a Nationally Recognized Testing Laboratory for copper and aluminum neutral conductors.
 - 3) Isolated Ground Kit:
 - a) Provide an internally mounted, insulated isolated ground kit capable of being grounded and bonded.
 - b) Provide an internally mounted, insulated isolated ground kit labeled by a Nationally Recognized Testing Laboratory for copper and aluminum neutral conductors.
 - 4) Auxiliary Contact Kit:
 - a) Provide 2 NO/NC (Form "C") auxiliary contact(s), arranged to activate before the switch blades open.
 - 5) Hookstick Handle:
 - a) Provide a handle that allows the use of a hookstick to operate the handle.
 - 6) Lugs:
 - a) Provide compression type lugs, suitable for the number, size, and material of conductors.
 - e. Manufacturers:

- 1) Eaton Corporation, Cutler-Hammer,
<http://www.eaton.com/EatonCom/ProductsServices/Cutler-Hammer/index.htm>.
 - 2) General Electric Company; GE Consumer & Industrial - Electrical Distribution,
http://www.geindustrial.com/cwc/electrical_homepage.htm.
 - 3) Siemens Industry, INC., Siemens Energy & Automation, Inc.,
<https://www.siemens.com/us/en/home.html>.
 - 4) Schneider Electric, Square D, <http://www.schneider-electric.us>.
 - 5) Approved equal.
3. Shunt Trip Switches:
- a. Provide shunt trip switches complying with the requirements specified in ASME A17.1, UL 50, and UL 98, and having a 200-kiloampere interrupting and short-circuit current rating when fitted with Class J fuses.
 - b. Switches:
 - 1) Provide three-pole, horsepower rated switches having an integral shunt trip mechanism and a Class J fuse block, a lockable handle with the capability to accept 3 padlocks, and interlocked with the cover in the closed position.
 - c. Control Circuit:
 - 1) Provide switches rated for 120 Volts AC, and having a control power transformer with enough capacity to operate the shunt trip, connected pilot, and indicating and control devices.
 - d. Accessories:
 - 1) Key Switch:
 - a) Provide an oil-tight key switch capable of performing a key-to-test function.
 - 2) Pilot Light:
 - a) Provide an oil-tight green "on" pilot light.
 - 3) Lug:
 - a) Provide an isolated neutral lug having a 100 percent rating.
 - 4) Auxiliary Contacts:
 - a) Provide mechanically interlocked auxiliary contacts that change state when the switch is opened and closed.
 - 5) Contacts:
 - a) Provide Form C alarm contacts that change state when the switch is tripped.
 - e. Manufacturers:
 - 1) Cooper Bussmann, Inc., <http://www.cooperbussmann.com>.
 - 2) Merson Electrical Power, <http://ep-us.mersen.com/>.
 - 3) Littelfuse, Inc., <http://www.littelfuse.com>.
 - 4) Approved equal.
4. Molded-Case Circuit Breakers:

- a. Provide molded-case circuit breakers complying with the requirements specified in UL 489 and NEMA AB 3, and having an interrupting capacity sized to comply with available fault currents.
 - 1) Provide circuit breakers having a standard frame size, trip rating, and number of poles.
 - 2) Shunt Trip:
 - a) Provide circuit breakers having a trip coil energized from a separate circuit, and having a coil-clearing contact.
 - 3) Undervoltage Trip:
 - a) Provide circuit breakers having an undervoltage trip set to operate at 35 to 75 percent of the rated voltage without an intentional time delay.
- b. Thermal-Magnetic Circuit Breakers:
 - 1) Provide thermal-magnetic circuit breakers having an inverse time-current element for low-level overloads, and an instantaneous magnetic trip element for short circuits.
 - 2) Provide an adjustable magnetic trip setting for circuit-breaker frame sizes 250 Amperes and larger.
- c. Application Listing:
 - 1) Provide molded-case circuit breakers having an application listing appropriate for the application;
 - a) For switching fluorescent lighting loads, provide Type SWD circuit breakers.
 - b) For feeding fluorescent and high-intensity discharge lighting circuits, provide Type HID circuit breakers.
- d. Zone-Selective Interlocking:
 - 1) For interlocking the ground-fault protection function, provide zone-selective interlocking integral with the electronic ground-fault trip unit.
- e. Electrical Operator:
 - 1) Provide an electrical operator capable of remotely controlling on, off, and reset operations.
- f. Accessories:
 - 1) Lugs:
 - a) Provide compression type lugs, suitable for the number, size, and material of conductors.
 - 2) Auxiliary Contacts:
 - a) Provide 2 single pole, double throw (SPDT) switches having "a" and "b" contacts that operate as follows:
 - (1) The "a" contacts mimic the circuit-breaker contacts.
 - (2) The "b" contacts operate in reverse of the circuit-breaker contacts.
 - 3) Alarm Switch:
 - a) Provide 1 NO contact that operates only when the circuit breaker has tripped.
 - 4) Key Interlock Kit:

- a) Provide an externally mounted key interlock to prohibit circuit-breaker operation.
 - b) Provide a key that is removable only when circuit breaker is in the "off" position.
- g. Manufacturers:
 - 1) Eaton Corporation, Cutler-Hammer,
<http://www.eaton.com/EatonCom/ProductsServices/Cutler-Hammer/index.htm>.
 - 2) General Electric Company; GE Consumer & Industrial - Electrical Distribution,
http://www.geindustrial.com/cwc/electrical_homepage.htm.
 - 3) Siemens Industry, INC., Siemens Energy & Automation, Inc.,
<https://www.siemens.com/us/en/home.html>.
 - 4) Schneider Electric, Square D, <http://www.schneider-electric.us>.
 - 5) Approved equal.
- 5. Enclosures:
 - a. Provide enclosures for enclosed switches and circuit breakers complying with the requirements specified in UL 50, UL 489, NEMA 250, and NEMA KS 1 for the environmental conditions at the installed location:

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Examine elements and surfaces to receive enclosed switches and circuit breakers for compliance with installation tolerances and other conditions affecting performance of the Work.
- B. Evaluation and Assessment:
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the enclosed switches and circuit breakers.

3.03 INSTALLATION

- A. When installing enclosed switches and circuit breakers, comply with the requirements specified in NECA 1
 - 1. Unless otherwise indicated in the Contract Documents, install individual wall-mounted switches and circuit breakers with their tops at a uniform height.

- B. Switches:
 - 1. Install fusible and nonfusible switches having the pole quantities, and voltage and ampere ratings indicated on the Contract Drawings.
 - a. For light-commercial applications, provide general duty Type GD fusible or nonfusible switches.
 - b. For all other single-throw switch uses, provide heavy duty Type HD fusible or nonfusible switches.
- C. Install fuses in fusible devices.
- D. Enclosures:
 - 1. Provide enclosures for enclosed switches and circuit breakers complying with the requirements specified in NEMA 250 for the environmental conditions at the installed location:
 - a. For indoor, dry, and clean locations, provide NEMA Type 1 enclosures complying with the requirements specified in NEMA 250.
 - b. For outdoor locations, provide NEMA Type 3R enclosures complying with the requirements specified in NEMA 250.
 - c. For wash-down areas, provide NEMA Type 4X stainless steel enclosures complying with the requirements specified in NEMA 250.
 - d. For other wet or damp indoor locations, provide NEMA Type 4 enclosures complying with the requirements specified in NEMA 250.
- E. Temporary Lifting Provisions:
 - 1. Remove temporary lifting eyes, channels, and brackets, and temporary blocking of moving parts, from the enclosures and components.
- F. Special Techniques:
 - 1. Identification
 - a. Comply with the requirements for identifying electrical equipment specified in Section 16075, Electrical Identification.
 - 1) Identify field-installed conductors, interconnecting wiring, and components.
 - 2) Provide warning signs.
 - 3) Label each enclosure with an engraved metal or laminated-plastic nameplate.
- G. Systems Integration:
 - 1. Coordinate the layout and installation of switches, circuit breakers, and components with the equipment served and adjacent surfaces.
 - a. Maintain the required workspace clearances and required clearances for equipment access doors and panels.

3.04 REPAIR/RESTORATION

A. Malfunctioning Units:

1. Where possible, correct malfunctioning units onsite; and retest the corrected units to demonstrate compliance with the specified requirements.
2. If malfunctioning units cannot be repaired onsite, replace the malfunctioning units with new units, and retest the replacement units.

3.05 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. During the period when enclosed switches and circuit breakers are being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing and inspection of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - 1) Periodic Special Inspections will be performed during the installation of enclosed switches and circuit breakers.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency and/or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
2. Testing Agency Responsibilities:
 - 1) Have the Testing Agency employed by the Contractor perform the tests specified herein, and prepare a certified written Field Quality-Control Report for each test conducted to record the following information pertaining to the test:
 - a) The enclosed switches and circuit breakers included in the testing.
 - b) Test procedures used to perform the testing.
 - c) Test results that comply with the requirements specified.
 - d) Test results that do not comply with the specified requirements, and corrective action taken to achieve compliance with the requirements.
 - (1) Note deficiencies detected, the remedial action taken, and observations after remedial action.
3. Site Tests:
 - a. NETA Acceptance Testing:
 - 1) Test Procedure:

- a) Have the Testing Agency perform each electrical test specified for enclosed switches and circuit breakers in ANSI/NETA ATS.
 - b) Have the Testing Agency prepare a certified Field Quality-Control Report that identifies the enclosed switches and circuit breakers included and documents the NETA Acceptance Testing performed, and submit the report to the Program/Project Manager for information.
 - 2) Acceptance Criteria:
 - a) Have the Testing Agency submit certification of compliance with the test parameters specified in ANSI/NETA ATS to the Program/Project Manager for approval.
 - b. Infrared Scanning:
 - 1) Test Procedure:
 - a) Instruments and Equipment:
 - (1) Have the Testing Agency furnish and use a portable infrared scanning device designed to measure temperature or to detect significant deviations from normal values.
 - (2) Have the Testing Agency submit a calibration record for the infrared scanning device to the Program/Project manager for information.
 - b) Initial Infrared Scanning:
 - (1) After Substantial Completion, but not more than 60 days after Final Acceptance, have the Testing Agency perform an infrared scan of each enclosed switch and circuit breaker.
 - (2) Remove the front panels so joints and connections are accessible to the portable infrared scanner.
 - c) Follow-up Infrared Scanning:
 - (1) Have the Testing Agency perform an additional follow-up infrared scan of each enclosed switch and circuit breaker 11 months after the date of Substantial Completion.
 - d) Have the Testing Agency prepare a certified Field Quality-Control Report that identifies the enclosed switches and circuit breakers included and describes the infrared scanning results, and have the Testing Agency submit the report to the Program/Project Manager for information.
 - 2) Acceptance Criteria:
 - a) Significant deviations from normal temperature values are cause for the enclosed switch or circuit breaker under test to fail the infrared scanning testing.
4. Site Inspections:
 - a. Have the Testing Agency perform each visual and mechanical inspection specified in ANSI/NETA ATS.

- 1) Have the Testing Agency submit certification of compliance with the inspection parameters specified in ANSI/NETA ATS to the Program/Project Manager for approval.
- B. Non-Conforming Work
 1. Enclosed switches and circuit breakers will be considered defective if they do not pass the tests and inspections specified.
- C. Manufacturer Services:
 1. Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections; and prepare a manufacturer's field service report.
 2. Submit the manufacturer's field service report to the Program/Project Manager for information.

3.06 ADJUSTING

- A. Adjust moving parts and operable components to function smoothly, and lubricate them as recommended by the manufacturer.
- B. Set field-adjustable circuit-breaker trip ranges as specified in Section 16055, Overcurrent Protective Device Coordination.
- C. Test and adjust controls, remote monitoring, and safeties.
 1. Replace damaged and malfunctioning controls and equipment.

3.07 PROTECTION

- A. Take steps to ensure that installed enclosed switches and circuit breakers are protected during subsequent construction activities.

3.08 MAINTENANCE

- A. Operation and Maintenance Data:
 1. Furnish operation and maintenance data for enclosed switches and circuit breakers for inclusion in emergency manuals and Operation and Maintenance Manuals as specified in Section 01780, Closeout Submittals, and include the following:
 - a. The manufacturer's written instructions for testing and adjusting enclosed switches and circuit breakers.
 - b. Time-current coordination curves (average melt) for each type and rating of overcurrent protective device.
 - 1) Include the selectable ranges for each type of overcurrent protective device.
 2. Submit the operation and maintenance data for the enclosed switches and circuit breakers to the Program/Project Manager for information.

SECTION 16420

ENCLOSED CONTROLLERS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following types of enclosed controllers:
 - a. Full-voltage manual enclosed controllers.
 - b. Full-voltage magnetic enclosed controllers.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01770 - Closeout Procedures.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 03300 - Cast-in-Place Concrete.
 - 6. Section 16070 – Hangers and Supports.
 - 7. Section 16075 – Electrical Identification.
 - 8. Section 16491 – Fuses.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AC: Alternating electric current.
 - 2. CPT: Control power transformer.
 - 3. LED: Light emitting diodes.
 - 4. MCP: Motor circuit protector.
 - 5. NC: Normally closed.
 - 6. NO: Normally open.
 - 7. OCPD: Overcurrent protective device.
 - 8. VA: Voltamperes.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.
- C. Reference Standards:

1. American Society of Civil Engineers (ASCE)/Structural Engineering Institute (SEI):
 - a. ASCE/SEI 7 - Minimum Design Loads for Buildings and Other Structures.
2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
4. Institute of Electrical and Electronics Engineers (IEEE):
5. InterNational Electrical Testing Association (NETA):
 - a. ANSI/NETA ATS – Standard for Acceptance Testing Specifications for Electrical Power Equipment and Systems.
 - b. ANSI/NETA ETT - Standard for Certification of Electrical Testing Technicians.
6. National Electrical Contractors Association (NECA):
 - a. NECA 1 - Standard Practice of Good Workmanship in Electrical Contracting.
7. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
8. National Electrical Manufacturers Association (NEMA):
 - a. NEMA ICS 2 – Industrial Control and Systems Controllers, Contactors and Overload Relays Rated 600 Volts.
 - b. NEMA ICS 5 - Industrial Control and Systems Control-Circuit and Pilot Devices.
 - c. NEMA ICS 6 - Industrial Control and Systems: Enclosures.
9. U. S. Government:
 - a. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1910 Occupational Health and Safety Standards.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
2. Coordinate the layout and installation of the enclosed controllers with other construction including conduit, piping, equipment, and adjacent surfaces.
 - a. Maintain the required workspace clearances and required clearances for equipment access doors and panels.

3. Where required for the enclosed controllers, coordinate the sizes and locations of concrete bases with the actual sizes of the equipment provided.
4. Where required for the enclosed controllers, coordinate the sizes and locations of roof curbs, equipment supports, and roof penetrations with the actual sizes and other requirements of the equipment provided.

B. Sequencing:

1. Sequence the installation of concrete bases, roof curbs, equipment supports, and roof penetrations to precede installation of the associated enclosed controllers.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Motor-starting switches.
 - 2) Fractional horsepower manual controllers.
 - 3) Magnetic controllers.
 - 4) Combination magnetic controllers.
 - 5) Enclosures.
 - 6) Control circuit and pilot devices.
 - 7) Auxiliary contacts.
 - 8) Control relays.
 - 9) Phase-failure, phase-reversal, and undervoltage and overvoltage relays.
 - 10) Cover gaskets.
 - 11) Power factor correction capacitor terminals.
 - 12) Control wiring terminal blocks.
 - b. Certificates:
 - 1) Electrical Listing and Labeling.
 - 2) Certification of compliance with the test parameters specified in ANSI/NETA ATS
 - c. Special Procedure Submittals:
 - 1) Load-Current and Overload-Relay Heater List.
 - 2) Load-Current List.
 - 3) List of Settings of Adjustable Overload Relays.
 - d. Qualification Statements:
 - 1) Qualifications of the Testing Agency.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Load-Current and Overload-Relay Heater List.
 - 2) Load-Current List.
 - 3) List of Settings of Adjustable Overload Relays.
 - b. Site Quality Control Submittals:
 - 1) Calibration record for the infrared scanning device.
 - 2) Acceptance Testing Field Quality Control Report.
 - 3) Infrared Scanning Field Quality Control Report.
- C. Closeout Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the enclosed controllers.
- D. Maintenance Material Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish spare parts that match the products installed in the following quantities, and package the spare parts with a protective covering for storage identified with labels describing the contents of the packages:
 - a) Fuses for Fused Switches:
 - (1) Furnish a number of fuses for fused switches equal to 10 percent of quantity installed for each size and type, but no fewer than 2 of each size and type.
 - b) Control Power Fuses:
 - (1) Furnish a number of control power fuses equal to 10 percent of quantity installed for each size and type, but no fewer than 2 of each size and type.
 - c) Indicating Lights:
 - (1) Furnish 2 spare indicating lights of each type and color of installed.
 - d) Auxiliary Contacts:
 - (1) Furnish 1 spare auxiliary contact for each size and type of magnetic controller installed.
 - e) Power Contacts:
 - (1) Furnish 3 spare power contacts for each size and type of magnetic contactor installed.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Special Inspections:

- a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
- b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
- c. Periodic Special Inspections will be performed during the installation of enclosed controllers.

2. Testing and Inspection Agencies:

- a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Qualifications:

1. Testing Agency's Qualifications:

- a. Employ an independent Testing Agency that is a member company of the InterNational Electrical Testing Association, or a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, that is acceptable to the Authorities Having Jurisdiction (AHJ), and that has the experience and capability to conduct the testing specified herein.
 - 1) Testing Agency's Field Supervisor:
 - a) The Testing Agency's field supervisor to supervise onsite field quality control testing must be currently certified by the InterNational Electrical Testing Association (NETA) in accordance with ANSI/NETA ETT.
 - 2) Submit the qualifications of the Testing Agency, including the Testing Agency field supervisor's qualifications, to the Program/Project Manager for approval.

C. Certifications:

1. Electrical Listing and Labeling:

- a. Provide electrical components, devices, and accessories that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally

recognized testing laboratories are not available or unless standards do not exist for the products.

- 1) Provide products marked with their intended use or classification.
- 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Ensure materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.
 2. Inspect materials and equipment for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.
- B. Storage and Handling Requirements:
 1. Store the enclosed controllers indoors in a clean, dry space having a uniform temperature to prevent condensation.
 - a. If the enclosed controllers are stored in areas subject to the weather, cover the enclosed controllers to protect them from the weather, dirt, dust, corrosive substances, and physical damage.
 2. Protect the enclosed controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- C. Packaging Waste Management:
 1. Remove loose packing and flammable materials from inside the controllers.
 2. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 ENCLOSED CONTROLLERS

- A. Manufacturers:
 1. Manufacturer List:

- a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
- 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. National Electrical Code (NEC):
 - 1) Provide products and installation complying with the requirements specified for enclosed switches and circuit breakers in NFPA 70.
- C. Performance:
 - 1. Service Conditions:
 - a. Unless otherwise indicated, provide enclosed controllers rated for continuous operation under the following conditions:
 - 1) Ambient Temperature:
 - a) Not outside the range from 22 degrees Fahrenheit (minus 6 degrees Celsius) to plus 104 degrees Fahrenheit (plus 40 degrees Celsius).
 - 2) Altitude:
 - a) Not exceeding 6600 feet (2000m) above sea level.
- D. Design Criteria:
 - 1. Product Data:
 - a. Prepare Product Data for each type of enclosed controller, including the manufacturer's technical data regarding their features, performance, electrical characteristics, ratings, and enclosure types and finishes.
 - b. Submit the Product Data to the Program/Project Manager for approval.
- E. Materials:
 - 1. Full-Voltage Controllers:
 - a. Provide surface mounted, full-voltage controllers complying with the requirements for general purpose, Class A controllers specified in NEMA ICS 2.
 - 1) Provide full-voltage controllers having the pole quantities, voltage rating, NEMA size and type, accessories, short-circuit current

- rating (or available short-circuit currents), and enclosure type indicated on the Contract Drawings.
- b. Motor-Starting Switches:
 - 1) Provide motor-starting switches having "quick-make, quick-break" toggle or push-button action, and that are marked to show whether the unit is off or on.
 - 2) Pilot Light:
 - a) Provide motor-starting switches having a red pilot light.
 - 3) Configuration:
 - a) Provide motor-starting switches having a nonreversing configuration.
 - 4) Manufacturers:
 - a) Eaton Corporation, Cutler-Hammer, <http://www.eaton.com/EatonCom/ProductsServices/Cutler-Hammer/index.htm>.
 - b) General Electric Company; GE Consumer & Industrial - Electrical Distribution, http://www.geindustrial.com/cwc/electrical_homepage.htm.
 - c) Rockwell Automation, Inc., Allen-Bradley, <http://www.ab.com>.
 - d) Siemens Industry, INC., Siemens Energy & Automation, Inc., <https://www.siemens.com/us/en/home.html>.
 - e) Schneider Electric, Square D, <http://www.schneider-electric.us>.
 - f) Approved equal.
 - c. Fractional Horsepower Manual Controllers:
 - 1) Provide surface mounted, fractional horsepower manual controllers having "quick-make, quick-break" toggle or push-button action, and that are marked to show whether the unit is off or on.
 - 2) Configuration:
 - a) Provide fractional horsepower manual controllers having a nonreversing configuration.
 - 3) Overload Relays:
 - a) Provide fractional horsepower manual controllers with bimetallic type overload relays having inverse-time-current characteristics; NEMA ICS 2, Class 10 tripping characteristics; heaters matched to the nameplate full-load current of the actual protected motor; and an external reset push button.
 - 4) Pilot Light:
 - a) Provide fractional horsepower manual controllers having a red pilot light.
 - 5) Manufacturers:
 - a) Eaton Corporation, Cutler-Hammer, <http://www.eaton.com/EatonCom/ProductsServices/Cutler-Hammer/index.htm>.

- b) General Electric Company; GE Consumer & Industrial - Electrical Distribution,
http://www.geindustrial.com/cwc/electrical_homepage.htm.
- c) Rockwell Automation, Inc., Allen-Bradley,
<https://ab.rockwellautomation.com/>.
- d) Siemens Industry, INC., Siemens Energy & Automation, Inc.,
<https://www.siemens.com/us/en/home.html>.
- e) Schneider Electric, Square D, <http://www.schneider-electric.us>.
- f) Approved equal.
- d. Magnetic Controllers:
 - 1) Provide full voltage, across the line, electrically held magnetic controllers.
 - 2) Configuration:
 - a) Provide magnetic controllers having a nonreversing configuration.
 - 3) Contactor Coils:
 - a) Provide magnetic controllers having pressure-encapsulated type contactor coils.
 - b) Operating Voltage:
 - (1) Depending on NEMA contactor size and the line-voltage rating, provide the manufacturer's standard operating voltage matching the control power or line voltage.
 - 4) Power Contacts:
 - a) Provide totally enclosed, double-break, silver-cadmium oxide; power contacts assembled to allow inspection and replacement of the contacts without disturbing the line or load wiring.
 - 5) Control Circuits:
 - a) Provide control circuits operating on 24 Volts AC obtained from an integral control power transformer (CPT).
 - (1) Provide a control power transformer (CPT) having sufficient capacity to operate the integral devices and remotely located pilot, indicating, and control devices; and having primary and secondary fuses.
 - (2) Provide a control power transformer (CPT) having spare capacity of 50 VA.
 - 6) Solid-State Overload Relay:
 - a) Provide a solid-state overload relay that is switch or dial selectable for motor running overload protection, and that has sensors in each phase, Class 10/20 selectable tripping characteristic selected to protect the motor against a voltage and current unbalance and single phasing, an analog communication module, and Class II ground-fault protection with start and run delays to prevent nuisance trip on starting.

- 7) Manufacturers:
 - a) Eaton Corporation, Cutler-Hammer,
<http://www.eaton.com/EatonCom/ProductsServices/Cutler-Hammer/index.htm>.
 - b) General Electric Company; GE Consumer & Industrial - Electrical Distribution,
http://www.geindustrial.com/cwc/electrical_homepage.htm.
 - c) Rockwell Automation, Inc., Allen-Bradley,
<https://ab.rockwellautomation.com/>.
 - d) Siemens Industry, INC., Siemens Energy & Automation, Inc.,
<https://www.siemens.com/us/en/home.html>
 - e) Schneider Electric, Square D, <http://www.schneider-electric.us>.
 - f) Approved equal.
- e. Combination Magnetic Controllers:
 - 1) Provide combination magnetic controller consisting of a factory-assembled combination of a magnetic controller, an overcurrent protective device (OCPD), and a disconnecting means.
 - a) The requirements for the disconnecting means and overcurrent protective devices (OCPD) are indicated on the Contract Drawings.
 - 2) Manufacturers:
 - a) Eaton Corporation, Cutler-Hammer,
<http://www.eaton.com/EatonCom/ProductsServices/Cutler-Hammer/index.htm>.
 - b) General Electric Company; GE Consumer & Industrial - Electrical Distribution,
http://www.geindustrial.com/cwc/electrical_homepage.htm.
 - c) Rockwell Automation, Inc., Allen-Bradley,
<https://ab.rockwellautomation.com/>.
 - d) Siemens Industry, INC., Siemens Energy & Automation, Inc.,
<https://www.siemens.com/us/en/home.html>
 - e) Schneider Electric, Square D, <http://www.schneider-electric.us>.
 - f) Approved equal.
- f. Enclosures:
 - 1) Provide enclosures for full-voltage controllers complying with the requirements specified in NEMA ICS 6 for the environmental conditions at the installed location:

2.02 ACCESSORIES

A. Control Circuit and Pilot Devices:

1. Unless otherwise indicated, provide control circuit and pilot devices complying with the requirements specified in NEMA ICS 5 and factory-installed in the controller enclosure cover.

- a. Push Buttons:
 - 1) Provide standard-duty, covered type push buttons.
 - 2) Provide maintained push buttons.
 - b. Pilot Lights:
 - 1) Provide standard-duty, LED type pilot lights
 - c. Selector Switches:
 - 1) Provide standard-duty, rotary selector switches.
- B. Auxiliary Contacts:
- 1. Provide normally closed (NC) and normally open (NO) auxiliary contacts as required.
- C. Control Relays:
- 1. Provide auxiliary and adjustable solid-state time-delay relays.
- D. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays:
- 1. Provide relays having a solid-state sensing circuit with isolated output contacts for hard-wired connections.
 - 2. Provide relays having adjustable undervoltage, overvoltage, and time-delay settings.
- E. Cover Gaskets:
- 1. For NEMA Type 1 enclosures, provide cover gaskets.
- F. Power Factor Correction Capacitor Terminals:
- 1. For connecting power factor correction capacitors to the load side of overload relays, provide terminals.
- G. Control Wiring Terminal Blocks:
- 1. Provide the quantity of spare wired, control wiring terminal blocks indicated in the Contract Documents.

2.03 SOURCE QUALITY CONTROL

- A. Non-Conforming Work:
- 1. Do not ship non-conforming units to the Site.
- B. Coordination of Other Tests and Inspections:
- 1. Notify the code-required Approved Agency responsible for performing special inspections when the enclosed controllers for this Contract are being fabricated, installed, and/or tested.
 - 2. Cooperate with the code-required Approved Agency when they are performing required material verifications and other special inspections.
 - a. Provide full access to the Work.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. With the installer present, examine elements and surfaces to receive enclosed controllers for compliance with the requirements and other conditions affecting performance of the Work.
 - 2. Before installing the enclosed controllers, examine the enclosed controllers for damage.
 - a. Reject enclosed controllers that are wet, moisture damaged, or mold damaged.
- B. Evaluation and Assessment:
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the enclosed controllers.
- B. Surface Preparation:
 - 1. Where required for the enclosed controllers, provide concrete bases having a minimum 4-inch (100mm) nominal thickness and that comply with the requirements for concrete bases specified in Section 03300, Cast-in-Place Concrete.
 - 2. Place and secure anchorage devices.
 - a. Cast anchor-bolt inserts into the concrete bases.

3.03 INSTALLATION

- A. When installing enclosed controllers, comply with the requirements specified in NECA 1
- B. Enclosures:
 - 1. Provide enclosures for full-voltage controllers complying with the requirements specified in NEMA ICS 6 for the environmental conditions at the installed location as follows:
 - a. For indoor, dry, and clean locations, provide NEMA Type 1 enclosures complying with the requirements specified in NEMA ICS 6.
 - b. For outdoor locations, provide NEMA Type 3R enclosures complying with the requirements specified in NEMA ICS 6.
 - c. For wash-down areas, provide NEMA Type 4X stainless steel enclosures complying with the requirements specified in NEMA ICS 6.

- d. For other wet or damp indoor locations, provide NEMA Type 4 enclosures complying with the requirements specified in NEMA ICS 6.
- C. Wall-Mounted Controllers:
 - 1. Unless otherwise indicated in the Contract Documents, install individual wall-mounted enclosed controllers with their tops at a uniform height.
 - 2. Bolt the enclosed controllers to the wall, or mount the enclosed controllers on lightweight structural-steel channels bolted to the wall.
- D. Controllers Not at Walls:
 - 1. For controllers not located at walls, provide freestanding racks complying with the requirements specified in Section 16070, Hangers and Supports:
- E. Temporary Lifting Provisions:
 - 1. Remove temporary lifting eyes, channels, and brackets, and temporary blocking of moving parts, from the enclosures and components.
- F. Fuses:
 - 1. Install fuses in each fusible-switch enclosed controller in accordance with the requirements specified in Section 16491, Fuses.
 - 2. If fuses have not been factory-installed in control circuits, install fuses in those circuits in accordance with the requirements specified in Section 16491, Fuses.
- G. Thermal Protection:
 - 1. Install heaters in thermal overload relays.
 - a. Select the heaters after the motors have been installed based on the actual nameplate full-load amperes.
 - 2. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven equipment.
- H. Power Factor Correction:
 - 1. Install power factor correction capacitors connected to the [line][load] side of the overload relays.
 - a. If the power factor correction capacitors are connected to the load side of the overload relays, adjust the overload heater sizes to accommodate the reduced motor full-load currents.
- I. Special Techniques:
 - 1. Identification:
 - a. Identify enclosed controllers, components, and control wiring in accordance with the requirements specified in Section 16075, Electrical Identification.
 - 1) Identify field-installed conductors, interconnecting wiring, and components.

- 2) Provide warning signs complying with the requirements specified in Section 16075, Electrical Identification.
- b. Enclosure Nameplates:
 - 1) Label each enclosure with a nameplate complying with the identification requirements specified in Section 16075, Electrical Identification.
- c. Enclosure-Mounted Controls and Pilot Devices:
 - 1) Label each enclosure-mounted control and pilot device
- d. Device Nameplates:
 - 1) Label each enclosure-mounted control and pilot device in accordance with the identification requirements specified in Section 16075, Electrical Identification.

3.04 REPAIR/RESTORATION

- A. Malfunctioning Units:
 1. Where possible, correct malfunctioning units onsite; and retest the corrected units to demonstrate compliance with the specified requirements.
 2. If malfunctioning units cannot be repaired onsite, replace the malfunctioning units with new units, and retest the replacement units.
- B. Replace controllers whose interiors have been exposed to water or other liquids prior to Substantial Completion.

3.05 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 1. During the period when enclosed controllers are being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing and inspection of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - 1) Periodic Special Inspections will be performed during the installation of enclosed controllers.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency and/or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.

2. Testing Agency Responsibilities:
 - 1) Have the Testing Agency employed by the Contractor perform the tests specified herein, and prepare a certified written Field Quality-Control Report for each test conducted to record the following information pertaining to the test:
 - a) The enclosed controllers included in the testing.
 - b) Test procedures used to perform the testing.
 - c) Test results that comply with the requirements specified.
 - d) Test results that do not comply with the specified requirements, and corrective action taken to achieve compliance with the requirements.
 - (1) Note deficiencies detected, the remedial action taken, and observations after remedial action.
3. Site Tests:
 - a. Acceptance Testing:
 - 1) Test Procedure:
 - a) Have the Testing Agency perform each electrical test specified for enclosed controllers and their components in ANSI/NETA ATS.
 - b) Have the Testing Agency test the insulation resistance for each enclosed-controller element, component, connecting motor supply, feeder, and control circuits.
 - c) Have the Testing Agency test the continuity of each circuit.
 - d) Have the Testing Agency verify that the voltages at the controller locations are within plus or minus 10 percent of the motor nameplate rated voltages.
 - (1) If the voltages at the controller locations are outside this range for any motor, notify the Program/Project Manager before starting the motor(s).
 - e) Have the Testing Agency test each motor for proper phase rotation.
 - f) Have the Testing Agency prepare a certified Field Quality-Control Report that identifies the enclosed controllers included and documents the Acceptance Testing performed, and submit the report to the Program/Project Manager for information.
 - 2) Acceptance Criteria:
 - a) Have the Testing Agency submit certification of compliance with the test parameters specified in ANSI/NETA ATS to the Program/Project Manager for approval.
 - b. Infrared Scanning:
 - 1) Test Procedure:
 - a) Instruments and Equipment:
 - (1) Have the Testing Agency furnish and use a portable infrared scanning device designed to measure

temperature or to detect significant deviations from normal values.

- (2) Have the Testing Agency submit a calibration record for the infrared scanning device to the Program/Project manager for information.
- b) Initial Infrared Scanning:
 - (1) After Substantial Completion, but not more than 60 days after Final Acceptance, have the Testing Agency perform an infrared scan of each multi-pole enclosed controller.
 - (2) Remove the front panels so joints and connections are accessible to the portable infrared scanner.
- c) Follow-up Infrared Scanning:
 - (1) Have the Testing Agency perform an additional follow-up infrared scan of each multi-pole enclosed controller 11 months after the date of Substantial Completion.
- d) Have the Testing Agency prepare a certified Field Quality-Control Report that identifies the enclosed controllers included and describes the infrared scanning results, and have the Testing Agency submit the report to the Program/Project Manager for information.
- 2) Acceptance Criteria:
 - a) Significant deviations from normal temperature values are cause for the enclosed switch or circuit breaker under test to fail the infrared scanning testing.
4. Site Inspections:
 - a. Have the Testing Agency inspect the controllers, wiring, components, connections, and equipment installation.
 - 1) Have the Testing Agency perform each visual and mechanical inspection specified in ANSI/NETA ATS.
 - 2) Have the Testing Agency test and adjust the controllers, components, and equipment.
 - b. Have the Testing Agency submit certification of compliance with the inspection parameters specified in ANSI/NETA ATS to the Program/Project Manager for approval.

B. Non-Conforming Work

1. Enclosed controllers will be considered defective if they do not pass the tests and inspections specified herein.

3.06 ADJUSTING

- A. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload-relay pickup and trip ranges.
- B. If power factor correction capacitors are connected to the load side of the overload relays, adjust overload-relay heaters or settings.

- C. Adjust the trip settings of motor circuit protectors (MCP) and thermal-magnetic circuit breakers with adjustable instantaneous trip elements.
 - 1. Initially adjust the trip settings to 6 times the motor nameplate full-load ampere ratings, and attempt to start motors several times allowing the motor to cool down between starts.
 - 2. If tripping occurs on motor inrush, adjust the settings in increments until the motors start without tripping.
 - a. Do not exceed 8 times the motor full-load amperes, except 11 times the motor full-load amperes is allowed for NEMA Premium Efficient motors if required.
 - 1) If these maximum settings do not allow a motor to start, notify the Program/Project Manager before increasing the settings.
- D. Test and adjust controls, remote monitoring, and safeties.
 - 1. Replace damaged and malfunctioning controls and equipment.

3.07 CLOSEOUT ACTIVITIES

- A. Demonstration:
 - 1. Load-Current and Overload-Relay Heater List:
 - a. After motors have been installed, compile a Load-Current and Overload-Relay Heater List, and arrange a demonstration for the Program/Project Manager to show that the selection of heaters suits the actual motor nameplate full-load currents.
 - b. Submit the Load-Current and Overload-Relay Heater List to the Program/Project Manager for approval.
 - 2. Load-Current List and List of Settings of Adjustable Overload Relays:
 - a. After motors have been installed, compile a Load-Current List and List of Settings of Adjustable Overload Relays, and arrange a demonstration for the Program/Project Manager to show that the switch settings for motor running overload protection suit the actual motors to be protected.
 - b. Submit the Load-Current List and List of Settings of Adjustable Overload Relays to the Program/Project Manager for approval.
- B. Training:
 - 1. Train the Owner's maintenance personnel to adjust, operate, and maintain the enclosed controllers in accordance with the requirements specified in Section 01770, Closeout Procedures.

3.08 PROTECTION

- A. Take steps to ensure that installed enclosed switches and circuit breakers are protected during subsequent construction activities.

3.09 MAINTENANCE

A. Operation and Maintenance Data:

1. Furnish operation and maintenance data for enclosed controllers for inclusion in emergency manuals and Operation and Maintenance Manuals as specified in Section 01780, Closeout Submittals, and include the following:
 - a. Routine maintenance requirements for enclosed controllers and installed components.
 - b. The manufacturer's written instructions for testing and adjusting the circuit breaker and motor circuit protector (MCP) trip settings.
 - c. The manufacturer's written instructions for setting field-adjustable overload relays.
 - d. The manufacturer's written instructions for testing, adjusting, and reprogramming reduced-voltage solid-state controllers.
2. Submit the operation and maintenance data for the enclosed controllers to the Program/Project Manager for information.

SECTION 16424

LOW-VOLTAGE MOTOR-CONTROL CENTERS

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes:
 - 1. Requirements for MCCs for use with ac circuits rated 600 V and less and having the following factory-installed components:
 - a. Incoming main lugs and OCPDs.
 - b. Full-voltage magnetic controllers.
 - c. Instrumentation.
 - d. Auxiliary devices.

1.02 DEFINITIONS

- A. BAS: Building automation system.
- B. CPT: Control power transformer.
- C. EMI: Electromagnetic interference.
- D. GFCI: Ground fault circuit interrupting.
- E. IGBT: Insulated-gate bipolar transistor.
- F. LAN: Local area network.
- G. LED: Light-emitting diode.
- H. MCC: Motor-control center.
- I. MCCB: Molded-case circuit breaker.
- J. MCP: Motor-circuit protector.
- K. NC: Normally closed.
- L. NO: Normally open.
- M. OCPD: Overcurrent protective device.
- N. PCC: Point of common coupling.
- O. PID: Control action, proportional plus integral plus derivative.

- P. PT: Potential transformer.
- Q. TDD: Total demand (harmonic current) distortion.
- R. THD(V): Total harmonic voltage demand.
- S. TVSS: Transient voltage surge suppressor.

1.03 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Functional Features
 - a) Controller units.
 - b) Feeder tap units.
 - c) Future units.
 - d) Spare units.
 - 2) Incoming Mains
 - a) Thermal magnetic circuit breakers.
 - b) MCCB features and accessories.
 - 3) Combination Controllers
 - a) Full voltage controllers.
 - b) Disconnecting means and OCPDs.
 - c) Overload relays.
 - d) Control circuits.
 - 4) MCC Control Power
 - a) Control circuits.
 - b) Control power fuses.
 - c) Control wiring.
 - 5) Enclosures
 - a) Indoor enclosures.
 - b) Enclosure finish for indoor units.
 - c) Compartments.
 - d) Wiring spaces.
 - 6) Auxiliary Devices
 - a) Push buttons.
 - b) Pilot lights.
 - c) Selector switches.
 - d) Reversible NC/NO contactor auxiliary contact(s).
 - e) Control relays.
 - f) Phase-Failure, Phase-Reversal, and Undervoltage and Over-voltage Relays.
 - g) Cover gaskets for Type 1 enclosures.

- h) Terminals for connecting power factor correction capacitors to the load side of overload relays.
 - i) Spare control-wiring terminal blocks; unwired.
 - j) Spare-fuse cabinet.
 - b. Shop Drawings:
 - 1) For each MCC, manufacturer's approval and production drawings as defined in UL 845. In addition to requirements specified in UL 845, include dimensioned plans, elevations, and sections; and conduit entry locations and sizes, mounting arrangements, and details, including required clearances and service space around equipment.
 - 2) Show tabulations of installed devices, equipment features, and ratings. Include the following:
 - a) Each installed unit's type and details.
 - b) Factory-installed devices.
 - c) Enclosure types and details.
 - d) Nameplate legends.
 - e) Short-circuit current (withstand) rating of complete MCC, and for bus structure and each unit.
 - f) Features, characteristics, ratings, and factory settings of each installed controller and feeder device, and installed devices.
 - g) Specified optional features and accessories.
 - 3) Schematic and Connection Wiring Diagrams: For power, signal, and control wiring for each installed controller.
 - 4) Nameplate legends.
 - 5) Vertical and horizontal bus capacities.
 - 6) Features, characteristics, ratings, and factory settings of each installed unit.
 - c. Standard Drawings: For each MCC, as defined in UL 845.
 - d. Production Drawings: For each MCC, as defined in UL 845.
 - 1) Product Certificates:
 - a) For each MCC, from manufacturer.
 - e. Qualification Statements:
 - 1) Qualified testing agency.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Source Quality Control Submittals:
 - 1) Source quality-control reports.
 - b. Site Quality Control Submittals:
 - 1) Field quality-control reports.
- C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data: For MCCs, all installed devices, and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 1 Section "Operation and Maintenance Data," include the following:
 - 1) Manufacturer's Record Drawings: As defined in UL 845. In addition to requirements specified in UL 845, include field modifications and field-assigned wiring identification incorporated during construction by manufacturer, Contractor, or both.
 - 2) Manufacturer's written instructions for testing and adjusting circuit breaker and MCP trip settings.
 - 3) Manufacturer's written instructions for setting field-adjustable overload relays.
 - 4) Manufacturer's written instructions for testing, adjusting, and reprogramming reduced-voltage, solid-state controllers.
 - 5) Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor control modules.
 - 6) Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.
 - 7) Load-Current and Overload-Relay Heater List: Compile after motors have been installed, and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.
 - 8) Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed, and arrange to demonstrate that switch settings for motor running overload protection suit actual motors to be protected.
 - b. Warranty Documentation:
 - 1) Sample of special warranty.

1.04 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Member company of NETA or an NRTL.
 1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.
- B. Source Limitations: Obtain MCCs and controllers of a single type from single source from single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with NFPA 70.

- E. IEEE Compliance: Fabricate and test enclosed controllers according to IEEE 344.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Deliver MCCs in shipping splits of lengths that can be moved past obstructions in delivery paths.
- B. Handle MCCs according to the following:
 - 1. NEMA ICS 2.3, "Instructions for the Handling, Installation, Operation, and Maintenance of Motor Control Centers Rated Not More Than 600 Volts."
 - 2. NECA 402, "Recommended Practice for Installing and Maintaining Motor Control Centers."
- C. If stored in space that is not permanently enclosed and air conditioned, remove loose packing and flammable materials from inside MCCs; install temporary electric heating, with at least 250 W per vertical section.

1.06 PROJECT CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:
 - 1. Ambient Temperature: Less than 0 deg F or exceeding 104 deg F, with an average value exceeding 95 deg F over a 24-hour period.
 - 2. Ambient Storage Temperature: Not less than minus 4 deg F and not exceeding 140 deg F.
 - 3. Humidity: Less than 95 percent (noncondensing).
 - 4. Altitude: Exceeding 6600 feet, or 3300 feet if MCC includes solid-state devices.
- B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for MCCs, including clearances between MCCs and adjacent surfaces and other items.

1.07 COORDINATION

- A. Coordinate sizes and locations of concrete bases. Cast anchor-bolt inserts into bases.
- B. Coordinate features of MCCs, installed units, and accessory devices with remote pilot devices and control circuits to which they connect.
- C. Coordinate features, accessories, and functions of each MCC, each controller, and each installed unit with ratings and characteristics of supply circuits, motors, required control sequences, and duty cycle of motors and loads.

1.08 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace devices that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: 5 years from date of Substantial Completion.

1.09 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
 - 2. Control Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.
 - 3. Indicating Lights: Two of each type and color installed.
 - 4. Auxiliary Contacts: Furnish one spare(s) for each size and type of magnetic controller installed.
 - 5. Power Contacts: Furnish three spares for each size and type of magnetic contactor installed.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide comparable product by one of the following:
 - 1. ABB; Control Products.
 - 2. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - 3. General Electric Company; GE Industrial Systems.
 - 4. Square D; a brand of Schneider Electric.
- B. General Requirements for MCCs: Comply with NEMA ICS 18 and UL 845.

2.02 FUNCTIONAL FEATURES

- A. Description: Modular arrangement of main units, controller units, control devices, feeder-tap units, instruments, metering, auxiliary devices, and other items mounted in vertical sections of MCC.
- B. Controller Units: Combination controller units.
 - 1. Install units up to and including Size 3 on drawout mountings with connectors that automatically line up and connect with vertical-section buses while being racked into their normal, energized positions.
 - 2. Equip units in Type B and Type C MCCs with pull-apart terminal strips for external control connections.

- C. Feeder-Tap Units: Through 225-A rating shall have drawout mountings with connectors that automatically line up and connect with vertical-section buses while being racked into their normal, energized positions.
- D. Future Units: Compartments fully bused and equipped with guide rails or equivalent, ready for insertion of drawout units.
- E. Spare Units: Installed in compartments indicated "spare."

2.03 INCOMING MAINS

- A. Incoming Mains Location: Verify in the field.
- B. MCCB: Comply with UL 489, with interrupting capacity to meet available fault currents.
 - 1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
 - 2. MCCB Features and Accessories:
 - a. Standard frame sizes, trip ratings, and number of poles.
 - b. Lugs: Mechanical style, suitable for number, size, trip ratings, and conductor material.
 - c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads.
 - d. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.

2.04 COMBINATION CONTROLLERS

- A. Full-Voltage Controllers:
 - 1. General Requirements for Full-Voltage Enclosed Controllers: Comply with NEMA ICS 2, general purpose, Class A.
 - 2. Magnetic Controllers: Full voltage, across the line, electrically held.
 - a. Configuration: Nonreversing.
- B. Disconnecting Means and OCPDs:
 - 1. Fusible Disconnecting Means:
 - a. NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate Class R fuses.
 - b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
 - c. Auxiliary Contacts: NO/NC, arranged to activate before switch blades open.
- C. Overload Relays:

1. Solid-State Overload Relays:
 - a. Switch or dial selectable for motor running overload protection.
 - b. Sensors in each phase.
 - c. Class 10 tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.
 - 1) Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
 - 2) Analog communication module.
2. NC and NO isolated overload alarm contact.
3. External overload reset push button.

D. Control Power:

1. Control Circuits: 24 ac; obtained from integral CPT, with primary and secondary fuses, with CPT of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.
 - a. CPT Spare Capacity: 50 VA.

2.05 MCC CONTROL POWER

- A. Control Circuits: 24-V dc.
- B. Control Power Fuses: Primary and secondary fuses for current-limiting and overload protection of transformer and fuses for protection of control circuits.
- C. Control Wiring: Factory installed, with bundling, lacing, and protection included. Provide flexible conductors for No. 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.

2.06 ENCLOSURES

- A. Indoor Enclosures: Freestanding steel cabinets unless otherwise indicated. NEMA 250, Type 1 unless otherwise indicated to comply with environmental conditions at installed location.
- B. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's standard gray finish over a rust-inhibiting primer on treated metal surface.
- C. Compartments: Modular; individual lift-off doors with concealed hinges and quick-captive screw fasteners. Interlocks on units requiring disconnecting means in off position before door can be opened or closed, except by operating a permissive release device.
- D. Interchangeability: Compartments constructed to allow for removal of units without opening adjacent doors, disconnecting adjacent compartments, or disturbing operation of other units in MCC; same size compartments to permit interchangeability and ready rearrangement of units, such as replacing three single units with a unit requiring three spaces, without cutting or welding.

E. Wiring Spaces:

1. Vertical wireways in each vertical section for vertical wiring to each unit compartment; supports to hold wiring in place.
2. Horizontal wireways in bottom and top of each vertical section for horizontal wiring between vertical sections; supports to hold wiring in place.

2.07 AUXILIARY DEVICES

A. General Requirements for Control-Circuit and Pilot Devices: NEMA ICS 5; factory installed in controller enclosure cover unless otherwise indicated.

1. Push Buttons, Pilot Lights, and Selector Switches: Standard-duty, oiltight type.
 - a. Push Buttons: Unguarded types; maintained contact unless otherwise indicated.
 - b. Pilot Lights: LED types; push to test.
 - c. Selector Switches: Rotary type.

B. Reversible NC/NO contactor auxiliary contact(s).

C. Control Relays: Auxiliary and adjustable solid-state time-delay relays.

D. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connections. Provide adjustable undervoltage, overvoltage, and time-delay settings.

E. Cover gaskets for Type 1 enclosures.

F. Terminals for connecting power factor correction capacitors to the load side of overload relays.

G. Spare control-wiring terminal blocks; unwired.

H. Spare-Fuse Cabinet: Identified cabinet with hinged lockable door.

2.08 CHARACTERISTICS AND RATINGS

A. Wiring: NEMA ICS 18, Class I, Type A or Type B, for starters above Size 3 Type C.

B. Control and Load Wiring: Factory installed, with bundling, lacing, and protection included. Provide flexible conductors for No. 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.

C. Nominal System Voltage: 480 V, three phase, three wire.

D. Short-Circuit Current Rating for Each Unit: Fully rated; 42 kA.

- E. Environmental Ratings:
 - 1. Ambient Temperature Rating: Not less than 0 deg F and not exceeding 104 deg F, with an average value not exceeding 95 deg F over a 24-hour period.
 - 2. Ambient Storage Temperature Rating: Not less than minus 4 deg F and not exceeding 140 deg F.
 - 3. Humidity Rating: Less than 95 percent (noncondensing).
 - 4. Altitude Rating: Not exceeding 6600 feet, or 3300 feet if MCC includes solid-state devices.
- F. Main-Bus Continuous Rating: As seen on drawings.
- G. Vertical-Bus Continuous Rating: Match main-bus rating.
- H. Horizontal and Vertical Bus Bracing (Short-Circuit Current Rating): Match MCC short-circuit current rating.
- I. Main Horizontal and Equipment Ground Buses: Uniform capacity for entire length of MCC's main and vertical sections. Provide for future extensions.
- J. Vertical Phase and Equipment Ground Buses: Uniform capacity for entire usable height of vertical sections, except for sections incorporating single units.
- K. Phase- and Neutral-Bus Material: Tin-plated, high-strength, electrical-grade aluminum alloy.
- L. Neutral Buses: 100 percent of the ampacity of phase buses unless otherwise indicated, equipped with mechanical connectors for outgoing circuit neutral cables.
- M. Ground Bus: Minimum size required by UL 845, hard-drawn copper of 98 percent conductivity, equipped with mechanical connectors for feeder and branch-circuit equipment grounding conductors.
- N. Front-Connected, Front-Accessible MCCs:
 - 1. Main Devices: Fixed mounted.
 - 2. Controller Units: fixed mounted.
 - 3. Feeder-Tap Units: fixed mounted.
 - 4. Sections front and rear aligned.
- O. Ammeters, Voltmeters, and Power-Factor Meters:
 - 1. Provide ammeters, voltmeters, and power-factor meters complying with the requirements specified in ANSI C39.1.
 - 2. Meters:
 - a. Provide 4-inch diameter or 6 inches square, flush or semiflush, meters with antiparallax 250-degree scales and external zero adjustment.
 - 3. Voltmeters:

- a. Provide voltmeters that cover an expanded-scale range of the nominal voltage plus 10 percent.
- 4. Software and Hardware:
 - a. Provide software and hardware that is compatible with that specified in Section 13453, Supervisory Control and Data Acquisition (SCADA).
- P. Bus Transition and Incoming Pull Sections: Matched and aligned with basic MCC.
- Q. Future Devices: Equip compartments with mounting brackets, supports, bus connections, and appurtenances at full rating of unit.
- R. Bus-Bar Insulation: Factory-applied, flame-retardant, tape wrapping of individual bus bars or flame-retardant, spray-applied insulation. Minimum insulation temperature rating of 105 deg C.

2.09 SOURCE QUALITY CONTROL

- A. MCC Testing: Inspect and test MCCs according to requirements in NEMA ICS 18.
- B. MCCs will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas and surfaces to receive MCCs, with Installer present, for compliance with requirements for installation tolerances, and other conditions affecting performance of the Work.
- B. Examine enclosed controllers before installation. Reject enclosed controllers that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Coordinate layout and installation of MCCs with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required work-space clearances and required clearances for equipment access doors and panels.

- B. Floor-Mounting Controllers: Install MCCs on 4-inch nominal thickness concrete base. Comply with requirements for concrete base specified in Division 3 Section "Cast-in-Place Concrete."
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
 - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- D. Install fuses in each fusible switch.
- E. Install fuses in control circuits if not factory installed. Comply with requirements in Division 16 Section "Fuses."
- F. Install heaters in thermal-overload relays. Select heaters based on actual nameplate full-load amperes after motors have been installed.
- G. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven equipment.
- H. Install power factor correction capacitors. Connect to the line side of overload relays. If connected to the load side of overload relays, adjust overload heater sizes to accommodate the reduced motor full-load currents.
- I. Comply with NECA 1.

3.03 IDENTIFICATION

- A. Comply with requirements in Division 16 Section "Electrical Identification" for identification of MCC, MCC components, and control wiring.
 - 1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
 - 2. Label MCC and each cubicle with engraved nameplate.
 - 3. Label each enclosure-mounted control and pilot device.
 - 4. Mark up a set of manufacturer's connection wiring diagrams with field-assigned wiring identifications and return to manufacturer for inclusion in Record Drawings.

- B. Operating Instructions: Frame printed operating instructions for MCCs, including control sequences and emergency procedures. Fabricate frame of finished metal, and cover instructions with clear acrylic plastic. Mount on front of MCCs.

3.04 CONTROL WIRING INSTALLATION

- A. Install wiring between enclosed controllers and remote devices and facility's central-control system. Comply with requirements in Division 16 Section "Control-Voltage Electrical Power Cables."
- B. Bundle, train, and support wiring in enclosures.
- C. Connect selector switches and other automatic-control selection devices where applicable.
 - 1. Connect selector switches to bypass only those manual- and automatic-control devices that have no safety functions when switch is in manual-control position.
 - 2. Connect selector switches within enclosed controller circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

3.05 CONNECTIONS

- A. Comply with requirements for installation of conduit in Section 16130, Raceways and Boxes. The Contract Drawings indicate general the arrangement of conduit, fittings, and specialties.
- B. Comply with requirements in Section 16060, Grounding and Bonding.

3.06 FIELD QUALITY CONTROL

- A. Acceptance Testing Preparation:
 - 1. Test insulation resistance for each enclosed controller, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
- B. Tests and Inspections:
 - 1. Inspect controllers, wiring, components, connections, and equipment installation. Test and adjust controllers, components, and equipment.
 - 2. Test insulation resistance for each enclosed controller element, component, connecting motor supply, feeder, and control circuits.
 - 3. Test continuity of each circuit.
 - 4. Verify that voltages at controller locations are within 10 percent of motor nameplate rated voltages. If outside this range for any motor, notify Construction Manager before starting the motor(s).

5. Test each motor for proper phase rotation.
6. Perform each electrical test and visual and mechanical inspection stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
7. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
8. Perform the following infrared (thermographic) scan tests and inspections and prepare reports:
 - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each multipole enclosed controller. Remove front panels so joints and connections are accessible to portable scanner.
 - b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each multipole enclosed controller 11 months after date of Substantial Completion.
 - c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
9. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
10. Mark up a set of manufacturer's drawings with all field modifications incorporated during construction and return to manufacturer for inclusion in Record Drawings.

C. Enclosed controllers will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports, including a certified report that identifies enclosed controllers and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.07 STARTUP SERVICE

A. Perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.

3.08 ADJUSTING

A. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload-relay pickup and trip ranges.

B. Adjust overload relay heaters or settings if power factor correction capacitors are connected to the load side of the overload relays.

- C. Adjust the trip settings of MCPs and thermal-magnetic circuit breakers with adjustable, instantaneous trip elements. Initially adjust to six times the motor nameplate full-load amperes and attempt to start motors several times, allowing for motor cool-down between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed eight times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify Construction Manager before increasing settings.
- D. Set the taps on reduced-voltage autotransformer controllers at 50 percent.
- E. Set field-adjustable switches and program microprocessors for required start and stop sequences in reduced-voltage, solid-state controllers.

3.09 PROTECTION

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until enclosed controllers are ready to be energized and placed into service.
- B. Replace controllers whose interiors have been exposed to water or other liquids prior to Substantial Completion.

3.10 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain enclosed controllers.

SECTION 16441

SWITCHBOARDS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following switchboards and associated equipment:
 - a. Service and distribution switchboards rated at 600 Volts and less.
 - b. Transient voltage suppression devices.
 - c. Disconnecting and overcurrent protective devices.
 - d. Instrumentation.
 - e. Control power.
 - f. Accessory components and features.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 03300 – Cast-In-Place Concrete.
 - 5. Section 13453, Supervisory Control and Data Acquisition (SCADA)
 - 6. Section 16055 – Overcurrent Protective Device Coordination.
 - 7. Section 16075 – Electrical Identification.
 - 8. Section 16134 - Cable Trays.
 - 9. Section 16450 - Enclosed Bus Assemblies.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. DC: Direct electrical current.
 - 2. HVAC: Heating, Ventilating, and Air-Conditioning.
 - 3. MCCB: Molded-case circuit breakers.
 - 4. NRTL – Nationally Recognized Testing Laboratory.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.

C. Reference Standards:

1. American National Standards Institute (ANSI):
 - a. ANSI C39.1 - Requirements for Electrical Analog Indicating Instruments.
2. American Society of Civil Engineers (ASCE)/Structural Engineering Institute (SEI):
 - a. ASCE/SEI 7 - Minimum Design Loads for Buildings and Other Structures.
3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
4. Institute of Electrical and Electronics Engineers (IEEE):
 - a. IEEE C57.13 - IEEE Standard Requirements for Instrument Transformers.
 - b. IEEE C62.41.1 – IEEE Guide on the Surges Environment in Low-Voltage (1000 V and Less) AC Power Circuits.
5. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
6. InterNational Electrical Testing Association (NETA):
 - a. ANSI/NETA ETT - Standard for Certification of Electrical Testing Technicians.
7. National Electrical Contractors Association (NECA):
 - a. ANSI/NECA 1 - Standard Practice of Good Workmanship in Electrical Contracting.
 - b. ANSI/NECA 400 - Standard for Installing and Maintaining Switchboards.
8. National Electrical Manufacturers Association (NEMA):
 - a. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
 - b. NEMA EI 21.1 - Instrument Transformers for Revenue Metering (110 kV BIL and Less).
 - c. NEMA FU 1 - Low Voltage Cartridge Fuses.
 - d. NEMA PB 2 - Deadfront Distribution Switchboards.
9. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
 - b. NFPA 70E - Standard for Electrical Safety in the Workplace®.
10. Underwriters Laboratories, Inc. (UL):
 - a. UL 891 - Switchboards.
 - b. UL 1449 - Standard for Surge Protective Devices.
11. United States Government:
 - a. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1910 Occupational Health and Safety Standards.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
2. Coordinate the layout and installation of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces.
 - a. Maintain required workspace clearances and required clearances for equipment access doors and panels.
3. Coordinate the sizes and locations of concrete bases with the actual equipment provided.

B. Sequencing:

1. Provide concrete bases and anchorage devices prior to installing the switchboards.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Switchboards.
 - 2) Transient voltage suppression devices.
 - 3) Molded-case circuit breakers (MCCB).
 - 4) Instrument transformers.
 - 5) Ammeters, voltmeters, and power-factor meters.
 - b. Shop Drawings:
 - 1) Switchboards and related equipment.
 - 2) Setting drawings, templates, diagrams, instructions, and directions for placing and securing anchorage devices.
 - c. Certificates:
 - 1) Electrical listing and labeling.
 - d. Qualification Statements:
 - 1) Switchboard installer's qualifications.
 - 2) Testing Agency's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Manufacturer's installation, operation, and starting instructions for the switchboard equipment and systems.
 - b. Site Quality Control Submittals:
 - 1) Field Quality-Control Report for Insulation Resistance Tests.
 - 2) Field Quality-Control Report for Electrical Continuity Tests.
- C. Closeout Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the switchboards and components.
 - b. Warranty Documentation:
 - 1) Switchboard Warranty.
- D. Maintenance Material Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish spare parts that match the products installed in the following quantities, and package the spare parts with a protective covering for storage identified with labels describing the contents of the packages:
 - a) Potential Transformer Fuses:
 - (1) Furnish a number of fuses for potential transformer equal to 10 percent of quantity installed for each size and type, but no fewer than 2 of each size and type.
 - b) Control-Power Fuses:
 - (1) Furnish a number of fuses for control power equal to 10 percent of quantity installed for each size and type, but no fewer than 2 of each size and type.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of

Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.

- c. Periodic Special Inspections will be performed during the installation of medium-voltage wire, cable, and accessories.
- 2. Testing and Inspection Agencies:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Qualifications:

- 1. Switchboard Installer's Qualifications:
 - a. Only employ a switchboard installer that employs workers who are qualified as defined in NEMA PB 2.1, and who are trained in electrical safety as required by NFPA 70E.
 - b. Submit the switchboard installer's qualifications to the Program/Project Manager for approval.
- 2. Testing Agency's Qualifications:
 - a. Employ an independent Testing Agency that is a member company of the InterNational Electrical Testing Association, or a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, that is acceptable to the Authorities Having Jurisdiction (AHJ), and that has the experience and capability to conduct the testing specified herein.
 - 1) Testing Agency's Field Supervisor:
 - a) The Testing Agency's field supervisor to supervise onsite field quality control testing must be currently certified by the InterNational Electrical Testing Association (NETA) in accordance with ANSI/NETA ETT, or by the National Institute for Certification in Engineering Technologies (NICET).
 - 2) Submit the qualifications of the Testing Agency, including the Testing Agency field supervisor's qualifications, to the Program/Project Manager for approval.

C. Certifications:

- 1. Electrical Listing and Labeling:
 - a. Provide products that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.

- 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Do not deliver switchboards until the spaces are enclosed and weathertight, the wet work in the spaces is complete and dry, the Work above where the switchboards will be installed is complete, and a temporary heating, ventilating, and air-conditioning (HVAC) system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
 2. Deliver switchboards in sections or lengths that are capable of being moved past obstructions within the delivery path.
 3. Receive and inspect switchboards in accordance with the requirements specified in ANSI/NECA 400.
- B. Storage and Handling Requirements:
 1. Handle, store, and prepare switchboards for installation in accordance with the requirements specified in ANSI/NECA 400.
 2. Prevent condensation in the switchboards.
- C. Packaging Waste Management:
 1. Remove loose packing and flammable materials from inside the switchboards.
 2. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

- A. Ambient Conditions:
 1. Do not install switchboards in spaces until the spaces are enclosed and weathertight, all wet work in the spaces is complete and dry, work above the switchboards is complete, and a temporary heating ventilating and air conditioning (HVAC) system is operating and maintaining the ambient

temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.08 WARRANTY

- A. Extended Correction Period:
 - 1. Warrant the transient voltage suppression devices' materials and workmanship against failures within the 5 year period after the Date of Substantial Completion:
 - 2. Submit the written Switchboard Warranty on the manufacturer's standard form in which the manufacturer agrees to repair or replace transient voltage suppression devices that fail in materials or workmanship within specified warranty period to the Program/Project Manager for approval.
 - a. Have the manufacturer's standard form signed by the Contractor and manufacturer.

PART 2 PRODUCTS

2.01 SWITCHBOARD EQUIPMENT

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Eaton Electrical Inc., Cutler-Hammer, www.eaton.com/EatonCom/ProductsServices/Cutler-Hammer/Index.htm.
 - b. Square D; Schneider Electric, www.schneider-electric.us/square-d-home-page.
 - c. General Electric, G.E., www.ge.com
 - d. Approved equal.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain switchboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. National Electrical Code (NEC):

- 1) Provide products and installation complying with requirements specified for switchboards in NFPA 70.

C. Design Criteria:

1. Switchboards:
 - a. Provide switchboards complying with the requirements specified in NEMA PB 2 and UL 891.
2. Service Conditions:
 - a. Provide switchboards complying with the requirements specified in NEMA PB 1 for usual service conditions.
 - b. Unless otherwise indicated, provide switchboard equipment rated for continuous operation under the following conditions:
 - 1) Ambient Temperature:
 - a) Not exceeding 130 degrees Fahrenheit).
 - 2) Altitude:
 - a) Not exceeding 1500 feet above sea level.
3. Product Selection for Restricted Space:
 - a. The Contract Drawings indicate the maximum dimensions for switchboards, including clearances between switchboards and adjacent surfaces and other items.
 - b. Provide switchboards capable of fitting within the indicated maximum dimensions.
4. Product Data:
 - a. For each type of switchboard, switching and overcurrent protective device, transient voltage suppression device, ground-fault protector, accessory, and component indicated in the Contract Documents, submit Product Data to the Program/Project Manager for approval.
 - 1) Include dimensions and the manufacturers' technical data on the features, performance, electrical characteristics, ratings, and finishes of their products.
5. Shop Drawings:
 - a. For each switchboard and related equipment, submit Shop Drawings to the Program/Project Manager for approval.
 - 1) Include dimensioned plans, elevations, sections, and details.
 - a) Show required clearances and service space around the switchboard equipment.
 - b) Show tabulations of installed devices, equipment features, and ratings.
 - 2) Detail enclosure types and details for types other than NEMA Type 1, which is described and specified in NEMA 250.
 - 3) Detail the bus configuration, current, and voltage ratings.
 - 4) Detail the short-circuit current rating of the switchboards and overcurrent protective devices.
 - 5) Include descriptive documentation of barriers specified for electrical insulation and isolation.

- 6) Detail the utility company's metering provisions, with an indication of approval by utility company.
- 7) Include evidence of a Nationally Recognized Testing Laboratory (NRTL) listing for series rating of installed devices.
- 8) Detail the features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
- 9) Include schematic and wiring diagrams for power, signal, and control wiring.
- 10) Include time-current coordination curves for each type and rating of overcurrent protective device included in switchboards.
 - a) Submit the time-current coordination curves on translucent log-log graft paper
 - b) Include selectable ranges for each type of overcurrent protective device.
- 11) Include a diagram and details of the proposed mimic bus.

D. Materials:

1. Switchboards:

- a. Provide front-connected, front-accessible switchboards assembled as follows:
 - 1) Main Devices: Panel mounted.
 - 2) Branch Devices: Panel mounted.
 - 3) Sections front and rear aligned.
- b. Nominal System Voltage:
 - 1) Provide switchboards designed for a nominal system voltage of 480Y/277 Volts.
- c. Main-Bus Continuous:
 - 1) Provide a switchboard main-bus as indicated on the Contract Drawings.
- d. Outdoor Enclosures:
 - 1) Provide outdoor enclosures having a flat roof, and complying with the requirements for NEMA Type 3R enclosures, which are described and specified in NEMA 250.
 - 2) Finish:
 - a) Provide outdoor enclosures having a factory-applied finish in the manufacturer's standard color.
 - b) Treat the undersurfaces of the outdoor enclosures with a corrosion-resistant undercoating.
- e. Insulation and Isolation:
 - 1) Provide insulation and isolation for the main bus of the main section and for the main and vertical buses of feeder sections.
- f. Utility Metering Compartment:
 - 1) Provide a fabricated utility metering barrier compartment and section complying with the utility company's requirements.
 - a) Provide a hinged sealed door.

- b) Provide buses provisioned for mounting the utility company's current transformers and potential transformers or potential taps as required by the utility company.
- 2) If a separate vertical section is required for utility metering, match and align this section with the basic switchboard.
- 3) Provide a service entrance label, and applicable service entrance features.
- g. Bus Transition and Incoming Pull Sections:
 - 1) Provide bus transition and incoming pull sections matched and aligned with the basic switchboard.
- h. Hinged Front Panels:
 - 1) Provide hinged front panels that allow access to the circuit breaker, metering, accessory, and blank compartments.
- i. Buses and Connections:
 - 1) Unless otherwise indicated, provide three phase, four wire buses and connections.
 - 2) Phase- and Neutral-Bus Material:
 - a) Provide phase- and neutral-buses fabricated from silver-plated, hard-drawn copper of 98 percent conductivity, and having tin-plated aluminum or copper feeder circuit-breaker line connections.
 - 3) Load Terminals:
 - a) Provide load terminals consisting of insulated, rigidly braced, runback bus extensions, fabricated from the same material as the through buses, and equipped with compression connectors for outgoing circuit conductors.
 - b) Provide load terminals for future circuit-breaker positions at the full-ampere rating of the circuit-breaker position.
 - 4) Ground Bus:
 - a) Provide a ground bus of the minimum-size required by UL 891, fabricated from hard-drawn copper of 98 percent conductivity, and equipped with compression connectors for feeder and branch-circuit ground conductors.
 - b) For busway feeders, extend insulated equipment grounding cable to the busway ground connection, and support the cable at intervals in the vertical run.
 - 5) Main Phase Buses and Equipment Ground Buses:
 - a) Provide main phase buses and equipment ground buses having a uniform capacity for entire length of the switchboard's main and distribution sections.
 - b) Provide main phase buses and equipment ground buses for future extensions from both ends.
 - 6) Neutral Buses:
 - a) Unless otherwise indicated, provide neutral buses having 100 percent of the ampacity of the phase buses and equipped with compression connectors for outgoing circuit neutral cables.

- b) Brace bus extensions for the busway feeder neutral bus.
 - 7) Isolation Barrier Access Provisions:
 - a) Provide isolation barrier access provisions that permit bus-bolt tightness to be checked.
 - j. Future Devices:
 - 1) Equip compartments with mounting brackets, supports, bus connections, and appurtenances at the full rating of circuit-breaker compartment to accommodate future devices.
 - k. Bus-Bar Insulation:
 - 1) Provide bus-bar insulation consisting of factory-applied, flame-retardant, tape wrapping on individual bus bars; or flame-retardant, spray-applied insulation.
 - 2) Provide bus-bar insulation having a minimum insulation temperature rating of 105 degrees Celsius.
- 2. Transient Voltage Suppression Devices:
 - a. Surge Protection Devices:
 - 1) Provide integrally mounted, parallel-connected, wired-in solid-state, non-modular type surge protection devices complying with the requirements specified in IEEE C62.41 and the second edition of UL 1449, and having the following features and accessory items
 - a) Provide sine-wave tracking suppression and filtering modules.
 - b) Provide a short-circuit current rating matching or exceeding the switchboard short-circuit rating.
 - c) Provide fuses rated at 200kA interrupting capacity.
 - d) Provide bolted compression lugs for internal wiring.
 - e) Provide an integral disconnect switch.
 - f) Provide redundant suppression circuits.
 - g) Provide an arrangement which provides wire connections to the phase buses, neutral bus, and ground bus.
 - h) Provide LED indicator lights that indicate power and protection status.
 - i) Provide an audible alarm with a silencing switch to indicate when protection has failed.
 - j) Provide Form-C contacts rated at 5 Amperes and 250 Volts AC, one normally open and one normally closed, for remote monitoring of system operation.
 - (1) Provide contacts that reverse position on the failure of any surge diversion module, or on the opening of any current-limiting device.
 - (2) Coordinate remote monitoring of the system operation with the building power monitoring and control system.
 - k) Provide a four-digit, transient-event counter set to totalize transient surges.
 - b. Peak Single-Impulse Surge Current Rating:

- 1) Provide surge protection devices having a peak single-impulse surge current rating of 160 kA per mode/320 kA per phase.
- 1) Provide surge protection devices having the withstand capability to withstand 12,000 Category C3 (10 kA), 8-by-20- microsecond surges, as described in IEEE C62.41, while allowing less than a 5 percent change in the clamping voltage.
- 2) Provide surge protection devices having protection modes, and a suppressed voltage rating (SVR) as specified in the second edition of UL 1449, for grounded wye circuits with 480Y/277-Volt, three-phase, four-wire circuits as follows:
 - a) Line to Neutral: 800 Volts for 480Y/277.
 - b) Line to Ground: 800 Volts for 480Y/277.
 - c) Neutral to Ground: 800 Volts for 480Y/277
3. Disconnecting and Overcurrent Protective Devices:
 - a. Molded-Case Circuit Breakers (MCCB):
 - 1) Provide molded-case circuit breakers (MCCB) complying with the requirements specified in UL 489, with an interrupting capacity to meet available fault currents, and having the following features and accessories:
 - a) Provide the standard frame sizes, trip ratings, and number of poles.
 - b) Provide Compression style lugs suitable for the trip ratings, conductor material and size, and the number of conductors.
 - c) Provide an application listing appropriate for the application as follows:
 - (1) For switching fluorescent lighting loads, provide Type SWD.
 - (2) For feeding fluorescent and high-intensity discharge (HID) lighting circuits, provide Type HID.
 - d) Provide ground-fault protection consisting of an integrally mounted relay and trip unit with adjustable pickup and time-delay settings, a push-to-test feature, and a ground-fault indicator.
 - e) Provide zone-selective interlocking integral with the electronic trip unit for interlocking the ground-fault protection function.
 - f) Provide a shunt trip consisting of a 120-Volt trip coil energized from a separate circuit, and set to trip at 55 percent of the rated voltage.
 - g) Provide an undervoltage trip set to operate at 35 to 75 percent of the rated voltage without an intentional time delay.
 - 2) Current-Limiting Circuit Breakers:
 - a) Provide current-limiting circuit breakers having 400 Ampere and smaller frame sizes, and let-through ratings less than RK-5 as defined in NEMA FU 1.
 - 3) Ground Fault Circuit Interrupter (GFCI) Circuit Breakers:

- a) Provide ground fault circuit interrupter (GFCI) circuit breakers having single- and two-pole configurations with Class A ground-fault protection (6-mA trip).
 - 4) Ground-Fault Equipment Protection (GFEP) Circuit Breakers:
 - a) Provide ground-fault equipment protection (GFEP) circuit breakers having Class B ground-fault protection (30mA trip).
- 4. Instrumentation:
 - a. Instrument Transformers:
 - 1) Provide instrument transformers complying with the requirements specified in IEEE C57.13, NEMA EI 21.1, and the following:
 - a) Current Transformers:
 - (1) Provide wound type current transformers complying with the requirements specified in IEEE C57.13, and having a 5 Ampere, 60 Hertz secondary.
 - (2) Provide current transformers having a single secondary winding and a secondary shorting device.
 - (3) Provide current transformers having a burden and accuracy consistent with the connected metering and relay devices.
 - b) Control-Power Transformers:
 - (1) Provide dry type control-power transformers, and for units larger than 3 kVA mounted in separate compartments.
 - c) Current Transformers for Neutral and Ground-Fault Current Sensing:
 - (1) For neutral and ground-fault current sensing, connect the secondary wiring of current transformers to ground overcurrent relays, via shorting terminals, to provide selective tripping of the main and tie circuit breaker.
 - (2) Coordinate current transformers provided for neutral and ground-fault current sensing with the feeder circuit-breaker and ground-fault protection.
 - b. Ammeters, Voltmeters, and Power-Factor Meters:
 - 1) Provide ammeters, voltmeters, and power-factor meters complying with the requirements specified in ANSI C39.1.
 - 2) Meters:
 - a) Provide 4-inch diameter or 6 inches square, flush or semiflush, meters with antiparallax 250-degree scales and external zero adjustment.
 - 3) Voltmeters:
 - a) Provide voltmeters that cover an expanded-scale range of the nominal voltage plus 10 percent.
 - 4) Software and Hardware:
 - a) Provide software and hardware that is compatible with that specified in Section 13453, Supervisory Control and Data Acquisition (SCADA).

5. Control Power:
 - a. Control Circuits:
 - 1) Provide 24-Volt DC control circuits.
 - b. Control Wiring:
 - 1) Provide factory-installed control wiring, with bundling, lacing, and protection included.
 - 2) Provide flexible conductors for 8 AWG and smaller conductors, for conductors across hinges, and for conductors for interconnections between shipping units.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Examine the elements and surfaces to receive switchboards for compliance with the installation tolerances and other conditions affecting performance of the Work.
 2. Examine switchboards before installation.
- B. Evaluation and Assessment:
 1. Proceed with installation only after unsatisfactory conditions have been corrected.
 2. Reject switchboards that are moisture damaged or physically damaged.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the switchboards.
- B. Surface Preparation:
 1. Provide concrete bases having a minimum 4-inch (100mm) nominal thickness and that comply with the requirements for concrete bases specified in Section 03300, Cast-in-Place Concrete, for the switchboards.
 - a. Install dowel rods to connect the concrete base to the concrete floor beneath.
 - b. Unless otherwise indicated in the Contract Documents, install dowel rods around the full perimeter of the concrete base on 18-inch (450mm) centers.
 2. Place and secure anchorage devices.
 - a. Install anchor bolts to the elevations required for proper attachment to the switchboards.
 - 1) Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded to properly locate these items.

- 2) Cast anchor-bolt inserts into the concrete bases.
 - 3) For supported equipment, install epoxy-coated anchor bolts that extend through the concrete base, and anchor into the structural concrete floor beneath.
 - b. Submit the setting drawings, templates, diagrams, instructions, and directions for placing and securing anchorage devices to the Program/Project Manager for information.
- C. Demolition / Removal:
- 1. Installation Pathway:
 - a. Remove and replace access fencing, doors, lift-out panels, and structures to provide a pathway for moving switchboards into place.

3.03 INSTALLATION

- A. When installing switchboards, comply with the requirements specified in ANSI/NECA 1, ANSI/NECA 400, and NFPA 70E.
- B. Equipment Mounting:
 - 1. Install switchboards on concrete bases.
- C. Temporary Lifting Provisions:
 - 1. Remove temporary lifting eyes, channels, and brackets, and temporary blocking of moving parts, from the switchboard units and components.
- D. Connections:
 - 1. Terminate feeder bus in accordance with the requirements specified in Section 16450, Enclosed Bus Assemblies.
 - a. The Contract Drawings indicate the general arrangement of the bus, fittings, and specialties.
 - 2. Terminate cable trays in accordance with the requirements specified in Section 16134, Cable Trays.
 - a. The Contract Drawings indicate the general arrangement of the cable trays, fittings, and specialties.
- E. Install overcurrent protective devices, transient voltage suppression devices, and instrumentation.
 - 1. Set field-adjustable switches and circuit-breaker trip ranges.
- F. Install filler plates in unused spaces of panel-mounted sections.
- G. Operating Instructions:
 - 1. Provide printed basic operating instructions for the switchboards, including control and key interlocking sequences and emergency procedures, framed and mounted on the front of the switchboards.
 - a. Fabricate the frame from finished wood or metal, and provide a clear acrylic plastic protective cover for the instructions.

H. Special Techniques:

1. Identification:

- a. Identify field-installed conductors, interconnecting wiring, and components in accordance with the requirements specified in Section 16075, Electrical Identification.
 - 1) Provide warning signs complying with the requirements specified in Section 16075, Electrical Identification.
- b. Switchboard Nameplates:
 - 1) Label each switchboard compartment with a nameplate complying with the identification requirements specified in Section 16075, Electrical Identification.
- c. Device Nameplates:
 - 1) Label each disconnecting and overcurrent protective device and each meter and control device mounted in compartment doors with a nameplate complying with the identification requirements specified in Section 16075, Electrical Identification.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

- 1. During the period when switchboards are being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing and inspection of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - 1) Periodic Special Inspections will be performed during the installation of switchboards.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency and/or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
- 2. Testing Agency Responsibilities:
 - 1) Have the Testing Agency employed by the Contractor perform the tests specified herein, and prepare a certified written Field Quality-Control Report for each test conducted to record the following information pertaining to the test:
 - a) The switchboards included in the testing.
 - b) Test procedures used to perform the testing.
 - c) Test results that comply with the requirements specified.

- d) Test results that do not comply with the specified requirements, and corrective action taken to achieve compliance with the requirements.
 - (1) Note deficiencies detected, the remedial action taken, and observations after remedial action.
- 3. Insulation Resistance Test:
 - a. Test Procedure:
 - 1) For each switchboard bus, component, connecting supply, feeder, and control circuit, test the insulation resistance.
 - 2) Prepare a certified Field Quality-Control Report that identifies the switchboards included and documents the Insulation Resistance Tests, and submit the report to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Switchboards buses, components, connecting supply, feeders, and control circuits having insulation sufficient for the wiring installation to be free from short circuits and from grounds pass the Insulation Resistance Test.
 - a) These items will be considered defective if they do not pass the specified test.
- 4. Electrical Continuity Test:
 - a. Test Procedure:
 - 1) Test the electrical continuity of each circuit.
 - 2) Prepare a certified Field Quality-Control Report that identifies the switchboards included and documents the Continuity Tests, and submit the report to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Circuits displaying electrical discontinuities fail the Electrical Continuity Test
- 5. Infrared Scanning:
 - a. Test Procedure:
 - 1) Instruments and Equipment:
 - a) Have the Testing Agency furnish and use a portable infrared scanning device designed to measure temperature or to detect significant deviations from normal values.
 - b) Have the Testing Agency submit a calibration record for the infrared scanning device to the Program/Project manager for information.
 - 2) Initial Infrared Scanning:
 - a) Two months after Substantial Completion, have the Testing Agency perform an infrared scan of the transformer connections.
 - 3) Follow-up Infrared Scanning:
 - a) Have the Testing Agency perform 2 additional follow-up infrared scans of each transformer, the first follow-up scan 4

- months after the date of Substantial Completion, and the second follow-up scan 7 months after the first follow-up scan.
- 4) Have the Testing Agency prepare a certified Infrared Scanning Field Quality-Control Report that identifies the transformers included and describes the infrared scanning results, and submit the report to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Significant deviations from normal temperature values are cause for the transformer under test to fail the infrared scanning testing.
 - 2) Test Labeling:
 - a) On satisfactory completion of the testing of each unit, have the Testing Agency attach a dated and signed "Satisfactory Test" label to the tested unit.
 6. Inspections:
 - a. Inspect the switchboards in accordance with the requirements specified in ANSI/NECA 400.
 - B. Non-Conforming Work
 1. Switchboards will be considered defective if they do not pass the specified inspections and tests.
 2. Where possible, correct malfunctioning units onsite, and retest the corrected units to demonstrate compliance with the specified requirements; otherwise, replace malfunctioning units with new units and retest the replacement units.
 - C. Manufacturer Services:
 1. Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

3.05 SYSTEM STARTUP

- A. Prior to starting switchboard equipment or systems, obtain and review the manufacturer's installation, operation, and starting instructions.
 1. Submit the manufacturer's installation, operation, and starting instructions for the switchboard equipment and systems to the Program/Project Manager for information.
- B. Set field-adjustable, circuit-breaker trip ranges in the coordination report developed as the Work of Section 16055, Overcurrent Protective Device Coordination.
- C. Verify the correctness of the wiring by actual electrical operation of electrical and mechanical devices in both manual and automatic modes of operation.

3.06 ADJUSTING

- A. Adjust moving parts and operable component to function smoothly, and lubricate them as recommended by manufacturer.

3.07 CLOSEOUT ACTIVITIES

- A. Training:
 - 1. Train the Owner's maintenance personnel to adjust, operate, and maintain the switchboards, overcurrent protective devices, instrumentation, and accessories.

3.08 PROTECTION

- A. Take steps to insure that installed switchboards are protected during subsequent construction activities.

3.09 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Furnish operation and maintenance data for switchboards and components for inclusion in emergency and Operation and Maintenance Manuals as specified in Section 01780, Closeout Submittals, and include the following:
 - a. Routine maintenance requirements for switchboards and installed components.
 - b. The overcurrent protective device manufacturer's written instructions for testing and adjusting these devices.
 - c. Time-current curves for each type and rating of overcurrent protective device included in the switchboards, including selectable ranges for each type of overcurrent protective device that allows adjustments.
 - 2. Submit the operation and maintenance data for the switchboards and components to the Program/Project Manager for information.
 - a. Submit the time-current coordination curves on translucent log-log graph paper

SECTION 16442

PANELBOARDS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following types of panelboards:
 - a. Distribution panelboards.
 - b. Lighting and appliance branch-circuit panelboards.
 - c. Electronic-grade panelboards.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01780 - Closeout Submittals.
 - 3. Section 03300 - Cast-in-Place Concrete.
 - 4. Section 13453 - Supervisory Control and Data Acquisition (SCADA).
 - 5. Section 16055 - Overcurrent Protective Device Coordination.
 - 6. Section 16071 - Seismic Controls.
 - 7. Section 16075 - Electrical Identification.
 - 8. Section 16491 - Fuses.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AC: Alternating electric current.
 - 2. AFCI: Arc-Fault Circuit-Interrupter.
 - 3. GFCI: Ground Fault Circuit Interrupter.
 - 4. GFEP: Ground Fault Equipment Protection.
 - 5. HVAC: Heating Ventilating and Air Conditioning.
 - 6. LED: Light emitting diodes.
 - 7. MCCB: Molded-case circuit breakers.
 - 8. NRTL: Nationally Recognized Testing Laboratory.
 - 9. RMS: Root-mean-square.
 - 10. SVR: Suppressed voltage rating.
 - 11. TVSS: Transient voltage surge suppressor.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in

29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
- 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
 - 2. Coordinate the layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces.
 - a. Maintain required workspace clearances and required clearances for equipment access doors and panels.
 - 3. Coordinate the sizes and locations of concrete bases for freestanding panelboards with the actual equipment provided.
- B. Sequencing:
- 1. For floor mounted panelboards, provide concrete bases and anchorage devices prior to installing the panelboards.

1.04 SUBMITTALS

- A. Action Submittals:
- 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Distribution panelboards.
 - 2) Lighting and appliance branch-circuit panelboards.
 - 3) Load centers.
 - 4) Electronic-grade panelboards.
 - 5) Molded-case circuit breakers (MCCB).
 - 6) Fused switches.

- 7) Surge protection devices.
 - 8) Accessory set.
 - 9) Portable test set.
 - b. Shop Drawings:
 - 1) Panelboards and related equipment.
 - 2) Setting drawings, templates, diagrams, instructions, and directions for placing and securing anchorage devices.
 - 3) Panelboard schedules.
 - c. Certificates:
 - 1) Electrical Listing and Labeling.
 - 2) Seismic Qualification Certificates.
 - 3) Certification of compliance with the inspection parameters specified in ANSI/NETA ATS.
 - d. Qualification Statements:
 - 1) Testing Agency's qualifications.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Manufacturer's installation, operation, and starting instructions for the panelboard equipment and systems.
 - b. Site Quality Control Submittals:
 - 1) Calibration record for the infrared scanning device.
 - 2) Insulation Resistance Tests Field Quality-Control Report.
 - 3) Electrical Continuity Tests Field Quality-Control Report.
 - 4) NETA Acceptance Testing Field Quality-Control Report.
 - 5) Infrared Scanning Field Quality-Control Report.
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the panelboards and components.
 - b. Warranty Documentation:
 - 1) Panelboards Warranty.
- D. Maintenance Material Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish spare parts that match the products installed in the following quantities, and package the spare parts with a protective

covering for storage identified with labels describing the contents of the packages:

- a) Keys:
 - (1) Furnish 2 spare keys for each type of panelboard cabinet lock.
 - b) Circuit Breakers:
 - (1) Furnish 2 spare circuit breakers, including GFCI and Ground Fault Equipment Protection (GFEP) types, for each panelboard.
 - c) Fuses for Fused Switches:
 - (1) Furnish a number of fuses for fused switches equal to 10 percent of quantity installed for each size and type, but no fewer than 3 of each size and type.
 - d) Fuses for Fused Power-Circuit Devices:
 - (1) Furnish a number of fuses for fused power-circuit devices equal to 10 percent of quantity installed for each size and type, but no fewer than 3 of each size and type.
- b. Tools:
- 1) Accessory set.
 - 2) Portable test set.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

- 1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - c. Periodic Special Inspections will be performed during the installation of medium-voltage wire, cable, and accessories.
- 2. Testing and Inspection Agencies:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Qualifications:

- 1. Testing Agency's Qualifications:

- a. Employ an independent Testing Agency that is a member company of the InterNational Electrical Testing Association, or a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, that is acceptable to the Authorities Having Jurisdiction (AHJ), and that has the experience and capability to conduct the testing specified herein.
 - 1) Testing Agency's Field Supervisor:
 - a) The Testing Agency's field supervisor to supervise onsite field quality control testing must be currently certified by the InterNational Electrical Testing Association (NETA) in accordance with ANSI/NETA ETT, or by the National Institute for Certification in Engineering Technologies (NICET).
 - 2) Submit the qualifications of the Testing Agency, including the Testing Agency field supervisor's qualifications, to the Program/Project Manager for approval.
- C. Certifications:
 - 1. Electrical Listing and Labeling:
 - a. Provide products that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.
 - 2. Seismic Qualification Certificates:
 - a. Have the manufacturer prepare Seismic Qualification Certificates certifying that the panelboards, overcurrent protective devices, accessories, and components will withstand the seismic forces defined in Section 16071, Seismic Controls.
 - 1) Indicate whether withstand certification is based on an actual test of the assembled components, or on calculations.
 - 2) Include a dimensioned outline drawing of each equipment unit identifying the center of gravity, and locating and describing the mounting and anchorage provisions.

- 3) Include a detailed description of the equipment anchorage devices on which the certification is based, and their installation requirements.
- b. Submit the Seismic Qualification Certificates to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Receive, inspect, handle, and store panelboards in accordance with the requirements specified in NECA 407 or NEMA PB 1.1.
- B. Storage and Handling Requirements:
 1. Remove loose packing and flammable materials from the inside of the panelboards.
 2. Handle and prepare panelboards for installation in accordance with the requirements specified in NECA 407 or NEMA PB 1.1.

1.07 SITE CONDITIONS

- A. Ambient Conditions:
 1. Do not deliver or install panelboards in spaces until the spaces are enclosed and weathertight, all wet work in the spaces is complete and dry, work above the panelboards is complete, and a temporary heating ventilating and air conditioning (HVAC) system is operating and maintaining the ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- B. Existing Conditions:
 1. Interruption of Existing Electric Service:
 - a. Do not interrupt electric service to facilities occupied by the Owner or others unless permitted under the following conditions, and then only after arranging to provide temporary electric service according to the requirements indicated:
 - 1) Notify the Program/Project Manager no fewer than 2 days in advance of the proposed interruption of electric service.
 - 2) Do not interrupt electric service without the Program/Project Manager's written permission.

1.08 WARRANTY

- A. Extended Correction Period:
 1. Warrant the panelboards' materials and workmanship against failures within the 5 year period after the Date of Substantial Completion:
 2. Submit the written Panelboards Warranty on the manufacturer's standard form in which the manufacturer agrees to repair or replace components of

manufactured panelboards that fail in materials or workmanship within specified warranty period to the Program/Project Manager for approval.

- a. Have the manufacturer's standard form signed by the Contractor and manufacturer.

PART 2 PRODUCTS

2.01 PANELBOARD EQUIPMENT

A. Manufacturers:

1. Manufacturer List:

- a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.

2. Substitution Limitations:

- a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- b. Source Limitations:
 - 1) Obtain panelboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

B. Description:

1. Regulatory Requirements:

- a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- b. National Electrical Code (NEC):
 - 1) Provide products and installation complying with the requirements specified for panelboards in NFPA 70.

C. Performance:

1. Seismic Performance:

- a. Provide panelboards capable of withstanding the effects of earthquake motions determined in accordance with the procedures specified in ASCE/SEI 7.
 - 1) The phrase "capable of withstanding" is hereby defined to mean the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event.
- b. Fabricate and test panelboards in accordance with the requirements specified in IEEE 344 to withstand the seismic forces defined in Section 16071, Seismic Controls.

D. Design Criteria:

1. Panelboards:
 - a. Provide panelboards complying with the requirements specified in NEMA PB 1 and NFPA 70.
 - b. Provide distribution panelboards complying with the requirements specified in NFPA 70 for power panelboards.
2. Service Conditions:
 - a. Provide panelboards complying with the requirements specified in NEMA PB 1 for usual service conditions.
 - b. Unless otherwise indicated, provide panelboard equipment rated for continuous operation under the following conditions:
 - 1) Ambient Temperature:
 - a) Not outside the range from 23 degrees Fahrenheit (minus 5 degrees Celsius) to plus 104 degrees Fahrenheit (plus 40 degrees Celsius).
 - 2) Altitude:
 - a) Not exceeding 1500 feet above sea level.
3. Product Selection for Restricted Space:
 - a. The Contract Drawings indicate the maximum dimensions for panelboards, including clearances between panelboards and adjacent surfaces and other items.
 - b. Provide panelboards capable of fitting within the indicated maximum dimensions.
4. Enclosures:
 - a. Provide flush- and surface mounted cabinets rated for the environmental conditions at the installed location as follows:
 - 1) Indoor Dry and Clean Locations:
 - a) Provide NEMA Type 1, which is described and specified in NEMA 250.
 - 2) Outdoor Locations:
 - a) Provide NEMA Type 3R, which is described and specified in NEMA 250.
 - 3) Kitchen and Wash-Down Areas:
 - a) Provide NEMA Type 4X, which is described and specified in NEMA 250.
 - 4) Other Wet or Damp Indoor Locations:
 - a) Provide NEMA Type 4, which is described and specified in NEMA 250.
 - 5) Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids:
 - a) Provide NEMA Type 5, which is described and specified in NEMA 250.
 - b. Front:
 - 1) Provide fronts secured to the box with concealed trim clamps.
 - 2) For surface-mounted fronts, match the box dimensions.
 - 3) For flush-mounted fronts, overlap the box.
 - c. Hinged Front Cover:

- 1) Provide a front cover having the entire front trim hinged to the box, and having a standard door within the hinged trim cover.
 - d. Skirt for Surface-Mounted Panelboards:
 - 1) Provide a skirt for surface-mounted panelboards of the same gage and finish as the panelboard front, and having flanges for attachment to the panelboard, wall, and ceiling or floor.
 - e. Gutter Extension and Barrier:
 - 1) Provide a gutter extension and barrier of the same gage and finish as the panelboard enclosure, and integral with the enclosure body.
 - 2) Arrange the gutter extension and barrier so individual panel sections are isolated.
 - f. Directory Card:
 - 1) Provide a directory card inside the panelboard door, mounted in a metal frame with a transparent protective cover.
5. Incoming Main Locations:
 - a. Verify entry locations for incoming mains as required.
6. Phase, Neutral, and Ground Buses:
 - a. Provide tin-plated aluminum phase, neutral, and ground buses.
 - b. Equipment Ground Bus:
 - 1) Provide an equipment ground bus adequate to accommodate the feeder and branch-circuit equipment grounding conductors.
 - 2) Bond the equipment ground bus to the box.
 - c. Isolated Ground Bus:
 - 1) Provide an isolated ground bus adequate to accommodate the branch-circuit isolated ground conductors.
 - 2) Insulate the isolated ground bus from the box.
 - d. Extra-Capacity Neutral Bus:
 - 1) Provide an extra-capacity neutral bus rated 200 percent of the phase bus, and UL-listed as suitable for nonlinear loads.
 - e. Split Bus:
 - 1) Provide vertical buses divided into individual vertical sections.
7. Conductor Connectors:
 - a. Provide tin-plated aluminum conductor connectors suitable for use with the conductor material and sizes.
 - b. Main and Neutral Lugs:
 - 1) Provide mechanical type main and neutral lugs.
 - c. Ground Lugs and Bus-Configured Terminators:
 - 1) Provide mechanical type ground lugs and bus-configured terminators.
 - d. Feed-Through Lugs:
 - 1) Provide mechanical type feed-through lugs, suitable for use with the conductor material.
 - 2) Locate the feed-through lugs at the opposite end of the bus from incoming lugs or the main device.
 - e. Subfeed (Double) Lugs:

- 1) Provide mechanical type subfeed (double) lugs suitable for use with the conductor material.
 - 2) Locate the subfeed (double) lugs at the same end of the bus as incoming lugs or the main device.
- f. Gutter-Tap Lugs:
 - 1) Provide mechanical type gutter-tap lugs suitable for use with conductor material.
 - 2) Locate gutter-tap lugs at the same end of the bus as incoming lugs or the main device.
- g. Extra-Capacity Neutral Lugs:
 - 1) Provide extra-capacity neutral lugs rated 200 percent of the phase lugs mounted on the extra-capacity neutral bus.
8. Service Equipment Label:
 - a. Provide service equipment labeled by a nationally recognized testing laboratory (NRTL) for use as service equipment for panelboards or load centers with one or more main service disconnecting and overcurrent protective devices.
9. Future Devices:
 - a. Provide mounting brackets, bus connections, filler plates, and necessary appurtenances required for the future installation of devices.
10. Panelboard Short-Circuit Current Rating:
 - a. Provide panelboards fully rated to interrupt symmetrical short-circuit current available at the terminals.
11. Product Data:
 - a. For each type of panelboard, switching and overcurrent protective device, transient voltage suppression device, accessory, and component indicated in the Contract Documents, submit Product Data to the Program/Project Manager for approval.
 - 1) Include dimensions and the manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes of their products.
12. Shop Drawings:
 - a. For each panelboard and related equipment, submit Shop Drawings to the Program/Project Manager for approval.
 - 1) Include dimensioned plans, elevations, sections, and details.
 - a) Show tabulations of installed devices, equipment features, and ratings.
 - 2) Detail enclosure types and details for types other than NEMA Type 1, which is described and specified in NEMA 250.
 - 3) Detail the bus configuration, current, and voltage ratings.
 - 4) Indicate the short-circuit current rating of the panelboard and overcurrent protective devices.
 - 5) Include evidence of a nationally recognized testing laboratory (NRTL) listing for series rating of installed devices.

- 6) Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
- 7) Include wiring diagrams for power, signal, and control wiring.
- 8) Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards.
 - a) Submit the time-current coordination curves on translucent log-log graft paper
 - b) Include selectable ranges for each type of overcurrent protective device.

E. Materials:

1. Distribution Panelboards:

a. Panelboards:

- 1) Provide power and feeder distribution type panelboards complying with the requirements specified in NEMA PB 1.

b. Doors:

- 1) Provide doors secured with a vault-type latch with a tumbler lock.
- 2) For doors more than 36 inches (914mm) high, provide 2 latches, keyed alike.
- 3) Key the door latches alike.

c. Mains:

- 1) Provide mains having circuit breakers only.

d. Branch Overcurrent Protective Devices:

- 1) For circuit-breaker frame sizes 125 Amp and smaller, provide Bolt-on circuit breakers.

e. Contactors in Main Bus:

- 1) In the main bus, provide general-purpose controller, mechanically held, contactors complying with the requirements for Class A contactors as specified in NEMA ICS 2, and having the same short-circuit interrupting rating as the panelboard.
 - a) Provide the contactor connections, contactor types, quantity of circuits controlled, current ratings, external control circuits, and number of poles as indicated on the Contract Drawings and schedules.
- 2) Internal Control-Power Source:
 - a) Provide a control-power transformer, with fused primary and secondary terminals, connected to the main bus ahead of the contactor connection.
 - (1) Provide a control-power transformer having the capacity and associated fuses indicated on the Contract Drawings.

f. Manufacturers:

- 1) Eaton Electrical Inc., Cutler-Hammer,
www.eaton.com/EatonCom/ProductsServices/Cutler-Hammer/Index.htm.

- 2) Square D; Schneider Electric, www.schneider-electric.us/square-d-home-page.
 - 3) General Electric, G.E., www.ge.com
 - 4) Approved equal.
2. Lighting and Appliance Branch-Circuit Panelboards:
- a. Panelboards:
 - 1) Provide lighting and appliance branch-circuit type panelboards complying with the requirements specified in NEMA PB 1.
 - b. Mains:
 - 1) Provide mains having circuit breakers only.
 - c. Branch Overcurrent Protective Devices:
 - 1) Provide bolt-on circuit breakers, replaceable without disturbing adjacent units.
 - d. Contactors in Main Bus:
 - 1) In the main bus, provide general-purpose controller, mechanically held, contactors complying with the requirements for Class A contactors as specified in NEMA ICS 2, and having the same short-circuit interrupting rating as the panelboard.
 - a) Provide the contactor connections, contactor types, quantity of circuits controlled, current ratings, external control circuits, and number of poles as indicated on the Contract Drawings and schedules.
 - 2) Internal Control-Power Source:
 - a) Provide a control-power transformer, with fused primary and secondary terminals, connected to the main bus ahead of the contactor connection.
 - (1) Provide a control-power transformer having the capacity and associated fuses indicated on the Contract Drawings.
 - e. Doors:
 - 1) Provide doors having concealed hinges, and secured with a flush latch with a tumbler lock.
 - 2) Key the door latches alike.
 - f. Column-Type Panelboards:
 - 1) Provide column-type panelboards having a narrow gutter extension with a cover to an overhead junction box equipped with ground and neutral terminal buses.
 - g. Manufacturers:
 - 1) Eaton Electrical Inc., Cutler-Hammer, www.eaton.com/EatonCom/ProductsServices/Cutler-Hammer/Index.htm.
 - 2) Square D; Schneider Electric, www.schneider-electric.us/square-d-home-page.

- 3) General Electric, G.E., www.ge.com
- 4) Approved equal.
3. Electronic-Grade Panelboards:
 - a. Panelboards:
 - 1) Provide electronic-grade panelboards complying with the requirements specified in NEMA PB 1, having a factory-installed, integral transient voltage surge suppressor (TVSS), and labeled by a nationally recognized testing laboratory (NRTL) for compliance with UL 67 after the transient voltage surge suppressor (TVSS) has been installed.
 - b. Doors:
 - 1) Provide doors secured with a vault-type latch with a tumbler lock.
 - 2) Key the door latches alike.
 - c. Main Overcurrent Protective Devices:
 - 1) Provide bolt-on thermal-magnetic circuit breakers on mains.
 - d. Branch Overcurrent Protective Devices:
 - 1) Provide bolt-on thermal-magnetic circuit breakers on branch circuits.
 - e. Buses:
 - 1) Provide copper phase and neutral buses; having 200 percent capacity neutral bus and lugs.
 - 2) Provide copper equipment and isolated ground buses.
 - f. Surge Protection Device:
 - 1) Provide modular (with field-replaceable modules) type surge protection devices having sine-wave tracking suppression and filtering modules.
 - 2) Provide surge protection devices having a short-circuit current rating complying with the requirements specified in the second edition of UL 1449 and matching or exceeding the panelboard short-circuit rating, redundant suppression circuits, with individually fused metal-oxide varistors.
 - 3) Provide integrally mounted, parallel-connected, bolt-on, solid-state surge protection devices complying with the requirements specified in IEEE C62.41, and including the following accessory items:
 - a) Provide fuses rated at 200kA interrupting capacity.
 - b) Provide bolted compression lugs for internal wiring.
 - c) Provide an integral disconnect switch.
 - d) Provide redundant suppression circuits.
 - e) Provide redundant replaceable modules.
 - f) Provide an arrangement which provides wire connections to the phase buses, neutral bus, and ground bus.
 - g) Provide LED indicator lights that indicate power and protection status.

- h) Provide an audible alarm with a silencing switch to indicate when protection has failed.
 - i) Provide Form-C contacts rated at 5 Amperes and 250 Volts AC, one normally open and one normally closed, for remote monitoring of system operation.
 - (1) Provide contacts that reverse position on the failure of any surge diversion module, or on the opening of any current-limiting device.
 - (2) Coordinate remote monitoring of the system operation with the building power monitoring and control system.
 - j) Provide a four digit, transient-event counter set to totalize transient surges.
- 4) Provide surge protection devices having a peak single-impulse surge current rating of 80 kA per mode/160 kA per phase.
 - 5) Provide surge protection devices having the minimum single-impulse current ratings, using an 8-by-20-microsecond waveform as described in IEEE C62.41.2, as follow:
 - a) Line to Neutral: 70,000 Amperes.
 - b) Line to Ground: 70,000 Amperes.
 - c) Neutral to Ground: 50,000 Amperes.
 - 6) Provide surge protection devices having the withstand capability to withstand 12,000 Category C3 (10 kA), 8-by-20- microsecond surges, as described in IEEE C62.41, while allowing less than a 5 percent change in the clamping voltage.
 - 7) Provide surge protection devices having protection modes, and a suppressed voltage rating (SVR) as specified in the second edition of UL 1449, for grounded wye circuits for 208Y/120 Volt, three-phase, four-wire circuits as follows:
 - a) Line to Neutral: 400 Volts for 208Y/120.
 - b) Line to Ground: 400 Volts for 208Y/120.
 - c) Neutral to Ground: 400 Volts for 208Y/120.
 - 8) Provide surge protection devices having protection modes, and a suppressed voltage rating (SVR) as specified in the second edition of UL 1449, for 480 Volt, three-phase, three-wire, delta circuits as follow:
 - a) Line to Line: 2000 Volts for 480 Volts.
 - b) Line to Ground: 1500 Volts for 480 Volts.
- g. Manufacturers:
 - 1) Current Technology; a subsidiary Thomas & Betts Power Solutions, LLC, <https://currenttechnology.com>.
 - 2) Cutler-Hammer, Eaton Electrical Inc., www.eaton.com/EatonCom/Markets/Electrical/.
 - 3) Liebert Corporation, an Emerson Network Power Company, <https://www.vertivco.com/en-us/products/brands/liebert/>.

- 4) Siemens Energy and Automation, Inc.,
<https://www.industry.usa.siemens.com/>.
 - 5) Square D; a brand of Schneider Electric, www.schneider-electric.us.
 - 6) Approved equal.
4. Disconnecting and Overcurrent Protective Devices:
- a. Molded-Case Circuit Breaker (MCCB):
 - 1) Provide molded-case circuit breakers (MCCB) complying with the requirements specified in UL 489, with an interrupting capacity to meet available fault currents, and having the following features and accessories:
 - a) Provide the standard frame sizes, trip ratings, and number of poles.
 - b) Provide Mechanical style lugs suitable for the trip ratings, conductor material and size, and the number of conductors.
 - c) Provide an application listing appropriate for the application as follows:
 - (1) Type SWD for switching fluorescent lighting loads.
 - (2) Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.
 - d) Provide ground-fault protection consisting of an integrally mounted relay and trip unit with adjustable pickup and time-delay settings, a push-to-test feature, and a ground-fault indicator.
 - e) Provide communication capability consisting of a circuit-breaker-mounted communication module with functions and features compatible with the power monitoring and control system specified in Section 13453, Supervisory Control and Data Acquisition (SCADA).
 - f) Provide a shunt trip consisting of a 120 Volt trip coil energized from a separate circuit, and set to trip at 75 percent of the rated voltage.
 - g) Provide an undervoltage trip set to operate at 35 to 75 percent of the rated voltage without an intentional time delay.
 - h) Provide auxiliary contacts consisting of two SPDT switches having "a" and "b" contacts, where "a" contacts mimic the circuit-breaker contacts and "b" contacts operate in reverse of the circuit-breaker contacts.
 - i) Provide an alarm switch consisting of a single-pole, normally open contact that actuates only when the circuit breaker trips.
 - j) Provide a key interlock kit externally mounted to prohibit circuit-breaker operation, and having a key removable only when the circuit breaker is in off position.

- k) Provide zone-selective interlocking integral with the electronic trip unit for interlocking the ground-fault protection function with other upstream or downstream devices.
 - l) Provide multipole units enclosed in a single housing or factory assembled to operate as a single unit.
 - m) Provide a handle padlocking device, consisting of a fixed attachment, for locking the circuit-breaker handle in the on or off position.
 - n) Provide a handle clamp consisting of a loose attachment for holding the circuit-breaker handle in the on position.
- 2) Thermal-Magnetic Circuit Breakers:
 - a) Provide thermal-magnetic circuit breakers having an inverse time-current element for low-level overloads, and an instantaneous magnetic trip element for short circuits.
 - b) Provide an adjustable magnetic trip setting for circuit-breaker frame sizes 250 Amperes and larger.
- 3) Thermal-Magnetic Circuit Breakers:
 - a) Provide thermal-magnetic circuit breakers having a magnetic trip element with a front-mounted, field-adjustable trip setting.
- 4) Provide electronic trip circuit breakers having rms sensing, a field-replaceable rating plug or field-replicable electronic trip, and the following field-adjustable settings:
 - a) Instantaneous trip.
 - b) Long- and short-time pickup levels.
 - c) Long- and short-time time adjustments.
 - d) Ground-fault pickup level, time delay, and I^2t response.
- 5) Current-Limiting Circuit Breakers:
 - a) Provide current-limiting circuit breakers having 400 Ampere and smaller frame sizes, and let-through ratings less than RK-5 as defined in NEMA FU 1.
- 6) Ground Fault Circuit Interrupter (GFCI) Circuit Breakers:
 - a) Provide ground fault circuit interrupter (GFCI) circuit breakers having single- and two-pole configurations with Class A ground-fault protection (6-mA trip).
- 7) Ground-Fault Equipment Protection (GFEP) Circuit Breakers:
 - a) Provide ground-fault equipment protection (GFEP) circuit breakers having Class B ground-fault protection (30-mA trip).
- 8) Arc-Fault Circuit-Interrupter (AFCI) Circuit Breakers:
 - a) Provide 120/240-Volt, single-pole arc-fault circuit interrupter (AFCI) circuit breakers complying with the requirements specified in UL 1699.
- b. Fused Switches:
 - 1) Provide a Type HD fused switch complying with the requirements specified in NEMA KS 1, and having the following features and accessories:

- a) Clips to accommodate the specified fuses, and a lockable handle.
 - b) Standard number of poles and ampere ratings.
 - c) Two normally open and normally closed auxiliary contacts that operate with switch handle operation.
 - 2) Fuses, and Spare-Fuse Cabinet:
 - a) Provide fuses and a spare-fuse cabinet complying with the requirements specified in Section 16491, Fuses.
 - c. Manufacturers:
 - 1) Cutler-Hammer, Eaton Electrical Inc., www.eaton.com/EatonCom/Markets/Electrical/.
 - 2) Siemens Energy and Automation, Inc., <https://www.industry.usa.siemens.com/>.
 - 3) Square D; a brand of Schneider Electric, www.schneider-electric.us.
 - 4) Approved equal.
- 5. Panelboard Suppressors:
 - a. Surge Protection Device:
 - 1) Provide integrally mounted, parallel-connected, solid-state surge protection devices complying with the requirements specified in IEEE C62.41, and including the following accessory items:
 - a) Provide LED indicator lights that indicate the power and protection status.
 - b) Provide an audible alarm with a silencing switch that indicates when protection has failed.
 - c) Provide 1 set of dry contacts rated at 5 Amperes and 250-Volts AC, for remote monitoring of the protection status.
 - b. Surge Protection Device:
 - 1) Provide modular (with field-replaceable modules) type surge protection devices having sine-wave tracking suppression and filtering modules.
 - 2) Provide surge protection devices having a short-circuit current rating complying with the requirements specified in the second edition of UL 1449 and matching or exceeding the panelboard short-circuit rating.
 - 3) Provide integrally mounted, parallel-connected, bolt-on, solid-state surge protection devices complying with the requirements specified in IEEE C62.41, and including the following accessory items:
 - a) Provide fuses rated at 200kA interrupting capacity.
 - b) Provide bolted compression lugs for internal wiring.
 - c) Provide an integral disconnect switch.
 - d) Provide redundant suppression circuits.
 - e) Provide redundant replaceable modules.

- f) Provide an arrangement which provides wire connections to the phase buses, neutral bus, and ground bus.
 - g) Provide LED indicator lights that indicate power and protection status.
 - h) Provide an audible alarm with a silencing switch to indicate when protection has failed.
 - i) Provide Form-C contacts rated at 5 Amperes and 250 Volts AC, one normally open and one normally closed, for remote monitoring of system operation.
 - (1) Provide contacts that reverse position on the failure of any surge diversion module, or on the opening of any current-limiting device.
 - (2) Coordinate remote monitoring of the system operation with the building power monitoring and control system.
 - j) Provide a four digit, transient-event counter set to totalize transient surges.
- 4) Provide surge protection devices having a peak single-impulse surge current rating of 80 kA per mode/160 kA per phase.
 - 5) Provide surge protection devices having the minimum single-impulse current ratings, using an 8-by-20-microsecond waveform as described in IEEE C62.41.2, as follow:
 - a) Line to Neutral: 70,000 Amperes.
 - b) Line to Ground: 70,000 Amperes.
 - c) Neutral to Ground: 50,000 Amperes.
 - 6) Provide surge protection devices having the withstand capability to withstand 12,000 Category C3 (10 kA), 8-by-20- microsecond surges, as described in IEEE C62.41, while allowing less than a 5 percent change in the clamping voltage.
 - 7) Provide surge protection devices having protection modes, and a suppressed voltage rating (SVR) as specified in the second edition of UL 1449, for grounded wye circuits with 480Y/277 Volt, three-phase, four-wire circuits as follows:
 - a) Line to Neutral: 800 Volts for 480Y/277.
 - b) Line to Ground: 800 Volts for 480Y/277.
 - c) Neutral to Ground: 800 Volts for 480Y/277.
 - 8) Provide surge protection devices having protection modes, and a suppressed voltage rating (SVR) as specified in the second edition of UL 1449, for 480 Volt, three-phase, three-wire, delta circuits as follow:
 - a) Line to Line: 2000 Volts for 480 Volts.
 - b) Line to Ground: 1500 Volts for 480 Volts.
- c. Manufacturers:
 - 1) Current Technology; a subsidiary Thomas & Betts Power Solutions, LLC, <https://currenttechnology.com>.
 - 2) Cutler-Hammer, Eaton Electrical Inc., www.eaton.com/EatonCom/Markets/Electrical/.

- 3) Liebert Corporation, an Emerson Network Power Company, <https://www.vertivco.com/en-us/products/brands/liebert/>.
- 4) Siemens Energy and Automation, Inc., <https://www.industry.usa.siemens.com/>.
- 5) Square D; a brand of Schneider Electric, www.schneider-electric.us.
- 6) Approved equal.

F. Finishes:

1. Panels and Trim:
 - a. Immediately after cleaning and pretreating steel panels and trim, factory-finish the panels and trim with the manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
2. Back Boxes:
 - a. Provide back boxes having the same finish as the panels and trim.
3. Fungus Proofing:
 - a. Provide permanent fungicidal treatment for overcurrent protective devices and other components.

2.02 ACCESSORIES

A. Accessory Set:

1. Provide an accessory set that include the tools and miscellaneous items required for overcurrent protective device tests, inspections, maintenance, and operation.

B. Portable Test Set:

1. Provide a portable test set for testing the functions of solid-state trip devices without the necessity of removing them from the panelboard.
 - a. Include relay and meter test plugs suitable for testing the panelboard meters and switchboard class relays.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions:

1. Examine the elements and surfaces to receive panelboards for compliance with the installation tolerances and other conditions affecting performance of the Work.
2. Examine panelboards before installation.

B. Evaluation and Assessment:

1. Proceed with installation only after unsatisfactory conditions have been corrected.

2. Reject panelboards that are damaged or rusted or have been subjected to water saturation.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the panelboards.
- B. Surface Preparation:
 1. For floor mounted panelboards, provide concrete bases having a minimum 4-inch (100mm) nominal thickness and that comply with the requirements for concrete bases specified in Section 03300, Cast-in-Place Concrete.
 - a. Install dowel rods to connect the concrete base to the concrete floor beneath.
 - b. Unless otherwise indicated in the Contract Documents, install dowel rods around the full perimeter of the concrete base on 18-inch (450mm) centers.
 2. For floor mounted panelboards, install anchor bolts to the elevations required for proper attachment to the panelboards.
 - a. Place and secure anchorage devices.
 - 1) Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded to properly locate these items.
 - 2) Cast anchor-bolt inserts into the concrete bases.
 - 3) Install epoxy-coated anchor bolts that extend through the concrete base, and anchor into the structural concrete floor beneath.
 - b. Submit the setting drawings, templates, diagrams, instructions, and directions for placing and securing anchorage devices to the Program/Project Manager for information.

3.03 INSTALLATION

- A. When installing panelboards, comply with the requirements specified in NECA 1, NECA 407, NEMA PB 1.1, and NFPA 70E.
- B. Equipment Mounting:
 1. Mount panelboard cabinets plumb and rigid, without distortion of the box.
 2. Mount recessed panelboards with their fronts uniformly flush with the wall finish, and mating with the back box.
 3. Install floor mounted panelboards on concrete bases.
 4. Attach all panelboards to the vertical finished or structural surface behind the panelboard.
 5. Mount and anchor panelboards in accordance with the requirements specified in Section 16071, Seismic Controls.

6. Unless otherwise indicated in the Contract Documents, mount the top of the trim 90 inches (2286mm) above the finished floor.
 - a. The operating handle of the top-most switch or circuit breaker, when in the in on position, may not be higher than 79 inches (2000mm) above the finished floor or grade.
- C. Temporary Lifting Provisions:
 1. Remove temporary lifting eyes, channels, and brackets, and temporary blocking of moving parts, from the panelboards.
- D. Install overcurrent protective devices and controllers that were not already factory-installed.
- E. Install filler plates in unused spaces.
- F. If ceilings are accessible, or if there are raised floors, or if panelboards are located in spaces that will be finished, provide the following empty conduits:
 1. Stub four 1-inch (27-GRC) empty conduits from each panelboard into accessible ceiling spaces or spaces designated to be ceiling space in the future.
 2. Stub four 1-inch (27-GRC) empty conduits into raised floor spaces or below slabs not on grade.
- G. Arrange the conductors in gutters into groups, and bundle and wrap the conductors with wire ties after completing load balancing.
- H. Special Techniques:
 1. Identification:
 - a. Identify panelboards, field-installed conductors, interconnecting wiring, and components in accordance with the requirements specified in Section 16075, Electrical Identification.
 - 1) Provide warning signs complying with the requirements specified in Section 16075, Electrical Identification.
 - b. Panelboard Schedules:
 - 1) After balancing the panelboard loads, create a directory for each panelboard for installation in the panelboard to indicate the installed circuit loads.
 - a) Use a computer or typewriter to create the directory; handwritten directories are unacceptable.
 - b) Incorporate the Owner's final room designations into the directory.
 - 2) Submit final version of each panelboard schedule to the Program/Project Manager for approval after load balancing has been performed on the panelboard.
 - a) Obtain approval from the Program/Project Manager before installing the directory.

- c. Panelboard Nameplates:
 - 1) Label each panelboard with a nameplate complying with the identification requirements specified in Section 16075, Electrical Identification.
- d. Device Nameplates:
 - 1) Label each branch circuit device in distribution panelboards with a nameplate complying with the identification requirements specified in Section 16075, Electrical Identification.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. During the period when panelboards are being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing and inspection of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - 1) Periodic Special Inspections will be performed during the installation of panelboards.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency and/or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
 - 2. Testing Agency Responsibilities:
 - 1) Have the Testing Agency employed by the Contractor perform the tests specified herein, and prepare a certified written Field Quality-Control Report for each test conducted to record the following information pertaining to the test:
 - a) The panelboards included in the testing.
 - b) Test procedures used to perform the testing.
 - c) Test results that comply with the requirements specified.
 - d) Test results that do not comply with the specified requirements, and corrective action taken to achieve compliance with the requirements.
 - (1) Note deficiencies detected, the remedial action taken, and observations after remedial action.
 - 3. Insulation Resistance Test:
 - a. Test Procedure:

- 1) For each panelboard bus, component, connecting supply, feeder, and control circuit, have the Testing Agency test the insulation resistance.
 - 2) Have the Testing Agency prepare a certified Field Quality-Control Report that identifies the panelboards included and documents the Insulation Resistance Tests, and submit the report to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Panelboard buses, components, connecting supply, feeders, and control circuits having insulation sufficient for the wiring installation to be free from short circuits and from grounds pass the Insulation Resistance Test.
 - a) These items will be considered defective if they do not pass the specified test.
4. Electrical Continuity Test:
 - a. Test Procedure:
 - 1) Have the Testing Agency test the electrical continuity of each circuit.
 - 2) Have the Testing Agency prepare a certified Field Quality-Control Report that identifies the panelboards included and documents the Continuity Tests, and submit the report to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Circuits displaying electrical discontinuities fail the Electrical Continuity Test.
5. NETA Acceptance Testing:
 - a. Test Procedure:
 - 1) Have the Testing Agency perform each electrical test specified for panelboards in ANSI/NETA ATS.
 - 2) Have the Testing Agency prepare a certified Field Quality-Control Report that identifies the panelboards included and documents the NETA Acceptance Testing, and submit the report to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Have the Testing Agency submit certification of compliance with the test parameters specified in ANSI/NETA ATS to the Program/Project Manager for approval.
6. Infrared Scanning:
 - a. Test Procedure:
 - 1) Instruments and Equipment:
 - a) Have the Testing Agency furnish and use a portable infrared scanning device designed to measure temperature or to detect significant deviations from normal values.
 - b) Have the Testing Agency submit a calibration record for the infrared scanning device to the Program/Project manager for information.

- 2) Initial Infrared Scanning:
 - a) After Substantial Completion, but not more than 60 days after Final Acceptance, have the Testing Agency perform an infrared scan of each panelboard.
 - b) Remove the front panels so joints and connections are accessible to the infrared scanner.
- 3) Follow-up Infrared Scanning:
 - a) Have the Testing Agency perform an additional follow-up infrared scan of each panelboard 11 months after the date of Substantial Completion.
- 4) Have the Testing Agency prepare a certified Field Quality-Control Report that identifies the panelboards included and describes the infrared scanning results, and have the Testing Agency submit the report to the Program/Project Manager for information.
- b. Acceptance Criteria:
 - 1) Significant deviations from normal temperature values are cause for the panelboard under test to fail the infrared scanning testing.
7. Inspections:
 - a. Have the Testing Agency perform each visual and mechanical inspection specified in ANSI/NETA ATS.
 - 1) Have the Testing Agency submit certification of compliance with the inspection parameters specified in ANSI/NETA ATS to the Program/Project Manager for approval.
- B. Non-Conforming Work
 1. Panelboards will be considered defective if they do not pass the specified inspections and tests.
 2. Where possible, correct malfunctioning units onsite, and retest the corrected units to demonstrate compliance with the specified requirements; otherwise, replace malfunctioning units with new units and retest the replacement units.
- C. Manufacturer Services:
 1. Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

3.05 SYSTEM STARTUP

- A. Prior to starting panelboard equipment or systems, obtain and review the manufacturer's installation, operation, and starting instructions.
 1. Submit the manufacturer's installation, operation, and starting instructions for the panelboard equipment and systems to the Program/Project Manager for information.

- B. Set field-adjustable, circuit-breaker trip ranges as indicated on the Contract Drawings or in the coordination report developed as the Work of Section 16055, Overcurrent Protective Device Coordination.
- C. Verify the correctness of the wiring by actual electrical operation of electrical and mechanical devices in both manual and automatic modes of operation.

3.06 ADJUSTING

- A. Adjust moving parts and operable component to function smoothly, and lubricate them as recommended by manufacturer.
- B. Load Balancing:
 - 1. After Substantial Completion, but not more than 60 days after Final Acceptance, measure the load balancing, and make circuit changes.
 - 2. Measure the load balancing as directed by the Program/Project Manager during a period of normal system loading.
 - 3. Perform load-balancing circuit changes outside the normal occupancy/working schedule of the facility, and at a time selected by the Program/Project Manager.
 - a. Avoid disrupting critical 24-hour services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.
 - 4. After circuit changes have been completed, recheck the loads during a normal load period.
 - a. Record the load readings before and after the changes, and submit test records to the Program/Project Manager for information.
 - 5. Tolerances:
 - a. Within a panelboard, differences exceeding 20 percent between phase loads are unacceptable.
 - 1) Rebalance and recheck phase loads as necessary to comply with these minimum phase load tolerance requirements.

3.07 PROTECTION

- A. Take steps to ensure that installed panelboards are protected during subsequent construction activities.

3.08 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Furnish operation and maintenance data for panelboards and components for inclusion in emergency manuals and Operation and Maintenance Manuals as specified in Section 01780, Closeout Submittals, and include the following:
 - a. The overcurrent protective device manufacturer's written instructions for testing and adjusting these devices.

- b. Time-current curves, including selectable ranges for each type of overcurrent protective device that allows adjustments.
2. Submit the operation and maintenance data for the panelboards and components to the Program/Project Manager for information.

SECTION 16460

LOW-VOLTAGE TRANSFORMERS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following types of dry-type transformers rated 600 Volts and less, with capacities up to 1000 kVA:
 - a. Distribution transformers.
 - 2. Requirements for a harmonics suppression system (HSS).
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 03100 - Concrete Forms and Accessories.
 - 5. Section 03200 - Concrete Reinforcement.
 - 6. Section 03300 - Cast-In-Place Concrete.
 - 7. Section 16061 – Electrical Grounding and Bonding.
 - 8. Section 16070 – Hangers and Supports.
 - 9. Section 16071 – Seismic Controls.
 - 10. Section 16075 – Electrical Identification.
 - 11. Section 16120 – Conductors and Cables.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. dBA: Decibels, referenced to the A-weighting filter curve defined in IEC 61672.
 - 2. HSS: Harmonics suppression system.
 - 3. RMS: Root-mean-square.
 - 4. SCR: Silicon-controlled-rectifier or semiconductor-controlled- rectifier.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.

C. Reference Standards:

1. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
2. Institute of Electrical and Electronics Engineers (IEEE):
 - a. IEEE C57.12.91 - IEEE Standard Test Code for Dry-Type Distribution and Power Transformers.
 - b. IEEE 519-2014 Recommended Practice for Harmonic Control in Electric Power Systems.
3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
4. International Electrotechnical Commission (IEC):
 - a. IEC 61672 – Electroacoustics – Sound Level Meters – Part 2: Pattern Evaluation Tests.
5. InterNational Electrical Testing Association (NETA):
 - a. ANSI/NETA ATS – Standard for Acceptance Testing Specifications for Electrical Power Equipment and Systems.
 - b. ANSI/NETA ETT - Standard for Certification of Electrical Testing Technicians.
6. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
7. National Electrical Manufacturers Association (NEMA):
 - a. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
 - b. NEMA ST 1 - Specialty Transformers (Except General-Purpose Type) [*rescinded*].
 - c. NEMA ST 20 - Dry Type Transformers for General Applications [*rescinded*].
 - d. NEMA TP 1 - Guide for Determining Energy Efficiency for Distribution Transformers.
 - e. NEMA TP 2 – Standard Test Method for Measuring the Energy Consumption of Distribution Transformers.
8. Underwriters Laboratories, Inc. (UL):
 - a. UL 506 – Standard for Specialty Transformers.
 - b. UL 1561 - Standard for Dry-Type General Purpose and Power Transformers.
9. United States Government:
 - a. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1910 Occupational Health and Safety Standards.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required

testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.

2. Coordinate size and location of concrete bases with the actual transformer provided.
3. Coordinate installation of wall-mounting and structure-hanging supports with the actual transformer provided.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:

- a. Product Data:
 - 1) Distribution transformers.
 - 2) Based transformers.
 - 3) Transformer nameplates.
- b. Shop Drawings:
 - 1) Transformer equipment assemblies.
- c. Certificates:
 - 1) Seismic Qualification Certificates.
- d. Qualification Statements:
 - 1) Testing Agency's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:

- a. Test and Evaluation Reports:
 - 1) Recorded transformer secondary voltages and tap settings.
- b. Manufacturer's Instructions:
 - 1) Ventilated-type transformer manufacturer's written instructions for providing temporary heat.
- c. Source Quality Control Submittals:
 - 1) Sound-Level Test Reports.
 - 2) IEEE Standard Test Reports.
 - 3) Harmonic Analysis Reports.
- d. Site Quality Control Submittals:
 - 1) NETA Acceptance Testing Field Quality-Control Reports.
 - 2) Calibration record for the infrared scanning device.
 - 3) Infrared Scanning Field Quality-Control Report.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:

- a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the transformers.
- b. Record Documentation:
 - 1) Output Settings Report.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - 2. Testing and Inspection Agency:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.
- B. Qualifications:
 - 1. Testing Agency's Qualifications:
 - a. Employ an independent Testing Agency that is a member company of the InterNational Electrical Testing Association, or a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, that is acceptable to the Authorities Having Jurisdiction (AHJ), and that has the experience and capability to conduct the testing specified herein.
 - 1) Testing Agency's Field Supervisor:
 - a) The Testing Agency's field supervisor to supervise onsite field quality control testing must be currently certified by the InterNational Electrical Testing Association (NETA) in accordance with ANSI/NETA ETT, or by the National Institute for Certification in Engineering Technologies (NICET).
 - 2) Submit the qualifications of the Testing Agency, including the Testing Agency field supervisor's qualifications, to the Program/Project Manager for approval.
- C. Certifications:
 - 1. Electrical Listing and Labeling:

- a. Provide products that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.
2. Seismic Qualification Certificates:
 - a. Have the manufacturer prepare Seismic Qualification Certificates certifying that the low-voltage transformers, accessories, and components will withstand the seismic forces defined in Section 16071, Seismic Controls.
 - 1) Indicate whether withstand certification is based on an actual test of the assembled components, or on calculations.
 - 2) Include a dimensioned outline drawing of each equipment unit identifying the center of gravity, and locating and describing the mounting and anchorage provisions.
 - 3) Include a detailed description of the equipment anchorage devices on which the certification is based, and their installation requirements.
 - b. Submit the Seismic Qualification Certificates to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver materials and equipment in a clean condition.
 2. Provide equipment needed for unloading operations, and have such equipment on the Site to perform unloading work when the material and equipment is delivered.
 - a. If possible, clearly identify pick-points or lift-points on electrical equipment crating and packaging.
 - b. In the absence of pick-points or lift-points on equipment crating and packaging, identify pick-points or lift-points on the equipment itself.

- c. When unloading materials and equipment, provide special lifting harnesses or apparatus as required by the manufacturers.
 3. Inspect materials and equipment for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.

B. Storage and Handling Requirements:

1. Handle materials and equipment in accordance with the manufacturer's written instructions.
2. Store all products whether onsite or off-site, indoors on blocking or pallets.
3. Follow the manufacturer's written instructions for storing the items.
4. Store the electrical equipment and products under cover in heated warehouses or in enclosed buildings that provide protection from the weather on all sides and are equipped with auxiliary heat.

C. Packaging Waste Management:

1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

A. Ambient Conditions:

1. Temporary Heating:
 - a. Throughout periods during which ventilated-type equipment is not energized, and when these transformers are not in a continuously controlled space that is under normal temperature and humidity conditions, provide temporary heat within the enclosure of each ventilated-type unit in accordance with the manufacturer's written instructions.
 - b. Submit the ventilated-type transformer manufacturer's written instructions for providing temporary heat to the Program/Project Manager for information.

PART 2 PRODUCTS

2.01 LOW-VOLTAGE TRANSFORMER EQUIPMENT

A. Manufacturers:

1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:

- 1) Obtain each transformer type from a single source from a single manufacturer.

B. Description:

1. Regulatory Requirements:

a. Phoenix Building Construction Code:

- 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].

b. National Electrical Code (NEC):

- 1) Provide products and installation complying with requirements specified for transformers in NFPA 70.

C. Performance:

1. Seismic Performance:

- a. Provide transformers capable of withstanding the effects of earthquake motions as defined in Section 16071, Seismic Controls.
 - 1) The phrase "capable of withstanding" is hereby defined to mean the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event.

2. Harmonics Suppression System (HSS) Performance:

- a. Provide Harmonic Study in accordance with IEEE 519.
- b. Verify system resonance in accordance with IEEE 399, Section 10.4.3.
- c. Compare maximum harmonic distortion limits at the service entrance section and motor control center under normal load operating conditions.
- d. Compare to maximum distortion limits per IEEE 519, Section 5.
- e. Analyze system against acceptable levels, TDD vs THD.
- f. Harmonic measurement instruments shall comply with IEC 61000 4-7 and IEC 61000-4-30.
- g. Provide analysis results and report in summary table for approval.

D. Design Criteria:

1. Transformers:

- a. Provide factory-assembled and factory-tested, air-cooled transformer units designed for 60 Hertz service, and having a 3-phase, 3-wire primary, and a 3-phase, 4-wire secondary.
 - 1) Cores:

- a) Provide grain-oriented, non-aging silicon steel transformer cores.
 - 2) Coils:
 - a) Provide continuous copper coil windings without splices except for taps.
 - b) Provide brazed or pressure type internal coil connections.
 - b. Provide transformer units complying with the requirements specified in IEEE C57.12.91.
 - 2. Harmonics Suppression System (HSS):
 - a. Provide transformers having integral low frequency harmonic suppression obtained via a passive device installed at the secondary of a wye-connected distribution transformer having voltage of 120/208 and a frequency of 60 Hertz as required by the Harmonic Analysis Report.
 - 3. Product Data:
 - a. Submit Product Data for each type and size of transformer to be provided under this Section to the Program/Project Manager for approval.
 - 1) Include the rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, and performance for each type and size of transformer.
 - 4. Shop Drawings:
 - a. Submit Shop Drawings that detail the transformer equipment assemblies, and indicate the dimensions, weights, loads, required clearances, method of field assembly, components, and the location and size of each field connection to the Program/Project Manager for approval.
 - 1) Wiring Diagrams:
 - a) Include power, signal, and control wiring diagrams.
- E. Materials:
- 1. Distribution Transformers:
 - a. Provide distribution transformers complying with the requirements specified in NEMA ST 20, and listed and labeled in accordance with the requirements specified in UL 1561.
 - b. Provide transformers that are constructed to withstand the seismic forces specified in Section 16071, Seismic Controls.
 - c. Cores:
 - 1) Provide transformer cores having 1 leg per phase.
 - d. Low-Sound-Level Requirements:
 - 1) Provide a minimum low-sound-level of 3 dBA less than the standard sound levels specified in NEMA ST 20 when factory-tested in accordance with the methods specified in IEEE C57.12.91.
 - e. Enclosure:

- 1) Provide totally enclosed, nonventilated transformer enclosures complying with the requirements for NEMA Type 2 enclosures specified in NEMA 250.
- 2) Provide cores and coils encapsulated within a resin compound that, seals out both moisture and air.
- f. Transformer Enclosure Finish:
 - 1) Provide a gray transformer enclosure finish complying with the requirements specified in NEMA 250.
- g. Taps:
 - 1) For transformers rated smaller than 3 kVA, provide one 5 percent tap above the normal full capacity.
 - 2) For transformers rated 7.5 kVA to 24 kVA, provide one 5 percent tap above and one 5 percent tap below normal full capacity.
 - 3) For transformers rated 25 kVA and larger, provide two 2.5 percent taps above and two 2.5 percent taps below the normal full capacity.
- h. Insulation Class:
 - 1) Provide a UL-component-recognized insulation system rated for 220 degrees Celsius, with a maximum of 80 degrees Celsius rise above a 40 degrees Celsius ambient temperature.
- i. Energy Efficiency:
 - 1) For transformers rated 15 kVA and larger, provide units complying with the requirements for Class 1 efficiency levels specified in NEMA TP 1 when tested in accordance with the methods specified in NEMA TP 2.
- j. Wall Brackets:
 - 1) For transformers indicated to be wall-mounted on the Contract Drawings, provide the manufacturer's standard wall brackets.
- k. Fungus Proofing:
 - 1) Provide permanent fungicidal treatment for the transformer coils and cores.
- l. Manufacturers:
 - 1) ACME Electric Corporation, Power Distribution Products Division, <https://www.hubbell.com/acmeelectric/en/>.
 - 2) Controlled Power Company, www.controlledpwr.com.
 - 3) Cutler-Hammer, Eaton Electrical Inc., www.eaton.com/EatonCom/Markets/Electrical/.
 - 4) Federal Pacific Transformer Company, Division of Electro-Mechanical Corp., www.federalpacific.com
 - 5) Hammond Manufacturing Ltd., www.hammondmfg.com.
 - 6) Magnetek, www.magnetek.com.
 - 7) Micron Industries Corp., www.microntransformers.com.
 - 8) Myers Power Products, Inc., <http://www.myerspwrproducts.com>.
 - 9) Sola/Hevi-Duty, <http://www.solahevidutysales.com/>.

- 10) Square D; a brand of Schneider Electric, www.schneider-electric.us.
- 11) Approved equal.
2. Harmonics Suppression System (HSS):
 - a. Provide a harmonics suppression system (HSS) that has the specified performance as identified in the Harmonic Analysis Report.

2.02 ACCESSORIES

- A. Identification Devices:
 1. Transformer Nameplates:
 - a. For each transformer, provide laminated-plastic or metal engraved nameplates as specified in Section 16075, Electrical Identification, and mounted with corrosion-resistant screws.

2.03 SOURCE QUALITY CONTROL

- A. Tests and Inspections:
 1. Materials specified in this Section require advance examination or laboratory testing according to the methods referenced herein, or as required by the Program/Project Manager.
 2. Sound-Level Test:
 - a. Test Procedure:
 - 1) Have the Testing Agency factory-test the sound-level of the equipment provided for this Contract under this Section in accordance with the methods specified in IEEE C57.12.91.
 - 2) Have the Testing Agency prepare source quality-control Sound-Level Test Reports documenting the results of the testing, and submit them to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Equipment having a minimum low-sound-level of 3 dBA less than the standard sound levels specified in NEMA ST 20 passes the Sound-Level Test.
 3. IEEE Standard Tests:
 - a. Test Procedure:
 - 1) Have the Testing Agency factory-test the transformers in accordance with the requirements specified in IEEE C57.12.91.
 - 2) Have the Testing Agency prepare source quality-control IEEE Standard Test Reports documenting the results of the testing, and submit them to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Equipment complying with the requirements specified in IEEE C57.12.91 passes the IEEE Standard Tests
 4. Inspections:
 - a. Have the Testing Agency inspect the transformers in accordance with the requirements specified in IEEE C57.12.91.

- B. Non-Conforming Work:
 - 1. Do not allow defective equipment to be shipped to the Site.
- C. Coordination of Other Tests and Inspections:
 - 1. Notify the code-required Approved Agency responsible for performing special inspections when transformers for this Contract are being fabricated and/or tested.
 - 2. Cooperate with the code-required Approved Agency when they are performing required material verifications and other special inspections.
 - a. Provide full access to the Work.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Examine conditions where the transformers will be installed for compliance with the enclosure- temperature and ambient-temperature requirements for each transformer.
 - 2. Verify by field measurements that the dimensions are as needed to maintain the working clearances required by NFPA 70 and manufacturer's written instructions.
 - 3. Examine walls, floors, roofs, and concrete bases where the transformers will be installed for suitable mounting conditions.
 - 4. Verify that the ground connections are in place, and that the requirements specified in Section 16061, Electrical Grounding and Bonding, have been met.
 - a. The maximum allowable ground resistance at the location of a transformer is 5 ohms.
- B. Evaluation and Assessment:
 - 1. Proceed to install the transformers only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the transformers.
- B. Surface Preparation:
 - 1. For floor mounted transformers, provide concrete bases having a minimum 4-inch (100mm) nominal thickness constructed according to the manufacturer's written instructions, the seismic codes applicable to the Contract, and the requirements specified in Section 16070, Hangers and Supports.
 - a. Cast anchor-bolt inserts into the concrete bases.

- 1) Install anchor bolts to the elevations required for proper attachment to the transformers.
- b. Provide concrete formwork as specified in Section 03100, Concrete Forms and Accessories; concrete reinforcement as specified in Section 03200, Concrete Reinforcement; and concreting as specified in Section 03300, Cast-In-Place Concrete, that comply with the requirements for concrete bases.

3.03 INSTALLATION

- A. Install wall-mounted transformers level and plumb with wall brackets fabricated by the transformer manufacturer.
 1. Brace wall-mounted transformers as specified in the seismic codes applicable to the Contract and Section 16071, Seismic Controls.
- B. Install and anchor floor-mounted transformers level and plumb on concrete bases.
- C. Systems Integration:
 1. Ground the transformer equipment in accordance with the requirements specified in Section 16061, Electrical Grounding and Bonding.
 2. Connect the transformer wiring in accordance with the requirements specified in Section 16120, Conductors and Cables.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 1. During the period when the transformers are being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials or proportions requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
 2. Testing Agency Responsibilities:
 - 1) Have the Testing Agency employed by the Contractor perform the tests and inspections specified herein, and prepare a written Field

Quality-Control Report for each test and inspection conducted to record the following information pertaining to the test or inspection:

- a) The transformers included in the testing.
- b) Test procedures used to perform the testing.
- c) Test results that comply with the requirements specified.
- d) Test results that do not comply with the specified requirements, and corrective action taken to achieve compliance with the requirements.
 - (1) Note deficiencies detected, remedial action taken, and observations after remedial action.

3. NETA Acceptance Testing:

a. Test Procedure:

- 1) Have the Testing Agency perform each electrical test specified for transformers in ANSI/NETA ATS.
- 2) Have the Testing Agency prepare a certified NETA Acceptance Testing Field Quality-Control Report that identifies the transformers included and documents the NETA acceptance testing, and submit the Report to the Program/Project Manager for information.

b. Acceptance Criteria:

- 1) Have the Testing Agency submit certification of compliance with the test parameters specified in ANSI/NETA ATS to the Program/Project Manager for approval.
- 2) Test Labeling:
 - a) On satisfactory completion of the testing of each unit, have the Testing Agency attach a dated and signed "Satisfactory Test" label to the tested unit.

4. Infrared Scanning:

a. Test Procedure:

- 1) Instruments and Equipment:
 - a) Have the Testing Agency furnish and use a portable infrared scanning device designed to measure temperature or to detect significant deviations from normal values.
 - b) Have the Testing Agency submit a calibration record for the infrared scanning device to the Program/Project manager for information.
- 2) Initial Infrared Scanning:
 - a) Two months after Substantial Completion, have the Testing Agency perform an infrared scan of the transformer connections.
- 3) Follow-up Infrared Scanning:
 - a) Have the Testing Agency perform 2 additional follow-up infrared scans of each transformer, the first follow-up scan 4 months after the date of Substantial Completion, and the second follow-up scan 7 months after the first follow-up scan.

- 4) Have the Testing Agency prepare a certified Infrared Scanning Field Quality-Control Report that identifies the transformers included and describes the infrared scanning results, and submit the report to the Program/Project Manager for information.
- b. Acceptance Criteria:
 - 1) Significant deviations from normal temperature values are cause for the transformer under test to fail the infrared scanning testing.
 - 2) Test Labeling:
 - a) On satisfactory completion of the testing of each unit, have the Testing Agency attach a dated and signed "Satisfactory Test" label to the tested unit.
5. Inspections:
 - a. Have the Testing Agency perform each visual and mechanical inspection and electrical test specified in ANSI/NETA ATS.
- B. Non-Conforming Work
 1. Remove and replace units that do not pass the tests or inspections, and retest the replacements as specified above.
- C. Manufacturer Services:
 1. Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
 - a. Have the factory-authorized service representative perform tests and inspections, and prepare and submit certified test reports to the Program/Project Manager for information.

3.05 ADJUSTING

- A. Record the transformer secondary voltage at each low-voltage transformer unit for at least 48 hours of a typical occupancy period.
 1. Adjust the transformer taps to provide the optimum voltage conditions at the secondary terminals.
 - a. Optimum is defined as not exceeding the nameplate voltage plus 10 percent, and not being lower than the nameplate voltage minus 3 percent, at maximum load conditions.
 2. Submit the recorded transformer secondary voltages and tap settings as test results to the Program/Project Manager for information.
- B. Output Settings Report:
 1. Prepare a written Output Settings Report recording the output voltages and tap settings, and submit the Report to the Program/Project Manager for information.

3.06 CLEANING

- A. Clean the area around the transformers by vacuuming dirt and debris; do not use compressed air to assist in the cleaning.
- B. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 PROTECTION

- A. Take steps to ensure that installed transformers are protected during subsequent construction activities.

3.08 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Furnish operation and maintenance data for the transformers for inclusion in emergency and Operation and Maintenance manuals as specified in Section 01780, Closeout Submittals.
 - 2. Submit the operation and maintenance data for the transformers to the Program/Project Manager for information.

0	10/06/2017	N/A	All	First edition.

SECTION 16491

FUSES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for cartridge fuses rated 600 Volts AC and less for use in control circuits, enclosed switches, panelboards, switchboards, enclosed controllers, and motor-control centers.
 - 2. Requirements for plug fuses rated 125 Volts AC and less for use in plug-fuse-type enclosed switches, fuseholders, and panelboards.
 - 3. Requirements for plug-fuse adapters for use in Edison-base, plug-fuse sockets.
 - 4. Requirements for spare-fuse cabinets.
- B. Products Supplied But Not Installed Under This Section:
 - 1. Generally, the fuses supplied under this Section are installed in equipment provided under other Sections as part of that equipment's startup activities.
- C. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01780 - Closeout Submittals.
 - 3. Section 16055 – Overcurrent Protective Device Coordination.
 - 4. Section 16075 – Electrical Identification.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AC: Alternating current.
- B. Definitions:
 - 1. Fuse: A type of electrical overcurrent protective device that typically has a conductive element that melts when too much current flows which in turn interrupts the connected circuit.
- C. Reference Standards:
 - 1. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 2. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
 - 3. National Fire Protection Association (NFPA).
 - a. NFPA 70 – National Electrical Code (NEC).

4. National Electrical Manufacturers Association (NEMA):
 - a. NEMA FU 1 - Low Voltage Cartridge Fuses.
5. Underwriters Laboratories, Inc. (UL):
 - a. UL 248-11 - Low-Voltage Fuses - Part 11: Plug Fuses.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate the selection of fuses for electrical equipment with the required average melt characteristics and peak let-through currents indicated in the studies prepared as specified in Section 16055, Overcurrent Protective Device Coordination.
- B. Sequencing:
 1. Take responsibility for arranging the Work and issuing purchase orders to facilitate securing delivery of the fuses and related items, so the Work progresses without delay or interruption.

1.04 SUBMITTALS

- A. Action Submittals:
 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Cartridge fuses.
 - 2) Plug fuses.
 - 3) Plug-fuse adapters.
 - 4) Spare-fuse cabinets.
 - b. Certificates:
 - 1) Electrical component, device, and accessory certification.
- B. Closeout Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Fuses.
- C. Maintenance Material Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish extra fuses matching the products installed, and packaged for storage by having a protective coverings and labels identifying the contents.

- a) For each size and type of fuse, provide fuses equal in number to 10 percent of the quantity installed, but no fewer than 2 of each size and type.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:

- a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].

B. Certifications:

1. Electrical Component, Device, and Accessory Certifications:

- a. Provide products that are listed and labeled as defined in Article 100 of NFPA 70 by Underwriters Laboratory, approved by Factory Mutual, or certified as meeting the standards of UL by the Electrical Testing Laboratory (ETL) acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
- b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Ensure materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.

B. Storage and Handling Requirements:

1. Protect fuse products from dirt and corrosion by placing them in closed containers.
 - a. Store fastener products in a protected shelter

1.07 SITE CONDITIONS

A. Ambient Conditions:

1. Evaluate the ambient temperatures to determine if fuse rating adjustment factors must be applied to the fuse ratings.
 - a. Where the ambient temperature to which fuses are directly exposed is less than 40 degrees Fahrenheit (5 degrees Centigrade) or more than 100 degrees Fahrenheit (38 degrees Centigrade), apply the manufacturer's ambient temperature adjustment factors to the fuse ratings.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

A. Manufacturers:

1. Manufacturer List:
 - a. Cooper Bussmann, Inc., www.cooperbussmann.com.
 - b. Automation Direct, <https://www.automationdirect.com/>.
 - c. Merson Electric Power, <http://ep-us.mersen.com/>.
 - d. Littelfuse, Inc., www.littelfuse.com.
 - e. Approved equal.
2. Substitution Limitations:
 - a. Source Limitations:
 - 1) Obtain fuses for use within a specific product or circuit from a single source from a single manufacturer.

B. Description:

1. Regulatory Requirements:
 - a. National Electrical Code (NEC):
 - 1) Comply with requirements specified for fuses in NFPA 70.

C. Performance:

1. Cartridge Fuses:
 - a. For cartridge fuse applications, comply with the requirements specified in NEMA FU 1.
 - b. Service Entrances:
 - 1) For service entrances, provide Class RK1, time delay cartridge fuses.
 - c. Feeders:
 - 1) For feeders, provide Class RK1, time delay cartridge fuses.
 - d. Motor Branch Circuits:
 - 1) For motor branch circuits, provide Class RK1, time delay cartridge fuses.
 - e. Other than Motor Branch Circuits:

- 1) For other than motor branch circuits, provide Class RK1, time delay cartridge fuses.
 - f. Control Circuits:
 - 1) For control circuits, provide Class CC, time delay cartridge fuses.
 2. Plug Fuses:
 - a. For plug fuse applications, comply with the requirements specified in UL 248-11.
- D. Design Criteria:
1. Fuse Applications:
 - a. Select fuse classes and types by coordinating the required average melt characteristics and peak let-through currents with the studies prepared as specified in Section 16055, Overcurrent Protective Device Coordination.
 2. Product Data:
 - a. For each product specified under this Section, submit Product Data to the Program/Project Manager for approval.
 - 1) Include construction details, material, dimensions, descriptions of individual components, and finishes for spare-fuse cabinets.
 - 2) Include the following information for each fuse type indicated:
 - a) Ambient Temperature Adjustment Information:
 - (1) If the ratings of the uses have been adjusted to accommodate ambient temperatures, provide a list of the fuses with adjusted ratings.
 - (2) For each fuse having adjusted ratings, include the location of the fuse, the original fuse rating, the local ambient temperature, and the adjusted fuse rating.
 - (3) Furnish the manufacturer's technical data on which the ambient temperature adjustment calculations are based.
 - b) Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
 - c) Current-limitation curves for fuses with current-limiting characteristics.
 - d) Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse.
 - e) Coordination charts and tables and related data.
 - f) Fuse sizes for elevator feeders and elevator disconnect switches.
- E. Materials:
1. Cartridge Fuses:
 - a. Provide nonrenewable cartridge fuses having voltage ratings consistent with the circuit voltages, and complying with the requirements specified in NEMA FU 1.
 2. Plug Fuses:

- a. Provide nonrenewable plug fuses having a 125 Volt AC rating, and complying with the requirements specified in UL 248-11.
3. Plug-Fuse Adapters:
 - a. Provide plug-fuse adapters capable of retrofitting Edison-base fuseholders or sockets with Type S, rejection-base plug fuses.
 - 1) Provide plug-fuse adapters that are irremovable once installed.
 - b. Provide plug-fuse adapters having ampere ratings matching the fuse ratings.

2.02 ACCESSORIES

- A. Spare-Fuse Cabinets:
 1. Provide wall-mounted steel spare-fuse cabinet units having a full-length, recessed piano-hinged door and a key-coded cam lock and pull.
 - a. Size:
 - 1) Provide spare-fuse cabinet units adequately sized to store the spare fuses specified; and, in addition, a minimum 15 percent spare capacity.
 - b. Finish:
 - 1) Provide spare-fuse cabinet units having a gray, baked enamel finish.
 - c. Identification:
 - 1) Apply a 1-1/2 inch (38mm) high lettered label reading "SPARE FUSES" to the exterior of the cabinet door.
 - d. Fuse Pullers:
 - 1) Where applicable and available, provide fuse pullers for each size of fuse from fuse manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Examine holders to receive fuses for compliance with installation tolerances and other conditions affecting performance, such as rejection features.
- B. Evaluation and Assessment:
 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Examine utilization equipment nameplates and installation instructions.
 1. Coordinate the fuse ratings with the utilization equipment nameplate limitations of the maximum fuse size, and with system short-circuit current levels.

- B. Install plug-fuse adapters in Edison-base fuseholders and sockets if required.
 - 1. Ensure that the adapters are irremovable once they have been installed.
- C. Install the fuses in fusible devices.
 - 1. Examine fuses before installation.
 - a. Reject fuses that are moisture damaged or physically damaged.
 - 2. Install fuses of the sizes and with the characteristics appropriate for each piece of equipment.
 - 3. Arrange the installed fuses so their rating information is readable without having to remove the fuses.
- D. Provide identification labels in accordance with the requirements specified in Section 16075, Electrical Identification; and indicate fuse replacement information on the inside door of each fused switch and adjacent to each fuse block, socket, and holder.
- E. Install spare-fuse cabinets in accordance with the cabinet manufacturer's recommendations.
 - 1. Submit the manufacturer's recommendations for installing the spare-fuse cabinets to the Program/Project Manager for information.

3.03 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Furnish operation and maintenance data for fuses to be included in emergency, operation, and maintenance manuals.
 - a. In addition to items specified in Section 01780, Closeout Submittals, include the following:
 - 1) Ambient temperature adjustment information.
 - 2) Current-limitation curves for fuses with current-limiting characteristics.
 - 3) Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse.
 - a) Submit the curves on translucent log-log graph paper.
 - 4) Coordination charts and tables, and related data.

SECTION 16497

AUTOMATIC TRANSFER SWITCHES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for automatic transfer switches rated 600 Volts and less.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01770 - Closeout Procedures.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 01810 - Commissioning.
 - 6. Section 03100 - Concrete Forms and Accessories.
 - 7. Section 03200 - Concrete Reinforcement.
 - 8. Section 03300 - Cast-In-Place Concrete.
 - 9. Section 16061 - Electrical Grounding and Bonding.
 - 10. Section 16070 - Hangers and Supports.
 - 11. Section 16075 - Electrical Identification.
 - 12. Section 16120 - Conductors and Cables.
 - 13. Section 16234 - Diesel Electric Generators.
 - 14. Section 16995 - Commissioning of Electrical Systems.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AC: Alternating electric current.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.
- C. Reference Standards:
 - 1. American Society of Civil Engineers (ASCE)/Structural Engineering Institute (SEI):

- a. ASCE/SEI 7 - Minimum Design Loads for Buildings and Other Structures.

 - c. UL 869A – Reference Standard for Service Equipment.
 - d. UL 1008 - Standard for Transfer Switch Equipment.
10. United States Government:
 - a. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1910 Occupational Health and Safety Standards.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required

testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.

2. Coordinate the size and location of concrete bases for the automatic transfer switches.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Automatic transfer switches.
 - b. Shop Drawings:
 - 1) Automatic transfer switches.
 - 2) Single-line diagram.
 - c. Qualification Statements:
 - 1) Diesel electric generator manufacturer's qualifications.
 - 2) Testing Agency's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Automatic transfer switch manufacturer's written installation instructions.
 - b. Site Quality Control Submittals:
 - 1) Field Quality-Control Report for the Insulation Resistance Test.
 - 2) Field Quality-Control Report for the Ground-Fault Tests.
 - 3) Field Quality-Control Report for the Performance Test.
 - 4) Field Quality-Control Report for the NETA Acceptance Testing.
 - 5) Field Quality-Control Report for the Infrared Scanning.
 - 6) Calibration record for the infrared scanning device.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the automatic transfer switches and accessories.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - c. Periodic Special Inspections will be performed during the installation of automatic transfer switches and accessories.
2. Testing and Inspection Agencies:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Qualifications:

1. Automatic Transfer Switch Manufacturer's Qualifications:
 - a. Procure products from a qualified manufacturer.
 - b. Procure products from a manufacturer that maintains a service center capable of providing training, parts, and emergency maintenance repairs within a response period of less than eight hours from time of notification.
 - c. Submit the automatic transfer switch manufacturer's qualifications to the Program/Project Manager for approval.
2. Testing Agency's Qualifications:
 - a. Employ an independent Testing Agency that is a member company of the InterNational Electrical Testing Association, or a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, that is acceptable to the Authorities Having Jurisdiction (AHJ), and that has the experience and capability to conduct the testing specified herein.
 - 1) Testing Agency's Field Supervisor:
 - a) The Testing Agency's field supervisor to supervise onsite field quality control testing must be currently certified by the InterNational Electrical Testing Association (NETA) in accordance with the requirements specified in ANSI/NETA ETT, or by the National Institute for Certification in Engineering Technologies (NICET) in accordance with the requirements specified in the Industrial Instrumentation Engineering Technology Industrial Instrumentation Program Detail Manual.

- 2) Submit the qualifications of the Testing Agency, including the Testing Agency field supervisor's qualifications, to the Program/Project Manager for approval.

C. Certifications:

1. Electrical Listing and Labeling:

- a. Provide electrical components, devices, and accessories that are listed and labeled for the location the product is installed in, and the application intended, by a Nationally Recognized Testing Laboratory (NRTL), as defined in Article 100 of NFPA 70, acceptable to the Authorities Having Jurisdiction (AHJ), unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
- b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Package and protect materials to limit field repairs.
 - a. Deliver pre-finished products in a manner that will prevent material damage and deterioration or contamination from the elements.

B. Storage and Handling Requirements:

1. Store and handle products in a manner that will prevent material damage and deterioration or contamination from the elements.

C. Packaging Waste Management:

1. Inspect for and remove shipping bolts, blocks, and tie-down straps.
2. Remove loose packing and flammable materials from inside the automatic transfer switches.
3. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

A. Existing Conditions:

1. Interruption of Existing Electric Service:

- a. Do not interrupt electric service to facilities occupied by the Owner or others unless permitted under the following conditions, and then only after arranging to provide temporary electric service according to the requirements indicated:
 - 1) Notify the Program/Project Manager no fewer than 2 weeks in advance of the proposed interruption of electric service.
 - 2) Do not interrupt electric service without the Program/Project Manager's written permission.

PART 2 PRODUCTS

2.01 AUTOMATIC TRANSFER SWITCH ASSEMBLIES

A. Manufacturers:

1. Manufacturer List:

- a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 1) Eaton Electrical Inc.; Cutler-Hammer, www.eaton.com.
 - 2) GE Zenith Controls, www.geindustrial.com.
 - 3) Generac Power Systems, Inc., <http://www.generac.com>.
 - 4) Approved equal.

2. Substitution Limitations:

- a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- b. Source Limitations:
 - 1) Obtain the automatic transfer switches from a single source and single manufacturer.

B. Description:

1. Regulatory Requirements:

- a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- b. National Electrical Code (NEC):
 - 1) Provide products and installation complying with the requirements specified for automatic transfer switches in NFPA 70.

C. Performance:

1. Indicated Current Ratings:

- a. Unless otherwise indicated in the Contract Documents, the indicated current ratings apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of the switch ampere rating.
 - 2. Tested Fault-Current Closing and Withstand Ratings:
 - a. Provide automatic transfer switches having tested fault-current closing and withstand ratings based on testing in accordance with the requirements specified in UL 1008 that are adequate for the duty imposed by the protective devices at the installed locations under the fault conditions indicated in the Contract Documents.
 - 1) Where the transfer switch includes internal fault-current protection, provide automatic transfer switches having a rating of the switch and trip unit combination exceeding the indicated fault-current value at the installation location.
 - 3. Solid-State Controls:
 - a. Provide automatic transfer switches with solid-state controls having a repetitive accuracy of all settings of plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 degrees Celsius.
 - 4. Resistance to Damage by Voltage Transients:
 - a. Provide automatic transfer switches having components capable of meeting or exceeding the voltage-surge withstand capability requirements when tested in accordance with the method specified in IEEE C62.41, and components capable of meeting or exceeding the voltage-impulse withstand test requirements when tested in accordance with the method specified in NEMA ICS 1.
- D. Design Criteria:
- 1. Provide automatic transfer switches complying with the design and installation requirements specified in NEMA ICS 1, NFPA 99, and NFPA 110.
 - 2. Except where the requirements specified in this Section are stricter, provide automatic transfer switches complying with the design and installation requirements specified in UL 1008.
 - 3. Transfer Switches Based on Molded-Case-Switch Components:
 - a. Provide automatic transfer switches based on molded-case-switch components complying with the requirements specified in NEMA AB 1, UL 489, and UL 869A.
 - 4. Automatic Open-Transition Transfer Switches:
 - a. Provide automatic open-transition transfer switches having the following functions and characteristics:
 - 1) Fully automatic break-before-make operation.
 - 2) Load transfer without interruption, through momentary interconnection of both power sources not exceeding 100 milliseconds.
 - 3) Initiation of No-Interruption Transfer:

- a) The initiation of no-interruption Transfer is controlled by the in-phase monitor and sensors confirming both sources are present and acceptable.
 - b) Initiation occurs without active control of generator.
 - 4) Failure of the power source serving the load initiates an automatic break-before-make transfer.
- 5. Switch Characteristics:
 - a. Provide automatic transfer switches designed for continuous-duty repetitive transfer of full-rated current between active power sources.
 - 1) Switch Action:
 - a) Provide automatic transfer switches having a double throw switch action, mechanically held in both directions.
 - 2) Contacts:
 - a) Provide automatic transfer switches having silver composition or silver alloy contacts for load-current switching.
 - (1) For conventional automatic transfer-switch units, rated for 225 Amperes and higher, provide separate arcing contacts.
 - b. Switching Arrangement:
 - 1) Unless otherwise indicated in the Contract Documents, provide automatic transfer switches having a double-throw type switching arrangement that is incapable of pauses or intermediate position stops during normal functioning.
 - c. Neutral Switching.
 - 1) For four-pole switches, provide automatic transfer switches that switch the neutral pole simultaneously with the phase poles.
- 6. Oversize Neutral:
 - a. For automatic transfer switches having an oversize neutral, provide a neutral path through the units having double the ampacity and switch ratings of the nominal rating of the circuit in which the switch is installed.
- 7. Fasteners and Supports:
 - a. Design each fastener and support to carry the load.
- 8. Product Data:
 - a. Obtain the manufacturer's Product Data for each type of automatic transfer switch specified.
 - 1) Include the automatic transfer switch's rated capacities, operating characteristics, and furnished specialties and accessories.
 - b. Submit the Product Data to the Program/Project Manager for approval.
- 9. Shop Drawings:
 - a. Prepare Shop Drawings for the automatic transfer switches that include dimensioned plans, elevations, sections, and details showing minimum clearances, conductor entry provisions, gutter space,

installed features and devices, and material lists for each switch specified.

- 1) Furnish dimensioned outline drawings of the automatic transfer switch unit that identify the center of gravity, and that locate and describe mounting and anchorage provisions.
- b. Single-Line Diagram:
 - 1) Furnish single-line diagram showing the connections between the transfer switch, bypass/isolation switch, power sources, and load; and that show interlocking provisions for each combined transfer switch and bypass/isolation switch.
- c. Submit the Shop Drawings and single-line diagram to the Program/Project Manager for approval.

E. Operation:

1. Electrical Operation:
 - a. Provide automatic transfer switches capable of being electrically operated by a non-fused, momentarily energized solenoid or electric-motor-operated mechanism, mechanically and electrically interlocked in both directions.
2. Manual Switch Operation:
 - a. Provide automatic transfer switches capable of manual switch operation under load, with either or both sources energized.
 - 1) The transfer time under manual switch operation must be the same as for electrical operation.
 - b. Provide automatic transfer switches that automatically disconnect the control circuit from the electrical operator during manual operation.

F. Materials:

1. Automatic Transfer Switches:
 - a. Provide automatic transfer switches complying with the requirements for Level 1 equipment specified in NFPA 110.
 - b. Enclosures:
 - 1) Unless otherwise indicated in the Contract Documents, provide general-purpose enclosures complying with the requirements for NEMA Type 1 enclosures specified in NEMA 250, and complying with the requirements specified in NEMA ICS 6 and UL 508.
 - c. Signal-Before-Transfer Contacts:
 - 1) Provide automatic transfer switches having a set of normally open/normally closed dry contacts that operate in advance of a retransfer to the normal source.
 - 2) Provide automatic transfer switches capable of adjustment of the signal-before-transfer interval from 1 to 30 seconds.
 - d. Digital Communication Interface:
 - 1) Provide automatic transfer switches having a digital communication interface matched to the capability of the remote annunciator or annunciator and control panel.

- e. Undervoltage Sensing for Each Phase of Normal Source:
 - 1) Provide automatic transfer switches capable of sensing low phase-to-ground voltage on each phase.
 - a) Provide automatic transfer switches capable of allowing the pickup voltage to be adjusted from 85 percent to 100 percent of the nominal, and of allowing the dropout voltage to be adjusted from 75 percent to 98 percent of pickup value.
 - b) Factory set the automatic transfer switches for pickup at 90 percent and dropout at 85 percent.
- f. Adjustable Time Delay:
 - 1) To override the normal-source voltage sensing so the transfer and engine start signals can be delayed, provide automatic transfer switches having a time delay adjustable from 0 to 6 seconds, and factory-set the time delay for 1 second.
- g. Voltage/Frequency Lockout Relay:
 - 1) Provide automatic transfer switches having a voltage/frequency lockout relay that prevents premature transfer to the generator.
 - a) Provide automatic transfer switches having a voltage/frequency lockout relay that is adjustable from 85 percent to 100 percent of nominal voltage.
 - (1) Factory set the voltage/frequency lockout relay for pickup voltage at 90 percent.
 - b) Provide automatic transfer switches having a voltage/frequency lockout relay having a pickup frequency adjustable from 90 percent to 100 percent of nominal.
 - (1) Factory set the voltage/frequency lockout relay pickup frequency for pickup at 95 percent.
- h. Time Delay for Retransfer to Normal Source:
 - 1) Provide automatic transfer switches having a time delay for retransfer to normal source that is adjustable from 0 to 30 minutes.
 - 2) Factory set the time delay for 10 minutes to automatically defeat a delay on loss of voltage or sustained undervoltage of the emergency source, provided that the normal supply has been restored.
- i. Test Switch:
 - 1) Provide automatic transfer switches having a test switch that simulates normal-source failure.
- j. Switch-Position Pilot Lights:
 - 1) Provide automatic transfer switches having switch-position pilot lights that indicate the source to which the load is connected.
- k. Source-Available Indicating Lights:
 - 1) Provide automatic transfer switches having source-available indicating lights that supervise the sources via transfer-switch normal-source and emergency-source sensing circuits.

- a) Normal Power Supervision:
 - (1) Provide green normal power supervision indicating lights having a nameplate engraved "Normal Source Available."
- b) Emergency Power Supervision:
 - (1) Provide red emergency power supervision indicating lights having a nameplate engraved "Emergency Source Available."
- l. Unassigned Auxiliary Contacts:
 - 1) Provide automatic transfer switches having 2 normally open, single-pole, double-throw contacts for each switch position, rated at 10 Amperes at 240 Volts AC.
- m. Transfer Override Switch:
 - 1) Provide automatic transfer switches having a transfer override switch that overrides the automatic retransfer control so the automatic transfer switch will remain connected to the emergency power source regardless of the condition of the normal source.
 - 2) Provide a pilot light that indicates the override status.
- n. Engine Shutdown Contacts:
 - 1) Provide automatic transfer switches having engine shutdown contacts that initiate shutdown at remote engine-generator controls after retransfer of the load to normal source, and that have a time delay adjustable from 0 to 5 minutes.
 - a) Factory set the engine shutdown contact time delay for 5 minutes.
- o. Engine-Generator Exerciser:
 - 1) Provide automatic transfer switches having a solid-state, programmable time switch that starts the engine generator and transfers the load to it from the normal source for a preset time, then retransfers and shuts down the engine after a preset cool-down period.
 - a) Provide a time switch that initiates the exercise cycle at preset intervals adjustable from 7 days to 30 days.
 - (1) Provide a time switch that allows running periods to be adjusted from 10 minutes to 30 minutes.
 - (2) Factory-set the engine-generator exerciser for a 7-day exercise cycle, a 20-minute running period, and a 5-minute cool-down period.
 - b) Provide an engine-generator exerciser that includes the following features:
 - (1) Exerciser Transfer Selector Switch:
 - (a) Provide an engine-generator exerciser having an exerciser transfer selector switch that permits selection of the exercise with or without load transfer.
 - (2) Provide an engine-generator exerciser having push-button programming control with a digital display of the settings.

- (3) Provide an engine-generator exerciser capable of allowing operation of the time switch on integral battery power when normal control power is unavailable.
- p. Factory Wiring:
 - 1) Factory-wire the automatic transfer switches so their wiring is trained, bundled, and labeled consistently with the designations on the Shop Drawings; either by color-coding the wiring or by attaching numbered or lettered wire and cable tape markers at the terminations.
 - a) Color-coding and wire and cable tape markers are specified in Section 16075, Electrical Identification.
 - 2) Designated Terminals:
 - a) Designate the automatic transfer switch terminals using pressure type designators, suitable for the types and sizes of field wiring indicated in the Contract Documents.
 - 3) Power-Terminal Arrangement and Field-Wiring Space:
 - a) Provide automatic transfer switches having a power-terminal arrangement and field-wiring space suitable to allow top, side, or bottom entrance of the feeder conductors as indicated in the Contract Documents.
 - 4) Control Wiring:
 - a) Provide automatic transfer switches equipped with lugs suitable for connecting the control wiring to terminal strips.
2. Annunciation, Control, and Programming Interface Components:
 - a. Provide annunciation, control, and programming interface devices at the automatic transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels, and having their communication capability matched with that of the remote device.

2.02 SOURCE QUALITY CONTROL

- A. Tests and Inspections:
1. Materials specified in this Section require advance examination or testing in accordance with the methods specified herein, or as required by the Program/Project Manager.
 - a. Before the tests will be performed, provide advance notice of the tests to the Program/Project Manager to give the Program/Project Manager and the Approved Agency the opportunity to observe the tests.
 2. Factory Test:
 - a. Factory-test and inspect the automatic transfer switch components, assembled switches, and associated equipment.
 - b. Test Procedure:
 - 1) Check the transfer time and voltage, frequency, and time-delay settings for compliance with the specified requirements.

- 2) Perform the dielectric strength test in accordance with the method specified in NEMA ICS 1.
- c. Acceptance Criteria:
 - 1) Ensure proper operation of the automatic transfer switch components, assembled switches, and associated equipment.
- B. Coordination of Other Tests and Inspections:
 1. Notify the code-required Approved Agency responsible for performing special inspections when automatic transfer switches for this Contract are being fabricated and/or tested.
 2. Cooperate with the code-required Approved Agency when they are performing required material verifications and other special inspections.
 - a. Provide full access to the Work.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. With the automatic transfer switch installer present, examine the areas, equipment bases, and conditions where the automatic transfer switches will be installed for compliance with the requirements for installation and other conditions affecting the automatic transfer switch performance.
- B. Pre-Installation Testing:
 1. Proceed installing the automatic transfer switches only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the automatic transfer switches.
- B. Surface Preparation:
 1. Concrete Bases:
 - a. Provide flat concrete pads to support the automatic transfer switches.
 - 1) Provide 4-inch high reinforced concrete bases with chamfered edges to support the automatic transfer switches.
 - 2) Extend the base no more than 4 inches (100mm) in all directions beyond the maximum dimensions of the automatic transfer switches, unless otherwise indicated on the Contract Drawings.
 - b. Construct the concrete bases in accordance with Section 03200, Concrete Reinforcement.
 - 1) Provide concrete formwork as specified in Section 03100, Concrete Forms and Accessories; concrete reinforcement as specified in Section 03200, Concrete Reinforcement; and

concreting as specified in Section 03300, Cast-In-Place Concrete, that comply with the requirements for concrete bases.

- c. Place and secure anchorage devices.
 - 1) Design each fastener and support to carry the load indicated and according to details.
 - 2) Use setting drawings, templates, diagrams, instructions, and directions for the items to be embedded to properly locate these items.
 - 3) Install anchor bolts to the elevations required for proper attachment to the automatic transfer switches.
 - 4) Cast anchor-bolt inserts into the concrete bases.

3.03 INSTALLATION

- A. Floor-Mounted Switches:
 - 1. Anchor floor-mounted switches to the floor by bolting.
 - 2. Install electrical devices furnished by the equipment manufacturers but not specified to be factory mounted.
- B. Install the automatic transfer switches in accordance with the automatic transfer switch manufacturer's installation instructions.
 - 1. Submit the automatic transfer switch manufacturer's written installation instructions to the Program/Project Manager for information.
- C. Annunciator and Control Panel Mounting:
 - 1. Unless otherwise indicated in the Contract Documents, mount the annunciator and control panels flush in the wall.
- D. Set the field-adjustable intervals and delays, relays, and the engine exerciser clock.
- E. Special Techniques:
 - 1. Identification:
 - a. Identify the components and provide warning signs in accordance with the requirements specified in Section 16075, Electrical Identification.
- F. Systems Integration:
 - 1. Wiring to Remote Components:
 - a. Provide wiring to remote components that matches the type and number of cables and conductors to the control and communication requirements of the transfer switches as recommended by manufacturer.
 - b. If it is necessary to increase raceway sizes in order to accommodate the required wiring, do so at no increase in the Contract Price.

2. Ground the automatic transfer switch equipment in accordance with the requirements specified in Section 16061, Electrical Grounding and Bonding.
3. Connect the automatic transfer switch wiring in accordance with the requirements specified in Section 16120, Conductors and Cables.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. During the period when the automatic transfer switches are being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials or proportions requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
2. Testing Agency Responsibilities:
 - a. Field Quality-Control Reports:
 - 1) After installing the equipment and after the electrical circuitry has been energized, have the Testing Agency employed by the Contractor test the equipment for compliance with specified requirements by performing the tests specified herein, and preparing a certified written Field Quality-Control Report for each test conducted to record the following information pertaining to the test:
 - a) The automatic transfer switches included in the testing.
 - b) Test procedures used to perform the testing.
 - c) Test results that comply with the requirements specified.
 - d) Test results that do not comply with the specified requirements, and corrective action taken to achieve compliance with the requirements.
 - (1) Note deficiencies detected, the remedial action taken, and observations after remedial action.
 - 2) Have the Testing Agency record the adjustable relay settings and measured insulation resistances, time delays, and other values and observations in the Field Quality-Control Reports.

- b. Coordinate the Site tests with the tests for diesel electric generators provided under Section 16234, Diesel Electric Generators, and run the tests concurrently.
 - c. Furnish test instruments that have been calibrated within the last 12 months, traceable to standards of the National Institute of Standards and Technology (NIST), and adequate for making positive observation of the test results.
 - 1) Make the calibration records available for examination upon request.
 - d. Test Labeling:
 - 1) Have the Testing Agency attach a label or tag to each tested component indicating satisfactory completion of the tests for that component.
 - a) On satisfactory completion of the testing of each unit, have the Testing Agency attach a dated and signed "Satisfactory Test" label to the tested unit.
- 3. Insulation Resistance Test:
 - a. Test Procedure:
 - 1) Have the Testing Agency measure the phase-to-phase and phase-to-ground insulation resistance using a insulation-resistance tester.
 - a) Include external annunciation and control circuits.
 - b) Use test voltages and a procedure recommended by the diesel electric generator manufacturer.
 - 2) Check the electrical circuits for electrical continuity and short circuits.
 - b. Acceptance Criteria:
 - 1) Diesel electric generators having insulation resistances complying with the manufacturer's specified minimum resistance pass the Insulation Resistance Test.
- 4. Ground-Fault Tests:
 - a. Test Procedure:
 - 1) Have the Testing Agency perform ground fault testing for the diesel electric generator.
 - a) Coordinate the testing of the ground-fault protective devices for power delivery from both sources.
 - 2) Verify the grounding connections, and the locations and ratings of the sensors.
 - 3) Observe the reaction of the circuit-interrupting devices when the simulated fault current is applied at sensors.
 - b. Acceptance Criteria:
 - 1) Diesel electric generators having ground fault performance as specified pass the Ground-Fault Tests.
- 5. Performance Test:
 - a. Test Procedure:

- 1) After energizing the circuits, have the Testing Agency demonstrate the interlocking sequence and operational function for each switch at least 3 times.
 - a) Simulate power failures of the normal source to the automatic transfer switches, and of the emergency source with the normal source available.
 - b) Simulate the loss of phase-to-ground voltage for each phase of the normal source.
 - c) Verify the time-delay settings.
 - d) Verify the pickup and dropout voltages by data readout or inspection of the control settings.
 - e) Test the bypass/isolation unit functional modes and related automatic transfer-switch operations.
 - f) Perform a contact-resistance test across the main contacts, and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from the other poles.
 - g) Verify the proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.
 - h) Perform manual transfer operation.
- b. Acceptance Criteria:
 - 1) Diesel electric generators having the performance specified pass the Performance Test.
6. NETA Acceptance Testing:
 - a. Test Procedure:
 - 1) After the automatic transfer switches are installed and the electrical circuitry has been energized, have the Testing Agency perform each electrical test for automatic transfer switches specified in ANSI/NETA ATS.
 - 2) Have the Testing Agency prepare a certified NETA Acceptance Testing Field Quality Control Report that identifies the automatic transfer switches included and documents the NETA acceptance testing, and submit the Report to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Testing Agency certification of compliance with the test parameters specified in ANSI/NETA ATS constitutes acceptance of the NETA Acceptance Testing.
7. Infrared Scanning:
 - a. Test Procedure:
 - 1) Instruments and Equipment:
 - a) Have the Testing Agency furnish and use a portable infrared scanning device designed to measure temperature or to detect significant deviations from normal values.

- b) Have the Testing Agency submit a calibration record for the infrared scanning device to the Program/Project manager for information.
 - 2) Initial Infrared Scanning:
 - a) After Substantial Completion, but not more than 60 days after Final Acceptance, have the Testing Agency perform an infrared scan of each automatic transfer switch.
 - b) Remove the access panels so joints and connections are accessible to the portable infrared scanner.
 - 3) Follow-up Infrared Scanning:
 - a) Have the Testing Agency perform an additional follow-up infrared scan of each automatic transfer switch 11 months after the date of Substantial Completion.
 - 4) Have the Testing Agency prepare a certified Field Quality Control Report that identifies the automatic transfer switches checked and describes the infrared scanning results, and have the Testing Agency submit the report to the Program/Project Manager for information.
- b. Acceptance Criteria:
 - 1) Significant deviations from normal temperature values are cause for the enclosed switch or circuit breaker under test to fail the infrared scan.
- c. Inspections:
 - 1) Have the Testing Agency perform each visual and mechanical inspection and electrical test specified in ANSI/NETA ATS.
 - 2) Inspect the electrical installation for physical damage, proper installation and connection, and the integrity of barriers, covers, and safety features.
 - 3) Verify that manual transfer warnings are properly placed.
- 8. Non-Conforming Work
 - a. Correct deficiencies identified by the tests and observations, and retest the corrected units until the specified requirements are complied with.
 - b. Remove malfunctioning units, and replace them with conforming replacement units.
 - 1) Replace damaged and malfunctioning controls and equipment.
 - 2) Retest the replacement units as specified herein.

3.05 SYSTEM STARTUP

- A. Commissioning:
 - 1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 16995, Commissioning of Electrical Systems, for the sweep or scheduled lighting controls, daylight dimming controls, lighting occupancy sensors, power quality, security systems, emergency power systems, uninterruptible

power supply (UPS) systems, fire and smoke alarms, fire protection systems, communications systems, and public address/paging work pertinent to the Work of this Section.

3.06 CLEANING

A. Waste Management:

1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 CLOSEOUT ACTIVITIES

A. Training:

1. Engage a factory-authorized service representative to train the Owner's maintenance personnel to adjust, operate, and maintain automatic transfer switches and related equipment in accordance with the requirements specified in Section 01770, Closeout Procedures.
 - a. Coordinate the training with the training for generator equipment specified in Section 16234, Diesel Electric Generators.

3.08 PROTECTION

- A. Take steps to insure that installed automatic transfer switches are protected during subsequent construction activities.

3.09 MAINTENANCE

A. Operation and Maintenance Data:

1. Furnish operation and maintenance data for each type of automatic transfer switch product and accessory for inclusion in emergency and Operation and Maintenance manuals as specified in Section 01780, Closeout Submittals.
 - a. Include the features and operating sequences, both automatic and manual, for the automatic transfer switch.
 - b. Include a list of all factory settings of relays.
 - 1) Furnish relay-setting and calibration instructions, including software, where applicable.
2. Submit the operation and maintenance data for the automatic transfer switches and accessories to the Program/Project Manager for information.

SECTION 16511

INTERIOR LIGHTING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following interior lighting items:
 - a. Interior lighting fixtures, lamps, and ballasts.
 - b. Emergency lighting units.
 - c. Exit signs.
 - d. Lighting fixture supports.
 - e. Retrofit kits for fluorescent lighting fixtures.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 16061 - Electrical Grounding and Bonding.
 - 5. Section 16070 – Hangers and Supports.
 - 6. Section 16075 – Electrical Identification.
 - 7. Section 16120 – Conductors and Cables.
 - 8. Section 16140 – Wiring Devices.
 - 9. Section 16145 – Lighting Control Devices.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. BF: Ballast factor.
 - 2. CCT: Correlated color temperature.
 - 3. CRI: Color-rendering index.
 - 4. HID: High-intensity discharge.
 - 5. LED: Light-emitting diode.
 - 6. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 7. LER: Luminaire efficacy rating.
 - 8. NVLAP: National Volunteer Laboratory Accreditation Program.

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
2. Lumen: A metric unit for luminous flux, and defined as the luminous flux emitted in a solid angle of one steradian by a point source having a uniform intensity of one candela; for the purposes of this Section the measured output of the lamp, luminaire, or both.
3. Luminaire: Complete lighting fixture, including the ballast housing if provided.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate the layout and installation of lighting fixtures and suspension systems with other construction that penetrates ceilings or is supported by the ceilings, including HVAC equipment, fire-suppression system, and partition assemblies.
 - 2. Coordination Drawings:

- a. Prepare Coordination Drawings that include reflected ceiling plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from the installers of the items involved:
 - 1) Lighting fixtures.
 - 2) Suspended ceiling components.
 - 3) Partitions and millwork that penetrate the ceiling or extend to within 12 inches (305mm) of the plane of the luminaires.
 - 4) Ceiling-mounted projectors.
 - 5) Structural members to which suspension systems for lighting fixtures will be attached.
 - 6) Other items in the finished ceiling, including the following:
 - (1) Air outlets and inlets.
 - (2) Speakers.
 - (3) Sprinklers.
 - (4) Smoke and fire detectors.
 - (5) Occupancy sensors.
 - (6) Access panels.
 - 7) Perimeter moldings.
- b. Submit the Coordination Drawings to the Program/Project Manager for approval.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Ballasts for linear fluorescent lamps.
 - 2) Ballasts for compact fluorescent lamps.
 - 3) Emergency fluorescent power units.
 - (1) Internal type power units.
 - (2) External type power units.
 - 4) Ballasts for HID lamps.
 - (1) Electromagnetic ballast for metal-halide lamps.
 - (2) Electronic ballast for metal-halide lamps.
 - (3) High-pressure sodium ballasts.
 - (4) Quartz lamp lighting controllers.
 - 5) Exit signs.
 - 6) Emergency lighting units.
 - 7) Fluorescent lamps.
 - 8) High-intensity discharge (HID) lamps:
 - (1) High-pressure sodium lamps.
 - (2) Metal-halide lamps.

- (3) Pulse-start, metal-halide lamps.
 - (4) Ceramic, pulse-start, metal-halide lamps.
 - (5) Low-pressure sodium lamps.
 - 9) LED Luminaires:
 - (1) Components: UL 8750 recognized or listed as acceptable.
 - (2) Tested in accordance with IES LM-79 and IES LM-80
 - (3) LED Estimated useful life: Minimum of 50,000 hours at 70% lumen maintenance, calculated based on IES LM-80 test data.
 - 10) Lighting Fixture Support Components
 - 11) Retrofit kits for fluorescent lighting fixtures:
 - (1) Reflector kits.
 - (2) Ballast and lamp change kits.
 - b. Shop Drawings:
 - 1) Coordination Drawings.
 - 2) Nonstandard or custom lighting fixtures.
 - c. Samples:
 - 1) Lighting fixtures.
 - d. Certificates:
 - 1) Manufacturer's Certificates of Compliance for each type of ballast for bi-level and dimmer-controlled fixtures.
 - 2) Manufacturer's Certificates of Compliance for photometric data.
 - e. Qualification Statements:
 - 1) Evidence that the laboratories of the manufacturers providing photometric data for lighting fixtures are accredited under the National Volunteer Laboratory Accreditation Program.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Lighting fixture manufacturer's installation instructions.
 - b. Site Quality Control Submittals:
 - 1) Emergency Lighting Test Report.
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for lighting equipment and fixtures.
 - b. Warranty Documentation:
 - 1) Emergency Lighting Unit Batteries' Warranty.

- 2) Emergency Fluorescent Ballast and Self-Powered Exit Sign Batteries' Warranty.

D. Maintenance Material Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish spare interior lighting products that match the products installed, and packaged for storage by having a protective coverings and labels identifying the contents.
 - 1) Lamps:
 - (1) For each type and rating of lamp installed, furnish 10 spare lamps for every 100 lamps installed, but not less than one of each type and rating.
 - 2) Plastic Diffusers and Lenses:
 - (1) For each type and rating of plastic diffuser and lens installed, furnish 1 spare plastic diffuser or lens for every 100 plastic diffusers or lens installed, but not less than one of each type and rating.
 - 3) Fluorescent-fixture-mounted, emergency battery pack:
 - (1) Furnish 1 spare fluorescent-fixture-mounted, emergency battery pack for every 20 emergency lighting units installed.
 - 4) Ballasts:
 - (1) For each type and rating of ballast installed, furnish 1 spare ballast for every 100 ballasts installed, but not less than one of each type and rating.
 - 5) Globes and Guards:
 - (1) For each type and rating of globe and guard installed, furnish 1 spare globe or guard for every 20 globes or guards installed, but not less than one of each type and rating.

1.05 QUALITY ASSURANCE

A. Qualifications:

1. Luminaire Photometric Data Testing Laboratory Qualifications:
 - a. Procure products from manufacturers participating in the National Volunteer Laboratory Accreditation Program (NVLAP), and which have manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products and the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products – Solid State Lighting, as specified in the appropriate handbooks and checklists.

- 1) Submit evidence that the laboratories of the manufacturers providing photometric data for lighting fixtures are accredited under the National Volunteer Laboratory Accreditation Program to the Program/Project Manager for approval.

B. Certifications:

1. Listing and Labeling of Electrical Components, Devices, and Accessories:
 - a. Provide products that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - 1) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - b. FM Approvals LLC Compliance:
 - 1) For hazardous locations, provide lighting fixtures listed and labeled for the indicated class and division of hazard by FM Approvals LLC.
 - c. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.
2. Manufacturer's Certificates of Compliance:
 - a. For each type of ballast for bi-level and dimmer-controlled fixtures, submit Manufacturer's Certificates of Compliance wherein the manufacturer of these items certifies that they comply with the specified requirements, to the Program/Project Manager for approval.
 - b. For each type of fixture, submit Manufacturer's Certificates of Compliance for photometric data and adjustment factors based on laboratory tests complying with IESNA Lighting Measurements Testing & Calculation Guides, certified by a manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program for Energy Efficient Lighting Products, to the Program/Project Manager for approval.

C. Site Samples:

1. For each lighting fixture indicated in the Light Fixture Schedule on the Contract Drawings, submit a Sample fixture each of which includes the following items:

- a. Lamps and ballasts, installed.
 - b. Cords and plugs.
 - c. Pendant support system.
- D. Mock-Ups:
 - 1. If room or module mock-ups are required, provide interior lighting fixtures complete with power and control connections for the mock-ups.
 - a. Obtain the Program/Project Manager's approval of the fixtures for the mockups before installing them in the mock-ups.
 - b. Maintain mock-ups during construction in an undisturbed condition as a standard for judging the completed Work.
 - 1) If mock-ups are installed as part of the building rather than erected separately, approved fixtures in the mock-ups may become part of the completed Work if they have remained undisturbed at the time of Substantial Completion.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Deliver lighting fixtures in a clean, undamaged condition.
 - 2. Inspect lighting fixtures for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.
- B. Storage and Handling Requirements:
 - 1. Handle lighting fixtures in accordance with the manufacturer's written instructions.
 - 2. Follow the manufacturer's written instructions for storing the lighting fixtures.
- C. Packaging Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

- A. Extended Correction Period:
 - 1. Emergency Lighting Unit Batteries' Warranty:
 - a. Warrant the emergency lighting unit batteries' materials and workmanship against failures within the 10 year period after the Date of Substantial Completion.
 - 1) Warrant the emergency lighting unit batteries under a full warranty applicable during the first year, and under a prorated warranty applicable during the remaining 9 years.
 - b. Submit the written Emergency Lighting Unit Batteries' Warranty on the manufacturer's standard form in which the manufacturer of the battery-powered emergency lighting units agrees to repair or replace

components of the rechargeable batteries that fail in materials or workmanship within specified warranty period to the Program/Project Manager for approval.

- 1) Have the manufacturer's standard form signed by the Contractor and manufacturer.
2. Emergency Fluorescent Ballast and Self-Powered Exit Sign Batteries' Warranty:
 - a. Warrant the emergency fluorescent ballast and self-powered exit sign batteries' materials and workmanship against failures within the 7 year period after the Date of Substantial Completion.
 - 1) Warrant the emergency fluorescent ballast and self-powered exit sign batteries under a full warranty applicable during the first year, and under a prorated warranty applicable during the remaining 6 years.
 - b. Submit the written Emergency Fluorescent Ballast and Self-Powered Exit Sign Batteries' Warranty on the manufacturer's standard form in which the manufacturers of the emergency fluorescent ballast and self-powered exit sign batteries agrees to repair or replace components of the ballasts and rechargeable batteries that fail in materials or workmanship within specified warranty period to the Program/Project Manager for approval.
 - 1) Have the manufacturer's standard form signed by the Contractor and manufacturer.

PART 2 PRODUCTS

2.01 LIGHTING FIXTURES AND COMPONENTS

- A. Manufacturers:
 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by the manufacturers listed in the Light Fixture Schedule on the Contract Drawings.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed in the Light Fixture Schedule on the Contract Drawings may be provided.
- B. Description:
 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC

International Building Code (IBC) as Amended by the City of Phoenix].

b. National Electrical Code (NEC):

- 1) Provide products and installation complying with requirements specified for interior lighting in NFPA 70.

C. Design Criteria:

1. Provide lighting fixtures complying with the following design criteria for the fixture type:

a. Recessed Fixtures:

- 1) Provide recessed lighting fixtures complying with the requirements for ceiling compatibility of recessed fixtures specified in NEMA LE 4.

b. Fluorescent Fixtures:

- 1) Provide fluorescent lighting fixtures complying with the requirements specified in UL 1598.
- 2) If the luminaire efficacy rating (LER) is specified in the Lighting Fixture Schedule on the Contract Drawings, test the fluorescent lighting fixtures to determine the LER in accordance with the method specified in NEMA LE 5A or NEMA LE 5A as applicable.

c. HID Fixtures:

- 1) Provide HID lighting fixtures complying with the requirements specified in UL 1598.
- 2) If the luminaire efficacy rating (LER) is specified in the Interior Lighting Fixture Schedule on the Contract Drawings, test the HID lighting fixtures to determine the LER in accordance with the method specified in NEMA LE 5B.

d. LED Luminaires:

- 1) Components: UL 8750 recognized or listed as acceptable.
- 2) Tested in accordance with IES LM-79 and IES LM-80
- 3) LED Estimated useful life: Minimum of 50,000 hours at 70% lumen maintenance, calculated based on IES LM-80 test data.

e. LED Drivers

- 1) Inrush currents not exceeding peak currents specified in NEMA 410.
- 2) Minimum efficiency/efficacy: Provide ballasts complying with all current and state ballast efficiency/efficacy standards.
- 3) Dimming Range: Continuous dimming from 100 percent to five percent relative light.
- 4) Control capability: Fully compatible with the dimming controls to be installed.

f. Metal Parts:

- 1) Provide metal parts free from burrs and sharp corners and edges.

g. Sheet Metal Components:

- 1) Unless otherwise indicated, provide steel sheet metal components.

- 2) Prevent sheet metal components from warping and sagging by providing formed and supported components.
- h. Doors, Frames, and Other Internal Access:
 - 1) Provide smooth operating doors, free from light leakage under operating conditions, and designed to permit re-lamping without requiring the use of tools.
 - 2) Provide doors, frames, lenses, diffusers, and other components designed so they do not accidentally fall during re-lamping or when secured in the operating position.
- i. Diffusers and Globes:
 - 1) Acrylic Lighting Diffusers:
 - (1) Provide 100 percent virgin acrylic plastic lighting diffusers.
 - 2) Provide UV stabilized diffusers highly resistant to yellowing and other changes due to aging, exposure to heat, and UV radiation.
 - 3) Lens Thickness:
 - (1) Unless otherwise indicated, provide lens thicknesses of at least 0.125 inch (3.175mm).
 - 2) Glass Diffusers and Globes:
 - 1) Unless otherwise indicated, provide annealed crystal glass diffusers and globes.
- j. Factory-Applied Labels:
 - 1) Provide factory-applied labels complying with the requirements specified in UL 1598.
 - (1) Locate the labels where they will be readily visible to service personnel, but not seen from normal viewing angles when the lamps are in place.
 - 2) Provide labels indicating the recommended lamps and ballasts, and including the following lamp and ballast characteristics:
 - (1) Include the words "USE ONLY", and insert the specific lamp type following the words.
 - 2) For fluorescent and compact fluorescent luminaires, indicate the lamp diameter code (T-4, T-5, T-8, T-12, or another code), the tube configuration (twin, quad, triple, or another configuration), the base type, and the nominal wattage.
 - 3) For high-intensity discharge (HID) luminaires, indicate the lamp type, wattage, bulb type (ED17, BD56, or another type) and coating (clear or coated), and indicate the ANSI ballast type (M98, M57, or another type).
 - 4) For fluorescent and compact fluorescent luminaires, indicate the start type (preheat, rapid start, instant start, or another type).
 - 5) For all luminaires, indicate the correlated color temperature (CCT) and color-rendering index (CRI).
- k. Electromagnetic-Interference Filters:

- 1) To suppress conducted electromagnetic interference, provide factory-installed electromagnetic-interference filters as specified by MIL-STD-461E.
- 2) Provide a filter for each ballast of each lighting fixture indicated to require a filter.
- I. Product Data:
 - 1) For each type of lighting fixture provided under this Section, submit Product Data to the Program/Project Manager for approval.
 - (1) Include data on each fixture's features, accessories, finishes, and the following:
 - (2) A physical description of each lighting fixture, including the dimensions of each.
 - (3) Identification of emergency lighting units, and including information regarding the unit's battery and charger.
 - (4) Ballast information, including the ballast factor (BF).
 - (5) Energy-efficiency data.
 - 2) Fixture life; fixture output, including its lumens, correlated color temperature (CCT), and color-rendering index (CRI); and energy-efficiency data for the lamps.
 - m. Shop Drawings:
 - 1) For nonstandard or custom lighting fixtures, submit Shop Drawings to the Program/Project Manager for approval.
 - (1) Include plans, elevations, sections, details, and attachments to other work.
 - 2) Detail equipment assemblies; and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3) Wiring diagrams for power, signal, and control wiring.
- D. Materials:
 1. Ballasts for Linear Fluorescent Lamps:
 - a. Provide electronic ballasts for linear fluorescent lamps complying with the requirements specified in UL 935 and ANSI C82.11 Consolidated, and designed for the type and quantity of lamps served.
 - 1) Provide ballasts designed for the full light output, unless another ballast factor (BF), dimmer, bi-level control, or tri-level control is indicated.
 - b. Disconnecting Means:
 - 1) Provide ballasts designed with integral disconnecting means as specified in section 410.73(G) of NFPA 70.
 - c. Sound Rating:
 - 1) Provide ballasts having a Class A sound.
 - d. Total Harmonic Distortion Rating:

- 1) Provide ballasts having a total harmonic distortion rating Less than 20 percent.
- e. Transient Voltage Protection:
 - 1) Provide ballasts having transient voltage protection complying with the requirements for Category A or better protection specified in IEEE C62.41.1 and IEEE C62.41.2.
- f. Operating Frequency:
 - 1) Provide ballasts having an operating frequency of 42 kilohertz or higher.
- g. Lamp Current Crest Factor:
 - 1) Provide ballasts having a lamp current crest factor of 1.7 or less.
- h. Ballast Factor (BF):
 - 1) Provide ballasts having a ballast factor (BF) of 0.88 or higher.
- i. Power Factor (PF):
 - 1) Provide ballasts having a 0.95 power factor or higher.
- j. Parallel Lamp Circuits:
 - 1) Provide multiple lamp ballasts that comply with the requirements specified in ANSI C82.11, and that are connected so if one or more lamps fail the full light output on the surviving lamps is maintained.
- k. Programmed-Start Ballasts:
 - 1) For luminaires controlled by occupancy sensors, provide programmed-start ballasts.
 - 2) For T5, T8, and T5HO lamps, provide electronic programmed-start ballasts complying with the requirements specified in ANSI C82.11 and with the following:
 - 3) Provide a lamp end-of-life detection and shutdown circuit for T5 diameter lamps.
 - 4) Provide automatic lamp starting after lamp replacement.
- l. Ballasts for Dimmer-Controlled Lighting Fixtures:
 - 1) For dimmer-controlled lighting fixtures, provide electronic type ballasts complying with the following requirements:
 - 2) Dimming Range:
 - (1) Provide ballasts having a dimming range of 100 to 5 percent of the rated lamp lumens.
 - 3) Ballast Input Watts:
 - 4) Provide ballasts capable of reducing the ballast input Watts to 20 percent of normal.
 - 5) Compatibility:
 - (1) Provide ballasts certified by the manufacturer for use with the specific dimming control system and lamp type indicated.
 - 6) Control:
 - (1) Coordinate the wiring from the ballast to the control device to ensure that the ballast, controller, and connecting wiring are compatible.

2. Ballasts for Compact Fluorescent Lamps:
 - a. Provide electronic-programmed rapid-start type ballasts for compact fluorescent lamps complying with the requirements specified in UL 935 and ANSI C82.11 Consolidated, and designed for the type and quantity of lamps served.
 - 1) Provide ballasts designed for the full light output, unless another ballast factor (BF), dimmer, bi-level control, or tri-level control is indicated.
 - 2) Provide a lamp end-of-life detection and shutdown circuit.
 - 1) Provide provisions for automatic lamp starting after lamp replacement.
 - b. Sound Rating:
 - 1) Provide ballasts having a Class A sound rating.
 - c. Total Harmonic Distortion Rating:
 - 1) Provide ballasts having a total harmonic distortion rating Less than 20 percent.
 - d. Transient Voltage Protection:
 - 1) Provide ballasts having transient voltage protection complying with the requirements for Category A or better protection specified in IEEE C62.41.1 and IEEE C62.41.2.
 - e. Operating Frequency:
 - 1) Provide ballasts having an operating frequency of 20 kilohertz or higher.
 - f. Lamp Current Crest Factor:
 - 1) Provide ballasts having a lamp current crest factor of 1.7 or less.
 - g. Ballast Factor (BF):
 - 1) Unless otherwise indicated in the Contract Documents, provide ballasts having a ballast factor (BF) of 0.95 or higher.
 - h. Power Factor (PF):
 - 1) Provide ballasts having a 0.95 power factor or higher.
 - i. Interference:
 - 1) Provide ballasts complying with the requirements for limitations on electromagnetic and radio-frequency interference for non-consumer equipment specified in Chapter 1, Subpart C of 47 CFR 18.
3. Emergency Fluorescent Power Units:
 - a. Internal Type Power Units:
 - 1) Provide self-contained, modular, battery-inverter power units complying with the requirements specified in UL 924, and compatible with the ballasts.
 - 2) Provide power units factory-mounted within the lighting fixture body.
 - 3) Emergency Connection:
 - (1) Provide power units capable of continuously operating one fluorescent lamp at an output of 1100 lumens each.

- (2) Connect the unswitched circuit to the battery-inverter unit and the switched circuit to the fixture ballast.
- 4) Nightlight Connection:
 - (1) Provide power units capable of operating one fluorescent nightlight lamp continuously.
- 5) Test Push Button and Indicator Light:
 - (1) Provide power units having a push button and indicator light that are visible and accessible without having to open the fixture or enter the ceiling space.
 - (2) Push Button:
 - (3) Provide power units having a push-to-test type push button in the unit housing capable of simulating the loss of normal power, and of demonstrating the unit's operability.
- 2) Indicator Light:
 - (1) Provide power units having an LED indicator light that indicates normal power on.
 - (2) Connect the LED indicator light so it indicates a trickle charge by displaying a normal glow, and indicates charging at the end of the discharge cycle by displaying a bright glow.
- 6) Battery:
 - (1) Provide sealed, maintenance-free, nickel-cadmium type batteries for the power units.
- 7) Charger:
 - (1) Provide fully automatic, solid-state, constant-current type battery chargers having a sealed power transfer relay.
- 8) Remote Test:
 - (1) Provide a test switch, mounted in a remote hand-held device that initiates a coded infrared signal when the test switch is depressed.
 - (2) Provide a factory-installed infrared receiver in the tested unit that is capable of triggering a simulation of the loss of the unit's normal power supply, providing a visual confirmation of either proper or failed emergency response, when the coded infrared signal from the remote hand-held device is aimed the in the direction of the tested unit's infrared receiver.
- 9) Integral Self-Test:
 - (1) Provide a factory-installed electronic device that automatically initiates a code-required test of the unit's emergency operation at required intervals, and annunciates test failure by sounding an integral audible alarm and a flashing a red LED.

- b. External Type Power Units:
 - 1) Provide self-contained, modular, battery-inverter power units suitable for powering one or more fluorescent lamps, and complying with the requirements specified in UL 924.
 - (1) Provide power units mounted remotely from the lighting fixture.
 - 2) Emergency Connection:
 - (1) Provide power units capable of continuously operating one fluorescent lamp each.
 - (2) Connect the unswitched circuit to the battery-inverter unit and the switched circuit to the fixture ballast.
 - 3) Nightlight Connection:
 - (1) Provide power units capable of operating one fluorescent nightlight lamp in a remote fixture continuously.
 - 4) Battery:
 - (1) Provide sealed, maintenance-free, nickel-cadmium type batteries for the power units.
 - 5) Chargers:
 - (1) Provide fully automatic, solid-state, constant-current type battery chargers.
 - 6) Housings:
 - (1) Provide NEMA 1 type enclosures complying with the requirements specified in NEMA 250.
 - 7) Test Push Button:
 - (1) Provide power units having a push-to-test type push button in the unit housing capable of simulating the loss of normal power, and of demonstrating the unit's operability.
 - 8) Indicator Light:
 - (1) Provide power units having an LED indicator light that indicates normal power on.
 - (2) Connect the LED indicator light so it indicates a trickle charge by displaying a normal glow, and indicates charging at the end of the discharge cycle by displaying a bright glow.
 - 9) Remote Test:
 - (1) Provide a test switch, mounted in a remote hand-held device that initiates a coded infrared signal when the test switch is depressed.
 - (2) Provide a factory-installed infrared receiver in the tested unit that is capable of triggering a simulation of the loss of the unit's normal power supply, providing a visual confirmation of either proper or failed emergency response, when the coded infrared signal from the remote

hand-held device is aimed the in the direction of the tested unit's infrared receiver.

10) Integral Self-Test:

- (1) Provide a factory-installed electronic device that automatically initiates a code-required test of the unit's emergency operation at required intervals, and annunciates test failure by sounding an integral audible alarm and a flashing a red LED.

4. Exit Signs:

- a. Provide exit signs having the colors, visibility, luminance, and lettering size in accordance with the requirements specified in UL 924; and complying with the requirements of the Authorities Having Jurisdiction.
- b. Internally Lighted Signs:

1) Lamps for Alternating Current Operation:

- (1) Provide either 2 fluorescent lamps for each fixture, each having a rated lamp life of 20,000 hours; or LEDs having a minimum rated lamp life of 50,000 hours.

2) Self-Powered Exit Signs (Battery Type):

- (1) Provide self-powered exit signs having a battery and an integral automatic charger in a self-contained power pack.

2) Battery:

- (1) Provide sealed, maintenance-free, nickel-cadmium type batteries.

3) Charger:

- (1) Provide fully automatic, solid-state type chargers having a sealed transfer relay.

4) Operation:

- (1) Provide self-powered exit signs having a relay that automatically energizes the lamp from the battery when circuit voltage drops to 80 percent of nominal voltage or below, and that disconnects the lamps from the battery when normal voltage is restored.
- (2) Provide self-powered exit signs that automatically recharge and float the battery on the charger.

5) Test Push Button:

- (1) Provide the unit with a push-to-test type push button in the unit housing that simulates loss of normal power, and demonstrates unit operability when activated.

6) Light-Emitting Diode (LED) Indicator Light:

- (1) Provide the unit with an LED indicator light that indicates normal power on as follows:
 - (a) A normal glow indicates trickle charge.
 - (b) A bright glow indicates charging at the end of the discharge cycle.

7) Remote Test:

- (1) Provide a test switch, mounted in a remote hand-held device that initiates a coded infrared signal when the test switch is depressed.
 - (2) Provide a factory-installed infrared receiver in the tested unit that is capable of triggering a simulation of the loss of the unit's normal power supply, providing a visual confirmation of either proper or failed emergency response, when the coded infrared signal from the remote hand-held device is aimed the in the direction of the tested unit's infrared receiver.
 - 8) Integral Self-Test:
 - (1) Provide a factory-installed electronic device that automatically initiates a code-required test of the unit's emergency operation at required intervals, and annunciates test failure by sounding an integral audible alarm and a flashing a red LED.
5. Emergency Lighting Units:
 - a. Provide self-contained emergency lighting units complying with the requirements specified in UL 924.
 - 1) Battery:
 - (1) Provide sealed, maintenance-free, lead-acid type batteries for the emergency lighting units.
 - 2) Charger:
 - (1) Provide fully automatic, solid-state, type battery chargers having a sealed power transfer relay.
 - 3) Operation:
 - (1) Provide emergency lighting units having a relay that automatically energizes the lamp from the power-supply circuit voltage drops to 80 percent of nominal voltage or below, and that automatically disconnects the lamps from the battery when normal voltage is restored.
 - (2) Provide emergency lighting units that automatically recharge and float the battery on the charger.
 - 4) Test Push Button:
 - (1) Provide the unit with a push-to-test type push button in the unit housing that simulates loss of normal power, and demonstrates unit operability when activated.
 - 5) Light-Emitting Diode (LED) Indicator Light:
 - (1) Provide the unit with an LED indicator light that indicates normal power on as follows:
 - (2) A normal glow indicates trickle charge.
 - (3) A bright glow indicates charging at the end of the discharge cycle.
 - 6) Wire Guard:

- (1) Provide the unit with a heavy-chrome-plated wire guard that protects the lamp heads and fixtures.
- 7) Integral Time-Delay Relay:
 - (1) Provide the unit with an integral time-delay relay that holds the unit "on" for a fixed interval of 15 minutes when the power is restored after an outage.
- 8) Remote Test:
 - (1) Provide a test switch, mounted in a remote hand-held device that initiates a coded infrared signal when the test switch is depressed.
 - (2) Provide a factory-installed infrared receiver in the tested unit that is capable of triggering a simulation of the loss of the unit's normal power supply, providing a visual confirmation of either proper or failed emergency response, when the coded infrared signal from the remote hand-held device is aimed the in the direction of the tested unit's infrared receiver.
- 9) Integral Self-Test:
 - (1) Provide a factory-installed electronic device that automatically initiates a code-required test of the unit's emergency operation at required intervals, and annunciates test failure by sounding an integral audible alarm and a flashing a red LED.
6. Fluorescent Lamps:
 - a. Provide low mercury fluorescent lamps of the following types as indicated in the Light Fixture Schedule on the Contract Drawings, or as required by the fixture indicated there:
 - 1) T8, 32-Watt Fluorescent Lamps:
 - (1) Unless otherwise indicated, provide T8 rapid-start lamps rated for 32 Watts maximum, and having a nominal length of 48 inches (1220mm), initial minimum luminous flux of 2800 lumens, a minimum color-rendering index of CRI 75, a color temperature of 4100 degrees Kelvin, and an average rated life of 20,000 hours.
 - 2) T8, 17-Watt Fluorescent Lamps:
 - (1) Unless otherwise indicated, provide T8 rapid-start lamps rated for 17 Watts maximum, and having a nominal length of 24 inches (610mm), initial minimum luminous flux of 1300 lumens, a minimum color-rendering index of CRI 75, a color temperature of 4100 degrees Kelvin, and an average rated life of 20,000 hours.
 - 3) Compact Fluorescent Lamps:

- (1) Unless otherwise indicated, provide 4-pin T4 compact fluorescent lamps suitable for use with dimming ballasts, and having a minimum color-rendering index of CRI 80, a color temperature of 4100 degrees Kelvin, an average rated life of 10,000 hours at three hours operation per start, and the following Wattages and minimum luminous fluxes as applicable:
 - (2) 13 Watts, double or triple tube, rated 900 initial lumens.
 - (3) 18 Watts, double or triple tube, rated 1200 initial lumens.
 - (4) 26 Watts, double or triple tube, rated 1800 initial lumens.
 - (5) 32 Watts, triple tube, rated 2400 initial lumens.
 - (6) 42 Watts, triple tube, rated 3200 initial lumens.
 - (7) 57 Watts, triple tube, rated 4300 initial lumens.
 - (8) 70 Watts, triple tube, rated 5200 initial lumens.

2.02 ACCESSORIES

A. Lighting Fixture Support Components:

1. Provide lighting fixture support components complying with the requirements for channel-iron and angle-iron supports and nonmetallic channel and angle supports specified in Section 16070, Hangers and Supports, and with the following:
 - a. Single-Stem Hangers:
 - 1) Provide single-stem hangers consisting of 1/2-inch (13mm) steel tubing finished the same as the fixture, and having swivel ball fittings and a ceiling canopy.
 - b. Twin-Stem Hangers:
 - 1) Provide two, 1/2-inch (13mm) steel tubes finished the same as the fixture, and having a single canopy designed to mount a single fixture.
 - c. Wires:
 - 1) Provide 12 gage (2.68mm) soft temper, zinc-coated steel wires complying with the requirements for Class 3 wire specified in ASTM A 641/A 641M.
 - d. Wires for Humid Spaces:
 - 1) Provide 12 gage (2.68mm) annealed stainless steel wires for humid spaces complying with the requirements for Type 302 or 304 stainless steel wire specified in ASTM A 580/A 580M.
 - e. Rod Hangers:
 - 1) Provide cadmium-plated, threaded steel rod hangers having a minimum diameter of 3/16 inch (5mm).
 - f. Hook Hangers:
 - 1) Provide hook hangers consisted of an integrated assembly matched to the fixture and line voltage, and equipped with a threaded attachment, cord, and locking-type plug.

2. Retrofit Kits for Fluorescent Lighting Fixtures:
 - a. Reflector Kits:
 - 1) Provide reflector kits complying with the requirements for Type I kits specified in UL 1598, and suitable for improving the reflectivity of the fixture surfaces of two-lamp to four-lamp, surface-mounted or recessed lighting fixtures.
 - b. Ballast and Lamp Change Kits:
 - 1) Provide ballast and lamp change kits complying with the requirements for Type II kits specified in UL 1598, and suitable for changing existing ballast, lamps, and sockets.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Examine the areas to receive lighting fixtures and the conditions there for compliance with requirements.
- B. Evaluation and Assessment:
 1. Proceed to install the lighting fixtures only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the lighting fixtures.

3.03 INSTALLATION

- A. Lighting Fixtures:
 1. Install lighting fixtures in accordance with the manufacturer's installation instructions.
 - a. Submit the lighting fixture manufacturer's installation instructions to the Program/Project Manager for information.
 2. Unless otherwise indicated, set the lighting fixtures level, plumb, and square with the ceilings and walls.
 3. Install lamps in each luminaire.
- B. Remote Ballasts:
 1. Do not mount remote ballasts further from their fixtures than allowed by the ballast manufacturer's recommendations.
 - a. Verify with the ballast manufacturers, the maximum distance between the ballast and the luminaire.
 2. Pulse-Start Ballasts:

- a. Remote mounting distances for some pulse-start ballasts might be as short as 60 inches (150mm).
- C. Lay-in Ceiling Lighting Fixtures Supports:
 - 1. Use the lay-in ceiling grid as a support element.
 - a. Install ceiling support system rods or wires, independent of the ceiling suspension devices, for each fixture.
 - 1) Locate the ceiling support system rods or wires not more than 6 inches (150mm) from the lighting fixture corners.
 - b. Support Clips:
 - 1) Fasten the support clips to the lighting fixtures and to the ceiling grid members at or near each fixture corner, using clips that are UL-listed for the application.
 - c. Fixtures Having Sizes Less Than the Ceiling Grid Dimensions:
 - 1) Install fixtures having sizes less than the ceiling grid dimensions as indicated on the reflected ceiling plans, or center these fixtures in the acoustical panels.
 - 1) Support the fixtures independently with at least two 3/4-inch (20mm) metal channels spanning and secured to the ceiling tees.
 - d. Install at least one independent support rod or wire from the structure to a tab on the lighting fixture.
 - 1) Provide wire or rod having a breaking strength based on the weight of the fixture and a safety factor of 3.
- D. Suspended Lighting Fixture Supports:
 - 1. Pendants and Rods:
 - a. Brace pendants and rods that are longer than 48 inches (1200mm) to limit swinging.
 - 2. Stem-Mounted, Single-Unit Fixtures:
 - a. Provide twin-stem hangers to suspend stem-mounted, single-unit fixtures.
 - 3. Continuous Rows:
 - a. Provide tubing or a stem for wiring at one point, and provide tubing or rod to suspend each unit length of the fixture chassis, including a tube or rod at each end.
 - 4. Do not use the grid as a support for pendant luminaires.
 - a. Connect support wires or rods to the building structure.
- E. Special Techniques:
 - 1. Identification:
 - a. Install labels having the panel and circuit numbers on concealed junction and outlet boxes for the lighting fixtures.
 - b. Comply with the requirements for identification specified in Section 16075, Electrical Identification.
- F. Interface with Other Work:

1. Connect wiring to the lighting fixtures in accordance with the requirements specified in Section 16120, Conductors and Cables.
2. Install lighting switches and controls in accordance with the requirements specified in Section 16140, Wiring Devices, and Section 16145, Lighting Control Devices.
3. Ground the lighting fixtures in accordance with the requirements specified in Section 16061, Electrical Grounding and Bonding.

3.04 RE-INSTALLATION

- A. Temporary Lighting:
 1. If necessary and approved by the Program/Project Manager, permanent luminaires may be used for temporary lighting.
 - a. Install and energize the minimum number of permanent luminaires necessary.
 - b. When construction is sufficiently complete, remove, disassemble, and thoroughly clean the luminaires used for temporary lighting; then install new lamps in the luminaires and reinstall the luminaires.

3.05 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 1. Emergency Lighting Test:
 - a. Test Procedure:
 - 1) Interrupt the power supply of each emergency lighting fixture to demonstrate the proper operation of the emergency lighting fixtures.
 - (1) Verify the transfer from normal power to battery power, and the retransfer to normal power.
 - 2) Prepare a written Emergency Lighting Test Report of the tests, inspections, observations, and verifications that documents and interprets the results.
 - (1) Submit the Emergency Lighting Test Report to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Emergency lighting fixtures operating as specified pass the Emergency Lighting Test.
 2. Inspections:
 - a. Inspect each installed fixture for damage.
- B. Non-Conforming Work
 1. Replace damaged fixtures and components.

3.06 SYSTEM STARTUP

- A. Prior to occupancy by Owner, burn-in all lamps that require a specific aging period to operate properly.

1. Burn-in fluorescent and compact fluorescent lamps intended to be dimmed, for at least 100 hours at full voltage.

3.07 ADJUSTING

- A. Occupancy Adjustments:
 1. When requested within 12 months of date of Substantial Completion, provide on-site assistance to adjust aimable luminaires to suit the actual occupied conditions.
 - a. Provide for up to 2 visits to the Site during other-than-normal occupancy hours for this purpose
 - b. Some of this work may be required to be performed after dark.
 2. Adjust the aimable luminaires in the presence of the Program/Project Manager.
- B. After adjustments are made to the lighting system, retest the adjusted components to demonstrate their compliance with the standards.

3.08 CLEANING

- A. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.09 PROTECTION

- A. Take steps to ensure that installed lighting equipment and fixtures are protected during subsequent construction activities.

3.10 MAINTENANCE

- A. Operation and Maintenance Data:
 1. Furnish operation and maintenance data for lighting equipment and fixtures for inclusion in emergency and operation and maintenance manuals as specified in Section 01780, Closeout Submittals, and include the following:
 - a. Provide a list of all lamp types used on the Contract using ANSI and manufacturers' codes to identify each.
 2. Submit the operation and maintenance data for the panelboards and components to the Program/Project Manager for information.

SECTION 16521

EXTERIOR LIGHTING

PART 1 GENERAL

1.01 SUMMARY

- A. Section includes requirements for exterior lighting, including the following:
 - 1. Exterior luminaires with lamps and ballasts.
 - 2. Luminaire-mounted photoelectric relays.
 - 3. Poles and accessories.
 - 4. Exterior solid-state luminaires that are designed for and exclusively use LED lamp technology.

- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01770 - Closeout Procedures.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 03100 - Concrete Forms and Accessories.
 - 6. Section 03200 - Concrete Reinforcement.
 - 7. Section 03300 - Cast-In-Place Concrete.
 - 8. Section 03600 - Grouts.
 - 9. Section 16061 - Electrical Grounding and Bonding.
 - 10. Section 16130 - Raceway and Boxes.
 - 11. Section 16511 - Interior Lighting.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AC: Alternating electric current.
 - 2. CCT: Correlated color temperature.
 - 3. CRI: Color-rendering index.
 - 4. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 5. HID: High-intensity discharge.
 - 6. LER: Luminaire efficacy rating.

7. LED: Light Emitting Diode
8. NIST: An acronym for National Institute of Standards and Technology, a Federal agency that develops and promotes measurements, standards, and technology.
9. NRTL: Nationally recognized testing laboratory.
10. NVLAP: National Volunteer Laboratory Accreditation Program.
11. RMS: Root-mean-square.
12. UV: Ultraviolet.

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
2. Luminaire: The complete lighting fixture, including the ballast housing if provided.
3. Nationally Recognized Testing Laboratory (NRTL): An organization which is recognized by the Occupational Safety and Health Administration (OSHA), and which tests for safety, and lists or labels or accepts, equipment or materials which meet the criteria specified in 29 CFR 1910.7, Definition and Requirements for a Nationally Recognized Testing Laboratory.
4. Pole: Luminaire support structure, including a tower used for large area illumination.
5. Standard: Same definition as for "Pole".

C. Reference Standards:

1. Aluminum Association (AA):
 - a. DAF-45 – Designation System for Aluminum Finishes.
2. American Architectural Manufacturers Association (AAMA):
 - a. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum.
3. American Association of State Highway and Transportation Officials (AASHTO):
 - a. AASHTO LTS-5 - Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals.
4. American National Standards Institute (ANSI):
 - a. ANSI_ANSLG C78.41 - American National Standard for Electric Lamps - Guidelines for Low Pressure Sodium Lamps.
 - b. ANSI_ANSLG C78.42 - American National Standard for Electric Lamps – High-Pressure Sodium Lamps.
 - c. ANSI_ANSLG C78.43 - American National Standard for Electric Lamps – Single-Ended Metal Halide Lamps.
 - d. ANSI C82.1 - American National Standard for Lamp Ballast – Line Frequency Fluorescent Lamp Ballast.

- e. ANSI C82.4 – American National Standard for Lamp Ballasts for High-Intensity-Discharge and Low-Pressure Sodium Lamps (Multiple-Supply Type).
- f. ANSI C136.10 - American National Standard for Roadway and Area Lighting Equipment, Locking –Type Photocontrol Devices and Mating Receptacles – Physical and Electrical Interchangeability and Testing.
- 5. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. (ASHRAE):
 - a. ANSI/ASHRAE/IESNA 90.1-2007 – Energy Standard for Buildings Except Low-Rise Residential Buildings.
- 6. ASTM International (ASTM):
 - a. ASTM A 36/A 36M - Standard Specification for Carbon Structural Steel.
 - b. ASTM A 48/A 48M - Standard Specification for Gray Iron Castings.
 - c. ASTM A 123/A 123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
 - d. ASTM A 500 - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
 - e. ASTM B 209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
 - f. ASTM B 209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate [Metric].
 - g. ASTM B 429/B 429M - Standard Specification for Aluminum-Alloy Extruded Structural Pipe and Tube.
 - h. ASTM B 660 - Standard Practices for Packaging/Packing of Aluminum and Magnesium Products.
- 7. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 8. Illuminating Engineering Society of North America (IESNA):

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Gaskets.
 - 2) Luminaire-mounted photoelectric relays.
 - 3) Ballasts for fluorescent lamps.
 - 4) Ballasts for high-intensity discharge (HID) lamps.
 - 5) High-intensity discharge (HID) lamps.
 - 6) LED Luminaires and associated driver and control equipment.
 - 7) Light poles and support components.
 - 8) Labels.
 - b. Shop Drawings:
 - 1) Luminaires, poles, support components, and foundations.
 - 2) Wiring diagrams for power, signal, and control wiring.
 - c. Certificates:
 - 1) Pole and Support Component Certificates.
 - d. Delegated Design Submittals:
 - 1) Design calculations for the strength of screw foundations and soil conditions.
 - e. Qualification Statements:
 - 1) Professional Engineer's qualifications.
 - 2) Evidence that the laboratories of the manufacturers providing photometric data for lighting fixtures are accredited under the National Volunteer Laboratory Accreditation Program.

- B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Luminaire manufacturer's light pole installation recommendations and instructions.
- C. Closeout Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for exterior luminaires and light poles.
 - b. Warranty Documentation:
 - 1) Luminaire Warranty.
 - 2) Metal Corrosion Warranty.
 - 3) Color Retention Warranty.
 - 4) Light Pole Warranty.
- D. Maintenance Material Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish spare exterior lighting products that match the products installed, and packaged for storage by having a protective coverings and labels identifying the contents.
 - a) Lamps:
 - (1) For each type and rating of lamp installed, furnish 1 spare lamp for every 100 lamps installed, but not less than one of each type and rating.
 - b) Glass and Plastic Lenses, Covers, and Other Optical Parts:
 - (1) For each type and rating of glass and plastic lens, cover, and other optical part installed, furnish 1 spare glass and plastic lens, cover, or other optical part for every 100 glass and plastic lens, cover, or other optical part installed, but not less than one of each type and rating.
 - c) Ballasts/Drivers:
 - (1) For each type and rating of ballast/Driver installed, furnish a spare for every 100 installed, but not less than one of each type and rating.
 - d) Globes and Guards:
 - (1) For each type and rating of globe and guard installed, furnish 1 spare globe or guard for every 20 globes or guards installed, but not less than one of each type and rating.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Approvals:

1. Special Inspections:

- a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
- b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
- c. Periodic Special Inspections will be performed during the installation of exterior lighting foundations.

2. Testing and Inspection Agencies:

- a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Qualifications:

1. Luminaire Photometric Data Testing Laboratory Qualifications:

- a. Procure products from manufacturers participating in the National Volunteer Laboratory Accreditation Program (NVLAP), and which have manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products and the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products – Solid State Lighting, as specified in the appropriate handbooks and checklists.
 - 1) Submit evidence that the laboratories of the manufacturers providing photometric data for lighting fixtures are accredited under the National Volunteer Laboratory Accreditation Program to the Program/Project Manager for approval.

2. Professional Engineer's Qualifications:

- a. Employ an independent Professional Engineer, registered in the State of Arizona, who is qualified to perform design calculations for the strength of screw foundations and the soil conditions required under this Section.
- b. Submit the Professional Engineer's qualifications to the Program/Project Manager for approval.

C. Certifications:

1. Listing and Labeling of Electrical Components, Devices, and Accessories:

- a. Provide products that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
2. Pole and Support Component Certificates:
 - a. Furnish Pole and Support Component Certificates, signed by the manufacturers of the poles and supports, certifying that the poles and supports are designed to comply with the requirements for loads specified in AASHTO LTS-5, and that the load imposed by the luminaire and attachments has been included in design.
 - 1) Furnish the certification on the basis of design calculations performed by a qualified Professional Engineer.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Light Poles:

- a. Package aluminum light poles for shipping in accordance with the requirements specified in ASTM B 660.

B. Storage and Handling Requirements:

1. Light Poles:

- a. Store light poles on decay-resistant-treated skids at least 12 inches (300mm) above grade and vegetation.
 - 1) Support light poles to prevent distortion, and arrange the light poles to promote free air circulation.
- b. Handle wood poles so they will not be damaged.
 - 1) Do not use pointed tools that can indent the pole surface more than 1/4 inch (6mm) deep.
 - 2) Do not apply tools to the section of the pole to be installed below the ground line.
- c. Retain factory-applied pole wrappings on fiberglass, laminated wood, and metal poles until right before pole installation.
 - 1) Handle poles with nonmetallic finishes using web fabric straps.

C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

A. Special Warranty:

1. Provide the special warranties for the exterior lighting listed herein on the manufacturer's standard form in which the manufacturer of the exterior lighting units agrees to repair or replace components of exterior lighting units that fail in materials or workmanship, and that corrode, fade, stain, perforate, erode, or chalk due to effects of weather or solar radiation, within specified warranty period:
 - a. Special warranty exclusions from coverage may include lightning damage, hail damage, vandalism, abuse, or unauthorized repairs or alterations.
2. Luminaire Warranty:
 - a. Furnish a Luminaire Warranty effective during the warranty period including the 5 years after the date of Substantial Completion.
3. Metal Corrosion Warranty:
 - a. Furnish a Metal Corrosion Warranty effective during the warranty period including the 5 years after the date of Substantial Completion.
4. Color Retention Warranty:
 - a. Furnish a Color Retention Warranty effective during the warranty period including the 5 years after the date of Substantial Completion.
5. Light Pole Warranty:
 - a. Furnish a Light Pole Warranty in which the manufacturer of the exterior lighting units agrees to repair or replace lighting poles and standards that fail in finish, materials, and workmanship within manufacturer's standard warranty period, but not less than the period including the 3 years after the date of Substantial Completion.

PART 2 PRODUCTS

2.01 EXTERIOR LIGHTING ASSEMBLIES

A. Manufacturers:

1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide the product manufactured by the manufacturer listed on the Contract Drawings.
2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed on the Contract Drawings may be provided.

B. Description:

1. Regulatory Requirements:

a. Phoenix Building Construction Code:

- 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].

b. National Electrical Code (NEC):

- 1) Provide products and installation complying with the requirements specified for external lighting in NFPA 70.

c. National Electrical Safety Code (NESC):

- 1) Provide products and installation complying with requirements specified for exterior lighting in ANSI/IEEE C2.

2. Sustainability Requirements:

a. Envision Credits:

- 1) Provide exterior lighting that is capable of qualifying the Project for ENVISION Credits RA2.1 – Reduce Energy Consumption and RA2.3 – Commission and Monitor Energy Systems.
 - a) Provide products and installation that meet the performance requirements established in the contract documents for purposes of maintaining the as designed energy reduction in accordance with the Appendix D in ANSI/ASHRAE/IESNA 90-2007.
 - b) Only light areas required for safety and comfort.
 - c) Do not exceed 80 percent of the lighting power densities for exterior areas and 50 percent for building facades and landscape features as defined in ASHRAE/IESNA 90.1.
 - d) Follow the requirements specified for lighting zone LZ4 - High (Major City Centers, Entertainment Districts) in accordance with the requirements specified in IESNA RP-33:
 - (1) Provide exterior lighting so all Site and building mounted luminaires produce a maximum initial illuminance value no greater than 0.60 horizontal and vertical footcandles at the Site boundary, and no greater than 0.01 horizontal footcandles 15 feet beyond the Site.
 - (2) Document that no more than 10 percent of the total initial designed Site lumens are emitted at an angle of 90 degrees or higher from nadir (straight down).
 - (3) For Site boundaries that abut public right-of-way, light trespass requirements may be met relative to the curb line instead of the Site Boundary.

C. Performance:

1. Lateral Light Distribution Patterns:

- a. If the Exterior Lighting Device Schedule or details on the Contract Drawings include lighting units or luminaires having a Type I, II, III, IV,

or V distribution pattern, provide these lighting units and luminaires having lateral light distribution patterns complying with the requirements specified in ANSI/IESNA RP-8.

2. Luminaire Efficacy Rating (LER):
 - a. Where the luminaire efficacy rating (LER) is indicated, provide exterior lighting luminaires having the LER specified when tested in accordance with the appropriate method specified for the following fixture types:
 - 1) Fluorescent Fixtures: NEMA LE 5 or NEMA LE 5A as applicable.
 - 2) Incandescent Fixtures: NEMA LE 5A.
 - 3) High-Intensity Discharge (HID) Fixtures: NEMA LE 5B.
 - 4) LED Fixtures: NEMA 410 as applicable.
3. Reflecting Surfaces:
 - a. Unless otherwise indicated, provide reflecting surfaces having the following minimum reflectance:
 - 1) White Surfaces: 85 percent.
 - 2) Specular Surfaces: 83 percent.
 - 3) Diffusing Specular Surfaces: 75 percent.

D. Design Criteria:

1. Building-Mounted Exterior Luminaires:
 - a. For exterior luminaires normally mounted on exterior surfaces of buildings, provide luminaires complying with the requirements specified in Section 16511, Interior Lighting.
2. Exterior Luminaires:
 - a. Provide exterior luminaires complying with the requirements specified in UL 1598, and that are listed and labeled for installation in wet locations by a nationally recognized testing laboratory (NRTL) acceptable to the Authorities Having Jurisdiction.
 - b. Housings:
 - 1) Provide rigidly formed, weather-tight and light-tight enclosures that will not warp, sag, or deform in use.
 - 2) For enclosed luminaires, provide a filter/breather.
 - c. Doors, Frames, and Other Internal Access:
 - 1) Provide smooth operating doors, free of light leakage under operating conditions, and designed to permit re-lamping without the use of tools.
 - 2) Provide doors, frames, lenses, diffusers, and other components designed not to accidentally fall during re-lamping and when secured in the operating position.
 - 3) Provide removable doors that allow for cleaning and replacing lenses.
 - 4) Provide doors designed to disconnect the ballast when the door opens.
 - d. Light Shields:

- 1) Provide factory-installed and field-adjustable metal baffles arranged to block light distribution to that portion of the normally illuminated area or field indicated in the Contract Documents.
3. Light Pole Structural Design Criteria:
 - a. Provide light poles designed to comply with the following structural design criteria:
 - 1) Dead Load:
 - a) Provide light poles designed to accommodate a dead load consisting of the weight of the luminaire and its horizontal and vertical supports, its lowering devices, and its supporting structure, applied as specified in AASHTO LTS-5.
 - 2) Live Load:
 - a) If pole-mounted walkways or service platforms are required, provide light poles designed to accommodate a live load consisting of a single load of 500 pounds-force (2224N), distributed as specified in AASHTO LTS-5.
 - 3) Wind Load:
 - a) Provide light poles designed to accommodate a wind load consisting of the pressure of the wind on the pole and luminaire and on banners and banner arms, calculated and applied as specified in AASHTO LTS-5.
 - (1) For each pole, multiply the actual equivalent projected area of luminaires and brackets by a factor of 1.1 to obtain the equivalent projected area to be used in the pole selection strength analysis.
 - b) Provide light poles having adequate wind-load strength at the following heights above grade to not fail, permanently deflect, or whip in steady winds of the speed indicated:
 - (1) For poles exceeding 50 feet (15m) in height, calculate the wind load using a basic wind speed of 100 miles per hour (45m/s), and the following additional factors:
 - (a) Wind Importance Factor: 1.0.
 - (b) Minimum Design Life: 50 years.
 - (c) Velocity Conversion Factors: 1.0.
 - (2) For poles 50 feet (15m) high or less, calculate the wind load using a basic wind speed of 100 miles per hour (45m/s), and the following additional factors:
 - (a) Wind Importance Factor: 1.0.
 - (b) Minimum Design Life: 25 years.
 - (c) Velocity Conversion Factors: 1.0.
4. Light Pole Clearances:
 - a. Unless otherwise indicated on the Contract Drawings, maintain the following minimum horizontal distances from light poles to surface and underground features:
 - 1) Fire Hydrants and Storm Drainage Piping: 60 inches (1520mm).

- 2) Water, Gas, Electric, Communication, and Sewer Lines: 10 feet (3m).
 - 3) Trees: 15 feet (5m) from the tree trunk.
5. Product Data:
 - a. Prepare Product Data for each luminaire, pole, and support component, arranged in order of the lighting unit designations, and including information regarding product features, accessories, finishes, and the following:
 - 1) A physical description of luminaires, including their materials, dimensions, effective projected area, and verification of the indicated parameters.
 - 2) Details for attaching luminaires and accessories.
 - 3) Details of installation and construction.
 - 4) Luminaire materials.
 - 5) Photometric data based on laboratory testing of each luminaire type, complete with its indicated lamps, ballasts, and accessories.
 - a) Testing Agency Certified Data:
 - (1) For the indicated luminaires, furnish photometric data certified by a qualified independent testing agency.
 - (2) For the remaining luminaires, furnish photometric data certified by the manufacturer.
 - b) Manufacturer Certified Data:
 - (1) Furnish photometric data certified by manufacturer's laboratory having a current accreditation under the NIST National Voluntary Laboratory Accreditation Program (NVLAP) for Energy Efficient Lighting Products.
 - 6) Photoelectric relays.
 - 7) Ballast and LED drivers, including energy-efficiency data.
 - 8) Lamps, including life, output, correlated color temperature (CCT), color-rendering index (CRI), lumens, and energy-efficiency data.
 - 9) Materials, dimensions, and finishes of poles.
 - 10) Means of attaching luminaires to supports, and an indication that the attachment is suitable for the components involved.
 - 11) Anchor bolts for poles.
 - 12) Manufactured pole foundations, if applicable, including screw foundations.
 - b. Submit Product Data for each luminaire, pole, and support component to the Program/Project Manager for approval.
6. Shop Drawings:
 - a. Prepare Shop Drawings for each luminaire, pole, support component, and foundation proposed for the Work of this Section.
 - 1) Include plans, elevations, sections, details, and attachments to other work.
 - a) Detail equipment assemblies, and indicate the dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

- b) Furnish anchor-bolt templates keyed to specific poles, and certified by the manufacturer.
 - 2) Wiring Diagrams:
 - a) Furnish wiring diagrams for power, signal, and control wiring.
 - b. Submit the Shop Drawings for each luminaire, pole, and support component to the Program/Project Manager for approval.
 - 7. Design Calculations:
 - a. Screw Foundations and Soil Conditions:
 - 1) Submit design calculations, certified by a qualified Professional Engineer, indicating the strength of screw foundations and the soil conditions on which they are based to the Program/Project Manager for approval.
- E. Materials:
 - 1. Plastic Parts:
 - a. Provide plastic parts having a high resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
- F. Components:
 - 1. Gaskets:
 - a. Provide gaskets, for sealing and cushioning lenses and refractors in luminaire doors, fabricated from heat- resistant and aging-resistant resilient material.
 - 2. Luminaire-Mounted Photoelectric Relays:
 - a. Provide luminaire-mounted photoelectric relays complying with the requirements specified in UL 773 or UL 773A.
 - b. Contact Relays:
 - 1) Provide factory mounted, single throw, contact relays designed to fail in the on position, and factory set to the turn light unit on at 1.5 foot-candles to 3 foot-candles (16lx to 32lx).
 - 2) Provide relays having a directional lens in front of the photocell to prevent artificial light sources from causing false turnoff.
 - 3) Relay having a locking-type receptacle must comply with the requirements specified in ANSI C136.10.
 - 4) For adjusting on-off set points, provide an adjustable window slide.
 - 3. Ballasts for Fluorescent Lamps:
 - a. Ballasts for Low Temperature Environments:
 - 1) For temperatures of 0 degrees Fahrenheit (minus 17 degrees Celsius) and higher, provide electromagnetic type ballasts rated for a starting and operating temperature of 0 degrees Fahrenheit (minus 17 degrees Celsius) with the lamp types indicated.
 - 2) For temperatures of minus 20 degrees Fahrenheit (minus 29 degrees Celsius) and higher, provide electromagnetic type ballasts designed for use with the lamp types indicated.
 - 3) Ballast Characteristics:

- a) Power Factor:
 - (1) Provide ballasts having a minimum power factor of 90 percent.
- b) Sound Rating:
 - (1) Provide ballasts having a Class A sound rating except provide a Class B sound rating for T12/HO ballasts.
- c) Total Harmonic Distortion Rating:
 - (1) Provide ballasts having a total harmonic distortion rating less than 10 percent.
- d) Electromagnetic Ballasts:
 - (1) Provide electromagnetic ballasts complying with the requirements specified for energy-saving, high power factor, Class P, automatic-reset thermal protection ballasts in ANSI C82.1.
- e) Case Temperature for Compact Lamp Ballasts:
 - (1) For compact lamp ballasts, provide ballasts having a maximum rated case temperature of 65 degrees Celsius.
- f) Transient-Voltage Protection:
 - (1) Provide ballasts having transient-voltage protection comply with the requirements for Category A or better protection specified in IEEE C62.41.1 and IEEE C62.41.2.
- 4) LED Drivers
 - a) Inrush currents not exceeding peak currents specified in NEMA 410.
 - b) Minimum efficiency/efficacy: Provide ballasts complying with all current and state ballast efficiency/efficacy standards.
 - c) Dimming Range: Continuous dimming from 100 percent to five percent relative light.
 - d) Control capability: Fully compatible with the dimming controls to be installed.
- 5) Low-Temperature Lamp Capability:
 - a) Provide ballasts having a low-temperature lamp capability rated for reliable starting and operation with the ballast provided at temperatures 0 degrees Fahrenheit (minus 18 degrees Celsius) and higher.
- 4. Light Poles and Support Components:
 - a. Mountings, Fasteners, and Appurtenances:
 - 1) Provide corrosion-resistant mountings, fasteners, and appurtenances compatible with support components, and that do not cause galvanic action at contact points.
 - a) Unless otherwise indicated, provide stainless-steel fasteners and mounting bolts.
 - 2) Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers:

- a) Unless otherwise indicated, provide anchor bolts, leveling nuts, bolt caps, and washers that have been hot-dip galvanized after fabrication.
 - 3) Anchor-Bolt Templates:
 - a) Provide plywood or steel anchor-bolt templates for the anchor-bolts for mounting the poles.
 - b. Handholes:
 - 1) Provide oval-shaped handholes having a clear opening of 2-1/2 inches by 5 inches (65mm by 130mm) minimum, and having covers secured by stainless-steel captive screws.
 - 2) Provide handholes on all poles, except for wood poles.
 - c. Steel Poles:
 - 1) Poles:
 - a) Provide square, straight poles fabricated from carbon steel complying with the requirements for Grade B steel specified in ASTM A 500 and having a minimum yield strength of 46,000 pounds per square inch (317MPa).
 - (1) For poles up to 40 feet (12m) in height, provide poles having one-piece construction and an access handhole in the pole wall.
 - b) Pole Mounting Provisions:
 - (1) For bolted mounting on a foundation or breakaway support, provide a butt flange.
 - 2) Steel Mast Arms:
 - a) Provide single-arm type steel mast arms, fabricated from the same material and having the same finish as the steel pole, continuously welded to a pole attachment plate.
 - 3) Grounding and Bonding Lugs:
 - a) Provide welded 1/2-inch (13mm) threaded grounding and bonding lugs complying with requirements specified in Section 16061, Electrical Grounding and Bonding, accessible through handhole, and listed for attaching grounding and bonding conductors of the type and size specified in Section 16061.
- 5. Labels:
 - a. Provide factory-applied labels complying with the requirements specified in UL 1598.
 - 1) Locate the labels where they will be readily visible to service personnel, but will not be seen from the normal viewing angles when the lamps are in place.
 - b. Include the following lamp and ballast characteristics on the label:
 - 1) List the recommended lamps and ballasts for the luminaire.
 - a) Include the words, "USES ONLY", and the specific lamp type.
 - (1) Indicate the lamp type, wattage, and bulb type (ED17, BD56, or similar designation); and for high-intensity discharge (HID) luminaires indicate the coating (clear or coated).

- b) For high-intensity discharge (HID) luminaires, indicate the ANSI ballast type (M98, M57, or similar designation).
- 2) Indicate the correlated color temperature (CCT) and color-rendering index (CRI) for all luminaires.

G. Shop Fabrication:

1. Metal Parts:

- a. Provide metal parts that are free of burrs and sharp corners and edges.
- b. Sheet Metal Components:
 - 1) Unless otherwise indicated, provide corrosion-resistant aluminum sheet metal components.
 - 2) Form and support the sheet metal components so warping and sagging are prevented.
- c. Exposed Hardware:
 - 1) Fabricate exposed hardware from stainless steel.

H. Finishes:

1. Primer Materials:

- a. Steel Luminaires:
 - 1) For exterior surfaces, provide the manufacturer's standard primer compatible with the substrate material and the manufacturer's standard finish coats.
 - 2) For interior surfaces, provide bituminous paint.

2. Finish Materials:

- a. Steel Luminaires:
 - 1) Provide the manufacturer's standard high-gloss, high-build polyurethane enamel.
- b. Aluminum Luminaires:
 - 1) Finish designations prefixed by "AA" and specified herein or indicated on the Contract Drawings conform to the system established by the Aluminum Association for designating aluminum finishes in DAF-45.

3. Shop Finishing Methods:

- a. For recommendations for applying and designating finishes on steel luminaires, comply with the requirements specified in NAAMM AMP 500.
- b. Surface Preparation:
 - 1) Clean surfaces to remove dirt, oil, grease, and other contaminants that could impair paint bond in accordance with the requirements specified in SSPC-SP 1.
 - a) Grind welds, and polish surfaces, to obtain a smooth, even finish.
 - b) If mill scale and rust are present on uncoated steel, remove the mill scale and rust in accordance with the requirements specified in SSPC-SP 5/NACE No. 1, or SSPC-SP 8.

- c. Steel Luminaires:
 - 1) After fabricating the steel luminaires, hot-dip galvanize the luminaires in accordance with the requirements specified in ASTM A 123/A 123M.
 - 2) Apply the manufacturer's standard paint to factory-assembled and factory-tested luminaires before shipping them to the Site.
 - a) Where indicated in the Contract Documents, match the finish process and color to those of the pole or support materials.
 - 3) For the interior surfaces of the steel luminaires, apply bituminous paint or otherwise treat the interior surfaces to provide corrosion protection equal to that provided by the bituminous paint.
 - 4) For the exterior surfaces of the steel luminaires, apply the manufacturer's standard finish consisting of one or more coats of primer and two finish coats of the color selected by the Program/Project Manager from the manufacturer's standard catalog of colors.
- d. Aluminum Luminaires:
 - 1) For aluminum luminaires that are not to be field painted and not required to match finish of pole or support materials, provide one of the following finishes:
 - a) Natural Satin Finish:
 - (1) Provide a fine, directional, medium satin polish complying with the requirements for finish AA-M32 specified in DAF-45
 - (2) Buff the finish in accordance with the requirements of AA-M20 specified in DAF-45, and seal the aluminum surfaces with clear, hard-coat wax.
 - b) Class I, Clear Anodic Finish:
 - (1) Provide an AA-M32C22A41 finish (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I) complying with the requirements specified in DAF-45.
 - (2) Apply a clear coating, 0.018mm thick or thicker, complying with the requirements specified in AAMA 611.
 - c) Class I, Color Anodic Finish:
 - (1) Provide an AA-M32C22A42/A44 finish (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I) complying with the requirements specified in DAF-45.
 - (2) Provide either an integrally colored finish or electrolytically deposit a color coating 0.018mm thick or thicker and complying with the requirements specified in AAMA 611.
 - (3) Color:
 - (a) Provide a dark bronze color finish.

2.02 ACCESSORIES

- A. Concrete:
 - 1. Provide concrete materials complying with the requirements specified in Section 03300, Cast-in-Place Concrete.
- B. Concrete Formwork:
 - 1. Provide concrete formwork materials complying with the requirements specified in Section 03100, Concrete Forms and Accessories.
- C. Concrete Reinforcement:
 - 1. Provide concrete reinforcement materials complying with the requirements specified in Section 03200, Concrete Reinforcement.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Examine the areas to receive exterior lighting and the conditions there for compliance with requirements.
- B. Evaluation and Assessment:
 - 1. Proceed to install the exterior lighting only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the exterior lighting.
- B. Surface Preparation:
 - 1. Concrete Pole Foundations:
 - a. Provide and finish cast-in-place pole foundations having anchor bolts matching the pole-base flange.
 - 1) Construct the concrete pole foundation formwork in accordance with the requirements specified in Section 03100, Concrete Forms and Accessories.
 - 2) Construct the concrete pole foundation concrete reinforcement in accordance with the requirements specified in Section 03200, Concrete Reinforcement.
 - 3) Construct the concrete pole foundation cast-in-place concrete in accordance with the requirements specified in Section 03300, Cast-In-Place Concrete.
 - 4) Set anchor bolts according to anchor-bolt templates furnished by the light pole manufacturer.

3.03 INSTALLATION

A. Light Poles:

1. Align light pole foundations and light poles to obtain the optimum directional alignment of the luminaires and their mounting provisions on the pole.
2. Raise and set the light poles using web fabric slings, not chain or cable.
3. Foundation-Mounted Light Poles:
 - a. Mount the light pole on the foundation using leveling nuts, and tighten the top nuts to the torque level recommended by pole manufacturer.
 - b. Use anchor bolts and nuts selected to resist the seismic forces defined for the application, and approved by manufacturer.
 - c. Grout the void between the pole base and foundation in accordance with the requirements specified in Section 03600, Grouts.
 - 1) Provide nonshrink or expanding concrete grout firmly packed to fill the space.
 - 2) To drain condensation from the interior of light pole, provide a short piece of 1/2-inch (13mm) diameter pipe to create a drain hole through grout.
 - d. Unless otherwise indicated, install base covers.
4. Light Poles and Light Pole Foundations in Concrete Paved Areas:
 - a. Install light poles with at least a 6-inch (150mm) wide, unpaved gap between the light pole or light pole foundation and the edge of the adjacent concrete slab.
 - b. Fill the unpaved ring with pea gravel to a level 1 inch (25mm) below the top of the concrete slab.

B. Luminaires:

1. Install lamps in each luminaire.
2. Fasten the luminaires to their structural supports.
 - a. Select fastening methods and materials approved by the manufacturer to resist the seismic forces defined for the application.
 - b. Luminaire Pole Attachments:
 - 1) Mount the luminaires on the light poles in accordance with the luminaire manufacturer's installation recommendations and instructions.
 - a) Submit the luminaire manufacturer's light pole installation recommendations and instructions to the Program/Project Manager for information.

C. Bollard Luminaires:

1. Align bollard luminaire units to furnish the optimum directional alignment of light distribution.
2. Install bollard luminaire units on a concrete base having its top flush with the finished grade or the surface at the bollard's location.

- a. Cast conduit into the concrete base, and shape the base to match the shape of the bollard base.
 - b. Finish the concrete by troweling and rubbing it smooth.
- D. Ground-Mounted Luminaires:
 - 1. Install ground-mounted luminaires on concrete bases with the top 4 inches (100mm) above the finished grade or the surface at the luminaire's location.
 - a. Cast conduit into the concrete base, and finish the concrete by troweling and rubbing smooth.
- E. Electrical Grounding:
 - 1. Ground metal poles and support structures in accordance with the requirements specified in Section 16061, Electrical Grounding and Bonding.
 - a. Install the grounding conductor pigtail for connecting the luminaire to the grounding system in the base.
 - 2. Ground nonmetallic poles and support structures in accordance with the requirements specified in Section 16061, Electrical Grounding and Bonding.
 - a. Provide a grounding electrode for each pole.
 - b. Provide a grounding conductor and conductor protector.
 - c. Ground metallic components of the pole accessories and foundations.
- F. Special Techniques:
 - 1. Corrosion Prevention:
 - a. Do not place aluminum in contact with the earth or concrete.
 - 1) When aluminum is in direct contact with a dissimilar metal, protect the aluminum by providing insulating fittings or another treatment.
 - b. Provide steel conduits in accordance with the requirements specified in Section 16130, Raceways and Boxes
 - 1) In concrete foundations, wrap steel conduit with 0.010-inch (0.254mm) thick pipe-wrapping plastic tape applied with a 50 percent overlap.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. During the period when exterior lighting is being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing and inspection of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.

- 1) Periodic Special Inspections will be performed during the installation of exterior lighting.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency and/or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
2. Illumination Tests:
 - a. Test Procedure:
 - 1) Light intensities will be measured at night using photometers having calibration referenced to National Institute of Standards and Technology (NIST) standards.
 - 2) Test measurements will be taken in accordance with the methods specified in the following Illuminating Engineering Society of North America (IESNA) testing guides as applicable:
 - a) IESNA LM-5 for photometric measurements of area lighting installations.
 - b) IESNA LM-50 for photometric measurements of roadway lighting installations.
 - c) IESNA LM-52 for photometric measurements of roadway sign installations.
 - d) IESNA LM-64 for photometric measurements of parking areas.
 - e) IESNA LM-72 for directional positioning of photometric data.
 - 3) A written report of the tests, inspections, observations, and verifications that indicates and interprets results will be prepared.
 - b. Acceptance Criteria:
 - 1) Luminaires having measurements complying with the requirements in the Contract Documents and referenced standards pass the Illumination Tests.
3. Inspections:
 - a. Inspect each installed fixture for damage.

B. Non-Conforming Work

1. Replace damaged fixtures and components.

3.05 SYSTEM STARTUP

A. Illumination Observations:

1. After installing the luminaires and energizing the electrical circuits with normal power source, verify normal operation of the lighting units.
 - a. Verify the operation of photoelectric controls.

3.06 ADJUSTING

- A. Adjust luminaires that require field adjustment or aiming.
 1. Adjust photoelectric devices to prevent false operation of the relay by artificial light sources, favoring a north orientation.
- B. If adjustments are made to the lighting system, retest the adjusted units as specified herein to demonstrate the adjusted units comply with the specified standards.

3.07 CLEANING

- A. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.08 CLOSEOUT ACTIVITIES

- A. Training:
 1. Train the Owner's maintenance personnel to adjust, operate, and maintain the luminaire lowering devices in accordance with the requirements specified in Section 01770, Closeout Procedures.

3.09 PROTECTION

- A. Take steps to ensure that installed exterior lighting units are protected during subsequent construction activities.

3.10 MAINTENANCE

- A. Operation and Maintenance Data:
 1. Furnish operation and maintenance data for exterior luminaires and light poles for inclusion in emergency and operation and maintenance manuals as specified in Section 01780, Closeout Submittals, and include the following:
 - a. Provide a list of all lamp types used on the Contract using ANSI and manufacturers' codes to identify each.
 2. Submit the operation and maintenance data for exterior luminaires and light poles to the Program/Project Manager for information.

SECTION 16527

LANDSCAPE LIGHTING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for in-grade uplights with luminaires, including lamps, power modules, and hardware.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 03100 - Concrete Forms and Accessories.
 - 5. Section 03300 - Cast-In-Place Concrete.
 - 6. Section 16061 - Electrical Grounding and Bonding.
 - 7. Section 16120 - Conductors and Cables.
 - 8. Section 16130 - Raceway and Boxes.
 - 9. Section 16140 - Wiring Devices.
 - 10. Section 16145 - Lighting Control Devices.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. CCT: Correlated color temperature.
 - 2. CRI: Color-rendering index.
 - 3. LED: Light emitting diode.
 - 4. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 5. NPT: National pipe thread tapered thread.
 - 6. PVC: Polyvinyl-chloride.
 - 7. UV: Ultraviolet.
 - 8. ENVISION: The rating system for sustainable infrastructure as published by the Institute for Sustainable Infrastructure
- B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
2. Luminaire: The complete lighting fixture, including the power module housing if provided.

C. Reference Standards:

1. American National Standards Institute (ANSI):
 - a. ANSI/ANSI C78.390 - American National Standard for Electric Lamps—Method of Designation for Electric Lamps-Miniature and Sealed Beam Incandescent Lamps.
2. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. (ASHRAE):
 - a. ANSI/ASHRAE/IESNA 90.1-2007 – Energy Standard for Buildings Except Low-Rise Residential Buildings.
3. Institute of Electrical and Electronics Engineers (IEEE):
 - a. ANSI/IEEE C2– National Electrical Safety Code® (NESC).
4. International Electrotechnical Commission (IEC):
 - a. IEC 60529 - Degrees of protection provided by enclosures (IP Code).
5. National Electrical Manufacturers Association (NEMA):
 - a. NEMA SSL 3 – High-Power White LED Binning for General Illumination.
6. National Fire Protection Association (NFPA):
 - a. NFPA 70 - National Electrical Code® (NEC).
7. National Institute of Standards and Technology (NIST):
 - a. Standards Services Division,
<http://ts.nist.gov/standards/accreditation/index.cfm>:
 - 1) NIST Handbook 150 – National Voluntary Laboratory Accreditation Program Procedures and General Requirements.
 - 2) NIST Handbook 150 Checklist.
 - 3) NIST Handbook 150-1 – National Voluntary Laboratory Accreditation Program Energy Efficient Lighting Products.
 - 4) NIST Handbook 150-1 Checklist.
 - 5) NIST Handbook 150-1A – National Voluntary Laboratory Accreditation Program Energy Efficient Lighting Products – Solid State Lighting.
 - 6) NIST Handbook 150-1A Checklist.
8. Underwriters Laboratories, Inc. (UL):
 - a. UL 1598 – Luminaires.
 - b. UL Online Certifications Directory,
<https://www.ul.com/ul-databases-and-directories/>.
9. Institute for Sustainability Infrastructure (ISI):
 - a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.
10. Institute for Sustainable Infrastructure (ISI) ENVISION Rating System for Sustainable Infrastructure 2015

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the location of the electrical conduit and pullboxes provided under another contract for the landscape lighting luminaires being provided under this Section with the other contractor.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Luminaires.
 - b. Shop Drawings:
 - 1) Luminaires.
 - c. Qualification Statements:
 - 1) Landscape lighting installer's qualifications.
 - 2) Evidence that the laboratories of the manufacturers providing photometric data for lighting fixtures are accredited under the National Volunteer Laboratory Accreditation Program.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Landscape lighting manufacturer's published installation instructions.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the landscape lighting.

D. Maintenance Material Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish spare exterior lighting products that match the products installed, and packaged for storage by having a protective coverings and labels identifying the contents.
 - a) Lamps:

- (1) For each type and rating of lamp installed, furnish 1 spare lamp for every 100 lamps installed, but not less than one of each type and rating.
- b) Lenses, Covers, and Other Optical Parts:
 - (1) For each type and rating of glass and/or plastic lens, cover, and other optical part installed, furnish 1 spare glass and plastic lens, cover, or other optical part for every 100 glass and plastic lens, cover, or other optical part installed, but not less than one of each type and rating.
- c) Power Modules
 - (1) For each type and rating of power modules installed, furnish 1 spare power module for every 100 power modules installed, but not less than one of each type and rating.
- d) Guards:
 - (1) For each type and rating of guard installed, furnish 1 spare guard for every 20 guards installed, but not less than one of each type and rating.

1.05 QUALITY ASSURANCE

A. Qualifications:

- 1. Landscape Lighting Installer's Qualifications:
 - a. Employ qualified and experienced electricians to install the landscape lighting fixtures.
 - b. Submit the landscape lighting installer's qualifications to the Program/Project Manager for approval.
- 2. Luminaire Photometric Data Testing Laboratory Qualifications:
 - a. Procure products from manufacturers participating in the National Volunteer Laboratory Accreditation Program (NVLAP), and which have manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products and the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products – Solid State Lighting, as specified in the appropriate handbooks and checklists.
 - 1) Submit evidence that the laboratories of the manufacturers providing photometric data for lighting fixtures are accredited under the National Volunteer Laboratory Accreditation Program to the Program/Project Manager for approval.

B. Certifications:

- 1. Listing and Labeling of Electrical Components, Devices, and Accessories:
 - a. Provide products that are listed and labeled as defined in Article 100 of NFPA 70 by a testing agency acceptable to the Authorities Having Jurisdiction (AHJ), such as Underwriters Laboratories, Inc. (UL), for the location the product is installed in, and the application intended,

unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.

- 1) Provide products marked with their intended use or classification.
- 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver lighting fixtures in a clean, undamaged condition.
2. Inspect lighting fixtures for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.

B. Storage and Handling Requirements:

1. Handle lighting fixtures in accordance with the manufacturer's written instructions.
2. Follow the manufacturer's written instructions for storing the lighting fixtures.
3. Protect the lighting fixtures from damage during their unloading or removal, storage, and installation.
 - a. Replace broken fixtures, glassware, or other items with new parts, at no increase in Contract Price, and without undue delay or inconvenience.

C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 LANDSCAPE LIGHTING SYSTEMS

A. Manufacturers:

1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide the product manufactured by the manufacturer listed herein.
2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed may be provided.

B. Description:

1. Regulatory Requirements:

a. National Electrical Code (NEC):

- 1) Provide products and installation complying with the requirements specified for external lighting in NFPA 70.

b. National Electrical Safety Code (NESC):

- 1) Provide products and installation complying with requirements specified for exterior lighting in ANSI/IEEE C2.

2. Sustainability Requirements:

a. Institute for Sustainable Infrastructure (ISI) "ENVISION" rating system for sustainable infrastructure requirements.

- 1) Provide landscape lighting that meet the ENVISION ratings for reduced energy consumption.
- 2) Provide landscape lighting that meet the performance requirements established in the contract documents for purposes of maintaining the as designed energy reduction in accordance with the Appendix D in ANSI/ASHRAE/IESNA 90-2007.

C. Performance:

1. Maximum Load Rating:

- a. Provide landscape lighting capable of withstanding at least a 2847-pound compressive force.

2. Light Distribution:

- a. Provide landscape lighting that has light emitting diode (LED) modules capable of at least 15 degree of internal tilt from vertical, and of 360 degrees of horizontal rotation.

D. Design Criteria:

1. Luminaires:

- a. Provide exterior luminaires complying with the requirements specified in UL 1598, and that are listed and labeled for installation in wet locations by a nationally recognized testing laboratory (NRTL), such as Underwriters Laboratories, Inc. (UL), acceptable to the Authorities Having Jurisdiction.

b. Light Source Type:

- 1) Provide landscape lighting that uses light emitting diodes (LEDs) as the source of light as indicated on the Contract Drawings.

c. Voltage:

- 1) Provide landscape lighting power modules capable of operating on a 120-Volt, 60 Hertz power source.

d. Housings:

- 1) Provide rigidly formed, weather-tight and light-tight enclosures that will not warp, sag, or deform in use; and that comply with the requirements for an IP68 rating specified in IEC 60529.

2. Product Data:

- a. Obtain Product Data for each type of luminaire including information regarding product features, accessories, and finishes including the following:
 - 1) A physical description of luminaires, including their materials, dimensions, effective projected area, and verification of the indicated parameters.
 - 2) Details for attaching accessories.
 - 3) Instruction sheets which clearly shows installation procedures, instructions for adjusting the lamp socket, and details of construction.
 - 4) Luminaire materials.
 - 5) Testing Agency Certified Data:
 - a) Photometric data certified by a qualified independent testing agency and based on laboratory testing of each luminaire type, complete with its indicated lamps, power modules, and accessories.
 - 6) Photoelectric relays.
 - 7) Power module energy-efficiency data, power module electrical data, and lamp operating volt-watt traces for nominal and 10 percent rated line voltage to verify power module performance and compliance with the lamp specifications for the rated life of the lamp.
 - 8) Lamps, including life, output, correlated color temperature (CCT), color-rendering index (CRI), lumens, and energy-efficiency data.
- b. Submit Product Data for each type of luminaire to the Program/Project Manager for approval.
- 3. Shop Drawings:
 - a. Prepare Shop Drawings showing the luminaires proposed for the Work of this Section.
 - 1) Include plans, elevations, sections, details, and attachments to other work.
 - a) Detail equipment assemblies, and indicate the dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2) Wiring Diagrams:
 - a) Furnish wiring diagrams for power, signal, and control wiring.
 - b. Submit the Shop Drawings for each luminaire and support component to the Program/Project Manager for approval.
- E. Components:
 - 1. Landscape Lighting Enclosures:
 - a. Enclosure Doors:
 - 1) Provide die cast stainless steel doors for the landscape lighting enclosures.
 - 2) Provide decorative rockguard doors to protect the lenses.
 - b. Enclosure Housings:

- 1) Provide enclosure housings that have a side-car configuration to house the lamp, power module components, and the lens/door finishing sections.
 - 2) Provide compression molded ultraviolet light stabilized polyester enclosure housings that are impact and corrosion resistant, and designed for use in all types of environments.
 - 3) Provide enclosure housings that have an internal direct access junction box with 44 inches of squared volume for through-branch wiring and to ensure a proper seal during installation.
- c. Conduit Entries:
 - 1) Provide 2 molded 3/4-inch national pipe thread tapered thread (NPT) side entries as standard, and bottom hubs having molded with a 3/4-inch national pipe thread tapered thread (NPT) membrane knockouts.
- d. Finish:
 - 1) Provide lens/door finishing sections having a natural bronze, stainless steel, or brushed stainless steel finish.
 - a) Bronze doors may be painted with a color selected by the Program/Project Manager from the manufacturer's full line.
2. Lens/Seal:
 - a. Provide lens/seal assemblies for the landscape lighting fabricated from tempered clear flat borosilicate glass and secured in place to the housing by 3 captive screws.
 - 1) Provide notched lenses designed to provide the maximum aperture opening.
 - 2) Provide a lens gasket.
3. Power Module:
 - a. Provide an integrally mounted modular light emitting diode (LED) driver that has been prewired with quick connectors to facilitate easy installation and maintenance.
4. Luminaires:
 - a. Provide light emitting diode (LED) luminaires having a brass top ring, heat sink, and reflective secondary infrared (IR) lens filter to reduce heat.
 - b. Light Emitting Diode (LED) Reflector Assembly:
 - 1) Provide rugged, high-grade light emitting diode (LED) reflector assemblies securely mounted to a support bracket.
 - c. Lamps:
 - 1) Provide 12-Watt monochromatic light emitting diode (LED) lamps rated at 360 lumens per lamp.
 - 2) Provide lamps having an average rated life of 50,000 hours.
 - 3) Provide light emitting diode (LED) lamps having a light color temperature of 4000K warm white.
 - 4) Clearly and permanently mark each lamp, giving the wattage, manufacturer's reference number, and the American National

Standards Institute (ANSI) reference number in accordance with the requirements specified in ANSI_ANSLG C78.390.

5. Power Modules:
 - a. Provide power modules rated to the circuit voltage and size of the lamps specified.
 - b. Provide power modules that reliably start and operate the lamps in ambient temperatures down to minus 40 degrees Fahrenheit for the rated life of the lamp.
 - c. For nominal line voltage and nominal lamp voltage, provide power modules having design centers that do not vary more than 2 percent from the rated lamp wattage.
 - d. Provide power modules having a lamp wattage regulation spread that does not exceed 2 percent for 10 percent line voltage variation at any lamp voltage from nominal through life.
 - e. Provide lamp- power module systems designed so the power factor does not drop below 90 percent for 10 percent life.
 - f. Provide power modules that protect themselves against normal lamp failure modes.
 - g. Provide power modules that are capable of operation with the lamp in an open or short-circuit condition for 6 months without significant loss of power module life.
 - h. Provide power modules that make their electrical connections through pre-wired quick disconnect plugs.
6. Manufacturers:
 - a. Acuity Brands Lighting, Inc., Hydrel Paradox™ Architectural In-Grade Luminaire, Catalog Number PDX7-SS-12LED-WHT30K-MVOLT-SP-FLC-34S-RG-LPI, <http://www.acuitybrands.com>.
 - b. Approved equal.

2.02 ACCESSORIES

- A. Concrete:
 1. Provide Class B concrete complying with the requirements specified in Section 03300, Cast-In-Place Concrete.
- B. Concrete Formwork:
 1. Provide concrete formwork materials complying with the requirements specified in Section 03100, Concrete Forms and Accessories.
- C. Conduit:
 1. Provide polyvinyl-chloride (PVC) conduit complying with the requirements specified in Section 16130, Raceway and Boxes.
- D. Electrical Wiring:

1. Provide electrical wiring complying with the requirements specified in Section 16120, Conductors and Cables.
- E. Electrical Switches and Controls:
 1. Provide electrical switches and controls complying with the requirements specified in Section 16140, Wiring Devices, and Section 16145, Lighting Control Devices.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Examine the areas to receive landscape lighting and the conditions there for compliance with requirements.
 2. Verify that the electrical power conduit and pull boxes that have been provided under another contract for the light fixture and wiring Work of this Section are properly in place.
- B. Evaluation and Assessment:
 1. Proceed to install the landscape lighting only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the landscape lighting.
- B. Surface Preparation:
 1. For each luminaire and its "rough-in-section", excavate a hole to the approximate depth that allows conduit to be roughed-in and secured to the luminaire.
 - a. Before installing the conduit to the luminaire, apply suitable thread sealing compound to the conduit threads to ensure the conduit is watertight and to prevent moisture from penetrating the conduit system.
 2. If the luminaires are being installed in organic mulch, surround the "rough-in-section" with approximately 6 inches of sand or another non-organic substance.

3.03 INSTALLATION

- A. Luminaires:
 1. Construct the landscape lighting in accordance with the manufacturer's installation instructions and the details shown on the Contract Drawings.

- a. Submit the landscape lighting manufacturer's published installation instructions to the Program/Project Manager for information.
 2. Install lamps in each luminaire.
- B. Collars:
 1. Provide and finish cast-in-place concrete collars as detailed on the Contract Drawings.
 - a. Construct the collar concrete formwork in accordance with the requirements specified in Section 03100, Concrete Forms and Accessories.
 - b. Construct the collar cast-in-place concrete in accordance with the requirements specified in Section 03300, Cast-In-Place Concrete.
- C. Systems Integration:
 1. Ground the landscape lighting fixtures in accordance with the requirements specified in Section 16061, Electrical Grounding and Bonding.
 2. Connect wiring to the landscape lighting fixtures in accordance with the requirements specified in Section 16120, Conductors and Cables.
 3. Install lighting switches and controls in accordance with the requirements specified in Section 16140, Wiring Devices, and Section 16145, Lighting Control Devices.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 1. Inspections:
 - a. Upon completion of the installation of the landscape lighting fixtures and lighting equipment, verify that they are in first-class operating order and their finish and other associated items are in perfect condition.
 - b. Check for the proper operation and appearance of the landscape lighting, the alignment of the fixtures, and the proper placement of lenses, louvers, lamps, and other light-controlling or modifying appurtenances.
- B. Non-Conforming Work
 1. Correct or replace non-conforming Work.

3.05 ADJUSTING

- A. Adjust angles of tilt and rotation of the lamps to aim the beams where indicated in the Contract Drawings.

3.06 CLEANING

- A. Immediately prior to the final inspection, damp clean the landscape lighting glassware, fixture trims, and reflectors.
- B. Clean the lamps, or install new lamps, as directed by the Program/Project Manager.
 - 1. Insure that the glass and fixtures are free of labels.
- C. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 PROTECTION

- A. Take steps to insure that installed landscape lighting units are protected during subsequent construction activities.

3.08 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Furnish operation and maintenance data for landscape lighting for inclusion in emergency and operation and maintenance manuals as specified in Section 01780, Closeout Submittals, and include the following:
 - a. Provide a list of the lamp types used for landscape lighting using ANSI and manufacturers' codes to identify each.
 - 2. Submit the operation and maintenance data for the landscape lighting to the Program/Project Manager for information.

SECTION 16702

BASIC COMMUNICATIONS MATERIALS AND METHODS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Basic requirements for providing additions to the Premises Distribution System (PDS), including a Structured Cabling System (SCS), at the Phoenix Sky Harbor International Airport as specified and shown on the Contract Drawings.
2. Procedural requirements for maintaining documents and Samples at the Site.
3. Requirements for relocation and modifications of the Premises Distribution System (PDS), including a Structured Cabling System (SCS), at the Phoenix Sky Harbor International Airport as specified and shown on the Contract Drawings.

B. Related Requirements:

1. Section 01330 - Submittal Procedures.
2. Section 01780 - Closeout Submittals.
3. Section 16061 – Communications Grounding and Bonding.
4. Section 16076 – Communications Identification.
5. Section 16081 – Communications Testing.
6. Section 16705 – Pathways for Communications Services.
7. Section 16711 – Communications Equipment Room Fittings.

1.02 REFERENCES

A. Abbreviations and Acronyms:

1. CAD: Computer-aided design.
2. FVP: ITS Field Verification Partner.
3. IDF: Intermediate Distribution Frame.
4. ITS: Information Technology System.
5. MDF: Main Distribution Frame.
6. NEC: National Electrical Code.
7. PDS: Premises Distribution System.
8. PSHIA: Phoenix Sky Harbor International Airport.
9. RCDD: Registered Communications Distribution Designer.
10. SCS: Structured Cabling System.
11. TGB: Telecommunications grounding busbar.
12. TSB: Technical Systems Bulletin.

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.

C. Reference Standards:

1. American National Standards Institute (ANSI):
 - a. ANSI/J-STD-607-A – Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications.
2. Building Industry Consulting Services International (BICSI):
 - a. BICSI TDMM - Telecommunications Distribution Methods Manual.
 - b. BICSI OSPDRM – Outside Plant Design Manual.
3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - b. City of Phoenix Aviation Department:
 - 1) Premises Distribution System Standards Report.
 - 2) Aviation Supplement to City of Phoenix Information Technology Standards.
4. InterNational Committee for Information Technology Standards (INCITS):
 - a. ANSI/INCITS 231 – Information Systems – Fibre Distributed Data Interface (FDDI) – Physical Layer Protocol (PHY-2).
5. International Standards Organization/International Electrotechnical Commission (ISO/IEC):
 - a. ISO/IEC 11801 – Information Technology – Generic Cabling for Customer Premises.
6. National Fire Protection Association (NFPA):
 - a. NFPA 70 - National Electrical Code (NEC).
7. Phoenix Sky Harbor International Airport (PSHIA):
 - a. PSHIA Premises Distribution System Standards:
 - 1) PSHIA Communication Network and Infrastructure Systems Design.
8. Telecommunications Industry Association/Electronic Industries Association (TIA/EIA):
 - a. ANSI/TIA/EIA-568-B.1 - Commercial Building Telecommunications Cabling Standard – Part 1: General Requirements.
 - b. ANSI/TIA/EIA-568-B.2 - Commercial Building Telecommunications Cabling Standard – Part 2: Balanced Twisted Pair Cabling Components.
 - c. ANSI/TIA/EIA-568-B.3 – Optical Fiber Cabling Components Standard.
 - d. ANSI/TIA/EIA-606-A – Administration Standard for Commercial Telecommunications Infrastructure.
 - e. ANSI/TIA/EIA-758-A – Customer Owned Outside Plant Telecommunications Infrastructure Standard.
9. Telecommunications Industry Association (TIA):
 - a. TIA-569-B – Commercial Building Standard for Telecommunications Pathways.

- b. TSB-140 – Additional Guidelines for Field Test Length, Loss and Polarity of Optical Fibers.
- 10. Underwriters Laboratories, Inc. (UL):
 - a. UL Performance Verification Service Requirements.
 - b. UL Qualification Tests and Follow-Up Service Requirements.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate all communications work with the Program/Project Manager and the approved Contract schedule.
 - a. Adhere to the approved installation schedule.
 - b. Give required notices for items affecting the Contract schedule.
 - 2. Coordinate delivery of extra materials, spare parts, and maintenance materials for the Structured Cabling System (SCS) to the Site with the Program/Project Manager, and obtain receipts for these materials prior to requesting final payment.
 - 3. Provide the final coordination and field routing required for completing the communications infrastructure at the Phoenix Sky Harbor International Airport as indicated in the Contract Documents.
- B. Pre-Installation Meetings:
 - 1. Coordinate construction meetings with the Program/Project Manager.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Certificates:
 - 1) Structured Cabling System Certification.
 - b. Qualification Statements:
 - 1) Structured Cabling System manufacturers' qualifications.
 - 2) Resumes for each member of the Structured Cabling System installation team.
 - 3) Communications project references.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Sustainable Design Submittals:
 - 1) Approval documents from the regulatory agencies.
- C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Record Documentation:
 - 1) Communications system record documents and Samples.
- D. Maintenance Material Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Provide spare parts and maintenance materials in quantities as specified in each Section, in addition to those used for construction of the Work.
 - b. Extra Stock Materials:
 - 1) Provide extra materials in quantities as specified in each Section, in addition to those used for construction of the Work.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
 2. Submit the documents required by State Licensure inspectors and other Authorities Having Jurisdiction to the appropriate agencies.
 - a. Secure and pay for plan check fees, permits, fees, and licenses necessary for the execution of the communications Work as applicable for this Contract.
 - b. Submit the approval documents from the regulatory agencies to the Program/Project Manager for information.
- B. Qualifications:
 1. Structured Cabling System Manufacturer's Qualifications:
 - a. Provide components for the Structured Cabling System that have been produced by manufacturers who have been regularly engaged in the production of telecommunications cabling components of the types to be installed under this Contract for a minimum of 5 years.
 - b. Submit the Structured Cabling System manufacturer's qualifications to the Program/Project Manager for approval.
 2. Structured Cabling System Installer's Qualifications:
 - a. Because the Structured Cabling System (SCS) to be installed at the Phoenix Sky Harbor International Airport is required to be a complete end to end (channel) solution, a single entity must take responsibility for certifying and warranting all components of the system including backbone cabling, horizontal cabling, outside plant cabling, and all termination devices.

- b. Employ a manufacturer-certified Structured Cabling System Installer to install, certify, and warranty the entire specified Structured Cabling System.
 - 1) All members of the Structured Cabling System installation team must be certified by the manufacturer as having completed the necessary training to complete their part of the installation.
 - 2) Submit a resume for each member of the Structured Cabling System installation team, including documentation of completed training courses, to the Program/Project Manager for approval.
 - c. Registered Communications Distribution Designer (RCDD):
 - 1) The Structured Cabling System Installer must furnish an onsite BICSI Registered Communications Distribution Designer (RCDD) to supervise the communications system Work performed under this Contract, and who demonstrates knowledge of the Codes, Standards, and UL service requirements listed in Paragraph 1.02.C and in the Division 16 Sections listed in Paragraph 1.02.B.
 - d. Communications Project References:
 - 1) Submit 5 references for communications projects completed by the Structured Cabling System Installer within the last 5 years of an equivalent scope, type, and complexity of work to the Work required under this Contract to the Program/Project Manager for approval.
- C. Certifications:
- 1. Structured Cabling System Certification:
 - a. Submit the manufacturer-certified Structured Cabling System Installer's Structured Cabling System Certification certifying the Structured Cabling System has been installed in accordance with the requirements of the Contract Documents and functions as a complete end to end (channel) communications system to the Program/Project Manager.

1.06 SITE CONDITIONS

- A. Existing Conditions:
 - 1. Premises Distribution System (PDS):
 - a. A Premises Distribution System (PDS) consisting of an active and passive infrastructure has been implemented at Phoenix Sky-Harbor International Airport.
 - 1) This infrastructure provides the backbone and interconnections to various computer and telephone systems throughout the airport.
 - 2) Installation of the infrastructure devices follows an industry recognized standards-based approach.
 - b. An approved common wiring scheme for all organizations within the facility, critical to support the services and equipment from multiple vendors, has been established.

- 1) Standards have been established to define the cabling types and their maximum distances, communications room design aspects, work area and component recommendations, and the means of connecting to various application systems.
- c. Additions to this Premises Distribution System (PDS) must comply with the established standards and be properly coordinated.

PART 2 PRODUCTS

2.01 PREMISES DISTRIBUTION SYSTEM (PDS)

- A. Manufacturers:
 1. Manufacturer List:
 - a. Automation Direct, <https://www.automationdirect.com/>.
 - b. Approved equal.
 2. Substitution Limitations:
 - a. Substitutions for any product identified in the Contract Drawings or Specifications must be submitted to and approved by the Program/Project Manager prior to being incorporated into the Work.
 - 1) Thoroughly investigate the proposed product and determine that it is equal to or superior in all respects to the specified product, and whether license fees and royalties are pending on the proposed substitute.
 - 2) Provide the same type of written warranty for the substitution as for the specified product, guaranteeing the substituted products have the same or superior performance as the product specified.
 - 3) Coordinate the installation of approved substitutes, making such changes as may be required for the Work to be complete in all respects, and at no increase in Contract Price unless otherwise agreed to in writing by the Owner as provided for in the Agreement.
 - b. Submittals that include requests for substitutions of products will be accepted no later than 90 calendar days after the Notice to Proceed for this Contract has been given to the Contractor.
 - c. Requests for Substitution:
 - 1) Submit Requests for Substitution complete with data substantiating compliance of the proposed substitution with the requirements of Contract Documents, and must include the following information at a minimum:
 - a) Project title and the Owner's project number.
 - b) Identification of the product specified, including its Specifications Section and Paragraph numbers.
 - c) Identification of the proposed substitute complete with the manufacturer's name and address, the trade name of the product, and the model or catalog number.

- d) Names, addresses, and phone numbers of the proposed substitution's fabricator(s) and Supplier(s).
 - e) The effect of the substitution on the dimensions, material thicknesses, wiring, piping, ductwork, and similar items indicated in the Contract Documents.
 - f) The effect of the substitution on other trades.
 - g) The effect of the substitution on the construction schedule.
 - h) Differences in quality and performance between the specified product and the proposed substitute.
 - i) Availability of maintenance services and replacement materials for the proposed substitute.
 - j) License fees and/or royalties pending on the proposed substitute.
3. Product Options:
- a. Submit documentation for the components proposed to be installed under this Contract as required in the individual Specification Sections.
 - 1) The City of Phoenix reserves the right, at the sole discretion of the Program/Project Manager, to request submittal documentation for any component of the system the Program/Project Manager deems necessary to ensure compliance to the Contract Drawings and Specifications.
 - 2) Provide submittals for specific components to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures, prior to installing the component.

B. Description:

- 1. The Premises Distribution System (PDS), including the Structured Cabling System (SCS), to be installed at the Phoenix Sky Harbor International Airport is required to be a complete end to end (channel) solution.
 - a. Provide the materials described and shown on the Contract Drawings.
 - b. Provide all cabling, including patch cords, connectors, adapters, and terminations necessary to interconnect all system equipment, including equipment located in the Communications Rooms (MDFs/IDFs), and as shown on the Contract Drawings.
- 2. Regulatory Requirements:
 - a. Comply with the codes, ordinances, regulations, and other legal requirements of public authorities which apply to the performance of the communications Work of this and the other Division 16 Sections referenced in Paragraph 1.01.B, including among others the following:
 - 1) Phoenix Building Construction Code and Amendments.
 - 2) City of Phoenix Aviation Department Premises Distribution System Standards Report.
 - 3) Aviation Supplement to City of Phoenix Information Technology Standards.

C. Performance:

1. Provide a complete and operational end to end (channel) Premises Distribution System (PDS), including the Structured Cabling System (SCS), at the Phoenix Sky Harbor International Airport complying with the requirements indicated in the Contract Documents.

D. Design Criteria:

1. Design the Premises Distribution System (PDS), including the Structured Cabling System (SCS), in accordance with the requirements specified in ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, ANSI/TIA/EIA-568-B.3, and the BICSI Telecommunications Distribution Methods Manual which have been established by the Phoenix Sky Harbor International Airport as the standards for cabling infrastructure installations.
 - a. These requirements are defined in the Phoenix Sky Harbor International Airport (PSHIA) Premises Distribution System (PDS) Standards:
 - 1) City of Phoenix Aviation Department Premises Distribution System Standards Report.
 - 2) Aviation Supplement to City of Phoenix Information Technology Standards.
2. The publications listed in the "Reference Standards" Paragraphs in the Division 16 Sections listed in Paragraph 1.01.B of this Section are incorporated into this Contract to the extent they are referenced.
 - a. The publications are referred to in the text by basic designation only.
 - b. Whenever conflicts between referenced requirements occur, comply with the one establishing the more stringent requirements.
 - c. Whenever conflicts between referenced requirements and the Contract Documents occur, comply with the one establishing the more stringent requirements.
3. Perform the calculations and analyses to support design decisions.
4. Contract Record Documents and Samples:
 - a. Prepare Contract record documents that are in compliance with the City of Phoenix Aviation Department's standards:
 - 1) Prepare Contract record drawings prepared using AutoCAD 2006, or City's latest version of CAD software.
 - 2) Prepare Contract record text documents using Microsoft Word 2003 and Excel 2003, or the City's latest versions of word processing and spreadsheet software.
 - b. Store and maintain the Contract records documents and Samples apart from the documents used for construction in the field office at the Site.
 - 1) Provide files, racks, and secure storage for the Records Documents and Samples.
 - 2) Maintain record documents in clean, dry, legible condition.
 - 3) Do not use record documents for construction purposes.

- 4) Record as-built information concurrently with construction progress.
 - a) Legibly mark a copy of the Project Manual and the Contract Drawings to record actual construction, including the following:
 - (1) On appropriate pages, record changes made by Addenda, Change Orders and other modifications.
 - (2) On appropriate pages, enter trade name, manufacturer, catalog number, and name of supplier of each product and item actually installed, if different from that specified.
 - (3) Other items installed but not originally specified.
 - b) Do not conceal the Work until the required information has been recorded.
 - c. Contract Record Documents and Samples include, but are not limited to, the following:
 - 1) Contract Drawings showing the systems' components.
 - 2) Specifications and Schedules (Project Manual).
 - 3) Addenda.
 - 4) Change Orders and other documents which modify original document.
 - 5) Approved Shop Drawings, Product Data, and Samples.
 - 6) Samples.
 - 7) Manufacturer's certificates.
 - 8) Fixed Equipment Manuals
 - 9) As-built record documents recording all changes made during the construction, and including systems' components, cable records, drawings, and cable management information, that have been approved by the Program/Project Manager.
 - 10) Field Inspection Certificates indicating components have been installed correctly with written acceptance by the Program/Project Manager's field inspector(s).
 - 11) Cable and field test records.
- E. Materials:
1. Plywood:
 - a. Provide void free A-C fire rated plywood.
 2. Paint:
 - a. Provide fire retardant paint.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
1. Verify that liquid-carrying pipes are not installed in or above voice and data system equipment rooms.

- a. If liquid-carrying pipes are identified, do not install communications equipment without written approval from the Program/Project Manager.
2. Verify support devices for communications equipment are properly installed.

3.02 INSTALLATION

A. Backboards:

1. Properly install plywood backboards for mounting telecommunications equipment in each Communications Room (MDF/IDF).
 - a. Cover each wall of the Main Distribution Frame (MDF) and Intermediate Distribution Frame (IDF) with rigidly fixed 3/4-inch void free A-C fire rated plywood, 8 feet high, and capable of supporting attached equipment.
 - 1) Coat the plywood with a minimum of 2 coats of fire retardant white paint.
 - 2) Do not paint over the fire rated label, but ensure it remains visible once the plywood is installed.

B. Interface with Other Work:

1. Power for Technology Equipment:
 - a. In each telecommunications room, provide a minimum of 2 electrical outlets fed from single fused 120 Volt 20 Amp circuits in dedicated panels located within the communications room and served from an emergency backup power system to ensure continuous uninterrupted power to the technology equipment.
 - 1) Clearly mark the circuits as dedicated for technology.
2. In telecommunication rooms, provide open, hard lid ceilings having a minimum height of 8'-6" to avoid dust.
3. Do not locate telecommunications rooms, Main Distribution Frame's (MDF), and Intermediate Distribution Frame's (IDF) adjacent to any spaces that contain sources of Electromagnetic Interference (EMI).
4. Provide anti-static flooring in telecommunication rooms.
5. Locate transformers at least 4 feet from any communications cable or termination equipment.
6. Do not locate transformers in telecommunications closets.

C. Systems Integration:

1. Install the components of the Structured Cabling System (SCS) in accordance with the Building Industry Consulting Services International (BICSI) recommended practices in BICSI TDM and BICSI OSPDRM; and with ANSI/J-STD-607-A, ANSI/INCITS 231, ISO/IEC 11801, NFPA 70, ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, ANSI/TIA/EIA-568-B.3, ANSI/TIA/EIA-606-A, ANSI/TIA/EIA-758-A,

TIA-569-B, TSB-140, the PSHIA Premises Distribution System Standards, and the Division 16 Sections listed in Paragraph 1.01.B.

2. Bond and ground protected telecommunication terminations to a telecommunications grounding busbar (TGB) as specified in Section 16061, Communications Grounding and Bonding.

3.03 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. Site Tests:

- a. During the period when the Premises Distribution System (PDS), including the Structured Cabling System (SCS), is being installed, the Testing and Inspection Agency is required to perform routine and other testing of systems and materials.

- 1) Advise the Program/Project Manager and Testing and Inspection Agency at least 1 week prior to the expected time of operations requiring the inspection and testing services in order to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.

- a) If, after such notice, tests or inspections cannot be performed as scheduled, notify the Program/Project Manager.
- b) Cooperate with laboratory personnel and the Program/Project Manager, and provide access to the Work.
- c) Provide incidental labor and facilities to provide access to the Work to be tested, to facilitate tests and inspections, and for storage of test equipment.

- 2) After each inspection and/or test, the Program/Project Manager will send 2 copies of a field verification report signed by persons authorized to sign for the Testing and Inspection Agency which conducted the tests to the project management team, and 2 copies to the Contractor, that each include the following information:

- a) Date issued.
- b) Contract title and number.
- c) Contract phase of testing.
- d) ITS Field Verification Partner (FVP) name, address, and telephone number.
- e) Name of inspector and job number.
- f) Date and time of sampling inspection.
- g) Record of temperature and weather conditions.
- h) Date of Test.
- i) Specification Section identification.
- j) Location of test.
- k) Cable identification, if applicable.
- l) Type of inspection or test.
- m) Results of test, and compliance with Contract Documents.

- n) Interpretation of test results.
- 3) The Testing and Inspection Agency will perform additional systems and materials testing due to changes in the system requested by the Contractor or testing required due to failure of systems to meet specified requirements.
- 4) Failure of the Testing and Inspection Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
- 2. Inspections:
 - a. Verify that conduit, raceways, boxes, handholds and manholes to be utilized have been properly installed in accordance with the applicable BICSI and ANSI/TIA/EIA standards and recommendations specified in Section 16705, Pathways for Communications Services.
 - 1) Verify that conduit is a minimum of 1 inch in diameter.
 - b. Verify that the telecommunications grounding system has been properly installed and tested in accordance with the BICSI and ANSI/TIA/EIA standards and recommendations specified in Section 16061, Communications Grounding and Bonding.
- B. Non-Conforming Work
 - 1. If items are verified to be non-compliant with the requirements stated in this Section, or with the BICSI and ANSI/TIA/EIA standards and recommendations, cease all work and notify the Program/Project Manager immediately.

3.04 SYSTEM STARTUP

- A. After installing and testing the completed system, have the manufacturer-certified Structured Cabling System Installer provide a Structured Cabling System Certification certifying the Structured Cabling System has been installed in accordance with the requirements of the Contract Documents and functions as a complete end to end (channel) communications system.

3.05 CLOSEOUT ACTIVITIES

- A. Training:
 - 1. Provide training by the manufacturer of the installed Structured Cabling System for up to 5 City of Phoenix Aviation Department employees, or other designees, named by the Program/Project Manager.
 - a. Provide these employee trainees with the skills to manage, troubleshoot, and perform moves, additions, and changes to the installed Structured Cabling System (SCS) under the specific manufacturer warranty requirements.

B. Contract Record Documents and Samples:

1. Prior to Contract Closeout, submit the communications system record documents and Samples, to Program/Project Manager under cover of a transmittal letter containing the following:
 - a. Date.
 - b. Contract title and number
 - c. Contractor's and his Subcontractor's names and addresses.
 - d. Title and number of each record document.
 - e. Certification that each document submitted is complete and accurate.
 - f. Signature of the Contractor or his authorized representative.
2. Submit the Contract Records Documents in Unifier, and physically deliver Samples, to the Program/Project Manager.

SECTION 16705

PATHWAYS FOR COMMUNICATION SERVICES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for providing interior communications pathways.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01780 - Closeout Submittals.
 - 3. Section 02582 – Underground Ducts and Manholes.
 - 4. Section 07850 - Through Penetration Firestopping Systems.
 - 5. Section 16061 - Communications Grounding and Bonding.
 - 6. Section 16070 - Hangers and Supports.
 - 7. Section 16076 - Communications Identification.
 - 8. Section 16081 - Communications Testing.
 - 9. Section 16702 - Basic Communications Materials and Methods.
 - 10. Section 16711 - Communications Equipment Room Fittings.
 - 11. Section 16712 - Communications Backbone Cabling.
 - 12. Section 16713 - Communications Horizontal Cabling.
 - 13. Section 16714 - Communications Connecting Cords, Devices, and Adaptors.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. HVAC: Heating, ventilation, and air conditioning.
 - 2. IDF: Intermediate Distribution Frame.
 - 3. MDF: Main Distribution Frame.
 - 4. NEC: National Electrical Code.
 - 5. PVC: Polyvinyl chloride.
 - 6. TGB: Telecommunications grounding busbar.
- B. Reference Standards:
 - 1. American National Standards Institute (ANSI):
 - a. ANSI C80.3 - Electrical Metallic Conduit – Zinc Coated (EMT).
 - b. ANSI/ASA Color Charts.
 - 2. ASTM International (ASTM):
 - a. ASTM A 123/A 123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
 - b. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

- c. ASTM B 26/B 26M - Standard Specification for Aluminum-Alloy Sand Castings.
 - d. ASTM E 84 - Standard Test Method for-Surface Burning Characteristics of Building Materials.
 - e. ASTM E 119 - Standard Test Methods for-Fire Tests of Building Construction and Materials.
 - f. ASTM E 814 - Standard Test Method for-Fire Tests of Through-Penetration Fire Stops.
- 3. Building Industry Consulting Services International (BICSI):
 - a. BICSI TDMM - Telecommunications Distribution Methods Manual.
- 4. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - b. City of Phoenix Aviation Department:
 - 1) Premises Distribution System Standards Report.
 - 2) Aviation Supplement to City of Phoenix Information Technology Standards.
- 5. National Electric Manufacturer's Association (NEMA):
 - a. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
- 6. National Fire Protection Association (NFPA):
 - a. NFPA 70 - National Electrical Code (NEC).
- 7. Phoenix Sky Harbor International Airport (PSHIA):
 - a. PSHIA Premises Distribution System Standards:
 - 1) PSHIA Communication Network and Infrastructure Systems Design.
- 8. Telecommunications Industry Association (TIA):
 - a. TIA 569-B – Commercial Building Standard for Telecommunications Pathways and Spaces.
- 9. Underwriters Laboratories, Inc. (UL):
 - a. UL Building Materials Directory.
 - b. UL Fire Resistance Directory.
 - c. UL Online Certifications Directory,
<https://www.ul.com/ul-databases-and-directories/>.
 - 1) UL Fire Resistance Directory (Fire Resistance Ratings).
 - d. UL 797 – Electrical Metallic Tubing – Steel.
 - e. UL 2079 – Standard for Tests for Fire Resistance of Building Joint systems.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate the routing and location of the conduits and other raceways with other trades and with the building construction to avoid conflicts.
 - 2. Where conduits pass through the roof, coordinate communications pathway installation with the roofing installer.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Electrical metallic tubing (EMT).
 - 2) Rigid Metal Conduit (RMC)
 - 3) Expansion joint fittings.
 - 4) Thruwall sealing fittings.
 - 5) Fire-seal fittings.
 - 6) Sealing material for sealing fittings.
 - 7) Insulated bushings.
 - 8) Pulling in wire.
 - 9) Thread lubricant/sealant.
 - 10) Wireways and wiring troughs.
 - 11) Cable trays.
 - 12) Innerduct.
 - 13) Junction boxes/pull boxes.
 - 14) Conduit
 - b. Shop Drawings:
 - 1) Plan and section drawings detailing the proposed communications pathway routing.
 - c. Certificates:
 - 1) Fire Stopping Manufacturer's Certificate.
 - d. Qualification Statements:
 - 1) Fire Stopping Installer's Certificate.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Firestopping manufacturer's instructions.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Manufacturer's warranties on all components installed under this Section.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
 2. Provide only UL listed and labeled conduits.
- B. Qualifications:
1. Fire Stopping Installer's Qualifications:
 - a. Employ a fire stopping installer who has been trained and approved by the fire stopping manufacturer to perform fire stopping work, and who has specialized in the installation of work similar to that required for this Contract.
- C. Certifications:
1. Fire Stopping Manufacturer's Certificate:
 - a. Submit a Fire Stopping Manufacturer's Certificate, signed by the manufacturer and certifying the materials he has supplied comply with the specified performance characteristics and physical properties for fire stopping materials, to the Program/Project Manager for approval.
 2. Fire Stopping Installer's Certificate:
 - a. Submit a Fire Stopping Installer's Certificate, certifying the installer is manufacturer-trained and approved to properly install the fire stopping materials.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
1. Deliver materials and equipment in a clean condition.
 - a. Provide packaging that plugs, caps, or otherwise seals openings both during shipping and temporary storage.
 2. Provide equipment needed for unloading operations, and have such equipment on the Site to perform unloading work when the material and equipment is delivered.
 - a. If possible, clearly identify pick-points or lift-points on communications equipment crating and packaging.
 - b. In the absence of pick-points or lift-points on equipment crating and packaging, identify pick-points or lift-points on the equipment itself.
 - c. When unloading the materials and equipment, provide special lifting harnesses or apparatus as required by the manufacturers.
 3. Inspect materials and equipment for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.
- B. Storage and Handling Requirements:
1. Handle materials and equipment in accordance with the manufacturer's written instructions.

2. Store all products whether on-site or off-site, indoors on blocking or pallets.
3. Follow the manufacturer's written instructions for storing the items.
4. Except for communications conduit, store communications equipment and products under cover in heated warehouses or in enclosed buildings that provide protection from the weather on all sides and are equipped with auxiliary heat.

1.07 WARRANTY

A. Manufacturer Warranty:

1. Provide a minimum one (1) year written manufacturer's warranty on all components installed under this Section.
 - a. Submit the manufacturer's warranties to the Program/Project Manager.

PART 2 PRODUCTS

2.01 MATERIALS

A. Manufacturers:

1. Substitution Limitations:
 - a. Comply with the substitution requirements specified in Section 16702, Basic Communications Materials and Methods.
2. Product Options:
 - a. Comply with the product option requirements specified in Section 16702, Basic Communications Materials and Methods.
 - 1) The manufacturers and specific part numbers listed in this Section are provided as an aid in the construction process and are not meant to preclude other manufacturers that may be qualified to provide communications components.
 - 2) Other manufacturers with comparable qualifications may be proposed but are subject to review as an approved equal.
 - 3) Submit documentation for the components proposed to be installed under this Contract as required.

B. Regulatory Requirements:

1. Comply with all codes, ordinances, regulations, and other legal requirements of public authorities, which bear on performance of the Work, including among others the following:
 - a. Phoenix Building Construction Code and Amendments.
 - b. City of Phoenix Aviation Department Premises Distribution System Standards Report.
 - c. Aviation Supplement to City of Phoenix Information Technology Standards.

C. Design Criteria:

1. Comply with the requirements specified in Annex B, "Application Information for Ampacity Calculation", in NFPA 70, the National Electrical Code (NEC).
2. Where the sizes of conduit and other raceway are not specifically shown on the Contract Drawings, size the conduits in accordance with the requirements of BICSI TDMM and NFPA 70, the National Electrical Code.
 - a. Do not provide conduit sized less than 1-inch.
 - b. Submit catalog cut sheets of the proposed conduit, innerduct, and associated hardware prior to any installation.
 - c. Submit plan and section drawings detailing the proposed pathway routing prior to any installation.
3. Use communications conduits, cable tray, and other raceways only for communications cabling.
 - a. Do not route power cabling within the same raceway with communications cabling.
4. Conflicts:
 - a. If conflicts between referenced requirements arise or between the requirements of referenced documents and the Contract Documents, as specified in Section 16702, Basic Communications Materials and Methods, comply with the one establishing the more stringent requirements.

D. Materials:

1. Conduit and Accessories:
 - a. Electrical Metallic Tubing (EMT):
 - 1) Provide high strength, zinc-coated electrical metallic tubing (EMT) complying with the requirements specified in UL 797 and ANSI C80.3, and having a minimum conduit size of 1 inch.
 - 2) Provide compression type fittings having the same finish and material as the tubing and with insulated throats for the electrical metallic tubing.
 - a) For all metallic couplings, connectors and fittings provide malleable iron or steel finished with zinc plating or galvanizing.
 - 3) Manufacturers:
 - a) Allied Tube and Conduit, www.alliedtube.com.
 - b) Triangle Conduit and Cable Company
 - c) Republic Conduit, www.republic-conduit.com.
 - d) Approved equal.
 - b. Non-Metallic Conduit:
 - 1) Electrical Plastic Tubing and Conduit:
 - a) Rigid Polyvinyl Chloride (PVC) Conduit:
 - (1) Provide high impact PVC conduit conforming to the requirements of NEMA TC 2 at 90 degrees Celsius, and made from compounds conforming to the requirements of ASTM D 1784.

- (a) For indoor use, provide Schedule 40 conduit.
 - (b) For encasement in concrete, provide Schedule 40, Type EB or Type DB, conduit tubing.
 - (c) Use material that at 78 degrees Fahrenheit has a tensile strength exceeding 5500 psi, a flexural strength exceeding 11,000 psi, and a compressive strength exceeding 800 psi,
- (2) Provide PVC conduits that are UL listed, labeled, or approved for both underground and above ground use.
- b) Manufacturers:
 - (1) Lamson & Sessions, Carlon®, www.carlon.com.
 - (2) Queen City Plastics, Inc., www.queencityplastics.com.
 - (3) Manhattan Wire, Inc., www.manhattanwire.com
 - (4) Approved equal.
- 2) Non-Metallic Conduit Solvent:
 - a) Provide solvent for non-metallic conduit joints from the same manufacturer as the conduit and conforming to the requirements of ASTM D 2564.
- c. Expansion Joint Fittings:
 - 1) Provide approved watertight weatherproof telescopic type expansion joint fittings that permit two-way movement up to 4 inches, and that are equipped with approved bonding jumpers around or through each fitting.
 - 2) Manufacturers:
 - a) EGS/O-Z/Gedney, Type TX, www.o-zgedney.com.
 - b) EGS/Appleton Electric, Type XJ and BJ, www.appletonelec.com.
 - c) Approved equal.
- d. Thruwall Sealing Fittings:
 - 1) Provide thruwall sealing fittings for sealing around a conduit passing through a wall or floor.
 - 2) Manufacturers:
 - a) EGS/O-Z/Gedney, Type WSK, www.o-zgedney.com.
 - b) Approved equal.
- e. Fire-Seal Fittings:
 - 1) Provide fire-seal fittings.
 - 2) Manufacturers:
 - a) EGS/O-Z/Gedney, Type CFSI, www.o-zgedney.com.
 - b) Approved equal.
- f. Sealing Material for Sealing Fittings:
 - 1) Provide sealing material for sealing fittings capable of being injected into the fitting and hardening to produce an explosion proof seal.
 - 1) Manufacturers:
 - a) Crouse-Hinds, www.crouse-hinds.com:

- (1) Chico® X Fiber and Chico® A sealing compound.
 - b) EGS/Appleton Electric, www.appletonelec.com.
 - (1) Kwiko® A sealing cement and fiber filler.
 - c) Approved equal.
 - g. Insulated Bushings:
 - 1) Provide specification grade insulated bushings for rigid metal, IMC, and EMT conduit to protect insulated conductors from abrasion during pulling and from mechanical vibration, and to provide voltage a gradient between live conductors and ground at the point of electrical and mechanical stress on the conductor insulation.
 - 1) Manufacturers:
 - a) EGS/O-Z/Gedney, Type B or SBT as applicable, www.o-zgedney.com.
 - b) Thomas & Betts Corporation; Steel City® BI 900 Series, BU 500 Series, or TC700 Series as applicable; <http://www.tnb.com>.
 - c) Approved equal.
 - h. Pulling in Wire:
 - 1) Provide 1250pound nylon pull rope.
 - i. Thread Lubricant/Sealant:
 - 1) For joints for non-heat producing elements, provide
 - a) Manufacturers:
 - (1) Crouse-Hinds, Type STL, www.crouse-hinds.com.
 - (2) Thomas & Betts Corporation; Kopr-Shield; <http://www.tnb.com>.
 - (3) Approved equal.
 - 2) For joints for heat producing elements such as lighting fixtures, provide
 - a) Manufacturers:
 - (1) Crouse-Hinds, Type HTL, www.crouse-hinds.com.
 - (2) Approved equal.
- 2. Wireways and Wiring Troughs:
 - a. Provide wireways and wiring troughs fabricated from code gauge galvanized steel, sized as shown on the Contract Drawings, or as required by NFPA 70, the National Electrical Code.
 - b. Provide screwed covers.
 - c. Where the Contract Drawings indicate rain tight wireways, provide galvanized wireways complying with the requirements for watertight enclosures as specified in NEMA 250.
- 3. Cable Trays:
 - a. Provide aluminum ladder rack cable trays, hot dip mill-galvanized in accordance with the requirements of ASTM A 653/A 653M, and hot dip galvanized after fabrication in accordance with the requirements of ASTM A 123/A 123M.

- 1) Do not provide center hung cable tray.
 - 2) Provide cable trays in 10foot lengths.
 - 3) For riser cables entering from floor sleeves and slots, provide vertical cable tray sections secured to the floor.
 - 4) For cable tray racks installed above equipment racks and cabinets, provide runway drop-offs.
 - b. Provide cable trays classified by UL as an equipment grounding conductor.
 - 1) Provide splices, supports, and other fittings necessary to provide a complete, continuously grounded system.
 - c. Provide cable trays that comply with the requirements specified in Article 318.5 of NFPA 70, the National Electrical code (NEC).
 - d. Provide appropriate connectors and mounting brackets to properly mount the cable tray.
 - e. Provide cable trays having the following dimensions unless otherwise specified or indicated on the Contract Drawings:
 - 1) Minimum Width: 12 inches.
 - 2) Minimum Load Depth: 4 inches.
 - 3) Minimum Rung Diameter: 1 inch.
 - 4) Maximum Rung Spacing: 12 inches.
 - f. Finish:
 - 1) Provide a surface treatment consisting of polyester powder-coated over electrodeposited zinc plating.
 - 2) Color: ASA 61 black.
 - g. Manufacturers:
 - 1) Cooper B-Line, www.b-line.com.
 - 2) Allied Electrical™ Group, Cope® Cable Tray, www.alliedeg.com/cope.
 - 3) Chatsworth Products, Inc., www.chatsworth.com.
 - 4) Hoffman, www.hoffmanonline.com.
 - 5) Cablofil, Inc., EZ Tray, www.cablofil.com
 - 6) GS Metals Corporation, Flextray, www.flextray.com.
4. Innerduct:
 - a. Provide innerduct complying with Articles 725, 760, and 800 of NFPA 70, the National Electrical Code, of the following sizes:
 - 1) 1/2 inch.
 - 2) 3/4 inch.
 - 3) 1 inch.
 - 4) 1-1/4 inch.
 - 5) 1-1/2 inch.
 - 6) 2 inch.
 - b. For Innerduct placed in spaces used as air returns, or connected with air handling plenums or building ventilation, provide low-smoke, fire retarding innerduct.
5. Junction Boxes/Pull Boxes:

- a. Unless otherwise specified, provide NEMA Type 1 pull boxes constructed of 14 or 12-gauge steel with an ANSI/ASA 61 grey polyester powder finish over phosphatized or galvanized surfaces inside and out.
- b. Provide pull boxes having flat, removable covers fastened with plated steel screws through unique keyhole screw slots in the cover that permit removal of the cover without extracting the screws.
- c. Provide pull boxes having appropriate provisioning for grounding.
- d. Size the pull boxes according to Table 16705-1 unless otherwise specified:

Table 16705-1 Communications Pull Box Sizes				
Maximum Trade Size of Conduit (Inches)	Minimum Box Size (inches)			Increased Width For Each Additional Conduit (Inches)
	Width	Length	Depth	
0.75	4	12	3	2
1	4	16	3	2
1.25	6	20	3	3
1.5	8	27	4	4
2	8	36	4	5
2.5	10	42	5	6
3	12	48	5	6
3.5	12	54	6	6
4	15	60	8	8

2.02 ACCESSORIES

- A. Firestopping Materials:
 1. Provide firestopping materials complying with the requirements specified in Section 07850, Through Penetration Firestopping Systems.
- B. Hangers and Supports:
 1. Provide hangers and supports as specified in Section 16070, Hangers and Supports, and as specified herein.
 2. Conduit Clamps:
 - a. Provide galvanized malleable iron conduit clamps.
 3. Conduit and Cable Tray Hangers:

- a. Provide hangers consisting of channel or Unistrut® suspended on 1/2-inch threaded rods.
- b. Manufacturer:
 - 1) Unistrut®, <http://unistrut.com>.
 - 2) Approved equal.
- C. Labels:
 - 1. Provide labels for communications pathways that comply with the requirements specified in Section 16076, Communications Identification.
- D. Communications Equipment Room Fittings:
 - 1. Provide communications equipment room fittings complying with the requirements specified in Section 16711, Communications Equipment Room Fittings.
- E. Communications Connecting Devices and Adaptors:
 - 1. Provide communications connecting devices and adaptors complying with the requirements specified in Section 16714, Communications Connecting Cords, Devices, and Adaptors.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Verify that new conduit runs will not interfere with existing or new systems within each facility.
 - 2. Verify that substrate conditions are acceptable for installing firestopping materials in accordance with the manufacturer's instructions.
 - a. Submit the firestopping manufacturer's instructions to the Program/Project Manager for information.

3.02 INSTALLATION

- A. Mechanically and electrically connect communications raceways to all boxes and fittings, and properly ground the raceways in accordance with the requirements of Section 16061, Communications Grounding and Bonding.
- B. Installing Communications Conduit and Innerduct:
 - 1. Install electrical metallic tubing (EMT) with compression fittings and couplings.
 - a. Ream conduit to eliminate sharp edges, and terminate the conduit with an insulated bushing.
 - b. Where conduits terminate in a thread less opening, provide locknuts on both the inside and outside of the box or enclosure, and fit the conduit end with an insulating bushing.

- c. Where bonding is required, equip the end of the conduit with an insulated metallic grounding and bonding bushing.
2. Do not install sections of conduit longer than 30m (100 feet), or that contain more than two 90-degree bends between pull points or pull boxes.
 - a. For bends in 2 inch or smaller conduit, provide inside bend radii at least 6 times the internal diameter.
 - b. For bends in conduit larger than 2 inches, provide inside bend radii at least 10 times the internal diameter of the conduit.
 - c. For bends underground, provide inside bend radii at least 12 feet.
3. Terminate conduit protruding through the floor 4 inches above the floor surface.
4. Place a fish tape or measured pull cord in installed conduit and innerduct.
 - a. Provide a pull rope in each empty conduit and innerduct.
5. In stud walls or above suspended ceilings, install only electrical metallic tubing raceways.
 - a. Do not use PVC conduit.
6. Do not use electrical metallic tubing (EMT) for service entrance conductors.
7. Do not use electrical metallic tubing (EMT) for outdoor rated cable.
8. Do not embed conduit in the required fire protective covering of a structural member that is to be individually encased in accordance with the Phoenix Building Construction Code and Amendments.
9. Provide expansion fittings where conduits pass through building expansion joints.
10. Unless specifically noted otherwise on the Contract Drawings, do not allow a single conduit run extending from an intermediate distribution frame (IDF) to serve more than 2 jacks.
11. Conduit Support:
 - a. Properly support conduits using conduit clamps for individual runs.
 - b. Support multiple runs on channel adequately secured to the walls or hung from the structure above with the conduits fastened to the channel with conduit clamps designed for the purpose.
 - c. Support conduit 2 inches and larger at 8 feet on center maximum, and support conduit 1-1/2 inch and smaller at 10 feet on center maximum.
12. Conduit Identification:
 - a. Color code all communications conduits with yellow tape marked "communications", and labeled with the location of the conduit's beginning and ending points.
 - b. Label the conduit at the beginning and ending points and at every 50 feet where the conduit is exposed.
13. Below Grade Conduit:
 - a. Install below grade conduit in conformance with the requirements of Section 02582, Underground Ducts and Manholes.
 - 1) For conduits that pass under building support walls, provide a minimum of 3 inches of concrete encasement all around.

- 2) For underground and concrete encased duct banks, provide non-metallic conduit spacers.
 - a) Provide sufficient space to allow pouring the concrete envelope without displacing or shifting the individual conduits.
 - b) Encased duct banks shall be provided with red dye.
 - b. Install conduit spacers at intervals not exceeding 5 feet.
 14. All conduit shall be painted to meet Aviation Design Standards for electrical, fire alarm, communications, and control conduits.
- C. Connecting Communications Conduit to Sheet Metal Boxes and Enclosures:
 1. Place a color-coded pull or splice box in a conduit run where the length is over 30 m (100 feet), there are more than two 90-degree bends, or there is a reverse bend in the run.
 - a. Place pull or splice boxes in an exposed, readily accessible location.
 2. To connect conduit to NEMA Type 1 boxes and enclosures, provide electrical metallic tubing (EMT) having compression box connectors with insulated throats.
 3. To connect conduit to NEMA Types 3R, 4, 4X, and 12 boxes, provide insulated bushings and sealing locknuts or hubs.
 4. Where conduits enter floor mounted enclosures from below and there is no sheet metal to which to attach; install grounding bushings on the conduit.
 - a. Bond the bushings to the ground bus using a conductor the same size as required for an equipment grounding conductor sized for the given circuit.
 5. Install sealing bushings within conduits which have entered a building from outside, whether from above or below grade.
- D. Installing Communications Cable Trays:
 1. Provide hangers affixed to the structure above by 1/2-inch threaded rod to support cable trays.
 - a. Within the cable tray, fit the threaded rod with a 6-inch PVC tube to protect the cables.
 2. Provide cable tray horizontal bends, cross fittings, and tees having 3-inch diameter holes on 6 inch centers with the edge of each hole covered by a grommet to protect cables.
 3. Unless otherwise specified or indicated on the Contract Drawings, locate cable trays 7 feet 6 inches above the finished floor.
 4. Provide proper clearance between HVAC ducting or other obstacles and cable trays.
 5. Ground and bond all cable tray and ladder racking to the telecommunications grounding busbar (TGB) in the communications room.
- E. Installing Communications Junction Boxes/Pull Boxes:

1. Install junction boxes/pull boxes in sections of conduit that are 100 feet or more in length, that contain more than two 90-degree bends, or that contain bends that are 180 degrees or more in the aggregate.
 - a. Do not provide a junction boxes/pull boxes in lieu of a conduit bend.
 2. Install junction boxes/pull boxes in an easily accessible location with unobstructed entry to the junction box/pull box access panel.
 3. Support the pull boxes on all 4 corners in so the pull box is not supported by either the cable running through the pull box or the conduit attached to the pull box.
- F. Seals:
1. To prevent the ingress of water, dust, and other foreign material, seal all conduit and cabinet entrances with an approved, re-enterable sealant material.
 2. Where raceways pass through walls, partitions, and floors, seal the penetrations so a neat installation results, and the integrity of the waterproofing or fireproofing of the structure, as applicable, is maintained.
 3. Seal raceways entering a building from underground to prevent water, moisture, gas, or any other foreign matter from entering the building.
 4. Seal service conduits in accordance with NFPA 70, 230.8.
- G. Identification:
1. Identify communications pathways in accordance with the requirements specified in Section 16076, Communications Identification.
- H. Special Techniques:
1. Where multiple innerducts are placed in the same raceway, provide each innerduct with a different color.
- I. Interface with Other Work:
1. Do not place cabling or innerduct in plenums without written approval from the Program/Project Manager.
 2. Install fire stopping materials for communications pathways in accordance with the requirements of Section 07850, Through Penetration Firestopping Systems.
 3. Use cable tray to route bulk telecommunications equipment within the Main Distribution Frame (MDF).
- J. Systems Integration:
1. Install all fiber optic cable within innerduct.
 2. Provide backbone fiber optic cable and copper cable as specified in Section 16712, Communications Backbone Cabling.
 3. Provide horizontal cabling for supporting voice, data and video communications as specified in Section 16713, Communications Horizontal Cabling.

3.03 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. Site Tests:
 - a. Test communications pathways in accordance with the requirements specified in Section 16081, Communications Testing.
 - 2. Inspections:
 - a. Code officials and/or building inspectors will inspect the installation to confirm the proper installation using manufacturer guidelines.

3.04 SYSTEM STARTUP

- A. Provide system startup as specified in Section 16702, Basic Communications Materials and Methods.

3.05 CLEANING

- A. Clean conduits before wires are pulled using mandrel. Provide report for approval.

3.06 PROTECTION

- A. Protect installed products from damage during construction operations until Final Acceptance.
- B. To prevent the entrance of construction dirt and debris, plug all conduits after installation.

SECTION 16711

COMMUNICATIONS EQUIPMENT ROOM FITTINGS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the building out of Telecommunications Equipment Rooms (MDF/IDFs) to be used for supporting telecommunications and other special systems.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01780 - Closeout Submittals.
 - 3. Section 16062 - Telecommunications Grounding and Bonding.
 - 4. Section 16702 - Basic Communications Materials and Methods.

 - b. ANSI/ASA Color Charts.
 - 2. Building Industry Consulting Services International (BICSI):
 - a. ANSI/NECA/BICSI 568 – Standard, Installing Commercial Building Telecommunications Cabling.
 - b. BICSI TDMM - Telecommunications Distribution Methods Manual.
 - c. BICSI OSPDRM – Outside Plant Design Manual.
 - d. BICSI ESSDRM – Electronic Safety and Security Reference Manual.

- e. BICSI ITSIM – Information Transport Systems Installation Manual.
- 3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - b. City of Phoenix Aviation Department:
 - 1) Premises Distribution System Standards Report.
 - 2) Aviation Supplement to City of Phoenix Information Technology Standards.
- 4. Electronic Industries Association (EIA):
 - a. EIA-310-D – Cabinets, Racks, Panels and Associated Equipment.
- 5. National Fire Protection Association (NFPA):
 - a. NFPA 70 - National Electrical Code (NEC).
- 6. Phoenix Sky Harbor International Airport (PSHIA):
 - a. PSHIA Premises Distribution System Standards:
 - 1) PSHIA Communication Network and Infrastructure Systems Design.
- 7. Telecommunications Industry Association/Electronic Industries Association (TIA/EIA):
 - a. ANSI/TIA/EIA-568-B.1 - Commercial Building Telecommunications Cabling Standard – Part 1: General Requirements.
 - b. ANSI/TIA/EIA-568-B.2 - Commercial Building Telecommunications Cabling Standard – Part 2: Balanced Twisted Pair Cabling Components.
 - c. ANSI/TIA/EIA-568-B.3 – Optical Fiber Cabling Components Standard.
- 8. Telecommunications Industry Association (TIA):
 - a. TIA-569-B – Commercial Building Standard for Telecommunications Pathways.
- 9. Underwriters Laboratories, Inc. (UL):
 - a. UL Qualification Tests and Follow-Up Service Requirements.
 - b. UL Product Directories.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate all communications work with the Program/Project Manager and the approved Contract schedule.
 - a. Adhere to the approved installation schedule.
 - b. Give required notices for items affecting the Contract schedule.
 - 2. Make every effort to schedule the Work of this Section so disruption of public areas during installation is limited.
- B. Pre-Installation Meetings:
 - 1. The communications equipment Subcontractor must attend all construction meetings related to the communication equipment installation scheduled by the Contractor.
- C. Scheduling:

1. Adhere to the installation schedule approved by the Program/Project Manager.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:

a. Product Data:

- 1) Equipment racks.
- 2) Equipment cabinets.
- 3) Floor frames.
- 4) Vertical wire menders.
- 5) Horizontal wire menders (patch cord organizers).
- 6) Cable tray.
- 7) Grounding bars.

b. Shop Drawings:

- 1) Proposed layout modifications for each affected or new communications rooms in the airport.

c. Qualification Statements:

- 1) Communications equipment room fitting manufacturer's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:

a. Manufacturer's Instructions:

- 1) Manufacturer's installation guidelines.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:

a. Warranty Documentation:

- 1) Manufacturer's standard warranties.

b. Record Documentation:

- 1) Record Drawings of the completed layout of each communications room.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:

- a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.

2. Fire Extinguishers:
 - a. Provide and maintain portable fire extinguishers within 75 feet travel distance from any part of the occupied space within the main distribution frame (MDF) in accordance with local code requirements.
 - 1) Furnish a fire extinguisher of the 2-A 10-B:C size and minimum rating.

B. Qualifications:

1. Manufacturer Qualifications:
 - a. Communications Equipment Room Fittings Manufacturer's Qualifications:
 - 1) Obtain communications equipment room fittings from experienced manufacturers who have been regularly engaged in the production of telecommunications equipment room fittings of the types to be installed under this Contract for a minimum period of 5 years.
 - 2) Submit the communications equipment room fitting manufacturers' qualifications to the Program/Project Manager for approval.
2. Structured Cabling System Installer's Qualifications:
 - a. Employ the structured cabling system installer specified in Section 16702, Basic Communications Materials and Methods, for installing the communications equipment room fittings.

C. Certifications:

1. Underwriters Laboratory, Inc. Certifications:
 - a. Provide floor frames complying with the appropriate UL Qualification Tests and Follow-Up Service Requirements.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Equipment Racks:
 - a. Ship equipment racks with the hardware necessary to assemble the frame included.
 - b. Pack equipment racks in cartons with suitable shipping inserts so no damage occurs to the rack finish.

B. Storage and Handling Requirements:

1. Do not allow the finish of the equipment racks to be scratched, chipped or marred.

1.07 SITE CONDITIONS

A. Ambient Conditions:

1. Environmental Conditions:

- a. Ensure that there is a continuous and dedicated environmental control (24 hours per day, 365 days per year) in communications equipment rooms.
 - b. Ensure that the air handling system for the equipment rooms is capable of providing positive air flow and cooling, even during times when the main building systems are shut down.
 - 1) Separate air handlers and/or small stand-alone cooling systems that are thermostatically controlled in this space may need to be provided.
 - 2) Maintain a positive air pressure differential with respect to surrounding areas.
 - 3) Provide heating, ventilation, and air conditioning sensors and control equipment in the communications rooms.
 - c. Maintain the room temperature between 64 degrees Fahrenheit and 75 degrees Fahrenheit, with a relative humidity between 30 percent and 55 percent.
 - 1) Communications equipment rooms are not to be located in any place that may be subject to water or steam infiltration, humidity from nearby water or stream, heat, and any other corrosive atmospheric or environmental conditions.
 - d. Protect the communications room from contaminants and pollutants that could affect operation and material integrity of the installed communications equipment.
 - 1) If contaminants are present in concentrations greater than indicated in Table 8.2-2 of TIA-569-B, provide vapor barriers, positive room pressure, or absolute filters.
2. Lighting:
- a. Provide adequate lighting, considered to be a minimum of 50 foot-candles measured 3 feet above the finished floor, in the communications rooms.
 - b. Mount the light fixtures a minimum of 8 feet, 6 inches above the finished floor (AFF).
 - c. Locate the light switches near the entrances of the communications rooms.
 - d. Properly place emergency lighting so an absence of light will not hamper emergency exiting.
- B. Existing Conditions:
- 1. If the existing condition of any of the following items is not as indicated herein, contact the Program/Project Manager immediately.
 - a. Access to Communications Rooms:
 - 1) Access to the communications rooms will be directly from hallways; and not through offices, janitorial rooms, or mechanical rooms.
 - 2) Doors:

- a) Ensure that the communications equipment room doors are lockable and keyed separately from other facility doors, that the doors open outward, and that they are a minimum of 3 feet wide by 7 feet 5 inches tall.
 - (1) Ensure that there is access for future equipment changes within the room.
 - b) Ensure that the doors are fire rated for a minimum of 1 hour or more as required by local code requirements.
- b. Signage:
 - 1) Ensure that communications equipment room signage is consistent with Phoenix Sky Harbor International Airport standards.
- c. Floors:
 - 1) To minimize dust and static electricity, ensure that the communications equipment room floors are sealed concrete.
 - a) Carpet is strictly prohibited on communications equipment room floors.
 - 2) Floor Capacity:
 - a) Ensure that the communications room floor is designed for a minimum distributed load rating of 100 pounds-force per square foot, and a minimum concentrated load rating of at least 2000 pounds-force.
- d. Electrical Power:
 - 1) Provide a minimum of two dedicated 3-wire, 120 VAC, 20-Ampere rated quad electrical outlets on separate branch circuits located on active equipment racks 24 inches above the finished floor (AFF) in each communications room.
 - a) Unless otherwise specified, provide duplex 20R spade receptacles.
 - 2) Provide separate duplex 120 VAC convenience outlets 18 inches above the finished floor at 6-foot intervals around perimeter walls in each communications room.
 - a) Locate the outlets on non-switched circuits, and identify and label them.
 - 3) Provide equipment to supply power to the equipment located within the communications rooms from a panel located within the room.
 - a) Provide power for the lighting and the telecommunications equipment from separate power panels.
- e. Electrical Grounding:
 - 1) Provide an electrical ground on a 4-inch or larger busbar as defined by Article 250-71(b) in NFPA 70, the National Electrical Code (NEC), for the communications room located near, but not behind, the riser sleeves between floors.

- 2) Connect the grounding bar to a main building ground electrode, complying with the requirements specified in ANSI/J-STD-607-A.
- f. Electromagnetic Interference:
 - 1) The communications rooms are not to be located near electrical power supply transformers, motors, generators, x-ray equipment, radio transmitters, induction heating devices, and other potential sources of electromagnetic interference.
- g. Uninterruptible Power Supplies:
 - 1) Provide a single Uninterruptible Power Supply capable of supporting the active electronics within the main distribution frame (MDF) for a minimum of 20 minutes.
 - 2) Provide an individual rack-mounted Uninterruptible Power Supply for each intermediate distribution frame (IDF) capable of supporting the equipment within that rack for a minimum of 20 minutes.
- h. Building Automation:
 - 1) Additional equipment, such as fire alarm panels and/or building monitoring devices, will not be housed in the communications equipment rooms.
 - a) Separate space for these services will be provided as part of the electrical room or in a separate space.
 - 2) Appropriate fire detection/protection systems will be provided in the communications equipment rooms in accordance with the City of Phoenix code requirements.

1.08 WARRANTY

- A. Manufacturer Warranty:
 1. Provide the manufacturer's standard warranty for the products provided under this Section.
 2. Submit the warranty to the Program/Project Manager.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

- A. Manufacturers:
 1. Substitution Limitations:
 - a. Comply with the substitution requirements specified in Section 16702, Basic Communications Materials and Methods.
 2. Product Options:
 - a. Comply with the product option requirements specified in Section 16702, Basic Communications Materials and Methods.
 - 1) The manufacturers and specific part numbers listed in this Section are provided as an aid in the construction process and are not

meant to preclude other manufacturers that may be qualified to provide communications components.

- 2) Other manufacturers with comparable qualifications may be proposed but are subject to review as an approved equal.
- 3) Submit documentation for the components proposed to be installed under this Contract as required.

B. Description:

1. Regulatory Requirements:

- a. Comply with all codes, ordinances, regulations, and other legal requirements of public authorities, which bear on performance of the Work of this Section, including among others the following:
 - 1) Phoenix Building Construction Code and Amendments.
 - 2) City of Phoenix Aviation Department Premises Distribution System Standards Report.
 - 3) Aviation Supplement to City of Phoenix information Technology Standards.

C. Design Criteria:

1. Provide the materials as described herein and shown on the Contract Drawings, and provide the communications equipment room fittings, necessary to interconnect all system equipment, including equipment located in Telecommunications Rooms.
 - a. Comply with the requirements specified in Section 16702, Basic Communications Materials and Methods.
 - b. Design all racks and cabinets to be floor mountable.
2. Should there be any discrepancies or a question of intent, refer the matter to the Program/Project Manager for a decision before ordering any equipment and materials, and before starting any related work.
3. Shop Drawings:
 - a. Prior to performing the Work of this Section, prepare Shop Drawings of the proposed layout modifications for each affected communications room in the airport.
 - b. Submit the Shop Drawings to the Program/Project Manager for approval.
4. Conflicts:
 - a. If conflicts between referenced requirements arise, comply with the one establishing the more stringent requirements.
 - b. If conflicts between referenced requirements and the Contract Documents arise, comply with the one establishing the more stringent requirements.

D. Materials:

1. Equipment Racks, Cabinets, and Shelves:
 - a. Equipment Racks:

- 1) Provide free standing, self-supporting equipment racks fabricated from extruded lightweight aluminum Alloy 6061-T6, and designed for cable and jumper management and to be permanently mounted on the floor with bolt-down kits.
- 2) Provide equipment racks capable of supporting and organizing electronic equipment, cross-connection and/or termination hardware for fiber optic cabling, station cabling, riser cabling, or building entrance cabling as required by the communication system design; and equipped for electrical grounds complying with the requirements specified in ANSI/J-STD-607-A.
 - a) Provide racks having a mounting width capable of supporting conventional 19-inch equipment.
 - b) Provide 7-foot tall racks having 6-inch wide channels on each side, and extruded aluminum angles at the top and base, to provide support.
 - c) Provide hardware to organize and support cabling and patch cords in the vertical and horizontal planes.
 - d) Provide standard grade frames capable of supporting a uniformly distributed weight of 750 pounds.
- 3) To facilitate easy equipment installation, provide a strong and durable fastening system having mounting screws with pilot points and screw holes with roll-formed threads.
- 4) Equipment Rack Specifications:
 - a) Provide equipment racks complying with the equipment rack specifications in Table 16711-1.

Table 16711-1 Equipment Rack Specifications	
Parameter	Requirement
Color	Black
Dimensions	7 feet by x 20-5/16 inches by 18 inches with 19 inch center mounting
Base footprint	20.25 inches wide by 18 inches deep
Hole pattern	5/8 inch - 5/8m inch - 1/2inch alternating in accordance with EIA-310-D
Rack Mounting Units (RMU)	45
Mounting screws	12-24 thread with combination Phillips/straight heads and pilot points.

- 5) Manufacturers:
 - a) Chatsworth Products, Inc., Part Number 66353-703, www.chatsworth.com.

- b) Approved equal.
- b. Equipment Cabinets:
 - 1) Free Standing Cabinet
 - a) Provide standard free standing equipment cabinets having 19-inch rack mounting options for equipment; designed to accommodate server rail kits from Compac, IBM, and Dell; and unless otherwise indicated on the Contract Drawings designed to be permanently mounted on the floor with bolt-down kits.
 - b) Provide equipment cabinets having the following features:
 - (1) A removable front locking door fabricated from smoked Plexiglas, and hinged on the right side.
 - (2) A removable rear locking door, louvered at both top and bottom, and hinged on the right side.
 - (3) Push button lift-off locking side panels.
 - (4) A perforated top panel designed for ventilation, and mounting an exhaust fan.
 - (5) An open base.
 - (6) Two 6-foot, 6-port, 20 Amp power strips.
 - (7) Unless otherwise indicated on the Contract Drawings, a grounding bus.
 - c) If cabinet drawings are provided for this Contract, layout equipment cabinet layouts accordingly.
 - 2) Wall Mounted Cabinet:
 - a) Provide wall mounted cabinets consisting of a lockable enclosure that provides standard 19-inch rack mounting options for equipment, a minimum of 7 rack units of mounting space, and capable of accommodating both active and passive components simultaneously.
- c. Floor Frames:
 - 1) Provide high capacity floor frames designed for high density terminations without congestion, and having cable runway support, junctioning bolts, a ground bus, and separate horizontal and vertical paths for jumpers.
 - a) Provide floor frames capable of mounting 100-pair or 300-pair 110 blocks.
 - b) Provide uprights fabricated from structural grade aluminum Alloy 6061-T6.
 - c) Provide floor frames capable of supporting the termination of up to 9000 pairs of copper conductors.
 - 2) Provide only floor frames that are UL-listed in accordance with the UL Qualification Tests and Follow-Up Service Requirements.
- 2. Cable Management:
 - a. Vertical Wire Menders:

- 1) Provide vertical wire menders that create an organized path for routing patch or cross-connect cables between distribution racks.
- 2) Provide vertical wire menders that have usable dimensions of 6 inches by 7 feet, and are compatible with a free standing 19-inch rack.
- 3) Manufacturers:
 - a) Chatsworth Products, Inc., Part Number 14831-703, www.chatsworth.com.
 - b) Approved equal.
- b. Horizontal Wire Menders (Patch Cord Organizers):
 - 1) Provide horizontal wire menders between all devices mounted within a rack or cabinet, and capable of organized movement for routing horizontal and vertical patch cables on distribution racks.
 - 2) Manufacturers:
 - a) Chatsworth Products, Inc., Part Number 30530-719, www.chatsworth.com.
 - b) Approved equal.
3. Cable Tray:
 - a. Provide cable trays that are at least 12 inches wide, and that include vertical sections secured to the floor for riser cables entering from floor sleeves and slots, and runway drop-offs for racks installed above equipment racks and cabinets.
 - b. Provide splices, supports, and other fittings necessary for a complete, continuously grounded cable tray system.
 - 1) Provide a cable tray system UL-Classified as equipment grounding conductor, and meeting the requirements specified in Article 318-5 of NFPA 70, the National Electric Code.
 - c. Dimensions:
 - 1) The actual dimensions are indicated on the Contract Drawings; however, if no dimensions are indicated provide cable trays having the following dimensions:
 - a) Length: 10 feet.
 - b) Width, Minimum: 6 inches.
 - c) Load Depth, Minimum: 4 inches.
 - 2) There may be more than one size cable tray in the design.
 - d. Cable Tray Finish:
 - 1) Provide an ANSI/ASA 61 black polyester powder-coated surface treatment over electrodeposited zinc plating.
 - e. Manufacturers:
 - 1) Cooper B-Line, www.b-line.com.
 - 2) Chatsworth Products, Inc., www.chatsworth.com.
 - 3) Hoffman, www.hoffmanonline.com.
 - 4) Cablofil, Inc., EZ Tray, www.cablofil.com
 - 5) GS Metals Corporation, Flextray, www.flextray.com.

2.02 ACCESSORIES

- A. Grounding Bars:
 - 1. Telecommunications Main Grounding Busbar (TMGB):
 - a. Provide a telecommunications main grounding busbar (TMGB) as specified in Section 16062, Telecommunications Grounding and Bonding.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Grounding:
 - a. Verify that the main telecommunications grounding system is properly installed and has been tested in accordance with the requirements of Section 16062, Communications Grounding and Bonding.
 - 2. Pathway Installation:
 - a. Verify that the communications conduit, raceways, and boxes are properly installed in accordance with the recommended practices of BICSI (ANSI/NECA/BICSI 568, BICSI TDMM, BICSI OSPDRM, BICSI ESSDRM, and BICSI ITSIM), ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and ANSI/TIA/EIA-568-B.3; and the PSHIA Premises Distribution System Standards.
 - b. Verify that the conduit has a minimum diameter of 1 inch.
 - 3. Fire Protection:
 - a. Verify that the main distribution frame (MDF) is equipped with a smoke/fire detection/protection system that is fully integrated with the existing building fire detection system and the Premises Distribution System (PDS) design standards.
 - 4. Clearances:
 - a. Verify that to provide space over the equipment frames for cables and suspended racks, ceiling protrusions allow a minimum clear height of 8 feet 6 inches.

3.02 PREPARATION

- A. Surface Preparation:
 - 1. Line the walls of the communications equipment rooms with 8 feet high Trade Size 3/4-inch AC-grade fire rated plywood.
 - a. Mount the plywood vertically by securely fastening it to the wall-framing members starting 2 inches above the finished floor (AFF).
 - 2. Paint the plywood with 2 coats of white fire-retardant paint, but do not paint over the fire rated label so it remains visible after the plywood is installed.

3.03 INSTALLATION

- A. Perform all installation in conformance with ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and ANSI/TIA/EIA-568-B.3, BICSI standards, and the manufacturer's installation guidelines.
 - 1. Provide the Work in accordance with the Contract Drawings, the manufacturer's instructions, and approved Submittals.
 - 2. Clean, adjust, test, and condition the manufactured articles, materials, and equipment, and place them in service in accordance with the manufacturer's directions and recommendations except as otherwise indicated in the Contract Documents.
 - 3. Submit the manufacturer's installation guidelines to the Program/Project manager for information.
- B. Cable Trays:
 - 1. To route bulk telecommunications equipment within the main distribution frame (MDF), provide cable trays.
 - 2. Install cable trays while keeping the proper clearance from HVAC ducting or other obstacles.
 - a. Place cable trays 7 feet 6 inches above the finished floor (AFF), or as otherwise indicated on the Contract Drawings.
 - 3. Ground and bond the cable trays and ladder racking to the telecommunications grounding busbar (TGB) in the communications room.
- C. Free Standing Equipment Cabinets and Racks:
 - 1. Provide free standing equipment racks mounted side by side and secured to adjacent racks in a line-up.
 - a. Connect multiple racks and cabinets together directly or indirectly via vertical cable management hardware as indicated in the Contract Drawings.
 - b. Install the racks so segregated cable management of jumper cross-connects, network patches, and fiber jumpers is provided.
 - c. Maintain a 3-foot working clearance in the front and in the back of each equipment rack, and a 3 foot working clearance at both ends of the equipment rack or multiple rack assemblies.
 - 1) Measure the clearance from the outermost surface of the equipment and connecting hardware rather than from the equipment rack since some of these devices may extend beyond the equipment rack.
 - 2. Mount racks and cabinets to the floor in accordance with the manufacturer's procedures for floor mounting the equipment.
 - a. Submit the manufacturer's procedures for floor mounting the equipment to the Program/Project Manager for information.
 - 3. Run power cables, control cables, and high-level cables for rack mounted equipment on the left side of an equipment rack as viewed from the rear;

run other cables on the right side of the equipment rack as viewed from the rear.

4. For equipment mounted in drawers or on slides, provide the interconnecting cables with a service loop of not less than 3 feet, and ensure that the cable is long enough to allow full extension of the drawer or slide.

3.04 REPAIR/RESTORATION

- A. Replace equipment damaged prior to system acceptance at no increase in the Contract Price.
 1. If damage to the communications equipment room fittings is sustained during implementation of the communication system, provide the additional material and labor necessary to properly rectify the situation in a timely fashion.

3.05 SITE QUALITY CONTROL

- A. Inspections:
 1. At a minimum, the Program/Project Manager, or its designated representative, will perform random and unannounced onsite inspections during the installation to ensure that the communications items are installed in accordance with the Contract Documents and City of Phoenix requirements.
 2. In addition, a final inspection and a complete review of the communications system will be performed in accordance with the requirements specified in Section 16702, Basic Communications Materials and Methods, before the system installation is accepted.
 3. Inspections and testing performed exclusively for the convenience of the Contractor are the sole responsibility of the Contractor.
- B. Non-Conforming Work
 1. Discrepancies noted during field inspections conducted by the Program/Project Manager must be corrected prior to system acceptance.

3.06 SYSTEM STARTUP

- A. Provide system startup as specified in Section 16702, Basic Communications Materials and Methods.

3.07 CLOSEOUT ACTIVITIES

- A. Record Documentation:
 1. The final installation is subject to the Program/Project Manager's approval.
 - a. Prior to the use of any system components, prepare Record Drawings for submission to the Program/Project Manager.

- b. System acceptance will not be provided without complete as-built documentation.
- 2. Record Drawings:
 - a. A complete set of AutoCAD 2000 Contract Drawings will be provided to the Contractor.
 - b. Prepare CAD as-built drawings of the completed layout of each communications room in the structured cabling system (SCS) by entering the information on a separate layer on the set of Contract Drawings provided.
 - 1) Include drawings of all installed equipment within each communications room.
 - c. Submit the as-built drawings Record Drawings to the Program/Project Manager for approval.

3.08 PROTECTION

- A. Protect installed products from damage during construction operations until Final Acceptance.

SECTION 16712

COMMUNICATIONS BACKBONE CABLING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for providing backbone fiber optic cable and copper cable for communications systems as shown on the Contract Drawings.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01780 - Closeout Submittals.
 - 3. Section 16062 - Communications Grounding and Bonding.
 - 4. Section 16076 - Communications Identification.
 - 5. Section 16081 - Communications Testing.
 - 6. Section 16702 - Basic Communications Materials and Methods.
 - 7. Section 16705 - Pathways for Communication Services.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ALVYN: A coated aluminum, polyvinyl chloride (PVC) jacket.
 - 2. ANSI: American National Standards Institute.
 - 3. AWG: American Wire Gauge.
 - 4. CAD: Computer Aided Drafting.
 - 5. ELFEXT: Equal Level Far End Crosstalk.
 - 6. IT: Information technology.
 - 7. NEXT: Near End Crosstalk.
 - 8. OSP: Outside plant.
 - 9. PSELFEXT: Power Sum Equal Level Far End Crosstalk.
 - 10. PVC: Polyvinyl Chloride.
 - 11. SCS: Structured Cabling System.
 - 12. TSB: Technical Systems Bulletin.
- B. Definitions:
 - 1. Backbone: A facility, such as a pathway, cable, or conductors between telecommunications rooms, or floor distribution terminals, the entrance facilities, and the equipment rooms within or between buildings.
- C. Reference Standards:
 - 1. Building Industry Consulting Services International (BICSI):
 - a. ANSI/NECA/BICSI 568 – Standard, Installing Commercial Building Telecommunications Cabling.
 - b. BICSI TDMM - Telecommunications Distribution Methods Manual.

- c. BICSI OSPDRM – Outside Plant Design Manual.
- d. BICSI ESSDRM – Electronic Safety and Security Reference Manual.
- e. BICSI ITSIM – Information Transport Systems Installation Manual.
- 2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - b. City of Phoenix Aviation Department:
 - 1) Premises Distribution System Standards Report.
 - 2) Aviation Supplement to City of Phoenix Information Technology Standards.
- 3. Insulated Cable Engineers Association (ICEA):
 - a. ANSI/ICEA S-83-596 – Fiber Optic Premises Distribution Cable.
 - b. ANSI/ICEA S-87-640 - Fiber Optic Outside Plant Communications Cable.
- 4. International Electrotechnical Commission (IEC):
 - a. IEC 60793 – International Standard – Optical Fibres – Part 1-1 Measurement Methods and Test Procedures – General and Guidance.
- 5. InterNational Committee for Information Technology Standards (INCITS):
 - a. ANSI/INCITS 231 – Information Systems – Fibre Distributed Data Interface (FDDI) – Physical Layer Protocol (PHY-2).
- 6. International Standards Organization (ISO):
 - a. ISO 9001 – Quality Management Systems – Requirements.
- 7. International Standards Organization/International Electrotechnical Commission (ISO/IEC):
 - a. ISO/IEC 11801 – Information Technology – Generic Cabling for Customer Premises.
- 8. National Institute of Standards and Testing (NIST):
 - a. NIST Policy on Traceability.
 - b. NIST Standard Reference Material (SRM).
- 9. Telecommunications Industry Association/Electronic Industries Association (TIA/EIA):
 - a. TIA/EIA-455-B – Standard Test Procedure for Fiber Optic Transducers, Sensors, Connecting and Terminating Devices, and Other Fiber Optic Components.
 - b. TIA/EIA 492 Series – Generic Specification for Optical Waveguide Fibers, and Amendments.
 - c. ANSI/TIA/EIA-568-B.1 - Commercial Building Telecommunications Cabling Standard – Part 1: General Requirements.
 - d. ANSI/TIA/EIA-568-B.2 – Commercial Building Telecommunications Cabling Standard – Part 2: Balanced Twisted Pair Cabling Components.
 - e. ANSI/TIA/EIA-568-B.3 – Optical Fibre Cabling Components Standard.
- 10. Telecommunications Industry Association (TIA):
 - a. TIA 569-B – Commercial Building Standard for Telecommunications Pathways and Spaces.

- b. TIA 758-A – Customer Owned Outside Plant Telecommunications Infrastructure Standard.
- c. TSB-140 – Additional Guidelines for Field Testing Length, Loss and Polarity of Optical Fibers.
- 11. National Fire Protection Association (NFPA):
 - a. NFPA 70 - National Electrical Code (NEC).
- 12. Phoenix Sky Harbor International Airport (PSHIA):
 - a. PSHIA Premises Distribution System Standards:
 - 1) PSHIA Communication Network and Infrastructure Systems Design.
- 13. Underwriters Laboratories, Inc. (UL):
 - a. UL 910 – Test Method for Fire and Smoke Characteristics of Electrical and Optical-Fiber Cables Used in Air-Handling Spaces (*no longer listed*).
 - b. UL 1666 – Standard for Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts.
 - c. UL Performance Verification Service Requirements.
 - d. UL Qualification Tests and Follow-Up Service Requirements.
 - e. UL Product Directories.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate construction meetings as agreed with the Program/Project Manager.
- B. Scheduling:
 - 1. Adhere to the installation schedule approved by the Program/Project Manager.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Multimode fiber optic cable.
 - 2) Singlemode fiber optic cable.
 - 3) Fiber splice modules.
 - 4) Copper cable.
 - 5) Copper cabling protection units.
 - 6) Closures.
 - 7) Fiber patch cords.
 - 8) Fiber optic patch panels.
 - b. Shop Drawings:

- 1) Backbone Cable Layout.
 - 2) Backbone Cable Pulling Plan.
 - 3) General procedures for the installation process.
 - c. Certificates:
 - 1) Termination and Test Equipment Certification.
- B. Closeout Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Manufacturer's guidelines for what constitute warranty liability issues.
 - 2) Special Communications Backbone Cabling Warranty.
 - b. Record Documentation:
 - 1) As-built drawings of the completed communications backbone cabling system.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
 2. Install the cabling so it meets all applicable national and local codes pertaining to low voltage cable system installations.
- B. Qualifications:
 1. Manufacturer Qualifications:
 - a. Multi-Mode Fiber Optic Cable Manufacturer: ISO 9001 Certified Manufacturer.
 - b. Single-Mode Fiber Optic Cable Manufacturer: ISO 9001 Certified Manufacturer.
 - c. Copper Cable Manufacturer: ISO 9001 Certified Manufacturer, and providing products complying with the appropriate UL Qualification Tests and Follow-Up Service Requirements.
 2. Structured Cabling System Installer's Qualifications:
 - a. Employ the structured cabling system installer specified in Section 16702, Basic Communications Materials and Methods, for installing the communications horizontal cabling.
- C. Certifications:
 1. Termination and Test Equipment Certification:
 - a. Furnish termination and test equipment calibrated in accordance with the traceability requirements of the National Institute of Standards and Testing (NIST).

- b. Submit a copy of the calibration documents, and certification that the equipment calibration meets NIST standards and has been calibrated at least once in the previous calendar year.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver materials in their original packages with their labels intact, and each item clearly identified.
 2. Ship fiber optic and copper cable on reels of the lengths specified, with a minimum overage of 10 percent.
 - a. Wind the cable on the reels so the cable can be unwound without kinking.
 - b. Make 2 meters of cable at both ends of the cable accessible for testing.
 - c. Attach a permanent water resistant label showing the length, cable identification number, cable size, cable type, attenuation, bandwidth, and date of manufacture to each reel.
 - 1) Use indelible writing on the labels.
- B. Storage and Handling Requirements:
 1. Store copper cable where the minimum storage temperature range is minus 40 degrees Celsius to plus 70 degrees Celsius.

1.07 WARRANTY

- A. Manufacturer Warranty:
 1. Have the chosen manufacturer prepare and submit written guidelines for what constitutes warranty liability issues regarding moves, adds, and changes to the cable plant performed by the Phoenix Sky Harbor International Airport's personnel to the Program/Project Manager for information.
- B. Special Warranty:
 1. Provide a Special Communications Backbone Cabling Warranty on the materials, services, and adherence of the cabling system to the requirements of this Section for a period of not less than 20 years.
 - a. If items supplied as part of this Contract have longer standard warranties, provide the longer warranty for those items.
 - b. Certify within the warranty that the cabling system supports and conforms to the requirements of ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and/or ANSI/TIA/EIA-568-B.3 covering current and future applications, which support transmission over a properly constructed horizontal cabling system premises network.
 - c. Cover the replacement or repair of defective products, and the labor for the replacement or repair of such defective products.

2. Submit the Special Communications Backbone Cabling Warranty to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 SYSTEMS

- A. Manufacturers:
 1. Manufacturer List:
 - a. Ortronics/Berk Tek, NetClear System,
<http://www.cablinginstall.com/articles/2002/01/ortronics-berk-tek-introduce-cat-6-netclear-system.html>.
 - b. Approved equal.
 2. Substitution Limitations:
 - a. Comply with the substitution requirements specified in Section 16702, Basic Communications Materials and Methods.
 3. Product Options:
 - a. Comply with the product option requirements specified in Section 16702, Basic Communications Materials and Methods.
 - 1) The manufacturers and specific part numbers listed in this Section are provided as an aid in the construction process and are not meant to preclude other manufacturers that may be qualified to provide communications components.
 - 2) Other manufacturers with comparable qualifications may be proposed but are subject to review as an approved equal.
 - b. Product Data:
 - 1) Submit manufacturers Product Data for the communication backbone cabling products proposed for the Work of this Section to the Program/Project Manager for approval.
 - c. Provide the standard products of a manufacturer regularly engaged in the manufacture of telecommunications cabling products.
 - d. Provide the manufacturer's latest standard design which has been in satisfactory use for at least 1 year prior to the award of this Contract.
 - e. For cable, equipment, modules, assemblies, parts, and components of the same classification, provide identical items.
- B. Description:
 1. Regulatory Requirements:
 - a. Comply with all codes, ordinances, regulations, and other legal requirements of public authorities, which bear on performance of the Work, including among others the following:
 - 1) Phoenix Building Construction Code and Amendments.
 - 2) City of Phoenix Aviation Department Premises Distribution System Standards Report.
 - 3) Aviation Supplement to City of Phoenix Information Technology Standards.

C. Performance:

1. Provide a cabling system that complies with the performance requirements of ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and ANSI/TIA/EIA-568-B.3 including NEXT, PSNEXT, ELFEXT, PSELFEXT, return loss, propagation delay, delay skew, bandwidth, characteristic impedance, attenuation/loss channel, and attenuation to crosstalk ratio (ACR) requirements.
2. Provide materials rated for continuous operation under the ambient environmental temperature, humidity, and vibration conditions encountered at the installed location, including the following:
 - a. Interior Controlled Environment: 64 to 75 degrees Fahrenheit dry bulb and 30 to 55 percent relative humidity, non-condensing.
 - b. Interior Uncontrolled Environment: 0 to 130 degrees Fahrenheit dry bulb and 10 to 95 percent relative humidity, non-condensing.
 - c. Exterior Environments: Minus 30 degrees to 130 degrees Fahrenheit dry bulb, and 10 to 100 percent relative humidity, condensing.
 - d. Hazardous Environment: Rate and install system components located in areas where fire or explosion hazards may exist because of flammable gas or vapors, flammable liquids, combustible dust, or ignitable fibers or flyings, according to Chapter 5 of the NFPA 70 and as shown on the Contract Drawings.

D. Design Criteria:

1. Provide the materials as described herein and shown on the Contract Drawings, and provide the cabling necessary to interconnect all system equipment, including equipment located in Telecommunications Rooms.
 - a. Comply with the requirements specified in Section 16702, Basic Communications Materials and Methods.
 - b. Perform the calculations and analysis to support design and engineering decisions.
 - c. Perform calculations and record the actual values for cable run pulling tensions, and submit the calculations and recorded values to the Program/Project Manager for approval.
2. Cable in Air Handling and Ventilation Spaces:
 - a. For cable placed in a space used as an air return or in any way connected with air handling plenums or building ventilation, provide low-smoke, fire retarding cable complying with Articles 725, 760, and 800 of NFPA 70 (National Electrical Code).
 - 1) Do not place cabling in plenums without the written approval of the Program/Project Manager.
 - b. For cable installed in plenums or air-handling spaces, provide cable that complies with the requirements of UL 910, and that is marked "OFNP" in accordance with NFPA 70, the National Electrical Code.
3. To support voice, data, and building service applications, provide copper riser cable.

4. For voice grade wire and cable placed in the outside environment, provide solid, twisted pair, and multi-conductor cabling.
 - a. For copper twisted pairs, provide cabling having a mutual capacitance at 1kHz of 15.7 nF/1000 feet.
5. Underground Copper Cable:
 - a. For underground copper cable, including cable installed in conduits or duct banks, provide cable that contains an additional moisture barrier in the form of a flooding compound.
6. Fiber Optic Cable:
 - a. Provide fiber optic cable certified to comply with all parts of TIA/EIA-455-B, and to comply with the applicable requirements of NFPA 70, the National Electrical Code.
 - 1) Provide the appropriate sheath for the particular fiber optic cable application in accordance with ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and/or ANSI/TIA/EIA-568-B.3.
 - b. Riser Cable:
 - 1) For riser cable, provide cable that complies with the requirements of UL 1666, and that is marked "OFNR" in accordance with NFPA 70, the National Electrical Code.
 - c. Building Cables:
 - 1) Nonplenum Rated Cable:
 - a) Provide nonplenum rated riser cable that consists of multiple fibers having a non-filled ribbon structure with a nonmetallic crossply polyvinyl chloride (PVC) core tube and a PVC outer jacket.
 - b) Provide UL-listed nonplenum rated riser cable that complies with the NFPA 70 requirements for type "OFNR" cable.
 - 2) Plenum Rated Cable:
 - a) Provide plenum rated cable that consists of multiple fibers organized into subunits, each fiber subunit surrounded with a color-coded low smoke polyvinyl chloride (PVC) buffer tube and reinforced with aramid yarn for extra strength, and the whole having a plenum polyvinyl chloride (PVC) outer jacket.
 - b) Provide UL-listed nonplenum rated riser cable and subunits that comply with the NFPA 70 requirements for type "OFNP" cable.
 - d. Fiber Optic Patch Cords:
 - 1) Provide manufactured duplex type fiber optic patch cords supplied from the same manufacturer as the termination hardware and cable to insure compatibility and performance.
 - 2) Do not field-fabricate patch cords unless doing so is unavoidable.
 - 3) Provide a quantity of multimode and singlemode patch cords of the appropriate length for the particular application, and equal to the number of ports on all patch panels.

- 4) Appropriately dress slack in the patch cords using vertical and horizontal patch cord organizers to maintain a neat appearance.
- e. Fiber Optic Cable Color Codes:
 - 1) Provide optical fiber conductors that follow standard color code schemes.
 - 2) Provide fiber numbers and binders corresponding to the color codes indicated in Table 16712-1:

Table 16712-1 Color Codes for Fiber Numbers and Binders			
Fiber/Binder Number	Color	Fiber/Binder Number	Color
1	Blue	7	Red
2	Orange	8	Black
3	Green	9	Yellow
4	Brown	10	Violet
5	Slate	11	Rose
6	White	12	Aqua

7. Shop Drawings:
 - a. Prior to beginning to pull cable, prepare and submit Shop Drawings to the Program/Project Manager indicating the intended Backbone Cable Layout and Backbone Cable Pulling Plan and the general procedures for the installation process.
 - 1) Include the number of cables per run, the outlet configurations, and other pertinent data.
 - 2) Identify pulling point locations.
 - 3) Identify pulling tensions.
 - 4) List of the termination and test equipment to be used to perform the Work.
8. Conflicts
 - a. If conflicts between referenced requirements arise, comply with the one establishing the more stringent requirements.
 - b. If conflicts between referenced requirements and the Contract Documents arise, comply with the one establishing the more stringent requirements.

E. Materials:

1. Multimode Fiber Optic Cable:
 - a. Provide UL-listed multimode fiber optic cable having fibers that comply with TIA/EIA 492 series of standards, ANSI/ICEA S-83-596, and ANSI/ICEA S-87-640.

- b. Provide multimode fibers having dual wavelength capability transmitting at 850nm and 1300nm ranges, and rated for use as riser cabling.
- c. Provide multimode fiber optic cable having a mechanically strippable coating.
- d. For multimode riser rated and multi-mode plenum rated indoor cabling, provide orange colored sheaths.
- e. Provide multimode fiber optic cable that meets or exceed the requirements in Table 16712-2.

Table 16712-2 Multimode Fiber Optic Cable Properties	
Property	Requirement
Core Diameter	62.5µm plus or minus 3.0µm
Core Non-Circularity	Less than 6 percent
Core/Cladding Concentricity Error	Less than 3.0µm
Numerical Aperture	0.275 plus or minus 0.015
Cladding diameter	125.0µm plus or minus 2.0µm
Cladding Non-Circularity	Less than 2 percent
Coating	250µm plus or minus 15µm
Buffering Diameter	900 mm plus or minus 50 mm
Minimum Tensile Strength	100,000 psi
Cable Minimum Bending Radius During Installation: After Installation:	20 times the cable diameter 10 times the cable diameter
Operating Temp. Range	-40°F to 185°F (-40°C to 77°C)
Storage Temp. Range	-40°F to 185°F (-40°C to 77°C)
Maximum Fiber Loss	3.5 dB/km at 850 NM 1.0 dB/km at 1300 NM
Minimum Bandwidth	850nm: 200 MHz at 1km 1300nm: 500 MHz at 1km
Gigabit Ethernet Distance Guarantee	300 meters at 850nm, 550 meters at 1300nm
Attenuation Uniformity	There shall be no point discontinuities greater than 0.2 dB at either 850 nm or 1300 nm

**Table 16712-2 Multimode Fiber Optic Cable Properties**

Property	Requirement
Attenuation Macro bend	Attenuation due to 100 turns of fiber around a 75mm plus or minus 2mm diameter mandrel exceeding 0.5 dB at 850nm is unacceptable
Attenuation at the Water Peak	Attenuation coefficient at 1380nm exceeding the attenuation coefficient at 1300nm by more than 1.0 dB/km is unacceptable

2. Singlemode Fiber Optic Cable:
- Provide UL-listed singlemode fiber optic cable having fibers that comply with TIA/EIA 492 series of standards, ANSI/ICEA S-83-596, and ANSI/ICEA S-87-640.
 - Provide fibers complying with TIA/EIA-455-B and the IEC 60793 test methods for the required attributes.
 - Provide fibers having dual wavelength capability transmitting at 1310nm and 1550nm ranges, and rated for use as riser cabling.
 - Provide singlemode fiber optic cable having a mechanically strippable coating.
 - For singlemode riser rated and single-mode plenum rated cabling, provide yellow colored sheaths.
 - Provide singlemode fiber optic cable that meets or exceed the requirements in Table 16712-3.

Table 16712-3 Singlemode Fiber Optic Cable Properties

Property	Requirement
Core Diameter	8.3 μm
Cladding Diameter	125.0 μm plus or minus 1.0 μm
Cladding Non-Circularity	Less than or equal to 1.0 percent
Index of Refraction	0.37 Percent
Core/Cladding Concentricity	Less than or equal to 0.8 μm
Coating Diameter	250 μm plus or minus 15 μm
Mode Field Diameter	8.8 μm plus or minus 0.5 μm at 1310 nm

Table 16712-3 Singlemode Fiber Optic Cable Properties	
Property	Requirement
Minimum Proof Strength	100,000 psi
Cable Minimum Bending Radius During Installation: After Installation:	20 times cable diameter 10 times cable diameter
Operating Temp. Range	-40°F to 170°F (-40°C to 77°C)
Storage Temp. Range	-40°F to 170°F (-40°C to 77°C)
Maximum Fiber Loss Depressed Clad	0.4 dB/km at 1310 nm 0.3 dB/km at 1550 nm
Gigabit Ethernet Distance Guarantee	5000 meters at 1310 nm and 1550nm
Maximum Dispersion	2.8 ps/nm-km 1285 to 1330 nm
Fiber Cutoff Wavelength	≥1130 nm. ≥1300 nm
Fiber Macrobend (100 turns @ 32 nm diameter)	≥0.05 dB at 1310 nm ≥0.10 dB at 1550 nm
Coating Strip Force	$1.3N \leq F \leq 8.9N$

3. Fiber Splice Modules:
 - a. Fiber splicing and closures:
 - 1) Unless specifically approved otherwise by the Program/Project Manager's IT Representative, provide fusion splices.
 - 2) Provide fiber splice modules complying with the following requirements:
 - a) Mechanical Requirements:
 - (1) Capable of joining single mode and multimode fibers.
 - (2) Capable of establishing a permanent mechanical splice.
 - (3) May be used in outside plant and/or premises applications.
 - (4) Accepts 250 and 900 micron fibers.
 - (5) Re-enterable, re-arrangeable, and reusable.
 - (6) Requires no polishing.
 - (7) Requires no adhesives.
 - (8) Has no loose parts.
 - (9) Has 1 part index matching gel.
 - (10) Has unlimited shelf life.
 - b) Optical Requirements:
 - (1) Splice Loss: Less than 0.20 dB
 - (2) Reflection: Less than 50 dB

- (3) Stability: Stable from - 40 degrees Fahrenheit to 185 degrees Fahrenheit (- 40 degrees Celsius to 85 degrees Celsius).
4. Copper Cable:
- a. Provide copper cable having the appropriate sheath for the particular application in accordance with the requirements of ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and/or ANSI/TIA/EIA-568-B.3.
 - b. Copper Riser Cable – Inside Plant:
 - 1) Unless specified otherwise, provide multi-pair riser cable for all riser cabling.
 - a) For vertical riser cables, provide shielded or unshielded 24 AWG multi-pair copper cables.
 - b) Unless the cables are placed in conduit or if specified otherwise, provide plenum rated multi-pair copper cables.
 - c) Conformance test 25 to 300 pair cables to verify they comply with the requirements for Category 3 cables specified in ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and ANSI/TIA/EIA-568-B.3.
 - 2) Shielded Nonplenum Cable:
 - a) Provide shielded nonplenum cable consisting of solid-copper conductors insulated with expanded polyethylene covered by a PVC skin.
 - (1) Provide the shielded nonplenum cable with an outer jacket of polyvinyl chloride (PVC) plastic to form an ALVYN sheath having improved frictional properties which allow the cable to be pulled through conduit without the use of lubricants.
 - (2) Overlay the core with a corrugated aluminum sheath adhesively bonded to ALVYN sheath.
 - b) Provide cable available in 25, 50, 100, 150, 200, and 300 pair counts.
 - c) Provide shielded nonplenum cable UL® Listed as “CMR”.
 - d) Provide shielded nonplenum cable that meets or exceeds the electrical characteristics listed in Table 16712-4, Table 16712-5, and Table 16712-6.

Table 16712-4 Shielded Nonplenum Cable Electrical Characteristics	
Characteristic	Acceptable Value
Average DC Resistance, maximum	26.5Ω/1,000 feet (8.7Ω/100m)
Average DC Resistance Unbalance, maximum	1.7 percent

Mutual Capacitance at 1kHz, maximum	16 nF/1000 feet (5.25 nF/100 m)
Capacitance Unbalance, maximum (pair to ground)	201pF/1,000 feet (65.94 pF/100m)

Table 16712-5 Shielded Nonplenum Cable Attenuation [dB/100m (328 ft.)]	
Frequency	Attenuation (Max.)
1.00 MHz	2.3 dB
4.00 MHz	4.9 dB
10.00 MHz	8.5 dB
16.00 MHz	12 dB

Table 16712-6 Shielded Nonplenum Cable Worst Pair Near-End Crosstalk (NEXT) [dB/100m (328 ft)]	
Frequency	Pair-To-Pair NEXT (Max.)
1.0 MHz	13.8 dB
4.0 MHz	11.2 dB
10.0 MHz	10.2 dB
16.0 MHz	9.2 dB

- 3) Non-Shielded Nonplenum Cable:
- a) Provide non-shielded nonplenum cable consisting of solid-copper 24 AWG conductors insulated with color coded PVC.
 - b) Provide cable available in 25, 50, 75, and 100 pair counts.
 - (1) For 25 pair cable, in addition to the conformance testing specified herein for non-shielded nonplenum cable provide cable UL[®] Verified to ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and ANSI/TIA/EIA-568-B.3 requirements for Category 3 cables.
 - c) Provide non-shielded nonplenum cable that meets or exceeds the electrical characteristics listed in Table 16712-7, Table 16712-8, and Table 16712-9.

**Table 16712-7 Non-Shielded Nonplenum Cable
Electrical Characteristics**

Characteristic	Acceptable Value
Maximum DC Resistance	28.6 Ω /1,000 feet (9.4 Ω /100m)
Maximum DC Resistance Unbalanced	5 percent
Maximum Capacitance Unbalanced (pair to ground)	1,000 pF/1000 feet (328 pF/m)
Mutual Capacitance at 1kHz, maximum	18 nF/1000 feet (5.9 nF/100 m)

**Table 16712-8 Non-Shielded Nonplenum Cable
Attenuation [dB/100m (328 ft.)]**

Frequency	Attenuation (Max.)
1.00 MHz	2.3 dB
4.00 MHz	4.9 dB
10.00 MHz	8.5 dB
16.00 MHz	12 dB

**Table 16712-9 Non-Shielded Nonplenum Cable
Worst Pair Near-End Crosstalk (NEXT) [dB/100m (328 ft)]**

Frequency	Pair-To-Pair NEXT (Max.)
1.0 MHz	13.8 dB
4.0 MHz	11.2 dB
10.0 MHz	10.2 dB
16.0 MHz	9.2 dB

- c. Copper Cable – Outside Plant:
- 1) For voice grade wire and cable placed in the outside environment, provide solid, twisted pair, and multi-conductor cabling.
 - a) For copper twisted pairs, provide cabling having a mutual capacitance of 15.7 nF/1000 feet at 1kHz.
 - 2) Provide cables conformance tested to verify they comply with the requirements for Category 3 cables specified in ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and ANSI/TIA/EIA-568-B.3.
 - 3) Multi-Pair Copper Cable:

- a) Provide multi-pair copper cable that meets or exceeds the electrical characteristics listed in Table 16712-10, Table 16712-11, and Table 16712-12.

Table 16712-10 Multi-Pair Copper Cable Physical Characteristics	
Characteristic	Value(s)
Gauge	24 AWG
Pair Size	25 to 300

Table 16712-11 Multi-Pair Copper Cable Electrical Characteristics	
Characteristic	Acceptable Value
DC Resistance, maximum	27.3 Ω /1000 feet (8.96 Ω /100m)
Mutual Capacitance at 1kHz, maximum	15.7 nF/1000 feet (5.15 nF/100m) (25 pair),
Impedance	100 Ω (25 pair)

Table 16712-12 Buried/Underground Cable Attenuation (db/1,000 ft [305m])	
Frequency	Acceptable Value
772 kHz	5.6 (25 pair), maximum
1.0 MHz	6.4 (25 pair), maximum

5. Copper Cabling Protection Units:
- a. For copper circuits between each building, provide entrance cable protector panels to protect the circuits.
 - 1) Route building-to-building circuits through this protector.
 - 2) Provide solid state plug-in protector modules for each pair terminated on the chassis of the protector panels.
 - b. Provide a 6 AWG copper bonding conductor to connect the protector ground lug to the telecommunications ground point.
6. Closures:
- a. Re-Enterable Closure:
 - 1) Provide 50-pair, 100-pair, and 300-pair re-enterable closure as required.
 - 2) Manufacturers:
 - a) 3m, http://solutions.3m.com/en_US

- (1) 50-pair, 3M No. 3924.
 - (2) 100-pair, 3M No. 3925.
 - (3) 300-pair, 3M No. 3926.
 - b) Approved equal.
- b. Buried Closures:
 - 1) Provide 2-inch, 3-inch, 4-inch, 5-inch, 7-inch, and 9-inch better buried closures as required.
 - 2) Manufacturers:
 - a) 3m, http://solutions.3m.com/en_US
 - (1) 2-inch, 3M No. 2BB/SC.
 - (2) 3-inch, 3M No. 3BB/SC.
 - (3) 4-inch, 3M No. 4BB/SC.
 - (4) 5-inch, 3M No. 5BB/SC.
 - (5) 7-inch, 3M No. 7BB/SC.
 - (6) 9-inch, 3M No. 9BB/SC.
 - b) Approved equal.
- c. Encapsulant:
 - 1) Provide encapsulant.
 - 2) Manufacturers:
 - a) 3m, 4441, http://solutions.3m.com/en_US
 - (1) 600 grams, 3M No. BB2-12/GEL.
 - (2) 1200 grams, 3M No. BB2-24/GEL.
 - (3) 3000 grams, 3M No. BB3-24/GEL.
 - (4) 4500 grams, 3M No. BB4-24/GEL.
 - (5) 7200 grams, 3M No. BB5-26/GEL.
 - b) Approved equal.
- 7. Fiber Patch Cords:
 - a. Multimode Fiber Patch Cords:
 - 1) Provide multimode fiber patch cords consisting of buffered, graded-index fiber with a 62.5 micron core with 3.0mm cordage and 125 micron cladding.
 - a) Cover the fiber cladding with aramid yarn and a jacket of flame-retardant polyvinyl chloride (PVC).
 - 2) Terminate multimode fiber patch cords with ST connectors.
 - 3) Provide multimode fiber patch cords that meet or exceed the requirements listed in Table 16712-13.

Table 16712-13 Multimode Fiber Patch Cord Requirements

Parameter	Requirement
Mated Connector Loss	$\mu = 0.3 \text{ dB}$, $\sigma = 0.2 \text{ dB}$
Operating temperature	-4° to 158° F (-20 to 70° C)
Cable Retention	50 pounds (220 N), minimum

**Table 16712-13 Multimode Fiber Patch Cord Requirements**

Parameter	Requirement
Connection Repeatability	0.20 dB maximum change per 100 reconnects
Operating temperature	-4° to 158° F (-20 to 70° C)

b. Singlemode Fiber Patch Cords:

- 1) Provide singlemode fiber patch cords consisting of a stepped-index 8.3 micron core with 3.0mm cordage and 125 micron cladding.
 - a) Cover the fiber cladding with aramid yarn and a jacket of flame-retardant polyvinyl chloride (PVC).
- 2) Terminate singlemode fiber patch cords with SC connectors.
- 3) Provide singlemode fiber patch cords that meet or exceed the requirements listed in Table 16712-14.

Table 16712-14 Singlemode Fiber Patch Cord Requirements

Parameter	Requirement
Return Loss	-50 dB maximum
Operating temperature	-4 degrees Fahrenheit to 158 degrees Fahrenheit (-20 degrees Celsius to 70 degrees Celsius)
Mated connector loss	$\mu = 0.35 \text{ dB}$, $\sigma = 0.2 \text{ dB}$
Cable Retention	50 pounds (220 N), minimum
Connection Repeatability	0.20 dB maximum change per 200 reconnects

8. Fiber Optic Patch Panels:

- a. Preload the multimode connector panels with Duplex 568ST (OSP and Riser) adapters.
 - 1) Provide beige connectors for multimode connector panels.
- b. Preload the singlemode connector panels with Duplex 568SC (OSP and Riser) adapters.
 - 1) Provide blue connectors for singlemode connector panels.
- c. Configure the fiber distribution cabinets with jumper troughs to aid in jumper management.
- d. Fiber distribution cabinets must be rack-mounted in either welded steel equipment racks or enclosed data cabinets, and must include radiused fiber patch cord management.

2.02 ACCESSORIES

- A. Labels:
 - 1. Provide labels for communications backbone cabling that comply with the requirements specified in Section 16076, Communications Identification.
- B. Communications Pathways:
 - 1. Provide communications pathways complying with the requirements specified in Section 16705, Pathways for Communication Services.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Verify that the main telecommunications grounding system is properly installed and has been tested in accordance with the requirements of Section 16062, Communications Grounding and Bonding.
 - 2. Verify that the communications conduit, raceways, and boxes are properly installed in accordance with the recommended practices of BICSI (ANSI/NECA/BICSI 568, BICSI TDMM, BICSI OSPDRM, BICSI ESSDRM, and BICSI ITSIM) and ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and ANSI/TIA/EIA-568-B.3.
 - a. Verify that the conduit has a minimum diameter of 1 inch.

3.02 INSTALLATION

- A. Install backbone cabling so that a fully operational, tested, certified, and warranted cabling system is provided.
 - 1. Install backbone cabling in accordance with the requirements of ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, ANSI/TIA/EIA-568-B.3, BICSI installation guidelines (ANSI/NECA/BICSI 568, BICSI TDMM, BICSI OSPDRM, BICSI ESSDRM, and BICSI ITSIM), and the Contract Drawings, manufacturer's instructions, and approved Submittal data
- B. Install the components of the cabling system in a neat, professional manner.
 - 1. Strictly observe wiring color codes.
 - 2. Provide uniform terminations throughout the installation.
 - 3. Neatly dress the cables at the termination points.
- C. Unless otherwise specified, install fiber optic cables in innerduct throughout the entire length of the cable run.
 - 1. Terminate these fibers in the communications rooms using ST or SC type connectors in wall or rack mounted fiber optic distribution shelves equipped with a sufficient number of panels, couplers, and jumper storage shelves to terminate and secure the fibers.

- D. Extend riser and tie cables between communications rooms using interfloor conduit sleeves.
- E. Ensure that the maximum pulling tensions of the specified distribution cables are not exceeded, and the cable bends maintain the proper radius during the placement of the facilities.
 - 1. Maintain the proper bend radii throughout the entire length of each cabling run, and at all termination locations.
 - 2. Observe the bending radius and pulling strength requirements of all backbone cables during handling and installation.
- F. Provide service loops (slack) for cables terminating in the main equipment room or the telecommunications rooms.
 - 1. Unless specified otherwise, provide a 6-foot service loop above the access ceiling or cable trays
- G. Rack Mounted Equipment:
 - 1. For rack mounted equipment, run power cables, control cables, and high-level cables on the left side of the equipment rack as viewed from the rear.
 - a. Run other cables on the right side of an equipment rack as viewed from the rear.
 - 2. For equipment mounted in drawers or on slides, provide the interconnecting cables with a service loop of not less than 3 feet, and ensure that the cable is long enough to allow full extension of the drawer or slide.
- H. Cable Ties:
 - 1. Bundle the cables by providing Velcro wraps of the appropriate length.
 - 2. Install Velcro ties so the cables may be easily removed or added to the cable bundle.
 - 3. Do not use plastic cable ties at any location within this Contract.

3.03 REPAIR/RESTORATION

- A. Replace materials damaged prior to system acceptance at no cost increase in Contract Price.
 - 1. If damage to the cables is sustained during the implementation, provide the additional material and labor necessary to properly rectify the situation in a timely fashion.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. Site Tests:
 - a. Have the testing and verification specified performed by a third party in accordance with the requirements specified in Section 16081, Communications Testing.

- b. Have all of the communications testing performed witnessed by the Program/Project Manager.
- 2. Inspections:
 - a. Inspections and testing performed exclusively for the convenience of the Contractor are the sole responsibility of the Contractor.

B. Non-Conforming Work

- 1. If the appropriate guidelines are not followed, provide the additional material and labor necessary to properly rectify the situation in a timely fashion.

C. Manufacturer Services:

- 1. Require the system vendors to coordinate, test, and problem solve the installation.

3.05 SYSTEM STARTUP

- A. Provide system startup as specified in Section 16702, Basic Communications Materials and Methods.

3.06 CLOSEOUT ACTIVITIES

A. Record Documentation:

- 1. The final installation is subject to the Program/Project Manager's approval.
 - a. Prior to the use of any system components, prepare Record Drawings and cable inventory data documentation for submission to the Program/Project Manager.
 - b. System acceptance will not be provided without complete as-built documentation.
- 2. Record Drawings:
 - a. A complete set of AutoCAD 2000 Contract Drawings will be provided to the Contractor.
 - b. Prepare CAD as-built drawings of the completed communications backbone cabling system part of the structured cabling system (SCS) by entering the cable information on a separate layer on the set of Contract Drawings provided.
 - 1) Prepare as-built documentation of the entire backbone cable installation as part of the structured cabling system (SCS), including the following:
 - a) A complete diagram of the terminations in the Telecommunications Rooms.
 - b) A complete diagram of the copper and fiber cable.
 - c) A complete diagram of the copper inter-building cable.
 - d) Floor plans showing exact cable routings.
 - e) A complete diagram of the cable tray, conduits, and conduit sleeves.

- 2) Include cable numbers.
 - 3) Follow the format and labeling conventions specified in Section 16076, Communications Identification.
 - 4) Place all of the requested drawings on the set of Contract Drawings so the cable routes are to scale, and provide accurate information for use in the future when changes are made and the exact location of cables are required to avoid service interruptions.
 - c. Submit the as-built drawings Record Drawings to the Program/Project Manager for approval.
 3. Cable Inventory Data Documentation:
 - a. Submit cable inventory data, for all fiber and copper cabling and termination equipment provided, to the Program/Project Manager for information; and include the following information for each item:
 - 1) Manufacturer's name.
 - 2) Manufacturer's part numbers and com code numbers.
 - 3) Cable numbers utilizing the Phoenix Sky Harbor International Airport cable numbering standard as specified in 16076, Communications Identification.
 - 4) Include documentation on riser cable and interbuilding cable indicating the cable number, source and destination, type of cable, length of cable, and the number of pairs or fibers.
 - 5) Complete cross connect documentation is required.
 - 6) Include detailed documentation of every pair of copper risers and inter-building cable, and every fiber of the fiber optic cables.
 - b. Prepare cable inventory data documentation in a format approved by the Program/Project Manager, so the data can be incorporated into cable management system databases.
 - c. Submit the cable inventory data documentation to the Program/Project Manager for approval.
- B. Training:
1. Furnish PSHIA personnel with adequate training in the processes involved for moves, additions, and changes to the cable plant.

3.07 PROTECTION

- A. Protect installed products from damage during construction operations until Final Acceptance.

END OF SECTION

REV. NO.	REV. DATE	RFC/CN/CO	Section(s) Affected	Comments

SECTION 16714

COMMUNICATIONS CONNECTING CORDS, DEVICES, AND ADAPTORS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the communications connecting cords, devices, and adaptors to be used for supporting telecommunications and other special systems.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01780 - Closeout Submittals.
 - 3. Section 16062 - Telecommunications Grounding and Bonding.
 - 4. Section 16702 - Basic Communications Materials and Methods.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ATM: Asynchronous Transfer Mode.
 - 2. AWG: American Wire Gauge.
 - 3. CAD: Computer Aided Drafting.
 - 4. ELFEXT: Equal Level Far End Crosstalk.
 - 5. IDF: Intermediate Distribution Frame.
 - 6. NEXT: Near End Crosstalk.
 - 7. Mbps: Megabits per second.
 - 8. OSP: Outside plant.
 - 9. PVC: Polyvinyl Chloride.
 - 10. SCS: Structured cabling system.
 - 11. TMGB: Telecommunications Main Grounding Busbar.
 - 12. UTP: Unshielded twisted pair.
- B. Definitions:
 - 1. Multimode Optical Fiber: An optical fiber that carries many paths of light.
 - 2. Singlemode Optical Fiber: An optical fiber that carries only one path of light.
- C. Reference Standards:
 - 1. Building Industry Consulting Services International (BICSI):
 - a. ANSI/NECA/BICSI 568 – Standard, Installing Commercial Building Telecommunications Cabling.
 - b. BICSI TDMM - Telecommunications Distribution Methods Manual.
 - c. BICSI OSPDRM – Outside Plant Design Manual.
 - d. BICSI ESSDRM – Electronic Safety and Security Reference Manual.

- e. BICSI ITSIM – Information Transport Systems Installation Manual.
- 2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - b. City of Phoenix Aviation Department:
 - 1) Premises Distribution System Standards Report.
 - 2) Aviation Supplement to City of Phoenix Information Technology Standards.
- 3. International Standards Organization (ISO):
 - a. ISO 9001 – Quality Management Systems – Requirements.
- 4. Phoenix Sky Harbor International Airport (PSHIA):
 - a. PSHIA Premises Distribution System Standards:
 - 1) PSHIA Communication Network and Infrastructure Systems Design.
- 5. Telecommunications Industry Association/Electronic Industries Association (TIA/EIA):
 - a. ANSI/TIA/EIA-568-B.1 - Commercial Building Telecommunications Cabling Standard – Part 1: General Requirements.
 - b. ANSI/TIA/EIA-568-B.2 - Commercial Building Telecommunications Cabling Standard – Part 2: Balanced Twisted Pair Cabling Components.
 - c. ANSI/TIA/EIA-568-B.3 – Optical Fiber Cabling Components Standard.
- 6. Underwriters Laboratories, Inc. (UL):
 - a. UL Qualification Tests and Follow-Up Service Requirements.
 - b. UL Product Directories.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate all communications work with the Program/Project Manager and the approved Contract schedule.
 - a. Give required notices for items affecting the Contract schedule.
- B. Pre-Installation Meetings:
 - 1. The communications equipment Subcontractor must attend all construction meetings related to the communication equipment installation scheduled by the Contractor.
- C. Scheduling:
 - 1. Make every effort to schedule the Work of this Section so disruption of public areas during installation is limited.
 - 2. Adhere to the installation schedule approved by the Program/Project Manager.

1.04 SUBMITTALS

- A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:

- a. Product Data:

- 1) Patch panels and modular patch panels.
- 2) Optical fiber panels.
- 3) Fiber splicing and closures.
- 4) Splice closure.
- 5) Termination blocks.
- 6) Copper patch cords.
- 7) Multimode fiber patch cords.
- 8) Singlemode fiber patch cords.
- 9) Building entrance protection blocks.
- 10) Grounding bars.

- b. Qualification Statements:

- 1) Communications connecting cord, device, and adaptor manufacturers' qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:

- a. Manufacturer's Instructions:

- 1) Manufacturer's installation guidelines.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:

- a. Warranty Documentation:

- 1) Manufacturer's standard warranties.

- b. Record Documentation:

- 1) Record Drawings of the connecting devices and adaptors.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:

- a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.

B. Qualifications:

1. Manufacturer Qualifications:

- a. Multi-Mode Fiber Optic Cable Manufacturer: ISO 9001 Certified Manufacturer.

- b. Single-Mode Fiber Optic Cable Manufacturer: ISO 9001 Certified Manufacturer.

- c. Communications Connecting Cord, Device, and Adaptor
Manufacturer's Qualifications:
 - 1) Obtain communications connecting cords, devices, and adaptors from experienced manufacturers who have been regularly engaged in the production of telecommunications equipment room fittings of the types to be installed under this Contract for a minimum period of 5 years.
 - 2) Submit the communications connecting cord, device, and adaptor manufacturers' qualifications to the Program/Project Manager for approval.
- 2. Structured Cabling System Installer's Qualifications:
 - a. Employ the structured cabling system installer specified in Section 16702, Basic Communications Materials and Methods, for installing the communications connecting cords, devices, and adaptors.
- C. Certifications:
 - 1. Underwriters Laboratory, Inc. Certifications:
 - a. Provide singlemode and multimode fiber patch cords, cross connect panels, and termination blocks complying with the appropriate UL Qualification Tests and Follow-Up Service Requirements.

1.06 WARRANTY

- A. Manufacturer Warranty:
 - 1. Provide the manufacturer's standard warranty for the products provided under this Section.
 - a. Include 110 wiring blocks in manufactures channel performance requirements and warranty program.
 - 2. Submit the warranty to the Program/Project Manager.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

- A. Manufacturers:
 - 1. Substitution Limitations:
 - a. Comply with the substitution requirements specified in Section 16702, Basic Communications Materials and Methods.
 - 2. Product Options:
 - a. Comply with the product option requirements specified in Section 16702, Basic Communications Materials and Methods.
 - 1) The manufacturers and specific part numbers listed in this Section are provided as an aid in the construction process and are not meant to preclude other manufacturers that may be qualified to provide communications components.

- 2) Other manufacturers with comparable qualifications may be proposed but are subject to review as an approved equal.
- 3) Submit documentation for the components proposed to be installed under this Contract as required.

B. Description:

1. Regulatory Requirements:

- a. Comply with all codes, ordinances, regulations, and other legal requirements of public authorities, which bear on performance of the Work of this Section, including among others the following:
 - 1) Phoenix Building Construction Code and Amendments.
 - 2) City of Phoenix Aviation Department Premises Distribution System Standards Report.
 - 3) Aviation Supplement to City of Phoenix Information Technology Standards.

C. Design Criteria:

1. Provide the materials as described herein and shown on the Contract Drawings, and provide the connecting cords, devices, and adaptors necessary to interconnect all system equipment, including equipment located in Telecommunications Rooms.
 - a. Comply with the requirements specified in Section 16702, Basic Communications Materials and Methods.
2. Should there be any discrepancies or a question of intent, refer the matter to the Program/Project Manager for a decision before ordering any equipment and materials, and before starting any related work.
3. Conflicts:
 - a. If conflicts between referenced requirements arise, comply with the one establishing the more stringent requirements.
 - b. If conflicts between referenced requirements and the Contract Documents arise, comply with the one establishing the more stringent requirements.

D. Materials:

1. Patch Panels and Associated Components:

- a. Patch Panels:
 - 1) Provide patch panels having a termination block capable of supporting the appropriate Category 6 applications, including 100 Base-T, 52/155 Mbps ATM, and 1000 BASE-T Gigabit Ethernet; and of facilitating cross connection and inter connection using modular patch cords.
 - a) Wire modular jack panels to T568B.
 - b) Provide patch panels having a wiring block capable of accommodating 24 AWG cable conductors.

- 2) Provide only modular cross connect panels that are UL-listed in accordance with the UL Qualification Tests and Follow-Up Service Requirements.
- 3) Patch Panel Specifications:
 - a) Provide patch panels with electrical characteristics that meet or exceed those listed in Table 16711-2.

Table 16711-2 Patch Panel Electrical Characteristics						
Frequency (MHz)	Attenuation dB/100m	NEXT (dB)	PS NEXT (dB)	ELFEXT (dB)	PS ELFEXT	Return Loss
0.772	1.6	76.0	74.0	70.0	67.0	N/A
1	1.8	74.3	72.3	67.8	64.8	20

450	45.0	34.5	32.5	14.7	11.7	16
500	47.9	33.8	31.8	13.8	10.8	15
550	50.6	33.2	31.2	12.9	9.9	15

- b. Modular Patch Panels:
 - 1) Provide modular patch panels where specified.

2. Optical Fiber Panels:
 - a. Fiber Optic Distribution System:
 - 1) Fiber Optic Interconnect Units and Distribution Shelves:
 - a) Provide a modular enclosure designed and suitable for fiber optic interconnection, cross-connection, and splicing applications of outside plant (OSP) cables.
 - b) Provide rack-mounted fiber optic termination cabinets/terminals in either welded steel equipment racks or enclosed data cabinets.
 - (1) Provide rack-mounted distribution shelves consisting of a modular enclosure with front and rear access that can be fully administered from the front or rear.
 - (2) Provide distribution shelves that fit into a 19-inch frame arrangement, and provide terminating capability for 24, 48, 72, or 144 fibers.
 - 2) The manufacturer of the fiber optic interconnect units and distribution shelves must be ISO 9001 certified.
 - b. Fiber Splicing and Closures:
 - 1) Unless otherwise approved by the Program/Project Manager, provide only fusion splices.
 - 2) Provide fiber splice modules that have the following required mechanical features:
 - a) Join singlemode and multimode fibers.
 - b) Establish a permanent mechanical splice.
 - c) May be used in outside plant and/or premises applications.
 - d) Accept 250 and 900 micron fibers.
 - e) Re-enterable, re-arrangeable, and reusable.
 - f) Require no polishing.
 - g) Require no adhesives.
 - h) Contain no loose parts.
 - i) Use a one-part index matching gel.
 - j) Have unlimited shelf life.
 - 3) Provide fiber splice modules that have the following required optical features:
 - a) Splice Loss: Less than 0.20 dB.
 - b) Reflection: Less than 50 dB.
 - c) Stable from -40 degrees Fahrenheit to 185 degrees Fahrenheit (-40 degrees Celsius to 85 degrees Celsius).
 - 4) All underground manholes shall be provided with 100' slack coiled neatly and properly labeled and limited to one splice enclosure.
3. Splice Closure:
 - a. Provide fiber splice closures capable of sealing, bonding, anchoring, and protecting fiber optic cable splices in aerial, underground, and direct buried applications.
 - b. Provide a standalone closure that does not require an outer closure.

- c. Provide fiber splice closures capable of accommodating a maximum of 6 cable entries in a butt-end configuration.
- 4. Termination Blocks:
 - a. Wiring Blocks:
 - 1) Provide wiring blocks complying with the EIA/TIA Category 6 requirements.
 - 2) Provide disconnect type 110 wiring blocks for the termination of horizontal, equipment, or tie cables; and of a high-density modular design compatible with all voice and data circuits provided under this Contract.
 - a) Provide fire retardant, molded plastic wiring blocks consisting of horizontal index strips for field-terminating 25 pairs of conductors each.
 - (1) Mark the index strips with 5 colors on the high teeth, separating the tip and ring of each pair, to establish pair location.
 - b) Locate a series of fanning strips on each side of the block for dressing the cable pairs terminated on the adjacent index strips.
 - 3) Provide wiring blocks capable of accommodating 22 AWG through 26 AWG conductors.
 - 4) Provide wiring blocks that are available in 25, 50, 100, and 300 pair sizes.
 - a) Provide 100 and 300 pair wiring blocks that are available with or without legs that allow the cables to pass behind the wiring block and fan out to each side.
 - b) Ensure that the space created by the feet on each side of the block can be used as a vertical jumper trough.
 - c) Because wiring blocks having 25 and 50 pair sizes are not available with legs, use them only for low pair count and/or depth restrictive situations.
 - d) Height:
 - (1) For 25- and 50-pair wiring blocks: 1.75 inches (4.45cm).
 - (2) For 100-pair wiring blocks: 3.59 inches (9.12cm).
 - (3) For 300-pair wiring blocks: 10.79 inches (27.41cm).
 - 5) Provide wiring blocks capable of accommodating over 500 repeated insertions without incurring permanent deformation, and having no more than one contact failure in 10000 connections.
 - 6) Provide wiring blocks capable of being mounted directly on wall surfaces with backboards, or on a 24-inch free-standing frame.
 - b. Label Holders:
 - 1) Provide clear label holders with the appropriate colored inserts with the wiring blocks that do not interfere with running, tracing, or removing jumper wire/patch cords; and insert labels containing vertical lines spaced on the basis of circuit size (3-, 4-, or 5-pair).

- c. Provide only termination blocks that are UL-listed in accordance with the UL Qualification Tests and Follow-Up Service Requirements.
- d. Manufacturers:
 - 1) Systimax, www.commscope.com/systtmax/.
 - 2) Ortronics, www.ortoniics.com.
 - 3) Siemon, www.siemon.com.
 - 4) Approved equal.
- 5. Patch Cords:
 - a. Copper Patch Cords:
 - 1) For each port on the patch panel, provide factory-made, round Category 6 modular patch cords complying with the requirements specified in the Horizontal Cabling Sections of ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and ANSI/TIA/EIA-568-B.3; and consisting of 24 AWG copper, stranded conductors, tightly twisted into individual pairs.
 - a) Provide patch cords that are backward compatible with Category 5/5e systems.
 - 2) To insure compatibility and the highest system performance levels, provide patch cords manufactured by the same manufacturer as the termination (patch panels and jack modules) hardware.
 - 3) Equip the cords with an 8-pin modular connector on each end.
 - b. Provide copper patch cords that meet or exceed the Guaranteed Channel Performance Specifications listed in Table 16711-3.

Table 16711-3 Copper Patch Cords Guaranteed Channel Performance Specifications								
Frequency	Insertion Loss (dB)	NEXT (dB)	PS NEXT (dB)	ELFEXT (dB)	PS ELFEXT (dB)	Return Loss (dB)	Phase Delay (ns)	Delay Skew (ns)

250**	35.0	33.1	30.2	15.3	12.3	8.0	546	30

- c. Unless specified otherwise, provide copper patch cords of the length(s) specified or detailed in the Contract Drawings.
- 1) Provide unshielded twisted pair (UTP) patch cord lengths as indicated in Table 16711-4 for the location or application.

Table 16711-4 Copper Patch Cords UTP Patch Cord Lengths	
Length	Location/Application
3 feet	From the patch panel to the electronic equipment located within the equipment rack, cabinet, or backboard
5 feet	From the patch panel to the electronic equipment located within the equipment rack, cabinet, or backboard
7 feet	From the patch panel to the electronic equipment located within the equipment rack, cabinet or backboard and from the jack to the computer workstation
9 feet	From the Jack to the computer workstation
15 feet	From the Jack to the computer workstation

- d. Fiber Patch Cords:
- 1) Multimode Fiber Patch Cords:
 - a) Provide UL-listed factory-made multimode fiber patch cords consisting of buffered, graded-index fiber having a 62.5 micron core with 3.0mm cordage and a 125 micron cladding.
 - (1) Cover the fiber cladding with aramid yarn and a jacket of flame-retardant polyvinyl chloride (PVC).
 - b) Provide multimode patch cords that meet or exceed the electrical characteristics listed Table 16711-5:

**Table 16711-5 Multimode Patch Cord
Electrical Characteristics**

Parameter	Requirement
Operating temperature	-4 degrees Fahrenheit to 158 degrees Fahrenheit (-20 degrees Celsius to 70 degrees Celsius)
Mated Connector Loss	$\mu = 0.3$ dB, $\sigma = 0.2$ dB
Cable Retention	50 lb. (220 N) minimum
Connection Repeatability	0.20 dB maximum change per 100 reconnects

2) Singlemode Fiber Patch Cords:

- a) Provide UL-listed factory-made singlemode fiber patch cords consisting of a stepped-index 8.3-micron core with 3.0mm cordage and 125 micron cladding.
 - (1) Cover the fiber cladding with aramid yarn and a jacket of flame-retardant polyvinyl chloride (PVC).
 - (2) Provide singlemode fiber patch cords that meet or exceed the requirements listed in Table 16711-14.

Table 16712-6 Singlemode Fiber Patch Cord Requirements

Parameter	Requirement
Return Loss	-50 dB maximum
Operating temperature	-4 degrees Fahrenheit to 158 degrees Fahrenheit (-20 degrees Celsius to 70 degrees Celsius)
Mated connector loss	$\mu = 0.35$ dB, $\sigma = 0.2$ dB
Cable Retention	50 pounds (220 N), minimum
Connection Repeatability	0.20 dB maximum change per 200 reconnects

6. Building Entrance Protection Blocks:

- a. Provide building entrance protection blocks equipped with solid-state protector modules, and full and lockable covers.
- b. Provide building entrance protection blocks equipped with a splice chamber and factory installed 710 type splice modules on the in-side (field side), and 110 type termination on the out-side (equipment).
- c. Manufacturers:
 - 1) Systimax (Commscope), www.commscope.com/systimax/.
 - 2) Circa, www.circatel.com.
 - 3) Tii Technologies, <http://www.tiitech.com/>.
 - 4) Approved equal.

2.02 ACCESSORIES

- A. Grounding Bars:
 - 1. Telecommunications Main Grounding Busbar (TMGB):
 - a. Provide a telecommunications main grounding busbar (TMGB) as specified in Section 16062, Telecommunications Grounding and Bonding.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Grounding:
 - a. Verify that the main telecommunications grounding system is properly installed and has been tested in accordance with the requirements of Section 16062, Communications Grounding and Bonding.
 - 2. Pathway Installation:
 - a. Verify that the communications conduit, raceways, and boxes are properly installed in accordance with the recommended practices of BICSI (ANSI/NECA/BICSI 568, BICSI TDM, BICSI OSPDRM, BICSI ESSDRM, and BICSI ITSIM), ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and ANSI/TIA/EIA-568-B.3; and the PSHIA Premises Distribution System Standards.
 - b. Verify that the conduit has a minimum diameter of 1 inch.

3.02 INSTALLATION

- A. Perform all installation in conformance with ANSI/TIA/EIA-568-B.1, ANSI/TIA/EIA-568-B.2, and ANSI/TIA/EIA-568-B.3, BICSI standards, and the manufacturer's installation guidelines.
 - 1. Provide the Work in accordance with the Contract Drawings, the manufacturer's instructions, and approved Submittals.
 - 2. Clean, adjust, test, and condition the manufactured articles, materials, and equipment, and place them in service in accordance with the manufacturer's directions and recommendations except as otherwise indicated in the Contract Documents.
 - 3. Submit the manufacturer's installation guidelines to the Program/Project manager for information.
- B. Building Entrance Protection Blocks:
 - 1. Terminate outside plant copper cables entering the building on wall-mounted building entrance protection block equipment.
 - 2. Terminate copper cables up to and including 100 pair on protection blocks.

3. For each protection block installed, provide a separate cross-connect point by providing a separate 110 type termination block adjacent to the protection block, and install and terminate an indoor rated copper cable, pair to pair.

C. Patch Cords:

1. Provide the number of copper patch cords equal to the number of ports on the patch panels of the appropriate length for the particular application
2. Provide multimode and singlemode fiber patch cords of the appropriate length for the particular application indicated in the Contract Documents.
3. Appropriately dress the slack in the patch cords using vertical and horizontal patch cord organizers to maintain a neat appearance.

D. Patch Panels:

1. Provide modular patch panels capable of housing both fiber and Category 6 copper terminations simultaneously for the ceiling mounted intermediate distribution frames (IDF).

E. Cable Ties:

1. Bundled cables using Velcro wraps of the appropriate length, and so cables may be easily removed or added to the cable bundle.
2. Do not use plastic cable ties at any location for the Work of this Contract.

3.03 REPAIR/RESTORATION

- A. Replace equipment damaged prior to system acceptance at no increase in the Contract Price.

3.04 SITE QUALITY CONTROL

A. Inspections:

1. At a minimum, the Program/Project Manager, or its designated representative, will perform random and unannounced onsite inspections during the installation to ensure that the communications items are installed in accordance with the Contract Documents and City of Phoenix requirements.
2. In addition, a final inspection and a complete review of the communications system will be performed in accordance with the requirements specified in Section 16702, Basic Communications Materials and Methods, before the system installation is accepted.
3. Inspections and testing performed exclusively for the convenience of the Contractor are the sole responsibility of the Contractor.

B. Non-Conforming Work

1. Discrepancies noted during field inspections conducted by the Program/Project Manager must be corrected prior to system acceptance.

3.05 SYSTEM STARTUP

- A. Provide system startup as specified in Section 16702, Basic Communications Materials and Methods.

3.06 CLOSEOUT ACTIVITIES

- A. Record Documentation:
 - 1. The final installation is subject to the Program/Project Manager's approval.
 - a. Prior to the use of any system components, prepare Record Drawings for submission to the Program/Project Manager.
 - b. System acceptance will not be provided without complete as-built documentation.
 - 2. Record Drawings:
 - a. A complete set of AutoCAD 2015 Contract Drawings will be provided to the Contractor.
 - b. Prepare CAD as-built drawings of the connecting devices and adaptors in the structured cabling system (SCS) by entering the information on a separate layer on the set of Contract Drawings provided.
 - c. Submit the as-built drawings Record Drawings to the Program/Project Manager for approval.

3.07 PROTECTION

- A. Protect installed products from damage during construction operations until Final Acceptance.

SECTION 16735

PASSENGER EMERGENCY DURESS SYSTEM (PEDS)

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for a passenger emergency duress system (PEDS) that include the following components:
 - a. Emergency and customer assistance call station devices.
 - b. Remote diagnostic and reporting software.
 - c. Computer work station and monitor.
 - 2. Requirement for completing the Passenger Emergency Duress System Compliance Matrix, attached to the end of this Section, and certifying compliance with each requirement specified.
- B. Related Requirements:
 - 1. Section 01316 - Project Meetings.
 - 2. Section 01325 - Progress Schedules and Reports.
 - 3. Section 01330 - Submittal Procedures.
 - 4. Section 01360 - Sustainable Design Requirements.
 - 5. Section 01732 - Cutting and Patching.
 - 6. Section 01770 - Closeout Procedures.
 - 7. Section 01780 - Closeout Submittals.
 - 8. Section 01810 - Commissioning.
 - 9. Section 16995 - Commissioning of Electrical Systems.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AVI: Audio video interweave.
 - 2. AWG: American Wire Gauge.
 - 3. CCTV: Closed circuit television.
 - 4. CD: Compact disc.
 - 5. CD-RW: Compact Disc-Rewritable.
 - 6. CO: Central office.
 - 7. CPU: Central processing unit.
 - 8. DVD: Digital video disc.
 - 9. CPU: Central processing unit.
 - 10. DDR2: Double data rate.
 - 11. DIMM: Dual in-line memory module.
 - 12. ECC: Error correction code.
 - 13. FBS: Front-side bus, the bus that carries data between a personal computer's central processing unit (CPU) and the north bridge.

14. IDF: Intermediate Distribution Frame.
15. KSU: Key service unit.
16. LED: Light emitting diode.
17. MDF: Main Distribution Frame.
18. NBD: Next business day.
19. NTFS: New Technology File System, the standard file system on Microsoft Windows NT, including its later versions Windows 2000, Windows XP, Windows Server 2003, Windows server 2008, Windows Vista, and Windows 7.
20. PBX: Private branch exchange.
21. PBX/CO: Private branch exchange/central office.
22. PDA: Personal digital assistant.
23. PEDS: Passenger emergency duress system.
24. POTS: Plain old telephone service.
25. MDF: Main Distribution Frame.
26. MTBF: Mean time between failure.
27. SATA: Serial advanced technology attachment.
28. SDRAM: Synchronous dynamic random-access memory, which is dynamic random-access memory (DRAM) that has a synchronous interface.
29. TGB: Telecommunications grounding busbar.
30. TMGB: Telecommunications main grounding busbar.
31. USB: Universal serial bus.
32. VOX: Voice Operated Exchange, a voice operated switch that operates when sound over a certain threshold is detected.

B. Reference Standards:

1. ASTM International (ASTM):
 - a. ASTM B 3 - Standard Specification for Soft or Annealed Copper Wire.
 - b. ASTM B 8 - Standard Specification for Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard, or Soft.
 - c. ASTM B 33 - Standard Specification for Tinned Soft or Annealed Copper Wire for Electrical Purposes.
2. Telecommunications Industry Association (TIA):
 - a. ANSI/TIA-968-B – Telecommunications – Telephone Terminal Equipment – Technical Requirements for Connection to Terminal Equipment to the Telephone Network.
 - b. ANSI/TIA J-STD 607 - Commercial Building Grounding and Bonding Requirements for Telecommunications.
3. United States Government:
 - a. Department of Justice:
 - 1) 28 CFR 36 Nondiscrimination on the Basis of Disability by Public Accommodations and in Commercial Facilities.
 - b. Federal Communications Commission (FCC):
 - 1) 47 CFR 15 Radio Frequency Devices.
 - c. Office of the Secretary of Transportation:

- 1) 49 CFR 37 Transportation Services for Individuals with Disabilities (ADA).
- d. Parks, Forests, and Public Property:
 - 1) 36 CFR 1192 Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities; Architectural Barriers Act (ABA) Accessibility Guidelines.
- e. United States Code (U.S.C.):
 - 1) 42 U.S.C. Section 4151 et seq.
 - a) Architectural Barriers Act, Public Law 90-480.
 - 2) 42 U.S.C. Section 12101 et seq.
 - a) Americans with Disabilities Act (ADA), Public Law 101-336.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

- 1. Coordinate the delivery and installation of the passenger emergency duress system equipment with the Program/Project Manager.
 - a. Coordinate installation of the call station devices with the Program/Project Manager.
- 2. 10 days before call stations are to be installed, give notice to those performing other construction work related to the call station installation, such as to those performing work that must be supported by or that will provide support of the call stations, to allow such items to be introduced or furnished before the call stations are installed.

B. Pre-Installation Meetings:

- 1. Contract Planning Meeting:
 - a. The Contractor's project manager and key staff must participate in a Contract planning meeting in accordance with the requirements specified in Section 01316, Project Meetings, as required by the Program/Project Manager and the Phoenix Sky Harbor International Airport.
 - 1) The purpose of the session is to ensure proper coordination between the parties responsible for the successful completion of the Work of this Contract.
 - 2) Allow 8 hours for the planning session.
 - b. The Program/Project Manager will coordinate and facilitate the Contract planning session.
- 2. Contract Status Meetings:
 - a. To discuss the status of the installation of the passenger emergency duress system, the Contractor's project manager must attend weekly and monthly Contract status meetings with the Program/Project Manager held in accordance with the requirements specified in Section 01316, Project Meetings.

C. Scheduling:

1. Within 15 calendar days after execution of the Notice to Proceed, develop a Contract schedule for maintaining the real time status of the installation phases in accordance with the requirements specified in Section 01325, Progress Schedules and Reports, including coordination issues with required Phoenix Sky Harbor International Airport activities; and submit the project schedule to the Program/Project Manager for approval.
 - a. The Contract schedule must include major milestones and the critical path.
 - b. The Contract schedule must address order-to-ship time.
 - c. Each week during the course of the Contract, submit a 2-week rolling schedule to be used as the basis for discussion of Contract progress during the weekly installation meetings.
 - 1) In the 2-week rolling schedule, represent the actual detailed work plan to be used to meet the schedule and Contract milestones.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Passenger emergency duress system (PEDS).
 - 2) Grounding conductors.
 - 3) Grounding connectors.
 - 4) Names of mounting hardware Suppliers, and mounting hardware Suppliers' part numbers of the relevant parts for various mounting configurations.
 - b. Shop Drawings:
 - 1) Passenger emergency duress system (PEDS).
 - c. Special Procedure Submittals:
 - 1) Compliance Matrix.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Passenger emergency duress system (PEDS) component manufacturers' written instructions for handling and storing their products.
 - b. Site Quality Control Submittals:
 - 1) Test report for each test.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and Maintenance Manuals for the passenger emergency duress system (PEDS).
 - b. Record Documentation:
 - 1) Record Drawing documents and as-built Shop Drawings.
 - c. Software:
 - 1) Backup copies of the remote diagnostic and reporting software.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 1. The Phoenix Sky Harbor International Airport will review and approve all test results and Contract closure requirements.
 2. Testing and Inspection Agencies:
 - a. To perform additional testing and inspections, the Phoenix Sky Harbor International Airport may employ an independent Testing and Inspection Agency.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver passenger emergency duress system (PEDS) components in a clean, undamaged condition.
 2. Inspect passenger emergency duress system (PEDS) components for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.
- B. Storage and Handling Requirements:
 1. Submit the passenger emergency duress system (PEDS) component manufacturers' written instructions for handling and storing their products to the Project/Project Manager for information.
 2. Handle passenger emergency duress system (PEDS) components in accordance with their manufacturer's written instructions.
 3. Follow the manufacturer's written instructions for storing the passenger emergency duress system (PEDS) components.
- C. Packaging Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 OWNER-FURNISHED PRODUCTS

- A. Existing Products:

1. Computer Workstation and Monitor:
 - a. A Dell OptiPlex GX280 Small Form Factor Chassis desktop computer workstation and monitor will be furnished by the Phoenix Sky Harbor International Airport for uploading and running the diagnostic and reporting software provided under this Section.
 - b. The computer workstation and monitor furnished by the Phoenix Sky Harbor International Airport will have the following minimum features:
 - 1) Processor:
 - a) The computer will have a 3.00 Gigahertz Intel Pentium 4 processor having a front-side bus speed of 800 Megahertz
 - 2) Operating System:
 - a) The computer will have a Microsoft Windows XP Professional operating system with Service Pack 3 (SP3), Media, and the New Technology File System (NTFS) installed.
 - 3) Hyperthreading:
 - a) The computer will have the Hyper-Threading feature preset to "OFF".
 - 4) Memory:
 - a) The computer will have two 400MHz dual in-line memory modules (DIMM) that together provide a 1.0 Gigabyte (GB) double data rate (DDR2) non- error correction code (non-ECC) synchronous dynamic random-access memory (SDRAM).
 - 5) Monitor:
 - a) A Dell Ultrasharp 1901FP flat panel monitor with a height adjustable stand will be provided for the computer workstation.
 - 6) Video Card:
 - a) The computer will have an Integrated DVMT Video card installed.
 - 7) Boot Hard Drives:
 - a) The computer will have an 80 Gigabyte (GB), serial advanced technology attachment (SATA), 7200 revolutions per minute hard drive with a data burst cache.
 - b) The computer will have no floppy drive unless required by the Project.
 - 8) Removable Media Storage Device:
 - a) A removable 24X CDRW/DVD combination media storage device having a DVD playback feature will be provided for the computer workstation.
 - 9) Keyboard:
 - a) A Dell universal serial bus (USB) keyboard having no hot keys will be provided for the computer workstation.
 - 10) Mouse:

- a) A Dell universal serial bus (USB) 2-button optical mouse having the scroll feature will be provided for the computer workstation.
- 11) Speakers:
 - a) An integrated Dell business audio speaker will be provided for the computer workstation.
- 12) Energy Star Setting:
 - a) The computer's Energy Star setting will be enabled.
- 13) Resources Compact Disk (CD):
 - a) A resources compact disk (CD) containing diagnostics and drivers for the OptiPlex small desktop computer workstation and monitor will be provided for the computer workstation.
- 14) Hardware Support Services:
 - a) The computer will have a 4-year limited warranty plus a 4-year next business day (NBD) on-site service agreement.
- 15) Installation Support Services:
 - a) Installation support services for the computer workstation and monitor will not be provided.
- 2. Laser Printer:
 - a. A Hewlett Packard Laser Jet 2300dn black and white laser printer will be furnished by the Phoenix Sky Harbor International Airport for reporting functions of the passenger emergency duress system (PEDS) provided under this Section.

2.02 PASSENGER EMERGENCY DURESS SYSTEM COMPONENTS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - 3. Product Options:
 - a. If required, have the passenger emergency duress system (PEDS) Supplier submit the names of mounting hardware Suppliers that are capable of furnishing mounting hardware compatible with the passenger emergency duress system (PEDS) Supplier's products, and submit the mounting hardware Suppliers' part numbers of the relevant parts for various mounting configurations, such as wall-mounted and floor-mounted to the Program/Project Manager for approval.
- B. Description:
 - 1. Passenger Emergency Duress System (PEDS):

- a. The intended purpose of the passenger emergency duress system (PEDS) is to provide a means for the public using the Phoenix Sky Harbor International Airport to contact the Airport's staff in the event of an emergency or of a need to request customer assistance.
 - 1) The Phoenix Sky Harbor International Airport is responsible for furnishing a computer and monitor, a laser printer, and a display monitor for displaying the camera call, for use in association with the Work provided under this Section.
 - a) The Phoenix Sky Harbor International Airport is responsible for furnishing space for the computer workstation and monitor.
 - 2) The Phoenix Sky Harbor International Airport is responsible for providing conduit, cabling, and cable terminations for the computer and monitor, laser printer, and display monitor they will furnish for use in association with the Work provided under this Section.
- b. The hardware and software to be provided under this Section are components of the passenger emergency duress system (PEDS) being implemented under the direction of the Phoenix Sky Harbor International Airport.
 - 1) Passenger emergency duress system (PEDS) equipment to be provided under this Section includes wall mounted call stations, free standing call stations, and remote diagnostic and reporting software as specified herein.
 - a) Install the remote diagnostic and reporting software on the computer workstation and monitor furnished by the Phoenix Sky Harbor International Airport.
 - 2) Provide additional related components to work in conjunction with the call stations, such as brackets and other mounting devices to connect them in a non-obstructive way, patch cords to allow connection to power and communication outlets, and patch cords to allow connection to existing closed circuit television (CCTV) cameras.
- c. Phoenix Sky Harbor International Airport Responsibilities:
 - 1) Implementation of the following passenger emergency duress system (PEDS) functions is the responsibility of the Phoenix Sky Harbor International Airport:
 - a) Upon activation of a closed circuit television (CCTV) camera by a call from a call station, automatically displaying the video display of the camera on the monitor selected, and displaying the location information of the call station at the bottom of the monitor.
 - (1) If more than one call station is activated, multiple monitors will be used, and/or split screen features will be activated.
 - b) Archiving the video of the activated cameras' images until the activating phone call is completed.

- c) Upon activation of a call station emergency or customer assistance button, sending location information through the existing phone switch, and displaying the location information on the operator phones.
- 2. Regulatory Requirements:
 - a. Accessibility and American with Disabilities Act (ADA) Requirements:
 - 1) Provide call stations that at a minimum comply with the requirements for two-way communications specified in section 708 of the American with Disabilities Act (ADA) Accessibility Guideline, and with the following additional criteria:
 - a) Provide call stations that are highly visible and easily identifiable to the traveling public, and where possible that have 360 degree visibility.
 - b) Wherever possible for wall mounted or pole mounted call stations, provide call stations that do not extend more than 4 inches from the wall or pole.
 - (1) If call stations do extend more than 4 inches from the wall or pole, then take one or the other of the following measures to ensure that these call stations are not obstructions:
 - (a) Mount the bottom of the call station 27 inches or less from finished floor level; or
 - (b) Mount an obstruction block below the call station so the obstruction can be identified by the use of a cane.
 - c) Mount the operating functions of the call stations no higher than 48 inches and no lower than 15 inches above the finished floor.
 - d) Wherever possible mount the call stations so there is a flat surface in front of and to the side of the units having dimensions 60 inches wide by 60 inches deep, but in no case mount the call stations with a flat surface less than 30 inches wide by 48 inches deep.
 - e) Where the information provided on the call stations is essential to the user, such as “emergency button”, provide Braille on the face of the call station.
 - (1) Where Braille is used, provide raised characters having their long dimension not less than 5/8 inches.
 - f) On each call station, provide a blue light emitting diode (LED) signal light that begins flashing after either the emergency button or customer assistance button is pressed, and that changes to a solid, non-flashing signal light once the call is picked up by the operator.
 - (1) Design the system so the signal light remains on in a non-flashing mode until the call is disconnected.

C. Performance:

1. Call Stations:
 - a. Operating Temperature Range:
 - 1) Provide call stations capable of functioning within the dry bulb temperature range from 0 degrees Fahrenheit to 150 degrees Fahrenheit.
 - b. Operating Humidity Range:
 - 1) Provide call stations capable of functioning within the condensing relative humidity range from 0 percent to 95 percent.
- D. Design Criteria:
 1. Passenger Emergency Duress System (PEDS):
 - a. Provide a passenger emergency duress system (PEDS) that is scalable regarding both the number of call stations and the monitoring software.
 - 1) Monitoring:
 - a) Primary Equipment:
 - (1) Provide a passenger emergency duress system (PEDS) designed to monitor and analyze the following primary components of the call stations for operational status:
 - (a) Auxiliary contacts.
 - (b) Emergency power supply.
 - (c) Strobe light/beacon.
 - (d) Emergency call button.
 - (e) Customer service call button.
 - (f) Speaker/microphone.
 - b) Auxiliary Equipment:
 - (1) Provide a passenger emergency duress system (PEDS) designed to monitor and analyze the following auxiliary components to which the call stations are connected:
 - (a) Surveillance cameras.
 - (b) Phone switches.
 - (c) Power.
 - (d) Strobe/beacon light, including operating conditions.
 - b. Call Stations:
 - 1) At the locations indicated in the Contract Drawings, provide passenger emergency duress system (PEDS) call stations suitable for use in the event of an emergency or a customer assistance related call, and suitable to be mounted on walls, on columns, or in floor-mounted configurations.
 - a) Provide heavy duty, durable, tamper resistant, vandal resistant call stations that are easy to clean.
 - b) Provide passenger emergency duress system (PEDS) call stations capable of 2 way hands free full duplex communications.
 - (1) Provide call stations complying with the requirements specified in 47 CFR 15 and ANSI/TIA-968-B.

- c) Unless otherwise noted, provide call station units that each have the same hardware and are capable of performing the same functions.
 - d) Provide non-proprietary components for the call stations to the greatest extent possible.
 - e) Provide mounting brackets and other mounting components for installation of the call stations.
 - f) Provide other components, parts, and items necessary to make the call station units fully functional.
- 2) Remote Programming:
 - a) Provide passenger emergency duress system (PEDS) call stations capable of having the phone numbers called by the stations, the audible alarm features, and strobe light features, programmed remotely.
- 3) Future Capabilities of the Call Stations:
 - a) Provide call stations that are capable of being equipped in the future with cellular communications and wireless communications.
- c. Computer Workstation and Monitor:
 - 1) To display system-related information, such as remote diagnostic information and reports, a computer workstation and monitor will be provided by the Phoenix Sky Harbor International Airport for uploading the diagnostic and reporting software provided under this Section.
- d. Remote Diagnostics and Reporting Software:
 - 1) Provide remote diagnostic and reporting software designed to have configurable parameters.
 - 2) System Logical Security:
 - a) Because the new audio video interweave (AVI) system will operate in an online real-time open architecture environment, design the software for the AVI system to provide adequate access and password management controls to ensure proper segregation of duties, accountability, and system integrity.
 - (1) Design the software to require both user identification (ID) and a password to identify a specific user's access rights.
 - (2) Design the software to prevent duplicate user identifications (IDs).
 - (3) Design the software to require at least 2 levels of password security for the User and Administration levels.
 - (4) Design the software to lock or suspend users after a specified period of system inactivity.
 - (5) Design the software to have Password Management Controls.
 - 3) Storage:

- a) Provide remote diagnostic and reporting software capable of storing diagnostic information for a preset period of time.
 - (1) Provide software capable of configuring the length of the storage time.
- 4) Outage Alerts:
 - a) Provide remote diagnostic and reporting software capable of alerting the City of Phoenix Aviation Department Communication Center Operator of any outage.
- 5) Polling:
 - a) Automatic Polling:
 - (1) Provide remote diagnostic and reporting software capable of performing automatic polling (self diagnostics) of all call station devices.
 - (2) Provide remote diagnostic and reporting software capable of configuring the frequency of the automatic polling.
 - b) Manual Polling:
 - (1) Provide remote diagnostic and reporting software capable of allowing the City of Phoenix Aviation Department Communication Center Operator to perform manual polling of all call station devices.
 - c) Polling Reports:
 - (1) Provide remote diagnostic and reporting software capable of automatically generating reports for pre-set and manual diagnostic polling, and that specifically identifies any failures.
- 6) Statistical Reports:
 - a) Provide remote diagnostic and reporting software designed to allow the City of Phoenix Aviation Department Communication Center Operator to generate statistical reports of the usage and operability of the call stations.
 - b) Provide remote diagnostic and reporting software designed to allow reports for various statistical information generated over the previous 30 days of use to be produced, including at a minimum the following:
 - (1) Usage trends of the call stations, including emergency and customer assistance calls, by call station device and by area.
 - (2) The duration of the time between activation of the call station, both emergency or customer assistance calls, and phone pickup.
 - (3) Queuing of call station calls.
 - (4) Frequency of failures.
 - (5) Maintenance statistics.
- 7) Ad-Hoc Report Generating Tool:

- a) Provide remote diagnostic and reporting software designed to allow additional reports to be added through an ad-hoc report generating tool.
 - 8) Submit backup copies of the remote diagnostic and reporting software to the Program/Project Manager.
 - e. Communications Network:
 - 1) Use the existing established phone line connections to furnish communications from the computer workstation to each call station so no additional communications network is required.
 - a) Design the call stations to communicate with the passenger emergency duress system (PEDS) through the existing phone line connections.
 - (1) The Phoenix Sky Harbor International Airport will perform modifications to the existing phone switch and phone switch database required to accommodate the Work of this Section.
 - b) Provide passenger emergency duress system (PEDS) software that does not require an additional data network for communications.
 - 2) The Phoenix Sky Harbor International Airport will perform modifications to the existing closed circuit television (CCTV) camera system to ensure that camera call up is performed once a call station emergency button is activated.
2. Product Data:
- a. Obtain the manufacturers' Product Data for the passenger emergency duress system (PEDS), including the following:
 - 1) Passenger emergency duress system (PEDS) and grounding components.
 - 2) The power consumption for each electrical component proposed, in terms of its startup, steady state, and peak usage.
 - a) Identify which components of the call station are to be powered through the telephone line power (20 milliamperes to 24 milliamperes), and which components require 120-Volt power.
 - b) Indicate the on-hook/off-hook line voltage requirements.
 - c) Specifically indicate if the call station requires a battery to provide power to any of the required components.
 - (1) If a battery is required to provide power to any of the required components, indicate if telephone line power or commercial power is required to charge the battery.
 - 3) The ambient noise thresholds for the voice operated exchange (VOX) activated microphones provided as part of the call stations.
 - 4) A description of how the call station acknowledges the disconnect signal from the B-party release.

- a) Identify what B-party release signals and duration the call station recognizes to prevent line lock-out (dial-tone, reorder tone, or break in loop current).
 - b) Indicate the loop current requirements.
 - 5) Detailed information relating to the expected life of the equipment, including the expected mean time between failure (MTBF) for all components.
 - 6) Detailed information related to which components are monitored through the remote diagnostic system.
 - a) Describe the capabilities of the monitoring equipment connected to the call station and described in this Section, including the operation of the Phoenix Sky Harbor International Airport's existing closed circuit television (CCTV) cameras.
 - b) Include the expected cycle times and central processing unit (CPU) usage required for the monitoring computer to run through an entire diagnostic check of all call stations.
 - 7) Detailed information related to possible installation of the remote diagnostic and reporting software on additional Phoenix Sky Harbor International Airport owned computers.
 - a) Include the required computing specifications, and multi-user capabilities.
 - b) Confirm that the Phoenix Sky Harbor International Airport supplied computer, monitor, and printer are suitable as specified for use by the passenger emergency duress system (PEDS), or specify any additional requirements needed.
 - (1) If necessary, indicate required specifications not included in this Section.
 - 8) The scalability of the number of units and software provided.
 - 9) A clear description of the fit and finish of the call station devices proposed for the Work of this Section.
 - 10) Description of how the number of errors caused by pressing the wrong button will be minimized by ensuring the emergency call button is distinct from the customer service call button.
 - 11) Technical information on how the call station can activate the Phoenix Sky Harbor International Airport's existing closed circuit television (CCTV) cameras.
 - b. Submit the passenger emergency duress system (PEDS) manufacturers' Product Data to the Program/Project Manager for approval.
3. Shop Drawings:
- a. Based on results of the Contractor's Site survey activity, prepare Shop Drawings for the passenger emergency duress system (PEDS) showing the location and type of the call stations to be provided under this Section.

- b. Prepare Shop Drawings showing mounting details for the passenger emergency duress system (PEDS) components.
- c. Submit the passenger emergency duress system (PEDS) Shop Drawings to the Program/Project Manager for approval.

E. Operation Sequences:

- 1. Emergency Button Operation Sequences:
 - a. Pressing the emergency button on a call center must activate the passenger emergency duress system (PEDS), and the following must immediately occur:
 - 1) Pressing the emergency button must override all other actions currently active at that call station.
 - 2) A preprogrammed telephone number from the call center to the Airport's Communication Center must be dialed automatically.
 - a) 2-way, hands free full duplex communications through a speaker system located on the call station must be enabled instantly between the call station and the City of Phoenix Aviation Department Communication Center.
 - 3) Information identifying which call station was activated must be automatically sent to the City of Phoenix Aviation Department Communication Center.
 - 4) The strobe light/beacon and an audible alarm on the call center must be activated.
 - a) Once activated, the strobe light must remain on while the two-way communication is active.
 - 5) A closed circuit television (CCTV) camera must be automatically and simultaneously activated.
 - a) The strobe must not "wash out" the video image.
- 2. Customer Service Button Operation Sequences:
 - a. Pressing the customer service button on a call center must activate the passenger emergency duress system (PEDS), and the following must immediately occur:
 - 1) A preprogrammed telephone number from the call center to the City of Phoenix Aviation Department Communication Center must be dialed automatically.
 - a) 2-way, hands free full duplex communications through a speaker system located on the call station must be enabled instantly between the call station and customer assistance.
 - 2) Information identifying which call station was activated must be automatically sent to the City of Phoenix Aviation Department Communication Center.
- 3. Audible Alarm Operation Sequences:
 - a. Pressing the emergency button on a call center must immediately activate the audible alarm.

- b. Once the City of Phoenix Aviation Department Communication Center Operator has connected the phone call, the audible alarm must be automatically silenced.

F. Components:

1. Call Stations:

- a. Provide wall mounted, column mounted, and/or free standing call stations as indicated on the Contract Drawings, and which are each capable of 2 number dialing of up to 15 digits.
- b. Speaker, Microphone, and Buttons:
 - 1) Provide water and dust resistant speakers, microphones, and buttons.
 - 2) Speakers/Microphones:
 - a) For each call station, provide a hands-free speaker and microphone system located on the call station, and including an automatic adjustment for ambient noise, a remote volume control, and a local volume control.
 - b) Provide call stations capable of allowing the City of Phoenix Aviation Department Communication Center to initiate a silent monitoring mode where the City of Phoenix Aviation Department Communication Center Operator can listen to sounds generated around the call station.
 - 3) Emergency Call Button:
 - a) For each call station, provide red emergency push buttons larger than the customer service buttons; and that when pushed, automatically without the need of picking up a handset dial the City of Phoenix Aviation Department Communication Center, activate a blue strobe light, and activate a brief audible annunciation and an existing closed circuit television (CCTV) camera.
 - (1) Provide emergency buttons that send information notifying the City of Phoenix Aviation Department Communication Center Operator which device is in use.
 - (2) Provide emergency buttons having action distinct from the customer service call buttons, and that are easily identifiable.
 - 4) Customer Service Call Button (Info Button):
 - a) For each call station, provide customer service call buttons that when pushed automatically dial the City of Phoenix Aviation Department Communication Center Operator.
 - (1) Provide customer service call buttons that send directional information notifying the City of Phoenix Aviation Department Communication Center Operator which device is in use.
 - (2) Provide customer service call buttons having action distinct from the emergency call buttons, and that

because of their size and style eliminate the potential for the user to be confused how to activate the emergency call or the information call buttons.

- c. Connections:
 - 1) Private Branch Exchange/Central Office (PBX/CO):
 - a) Provide call stations capable of being connected to a 2-wire analog line from a private branch exchange (PBX), a key service unit (KSU), or a plain old telephone service (POTS) line.
 - b) Provide call stations capable of operating over Category 3, Category 5, or optional fiber optic cable.
 - c) Provide call stations capable of detecting disconnection from the phone switch.
 - 2) Auxiliary Contacts:
 - a) Provide call stations having at least 2 dry contact closures, at least one of which is capable of being used for connection to an existing closed-circuit television (CCTV) camera.
- d. Strobe Light/Beacon:
 - 1) Provide call stations having a combination blue light strobe and beacon that generates approximately 1,000,000 candlepower.
 - a) The strobe lamp or beacon may be a light emitting diode (LED).
 - 2) For the strobe lamp, provide a timer adjustable at thirty (30) second intervals, and capable of setting the length of time the strobe light remains on, even if the duplex communications through the speaker system are closed.
 - 3) The beacon must have the capability of always on illumination.
 - 4) Provide a strobe light capable of being turned off either at the call station, or remotely through means of a protected command.
- e. Audible Alarms:
 - 1) Provide call stations having a piezoelectric audible siren or alarm, voice annunciation, or another audible signal designed to alert those near the call station; and configurable for sound level, voice announcement, or tones.
 - 2) Provide audible alarms capable of having the duration the alarm will sound set.
- f. Electrical Power:
 - 1) Provide call stations requiring no more than a 3-Ampere load for the strobe and beacon.
 - 2) Emergency Power Supply:
 - a) Provide a battery backup power supply capable of providing power for all of the call station's components, including the strobe light/beacon, and of being charged periodically by the limited power provided.

- (1) Provide a battery backup power supply capable of providing standby power for at least 8 hours.
 - g. Signage:
 - 1) Provide highly visible and legible engineering grade vinyl signage for the call stations applied directly over the finish color of the call stations.
 - a) Provide a legend reading “EMERGNCY” that is at least 20 inches long on the sides of the wall-mounted call stations and at least 30 inches long on the sides of the floor-mounted call stations.
 - b) Provide “reflective white” graphic legends.
 - 2) Provide the following faceplates for the call station buttons:
 - a) For the emergency buttons, provide a faceplate having a red “Emergency” legend on a white backfield.
 - b) For the customer service call buttons (Info Buttons), provide a faceplate having a black “Info” legend on a white backfield.
 - c) Silk screen additional information, to be determined at a later date, on the call station.
 - h. Manufacturers:
 - 1) Code Blue Corporation, <http://www.codeblue.com>.
 - a) Basis of Design (Free Standing): CB 5-p Pedestal – Interactive Voice Communication Unit with Deck Mounting kit.
 - b) Basis of Design (Wall Mounted): CB 2-e Pedestal – Interactive Voice Communication Unit
 - 2) Approved equal.
- G. Finishes:
 1. Primer Materials:
 - a. Provide a primer that is compatible with both the substrate and the finish coat.
 2. Finish Materials:
 - a. Provide a polyurethane finish coat that is compatible with the primer, and is graffiti-resistant and resistant to ultraviolet radiation.
 - b. Colors:
 - 1) Provide a “safety blue” finish color for the call stations.
 3. Shop Finishing Methods:
 - a. Apply both the primer and finish coats so they each have a minimum dry film thickness of 2 mils.

2.03 ACCESSORIES

- A. Grounding Conductors:
 1. Provide bare or insulated copper American Wire Gauge (AWG) wire grounding conductors complying with the requirements specified in ASTM B 3, ASTM B 8, and ASTM B 33.

2. For communications systems, provide stranded, insulated copper conductor having a minimum size of 6 AWG, since this will accommodate different code requirements and allow for future changes.
 3. Where single conductor insulated grounding conductors are required, furnish green color (or tape marking) insulation rated for 600 volts.
 4. Manufacturers:
 - a. The Okonite Company, www.okonite.com.
 - b. Anixter, www.anixter.com.
 - c. Continental Cables Company, www.continentalcables.com.pk.
 - d. Pirelli Cable Corporation.
 - e. Superior Essex, www.superioressex.com.
 - f. Approved equal.
- B. Grounding Connectors:
1. Provide zinc plated compression type grounding connectors capable of handling up to 2 wires sized up to 4 AWG, and having a hole sized for one 12-24 mounting screw.
 2. Manufacturers:
 - a. Chatsworth Products, Inc., Part Number 40158-020, <http://www.chatsworth.com>.
 - b. Approved equal.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
1. After receiving the Notice to Proceed, conduct a Site survey of the call center locations indicated in the Contract Documents to validate the placement of the call station devices, directional signage, computer, and monitor in accordance with requirements specified.
 - a. Based on the results of this Site survey, recommend the types of call stations to be provided under this Section and their final locations, and update the Record Documentation specified in Paragraph 3.07.B accordingly.
- B. Evaluation and Assessment:
1. Proceed installing the passenger emergency duress system (PEDS) only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
1. Protect adjacent areas from damage resulting from installation of the passenger emergency duress system (PEDS).
- B. Surface Preparation:

1. Provide anchorage devices and fasteners where needed to secure the call stations to in-place construction.

C. Demolition/Removal:

1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

A. Call Stations:

1. Install the passenger emergency duress system (PEDS) call stations in the Terminal 3 Station at the locations indicated in the Contract Documents.
 - a. Where free standing call stations are shown on the Contract Drawings, mount the units on the floor.
 - b. Where wall-mounted call stations are shown on the Contract Drawings, mount the units on the wall 37 inches above the finished floor.
2. Ensure that the passenger emergency duress system (PEDS) call stations' connections are properly installed in all respects, including, but not limited to, their form, fit, and function.
 - a. The installed call station must satisfy not only the specified location requirements for the call station, but must be fully compliant with the American with Disabilities Act (ADA) requirements specified.
 - b. Coordinate connection of the call stations to the Phoenix Sky Harbor International Airport phone switch with the Phoenix Sky Harbor International Airport.

B. Diagnostic and Reporting Software:

1. Upload and install the software for the remote diagnostic and reporting system provided under this Section onto the computer workstation provided by the Phoenix Sky Harbor International Airport.

C. Special Techniques:

1. Communications Grounding:
 - a. Ground the communications equipment in accordance with the requirements specified in ANSI/TIA J-STD 607.
 - 1) Isolated telecommunications main grounding busbars (TMGB) have been installed by others in the power panels located in each communications Main Distribution Frame (MDF) and Intermediate Distribution Frame (IDF) room.
 - a) The raceway connections and associated grounding within the room will be provided by others.
 - b. Provide cabinet ground connections using grounding conductors, but do not attach more than 3 cabinets on 1 wire segment connected in series.

- 1) Neatly dress the grounding conductors together within the power trays from the cabinets to the telecommunications main grounding busbar (TMGB) using no crosses grounding conductors.
- 2) Provide grounding connectors for attaching the grounding conductors to the rear of the cabinets where directed by the Program/Project Manager.
- 3) Tightly crimp and secure the grounding lugs at the telecommunications main grounding busbar (TMGB) or telecommunications grounding busbar (TGB).

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. During the period when the passenger emergency duress system (PEDS) is being installed, the Testing and Inspection Agency must perform routine and other testing and inspection of materials.
 - a. Advise the Testing and Inspection Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - 1) The Phoenix Sky Harbor International Airport will coordinate integrated test requirements.
 - b. The Testing and Inspection Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
2. Test Procedures:
 - a. Prepare test procedures for performing the following testing:
 - 1) Call station tests.
 - 2) System/software tests.
 - 3) Final system tests.
 - b. Prepare the test procedure so that each procedure contains at a minimum the following items:
 - 1) Objective of the test.
 - 2) Functional procedure, including the use of any test equipment.
 - a) Identify test equipment by manufacturer and model;
 - 3) Define the interconnection of test equipment, and the steps of operation.
 - 4) Definition of documentation verification, both interconnections and functionality;
 - 5) Results required for compliance with the specified and expected requirements.

- 6) Traceability matrix referencing specification requirements with specific test procedures.
 - c. Submit the test procedures to the Program/Project Manager for approval.
 3. Test the passenger emergency duress system (PEDS) in accordance with the approved test procedures.
 4. Test Reports:
 - a. Within the 10 days following each test, prepare a test report for each test that certifies the successful or unsuccessful completion of that test.
 - 1) Include the test equipment serial number, calibration date, and calibration certification of test equipment;
 - 2) Record the test results, the test witness's initials or signature, and date the testing was performed.
 - 3) Indicate pass or fail evaluation for the equipment or system tested with comments.
 - b. Submit the test reports to the Program/Project Manager for review and acceptance.
 5. Phase Testing:
 - a. Test Procedure:
 - 1) Installation of the call stations may be phased in to support specific Phoenix Sky Harbor International Airport requirements.
 - a) Phase testing will be used to test specific areas that are completed and ready for use.
 - 2) Prior to starting the test, obtain written permission from the Program/Project Manager to commence the tests.
 - 3) Perform tests that demonstrate the system features and functionality.
 - a) Individually and jointly test the units to ensure they are operating properly.
 - b) As part of phase testing, test all components of the system.
 - b. Acceptance Criteria:
 - 1) Demonstrate that the system is operating properly.
 - 2) Acceptance of the test is at the sole discretion of the Program/Project Manager.
 6. Final Acceptance Test:
 - a. Test Procedure:
 - 1) Prior to starting the Final Acceptance Test, obtain written permission from the Program/Project Manager to commence the tests.
 - 2) Do not begin the Final Acceptance Test until all passenger emergency duress system (PEDS) systems have been installed and jointly tested to ensure they are operating properly.
 - 3) Complete the operational and stress testing of the components and systems/software installed.

- 4) During the first 2 weeks of the Final Acceptance Test, furnish personnel to operate the system 24 hours a day, including during weekends and holidays.
 - 5) Furnish on-call service throughout the remaining duration of the Final Acceptance Test.
 - 6) Monitor all systems during this testing, and coordinate the monitoring with the Program/Project Manager.
 - b. Acceptance Criteria:
 - 1) Demonstrate that the system is operating properly.
 - 2) Acceptance of the test is at the sole discretion of the Program/Project Manager.
 7. Final Endurance Test:
 - a. Test Procedure:
 - 1) Perform the Final Endurance Test for 90 days.
 - 2) Monitor all systems during endurance testing, and coordinate the monitoring with the Program/Project Manager.
 - 3) Start the Final Endurance Test only after the following actions have been completed:
 - a) The Final Acceptance Test has been successfully completed.
 - b) The specified training has been completed.
 - c) Deficiencies discovered by earlier testing have been corrected.
 - d) A written start notification from the Program/Project Manager has been received.
 - 4) Record the test data on forms approved by the Phoenix Sky Harbor International Airport to provide a continuous log of systems performance.
 - b. Acceptance Criteria:
 - 1) Demonstrate that the system is operating properly.
 - 2) Acceptance of the test is at the sole discretion of the Program/Project Manager.
 8. Inspections:
 - a. Ensure that all connections to the call station devices and associated functions are completed properly.
- B. Non-Conforming Work
1. Correct the problems identified during each test phase.
 - a. Before any subsequent testing phase is performed, re-test a percentage of the entire system as determined by the Program/Project Manager.
 - b. Correct the discrepancies or problems discovered during these tests at no increase in Contract Price.

3.05 SYSTEM STARTUP

A. Commissioning:

1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 16995, Commissioning of Electrical Systems, for the power quality, security systems, emergency power systems, uninterruptible power supply (UPS) systems, communications systems, and public address/paging work pertinent to the Work of this Section.

3.06 CLEANING

A. Waste Management:

1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 CLOSEOUT ACTIVITIES

A. Training:

1. Train the Owner's maintenance personnel to adjust, operate, and maintain the passenger emergency duress system (PEDS) and related equipment in accordance with the requirements specified in Section 01770, Closeout Procedures.
 - a. The Phoenix Sky Harbor International Airport will provide adequate training facilities for each training session.

B. Record Documentation:

1. The Phoenix Sky Harbor International Airport will provide electronic background drawings to be used to prepare Record Drawing submittals.
2. Legibly mark the Record Drawing documents and as-built Shop Drawings to record the actual passenger emergency duress system (PEDS) installation, including communication conduit, cabling and pathways used, field changes of dimensions and details, changes in details from those indicated on the Contract Drawings, details not on the original Contract Drawings, and the make and model of the actual products installed.
 - a. Base the as-built locations of the call stations on the final installation.
3. 14 days prior to completion of the Final Acceptance Test, submit the Record Drawing documents and as-built Shop Drawings to the Program/Project Manager for review.
 - a. Should additional information or revisions be required, the reviewed documents will be returned to the Contractor for correction and re-submittal to the Program/Project Manager.

3.08 MAINTENANCE

A. Operation and Maintenance Data:

1. Prepare Operation and Maintenance Manuals for the passenger emergency duress system (PEDS).

2. Submit the Operation and Maintenance Manuals for the passenger emergency duress system (PEDS) to the Project/Project Manager.

3.09 ATTACHMENTS

- A. The following attachments are appended to this Section following the “END OF SECTION” marker:
 1. Compliance Matrix.

END OF SECTION

Passenger Emergency Duress System Compliance Matrix

The purpose of this document is to provide a common form for the Contractor to respond within its proposal for call station devices, remote diagnostic and reporting software, and associated computer and monitors.

The following is a list of the waiverable technical requirements. The references indicated in the Passenger Emergency Duress System Compliance Matrix Description refer Paragraphs and Subparagraphs within Specification Section 16275, Passenger Emergency Duress System.

Check C1, C2 or NC and include comments as necessary.

C1 – Compliance 1 – Vendor’s current product fully complies.

C2 – Compliance 2 – Vendor’s current product does not have this function but Vendor will ensure functionality is part of the base package. Specify in the comments if there is an additional cost

NC – Not Comply

Comments – Specific characteristics, additional cost, etc.

Item No.	Item	Description	C1	C2	NC	Comments
Call Station Hardware Requirements						
1-1	Call Station Type	Wall-mount unit or free standing unit. Unless otherwise noted, each unit has same hardware and function requirements. [Subparagraphs 2.02.D.1.b.1 and 2.02.D.1.b.1.c]				
1-2	Construction	Heavy duty, tamper resistant, vandal resistant, easy to clean, and durable construction. [Subparagraph 2.02.D.1.b.1.a]				
1-3	Components	Non-Proprietary Components to the best extent possible. [Subparagraph 2.02.D.1.b.1.d]				
1-4	Temperature/ Humidity Range	0 to 150 Degrees F, dry bulb. [Subparagraph 2.02.C.1.a.1] 0 to 95 percent relative humidity, condensing. [Subparagraph 2.02.C.1.b.1]				
1-5	Weather	Water and dust resistant speaker, microphone, and buttons. [Subparagraph 2.02.F.1.b.1]				
1-6	Communications	Two way hands free full duplex communications. [Subparagraph 2.02.D.1.b.1.b]				
1-7	Auxiliary Contacts	Minimum of 2 dry contact closures shall be supplied. At least one shall be used for connection to existing CCTV Camera. [Subparagraph 2.02.F.1.c.2.a]				
1-8	PBX/CO	Capable of connecting to a 2-wire analog line from a Private Branch Exchange (PBX), KSU or POTS line. [Subparagraph 2.02.F.1.c.1.a] Devices must be able to operate over Category				

Item No.	Item	Description	C1	C2	NC	Comments
		3, Category 5 or optional fiber optic cable. [Subparagraph 2.02.F.1.c.1.b]				
1-9	Emergency Power Supply	<p>Battery backup power supply that will be charged by power that may be provided in a limited capacity with the following features. [Subparagraph 2.02.F.1.f.2.a]</p> <ol style="list-style-type: none"> 1. A minimum of 8 hours of standby power shall be available; 2. Shall provide power for all components of the call station including strobe light / beacon. 				
1-10	Strobe Light / Beacon	<p>The call station unit includes a combination blue light strobe and beacon with the following [Subparagraph 2.02.F.1.d.1]:</p> <ol style="list-style-type: none"> 1. Strobe shall generate approximately 1,000,000 candlepower. [Subparagraph 2.02.F.1.d.1] 2. As an option strobe lamp or beacon shall have the capability of being a Light Emitting Diode (LED). [Subparagraph 2.02.F.1.d.1.a] 				
1-11	Emergency Button	<p>Action is distinct from the customer service call and easily identifiable. [Subparagraph 2.02.F.1.b.3.a.2] Action should be by push button, without the need of picking up a handset. Emergency button shall be red in color and larger than the Info Button. [Subparagraph 2.02.F.1.b.3.a]</p>				
1-12	Info Button	<p>Action is distinct from the emergency call button. Size and style of button should take into consideration that the potential of the user being confused as to how to activate the emergency call or the information call is eliminated. [Subparagraph 2.02.F.1.b.4.a.2]</p>				
1-13	Speaker/ microphone	<p>Hands-free speaker and microphone system located on the call station with the following features [Subparagraph 2.02.F.1.b.2.a]:</p> <ol style="list-style-type: none"> 1. Automatic adjustment for ambient noise; 2. Remote volume control; and 3. Local volume control. 				
1-14	Signage	<p>At a minimum, each call station shall be equipped with the following signage legends</p>				

Item No.	Item	Description	C1	C2	NC	Comments
		<p>mounted directly on the station:</p> <ol style="list-style-type: none"> 1. “EMERGNCY” on the sides of the call stations. [Subparagraph 2.02.F.1.g.1.a] 2. “Emergency” on the emergency button faceplate. [Subparagraph 2.02.F.1.g.2.a] 3. “Info” – on the information button. [Subparagraph 2.02.F.1.g.2.b] 4. Silk screening on the call station for additional information to be determined at a later date. [Subparagraph 2.02.F.1.g.2.c] 				
1-15	Finish	Provide a “safety blue” polyurethane finish having at least a 4-mil dry film thickness that is graffiti-resistant and resistant to ultraviolet radiation for the call stations. [Subparagraph 2.02.G]				
Call Station Functionality						
2-1	Communications	Call stations are connected to the City Phone switch and each station has 2 number dialing capability up to 15 digits. [Subparagraph 2.02.F.1.a]				
2-2	Remote Programmable	<p>Call Stations are remote programmable for at least the following [Subparagraph 2.02.D.1.b.2.a]:</p> <ol style="list-style-type: none"> 1. Changing phone numbers called by the stations 2. Audible alarm features 3. Strobe light features 				
2-3	Emergency Button	<p>Upon activation of the PEDS by pushing of the emergency button, the following shall immediately occur [Subparagraph 2.02.E.1.a]:</p> <ol style="list-style-type: none"> 1. Automatic dial of preprogrammed number to the Communication Center; 2. Instant 2 way hands free full duplex communications through a speaker system located on the call station. 3. Information is automatically sent to the Communication Center, identifying which call station was activated. 4. Strobe light activation; 5. Immediate activation of audible alarm; 6. Automatic, simultaneous CCTV camera 				

Item No.	Item	Description	C1	C2	NC	Comments
		activation 7. Pressing the Emergency Button overrides all other actions currently active with the call station.				
2-4	Info Button	Upon activation of the PEDS by pushing of the Information button, the following shall immediately occur [Subparagraph 2.02.E.2.a]: 1. Automatic dial of preprogrammed number to the City of Phoenix Aviation Department Communication Center; 2. Immediate 2 way hands free full duplex communications between call station and customer assistance; 3. Location information is automatically sent to the City of Phoenix Aviation Department Communication Center, identifying which call station was activated.				
2-5	Silent Monitoring mode	Silent monitoring mode can be initiated by the City of Phoenix Aviation Department Communication Center, where the operator can listen in on sounds generated around the call station. [Subparagraph 2.02.F.1.b.2.b]				
2-6	Disconnect Detection	The call station can detect disconnection from the phone switch. [Subparagraph 2.02.F.1.c.1.c]				
2-7	Power	Each station shall require no more than 3 amps maximum load for strobe. [Subparagraph 2.02.F.1.f.1]				
2-8	Strobe Light / Beacon	The call station unit includes a combination blue light strobe and beacon with the following: 1. Upon pressing of the emergency button, the strobe light is activated. [Subparagraph 2.02.E.1.a.4] 2. Once activated, the strobe light shall remain on while the two-way communication is active. [Subparagraph 2.02.E.1.a.4.a] 3. Strobe shall not “wash out” video image. [Subparagraph 2.02.E.1.a.5.a] 4. The beacon shall have the capability of always on illumination. [Subparagraph 2.02.F.1.d.3] 5. Ability to set the length of time in which the strobe light shall remain on even if				

Item No.	Item	Description	C1	C2	NC	Comments
		communications are closed. At a minimum, the timer can be adjusted at thirty (30) second interval. [Subparagraph 2.02.F.1.d.2] 6. The strobe light can be turned off either at the station or remotely through command protected means. [Subparagraph 2.02.F.1.d.4]				
2-9	Audible Alarm	The audible alarm has the following features: 1. Audible alarm is activated immediately upon pressing of the emergency button. [Subparagraph 2.02.E.3.a] 2. Audible alarm is silenced once City of Phoenix Aviation Department Communication Center Operator has connected the phone call. [Subparagraph 2.02.E.3.b] 3. Feature for setting duration of time the alarm will sound. [Subparagraph 2.02.F.1.e.2] 4. Alarm is configurable for sound level, voice announcement, or tones. [Subparagraph 2.02.F.1.e.1] 5. Audible alarm may be piezoelectric siren or alarm, voice annunciation, or other means of audible signal designed to alert those near the call station. [Subparagraph 2.02.F.1.e.1]				
Call Station Accessibility and ADA Requirements						
3-1	Visibility	Call stations shall be highly visible and easily identifiable to the traveling public (360 degree visibility where possible) [Subparagraph 2.02.B.2.a.1.a]				
3-2	Obstructions	Wall mounted or pole mounted call stations should not extend beyond 4" from the wall. If call stations do extend more than 4", then provisions must be made so that this mounting would not be considered an obstruction. [Subparagraph 2.02.B.2.a.1.b] Such provisions may include the following: 1. Bottom of call station must be mounted 27 inches or less from finished floor level				

Item No.	Item	Description	C1	C2	NC	Comments
		[Subparagraph 2.02.B.2.a.1.b.1.a]; or 2. Obstruction block must be mounted below the call station for identification of obstruction by use of a cane. [Subparagraph 2.02.B.2.a.1.b.1.b]				
3-3	Height	Operating functions of the call stations must be mounted no higher than 48 inches and no lower than 15 inches above finished floor. [Subparagraph 2.02.B.2.a.1.c]				
3-4	Dimensions	Call stations shall be mounted with a flat surface in front of, and to the side of the units with a minimum dimension of 30 inches wide by 48 inches deep. The City prefers 60 inches wide by 60 inches deep. [Subparagraph 2.02.B.2.a.1.d]				
3-5	Braille	Braille must be included on the face of the call station, anywhere information is provided essential to the user (ex. “emergency button”). [Subparagraph 2.02.B.2.a.1.e] When Braille is used, it must have raised characters having their long dimension not less than 5/8”. [Subparagraph 2.02.B.2.a.1.e.1]				
3-6	Connect/ Disconnect Indicator	Call stations shall be equipped with a blue LED light that once either the emergency button or customer assistance button is pressed, the LED shall begin to flash, and once the call is picked up by the operator, the LED will turn to a solid (non-flash) light signal. [Subparagraph 2.02.B.2.a.1.f] The LED shall remain on in a non-flash mode until call is disconnected. [Subparagraph 2.02.B.2.a.1.f.1]				
Future Considerations						
4-1	Cellular	Cellular communications. [Subparagraph 2.02.D.1.b.3.a]				
4-2	Wireless	Wireless communications. [Subparagraph 2.02.D.1.b.3.a]				
Remote Diagnostics and Reporting Software						
5-1	Communications	Communication with call stations is achieved through existing phone line connections. [Subparagraph 2.02.D.1.e.1.a] System software does not require an additional data				

Item No.	Item	Description	C1	C2	NC	Comments
		network. [Subparagraph 2.02.D.1.e.1.b]				
5-2	Configurable Software	Diagnostics software shall have configurable parameters. [Subparagraph 2.02.D.1.d.1]				
5-3	Automatic Polling	System shall be capable of automatic poll (self-diagnostic) of all call station devices. [Subparagraph 2.02.D.1.d.5.a.1] Frequency of automatic polling shall be configurable. [Subparagraph 2.02.D.1.d.5.a.2]				
5-4	Manual Polling	System allows operator to initiate poll of any / all call station devices. [Subparagraph 2.02.D.1.d.5.b.1]				
5-5	Storage	System shall store diagnostic information for a preset period of time. [Subparagraph 2.02.D.1.d.3.a] Length of storage time shall be configurable. [Subparagraph 2.02.D.1.d.3.a.1]				
5-6	Automatic Alert	System shall alert the operator of any outage. [Subparagraph 2.02.D.1.d.4.a]				
5-7	Primary Equipment monitored	System can analyze all primary components of call stations for operation status. [Subparagraph 2.02.D.1.a.1.a.1].				
5-8	Auxiliary Equipment Monitored	System can analyze auxiliary components in which the call station is connected to, including the following [Subparagraph 2.02.D.1.a.1.b.1]: <ul style="list-style-type: none"> - Connection to camera - Connection to Phone switch - Connection to power - Connection to and operating conditions of strobe/beacon light (if vendor considers light to be auxiliary equipment) 				
5-9	Polling Reports	System automatically generates reports for pre-set and manual diagnostic polling and specifically identifies any failures. [Subparagraph 2.02.D.1.d.5.c.1]				
5-10	Ad-Hoc reporting	System has the ability to allow additional reports to be added through an ad-hoc report generating tool. [Subparagraph 2.02.D.1.d.7.a]				
5-11	Statistical Reports	System can generate reports over the previous 30 days of use on various statistical information including at least the following [Subparagraph 2.02.D.1.d.6.b]:				

Item No.	Item	Description	C1	C2	NC	Comments
		<ol style="list-style-type: none"> 1. Usage trends of call stations (emergency and customer assistance) by call station device and by area; 2. Duration of time between activation of call station (emergency or customer assistance) and phone pickup; 3. Queuing of call station calls; 4. Frequency of failures; and 5. Maintenance statistics. 				
5-12	System Logical Security	<p>With the new AVI system operating in an on-line real-time open architecture environment, adequate access and password management controls must exist in the AVI system to ensure proper segregation of duties, accountability, and system integrity. [Subparagraph 2.02.D.1.d.2.a] The following features shall be available:</p> <ol style="list-style-type: none"> 1. System uses both user ID and password to identify a specific user's access rights. 2. At least two levels of password security shall be provided for User and Administration levels; 3. System prevents duplicate user IDs; 4. System can lock or suspend users after a specified period of system inactivity and; 5. Password Management Controls.

SECTION 16995

COMMISSIONING OF ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for commissioning the electrical systems listed in Section 01810, Commissioning.
 - 2. Requirements for demonstrating the operation of the electrical systems listed in Section 01810, Commissioning, and the extent of the demonstration.
 - 3. Requirements for providing training to the Owner's personnel for the electrical systems listed in Section 01810, Commissioning, and the extent of the training.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01770 - Closeout Procedures.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 01810 - Commissioning.
 - 6. Section 15950 - Testing, Adjusting and Balancing.
 - 7. Section 16080 - Electrical Testing.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. CA: Commissioning Authority.
 - 2. HVAC: Heating, Ventilating, and Air-Conditioning.
- B. Definitions:
 - 1. Commissioning: A systematic process to ensure that the Phoenix Sky Harbor International Airport's building systems perform interactively according to the design intent and operational needs of the Owner.
 - a. The commissioning process encompasses and coordinates the system documentation, equipment startup, control system calibration, testing and balancing, performance testing, and training.
 - 2. Commissioning Authority (CA): An independent agent engaged by the Phoenix Sky Harbor International Airport to direct and coordinate the commissioning process for the Project, and to approve the Work requiring commissioning.
 - a. The Commissioning Authority (CA) is not otherwise associated with the Design Consultant or the Contractor.

- b. The Commissioning Authority (CA) directs and coordinates the day-to-day commissioning activities without assuming oversight responsibilities.
 - c. The Commissioning Authority (CA) reports directly to the Program/Project Manager.
- 3. Commissioning Plan: An overall plan, developed before or after award of the Contract, that provides the structure, schedule, and coordination planning for the commissioning process.
- 4. Commissioning Team: A group of stakeholders that includes the following members who work together to fulfill contractual commissioning responsibilities under the Contract:
 - a. The Commissioning Authority (CA)
 - b. The Program/Project Manager.
 - c. The Facilities Manager (FM)
 - d. The Contractor.
 - e. The Contractor's Subcontractors whose equipment and systems will be commissioned, and who typically include the plumbing, HVAC, and fire suppression Subcontractors; the electrical and communications Subcontractors, the HVAC test and balance Subcontractor, the Building Automation System (BAS) Subcontractor, and other specialty system Subcontractors.
 - f. The Design Consultant.
- 5. Guaranteed Maximum Price (GMP): The sum of the maximum cost of the Work as defined in the Agreement, including the construction fee, costs of general conditions as defined in the Agreement, taxes, and the Contractor's contingency, including authorized adjustments.
 - a. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.

C. Reference Standards:

- 1. American Society of Heating, Refrigerating, and Air-Conditioning Engineers, Inc. (ASHRAE):
 - a. ASHRAE Guideline 1.1-2008 - HVAC&R Technical Requirements for the Commissioning Process (*Supersedes ASHRAE Guideline 1-1996*).
 - b. Institute for Sustainability Infrastructure (ISI)
 - 1) ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Commissioning requires participation not only of the Contractor, but also of the electrical Subcontractors and Suppliers, to ensure that systems are operating in a manner consistent with the requirements specified in the Contract Documents.
 - a. General commissioning and coordination requirements are specified in Section 01810, Commissioning.
 - 1) Familiarize the electrical Subcontractors with the requirements specified in Section 01810, Commissioning, and the Commissioning Plan issued by the Commissioning Authority.
 - 2) In each purchase order or subcontract written, include the requirements for submittal data, commissioning documentation, Operation and Maintenance data, and demonstration and training services required for performing commissioning activities.
2. Take responsibility for coordinating and scheduling the training specified in Section 01770, Closeout Procedures, and Section 01810, Commissioning; and ultimately for ensuring that the training is completed in accordance with the requirements specified.

B. Pre-Installation Meetings:

1. Commissioning Scoping Meeting:
 - a. Within 60 days of commencement of construction, the Commissioning Authority (CA) will schedule, plan, and conduct a Commissioning Scoping Meeting with the entire commissioning team for this Contract in attendance.
 - b. Information gathered from this meeting will allow the Commissioning Authority (CA) to update the Commissioning Plan to its "final" version, which will be distributed to all parties in attendance.
2. Miscellaneous Meetings:
 - a. Other meetings besides the Commissioning Scoping Meeting will be planned and conducted by the Commissioning Authority (CA) as construction progresses.
 - 1) These miscellaneous meetings will cover coordination, deficiency resolution, and planning issues with particular Subcontractors.
 - 2) The Commissioning Authority (CA) will plan these meetings, and will minimize unnecessary time being spent by Subcontractors.
 - 3) These miscellaneous meetings may be held monthly, until the final 3 months of construction when they may be held as frequently as one per week.
3. Meeting Minutes:
 - a. The Commissioning Authority (CA) will prepare and distribute meeting minutes to all parties in attendance at commissioning meetings.

1.04 SUBMITTALS

- A. Submit Product Data, Shop Drawing, and Operation and Maintenance Manual submittals of equipment to be commissioned to the Commissioning Authority as specified in Section 01810, Commissioning.
- B. Prior to submitting normal Operation and Maintenance Manual submittals, submit additional requested documentation to the Commissioning Authority to enable development of the startup and functional testing procedures.
 - 1. Submittal documentation includes, but is not limited to, detailed manufacturer installation and startup, operating, troubleshooting, and maintenance procedures; full details of Owner-contracted tests; fan and pump curves; full factory testing reports, if any; and warranty information, including clearly defined actions that are the responsibility of the Owner in order to keep warranties in force.
 - a. Include installation, startup, and checkout materials shipped with the equipment provided, and field checkout forms to be used by factory or field technicians.
 - b. The Commissioning Authority may request further documentation necessary for the commissioning process.
 - 2. Requests for data may be made prior to, concurrent with, or following normal submittals.
- C. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Special Procedure Submittals:
 - 1) Product Data, Shop Drawing, and Operation and Maintenance Manual submittals of equipment to be commissioned.
 - 2) Additional documentation requested by the Commissioning Authority.
- D. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Record Documentation:
 - 1) Final computer-generated as-built drawings showing the commissioned electrical equipment and systems.

1.05 QUALITY ASSURANCE

- A. Sustainability Standards Certifications:
 - 1. The Phoenix Sky Train Project at the Phoenix Sky Harbor International Airport has been registered with the Institute for Sustainability Infrastructure (ISI) for the purpose of achieving the ISI's certification of the

Project under the ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

2. The Project has been registered online under ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.
3. In order to assist the Owner to qualify the Project for ENVISION certification, manage the ENVISION® prerequisites and credits related to commissioning that have been assigned to the Contractor, coordinate with the other assigned ENVISION® Project Team members to help them certify the various ENVISION™ requirements they are responsible for as indicated in Section 01360, Sustainable Design Requirements, and in other Contract Documents; and perform the Work of this Contract to deliver a product consistent with this goal.

1.06 WARRANTY

A. Manufacturer Warranties:

1. Determine the specific requirements necessary to maintain the validity of the warranties for electrical equipment and systems to be commissioned by contacting and coordinating activities with the manufacturers of the electrical equipment and systems to be commissioned and those responsible for actions required to maintain the warranties in effect.

B. Warranty Period:

1. During the warranty periods for the electrical equipment and systems to be commissioned, correct deficiencies and make necessary adjustments to the electrical equipment and systems, Operation and Maintenance Manuals, and Record Documentation.
 - a. Address applicable issues identified during seasonal testing.

PART 2 PRODUCTS

NOT USED

PART 3 EXECUTION

3.01 COMMISSIONING ELECTRICAL EQUIPMENT AND SYSTEMS

A. Electrical Subcontractors Commissioning Responsibilities:

1. The electrical Subcontractors, or the Contractor if there are no electrical Subcontractors, are required to execute the commissioning responsibilities assigned to them by the Contract Documents, including, but not limited to, the following:
 - a. Furnishing an itemized cost for providing the services to commission electrical systems for inclusion in the in the Guaranteed Maximum Price (GMP).

- b. Attending the commissioning scoping meeting and other meetings necessary to facilitate the commissioning process for this Contract.
- c. Supporting the Commissioning Authority (CA) through all phases of the commissioning process.
 - 1) The electrical Subcontractors are responsible for working with the Commissioning Authority according to the protocols established in the Commissioning Plan.
 - 2) The electrical Subcontractors are responsible for providing sufficient notice to the Commissioning Authority (CA) regarding the completion schedule for the pre-functional checklists and the startup of the electrical equipment and systems.
- d. Written Work Products:
 - 1) The electrical Subcontractors are responsible for furnishing the written work products specified in Section 01810, Commissioning, including the procedures to be executed as part of initial checkout and other input for developing the Startup Plans, and executed (filled in and signed) initial checkout, startup, and pre-functional checklists.
 - 2) If the Specifications, control drawings, or equipment documentation furnish insufficient information to allow detailed testing procedures to be written, then with assistance from the Program/Project Manager furnish clarification of the operation and control of the equipment to be commissioned to the Commissioning Authority (CA).
 - 3) Using the manufacturers' startup procedures and pre-functional checklists from the Commissioning Authority, develop initial checkout and full Startup Plans for electrical equipment and systems to be commissioned in accordance with the requirements specified in Section 01810, Commissioning.
 - a) Submit the initial checkout and full Startup Plans to the Commissioning Authority for review and approval prior to startup of the equipment or system.
 - 4) Provide assistance to the Commissioning Authority in preparing functional performance test procedures.
 - a) Review the test procedures to ensure their feasibility, safety, and protection of equipment; and furnish in writing the necessary alarm limits to be used during the tests.
- e. Furnishing the electrical testing equipment required to perform the commissioning procedures indicated in the Contract Documents.
- f. Executing the tasks listed on the approved pre-functional checklists and performing the startup tests.
 - 1) Provide skilled technicians to execute the starting of equipment.
 - a) Ensure that the technicians are available and present during agreed upon schedules, and for a sufficient time to complete the necessary tests, adjustments, and problem solving.

- g. Under the direction of the Commissioning Authority (CA), performing the functional performance tests (FPT), and executing seasonal or deferred functional performance testing, witnessed by the Commissioning Authority, in accordance with the Contract Documents.
 - 1) Provide skilled technicians to perform the functional performance testing under the direction of the Commissioning Authority for the equipment specified in Section 16080, Electrical Testing, and Section 01810, Commissioning.
 - 2) Assist the Commissioning Authority in interpreting monitoring data as necessary.
 - h. Correcting deficiencies, meaning differences between the specified and observed performance as interpreted by the Commissioning Authority, in the tested equipment and systems; and retesting the equipment and systems after corrections have been made.
- B. Electrical Equipment and Systems Supplier's Commissioning Responsibilities:
 - 1. The electrical Suppliers and vendors are required to execute the commissioning responsibilities assigned to them by the Contract Documents, including, but not limited to, the following:
 - a. Furnishing requested Submittal data, including detailed startup procedures, and specifying specific responsibilities of the Owner required for maintaining the equipment warranties in force.
 - b. Furnishing assistance during equipment testing.
 - c. Furnishing costs to include in the Guaranteed Maximum Price (GMP) for special tools and instruments only available from the equipment Suppliers or vendors, that are specific to a piece of equipment, as required by the Specifications, and required for testing the equipment according to the Contract Documents, except for stand-alone data logging equipment that may be used by the Commissioning Authority (CA).
 - d. Furnishing information requested by the Commissioning Authority (CA) regarding the sequences of operation and testing procedures for equipment.
 - e. Reviewing and approving test procedures for equipment installed by factory representatives.

3.02 SYSTEM STARTUP

- A. Prior to system startup, complete the electrical systems and sub-systems so the systems and sub-systems are fully functional, and meet the performance and design requirements of the Contract Documents.
 - 1. Commissioning procedures and functional testing do not relieve or lessen this responsibility, or shift this responsibility in whole or in part to the Commissioning Authority or the Owner.
 - 2. Address current punch list items before performing functional testing.

- a. Complete air and water testing and balancing, and remedy discrepancies and problems discovered, before performing functional testing of air-related or water-related electrical systems.
 - 1) Testing, adjust, and balance heating, ventilating, and air-conditioning (HVAC) systems in accordance with the requirements specified in Section 15950, Testing, Adjusting and Balancing.
- B. Initial Checkout Process and Startup:
 - 1. The electrical Subcontractors are responsible for following the startup and initial checkout procedures specified in Section 01810, Commissioning, for electrical equipment and systems provided under this Contract.
 - a. During initial checkout process and startup, execute and document the electrical-related portions of the pre-functional checklists provided by the Commissioning Authority for commissioned equipment and systems.
 - b. Perform and clearly document completed startup and system operational checkout procedures, and submit a copy to the Commissioning Authority.
- C. Functional Testing:
 - 1. A complete list of systems to be commissioned, and a description of the process is specified in Section 01810, Commissioning.
 - a. Have the Commissioning Authority (CA) at a minimum perform the startup and checkout activities listed in Section 01810, Commissioning, for the sweep or scheduled lighting controls, daylight dimming controls, lighting occupancy sensors, power quality, security systems, emergency power systems, uninterruptible power supply (UPS) systems, fire and smoke alarms, fire protection systems, communications systems, public address/paging, variable frequency drives, and building automation system work pertinent to the Work of this Section.
 - b. Specific details of the required functional performance tests are specified in Section 16080, Electrical Testing.
 - c. Specific details regarding non-conformance issues relating to pre-functional checklists and tests are specified in Section 01810, Commissioning.
 - 2. Begin functional testing of each electrical equipment item or system when the equipment item or system is completed.
 - a. At the discretion of the Commissioning Authority (CA) and the Program/Project Manager, functional testing may proceed prior to completion of the system or sub-systems.
 - b. Beginning testing of a system before it is completed does not relieve the Contractor from fully completing the system, or executing pre-functional checklists, as early as possible.
 - c. Specific details regarding deferred testing are specified in Section 01810, Commissioning.

3.03 CLOSEOUT ACTIVITIES

- A. The Commissioning Authority is responsible for overseeing and approving the content and adequacy of the training provided to the Owner's personnel for commissioned electrical equipment and systems.
- B. Electrical Subcontractors:
 - 1. The electrical Subcontractors are responsible for performing the following training-related functions after the functional testing is complete, unless otherwise approved by the Owner in writing:
 - a. For each major piece of equipment, engage an appropriate expert and qualified trainer to furnish the instruction for the Owner's operating staff and demonstrate the equipment as specified.
 - 1) The trainer may be the startup technician for the piece of equipment, the installing Subcontractor, or a trade or manufacturer's representative.
 - 2) The trainer must possess practical building operating expertise and in-depth knowledge of the specific piece of equipment's modes of operation.
 - 3) More than 1 trainer may be required to demonstrate or furnish training for a piece of equipment.
 - b. At least 2 weeks before the training and demonstration are scheduled to occur, submit an outline describing the training to be furnished as specified in Section 01810, Commissioning.
 - c. For each electrical system, subsystem, or piece of equipment to be commissioned, provide the Owner's designated personnel with a comprehensive orientation and a training session, or training sessions, designed to furnish an understanding of the systems and their operation and maintenance as specified in Section 01770, Closeout Procedures.
 - 1) Begin the training with classroom sessions, if necessary, followed by hands-on training on each piece of equipment or system designed to illustrate the equipment's or system's various modes of operation, including startup, shutdown, fire or smoke alarm, power failure, and similar modes.
- C. Demonstration:
 - 1. Engage the electrical Subcontractor to fully explain and demonstrate the operation, function, and overrides of local packaged controls not controlled by the central control system to the Owner's designated personnel.
 - a. During the demonstration, if the system fails to perform in accordance with the requirements of the Operation and Maintenance Manual or the sequence of operations, repair or adjust the system as necessary, and repeat the demonstration.
- D. Training of Owner Personnel:

1. Duration of Training:
 - a. Furnish training lasting as long as specified in Section 01770, Closeout Procedures.
 2. Classroom Sessions:
 - a. Design training sessions to follow the Table of Contents of the Operation and Maintenance Manuals for the subject equipment, and whenever possible illustrate the use of the Operation and Maintenance Manuals for reference.
 - 1) Use the format and training agenda included in ASHRAE Guideline 1.1-2008.
 - 2) Use overhead projections, slides, video/audio-taped material, as appropriate, in classroom sessions.
 - 3) Refer to the printed installation, operation, and maintenance instruction material included in the Operation and Maintenance Manual for the equipment or system.
 - 4) Review the written operation and maintenance instructions, emphasizing safe and proper operating requirements, preventative maintenance, special tools needed, and spare parts inventory suggestions.
 - 5) Teach students the startup, shutdown, seasonal changeover, and emergency procedures as applicable, and operation of the equipment or system in all possible modes.
 - 6) Discuss relevant health and safety issues and concerns.
 - 7) Discuss warranties and guarantees.
 - 8) Describe common troubleshooting problems and solutions.
 - 9) Discuss peculiarities of the equipment installation or operation.
 - 10) Discuss the explanatory information included in the Operation and Maintenance Manuals, and the location of plans and manuals in the facility.
 3. Hands-On Training
 - a. Furnish hands-on training that includes startup and operation in all modes, including, but not limited to, manual operation, shut-down, and emergency operation procedures, if any.
 - b. Furnish hands-on maintenance training for each piece of equipment.
- E. Record Documentation
1. During construction, prepare and maintain as-built red-line drawings on Contract Drawings, and prepare final computer-generated as-built drawings to be used as coordination drawings.
 2. Update the as-built drawings after completion of the commissioning activities, excluding the deferred functional testing.
 3. Submit the final computer-generated as-built drawings showing the commissioned electrical equipment and systems to the Program/Project Manager.

3.04 MAINTENANCE

A. Operation and Maintenance Manuals:

1. Prepare Operation and Maintenance Manuals in accordance with the requirements specified in the Contract Documents.
 - a. The electrical Subcontractors and equipment Suppliers are responsible for compiling and preparing documentation for the electrical equipment and systems provided under this Contract for inclusion in the Operation and Maintenance Manuals.
2. Submit a copy of the Operation and Maintenance Manuals and submittals for the electrical equipment and systems to be commissioned, as specified in the Contract Documents, to the Commissioning Authority for review.
3. The electrical Subcontractors are responsible for clarifying and updating the original sequences of operation furnished to as-built conditions.
