1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate installation of anchorages for gratings, grating frames, and supports.
 - a. Deliver the anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, to the Site allowing ample time for their installation so the Work of the Contract is not delayed.
- B. Sequencing:
 - 1. Sequence the installation of metal gratings to follow construction of supporting concrete and masonry load bearing walls and concrete foundations.
 - 2. Deliver concrete inserts, anchor bolts, and items with integral anchors that are to be embedded in concrete or masonry so they can be incorporated into the Work in time to not delay the Work.
- C. Scheduling:
 - 1. Coordinate the grating fabrication schedule with construction progress to avoid delays to the Work.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Shop and touchup paint systems.

- 2) Clips and anchorage devices for gratings.
 - b. Shop Drawings:
 - 1) Grating.
 - c. Samples:
 - 1) Stainless steel grating.
 - 2) Fiberglass Grating
 - d. Certificates:
 - 1) Mill certificates for stainless steel sheet products.
 - e. Delegated Design Submittals:
 - 1) Structural analysis data.
 - f. Qualification Statements:
 - 1) Professional Engineer's qualifications.
 - 2) Welding procedure qualification test records (PQRs).
 - 3) Welding procedure specifications (WPSs).
 - 4) Welding Certificates.
- B. Informational Submittals:
- 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Test reports for expansion anchors used in non-structural applications.
 - b. Manufacturer's Instructions:
 - 1) Setting drawings, templates, and directions for installing anchorages specified for installation under other Sections.
 - 2) Stainless steel grating manufacturer's published installation instructions.
 - 2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. ENVISION Credit RA 1.3 - Use Recycled Materials
 - 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - b. Paints and Coatings
 - 1) Submit product data highlighting the VOC content for any field applied paint used to touch-up shop applied primer.
- C. Closeout Submittals:
- 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Stainless Steel Grating Warranty.
 - 2) Fiberglass Grating Warranty.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
- B. Qualifications:
 - 1. Professional Engineer's Qualifications:
 - a. Employ a qualified Professional Engineer, licensed in the State of Arizona and capable of performing a structural engineering analysis of the manufacturer's standard units similar to those proposed for the Work of this Contract, to prepare a complete structural design for the grating Work under this Contract, including required sub-framing.
 - b. Submit the Professional Engineer's qualifications to the Program/Project Manager for approval.
 - 2. Welding Qualifications:
 - a. Welding Procedure Specifications (WPS):
 - 1) Prior to beginning work that requires welding, submit the pre-qualifying welding procedures to the Program/Project Manager for approval.
 - 2) For all procedures, other than those set forth in AWS D1.1/D1.1M, AWS D1.2/D1.2M, AWS D1.3, and AWS D1.6, submit a copy of the welding procedure specifications (WPS) test records to the Program/Project Manager for approval.
 - b. Welder Qualifications:
 - 1) Prior to beginning work that requires welding, submit the procedures to be used for qualifying welders and welding procedures to the Program/Project Manager for approval.
 - a) For all procedures, other than those set forth in AWS D1.1/D1.1M, AWS D1.2/D1.2M, AWS D1.3, and AWS D1.6, submit a copy of the welding procedure qualification test records (PQRs) and welding procedure specifications (WPSs) to the Program/Project Manager for approval.
 - 2) Only use welders, tackers, and welding operators qualified to perform the types of work required by having passed the qualification tests prescribed in AWS D1.1/D1.1M, AWS D1.2/D1.2M, AWS D1.3, and/or AWS D1.6 for the procedures to be used.
 - 3) Submit Welding Certificates certifying the welders employed to fabricate and to erect the Work of this Section have been certified in accordance with the American Welding Society (AWS) standards within the previous 12 months to the Program/Project Manager for approval.

- a) Include certified copies of qualification test records and photographic identification indicating each welder, welding operator, and tacker employed to perform the Work has satisfactorily passed the AWS qualification tests for the required welding procedures and, if pertinent, has undergone recertification.
- C. Certifications:
 - 1. Mill Certificates:
 - a. Submit mill certificates for the stainless steel sheet products furnished, signed by the stainless steel sheet manufacturers to certify that their products comply with requirements specified, to the Program/Project Manager for approval.
- D. Site Samples:
 - 1. Stainless Steel Grating:
 - a. Submit a 6-inch by 6-inch Sample of the stainless steel grating to the Program/Project Manager for approval.
 - b. Submit a 6-inch by 6-inch Sample of the fiberglass grating to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Deliver pre-finished products in a manner that will prevent material damage and deterioration or contamination from the elements.
 - 2. Provide protective wrapping on pre-finished aluminum and stainless steel products, and maintain the wrapping in place until the Contract is ready for final inspection.
- B. Storage and Handling Requirements:
 - 1. Store and handle pre-finished products in a manner that will prevent material damage and deterioration or contamination from the elements.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

- A. Manufacturer Warranty:
 - 1. Have the stainless steel grating manufacturer warrant the stainless steel grating against defects in materials and workmanship within the 5-year period after the Date of Substantial Completion:
 - 2. Submit a written Stainless Steel Grating Warranty on the manufacturer's standard or customized form, without monetary limitation, in which

manufacturer agrees to repair or replace stainless steel grating that fails in materials or workmanship within the specified warranty period to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

A. Manufacturers:

1. Welded Steel Grating Manufacturer List:
 - a. Alabama Metal Industries Corporation, <http://amico-online.com>.
 - b. IKG Industries; a Harsco Company, www.ikgindustries.com.
 - c. Ohio Gratings, Inc., www.ohiogratings.com.
 - d. Fisher and Ludlow, Tru-Weld Grating, www.fisherludlow.com.
 - e. Approved equal.
2. Aluminum Grating Manufacturer List:
 - a. Ohio Gratings, Inc., Series 19SGF, www.ohiogratings.com.
 - b. Intertec Corp., AL-14 Series.
 - c. Seidelhuber Metal Products, Inc., www.seidelhuber.com.
 - d. Approved equal.
3. Stainless Steel Grating Manufacturer List:
 - a. Kadee Industries, Inc., Model KD98 Stainless Steel Floor Grate, <http://www.kadeeindustries.com>.
 - b. Approved equal.
4. Glass-Fiber-Reinforced Plastic Grating Manufacturer List:
 - a. Enduro Systems Inc.; Composite Products Division. www.endurocomposites.com
 - b. Fibergrate Composite Structures Inc. www.fibergrate.com
 - c. Fisher & Ludlow. www.fisherludlow.com
 - d. McNichols Co. www.mcnichols.com
 - e. Approved equal.
5. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.

B. Description:

1. Regulatory Requirements:
 - a. Floor or ground openings in areas required to be accessible to people with disabilities are limited to 1/2 inch (13mm) in width by the Americans with Disabilities Act Accessibility Guidelines (ADAAG) for Buildings and Facilities and by ICC/ANSI A117.1.
2. Sustainability Requirements:
 - a. Recycled Content

- 1) Provide Grating whose combined post-consumer recycled content and one-half pre-consumer recycled content is no less than the values noted in the materials section of this specification section.
 - b. Low Emitting Materials – Paints and Coatings
 - 1) When paint is field applied to touch-up shop applied primer on surfaces within the building envelop, ensure they have a VOC content not exceeding 100 g/L.
- C. Performance:
 1. Structural Performance:
 - a. Provide gratings and anchors capable of withstanding the effects of gravity loads and the following loads and stresses within the limits and under the conditions indicated in the Contract Documents:
 - 1) Floor Loads:
 - a) Design floor grates to withstand a uniform load of at least 300 pounds force per square foot, or a concentrated load of 3000 pounds force, whichever produces the greater stress.
 - (1) Concentrated loads are assumed to be applied uniformly over a 2.5-foot by 2.5-foot area to produce the maximum load effects on the grating and structural support members.
 - 2) Vehicle Loads:
 - a) Design grates in sidewalks and vehicular driveways subject to vehicular loading to withstand a uniform load of 300 pounds force per square foot, or a concentrated load of 8000 pounds force, whichever produces the greater stress.
 - (1) Concentrated loads are assumed to be applied uniformly over the standard wheel pattern as specified in the AASHTO Standard Specifications for Highway Bridges to produce the maximum load effects on the grating and structural support members.
 - 3) Maximum Stress:
 - a) Design the grating to withstand 12,000 psi for the clear span shown on the Contract Drawings.
 - 4) Maximum Deflection:
 - a) Design the grating depth for a maximum deflection of 1/4 inch under a uniform load 100 pounds per square foot.
 - b) Limit deflection to L/240 or 1/4 inch, whichever is less.
 2. Seismic Performance:
 - a. Provide gratings capable of withstanding the effects of earthquake motions determined according to Phoenix Building Construction Code and Amendments.

D. Design Criteria:

1. Unless otherwise indicated in the Construction Documents, design the grating that will be installed and mechanically fastened down to be removable.
2. Metal Bar Grating Standards:
 - a. For steel and stainless steel gratings with a maximum bearing bar depth of 2-1/2 inches (64mm) and a maximum thickness of 3/16 inch (4.8mm), and for aluminum gratings with a maximum bearing bar depth of 2-1/2 inches (64mm) and a maximum thickness of 1/4 inch, (6.4mm) comply with the requirements specified in ANSI/NAAMM MBG 531.
 - b. For steel and stainless steel gratings with a maximum bearing bar depth of 5 inches (127mm) and a thicknesses from 1/4 inch to 3/8 inch (6.4mm to 9.5mm) comply with the requirements specified in ANSI/NAAMM MBG 532.
 - c. Design the grating connections so the structural value of the joined pieces is maintained.
 - d. Provide the anchorage indicated in the Contract Drawings, and coordinate the type of anchorage with the anchorage requirements for the supporting structure.
 - 1) Provide and space the anchoring devices to secure the gratings, frames, and supports rigidly in place; and to support the loads indicated in the Contract Documents.
 - e. Design the grating so the maximum weight of any one piece of grating does not exceed 75 pounds.
3. Fiberglass Grating Standards:
 - a. For fiberglass gratings with a maximum bearing bar thickness of 1-inch, comply with the requirements specified in ASTM E84.
 - b. Design the grating connections so the structural value of the joined pieces is maintained.
 - c. Provide anchorage indicated in the Contract Drawings, and coordinate the type of anchorage with the anchorage requirements for the supporting structure.
 - 1) Provide and space the anchoring devices to secure the gratings, frames, and supports rigidly in place; and to support the loads indicated in the Contract Documents.
4. Fasteners:
 - a. Select fasteners of the type, grade, and class required.
 - b. Unless otherwise indicated in the Contract Documents, provide the following types of fasteners for metal gratings:
 - 1) For exterior applications, provide Type 316 stainless steel bolts and fasteners.
 - 2) For interior applications, provide fasteners and bolts zinc-plated in accordance with the requirements for Class Fe/Zn 5 coating specified in ASTM B 633.
 - 3) For fastening aluminum, provide stainless steel fasteners.

- c. Expansion Anchors:
 - 1) For non-structural applications, provide expansion anchor bolt and sleeve assemblies with the capability to sustain, without failure, the following loads as determined by testing conducted by a qualified independent testing agency in accordance with the requirements specified in ASTM E 488:
 - a) When installed in unit masonry, a load equal to 6 times the load imposed.
 - b) When installed in concrete, a load equal to 4 times the load imposed.
 - 2) For expansion anchors used in non-structural applications, submit test reports prepared, signed, sealed, and dated by an independent Testing and Inspection Agency, qualified in accordance with the requirements specified in ASTM E 488, to the Program/Project Manager for information.
 - 3) For structural applications, provide expansion anchor bolt and sleeve assemblies as specified in the structural Sections and indicated on the Contract Drawings.
- d. Adhesive Anchors:
 - 1) For structural applications, provide adhesive anchors as specified in the structural Sections and indicated on the Contract Drawings.
- 5. Product Data:
 - a. Submit Product Data for the following products to the Program/Project Manager for approval:
 - 1) Shop and touchup paint systems.
 - 2) Clips and anchorage devices for gratings.
- 6. Shop Drawings:
 - a. Prepare Shop Drawings for the grating proposed for the Work of this Section demonstrating compliance with the requirements of the Contract Documents.
 - 1) Include plans, layouts, elevations, sections, details, typical installations, and attachments to other work.
 - a) Show supports supplied and required by the grating manufacturer.
 - b) Include anchor requirements and anchors.
 - c) Indicate the field measurements of the slab recesses to receive the floor grating.
 - d) Indicate the types of floor grates and details of patterns or designs.
 - 2) Provide easy-to-read markings on the Shop Drawings for assemblies requiring erection or installation identification marks.
 - 3) Include tolerance variations or clearance requirements.
 - 4) Use American Welding Society standard welding symbols as shown in AWS A2.1 WC & DC.

- 5) Prepare setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors that are to be embedded in concrete or masonry provided under other Sections to the Program/Project Manager for information.
 - a) Prepare templates for anchors and bolts specified for installation under other Sections.
 - b. Submit the Shop Drawings of the grating to the Program/Project Manager for approval.
7. Design Calculations:
 - a. For products required to comply with design loads, prepare and submit structural analysis data, signed and sealed by the qualified Professional Engineer responsible for their preparation, to the Program/Project Manager for approval.

E. Materials:

1. Ferrous Metals:
 - a. Steel Plates, Shapes, and Bars:
 - 1) Provide steel plates, shapes, and bars complying with the requirements specified in ASTM A 36/A 36M.
 - b. Wire Rod:
 - 1) Provide wire rod for grating crossbars complying with the requirements specified in ASTM A 510.
2. Aluminum:
 - a. Aluminum Structural Shapes:
 - 1) Provide structural shapes of rolled or extruded aluminum alloy 6061-T6 complying with the requirements specified in ASTM B 308/B 308M.
 - 2) Provide the structural shapes and thicknesses indicated on Contract Drawings.
 - b. Aluminum Rod and Bars:
 - 1) Provide rods and bars of aluminum alloy 6061-T6 complying with the requirements specified in ASTM B 221.
 - 2) Provide rods and bars having the dimensions indicated on the Contract Drawings.
 - c. Aluminum Sheet and Plate:
 - 1) Provide sheets and plates of aluminum alloy 6061-T6 complying with the requirements specified in ASTM B 209.
 - 2) Provide sheets and plates having the thicknesses indicated on Contract Drawings.
 - d. Aluminum Checkered Plate:
 - 1) Provide checkered plate of aluminum alloy 6061-T6 complying with the requirements specified in ASTM B 209.
 - 2) Provide checkered plate having the thicknesses indicated on Contract Drawings, which does not include the raised portion.
3. Stainless Steel:

- a. Stainless Steel Angles:
 - 1) Provide stainless steel angles complying with the requirements for Type 304 stainless steel specified in ASTM A 276.
- b. Stainless Steel Wire:
 - 1) Provide stainless steel wire complying with the requirements for Type 304 stainless steel specified in ASTM A 276.
- c. Stainless Steel Rods:
 - 1) Provide stainless steel wire complying with the requirements for Type 304 stainless steel specified in ASTM A 276.
- 4. Welding Rods and Bare Electrodes:
 - a. Furnish welding rods and bare electrodes selected in accordance with the requirements for the metal alloy being welded in the American Welding Society (AWS) references.

F. Manufactured Units:

- 1. Steel Grating:
 - a. Provide welded steel grating having the following features:
 - 1) Bearing Bar Spacing: Either 7/16 inch or 1/2 inch apart on center.
 - 2) Bearing Bar Depth: 1 inch, but not less than the depth required to comply with the structural performance requirements.
 - 3) Bearing Bar Thickness: 1/8 inch, but not less than the thickness required to comply with structural performance requirements.
 - 4) Crossbar Spacing: 4 inches apart on center.
 - 5) Traffic Surface:
 - a) Apply an abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive.
 - 6) Steel Finish:
 - a) Provide a hot-dip galvanized coating with a weight of not less than 1.8 ounces per square foot of coated surface.
 - b. Recycled Content
 - 1) Provide Steel Grating whose combined post-consumer recycled content and one-half pre-consumer recycled content is no less than 75 percent.
- 2. Aluminum Grating:
 - a. Provide removable type aluminum grating, fabricated to the panel sizes and thickness indicated on the Contract Drawings.
 - 1) Where panel sizes are not indicated on the Contract Drawings, limit the panel weights to a maximum of 120 pounds each.
 - 2) Bearing Bars:
 - a) Provide bearing bars fabricated from aluminum alloy 6063-T6 complying with the requirements specified in ASTM B 221.
 - 3) Cross Bars and Bent Connecting Bars:
 - a) Provide cross bars and bent connecting bars fabricated from aluminum alloy 6063-T5 complying with the requirements specified in ASTM B 221.
 - 4) Bar Spacing:

- a) Bearing Bars: Spaced 1-3/16 inches apart, center-to-center.
 - b) Cross Bars: Spaced 4 inches apart, center-to-center.
 - 5) Bar Connections:
 - a) Mechanically lock the cross bars to the bearing bars.
 - 6) Anchor Clips:
 - a) Provide galvanized steel or stainless steel saddle clips of the number recommended by manufacturer.
 - 7) Bearing Angle:
 - a) Provide aluminum bearing angles fabricated from aluminum alloy 6061-T6 complying with the requirements specified in ASTM B 308/B 308M.
 - 8) Banding:
 - a) Band the grating bar ends the same depth as the bars.
 - b) Openings cutting 2 or more bearing bars require banding.
 - c) Openings for pipes, ducts, conduits, and similar objects require banding.
 - 9) Openings through Panels:
 - a) To facilitate removal of panels at pipes, ducts, conduits, and similar objects passing through grating panels, split the panels into 2 individual sections.
 - 10) Recycled Content
 - a) Provide Aluminum Grating whose combined post-consumer recycled content and one-half pre-consumer recycled content is no less than 75 percent.
- 3. Stainless Steel Grating:
 - a. Provide removable type stainless steel grating, fabricated to the panel sizes and thickness indicated on the Contract Drawings.
 - b. Stainless Steel Grating Frames:
 - 1) Provide 1-1/4 x 1-1/4 x 1/8 stainless steel angle frames having 1-1/2 x 1-1/2 x 3/16 stainless steel angle intermediate supports spaced no more than 3 feet apart.
 - c. Stainless Steel Grating Support Rods:
 - 1) Provide 0.070 inch by 1 inch stainless steel support rods spaced 1 inch apart on center.
 - d. Stainless Steel Grating Treads:
 - 1) Provide stainless steel treads consisting of 0.071-inch by 0.177-inch stainless steel surface wire inserted in slot openings in the support rods spaced 0.125-inch apart on center, and resistance welded to the support rods.
 - 2) Provide approximately 60 tread wires in 1 foot.
 - 3) Finish:
 - a) Provide tread wires having a number 4 satin finish.
 - e. Stainless Steel Grating Locking Devices:

- 1) Provide hidden locking devices complying with the stainless steel grating manufacturer's recommendations to prevent warping and rattling.
- f. Recycled Content
 - 1) Provide Stainless Steel Grating whose combined post-consumer recycled content and one-half pre-consumer recycled content is no less than 33 percent.
4. Glass-Fiber-Reinforced Grating:
 - a. Bar gratings assembled from components made by simultaneously pulling glass fibers and extruding thermosetting plastic resin through a heated die under pressure to produce a product without voids and with a high glass-fiber content.
 - 1) Configuration: T5020; 2 inch T-bars spaced 2 inches o.c. McNichols F141611142; I-bars spaced 1.5 inches o.c.
 - 2) Resin Type: Polyester; Flame spread 25 or less when tested according to ASTM E84.
 - 3) Color: Gray
 - 4) Traffic Surface: Plain. Medium Grit surface at Roof applications.
 - b. Fabricate cutouts in grating sections for penetrations indicated. Arrange cutouts to permit grating removal without disturbing items penetrating gratings. Provide support members at penetrations and cutouts to maintain design load requirements.
5. Removable Grating Sections:
 - a. Provide removable grating sections that have banding bars welded to the section's perimeter.
 - b. Provide anchors and fasteners of the type indicated in the Contract Documents; or, if not indicated, as recommended by the manufacturer for attaching the grating to its supports.
 - c. For each heavy-duty grating section, provide not less than 4 small square metal lugs, each having a hole for inserting a fastener, and shop weld each lug to 2 bearing bars.
 - d. Furnish threaded bolts with nuts and washers for securing the removable grating to its supports.
 - e. Do not notch the bearing bars at supports to maintain elevation.
6. Frames and Supports for Metal Gratings:
 - a. For metal grating not supported by structural steel, provide frames and supports fabricated by welding metal shapes, plates, and bars to the sizes, shapes, and profiles indicated in the Contract Documents and as necessary to receive the gratings.
 - 1) Unless otherwise indicated, fabricate the frames and supports from the same basic metal as the gratings are fabricated from.
 - 2) Miter and weld the connections of perimeter angle frames.
 - 3) Cut, drill, and tap the units to receive hardware and similar items.
 - 4) Galvanize steel frames and supports.

- b. For frames and supports to be cast into concrete or built into masonry, provide anchors integrally welded to the frames and supports.
 - 1) Unless otherwise indicated, space these anchors 24 inches apart on center
 - 2) At a minimum, provide steel strap anchors 1-1/4 inches wide by 1/4 inch thick by 8 inches long.
 - 7. Frames and Supports for Glass-Fiber-Reinforced Plastic Gratings:
 - a. Fabricate from glass-fiber-reinforced plastic shapes of sizes, shapes, and profiles indicated and as necessary to receive gratings. Miter connections for perimeter angle frames. Cut, drill, and tap units to receive hardware and similar items.
 - 1) Unless otherwise indicated, use shapes made from same resin as gratings.
 - 2) Equip units indicated to be cast into concrete or built into masonry with integral anchors.
 - 8. Grating Stair Treads and Landings:
 - a. For grating stair treads and landings on steel-framed stairs, provide grating complying with the requirements specified in Section 05511, Metal Stairs.
 - 9. Metal Handrails and Railings:
 - a. For metal handrails and railings, provide pipe and tube handrails and railings complying with the requirements specified in Section 05521, Pipe and Tube Railings.
- G. Assembly/Fabrication:
 - 1. Factory Assembly
 - a. Insofar as possible, fit and shop assemble metal gratings and fabrications ready for installation.
 - 1) Fabricate grating sections in the shop to the greatest extent possible to minimize field splicing and assembly.
 - a) Disassemble units only as necessary for shipping and due to handling limitations.
 - b) Clearly mark units to facilitate reassembly and coordinated installation.
 - 2. Shop Fabrication:
 - a. Fabricate metal and fiberglass gratings and fabrications in accordance with the details on the Contract Drawings, approved Shop Drawings, and referenced standards.
 - 1) Fabricate work square, plumb, straight, and true.
 - 2) Form grating sections from materials of the size, thickness, and shapes indicated in the Contract Documents, but not less than those needed to support the loads specified.
 - 3) Cut, drill, and punch material cleanly and accurately.
 - a) Unless otherwise indicated, remove burrs and ease edges to a radius of approximately 1/32 inch.
 - b) Remove sharp or rough areas on exposed surfaces.

- 4) Fit exposed connections accurately together to form hairline joints.
 - b. Drill or punch holes required for attachment of other Work and for bolted connections.
 - 1) Burned holes are unacceptable.
 - c. Welding:
 - 1) Perform welding in accordance with the requirements specified in the appropriate American Welding Society (AWS) standards for the materials being welded, and with the following:
 - a) Use materials and methods that minimize distortion and develop the strength and corrosion resistance of the base metals.
 - b) Obtain fusion without undercut or overlap.
 - c) Remove welding flux immediately.
 - d) Weld aluminum in accordance with the requirements specified in Section 4, Chapter 69 "Aluminum and Aluminum Alloys", of the AWS Handbook.
 - 2) Dress welds and sharp corners smooth.
- H. Finishes:
- 1. Primer Materials:
 - a. Zinc Chromate Primer:
 - 1) Provide zinc chromate primer complying with the requirements specified in TT-P-645.
 - 2. Finish Materials:
 - a. Galvanizing Repair Paint:
 - 1) For re-galvanizing welds in steel, provide high-zinc-dust-content paint complying with the requirements specified in SSPC-Paint 20.
 - b. Mineral filled coal tar pitch:
 - 1) Provide mineral filled coal tar pitch.
 - 2) Manufacturers:
 - a) Tnemec Company, Inc., 46-449, www.tnemec.com.
 - b) Carboline Company, www.carboline.com.
 - c) M. A. B. Paints, www.mabpaints.com.
 - d) The Sherwin-Williams Company, www.sherwin-williams.com.
 - e) Approved equal.
 - 3. Shop Finishing Methods:
 - a. Steel Finishes:
 - 1) Finish gratings, frames, and supports after assembly.
 - 2) For finish designations and application recommendations, comply with the requirements specified in NAAMM/NOMMA AMP 500.
 - 3) Galvanizing:
 - a) For those items indicated to be galvanized, apply a zinc coating by using the hot-dip process complying with the requirements specified in ASTM A 123/A 123M.
 - 4) To isolate dissimilar material surfaces from one another, paint the material interfaces with mineral filled coal tar pitch.

2.02 ACCESSORIES

A. Fasteners, Anchors, and Bolts:

1. Bolts and Nuts:
 - a. Provide regular hexagon-head steel bolts complying with the requirements specified for Grade A bolts in ASTM A 307.
 - b. Provide steel hex nuts complying with the requirements specified in ASTM A 563 (ASTM A 563M).
 - c. Provide steel flat washers where indicated in the Contract Documents.
2. Plain Washers:
 - a. Provide plain round washers complying with the requirements specified in ASME B18.22.1.
3. Lock Washers:
 - a. Provide helical, spring type lock washers complying with the requirements specified in ASME B18.21.1.
4. Lag Bolts:
 - a. Provide lag bolts complying with the requirements specified in ASME B18.2.1.
5. Anchor Bolts:
 - a. Provide Grade 36 anchor bolts complying with the requirements specified in ASTM F 1554.
6. Cast-in-Place Anchors:
 - a. Non-Structural Anchors in Concrete:
 - 1) Provide anchors capable of sustaining, without failure, a load equal to 4 times the load imposed as determined by testing conducted by a qualified independent testing agency in accordance with the requirements specified in ASTM E 488.
 - b. Non-Structural Anchors in Masonry Construction:
 - 1) Provide anchors capable of sustaining, without failure, a load equal to 6 times the load imposed as determined by testing conducted by a qualified independent testing agency in accordance with the requirements specified in ASTM E 488.
 - c. Provide either threaded or wedge type anchors.
 - d. Provide galvanized ferrous castings, either malleable iron castings complying with the requirements specified in ASTM A 47/A 47M, or cast steel castings complying with the requirements specified in ASTM A 27/A 27M.
 - e. Provide bolts, washers, and shims as required, hot-dip galvanized in accordance with the requirements specified in ASTM A 153/A 153M.
7. Expansion Anchors:
 - a. For non-structural applications in interior locations, provide carbon steel expansion anchors zinc-plated in accordance with the requirements for Class Fe/Zn 5 coating specified in ASTM B 633.
 - b. For non-structural applications in exterior locations, provide expansion anchors having Alloy Group 1 stainless steel bolts complying with the

requirements specified in ASTM F 593, and stainless steel nuts complying with the requirements specified in ASTM F 594.

- c. For structural applications, provide expansion anchor bolt and sleeve assemblies complying with the requirements specified in other structural Sections and as indicated on the Contract Drawings.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Inspect installed adjacent work to verify it is completed to the point so the gratings may be properly installed.
 - a. For level bed applications of stainless steel grating, the surfaces must be flat.
 2. Field Measurements:
 - a. Verify the actual locations of walls and other construction contiguous to the gratings and the actual block-out openings in the floors by taking accurate field measurements before fabricating the metal grating, and indicate the field measurements on the Shop Drawings.
- B. Evaluation and Assessment:
 1. Immediately report any errors in the metal gratings which will prevent the proper installation and fitting of parts.
 - a. Report errors resulting from either shop fabrication or deformation resulting from handling or transportation.
 2. Do not proceed with erection until unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the metal gratings.
- B. Surface Preparation:
 1. Provide anchorages, including concrete inserts, sleeves, anchor bolts, and miscellaneous items having integral anchors that are to be embedded in concrete or masonry construction.

3.03 INSTALLATION

- A. Provide metal grating in accordance with details on the Contract Drawings, approved Shop Drawings, and the referenced standards.
 1. Install gratings in accordance with the recommendations of the referenced metal bar grating standard that applies to the grating type and bar size

- indicated in the Contract Documents, including recommended installation clearances and standard anchoring details.
2. Stainless Steel Grating:
 - a. Defer the installation of stainless steel grating as much as possible until near the time of Substantial Completion.
 - b. Install stainless steel grating in accordance with the stainless steel grating manufacturer's installation instructions.
 - 1) Submit the stainless steel grating manufacturer's published installation instructions to the Program/Project Manager for information.
 3. Attach removable units to supporting members with the type and size of clips and fasteners indicated in the Contract Documents; or, if not indicated, as recommended by the grating manufacturer for the type of installation conditions shown.
 4. Where both the non-removable gratings and their supporting members have been fabricated from the same material, weld the non-removable gratings to the supporting members.
 5. Where neither the non-removable gratings and their supporting members have been fabricated from the same material, fasten non-removable units to supporting members the type and size of bolts and fasteners indicated in the Contract Documents; or, if not indicated, as recommended by the grating manufacturer for the type of installation conditions shown.
- B. Provide glass-fiber-reinforced grating in accordance with manufacturer's written instructions for installing grates. Use manufacturer's standard stainless-steel anchor clips and hold-down devices for bolted connections.
- C. Provide suitable temporary braces and stays to hold work in position until it can be permanently secured.
1. Furnish temporary bracing or anchors in formwork for items that are to be built into concrete or masonry.
- D. Cutting, Fitting, and Placement:
1. Cut, drill, and fit the metal gratings as required for installation.
 2. Accurately set the metal gratings in the proper location, in the proper alignment, and at the proper elevation when measured from established lines and levels, with edges and surfaces level, plumb, true, and free of rack.
 3. Fit exposed connections accurately together to form hairline joints.
- E. Special Techniques:
1. Field Welding:
 - a. Weld connections that are not to be left as exposed joints, but that cannot be shop welded because of shipping size limitations.

- 1) Do not weld, cut, or abrade the surfaces of exterior units that have been hot-dip galvanized after fabrication, or are designed for bolted or screwed field connections.
 - 2) Weld the toeplates not attached to the gratings in the shop to the gratings at the locations indicated in the Contract Documents.
 - b. Provide materials and methods that minimize distortion, and that develop the strength and corrosion resistance of the base metals.
 - c. Obtain fusion without undercut or overlap.
 - d. Remove welding flux immediately.
- F. Interface with Other Work:
1. Dissimilar Surfaces Isolation:
 - a. Paint metal surfaces at the point of contact with wood, concrete, or masonry construction with one coat of bituminous paint to a minimum dry mil thickness of 5.0 mils, or install isolators made of mylar or another approved material.
 - b. Paint aluminum surfaces at the point of contact with steel with one coat of zinc chromate primer.
 2. Fastening to In-Place Construction:
 - a. Provide anchorage devices and fasteners where necessary for securing gratings to in-place construction.
 - b. Provide threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
 3. Expansion Anchor Installation:
 - a. Install expansion anchors in strict accordance with the manufacturer's instructions and the following.
 - 1) Drilling Holes:
 - a) Use a rotary hammer type drill to make drill holes to the required diameter and depth consistent with the anchor manufacturer's instructions for the size of the anchor being installed.
 - b) Do not cut existing reinforcement steel.
 - 2) Minimum Embedment:
 - a) Embed expansion anchors to a depth of 4-1/2 bolt diameters, unless otherwise indicated on Contract Drawings.
 - b) Apply a safety factor of 4 to the expansion bolt pullout values published by manufacturer.
- G. Tolerances:
1. Align the grating straight, plumb, and level within a tolerance of 1 in 200.

3.04 CLEANING

- A. Clean away excess or misplaced paint materials from railing surfaces and adjoining construction materials.

B. Waste Management:

1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.05 PROTECTION

A. Protect installed grating products until the Work of the Contract is completed.

B. Stainless Steel Grating:

1. After the concrete work and stainless steel grating frame have been installed, furnish temporary plywood or fiberboard filler in the grate recesses, and cover the frames with protective plywood flooring until construction traffic has ceased and the Contract time nears Substantial Completion..

SECTION 05580

FORMED METAL FABRICATIONS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for formed metal fabrications, including the following:
 - a. Metal panel cladding.
 - b. Metal panel beam wrap.
 - c. Metal column cover.
 - d. Baggage cart protection rail.
 - e. Corner guards.
 - f. Base.
 - g. Break metal shapes.
 - h. Metal panel escalator cladding.
 - i. Metal panels soffits and bulkheads.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 – Sustainable Design Requirements.
 - 3. Section 01454 - Mock-Up Requirements.
 - 4. Section 01732 - Cutting and Patching.
 - 5. Section 01780 - Closeout Submittals.
 - 6. Section 09912 – Painting.
 - 7. Section 09960 - High-Performance Coatings.
 - 8. Section 09961 - Fluoropolymer Coatings.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 2. MSDS: Material safety data sheets.
 - 3. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside, and San Bernardino counties in California.
 - 4. URL: Uniform resource locator.

5. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the installation of anchorages for architectural metal items.
 - a. Furnish setting drawings, templates, and directions for installing the anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry.
 - 1) Deliver these items to the Site in time for installation.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Metal panel cladding.
 - 2) Metal panel beam wrap.
 - 3) Metal column cover.
 - 4) Baggage cart protection rail.
 - 5) Corner guards.
 - 6) Base.
 - 7) Break metal shapes.
 - 8) Metal panel escalator cladding.
 - 9) Metal panels soffits and bulkheads.
 - 10) Material Safety Data Sheets (MSDS)
 - b. Shop Drawings:
 - 1) Formed metal fabrications.
 - c. Samples:
 - 1) Samples of each type of exposed finish specified.
 - 2) Samples of the specified finishes for panel edge extrusions.
 - 3) Mock-up Samples of the wall systems.
 - d. Certificates:
 - 1) Stainless-steel mill certificates.
 - e. Qualification Statements:
 - 1) Formed metal fabrications fabricator's and installer's qualifications.
 - 2) Formed metal fabrications manufacturer's qualifications.
 - 3) Anodic finisher's qualifications.
 - 4) Powder-coating applicator's qualifications.
 - 5) Welding procedure specifications (WPS) test records.
 - 6) Procedures to be used for pre-qualifying welders.
 - 7) Welding Certificates.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Formed metal fabrication manufacturer's written installation instructions.
 - 2) ENVISION Credit RA 1.3 - Use Recycled Materials
 - a) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - 3) Paints and Coatings
 - a) Submit product data highlighting the VOC content for any field applied paint used to touch-up shop applied prime
- C. Closeout Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Manufacturer's maintenance instructions for the formed metal fabrications.
 - b. Warranty Documentation:
 - 1) Formed Metal Fabrications Warranty.

1.05 QUALITY ASSURANCE

- A. Qualifications:
 1. Formed Metal Fabrications Fabricator's and Installer's Qualifications:
 - a. To fabricate and install the formed metal fabrications required for the Work of this Section, employ a firm experienced in producing architectural metal similar to that required for this Contract, and whose work has a record of successful in-service performance
 - 1) Employ a firm having sufficient production capacity to produce quantity of units required.
 - 2) Arrange to have the same firm that fabricates the formed architectural metal fabrications for this Contract to install those fabrications
 - a) The installation firm must have a minimum of 3 years' experience installing wall systems similar to those required as the Work of this Section.
 - b. Submit the formed metal fabrications fabricator's and installer's qualifications to the Program/Project Manager for approval.
 2. Formed Metal Fabrications Manufacturer's Qualifications:
 - a. To manufacture the formed metal fabrications, select a firm having a minimum of 10 years' experience manufacturing architectural surface

- materials and a minimum of 10 years' experience fabricating wall systems.
- b. Submit the formed metal fabrications manufacturer's qualifications to the Program/Project Manager for approval.
 - 1) Include a reference list of at least 20 public space projects currently using walls fabricated by the manufacturer.
 - 2) Include overview literature describing the manufacturer's overall scope of products and manufacturing capabilities.
 - 3) Include the URL for the manufacturer's web site.
 - a) The web site must provide access to technical data, images, and general product information.
 3. Anodic Finisher's Qualifications:
 - a. To apply the anodic finishes to aluminum as required for the Work of this Section, employ a firm experienced in successfully applying anodic finishes of the types indicated, and that employs competent control personnel to conduct a continuing, effective quality control program to ensure compliance of the anodic finishes with the specified requirements.
 - b. Submit the anodic finisher's qualifications to the Program/Project Manager for approval.
 4. Powder-Coating Applicator's Qualifications:
 - a. To apply the powder-coating finishes required for the Work of this Section, employ a firm experienced in successfully applying powder coatings of the types indicated, and that employs competent control personnel to conduct a continuing, effective quality control program to ensure compliance of the powder-coatings with the specified requirements.
 - b. Submit the powder-coating applicator's qualifications to the Program/Project Manager for approval.
 5. Welding Qualifications:
 - a. Welding Procedure Specifications (WPS):
 - 1) Prior to beginning work that requires welding, submit the pre-qualifying welding procedures to the Program/Project Manager for approval.
 - 2) For all procedures, other than those set forth in AWS D1.1/D1.1M, AWS D1.2/D1.2M, AWS D1.3, or AWS D1.6 submit a copy of the welding procedure specifications (WPS) test records to the Program/Project Manager for approval.
 - b. Welders' Qualifications:
 - 1) Prior to beginning work that requires welding, submit the procedures to be used for pre-qualifying welders to the Program/Project Manager for approval.
 - 2) Only use welders, tackers, and welding operators demonstrating they are qualified to perform the types of work required by having passed the qualification tests prescribed for the procedures.

- 3) Submit Welding Certificates certifying the welders employed to fabricate and to erect the Work of this Section have been certified by the American Welding Society (AWS) within the previous 12 months to the Program/Project Manager for approval.
 - a) Include certified copies of qualification test records and photographic identification indicating each welder, welding operator, and tacker employed to perform the Work has satisfactorily passed the AWS qualification tests for the required welding procedures and, if pertinent, has undergone recertification.
- B. Certifications:
1. Mill Certificates:
 - a. Submit stainless-steel mill certificates, signed by the manufacturer of the stainless-steel products, certifying the products provided comply with the specified requirements.
 - 1) Certify the material provided conforms to the appropriate ASTM specification.
- C. Site Samples:
1. Samples for Verification:
 - a. For products involving the selection of a color, texture, or design, including mechanical finishes, Samples are required for verification of the color, texture, or design.
 - 1) For each type of exposed finish specified, submit Samples not less than 4 inches by 4 inches in size.
 - 2) For panel edge extrusions, submit Samples of the specified finishes not less than 4 inches long.
 - 3) Submit mock-up Samples of the wall systems not less than 12 inches by 12 inches in size.
- D. Mock-Ups:
1. After the Samples have been approved, build mockups of the following types of architectural metal in accordance with the requirements specified in Section 01454, Mock-Up Requirements, to verify the selections made under the Sample submittals, and to demonstrate the aesthetic effects and set the quality standards for fabrication and installation of the formed metal fabrications:
 - a. Metal beam wraps.
 - b. Metal column.
 - c. Baggage cart protection rail.
 - d. Metal panel escalator cladding.
 - e. Stainless steel guardrails.
 2. Build the mockups in the locations and of the size indicated on the Contract Drawings; or, if not indicated, as directed by Program/Project Manager.

3. Build architectural metal mockups that include all the types of components required by the system and that match the systems' components, and use the installation methods to be used to install the production Work to install the mock-ups.
4. Approved mockups may become part of the completed Work if undisturbed at the time of Substantial Completion.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver formed metal fabrications materials to the Site in their manufacturer's original packaging.
2. Deliver cast-metal products in wooden crates surrounded by sufficient packing material to ensure that the products will not be cracked or otherwise damaged.
3. Protect finished surfaces with strippable film.

B. Storage and Handling Requirements:

1. Store architectural metal inside a well-ventilated area, away from uncured concrete and masonry; and protected from weather, moisture, soiling, abrasion, extreme temperatures, and humidity.
2. Store formed metal fabrications products in a dry, secure location, protected against direct sunlight and excessive heat.
3. Store cast-metal products in wooden crates surrounded by sufficient packing material to ensure that the products will not be cracked or otherwise damaged.
4. Handle formed metal fabrications products in accordance with their manufacturer's instructions.

C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

A. Manufacturer Warranty:

1. Warrant the formed metal fabrications against defects in materials and workmanship within the 1 year period after the Date of Substantial Completion:
2. Submit the written Formed Metal Fabrications Warranty on the manufacturer's standard form in which the manufacturer agrees to repair or replace components of manufactured formed metal fabrications that fail in materials or workmanship within specified warranty period to the Program/Project Manager for approval.

- a. Have the manufacturer's standard form signed by the Contractor and manufacturer.

PART 2 PRODUCTS

2.01 FORMED METAL FABRICATIONS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - 2. Sustainability Requirements:
 - a. Volatile Organic Compounds (VOC) Content of Interior Adhesives, Sealants, and Sealant Primers:
 - 1) Provide adhesives, sealants, and sealant primers for the interior formed metal fabrications of this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168:
 - a) For drywall and panel adhesives: Not more than 50 grams per Liter less water.
 - b) For cove base adhesives: Not more than 50 grams per Liter less water.
 - c) For multipurpose construction adhesives: Not more than 70 grams per Liter less water.
 - d) For contact adhesive: Not more than 80 grams per Liter less water.
 - e) For special purpose contact adhesive: Not more than 250 grams per Liter less water.
 - f) For top and trim adhesive: Not more than 250 grams per Liter less water.
 - g) For metal to metal: Not more than 30 grams per Liter less water.

- h) For architectural sealants: Not more than 250 grams per Liter less water.
 - i) For other non-roof and non-roadway sealants: Not more than 420 grams per Liter less water.
 - j) For architectural non-porous sealant primers: Not more than 250 grams per Liter less water.
 - b. Volatile Organic Compounds (VOC) Content of Field-Applied Interior Paints and Coatings:
 - 1) Provide paint products having volatile organic compound content, exclusive of colorants added to a tint base, not greater than the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59:
 - a) Paints & Coatings: Not more than 50 grams per Liter.
 - b) Primers: Not more than 100 grams per Liter.
 - c) Anti-Corrosive and Anti-Rust Paints Applied to Ferrous Metals: Not more than 100 grams per Liter.
 - c. Recycled Stainless Steel and Aluminum:
 - 1) Provide stainless steel and aluminum with the following percentages of recycled stainless steel and aluminum:
 - a) Post-industrial recycled content: 46 percent, minimum.
 - b) Post-consumer recycled content: 25 percent, minimum.
 - c) Total recycled content: Not less than 71 percent.
 - 2) Submit written affidavits from the stainless steel and aluminum manufacturers verifying that the recycled stainless steel and aluminum content provided complies with the specified requirements.
- C. Performance:
 - 1. Anchors:
 - a. Provide anchors capable of sustaining, without failure, a load equal to 6 times the load imposed when installed in unit masonry, and equal to 4 times the load imposed when installed in concrete, as determined when tested by a qualified independent testing agency in accordance with the method specified in ASTM E 488.
- D. Design Criteria:
 - 1. The wall panel layout and reveal spacing are indicated on the Contract Drawings.
 - 2. Product Data:
 - a. For each type of formed metal fabrications product proposed for the Work of this Section, obtain the manufacturer's Product Data, including finishing materials.
 - b. Material Safety Data Sheets (MSDS):
 - 1) For each of the following products applied onsite and in the interior of the building, obtain the manufacturer's Material Safety Data Sheets (MSDS):

- a) Adhesives and sealants.
 - b) Paints and coatings.
 - c. Submit the Product Data and material safety data sheets (MSDS) for the formed metal fabrications to the Program/Project Manager for approval.
 - 3. Shop Drawings:
 - a. Prepare Shop Drawings for the formed metal fabrications, including plans, elevations, component details, and attachments to other work.
 - 1) Show fabrication and installation details that indicate the materials and profiles of each architectural metal member, fittings, joinery, finishes, fasteners, anchorages, and accessory items.
 - 2) Include the manufacturer's installation drawings.
 - a) Provide templates for anchors and bolts specified for installation under other Sections.
 - b. Submit the Shop Drawings for the formed metal fabrications to the Program/Project Manager for approval.
- E. Materials:
- 1. Metals:
 - a. Metal Surfaces:
 - 1) Provide metal materials having smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
 - b. Aluminum:
 - 1) Provide aluminum alloy and tempers recommended by the aluminum producer and finisher for the type of use and finish indicated in the Contract Documents, and having the strength and durability for each aluminum form required of not less than that of the alloy and temper designated for the items as follows:
 - a) Extruded Bars and Shapes:
 - (1) Provide extruded aluminum bars and shapes complying with the requirements for aluminum Alloy 6063-T5/T52 specified in ASTM B 221.
 - b) Drawn Seamless Tubing:
 - (1) Provide Drawn Seamless Aluminum Tubing complying with the requirements for aluminum Alloy 6063-T832 specified in ASTM B 210 or ASTM B 483/B483 M.
 - c) Plate and Sheet:
 - (1) Provide aluminum plate and sheet complying with the requirements for aluminum Alloy 5005-H32 specified in ASTM B 209.
 - c. Stainless Steel:
 - 1) Provide stainless steel of the type indicated for the following items:
 - a) Tubing:

- (1) Provide stainless steel tubing complying with the requirements for Grade MT 304 stainless steel specified in ASTM A 554.
 - b) Pipe:
 - (1) Provide stainless steel pipe complying with the requirements for Grade TP 304 stainless steel specified in ASTM A 312/A 312M.
 - c) Sheet, Strip, Plate, and Flat Bar:
 - (1) Provide stainless steel sheets, strips, plates, and flat bars complying with the requirements for Type 304 stainless steel specified in ASTM A 666.
 - d) Bars and Shapes:
 - (1) Provide stainless steel bars and shapes complying with the requirements for Type 304 stainless steel specified in ASTM A 276.
- d. Carbon Steel and Iron:
 - 1) Provide carbon steel and iron of the type indicated for the following items:
 - a) Tubing:
 - (1) Provide carbon steel and iron tubing sheets complying with the requirements for cold formed tubing specified in ASTM A 500 or with the requirements for Type 5 (mandrel drawn) tubing specified in ASTM A 513.
 - b) Bars:
 - (1) Provide hot-rolled carbon steel bars complying with the requirements for Grade 1010 carbon steel bars specified in ASTM A 29/A 29M.
 - c) Plates, Shapes, and Bars:
 - (1) Provide carbon steel and iron plates, shapes, and bars complying with the requirements specified in ASTM A 36/A 36M.
 - d) Steel Sheet, Cold Rolled:
 - (1) Provide cold rolled carbon steel sheets complying with the requirements either for commercial steel, Type B, or structural steel, Grade 25, exposed, specified in ASTM A 1008/A 1008M.
- 2. Fasteners and Hardware:
 - a. Unless otherwise indicated in the Contract Documents, provide architectural fastener and hardware fabricated from the following materials as appropriate for the materials being fastened:
 - 1) For fastening aluminum Items, provide stainless steel fasteners.
 - 2) For fastening stainless steel Items, provide stainless steel fasteners.

- 3) For fastening concealed uncoated steel Items, provide steel fasteners plated in accordance with the requirements for a Class Fe/Zn 25 electrodeposited zinc coating specified in ASTM B 633.
- 4) For fastening exposed uncoated steel Items, provide stainless steel fasteners.
- 5) For fastening dissimilar metals, provide stainless steel fasteners.
- b. Fasteners for Anchoring to Other Construction:
 - 1) Unless otherwise indicated in the Contract Documents, select fasteners of a type, grade, and class required to produce connections suitable for anchoring the formed metal fabrications to the other types of construction shown.
 - 2) For interconnecting components and for attaching architectural metal items to other work, provide concealed fasteners unless otherwise indicated in the Contract Documents.
 - 3) For exposed fasteners, provide square or hex socket flat-head machine screws unless otherwise indicated in the Contract Documents.
3. Anchors:
 - a. Provide cast-in-place, chemical, or torque-controlled expansion anchors fabricated from corrosion-resistant materials.

F. Wall Panels:

1. Panel Systems:
 - a. Provide an interlocking grid panel system having inset panels mounted in extruded aluminum frames on a fire-rated structural backer.
 - 1) Configure the panels in float style panel frames.
 - b. Stainless Steel Panels (W-3 and W-9):
 - 1) Face Panels:
 - a) Provide 19 gage (0.8mm) stainless steel face panels complying with the requirements for Type 304 stretcher leveled stainless steel specified in ASTM A 666.
 - 2) Cores:
 - a) Provide commercial grade aluminum honeycomb cores complying with the requirements for the alloy 3000 series, and having cell depths as required to produce a 1-1/4 inch thick panel.
 - 3) Backing Sheets:
 - a) Provide 20 gage stainless steel backing sheets complying with the requirements for Type 304 stretcher leveled stainless steel specified in ASTM A 666.
 - 4) Provide individually accessible panels as indicated on the Contract Drawings.
 - c. Aluminum Panels (W-1):
 - 1) Provide aluminum panels complying with the requirements for an alloy and temper as recommended by aluminum producer

- specified in ASTM B 209 or ASTM B 209M, and that are at least 0.063 inch thick.
- 2) Provide individually accessible panels as indicated on the Contract Drawings.
- 3) Finish:
 - a) Provide panels having a 3-coat fluoropolymer finish complying with the requirements specified in Section 09961, Fluoropolymer Coatings, and approved by the Program/Project Manager.
- d. Stainless Steel Base (B-2):
 - 1) Provide 11 gage stainless steel base complying with the requirements for Type 304 stretcher leveled stainless steel specified in ASTM A 666.
 - 2) Provide fabricated base having a solid backing on the inside of the base as indicated on the Contract Drawings.
- 2. Mounting Frames and Tracks;
 - a. Provide mounting frames and tracks fabricated from the following components:
 - 1) Vertical Hat Channels:
 - a) Provide extruded, anodized aluminum vertical hat channels complying with the requirements for aluminum Alloy 6063-T5/T52 specified in ASTM B 221, and having a matte black finish.
 - 2) Horizontal Mounting Tracks:
 - a) Provide extruded, anodized aluminum horizontal mounting tracks complying with the requirements for aluminum Alloy 6063-T5/T52 specified in ASTM B 221, and having a matte black finish.
 - 3) Corners and Reveals:
 - a) Provide extruded, anodized aluminum corners complying with the requirements for aluminum Alloy 6063-T5/T52 specified in ASTM B 221, and having a matte black finish; or provide stainless corners and reveals; as approved by the Program/Project Manager.
- 3. Manufacturers:
 - a. Rigidized Metals Corp. Honeycomb Core Reveal Joint Style Interior Panel Systems; Pattern: 5HR, Material: 304 SS, Finish: Sand-TeX, Gauge: 0.036", <http://www.rigidized.com>.
 - b. Environmental Interiors, Inc., <http://www.environmentalinteriors.com>.
 - c. Lindner USA, <http://www.lindnerusa.com>.
 - d. Approved equal.
- G. Assembly/Fabrication:
 - 1. Factory Assembly
 - a. To minimize field splicing and assembly, assemble formed metal fabrications in the shop to greatest extent possible.

- 1) Disassemble formed metal units only as necessary to accommodate shipping and handling limitations.
 - 2) Clearly mark formed metal units to facilitate reassembly and coordinated installation.
 - 3) Provide connections that maintain the structural value of the joined pieces.
2. Shop Fabrication:
- a. Form the architectural metal to the required shapes and sizes, true to line and level with true curves and accurate angles and surfaces.
 - 1) Finish exposed surfaces to smooth, sharp, well-defined lines and arris.
 - 2) Form bent-metal corners to the smallest radius possible without causing grain separation or otherwise impairing the work.
 - 3) In bars and extruded shapes, form simple and compound curves by bending the members in jigs that produce uniform curvature for each configuration required and maintain the cross section of the member throughout the entire bend without buckling, twisting, cracking, or otherwise deforming the exposed surfaces.
 - b. Cut, drill, and punch metals cleanly and accurately.
 - 1) Unless otherwise indicated in the Contract Documents, remove burrs and ease edges to a radius of approximately 1/32 inch.
 - 2) Remove sharp or rough areas on exposed surfaces.
 - 3) Unless otherwise indicated in the Contract Documents, cut, reinforce, drill, and tap as required to receive finish hardware, screws, and similar items.
 - c. Mill joints to a tight, hairline fit.
 - 1) Cope or miter corner joints.
 - 2) Fabricate connections that will be exposed to the weather so water will be excluded.
 - d. Provide the rebates, lugs, and brackets necessary to assemble the units and to attach them to other work.
 - e. Where cutting, welding, and/or grinding were required for proper shop fitting and jointing of architectural metal, restore the finishes so evidence of such corrective work is eliminated.
 - 1) Do not cut or abrade finishes that cannot be completely restored in the field.
 - f. For recommended shop welding practices, comply with the requirements specified in the American Welding Society (AWS) standards.
 - 1) Weld behind finished surfaces without distorting or discoloring the exposed side.
 - 2) Clean the exposed welded joints of flux, and dress the exposed and contact surfaces.

H. Finishes:

1. Primer Materials:

- a. Universal Shop Primer for Ferrous Metal:
 - 1) Provide an acrylic multipurpose primer complying with the requirements specified in Section 09912, Painting.
 - 2) Provide a primer containing pigments that make it easily distinguishable from zinc-rich primer.
- b. Zinc-Rich Primer:
 - 1) Provide a zinc-rich primer complying with the requirements specified in Section 09960, High-Performance Coatings, and that is compatible with the topcoats.
- 2. Finish Materials:
 - a. Aluminum Finishes:
 - 1) Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes in AA DAF-45.
 - 2) Class I, Clear Anodic Finish:
 - a) Provide an AA-M12C22A41 finish (Mechanical Finish: Nonspecular as fabricated; Chemical Finish: Etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018mm or thicker) complying with the requirements specified in AAMA 611.
 - b) Powder-Coat Anodic Finish:
 - (1) Provide powder-coat anodic finishes matching the finishes of the approved Samples.
 - 3) High-Performance Organic Finish (3-Coat Fluoropolymer):
 - a) Provide an AA-C12C40R1x finish (Chemical Finish: Cleaned with inhibited chemicals; Chemical Finish: Conversion coatings; Organic Coating: Manufacturer's standard 3-coat, thermocured system consisting of specially formulated inhibitive primer, barrier coat, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight) as specified in Section 09961, Fluoropolymer Coatings.
 - b) Color and Gloss:
 - (1) Provide high-performance organic finishes having the color and gloss matching the finishes of the approved Samples.
 - b. Stainless Steel Finishes:
 - 1) Directional Satin Finish:
 - a) Provide 120-grit to 150-grit polishing materials.
 - c. Steel and Iron Finishes:
 - 1) High-Performance Intermediate Coating:
 - a) Provide a high-build urethane or epoxy intermediate coating recommended by the manufacturer for application over the

- specified zinc-rich primer and under the specified high-performance top coating.
- b) Manufacturers:
 - (1) Benjamin Moore and Co.; M73/M75 Aliphatic Acrylic Urethane Semi-Gloss, <http://www.benjaminmoore.com>.
 - (2) Carboline Company; Carboguard890 2-Component Epoxy, <http://www.carboline.com>.
 - (3) ICI Paints, Devoe® High Performance Coatings, Devthane® 378 Aliphatic Urethane Semi-Gloss Enamel, <http://www.devoecoatings.com>.
 - (4) PPG Architectural Finishes, Inc., Aquapon 97-130 Epoxy, <http://www.ppg.com>.
 - (5) The Sherwin-Williams Company, Macropoxy HS High Solids Epoxy, <http://www.sherwin-williams.com>.
 - (6) Tnemec Company, Inc., Series 27 Hi-Build Epoxy, <http://www.tnemec.com>.
 - (7) Approved equal.
 - 2) High-Performance Top Coating:
 - a) Provide a high-build, semi-gloss polyurethane enamel top coating.
 - b) Manufacturers:
 - (1) Benjamin Moore and Co.; M73/M75 Aliphatic Acrylic Urethane Semi-Gloss, <http://www.benjaminmoore.com>.
 - (2) Carboline Company; Carbothane 133 HB Aliphatic Polyurethane, <http://www.carboline.com>.
 - (3) ICI Paints, Devoe® High Performance Coatings, Devthane® 378 Aliphatic Urethane Semi-Gloss Enamel, <http://www.devoecoatings.com>.
 - (4) PPG Architectural Finishes, Inc., Aquapon 95-612 Semi-Gloss Polyurethane, <http://www.ppg.com>.
 - (5) The Sherwin-Williams Company, Corothane II Satin B65-200 Series, <http://www.sherwin-williams.com>.
 - (6) Tnemec Company, Inc., Series 1075 Endura-Shield, <http://www.tnemec.com>.
 - (7) Approved equal.
 - d. Bituminous Paint:
 - 1) Provide a cold-applied asphalt emulsion complying with the requirements specified in ASTM D 1187.
 - 3. Shop Finishing Methods:
 - a. For recommendations relative to applying and designing finishes, comply with the recommendations specified in NAAMM/NOMMA 500.
 - b. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 - c. Aluminum Finishes:

- 1) Prepare and pretreat exposed metal surfaces, and apply the specified coatings in accordance with the requirements specified in AAMA 2605 and with coating and resin manufacturers' written instructions.
- d. Stainless Steel Finishes:
 - 1) Remove tool and die marks and stretch lines, or blend them into the finish.
 - 2) For formed stainless steel fabrications, provide the finishes indicated in Table 05580-1.

Table 05580-1 Stainless Steel Fabrication Finishes	
Stainless Steel Fabrication	Finish
W-3 stainless steel panels	Sand-Tex with 5HR Pattern ⁽¹⁾
W-9 stainless steel panels	Sand-Tex ⁽¹⁾
Baggage cart protection rail	No. 4 finish
Corner guards	No. 4 finish
Base	No. 4 finish
1. Finish and pattern specified in this table is the Basis-of-Design finish and pattern available from Rigidized Metals Corp.	

- 3) Directional Satin Finish:
 - a) Unless otherwise indicated in the Table 05580-1, grind and polish the surfaces to produce a uniform Number 4 sheet finish, free of cross scratches.
 - b) Run the grain of directionally textured finishes with the long dimension of each piece unless otherwise indicated.
 - c) When the polishing is completed, passivate and rinse the surfaces.
 - d) Remove embedded foreign matter, and leave the surfaces chemically clean.
- e. Steel and Iron Finishes:
 - 1) Preparation for Shop Priming:
 - a) Prepare uncoated ferrous-metal surfaces in accordance with the requirements specified in SSPC-SP 6/NACE No. 3 for the environmental exposure conditions of the installed architectural metal.
 - 2) Factory-Primed Finish:
 - a) Immediately after cleaning and pretreatment, apply an air-dried primer to surfaces that will be exposed after assembly and installation, and to concealed, non-galvanized surfaces,

to produce a minimum dry film thickness of 2 mils from each applied coat.

- 3) Painted Finish:
 - a) Provide painted finishes complying with the requirements specified in Section 09912, Painting.
- 4) High-Performance Coating Finish:
 - a) Provide high-performance coating finishes complying with the requirements specified in Section 09960, High-Performance Coatings.
 - b) Apply intermediate and finish coats to surfaces of railings primed with zinc-rich primer.
 - (1) For shop painting, comply with the coating manufacturer's written directions and with the requirements specified in SSPC-PA 1,
 - (2) Apply the intermediate coat at the spreading rate recommended by the manufacturer to achieve a dry film thickness of 3.0 mils to 8.0 mils for epoxy intermediate coats, and 1.5 mils to 4.0 mils for aliphatic urethane intermediate coats.
 - (3) Apply the topcoat at the spreading rate recommended by the manufacturer to achieve a dry film thickness of 1.5 mils to 4.0 mils.
 - (4) Match the color, texture, and coverage of the approved Samples.
 - (5) Remove and refinish, or recoat work that does not comply with the specified requirements.

2.02 ACCESSORIES

- A. Welding Rods and Bare Electrodes:
 1. Provide welding rods and bare electrodes selected in accordance with the requirements specified in the American Welding Society (AWS) welding specifications for the metal alloy welded.
 2. For aluminum, provide welding rods and bare electrodes of the type and alloy recommended by the producer of the metal to be welded as required to produce a color match, the strength, and the compatibility required in the fabricated items.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. With the formed metal fabrications installer present, examine the areas and conditions where this architectural metal will be installed for

compliance with the installation tolerance requirements and other conditions affecting the performance of the architectural metal.

2. Field Measurements:
 - a. Before fabricating the formed metal fabrications, verify the actual locations of walls and other construction contiguous with architectural metal by taking field measurements; and indicate the field measurements on the Shop Drawings.
- B. Evaluation and Assessment:
 1. Proceed to install the formed metal fabrications only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas, wall finishes, fixtures, and equipment from damage resulting from installation of the formed metal fabrications.
- B. Surface Preparation:
 1. Provide anchorage devices and fasteners where needed to secure the architectural metal to in-place construction.
 2. For items to be built into concrete, masonry, or similar construction, provide temporary bracing or anchors in the formwork.
- C. Demolition/Removal:
 1. Perform cutting, drilling, and fitting as required to install the architectural metal.
 - a. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Install the formed metal fabrications in accordance with manufacturer's installation instructions.
 1. Submit the formed metal fabrication manufacturer's written installation instructions to the Program/Project Manager for information.
- B. Set the formed metal fabrications products accurately at the locations indicated in the Contract Documents, and to the proper alignment and elevations measured from established lines and levels, in accordance with the manufacturer's installation instructions.
 1. Fit exposed connections accurately together to form tight, hairline joints; or, where indicated in the Contract Documents, with uniform reveals and spaces for sealants and joint fillers.
 2. Install concealed gaskets, joint filler, insulation, and flashings as the work progresses.

C. Field Welding:

1. Perform field welding in accordance with the applicable American Welding Society (AWS) specification for the procedures applying to manual shielded metal arc welding, for the requirements for appearance and quality of welds, and for the methods used to correct welding work.
2. Weld connections that are not to be left as exposed joints, but that cannot be shop welded because of shipping size limitations.
3. Grind exposed welded joints smooth, and restore the finish so it matches the finish of adjacent surfaces.

D. Corrosion Protection:

1. Coat the concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

3.04 REPAIR/RESTORATION

A. Restore protective coverings that have been damaged during shipment or installation.

B. Touchup Painting:

1. Restore finishes damaged during the installation and construction period in a manner so no evidence remains of the correction work.
2. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint the exposed areas with the same material originally applied to the surfaces.

C. Return items with abraded finishes that cannot be completely restored in the field to the shop so the required alterations can be made and followed by complete refinishing, or provide new units as required.

3.05 CLEANING

A. Clean the exposed surfaces in accordance with the manufacturer's cleaning instructions.

1. Unless otherwise indicated in the manufacturer's instructions, clean the metals by washing them thoroughly with clean water and soap, rinsing with clean water, and drying with soft cloths.
2. Submit the manufacturer's written cleaning instructions to the Program/Project Manager for information

B. Remove strippable film and other protective coverings at the time of Substantial Completion.

C. Waste Management:

1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 PROTECTION

- A. Protect exposed surfaces from damage by subsequent construction.
 - 1. Protect the finishes of the architectural metal from damage during the construction period using temporary protective coverings approved by the architectural metal fabricator.
- B. Retain protective coverings intact.
 - 1. Remove protective coverings only when there is no possibility of damage from other work yet to be performed at same location.
 - 2. Remove coverings simultaneously from similarly finished items to preclude non-uniform oxidation and discoloration.

3.07 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Furnish the manufacture's maintenance instructions for the formed metal fabrications for inclusion in operation and maintenance manuals as specified in Section 01780, Closeout Submittals.
 - 2. Submit the maintenance instructions for the formed metal fabrications to the Program/Project Manager for information.

SECTION 05700

ORNAMENTAL METAL

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for ornamental metal as indicated on the Contract Drawings, including but not limited to the following types:
 - a. Ornamental metal grilles.
 - b. Ornamental metal clad doors and frames.
 - c. Combination hall push-button stations.
 - d. Exterior façade panels.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01454 - Mock-Up Requirements.
 - 4. Section 01732 - Cutting and Patching.
 - 5. Section 05580 - Formed Metal Fabrications.
 - 6. Section 09912 – Painting.
 - 7. Section 09960 - High-Performance Coatings.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 2. PVDF: Polyvinylidene fluoride, a highly non-reactive and pure thermoplastic fluoropolymer.
- B. Reference Standards:
 - 1. Aluminum Association (AA):
 - a. AA DAF-45 – Designation System for Aluminum Finishes.
 - 2. American Architectural Manufacturers Association (AAMA):
 - a. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum.

 - a. SSPC Steel Structures Painting Manual.
 - 1) SSPC-Paint 20 – Zinc-Rich Primers (Type I, “Inorganic,” and Type II, “Organic”).
 - 2) SSPC-SP 6/NACE No. 3 - Surface Preparation Specification No. 6 Commercial Blast Cleaning.
 - 3) SSPC-SP 7/NACE No. 4 - Surface Preparation Specification No. 7 Brush-off Blast Cleaning.
10. Institute for Sustainability Infrastructure (ISI):
 - a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate the fabrication of metal mesh with the fabrication of Work on or in which the panels will be installed.
 2. Provide final size measurements to the manufacturer in time to avoid delaying the construction schedule.

1.04 SUBMITTALS

- A. Action Submittals:
 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Ornamental metal grilles.
 - 2) Ornamental -metal clad doors and frames.
 - 3) Combination hall push-button stations.
 - 4) Exterior façade panels.
 - b. Shop Drawings:

- 1) Ornamental metal fabrication and installation details.
 - 2) Architectural mesh exterior façade panels.
 - c. Delegated Design Submittals:
 - 1) Structural design calculations for the exterior façade panels.
 - d. Samples:
 - 1) Samples of each type of exposed finish required.
 - e. Qualification Statements:
 - 1) Ornamental metal manufacturer's qualifications.
 - 2) Professional Engineer's credentials.
 - 3) Welding procedure qualification test records (PQRs).
 - 4) Welding procedure specifications (WPSs).
 - 5) Welding Certificates.
- B. Informational Submittals:
- 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Exterior façade panel manufacturer's written installation instructions.

1.05 QUALITY ASSURANCE

- A. Qualifications:
- 1. Ornamental Metal Manufacturer's Qualifications:
 - a. Obtain the ornamental metal products from a firm having the domestic engineering, manufacturing, and delivery capacity required for the Work of this Section.
 - b. Obtain the ornamental metal products from a firm having successfully completed at least 5 projects within the past 3 years of a similar size and complexity, and using similar systems, to the Work required under this Section.
 - c. Submit the ornamental metal manufacturer's qualifications to the Program/Project Manager for approval.
 - 2. Professional Engineer's Qualifications:
 - a. Engage a qualified Professional Engineer registered in the State of Arizona to perform structural analysis required for the metal fabrication.
 - b. Submit the Professional Engineer's credentials to the Program/Project Manager for approval.
 - 3. Welding Qualifications:
 - a. Prior to beginning work that requires welding, the welding procedures and welders to be employed need to be qualified in accordance with the procedures specified in AWS B2.1.
 - 1) Submit the procedures to be used for pre-qualifying welders and welding procedures to the Program/Project Manager for approval.

- 2) For all procedures, other than those set forth in AWS D1.1/D1.1M, AWS D1.2/D1.2M, AWS D1.3, and AWS D1.6, submit a copy of the welding procedure qualification test records (PQRs) and welding procedure specifications (WPSs) to the Program/Project Manager for approval.
 - b. Only use welders, tackers, and welding operators demonstrating they are qualified to perform the types of work required by having passed the qualification tests prescribed in AWS D1.1/D1.1M, AWS D1.2/D1.2M, AWS D1.3, and/or AWS D1.6, for the procedures.
 - 1) Submit Welding Certificates certifying the welders employed to fabricate and to install the Work of this Section have been certified in accordance with American Welding Society (AWS) standards within the previous 12 months to the Program/Project Manager for approval.
 - a) Include certified copies of qualification test records and photographic identification indicating each welder, welding operator, and tacker employed to perform the Work has satisfactorily passed the AWS qualification tests for the required welding procedures and, if pertinent, has undergone recertification.
- B. Sustainability Standards Certifications:
 1. Recycled Content ENVISION Submittals:
 - a. ENVISION Credit RA 1.3 - Use Recycled Materials
 - 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - b. ENVISION Credit RA 1.4 – Use Regional Materials
 - 1) Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).
- C. Site Samples:
 1. For each type of exposed finish required, including finishes for the exterior façade panels, submit 2 Samples that are each at least 6 inches (150mm) square and that are representative of the actual product, its color, and its patterns.
- D. Mock-Ups:

1. After the Samples have been approved, build mockups in accordance with the requirements specified in Section 01454, Mock-Up Requirements.
 - a. Build the mockups in the location and of the size indicated or, if not indicated, as directed by Program/Project Manager.
 - b. For each custom ornamental metal casting required, furnish the patterns, models, or plaster castings.
 - c. For the exterior façade panels, provide 4 foot wide by 8 foot tall mock-ups that demonstrate the complete system, including mesh attachments, surface finishes, and system compatibility.
 - 1) During installation of the exterior façade panel mock-ups, furnish onsite engineering assistance by the Contractor's Professional Engineer.
 - d. Build ornamental metal mockups that include the ornamental metal, structural support members, fasteners, flashing and trim, and sealants matching the systems, and using the methods to be used to install production Work.
2. Approved mockups may become part of the completed Work if undisturbed at the time of Substantial Completion.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Protect finished surfaces with strippable film.
 - a. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 2. Deliver ornamental metal materials to the Site in their manufacturer's original packaging.
 3. Deliver cast-metal products in wooden crates surrounded by sufficient packing material to ensure that the products will not be cracked or otherwise damaged.
- B. Storage and Handling Requirements:
 1. Store ornamental metal components inside a clean, dry, secure, well-ventilated location away from uncured concrete and masonry; and protected from the weather, direct sunlight, moisture, soiling, abrasion, extreme temperatures, and humidity.
 - a. Store ornamental metal products in their manufacturer's packaging unopened until the time of their installation.
 - 1) Wrap or otherwise protect the ornamental metal products during storage.
 - b. Store cast-metal products in wooden crates surrounded by sufficient packing material to ensure that the products will not be cracked or otherwise damaged.
 - c. Protect fastener products from dirt and corrosion by storing them in closed containers.

- 1) Store the fastener products in a protected shelter, remove fastener components only as necessary, and promptly return unused fasteners to protected storage.
2. Handle ornamental metal products in accordance with their manufacturer's instructions.

C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 ORNAMENTAL METAL

A. Manufacturers:

1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed:
2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.

B. Description:

1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
2. Sustainability Requirements:
 - a. Recycled Steel Products:
 - 1) Provide ornamental metal products having an average recycled steel content so that the postconsumer recycled content plus one-half of the pre-consumer recycled content is not less than 25 percent.
 - 2) Submit written affidavits from the steel product manufacturers verifying that the recycled steel content provided complies with the specified requirements.
 - b. ENVISION Credits:
 - 1) ENVISION Credit RA 1.3 - Use Recycled Materials
 - a) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or

volume) of materials used are from reclaimed or recycled materials.

C. Design Criteria:

1. Provide ornamental metal, including exterior façade panels, as indicated on the Contract Drawings.
2. Provide architectural mesh systems designed to withstand the design forces without permanent deformation or contacting the structure behind the mesh during peak load conditions.
3. Calculations:
 - a. Have a qualified Professional Engineer prepare structural design calculations for the exterior façade panels, and sign and seal the calculations.
 - b. Submit the structural design calculations for the exterior façade panels to the Program/Project Manager for approval.
4. Product Data:
 - a. Obtain the ornamental metal manufacturers' Product Data for each type of ornamental metal product proposed for the Work of this Section, including the following:
 - 1) Finishing materials.
 - 2) Preparation instructions and recommendations.
 - 3) Storage and handling requirements and recommendations.
 - 4) Installation methods.
 - b. Submit the ornamental metal manufacturers' Product Data to the Program/Project Manager for approval.
5. Shop Drawings:
 - a. Prepare Shop Drawings that show fabrication and installation details of the ornamental metal.
 - 1) Indicate materials, finishes, fasteners, anchorages, and accessory items.
 - 2) Architectural Mesh Exterior Façade Panels:
 - a) Provide Shop Drawings for the architectural mesh exterior façade panels that furnish the following information:
 - (1) Mesh series and pattern name.
 - (2) Panel sizes.
 - (3) Panel thickness.
 - (4) Installation details.
 - (5) Provisions for reinforcement and anchoring.
 - b. Submit the ornamental metal Shop Drawings to the Program/Project Manager for approval.

D. Materials:

1. Aluminum:
 - a. Provide aluminum alloys and tempers recommended by the aluminum producer and finisher, and having strength and durability properties

not less than those of the alloys and tempers specified for the following items:

- 1) Extruded Bars and Shapes:
 - a) Provide extruded bars and shapes complying with the requirements for aluminum Alloy 6063-T5/T52 specified in ASTM B 221 (ASTM B 221M).
- 2) Plate and Sheet:
 - a) Provide Plate and Sheet complying with the requirements for aluminum Alloy 6061-T6 specified in ASTM B 209 (ASTM B 209M).
- 3) Die and Hand Forgings:
 - a) Provide die and hand forgings complying with the requirements for aluminum Alloy Alloy 6061-T6 specified in ASTM B 247 (ASTM B 247M).
- 4) Castings:
 - a) Provide castings complying with the requirements for aluminum Alloy A356.0-T6 specified in ASTM B 26/B 26M.
2. Copper Alloys:
 - a. For the following items, provide copper alloys complying with the requirements for the alloy specified for the item:
 - 1) Extruded Shapes:
 - a) Bronze:
 - (1) Provide extruded bronze shapes complying with the requirements for copper Alloy UNS No. C38500 (architectural bronze) specified in ASTM B 455.
 - b) Brass:
 - (1) Provide extruded brass shapes complying with the requirements for Alloy UNS No. C36000 (free-cutting brass) specified in ASTM B 249/B 249M.
 - c) Nickel Silver:
 - (1) Provide extruded nickel silver shapes complying with the requirements for Alloy UNS No. C79600 specified in ASTM B 249/B 249M.
 - 2) Castings:
 - a) Bronze:
 - (1) Provide bronze castings complying with the requirements for Alloy UNS No. C83600 (85-5-5-5 or No. 1 composition commercial red brass) specified in ASTM B 62, or complying with the requirements for Alloy UNS No. C86500 (No. 1 manganese bronze) specified in ASTM B 584.
 - b) Brass:
 - (1) Provide brass castings complying with the requirements for Alloy UNS No. C85200 (high-copper yellow brass) specified in ASTM B 584.

- c) Copper:
 - (1) Provide copper castings that contain at least 99.9 percent copper complying with the requirements specified in ASTM B 824.
 - d) Nickel Silver:
 - (1) Provide nickel silver castings complying with the requirements for Alloy UNS No. C97300 (12 percent leaded nickel silver) specified in ASTM B 584.
- 3) Plate, Sheet, Strip, and Bars:
 - a) Bronze:
 - (1) Provide bronze plate, sheet, strip, and bars complying with the requirements for Alloy UNS No. C28000 (muntz metal, 60 percent copper) specified in ASTM B 36/B 36M.
 - b) Brass:
 - (1) Provide brass plate, sheet, strip, and bars complying with the requirements for Alloy UNS No. C26000 (cartridge brass, 70 percent copper) specified in ASTM B 36/B 36M.
 - c) Copper:
 - (1) Provide copper plate, sheet, strip, and bars complying with the requirements for Alloy UNS No. C11000 (electrolytic tough pitch copper) or Alloy UNS No. C12200 (phosphorous deoxidized, high-residual phosphorous copper) specified in ASTM B 152/B 152M.
- 3. Stainless Steel:
 - a. For the following items, provide stainless steel complying with the requirements for the type or grade specified for the item:
 - 1) Tubing:
 - a) Provide stainless steel tubing complying with the requirements for Grade MT 316L stainless steel specified in ASTM A 554.
 - 2) Castings:
 - a) Provide stainless steel castings complying with the requirements for Grade CF 8M or CF 3M stainless steel specified in ASTM A 743/A 743M.
 - 3) Sheet, Strip, Plate, and Flat Bar:
 - a) Provide stainless steel sheet, strip, plate, and flat bar complying with the requirements for Type 316L stainless steel specified in ASTM A 666.
 - 4) Bars and Shapes:
 - a) Provide stainless steel bars and shapes complying with the requirements for Type 316L stainless steel specified in ASTM A 276.
 - 5) Wire Rope and Wire-Rope Fittings:
 - a) Provide stainless steel wire rope complying with the requirements for 7-by-19 wire rope made from wire complying

with the requirements for Type 316 stainless steel specified in ASTM A 492.

- b) Provide wire rope connectors of the types indicated in the Contract Documents, fabricated from stainless steel, and having the capability to sustain, without failure, a load equal to the minimum breaking strength of the wire rope with which they are used.
 - c) Manufacturers:
 - (1) The Cable Connection, <http://www.thecableconnection.com>.
 - (2) Carl Stahl DecorCable, Inc., <http://www.decorable.com>.
 - (3) Esmet, Inc., <http://www.esmet.com>.
 - (4) Feeney Wire Rope & Rigging, <http://www.feeneygateway.com/feeneywire.html>.
 - (5) Hayn Enterprises, LLC, <http://www.hayn.com>.
 - (6) Johnson, C. Sherman, Co., Inc., <http://www.csjohnson.com>.
 - (7) Loos & Co., Inc.; Cableware Division, <http://www.loosco.com>.
 - (8) Ronstan International Inc., <http://www.ronstan.com>.
 - (9) Secosouth, Inc., <http://www.secosouth.com>.
 - (10) Approved equal.
4. Iron and Steel:
- a. For the following items, provide iron and steel complying with the requirements specified for the item:
 - 1) Bars:
 - a) Provide hot-rolled, carbon steel bars complying with the requirements for Grade 1010 bars specified in ASTM A 29/A 29M.
 - 2) Plates, Shapes, and Bars:
 - a) Provide steel plates, shapes, and bars complying with the requirements specified in ASTM A 36/A 36M.
 - 3) Cast Iron:
 - a) Unless otherwise indicated in the Contract Documents, provide either gray iron complying with the requirements specified in ASTM A 48/A 48M, or malleable iron, complying with the requirements specified in ASTM A 47/A 47M.
 - 4) Steel Sheet:
 - a) Provide cold rolled steel sheet complying with the requirements for either commercial steel or structural steel, exposed, specified in ASTM A 1008/A 1008M.
5. Fasteners:
- a. Fastener Materials:

- 1) Unless otherwise indicated in the Contract Documents, provide fasteners for the following items fabricated from the materials specified:
 - a) Aluminum Items:
 - (1) For aluminum items, provide fasteners fabricated from stainless-steel.
 - b) Copper-Alloy Items:
 - (1) For copper-alloy items, provide fasteners fabricated from silicon bronze.
 - c) Stainless-Steel Items:
 - (1) For stainless steel items, provide fasteners fabricated from stainless-steel.
 - d) Steel Items:
 - (1) For steel items, provide plated steel fasteners having plating that complies with the requirements for the Class Fe/Zn 25 electrodeposited zinc coating specified in ASTM B 633 unless otherwise indicated in the Contract Documents.
 - e) Dissimilar Metals:
 - (1) For dissimilar metals, provide fasteners fabricated from stainless-steel.
- b. Exposed Fasteners:
 - 1) For exposed fasteners, provide tamper-resistant flat-head machine screws unless otherwise indicated in the Contract Documents.
- c. Post-Installed Anchors:
 - 1) Provide torque-controlled expansion type anchors or chemical type anchors.
 - 2) For interior locations, provide zinc plated carbon-steel components that have been plated with zinc in accordance with the requirements for Class Fe/Zn 5 specified in ASTM B 633 or ASTM F 1941 (ASTM F 1941M), unless otherwise indicated in the Contract Documents.
 - 3) For exterior locations and where stainless steel is indicated in the Contract Documents, provide stainless-steel bolts complying with the requirements for Alloy Group 1 (A1) specified in ASTM F 593 (ASTM F 783M), and provide stainless-steel nuts, complying with the requirements specified in ASTM F 594 (ASTM F 836M).

E. Product Types:

1. Ornamental Metal Grilles:

- a. Where indicated on the Contract Drawings, provide ornamental metal grilles fabricated from the materials specified herein.
- b. Fabricate ornamental grilles from perforated stainless-steel sheet or plate having the thickness, size, and pattern indicated on the Contract Drawings.

- 1) The Contract Drawings indicate the perforated metal patterns required based on products of one manufacturer.
- 2) Perforated metal patterns produced by other manufacturers may be considered, provided deviations are minor and do not change design concept as judged solely by Program/Project Manager.
- c. Manufacturers:
 - 1) Architectural Grille; Division of Giumenta Corporation, <http://www.archgrille.com>.
 - 2) Beaux-Artes, <http://www.beaux-artistes.com>.
 - 3) Harrington & King Perforating Company, Inc., <http://www.hkperf.com>.
 - 4) Reggio Register Company, Inc., <http://www.reggioregister.com>.
 - 5) Register & Grille Mfg. Co., Inc.
 - 6) Approved equal.
2. Ornamental Metal Clad Doors and Frames:
 - a. Where indicated on the Contract Drawings, provide ornamental metal clad doors and frames fabricated from the materials specified herein.
 - b. Laminate 0.0375 inch (0.95mm) thick stainless-steel sheets to the outside face of the hollow-metal doors and frames at the locations and in accordance with the details indicated on the Contract Drawings.
 - c. Provide the adhesive recommended by the metal fabricator that will fully bond metal to metal, and that will prevent telegraphing and oil canning.
 - d. Manufacturers:
 - 1) Dawson Metal Co., Inc., <http://www.dawsonmetal.com>.
 - 2) InKan Limited, <http://www.inkan.on.ca>.
 - 3) Krieger Specialty Products Company, <http://www.kriegerproducts.com>.
 - 4) Approved equal.
3. Combination Hall Push-Button Stations:
 - a. Provide combination hall push-button stations fabricated from stainless steel in accordance with the details indicated on the Contract Drawings.
 - b. Coordinate combination hall push-button stations with the requirements for the electric traction elevators to provide integrated, closely fitted assemblies.
 - 1) Fabricate faceplates from 1/8 inch (3.2mm) thick sheet having edges beveled at a 45-degree angle for one-half the thickness of metal.
 - 2) Provide combination hall push-button stations having a rectangular, split-bowl trash receptacle, designed for recess mounting in nominal 4 inch (100mm) wall depth.
 - 3) Provide combination hall push-button stations having emergency pictorial signs and text complying with requirements of the Authorities Having Jurisdiction, and indicating that in a fire

- emergency the elevators should not be used and that stairways should be used instead.
- a) Engrave the pictorial sign and text into the front surface of the faceplates to a depth of 1/16 inch (1.6 mm), and paint the engraving red.
 - 4) Provide cutouts in the faceplates for the push buttons of the elevator hall push-button station, card reader, and elevator key switches.
4. Exterior Façade Panels:
- a. Architectural Mesh Type I:
 - 1) Provide a woven stainless steel fabric system as shown on the Contract Drawings.
 - a) This is a performance specification.
 - b) The system specified has been carefully chosen due to its inherent performance characteristics.
 - c) A manufacturer is named to establish a reference for quality and appearance.
 - d) Lesser quality materials will not be considered or approved.
 - 2) Provide square architectural mesh panels in accordance with the approved Shop Drawings.
 - 3) Mesh:
 - a) Provide rigid stainless steel architectural mesh having open area over 64 percent of the surface, and weighing 2.03 pounds per square foot.
 - 4) Attachment System:
 - a) Provide a Type 316L stainless steel frame upon which the metal fabric is tack welded, and that has mitered corners that are welded and ground smooth for a polished finish.
 - b) Fabricate a compatible attachment system that satisfies the structural and performance requirements.
 - 5) Manufacturers:
 - a) Cambridge Architectural, Plait Mesh with the Angle Frame attachment system, www.cambridgearchitectural.com.
 - b) Approved equal.
 - b. Architectural Mesh Type II:
 - 1) Mesh:
 - a) Provide flexible Type 304L stainless steel architectural mesh having open area over 54 percent of the surface, and weighing 1.70 pounds per square foot.
 - b) Width:
 - (1) Provide an architectural mesh system no more than 240 inches wide.
 - c) Finish:
 - (1) Provide an architectural mesh system having a bright finish.

- 2) Attachment System:
 - a) Provide a Type 304L stainless steel tension system having custom cut apertures that receives the metal fabric ends in tubing that is integrated into a bracket and structural support design.
- 3) Manufacturers:
 - a) Cambridge Architectural, Stripe Mesh with the Eclipse attachment system, www.cambridgearchitectural.com.
 - b) Approved equal.
5. Ornamental Sheet Metal:
 - a. Provide ornamental sheet metal items complying with the requirements specified in Section 05580, Formed Metal Fabrications.

F. Fabrication:

1. Shop Fabrication:
 - a. Form decorative metal to the required shapes and sizes, true to line and level with true curves and accurate angles and surfaces.
 - 1) Finish exposed surfaces to smooth, sharp, well-defined lines and arris.
 - b. Mill joints to a tight, hairline fit.
 - 1) Cope or miter corner joints.
 - 2) Fabricate connections that will be exposed to the weather so water will be excluded.
 - c. Comply with the recommended practices for in shop welding and brazing specified in the American Welding Society (AWS) reference standards.
 - 1) Weld and braze behind finished surfaces without distorting or discoloring the exposed side.
 - a) Clean exposed welded and brazed joints of flux, and dress the exposed and contact surfaces.
 - 2) Where welding and brazing cannot be concealed behind finished surfaces, finish the joints in accordance with the requirements for Type 1 Welds (no evidence of a welded joint) specified in NAAMM/NOMMA 500.
 - d. Provide castings that are sound and free of warp, cracks, blowholes, and other defects that impair strength or appearance.
 - 1) Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks.

G. Finishes:

1. Primer Materials:
 - a. Etching Cleaner:
 - 1) For galvanized metal, provide etching cleaner complying with the requirements specified in MPI# 25.
 - b. Galvanizing Repair Paint:

- 1) For galvanizing repairs, provide high-zinc-dust-content paint complying with the requirements specified in SSPC-Paint 20, and that is compatible with the paints specified to be used over it.
- c. Lacquer:
 - 1) For copper alloys, provide clear, acrylic lacquer specially developed for coating copper-alloy products.
- d. Shop Primers:
 - 1) Provide shop primers that comply with the requirements specified in Section 09912, Painting, and Section 09960, High-Performance Coatings.
 - 2) Universal Shop Primer for Ferrous Metal:
 - a) For ferrous metal, provide fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with the requirements specified in MPI# 79, and that is compatible with the topcoat.
 - 3) Epoxy Zinc-Rich Primer:
 - a) Provide epoxy zinc-rich primer complying with the requirements specified in MPI# 20, and that is compatible with the topcoat.
 - 4) Shop Primer for Galvanized Steel:
 - a) For galvanized steel, provide [water-based galvanized metal shop primer complying with the requirements specified in MPI# 134.
- e. Bituminous Paint:
 - 1) Provide cold-applied asphalt emulsion complying with the requirements specified in ASTM D 1187.
2. Finish Materials:
 - a. Aluminum:
 - 1) Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes in DAF-45.
 - 2) Clear Anodic Finish:
 - a) Provide clear anodic finishes complying with the requirements for a AA-M12C22A41, Class I, 0.018mm or thicker finish specified in AAMA 611.
 - 3) Color Anodic Finish:
 - a) Provide color anodic finishes complying with the requirements for a AA-M12C22A42/A44, Class I, 0.018mm or thicker finish specified in AAMA 611, and having a champagne color.
 - 4) Baked-Enamel or Powder-Coat Finish:
 - a) Provide baked-enamel or powder-coat finishes complying with the requirements specified in AAMA 2603, except having a minimum dry film thickness of 1.5 mils (0.04mm).

- (1) Comply with the coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking the finish.
 - b) Color and Gloss:
 - (1) Provide color and gloss as selected by the Program/Project Manager from the manufacturer's full range.
- 5) Siliconized Polyester Finish:
 - a) Provide siliconized polyester finishes consisting of an epoxy primer and a silicone-modified, polyester-enamel topcoat having dry film thicknesses of not less than 0.2 mil (0.005mm) for the primer and not less than 0.8 mil (0.02mm) for the topcoat.
 - b) Color and Gloss:
 - (1) Provide color and gloss as selected by the Program/Project Manager from the manufacturer's full range.
- 6) High-Performance Organic Finish:
 - a) Provide high-performance organic finishes complying with the requirements for a two-coat fluoropolymer finish specified in AAMA 2605, and containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in the color coat.
 - (1) Prepare, pretreat, and apply the coating to exposed metal surfaces in accordance with the coating and resin manufacturers' written instructions.
 - b) Color and Gloss:
 - (1) Provide color and gloss as selected by the Program/Project Manager from the manufacturer's full range.
- 7) High-Performance Organic Finish:
 - a) Provide high-performance organic finishes complying with the requirements for a three-coat fluoropolymer finish specified in AAMA 2605, and containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both the color coat and the clear topcoat.
 - (1) Prepare, pretreat, and apply the coating to exposed metal surfaces in accordance with the coating and resin manufacturers' written instructions.
 - b) Color and Gloss:
 - (1) Provide color and gloss as selected by the Program/Project Manager from the manufacturer's full range.
- b. Copper-Alloy Finishes:

- 1) Finish designations prefixed by M conform to the system established by the National Association of Architectural Metal Manufacturers (NAAMM) and the National Ornamental and Miscellaneous Metals Association (NOMMA) for designating copper-alloy finish systems in NAAMM/NOMMA 500.
- 2) Buffed Finish:
 - a) Provide an M21 (smooth specular) finish.
- 3) Hand-Rubbed Finish:
 - a) Provide an M31-M34 (directionally textured, hand rubbed) finish.
- 4) Medium-Satin Finish:
 - a) Provide an M32 (directionally textured, medium satin) finish.
- 5) Fine-Matte Finish:
 - a) Provide an M42 (non-directional finish, fine matte) finish.
- 6) Buffed Finish, Lacquered:
 - a) Provide an M21-O6x (smooth specular; coating as specified) finish.
 - b) Coating:
 - (1) Provide a clear, organic lacquer designated for use on copper alloys.
- 7) Hand-Rubbed Finish, Lacquered:
 - a) Provide an M31-M34-O6x (directionally textured, hand rubbed; coating as specified) finish.
 - b) Coating:
 - (1) Provide a clear, organic lacquer designated for use on copper alloys.
- 8) Medium-Satin Finish, Lacquered:
 - a) Provide an M32-O6x (directionally textured, medium satin; coating as specified) finish.
 - b) Coating:
 - (1) Provide a clear, organic lacquer designated for use on copper alloys.
- 9) Fine-Matte Finish, Lacquered:
 - a) Provide an M42-O6x (non-directional finish, fine matte; coating as specified) finish.
 - b) Coating:
 - (1) Provide a clear, organic lacquer designated for use on copper alloys.
- 10) Statuary Conversion Coating over Satin Finish:
 - a) Provide an M31-C55 (directionally textured, fine satin; conversion coating, sulfide), having the color matching the Program/Project Manager's Sample finish.
- 11) Patina Conversion Coating:

- a) Provide an M36-C12-C52 (directionally textured, uniform; conversion coating, ammonium sulfate), having the color matching the Program/Project Manager's Sample finish.
- 12) Statuary Conversion Coating, Bright Relieved and Lacquered:
 - a) Provide an M12-C55-M2x-O6x (matte finish, as cast; conversion coating, sulfide; buffed; coating as specified), having the color matching the Program/Project Manager's Sample finish.
 - b) Coating:
 - (1) Provide a clear, organic lacquer designated for use on copper alloys.
- 13) Blackened, Bright Relieved, and Lacquered:
 - a) Provide an M33-O60-M2x-O6x (directionally textured, coarse satin; black, air drying coating; buffed; coating as specified), having blackening and buffing matching the Program/Project Manager's Sample finish.
 - b) Coating:
 - (1) Provide a clear, organic lacquer designated for use on copper alloys.
- c. Stainless-Steel Finishes:
 - 1) Bright, Cold-Rolled, Unpolished Finish:
 - a) Provide a No. 2B finish.
 - 2) Directional Satin Finish:
 - a) Provide a No. 4 finish.
 - 3) Dull Satin Finish:
 - a) Provide a No. 6 finish.
 - 4) Reflective, Directional Polish:
 - a) Provide a No. 7 finish.
 - 5) Mirror-Like Reflective, Non-Directional Polish:
 - a) Provide a No. 8 finish.
- d. Steel and Iron Finishes:
 - 1) Galvanizing:
 - a) Hot-dip galvanize the products fabricated from rolled, pressed, and forged steel shapes, castings, plates, bars, and strips and that are indicated to be galvanized in the Contract Documents in accordance with the requirements specified in ASTM A 123/A 123M.
 - b) Hot-dip galvanize steel and iron hardware indicated to be galvanized in the Contract Documents in accordance with the requirements specified in ASTM A 153/A 153M.
 - 2) Powder-Coat Finish:
 - a) For ferrous metal indicated to get a powder-coat finish in the Contract Documents, prepare, treat, and coat the metal in accordance with the resin manufacturer's written instructions and as follows:

- (1) Prepare the uncoated ferrous-metal surfaces in accordance with the requirements specified in SSPC-SP 6/NACE No. 3.
 - (2) Prepare galvanized metal by thoroughly removing grease, dirt, oil, flux, and other foreign matter.
 - (3) Treat the prepared metal with a metallic-phosphate pretreatment, then rinse and seal the surfaces.
 - (4) Apply the thermosetting polyester or acrylic urethane powder coating so that the cured-film thickness is not less than 1.5 mils (0.04mm).
 - b) Color:
 - (1) Provide the color as selected by the Program/Project Manager from the manufacturer's full range.
3. Shop Finishing Methods:
 - a. Follow the recommendations for applying and designating finishes furnished in NAAMM/NOMMA 500.
 - b. Iron and Steel:
 - 1) Preparing Galvanized Items for Shop Priming:
 - a) After galvanizing, thoroughly clean the ornamental metal of grease, dirt, oil, flux, and other foreign matter; and treat the ornamental metal with etching cleaner.
 - 2) Preparing Non-galvanized Items for Shop Priming:
 - a) Prepare uncoated ferrous-metal surfaces in accordance with the requirements specified in SSPC-SP 6/NACE No. 3.
 - 3) Primer Application:
 - a) Unless otherwise indicated in the Contract Documents, apply shop primer to the prepared surfaces of the items.
 - (1) The primer does not have to be applied to surfaces that will be embedded in concrete or masonry.
 - b) Shop prime uncoated ferrous-metal surfaces with the primers specified in Section 09912, Painting and Section 09960, High-Performance Coatings unless zinc-rich primer is indicated.
 - c) Do not apply primer to galvanized surfaces.

2.02 ACCESSORIES

A. Welding Rods and Bare Electrodes:

1. Provide welding rods and bare electrodes selected in accordance with the requirements specified in the American Welding Society (AWS) welding specifications for the metal alloy welded.
2. For aluminum, provide welding rods and bare electrodes of the type and alloy recommended by the producer of the metal to be welded as required to produce a color match, the strength, and the compatibility required in the fabricated items.

B. Brazing Rods:

1. For copper alloys, provide brazing rods of the type and alloy recommended by the producer of the metal to be welded as required to produce a color match, the strength, and the compatibility required in the fabricated items.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Verify the dimensions, tolerances, and method of attachment with the other Work onsite.
- B. Evaluation and Assessment:
 1. Do not begin to install ornamental metal until the openings and substrates have been properly prepared to receive the products provided under this Section.
 2. If the substrate preparation is the responsibility of another installer, notify the Program/Project Manager of unsatisfactory preparation before proceeding.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the ornamental metal.
- B. Surface Preparation:
 1. Clean substrate surfaces thoroughly prior to installing the ornamental metal.
 2. Prepare the substrate surfaces using the methods recommended by the ornamental metal manufacturer for achieving the best result for the substrate under the Contract conditions.
- C. Demolition/Removal:
 1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Where needed to secure the ornamental metal to in-place construction, provide anchorage devices and fasteners acceptable to the ornamental metal manufacturer.
- B. Anchor supports securely in the location, and to the alignment and elevation, measured from established lines and levels with allowance for necessary thermal movement and structural support.

- C. Erect metalwork square, plumb, straight, and true.
 - 1. Do not install component parts that are observed to be defective, including warped, bowed, dented, abraded and broken members.
- D. Fit exposed connections accurately together to form tight, hairline joints; or, where indicated, uniform reveals and spaces for sealants and joint fillers.
- E. Do not cut or abrade finishes that cannot be completely restored in the field.
 - 1. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.
- F. Install concealed gaskets, joint fillers, insulation, and flashings as the ornamental metal Work progresses.
- G. Exterior Façade Panels:
 - 1. During installation of the exterior façade panels, furnish onsite engineering assistance by the Contractor's Professional Engineer.
 - 2. Install exterior façade panels in accordance with the exterior façade panel manufacturer's installation instructions.
 - a. Submit the exterior façade panel manufacturer's written installation instructions to the program/Project Manager for information.
 - 3. Separate dissimilar metals, and provide gasketed fasteners, isolation shims, or isolation tape where needed to eliminate the possibility of corrosive electrolytic action between metals.
- H. Special Techniques:
 - 1. Corrosion Protection:
 - a. Coat the concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

3.04 REPAIR/RESTORATION

- A. Touch-up, repair, or replace damaged products before Substantial Completion.

3.05 CLEANING

- A. Clean the exposed surfaces in accordance with the manufacturer's cleaning instructions.
 - 1. Unless otherwise indicated in the manufacturer's instructions, clean the metals by washing them thoroughly with clean water and soap, rinsing with clean water, and drying with soft cloths.
 - 2. Submit the manufacturer's written cleaning instructions to the Program/Project Manager for information

- B. Remove protective coverings from the ornamental metal only when there is no possibility of damage from other work.
 - 1. If the strippable film and other protective coverings have not been removed by the time of Substantial Completion, remove them then.
- A. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 PROTECTION

- A. Restore protective coverings on the ornamental metal that have been damaged during shipment or installation.
- B. Protect installed ornamental metal products until the Work of the Contract is completed.

SECTION 05810

EXPANSION JOINT COVER ASSEMBLIES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for expansion joint cover assemblies, including for the following applications:
 - a. Floor expansion joint cover assemblies.
 - b. Wall and ceiling expansion joint cover assemblies.
 - c. Exterior expansion joint seals.
 - d. Roof expansion joint assemblies.
 - e. Fire barrier systems.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01732 - Cutting and Patching.
 - 4. Section 09961 - Fluoropolymer Coatings.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. EIFS: An acronym for exterior insulation and finish systems.
 - 2. FRT: Fire or Flame Retardant Treated.
 - 3. PVC: Polyvinyl-chloride.
 - 4. UV: Ultraviolet.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
- C. Reference Standards:
 - 1. Aluminum Association (AA):
 - a. AA DAF-45 – Designation System for Aluminum Finishes.
 - 2. ASTM International (ASTM):
 - a. ASTM B 209 – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
 - b. ASTM B 221 – Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
 - c. ASTM D 412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers-Tension.

- d. ASTM D 518 - Standard Test Method for Rubber Deterioration – Surface Cracking.
- e. ASTM D 2000 – Standard Classification System for Rubber Products in Automotive Applications.
- f. ASTM E 119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
- g. ASTM E 283 - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Curtain Walls and Doors Under Specified Pressure Differences Across the Specimen.
- h. ASTM E 1399 - Standard Test Method for Cyclic Movement and Measuring the Minimum and Maximum Joint Widths of Architectural Joint Systems.
- i. ASTM E 1966 - Standard Test Method for Fire-Resistive Joint Systems.
- 3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
- 5. National Association of Architectural Metal Manufacturers (NAAMM):
 - a. Architectural Metal Products Division (AMP):
 - 1) NAAMM AMP 500 – Metal Finishes Manual for Architectural and Metal Products.
- 6. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code® (NEC).
 - b. NFPA 251 - Standard Methods of Tests of Fire Resistance of Building Construction and Materials.
- 7. Underwriters Laboratories, Inc. (UL):
 - a. ANSI/UL 263 - Standard for Fire Tests of Building Construction and Materials.
 - b. ANSI/UL 2079 - Standard for Tests for Fire Resistance of Building Joint Systems.
 - c. UL Online Certifications Directory,
<http://www.ul.com/regulators/quickguide.html>.
 - d. [UL Qualification Tests and Follow-Up Service Requirements](#).
- 8. United States Government:
 - a. Americans with Disabilities Act Accessibility Guidelines (ADAAG) for Buildings and Facilities [Federal Register Volume 56 Number 144 (1991)], <http://www.access-board.gov/adaag/html/adaag.htm>.
 - b. Department of Justice:
 - 1) 28 CFR 36 – Nondiscrimination on the Basis of Disability by Public Accommodations and in Commercial Facilities.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the compatibility of the expansion joint cover assemblies specified in this Section with the expansion joint cover assemblies specified in other Sections.
 2. Coordinate blockout dimensions with the expansion joint manufacturer.
 3. Coordinate and furnish anchorages, setting drawings, templates, and instructions for installation of expansion joint cover assemblies to be embedded in or anchored to concrete, or to have recesses formed into edges of concrete slabs, for later placement and grouting-in of frames.
 - a. Provide the templates required to the related trade for locating support and anchorage items.
- B. Sequencing:
1. Sequence the Work of this Section with the work of related trades, particularly the installation of items embedded in concrete and masonry, so job progress is not delayed.
- C. Scheduling:
1. Coordinate the fabrication schedule for the expansion joint cover assemblies with actual construction progress to avoid delaying the Work.

1.04 SUBMITTALS

- A. Action Submittals:
1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Interior flush aluminum interior wall and ceiling seismic cover assemblies.
 - 2) Interior aluminum heavy duty seismic floor cover assemblies.
 - 3) Interior aluminum recessed pan interior seismic floor cover assemblies.
 - 4) Interior flush lightweight composite wall and ceiling seismic cover assemblies.
 - 5) Interior flush floor expansion joint covers.
 - 6) Exterior vertical exterior seals.
 - 7) Exterior vertical and horizontal exterior seals.
 - 8) Exterior pre-compressed sealant expansion joint covers.
 - 9) Metal roof covers.
 - 10) Split slab expansion joints.
 - 11) Fire barrier systems for floor or wall joints.
 - 12) Fire barrier systems for parking deck.
 - b. Shop Drawings:
 - 1) Fabrication and installation of the expansion joint cover assemblies.
 - 2) Template drawings.

- c. Samples:
 - 1) Samples of the expansion joint cover assemblies.
 - d. Certificates:
 - 1) Evidence of fire barrier systems Listing and Labeling.
- B. Informational Submittals:
- 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Expansion joint cover assembly manufacturer's instructions and recommendations for preparing substrates.
 - 2) Expansion joint cover assembly manufacturer's installation instructions.
 - 3) Preformed seal manufacturer's recommendations and instructions for installing the preformed seal.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
- 1. Phoenix Building Construction Code:
 - a. Obtain approval of the Work of this Section from the Authorities Having Jurisdiction (AHJ) in accordance with requirements of the Phoenix Building Construction Code and Amendments.
- B. Certifications:
- 1. Fire Barrier Systems Certifications:
 - a. Provide fire barrier systems complying with the appropriate Underwriters Laboratory, Inc. Qualification Tests and Follow-Up Service Requirements.
 - b. Listing and Labeling:
 - 1) Provide fire barrier systems that are listed and labeled as defined in Article 100 of NFPA 70 by Underwriters Laboratory, Inc. for the location the product is installed in, and the application intended.
 - a) Provide products marked with their intended use or classification.
 - b) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - (1) Such evidence may consist of either a printed mark on the data or a separate listing card.
- C. Site Samples:
- 1. For initial selection purposes, submit Samples of the expansion joint cover assemblies in the form of the manufacturer's color charts, and actual units

or sections of units, showing the full range of colors, textures, and patterns available for each exposed metal and elastomeric material of the expansion joint cover assemblies indicated to the Program/Project Manager.

- a. Furnish Samples for each type of flexible seal to be used in the Work with color samples.
- b. Install elastomeric material for the joint's Samples to verify the color selected.
- c. Furnish Samples for each indicated type of metal finish on metal of the same thickness and alloy to be used in work.
 - 1) Where normal color and texture variations are to be expected, include 2 or more units in each set of Samples showing the limits of such variations.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver materials to the Site ready for use.
 2. Remove materials that are damaged or otherwise unsuitable for installation from the Site, and replace the unsuitable materials with acceptable materials at no increase in Contract Price.
- B. Storage and Handling Requirements:
 1. Store materials under cover in a dry and clean location off the ground.
 2. Exercise proper care when handling the materials so the finished surfaces are not damaged.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 EXPANSION JOINT COVER ASSEMBLIES

- A. Manufacturers:
 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified and approval by the Program/Project Manager, products from other manufacturers may be provided.
 - b. Single-Source Responsibility:
 - 1) Obtain the expansion joint cover assemblies specified in this Section from one source and from a single manufacturer.

B. Description:

1. Regulatory Requirements:

a. Phoenix Building Construction Code:

- 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- 2) Provide materials and work conforming to all applicable codes and the requirements of the local Authorities Having Jurisdiction.

b. Americans with Disabilities Act (ADA):

- 1) Provide expansion joint systems complying with the requirements specified in the Americans with Disabilities Act (ADA) guidelines.

C. Performance:

1. Fire-Rated Joint Covers:

- a. At locations indicated on the Contract Drawings, provide expansion joint cover assemblies having the manufacturer's continuous, standard, flexible fire barrier seals under the covers to provide fire-resistive rating not less than the fire rating of the adjacent construction.
- b. Fire-Test-Response Characteristics:
 - 1) Where indicated, provide expansion joint cover assemblies identical to those assemblies whose fire resistance has been determined by a Testing and Inspecting Agency acceptable to the Authorities Having Jurisdiction and in accordance with the requirements specified in ANSI/UL 263, NFPA 251, or ASTM E 119, including a hose stream test of vertical wall assemblies; and with the requirements specified in ANSI/UL 2079.
 - 2) Fire-Resistance Ratings:
 - a) Provide expansion joint cover assemblies having fire-resistance ratings as indicated in the Contract Documents, but not less than the rating of adjacent construction.

2. Allowable Loading Criteria:

a. Live Load:

- 1) Provide an expansion joint system capable of withstanding a distributed live load of 200 pounds per square foot.
- 2) Provide an expansion joint system capable of withstanding a single axle load of 1440 pounds applied by airport courtesy carriages.

b. Floor Cover Loading Characteristics:

- 1) Provide heavy-duty covers capable of withstanding a point load of 2,000 pounds.

3. Joint Movement:

- a. Provide an expansion joint system capable of withstanding movement of plus or minus 50 percent of the joint width without system

separations or failure, and without considerable change to the system's walking surface that might contribute to a trip hazard.

D. Design Criteria:

1. The expansion joint cover assemblies indicated in the Contract Drawings are based on expansion covers manufactured by Construction Specialties, Inc.
2. Provide expansion joint cover assemblies having the design, basic profile, materials, and operation indicated in the Contract Drawings.
 - a. Select units comparable to those indicated or required to accommodate the joint size, variations in adjacent surfaces, and dynamic structural movement without material degradation or fatigue when tested in accordance with the requirements specified in ASTM E 1399.
 - 1) Provide an expansion joint system weighing a minimum of 6 pounds per lineal foot.
 - b. Engineer the aluminum floor plates and their supporting tubes so they are capable of supporting the loading from courtesy vehicles without cracking adjacent porcelain tiles.
 - 1) Provide supporting tubes that are a minimum of 6 inches apart on center and the aluminum plate that is at least 1/4 inch thick.
 - 2) Size tubes and lower plates to accept 3/8-inch porcelain tile and 1/4-inch thinset mortar flush with the top of the expansion joint.
 - c. Provide factory welded corners where joints change direction or abut other materials.
 - d. Include closure materials and transition pieces, tee-joints, corners, curbs, cross-connections and other accessories as required to provide continuous joint cover assemblies.
 - 1) Nosing Trim:
 - a) Provide single exposed aluminum nosing trim not exceeding 3/4 inch in width, and that is easily replaceable.
 - e. For floor assemblies, provide expansion joint cover assemblies having their upper and lower aluminum components attached by threaded fasteners.
 - 1) Aluminum components that are *snap* together are unacceptable due to live load considerations.
3. Product Data:
 - a. Prepare Product Data for each type of expansion joint cover assembly and accessory specified.
 - 1) Indicate the movement capability of the cover assemblies, and the suitability of the material used in exterior seas for exposure to Ultraviolet (UV) radiation.
 - 2) Include the manufacturer's product specifications, installation instructions, details of construction relative to materials, dimensions of individual components, profiles, and finishes.

- b. Submit the Product Data to the Program/Project Manager for approval.
- 4. Shop Drawings:
 - a. Prepare Shop Drawings for the Work specified herein showing the full extent of the expansion joint cover assemblies.
 - 1) Show the fabrication and installation of the expansion joint cover assemblies, including plans, elevations, sections, details of components, joints, splices, and attachments to other units of Work.
 - a) Furnish large-scale details indicating the profiles of each type of expansion joint cover assembly, splice joints between sections, joinery with other types, special end conditions, the anchorage's, fasteners, and the relationship to adjoining work and finishes. Shop drawing details shall indicate standard flashing components and be a complete expansion joint cover assembly system to ensure that transitions are watertight.
 - b) Furnish a description of the materials and finishes, and installation instructions.
 - c) Include details of splices, intersections, transitions, fittings, method of field assembly, and location and size of each field splice.
 - d) Provide isometric drawings of intersections, terminations, and changes in joint direction or planes, depicting how components interconnect with each other and adjacent construction, specific to this project, to allow movement and achieve waterproof continuity.
 - 2) Template Drawings:
 - a) Furnish typical expansion joint cross-sections indicating pertinent dimensions, general construction, component connections, anchorage methods, and hardware locations.
 - b. Submit the Shop Drawings to the Program/Project Manager for approval.
- 5. Coordination: Coordinate installation of exterior and interior wall and soffit expansion control systems with roof expansion control systems to ensure that wall transitions are watertight.

E. Materials:

- 1. Aluminum:
 - a. For extrusions, provide aluminum complying with the requirements for Alloy 6063-T5 specified in ASTM B 221.
 - 1) Provide aluminum extrusions in lengths of at least 10 feet.
 - b. For sheet and plate, provide aluminum complying with the requirements for Alloy 6061-T6 specified in ASTM B 209.
- 2. Exterior Seals:
 - a. Provide exterior seals consisting of 2 single layered flexible extrusions, one interior polyvinyl-chloride (PVC) extrusion and one

exterior non-hydroscopic thermoplastic rubber extrusion classified as indicated in ASTM D 2000, retained in a set of compatible frames.

- 1) Provide Santoprene™ 8000 series thermoplastic rubber manufactured by ExxonMobil Chemicals.
- b. Provide exterior seals of the color indicated in the Contract Drawings, or if not indicated, as selected by the Program/Project Manager from the manufacturer's standard colors.
3. Fire Barriers:
 - a. Provide fire barriers designed for the indicated or required dynamic structural movement without material degradation or fatigue when tested according to ASTM E 1399 or ASTM E 1966.
 - b. Employ a nationally recognized Testing and Inspecting Agency acceptable to Authorities Having Jurisdiction to test the fire barriers in the maximum joint width condition with a field splice as a component of an expansion joint cover in accordance with the requirements specified in ANSI/UL 263, NFPA 251, or ASTM E 119, and ANSI/UL 2079, including the hose stream test of vertical wall assemblies for the full-rated period.
4. Leaf Springs:
 - a. Provide leaf springs fabricated from flexible tempered SAE stainless steel secured to an aluminum retainer by a snap-lock fit.
 - 1) Mechanical attachments, or rotation of the spring element, at this point are unacceptable.
 - b. Provide leaf springs in lengths of at least 10 feet.
5. Moisture Barrier:
 - a. Provide moisture barrier fabricated from flame retardant, extruded polyvinyl-chloride (PVC) complying with the requirements specified in ASTM D 412, and having a Durometer hardness of 60, plus 1, minus 5.
 - b. Supply moisture barrier in the longest continuous piece practical to keep the number of field splices to a minimum.
 - c. Provide Gutter profile moisture barrier fabricated from flexible fabric reinforced neoprene gutter that satisfies the required movement criteria and compresses without damage during the full cycle of joint closure. The moisture barrier shall have +/- 100% versatile movement capability, a minimum fabric type of 4 ounce polyester cloth, Hardness Shore A of 70 +/- 5, 1,000 psi tensile strength, and 250% elongation.
6. Hardware and Fasteners:
 - a. Provide zinc plated hardware and fasteners of the size and length indicated on the Contract Drawings.
 - b. Provide fasteners of a metal, type, and size suiting the type of construction indicated in the Contract Documents, and capable of securely attaching the expansion joint cover assemblies to the in-place construction.

- 1) For masonry and concrete where anchoring members are not embedded in concrete, provide drilled-in fasteners having threaded fasteners.
7. Anchors:
 - a. Provide anchors having a diameter of at least 3/8 inch.
- F. Product Types:
 1. Interior Seismic Joint Covers:
 - a. Flush Aluminum Interior Wall and Ceiling Seismic Cover Assemblies:
 - 1) Provide a continuous extruded aluminum frame assembly having a profile designed to accommodate a colorable thermoplastic seal having rigid edges designed for positive attachment to the aluminum frame.
 - a) Provide flexible core seals having a shore hardness of 73 and that allow a maximum movement of 1 inch without allowing gaps to occur between the seal and its cover assembly.
 - (1) Unless otherwise specified, provide thermoplastic seals having one of the manufacturer's standard colors.
 - b) Provide continuous aluminum frames designed to be surface mounted and spackled into drywall.
 - 2) Provide flush seismic cover assemblies free from grooves or ridges
 - 3) For wall seals, provide a flexible base closure where required.
 - 4) Manufacturers:
 - a) Construction Specialties, Inc. (C/S), www.c-sgroup.com.
 - (1) Flexible Wall Seal: Model FWFC-M-400.
 - (2) Flexible Ceiling Seal: Seismic Series Model FCF-400.
 - b) Approved equal.
 - b. Aluminum Heavy Duty Seismic Floor Cover Assemblies:
 - 1) Provide a continuous extruded aluminum frame assembly having a profile designed to accommodate a free floating aluminum center plate as indicated in the Contract Drawings.
 - a) Protect aluminum surfaces in contact with concrete by applying a heavy metal free high solids primer.
 - b) Provide aluminum having a mill finish.
 - 2) To center and hold the center plate in place, provide stainless steel turn bar assemblies spaced no more than 24 inches apart on center.
 - 3) Heavy Duty Floor Cover:
 - a) On each side of the joint, provide a continuous heavy duty two-piece frame designed to support minimum 1/4-inch thick center plate capable of supporting a 2000-pound point load without damage or permanent deformation.
 - 4) Manufacturers:
 - a) Construction Specialties, Inc. (C/S), www.c-sgroup.com.

- (1) Heavy Duty Seismic Floor Cover Assemblies: Seismic Series Model SJ-500HD.
 - b) Approved equal.
- c. Aluminum Recessed Pan Interior Seismic Floor Cover Assemblies:
 - 1) Provide a continuous extruded aluminum frame assembly having a profile designed to accommodate a free floating center plate as indicated in the Contract Drawings.
 - a) Protect aluminum surfaces in contact with concrete by applying a heavy metal free high solids primer.
 - 2) Provide covers that allow thermal movement of plus or minus 1/2, inch, and horizontal movement during a seismic event of plus or minus 50 percent of the joint width.
 - 3) To center and hold the center palate in place, provide spring-loaded stainless steel turn bar assemblies spaced no more than 18 inches apart on center.
 - 4) To allow full seismic movement without damage to the cover, provide a concealed lifting device for the center plate.
 - a) Provide a cover designed to disengage under seismic conditions only.
 - 5) Concealed Stone Flush Floor Cover:
 - a) Provide a continuous frame on each side of the joint supporting a center pan designed to receive stone paver or concrete fill.
 - 6) Manufacturers:
 - a) Construction Specialties, Inc. (C/S), www.c-sgroup.com.
 - (1) Heavy Duty Floor Cover: Seismic Series Model SSR-400.
 - b) Approved equal.
 - d. Flush Composite Wall and Ceiling Seismic Cover Assemblies:
 - 1) Provide a continuous extruded aluminum frame assembly having a profile designed to accommodate a free floating composite panel as indicated in the Contract Drawings.
 - 2) To hold the composite panels in place, provide a hook and loop attachments spaced no more than 18 inches apart on center, and a secondary support system comprised of pre-tensioned shock cords installed directly behind the panel and attached with removable "S" hooks.
 - 3) Flush Wall/Ceiling Cover:
 - a) Provide a continuous frame on each side of the joint supporting a lightweight composite panel cover, and designed to finish flush with the adjacent wall or ceiling surface.
 - b) Provide cover assemblies that allow movement up to 100 percent of the joint width.
 - c) Factory-prime and field paint the panel, or cover the panel with field-applied wall covering.
 - 4) Manufacturers:

- a) Construction Specialties, Inc. (C/S), www.c-sgroup.com.
 - (1) Flush Composite Wall/Ceiling Covers: Model LAF-400.
 - b) Approved equal.
- e. Flush Floor Expansion Joint Covers:
 - 1) Provide flush floor expansion joint covers capable of supporting a 2000-pound point load without damage or permanent deformation, and having a continuous heavy duty frame on each side of the joint that are designed to support a cover plate that is at least 1/4 inch thick, and that are centered throughout the movement cycle by stainless steel spring clips 18 inches apart on center.
 - 2) Finish:
 - a) Provide flush floor expansion joint covers having a mill finish.
 - 1) Manufacturers:
 - a) Construction Specialties, Inc. (C/S), www.c-sgroup.com.
 - (1) Flush Floor Expansion Joint Covers: Model GFP-400.
 - b) Approved equal.
- 2. Exterior Expansion Joint Covers:
 - a. Vertical Exterior Seals:
 - 1) Provide extruded aluminum side frames that retain extruded Santoprene™ thermoplastic rubber primary seals, and complete with an independent and continuous polyvinyl-chloride (PVC) back seal.
 - a) Mount the side frames on butyl caulk tape using appropriate anchors spaced 18 inches apart on center.
 - b) Provide the primary seal with multi movement grooves designed to remain in place throughout movement of the joint up to 100 percent of the joint width.
 - (1) Provide thermoplastic seals having one of the manufacturer's standard colors or a custom color selected by the Program/Project Manager.
 - c) Ensure a watertight system by providing factory heat welded transitions where applicable.
 - 2) At the base of vertical joints, provide material for field-formed flexible base closures.
 - 3) Manufacturers:
 - a) Construction Specialties, Inc. (C/S), www.c-sgroup.com.
 - (1) Vertical Exterior Seals: Model SF-400.
 - b) Approved equal.
 - b. Vertical and Horizontal Exterior Seals:
 - 1) For precast to precast; precast to exterior insulation and finish systems (EIFS); and EIFS to EIFS, vertical or horizontal as indicated; provide a beige extruded aluminum primary visual seal and a continuous extruded polyvinyl-chloride (PVC) secondary moisture seal.

- 2) Provide factory-fabricated 90-degree mitres and custom angles as required.
- 3) Manufacturers:
 - a) Construction Specialties, Inc. (C/S), www.c-sgroup.com.
 - (1) Vertical and Horizontal Exterior Seals: Model SF-600, SF-700 or SF-800.
 - b) Approved equal.
- c. Pre-Compressed Sealant Expansion Joint Covers:
 - 1) For vertical applications where the attachment of metal frames is undesirable or impractical, provide pre-compressed sealant expansion joint covers consisting of open micro-cell polyurethane foam impregnated with a hydrophobic, polymer sealing compound, and having a factory-applied colored elastomeric silicon face to produce a watertight, dustproof, airtight, UV stable, chemically resistant, sound-proof, and insulated primary seal when measured in accordance with the requirements specified in ASTM D 518 and ASTM E 283.
 - 2) Provide a continuous silicon sealant bead that is at least 1/4 inch wide at the joint edges.
 - 3) Manufacturers:
 - a) Construction Specialties, Inc. (C/S), www.c-sgroup.com.
 - (1) Connector Walkways Next to Existing Structures: Models VF-400, VF-600.
 - (2) Deflection Joints: Model VF-100, VF-200, VF-300, VF-400, VF-600, VF-800.
 - b) Emseal Joint Systems, Ltd, www.emseal.com.
 - (1) Vertical Exterior Joints: Colorseal
 - (2) Deck Joints: Horizontal Colorseal
 - (3) Seismic and High Movement Joints: Seismic Colorseal
 - c) Approved equal.
3. Roof Covers:
 - a. Metal Roof Covers:
 - 1) Provide continuous extruded aluminum base frame sections having a continuous extruded polyvinyl-chloride (PVC) sealing gasket, and seated on a continuous 1/16-inch thick neoprene or polyethylene vapor barrier.
 - a) Fasten the base frame sections to the roof curb at locations 24 inches apart on center.
 - b) To cover the adjacent edge of the roof membrane, incorporate an adjustable angle flange into the base frames that is designed to be folded onsite.
 - c) Hold roof to roof and roof to wall aluminum covers in place using stainless steel turn bar assemblies located 24 inches apart on center.

- 2) Provide an aluminum cover formed from aluminum sheet at least 0.078-inch thick and finished with a fluoropolymer coating, complying with the requirements specified in Section 09961, Fluoropolymer Coatings, matching the adjacent wall panels.
- 3) Flash and/or cap all ends.
 - a) To ensure maximum weather tightness, factory-fabricate transitions and end caps.
- 4) Seal butt joints with an aluminum splice cover bedded on caulk and fastened on one side only.
- 5) Manufacturers:
 - a) Construction Specialties, Inc. (C/S), www.c-sgroup.com.
 - (1) Metal Roof to Wall Covers: Models SRJW-600 and SRJW-800.
 - (2) Roof to Roof (Floor to Floor) Covers: Model SRJ-1200 with a custom fire or flame retardant treated (FRT) wood blocking moisture barrier and a 16-inch wide neoprene vapor barrier.
 - (3) Roof to Wall Covers (at train column shafts): Model BRJW-600 having a secondary moisture seal.
 - b) Approved equal.
4. Heavy Duty Split Slab Expansion Joints:
 - a. Provide split slab expansion joints and covers consisting of continuous Santoprene® membrane seal elements having continuous metal wings tied into the membrane on each side of the joint, and that are mechanically attached to the floor structure on each side of the joint.
 - b. Provide stainless steel or aluminum capping for the wings.
 - c. Manufacturers:
 - 1) Construction Specialties, Inc. (C/S), www.c-sgroup.com.
 - a) Guideway Seal Covers: Model PDA 400X9.
 - 2) Approved equal.
5. Fire Barrier Systems:
 - a. Unless otherwise detailed, provide prefabricated fire barrier assemblies complying with the requirements specified in ASTM E 1966, and certified to have a 2-hour rating when tested in accordance with ANSI/UL 2079.
 - b. For floor and wall expansion joints having nominal joint widths from 1 inch to 20 inches and requiring plus or minus 50 percent movement, in tension, compression and lateral shear, provide pre-engineered floor or wall fire barrier systems consisting of ceramic blankets, ceramic papers, stainless foil, and screens.
 - c. For parking deck expansion joints having nominal joint widths up to 14 inches, provide fire barrier systems consisting of intumescent blankets layered to provide a flame and insulation barrier, and to accommodate the specified dynamic movement.

- d. To minimize field splicing, provide components of the longest lengths practical.
 - e. Manufacturers:
 - 1) Construction Specialties, Inc. (C/S), www.c-sgroup.com.
 - a) Fire Barrier Systems for Floor or Wall Joints: Models MFX-4F, MFX-4W, and MFX-5F.
 - b) Fire Barrier Systems for Parking Decks: Model FB-97.
 - 2) Approved equal.
- G. Fabrication:
- 1. Fabricate expansion joint cover assemblies in sections and assemblies as large as practical.
 - a. Furnish units in the longest practicable lengths to minimize the number of end joints and minimize field splicing.
 - 2. Factory fabricate 90-degree mitres and custom angles as required.
 - a. Factory-weld or mechanically fasten mitred corners.
 - b. Mitre and weld floor gaskets with a color to match the gasket color.
 - 3. Except in component pieces to receive the threaded end of self-tapping fasteners, pre-drill anchoring and assembly holes in the factory.
- H. Finishes:
- 1. Metal Finishes
 - a. Except as otherwise indicated in the Contract Documents, comply with the requirements regarding finish designations and application recommendations specified in NAAMM AMP 500.
 - 1) Apply finishes in the factory after the products are fabricated.
 - 2) Protect finishes on exposed surfaces with protective covering before shipment.
 - b. Aluminum Finishes
 - 1) Finish designations prefixed by AA refer to finishes defined by the system for designating aluminum finishes established by the Aluminum Association and specified in AA DAF-45.
 - 2) Protect aluminum surfaces in contact with cementitious materials by applying a heavy metal free high solids primer or a chromate conversion coating.
 - 3) Mill Finish:
 - a) Where a mill finish is specified, provide an AA-M10 (unspecified mill finish) finish.
 - 4) Clear Anodize Finish, Class II:
 - a) Where a Class II Clear Anodize Finish is specified, provide an AA-C22A31 finish having a medium matte etched finish with at least a 0.4-mil thick anodic coating.
 - 5) Paint Finish:
 - a) Paint aluminum roof covers.
 - b) Where a paint finish is specified, apply an inhibited thermocured primer having at least a 0.02-mil dry film

thickness, and a thermocured fluorocarbon coating containing fully 70 percent Kynar 500 resin and having at least a 1.0-mil dry film thickness.

- c) Provide the color indicated in the Contract Documents, or if none is indicated, provide a color selected by the Program/Project Manager from manufacturer's standard colors.
- 6) Factory Primed Concealed Surfaces:
 - a) Protect concealed metal surfaces that will be in contact with concrete and masonry surfaces when installed by applying a shop coat of the manufacturer's standard primer to contact surfaces.
 - b) Provide a primer dry film thickness of at least 2.0 mils.
- 2. Composite Panel Finishes:
 - a. Finish composite panels in the field by applying a prime coat and 2 finish coats of a commercially available acrylic latex system.

2.02 ACCESSORIES

- A. Provide the manufacturer's standard anchors, fasteners, set screws, spacers, flexible vapor seals and filler materials, drain tubes, adhesives, and other accessories compatible with material in contact required for complete installations.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Verify all measurements and dimensions at the Site.
 - a. Make a thorough examination of all surfaces receiving the Work of this Section.
 - b. Before fabricating the expansion joint cover assemblies, check the actual locations of walls and other construction to which the Work of this Section must fit by accurate field measurements where necessary.
 - c. Show the measurements recorded on the final Shop Drawings.
- B. Evaluation and Assessment:
 - 1. Before starting to install expansion joint cover assemblies, notify the Program/Project Manager in writing of any defect which would affect the satisfactory completion of the Work of this Section.

3.02 PREPARATION

- A. Protection of In-Place Conditions:

1. Protect adjacent areas from damage resulting from installation of the expansion joint cover assemblies.
- B. Surface Preparation:
 1. Comply with the manufacturer's instructions and recommendations for preparing substrates.
 - a. Submit the manufacturer's instructions and recommendations for preparing substrates to the Program/Project Manager for information.
 2. Provide anchorage devices and fasteners where necessary for securing expansion joint cover assemblies to in-place construction.
 - a. Unless otherwise specified, space anchors and assembly hardware a maximum of 18 inches apart on center.
 3. Prior to installation of the expansion joints, float concrete floor slabs and expansion joint blockouts with a cementitious leveling compound as required to properly install the expansion joint cover assemblies.
- C. Demolition / Removal:
 1. Perform the cutting, drilling and fitting required to install expansion joint covers in accordance with the requirements specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Comply with the expansion joint cover assembly manufacturer's instructions and recommendations for installing and applying materials.
 1. Securely attach expansion joint cover assemblies in place with all required accessories.
 2. Submit the expansion joint cover assembly manufacturer's installation instructions to the Program/Project Manager for information.
- B. Anchorages:
 1. Locate anchors at the interval recommended by manufacturer, but not less than 3 inches from each end and not more than 24 inches on center.
 2. Mechanically fasten expansion joint lengths using countersunk bolts and concealed aluminum plates.
- C. Install joint cover assemblies in true alignment and in proper relationship to the expansion joints and adjoining finished surfaces measured from established lines and levels.
 1. Allow adequate free movement for thermal expansion and contraction of metal to avoid buckling.
 - a. Cut and fit the ends of frames to produce joints that will accommodate the thermal expansion and contraction of the metal.
 2. Set floor covers flush with adjacent finished floor materials.

- a. If necessary, shim floor covers to level them, but ensure that base frames have continual support to prevent rocking and vertical deflection.
 3. Locate wall, ceiling, roof and soffit covers so they are in continuous contact with adjacent surfaces.
 4. Align metal members mechanically using splice joints.
 5. Maintain the continuity of the expansion joint cover assemblies, and keep end joints to a minimum.
- D. Preformed Seals:
 1. Adhere flexible filler materials, if any, to the frames using adhesive or pressure-sensitive tape as recommended by manufacturer.
 2. Prior to installing the preformed seal, apply the manufacturer's approved adhesive, epoxy, or lubricant-adhesive to both frame interfaces.
 3. Install extruded preformed seals in accordance with the manufacturer's instructions, and so they have the minimum number of end joints possible.
 4. For straight sections provide preformed seals in continuous lengths.
 5. To provide watertight joints, vulcanize or heat-seal field splice joints made in the preformed seal material using the manufacturer's recommended procedure.
 6. Seal transitions in accordance with the manufacturer's instructions.
 7. Submit the preformed seal manufacturer's recommendations and instructions for installing the preformed seal to the Program/Project Manager for information.
- E. Exterior Seal Joint Assemblies
 1. Install exterior flexible seals using standard lengths.
 2. Install secondary seals using continuous lengths.
 - a. To provide watertight joints in secondary seal material, vulcanize field splice joints using the manufacturer's recommended procedures.
 3. To provide a watertight installation, seal the end joints within continuous runs of exterior seal joint assemblies, and joints at transitions, in accordance with the manufacturer's directions.
 4. Seal transitions and butt joints in accordance with the manufacturer's instructions.
- F. Fire Barriers:
 1. Install fire barriers, including transitions and end joints in strict accord with the manufacturer's installation instructions so fire-rated construction is continuous.
 - a. Install fire barrier in accordance with Federal, State, and local building codes using the manufacturer's recommended procedures.

3.04 CLEANING

- A. When protective material is removed from the expansion joint cover assemblies, clean the exposed metal surfaces in accordance with the manufacturer's instructions.
- B. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.05 PROTECTION

- A. Do not remove protective coverings until finish work in the adjacent areas is complete.
- B. Take proper precautions to protect the Work of this Section from damage after it is installed in place.
 - 1. Comply with manufacturer's instructions and recommendations for protection of installed units.

SECTION 05830

BRIDGE EXPANSION JOINT ASSEMBLIES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for providing the following types of bridge expansion joint assemblies for elevated guideway as detailed on the Contract Drawings at the locations indicated thereon.
 - a. Cellular compression expansion seals.
 - b. Strip expansion seals.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. IRM: Industry reference materials.
 - 2. MR: Movement Rating.
 - 3. pphm: Parts per hundred million.
- B. Reference Standards:
 - 1. Arizona Department of Transportation (ADOT):
 - a. ADOT Standard Drawings – Construction Standards.
 - 1) ADOT Standard Drawing SD 3.01 (B-24.20 replacement).
 - 2. ASTM International (ASTM):
 - a. ASTM A 36/A 36M – Standard Specification for Carbon Structural Steel.
 - b. ASTM A 123/A 123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
 - c. ASTM A 153/A 153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
 - d. ASTM A 325 - Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength.
 - e. ASTM D 395 - Standard Test Methods for Rubber Property—Compression Set.
 - f. ASTM D 412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension.
 - g. ASTM D 471 - Standard Test Method for Rubber Property—Effect of Liquids.
 - h. ASTM D 518 - Standard Test Method for Rubber Deterioration—Surface Cracking.

- i. ASTM D 573 - Standard Test Method for Rubber—Deterioration in an Air Oven.
- j. ASTM D 1149 - Standard Test Method for Rubber Deterioration—Surface Ozone Cracking in a Chamber.
- k. ASTM D 2240 - Standard Test Method for Rubber Property—Durometer Hardness.
- l. ASTM D 3542 - Standard Specification for Preformed Polychloroprene Elastomeric Joint Seals for Bridges.
- m. ASTM D 4070 - Standard Specification for Adhesive Lubricant for Installation of Preformed Elastomeric Bridge Compression Seals in Concrete Structures.
- n. ASTM F 1135 - Standard Specification for Cadmium or Zinc Chromate Organic Corrosion Protective Coating for Fasteners.
- 3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
- 5. The Society for Protective Coatings (SSPC):
 - a. SSPC Steel Structures Painting Manual.
 - 1) SSPC-SP 6 - Surface Preparation Specification No. 6 Commercial Blast Cleaning.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

- 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing and inspections performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
- 2. 10 days before the bridge expansion joint assemblies are to be installed, give notice to those performing other construction work related to the bridge expansion joint assembly installation, such as to those performing work that will provide support of the bridge expansion joint assemblies, to allow such items to be introduced or furnished before the deck joint assemblies are installed.

B. Sequencing:

- 1. Install bridge expansion joint assemblies in the blockouts constructed in the deck slabs as shown on the Contract Drawings.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Shop Drawings:
 - 1) Bridge expansion joint assemblies.
 - b. Certificates:
 - 1) Bridge Expansion Joint Certificates of Compliance.
- B. Informational Submittals:
 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Manufacturer's recommendations for installing cellular compression expansion joints.
 - b. Site Quality Control Submittals:
 - 1) Elastomer seals from bridge expansion joint assemblies for testing.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
 2. Special Inspections:
 - a. No Work in this Section is subject to Special Inspections per the ICC International Building Code (IBC) as Amended by the City of Phoenix.
 3. Testing and Inspection Agency:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ independent Testing and Inspection Agencies, including the City Building Official and the City of Phoenix Testing Laboratory.
- B. Certifications:
 1. Bridge Expansion Joint Certificates of Compliance:
 - a. Prior to providing bridge expansion joint assemblies, submit a Certificate of Compliance for each material or manufactured assembly to the Program/Project Manager for approval.
 - b. Include the following information in each Certificate of Compliance:
 - 1) A description of the material supplied.
 - 2) The quantity of material represented by the Certificate of Compliance.
 - 3) The means of identifying the material, such as a label, lot number, or other marking.

- 4) A statement certifying that the material complies in all respects with the requirements specified, such as reference standards, tables, or Specification Sections.
- 5) The name, title, signature, and date of the signature of a person having legal authority to bind the manufacturer or Supplier of the material or manufactured assembly.
- c. Do not have the person having the legal authority sign the Certificate of Compliance sign it before all other required information has been inserted on the Certificate.
 - 1) Do not alter, add to, or change in any way a Certificate of Compliance after the authorized signature has been affixed to the original Certificate, except notations of a clarifying nature, such as the Project number, which do not affect the basic requirements of the Certificate.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Ensure that materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.
 - a. Deliver the bridge expansion joint assembly components to be embedded in or attached to concrete in ample time so that the Work is not delayed.
2. Cellular Compression Expansion Seals:
 - a. Deliver each lot of lubricant adhesive and sealant for cellular compression expansion seals in sealed containers plainly marked with the manufacturer's name or trademark and the date of manufacture.
 - 1) On the shipping containers, indicate special precautions and instructions required due to product toxicity or flammability, and other similar information pertinent to the proper storage and use of the product.
 - b. Ship deck joint assemblies of cellular compression expansion seals fully assembled, and equipped with shipping and temperature adjustment devices approved by the Program/Project Manager.
3. Strip Expansion Joints:
 - a. Deliver strip seal gland to the Site in lengths suitable for continuous one-piece installation of each individual expansion joint.

B. Storage and Handling Requirements:

1. Handle the bridge expansion joint assembly components so no parts are bent, broken, or otherwise damaged; and avoid damage to other material and work.
 - a. Exercise care to avoid over stressing the units.
 - b. Replace pieces that are damaged, unless the Program/Project Manager authorizes repairs.

2. Store the bridge expansion joint assembly components on platforms, skids, or other supports to prevent contact with dirt, debris, and moisture.
 - a. Protect the bridge expansion joint assembly components from exposure to conditions that produce rust.

PART 2 PRODUCTS

2.01 ASSEMBLIES

A. Description:

1. Provide bridge expansion joint assemblies consisting of elastomer and metal assemblies anchored to the concrete at the joint.
 - a. Armor:
 - 1) For cast-in place seal assemblies, provide steel armor.

B. Performance:

1. Provide bridge expansion joint assemblies that satisfactorily resist the intrusion of foreign material and water.
2. Cellular Compression Expansion Joints:
 - a. Provide expansion joint seals having a Movement Rating (MR) of not less than the Movement Rating indicated on the Contract Drawings.
 - 1) Provide seals capable of being compressed to 40 percent of the original width without damage while at the same time maintaining the center of the top of the exposed surface of the seal below the top surface of the installed joint.
 - b. Provide expansion joint seals that maintain their top and bottom edges in continuous contact with the side of the armor over the entire joint movement range.

C. Design Criteria:

1. Provide bridge expansion joint assemblies compatible with concrete.
2. Provide bridge expansion joint assemblies resistant to abrasion, oxidation, aging, and sunlight.
3. Provide bridge expansion joint assemblies resistant to oils, gasoline, salt, and other materials that may be spilled on or applied to the surface.
4. Cellular Compression Expansion Joints:
 - a. Provide cellular compression expansion joint seals having a minimum depth, measured at the contact surface, of at least 95 percent of the uncompressed width of the seal as indicated by the manufacturer.
5. Shop Drawings:
 - a. Prepare Shop Drawings of the bridge expansion joint assemblies showing, at a minimum, complete details of the installation method to be followed a temperature correction chart for adjusting the dimensions of the joint according to the ambient temperature, and additions or rearrangements of the reinforcing steel from that shown on the Contract Drawings.

- b. Submit the bridge expansion joint assemblies Shop Drawings to the Program/Project manager for approval.

D. Materials:

1. Cellular Compression Expansion Joints:

- a. Provide cellular compression expansion joints consisting of prefabricated preformed elastomer joint seal material complying with the requirements specified in ASTM D 3542.

- 1) Extrude compression seals from multi-channels to produce nonporous, homogeneous material in its finished form.

- b. Lubricant Adhesive and Sealant:

- 1) Provide lubricant adhesive and sealant complying with the requirements specified in ASTM D 4070 for the cellular compression expansion joint seals.

- 2) Provide lubricant adhesive and sealant having a viscosity so the material remains fluid from 5 degrees Fahrenheit to 120 degrees Fahrenheit, and suitable for use with the installation equipment furnished.

2. Strip Expansion Joints:

- a. Provide strip expansion joint seals consisting of preformed, non-reinforced, elastomer strip seal glands that mechanically lock into steel retainers.

- 1) Provide strip seal glands fabricated from polychloroprene elastomer complying with the requirements specified in ASTM D 3542, except modified as follows:
 - a) Exclude recovery testing requirements.
 - b) Comply with the requirements specified in Table 05830-1 instead of the requirements specified in Table 1 of ASTM D 3542.

Table 05830-1 Preformed Elastomer Strip Seal Physical Properties		
Property	Requirement	Test Method
Tensile strength, minimum	2000 psi	ASTM D 412
Elongation at break, minimum	250 percent	ASTM D 412
Hardness, Type A durometer	60±5 points	ASTM D 2240 (modified) ^{(1),(3)}
Oven aging, 70 hours at 212 degrees Fahrenheit		
Tensile strength, maximum loss	20 percent	ASTM D 573
Elongation, maximum loss	20 percent	ASTM D 573

Table 05830-1 Preformed Elastomer Strip Seal Physical Properties		
Property	Requirement	Test Method
Hardness, Type A durometer	0 to +10 points change	ASTM D 2240 (modified) ^{(1),(3)}
Oil swell, IRM 903 for 70 hours at 212 degrees Fahrenheit, maximum weight change	45 percent	ASTM D 471
Ozone resistance, 20 percent strain, 300 pphm in air, 70 hours at 104 degrees Fahrenheit	No cracks	ASTM D 1149 (modified) ⁽²⁾
Low temperature stiffening, 7 days at 14 degrees Fahrenheit, hardness, Type A durometer	0 to +15 points change	ASTM D 2240 (modified) ^{(1),(3)}
Compression set, maximum, 70 hours at 212 degrees Fahrenheit	40 percent	ASTM D 395 Method B (modified) ⁽¹⁾
1. The term modified in the table relates to specimen preparation. The use of the strip seal as the specimen source requires that more plies than specified in either of the modified test procedures be used. Such specimen modification must be agreed to by both Contractor and Supplier before testing. 2. Test in accordance with Procedure A of ASTM D 518, and express ozone concentration in pphm. 3. Perform the hardness test with the durometer in a durometer stand as recommended in ASTM D 2240.		

- b. To install the strip seal gland into the locking steel retainer, provide adhesive lubricant consisting of a one part moisture curing polyurethane compound complying with the requirements specified in ASTM D 4070.
 3. Structural Shapes and Plates:
 - a. Provide steel shapes and plates complying with the requirements specified in ASTM A 36/A 36M.
- E. Fabrication:
 1. Shop Fabrication:
 - a. Shop-fabricate strip expansion joint seal miters, tees, and crosses in a mold under heat and pressure.
- F. Shop Finishing Methods:
 1. Strip Seal Assemblies:
 - a. Galvanize the metal parts of the strip seal assemblies after fabrication in accordance with the requirements specified in ASTM A 123/A 123M and ASTM A 153/A 153M.

2. Cellular Compression Expansion Seal Assemblies:
 - a. The metal parts of cellular compression expansion seals are not required to be galvanized, plated, or painted.

2.02 ACCESSORIES

- A. Fasteners:
 1. Provide high strength bolts complying with the requirements specified in ASTM A 325, and having a protective coating of cadmium or zinc followed by a chromate ad baked organic coating in accordance with the requirements for Grade 3, 5, 6, 7, or 8 and Color Code A specified in ASTM F 1135.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Verify the joint opening is adequate to allow easy installation of the cellular compression expansion joint seal element.
- B. Evaluation and Assessment:
 1. If a joint opening is inadequate to allow easy installation of the required seal element, shop-install the cellular compression expansion joint into deck joint assemblies.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Cover or otherwise protect the joints to be sealed prior to installing the elastomer portion of the assembly.
- B. Surface Preparation:
 1. Provide anchorage devices and fasteners where necessary for securing bridge expansion joint assemblies to in-place construction.

3.03 INSTALLATION

- A. Provide bridge expansion joint assemblies of the type and at the locations indicated on the Contract Drawings.
 1. Install the elastomer portion of each assembly when and in a way so it will not be damaged by subsequent construction operations.
 2. Install the bridge expansion joint assemblies at the narrowest joint opening possible to allow for long term creep.
 3. Form the joint with a secondary concrete pour.

- a. Prior to placing the concrete, coat the surface of the existing concrete with an approved adhesive specifically formulated for bonding new concrete to old concrete.
 4. Immediately prior to installing the seal element, ensure that the metal contact surfaces of the joint armor are clean, dry, and free of oil, rust, paint, and foreign material.
- B. Cellular Compression Expansion Joint Installation:
 1. Install cellular compression expansion joints in accordance with the manufacturer's recommendations using equipment specifically manufactured for that purpose.
 - a. Furnish equipment to install the cellular compression expansion joints that will not structurally damage either the seal element or the joint armor; and that will not twist, distort, or otherwise cause malformations in the installed seal element.
 - b. Submit the manufacturer's recommendations for installing cellular compression expansion joints to the Program/Project Manager for information.
 2. Unless otherwise indicated on the Contract Drawings or ADOT Standard Drawing SD 3.01 (B-24.20 replacement), provide cellular compression expansion joint seals the full length of the bridge expansion joint.
 3. Immediately prior to applying lubricant adhesive and sealant, clean the contact surfaces of the seal element using normal butylacetate and clean rags or mops.
 4. Apply lubricant adhesive and sealant to the seal element and joint armor contact surfaces at the rate recommended by the manufacturer.
 - a. If fully assembled deck joint assemblies are provided, provide units having the lubricant adhesive shop-applied to both the seal and the armor contact surfaces; and install these assemblies as a unit.
 5. At the open ends of cellular compression expansion joint seals that could admit water or debris, fill each cell with commercial quality open cell polyurethane foam to a depth of 3 inches, or close the ends by another means approved by the Program/Project Manager.
- C. Strip Expansion Joint Installation:
 1. Anchor the strip expansion joint steel retainers provided into the structure in accordance with the requirements indicated in the Contract Documents.
 2. Do not install strip seal glands at joint openings less than 1-1/2 inches wide.
 3. Provide a continuous one-piece strip seal gland for each individual expansion joint.
 - a. Prior to installing the strip seal gland, clean the steel surfaces coming into contact with the strip seal gland in accordance with the requirements of SSPC-SP 6.
 - b. Field splicing the strip seal gland is unacceptable.

D. Tolerances:

1. Cast-In-Place Concrete Tolerances:

- a. The maximum allowable tolerances or deviations from the dimensions shown on the Contract Drawings or approved Shop Drawings are as follow:
 - 1) Deviation in alignment of the bridge expansion joint assembly from a straight line parallel to the centerline is 1/8 inch in each 10 feet of length.
 - 2) Deviation in bearing seat flatness from a plane surface is plus or minus 1/8 inch in each 10 feet of length.
 - 3) Deviation in overall depth and in the thickness of slabs is plus 1/4 inch, minus 1/8 inch.
 - 4) Variation in cross-sectional dimensions is plus 1/4 inch, minus 1/8 inch.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

- 1. During the period when bridge expansion joint assemblies are being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other inspection and testing of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing and inspection personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency and/or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
- 2. Tests:
 - a. Bridge Expansion Joint Material Testing:
 - 1) Test Procedure:
 - a) Provide one piece of each bridge expansion joint material at least 18 inches longer than otherwise required by the Contract Drawings.
 - (1) Remove this excess material and submit it to the Program/Project Manager for testing by the Testing and Inspection Agency.
 - 2) Acceptance Criteria:

- a) Bridge expansion joint material complying with the specified requirements will be acceptable.
 - b. Concrete Compressive Strength Test:
 - 1) Test Procedure:
 - a) Sampling and testing of the compressive strength of the cast-in-place concrete will be performed in accordance with the procedures specified in Section 03300, Cast-In-Place Concrete.
 - 2) Acceptance Criteria:
 - a) Cast-in-place concrete complying with the specified requirements will be acceptable.
 - 3. Inspections:
 - a. The installed seal elements are subject to approval of the Program/Project Manager.
 - b. Perforations and/or tears of the seal element due to installation procedures or construction activities are cause for rejecting the installed element.
- B. Non-Conforming Work
- 1. Promptly remove and replace Work that does not comply with specified requirements.
 - a. Correct deficiencies in the Work that inspections and test reports have indicated to be not in compliance with requirements.

3.05 PROTECTION

- A. Protect deck joint assemblies in place until the adjacent blockouts are back-poured with concrete.
- B. Do not allow vehicular traffic on cast-in-place structures until at least 10 days after the last concrete has been placed in each continuous portion of the structure, and until the compressive strength has reached the specified 28-day compressive strength.

END OF SECTION

REV. NO.	REV. DATE	RFC/CN/CO	Section(s) Affected	Comments
0	12/01/2017	N/A	All	First edition.

SECTION 05835

ELASTOMERIC BEARING PADS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for furnishing and installing elastomeric bearing pads as indicated on the Contract Drawings.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.

1.02 REFERENCE STANDARDS:

- A. American Association of State Highway and Transportation Officials (AASHTO):
 - 1. AASHTO M 251 - Standard Specification for Plain and Laminated Elastomeric Bridge Bearings.
 - 2. AASHTO LRFD Bridge Design Specifications, Customary U.S. Units, 4th Edition with 2008 U.S. Edition Interim.
- B. ASTM International (ASTM):
 - 1. ASTM A 36/A 36M - Standard Specification for Carbon Structural Steel.
 - 2. ASTM A 1008/A 1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High Strength-Low Alloy with Improved Formability, Solution Hardened, and Bake Hardenable.
 - 3. ASTM A 1011/A 1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.
 - 4. ASTM D 395 - Standard Test Methods for Rubber Property – Compression Set.
 - 5. ASTM D 412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers – Tension.
 - 6. ASTM D 518 - Standard Test Method for Rubber Deterioration-Surface Cracking.
 - 7. ASTM D 573 - Standard Test Method for Rubber-Deterioration in an Air Oven.
 - 8. ASTM D 1149, Standard Test Method for Rubber Deterioration –Surface Ozone Cracking in a Chamber.
 - 9. ASTM D 2240 - Standard Test Method for Rubber Property-Durometer Hardness.
 - 10. ASTM D 4014 - Standard Specification for Plain and Steel-Laminated Elastomeric Bearings for Bridges.

- C. State of Arizona:
 - 1. Arizona Department of Transportation (ADOT):
 - a. ADOT Standard Specifications for Road and Bridge Construction.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate with the Program Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.

1.04 SYSTEM DESCRIPTION

- A. Provide steel-reinforced bearing pads for supporting structural elements consisting of alternating elastomer laminates and internal steel laminates, bonded together, and having top and bottom elastomer covers.

1.05 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Steel reinforced laminated bearing pad.
 - b. Samples:
 - 1) Steel reinforced laminated bearing pad.

1.06 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Testing and Inspection Agency Qualifications:
 - a. To perform testing and inspections, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency having the qualifications specified in Section 01400, Quality Requirements, and the City of Phoenix Testing Laboratory.
- B. Site Samples:
 - 1. Submit 2 Samples of the steel reinforced laminated bearing pads to be used on the elevated guideway to become test specimens.

**PART 2 PRODUCTS****2.01 MATERIALS:****A. Elastomeric Compound/Elastomer:**

1. As the raw elastomer, provide virgin crystallization-resistant polychloroprene (neoprene) that exhibits physical properties in Table 05835-1:

Table 05835-1 Elastomeric Compound/Elastomer Properties		
Physical Property	Test Method	Requirement
Hardness	ASTM D 2240	60+/-5
Tensile Strength (Minimum)	ASTM D 412	15.5 MPa
Ultimate Elongation (Minimum)	ASTM D 412	350 %
Heat Resistance: 70 hours at 100 deg C		
Change in durometer hardness (Maximum)	ASTM D 573	+15%
Change in tensile strength	ASTM D 573	-15%
Change in ultimate elongation (Maximum)	ASTM D 573	-40%
Compression Set: 22 hours at 100 deg C	ASTM D 395, Method B	35%
Ozone Cracking	ASTM D 518; ASTM D 1149 ⁽¹⁾	No cracks
1. ASTM D 518: Method A, 20 percent strain, 100 hours; ASTM D 1149:100 pphm ozone in air by volume, 37.7 degree C \pm 1 degree C.		

B. Internal Reinforcement:

1. Provide steel conforming to the following requirements for internal reinforcement of the elastomer:
 - a. 3/16 Inch (4.7625mm) Thick and Thicker: Provide steel plate conforming with the requirements specified in ASTM A 36/A 36M.
 - b. Under 3/16 Inch (4.7625mm) Thick: Provide steel sheet conforming with the requirements for Grade 36 or 40 as specified in ASTM A 1011/A 1011M, or conforming with the requirements for Grade C or D as specified in ASTM A 1008/A 1008M.

C. Adhesive:

1. For attaching the bearing pad to concrete and steel bearing surfaces at locations indicated on the Contract Drawings, provide solvent-free epoxy adhesive suitable for the purpose and appropriate for the particular installation as approved by the Program Manager.

D. Fabrication:

1. Shop Fabrication:
 - a. Fabricate laminated steel bearing pads in conformance to the applicable requirements of ASTM D 4014 or AASHTO M 251.
 - 1) Bearing pads less than 1/2 inch in thickness may be either laminated or fabricated completely out of elastomer; bearing pads thicker than 1/2 inch must be laminated.
 - 2) Mold laminated pads as a single unit under pressure and heat.
 - a) Provide reinforcement parallel to the top and bottom surfaces of the pad.
 - b) Bond the elastomer to laminates and to external load plates during molding.
 - 3) At the outer edges of bonds, shape the elastomer to conform to the external load plates to avoid stress concentrations.
 - 4) Provide internal steel laminates free of sharp edges.
 - 5) Do not stack individual laminated pads to attain thicknesses over 1/2 inch.
2. Fabrication Tolerances:
 - a. Fabricate elastomeric bearing pads within the tolerances specified in ASTM D 4014.

2.02 SOURCE QUALITY CONTROL

A. Tests and Inspections:

1. Materials specified in this Section require advance examination or laboratory testing according to the methods referenced herein, or as required by the Program Manager.
 - a. Notify the Program Manager when manufacturing, fabrication, or mill testing of the items intended for the Work of this Section are to be performed.
2. The Testing and Inspection Agency or the City of Phoenix Testing Laboratory will perform the source testing specified in this Paragraph.
3. Elastomeric Bearing Pad Tests:
 - a. Test Procedure:
 - 1) The tests specified in Subsection 1013-3 of the ADOT Standard Specifications for Road and Bridge Construction, will be performed on samples of the elastomeric bearing pads.
 - b. Acceptance Criteria:
 - 1) Elastomeric bearing pads complying with the criteria specified in Subsection 1013-3 of the ADOT Standard Specifications for Road

and Bridge Construction, which references AASHTO M 251, are acceptable.

4. Inspections:

- a. Perform visual inspections in accordance with the requirements specified in Subsection 1013-3 of the ADOT Standard Specifications for Road and Bridge Construction.

B. Non-Conforming Work:

1. Bearings having dimensions or properties outside the tolerances specified will be rejected.

PART 3 EXECUTION

3.01 INSTALLATION

- A. Install elastomeric bearing pads in accordance with the details indicated on the Contract Drawings and with the requirements specified in Section 1013 of the ADOT Standard Specifications for Road and Bridge Construction.
- B. Interface with Other Work:
 1. Ensure that bearing surfaces comply with the requirements specified in Section 1013 of the ADOT Standard Specifications for Road and Bridge Construction.

SECTION 06105

MISCELLANEOUS CARPENTRY

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for miscellaneous carpentry, including the following:
 - a. Wood blocking and nailers.
 - b. Plywood backing panels.
 - c. Non-combustible substrates (wood substitute material).
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements
 - 3. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - a. Requirements for complying with the ENVISION Sustainable Infrastructure Rating System under this Contract are specified in Section 01360, Sustainable Design Requirements.
- B. Definitions:
 - 1. Dressed “S4S”: Dressed (surfaced) on all four sides.
 - 2. No. 1 Grade or Construction Lumber: Wood having moderate sized knots; paints well.
 - 3. No. 2 Grade or Standard Lumber: Wood having larger sized and more numerous knots; paints fairly well.
 - 4. Dimension lumber: Wood of thicknesses 2 inches up to, but not including, 5 inches.

C. Reference Standards:

1. American Society of Mechanical Engineers Standards (ASME):
 - a. ASME B18.2.1 - Square and Hex Bolts and Screws, Inch Series.
 - b. ASME B18.6.1 - Wood Screws (Inch Series).
2. American Wood Protection Association (AWPA):
 - a. AWPA T1 – Use Category System: Processing and Treatment Standard.
 - b. AWPA U1 – Use Category System: User Specification for Treated Wood.
 - c. AWPA M4 - Standard for the Care of Preservative-Treated Wood Products.
3. ASTM International (ASTM):
 - a. ASTM A 153/A 153M - - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
 - b. ASTM A 307 - Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength.
 - c. ASTM A 563 - Standard Specification for Carbon and Alloy Steel Nuts.
 - d. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - e. ASTM B 633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel.
 - f. ASTM C 954 - Standard Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs from 0.033 in. (0.84 mm) to 0.112 in. (2.84 mm) in Thickness.
 - g. ASTM D 256 - Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics.
 - h. ASTM D 5516 - Standard Test Method for Evaluating the Flexural Properties of Fire-Retardant Treated Softwood Plywood Exposed to Elevated Temperatures.
 - i. ASTM D 5664 - Standard Test Method for Evaluating the Effects of Fire-Retardant Treatments and Elevated Temperatures on Strength Properties of Fire-Retardant Treated Lumber.
 - j. ASTM E 136 - 04 Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750°C.
 - k. ASTM E 488 - Standard Test Methods for Strength of Anchors in Concrete and Masonry Elements.
 - l. ASTM F 1667 - Standard Specification for Driven Fasteners: Nails, Spikes, and Staples.
4. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.

5. Forrest Stewardship Council (FSC):
 - a. FSC-STD-01-001 - FSC Principles and Criteria for Forest Stewardship.
6. ICC Evaluation Services, Inc.
 - a. ICC ES 94-61.01 – ES Legacy Report: Viroc Type T2 Cement Bonded Particleboard.
7. National Lumber Grades Authority (NLGA):
 - a. NGLA Standard Grading Rules For Canadian Lumber.
8. Northeastern Lumber Manufacturers Association (NeLMA):
 - a. NeLMA Standard Grading Rules for Northeastern Lumber, <http://www.nelma.org/Page-10.html>.
9. Southern Pine Inspection Bureau (SPIB):
 - a. SPIB Standard Grading Rules for Southern Pine Lumber.
10. United States Government:
 - a. Department of Commerce:
 - 1) Product Standards:
 - a) PS-1-07 – Structural Plywood Standard.
 - b) PS-20-05 – American Softwood Lumber Standard.
11. Institute for Sustainable Infrastructure (ISI):
12. a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.
13. West Coast Lumber Inspection Bureau (WCLIB):
 - a. WCLIB Standard Number 17 - Grading Rules for West Coast Lumber.
14. Western Wood Products Association (WWPA):
 - a. WWPA G5 - Western Lumber Grading Rules '05.

1.03 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Wood structural panels.
 - 2) Non-combustible substrate and non-combustible sheathing.
 - 3) Non-combustible nailers.
 - 4) Wood preservative treatment.
 - 5) Fire retardant treatment.
 - b. Certificates:
 - 1) Fire-Retardant Treated Material Certification.
 - 2) Wood-Preservative Treated Material Certification

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Source Quality Control Submittals:
 - 1) Information showing compliance of preservative treated wood with the Phoenix Building Construction Code.
 - 2) Information showing compliance of fire retardant treated wood with the Phoenix Building Construction Code.
 - b. Manufacturer's Instructions:
 - 1) Wood preservative treatment chemical manufacturer's written instructions for handling, storage, installing and finishing treated materials.
 2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. ENVISION Credit 4AR1.3 – Recycled Content
 - 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - b. Certified Wood
 - 1) Submit Chain of Custody (COC) certificates indicating that new wood provided complies with Forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product. If product is a mix of recycled content and new wood, provide breakdown by weight of each component and material values for each separately.
 - c. Adhesives and Sealants
 - 1) Submit product data highlighting the VOC content.
 - d. Composite Wood & Agrifiber Products
 - 1) Submit product data stating that product contains No Added Urea Formaldehyde (NAUF).
- C. Closeout Submittals:
1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Manufacturers warranties for each type of fire-retardant and wood preservative treatment.

1.04 QUALITY ASSURANCE

- A. Regulatory Agency Approvals:
 - 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
 - b. Submit information to the Program/Project Manager to show compliance of the following with the Phoenix Building Construction Code:
 - 1) Preservative treated wood.
 - 2) Fire retardant treated wood.
- B. Certifications:
 - 1. Fire-Retardant Treated Material Certification:
 - a. Submit certification provided by the treating plant to the Program/Project Manager certifying that the fire retardant treated materials comply with the specified requirements.
 - 1) Include the physical properties of the treated materials, both before and after exposure to the elevated temperatures experienced when the materials are tested in accordance with the requirements specified in ASTM D 5516 and ASTM D 5664.
 - 2. Wood-Preservative Treated Material Certification:
 - a. Submit certification provided by the treating plant to the Program/Project Manager certifying that the preservative treated materials comply with the specified requirements.
 - 1) Indicate the type of preservative used, and the net amount of preservative retained.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Storage and Handling Requirements:
 - 1. Stack lumber, plywood, and other panels.
 - a. Provide for air circulation around stacks and under coverings.
 - 2. Create space between each bundle of lumber to provide air circulation.

1.06 WARRANTY

- A. Manufacturer Warranty:
 - 1. Provide warranties from the chemical treatment manufacturers for each type of fire-retardant and wood preservative treatment.
 - 2. Submit the warranties to the Program/Project Manager for information.

PART 2 PRODUCTS

2.01 SUSTAINABILITY REQUIREMENTS:

- A. Sustainability Requirements:
 - 1. FSC Certification
 - a. Provide wood materials that are procured through an FSC chain of custody from sustainably managed forests.
 - 2. No Added Urea Formaldehyde (NAUF)
 - a. Provide products that manufactured with NAUF.

2.02 DESIGN CRITERIA:

- A. Provide miscellaneous lumber for the support or attachment of other construction, including blocking, cants, nailers, furring, and grounds.
 - 1. For dimension lumber size, provide Construction, Stud, or No. 2 grade lumber having maximum moisture content of 19 percent.
 - 2. For concealed bards provide lumber having maximum moisture content of 19 percent and consisting of any of following species or grades:
 - a. Mixed Southern Pine:
 - 1) Provide No. 2 grade mixed southern pine lumber, graded in accordance with the SPIB Standard Grading Rules for Southern Pine Lumber.
 - b. Hem-fir or Hem-fir (North):
 - 1) Provide Construction or No. 2 Common grade hem-fir or hem-fir (north) lumber, graded in accordance with the NGLA Standard Grading Rules For Canadian Lumber, WCLIB Standard Number 17 - Grading Rules for West Coast Lumber, or WWPA G5.
 - c. Spruce-Pine-Fir (south) or Spruce-Pine-Fir:
 - 1) Provide Construction or No. 2 Common grade spruce-pine-fir (south) or spruce-pine-fir lumber; graded in accordance with the rules of NeLMA Standard Grading Rules for Northeastern Lumber, NGLA Standard Grading Rules For Canadian Lumber, WCLIB Standard Number 17 - Grading Rules for West Coast Lumber, or WWPA G5.
 - d. Eastern Softwoods:
 - 1) Provide No. 2 Common Grade eastern softwood lumber; graded in accordance with the NeLMA Standard Grading Rules for Northeastern Lumber.
 - e. Northern Species:

- 1) Provide No. 2 Common grade northern species lumber; graded in accordance with the NGLA Standard Grading Rules For Canadian Lumber.
 - f. Western Woods:
 - 1) Provide Construction or No. 2 Common grade western woods lumber; graded in accordance with the rules of WCLIB Standard Number 17 - Grading Rules for West Coast Lumber or WWP A G5.
 3. Submit Product Data for each type of factory-fabricated product to the Program/Project Manager for approval.
 - a. Indicate the processes used to fabricate the products.
 - b. Indicate component materials and dimensions.
 - c. Include construction and application details.
- B. Fire-Retardant Treated Materials:
1. Treat all wood provided for miscellaneous carpentry with fire-retardant in accordance with the performance requirements specified in AWWPA T1 and AWWPA U1.
 - a. Only provide fire-retardant treatment for which the manufacturer publishes physical properties for the lumber after it has been treated and exposed to elevated temperatures.
 - 1) The physical properties must be determined by a qualified independent Testing and Inspection Agency according to the requirements specified in ASTM D 5664 for lumber and in ASTM D 5516 for plywood.
 - b. Provide fire-retardant treatment that is non-corrosive to metal fasteners.
 2. Identify the material with an appropriate classification marking of Underwriters Laboratories, Inc; U.S. Testing; Timber Products Inspection; or another Testing and Inspecting Agency acceptable to the Authorities Having Jurisdiction.
 3. Unless otherwise indicated, provide interior Type A, high temperature (HT) rated material.
 - a. Provide exterior type material for exterior locations and other locations indicated in the Contract Documents.
 4. Submit Product Data for the fire retardant treatment from the chemical treatment manufacturer to the Program/Project Manager for approval.
- C. Wood-Preservative Treated Materials:
1. Treat the following items with wood preservative:
 - a. Wood cants, nailers, curbs, equipment support bases, blocking and similar members provided in connection with roofing, flashing, vapor barriers, and water proofing.

- b. Wood sills, sleepers, blocking furring, stripping and similar concealed members that will be in contact with concrete or masonry.
2. Submit Product Data for the wood preservative treatment from the chemical treatment manufacturer to the Program/Project Manager for approval.
3. Submit the wood preservative treatment chemical manufacturer's written instructions for handling, storage, installing and finishing treated materials to the Program/Project Manager for information.

2.03 MATERIALS

A. Lumber:

1. Provide lumber that has been factory-marked with the grade stamp of the grading agency on each piece of lumber.
2. Where nominal sizes are indicated, provide the actual sizes required by PS-20-05 for the moisture content specified.
 - a. Where actual sizes are indicated in the Contract Documents, they are minimum dressed sizes for dry lumber.
3. Unless otherwise indicated, provide dressed lumber, S4S.
4. For dry lumber having a nominal thickness of 2 inches or less, provide lumber having maximum moisture content of 19 percent at the time of dressing unless otherwise indicated.

B. Wood Structural Panels:

1. Provide wood structural panels factory-marked to indicate the applicable standard on each panel.
2. Provide plywood complying with the requirements specified in PS-1-07.
3. Provide wood structural panels of the thickness needed to comply with requirements specified, but not less than the thickness indicated in the Contract Documents.

C. Wood-Preservative Treated Materials:

1. Provide materials treated by the pressure process in accordance with the requirements specified in AWPA T1 and AWPA U1.
2. Provide material that is kiln-dried after treatment to have a maximum moisture content of 19 percent for lumber and 15 percent for plywood.
 - a. Do not provide warped material or material that does not comply with the requirements for untreated material.
3. Provide materials marked with the treatment quality mark of an inspection agency approved by the American Lumber Standards Committee Board of Review.

- D. Non-Combustible Substrate (Wood Substitute):
1. Non-Combustible Substrate and Non-Combustible Sheathing:
 - a. Provide non-combustible nailing substrate consisting of Portland cement bonded particle board.
 - b. Basis of Design:
 - 1) The Basis of Design is "Viroc", which is available from Allied Building Products Corp., www.virocusa.com.
 - a) An ICC Evaluation Services Legacy Report for Viroc, ICC ES 94-61.01, is available indicating approval of Viroc by BOCA as Type T2 cement bonding particle board.
 - 2) The Basis of Design is intended to establish a standard of quality for achieving the desired architectural effect.
 - a) Do not construe The Basis of Design as limiting competition.
 2. Non-Combustible Nailer and Non-Combustible Sheathing:
 - a. Provide non-combustible nailer and non-combustible sheathing conforming to the following requirements:
 - 1) Impact Resistance:
 - a) Provide materials having impact resistance complying with the requirements specified in ASTM D 256.
 - 2) Fire Resistance:
 - a) Provide non-combustible materials having fire-resistance complying with the requirements specified in ASTM E 136.

2.04 ACCESSORIES

- A. Fasteners:
1. Provide fasteners of the size and type indicated and complying with the material and manufacturing requirements specified.
 2. Where carpentry will be exposed to the weather, be in contact with the ground, or in an area of high relative humidity, provide fasteners coated with hot-dip zinc complying with the requirements specified in ASTM A 153/A 153M, or fabricated from Type 304 stainless steel.
 3. Nails, Wire, Bards, and Staples:
 - a. Provide nails, wire, bards, and staples complying with the requirements specified in ASTM F 1667.
 4. Wood Screws:
 - a. Provide wood screws meeting the requirements of ASME B18.6.1.
 - b. For fastening to cold-formed metal framing, provide screws complying with the requirements specified in ASTM C 954, except provide wafer heads and reamer wings.
 - 1) Provide lengths as recommended by the screw manufacturer for the material being fastened.

5. Lag Bolts:
 - a. Provide lag bolts complying with the requirements specified in ASME B18.2.1.
 6. Bolts, Nuts, and Washers:
 - a. Bolts:
 - 1) Provide steel bolts complying with the requirements for Grade A bolts as specified in ASTM A 307.
 - b. Nuts and Washers:
 - 1) Provide steel hex nuts complying with the requirements specified in ASTM A 563; and, where indicated, flat washers.
 7. Anchors:
 - a. Provide expansion anchors fabricated from carbon-steel components, zinc plated complying with the requirements for Class Fe/Zn 5 coatings as specified in ASTM B 633.
 - b. Provide anchor bolt and sleeve assemblies capable of sustaining, without failure, a load equal to 6 times the load imposed when installed in unit masonry assemblies; and load equal to equal to 4 times the load imposed when installed in concrete, as determined when tested in accordance with the requirements specified in ASTM E 488 by a qualified independent testing and inspection agency.
- B. Metal Framing Anchors:
1. Galvanized Steel Framing Anchors:
 - a. Provide galvanized steel framing anchors having the structural capacity, of the type and size indicated in the Contract Documents, and that are acceptable to Authorities Having Jurisdiction.
 2. Galvanized Sheet Steel:
 - a. Provide hot-dip, zinc-coated steel sheet complying with the requirements for a G60 coating designation as specified in ASTM A 653/A 653M.

PART 3 EXECUTION

3.01 INSTALLATION

- A. Set carpentry to the required levels and lines, with members plumb, true to line, cut, and fitted.
 1. Fit carpentry to other construction.
 2. Scribe and cope carpentry as needed for an accurate fit.

- B. Locate nailers, blocking, and similar supports so they comply with the requirements for attaching other construction.
- C. Securely attach carpentry work as indicated and according to applicable codes and recognized standards.
- D. Fastening:
 - 1. Use fasteners of the appropriate type and length.
 - 2. Pre-drill members when necessary to avoid splitting wood.
 - 3. Unless otherwise indicated in the Construction Documents, recess bolts and nuts flush with the surfaces.
 - a. Countersink fastener heads on exposed carpentry work, and fill holes with wood filler.
- E. Wood Blocking and Nailer Installation:
 - 1. Install wood blocking and nailers where indicated and where required for attaching other work.
 - 2. Form wood blocking and nailers to the shapes indicated, and cut them as required for the true line and level of the attached work.
 - 3. Attach items to substrates to support the applied loading.
- F. Special Techniques:
 - 1. Apply field treatments complying with AWP A M4 to cut surfaces or preservative-treated lumber and plywood.
- G. Interface with Other Work:
 - 1. Coordinate the locations of miscellaneous carpentry with the other work involved.

3.02 SITE QUALITY CONTROL

- A. Non-Conforming Work:
 - 1. Discard material with defects that would impair the quality of carpentry, and that are too small to use with a minimum number of joints or optimum joint arrangement.

3.03 CLEANING

- A. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

SECTION 06605

FIBERGLASS REINFORCED PLASTIC WALL PANELS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for fiberglass reinforced plastic wall panels.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01770 - Closeout Procedures.
 - 3. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 2. FRP: Fiberglass reinforced plastic.
 - 3. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside, and San Bernardino counties.
 - 4. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
- B. Reference Standards:
 - 1. ASTM International (ASTM):
 - a. ASTM C 177 – Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus
 - b. ASTM D 570 – Standard Test Method for Water Absorption of Plastics

- c. ASTM D 638 – Standard Test Method for Tensile Properties of Plastics
- d. ASTM D 696 – Standard Test Method for Coefficient of Linear Thermal Expansion of Plastics Between -30°C and 30°C With a Vitreous Silica Dilatometer
- e. ASTM D 790 – Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials
- f. ASTM D 953 – Standard Test Method for Bearing Strength of Plastics
- g. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
- 2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 3. South Coast Air Quality Management District (SCAQMD):
 - a. SCAQMD Rule #1168 – Adhesive and Sealant Applications.
- 4. Institute for Sustainability Infrastructure (ISI)
 - 1) ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate the Work of this Section with the work of other trades which passes through the wall covering.
- B. Sequencing:
 - 1. Where applicable, install paneling before installation of plumbing, casings, bases, cabinets, and other items to be applied over paneling.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Panels and accessories.
 - 2) Moldings at panel edges.
 - 3) Adhesive.
 - 4) Sealant.
 - 5) Corner and trim moldings.
 - 6) Miscellaneous items.
 - b. Shop Drawings:
 - 1) Joints and fastener attachments.

- c. Samples:
 - 1) Color and texture samples.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Sustainable Design Submittals:
 - 1) Low-Emitting Materials: Adhesives & Sealants, Submittal for adhesives and sealants used with fiberglass reinforced plastic (FRP) panels.
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Cleaning and maintenance instructions.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
- B. Sustainability Standards Certifications:
 - 1. Adhesives and Sealants Submittal:
 - a. For the sealants and sealant primers used within the fiberglass reinforced plastic wall panels, submit Product Data, including a printed statement of volatile organic compound (VOC) content and chemical components, certifying that these products comply with SCAQMD Rule #1168.
- C. Site Samples:
 - 1. Submit specified color and texture sample of the wall panels and trim pieces for verification.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Deliver materials clearly labeled to identify the manufacturer, brand name, quality or grade, and the fire hazard classification.

B. Storage and Handling Requirements:

1. Store wall panels horizontally in the original undamaged packages.
2. Remove foreign matter from the face of the panels with a soft bristle brush, avoiding abrasive action.

1.07 SITE CONDITIONS

A. Ambient Conditions:

1. Install materials when the temperature and humidity conditions approximate conditions that will exist when the building is occupied.
2. Provide ventilation to disperse fumes during application of the adhesive as recommended by the adhesive manufacturer.

1.08 MANUFACTURER WARRANTY

- A. Provide the manufacturer's standard warranty.

PART 2 PRODUCTS

2.01 MANUFACTURERS:

A. Manufacturer List:

1. Marlite, Marlite Standard FRP, www.marlite.com.
2. Kemlite Company, Glasbord-P with SurfaSeal, www.kemlite.com.
3. Approved equal.

B. Substitution Limitations:

1. Provide panels and accessories by one manufacturer to ensure the warranty and color match.

2.02 SUSTAINABILITY REQUIREMENTS

- A. Provide adhesives and sealants for use within the fiberglass reinforced plastic wall panels that are capable of qualifying the Project for Sustainability Credit.

2.03 DESIGN CRITERIA

A. Product Data:

1. Submit manufacturer's Product Data and installation instructions for each proposed material and accessory to the Program/Project Manager for approval.

B. Shop Drawings:

1. Submit Shop Drawings showing the locations and dimensions of proposed joints and fastener attachments to the Program/Project Manager for approval.

2.04 MATERIALS

A. Panels and Accessories:

1. Fiberglass Reinforced Plastic (FRP):
 - a. Provide 0.09-inch thick fiberglass reinforced plastic meeting or exceeding the requirements specified in Table 06605-1.

Table 06605-1 Fiberglass Reinforced Plastic Properties		
Property	Test Method	Acceptable Value
Bearing Strength	ASTM D 953	20,000 psi
Flexural Strength	ASTM D 790	17,000 psi
Flexural Modulus	ASTM D 790	0.85 x 10 ⁶ psi
Tensile Strength	ASTM D 638	8000 psi
Coefficient of Lineal Thermal Expansion	ASTM D 696	20 x 10 ⁻⁶ in/in°F
Water Absorption	ASTM D 570	< 0.5 %
*Thermal Conductivity (K-factor)	ASTM C 177	1.2 BTU/in/hr/ft ² /°F
Flamespread	ASTM E 84	- < 200*
Smoke Developed	ASTM E 84	- < 450*

B. Moldings at Panel Edges:

1. Provide 2-piece batten type moldings at the panel edges with snap-on trim.
2. Color/Texture:
 - a. Provide a white panel with an embossed texture.

C. Adhesive:

1. Provide the manufacturer's recommended type adhesive for use with the selected materials.
2. Provide waterproof, mildew resistant non-staining type adhesive.
3. VOC Limit for Adhesive: 70 gallons per Liter less water.

- D. Sealant:
 - 1. Provide latex type sealant as approved by the adhesive and wall paneling manufacturer.
 - 2. VOC Limit for Sealant: 250 gallons per Liter less water.
- E. Corner and Trim Moldings:
 - 1. Provide extruded anodized aluminum trim pieces.
 - 2. Provide moldings at internal and external corners.
- F. Miscellaneous Items:
 - 1. Provide supplementary or miscellaneous items, appurtenances, and devices incidental to or necessary for a sound, secure, and complete installation, whether or not specified or otherwise indicated.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Examine the substrate and conditions under which the material is to be installed.
 - 2. Verify that surfaces, when tested with a moisture meter, have the proper moisture content.
 - 3. Verify that nails and screws are recessed, with joints and depressions taped, finished, and sealed.
- B. Evaluation and Assessment:
 - 1. Do not proceed with the Work of this Section until the work of other trades which passes through the wall covering has been completed, and unsatisfactory conditions have been corrected.
 - 2. Starting the Work indicates acceptance of responsibility for performance and any required remedial Work.

3.02 PREPARATION

- A. Surface Preparation:
 - 1. Remove plumbing escutcheons, switchplates, wall plates, and surface-mounted fixtures, and cut wall paneling evenly to fit.
 - a. Replace items after completion of Work.
 - 2. Remove contaminants from areas to be covered.

3.03 INSTALLATION

- A. Install panels in accordance with the manufacturer's printed instructions using the full sheet mastic coverage method with no exposed fasteners or "buttons".
- B. Make joints with a 1/8 inch space for expansion, and use moldings designed for each condition for the Contract.
- C. Bevel the edges of panels with a block plane to permit proper fit into moldings.
- D. If one end of a panel must be nailed, do not nail the other end.

3.04 CLEANING

- A. Remove excess adhesive and smudges with a soft cloth and mineral spirits, or with a product recommended by the wall panel manufacturer.
 - 1. Submit cleaning and maintenance instructions in accordance with Section 01770, Closeout Procedures.

END OF SECTION

REV. NO.	REV. DATE	RFC/CN/CO	Section(s) Affected	Comments
0	10/06/2017	N/A	All	First Edition
1	12/20/2017	N/A	1.02.A, 1.02.B.4, 1.04.B, 1.05.B, 2.02.A	Add requirements for ENVISION Sustainability Rating System

SECTION 06690

SOLID SURFACING FABRICATIONS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Countertops with sinks
2. Laboratory countertops
3. Lavatory tops with undermount bowls
4. Lavatory tops with integral bowls
5. Reception areas/nurses' stations
6. Vanity tops
7. Tabletops
8. Bar tops
9. Seats
10. Cold cafeteria surfaces
11. Hot cafeteria surfaces
12. Windowsills
13. Thermoforming
14. Cove backsplashes
15. Color inlays

B. Related Requirements:

1. Section 01330 - Submittal Procedures
2. Section 01780 - Closeout Submittals
3. Section 05500 - Metal Fabrications
4. Section 06105 - Miscellaneous Carpentry
5. Section 10155 - Toilet Compartments
6. Section 15410 - Plumbing Fixtures
7. Section 16140 - Wiring Devices

1.02 REFERENCES

A. Definitions:

1. Solid surface is defined as nonporous, homogeneous material maintaining the same composition throughout the part with a composition of acrylic polymer, aluminum trihydrate filler and pigment

B. Reference Standards:

1. ASTM International (ASTM):

- a. ASTM D 256 - Standard Test Method for Determining the IZOD Pendulum Impact Resistance of Plastics.
- b. ASTM D 570 - Standard Test Method for Water Absorption of Plastics.
- c. ASTM D 638 - Standard Test Method for Tensile Properties of Plastics.
- d. ASTM D 696 - Standard Test Method for Coefficient of Linear Thermal Expansion of Plastics Between -30 degrees C and 30 Degrees C with a Vitreous Silica Dilatometer.
- e. ASTM D 785 - Standard Test Method for Rockwell Hardness of Plastics and Electrical Insulating Materials.
- f. ASTM D 790 - Standard Test Method for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.
- g. ASTM D 2583 - Standard Test Method for Indentation Hardness of Rigid Plastics by Means of a Barcol Impressor.
- h. ASTM G 21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.
- i. ASTM G 22 - Standard Practice for Determining Resistance of Plastics to Bacteria (Withdrawn 2001).
- j. ASTM G 155 - Standard Practice for Operating Xenon Arc Light Apparatus for Exposure of Non-Metallic Materials.
- k. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
- l. ASTM E 238 - Standard Test Method for Pin-Type Bearing Test of Metallic Materials.
- 2. International Association of Plumbing and Mechanical Officials (IAPMO):
 - a. ANSI/IAPMO Z124.3 – Plastic Lavatories.
 - b. ANSI/IAPMO Z124.6 – Plastic Sinks.
- 3. National Fire Protection Association (NFPA):
 - a. NFPA 255 – Standard Method of Test of Surface Burning Characteristics of Building Materials.
- 4. National Science Foundation (NSF):
 - a. NSF/ANSI 51 – Food Equipment Materials.
- 5. Underwriters Laboratories, Inc. (UL):
 - a. UL 723 – Tests for Surface Burning Characteristics of Building Materials.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordination drawings:
 - a. Shall be prepared indicating:

- 1) Plumbing work.
 - 2) Electrical work.
 - 3) Miscellaneous steel for the general work.
 - 4) Indicate location of all walls (rated and non-rated), blocking locations and recessed wall items, etc.
 - b. Content:
 - 1) Project-specific information, drawn accurately to scale.
 - 2) Do not base coordination drawings on reproductions of the contract documents or standard printed data.
 - 3) Indicate dimensions shown on the contract drawings and make specific note of dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements.
 - 4) Provide alternate sketches to designer for resolution of such conflicts.
 - a) Minor dimension changes and difficult installations will not be considered changes to the contract.
 - c. Drawings shall:
 - 1) Be produced in 1/2-inch scale for all fabricated items.
 - d. Drawings must be complete and submitted to the Program/Project Manager within 60 days after award of contract for record only.
 - 1) No review or approval will be forthcoming.
 - 2) Coordination drawings are required for the benefit of contractor's fabricators/installers as an aid to coordination of their work so as to eliminate or reduce conflicts that may arise during the installation of their work.
- B. Pre-Installation Meetings:
1. Conduct conference at project site to comply with requirements in Division 1.

1.04 SUBMITTALS

- A. Action Submittals:
1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) For each type of product indicated.
 - b. Shop Drawings:
 - 1) Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices and other components.

- a) Show full-size details, edge details, thermoforming requirements, attachments, etc.
 - b) Show locations and sizes of furring, blocking, including concealed blocking and reinforcement specified in other Sections.
 - c) Show locations and sizes of cutouts and holes for plumbing fixtures, faucets, soap dispensers, waste receptacle and other items installed in solid surface.
 - c. Samples:
 - 1) For each type of product indicated.
 - a) Submit minimum 6-inch by 6-inch sample in specified gloss.
 - b) Cut sample and seam together for representation of inconspicuous seam.
 - c) Indicate full range of color and pattern variation.
 - 2) Approved samples will be retained as a standard for work.
 - d. Certificates:
 - 1) Fabricator/Installer's qualifications.
 - 2) Manufacturer's technical representative's qualifications
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Sustainable Design Submittals:
 - 1) ENVISION Credit RA 1.3 - Use Recycled Materials
 - a) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - 2) ENVISION Credit RA 1.4 – Use Regional Materials
 - a) Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:

- a. Operation and Maintenance Data:
 - 1) Submit manufacturer's care and maintenance data, including repair and cleaning instructions.
 - a) Maintenance kit for finishes shall be submitted.
 - 2) Provide maintenance requirements as specified by the manufacturer.

1.05 QUALITY ASSURANCE

A. Qualifications:

- 1. Shop that employs skilled workers who custom fabricate products similar to those required for this project and whose products have a record of successful in-service performance.

B. Certifications:

- a. Certificates:
 - 1) Fabricator/Installer's qualifications.
 - 2) Manufacturer's technical representative's qualifications

C. Sustainability Standards Certifications:

- a. Sustainable Design Submittals:
 - 1) ENVISION Credit RA 1.3 - Use Recycled Materials
 - a) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - 2) ENVISION Credit RA 1.4 – Use Regional Materials
 - a) Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).

D. Site Samples:

- a. Samples:
 - 1) For each type of product indicated.
 - a) Submit minimum 6-inch by 6-inch sample in specified gloss.
 - b) Cut sample and seam together for representation of inconspicuous seam.
 - c) Indicate full range of color and pattern variation.

2) Approved samples will be retained as a standard for work.

E. Mock-Ups:

1. Prior to fabrication of architectural millwork, erect sample unit to further verify selections made under sample submittals and to demonstrate the quality of materials and execution.
2. Mock-up shall be TBD.
3. Build the mock-up to comply with the contract documents and install in a location as directed by the Program/Project Manager.
4. Notify the Program/Project Manager two weeks in advance of the date of when the mock-up will be delivered.
5. Should mock-up not be approved, re-fabricate and reinstall until approval is secured.
 - a. Remove rejected units from project site.
6. After approval, the mock-up may become a part of the project.
7. This mock-up, once approved, shall serve as a standard for judging quality of all completed units of work.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver no components to project site until areas are ready for installation.

B. Storage and Handling Requirements:

1. Store components indoors prior to installation.
2. Handle materials to prevent damage to finished surfaces.
 - a. Provide protective coverings to prevent physical damage or staining following installation for duration of project.

1.07 WARRANTY

A. Manufacturer Warranty:

1. Provide manufacturer's warranty against defects in materials.
 - a. Warranty shall provide material and labor to repair or replace defective materials.
 - b. Damage caused by physical or chemical abuse or damage from excessive heat will not be warranted.
2. Optional Installed Warranty:
 - a. To qualify for the optional Installed Warranty, fabrication and installation must be performed by a DuPont Certified Fabrication/Installation source who will provide a brand plate for the application.

- b. This warranty covers all fabrication and installation performed by the certified/approved source subject to the specific wording contained in the Installed Warranty Card.
- 3. Manufacturer's warranty period:
 - a. Ten years from date of substantial completion.

PART 2 PRODUCTS

2.01 MATERIALS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with requirements, provide products by one of the following:
 - 1) Corian® surfaces from the DuPont company (basis of design).
 - 2) Insert manufacturer's name.
- B. Design Criteria:
 - a. Product Data:
 - 1) For each type of product indicated.
 - b. Shop Drawings:
 - 1) Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices and other components.
 - a) Show full-size details, edge details, thermoforming requirements, attachments, etc.
 - b) Show locations and sizes of furring, blocking, including concealed blocking and reinforcement specified in other Sections.
 - c) Show locations and sizes of cutouts and holes for plumbing fixtures, faucets, soap dispensers, waste receptacle and other items installed in solid surface.
- C. Materials:
 - 1. Solid polymer components
 - a. Cast, nonporous, filled polymer, not coated, laminated or of composite construction with through body colors meeting ANSI Z124.3 or ANSI Z124.6, having minimum physical and performance properties specified.
 - b. Superficial damage to a depth of 0.010 inch (.25 mm) shall be repairable by sanding and/or polishing.
 - 2. Thickness:
 - a. 1/4 inch

- b. 1/2 inch
 - c. 3/4 inch
- 3. Edge treatment:
 - a. *TBD*.
 - b. *TBD*.
 - c. As indicated
- 4. Inlays:
 - a. Fabricate using manufacturer's approved method.
 - b. Rout 1/8" deep max. groove for inlay to pattern indicated on designer's drawings.
 - c. Fill groove using methods approved by manufacturer, avoiding air bubbles or voids.
 - d. Overfill inlay area.
 - e. Allow area to fully cure.
 - 1) Do not overheat inlay while sanding.
 - f. Finish and touch up to uniform appearance.
 - g. Provide full *TBD* with contrasting color inlay in center of edge.
 - 1) Color *TBD*.
- 5. Integral sink:
 - a. Model number:
 - 1) *TBD*.
 - 2) *TBD*.
 - 3) *TBD*.
 - b. Color:
 - 1) *TBD*.
 - 2) *TBD*.
 - c. Mounting:
 - 1) Seamed; undermount.
- 6. Integral vanity:
 - a. Model number:
 - 1) *TBD*.
 - 2) *TBD*.
 - 3) *TBD*.
 - b. Color:
 - 1) *TBD*.
 - 2) *TBD*.
 - 3) *TBD*.
 - c. Mounting:
 - 1) Seamed; undermount.
- 7. Backsplash:
 - a. Applied.

- b. Coved.
- 8. Sidesplash:
 - a. Applied.
 - b. Coved.
- 9. Performance characteristics:

Property	Typical Result	Test
Tensile Strength	6,000 psi	ASTM D 638
Tensile Modulus	1.5×10^{-6} psi	ASTM D 638
Tensile Elongation	0.4% min.	ASTM D 638
Flexural Strength	10,000 psi	ASTM D 790
Flexural Modulus	1.2×10^{-6} psi	ASTM D 790
Hardness	>85	Rockwell "M" Scale ASTM D 785
	56	Barcol Impressor ASTM D 2583
Thermal Expansion	3.02×10^{-5} in./in./°C (1.80×10^{-5} in./in./°F)	ASTM D 696
Gloss (60° Gardner)	5–75 (matte—highly polished)	ANSI Z124
Light Resistance	(Xenon Arc) No effect	NEMA LD 3-2000 Method 3.3
Wear and Cleanability	Passes	ANSI Z124.3 & Z124.6
Stain Resistance: Sheets	Passes	ANSI Z124.3 & Z124.6
Fungus and Bacteria Resistance	Does not support microbial growth	ASTM G21&G22
Boiling Water Resistance	No visible change	NEMA LD 3-2000 Method 3.5
High Temperature Resistance	No change	NEMA LD 3-2000 Method 3.6
Izod Impact (Notched Specimen)	0.28 ft.-lbs./in. of notch	ASTM D 256 (Method A)
Ball Impact	No fracture—1/2 lb. ball:	NEMA LD 3-2000
Resistance	1/4" slab—36" drop 1/2" slab-144" drop	Method 3.8

Property	Typical Result	Test
Weatherability	$\Delta E^*_{94} < 5$ in 1,000 hrs	ASTM G 155
Specific Gravity †	1.7	
Water Absorption	Long-term 0.4% (3/4") 0.6% (1/2") 0.8% (1/4")	ASTM D 570
Toxicity	99 (solid colors) 66 (patterned colors)	Pittsburgh Protocol Test ("CL50" Test)
Flammability	All colors (Class I and Class A)	ASTM E 84, NFPA 255 & UL 723
Flame Spread Index	<25	
Smoke Developed Index	<25	

† Approximate weight per square foot: 1/4" (6 mm) 2.2 lbs., 1/2" (12.3 mm) 4.4 lbs.

Shapes meet or exceed the ANSI Z124.3 and ANSI Z124.6 standards for plastic sinks and lavatories.

NEMA results based on the NEMA LD 3-2000

D. Fabrication:

1. Shop Fabrication:

- a. Fabricate components to greatest extent practical to sizes and shapes indicated, in accordance with approved shop drawings and manufacturer's printed instructions and technical bulletins.
- b. Form joints between components using manufacturer's standard joint adhesive without conspicuous joints.
- c. Reinforce with strip of solid polymer material, 2" wide.
- d. Provide factory cutouts for plumbing fittings and bath accessories as indicated on the drawings.
- e. Rout and finish component edges with clean, sharp returns.
 - 1) Rout cutouts, radii and contours to template.
 - 2) Smooth edges.
 - 3) Repair or reject defective and inaccurate work.

2. Thermoforming:

- a. Comply with manufacturer's data.
- b. Heat entire component.
 - 1) Material shall be uniform, between 275 and 325 degrees Fahrenheit during forming.
- c. Form pieces to shape prior to seaming and joining.
- d. Cut pieces to finished dimensions.
- e. Sand edges and remove nicks and scratches.

E. Finishes:

1. Shop Finishing Methods:

- a. Select from the manufacturer's standard color chart.
 - 1) Color:
 - a) *TBD.*
 - b) *TBD.*
 - c) *TBD.*
- b. Finish:
 - 1) Provide surfaces with a uniform finish.
 - a) Matte; gloss range of 5–20.
 - (1) Color
 - (2) Color
 - (3) Color
 - b) Semigloss; gloss range of 20–50.
 - (1) Color
 - (2) Color
 - (3) Color
 - c) Polished; gloss range of 50–80.

- (1) Color
- (2) Color
- (3) Color

2.02 ACCESSORIES

- A. Joint adhesive:
 - 1. Manufacturer's standard one- or two-part adhesive kit to create inconspicuous, nonporous joints.
- B. Sealant:
 - 1. Manufacturer's standard mildew-resistant, FDA-compliant, NSF 51-compliant (food zone — any type), UL-listed silicone sealant in colors matching components.
- C. Sink/lavatory mounting hardware:
 - 1. Manufacturer's standard bowl clips, panel inserts and fasteners for attachment of undermount sinks/lavatories.
- D. Conductive tape:
 - 1. Manufacturer's standard aluminum foil tape, with required thickness, for use with cutouts near heat sources.
- E. Insulating felt tape:
 - 1. Manufacturer's standard for use with conductive tape in insulating solid surface material from adjacent heat source.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Examine substrates and conditions, with fabricator present for compliance with requirements for installation tolerances and other conditions affecting performance of work.
 - 2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install components plumb, level and rigid, scribed to adjacent finishes, in accordance with approved shop drawings and product data.
 - 1. Provide product in the largest pieces available.

2. Form field joints using manufacturer's recommended adhesive, with joints inconspicuous in finished work.
 - a. Exposed joints/seams shall not be allowed.
 3. Reinforce field joints with solid surface strips extending a minimum of 1 inch on either side of the seam with the strip being the same thickness as the top.
 4. Cut and finish component edges with clean, sharp returns.
 5. Rout radii and contours to template.
 6. Anchor securely to base cabinets or other supports.
 7. Align adjacent countertops and form seams to comply with manufacturer's written recommendations using adhesive in color to match countertop.
 8. Carefully dress joints smooth, remove surface scratches and clean entire surface.
 9. Install countertops with no more than 1/8-inch (3 mm) sag, bow or other variation from a straight line.
- B. Coved backsplashes and applied sidesplashes:
1. Install applied sidesplashes using manufacturer's standard color-matched silicone sealant.
 2. Adhere applied sidesplashes to countertops using manufacturer's standard color-matched silicone sealant.
- C. Coved backsplashes and sidesplashes:
1. Provide coved backsplashes and sidesplashes at all walls and adjacent millwork.
 2. Fabricate radius cove at intersection of counters with backsplashes to dimensions shown on the drawings.
 3. Adhere to countertops using manufacturer's standard color-matched Joint Adhesive.
- D. Color inlays:
1. Comply with product data from manufacturer.
 2. Rout groove for inlay to straight edge or pattern indicated on drawings.
 3. Fill groove using material furnished by manufacturer.
 4. Cure inlay, finish and touch up to uniform appearance.
- E. Integral sinks/vanities:
1. Provide solid surface materials bowls and/or lavatories sinks with overflows in locations shown on the drawings.
 2. Secure sinks and lavatory bowls to tops using manufacturer's recommended sealant, adhesive and mounting hardware to maintain warranty.

3.03 SCHEDULE

A. Reception areas:

1. Surfaces of material adhesively joined with inconspicuous seams.

	Color
a. Vertical Thickness _____	<u>TBD</u>
b. Horizontal Thickness _____	<u>TBD</u>
c. Inlay _____	<u>TBD</u>
d. Edge Details _____	<u>TBD</u>
e. Finish _____	<u>TBD</u>
f. Backsplash _____	<u>TBD</u>
g. Sidesplash _____	<u>TBD</u>

B. Seats:

1. Surfaces of material adhesively joined with inconspicuous seams.

	Color
a. Vertical Thickness _____	<u>TBD</u>
b. Horizontal Thickness _____	<u>TBD</u>
c. Inlay _____	<u>TBD</u>
d. Edge Details _____	<u>TBD</u>
e. Finish _____	<u>TBD</u>

C. Laboratory tops:

1. Surfaces of material adhesively joined with inconspicuous seams.

	Color
a. Vertical Thickness _____	<u>TBD</u>
b. Horizontal Thickness _____	<u>TBD</u>
c. Inlay _____	<u>TBD</u>
d. Edge Details _____	<u>TBD</u>
e. Finish _____	<u>TBD</u>
f. Backsplash _____	<u>TBD</u>
g. Sidesplash _____	<u>TBD</u>
h. Sink _____	<u>TBD</u>

D. Countertops:

1. Surfaces of material adhesively joined with inconspicuous seams.

	Color
a. Vertical Thickness _____	<u>TBD</u>
b. Horizontal Thickness _____	<u>TBD</u>
c. Inlay _____	<u>TBD</u>
d. Edge Details _____	<u>TBD</u>
e. Finish _____	<u>TBD</u>

- | | |
|---------------------|------------------|

g. Sidesplash _____	<u>TBD</u>
h. Sink _____	<u>TBD</u>

J. Windowsills:

1. Surfaces of material adhesively joined with inconspicuous seams.

	Color
a. Vertical Thickness _____	<u>TBD</u>
b. Horizontal Thickness _____	<u>TBD</u>
c. Inlay _____	<u>TBD</u>
d. Edge Details _____	<u>TBD</u>
e. Finish _____	<u>TBD</u>

3.04 REPAIR

- A. Repair or replace damaged work which cannot be repaired to Program/Project Manager's satisfaction.

3.05 CLEANING

- A. Keep components clean during installation.
- B. Remove adhesives, sealants and other stains.

3.06 MAINTENANCE

- a. Operation and Maintenance Data:
 - 1) Submit manufacturer's care and maintenance data, including repair and cleaning instructions.
 - a) Maintenance kit for finishes shall be submitted.
 - 2) Provide maintenance requirements as specified by the manufacturer.

SECTION 07132

SELF-ADHERING SHEET WATERPROOFING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following types of self-adhering sheet waterproofing:
 - a. Butyl rubber sheet waterproofing.
 - b. Ethylene propylene diene terpolymer (EPDM) rubber sheet waterproofing.
 - c. Polyethylene sheet waterproofing.
 - d. Modified Bituminous sheet waterproofing
 - e. Molded-sheet drainage panels.
 - f. Insulation.
 - g. Self-adhesive HDPE waterproofing membrane.
 - h. Pre-applied HDPE waterproofing membrane.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Meetings:

1. Conduct a Pre-Installation Conference with the Program/Project Manager at the Site in accordance with the requirements specified in Section 01316, Project Meetings.
 - a. In the meeting agenda, include a review of waterproofing requirements including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Self-adhering sheet waterproofing.
 - b. Shop Drawings:
 - 1) Self-adhering sheet waterproofing.
 - c. Samples:
 - 1) Sample of each type of self-adhering sheet waterproofing to be provided under this Contract.
 - d. Qualification Statements:
 - 1) Self-adhering sheet waterproofing installer's qualifications.
 - 2) Self-adhering sheet waterproofing manufacturer's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Manufacturers' written installation instructions.
 - 2) Manufacturers' written seam construction instructions
 - b. Manufacturer's Reports:
 - 1) Manufacturers' test reports.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Butyl Rubber Sheet Waterproofing Warranty.
 - 2) Ethylene Propylene Diene Terpolymer M-Class (EPDM) Rubber Sheet Waterproofing Warranty.
 - 3) High Density Polyethylene (HDPE) Sheet Waterproofing Membrane Warranty.

1.05 QUALITY ASSURANCE

A. Qualifications:

1. Self-Adhering Sheet Waterproofing Installer's Qualifications:
 - a. Employ a firm that is approved or licensed by the waterproofing manufacturer to install the self-adhering sheet waterproofing products to be installed under this Contract.
 - b. Submit the self-adhering sheet waterproofing installer's qualifications to the Program/Project Manager for approval.
2. Self-Adhering Sheet Waterproofing Manufacturer's Qualifications:
 - a. Obtain the self-adhering sheet waterproofing products from a manufacturer that has a minimum of 25 years' experience manufacturing waterproofing membrane underlayments.
 - b. Submit the self-adhering sheet waterproofing manufacturer's qualifications to the Program/Project Manager for approval.

B. Site Samples:

1. Submit a manufacturer's Sample of each type of self-adhering sheet waterproofing to be provided under this Contract to the Program/Project manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver the self-adhering sheet waterproofing materials in their original unopened packages, containers, or bundles bearing the brand name and identification of the manufacturer or Supplier.
 - a. Include Material Safety Data Sheets that indicate proper handling and disposal methods for each material.

B. Storage and Handling Requirements:

1. Store the self-adhering sheet waterproofing materials under cover.
2. Do not double stack palletized material.

C. Packaging Waste Management:

1. Remove disposable release sheets from the self-adhering sheet waterproofing immediately prior to using the material.
2. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

A. Ambient Conditions:

1. Only apply waterproofing when the ambient and substrate temperatures are within the range recommended by the waterproofing manufacturer.

1.08 WARRANTY

A. Special Warranty:

1. Butyl Rubber Sheet Waterproofing Warranty:
 - a. Obtain a manufacturer's warranty for the Type 1 self-adhering butyl rubber sheet waterproofing materials on the manufacturer's standard or customized form, in which the manufacturer agrees, without monetary limitation, to replace waterproofing materials that do not comply with the specified requirements or that fail to remain watertight within the warranty period that begins on the Date of Substantial Completion and continues after that date for 20 years.
 - b. Submit the written Butyl Rubber Sheet Waterproofing Warranty for the specified warranty period to the Program/Project Manager for approval.
2. Ethylene Propylene Diene Terpolymer M-Class (EPDM) Rubber Sheet Waterproofing Warranty:
 - a. Obtain a manufacturer's warranty for the Type 2 self-adhering ethylene propylene diene terpolymer M-Class (EPDM) rubber sheet waterproofing materials on the manufacturer's standard or customized form, in which the manufacturer agrees, without monetary limitation, to replace waterproofing materials that do not comply with the specified requirements or that fail to remain watertight within the warranty period that begins on the Date of Substantial Completion and continues after that date for 20 years.
 - b. Submit the written Ethylene Propylene Diene Terpolymer M-Class (EPDM) Rubber Sheet Waterproofing Warranty for the specified warranty period to the Program/Project Manager for approval.
3. Modified Bituminous Sheet Waterproofing Warranty: Manufacturer's standard form in which manufacturer agrees to replace waterproofing material that does not comply with requirements or that fails to remain watertight within specified warrant period of 5 years from date of substantial completion.
4. High Density Polyethylene (HDPE) Sheet Waterproofing Membrane Warranty:
 - a. Obtain a manufacturer's warranty for the Type 3 self-adhering high-density polyethylene (HDPE) sheet waterproofing membrane materials on the manufacturer's standard or customized form, in which the manufacturer agrees, without monetary limitation, to replace waterproofing materials that do not comply with the specified requirements or that fail to remain watertight within the warranty period that begins on the Date of Substantial Completion and continues after that date for 10 years.
 - b. Submit the written High-Density Polyethylene (HDPE) Sheet Waterproofing Membrane Warranty for the specified warranty period to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 SELF-ADHERING SHEET WATERPROOFING SYSTEMS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain self-adhering sheet waterproofing from single source from single manufacturer.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- C. Design Criteria:
 - 1. Provide watertight self-adhering sheet waterproofing of the types specified herein at the locations indicated in the Contract Documents.
 - 2. Provide the auxiliary materials recommended by the waterproofing manufacturer for the intended use and compatible with the sheet waterproofing.
 - a. Provide waterproofing and sheet flashing accessories including sealants, pourable sealers, cone and vent flashings, inside and outside corner flashings, termination reglets, and other accessories recommended by the waterproofing manufacturer for the intended application.
 - b. Furnish liquid-type auxiliary materials that comply with the volatile organic compounds (VOC) limits of the Authorities Having Jurisdiction.
 - 3. Product Data:
 - a. Obtain Product Data from the self-adhering sheet waterproofing manufacturer, including the manufacturer's product data sheets, technical data, product test reports, Material Safety Data Sheets, tested physical and performance properties of the waterproofing materials, and the manufacturer's written instructions for evaluating, preparing, and treating the substrates where the self-adhering sheet waterproofing will be applied.

- b. Submit the Product Data to the Program/Project Manager for approval.
- 4. Shop Drawings:
 - a. Prepare Shop Drawings of the self-adhering sheet waterproofing showing the locations and extent of the waterproofing to be provided under this Section.
 - 1) Include details of substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.
 - b. Submit the Shop Drawings to the Program/Project Manager for approval.

D. Materials:

- 1. Self-Adhering Sheet Waterproofing:
 - a. Type 1 - Butyl Rubber Sheet Waterproofing:
 - 1) Provide flexible, unreinforced, self-adhering isobutylene-isoprene rubber sheets formed from material complying with the requirements for Type II butyl rubber sheets specified in ASTM D 6134.
 - 2) Thickness:
 - a) Provide butyl rubber sheets that are 60 mils (1.5mm) thick.
 - 3) Manufacturers:
 - a) Carlisle Coatings & Waterproofing Inc.; Sure-Seal Butyl, www.carlisle-ccw.com.
 - b) Approved Equal.
 - b. Type 2 - Ethylene Propylene Diene Terpolymer M-Class (EPDM) Rubber Sheet Waterproofing:
 - 1) Provide flexible, unreinforced, self-adhering ethylene propylene diene terpolymer M-class (EPDM) rubber sheet complying with the requirements for Type I EPDM specified in ASTM D 6134.
 - 2) Thickness:
 - a) Provide ethylene propylene diene terpolymer M-class (EPDM) rubber sheets that are 60 mils (1.5mm) thick.
 - 3) Manufacturers:
 - a) Carlisle Coatings & Waterproofing Inc.; Sure-Seal EPDM, www.carlisle-ccw.com.
 - b) Approved Equal.
 - c. Type 3 – Modified Bituminous Waterproofing Membrane:
 - 1) Not less than 60 mil (1.5 mm) thick, self-adhering sheet consisting of 56 mils (1.4 mm) of rubberized asphalt laminated to a 4-mil (0.10 mm) thick polyethylene film with release liner on adhesive side and formulated for application with primer or surface conditioner that complies with VOC limits of authorities having jurisdiction.
 - 2) Manufacturers:

- a) Grace, W.R. & Co.; Bituthene 3000;
www.graceconstruction.com
- b) Approved Equal
- d. Type 4 - HDPE Sheet Waterproofing Membrane:
 - 1) Provide a flexible, pre-formed waterproof membrane which combines a high performance, cross laminated, HDPE carrier film having a unique, super tacky, self-adhesive rubberized asphalt compound.
 - a) Provide HDPE sheet waterproofing membrane having the properties specified in Table 07132-2.

Table 07132-1 Type 3 HDPE Waterproofing Membrane Properties		
Property	Test Method	Required Value
Color	N/A	Dark gray-black
Thickness	ASTM D 3767-Method A	1/16 in. (1.5mm) normal
Flexibility, 180 degree bend over a 1 inch (25mm) mandrel at -25°F (-32°C)	ASTM D 1970	Unaffected
Tensile strength, membrane, die C	ASTM D 412 modified ⁽¹⁾	325 lbs/in. ² (2240kPa) minimum
Tensile strength, film	ASTM D 882 modified ⁽¹⁾	5,000 lbs/in. ² (34.5MPa) minimum
Elongation, ultimate failure of rubberized asphalt	ASTM D 412 modified ⁽¹⁾	300 percent minimum
Crack cycling at -25°F (-32°C), 100 cycles	ASTM C 836	Unaffected
Lap adhesion at minimum application temperature	ASTM D 1876 modified ⁽²⁾	5 pounds per inch (800N/m)
Peel strength	ASTM D 903 modified ⁽³⁾	9 pounds per inch (1576N/m)

Table 07132-1 Type 3 HDPE Waterproofing Membrane Properties		
Property	Test Method	Required Value
Puncture resistance, membrane	ASTM E 154	50 pounds (9222N) minimum
Resistance to hydrostatic head	ASTM D 5385	210 feet (70m) of water
Permeance	ASTM E 96/E 96M, section 12 Water Method	0.05 perms (2.9ng/m ² sPa) maximum
Water absorption	ASTM D 570	0.1 percent maximum
<ol style="list-style-type: none">1. Run the test at a rate of 2 inches (50mm) per minute.2. Conduct the test 15 minutes after the lap is formed, and at a rate of 2 inches (50mm) per minute at 40 degrees Fahrenheit (5° C).3. Run the peel strength test at a rate of 12 inches (300mm) per minute.		

- b) Provide HDPE sheet waterproof membrane having a surface conditioner consisting of a water-based latex surface treatment which imparts an aggressive, high tack finish to the treated substrate, and has the properties specified in Table 07132-3.

Table 07132-2 Type 3 HDPE Waterproofing Membrane Surface Conditioner Properties	
Property	Required Value
Solvent type	Water
Flash point	>140° F (>60° C)
Volatile Organic Compound (VOC) content	91 g/L
Application temperature	25° F (-4° C) and above
Freeze thaw stability	5 cycles (minimum)
Freezing point (as packaged)	14° F (-10° C)
Dry time (hours)	1 hour ⁽¹⁾
<ol style="list-style-type: none">1. Dry time will vary with weather conditions.	

- c) Manufacturer:
 - (1) W. R. Grace and Company, Grace Construction Products, Bituthene System 4000. www.graceconstruction.com.
 - (2) Approved equal.

2.02 ACCESSORIES

- A. Concealed Sheet Flashing:
 - 1. Provide the concealed sheet flashing recommended by the manufacturer, and fabricated from the same material, and having the same construction and thickness, as the sheet waterproofing; or uncured ethylene propylene diene terpolymer M-class (EPDM) rubber sheet that is 60 mils (1.5mm) thick.
- B. Exposed Sheet Flashing:
 - 1. Provide the exposed sheet flashing recommended by the manufacturer, and fabricated from cured or uncured ethylene propylene diene terpolymer M-class (EPDM) rubber sheet that is 60 mils (1.5mm) thick.
- C. Bonding Adhesives:
 - 1. Provide adhesive suitable for bonding the polymeric sheets and sheet flashings to the substrates and projections.
- D. Butyl Splicing Cement and Cleaner:
 - 1. Provide single-component butyl splicing cement and solvent-based splice cleaner.
- E. Butyl Gum Tape:
 - 1. Provide butyl gum tape consisting of uncured butyl that is 30 mils (0.76mm) thick and 6-1/4 inches (160mm) wide, and that has polyethylene release film.
- F. Lap Sealant:
 - 1. Provide single-component lap sealant.
- G. In-Seam Sealant:
 - 1. Provide single-component in-seam sealant.
- H. Water Cutoff Mastic:
 - 1. Provide butyl mastic sealant.
- I. Metal termination Bars:
 - 1. Provide the manufacturer's standard pre-punched aluminum bars, approximately 1 inch (25mm) wide, and having zinc-alloy-body fasteners and stainless-steel pins.

J. Protection Course:

1. Protection Board:

- a. Provide protection board complying with the requirements specified in ASTM D 6506, and consisting of semi-rigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between 2 asphalt-saturated fibrous liners.

1) Thickness:

- a) For vertical applications, provide protection board having a nominal thickness of 1/8 inch (3mm).
- b) For non-vertical applications, provide protection board having a nominal thickness of 1/4 inch (6mm).

b. Adhesive:

- 1) Provide the rubber-based solvent type adhesive recommended by the waterproofing manufacturer for the type of protection course provided.

2. Faced Polystyrene Board Protection Course:

- a. Provide a faced, fan-folded, protection course consisting of a core of extruded-polystyrene board insulation sandwiched between 2 sheets of plastic film

b. Thickness:

- 1) Provide polystyrene board having a nominal thickness of 1/4 inch (6 mm).

c. Compressive Strength:

- 1) Provide polystyrene board having compressive strength not less than 8 psi (55kPa) when tested in accordance with the method specified in ASTM D 1621.

d. Water Absorption:

- 1) Provide polystyrene board having maximum water absorption by volume of 0.6 percent when tested in accordance with the method specified in ASTM C 272.

3. Un-Faced Polystyrene Protection Course:

- a. Provide an un-faced, fan-folded, extruded-polystyrene board insulation protection course.

b. Thickness:

- 1) Provide polystyrene board having a nominal thickness of 1/4 inch (6mm).

c. Compressive Strength:

- 1) Provide polystyrene board having compressive strength not less than 8 psi (55kPa) when tested in accordance with the method specified in ASTM D 1621.

4. Un-Faced Rigid Cellular Polystyrene (RCPS) Protection Course:

- a. Provide an un-faced, extruded-polystyrene board insulation protection course complying with the requirements for Type X rigid cellular polystyrene (RCPS) specified in ASTM C 578.

b. Thickness:

- 1) Provide polystyrene board having a nominal thickness of 1/2 inch (13mm).
 5. Molded-Polystyrene Protection Course:
 - a. Provide molded-polystyrene board insulation complying with the requirements for Type I rigid cellular polystyrene (RCPS) specified in, ASTM C 578.
 - b. Density
 - 1) Provide molded-polystyrene board having a minimum density of 0.90 pounds per cubic foot (15kg/m³).
 - c. Thickness:
 - 1) Provide molded-polystyrene board having a minimum thickness of 1 inch (25mm).
- K. Molded-Sheet Drainage Panels:
 1. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panels:
 - a. Provide manufactured composite subsurface drainage panels consisting of a studded, non-biodegradable, molded-plastic-sheet drainage core having a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding a No. 70 (0.21mm) sieve size laminated to one side [and a polymeric film bonded to the other side].
 - b. Flow Rate:
 - 1) Provide drainage panels having a vertical flow rate of 9 gallons per minute per foot to 15 gallons per minute per foot (112L/min./m to 188L/min./m).
 2. Woven-Geotextile-Faced, Molded-Sheet Drainage Panels:
 - a. Provide manufactured composite subsurface drainage panels consisting of a studded, non-biodegradable, molded-plastic-sheet drainage core having a woven-geotextile facing with an apparent opening size not exceeding a No. 40 (0.425mm) sieve size laminated to one side [and a polymeric film bonded to the other side].
 - b. Flow Rate:
 - 1) Provide drainage panels having a horizontal flow rate not less than 2.8 gallons per minute per foot (35L/min./m).
- L. Insulation:
 1. Board Insulation:
 - a. Provide square edged extruded-polystyrene board insulation complying with the requirements specified in ASTM C 578, and of a Type having the required minimum compressive strength as follows:
 - 1) Type IV has a minimum compressive strength of 25 psi (173kPa).
 - 2) Type V has a minimum compressive strength of 100 psi (690kPa).
 - 3) Type VI has a minimum compressive strength of 40 psi (276kPa).
 - 4) Type VII has a minimum compressive strength of 60 psi (414kPa).
 2. Un-Faced Wall Insulation Drainage Panels:

- a. Provide un-faced extruded-polystyrene board insulation complying with the requirements for Type VII rigid cellular polystyrene (RCPS) specified in ASTM C 578, and fabricated with grooved drainage channels on 1 side and shiplapped or channel edges.
3. Geotextile-Faced Wall Insulation Drainage Panels:
 - a. Provide extruded-polystyrene board insulation complying with the requirements for Type VI rigid cellular polystyrene (RCPS) specified in ASTM C 578, faced with nonwoven geotextile filter fabric, and fabricated with grooved drainage channels on 1 side and tongue-and-groove edges.
4. Unfaced Plaza Deck Insulation Drainage Panels:
 - a. Provide un-faced extruded-polystyrene board insulation complying with the requirements for Type VII rigid cellular polystyrene (RCPS) specified in ASTM C 578, and fabricated with ribbed drainage channels on 1 side and shiplapped or channel edges.
5. Geotextile-faced Plaza Deck Insulation Drainage Panels:
 - a. Provide extruded-polystyrene board insulation complying with the requirements for Type VII rigid cellular polystyrene (RCPS) specified in ASTM C 578, faced with manufacturer's standard, nonwoven geotextile filter fabric, and fabricated with grooved drainage channels on 1 side and tongue-and-groove edges.

M. Polyethylene Sheet Waterproofing Primer:

1. Provide the polyethylene sheet primer recommended by the polyethylene sheet waterproofing manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Verify that the deck areas that are indicated to receive polyethylene sheet waterproofing as a roof underlayment in the Contract Documents, such as plywood, wood composition, wood plank, metal, concrete, or gypsum sheathing, are clean, dry, and furnish a continuous structural deck.
 - a. Verify that the decks have no voids, damaged, or unsupported areas.
- B. Evaluation and Assessment:
 1. Prior to installing the self-adhering sheet waterproofing, notify the Program/Project Manager in writing of defects discovered which could affect the satisfactory completion of the Work of this Section.
 2. Do not apply self-adhering sheet waterproofing to damp or wet substrates.

3.02 PREPARATION

- A. Protection of In-Place Conditions:

1. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray from affecting other construction.

B. Surface Preparation:

1. Clean, prepare, and treat substrates according to the manufacturer's written instructions.
 - a. Repair damaged deck areas before installing polyethylene sheet waterproofing membranes.
 - b. Prepare, fill, prime, and treat joints and cracks in the substrates.
 - c. Insure that the substrates where waterproofing are to be applied are clean, dust-free, and dry.
 - 1) Remove dust and dirt from joints and cracks in accordance with the requirements specified in ASTM D 4258.
 - 2) Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
 - 3) Remove dust, dirt, loose nails, and old roofing materials from deck areas to receive polyethylene sheet waterproofing as a roof underlayment.
2. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through the waterproofing and at drains and protrusions.
3. In areas that are to receive polyethylene sheet waterproofing, apply the primer recommended by the waterproofing manufacturer to concrete, masonry, wood composition, and gypsum board surfaces.

C. Demolition/Removal:

1. Remove fins, ridges, mortar, and other projections; and fill honeycomb, aggregate pockets, holes, and other voids.
2. Remove protrusions from deck areas that are to receive polyethylene sheet waterproofing as a roof underlayment.

3.03 INSTALLATION

A. Fully Adhered Sheet Waterproofing:

1. Install fully adhered waterproofing sheets over the entire area that is to receive waterproofing in accordance with the requirements of the fully adhered sheet waterproofing manufacturer's installation instructions, and with the recommendations in ASTM D 5843.
 - a. Submit the manufacturers' written installation instructions to the Program/Project Manager for information.
2. Accurately align the sheets, and maintain uniform side and end laps that have the minimum dimensions required.
 - a. Stagger end laps.
3. Bonding Adhesive:
 - a. Apply bonding adhesive at the required rate to the substrates, and allow the bonding adhesive to partially dry.

- b. Apply bonding adhesive to the sheets, and firmly adhere the sheets to the substrates.
 - c. Do not apply the bonding adhesive to the splice area of the sheet.
 4. Install the fully adhered sheets and auxiliary materials so they tie into existing waterproofing.
 5. Horizontal Applications:
 - a. Apply the fully adhered sheets so the side laps are shingled with the slope of the deck wherever possible.
 - b. Spread a sealant bed over the deck drain flanges at deck drains, and securely seal the sheet waterproofing in place using a clamping ring.
- B. Partially Adhered Sheet Waterproofing:
 1. Install partially adhered waterproofing sheets over the entire area that is to receive waterproofing in accordance with the requirements of the partially adhered waterproofing manufacturer's written installation instructions.
 - a. Submit the manufacturers' written installation instructions to the Program/Project Manager for information.
 2. Accurately align the sheets, and maintain uniform side and end laps that have the minimum dimensions required.
 - a. Stagger end laps.
 3. Bonding Adhesive:
 - a. Apply bonding adhesive at the required rate to the substrates under 25 percent of each sheet at the upper end, and under the 18-inch (457mm) strip along the perimeter of the remaining 3 sides of each sheet, and allow the bonding adhesive to partially dry.
 - b. Firmly adhere the sheets to the substrates.
 - c. Do not apply the bonding adhesive to the splice area of the sheet.
 4. Install the partially adhered sheets and auxiliary materials so they tie into existing waterproofing.
- C. Compartmented, Loosely Laid Sheet Waterproofing:
 1. Install compartmented, loosely laid sheets over the entire area to receive waterproofing according to the compartmented, loosely laid sheet waterproofing manufacturer's written instructions.
 - a. Submit the manufacturers' written installation instructions to the Program/Project Manager for information.
 2. Accurately align the sheets, and maintain uniform side and end laps that have the minimum dimensions required.
 - a. Stagger end laps.
 3. Apply continuous beads of water cutoff mastic of the size recommended by the compartmented, loosely laid sheet waterproofing manufacturer to the substrates in a 60 inch by 60 inch (1500mm by 1500mm) grid pattern before installing the compartmented, loosely laid sheet waterproofing.
 4. Apply the compartmented, loosely laid sheets so the side laps are shingled with the slope of the deck wherever possible.

5. Spread a sealant bed over the deck drain flanges at deck drains, and securely seal the sheet waterproofing in place using a clamping ring.
6. Install the compartmented, loosely laid sheets and auxiliary materials so they tie into existing waterproofing.

D. Waterproofing Seams:

1. Cement Splices:
 - a. Clean the areas that are to receive cement splices.
 - b. Apply splicing cement and in-seam sealant, and firmly roll the side and end laps of overlapping sheets in accordance with the manufacturer's instructions to produce a splice that is not less than 6 inches (150mm) wide, and to ensure a watertight seam installation.
 - c. Apply lap sealant, and seal the exposed edges at sheet terminations.
2. Cement and Tape Splices:
 - a. Clean the areas that are to receive cement and tape splice.
 - b. Apply splicing cement and butyl gum tape, and firmly roll the side and end laps of overlapping sheets in accordance with the manufacturer's instructions to ensure a watertight seam installation.
 - c. Apply lap sealant, and seal exposed edges at sheet terminations.
3. Submit the manufacturers' written seam construction instructions to the Program/Project Manager for information.

E. Sheet Flashing:

1. Install sheet flashings and preformed flashing accessories, and adhere them to the substrates in accordance with the waterproofing manufacturer's written installation instructions.
2. Form wall flashings using exposed sheet flashing.
3. Extend deck sheet waterproofing to form wall flashings.
 - a. Flash penetrations and the field-formed inside and outside corners using uncured sheet flashing.
 - b. Clean splice areas, apply splicing cement, and firmly roll the side and end laps of overlapping sheets to ensure a watertight installation.
 - c. Apply lap sealant, and seal the exposed edges at sheet flashing terminations.
4. Cover expansion joints and discontinuous deck-to-wall or deck-to-deck joints by extending the deck sheet waterproofing over the joints.
5. Terminate and seal the tops of sheet flashings using mechanically anchored termination bars.

F. Protection Course:

1. Prior to beginning subsequent construction operations, install the protection course over the waterproofing membrane in accordance with the protection course manufacturer's installation instructions.
 - a. Submit the manufacturers' written installation instructions to the Program/Project Manager for information.
2. Minimize exposure of the membrane.

3. For vertical applications, molded-sheet drainage panels, insulation drainage panels, or board insulation may be used in place of a separate protection course if its use is approved by the waterproofing manufacturer.

G. Molded-Sheet Drainage Panels:

1. Place and secure molded-sheet drainage panels, with the geotextile facing away from the wall or deck substrate, in accordance with the molded-sheet drainage panel manufacturer's installation instructions.
 - a. Submit the manufacturers' written installation instructions to the Program/Project Manager for information.
 - b. Provide adhesives or mechanical fasteners that do not penetrate the waterproofing.
 - c. Lap the edges and ends of the geotextile so continuity is maintained.
 - d. For vertical applications, install the board insulation or protection course before installing the drainage panels.

H. Insulation:

1. Install one or more layers of board insulation as required to achieve the required thickness, and install insulation drainage panels, over the waterproofed surfaces.
 - a. Cut and fit the insulation to within 3/4 inch (19mm) of projections and penetrations.
2. Place and secure insulation units on vertical surfaces in accordance with the manufacturer's installation instructions.
3. Loosely lay insulation units on horizontal surfaces in accordance with the manufacturer's installation instructions.
 - a. Stagger end joints, and tightly abut insulation units.
4. Submit the manufacturers' written installation instructions to the Program/Project Manager for information.

3.04 REPAIR/RESTORATION

- A. Repair tears, voids, and lapped seams in the waterproofing that do not comply with the specified requirements.
1. Slit and flatten fishmouths and blisters.
 2. Provide patches using sheet waterproofing, and that extend beyond the repaired areas in all directions.

3.05 CLEANING

- A. Clean spillage onto and soiling of adjacent construction using cleaning agents and procedures recommended by the manufacturer of the affected construction.
- B. Waste Management:

1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 PROTECTION

- A. Protect installed self-adhering sheet waterproofing from damage and wear during the remainder of the construction period.
 1. Do not permit foot or vehicular traffic on unprotected self-adhering sheet waterproofing membrane.
- B. Protect installed board insulation and insulation drainage panels from damage due to UV light, harmful weather exposures, physical abuse, and other causes.
 1. Where insulation will be subject to abuse and cannot be concealed and protected by permanent construction immediately after installation, provide temporary coverings.
 2. Protect installed molded-sheet drainage panels during subsequent construction.

SECTION 07142

COLD FLUID-APPLIED WATERPROOFING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for acrylic-based elastomeric waterproofing.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 03300 - Cast-In-Place Concrete.
 - 5. Section 07620 - Sheet Metal Flashing and Trim.
 - 6. Section 07920 - Joint Sealants.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. CGSB – Canadian General Standards Board.
 - 2. SNCF – The French national railway.
- B. Reference Standards:
 - 1. ASTM International (ASTM):
 - a. ASTM C 836 – Standard Specification for High Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane for Use with Separate Wearing Course.
 - b. ASTM C 898 – Standard Guide for Use of High Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane With Separate Wearing Course.
 - c. ASTM C 1193 – Standard Guide for Use of Joint Sealants.
 - d. ASTM D 638 – Standard Test Method for Tensile Properties of Plastics.
 - e. ASTM D 4258 – Standard Practice for Surface Cleaning Concrete for Coating.
 - f. ASTM D 4259 – Standard Practice for Abrading Concrete.
 - g. ASTM D 4263 – Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method.
 - h. ASTM D 5957 – Standard Guide for Flood Testing Horizontal Waterproofing Installations.
 - i. ASTM D 7234 – Standard Test Method for Pull-Off Adhesion Strength of Coatings on Concrete Using Portable Pull-Off Adhesion Testers.
 - j. ASTM E 96/ E 96M – Standard Test Methods for Water Vapor Transmission of Materials.

2. Canadian General Standards Board (CGSB):
 - a. CAN/CGSB 37.50 M89 – Hot Applied, Rubberized Asphalt for Roofing and Waterproofing [*withdrawn*].
3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
5. SNCF:
 - a. Dynamic ballast impact test.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency and the City prior to incorporating items requiring testing by them into the Work.
- B. Pre-Installation Meetings:
 1. Conduct a Pre-installation Conference at the Site to review waterproofing requirements, including surface preparation, substrate conditions and pretreatment, minimum curing periods, forecasted weather conditions, special details and flashings, installation procedures, testing and inspection procedures, protection, and repairs.

1.04 SUBMITTALS

- A. Action Submittals:
 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Cold fluid-applied waterproofing membrane.
 - 2) Waterproofing membrane primer.
 - 3) Nonwoven-geotextile-faced, molded-sheet drainage panels.
 - 4) Woven-geotextile-faced, molded-sheet drainage panels.
 - b. Shop Drawings:
 - 1) Cold fluid-applied waterproofing.
 - c. Samples:
 - 1) Flashing sheet Sample.
 - 2) Membrane-reinforcing fabric Sample.
 - 3) Insulation Sample.
 - 4) Drainage Panel Samples.
 - d. Qualification Statements:

- 1) Cold Fluid-applied waterproofing installer's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Waterproofing.
 - b. Manufacturer's Instructions:
 - 1) Waterproofing manufacturer's written surface preparation recommendations.
 - 2) Waterproofing manufacturer's written instructions for preparing vertical and horizontal surfaces at terminations and penetrations.
 - 3) Waterproofing manufacturer's written application instructions.
 - c. Manufacturer's Reports:
 - 1) Daily reports from the technical site representative qualified by the waterproofing membrane manufacturer.
 - d. Qualification Data:
 - 1) Cold fluid-applied waterproofing installer's qualifications:

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Fluid-Applied Waterproofing Materials Warranty.
 - 2) Cold Fluid-Applied Waterproofing Installation Warranty.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Testing and Inspection Agencies:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Qualifications:

1. Cold Fluid-Applied Waterproofing Installer's Qualifications:
 - a. Engage a firm that is certified by the waterproofing manufacturer to install the waterproofing specified for this Contract.
 - b. Submit the cold fluid-applied waterproofing installer's qualifications to the Program/Project Manager for approval.
 - 1) Include a list of at least 5 references for similar projects in North America completed to the client's satisfaction during the past 5 years in a similar environment and application.

C. Certifications:

1. Test and Evaluation Reports:

- a. Submit Test and Evaluation Reports for the waterproofing, proposed to be provided under this Section, to the Program/Project Manager for information.
- 1) Furnish test and evaluation reports based on evaluation of comprehensive tests performed by a qualified independent testing agency.

D. Site Samples:

1. Submit the following Samples to the Program/Project Manager for approval:
 - a. Flashing Sheet: 10-inch by 8-inch Sample.
 - b. Membrane-Reinforcing Fabric: 10-inch by 8-inch Sample.
 - c. Insulation: 10-inch by 8-inch Sample.
 - d. Drainage Panels: 4-inch by 4-inch Sample.

E. Mock-Ups:

1. Before beginning to apply the waterproofing materials for production Work, at a location determined by the Program/Project Manager apply waterproofing to 100 square feet of deck or wall to demonstrate surface preparation, crack and joint treatment, corner treatment, thickness, texture, and execution quality to the Program/Project Manager.
 - a. If the Program/Project Manager determines the mockups do not comply with the specified requirements, reapply waterproofing until the mockups are approved by the Program/Project Manager.
 - b. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in the mockups, unless the Program/Project Manager specifically approves such deviations in writing.
 - c. Mock-ups applied as part of the building or structure as opposed to those erected separately may become part of the completed Work if approved by the Program/Project Manager and undisturbed at the time of Substantial Completion.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver liquid materials to the Site in their original containers with seals unbroken, labeled with the manufacturer's name, the product brand name and the type, date of manufacture, shelf life, and directions for storing and mixing with other components.

B. Storage and Handling Requirements:

1. Store liquid materials in their original undamaged containers in a clean, dry, protected location, and within the temperature range required by the waterproofing manufacturer.
2. Remove and replace liquid materials that cannot be applied within their stated shelf life.
3. Protect stored materials from direct sunlight.

C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

A. Ambient Conditions:

1. Apply waterproofing within the range of ambient and substrate temperatures recommended by the waterproofing manufacturer.
 - a. Do not apply waterproofing to damp or wet substrate, when the relative humidity exceeds 85 percent, or when temperatures are less than 14 degrees Fahrenheit if the substrate temperature is above the dew point.
 - 1) If conditions are outside of these ranges, consult the manufacturer.
 - b. Do not apply waterproofing in snow, rain, fog, or mist; or when these weather conditions are imminent during an application or curing period.
2. Maintain adequate ventilation during application and curing of waterproofing materials.

1.08 WARRANTY

A. Manufacturer Warranty:

1. Warrant the cold fluid-applied waterproofing materials against failures within the 5-year period after the Date of Substantial Completion:
 - a. Submit a Cold Fluid-Applied Waterproofing Materials Warranty on the manufacturer's standard or customized form, without monetary limitation, in which the manufacturer agrees to repair or replace waterproofing that fails to remain watertight within the specified warranty period to the Program/Project Manager for approval.
 - b. The Cold Fluid-Applied Waterproofing Materials Warranty does not include failure of waterproofing due to failure of substrate prepared and treated according to the specified requirements, or formation of new joints and cracks in substrate that exceed 1/16 inch in width.

B. Special Warranty:

1. Special Installer's Warranty:

- a. Warrant the cold fluid-applied waterproofing workmanship against failures within the 5-year period after the Date of Substantial Completion:
 - 1) Include removing and reinstalling protection board, drainage panels, insulation, pedestals, and pavers on plaza decks in the Warranty.
 - 2) Submit a Cold Fluid-Applied Waterproofing Installation Warranty on the installer's standard or customized form, without monetary limitation, in which installer agrees to repair waterproofing that fails to remain watertight within the specified warranty period to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 WATERPROOFING SYSTEMS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain waterproofing materials, the protection course, and molded-sheet drainage panels from a single source from single manufacturer having the resources to provide products of consistent quality in appearance and physical properties without delaying the progress of the Work.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- C. Performance:
 - 1. Flow Rates of Molded-Sheet Drainage Panels:
 - a. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panels:
 - 1) Vertical Flow Rate:
 - a) Provide nonwoven-geotextile-faced, molded-sheet drainage panels having a vertical flow rate of 9 to 15 gallons per minute per foot (112 to 188 Liters per minute per meter).

- b. Woven-Geotextile-Faced, Molded-Sheet Drainage Panels:
- 1) Horizontal Flow Rate:
 - a) Provide woven-geotextile-faced, molded-sheet drainage panels having a horizontal flow rate not less than 2.8 gallons per minute per foot (35 Liters per minute per meter).
- D. Design Criteria:
1. Compatibility:
 - a. Provide auxiliary materials recommended by the waterproofing manufacturer that are compatible with one another and with the waterproofing, as demonstrated by the waterproofing manufacturer based on testing and field experience.
 2. Product Data:
 - a. Submit Product Data for each type of product specified herein to the Program/Project Manager for approval.
 - 1) Include the manufacturer's written instructions for evaluating, preparing, and treating the substrate, technical data, and physical and performance properties tested for the waterproofing.
 3. Shop Drawings:
 - a. Prepare Shop Drawings for the cold fluid-applied waterproofing showing the locations and extent of the waterproofing.
 - 1) Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.
 - b. Submit the Shop Drawings for the cold fluid-applied waterproofing to the Program/Project Manager for approval.
- E. Materials:
1. Acrylic-Based Elastomeric Waterproofing:
 - a. Provide 100 percent solvent-free, two-component, reactive acrylic-based cold liquid spray-applied seamless, elastomeric waterproofing complying with the requirements specified in ASTM C 836, and having properties complying with or exceeding the values specified in Table 07142-1.

Table 07142-1 Membrane Properties ⁽¹⁾		
Property	Test Method	Acceptable Values
Gel time	N/A	6 to 11 minutes
Cure time	N/A	30 minutes
Water vapor transmission	ASTM E 96/ E 96M, Method A	1.048 g/m ² /day

Table 07142-1 Membrane Properties ⁽¹⁾		
Property	Test Method	Acceptable Values
Adhesion to concrete	ASTM D 7234	100 psi (0.7MPa) with failure in concrete
Tensile strength		
Typical	ASTM D 638, Die C	1,700 psi (11.8MPa)
Heat ageing at 160 F (4 weeks)	ASTM D 638, Die C	0 percent change
Elongation at Break		
Typical	ASTM D 638, Die C	130 percent at break
Heat ageing at 160 F (4 weeks)	ASTM D 638, Die C	0 percent change
Low temperature flexibility	CAN/CGSB 37.50 M89	Pass 1/4 inch (6.5mm) mandrel at -13 F (-25 C)
For Railroads:		
Dynamic ballast impact test	SNCF 181kN for 2x10 ⁶ cycles	No damage or leak
1. Test laboratory-prepared samples at 68 degrees Fahrenheit (20 degrees Celsius); and where applicable, after a 24-hour cure.		

- b. Manufacturers:
 - 1) Stirling Lloyd Group Plc, Eliminator®, <http://www.stirlinglloyd.com>.
 - 2) Approved equal.
2. Primer:
 - a. Provide the waterproofing manufacturer's standard 100 percent solvent-free, reactive methyl methacrylate-based, two-component resin primer capable of a full cure in 40 minutes at 68 degrees Fahrenheit (20 degrees Celsius).
 - b. Manufacturers:
 - 1) Stirling Lloyd Group Plc, Eliminator®, <http://www.stirlinglloyd.com>.
 - 2) Approved equal.
3. Protection Course:
 - a. Cast-In-Place Concrete:
 - 1) Provide cast-in-place concrete complying with the requirements specified in Section 03300, Cast-In-Place Concrete.

2.02 ACCESSORIES

- A. Insulation:
 - 1. Provide insulation complying with the requirements specified in Section 07210, Building Insulation.
- B. Joint Sealants:
 - 1. Provide joint sealants complying with the requirements specified in Section 07920, Joint Sealants.
- C. Sheet Flashing:
 - 1. Provide sheet flashing complying with the requirements specified in Section 07620, Sheet Metal Flashing and Trim.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. With the installer present, examine the substrates and conditions in the areas to receive cold fluid-applied waterproofing for compliance with specified requirements and other conditions affecting performance of the waterproofing.
 - 2. Verify that substrate concrete has cured and aged for the minimum time period recommended by the waterproofing manufacturer.
- B. Pre-Installation Testing:
 - 1. Tensile Bond Strength Test:
 - a. Conduct random tests to verify the substrate has adequate tensile bond strength
 - 1) Test Procedure:
 - a) Tests substrate tensile bond strength in accordance with the requirements specified in ASTM D 7234 at a minimum test frequency of 1 test for each 5000 square feet (500m²) of substrate.
 - b) For areas smaller than 5000 square feet (500m²), perform a minimum of 3 tests.
 - 2) Acceptance Criteria:
 - a) Tensile bond strengths of the primer to the substrate greater than or equal to 100 psi (0.7MPa), with failure in the concrete, indicate adequate surface preparation.
 - 2. Capillary Moisture Test:
 - a. Verify that the substrate is visibly dry and free of moisture.
 - 1) Test Procedure:

- a) Determine the capillary moisture in the substrate in accordance with the requirements for the plastic sheet method specified in ASTM D 4263.
 - 2) Acceptance Criteria:
 - a) The absence of moisture indicates appropriate surface conditions.
- C. Evaluation and Assessment:
- 1. Proceed to apply the cold fluid-applied waterproofing only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
- 1. Protect the Work of other trades, whether being coated or not, against damage from application of the waterproofing.
 - a. Mask off adjoining surfaces not receiving waterproofing to prevent spillage or overspray affecting other construction.
 - b. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.
- B. Surface Preparation:
- 1. Prior to applying the waterproofing, clean and prepare the substrate in accordance with the waterproofing manufacturer's surface preparation recommendations.
 - a. Ensure the substrate where waterproofing will be applied is clean, dust-free, and dry.
 - b. Submit the waterproofing manufacturer's written surface preparation recommendations to the Program/Project Manager for information.
- C. Demolition/Removal:
- 1. Prior to applying the waterproofing, remove grease, oil, bitumen, form-release agents, paints, curing compounds, acid residues, and other penetrating contaminants or film-forming coatings from the substrate concrete.
 - a. Abrasive blast clean the substrate concrete surfaces with a self-contained, re-circulating, blast-cleaning apparatus to uniformly expose the top surface of fine aggregate in accordance with the requirements specified in ASTM D 4259.
 - 1) Remove material to create a sound surface free of laitance, glaze, efflorescence, curing compounds, concrete hardeners, and form-release agents.
 - 2) Remove the remaining loose material, and clean the surfaces, in accordance with the requirements specified in ASTM D 4258.
 - 2. Remove fins, ridges, and other projections; and fill honeycomb, aggregate pockets, and other voids using appropriate concrete patching materials.

3.03 APPLICATION

- A. Apply waterproofing in accordance with the requirements specified in ASTM C 898 and with waterproofing manufacturer's application instructions.
 - 1. Apply primer over the prepared substrate.
 - 2. Submit the waterproofing manufacturer's written application instructions to the Program/Project manager for information.
- B. Unreinforced Waterproofing Applications:
 - 1. Mix the waterproofing materials, and apply the materials by spray, roller, notched squeegee, trowel, or another application method suitable for the substrate slope.
 - a. Spray-apply 2 different color-coded waterproofing coats to obtain a seamless membrane free of entrapped gases, and having an average dry film thickness of 120 mils and a minimum dry film thickness of 100 mils at any point.
 - 1) Ensure that each coat has a wet film thickness of 60 mils to achieve an overall coverage rate of 13.4 square feet per gallon.
 - 2) Verify the wet film thickness of the waterproofing after the application of every 100 square feet (9.3m²) of material.
 - b. Apply the waterproofing to prepared wall terminations and vertical surfaces.
- C. Reinforced Waterproofing Applications:
 - 1. Mix the waterproofing materials, and apply the materials by roller, notched squeegee, trowel, or another suitable application method.
 - a. Apply the first coat of waterproofing, embed the membrane-reinforcing fabric, and apply a second coat of waterproofing to completely saturate the reinforcing fabric and to obtain a seamless reinforced membrane free of entrapped gases, and having an average dry film total thickness of 120 mils (3mm).
 - 1) Coordinate the total thickness of the waterproofing membrane with the weight of the membrane-reinforcing fabric and the type of waterproofing.
 - 1) Verify the wet film thickness of the waterproofing after the application of every 100 square feet (9.3m²) of material.
 - b. Apply the reinforced waterproofing to prepared wall terminations and vertical surfaces.
- D. Curing:
 - 1. Cure the waterproofing according to the manufacturer's written recommendations, taking care to prevent contamination and damage during the application stages and curing period.
- E. Protection Course:

1. Before starting subsequent construction operations, provide a cast-in-place concrete protection course having tooled joints over the cured membrane.

F. Special Techniques:

1. Where the membrane is to be joined to existing cured material and at day joints, ensure that the new application overlaps the existing one by at least 2 inches. No preparation shall be necessary unless the existing materials are contaminated with dirt in which case the repair/overlap shall first be wiped with solvent (e.g. acetone).
2. Terminations and Penetrations:
 - a. At terminations and penetrations through the waterproofing, and at expansion joints, drains, and sleeves, prepare the vertical and horizontal surfaces in accordance with the requirements specified in ASTM C 898 and with the waterproofing manufacturer's instructions.
 - b. Unless otherwise recommended by the waterproofing manufacturer, prime the substrate at terminations and penetrations.
 - c. At terminations and penetrations, apply 2 separate waterproofing applications.
 - 1) If recommended by the waterproofing manufacturer, embed a joint reinforcing strip in the first preparation coat.
 - 2) If recommended by the waterproofing manufacturer, provide sealant cants around penetrations and at the inside corners of deck-to-wall butt joints.
 - d. Submit the waterproofing manufacturer's written instructions for preparing vertical and horizontal surfaces at terminations and penetrations to the Program/Project Manager for information.
3. Joint and Crack Treatment:
 - a. Prior to applying the waterproofing, prepare, rout, treat, and fill joints and cracks in the substrates in accordance with the requirements specified in ASTM C 898, and with the waterproofing manufacturer's written joint and crack treatment instructions.
 - 1) Before coating surfaces with waterproofing, remove dust and dirt from the joints and cracks in accordance with the requirements specified in ASTM D 4258.
 - 2) Install joint sealants in accordance with the requirements specified in ASTM C 1193.
 - 3) Prime the substrate, and apply a single thickness of the preparation strip extending a minimum of 3 inches along each side of the joint.
 - a) Apply a bond breaker between joint sealants and the preparation strip.
 - b) Apply waterproofing in 2 separate applications, and embed a joint reinforcing strip in the first preparation coat.
 - 4) Unless expansion joint gaskets or expansion joint cover assemblies are present, and where indicated in the Contract

Documents or required according to the waterproofing manufacturer's written instructions, provide sheet flashing bonded to deck and wall substrates.

- a) Extend the sheet flashings onto perpendicular surfaces and other work penetrating the substrate in accordance with the requirements specified in ASTM C 898.

3.04 REPAIR/RESTORATION

- A. If an area of waterproofing is left untreated, or if the membrane becomes damaged, apply a patch repair to restore the integrity of the waterproofing system.
 1. Cut back the damaged area to sound material, and wipe the area with a solvent, such as acetone, to remove contaminants on the periphery up to a width of at least 2 inches.
 2. Prime the substrate as necessary, followed by the application of the membrane.
 3. Obtain a continuous layer over the substrate with a 2-inch overlap onto existing membrane.

3.05 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 1. During the period when cold fluid-applied waterproofing is being applied, the Testing and Inspection Agency must perform routine and other testing of materials.
 - a. Advise the Testing and Inspection Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. The Testing and Inspection Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
 2. Flood Test:
 - a. Test Procedure:
 - 1) The Testing and Inspection Agency will observe flood testing and examine the underside of horizontal decks and terminations for evidence of leaks during the flood testing.
 - 2) After the waterproofing has been completed but before the overlaying construction is placed, each deck area will be flood tested for leaks in accordance with the recommended method specified in ASTM D 5957.

- 3) After temporary containment assemblies, plugs, or dam drains have been installed, the deck area will be flooded with potable water having an average depth of 2-1/2 inches, a minimum depth of 1 inch, and not exceeding a depth of 4 inches.
- 4) A clearance of 2 inches will be maintained from the top of sheet flashings.
- 5) Each area will be flooded for at least 24 hours, but for no longer than 72 hours.
- b. Acceptance Criteria:
 - 1) Areas not exhibiting leakage pass the Flood Test.
3. Inspections:
 - a. Have the manufacturer-qualified site representative inspect substrate conditions, surface preparation, and application of the membrane, flashings, protection, and drainage components.
- B. Non-Conforming Work
 1. After flood testing, repair leaks, repeat flood tests, and make further repairs until the waterproofing installation is watertight.
- C. Manufacturer Services:
 1. Engage a full time technical site representative qualified by the waterproofing membrane manufacturer to perform inspections, and to submit daily reports to the Program/Project Manager.
 2. Install waterproofing only in the presence of the manufacturer's technical site representative.

3.06 CLEANING

- A. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by the manufacturer of the construction items affected.
- B. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 PROTECTION

- A. Protect applied waterproofing from damage and wear during the remainder of the construction period.
 1. Do not permit foot or vehicular traffic on unprotected waterproofing membrane.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency and the City prior to incorporating items requiring testing by them into the Work.
- B. Pre-Installation Meetings:
 - 1. Conduct a Pre-installation Conference at the Site to review waterproofing requirements, including surface preparation, substrate conditions and pretreatment, minimum curing periods, forecasted weather conditions, special details and flashings, installation procedures, testing and inspection procedures, protection, and repairs.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Metal Oxide waterproofing.
 - 2) Patching compound.
 - 3) Plugging compound.
 - b. Shop Drawings:
 - 1) Metal Oxide waterproofing.
 - c. Mock-ups
 - 1) Metal Oxide waterproofing typical horizontal and vertical surfaces shown on drawings.
 - d. Qualification Statements:
 - 1) Metal Oxide waterproofing applicator or installer's qualifications.
 - 2) Product certificates
 - 3) Product Test reports.
 - 4) Field quality-control reports.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Metal Oxide Waterproofing.
 - 2) Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for metal-oxide waterproofing.

- b. Manufacturer's Instructions:
 - 1) Waterproofing manufacturer's written surface preparation recommendations.
 - 2) Waterproofing manufacturer's written instructions for preparing vertical and horizontal surfaces at terminations and penetrations.
 - 3) Waterproofing manufacturer's written application instructions.
 - c. Manufacturer's Reports:
 - 1) Daily reports from the technical site representative qualified by the waterproofing membrane manufacturer.
 - d. Qualification Data:
 - 1) Cold fluid-applied waterproofing applicator or installer's qualifications:
- C. Closeout Submittals:
- 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Metal Oxide Waterproofing Materials Warranty.
 - 2) Waterproofing Installation Warranty.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
- 1. Testing and Inspection Agencies:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.
- B. Qualifications:
- 1. Metal Oxide Waterproofing Installer's Qualifications:
 - a. Engage a firm that is experienced in applying metal oxide waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in applications with a record of successful in-service performance, and that employs workers trained and approved by manufacturer, specified for this Contract.
 - b. Submit the cold fluid-applied waterproofing installer's qualifications to the Program/Project Manager for approval.
 - 1) Include a list of at least 5 references for similar projects in North America completed to the client's satisfaction during the past 5 years in a similar environment and application.
- C. Certifications:
- 1. Test and Evaluation Reports:

- a. Submit Test and Evaluation Reports for the waterproofing, proposed to be provided under this Section, to the Program/Project Manager for information.
 - 1) Furnish test and evaluation reports based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency.
- D. Mock-Ups:
 - 1. Before beginning to apply the waterproofing materials for production Work, at a location determined by the Program/Project Manager apply waterproofing to 100 square feet of deck and wall to demonstrate surface preparation, crack and joint treatment, corner treatment, thickness, texture, and execution quality to the Program/Project Manager.
 - a. Provide mock-ups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - b. If the Program/Project Manager determines the mockups do not comply with the specified requirements, reapply waterproofing until the mockups are approved by the Program/Project Manager.
 - c. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in the mockups, unless the Program/Project Manager specifically approves such deviations in writing.
 - d. Mock-ups applied as part of the building or structure as opposed to those erected separately may become part of the completed Work if approved by the Program/Project Manager and undisturbed at the time of Substantial Completion.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Deliver liquid materials to the Site in their original containers with seals unbroken, labeled with the manufacturer's name, the product brand name and the type, date of manufacture, shelf life, and directions for storing and mixing with other components.
- B. Storage and Handling Requirements:
 - 1. Store liquid materials in their original undamaged containers in a clean, dry, protected location, and within the temperature range required by the waterproofing manufacturer.
 - 2. Remove and replace liquid materials that cannot be applied within their stated shelf life.
 - 3. Protect stored materials from direct sunlight.
- C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

A. Ambient Conditions:

1. Apply waterproofing within the range of ambient and substrate temperatures recommended by the waterproofing manufacturer.
 - a. Do not apply waterproofing to damp or wet substrate, when the relative humidity exceeds 85 percent, or when temperatures are less than 14 degrees Fahrenheit if the substrate temperature is above the dew point.
 - 1) Proceed with waterproofing work only if temperature is maintained at 40 deg F or above, during work and cure period, and space is well ventilated and kept free of water.
 - 2) If conditions are outside of these ranges, consult the manufacturer.
 - b. Do not apply waterproofing in snow, rain, fog, or mist; or when these weather conditions are imminent during an application or curing period.
2. Maintain adequate ventilation during application and curing of waterproofing materials.
3. Proceed with waterproofing work only after pipe sleeves, vents, curbs, inserts, drains, and other projections through the substrate have been completed. Proceed only after substrate defects, including honeycombs, voids, and cracks, have been repaired to provide a sound substrate free of forming materials, including reveal inserts.

1.08 WARRANTY

A. Manufacturer Warranty:

1. Warrant the metal oxide waterproofing materials against failures within the 5-year period after the Date of Substantial Completion:
 - a. Submit a Metal Oxide Waterproofing Materials Warranty on the manufacturer's standard or customized form, without monetary limitation, in which the manufacturer agrees to repair or replace waterproofing that fails to remain watertight within the specified warranty period to the Program/Project Manager for approval.
 - b. The Metal Oxide Waterproofing Materials Warranty does not include failure of waterproofing due to failure of substrate prepared and treated according to the specified requirements, or formation of new joints and cracks in substrate that exceed 1/16 inch in width.

B. Special Warranty:

1. Special Installer's Warranty:

- a. Warrant the cold fluid-applied waterproofing workmanship against failures within the 5-year period after the Date of Substantial Completion:
 - 1) Include removing and reinstalling structure or substrate in the Warranty.
 - 2) Submit a Metal Oxide Waterproofing Installation Warranty on the installer's standard or customized form, without monetary limitation, in which installer agrees to repair waterproofing that fails to remain watertight within the specified warranty period to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 WATERPROOFING MATERIALS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain waterproofing materials, and accessories from a single source from single manufacturer having the resources to provide products of consistent quality in appearance and physical properties without delaying the progress of the Work.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments and ICC International Building Code (IBC) as Amended by the City of Phoenix.
- C. Design Criteria:
 - 1. Compatibility:
 - a. Provide auxiliary materials recommended by the waterproofing manufacturer that are compatible with one another and with the waterproofing, as demonstrated by the waterproofing manufacturer based on testing and field experience.
 - 2. Product Data:
 - a. Submit Product Data for each type of product specified herein to the Program/Project Manager for approval.

- 1) Include the manufacturer's written instructions for evaluating, preparing, and treating the substrate, technical data, and physical and performance properties tested for the waterproofing.
3. Shop Drawings:
 - a. Prepare Shop Drawings for the metal oxide waterproofing showing the locations and extent of the waterproofing.
 - 1) Include details for substrate joints and cracks, flashing, penetrations, inside corners, tie-ins with other termination conditions.
 - b. Submit the Shop Drawings for the metal oxide waterproofing to the Program/Project Manager for approval.

D. Materials:

1. Metal Oxide Waterproofing Compound:
 - a. Provide a product specifically formulated for waterproofing concrete and masonry substrates; containing pulverized iron and a chemical oxidizing agent to cause the iron particles to rust and grow in size in the presence of water; with VOC content complying with limits of authorities having jurisdiction.
 - b. Manufacturers:
 - 1) Anti-Hydro International, Inc; A-H Metallic Waterproofing
 - 2) Metalcrete Industries; Metalcrete Waterproofing.
 - 3) Specco Industries, Inc.; Speccrete Metallic Waterproofer.
 - 4) Approved equal.

2.02 ACCESSORY MATERIALS

A. Patching Compound:

1. Provide factory-premixed cementitious repair mortar, crack filler, or sealant recommended by waterproofing manufacturer for filling and patching tie holes, honeycombs, reveals, and other imperfections.
2. Compatible with substrate and other materials indicated
3. VOC content complying with limits of authorities having jurisdiction.

B. Plugging Compound:

1. Provide factory-premixed cementitious compound with hydrophobic properties and recommended by waterproofing manufacturer.
2. Resistant to water and moisture but vapor permeable for all standard applications (vertical, overhead, and horizontal surfaces not exposed to vehicular traffic)
3. Compatible with substrate and other materials indicated.
4. VOC content complying with limits of authorities having jurisdiction.

C. Portland Cement:

1. ASTM C 150, Type 1.

- D. Sand
 - 1. ASTM C 144.
- E. Water
 - 1. Potable.

2.03 MIXES

- A. Metal Oxide Waterproofing Compound
 - 1. Add metal oxide waterproofing components, pre-mixed or field mixed, per manufacturer's written instructions.
 - 2. Blend together with mechanical mixer or by hand to required consistency for reach coat.
- B. Protection Coating
 - 1. Field mix protection coat consisting of Portland cement and sand as recommended by same manufacturer as metal oxide waterproofing according to manufacturer's written instructions for application over waterproofing.
 - 2. Measure, batch, and mix materials with potable water.
 - 3. Blend together with mechanical mixer to required consistency.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. With the installer present, examine the substrates and conditions in the areas to receive metal oxide waterproofing for compliance with specified requirements and other conditions affecting performance of the waterproofing.
 - 2. Verify that substrate concrete has cured and aged for the minimum time period recommended by the waterproofing manufacturer.
- B. Evaluation and Assessment:
 - 1. Proceed to apply the metal oxide waterproofing only after unsatisfactory conditions have been corrected.
 - 2. Notify Architect in writing of active leaks or defects that would affect system performance.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect the Work of other trades, whether being coated or not, against damage from application of the waterproofing.
 - a. Protect other work from damage caused by cleaning, preparation, and application of waterproofing.

- b. Mask off adjoining surfaces not receiving waterproofing to prevent spillage or overspray affecting other construction.
- c. Provide temporary enclosure to ensure adequate ambient temperatures and ventilation conditions for application.
- d. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.
- e. Do not allow waterproofing, patching, and plugging materials to enter reveals or annular spaces intended for resilient sealants or gaskets, such as joint spaces between pipes and pipe sleeves.
- f. Stop active water leaks with plugging compound according to waterproofing manufacturer's written instructions.

B. Surface Preparation:

- 1. Prior to applying the waterproofing, clean and prepare the substrate in accordance with the waterproofing manufacturer's surface preparation recommendations.
 - a. Ensure the substrate where waterproofing will be applied is clean, dust-free, and dry.
 - b. Repair damaged or unsatisfactory substrate with patching compound according to manufacturer's written instructions.
 - 1) At holes and cracks in substrate, remove loosened chips and cut reveal with sides perpendicular to surface, not tapered, and approximately 1 inch (25.4 mm) deep.
 - 2) Fill reveal with patching compound flush with surface.
 - c. Submit the waterproofing manufacturer's written surface preparation recommendations to the Program/Project Manager for information.

C. Demolition/Removal:

- 1. Prior to applying the waterproofing, remove efflorescence, chalk, dust, dirt, mortar spatter, grease, oils, form-release agents, paints, curing compounds, acid residues, and other penetrating contaminants or film-forming coatings from the substrate concrete to ensure that waterproofing bonds to surface.
 - a. Clean concrete surfaces according to ASTM D 4258.
 - 1) Remove material to create a sound surface free of laitance, glaze, efflorescence, curing compounds, concrete hardeners, and form-release agents.
 - b. Mechanical abrading or abrasive-blast cleaning according to ASTM D 4259.
- 2. Remove fins, ridges, and other projections; and fill honeycomb, aggregate pockets, and other voids using appropriate concrete patching materials.

3.03 APPLICATION

- A. Apply waterproofing in accordance with the requirements of the waterproofing manufacturer's application instructions.

1. Submit the waterproofing manufacturer's written application instructions to the Program/Project manager for information.
2. As recommended by the manufacturer, saturate surface with water and maintain in a damp condition until applying waterproofing. Remove standing water.
3. Apply waterproofing to surfaces indicated on Drawings.
4. Number of Metal Oxide Coats: Three.

B. Curing:

1. Moist-cure the waterproofing after final coat has set, followed by air drying prior to being placed in service, unless otherwise recommended according to the manufacturer's written recommendations, taking care to prevent contamination and damage during the application stages and curing period; unless otherwise recommended in writing by manufacturer.

C. Application Method:

1. Brush apply the waterproofing, vigorously working first coat onto the substrate and forcing the material into surface voids.
2. Brush each subsequent coat into full contact with previous coat.
3. Dampen surface between coats.
4. Allow each coat to cure before applying subsequent coats.
5. Terminations and Penetrations:
 - a. At terminations and penetrations through the waterproofing, and at drains, and sleeves, prepare the vertical and horizontal surfaces in accordance with the requirements specified in ASTM C 898 and with the waterproofing manufacturer's instructions.
6. Protection Coat:
 - a. Apply to a thickness of 1/8 inch (3 mm) to 1/4 inch (6 mm) for walls and 1 inch for floors.
7. Waterproofing Treatment Extents: Extend waterproofing treatment as follows:
 - a. Onto columns integral with treated walls.
 - b. Onto interior non-treated walls intersecting exterior treated walls, for a distance of 24 inches (600 mm) for cast-in-place concrete.
 - c. Onto every substrate in areas indicated for treatment, including pits, sumps, and similar offsets and features.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. Engage manufacturer's representative to inspect completed application and provide a written report that application complies with manufacturer's written instructions.

2. During the period when metal oxide waterproofing is being applied, the Testing and Inspection Agency must perform routine and other testing of materials.
 - a. Advise the Testing and Inspection Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. The Testing and Inspection Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.

B. Non-Conforming Work

1. After flood testing, repair leaks, repeat flood tests, and make further repairs until the waterproofing installation is watertight.

3.05 CLEANING

- A. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by the manufacturer of the construction items affected.
- B. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 PROTECTION

- A. Protect applied waterproofing from damage and wear during the remainder of the construction period.
 1. Do not permit foot or vehicular traffic on unprotected waterproofing membrane.

0	07/13/2018	N/A	All	First edition.

SECTION 07180

TRAFFIC COATINGS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for exterior pedestrian traffic coatings.
- B. Related Requirements:
 - 1. Section 01316 - Project Meetings.
 - 2. Section 01330 - Submittal Procedures.
 - 3. Section 01360 - Sustainable Design Requirements.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 07920 - Joint Sealants

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Pre-Installation Meetings:
 - 1. Attend a pre-installation meeting at the Site held in compliance with the requirements of Section 01316, Project Meetings, to discuss the requirements for applying the traffic coatings to be provided under this Contract.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Traffic Coating
 - 2) Primer
 - 3) Basecoat
 - 4) Intermediate coats
 - 5) Topcoat
 - 6) Bodycoat
 - 7) Aggregate
 - 8) Flakes
 - 9) Joint Sealants
 - 10) Sheet Flashing
 - 11) Adhesive
 - 12) Reinforcing Strip
 - b. Shop Drawings:
 - 1) Traffic coatings.

- c. Samples:
 - 1) Samples for each type of traffic coating and substrate indicated in Contract Documents
 - 2) Samples for each type of finish indicated in the Contract Documents.
 - d. Certificates:
 - 1) Traffic coating manufacturer's Certificate of Compliance.
 - e. Qualification Statements:
 - 1) Installer's Qualifications
- B. Informational Submittals:
- 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Source Quality Control Submittals:
 - 1) Material Test Reports.
- C. Closeout Submittals:
- 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Traffic Coating Materials Warranty.
 - 2) Traffic Coating Installation Warranty.

1.04 QUALITY ASSURANCE

- A. Qualifications:
- 1. Installer's Qualifications:
 - a. Retain an installer that is trained and approved for installation of traffic coatings.
- B. Site Samples:
- 1. Submit samples for each type of traffic coating required, prepared on rigid backing and of same thickness and material indicated in the Contract Documents to the Program/Project Manager for approval.
 - 2. Submit samples for each type of finish indicated in the Contract Documents to the Program/Project Manager for approval.
- C. Mock-Ups:
- 1. Apply mock-ups to set quality standards for materials and execution.
 - a. Apply each coating to at least 100 square feet of each substrate selected by the Program/Project Manager to demonstrate surface preparation, joint and crack treatment, thickness, texture, color, and standard of workmanship. The 100 square feet mock-up area shall include an edge condition.

- b. Remove and reapply mock-ups until approved by Program/Project Manager.
- c. Approved mock-ups may become part of the completed work if undisturbed at time of Substantial Completion.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Deliver traffic coating materials to the Site in their original containers, with their seals unbroken, labeled with the manufacturer's name, product brand name and type, date of manufacture, and directions for storage.
- B. Storage and Handling Requirements:
 - 1. To prevent deterioration from moisture or other detrimental effects, store materials in accordance with the manufacturer's written instructions.
- C. Packaging Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.06 SITE CONDITIONS

- A. Ambient Conditions:
 - 1. Do not proceed to apply traffic coatings unless the surface and air temperatures are within the traffic coating manufacturer's acceptable limits.
 - 2. Do not apply traffic coatings if standing water is visible on the surface to be treated, if the wind speed exceeds 15 miles per hour, or if rain is expected within 6 hours of the scheduled application time.

1.07 WARRANTY

- A. Manufacturer Warranty:
 - 1. Warrant the traffic coatings against defects in materials within the 5-year period after the Date of Substantial Completion:
 - a. The manufacturer's liability does not include variable factors out of the manufacturer's control, such as environmental conditions, application techniques, and surface conditions which are critical to the results obtained.
 - b. Submit a Traffic Coating Materials Warranty on the traffic coating manufacturer's standard or customized form, without monetary limitation, in which the traffic coating manufacturer agrees to replace properly applied traffic coatings that fail in materials within the specified warranty period to the Program/Project Manager for approval.
 - 1) Have the manufacturer's standard form signed by the Contractor and manufacturer.

B. Special Warranty:

1. Installer's Warranty:

- a. Warrant the traffic coatings workmanship against failures within the 5-year period after the Date of Substantial Completion:
 - 1) Submit a Traffic Coating Installation Warranty on the installer's standard or customized form, without monetary limitation, in which installer agrees to repair traffic coatings that fail within the specified warranty period to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 TRAFFIC COATING PRODUCT TYPES

A. Manufacturers:

1. Manufacturer List:

- a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
- 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.

B. Description:

1. Regulatory Requirements:

- a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].

C. Design Criteria:

1. Product Data:

- a. Obtain the traffic coating manufacturers' Product Data for each type of product proposed for the Work of this Section.
- b. Submit the traffic coating manufacturers' Product Data for each type of product to the Program/Project Manager for approval.
- 2. Submit Shop Drawings showing the extent of each traffic coating to the Program/Project Manager for approval.
 - a. Include details for treating substrate joints and cracks, flashings, deck penetrations, and other termination conditions.

D. Materials

1. Traffic Coating:

- a. Provide a traffic coating complying with ASTM C 957, ASTM D2047 and ASTM D523.

- b. Provide primers; base, intermediate, and topcoats; and miscellaneous materials that are compatible with one another and with substrate under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
- c. Manufacturers:
 - 1) Dex-O-Tex/Crossfield Products Corp.; Elastatex 500 Elastomeric Waterproofing.
 - 2) Dex-O-Tex/Crossfield Products Corp.; Weatherware waterproofing system at Stage 2, 24th Street Station
 - 3) Pecora Corporation; .Pecora-Deck 800
 - 4) Tamms Industries, Inc.; Tammsdeck System.
 - 5) ChemSystems, Inc.; Quartzite Seamless Polymer Topping System.
 - 6) Miracote; MiraGuard ColorBond XL / MiraGard HDWB body coat with micro-flake broadcast
- 2. Primer: Manufacturer's standard factory-formulated primer recommended for substrate and conditions indicated.
 - a. Provide MiraPrima Aqua-Blok XL if moisture content in newly placed cast-in-place concrete exceeds 4 pounds of moisture vapor transmission per 100 sf over a 24 hour period.
- 3. Basecoat for Miracote: Pigmented Basecoat Component: single component self-crosslinking acrylic finish waterproofing sealer
 - a. Color: Dolphin Gray
- 4. Basecoat Component for Miracote: water-based, waterproofing sealer, VOC compliant
 - a. Color: clear or matte clear
 - b. Coverage: one or two very thin coats (6-8 mils wet; 2-3 mils dry)
- 5. Basecoats for Weatherware: Barrier-Guard with fabric and slip sheet, and Neotex body coat
 - a. First basecoat: Barrier -guard with fabric and slip sheet
 - 1) Fluid-applied polymer emulsion waterproofing membrane
 - 2) Comply with ANSI 10-99.
 - b. Second Basecoat: Neotex body coat, single-component premixed material
- 6. Intermediate Coat for Weatherware:
 - a. Resistite, 2-component protective coating consisting of a dry mix powder blend and liquid polymer.
 - b. Color: As selected by Architect.
 - c. Coverage: minimum two coats to achieve the desired durability and finished appearance.
 - d. Finish: smooth or textured for slip resistance (greater than or equal to minimum coefficient of friction wet and dry code requirements)
- 7. Topcoat: Single- or multicomponent, aromatic liquid urethane elastomer with UV inhibitors.
 - a. Color: Gray or manufacturers standard color selection.

8. Topcoat for Quartzite: Two-part, water-based polyurethane that forms a high-solids coating, UV stable, non-yellowing.
 - a. Color: liquid, clear
9. Topcoat for Miracote: high-solids, two-component, UV-stable, aliphatic elastomeric polyaspartic resinous coating
 - a. Color: clear
 - b. Finish: high gloss and satin finishes
10. Topcoats for Weatherware: AJ-44 SR Topcoat, single component self-crosslinking solar-reflective acrylic sealer, UV stable
 - a. Color: Architect to select from standard colors
 - b. Second Topcoat: Weatherseal XL, water-based, waterproofing sealer, VOC compliant
 - 1) Apply over broadcast mica flakes
11. Body Coat for Quartzite: One-component, high strength polymer topping system, decorative aggregates.
 - a. Thickness: 1/16" – 1/8"
 - b. Finish: smooth or textured for slip resistance
 - c. Coverage rate: fine sand (32 sf/gal), medium sand (19 sf/gal), quartz aggregate (24 sf/gal).
12. Aggregate: Uniformly graded, washed silica sand of particle sizes, shape, and minimum hardness recommended in writing by traffic coating manufacturer.
 - a. Spreading Rate: As recommended by manufacturer for substrate and service conditions indicated, but not less than the following:
 - 1) Intermediate Coat: 8 to 10 lb/100 sq. ft.
 - 2) Topcoat: 8 to 10 lb/100 sq. ft.
13. Flake for Miracote: Microflake chips
 - a. Color: CF 01 – gray, white
14. Flake for Weatherware: Mica flakes
 - a. Color: Black
 - b. Chip Size: Standard 1/4"
 - c. Broadcast effect: Light sprinkle
 - d. Broadcast over AJ-44 topcoat
15. Miscellaneous Materials
 - a. Joint Sealants: As specified in Section 07920, Joint Sealants.
 - b. Sheet Flashing: Nonstaining.
 - 1) Minimum Thickness: 60 mils (1.5 mm).
 - 2) Material: Sheet material recommended in writing by traffic coating manufacturer .
 - 3) Sheet metal shall be degreased, prepared and primed prior to application of the membrane material.
 - 4) Install in accordance with SMACNA Standards.
 - c. Adhesive: Contact adhesive recommended in writing by traffic coating manufacturer.

- d. Reinforcing Strip: Fiberglass mesh recommended in writing by traffic coating manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Examine substrates, with Installer present, for compliance with requirements and for other conditions affecting performance of traffic coatings.
 - a. Notify Program/Project Manager of any defects or issues with installation of this product at this existing concrete deck.
 - b. Verify compatibility with and suitability of substrates.
 - c. Verify that substrates are visibly dry and free of moisture.
- B. Pre-Installation Testing
 1. Test for moisture vapor transmission by plastic sheet method according to ASTM D 4263.
 2. Test for moisture content by measuring with an electronic moisture meter or method approved by manufacturer.
- C. Evaluation and Assessment:
 1. Do not proceed installing the traffic coating until unsatisfactory conditions have been corrected.
 2. Application of coating indicates acceptance of surfaces and conditions.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage that could otherwise result from installation of the traffic coatings.
- B. Surface Preparation:
 1. Clean and prepare substrates according to ASTM C 1127 and manufacturer's written recommendations to produce clean, dust-free, dry substrate for traffic coating application.
 2. Mask adjoining surfaces not receiving traffic coatings, to prevent spillage, leaking, and migration of coatings.
 3. Concrete Substrates: Mechanically abrade concrete surfaces to a uniform profile according to ASTM D 4259. Do not acid etch.
 - a. Remove grease, oil, paints, and other penetrating contaminants from concrete.
 - b. Remove concrete fins, ridges, and other projections.
 - c. Remove laitance, glaze, efflorescence, curing compounds, concrete hardeners, form-release agents, and other incompatible materials that might affect coating adhesion.

- d. Remove remaining loose material to provide a sound surface, and clean surfaces according to ASTM D 4258.
- C. Prepare vertical and horizontal surfaces at terminations and penetrations through traffic coatings and at expansion joints, drains, and sleeves according to ASTM C 1127 and manufacturer's written recommendations.
- D. Provide sealant cants at penetrations and at reinforced and nonreinforced, deck-to-wall butt joints.
- E. Terminate edges of deck-to-deck expansion joints with preparatory base-coat strip.
- F. Install sheet flashings at deck-to-wall expansion and dynamic joints, and bond to deck and wall substrates according to manufacturer's written recommendations.
- G. Prepare, treat, rout, and fill joints and cracks in substrates according to ASTM C 1127 and manufacturer's written recommendations. Before coating surfaces, remove dust and dirt from joints and cracks according to ASTM D 4258.
 - 1. Comply with recommendations in ASTM C 1193 for joint-sealant installation.

3.03 APPLICATION

- A. Apply traffic coating material according to ASTM C 1127 and manufacturer's written recommendations.
 - 1. Verify that wet film thickness of each component coat complies with requirements every 100 sq. ft. (9 sq. m).
- B. Apply traffic coatings to prepared wall terminations and vertical surfaces to height indicated recommended by manufacturer and omit aggregate on vertical surfaces.
- C. Cure traffic coatings according to manufacturer's written recommendations. Prevent contamination and damage during application and curing stages.
- D. General Helix Quartzite Application: Apply each component of quartz-polymer flooring system according to manufacturer's directions to produce a uniform monolithic flooring surface of thickness indicated.
 - 1. Body Coat: Trowel or squeegee apply quartz-polymer material at nominal 1/8-inch thickness. When cured, sand or grind if necessary to remove trowel marks and roughness.
 - 2. Sealing Coats: After body coat has cured sufficiently, sealing coats of type recommended by flooring manufacturer to produce finish matching

approved sample and in number of coats and spreading rates recommended by manufacturer.

- E. General Miracote Application: Follow all manufacturer's directions, as published in their product technical data sheets and/or available installation guidelines regarding application of the microflake system.
1. Miracote Basecoat: Mix pigmented and clear basecoat components at a 1:1 ratio. Apply with roller at a rate of approximately 250 square feet per mixed gallon.
 2. Miracote Microflake broadcast: While basecoat is still wet, broadcast microflake chips into the wet material until refusal. After the basecoat has fully cured, remove all excess microflake chips.
 3. Clear receiving coat: Apply clear basecoat component over first coat of microflake chips at approximately 200 square feet per gallon.
 4. Second microflake broadcast: While clear receiving coat is still wet, broadcast microflake chips into the wet material until refusal. After the clear receiving coat has fully cured, remove all excess microflake chips.
 5. Sealing: Apply one coat of clear polyaspartic sealer at a rate of approximately 200 square feet per gallon.

3.04 CLEANING

- A. Clean spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.05 PROTECTION

- A. Protect traffic coatings from damage and wear during remainder of construction period.

SECTION 07190

WATER REPELLENTS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for penetrating water-repellent treatments for the following vertical and horizontal surfaces:
 - a. Cast-in-place concrete.
 - b. Precast concrete.
 - c. Cast stone.
 - d. Concrete unit masonry.
 - e. Clay brick masonry.
 - f. Natural stone.
 - g. Portland cement plaster (stucco).
- B. Related Requirements:
 - 1. Section 01316 - Project Meetings.
 - 2. Section 01330 - Submittal Procedures.
 - 3. Section 01360 - Sustainable Design Requirements.
 - 4. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 2. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
- B. Definitions:
 - 1. pH: A measure of the acidity or basicity of a solution, and defined as the cologarithm of the activity of dissolved hydrogen ions (H^+).

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Pre-Installation Meetings:
 - 1. Attend a pre-installation meeting at the Site held in compliance with the requirements of Section 01316, Project Meetings, to discuss the requirements for applying the water repellents to be provided under this Contract.
- B. Sequencing:
 - 1. Mortar Joints:
 - a. Do not apply water repellent until the pointing for mortar joints adjacent to the surfaces to receive water-repellent treatment has been installed and cured.
 - 2. Sealant Joints:
 - a. Do not apply water repellent until the sealants for joints adjacent to the surfaces to receive water-repellent treatment have been installed and cured.
 - 1) Water-repellent work may precede the sealant application only if the sealant adhesion and compatibility have been tested and verified using substrate, water repellent, and sealant materials identical to those required for the Work of this Section.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Low volatile organic compound (VOC) silane penetrating water repellents.
 - 2) High volatile organic compound (VOC) silane penetrating water repellents.
 - 3) Low volatile organic compound (VOC) siloxane penetrating water repellents.
 - 4) High volatile organic compound (VOC) siloxane penetrating water repellents.
 - 5) Low volatile organic compound (VOC) silane/siloxane-blend penetrating water repellents.
 - 6) High volatile organic compound (VOC) silane/siloxane-blend penetrating water repellents.
 - b. Samples:
 - 1) Samples for each type of water repellent and substrate indicated in the Contract Documents.
 - c. Certificates:
 - 1) Water repellent manufacturers' Certificates of Compliance.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Results of the pre-installation surface testing, and recommendations resulting from an analysis of the test results.
 - b. Manufacturer's Instructions:
 - 1) Water repellent manufacturer's written pre-installation surface testing methods and instructions.
 - 2) Water repellent manufacturer's written surface preparation instructions.
 - 3) Water repellent manufacturer's written cleaning instructions.
2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. Paints and Coatings
 - 1) Submit product data highlighting the VOC content for any water repellent applied to interior surfaces.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Water Repellant Materials Warranty.
 - 2) Water Repellant Installation Warranty.

1.05 QUALITY ASSURANCE

A. Certifications:

1. Certificates of Compliance:
 - a. Submit the water repellent manufacturers' Certificates of Compliance, signed by the manufacturers, certifying that their products comply with the specified requirements to the Program/Project Manager for approval.

B. Site Samples:

1. Submit Samples for each type of water repellent and substrate indicated in the Contract Documents to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver water repellent materials to the Site in their original containers, with their seals unbroken, labeled with the manufacturer's name, product brand name and type, date of manufacture, and directions for storage.

- B. Storage and Handling Requirements:
 - 1. To prevent deterioration from moisture or other detrimental effects, store materials in accordance with the manufacturer's written instructions.
- C. Packaging Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

- A. Ambient Conditions:
 - 1. Do not proceed to apply water repellants unless the surface and air temperatures are within the water repellant manufacturer's acceptable limits.
 - 2. Do not apply water repellants if standing water is visible on the surface to be treated, if the wind speed exceeds 15 miles per hour, or if rain is expected within 6 hours of the scheduled application time.

1.08 WARRANTY

- A. Manufacturer Warranty:
 - 1. Warrant the water repellants against defects in materials within the 5-year period after the Date of Substantial Completion:
 - a. The manufacturer's liability does not include variable factors out of the manufacturer's control, such as environmental conditions, application techniques, and surface conditions which are critical to the results obtained.
 - b. Submit a Water Repellant Materials Warranty on the water repellant manufacturer's standard or customized form, without monetary limitation, in which the water repellant manufacturer agrees to replace properly applied water repellants that fail in materials within the specified warranty period to the Program/Project Manager for approval.
 - 1) Have the manufacturer's standard form signed by the Contractor and manufacturer.
- B. Special Warranty:
 - 1. Installer's Warranty:
 - a. Warrant the water repellants workmanship against failures within the 5-year period after the Date of Substantial Completion:
 - 1) Submit a Water Repellant Installation Warranty on the installer's standard or customized form, without monetary limitation, in which installer agrees to repair water repellants that fail within the specified warranty period to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 WATER REPELLENT PRODUCT TYPES

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - 2. Sustainability Requirements:
 - a. Low Emitting Materials – Paints and Coatings
 - 1) Provide Water Repellents with a VOC content of 100 g/L or less.
- C. Performance:
 - 1. Provide water repellants that cause concrete, masonry, and many natural stones to become repellant to water, chloride, waterborne contaminants, and weathering elements; and that prevent premature deterioration of the protected structures.
 - 2. Provide water repellants that permit water vapor transmittance.
- D. Design Criteria:
 - 1. Product Data:
 - a. Obtain the water repellent manufacturers' Product Data for each type of product proposed for the Work of this Section.
 - b. Submit the water repellent manufacturers' Product Data for each type of product to the Program/Project Manager for approval.
- E. Materials:
 - 1. Low Volatile Organic Compound (VOC) Silane Penetrating Water Repellents:
 - a. Provide a clear penetrating water repellent containing 20 percent or more solids of alkyltrialkoxysilanes in an alcohol, mineral spirits, water, or other proprietary solvent carrier; and having 100 grams per liter or less of volatile organic compounds (VOCs).
 - b. Manufacturers:

- 1) Dayton Superior Corporation; Weather Worker J-29-WB, www.daysup.com.
 - 2) Pecora Corporation, KlereSeal 940-S VOC, www.pecora.com.
 - 3) PROSOCO, Inc., SL100, www.prosoco.com.
 - 4) Tamms Industries, Inc., The Euclid Chemical Company, Barcade Silane 100, www.tamms.com.
 - 5) Tnemec Inc., Dur A Pell 40, www.tnemec.com.
 - 6) Approved equal.
2. Low Volatile Organic Compound (VOC) Siloxane Penetrating Water Repellent:
- a. Provide a clear penetrating water repellent containing 10 percent or more solids of oligomeric alkylalkoxysiloxanes in an alcohol, ethanol, mineral spirits, water, or other proprietary solvent carrier; and having 100 grams per liter or less of volatile organic compounds (VOCs).
 - b. Manufacturers:
 - 1) Dayton Superior Corporation, Weather Worker WB (J-26-WB), www.daysup.com.
 - 2) The Euclid Chemical Company, an RPM company, Euco-Guard VOX, <http://www.euclidchemical.com/>.
 - 3) H&C Concrete Care Products, The Sherwin-Williams Company, H&C Super V, <http://www.sherwin-williams.com/>.
 - 4) Rainguard International, MicroSeal, <http://www.rainguard.com/>.
 - 5) Tamms Industries, Inc., The Euclid Chemical Company, Barcade M.E., www.tamms.com.
 - 6) Approved equal.
3. Low Volatile Organic Compound (VOC) Silane/Siloxane-Blend Penetrating Water Repellent:
- a. Provide a clear penetrating water repellent consisting of a silane and siloxane blend having 100 grams per liter or less of volatile organic compounds (VOCs).
 - b. Manufacturers:
 - 1) L&M Construction Chemicals, Inc., Aquapel, <http://www.lmcc.com/>.
 - 2) Pecora Corporation, KlereSeal 910-W, <http://www.pecora.com/>.
 - 3) PROSOCO, Inc., Saltguard WB, www.prosoco.com.
 - 4) Tamms Industries, Inc., The Euclid Chemical Company, Barcade WB 244, www.tamms.com.
 - 5) Tnemec Inc., Dur A Pell 10, www.tnemec.com.
 - 6) Approved equal.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions:

1. With the water repellent applicator present, examine the substrates, areas, and conditions where the water repellent will be applied for compliance with requirements and conditions affecting performance of this Work.
 - a. Verify that the surfaces are clean and dry in accordance with the water-repellent manufacturer's requirements.
 - b. Inspect the substrates for previously applied treatments that may inhibit penetration or performance of water repellents.
 - c. Verify that there is no efflorescence or other removable residues that would be trapped beneath the water repellent application.
 - d. Verify that required repairs are complete, cured, and dry before applying water repellent.
 - 1) Verify that joint sealers, paints, and glazing compounds and sealants are fully cured.

B. Pre-Installation Testing:

1. Check the moisture content of the surfaces in representative locations using methods recommended by the water repellent manufacturer.
2. Test the pH level of the surfaces in representative locations in accordance with the water-repellent manufacturer's written instructions to ensure a proper chemical bond to silica-containing or siliceous minerals.
3. Submit the water repellent manufacturer's written pre-installation surface testing methods and instructions, and the results of the pre-installation surface testing and recommendations resulting from an analysis of the test results, to the Program/Project Manager for information.

C. Evaluation and Assessment:

1. Proceed to apply the water repellent only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Protection of In-Place Conditions:

1. Protect adjacent areas from damage resulting from application of the water repellent.
 - a. Mask windows, glass, metals, shrubs, and other vulnerable items from overspray.
 - b. Close air intakes, windows, and other openings.

B. Surface Preparation:

1. Cleaning:
 - a. To remove substances that could impair the penetration or performance of the water repellent product, clean the substrate in accordance with the water repellent manufacturer's surface preparation instructions before applying the water repellent.
 - b. Submit the water repellent manufacturer's written surface preparation instructions to the Program/Project Manager for information.

2. Walls:
 - a. Where water repellant is to be applied to walls, prevent water from entering through the backside or the top of walls.
 - 1) If possible, do not apply water repellants before the coping, flashing, and roofing have been installed; water trapped in the walls has drained out; and the building materials have dried.

3.03 APPLICATION

- A. Unless otherwise indicated in the Contract Documents, apply the water repellant in accordance with the application procedure specified in the water repellant manufacturer's instructions.
 1. Using low-pressure spray in uniform passes, apply a heavy-saturation coating of water repellant on the surfaces indicated in the Contract Documents to receive the treatment.
 2. Remove excess water repellant material.
 - a. Do not allow water repellant material to puddle beyond a saturation condition.
 3. Submit the water repellant manufacturer's written instructions specifying the application procedure to the Program/Project Manager for information.
- B. Apply a second saturation coating, repeating the procedure used for the first application.
 1. Comply with water repellant manufacturer's limitations regarding drying time between coats, and after-rainstorm-wetting of surfaces between coats.
- C. Special Techniques:
 1. If the water repellant manufacturer's written instructions are not applicable to the Contract conditions, consult with the water repellant manufacturer's technical representative.
 2. Precast Concrete and Cast Stone:
 - a. At Contractor's option, the first application of water repellant on precast concrete and cast stone units may be completed before installing them.
 - b. Mask mortar and sealant bond surfaces to prevent water repellant from migrating onto joint surfaces.

3.04 REPAIR/RESTORATION

- A. Correct damage to other Work caused by the application of the water-repellents.

3.05 SITE QUALITY CONTROL

- A. Manufacturer Services:

1. Engage a factory-authorized service representative to inspect the substrate before the application of the water repellents, and to instruct the applicator regarding the product and the application method to be used.

3.06 CLEANING

- A. Immediately clean water repellent from adjoining surfaces, and from surfaces soiled or damaged by the application of water repellents, as the Work of this Section progresses.
 1. Clean the water repellent from the surfaces in accordance with the water repellent manufacturer's cleaning instructions.
 - a. Submit the water repellent manufacturer's written cleaning instructions to the Program/Project Manager for information.
- B. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.
 2. Remove unused water repellants, residues, rinse water, wastes, and effluents in accordance with environmental regulations.

3.07 PROTECTION

- A. Do not allow traffic on the water repellants applied onto horizontal surfaces for the time period specified by the water repellent manufacturer.

SECTION 07210

BUILDING INSULATION

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
1. Requirements for building insulation, including the following types:
 - a. Batt insulation.
 - b. ~~Expanding foam insulation.~~
 - c. Fire safing insulation.
 - d. ~~Loose fill insulation.~~
 - e. Sprayed thermal and acoustical insulation.
 - f. Rigid insulation.
- B. Related Requirements:
1. Section 01330 - Submittal Procedures.
 2. Section 01360 - Sustainable Design Requirements.

Building Insulation
at the Stations

1.02 REFERENCES

- A. Abbreviations and Acronyms:
1. EPA: the United States Environmental Protection Agency.
 2. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 3. NRC: Noise reduction coefficient.
 4. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside, and San Bernardino counties in California.
 5. UL: Underwriters Laboratories, Inc.
 6. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
- B. Definitions:
1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.

2. British Thermal Unit or Btu: A measure of energy defined as the amount of heat required to raise the temperature of one pound of water one degree Fahrenheit.
3. Thermal Resistance, R: The mean temperature difference between 2 defined surfaces of material or construction under steady state conditions that induces a unit heat flux.
 - a. Thermal resistivity is expressed by the temperature difference in degrees Fahrenheit between the two exposed faces required to cause one Btu to flow through one square foot per hour at the mean temperatures indicated ($\text{h}\cdot\text{ft}^2\cdot^\circ\text{F}/\text{Btu}$).
 - b. Where the thermal resistivity of insulation products is designated by “R-values”, it represents the reciprocal of thermal conductivity (k-values).
4. Thermal Conductivity, k: The rate of heat flow through a homogenous material exactly 1-inch thick.

C. Reference Standards:

1. ASTM International (ASTM):
 - a. ASTM C 203 - Standard Test Methods for Breaking Load and Flexural Properties of Block-Type Thermal Insulation.
 - b. ASTM C 209 - Standard Test Methods for Cellulosic Fiber Insulation Board.
 - c. ASTM C 423 – Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.
 - d. ASTM C 518 – Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.
 - e. ASTM C 612 – Standard Specification for Mineral Fiber Block and Board Thermal Insulation.
 - f. ASTM C 665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing.
 - g. ASTM C 739 - Standard Specification for Cellulosic Fiber Loose-Fill Thermal Insulation.
 - h. ASTM C 1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board.
 - i. ASTM C 1363 - Standard Test Method for Thermal Performance of Building Materials and Envelope Assemblies by Means of a Hot Box Apparatus.
 - j. ASTM D 1621 - Standard Test Method for Compressive Properties of Rigid Cellular Plastics.
 - k. ASTM D 1622 - Standard Test Method for Apparent Density of Rigid Cellular Plastics.
 - l. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
 - m. ASTM E 96/E 96M - Standard Test Methods for Water Vapor Transmission of Materials.

- n. ASTM E 119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
- o. ASTM E 136 - Standard Test Method for Behavior of materials in a Vertical Tube Furnace at 750° C.
- p. ASTM E 605 – Standard Test Methods for Thickness and Density of Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members.
- q. ASTM E 736 – Standard Test Method for Cohesion/Adhesion of Sprayed Fire-Resistive Materials Applied to Structural Members.
- r. ASTM E 759 – Standard Test Method for Effect of Deflection on Sprayed Fire-Resistive Material Applied to Structural Members.
- s. ASTM E 1042 – Standard Classification for Acoustically Absorptive Materials Applied by Trowel or Spray.
2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
3. FM Approvals LLC (FM):
 - a. FM Class Number 4470 – Approval Standard for Class 1 Roof Covers.
 - b. The Approval Guide, www.approvalguide.com.
4. Green Seal, Inc. (GS):
 - a. GC-03 - Green Seal™ Environmental Criteria for Anti-Corrosive Paints.
 - b. GS-11 – Green Seal™ Environmental Standard for Paints and Coatings.
5. Gypsum Association (GA):
 - a. GA-600 - Fire Resistance Design Manual.
6. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
7. International Organization for Standardization (ISO):
 - a. ISO 9001 – Quality Management System – Requirements.
8. South Coast Air Quality Management District (SCAQMD):
 - a. SCAQMD Rule 1113 – Architectural Coatings.
 - b. SCAQMD Rule 1168 – Adhesive and Sealant Applications.
9. Underwriters Laboratories, Inc. (UL):
 - a. UL Qualification Tests and Follow-Up Service Requirements.
 - b. UL Online Certifications Directory, <http://www.ul.com/regulators/quickguide.html>.
 - 1) UL Fire Resistance Directory (Fire Resistance Ratings).
 - c. UL 723 – Standard for Test for Surface Burning Characteristics of Building Materials.
10. United States Government:
 - a. United States Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.
 - b. United States Department of Housing and Urban Development (HUD):

- 1) HUD UMB-80 – Use of Materials Bulletin No. 80 Spray Applied Cellulosic Thermal Insulation.
11. Institute for Sustainability Infrastructure (ISI)
 - a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate installation of the roofing system components with installation of the roofing insulation so the insulation is not exposed to precipitation or left exposed at the end of the workday.
 2. Coordinate application of the sprayed thermal and acoustical insulation with the other work in the area of application.
- B. Sequencing:
 1. Prior to applying sprayed thermal and acoustical insulation in an area, install roof penetrations.
 2. Prior to applying sprayed thermal and acoustical insulation in an area, install clips, hangers, supports, sleeves, and other attachments to the spray bases.
 3. In areas where sprayed thermal and acoustical insulation is to be applied, do not install ducts, piping, conduit, and other suspended equipment until after the sprayed thermal and acoustical insulation has been applied in the area.

1.04 SUBMITTALS

- A. Action Submittals:
 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Unfaced mineral-fiber blanket insulation.
 - 2) Faced mineral-fiber blanket insulation.
 - 3) Unfaced mineral fiber safing insulation.
 - 4) Sealant approved by the safing insulation manufacturer.
 - 5) Expanding foam insulation.
 - 6) Loose-fill insulation.
 - 7) Sprayed thermal and acoustical insulation.
 - 8) Rigid thermal insulation.
 - b. Qualification Statements:
 - 1) Sprayed thermal and acoustical insulation manufacturer's qualifications.
 - 2) Sprayed thermal and acoustical insulation applicator's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Insulation manufacturer's written handling and installation instructions.
2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. ENVISION Credit RA1.3 – Use Recycled Materials
 - 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - b. ENVISION Credit RA 1.4 – Use Regional Materials
 - 1) Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).
 - c. Adhesives and Sealants
 - 1) Submit product data highlighting the VOC content for any field applied sealant used.
 - d. Paints and Coatings
 - 1) Submit product data highlighting the VOC content for any field applied coating within the buildings weather barrier.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Testing and Inspection Agency:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Qualifications:

1. Sprayed Thermal and Acoustical Insulation Manufacturer's Qualifications:
 - a. Unless accepted otherwise by the Program/Project Manager, obtain sprayed thermal and acoustical insulation products from manufacturers that employ a Quality Management System complying with the program described in ISO 9001, or a similar system.

- b. Submit proof of the sprayed thermal and acoustical insulation manufacturer's qualifications, including a copy of the manufacturer's ISO 9001 certification, to the Program/Project Manager for approval.
 - 2. Sprayed Thermal and Acoustical Insulation Applicator's Qualifications:
 - a. Engage a qualified firm that is approved, authorized, and/or licensed by the sprayed thermal and acoustical insulation manufacturer to apply the manufacturer's product.
 - b. Submit the sprayed thermal and acoustical insulation applicator's qualifications to the Program/Project Manager for approval.
 - C. Certifications:
 - 1. Manufacturer's Certificates of Compliance:
 - a. Sprayed Thermal and Acoustical Insulation:
 - 1) Submit the sprayed thermal and acoustical insulation manufacturer's Certificates of Compliance, certifying that the sprayed thermal and acoustical insulation being provided comply with the specified requirements, to the Program/Project Manager for approval.
 - a) Certify that the sprayed thermal and acoustical insulation contains no asbestos, fiberglass, or other man-made mineral fibers
 - b) Include evidence of complete sprayed thermal and acoustical insulation compliance with the specified performance requirements.
 - 2. Testing and Inspection Agency Certifications:
 - a. Sprayed Thermal and Acoustical Insulation:
 - 1) Provide sprayed thermal and acoustical insulation manufactured by a firm that subscribes to the certification and follow-up inspection services provided by independent testing agencies acceptable to the Authorities Having Jurisdiction (AHJ), such as the appropriate FM Approvals LLC (FM) program and/or UL Qualification Tests and Follow-Up Service Requirements.
 - a) Provide products marked with their intended use or classification for the location where the product is applied and the application intended.
 - b) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - (1) Such evidence may consist of either a printed mark on the data or a separate listing card.
 - D. Mock-Ups:
 - 1. Sprayed Thermal and Acoustical Insulation Mock-Up:

- a. Construct a mock-up consisting of a representative sample of each type of sprayed thermal and acoustical insulation proposed for use applied to an area of 100 square feet.
- b. Obtain the Program/Project Manager's approval of the sprayed thermal and acoustical insulation mock-ups prior to providing these types of insulation for the production Work of this Section.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver insulation materials in their original, unopened containers bearing the name of the manufacturer, product identification, and reference to third party testing, such as testing by FM Approvals LLC (FM) or Underwriters Laboratories, Inc. (UL).
- B. Storage and Handling Requirements:
 1. Store insulation materials inside under cover, off the ground, and in a dry location.
 - a. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources.
 2. Protect liquid adhesive from freezing.
 3. Comply with the insulation material manufacturer's written instructions for handling, storing, and protecting the material during installation.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 BUILDING INSULATION PRODUCT TYPES

- A. Manufacturers:
 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain each type of building insulation from a single source from single manufacturer having the resources to provide products of consistent quality in appearance and physical properties without delaying the progress of the Work.

B. Description:

1. Regulatory Requirements:

a. Phoenix Building Construction Code:

- 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].

2. Sustainability Requirements:

a. Recycled Content

- 1) Provide glass fiber insulation with combined post-consumer recycled content and one-half pre-consumer recycled content that is no less than 25 percent.
- 2) Provide Fire-safing insulation with a minimum 85% pre-consumer content.

b. Low Emitting Materials – Paints and Coatings

- 1) Provide Architectural Non-Porous Sealant Primers with not more than 250 grams per Liter less water.
- 2) Provide architectural Porous Sealant Primers with not more than 775 grams per Liter less water.

c. All batt insulation shall be formaldehyde free.

C. Performance:

1. Fire-Test-Response Characteristics:

- a. Except for loose-fill thermal insulation, provide insulation and related materials that have the fire-test-response characteristics indicated for each material in Paragraph 2.01.E as determined when Underwriters Laboratories, Inc. (UL) or another testing and inspecting agency acceptable to the Authorities Having Jurisdiction tests identical products in accordance with the following test methods:

- 1) Surface-Burning Characteristics: ASTM E 84 or UL 723.
- 2) Fire-Resistance Ratings: ASTM E 119.
- 3) Combustion Characteristics: ASTM E 136.

- b. Identify materials with appropriate markings of the applicable testing and inspecting agency.

2. Thermal Resistance (R):

- a. Provide insulation that furnishes the following thermal resistances for the applications listed, unless otherwise indicated in the Contract Documents:

- 1) Roofs: R-30.
- 2) Walls: R-19.
- 3) Floors: R-19.

D. Design Criteria:

1. Provide insulating materials that comply with the requirements specified herein, and with the requirements of the standards referenced.

2. Provide materials that ensure continuity of the thermal barrier at building enclosure elements.
3. Preformed Units:
 - a. Provide preformed unit sizes selected from the manufacturer's standard thicknesses, widths, and lengths; and designed to fit the applications indicated.

E. Materials

1. General Building Insulating Materials:
 - a. For roofing insulation materials, refer to the associated roofing specification Sections.
 - b. Unfaced Blanket Insulation:
 - 1) Provide unfaced mineral-fiber blanket insulation consisting of fibers manufactured from glass, and complying with the requirements for Type I (blankets without membrane facing) as specified in ASTM C 665.
 - 2) Fire-Test-Response Characteristics:
 - a) Maximum flame-spread index: 25.
 - b) Maximum smoke-developed index: 50.
 - c) Combustion characteristics:
 - (1) Provide unfaced mineral-fiber blanket insulation passing the testing specified in ASTM E 136 for combustion characteristics
 - 3) Manufacturers:
 - a) CertainTeed Corporation, www.certainteed.com.
 - b) Johns Manville, www.jm.com/insulation/.
 - c) Owens Corning, www.owenscorning.com.
 - d) Approved equal.
 - c. Faced Blanket Insulation:
 - 1) Provide faced mineral-fiber blanket insulation consisting of fibers manufactured from glass with foil-scrim-kraft, foil-scrim, or foil-scrim-polyethylene vapor-retarder membrane on one face, and complying with the requirements for Type III (blankets with reflective facings), Class A (facing with a flame spread index of 25 or less); Category 1 (facing is a vapor retarder) as specified in ASTM C 665.
 - 2) Manufacturers:
 - a) CertainTeed Corporation, www.certainteed.com.
 - b) Johns Manville, www.jm.com/insulation/.
 - c) Owens Corning, www.owenscorning.com.
 - d) Approved equal.
 - d. Expanding Foam Insulation:
 - 1) Provide a closed-cell polyurethane system using an EPA-approved, zero ozone-depleting blowing agent capable of controlling air and moisture infiltration and of providing superior insulation performance.

- a) Fire-Test-Response Characteristics:
 - (1) Maximum flame-spread index: 25.
 - (2) Maximum smoke-developed index: 350.
- b) Thermal Conductivity:
 - (1) Minimum R Value: 6 per inch when measured in accordance with ASTM C 518.
- c) Water Vapor Transmission: 1.82 perms when measured in accordance with ASTM E 96/E 96M.
- 2) Manufacturers:
 - a) C.P. Chemical Co., Tripolymer, www.tripolymer.com.
 - b) Nordic Builders, Air Krete, <http://yp.eastvalleytribune.com>.
 - c) Tailored Chemical Products, Core-Fill 500, www.tailoredchemical.com.
 - d) BASF Polyurethane Foam Enterprises LLC, www.basf-pfe.com
 - e) NCFI Polyurethanes, www.ncfi.com.
 - f) Polyfoam Products, Inc., www.polyfoam.cc.
 - g) Approved equal.
- e. Loose-Fill Insulation:
 - 1) Provide self-supporting, cellulosic fiber loose-fill thermal insulation complying with the requirements specified in ASTM C 739, and suitable for being pneumatically placed and poured into wall spaces, and poured into joist spaces, through access holes.
 - 2) Provide loose-fill thermal insulation having the following properties:
 - a) Thermal Conductivity: 0.27 Btu-inches per hour-square foot-degree Fahrenheit.
 - b) Total Thermal Resistance: 19.0 hour-square-foot-degree Fahrenheit per British thermal unit.
 - 3) Ventilation Baffles:
 - a) Provide formed plastic ventilation baffles.
 - 4) Manufacturers:
 - a) GreenFiber, www.cocooninsulation.com.
 - b) Approved equal.
- f. Sprayed Thermal and Acoustical Insulation:
 - 1) Provide cellulosic acoustical and thermal insulation classified as Type II, Class (a) in accordance with the classification system defined in ASTM E 1042; containing no asbestos, fiberglass, or other man-made mineral fibers; suitable for spray application; and complying with the following additional requirements:
 - a) Bond Deflection:
 - (1) Provide sprayed acoustical and thermal insulation exhibiting no spalling or delamination when subjected to a 6-inch deflection in a 10-foot clear span in accordance with the requirements specified in ASTM E 759.

- b) Bond Strength:
 - (1) Provide sprayed acoustical and thermal insulation having a cohesive/adhesive force or bond strength of 100 pounds-force per square foot when tested in accordance with the Field Test Method specified in ASTM E 736.
- c) Color:
 - (1) Provide sprayed acoustical and thermal insulation having the color indicated on the Contract Drawings.
 - (a) If no color is indicated on the Contract Drawings, provide the colors selected by the Program/Project Manager from the manufacturer's standard color samples.
- d) Corrosiveness:
 - (1) Provide sprayed acoustical and thermal insulation determined by testing in accordance with the Test Procedures for Corrosiveness specified in HUD UMB-80 to be non-corrosive.
- e) Fire-Test-Response Characteristics:
 - (1) Provide sprayed acoustical and thermal insulation having the following fire-test-response characteristics:
 - (a) Maximum flame-spread index: 5.
 - (b) Maximum smoke-developed index: 5.
- f) Thickness:
 - (1) Provide sprayed acoustical and thermal insulation having at least the thicknesses indicated in Table 07210-1 to achieve the Noise Reduction Coefficient (NRC) indicated in the Contract Documents.

Table 07210-1 Thicknesses and Noise Reduction Coefficients (NRC) ⁽¹⁾								
Substrate	Insulation Thickness (Inches)	Sound Frequency (Hertz)						NRC Rating
		125	250	500	1000	2000	4000	
Solid Backing	1.00	0.08	0.29	0.75	0.98	0.93	0.96	0.75
	1.00 ⁽²⁾	0.47	0.90	1.10	1.03	1.05	1.03	1.00
	2.00	0.26	0.68	1.05	1.10	1.03	0.98	0.95
	3.00	0.57	0.99	1.04	1.03	1.00	1.00	1.00
1.5-Inch Ribbed Metal Deck	1.50	0.36	0.89	1.26	1.07	1.01	1.00	1.05
	3.00	0.97	1.04	1.13	0.99	0.95	0.98	1.05
1. Test material in accordance with the requirements specified in ASTM C 423. Some values in Table 07210-1 are interpolated.								
2. On lath.								

- (2) Provide sprayed acoustical and thermal insulation having the capability to provide R-values of 3.8 per inch up to R-19 determined in accordance with the requirements specified in ASTM C 518, and provide at least the thicknesses required to have the thermal resistance, R, specified.
- 2) Manufacturers:
 - a) International Cellulose Corporation, K-13 Spray-On System, <http://www.spray-on.com>.
 - b) Approved equal.
- g. Rigid Thermal Insulation:
 - 1) Provide rigid thermal insulation complying with the requirements for Type I, Class 1 faced rigid cellular polyisocyanurate thermal insulation board specified in ASTM C 1289; and consisting of a high-insulating value, closed-cell polyisocyanurate foam core sandwiched between durable exterior facers.
 - a) For one of the facers, provide a continuous sheet of aluminum foil.
 - b) For the other facer, provide a three-ply laminate consisting of kraft having aluminum foil on both sides.
 - 2) Provide rigid thermal insulation having the physical properties and R-values specified in Table 07210-2 and Table 07210-3.

Table 07210-2 Rigid Thermal Insulation Physical Properties

Property	Test Method	Value
Compressive strength ⁽¹⁾	ASTM D 1621	25.0 psi (minimum)
Flexural strength	ASTM C 203	55 psi ⁽²⁾ (minimum)
Water adsorption	ASTM C 209	0.05 percent by volume (maximum)
Water vapor permeance	ASTM E 96/E 96M ⁽³⁾	Less than 0.03 perms
Nominal density	ASTM D 1622	2 pounds per cubic foot
Operational temperature range	N/A	-50° to 190° Fahrenheit
1. Vertical compressive strength measured at 10 percent deformation or at yield, whichever comes first. 2. Based on 1 inch foam core. 3. Based on 1 inch thickness using the dessicant method.		

**Table 07210-3 Rigid Thermal Insulation R-Values**

Nominal Foam Thickness (Inches)	R-Value for Insulation Alone⁽¹⁾	R-Value for Insulation Plus 3/4-Inch Air Space⁽²⁾
3/8	2.0	N/A
1/2	3.3	6.1
5/8	4.1	6.9
3/4	5.0	7.8
1	6.5	9.3
<p>1. R-values determined on a full-sized product in accordance with the methods specified in ASTM C 518, ASTM C 1289, and ASTM C 1363 at a mean temperature of 75 degrees Fahrenheit.</p> <p>2. R-values determined by summing the R-value for insulation alone with an additional R-value calculated when an aluminum foil surface is installed next to a non-ventilated 3/4-inch air space (R = 2.8).</p>		

- 3) Manufacturers:
 - a) Dowel Chemical Company, Tuff-R™ Polyisocyanurate Insulation, <http://www.dow.com>.
 - b) Approved equal.
2. Safing Insulating Materials:
 - a. Unfaced Safing Insulation:
 - 1) Provide unfaced mineral fiber safing insulation complying with the requirements for Type I (blankets without facing) as specified in ASTM C 665, and with the requirements for Category 1 (no compressive resistance properties are required) or Category 2 (minimum compressive resistance properties are required) as specified in ASTM C 612.
 - a) Nominal Density: 4.0 pounds per cubic foot.
 - 2) Provide sealant approved by the safing insulation manufacturer for the conditions indicated on the Contract Drawings.
 - 3) Manufacturers:
 - a) USG Interiors, Inc., Thermafiber Safing Insulation, www.usg.com.
 - b) Owens Corning, www.owenscorning.com.
 - c) Approved equal.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. With the installer present, examine the substrates and Site conditions for compliance with the requirements of the Sections in which the substrates and related work are specified, and for other Site conditions affecting performance of the building insulation.
 - 2. Loose-Fill Insulation:
 - a. Where loose-fill thermal insulation is to be installed, verify that the substrate, adjacent materials, and the insulation are dry and ready to receive the insulation.
 - b. Verify that light fixtures in areas where loose-fill thermal insulation is to be installed have thermal cut-out devices to restrict over-heating in soffit or ceiling spaces.
 - c. Verify that the spaces where loose-fill thermal insulation is to be installed are unobstructed to allow insulation to be placed into the full space.
 - 3. Sprayed Thermal and Acoustical Insulation:
 - a. Determine if surfaces to receive sprayed thermal and acoustical insulation require sealing/priming to insure bonding and/or to prevent discoloration caused by migratory stains.
- B. Evaluation and Assessment:
 - 1. Proceed to installation insulating materials only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Surface Preparation:
 - 1. Clean substrates to remove substances harmful to insulations or vapor retarders.
 - 2. In areas to receive sprayed thermal and acoustical insulation, provide masking tape, drop cloths, or other satisfactory coverings to prevent overspray from damaging materials and surfaces not to receive spray applied insulation.
 - 3. In areas to receive sprayed thermal and acoustical insulation, prime surfaces if required by the manufacturer's application instructions or determined by examination to require priming.
- B. Demolition/Removal:
 - 1. Remove projections that interfere with placement of the insulation required.
 - a. Remove projections capable of puncturing vapor retarders or of interfering with insulation attachment.

3.03 INSTALLATION

- A. Comply with the insulation manufacturer's written handling and installation instructions applicable to the products and applications indicated in the Contract Documents.
 - 1. For roofing insulation installation, refer to the associated roofing specifications.
 - 2. Submit the insulation manufacturer's written instructions applicable to the products and applications provided.
- B. Envelop the entire area to be insulated by extending the insulation of the thickness indicated in the Contract Documents for the application.
 - 1. Cut and fit solid insulation tightly around obstructions, and fill voids with insulation.
 - 2. Unless multiple layers are shown or required to make up the total thickness required, apply a single layer of insulation to produce the thickness indicated.
 - 3. Determine the minimum thickness of sprayed thermal and acoustical insulation applied in accordance with the requirements of the field test procedure specified in ASTM E 605.
- C. Install insulation that is undamaged, dry, and unsoiled, and that has not been left exposed to ice and snow.
- D. Installing General Building Insulation:
 - 1. Using the method indicated and complying with manufacturer's written instructions, furnish and install general building insulation to or into the substrates that provide support for the insulation to produce a permanent installation.
 - a. If no specific method is indicated, bond the mineral-fiber blanket units to the substrate with adhesive, or use mechanical means of anchorage.
 - 2. Seal joints between closed-cell (non-breathing) insulation units as the units are placed by applying an adhesive, mastic, or sealant to the edges of each unit to form a tight seal.
 - a. Fill voids in installed units with adhesive, mastic, or sealant as recommended by the insulation manufacturer.
 - 3. For vapor-retarder-faced units, place the vapor retarder facing toward the conditioned space unless otherwise indicated.
 - a. Do not obstruct ventilation spaces, except for areas where firestopping material is installed.
 - 4. Ensure an airtight installation.
 - a. Seal each area of continuous insulation to the surrounding construction.
 - b. Tape the joints and ruptures in the vapor retarder in a way that insures an airtight seal.

5. Installing Blanket Insulation:

- a. Install mineral-fiber blankets in cavities formed by framing members as follows:
 - 1) Provide blanket widths and lengths that fill the cavities formed by the framing members.
 - a) If more than one length is required to fill a cavity, provide lengths that will produce a snug fit at the ends of adjoining blankets.
 - 2) Produce a friction fit between the edges of insulation blankets and the adjoining framing members.
 - 3) Wherever cavity heights in metal-framed walls exceed 96 inches, mechanically support unfaced blankets, and support faced blankets by taping stapling flanges to the flanges of the metal framing studs.

RFI
2019

Batt Insulation in
Partitions

6. Installing Expanding Foam Insulation:

- a. Do not apply expanding foam insulation until the installation of pipes, ducts, conduits, wiring, and electrical outlets in walls is completed and windows, electrical boxes, and other items not indicated to receive insulation are masked.
- b. Install expanding spray-applied foam insulation in accordance with the manufacturer's printed instructions to assure that cavity walls are completely filled where indicated in the Contract Drawings.

7. Installing Loose-Fill Insulation:

- a. Do not apply loose cellulosic insulation until the installation of pipes, ducts, conduits, wiring, and electrical outlets in walls is completed and windows, electrical boxes, and other items not indicated to receive insulation are masked.
- b. Install self-supported, spray-applied, loose cellulosic insulation where indicated in the Contract Drawings in accordance with the manufacturer's printed instructions to assure that cavity walls are completely filled.
- c. As the cellulosic insulation is installed, use methods recommended by the insulation manufacturer to fill the cavity flush with the edges of the studs.

8. Installing Sprayed Thermal and Acoustical Insulation:

- a. Spray-apply the acoustical and thermal insulation onto the substrate surface where indicated in the Contract Drawings in accordance with the manufacturer's printed instructions to assure that the surfaces are covered to at least the required minimum thickness.
- b. Keep overspray to a minimum.
- c. Remove and properly dispose of overspray.
- d. Cure sprayed acoustical and thermal insulation using continuous natural or mechanical ventilation.

9. Installing Rigid Thermal Insulation:

- a. Install rigid thermal insulation where indicated in the Contract Drawings in accordance with the manufacturer's printed instructions.
 - b. Install rigid thermal insulation boards vertically, with the long joints butted tightly together, and secure it to the substrates using mechanical fasteners such as nails or staples or adhesive as recommended by the rigid thermal insulation manufacturer, and spaced as recommended by the manufacturer.
 - 1) Ensure that the mechanical fasteners are driven to the depth recommended by the rigid thermal insulation manufacturer, but do not overdrive the fasteners.
 - c. Using a utility knife and straight edge, trim the rigid thermal insulation board to conform to irregular wall angles, projections, or wall surfaces less than board width or height.
- E. Installing Safing Insulation:
1. Install safing insulation so it fills the gap between the top of the partition and the horizontal material above, unless shown otherwise on the Contract Drawings.
 2. Complete the safing assembly by applying sealant as indicated in Section II, Requirements for Fire Protection, in GA-600.

3.04 CLEANING

- A. Waste Management:
1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.05 PROTECTION

- A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes.
- B. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

1	12/20/2017	N/A	1.02.A, 1.02.C.11, 1.05.B.2, 2.01.B.2	Add requirements for ENVISION Sustainability Rating System

SECTION 07275

FLUID-APPLIED MEMBRANE AIR BARRIERS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for a fluid applied, vapor permeable air barrier membrane system located in the non-accessible portion of the wall, and including methods for bridging and sealing air leakage pathways in roof and foundation junctions, window and door openings, control and expansion joints, masonry ties, piping and other penetrations through the wall assembly.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 – Sustainable Design Requirements.
 - 3. Section 01400 - Quality Requirements.
 - 4. Section 01732 - Cutting and Patching.
 - 5. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. CMU: Concrete masonry unit.
 - 2. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 3. M.D.: Machine direction.
 - 4. MSDS: Material safety data sheets.
 - 5. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
- B. Definitions:
 - 1. Air Barrier Assembly: The collection of air barrier materials and auxiliary materials applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

2. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.

C. Reference Standards:

1. ASTM International (ASTM):
 - a. ASTM C 920 – Standard Specifications for Elastomeric Joint Sealants.
 - b. ASTM C 1193 – Standard Guide for Use of Joint Sealants.
 - c. ASTM D 412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers-Tension.
 - d. ASTM D 570 – Standard Test Method for Water Absorption of Plastics.
 - e. ASTM D 1004 – Standard Test Method for Tear Resistance (Graves Tear) of Plastic Film and Sheeting.
 - f. ASTM D 1876 – Standard Test Method for Peel Resistance of Adhesives (T-Peel Test).
 - g. ASTM D 1938 – Standard Test Method for Tear-Propagation Resistance (Trouser Tear) of Plastic Film and Thin Sheeting by Single-Tear Method.
 - h. ASTM D 1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection.
 - i. ASTM D 4258 – Standard Practice for Surface Cleaning Concrete for Coating.
 - j. ASTM D 4263 – Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method.
 - k. ASTM E 96/E 96M – Standard Test Methods for Water Vapor Transmission of Materials.
 - l. ASTM E 154 – Standard Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover.
 - m. ASTM E 162 – Standard Test Method for Surface Flammability of Materials Using a Radiant Heat Energy Source.
 - n. ASTM E 1186 – Standard Practices for Air Leakage Site Detection in Building Envelopes and Air Barrier Systems.
 - o. ASTM E 2178 - Standard Test Method for Air Permeance of Building Materials.
 - p. ASTM E 2357 - Standard Test Method for Determining Air Leakage of Air Barrier Assemblies.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate the installation of the fluid-applied membrane air barrier with the installation of the roofing membrane and base flashing to ensure continuity of the air barrier with the roofing membrane.
- B. Pre-Installation Meetings:
 - 1. Prior to the commencement of field operations, schedule and conduct a pre-installation conference in accordance with the requirements specified in Section 01316, Project Meetings, to establish the procedures for maintaining optimum working conditions, and to coordinate the Work of this Section with related and adjacent work.
 - 2. Attendees must include the Contractor, the installer of the fluid-applied membrane air barrier, the Program/Project Manager, and the fluid-applied membrane air barrier system manufacturer's field representative.
 - 3. The agenda for the pre-installation conference must include, but in not limited to, the following:
 - a. Review of fluid-applied membrane air barrier submittals.
 - b. Review of surface preparation requirements, discussion of the minimum curing period, and installation procedures.
 - c. Review of special details and flashings.
 - d. The sequence of construction, the responsibilities of the attendees, and the schedule for subsequent operations.
 - e. Review of mock-up requirements.
 - f. Review of inspection, testing, protection, and repair procedures.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Membrane air barrier.
 - 2) Liquid membrane.
 - 3) Wall primer.
 - 4) Flexible membrane wall flashing.
 - 5) Joint reinforcing strip.
 - 6) Transition membrane.
 - 7) Substrate patching membrane.
 - 8) Sprayed polyurethane foam sealant.
 - 9) Joint sealant.

- b. Shop Drawings:
 - 1) Fluid-applied membrane air barrier system.
 - c. Samples:
 - 1) Fluid applied membrane.
 - 2) Transition membrane.
 - 3) Through wall flashing.
 - d. Certificates:
 - 1) Fluid-Applied Membrane Air Barrier Certificate-of-Compliance.
 - e. Qualification Statements:
 - 1) Fluid-applied membrane air barrier manufacturer's qualifications.
 - 2) Fluid-applied membrane air barrier applicator's qualifications.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Tested physical and performance properties of air barrier.
 - b. Manufacturer's Instructions:
 - 1) Manufacturer's published instructions for evaluating, preparing, and treating substrates.
 - 2) Fluid-applied membrane air barrier manufacturer's published installation instructions.
 - c. Source Quality Control Submittals:
 - 1) Certified product test report showing compliance of the proposed air barriers with the requirements for air permeance.
 - 2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. Adhesives and Sealants
 - 1) Submit product data highlighting the VOC content for any field applied sealant used.
 - b. Paints and Coatings
 - 1) Submit product data highlighting the VOC content for any field applied coating within the buildings weather barrier.
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Fluid-Applied Membrane Air Barrier Material Warranty.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Testing and Inspection Agency Qualifications:

- a. To perform testing and inspections, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency having the qualifications specified in Section 01400, Quality Requirements, and the City of Phoenix Testing Laboratory.
- B. Qualifications:
 1. Fluid-Applied Membrane Air Barrier Manufacturer's Qualifications:
 - a. Acquire fluid-applied membrane air barrier systems that have been manufactured and marketed by a firm having a minimum of 20 years experience in the production and sales of waterproofing and air barriers.
 - b. Submit the fluid-applied membrane air barrier manufacturer's qualifications evidencing the ability of the proposed manufacturer to meet the requirements specified, and including a list of projects of similar design and complexity to the Work required by this Contract that the proposed manufacturer has completed within the past 5 years, to the Program/Project Manager for approval.
 2. Fluid-Applied Membrane Air Barrier Applicator's Qualifications:
 - a. Engage a firm experienced in applying air barrier materials similar in material, design, and extent to those specified for this Contract; and whose work has resulted in applications exhibiting a record of successful in-service performance.
 - b. Submit the fluid-applied membrane air barrier applicator's qualifications to the Program/Project Manager for approval.
- C. Certifications:
 1. Fluid-Applied Membrane Air Barrier Certificate-of-Compliance:
 - a. Submit a Certificate-of-Compliance for the fluid-applied membrane air barriers, signed by the product manufacturer, and certifying the air barrier and accessory materials to be provided under this Contract are compatible with the materials that will connect to or that will come into contact with the air barrier to the Program/Project Manager for approval.
- D. Site Samples:
 1. Submit representative Samples of the following materials to the Program/Project Manager for approval:
 - a. Fluid applied membrane.
 - b. Transition membrane.
 - c. Through wall flashing.
- E. Mock-Ups:
 1. After the Samples have been approved but prior to beginning to install the fluid-applied membrane air barrier systems, construct exterior wall assembly mockups in accordance with the requirements specified in

Section 01454, Mock-Up Requirements, and that incorporate the air barrier work relative to backup wall construction, external cladding, window, door frame and sill, insulation, and flashing to demonstrate the surface preparation, the crack and joint treatment, and the sealing of gaps, terminations, and penetrations of the air barrier membrane.

- a. Build the mockups in the locations and of the size indicated on the Contract Drawings; or, if not indicated, as directed by Program/Project Manager.
 - b. Build mockups that include the components required by the system, and that match the systems' components and use the installation methods to be used to install the production Work, to construct the mock-ups.
 - c. Coordinate construction of the mockup so the Testing and Inspection Agency can inspect the air barrier installation before the external insulation and cladding is installed.
2. If the Program/Project Manager determines that the mockups do not comply with the specified requirements, reconstruct the mockups including the air barrier until the mockups are approved by the Program/Project Manager.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Sequence deliveries of fluid-applied membrane air barrier system materials to the Site to avoid delays, but to minimize onsite storage.
2. Deliver fluid-applied membrane air barrier system materials to the Site in their manufacturer's original labeled packaging.
3. Remove damaged fluid-applied membrane air barrier system material from the Site, and dispose of it in accordance with the applicable regulations.

B. Storage and Handling Requirements:

1. Store and handle the fluid-applied membrane air barrier system materials in strict compliance with their manufacturer's instructions, recommendations, and material safety data sheets (MSDS).
2. Protect the fluid-applied membrane air barrier system materials from damage from sunlight, weather, excessive temperatures, and construction operations.
 - a. Do not double-stack pallets of fluid applied membrane components on the Site.
 - b. Provide cover on the top and all sides of the fluid-applied membrane air barrier system materials, allowing for adequate ventilation.
 - c. Protect fluid-applied membrane components from freezing and extreme heat.

C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

A. Ambient Conditions:

1. Apply the fluid-applied air barrier within the range of ambient and substrate temperatures recommended by the fluid-applied membrane air barrier manufacturer.
2. Apply joint sealants that form part of the air barrier assembly within joint sealant manufacturer's recommended application temperature ranges.
 - a. If the sealant cannot be applied within these temperature ranges, consult the joint sealant manufacturer for their recommendations.
3. Do not apply fluid-applied membrane air barrier to a wet substrate or during snow, rain, fog, or mist.

1.08 WARRANTY

A. Manufacturer Warranty:

1. Fluid-Applied Membrane Air Barrier Material Warranty:
 - a. Warrant the fluid-applied membrane air barrier against defects within the 5-year period after the Date of Substantial Completion:
 - 1) Submit a Fluid-Applied Membrane Air Barrier Material Warranty on the fluid-applied membrane air barrier manufacturer's standard form in which the fluid-applied membrane air barrier manufacturer agrees, without monetary limitation, to replace fluid-applied membrane air barrier that when installed and used in strict conformance with the manufacturer's published instructions fails within the specified warranty period, to the Program/Project Manager for approval.
 - 2) Failures include, but are not limited to, the following:
 - a) Failure within the specified warranty period to maintain an air permeance rating not exceeding 0.004 cubic feet per minute per square foot (0.02L/s/m²) when tested in accordance with the method specified in ASTM E 2178.
 - b) Failure within the specified warranty period to maintain a vapor permeance rating greater than 10 perms when tested in accordance with Method B specified in ASTM E 96/E 96M.

PART 2 PRODUCTS

2.01 FLUID-APPLIED MEMBRANE AIR BARRIER SYSTEMS

A. Manufacturers:

1. Manufacturer List:

- a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain the primary fluid-applied membrane air barrier material and through wall flashing from a single source from a single manufacturer.
 - a) If vapor permeable and a vapor impermeable air barrier is required for the Work this Contract, obtain the vapor permeable and vapor impermeable air barrier and through wall flashing from a single source from a single manufacturer.
- B. Sustainability Requirements:
 1. Low Emitting Materials – Paints and Coatings
 - a. Provide fluid applied air barrier with a VOC content of 50g/L or less.
 2. Low Emitting Materials – Adhesives and Sealants
 - a. Provide Architectural Non-Porous Sealant Primers with not more than 250 grams per Liter less water.
 - b. Provide Architectural Porous Sealant Primers with not more than 775 grams per Liter less water.
- C. Description:
 1. The fluid-applied membrane air barrier system is a continuous air barrier to control air leakage into, or out of the conditioned space at building envelopes designed and constructed to control air infiltration and exfiltration.
 2. The fluid-applied membrane air barrier can also be applied to interior partitions between conditioned spaces and spaces designed to maintain temperature or humidity levels which differ from those in the conditioned spaces by more than 50 percent of the difference between the conditioned spaces and design ambient conditions.
 3. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).
 - 2) Provide liquid-type materials complying with the VOC limits of the Authorities Having Jurisdiction.
- D. Performance:
 1. Provide fluid-applied, vapor permeable membrane air barrier having the following minimum physical properties and performance:

- a. Membrane Air Permeance:
 - 1) Provide fluid-applied membrane air barrier having a membrane air permeance not exceeding 0.0004 cubic feet per minute per square foot of surface area at a pressure difference of 1.57 pounds-force per square foot (0.002L/s/m² of surface area at 75Pa) when the specified thickness is tested in accordance with the requirements specified in ASTM E 2178.
 - b. Membrane Vapor Permeance:
 - 1) Provide fluid-applied membrane air barrier having a membrane vapor permeance not less than 11.2 perms (649.6ng/Pa/s/m²) when tested in accordance with the methods specified in ASTM E 96/E 96M.
 - c. Assembly Air Leakage:
 - 1) Provide a continuous air barrier assembly that has air leakage less than 0.0008 cubic feet per minute per square foot of surface area when under a pressure differential of 0.3 inch water gage (1.57 pounds per square foot, or 0.004L/s/m² of surface area at 75Pa) when tested in accordance with the method specified in ASTM E 2357.
 - d. Ultraviolet (UV) Radiation Exposure Limit:
 - 1) Provide fluid-applied membrane air barrier having an ultraviolet (UV) radiation exposure limit of not more than 180 calendar days when tested in accordance with the methods specified in ASTM D 412 and with Method B specified in ASTM E 96/E 96M.
 - e. Structural Loading:
 - 1) Provide fluid-applied membrane air barrier that is capable of withstanding positive and negative combined design wind, fan, and stack pressures on the envelope without damage or displacement, and capable of transferring the load to the structure.
 - 2) Provide fluid-applied membrane air barrier that will not displace adjacent materials under full load.
- E. Design Criteria:
- 1. Provide a durable or maintainable fluid-applied membrane air barrier capable of performing as a continuous vapor-permeable air barrier with all joints made airtight and as a liquid-water drainage plane flashed to discharge incidental condensation or water penetration to the exterior.
 - 2. Provide fluid-applied membrane air barrier assemblies capable of accommodating substrate movement, construction material changes, and transitions at perimeter conditions; and of sealing substrate expansion and control joints, without deterioration and air leakage exceeding the specified limits.
 - 3. Provide auxiliary materials recommended by the air barrier manufacturer for their intended use, and that are compatible with the air barrier membrane.

4. Product Data:
 - a. Obtain the fluid-applied membrane air barrier manufacturer's Product Data for the fluid-applied membrane air barrier system, including auxiliary materials and the manufacturer's published instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of air barrier.
 - b. Submit the Product Data to the Program/Project Manager for approval.
5. Shop Drawings:
 - a. Prepare Shop Drawings that show the locations and extent of the fluid-applied membrane air barrier system.
 - 1) Include details for substrate joints and cracks, counterflashing strip, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
 - 2) Include details of interfaces with other materials that form part of air barrier.
 - 3) Include details of mockups.
 - b. Submit the fluid-applied membrane air barrier system Shop Drawings to the Program/Project Manager for approval.

F. Materials:

1. Membrane Air Barrier:
 - a. Provide a fluid-applied, fully-adhered, vapor-permeable single component acrylic membrane air barrier that cures to form a resilient, monolithic, fully bonded elastomeric sheet when applied to construction surfaces.
 - b. Manufacturers:
 - 1) Grace Construction Products, Perm-A-Barrier VP, <http://www.na.graceconstruction.com>.
 - 2) Approved equal.
2. Liquid Membrane:
 - a. Provide rubberized, asphalt-based liquid membrane designed to seal terminations, edges of patches, and overlaps in detail areas.
 - b. Manufacturers:
 - 1) Grace Construction Products, Bituthene Liquid Membrane, <http://www.na.graceconstruction.com>.
 - 2) Approved equal.
3. Flexible Membrane Wall Flashing:
 - a. Provide flexible membrane wall flashing consisting of 0.97mm (36-mil) thick self-adhesive rubberized asphalt integrally bonded to 0.1mm (4-mil) thick cross-laminated, high-density polyethylene film to produce at least a 1.0mm (40-mil) thick membrane, and interleaved with disposable silicone-coated release paper to be removed when the flashing is installed.
 - b. Provide flexible membrane wall flashing having the properties specified in Table 07275-2.

Table 07275-2 Flexible Membrane Wall Flashing Properties		
Property	Test Method	Requirement
Water Vapor Transmission	ASTM E 96/E 96M Method B	2.9 ng/m ² /s/Pa (0.05 perms)
Water Absorption	ASTM D 570	0.1 percent by weight maximum
Puncture Resistance	ASTM E 154	356N (80 pounds) minimum
Tear Resistance		
Initiation	ASTM D 1004	58N (13.0 pounds) M.D. minimum
Propagation	ASTM D 1938	40N (9.0 pounds) M.D. minimum
Lap Adhesion at minus 4 degrees Celsius (25 °F)	ASTM D 1876	880N/m (5.0 pounds/inch) of width
Low Temperature Flexibility	ASTM D 1970	Unaffected to minus 43 degrees Celsius (-45 °F)
Tensile Strength	ASTM D 412 Die C Modified	5.5MPa (800 psi) minimum
Elongation, Ultimate Failure of Rubberized Asphalt	ASTM D 412 Die C	200 percent minimum

- c. Manufacturers:
 - 1) Grace Construction Products, Perm-A-Barrier Detail Membrane, <http://www.na.graceconstruction.com>.
 - 2) Approved equal.
- 4. Joint Reinforcing Strips:
 - a. Provide the air barrier manufacturer's approved joint reinforcing tape.
- 5. Transition Membrane:
 - a. Provide transition membrane consisting of 0.97mm (36-mil) thick self-adhesive rubberized asphalt integrally bonded to 0.1mm (4-mil) thick cross-laminated, high-density polyethylene film to produce at least a 1.0mm (40-mil) thick membrane, and interleaved with disposable silicone-coated release paper to be removed when the flashing is installed.
 - b. Provide transition membrane having the properties specified in Table 07275-3.

Table 07275-3 Transition Membrane Properties		
Property	Test Method	Requirement
Water Vapor Transmission	ASTM E 96/E 96M Method B	2.9 ng/m ² /s/Pa (0.05 perms)
Water Absorption	ASTM D 570	0.1 percent by weight maximum
Puncture Resistance	ASTM E 154	356N (80 pounds) minimum
Tear Resistance		
Initiation	ASTM D 1004	58N (13.0 pounds) M.D. minimum
Propagation	ASTM D 1938	40N (9.0 pounds) M.D. minimum
Lap Adhesion at minus 4 degrees Celsius (25 °F)	ASTM D 1876	880N/m (5.0 pounds/inch) of width
Low Temperature Flexibility	ASTM D 1970	Unaffected to minus 43 degrees Celsius (-45 °F)
Tensile Strength	ASTM D 412 Die C Modified	5.5MPa (800 psi) minimum
Elongation, Ultimate Failure of Rubberized Asphalt	ASTM D 412 Die C	200 percent minimum

- a. Manufacturers:
 - 1) Grace Construction Products, Perm-A-Barrier Detail Membrane, <http://www.na.graceconstruction.com>.
 - 2) Approved equal.
6. Substrate Patching Membranes:
 - a. Provide the air barrier material manufacturer's standard trowel-grade substrate filler.
 - b. Manufacturers:
 - 1) Grace Construction Products, Bituthene Liquid Membrane, <http://www.na.graceconstruction.com>.
 - 2) Approved equal.
7. Sprayed Polyurethane Foam Sealant:
 - a. Provide one-component or two-component, foamed-in-place, polyurethane foam sealant having the following properties:
 - 1) Density: 1.5 pounds per cubic foot to 2.0 pounds per cubic foot (24kg/m³ to 32kg/m³).

- 2) Flame Spread Index: 25 or less when tested in accordance with the method specified in ASTM E 162.
 - b. Provide the primer and noncorrosive substrate cleaner recommended by the foam sealant manufacturer.
8. Joint Sealant:
 - a. Provide joint sealant complying with the requirements for single-component, neutral-curing silicone; Class 100/50 (low-modulus), Grade NS, Use NT related to exposure specified in ASTM C 920, except provide Use O joint sealant where applicable for the joint substrates.

2.02 SOURCE QUALITY CONTROL

- A. Tests and Inspections:
 1. Air Permeance Test:
 - a. Test Procedure:
 - 1) Based on evaluation of comprehensive tests performed on the proposed air barriers by a qualified testing agency, submit a certified product test report showing compliance of the proposed air barriers with the requirements for air permeance specified in ASTM E 2178.
 - b. Acceptance Criteria:
 - 1) A certified product test report showing the proposed air barriers comply with the requirements for air permeance specified in ASTM E 2178 allow those products to pass the Air Permeance Test.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. With the fluid-applied membrane air barrier system installer present, examine the substrates, areas, and conditions where this air barrier system will be installed for compliance with the installation requirements and other conditions affecting the performance of the architectural metal.
 - a. Verify that the substrates are sound, and free of oil, grease, dirt, excess mortar, or other contaminants.
 - b. Verify that concrete has cured and aged for the minimum time period recommended by the fluid-applied membrane air barrier manufacturer.
 - c. Verify that masonry joints are struck flush, and completely filled with mortar.
 - d. Verify that surfaces are sound and free of voids, spalled areas, loose aggregate, and sharp protrusions.
- B. Pre-Installation Testing:

1. Capillary Moisture Test:
 - a. Test Procedure:
 - 1) Test the concrete substrates for capillary moisture in accordance with the plastic sheet method specified in ASTM D 4263.
 - b. Acceptance Criteria:
 - 1) Verify that concrete is visibly dry and free of moisture.

C. Evaluation and Assessment:

1. Proceed to install the fluid-applied membrane air barrier system only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Protection of In-Place Conditions:

1. To prevent spillage and overspray affecting other construction, mask off adjoining surfaces not to be covered by fluid-applied membrane air barrier.

B. Surface Preparation:

1. Comply with the requirements for substrate preparation specified in the fluid-applied membrane air barrier manufacturer's Product Data.
 - a. Protect substrates from environmental conditions that will affect the performance of the fluid-applied membrane air barrier.
2. Clean, prepare, treat, and seal the substrates in accordance with the fluid-applied membrane air barrier manufacturer's written instructions.
 - a. Furnish clean, dust-free, and dry substrates for fluid-applied membrane air barrier application.
 - 1) Remove dust, dirt, loose stone, and debris.
 - b. Remove contaminants such as grease, oil, and wax from exposed surfaces.
 - 1) Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
3. Substrate Repair, Remediation, and Other Preparation:
 - a. Use repair materials and methods that are acceptable to the manufacturer of the fluid-applied air barrier system.
 - b. Install flashing and treat construction joints as recommended by the fluid-applied membrane air barrier manufacturer.
 - c. Provide continuous support for the air barrier by covering gaps in the substrate plane using stainless-steel sheet mechanically fastened to the structural framing to form a smooth transition from one substrate plane to another.
 - d. At changes in the plane of the substrate, such as at sharp corners and edges, apply a sealant or substrate patching membrane to form a smooth transition from one plane to the other.
 - e. Exterior Sheathing Panel Substrates:

- 1) Ensure that the boards are sufficiently stabilized, and that the corners and edges have been fastened with appropriate screws.
 - 2) Pre-treat all board joints with 50mm (2inch) to 75mm (3 inch) wide self-adhesive tape of a type recommended by the manufacturer.
 - a) Fill gaps greater than 6mm (1/4 inch) with mastic or caulk, and allow sufficient time for the mastic or caulk to fully cure before applying the tape and fluid applied air barrier system.
 - f. Gypsum Sheathing:
 - 1) Fill gypsum sheathing joints wider than 1/4 inch (6mm) with sealant in accordance with the requirements specified in ASTM C 1193 and with the fluid-applied membrane air barrier manufacturer's published instructions.
 - 2) Prior to applying fluid air barrier membrane, apply tape to the gypsum sheathing joints.
 - g. Concrete and Masonry Substrates:
 - 1) Prepare, treat, rout, and fill joints and cracks in concrete and masonry substrate in accordance with the requirements specified in ASTM C 1193 and the fluid-applied membrane air barrier manufacturer's written instructions.
 - a) Before coating the concrete and masonry surfaces with fluid-applied membrane air barrier, remove dust and dirt from the joints and cracks in accordance with the requirements specified in ASTM D 4258.
 - 2) Remove fins, ridges, mortar, and other projections; and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate patching membrane.
 - 3) Ensure that the concrete block and brick substrates have smooth trowel-cut mortar joints, struck full and flush.
 - 4) Fill all voids and holes in masonry, particularly in the mortar joints, with a lean mortar mix, non-shrinking grout, or parge coat.
 - 5) Remove excess mortar from masonry ties, shelf angles, and other obstructions.
 - 6) Prime concrete and masonry substrate as required.
- C. Demolition/Removal:
1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 APPLICATION

- A. Ensure that all penetrations of the air barrier and paths of air infiltration/exfiltration are made airtight.
1. Join the air barrier to the air barrier material of adjacent systems in an airtight and flexible manner, allowing for the relative movement of systems due to thermal and moisture variations and creep.

B. Air Barrier Membrane:

1. Apply the fluid-applied air barrier membrane in accordance with the air barrier manufacturer's instructions so a continuous air barrier is achieved.
 - a. Submit the fluid-applied membrane air barrier manufacturer's published installation instructions to the Program/Project Manager for information.
2. Apply a continuous unbroken vapor-permeable membrane air barrier onto the substrates to the following minimum thicknesses:
 - a. Wet Film Thickness: 90 mils (2.4mm).
 - b. Dry Film Thickness: 45 mils (1.2mm).
3. Apply the fluid-applied air barrier membrane so it has full contact around protrusions, such as masonry ties.

C. Transition Membrane:

1. Apply primer to substrates that will receive transition membrane at the required rate and allow it to dry.
 - a. Limit priming to areas that will be covered by transition tape in the same day.
 - b. Re-prime areas exposed for more than 24 hours.
 - c. Prime glass-fiber-surfaced gypsum sheathing not to be covered with air membrane material with the number of prime coats needed to achieve the required bond, and allow adequate drying time between coats.
2. Install strips, transition membrane, and other auxiliary materials in accordance with the fluid-applied air barrier manufacturer's published instructions so it forms a seal with the adjacent construction and maintains a continuous air barrier.
 - a. Install flashings only after the air barrier has been applied.
 - b. Install strip transition membrane on the roofing membrane and the base flashing so both substrates are covered by a minimum of 3 inches (75mm) of transition membrane.
3. At end of each working day, seal the top edge of strips and transition membrane strips to the substrate using termination mastic.
4. Apply joint sealants that form part of the air barrier assembly.
5. Wall Openings:
 - a. Prime the concealed perimeter frame surfaces of windows, curtain walls, storefronts, and doors.
 - b. Apply transition strips so a minimum coverage of 3 inches (75mm) of is achieved over both substrates.
 - 1) Maintain 3 inches (75mm) of full contact with perimeter frames over firm bearing so not less than 1 inch (25mm) of full contact is achieved.
 - 2) Firmly roll the transition membrane to enhance adhesion.
6. Fill gaps in the perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air barrier membrane with foam sealant.

7. Repair punctures, voids, and deficient lapped seams in strips and transition strips.
 - a. Slit and flatten fishmouths and blisters.
 - b. Patch these defects using transition strips that extend 6 inches (150mm) beyond the repaired areas in the strip direction.
- D. Special Techniques:
 1. Liquid Membrane:
 - a. To seal terminations, edges of patches, and overlaps in detail areas provide liquid membrane.
 2. Wall Primer:
 - a. For throughwall flashing and tapes applied to the substrate, provide wall primer.
- E. Interface with Other Work:
 1. Using auxiliary materials, connect and seal the exterior wall air barrier membrane continuously to the roofing membrane air barrier, concrete below-grade structures, floor-to floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings.
 2. Provide connection between the following systems:
 - a. Foundations and walls.
 - b. Walls and windows or doors.
 - c. Different wall systems.
 - d. Walls and roofs.
 - e. Walls and roofs over unconditioned space.
 - f. Walls, floors, and roofs across construction, control, and expansion joints.
 - g. Walls, floors and roofs to utility, pipe and duct penetrations.

3.04 REPAIR/RESTORATION

- A. Correct deficiencies in, or remove, air barrier that does not comply with the specified requirements.
 1. Repair the substrates, and reapply the air barrier components.

3.05 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 1. During the period when fluid-applied air barrier is being applied, the Testing and Inspection Agency must perform routine and other inspections and testing of materials and prepare test reports.
 - a. Advise the Testing and Inspection Agency sufficiently in advance of operations to allow inspection and testing personnel to be assigned,

- and to provide sufficient time for quality tests to be performed and completed.
- b. The Testing and Inspection Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
2. Do not cover air barrier until it has been tested and inspected by the Testing and Inspection Agency.
 3. Air Leakage Test:
 - a. Test Procedure:
 - 1) The Testing and Inspection Agency will test air barrier assemblies for evidence of air leakage in accordance with the method specified in ASTM E 1186 using a smoke pencil with pressurization or depressurization.
 - b. Acceptance Criteria:
 - 1) Air barrier assemblies showing no evidence of air leakage pass the Air Leakage Test.
 4. Inspections:
 - a. Air barrier materials and installation are subject to inspections to verify the following compliance with the specified requirements:
 - 1) Continuity of air barrier system has been achieved throughout the building envelope with no gaps or holes.
 - 2) Continuous structural support of air barrier system has been provided.
 - 3) Masonry and concrete surfaces are smooth, clean and free of cavities, protrusions, and mortar droppings.
 - 4) Site conditions for the application temperature and dryness of substrates have been maintained.
 - 5) Maximum exposure time of materials to ultraviolet (UV) deterioration has not been exceeded.
 - 6) Surfaces have been primed where applicable.
 - 7) Laps in strips and transition strips have complied with at least the minimum requirements, and have been shingled in the correct direction or mastic has been applied on exposed edges, with no fishmouths.
 - 8) Termination mastic has been applied on cut edges.
 - 9) Strips and transition strips have been firmly adhered to the substrate.
 - 10) Compatible materials have been used.
 - 11) Transitions at changes in direction and structural support at gaps have been provided.

- 12) Connections between assemblies, both membrane and sealants, have complied with the requirements for cleanliness, preparation and priming of surfaces, structural support, integrity, and continuity of seal.
- 13) All penetrations have been sealed.

B. Non-Conforming Work

1. Remove deficient air barrier components, replace the deficient components with acceptable components, and retest the replacement components as specified herein.

3.06 CLEANING

- A. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended by the manufacturer of the affected construction.
- B. Remove masking materials after installation.
- A. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 PROTECTION

- A. Protect the air barrier system from damage during its application and the remainder of the construction period in accordance with the manufacturer's published instructions.
- B. Protect air barrier from exposure to ultraviolet (UV) light and harmful weather exposure as required by the manufacturer.
 1. Remove air barrier exposed for more than 150 days, and replace the removed air barrier with new material.

SECTION 07412

METAL WALL PANELS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for concealed-fastener, lap-seam metal wall panels.
- B. Related Requirements:
 - 1. Section 01316 - Project Meetings.
 - 2. Section 01330 - Submittal Procedures.
 - 3. Section 01360 - Sustainable Design Requirements.
 - 4. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. EPDM: Ethylene propylene diene terpolymer M-class rubber.
 - 2. PVC: Polyvinyl-chloride.
 - 3. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 4. NRC: Noise reduction coefficient.
 - 5. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside, and San Bernardino counties.
 - 6. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
- B. Definitions:
 - 1. Volatile Organic Compounds (VOC): Generally meant to refer to organic chemical compounds having high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
- C. Reference Standards:
 - 1. American Architectural Manufacturers Association (AAMA):

- a. AAMA 621 - Voluntary Specifications for High Performance Organic Coatings on Coil Coated Architectural Hot Dipped Galvanized (HDG) and Zinc-Aluminum Coated Steel Substrates.
2. ASTM International (ASTM):
 - a. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - b. ASTM A 755/A 755M - Standard Specification for Steel Sheet, Metallic Coated by the Hot-Dip Process and Prepainted by the Coil-Coating Process for Exterior Exposed Building Products.
 - c. ASTM A 792/A 792M - Standard Specification for Steel Sheet, 55% Aluminum-Zinc Alloy-Coated by the Hot-Dip Process.
 - d. ASTM C 645 - Standard Specification for Nonstructural Steel Framing Members.
 - e. ASTM C 754 - Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products.
 - f. ASTM C 920 - Standard Specification for Elastomeric Joint Sealers.
 - g. ASTM C 1311 - Standard Specification for Solvent Release Sealants.
 - h. ASTM E 1592 - Standard Test Method for Structural Performance of Sheet Metal Roof and Siding Systems by Uniform Static Air Pressure Difference.
3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
5. Sheet Metal and Air Conditioning Contractors' National Association (SMACNA):
 - a. SMACNA Architectural Sheet Metal Manual.
6. South Coast Air Quality Management District (SCAQMD):
 - a. SCAQMD Rule 1168 – Adhesive and Sealant Applications.
7. United States Government:
 - a. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.
8. Institute for Sustainability Infrastructure (ISI):
 - a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved

Agency, and the City, prior to incorporating items requiring testing by them into the Work.

2. Coordinate the panel attachment locations with other trades.
 - a. Support fasteners must not obstruct the girt line.
3. Coordination Drawings:
 - a. Prepare and submit Coordination Drawings to the Program/Project Manager for approval.
 - 1) Show the following items for this Contract drawn to scale, and coordinate them with each other:
 - a) Exterior elevations drawn to scale.
 - b) Penetrations.
 - c) Wall-mounted items.

B. Pre-Installation Meetings:

1. Attend a pre-installation meeting at the Site held in compliance with the requirements of Section 01316, Project Meetings, to discuss the requirements for constructing the metal wall panels to be provided under this Contract.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Zinc-coated (galvanized) steel sheet.
 - 2) Aluminum-zinc alloy-coated steel sheet.
 - 3) Sealant tape.
 - 4) Joint sealant.
 - 5) Solvent-release sealant.
 - 6) Metal framing.
 - 7) Panel fasteners.
 - 8) Concealed-fastener, lap-seam metal wall panels.
 - 9) Exposed coil-coated finishes.
 - 10) Concealed finishes.
 - 11) Wall panel closures.
 - 12) Wall panel backing plates.
 - 13) Wall panel closure strips.
 - 14) Flashing and trim.
 - b. Shop Drawings:
 - 1) Metal wall panels.
 - c. Samples:
 - 1) Exposed coil-coated finishes.
 - 2) Concealed finishes.
 - d. Qualification Statements:

- 1) Metal wall panel installer's qualifications.
- 2) Professional Engineer's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Metal wall panel manufacturer's written panel installation recommendations.
 - 2) Metal wall panel manufacturer's written recommendations for cleaning the panels.
 - b. Source Quality Control Submittals:
 - 1) Structural Performance Test Reports.
2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. ENVISION Credit RA 1.3 - Use Recycled Materials
 - 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - b. ENVISION Credit RA 1.4 – Use Regional Materials
 - 1) Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).
 - c. Adhesives and Sealants
 - 1) Submit product data highlighting the VOC content for any field applied sealants.
 - d. Paints and Coatings
 - 1) Submit product data highlighting the VOC content for any field applied coatings within the building's weather barrier.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Maintenance instructions for the metal wall panels.
 - b. Warranty Documentation:
 - 1) Metal Wall Panel Warranty.
 - 2) Metal Wall Panel Architectural Finish Warranty.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by a code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - 1) Both continuous and periodic Special Inspections will be performed during the fabrication and erection of structural steel.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - 2. Testing and Inspection Agency:
 - a. To perform approval testing and inspections, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.
- B. Qualifications:
 - 1. Metal Wall Panel Installer's Qualifications:
 - a. Retain an installer that employs workers trained and approved by the metal wall panel manufacturer.
 - b. Submit the metal wall panel installer's qualifications to the Program/Project Manager for approval.
 - 2. Professional Engineer's Qualifications:
 - a. Employ an independent Professional Engineer, registered in the State of Arizona, who is qualified to perform the structural analysis required under this Section.
 - b. Submit the Professional Engineer's qualifications to the Program/Project Manager for approval.
- C. Site Samples:
 - 1. Submit Samples of each type of exposed finish used for the Work of this Section to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Protect metal wall panel materials from the elements and construction activity during transit and at the Site.
- B. Storage and Handling Requirements:
 - 1. Protect the metal finishes by applying the protective coverings recommended by the manufacturer.

2. Store the metal wall panel materials off the ground.

C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

A. Special Warranties:

1. Warrant the metal wall panel materials and workmanship against failures during the warranty period specified, including but not limited to the following:
 - a. Metal Wall Panel Warranty:
 - 1) Warrant the metal wall panels against defective materials, defective workmanship, defective watertightness, and defective design during the warranty period within 2 years from the Date of Substantial Completion.
 - 2) In the warranty, the manufacturer must agree to repair or replace components of metal wall panels that fail in materials or workmanship within the specified warranty period.
 - b. Metal Wall Panel Architectural Finish Warranty:
 - 1) Warrant the metal wall panel architectural finish against fading, chalking, yellowing, peeling, cracking, pitting, corroding or non-uniformity of color, or gloss deterioration beyond manufacturer's descriptive standards during the warranty period within 20 years from the Date of Substantial Completion.
 - 2) In the warranty, the manufacturer must agree to repair the finish or replace metal wall panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
2. Submit the written Metal Wall Panel Warranty and the Metal Wall Panel Architectural Finish Warranty on the manufacturer's standard form acceptable to the Owner to the Program/Project Manager for approval.
 - a. Have the manufacturer's standard form signed by the Contractor and manufacturer.

PART 2 PRODUCTS

2.01 METAL WALL PANEL COMPONENTS

A. Manufacturers:

1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
2. Substitution Limitations:

- a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- 3. Product Options:
 - a. Product Data:
 - 1) Obtain Product Data for each type of product proposed for the Work of this Section.
 - 2) Submit the Product Data to the Program/Project Manager for approval.
- B. Description:
 - 1. Provide the components required for a complete metal wall panel assembly including trim, copings, corners, seam covers, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items.
 - 2. Regulatory Requirements:
 - a. Phoenix Building Code:
 - 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).
 - 3. Sustainability Requirements:
 - a. Volatile Organic Compounds (VOC) Content of Interior Adhesives and Sealants:
 - 1) Provide interior adhesives, sealants, and primers for this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168:
 - a) Substrate Specific Applications Metal to Metal: Not more than 30 grams per Liter less water.
 - b) Substrate Specific Applications Plastic Foams: Not more than 50 grams per Liter less water.
 - c) Substrate Specific Applications Porous Material (except wood): Not more than 50 grams per Liter less water.
 - d) Architectural Sealants: Not more than 250 grams per Liter less water.
 - e) Architectural Non-Porous Sealant Primers: Not more than 250 grams per Liter less water.
 - f) Architectural Porous Sealant Primers: Not more than 775 grams per Liter less water.
 - b. Recycled Content
 - 1) Provide Metal Wall Panels whose combined post-consumer recycled content and one-half pre-consumer recycled content is no less than 25 percent.

- 2) Provide Metal Framing whose combined post-consumer recycled content and one-half pre-consumer recycled content is no less than 25 percent.
 - 3) Provide glass fiber insulation with combined post-consumer recycled content and one-half pre-consumer recycled content that is no less than 25 percent.
 - c. All batt insulation shall be formaldehyde free.
- C. Performance:
 - 1. Structural Performance:
 - a. Provide metal wall panel assemblies capable of withstanding the effects the following loads and stresses within the limits and under the conditions indicated based on testing in accordance with the methods specified in ASTM E 1592:
 - 1) Wind Loads:
 - a) Determine minimum design loads based on a uniform wind pressure of [37.5] pounds•force per square foot. ([1796]Pa) acting inward or outward.
 - 2) Deflection Limits:
 - a) Design metal wall panel assemblies to withstand wind loads with horizontal deflections no greater than 1/180 of the span.
- D. Design Criteria:
 - 1. Delegated Design:
 - a. Design each metal wall panel assembly using the performance requirements and design criteria indicated.
 - 1) Employ a qualified Professional Engineer to furnish a comprehensive engineering analysis.
 - b. Design the metal wall panels so condensation is eliminated on the interior side of the panel, and the joints between panels form weathertight seals.
 - c. Provide panels having the same profile for the full length of the panel, including major ribs and intermediate stiffening ribs.
 - 2. Shop Drawings:
 - a. Prepare Shop Drawings of the metal wall panels that show fabrication and installation layouts; details of edge conditions, joints, panel profiles, corners, anchorages, the attachment system, trim, flashings, closures, accessories, and special details.
 - 1) Distinguish between factory- assembled, shop- assembled, and field-assembled work on the Shop Drawings.
 - b. Submit the Shop Drawings to the Program/Project Manager for approval.
- E. Materials:
 - 1. Panel Materials:
 - a. Metallic-Coated Steel Sheet:

- 1) Provide restricted flatness steel sheet that has been metallic coated using the hot-dip process and pre-painted using the coil-coating process in accordance with the requirements specified in ASTM A 755/A 755M.
 - a) Zinc-Coated (Galvanized) Steel Sheet:
 - (1) Provide structural steel (SS) sheet galvanized in accordance with the requirements for G90 (Z275) Coating Designation specified in ASTM A 653/A 653M.
 - b) Aluminum-Zinc Alloy-Coated Steel Sheet:
 - (1) Provide steel sheet alloy-coated in accordance with the requirements for AZ50 Coating Designation, Grade 50 Class 1 (AZM150 Coating Designation, Grade 340 Class 1) structural steel (SS) specified in ASTM A 792/A 792M.
 - c) Surface:
 - (1) Provide metallic-coated steel sheet having a smooth finish.
 - b. Panel Sealants:
 - 1) Sealant Tape:
 - a) Provide pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape having a release-paper backing
 - b) Provide 1/2-inch (13mm) wide and 1/8-inch (3 mm) thick tape.
 - 2) Joint Sealant:
 - a) Provide elastomeric joint sealant complying with the requirements specified in ASTM C 920, and recommended in writing by the metal wall panel manufacturer.
 - 3) Solvent-Release Sealant:
 - a) Provide butyl-rubber-based, solvent-release sealant complying with the requirements specified in ASTM C 1311.
2. Metal Framing:
 - a. Steel Sheets:
 - 1) Provide cold-formed metallic-coated steel sheet complying with the requirements for nonstructural framing members specified in ASTM C 645; and hot-dip galvanized in accordance with the requirements for Coating Designation G60 (Z180) specified in ASTM A 653/A 653M, or another coating having equivalent corrosion resistance unless otherwise indicated in the Contract Documents.
 - b. Subgirts:
 - 1) Provide subgirts fabricated from the manufacturer's standard C-shaped or Z-shaped sections, and having a nominal thickness of 0.064 inch (1.63mm).
 - c. Zee Clips:
 - 1) Provide zee clips having a nominal thickness of 0.079 inch (2.01mm).

- d. Base and Sill Angles and Channels:
 - 1) Provide base or sill angles or channels having a nominal thickness of 0.079 inch (2.01mm).
3. Panel Fasteners:
 - a. Provide self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand the specified design loads.
 - b. Provide exposed fasteners having heads having plastic caps or a factory-applied coating matching the color of the metal wall panels.
 - c. Provide sealing washers made from ethylene propylene diene terpolymer M-class rubber (EPDM), Polyvinyl-chloride (PVC), or neoprene.

2.02 METAL WALL PANEL ASSEMBLIES

- A. Concealed-Fastener, Lap-Seam Metal Wall Panels:
 1. Provide factory-formed metal wall panels designed to be field assembled by lapping and interconnecting the side edges of adjacent panels, and mechanically attaching the panels to supports using concealed fasteners and factory-applied sealant in the side laps.
 - a. Provide concealed-fastener, lap-seam metal wall panels having a reveal joint or creased profile.
 - b. Provide panels having coverage of 12 or 16 inches.
 - c. Provide panel heights as indicated on the Contract Drawings.
 2. For zinc-coated (galvanized) steel concealed-fastener, lapped and interconnected seam wall panels, fabricate the panels from sheets having a nominal thickness of 0.028 inch (0.71mm).
 - a. Provide zinc-coated (galvanized) steel concealed-fastener, lap-seam wall panels having a 3-coat fluoropolymer external finish and the color as selected by Program/Project Manager from the manufacturer's full color range.
 3. For aluminum-zinc alloy-coated steel concealed-fastener, lapped and interconnected seam wall panels, fabricate the panels from sheets having a nominal thickness of 0.028 inch (0.71mm).
 - a. Provide aluminum-zinc alloy-coated steel concealed-fastener, lap-seam wall panels having a 3-coat fluoropolymer external finish and the color as selected by Program/Project Manager from the manufacturer's full color range.
 4. Provide the accessories required to create a weathertight installation.
 5. Manufacturers:
 - a. MBCI; Division of NCI Group, Inc., <http://www.mbc.com/>.
 - b. Manufacturer providing an equivalent product approved by the Program/Project Manager.
- B. Shop Fabrication:

1. Using the manufacturer's standard procedures and processes, fabricate and finish the metal wall panels and accessories at the factory to greatest extent possible to produce panels capable of complying with the specified performance requirements.
2. Fabricate metal wall panels complying with profiles and with dimensional and structural requirements indicated in the Contract Documents.
3. If gaskets or sealants are factory installed, fabricate the metal wall panel joints with factory-installed captive gaskets or separator strips that provide a tight seal and prevent metal-to-metal contact, and that will minimize noise from movements within the panel assembly.
4. Sheet Metal Accessories:
 - a. Fabricate flashing and trim in accordance with the recommendations in the SMACNA Architectural Sheet Metal Manual that apply to the design, dimensions, metal, and other characteristics of the.

C. Finishes:

1. Finish Materials:
 - a. Exposed Coil-Coated Finishes:
 - 1) 3-coat Fluoropolymer Finish:
 - a) Provide a 3-coat fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat complying with the requirements specified in AAMA 621.
 - b. Concealed Finishes:
 - 1) On steel, provide the manufacturer's standard white or light-colored acrylic or polyester backer finish.

2.03 ACCESSORIES

A. Wall Panel Accessories:

1. Unless otherwise indicated, the material and finish of wall panel accessories match the material and finish of metal wall panels.
2. Closures:
 - a. At eaves and rakes, provide closures fabricated of the same metal as the metal wall panels.
3. Backing Plates:
 - a. At panel end splices, provide metal backing plates fabricated from material recommended by the wall panel manufacturer.
4. Closure Strips:
 - a. Provide closure strips fabricated from closed-cell, expanded, cellular, rubber or from crosslinked, polyolefin-foam or closed-cell laminated polyethylene having at least 1-inch (25mm) thick flexible closure strips that have been cut or pre-molded to match the metal wall panel profile.
 - b. Provide closure strips where indicated in the Contract Documents or necessary to ensure weathertight construction.

B. Flashing and Trim:

1. Provide flashing and trim formed from zinc-coated (galvanized) steel sheet or aluminum-zinc alloy-coated steel sheet that is at least 0.018-inch (0.46mm) thick and pre-painted with a coil coating.
2. Finish the flashing and trim with same finish system as adjacent metal wall panels.

2.04 SOURCE QUALITY CONTROL

A. Tests and Inspections:

1. Structural Performance Test:
 - a. Test Procedure:
 - 1) Have the Testing and Inspection Agency determine the structural performance of the metal wall panel assemblies in accordance with the method specified in ASTM E 1592 under the wind load constraint specified in Subparagraph 2.01C.1.a.1.
 - 2) Have the Testing and Inspection Agency prepare Structural Performance Test Reports documenting the testing results, and submit the reports certified by the Testing and Inspection Agency to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Metal wall panel assemblies testing within the deflection limit specified in Subparagraph 2.01B.1.a.2 pass the Structural Performance Test.

B. Non-Conforming Work

1. Correct deficiencies in metal wall panels that inspections and test reports have indicated are not in compliance with specified requirements.

C. Coordination of Other Tests and Inspections:

1. Notify the code-required Approved Agency responsible for performing special inspections when metal wall panels for this Contract are being fabricated, shipped, and/or tested.
2. Cooperate with the code-required Approved Agency when they are performing required material verifications and other special inspections.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions:

1. Verify that the building is ready for the installation of the metal wall panels.
 - a. Examine the supporting members to verify the layout and alignment are correct.
 - b. Using laser instruments, field-check the dimensions and the alignment of supports.

- 1) Verify that support members have been installed within 6mm of their theoretical location.
- 2) The offset between any 2 adjacent members may not exceed 3mm.
- c. Verify that structural supports are in place.
 - 1) Before installing the Work of this Section, tighten the diagonal bracing and connections.
- B. Evaluation and Assessment:
 1. Do not proceed installing the metal wall panels until unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage that could otherwise result from installation of the metal wall panels.
- B. Surface Preparation:
 1. Install miscellaneous framing, including subgirts, base angles, sills, furring, and other miscellaneous wall panel support members and anchorages in accordance with the requirements specified in ASTM C 754.

3.03 ERECTION

- A. Provide metal wall panel metal installed in accordance with the wall panel manufacturer's written installation recommendations.
 1. Submit the metal wall panel manufacturer's written panel installation recommendations to the Program/Project Manager for information.
- B. Metal Wall Panels:
 1. Lap-Seam Metal Wall Panels:
 - a. Fasten metal wall panels to their supports using fasteners at each lapped joint location, and spaced as recommended by the manufacturer.
 - 1) Lap ribbed or fluted sheets one full rib corrugation.
 - a) Apply panels and associated items so a neat and weathertight enclosure is produced.
 - b) Avoid "panel creep" and applications not true to line.
 - 2) Provide metal-backed washers under the heads of exposed fasteners bearing on the weather side of metal wall panels.
 - 3) Locate and space exposed fasteners in a uniform vertical and horizontal alignment.
 - a) Use tools that control the compression uniformly to produce a positive seal without rupturing of washer.

- 4) When installing screw fasteners, adjust the power tool's controlled torque so it compresses the washer tightly without damaging the washer, screw threads, or panels.
 - a) Install screws in predrilled holes.
- 5) Provide sealant tape at the lapped joints of the metal wall panels and between panels and protruding equipment, vents, and accessories.
- 6) Apply a continuous ribbon of sealant tape to the weather-side surface of fastenings on end laps; on side laps of nesting-type panels; on side laps of corrugated nesting-type, ribbed, or fluted panels; and elsewhere as needed to make the panels weathertight.
- 7) At panel splices, nest the panels so the end lap is at least 6 inches (152mm), seal the end laps with butyl-rubber sealant, and fasten the end laps together using interlocking clamping plates.

C. Flashing and Trim:

1. Provide flashing and trim as required to seal against weather and to provide a finished appearance.
 - a. Install flashing and trim so laps, joints, and seams will be permanently watertight and weather resistant.
2. Install flashing and trim in accordance with the manufacturer's written installation instructions and the SMACNA Architectural Sheet Metal Manual so the performance requirements specified are complied with.
 - a. Locations requiring flashing and trim include, but are not limited to, bases, drips, sills, jambs, corners, end walls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers.
 - b. Provide concealed fasteners where possible, and set metal wall panels true to line and level as indicated in the Contract Documents.

D. Accessories:

1. Install accessories so positive anchorage to building and weathertight mounting is assured.
2. Coordinate the installation of accessories with flashings and other components.

E. Special Techniques:

1. Install the metal wall panels to allow for thermal expansion.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. During the period when metal wall panels are being erected, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing and inspection of materials and installation.

- a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow personnel to be assigned and to provide sufficient time for quality tests and inspections to be performed and completed.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency and/or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
2. Inspections:
 - a. Periodic Special Inspections will be performed during the erection of metal wall panels.
- B. Non-Conforming Work
 1. Correct deficiencies in metal wall panels that inspections and test reports have indicated are not in compliance with specified requirements.
 - a. Promptly remove and replace Work that does not comply with specified requirements.

3.05 CLEANING

- A. Remove the temporary protective coverings and strippable protective film from the exterior panel skins immediately after installation of each panel.
- B. Clean the exposed surfaces of the Work promptly after installation is completed in accordance with the metal wall panel manufacturer's recommendations.
 1. Submit the metal wall panel manufacturer's written recommendations for cleaning the metal wall panels to the Program/Project Manager for information.
- C. After metal wall panels have been installed, clear weep holes and drainage channels of obstructions, dirt, and sealant.
- D. During construction, keep the metal wall panels clean.
- E. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 PROTECTION

- A. Protect the Work as required to ensure the metal wall panels will be without damage at the time of Final Acceptance.

3.07 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Submit maintenance instructions for the metal wall panels to the Program/Project Manager for inclusion in Operation and Maintenance Manuals as specified in Section 01780, Closeout Submittals.

SECTION 07430

COMPOSITE PANELS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for a watertight rout and return, dry composite panel system as detailed on the Contract Drawings.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01400 - Quality Requirements.
 - 4. Section 01454 - Mock-Up Requirements.
 - 5. Section 01732 - Cutting and Patching.
 - 6. Section 01780 - Closeout Submittals.
 - 7. Section 05120 - Structural Steel.
 - 8. Section 05400 - Cold-Formed Metal Framing.
 - 9. Section 07275 - Fluid-Applied Membrane Air Barriers.
 - 10. Section 07920 - Joint Sealants.
 - 11. Section 09253 - Gypsum Sheathing.
 - 12. Section 09961 – Fluoropolymer Coatings.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. CEG: Continuous edge grip.
 - 2. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 3. EPDM: Ethylene propylene diene terpolymer M-class rubber.
 - 4. PVDF: Polyvinylidene fluoride, a highly non-reactive and pure thermoplastic fluoropolymer.
 - 5. SBS: Styrene-butadiene-styrene.
 - 6. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency and the City, prior to incorporating items requiring testing by them into the Work.
2. Coordinate the panel attachment locations with other trades.
 - a. Support fasteners must not obstruct the girt line.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Composite panels.
 - 2) Underlayment.
 - 3) Fasteners.
 - 4) Gaskets.
 - 5) Sealants.
 - 6) Wall panel support system.
 - 7) Organic coating.
 - b. Shop Drawings:
 - 1) Composite panels.
 - 2) Layout of all composite panel Work.
 - c. Samples:
 - 1) Flat panel Samples of the composite panel materials.
 - d. Certificates:
 - 1) Composite panel system manufacturer's Certificates of Compliance.
 - e. Qualification Statements:
 - 1) Composite panel installer's qualifications.
 - 2) Composite panel manufacturer's acceptance of the composite panel installer.
 - 3) Composite panel manufacturer's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Composite panel manufacturer's written installation instructions.

- 2) Panel manufacturer's written recommendations for cleaning the composite panels.
 - 3) Sealant manufacturer's written installation instructions
 - b. Manufacturer's Reports:
 - 1) Factory-authorized service representative report of the results of his or her inspection.
- C. Closeout Submittals:
- 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Maintenance instructions for the composite panel finishes.
 - b. Warranty Documentation:
 - 1) Composite Panel Warranty.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
- 1. Testing and Inspection Agency:
 - a. To perform testing and inspections, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency having the qualifications specified in Section 01400, Quality Requirements, and the City of Phoenix Testing Laboratory.
- B. Qualifications:
- 1. Composite Panel Installer's Qualifications:
 - a. Unless otherwise accepted by the Program/Project Manager, employ an installer that employs a quality management system complying with the program requirements specified in ISO 9001, or with the program requirements specified for a similar quality management system.
 - 1) Employ a firm having a minimum of 10 years' experience installing composite panel systems similar to those required as the Work to be performed under this Section, and that have a record of successful in-service performance.
 - b. Submit the composite panel installer's qualifications to the Program/Project Manager for approval.
 - c. Submit the composite panel manufacturer's acceptance of the composite panel installer to the Program/Project Manager for information.
 - 2. Composite Panel Manufacturer's Qualifications:
 - a. Unless otherwise accepted by the Program/Project Manager, employ a manufacturer that employs a quality management system complying with the program requirements specified in ISO 9001, or with the program requirements specified for a similar quality management system.

- b. Submit the composite panel manufacturer's qualifications to the Program/Project Manager for approval.
- C. Certifications:
 - 1. Composite Panel System Manufacturer's Certificates of Compliance:
 - a. Submit the composite panel system manufacturer's Certificates of Compliance, signed by the composite panel system manufacturer, and certifying that the composite panel system materials and finishes being provided comply with the specified requirements, to the Program/Project Manager for approval.
 - 1) Provide evidence of the complete composite panel system's compliance with the specified performance requirements.
- D. Site Samples:
 - 1. Submit two 600mm by 600mm flat panel Samples of the composite panel materials showing the methods of attachment, interconnection methods, and the specified factory-applied finishes to the Program/Project Manager for approval and color verification.
 - a. If more than 2 color finishes are required, submit additional color Samples for verification.
- E. Mock-Ups:
 - 1. After the Samples have been approved, build mockups in accordance with the requirements specified in Section 01454, Mock-Up Requirements.
 - a. Build the mockups in the location and of the size indicated or, if not indicated, as directed by Program/Project Manager.
 - b. Build composite panel mockups that include the composite panels, structural support members, fasteners, flashing and trim, and sealants matching the systems, and using the methods to be used to install production Work.
 - 2. Approved mockups may become part of the completed Work if undisturbed at the time of Substantial Completion.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Protect composite panel materials from the elements and construction activity during transit and at the Site.
- B. Storage and Handling Requirements:
 - 1. Provide the protective coverings recommended by the manufacturer to protect the metal finishes.
 - 2. Store the composite panel materials off the ground.
- C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

A. Manufacturer Warranty:

1. Warrant the composite panel materials and workmanship against failures during the warranty period specified, including but not limited to the following:
 - a. Composite Panels:
 - 1) Warrant the composite panels against defective materials, defective workmanship, defective watertightness, and defective design during the warranty period within 10 years from the Date of Substantial Completion.
 - b. Architectural Fluorocarbon Coating:
 - 1) Warrant the composite panel architectural fluorocarbon coating finish against fading, chalking, yellowing, peeling, cracking, pitting, corroding or non-uniformity of color, or gloss deterioration beyond manufacturer's descriptive standards during the warranty period within 20 years from the Date of Substantial Completion.
2. Submit the written Composite Panel Warranty on the manufacturer's standard form acceptable to the Owner in which the manufacturer agrees to repair or replace components of composite panels that fail in materials or workmanship within specified warranty period to the Program/Project Manager for approval.
 - a. Have the manufacturer's standard form signed by the Contractor and manufacturer.

PART 2 PRODUCTS

2.01 COMPOSITE PANELSYSTEMS

A. Manufacturers:

1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.

B. Description:

1. Provide a watertight rout and return, dry composite panel system, as detailed on the Contract Drawings, and consisting of concealed dry gasketed perimeter extrusions, extruded stiffeners, gaskets, fasteners and

related flashings, sealants between jamb panels and previously installed adjacent construction, and other miscellaneous accessories required for a complete watertight installation.

- a. Caulk and seal roof portions of the system, and caulk roof panels which continue on the fascia to a point 100mm down the fascia.
 - b. Provide accessories and color coordinated copings, closures, flashings and trim as required.
2. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).
 3. Sustainability Requirements:
 - a. Recycled Content
 - 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.

C. Performance:

1. Structural Requirements:
 - a. Flexural, Shear, and Connection Capacities:
 - 1) Engineer the composite panels to have flexural, shear, and connection capacities derived from full scale tests performed in accordance with the Chamber Method specified in ASTM E 72.
 - 2) Determine the load/span data based on full scale testing by an independent Testing and Inspection Agency employed by the manufacturer to pretest and certify the system under the installed conditions indicated in the Contract Documents.
 - b. Wind Load:
 - 1) Provide completed panel assemblies capable of withstanding the wind load indicated on the Contract Drawings, with a deflection not greater than $L/180$ when tested in accordance with the method specified in ASTM E 330.
2. Movement:
 - a. Provide composite panels capable of expansion and contraction due to structural movement and temperature changes without detriment to their appearance or performance.
3. Environmental Requirements:
 - a. Provide composite panels complying with the following environmental requirements:
 - 1) Resistance to Air Infiltration:
 - a) Provide composite panels having a resistance to air infiltration through a side joint lap of 1.04×10^{-4} cubic meters per second-

square meter of panel area ($\text{m}^3/\text{s}\cdot\text{m}^2$) when tested in accordance with the method specified in ASTM E 283 at a static test pressure differential of 298.77 Newtons per square meter (N/m^2).

- 2) Resistance to Water infiltration:
 - a) Provide composite panels having no water leakage through panel joints when tested in accordance with the method specified in ASTM E 331 at a static test pressure differential of 574.56 Newtons per square meter (N/m^2).
4. Fire-Test-Response Characteristics:
 - a. Surface-Burning Characteristics:
 - 1) Provide composite panels complying with the following surface-burning characteristic requirements when tested in accordance with the method specified in ASTM E 84:
 - a) Flame Spread Index: 25 or less.
 - b) Smoke-Developed Index: 450 or less.
 - b. Fire Propagation Characteristics:
 - 1) Provide composite panels complying with the fire propagation acceptance criteria specified in NFPA 285 when tested in accordance with the method specified in NFPA 285.

D. Design Criteria:

1. Provide a preformed panel system which consists of composite face panels and a system of custom aluminum extrusions of the size and shape indicated on the Contract Drawings, required by the approved Shop Drawings, and that has been pretested and certified by the manufacturer under the installed conditions indicated in the Contract Documents.
 - a. Design, fabricate, assemble, and erect composite panel units to insure a weather-tight system.
 - b. Include an allowance for field adjustment and thermal movements in the panel dimensions.
2. Perimeter Extrusions:
 - a. Provide aluminum extrusions having integral weather-stripping.
 - b. Rout and return all perimeters on the composite face panels.
 - 1) "Continuous edge grip (CEG)" is unacceptable.
 - c. Protect the exposed edges of the composite face panels inside extruded aluminum pockets.
 - d. The maximum overall panel thickness, including the attachment shim space, must not exceed 50mm.
 - e. Mechanically attach the composite face panel to all perimeter extrusions.
 - f. Wet sealants are unacceptable as a substitute for dry gasketing at the metal panel joinery.
3. Stiffeners:
 - a. Provide extruded aluminum sections secured to the edge trim, and bonded to the rear face of the composite face panel with silicone.

- b. Provide stiffeners having sufficient size and strength to maintain the flatness of the panel within the specified tolerances.
 - 4. Reveals at Panels:
 - a. Size the joints between the faces of the perimeter extrusions to have a nominal dimension of 12mm.
 - 5. Flatness Criteria:
 - a. For assembled units, ensure that the panels deviate from flat no more than 3mm in 4m in any direction on the panel, non-accumulatively.
 - 6. Product Data:
 - a. Obtain the manufacturer's Product Data for the composite panels, including specifications, standard detail drawings and installation procedures.
 - b. Submit the Product Data to the Program/Project Manager for approval.
 - 7. Shop Drawings:
 - a. Prepare Shop Drawings for the composite panels showing their exterior wall elevations, reflected ceiling plans, roof plans, profiles of units, the method of vertical and horizontal jointing, supports, major interfaces with adjacent materials, anchorages, trim, flashing and accessories.
 - 1) Include details of the weatherproofing at edges and terminations.
 - b. Prepare Shop Drawings showing a large scale layout of all composite panel Work to be provided under this Section.
 - c. Submit the Shop Drawings to the Program/Project Manager for approval.
- E. Materials:
 - 1. Composite Panels:
 - a. Provide composite panels consisting of 2 aluminum face sheets sandwiching a core of extruded thermoplastic, and formed in a continuous process with no glues or adhesives between dissimilar materials.
 - 1) Provide composite panels having a total composite thickness of 4.0mm.
 - b. Aluminum Face Sheets:
 - 1) Provide aluminum face sheets consisting of 0.5mm thick aluminum alloy 3003 for coil coating, and that have their exterior surfaces finished.
 - a) For the exterior sheet surface finish, provide a 0.04mm thick fluoropolymer coating having 70 percent polyvinylidene fluoride (PVDF) resins, and the color specified in Section 09961, Fluoropolymer Coatings.
 - b) For the interior sheet surface finish, provide a 0.02mm thick coating of polyester.
 - 2) Provide strippable protective film, factory-applied on the exterior face, to be removed immediately after installation.

- c. Aluminum Extrusions:
 - 1) Provide extruded aluminum mounting and indexing extrusions shop-fastened to the composite panel.
 - 2) Provide extruded aluminum reveals and trim as required to conform to the design.
 - 3) Attach stiffeners in a manner that will not interfere with or restrain the free differential thermal movement of the panel.
 - a) Space the stiffeners so the panel deflection of the shortest panel dimension is limited to $L/60$.
 - d. Flashing and Trim:
 - 1) Aluminum Flashing and Trim:
 - a) Provide aluminum having of the alloy and temper recommended by the aluminum producer and finisher for the application and the finish indicated in the Contract Documents, and having at least the strength and durability of the following alloys and tempers:
 - (1) Factory-Painted Aluminum Sheet:
 - (a) Unless otherwise indicated in the Contract Documents, provide aluminum complying with the requirements for alloy 3003-H14 specified in ASTM B 209M, and having a minimum thickness of 1.0mm.
 - (2) Extruded Aluminum:
 - (a) Unless otherwise indicated in the Contract Documents, provide anodized aluminum complying with the requirements for alloy 6063-T52 specified in ASTM B 221M, and having a minimum thickness of 1.0mm for the primary legs of extrusions.
 - 2) Miscellaneous Shapes:
 - a) For coping, the bottom of walls, reveals, corners, and openings, provide extruded or sheet metal shapes finished to match the wall panels.
 - e. Manufacturer List:
 - 1) Alcan, Inc., Alucobond®, <http://www.alucobondusa.com>.
 - 2) Mitsubishi Chemical America, Inc., Alpolc, <http://www.alpolc-usa.com>.
 - 3) Alcoa, Inc., Renobond, http://www.alcoa.com/aap/north_america/en/home.asp.
 - 4) Approved equal.
2. Underlayment:
- a. Provide underlayment complying with the requirements specified in Section 07275, Fluid-Applied Membrane Air Barriers.

F. Fabrication:

- 1. Shop Fabrication:

- a. Using composite aluminum panel material and perimeter extrusions, fabricate panels of the sizes shown in the Contract Drawings and so the panel thickness at the joinery is no more than 50mm.
 - 1) Properly design and fabricate the completed panels so no restraints are placed on the panel which might result in excessive compressive skin stresses.
 - a) Oil canning of the panel surfaces is unacceptable.
 - 2) Detail the panel installation so the installed panels will remain flat when subjected to temperature changes, and remain water tight and airtight.
 - b. Provide composite panels that comply with the dimensions, profile limitations, gauges and fabrication details shown on the Contract Drawings.
 - 1) Where the dimensions, profile limitations, gauges, and fabrication details are not indicated on the Contract Drawings, provide the composite panel manufacturer's standard fabrication and details.
 - c. Rout and Return Panels:
 - 1) Reinforce rout and return panels with concealed stiffeners and anchors.
 - a) Provide stiffeners secured to the rear face of the composite panels and mechanically fastened to edge trim members at the spacing required by the specific wind loading specified.
 - 2) After routing, the sides of the groove must not touch.
 - d. Where practical, shop-fabricate composite panel units that are ready for erection.
 - 1) If the units are not shop-assembled, pre-fabricate the components at the shop as required for proper and expeditious field assembly.
 - e. Where the Contract Drawings indicate curved panels, factory-curve the panels to the required radii.
 - 1) Factory-stretch form extrusions to conform to the required panel curve.
2. Fabrication Tolerances:
- a. Surface Flatness:
 - 1) Ensure that panel bow does not exceed 0.8 percent of the panel overall dimension in width or length.
 - 2) Fabricate panels so the deviation in flatness does not exceed 0.14mm per meter in any direction when measured with a metal straight edge.
 - a) Panels exhibiting rippling, waving, or oil canning exceeding 0.14mm per meter will be rejected.
 - b. Permissible Dimensional Variations:
 - 1) Panel Width: Plus or minus 0.8mm.
 - 2) Panel Length: Plus 0mm, minus 3mm.
 - 3) Panel Thickness: Plus or minus 0.8mm.

G. Finishes:

1. Finish Materials:
 - a. Aluminum Finishes:
 - 1) Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes and application recommendations in AA DAF-45.
 - b. High-Performance Organic Coating Finish:
 - 1) Provide a high-performance organic coating finish complying with the requirements for AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid chromate-fluoride-phosphate conversion coating; Organic Coating) specified in AA DAF-45.
 - 2) Organic Coating:
 - a) Provide a fluoropolymer 3-Coat "XL" coating system.
 - b) Provide the finish and custom color as specified in Section 09961, Fluoropolymer Coatings.
2. Shop Finishing Methods:
 - a. Aluminum Extrusions:
 - 1) Mill finish the extrusions not exposed to view.
 - 2) Finish the exposed extrusions to match the panel face.
 - b. Flashing and Trim:
 - 1) Finish the flashing and trim to match the adjoining panels.
 - c. High-Performance Organic Coating Finish:
 - 1) Prepare, pretreat, and apply the organic coating to the exposed metal surfaces in accordance with the coating and resin manufacturer's instructions.

2.02 ACCESSORIES

- A. Fasteners:
 1. Provide number 14 self-tapping hex head type fasteners as required for proper erection of side lap joints in concealed locations, and hot-dipped galvanized or cadmium plated screws, clips, and fasteners as recommended by the composite panel manufacturer.
- B. Gaskets:
 1. Provide dense compression gaskets molded or extruded from the following elastomeric materials to the profile and hardness required to maintain a watertight seal, and that comply with the standard referenced with the elastomer:
 - a. Provide neoprene gaskets complying with the requirements specified in ASTM C 864.
 - b. Provide ethylene propylene diene terpolymer M-class rubber (EPDM) gaskets complying with the requirements specified in ASTM C 864.
 - c. Provide silicone gaskets complying with the requirements specified in ASTM C 1115.

- C. Sealants:
 - 1. Provide medium modulus silicone sealants as specified in Section 07920, Joint Sealants.
 - 2. Compatibility Testing:
 - a. Test sealants for compatibility with substrates in accordance with the requirements specified in Section 07920, Joint Sealants.
- D. Wall Panel Support System:
 - 1. Provide framing for the wall panel support system as specified in Section 05120, Structural Steel, and Section 05400, Cold-Formed Metal Framing; and provide gypsum sheathing for the wall panel support system as specified in Section 09253, Gypsum Sheathing.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Verify that the building is ready for the installation of the composite panels.
 - a. Examine the supporting members to verify the layout and alignment are correct.
 - b. Using laser instruments, field-check the dimensions and the alignment of supports.
 - 1) Verify that support members have been installed within 6mm of their theoretical location.
 - 2) The offset between any 2 adjacent members may not exceed 3mm.
 - c. Verify that structural supports are in place.
 - 1) Before installing the Work of this Section, tighten the sag rods, diagonal bracing, and connections.
- B. Evaluation and Assessment:
 - 1. Do not proceed installing the composite panels until unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the composite panels.
- B. Surface Preparation:
 - 1. Isolate aluminum members from contact with concrete or dissimilar metals using neoprene shims/spacers.
 - a. Where shims/spacers are not appropriate, provide a heavy coating of bituminous paint or zinc chromate primer to concealed surfaces.

C. Demolition/Removal:

1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

A. Comply with the composite panel manufacturer's instructions for assembly, installation, and erection of the composite panels, and install the composite panels in accordance with the approved Shop Drawings.

1. Submit the composite panel manufacturer's written installation instructions to the Program/Project Manager for information.
2. Anchor component parts securely in place using concealed fasteners, and to allow for thermal and structural movement of the panels.
3. Shim the composite panels as required to erect the Work plumb, level, and true to line within a tolerance of 3mm in 1m horizontally or vertically, non-cumulative.
4. Ensure that panel lines, breaks, and curves are sharp, smooth, and free of warps and buckles.

B. Install sealants in accordance with the sealant manufacturer's instructions, including requirements for substrate priming as applicable.

1. Submit the sealant manufacturer's written installation instructions to the Program/Project Manager for information.
2. Comply with the sealant manufacturer's joint width to depth ratios.

3.04 REPAIR/RESTORATION

A. Replace damaged panels and other components of the Work which cannot be repaired by finish touch-up or similar minor repair to the Program/Project Manager and Owner's satisfaction.

1. Replace damaged work that cannot be restored to its original condition with new undamaged materials.

3.05 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. During the period when the composite panels are being assembled, erected, and installed, the Testing and Inspection Agency must perform routine and other testing of materials.
 - a. Advise the Testing and Inspection Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. The Testing and Inspection Agency will perform additional materials testing due to changes in materials or proportions requested by the Contractor or testing required due to failure of material to meet specified requirements.

- c. Failure of the Testing and Inspection Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
 - 2. Water-Spray Test:
 - a. Test Procedure:
 - 1) After completion of the composite panel installation, the Testing and Inspection Agency will test the composite panel assembly in accordance with the methods specified in AAMA 501.2 for water penetration of each end to end splice joint, corners, and joints with door frames.
 - 2) The Program/Project Manager will select 10 locations for the testing.
 - b. Acceptance Criteria:
 - 1) Assemblies that do not leak in accordance with the requirements specified in AAMA 501.2 pass the Water-Spray Test.
- B. Non-Conforming Work
 - 1. Remove damaged materials from the Site, and replace the removed materials with new materials.
 - 2. Remove composite panels where inspections indicate they do not comply with the specified requirements, and replace the removed materials with new conforming materials.
 - a. To determine compliance of replaced or additional Work with the specified requirements, additional tests and inspections will be performed at the Contractor's expense.
- C. Manufacturer Services:
 - 1. Manufacturer's Field Service:
 - a. Engage a factory-authorized service representative to inspect the completed wall panel installation, including accessories.
 - b. Have the factory-authorized service representative submit a report of the results of the inspection in writing to the Program/Project Manager for information.

3.06 CLEANING

- A. Remove the strippable protective film from the exterior panel skins immediately after installation of each panel.
- B. Clean the exposed surfaces of the Work promptly after installation is completed .
- C. Wash the panels in accordance with the manufacturer's recommendations.
 - 1. Submit the manufacturer's written recommendations for cleaning the composite panels to the Program/Project Manager for information.

- A. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 CLOSEOUT ACTIVITIES

- A. Training:
 - 1. Train the Owner's maintenance personnel to properly clean the composite panels.

3.08 PROTECTION

- A. Protect the Work as required to ensure the composite panels will be without damage at the time of Final Acceptance.

3.09 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Submit maintenance instructions for the composite panel finishes to the Program/Project Manager for inclusion in Operation and Maintenance Manuals as specified in Section 01780, Closeout Submittals.

SECTION 07485

EXTERIOR WALL ASSEMBLY TESTING REQUIREMENTS

PART 1 GENERAL

Stations UCW Test
Methods, Reports and
Spec Edit

ACM Performance Test
Report

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for constructing mock-ups of exterior wall assemblies, and for performing both laboratory testing of the exterior wall assembly mock-up in a custom designed test chamber and field testing the exterior wall assembly mock-ups at the Site.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01454 – Mockup Requirements.

1.02 REFERENCES

- A. Definitions:
 - 1. Leakage Failure: the condition existing when visible water is beyond the second line of defense.
 - a. No uncontrolled water penetration may occur when the Work is tested in accordance with ASTM E 331 at pressure differentials indicated.
- B. Reference Standards:
 - 1. American Architectural Manufacturer's Association (AAMA):
 - a. AAMA 501 - Methods of Test for Exterior Walls.
 - b. AAMA 501.2 – Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems.
 - c. AAMA 501.3 - Field Check of Water and Air Leakage Through Installed Exterior Windows, Curtain Walls and Doors by Uniform Air Pressure Difference [withdrawn].
 - d. AAMA 502 - Voluntary Specification for Field Testing of Newly Installed Fenestration Products.
 - e. AAMA 503 – Voluntary Specification for Field Testing of Newly Installed Storefronts, Curtain Walls and Sloped Glazing Systems.
 - 2. American Society of Civil Engineers (ASCE)/Structural Engineering Institute (SEI):
 - a. ASCE/SEI 7 - Minimum Design Loads for Buildings and Other Structures.
 - 3. American Society for Testing and Materials (ASTM):

- a. ASTM E 283 - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.
- b. ASTM E 329, Standard Specification for Agencies Engaged in the Testing and/or Inspection of Materials Used in Construction.
- c. ASTM E 330 - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.
- d. ASTM E 331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.
- e. ASTM E 548 – Standard Guide for General Criteria Used for Evaluating Laboratory Competence [*withdrawn*].
- f. ASTM E 1105 - Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference.
- 4. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 5. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and/or perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City of Phoenix, prior to incorporating items requiring testing by them into the Work.
 - a. Notify the Program/Project Manager 7 days in advance of the dates and times when the exterior wall assemblies will be tested
 - 2. Coordinate construction of the exterior wall assembly mock-ups with the building trades responsible for fabrication of the complete exterior wall assembly.
 - a. Construct the mock-ups in accordance with the requirements specified for the completed, in-place exterior wall assembly.
 - b. Requirements for the construction of each component of the exterior wall assembly are specified in the respective Sections.
- B. Pre-Installation Meetings:
 - 1. Pretesting Conference:
 - a. Schedule and conduct pretesting conferences at both the Testing and Inspection Agency's testing laboratory prior to performing offsite laboratory testing, and at the Site prior to performing field testing.

C. Sequencing:

1. Sequence construction activities to accommodate the required quality assurance and quality control services to minimize delays, and to avoid the necessity of removing and replacing equipment and materials to accommodate the testing and inspections.

D. Scheduling:

1. Schedule the mock-up testing so construction delays are avoided.
 - a. Schedule the times for the tests, inspections, obtaining samples, and similar activities.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Products to be used to construct mock-ups.
 - b. Shop Drawings:
 - 1) Drawings detailing the fabrication and assembly of the mock-ups to be used for laboratory testing.
 - c. Special Procedure Submittals:
 - 1) Exterior Wall Assembly Testing Protocol.
 - d. Qualification Statements:
 - 1) Exterior wall assembly Testing and Inspection Agency's qualifications.
 - 2) Professional Engineer's credentials.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Site Quality Control Submittals:
 - 1) Quality Control Test Report for the Glazing Demonstration.
 - 2) Quality Control Test Report for the Static Air Infiltration Test.
 - 3) Quality Control Test Report for the Water Penetration Tests.
 - 4) Quality Control Test Report for the Structural Tests.
 - 5) Quality Control Test Report for the Uniform Air Pressure Difference Test (Chamber Test).
 - 6) Quality Control Test Report for the Water Penetration Test (Hose Test).
 - 7) Quality Control Test Report for the Flashing Testing.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Obtain the necessary approvals for the mock-ups from the Authorities Having Jurisdiction (AHJ).
- B. Qualifications:
 - 1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - 2. Testing and Inspection Agency:
 - a. To perform exterior wall assembly testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, employ an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.
 - 1) The Testing and Inspection Agency must be acceptable to and approved by the Owner, and be authorized by the Authorities Having Jurisdiction to operate in the Site's geographic location.
 - 2) The Testing and Inspection Agency must be accredited to perform the tests and inspections specified in accordance with the requirements specified in ASTM E 329, and to report on and to interpret the results of those tests or inspections.
 - 3) Unless other accreditation is specified in the applicable individual Sections, each Testing and Inspection Agency must be pre-qualified in accordance with the requirements specified in ASTM E 548 to have the specialized experience and capability to conduct the testing and inspections indicated to be performed.
 - 4) Mock-Up Test Chamber:
 - a) The Testing and Inspection Agency must have a test chamber of the proper size and configuration to accommodate the mock-up test assembly.
 - (1) Construct an air chamber or enclosure having a sufficient number of observation ports sized to permit thorough examination of the interior surfaces and joints of a test assembly during actual test periods.
 - (a) Provide convenient access to the ports.

- (b) Do not place mock-up chamber supports or framing elements that are not functional or representative of actual Site conditions within chamber.
 - (c) Make the interior of the air chamber accessible so that close inspections of the test assembly can be conducted during and following water penetration and structural performance tests.
 - (2) Maintain the interior environment of the chamber at a uniform temperature of 70 degrees Fahrenheit with relative humidity of 40 percent during testing.
 - (3) Provide lighting within the test chamber to allow complete observation of the test assembly.
 - (4) The mock-up test chamber must be capable of sustaining positive and negative static pressures of at least 100 pounds per square foot.
- b) The chamber, air supply generator, and water supply must be sufficient meet the requirements for each test conducted.
- b. Submit the exterior wall assembly Testing and Inspection Agency's qualifications to the Program/Project Manager for approval.
- 3. Professional Engineer Qualifications:
 - a. Engage a qualified Professional Engineer registered in the State of Arizona to perform structural analysis required for the structural systems.
 - b. Submit the Professional Engineer's credentials to the Program/Project Manager for information.

C. Mock-Ups:

- 1. Assembly of Exterior Wall Assembly Mock-Ups for Laboratory Testing:
 - a. Provide mock-ups suitable for the Program/Project Manager's visual examination, and for testing to determine compliance with the performance requirements.
 - 1) Fabricate the exterior wall mock-up for laboratory testing in accordance with the reviewed and approved component and assembly mock-up Shop Drawings.
 - a) The exact configuration of the mock-up will be determined as a function of the final design of the Work, and during Shop Drawing review.
 - 2) Employing the same personnel who will fabricate, assemble, and erect the mock-ups at the Site, construct a complete exterior wall test assembly consisting of, but not limited to, the supporting framework, cold-formed metal framing, corners, splice joints, gypsum sheathing, self-adhering sheet waterproofing, sheet metal flashing and trim, architectural composite metal panel system, glazed aluminum curtain wall system, glazing, windows, coping, joint sealants, anchors, finishes, other construction indicated, and appurtenant structural elements required for support during tests

- in the Testing and Inspection Agency's custom designed test chamber.
- a) The mock-up may be glazed, plastered, and sealed at the laboratory testing facility provided such work is performed in a manner comparable to and by same persons who will perform this Work at the Site.
 - 3) Ensure that the details are complete and identical to those proposed for use in the completed construction at the Site.
 - a) Do not use an excessive amount of sealant or employ other special measures or techniques that are not representative of those to be used in the completed building at the Site.
 - 4) Finish the exterior wall assembly components to show the maximum variation between adjacent and non-adjacent components that will exist in the completed building construction.
 - b. For each exterior wall system, provide a mock-up that is a minimum of one bay wide by two stories high, unless the size and extent of the mock-up is indicated otherwise on the Contract Drawings or this is of insufficient size and configuration to adequately demonstrate the performance capabilities of the various types of Work.
 - 1) Use materials, fabrication methods, and installation methods identical to those indicated for the production Work.
 - 2) Provide full size parts for the metal assemblies, composite wall panels, glass, glazing materials, structural supports and connections, interior and exterior finish materials, sealants, insulation, and gaskets for the mock-ups using the same materials as those to be provided in the actual building.
 - 3) Extend steel reinforcing and bracing to simulate actual construction.
 - 4) Metal panels, fascias, and other sheet, plate, or laminated sheet items must read as flat and free of bow or "oil canning", and be free of "read through" of their stiffeners when installed on the building.
 - c. Construct mock-ups in accordance with the requirements specified in the Contract Documents from completely detailed drawings incorporating architectural and structural features, including details and methods of construction.
 - 1) Include mock-up components of both vertical and corner wall sections, including insulation, glazing, metal panels and coping.
 - 2) Include all of the types of glass units specified for the mock-up.
 - d. The Contractor's supervisory personnel who are responsible to construct the in-place exterior wall assembly at the Site must be present during construction of the mock-up test assembly to assist with the construction, verify that critical design details are properly reproduced, and to become familiar with the actual construction procedures.

- 1) Fabricate and erect each mock-up under the manufacturer's/installer's direct supervision, and employ workers as they would be employed during the actual erection at the Site.
- 2) Employ the same supervisory personnel who will perform Site erection.
- e. Assembly Tolerances:
 - 1) Flatness of Panels:
 - a) Assemble exposed metal faces so when they are supported in the building the maximum bow in 2 feet does not exceed 1/16 inch, and the maximum overall variation in plane between the high and low point within a panel does not exceed 1/8 inch.
2. Assembly of Exterior Wall Assembly Mock-Ups for Field Testing:
 - a. Build onsite mockups in accordance with the requirements specified in Section 01454, Mock-Up Requirements.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver the materials for the mock-ups in accordance with the delivery and acceptance requirements specified in the Sections where the items are specified.
- B. Storage and Handling Requirements:
 1. Store and handle the materials for the mock-ups in accordance with the delivery and acceptance requirements specified in the Sections where the items are specified.
- C. Packaging Waste Management:
 1. Remove shipping, blocking, and bracing materials.
 - a. Remove loose packing materials.
 2. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

- A. Ambient Conditions:
 1. Weather Limitations:
 - a. Proceed only when existing and forecasted weather conditions permit testing to be performed in accordance with the requirements specified in the referenced standards.

PART 2 PRODUCTS

2.01 EXTERIOR WALL ASSEMBLY TESTING REQUIREMENTS

- A. Description:

1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- B. Performance
 1. Structural Performance:
 - a. Structural performance requirements for the components within the exterior wall systems are specified in other Sections.
 2. Seismic Performance:
 - a. Seismic performance requirements for the components within the exterior wall systems are specified in other Sections.
 3. Thermal Movements:
 - a. Thermal movement requirements for components within the exterior wall systems are specified in other Sections.
- C. Design Criteria:
 1. Thermal Tolerance:
 - a. Design, fabricate, and install exterior wall systems to allow for expansion and/or contraction caused by an exterior ambient temperature ranging from minus 0 degrees Fahrenheit to an exterior metal surface temperature of 160 degrees Fahrenheit without causing harmful buckling, opening of joints, undue stress of fastenings, or other detrimental effects.
 2. Product Data:
 - a. Obtain Product Data for the products to be used to construct the mock-ups, including details, material descriptions, components, and equipment used in testing the exterior wall systems.
 - b. Submit the Product Data of the mock-ups to the Program/Project Manager for approval.
 3. Shop Drawings:
 - a. Develop Shop Drawings detailing the fabrication and assembly of the mock-ups to be used for laboratory testing, prepared by or under the supervision of a qualified Professional Engineer.
 - 1) Submit the Shop Drawings of the assembly mock-ups to the Program/Project Manager for approval.
 - 2) Resubmit revised Shop Drawings showing modifications made to mock-up as necessary for the mock-ups to pass the performance tests.
 4. Testing Protocol:
 - a. Develop the testing protocol, including descriptions of the methodology and testing procedures.
 - b. Submit the Exterior Wall Assembly Testing Protocol to the Program/Project Manager for approval.

D. Materials:

1. For the materials and products required to construct the exterior wall assembly mock-ups, refer to the individual Specification Sections where the mock-ups are specified.
 - a. Only incorporate materials into the mockups that are identical in characteristics, profile, color, texture, and finish to those to be used in construction of the production Work.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions:

1. Prior to starting Work on mock-ups at the Site, visit the Site together with the mock-up installers to become familiarized with the conditions and related Work at the Site.

B. Evaluation and Assessment:

1. Proceed to install the mock-ups only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Protection of In-Place Conditions:

1. Protect adjacent areas from damage resulting from installation and testing of the exterior wall assembly mock-ups.

3.03 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. During the period when each exterior wall assembly is being tested the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for the quality tests to be performed and completed.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials or proportions requested by the Contractor or testing required due to the failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.

2. Cooperate with the agencies performing the required tests, inspections, and similar quality-control services; and provide reasonable auxiliary services as requested.
 - a. Provide the agencies performing the required tests with access to the Work.
 - b. Furnish incidental equipment, labor, and facilities necessary to facilitate the tests and inspections.
 - c. Provide security and protection for the testing and inspecting equipment at the Site.
 - d. The Program/Project Manager retains the right to check the testing technician's procedures, techniques, and other items pertinent to the testing for compliance with the standards specified.
3. Testing and Inspection Agency's Responsibility:
 - a. The Testing and Inspection Agency is responsible for testing the exterior wall systems for compliance with the specified performance requirements using the specified test methods.
 - 1) Testing agencies may not release, revoke, alter, or increase the requirements of the Contract Documents, or approve or accept any portion of the Work.
 - 2) The extent of the exterior enclosure areas to be tested is indicated in the Contract Drawings.
 - b. Test Locations:
 - 1) The Testing and Inspection Agency is responsible for performing the following exterior wall inspections and tests at the following locations indicated for the particular testing:
 - a) Testing and Inspection Agency's independent laboratory Site:
 - (1) Glazing Demonstration.
 - (2) Static Air Infiltration Test.
 - (3) Water Penetration Tests.
 - (4) Structural Tests.
 - b) Onsite Exterior Wall Mockup Field Testing:
 - (1) Uniform Air Pressure Difference Test (Chamber Test).
 - (2) Water Penetration Test (Hose Test).
 - (3) Flashing Testing.
 - c. Quality Control Test Reports:
 - 1) The Testing and Inspection Agency is responsible for preparing Quality Control Test Reports that report the results of the exterior wall system testing to show that the system complies with the requirements for the comprehensive tests of the manufacturer's current system, and that include the following information:
 - a) Date of issue.
 - b) Project title and number.
 - c) Name, address, and telephone number of the testing agency.
 - d) Dates and locations of the tests or inspections.
 - e) Names of individuals performing the tests and inspections.

- f) Description of the Work, and the test and inspection method.
 - g) Identification of the product and Specification Section.
 - h) Complete test or inspection data.
 - i) Test and inspection results, and an interpretation of the test results.
 - j) Ambient conditions at the time of the testing and inspecting.
 - k) Comments or professional opinions on whether the tested or inspected Work complies with the Contract Document requirements.
 - l) Name and signature of the laboratory inspector.
 - m) Recommendations regarding retesting and re-inspecting.
 - 2) Submit copies of each written test report directly to the Program/Project Manager.
- 4. Tests and Test Sequence for Laboratory Testing:
 - a. Glazing Demonstration:
 - 1) Remove and re-glaze selected glass lites, using the details and procedures intended for glass replacement on the actual building.
 - 2) The sealant used for the re-glazed lites may be fast curing if this does not compromise the ability of the re-glazed lites to satisfy the test criteria.
 - b. Static Air Infiltration Test:
 - 1) Test Procedure:
 - a) Pressure Preload:
 - (1) Preload the exterior wall system mock-up within the mock-up test chamber to 50 percent of the inward system design wind pressure.
 - b) Calibrate the test chamber, and perform the static air infiltration testing in accordance with the methods specified in ASTM E 283 and in the Sections requiring the mock-up testing.
 - 2) Acceptance Criteria:
 - a) Exterior wall assemblies complying with the static air infiltration performance requirements specified in the Sections requiring the exterior wall system mock-up testing pass the Static Air Infiltration Test.
 - c. Water Penetration Tests:
 - 1) Test Procedure:
 - a) Static Water Penetration Test:
 - (1) Perform the static water penetration testing in accordance with the methods specified in ASTM E 331 and in the Sections requiring the exterior wall system mock-up testing.
 - b) Dynamic Water Penetration Test:
 - (1) Perform the dynamic water penetration testing in accordance with the methods specified in AAMA 501 and

in the Sections requiring the exterior wall system mock-up testing.

- 2) Acceptance Criteria:
 - a) Exterior wall assemblies complying with the water penetration performance requirements specified in the Sections requiring the mock-up testing pass the Water Penetration Test.
- d. Structural Tests:
 - 1) Test Procedure:
 - a) Uniform Load Deflection Test:
 - (1) Perform the uniform load deflection testing at design loads specified in the Sections requiring the exterior wall system mock-up testing in accordance with the methods specified in ASTM E 330.
 - (a) Maintain the design loads for minimum 60 seconds.
 - b) Repeat the Air Infiltration Test.
 - c) Repeat the Static Water Infiltration Test.
 - d) Seismic Loading (Racking) Test:
 - (1) Test Procedure:
 - (a) Seismic performance requirements for the exterior wall systems are specified in the Sections requiring the mock-up testing.
 - (b) Move through 3 complete cycles parallel to wall, with each cycle consisting of movement from vertical to the maximum displacement in each direction and back to vertical.
 - (c) Move through 3 complete cycles normal to wall, with each cycle consisting of movement from vertical to the maximum displacement in each direction and back to vertical.
 - (2) Acceptance Criteria:
 - (a) No failure or deterioration of any kind may occur in the exterior wall system during the Structural Tests, including glass-to-metal contact.
 - e) Repeat the Air Infiltration Test.
 - f) Repeat the Static Water Penetration Test.
 - g) Wind Load Safety Factor Test:
 - (1) Test Procedure:
 - (a) Perform the Wind Load Safety Factor Test for 10 seconds in accordance with the methods specified in ASTM E 330 using a load that is 1.5 times the design load.
 - (2) Acceptance Criteria:
 - (a) Exterior wall assemblies exhibiting no glass breakage; no permanent damage to the framing members, fasteners, or anchors; and no permanent deformation

of the framing members greater than 0.2 percent of the member's clear span pass the Wind Load Safety Factor Test.

- h) Upon completion of Wind Load Safety Factor Test, inspect the silicone seals for loss of bond at a test pressure differential determined by the Testing and Inspection Agency laboratory personnel, but not less than negative 20 pounds force per square foot.
 - i) Repeat the Seismic Loading (Racking) Test using each of the following values and configurations:
 - (1) At 200 percent of the stated values parallel to the plane of the wall.
 - (2) At 200 percent of the stated values normal to the plane of the wall.
 - j) At the conclusion of this repeated Seismic Loading (Racking) Testing, gaskets may disengage and sealants may split or lose adhesion, but no other failure or deterioration of any kind may occur, including glass to metal contact, for the test specimen to pass the testing.
5. Uniform Air Pressure Difference Test (Chamber Test):
- a. Test Procedure:
 - 1) Window Walls:
 - a) The Program/Project Manager will select the test areas which will encompass 1 full typical bay width by 1 floor height at 1 location.
 - b) Test window walls in accordance with the test methods specified in AAMA 503, and perform the Water Penetration Test on the window walls in accordance with the test methods specified in ASTM E 1105.
 - (1) Use a differential of 15 pounds per square foot.
 - 2) Windows:
 - a) The Program/Project Manager will select the test areas which will encompass 1 full typical bay width by 1 floor height at 1 location for each window system.
 - b) Test windows in accordance with the test methods specified in AAMA 502, and perform the Water Penetration Test on the windows in accordance with the test methods specified in ASTM E 1105.
 - (1) Use a differential of 15 pounds per square foot.
 - 3) Louvers:
 - a) The Program/Project Manager will select the test areas which will encompass 1 full typical bay width by 1 floor height at 1 location for each louver system.
 - b) Test louvers in accordance with the test methods specified in AAMA 501.3.

- b. Acceptance Criteria:
 - 1) Test assemblies complying with the acceptance requirements specified in the test standards pass the Uniform Air Pressure Difference Test (Chamber Test).
- 6. Water Penetration Test (Hose Test):
 - a. Test Procedure:
 - 1) The Program/Project Manager will select the test areas which will encompass 1 full typical bay width by 1 floor height at 1 location.
 - a) Except at parapets and ground floors, the test areas will be located from mid-bay to mid-bay and from mid-story-height to mid-story-height.
 - b) Limit each test area to 1 bay wide, but not less than 20 feet or more than 40 feet, by 1 story high.
 - 2) Perform the Water Penetration Test (Hose Test) in accordance with the "Field Check for Water Leakage of Metal Curtain Walls", test method specified in AAMA 501.2, except perform the test within the area specified herein.
 - b. Acceptance Criteria:
 - 1) Test assemblies complying with the acceptance requirements specified in the test standards pass the Water Penetration Test (Hose Test).
- 7. Flashing Testing:
 - a. Test Procedure:
 - 1) The Program/Project Manager will select the test areas which will encompass six 30'-0" lengths of flashing.
 - 2) End dam and plug weep holes at selected test areas.
 - 3) Selected test areas must include splices in the flashing.
 - 4) Fill the cavity 2 inches high with water.
 - 5) Conduct the test over a continuous 24-hour period, and determine if leaks exist and the volume of water loss.
 - b. Acceptance Criteria:
 - 1) Test assemblies that do not leak pass the Flashing Testing.

B. Non-Conforming Work:

- 1. Repair and modify exterior wall assemblies having leakage disclosed by tests of the Work in place, and retest the repaired and modified exterior wall assemblies.
- 2. Modify the methods of installing the Work subsequent to the testing to incorporate corrections determined to be necessary by the testing process.

3.04 CLEANING

- A. Remove rejected mock-ups from the Site after the final mock-up is approved.

- B. Demolish and remove mock-ups from the Site when requested by the Program/Project Manager.
- C. Waste Management:
 - 1. At the end of each work day, recycle or dispose of unused material, debris and containers.
 - 2. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.05 PROTECTION

- A. Furnish on-going care and protection for the onsite mock-ups until the date of Substantial Completion so they will not deteriorate or be damaged
 - 1. Remove protection at the time of Substantial Completion.

SECTION 07542

POLYVINYL-CHLORIDE (PVC) ROOFING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for an adhered PVC membrane roofing system.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 2. PVC: Polyvinyl-chloride.
 - 3. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside and San Bernardino counties.
 - 4. SRI: Solar reflective index.
 - 5. UL: Underwriters Laboratories, Inc.
 - 6. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public’s health, safety, and welfare.
- C. Reference Standards:
 - 1. ASTM International (ASTM):
 - a. ASTM C 1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board.

- b. ASTM D 4434 - Standard Specification for Poly(Vinyl Chloride) Sheet Roofing.
- c. ASTM D 5036 - Standard Practice for Application of Adhered Poly(Vinyl Chloride) Sheet Roofing.
- d. ASTM E 108 - Standard Test Methods for Fire Tests of Roof Coverings.
- e. ASTM E 1980 - Standard Practice for Calculating Solar Reflectance Index of Horizontal and Low-Sloped Opaque Surfaces.
- 2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 3. FM Approvals LLC (FM):
 - a. FM Class Number 4470 – Approval Standard for Class 1 Roof Covers.
 - b. The Approval Guide, www.approvalguide.com.
- 4. South Coast Air Quality Management District (SCAQMD):
 - a. SCAQMD Rule 1168 – Adhesive and Sealant Applications.
- 5. United States Government:
 - a. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.
- 6. Institute for Sustainability Infrastructure (ISI)
 - a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Pre-Installation Meetings:
 - 1. Conduct a Pre-Installation Roofing Conference one week before starting the Work of this Section at the Site.
 - a. Review preparation and installation procedures, and coordination and scheduling required with related work.

1.04 SUBMITTALS

- A. Action Submittals: Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Polyvinyl-chloride (PVC) sheet membrane.
 - 2) Walkway membrane.
 - 3) Roofing insulation.
 - 4) Bonding adhesive.
 - 5) Metal termination bars.
 - 6) Sheet flashing.
 - 7) Sheet membrane fasteners.
 - 8) Miscellaneous accessories.
 - b. Shop Drawings:

- 1) Polyvinyl-chloride (PVC) roofing system.
 - c. Samples:
 - 1) Sheet roofing verification Samples.
 - d. Certificates:
 - 1) Manufacturer's Certificates.
 - e. Qualification Statements:
 - 1) Installer qualifications.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Roofing system manufacturer's written instructions for installing the roofing system.
 - 2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - 1) Heat Island Effect: Roof, Submittal for the polyvinyl-chloride (PVC) roofing system.
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Maintenance data for the roofing system.
 - b. Warranty Documentation:
 - 1) Polyvinyl-Chloride (PVC) Roofing Warranty.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
 - 2. Testing and Inspection Agency:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.
- B. Qualifications:
 - 1. Installer's Qualifications:
 - a. Engage a qualified firm that is approved, authorized, and/or licensed by the membrane roofing system manufacturer to install the manufacturer's product.

- b. Submit the installer's qualifications to the Program/Project Manager for approval.
 - C. Certifications:
 - 1. Manufacturer's Certificates:
 - a. Submit Manufacturer Certificates, signed by the roofing manufacturer, certifying that the roofing system being provided complies with the specified requirements.
 - 1) Provide evidence of the complete roofing system's compliance with the specified performance requirements.
 - D. Site Samples:
 - 1. Verification Samples:
 - a. Submit the sheet roofing verification Samples of the color specified or indicated on the Contract Drawings.

1.06 WARRANTY

- A. Special Warranty:
 - 1. Warrant the polyvinyl-chloride (PVC) roofing materials and workmanship against failures within the 30-year period after the Date of Substantial Completion:
 - 2. Submit a written Polyvinyl-Chloride (PVC) Roofing Warranty on the manufacturer's standard or customized form, without monetary limitation, in which manufacturer agrees to repair or replace components of the roofing system that fail in materials or workmanship within the specified warranty period to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 SYSTEMS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain polyvinyl-chloride (PVC) roofing and accessories from a single source from single manufacturer.
- B. Sustainability Requirements:
 - 1. Heat-Island Roof

- a. Provide roofing having a Solar reflective index (SRI) complying with the following requirements:
 - 1) For roof slopes less than 2:12: Greater than or equal to 78.
 - 2) For roof slopes greater than or equal to 2:12: 29.
 - b. Provide materials not exceeding the following volatile organic compound (VOC) limits:
 - 1) For board insulation adhesive: 250 gallons per Liter.
- C. Performance:
 - 1. Energy Performance:
 - a. Provide a roofing system with an initial Solar Reflectance Index (SRI) not less than 78 when calculated according to ASTM E 1980, as determined by a qualified testing agency, such as UL, testing identical products.
 - 2. Exterior Fire-Test Exposure:
 - a. Provide a roofing system complying with the requirements for Class A exterior fire-test exposure as specified in ASTM E 108 for the application and roof slopes indicated on the Contract Drawings, as determined by a qualified testing agency, such as UL, testing identical membrane roofing materials.
 - b. Identify materials with the appropriate markings of the applicable testing agency.
- D. Design Criteria:
 - 1. Obtain components for the membrane roofing system only as approved by the membrane roofing manufacturer.
 - 2. Product Data:
 - a. Submit the manufacturer's Product Data for each type of product indicated and provided.
 - 3. Shop Drawings:
 - a. Submit Shop Drawings for the polyvinyl-chloride (PVC) roofing system, including plans, elevations, sections, details, and attachments to other work.
- E. Materials:
 - 1. Polyvinyl-Chloride (PVC) Sheet Membrane:
 - a. Provide glass fiber reinforced, felt backed polyvinyl-chloride (PVC) sheet membrane complying with the requirements for Type II, Grade I as specified in ASTM D 4434.
 - b. Nominal Thickness: 72 mils.
 - c. Exposed Face Color: Beige.
 - d. Manufacturers:
 - 1) Sika Sarnafil Inc., Sarnafil G410, www.sarnafilus.com.
 - 2) Approved equal.
 - 2. Walkway Membrane:

- a. Provide a polyester reinforced, weldable membrane with surface embossment.
- b. Nominal Thickness: 96 mils.
- c. Manufacturers:
 - 1) Sika Sarnafil Inc., Sarnatred, www.sarnafilus.com.
 - 2) Approved equal.
- 3. Roofing Insulation:
 - a. Provide Type II, Class I, Grade 3 polyisocyanurate board insulation complying with the requirements specified in ASTM C 1289.
 - 1) Provide a felt or glass-fiber mat facer on both major surfaces.
 - b. Tapered Insulation:
 - 1) Provide factory-tapered insulation boards fabricated with a slope of 1/4 inch to 12 inches (1:48) unless otherwise indicated.
 - 2) Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain.
 - 3) Fabricate insulation boards having the slopes indicated on the Contract Drawings.
 - c. Board Insulation Accessories:
 - 1) Fasteners:
 - a) Provide factory coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Class Number 4470, designed for fastening roof insulation to the substrate, and acceptable to roofing system manufacturer.
 - 2) Insulation Adhesive:
 - a) Provide the insulation manufacturer's recommended cold-applied adhesive formulated to attach roof insulation to the substrate or to another insulation layer.

2.02 ACCESSORIES

- A. Bonding Adhesive:
 - 1. Provide the manufacturer's standard, water based bonding adhesive.
- B. Metal Termination Bars:
 - 1. Provide the manufacturer's standard, predrilled stainless steel or aluminum termination bars, approximately 1 inch (25mm) by 1/8 inch (3mm) thick; with anchors.
- C. Sheet Flashing:
 - 1. Provide the manufacturer's standard sheet flashing of the same material, type, reinforcement, thickness, and color as the polyvinyl-chloride (PVC) sheet membrane.
- D. Sheet Membrane Fasteners:

1. Provide factory-coated steel fasteners and metal or plastic plates designed for fastening the sheet membrane to the substrate, that comply with the corrosion-resistance provisions in FM Class Number 4470, and that are acceptable to the membrane roofing system manufacturer.

E. Miscellaneous Accessories:

1. Provide auxiliary membrane roofing materials as recommended by the roofing system manufacturer for the application indicated on the Contract Drawings, and compatible with the membrane roofing provided.
2. Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, lap sealants, termination reglets, and other accessories as required.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions:

1. Verify that surfaces and Site conditions are ready to receive the Work of this Section.
 - a. Verify that the roof deck and existing roof construction is structurally sound enough to provide support for the new roof system, and secured to the structural framing.
 - b. Verify the roof insulation system has been properly installed.
 - c. Verify that insulation surfaces are dry.

3.02 INSTALLATION

A. Roofing Insulation:

1. Comply with the roofing system and insulation manufacturers' written instructions for installing roof insulation.
2. Install tapered insulation under the area of the roofing so it conforms to the slopes indicated on the Contract Drawings.
3. Install insulation under the area of the roofing so the required thickness is achieved
 - a. Where the overall insulation thickness is 2.7 inches (68mm) or greater, install 2 or more layers of insulation, and stagger the joints of each succeeding layer from the joints of the previous layer a minimum of 6 inches (150mm) in each direction.
4. Mechanically Fastened Insulation:
 - a. Install each layer of insulation, and secure it to the deck using mechanical fasteners specifically designed and sized for fastening board-type roof insulation to the deck type.
 - b. Fasten insulation to resist uplift pressure at the corners, perimeter, and the field of the roof.

B. Membrane Roofing:

1. Install roofing insulation as specified in Section 07210, Building Insulation.
2. Install the polyvinyl-chloride (PVC) membrane roofing provided according to the membrane roofing system manufacturer's written instructions.
 - a. Accurately align the membrane roofing, and maintain uniform side and end laps of the minimum dimensions required by manufacturer.
 - 1) Stagger end laps.
 - b. Submit the roofing system manufacturer's written instructions for installing the roofing system to the Program/Project Manager for information.
3. Bonding Adhesive:
 - a. Adhere the polyvinyl-chloride (PVC) membrane roofing over the area to receive the roofing according to the requirements specified in ASTM D 5036.
 - 1) Apply bonding adhesive to the substrate and underside of the membrane roofing at the rate required by the manufacturer, and allow the adhesive to partially dry before installing the membrane roofing.
 - 2) Do not apply bonding adhesive to the splice area of the membrane roofing.
4. Mechanical Fastening:
 - a. In addition to adhering the polyvinyl-chloride (PVC) roofing membrane using the bonding adhesive, mechanically fasten the membrane roofing securely at terminations, penetrations, and the perimeter of the roofing.
5. Apply membrane roofing with side laps shingled with the slope of the roof deck wherever possible.
6. Seams:
 - a. Clean seam areas, overlap the polyvinyl-chloride (PVC) membrane roofing, and hot-air weld the side and end laps of the membrane roofing and sheet flashings according to the manufacturer's written instructions to ensure a watertight seam installation.

C. Base Flashing:

1. Provide sheet flashings and preformed flashing accessories, and adhere them to the substrates according to the membrane roofing system manufacturer's written instructions.
2. Apply bonding adhesive to the substrate and underside of the sheet flashing at the required rate, and allow it to partially dry.
 - a. Do not apply bonding adhesive to the seam area of the flashing.
3. Flash the penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.
4. Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive.
 - a. Hot-air weld the side and end laps to ensure a watertight seam installation.

5. Terminate and seal the top of sheet flashings, and mechanically anchor them to the substrate through termination bars.

3.03 REPAIR

- A. Repair tears, voids, and lapped seams in the roofing that do not comply with the requirements specified.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:

1. Site Tests:

- a. During the period when the polyvinyl-chloride (PVC) roofing system is being installed, the Testing and Inspection Agency must perform routine and other testing of materials.

- 1) Advise the Testing and Inspection Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
- 2) The Testing and Inspection Agency will perform additional materials testing due to failure of material to meet specified requirements.
- 3) Failure of the Testing and Inspection Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.

- b. Seam Weld Continuity Test:

- 1) Test Procedure:

- a) A minimum of twice daily, the Testing and Inspection Agency will verify the field strength of the seams.
- b) The lap edges will be tested with a probe to verify seam weld continuity.
 - (1) Repair these seam sample areas
 - (2) Apply lap sealant to seal cut edges of the sheet membrane.

- 2) Acceptance Criteria:

- a) Roofing seams that are continuous without holes or gaps are acceptable.

2. Inspections:

- a. Final Roof Inspection:

- 1) Arrange for the roofing system manufacturer's technical personnel to inspect the complete roofing installation, including roof insulation, upon its completion to verify the system is acceptable.

- B. Non-Conforming Work

1. Repair or remove and replace components of membrane roofing system where inspections indicate that they do not comply with specified requirements.

C. Manufacturer Services:

1. Arrange for the roofing system manufacturer's technical personnel to be onsite for the Final Roof Inspection.

3.05 MAINTENANCE

- A. Submit maintenance data for the roofing system to the Program/Project Manager.

ATACTIC POLYPROPYLENE-MODIFIED (APP-MODIFIED) BITUMINOUS MEMBRANE ROOFING

PART 1 GENERAL

APP mod bit roofing, cool
APP in lieu of torch applied
approved for use

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for atactic polypropylene-modified (APP-modified) bituminous membrane roofing and associated roof insulation.
- B. Products Installed But Not Supplied Under This Section:
 - 1. Install acoustical roof deck rib insulation strips furnished under Section 05310, Steel Deck, as the Work of this Section.
- C. Related Requirements:
 - 1. Section 01316 – Project Meetings.
 - 2. Section 01330 - Submittal Procedures.
 - 3. Section 01360 - Sustainable Design Requirements.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 05310 – Steel Deck.
 - 6. Section 06105 – Miscellaneous Carpentry.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. APP: Atactic polypropylene.
 - 2. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 3. SRI: Solar reflective index.
- B. Definitions:
 - 1. Roofing Terminology - Refer to ASTM D 1079 and the glossary of The NRCA Roofing and Waterproofing Manual for definition of terms related to the roofing work in this Section.
 - 2. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public’s health, safety, and welfare.

3. Equiviscous Temperature: The temperature at which a bitumen attains the proper viscosity for built-up roofing application, in particular the temperature at which its viscosity is 125 centipoises for mop-applied roofing asphalt and 75 centipoises for mechanical spreader-applied roofing asphalt.
4. Hot Roofing Asphalt - Roofing asphalt heated to its equiviscous temperature, within a range of plus or minus 25 degrees Fahrenheit, measured at the mop cart or mechanical spreader, immediately before application.
5. SEBS-Modified Roofing Asphalt: Styrene-ethylene-butylene-styrene modified asphalt intended for use in built-up roof construction, construction of some modified bitumen systems, construction of bituminous vapor retarder systems, and for adhering insulation boards used in various types of roof systems.

C. Reference Standards:

1. ASTM International (ASTM):
 - a. ASTM C 208 – Standard Specification for Cellulosic Fiber Insulating Board.
 - b. ASTM C 728 – Standard Specification for Perlite Thermal Insulation Board.
 - c. ASTM C 1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board.
 - d. ASTM D 41 – Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing.
 - e. ASTM D 312 – Standard Specification for Asphalt Used in Roofing.
 - f. ASTM D 1079 – Standard Terminology Relating to Roofing and Waterproofing.
 - g. ASTM D 3617 – Standard Practice for Sampling and Analysis of New Built-Up Roof Membranes.
 - h. ASTM D 4263 – Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method.
 - i. ASTM D 6222 – Standard Specification for Atactic Polypropylene (APP) Modified Bituminous Sheet Materials Using Polyester Reinforcements.
 - j. ASTM E 108 - Standard Test Methods for Fire Tests of Roof Coverings.
 - k. ASTM E 119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
3. FM Approvals LLC (FM):
 - a. FM Class Number 4470 – Approval Standard for Class 1 Roof Covers.
 - b. The Approval Guide, www.approvalguide.com.
4. International Code Council (ICC):

- a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
- b. ICC Evaluation Services, Inc. (ICC ES), www.icc-es.org.
- 5. National Roofing Contractors Association (NRCA):
 - a. The NRCA Roofing and Waterproofing Manual.
 - b. NRCA Quality Control Guidelines for Application of Polymer Modified Bitumen Roofing.
- 6. Underwriters Laboratories, Inc.® (UL):
 - a. UL Online Certifications Directory, <http://www.ul.com/regulators/quickguide.html>.
 - 1) UL Fire Resistance Directory (Fire Resistance Ratings).
- 7. Institute for Sustainability Infrastructure (ISI):
 - a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate installation of the acoustical roof deck rib insulation strips furnished under Section 05310, Steel Deck, with the Work of this Section.
- B. Pre-Installation Meetings:
 - 1. Schedule and conduct a Pre-Installation conference at the Site in accordance with the requirements specified in Section 01316, Project Meetings.
 - 2. Review the methods and procedures related to the roofing system including, but not limited to, the following:
 - a. Meet with the Owner, Program/Project Manager, Owner's insurer if applicable, Testing and Inspecting Agency representative, roofing installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects the roofing, including installers of roof accessories and roof mounted equipment.
 - b. Review the methods and procedures related to roofing installation, including the manufacturer's written instructions.
 - 1) Submit the manufacturer's written roofing installation instructions to the Program/Project Manager for information.
 - c. Review and finalize the construction schedule, and verify the availability of materials, the installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - d. Examine the deck substrate conditions and finishes for compliance with the specified requirements, including its flatness and fastening.
 - e. Review structural loading limitations of the roof deck during and after roofing.
 - f. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect the roofing system.

- g. Review the governing regulations and requirements for insurance and certificates if applicable.
- h. Review temporary protection requirements for the roofing system during and after installation.
- i. Review roof observation and repair procedures after roofing installation.

C. Sequencing:

- 1. Sequence installation of the roofing system components with installation of the roofing insulation so the insulation is not exposed to precipitation or left exposed at the end of the workday.
- 2. Install counterflashing after the roofing has been installed.

1.04 SUBMITTALS

A. Action Submittals:

- 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) APP-modified asphalt membrane sheet.
 - 2) APP-modified asphalt membrane cap sheet.
 - 3) Base flashing sheet.
 - 4) Asphalt primer.
 - 5) Roofing asphalt.
 - 6) Cold-applied adhesive.
 - 7) Mastic sealant.
 - 8) Roofing membrane fasteners.
 - 9) Roofing granules.
 - 10) Miscellaneous accessories as recommended by the roofing system manufacturer.
 - 11) Roof insulation.
 - 12) Roof insulation fasteners.
 - 13) Insulation cant strips.
 - 14) Wood nailer strips.
 - 15) Substrate joint tape.
 - b. Shop Drawings:
 - 1) Atactic polypropylene-modified bituminous membrane roofing system.
 - c. Samples:
 - 1) Roofing Sample.
 - 2) Walkway pad or walkway cap sheet Sample.
 - d. Certificates:
 - 1) Manufacturer Certificates.
 - e. Special Procedure Submittals:
 - 1) Written roof condition report.

- f. Qualification Statements:
 - 1) Atactic polypropylene-modified bituminous membrane roofing installer's qualifications.
 - 2) Atactic polypropylene-modified bituminous membrane roofing manufacturer's qualifications.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Research/evaluation reports for the components of the roofing system.
 - b. Manufacturer's Instructions:
 - 1) Roofing installation instructions.
 - 2) Acrylic coating manufacturer's written application instructions.
 - c. Manufacturer's Reports:
 - 1) Inspection Report:
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and Maintenance manuals for the atactic polypropylene-modified bituminous membrane roofing system.
 - b. Warranty Documentation:
 - 1) Atactic Polypropylene-Modified Bituminous Membrane Roofing Warranty.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
 - 2. Testing and Inspection Agency:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.
- B. Qualifications:
 - 1. Atactic Polypropylene-Modified Bituminous Membrane Roofing Installer's Qualifications:

- a. Engage a qualified firm that is approved, authorized, and/or licensed by the membrane roofing system manufacturer to install the manufacturer's product so it is eligible to receive the manufacturer's warranty.
 - b. Submit the installer's qualifications to the Program/Project Manager for approval.
 2. Atactic Polypropylene-Modified Bituminous Membrane Roofing Manufacturer Qualifications:
 - a. Engage a qualified manufacturer providing a UL-listed roofing system identical to that to be provided under this Section.
 - b. Submit the manufacturer's qualifications, including evidence of the UL-listing for their roofing system, to the Program/Project Manager for approval.
- C. Certifications:
 1. Manufacturer's Certificates:
 - a. Submit Manufacturer Certificates, signed by the roofing manufacturer, certifying that the roofing system being provided complies with the specified requirements.
 - 1) Provide evidence of the complete roofing system's compliance with the specified performance requirements.
- D. Preconstruction Testing:
 1. Submit research/evaluation reports for the components of the roofing system, such as from ICC Evaluation Services, Inc., to the Program/Project Manager for information.
- E. Site Samples:
 1. Verification Samples:
 - a. Submit the following roofing verification Samples to the Program/Project Manager for approval:
 - 1) 12-inch by 12-inch square roofing Sample of the color specified or indicated on the Contract Drawings.
 - 2) 12-inch by 12-inch square Sample of the walkway pad or walkway cap sheet.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver roofing materials to the Site in their original containers, with their seals unbroken, labeled with the manufacturer's name, product brand name and type, date of manufacture, and directions for storage.
- B. Storage and Handling Requirements:
 1. Liquid Materials:

- a. Store liquid materials in their original undamaged containers in a clean, dry, protected location; and within the temperature range specified by the roofing system manufacturer.
 - b. Protect stored liquid material from direct sunlight.
 - c. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
 2. Roof Insulation:
 - a. Protect roof insulation materials from physical damage, and from deterioration by sunlight, moisture, soiling, and other sources.
 - b. Store the roof insulation materials in a dry location.
 - c. Comply with the insulation manufacturer's written instructions for handling, storing, and protecting the insulation.
 3. Roofing Materials:
 - a. Handle and store roofing materials, and place equipment, in a manner to avoid permanent deflection of the deck.
- C. Packaging Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

- A. Ambient Conditions:
 1. Weather Limitations:
 - a. Proceed with installation only when the existing and forecasted weather conditions permit the roofing system to be installed according to the manufacturer's written instructions and warranty requirements.

1.08 WARRANTY

- A. Special Warranty:
 1. Warrant the atactic polypropylene-modified bituminous membrane roofing materials and workmanship against failures within the 25-year period after the Date of Substantial Completion:
 2. Submit a written Atactic Polypropylene-Modified Bituminous Membrane Roofing Warranty on the manufacturer's standard or customized form, without monetary limitation, in which manufacturer agrees to repair or replace components of the roofing system, including the roofing membrane, base flashings, and other components of roofing system, that fail in materials or workmanship within the specified warranty period to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 ATACTIC POLYPROPYLENE-MODIFIED BITUMINOUS MEMBRANE ROOFING SYSTEM

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments and the ICC International Building Code (IBC) as Amended by the City of Phoenix.
 - 2. Sustainability Requirements:
 - a. Heat-Island Roof
 - 1) Provide roofing having a Solar reflective index (SRI) complying with the requirements:
 - a) For roof slopes less than 2:12: Greater than or equal to 78.
 - b) For roof slopes greater than or equal to 2:12:29.
- C. Performance:
 - 1. Fire-Test-Response Characteristics:
 - a. Provide roofing materials that have the fire-test-response characteristics indicated as determined when Underwriters Laboratories, Inc. (UL), Factory Mutual (FM), or another testing and inspecting agency acceptable to the Authorities Having Jurisdiction tests identical products in accordance with the following test methods:
 - 1) Exterior Fire-Test Exposure:
 - a) Determine the exterior fire-test exposure in accordance with the Class A Method of Test specified in ASTM E 108 for the application and roof slopes indicated in the Contract Documents.
 - 2) Fire-Resistance Ratings:
 - a) Determine the fire-resistance ratings in accordance with the methods specified in ASTM E 119 for the fire-resistance-rated roof assemblies of which the roofing system is a part.
 - b. Identify materials with appropriate markings of the applicable testing and inspecting agency.

2. Environmental Performance:
 - a. Provide installed roofing membrane and base flashings that remain watertight, that do not permit the passage of water, and that resist the specified uplift pressures, thermally induced movement, and exposure to weather without failure.
 3. Material Compatibility:
 - a. Provide roofing materials that are compatible with one another under the conditions of service and the application required, based on testing and field experience as demonstrated by the roofing manufacturer.
- D. Design Criteria:
1. Provide atactic polypropylene-modified bituminous membrane roofing system components from, or approved by, the roofing system manufacturer.
 2. Auxiliary Roofing Membrane Materials:
 - a. Provide auxiliary materials recommended by the roofing system manufacturer for the intended application, and compatible with the roofing membrane.
 3. Roof Insulation:
 - a. Provide preformed roof insulation boards complying with specified requirements and referenced standards.
 - b. Provide roof insulation boards selected from the manufacturer's standard sizes, and of the thicknesses indicated in the Contract Documents.
 4. Insulation Accessories:
 - a. Provide the roof insulation accessories recommended by the insulation manufacturer for the intended application, and compatible with the membrane roofing.
 5. Product Data:
 - a. Submit the manufacturers Product Data for each type of atactic polypropylene-modified bituminous membrane roofing product proposed for the Work of this Section to the Program/Project Manager for approval.
 6. Shop Drawings:
 - a. Submit Shop Drawings of the atactic polypropylene-modified bituminous membrane roofing system to the Program/Project Manager for approval.
 - 1) Include plans, elevations, sections, details, and attachments to other Work.
- E. Materials:
1. Atactic Polypropylene-Modified (APP-Modified) Asphalt-Sheet Materials:
 - a. Roofing Membrane Sheet:
 - 1) Provide smooth surfaced roofing membrane sheet complying with the requirements for Grade S, Type I or II, polyester-reinforced,

- APP-modified asphalt sheet specified in ASTM D 6222, and suitable for the application method specified.
- b. Roofing Membrane Cap Sheet:
 - 1) Provide smooth surfaced roofing membrane cap sheet complying with the requirements for Grade S, Type I or II, polyester-reinforced, APP-modified asphalt sheet specified in ASTM D 6222, and suitable for the application method specified.
 - c. Manufacturers:
 - 1) Firestone Building Products Company, www.firestonebpco.com.
 - 2) U.S. Intec®, Inc., a division of BMCA, www.usintec.com.
 - 3) Tremco, <http://www.tremcoroofing.com>.
 - 4) Approved equal.
2. Base Flashing Sheet Materials:
- a. Flashing Sheet:
 - 1) Provide granular surfaced flashing sheet complying with the requirements for Grade G, Type I or II, polyester-reinforced, APP-modified asphalt sheet specified in ASTM D 6222, and suitable for the application method specified.
 - a) Granule Color:
 - (1) Provide granular surfaced flashing sheet having tan colored granules.
 - b. Manufacturers:
 - 1) Firestone Building Products Company, www.firestonebpco.com.
 - 2) U.S. Intec®, Inc., a division of BMCA, www.usintec.com.
 - 3) Tremco, <http://www.tremcoroofing.com>.
 - 4) Approved equal.
3. Auxiliary Roofing Membrane Materials:
- a. Asphalt Primer:
 - 1) Provide asphalt primer complying with the requirements specified in ASTM D 41.
 - b. Roofing Asphalt:
 - 1) Provide roofing asphalt, complying with the requirements specified in ASTM D 312, and of the type recommended by the roofing system manufacturer for the application.
 - c. Cold-Applied Adhesive:
 - 1) Provide the roofing system manufacturer's standard asphalt-based, one- or two-part, asbestos-free, cold-applied adhesive specially formulated for compatibility and use with the roofing membrane and base flashings.
 - d. Mastic Sealant:
 - 1) Provide polyisobutylene, plain or modified bitumen, mastic sealant that is nonhardening, nonmigrating, nonskinning, and nondrying.
 - e. Roofing Membrane Fasteners:
 - 1) Provide factory-coated steel fasteners and metal or plastic plates complying with the corrosion-resistance provisions specified in FM

- Class Number 4470; and designed for fastening the roofing membrane components to the substrate, tested by the manufacturer for the required pullout strength, and acceptable to the roofing system manufacturer.
- f. Roofing Granules:
 - 1) Provide ceramic-coated, No. 11 screen size roofing granules.
 - 2) Provide roofing granules graded so 100 percent pass a No. 8 sieve, and 98 percent of the granules' mass is retained on a No. 40 sieve.
 - 3) Provide roofing granules having a color matching the roofing membrane.
 - g. Miscellaneous Accessories:
 - 1) Provide miscellaneous accessories as recommended by the roofing system manufacturer.
4. Roof Insulation:
- a. Polyisocyanurate Board Insulation:
 - 1) Provide polyisocyanurate board insulation complying with the requirements for Type I Class 1 insulation specified in ASTM C 1289, and having an aluminum foil facer on both major surfaces.
 - b. Tapered Insulation:
 - 1) Provide factory-tapered insulation boards fabricated to have the slope indicated.
 - c. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated on the Contract Drawings for sloping the roof to drains.
 - 1) Fabricate these preformed insulation shapes to have the slopes indicated.
 - d. Insulation Cover Board:
 - 1) Provide 0.5-inch (13mm) thick perlite insulation board having a length and other characteristics recommended by the manufacturer.
 - 2) Provide asphalt for attaching the insulation cover board to the insulation.
 - e. Manufacturers:
 - 1) Celotex Corporation, <http://www.celotex.co.uk>.
 - 2) Firestone Building Products Company, www.firestonebpco.com.
 - 3) Approved equal.
5. Coating Materials
- a. Roof Coating: remedial coating system for existing mineral surface modified bit substrates, elastomeric silicone coating.
 - b. Manufacturers: Gaco Western GacoFlex S-20 (www.gaco.com) or approved equal.

- c. Apply two coats of elastomeric silicone coating over existing built-up roof membrane at Penthouse roof. Adhesion tests will be required per ASTM D903.
- d. Roof coating: over metal roofs. Polyurethane and silicone elastomeric coating system.
- e. Manufacturers: Gaco Western GacoFlex 32 MIL (www.gaco.com) or approved equal.
- f. Base coats include two component aromatic polyurethane. Topcoat is the GacoSil S-10 silicone coating.
- g. Color to be Tan or selected from manufacturers standard color choices.
- 6. Insulation Accessories:
 - a. Roof Insulation Fasteners:
 - 1) Provide factory-coated steel fasteners and metal or plastic plates complying with the corrosion-resistance provisions specified in FM Class Number 4470, designed for fastening the roof insulation to the substrate, and acceptable to the roofing system manufacturer.
 - b. Insulation Cant Strips:
 - 1) Provide perlite insulation board cant strips complying with the requirements specified in ASTM C 728; or cellulosic-fiber insulation complying with the requirements for Type II, Grade 1 insulation board specified in ASTM C 208.
 - c. Wood Nailer Strips:
 - 1) Provide wood nailer strips complying with the requirements specified in Section 06105, Miscellaneous Carpentry.
 - d. Substrate Joint Tape:
 - 1) Provide 6-inch or 8-inch wide, coated, glass-fiber joint tape.
 - e. Roof Walkway Pads:
 - 1) Provide granule surfaced atactic polypropylene (APP) polymer-modified cap sheets, or standard 3-foot by 4-foot walk pads.
 - 2) Acrylic Coating:
 - a) Provide a white acrylic coating for the roof walkway pads.
 - b) Membrane cleaner:
 - (1) Provide the membrane cleaner recommended by the manufacturer.
 - c) Manufacturers:
 - (1) Firestone Building Products Company, LLC, AcryliTop PC-11, <http://www.firestonebpco.com>.
 - (2) Approved equal.
 - (3)

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions:

1. With the atactic polypropylene-modified bituminous membrane roofing installer present, examine the substrates, areas, and conditions where the roofing will be installed for compliance with the following requirements and other conditions affecting the performance of roofing system:
 - a. Verify that roof openings and penetrations are in place, set, and braced; and that roof drains are securely clamped in place.
 - b. Verify that wood cants, blocking, curbs, and nailers are securely anchored to the roof deck at penetrations and terminations, and that nailers match the thicknesses of the insulation.
 - c. Verify that the surface plane flatness and the fastening of the steel roof deck comply with the requirements specified in Section 05310, Steel Deck.
 - d. Verify that concrete curing compounds that will impair the adhesion of the roofing components to the roof deck have been removed.
 - e. Verify that the roof deck is securely fastened, with no projecting fasteners, and with no adjacent roof deck units in excess of 1/16 inch out of plane relative to the adjoining deck.
- B. Pre-Installation Testing:
 1. Capillary Moisture Test:
 - a. Test Procedure:
 - 1) Determine the capillary moisture of the concrete substrates in accordance with the plastic sheet method specified in ASTM D 4263.
 - b. Acceptance Criteria:
 - 1) Verify that the concrete substrates are visibly dry and free of moisture.
 2. Surface Moisture Test:
 - a. Test Procedure:
 - 1) Test for moisture by pouring 1 pint of hot roofing asphalt on the deck at the start of each day's work and at the start of each roof area or plane.
 - b. Acceptance Criteria:
 - 1) Do not proceed with roofing work if the test sample foams or can be easily and cleanly stripped after cooling.
- C. Evaluation and Assessment:
 1. Proceed with installation of the roofing only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Prevent materials from entering and clogging roof drains and conductors, and from spilling or migrating onto surfaces of other construction.

- a. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- 2. Substrate-Joint Penetrations:
 - a. Prevent roofing asphalt from penetrating substrate joints, entering the building, or damaging the roofing system components or adjacent building construction.
- B. Surface Preparation:
 - 1. Clean dust, debris, moisture, and other substances detrimental to the roofing installation from the substrate in accordance with the roofing system manufacturer's written instructions.
 - 2. Prime the surface of concrete deck with asphalt primer at a rate of 3/4 gallons per 100 square feet, and allow the primer to dry before proceeding to install the roofing.
- C. Demolition/Removal:
 - 1. Remove sharp projections from the substrate.

3.03 INSTALLATION

- A. Insulation:
 - 1. Comply with roofing system manufacturer's written instructions for installing roof insulation.
 - a. Roof Deck Rib Insulation Strips:
 - 1) Install acoustical roof deck rib insulation strips, specified in Section 05310, Steel Deck, according to the acoustical roof deck manufacturer's written instructions.
 - 2. Nailer Strips:
 - a. Mechanically fasten 4-inch nominal width wood nailer strips having the same thickness as the insulation perpendicular to the sloped roof deck at the following spacing:
 - 1) For roof slopes greater than 1 inch per 12 inches, but less than 3 inches per 12 inches, space the nailer strips 16 feet apart.
 - 2) For roof slopes greater 3 inches per 12 inches, space the nailer strips 48 inches apart.
 - 3. Insulation Cant Strips:
 - a. Install and secure preformed 45-degree insulation cant strips at the junctures of the roofing membrane system with vertical surfaces or angle changes greater than 45 degrees.
 - 4. Tapered Insulation:
 - a. Install tapered insulation under the area of the roofing to conform to the slopes indicated in the Contract Documents.
 - 5. Install insulation with the long joints of the insulation in a continuous straight line, with end joints staggered between rows, abutting edges, and ends between boards.
 - a. Fill gaps exceeding 1/4 inch (6mm) with insulation.

- b. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
 6. Install one or more layers of insulation under the area of the roofing to achieve the required thickness.
 - a. Where the overall insulation thickness is 2 inches or greater, install 2 or more layers with the joints of each succeeding layer staggered from the joints of the previous layer a minimum of 6 inches in each direction.
 7. Trim the surface of insulation at roof drains where necessary to ensure that the completed surface is flush and does not restrict the flow of water.
 8. Mechanically Fastened Insulation:
 - a. Install each layer of insulation, and it secure to deck using mechanical fasteners specifically designed and sized for fastening the specified board-type roof insulation to type of deck present.
 - 1) Fasten insulation to resist the uplift pressure at corners, the perimeter, and within the field of the roof.
- B. APP-Modified Bituminous Membrane:
 1. Install the modified bituminous roofing membrane system according to the roofing system manufacturer's written installation instructions and the applicable recommendations of the NRCA Quality Control Guidelines for Application of Polymer Modified Bitumen Roofing.
 - a. Start installing roofing membrane in the presence of the roofing system manufacturer's technical personnel.
 - b. Install the roofing membrane sheet and cap sheet starting at low point of the roofing system.
 - c. Extend the roofing membrane sheets over and terminate beyond eaves, and install the sheet as follows:
 - 1) Torch-apply the roofing membrane sheets to the substrate.
 - 2) Unroll the roofing membrane sheets, and allow them to relax for the minimum time period required by manufacturer.
 2. Asphalt Heating:
 - a. Do not raise the roofing asphalt temperature above the equiviscous temperature range more than 1 hour before the time of its application.
 - b. Do not exceed the roofing asphalt manufacturer's recommended temperature limits during roofing asphalt heating.
 - c. Do not heat roofing asphalt within 25 degrees Fahrenheit (14 degrees Celsius) of its flash point.
 - d. Discard roofing asphalt that has been maintained at a temperature exceeding the finished blowing temperature for more than 4 hours.
 - e. Heat and apply SEBS-modified roofing asphalt according to the roofing system manufacturer's written instructions.
 3. Laps:
 - a. Accurately align the roofing membrane sheets, without stretching, and maintain uniform side and end laps.
 - 1) Stagger end laps.

- 2) Completely bond and seal laps, leaving no voids.
- b. Repair tears and voids in laps and lapped seams not completely sealed.
- c. Apply roofing granules to cover the exuded bead at laps while the bead is hot.
- d. Install roofing membrane sheets so the side and end laps shed water.
4. Where the roof slope exceeds 1/2 inch per 12 inches, install the roofing membrane sheets parallel with slope.

C. Flashing and Stripping:

1. Install base flashing over cant strips and other sloping and vertical surfaces, at roof edges, and at penetrations through the roof; and secure the base flashing to the substrates in accordance with the roofing system manufacturer's written instructions and the following:
 - a. If required by the roofing system manufacturer, prime the substrates with asphalt primer.
 - b. Torch apply flashing sheet to the substrate.
2. Extend base flashing up walls or parapets a minimum of 8 inches above the roofing membrane, and 4 inches onto the field of the roofing membrane.
3. Mechanically fasten the top of the base flashing securely at terminations and the perimeter of roofing.
 - a. Seal the top termination of the base flashing.
4. Where metal flanges and edgings are set on the membrane roofing, install roofing membrane cap-sheet stripping according to the roofing system manufacturer's written instructions.
5. Install stripping according to the roofing system manufacturer's written instructions.

D. Roof Walkway Pads:

1. Cap Sheets:
 - a. Remove the salvage edge, cut the cap sheet into appropriate lengths, and apply these roof walkway pads in the same manner as the cap sheets.
 - b. Apply the acrylic coating in accordance with the coating manufacturer's application instructions, and clean the membrane.
 - 1) Submit the acrylic coating manufacturer's written application instructions to the Program/Project Manager for information.
2. Walkway Pads:
 - a. Adhere the walkway pads to the roofing membrane, spacing each pad not less than 1.0 inch (25mm) or more than 3.0 inches (75mm) apart to allow for drainage.

E. Interface with Other Work:

1. Roof Drains:

- a. Set a 30-inch by 30-inch piece of metal flashing on the completed roofing membrane in a bed of the roofing-manufacturer-approved asphaltic adhesive.
- b. Cover the metal flashing with roofing membrane cap-sheet stripping, and extend it a minimum of 4 inches beyond edge of the metal flashing onto the field of roofing membrane.
- c. Clamp the roofing membrane, metal flashing, and stripping into the roof-drain clamping ring.

3.04 REPAIR/RESTORATION

- A. When the remaining construction will not affect or endanger the roofing, inspect the roofing for deterioration and damage, describe its nature and extent in a written roof condition report, and submit copies to the Program/Project Manager and the Owner.
- B. Correct deficiencies in the roofing system that do not comply with specified requirements, or remove the roofing system and reinstall roofing complying with the requirements.
 1. Repair substrates, and repair or reinstall the roofing system so it is free of damage and deterioration at the time of Substantial Completion and complies with warranty requirements.

3.05 SITE QUALITY CONTROL

- A. Site Tests:
 1. Cooperate with the Testing and Inspecting Agencies engaged or required to perform services for installing roofing system.
 2. Test Cut Evaluations:
 - a. Test Procedure:
 - 1) To evaluate problems observed during quality-assurance inspections of the roofing membrane, test specimens will be removed from the installed roofing.
 - 2) The approximate quantities of components within the roofing membrane will be determined in accordance with the methods specified in ASTM D 3617.
 - 3) Test specimens will be examined for interply voids determined in accordance with the methods specified in ASTM D 3617.
 - b. Acceptance Criteria:
 - 1) Test specimens complying with the criteria established in Appendix 3 of the NRCA Quality Control Guidelines for Application of Polymer Modified Bitumen Roofing pass the test cut evaluation.
- B. Non-Conforming Work

1. Repair or remove and replace components of the atactic polypropylene-modified bituminous membrane roofing system where test results or inspections indicate that they do not comply with specified requirements.
2. Additional testing and inspection, at Contractor's expense, will be performed to determine the compliance of replaced or additional work with the specified requirements.

C. Manufacturer Services:

1. Final Roof Inspection:
 - a. Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion, and to prepare and submit an Inspection Report to Program/Project Manager.
 - 1) Notify the Program/Project Manager 48 hours in advance of the date and time of this inspection.

3.06 CLEANING

- A. Clean overspray and spillage from atactic polypropylene-modified bituminous membrane roofing system on adjacent construction using cleaning agents and procedures recommended by the manufacturer of the affected construction.
- B. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 PROTECTION

- A. Protecting Components Not Permanently Exposed:
 1. Coordinate installation of the roofing system so insulation and other components of the roofing membrane system not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday, or when rain is forecast.
 - a. Provide tie-offs at end of each day's work to cover exposed roofing membrane sheets and insulation with a course of coated felt set in roofing cement or hot roofing asphalt with joints and edges sealed.
 - b. Complete terminations and base flashings, and provide temporary seals to prevent water from entering completed sections of the roofing system.
 - c. Remove and discard temporary seals before beginning work on adjoining roofing.
- B. Protect the completed roofing system from damage and wear during the remainder of the construction period.

3.08 MAINTENANCE

- A. Operation and Maintenance Data:

1. Submit maintenance information for the atactic polypropylene-modified bituminous membrane roofing system in Operation and Maintenance manuals to the Program/Project Manager for approval.

SECTION 07610

SHEET METAL ROOFING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for sheet metal roofing panels, thermally responsive clips, fasteners, flashing, closures, insulation and related accessories required for a complete roofing system as indicated in the Contract Documents.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 07620 - Sheet Metal Flashing and Trim.
 - 5. Section 07920 – Joint Sealants.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 2. MD: Machine direction.
 - 3. SBS: Styrene-butylene-styrene plastic.
 - 4. XD: Cross direction.
- B. Definitions:
 - 1. NBS Unit: Short for the National Bureau of Standards (NBS) Unit of Color Difference, a unit to describe the size of the difference, ΔE , between 2 colors of tristimulus specifications based on Equation 13 in the now obsolete NBS Circular C429, Photoelectric Tristimulus Colorimetry with Three Filters.
- C. Reference Standards:

1. American Iron and Steel Institute (AISI):
 - a. AISI S100 - North American Specification for the Design of Cold-Formed Steel Structural Members.
 - b. AISI S200 - North American Standard for Cold-Formed Steel Framing – General Provisions.
 - c. AISI S201 - North American Standard for Cold-Formed Steel Framing – Product Data.
 - d. AISI S210 - North American Standard for Cold-Formed Steel Framing – Floor and Roof System Design.
 - e. AISI S211 - North American Standard for Cold-Formed Steel Framing – Wall Stud Design.
 - f. AISI S212 - North American Standard for Cold-Formed Steel Framing Header Design.
 - g. AISI S213 - North American Standard for Cold-Formed Steel Framing – Lateral Design.
2. ASTM International (ASTM):
 - a. ASTM B 117 – Standard Practice for Operating Salt Spray (Fog) Apparatus.
 - b. ASTM D 412 – Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers-Tension.
 - c. ASTM D 523 – Standard Test Method for Specular Gloss.
 - d. ASTM D 822 – Standard Practice for Filtered Open-Flame Carbon-Arc Exposures of Paint and Related Coatings.
 - e. ASTM D 903 – Standard Test Method for Peel or Stripping Strength of Adhesive Bonds.
 - f. ASTM D 968 – Standard Test Methods for Abrasion Resistance of Organic Coatings by Falling Abrasive.
 - g. ASTM D 1308 – Standard Test Method for Effect of Household Chemicals on Clear and Pigmented Organic Finishes.
 - h. ASTM D 1970 – Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection.

1.03 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Sheet metal roof panels.
 - 2) Sheet metal roof clips.
 - 3) Flashing.
 - 4) Underlayment materials.
 - 5) Fall arrest/restraint system.
 - b. Shop Drawings:
 - 1) Standing seam roof system.
 - c. Samples:
 - 1) Roof panels.
 - 2) Panel system clips.
 - 3) Fasteners.
 - 4) Closures.
 - 5) Insulation.
 - 6) Sealants.
 - d. Delegated Design Submittals:
 - 1) Professional Engineer's structural design calculations and test reports.
 - e. Qualification Statements:
 - 1) Professional Engineer's qualifications.
 - 2) Sheet metal roofing manufacturer's qualifications.
 - 3) Sheet metal roofing installer's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Sheet metal roof system manufacturer's published installation instructions.
 - b. Source Quality Control Submittals:
 - 1) Uniform Uplift Load Capacity Test certified laboratory test report.
 - 2) Clip Fastener Pull-Out Test certified laboratory test report.
 - 3) Uplift – Class Test certified laboratory test report.
 - 4) Concentrated Load Test certified laboratory test report.
 - 5) Air Infiltration Test certified laboratory test report.
 - 6) Water Penetration Test certified laboratory test report.
 - 7) Thermal Cycle Test certified laboratory test report.

- 8) Factory Mutual Wind Uplift Resistance Test certified laboratory test report.
- c. Site Quality Control Submittals:
 - 1) Sheet metal roofing manufacturers field service representative's written field report.
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Sheet Metal Roofing Materials and Workmanship Warranty.
 - 2) Sheet Metal Roofing Weather Tightness Warranty.

1.04 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Professional Engineer's Qualifications:
 - a. Engage a Professional Engineer registered in the State of Arizona, and qualified to perform the structural calculations and tests required for the sheet metal roofing.
 - b. Submit the Professional Engineer's credentials to the Program/Project Manager for information.
 - 2. Sheet Metal Roofing Manufacturer's Qualifications:
 - a. Obtain sheet metal roofing products from a manufacturer having at least 10 years of experience manufacturing architectural and industrial roofing systems, and that has successfully completed projects similar in materials and scope to the Work of this Contract.
 - b. Submit the sheet metal roofing manufacturer's qualifications to the Program/Project Manager for approval.
 - 3. Sheet Metal Roofing Installer's Qualifications:
 - a. Only employ a sheet metal roofing installer that has been trained and certified by the manufacturer to provide a complete single source weather-tight package, and that will provide a single source of responsibility for this portion of the Work.
 - b. Employ a sheet metal roofing installer having a minimum of 5 years of experience installing structural field-formed concealed clip roofing systems, and that has successfully completed projects similar in materials and scope to the Work of this Contract.
 - c. Submit the sheet metal roofing installer's qualifications to the Program/Project Manager for approval.
- B. Sustainability Standards Certifications:
 - 1. Roof Submittal:

- a. For the roofing materials used within the sheet metal roofing system, submit Product Data, including a printed statement of the Solar Reflectance Index (SRI).
- C. Site Samples:
 - 1. Submit the following Samples to the Program/Project Manager for approval:
 - a. Roof Panels:
 - 1) 12-inch long Samples of the roof panels that are the full width of the sheet metal roof panels.
 - b. Panel System Clips:
 - 1) Provide 2 Samples of the panel system clips.
 - c. Fasteners:
 - 1) Provide 2 Samples of each type of fastener to be used, and include a statement identifying the intended use of each.
 - d. Closures:
 - 1) Provide 1 metal closure Sample and one neoprene closure Sample.
 - e. Insulation:
 - 1) Provide a 12 inch square insulation Sample having the thickness specified.
 - f. Sealants:
 - 1) Provide 1 Sample of each type of sealant, and include a statement identifying the intended use of each.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Inspect sheet metal roofing materials for broken battens, tie down damage between battens, and diesel smoke stains.
 - a. Photo document damage, note the damage on the receipt, and have the driver sign the receipt.
- B. Storage and Handling Requirements:
 - 1. Before delivering sheet metal roofing materials to the Site, secure suitable facilities for storing and protecting the sheet metal roofing materials onsite.
 - 2. When unloading and hoisting bundles of roof panels, furnish slats under the slings, limit lift points to 30 feet apart, and limit overhangs to 15 feet.
 - a. Always use slings, and not cables or chains which can damage the panels, to lift the bundles.
 - b. Use spreader bars if the distance between the outer pick points is greater than the length of the cable.

- c. Use spreader planks between the sling and the bottom and top of the bundles to prevent damaging the corners of roof panels.
3. Slope stored roof panels to promote drainage.
 - a. Avoid placing bundles so they can trap water.
4. Cover the bundles of roof panels.
5. Vent the ends of bundles.
6. Avoid storing bundles of roof panels on wet ground.
7. On roofs, tie roof panels down to protect them from wind, and brace the roof panels on steep slopes.
 - a. Place bundles on the roof where the load will be supported.
 - b. Avoid loading decking, purlins, and bar joists at mid-span.
 - c. Locate bundles over primary structural supports near column lines.

C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.06 WARRANTY

A. Manufacturer Warranty:

1. Sheet Metal Roofing Materials and Workmanship Warranty
 - a. Warrant the sheet metal roofing materials and workmanship against standard performance failures within the 2-year period after the Date of Substantial Completion:
 - b. Submit a written Sheet Metal Roofing Materials and Workmanship Warranty on the manufacturer's standard or customized form, without monetary limitation, in which the sheet metal roofing manufacturer agrees to repair or replace components of the roofing system, including the roofing system panels, flashings, sealants, fasteners, and accessories that fail in materials or workmanship within the specified warranty period to the Program/Project Manager for approval.

B. Special Warranty:

1. Sheet Metal Roofing Weather Tightness Warranty:
 - a. Have the sheet metal roofing manufacturers/erectors warrant the weather tightness of the sheet metal roofing against failures within the 20-year period after the Date of Substantial Completion.
 - b. Submit a written Sheet Metal Roofing Weather Tightness Warranty, without monetary limitation, in which the sheet metal roofing manufacturers/erectors agree to repair defects in the weather

tightness of the roofing system, including replacing defective materials with weather tight materials.

PART 2 PRODUCTS

2.01 SHEET METAL ROOFING SYSTEMS

A. Manufacturers:

1. Manufacturer List:

- a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.

- 1) Bemo USA, Basis-of-Design: Bemo-Roof system,
<http://www.bemousa.com>.
- 2) Overly Manufacturing Company, Batten "C" Profile system,
<http://www.overlymanufacturing.com>.
- 3) Merchant and Evens, Inc., Zip-Rib® Standing Seam Panels,
<http://www.ziprib.com>.
- 4) Centria, SRS 3 Structural Standing Seam Roof System,
<http://www.centria.com>.

- 5) Approved equal.

2. Substitution Limitations:

- a. The manufacturers listed in this Section are prequalified manufacturers.
 - 1) Substitution of a manufacturer's alternate products for those specified at any time during the bidding or construction phases of this Contract is not allowed.
 - 2) Requests to use alternate systems must be submitted in writing to the Program/Project Manager at least 10 days prior to the bid date.
 - a) Performance requirements, certified statements, Samples, sample warranties and descriptive data must accompany the request for substitution.
- b. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - 1) Substitutions must fully comply with specified requirements.

B. Description:

1. Regulatory Requirements:

- a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC

- International Building Code (IBC) as Amended by the City of Phoenix].
2. Sustainability Requirements:
 - 1) Provide roofing having a Solar reflective index (SRI) complying with the following requirements:
 - a) For roof slopes less than 2:12: Greater than or equal to 78.
 - b) For roof slopes greater than or equal to 2:12: 29.
- C. Performance:
1. Being listed as a prequalified manufacturer does not release the manufacturer from providing complete and acceptable performance data as specified in this Section.
 2. Sheet Metal Roofing System:
 - a. Uniform Uplift Load Capacity:
 - 1) Determine the structural-uniform uplift load capacity of the panel system in accordance with the methods specified in ASTM E 1592 as follows:
 - a) For the panel and clip/halter ultimate loads, apply a factor of safety of 1.65 on the test results with no increase for wind.
 - b) For the fasteners, apply a factor of safety of 3.0 for a single fastener in each connection, a factor of safety of 2.25 for 2 or more fasteners in each connection, and a factor of safety of 4.0 in masonry.
 - c) The design uplift capacity for gages, spans, or loading conditions other than those tested may be determined by interpolation of the test results.
 - d) For positive loading, limit deflection to L/180.
 - b. Water Penetration:
 - 1) Provide panel assemblies having “no uncontrollable leakage” for 15 minutes at a pressure of 20 pounds per square foot when tested in accordance with the method specified in ASTM E 1646.
 - c. Air Infiltration:
 - 1) Provide panel assemblies having air infiltration of no more than 0.006 cubic feet per minute per square foot of panel at a pressure of 20 pounds per square foot pressure when tested in accordance with the method specified in ASTM E 1680.
 - d. Underwriters Laboratories, Inc. (UL) Uplift – Class:
 - 1) Provide a panel system having an Underwriters Laboratories, Inc. (UL) Uplift - Class rating of 90 when tested in accordance with the methods specified in UL 580.
 3. Fall Arrest/Restraint System:
 - a. Longitudinal Direction:

- 1) Provide a fall arrest/restraint system capable of withstanding 4136 pounds (18.4kN) of force parallel to the standing seam of the roof system.
 - b. Transverse Direction:
 - 1) Provide a fall arrest/restraint system capable of withstanding 3327 pounds (14.8kN) of force 90 degrees to the standing seam of the roof system.
- D. Design Criteria:
1. Sheet Metal Roofing System:
 - a. Design the standing seam roof system to safely resist the positive and negative loads required for the location and type of structure indicated in the Contract Drawings.
 - b. Provide roof panels that are fabricated full length with no end lap conditions.
 - c. For fastening the roofing panels to the structure, provide halters/clips designed to be concealed and allow panel movement up to and including 3-3/4 inches without impeding the performance of the panel.
 2. Fall Arrest/Restraint System:
 - a. Design the fall arrest/restraint system so it does not need to penetrate the standing seam metal roofing system.
 - 1) Design the fall arrest/restraint system so all attachments to the roof will be made to the standing seam, and will not hinder the thermal movement of the roof panels.
 3. Product Data:
 - a. Obtain the standing seam roof system manufacturer's complete catalog cuts for the sheet metal roofing proposed for the Work of this Section.
 - b. Submit the standing seam roof system manufacturer's Product Data to the Program/Project Manager for approval.
 4. Shop Drawings:
 - a. Prepare complete Shop Drawings for the standing seam roof system, including clearly indicated details, roof plans, wall elevations, and field installation notes.
 - 1) Have the standing seam roof system manufacturer approve the Shop Drawings before submitting them to the Program/Project Manager for approval
 - b. Submit the standing seam roof system Shop Drawings to the Program/Project Manager for approval.
 - 1) The Program/Project Manager must approve the Shop Drawings prior to the manufacturer starting to fabricate the sheet metal roofing.

5. Calculations:

- a. Have the Professional Engineer prepare structural design calculations and test reports for the carrying capacities and thermal movement allowances of the sheet metal roofing, and sign and seal these calculations to certify and verify the loads.
- b. Submit the Professional Engineer's structural design calculations and test reports to the Program/Project Manager for approval.

E. Materials:

1. Sheet Metal Roof Panels:

- a. Provide roof panels fabricated from aluminum Alloy 3105 or aluminum Alloy 3004-H-34, and that have a smooth finish.
- b. Provide roof panels that are at least 0.040 inches thick, no more than 16 inches wide, and that have a vertical standing leg at least 2-1/2 inches high.
- c. During the manufacturing process of the panel system, provide a continuous weather seal on the roof panels.

2. Sheet Metal Roof Clips:

- a. To fasten the standing seam roofing to the structure, provide specially designed and tested concealed sheet metal roof clips manufactured exclusively for the standing seam roofing system.
- b. Provide two-piece, thermally responsive, sliding sheet metal roof clips designed to allow the roofing materials free movement parallel to the standing leg of the panel without binding.
- c. Provide sheet metal roof clips capable of passing the loaded 100,000 cycle test with zero wear between the clip and the panel.

3. Flashing:

- a. Provide trim materials having the same gage and finish specified for the panel system.

4. Underlayment Materials:

- a. Provide cold applied, self-adhering, high-temperature sheet membrane underlayment that is at least 40 mils thick, and is fabricated from a slip resistant polyethylene-film top surface laminated to a layer of butyl or SBS-modified asphalt adhesive having a split release paper backing.
 - 1) To reduce solar heat gain, provide membrane underlayment having a white surface; black or gray is unacceptable.
- b. If required, provide a primer compatible with the underlayment materials and recommended by the manufacturer.
- c. Minimum Membrane Performance Characteristics:
 - 1) Thermal Stability:

- a) Provide membrane underlayment that is stable after testing at 240 degrees Fahrenheit (116 degrees Celsius) in accordance with the Thermal Stability test method specified in ASTM D 1970.
- 2) Low Temperature Flexibility:
 - a) Provide membrane underlayment that passes after testing at minus 20 degrees Fahrenheit (29 degrees Celsius) in accordance with the Low Temperature Flexibility test method specified in ASTM D 1970.
- 3) Tensile Strength:
 - a) Provide membrane underlayment having a tensile strength in the machine direction (MD) of 11,200kN/m² (1624 pounds per square foot), and in the cross direction (XD) of 13,100kN/m² (1900 pounds per square foot), when tested using Die C in accordance with the method specified in ASTM D 412.
- 4) Ultimate Elongation:
 - a) Provide membrane underlayment having an ultimate elongation in the machine direction (MD) of 88 percent, and in the cross direction (XD) of 55 percent, when tested using Die C in accordance with the method specified in ASTM D 412.
- 5) Recommended Exposure:
 - a) Provide membrane underlayment having a recommended exposure limit of 90 days.
- 6) Adhesion:
 - a) Provide membrane underlayment having an adhesion at 50 degrees Fahrenheit of 2000 kilograms per millimeter (11.4 pounds per inch) of width when tested in accordance with the method specified in ASTM D 903.
- 7) Permeance:
 - a) Provide membrane underlayment having a maximum permeance of 0.90 nanograms per square meter per second per Pascal (0.016 perm) when tested in accordance with the method specified in ASTM E 96/E 96M.

F. Fabrication:

- 1. Shop Fabrication:
 - a. Manufacture each panel, including curved panels, in continuous lengths having no end laps and without distorting the standing seam leg of the roof panel.
 - 1) Fabricator-owned, installer-owned, toll-formed, private label formed, and third party licensed roll formed products are strictly prohibited; and are unacceptable for the Work of this Contract.

- b. Equipment Requirements:
 - 1) The manufacturing equipment must be owned and operated by the manufacturer.
 - 2) Mobile Factory Roll-Forming Equipment:
 - a) Furnish a mobile UL-certified factory roll former capable of forming sheet metal roofing profiles as required for the Work of this Contract, and having the following minimum features:
 - (1) Post roll-form profiled shear.
 - (a) No pre-sheared products are acceptable.
 - (2) At least 12 roll forming stages of hardened tooling to ensure proper quality control of the profile.
 - (3) In-line seam sealant injection system.
 - (4) Coil capacity of at least 5000 pounds to minimize coil changes.
 - (5) The ability to fabricate continuous-length roll-formed panels.
 - (6) In-Line metal cooling system to minimize heat induced stress (oil canning) in the finished roll formed profiles.
 - (7) A mill having hardened tolling, a post shear block, a decoiler, and a power source weighing at least 30,000 pounds.

G. Finishes:

- 1. Primer Materials:
 - a. Provide a primer that is compatible with both the substrate and the topcoat.
- 2. Finish Materials:
 - a. Topcoat:
 - 1) Provide a coating that includes 70 percent polyvinylidene.
 - b. Provide a coating system tested for and exhibiting the minimum test criteria for the following characteristics:
 - 1) Specular Gloss:
 - a) Provide a coating system having a standard gloss of 20-30 when measured at 60 degrees Fahrenheit in accordance with the method specified in ASTM D 523.
 - 2) Pencil Hardness:
 - a) Provide a coating system having a pencil hardness of HB-H when measured in accordance with the method specified in ASTM D 3363.
 - 3) Flexibility:
 - a) Provide a coating system having a T-bend flexibility exhibiting no cracking or tape removal of film at 1-T on painted

aluminum and at 2-T on paint steel when measured in accordance with the method specified in ASTM D 4145.

- 4) Adhesion/Reverse Impact:
 - a) Provide a coating system having an adhesion/reverse impact having no cracking or loss of adhesion when coatings 1.5 times the metal thickness are measured in accordance with the method specified in ASTM D 2794, and having no loss of adhesion when measured in accordance with the method specified in ASTM D 3359.
- 5) Abrasion/Falling Sand:
 - a) Provide a coating system requiring 50 liters of falling sand to expose a 5/32 inch (4mm) diameter of substrate when measured in accordance with Method A specified in ASTM D 968.
- 6) Acid Pollutants:
 - a) Provide a coating system experiencing no effect when exposed to 10 percent muriatic acid for 15 minutes, and no effect when exposed to 20 percent sulfuric acid for 15 minutes when measured in accordance with the method specified in ASTM D 1308.
- 7) Salt Spray Resistance:
 - a) Provide a coating system passing the salt spray resistance test when coated aluminum is exposed to a 5 percent salt spray at 95 degrees Fahrenheit for 3000 hours, and when coated steel is exposed to a 5 percent salt spray at 95 degrees Fahrenheit for 1000 hours, in accordance with the method specified in ASTM B 117.
- 8) Humidity Resistance:
 - a) Provide a coating system passing a humidity resistance test when coated aluminum is exposed to 100 percent relative humidity at 95 degrees Fahrenheit for 3000 hours, and when coated steel is exposed to 100 percent relative humidity at 95 degrees Fahrenheit for 1000 hours, in accordance with the method specified in ASTM D 2247.
- 9) Weathering Tests:
 - a) Provide a coating system having less than 5 NBS units of change in color when measured in a South Florida Exposure in accordance with the method specified in ASTM D 2244.
 - b) Provide a coating system that passes the color retention test when measured in accordance with the method specified in ASTM D 822 after 5000 hours of exposure.

- c) Provide a coating system having a Chalk Rating of at least 8.0 when measured in accordance with the method specified in ASTM D 4214.
- 3. Shop Finishing Methods:
 - a. Exterior Surface of Panels:
 - 1) Apply a finish consisting of a nominal 0.2 mil primer and nominal 0.8 mil topcoat.
 - 2) Apply a nonmetallic, non-exotic color selected by the Program/Project Manager from the manufacturer's standard range.

2.02 ACCESSORIES

- A. Fall Arrest/Restraint System:
 - 1. Provide a fall arrest/restraint system manufactured by the standing seam metal roof system manufacture, and having the following components:
 - a. Brackets:
 - 1) For end and corner attachment, provide a universal standing seam roof anchor having a bracket framework fabricated from Type 316 stainless steel.
 - b. Intermediate Anchors:
 - 1) For attachment between brackets, provide intermediate anchors having a bracket framework fabricated from Type 316 stainless steel.
 - c. End Anchorage Connectors:
 - 1) Provide end anchorage connectors fabricated from Type 316 stainless steel.
 - d. Swages:
 - 1) Provide swages fabricated from Type 316 stainless steel.
 - e. Tensioners:
 - 1) Provide tensioners fabricated from Type 316 stainless steel.
 - f. Cables:
 - 1) Provide cables having polyester covers and core yarn, red neoprene membranes made from a proprietary polychloroprene formula, and compounds made from proprietary latex formulas.
 - g. Fixed Corner Units:
 - 1) Provide fixed corner units fabricated from Type 316 stainless steel.
 - 2. Manufacturers:
 - a. Bemo USA, Basis-of-Design: Xtreme Uniline Safety Systems, <http://www.bemousa.com>.
 - b. Approved equal.

2.03 SOURCE QUALITY CONTROL

A. Tests and Inspections:

1. At the time the sheet metal roofing components are being manufactured, have an independent Testing and Inspection Agency or an independent Professional Engineer test the sheet metal roofing components in accordance with the following methods to verify that the proposed roofing will meet the performance requirements specified herein:
2. Uniform Uplift Load Capacity Test:
 - a. Test Procedure:
 - 1) Determine the structural-uniform uplift load capacity of the panels and clip/halters for the sheet metal roofing panel system in accordance with the methods specified in ASTM E 1592 applying a factor of safety of 1.65 onto the test results with no increase for wind.
 - b. Acceptance Criteria:
 - 1) Sheet metal roofing panel system panels and clip/halters not failing when the calculated deflection allowing for the safety factor is equal to or less than $L/180$ pass the Uniform Uplift Load Capacity Test.
3. Clip Fastener Pull-Out Test:
 - a. Test Procedure:
 - 1) Determine the structural-uniform uplift load capacity of the clip fasteners for the sheet metal roofing panel system in accordance with the methods specified in ASTM E 1592 applying a factor of safety of 3.0 for a single fastener in each connection, a factor of safety of 2.25 for 2 or more fasteners in each connection, and a factor of safety of 4.0 for fasteners in masonry.
 - b. Acceptance Criteria:
 - 1) Sheet metal roofing panel system clip fasteners not failing when the calculated deflection allowing for the safety factors is equal to or less than $L/180$ pass the Uniform Uplift Load Capacity Test.
4. Uplift – Class Test:
 - a. Test Procedure:
 - 1) Obtain the Uplift – Class test data for the sheet metal roofing performed in accordance with the method specified in UL 580 and the report number.
 - b. Acceptance Criteria:
 - 1) Roof systems having an Underwriters Laboratories, Inc. (UL) Uplift - Class rating of 90 pass the Uplift – Class Test
5. Concentrated Load Test:
 - a. Test Procedure:

- 1) Apply concentrated loads equal to the loads specified for the fall arrest/restraint system to the roof system.
- b. Acceptance Criteria:
 - 1) Sheet metal roofing panel assemblies demonstrating they can withstand the concentrated loads imposed by the fall arrest/restraint system pass the Concentrated Load Test.
6. Air Infiltration Test:
 - a. Test Procedure:
 - 1) Determine the sheet metal roofing's air infiltration rate in accordance with the test method specified in ASTM E 1680.
 - b. Acceptance Criteria:
 - 1) Panel assemblies having air infiltration of no more than 0.006 cubic feet per minute per square foot of panel at a pressure of 20 pounds per square foot pressure pass the Air Infiltration Test.
7. Water Penetration Test:
 - a. Test Procedure:
 - 1) Determine the sheet metal roofing's water penetration rate in accordance with the test method specified in ASTM E 1646.
 - b. Acceptance Criteria:
 - 1) Sheet metal roofing panel assemblies having "no uncontrollable leakage" pass the Water Penetration Test.
8. Thermal Cycle Test:
 - a. Test Procedure:
 - 1) Perform the Thermal Cycle Test on the sheet metal roof clips for 100,000 cycles.
 - b. Acceptance Criteria:
 - 1) Sheet metal roof clips capable of passing the loaded 100,000 cycle test with zero wear between the clip and the panel pass the Thermal Cycle Test.
9. Factory Mutual Wind Uplift Resistance Test:
 - a. Test Procedure:
 - 1) Perform the Factory Mutual Wind Uplift Resistance in accordance with the procedure specified in FM Class Number 4471.
 - b. Acceptance Criteria:
 - 1) Sheet metal roofing panel assemblies having at least a Class 1-120 Windstorm Classification pass the Factory Mutual Windstorm Classification Test.
10. Submit laboratory test reports, certified by the independent Testing and Inspection Agency or an independent Professional Engineer, for the tests performed; and that show the proposed sheet metal roofing system has been properly factory-tested, and conforms to the applicable provisions specified herein; to the Program/Project Manager for information.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. To verify that the structure is ready for installation of the roofing, examine the building substrates and Site conditions with the manufacturer/installer present for compliance with the requirements of the Sections in which the substrates and related work are specified, and for other Site conditions affecting performance of the sheet metal roofing.
 - a. Verify that the panel supports are within the manufacturer's tolerances.
- B. Evaluation and Assessment:
 - 1. Do not proceed to install the sheet metal roofing until all structural supports and/or substrates are satisfactorily installed in accordance with the approved Shop Drawings, Specifications, and applicable industry standards.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the sheet metal roofing.

3.03 INSTALLATION

- A. Install the sheet metal roof system in accordance with the sheet metal roof system manufacturer's installation instructions.
 - 1. Submit the sheet metal roof system manufacturer's published installation instructions to the Program/Project Manager for information.
- B. Curving Mill:
 - 1. Onsite curving is mandatory.
 - 2. Furnish a curving mill capable of inducing a smooth curve into the panel profiles to the radius required for the Work of this Contract.
 - a. Dimple or crimp curving to induce the panel radius is unacceptable.
- C. Install the metal roof panels with the orientation, of the sizes, and at the locations indicated in the Contract Drawings.
 - 1. For whatever length required, install panels having one continuous, unbroken length from the ridge to the eave unless otherwise indicated on the approved Shop Drawings.

- D. Anchor the panels and other components securely in place, anchoring the roof panels to the supports using the manufacturer's recommended clips, screws, fasteners, sealants, and adhesives indicated on the approved Shop Drawings.
 - 1. Provide only attachments that allow for thermal expansion and contraction of the roofing materials.
- E. Mechanically seam the panels after installation in the field.
- F. Joint Sealers:
 - 1. Provide joint sealers where indicated in the approved Shop Drawings and where required to produce weatherproof performance of the sheet metal roof assemblies.
 - 2. Prepare the joints, and apply the sealants, as specified in Section 07920, Joint Sealants.
- G. Flashing and Trim:
 - 1. Provide related flashing and trim in accordance with the requirements specified in Section 07620, Sheet Metal Flashing and Trim.
- H. Provide weatherproof escutcheons for pipe and conduit that penetrates the roof.
- I. Special Techniques:
 - 1. Dissimilar Materials:
 - a. Where elements of the metal panel system come into contact with dissimilar materials, treat the faces and edges in contact with dissimilar materials as recommended by the sheet metal roofing manufacturer.

3.04 REPAIR/RESTORATION

- A. Replace any materials or components that are damaged beyond repair prior to completion, with undamaged materials.

3.05 SITE QUALITY CONTROL

- A. Non-Conforming Work
 - 1. Correct deficiencies indicated in the sheet metal roofing manufacturer's service representative's field report.
- B. Manufacturer Services:
 - 1. Manufacturers Field Service:

- a. Engage a service representative of the sheet metal roofing manufacturer to inspect the completed installation, and submit a written field report to the Program/Project Manager.

3.06 CLEANING

- A. Wipe down each area as it is completed.
- B. Remove temporary protective films when directed by the Program/Project Manager.
- C. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

SECTION 07620

SHEET METAL FLASHING AND TRIM

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for sheet metal flashing and trim, including the following types:
 - a. Formed roof drainage system.
 - b. Formed low-slope roof flashing and trim.
 - c. Formed wall flashing and trim.
 - d. Formed equipment support flashing.
- B. Related Requirements:
 - 1. Section 01316 - Project Meetings.
 - 2. Section 01330 - Submittal Procedures.
 - 3. Section 01360 - Sustainable Design Requirements.
 - 4. Section 01454 - Mock-Up Requirements.
 - 5. Section 07920 - Joint Sealants.
 - 6. Section 09961 – Fluoropolymer Coatings

1.02 REFERENCES

- A. Definitions:
 - 1. Counterflashing: Typically, a strip of sheet metal or other material built into masonry, and turned down to prevent water from entering joints and exposed upturned edges of the base flashing on a roof.
 - 2. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 3. Reglet: A groove for guiding or holding a panel, window sash, or similar item; or a narrow, flat molding.
 - 4.
- B. Reference Standards:
 - 1. Aluminum Association (AA):
 - a. AA DAF-45 – Designation System for Aluminum Finishes.
 - 2. American Architectural Manufacturers Association (AAMA):

- a. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum.
- b. AAMA 2604 – Voluntary Specification, Performance Requirements and Test Procedures for High Performance Organic Coatings on Aluminum Extrusions and Panels.
3. ASTM International (ASTM):
 - a. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - b. ASTM A 755/A 755M - Standard Specification for Steel Sheet, Metallic Coated by the Hot-Dip Process and Prepainted by the Coil-Coating Process for Exterior Exposed Building Products.
 - c. ASTM A 924/A 924M - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.
 - d. ASTM B 32 - Standard Specification for Solder Metal.
 - e. ASTM B 209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
 - f. ASTM B 749 - Standard Specification for Lead and Lead Alloy Strip, Sheet, and Plate Products.
 - g. ASTM C 920 - Standard Specification for Elastomeric Joint Sealants.
 - h. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.
 - i. ASTM D 523 - Standard Test Method for Specular Gloss.
 - j. ASTM D 4397 - Standard Specification for Polyethylene Sheeting for Construction, Industrial, and Agricultural Applications
 - k. ASTM D 4586 –. Standard Specification for Asphalt Roofing Cement, Asbestos-Free.
4. FM Global (FMG), <http://www.fmglobal.com>.
 - a. FMG Property Loss Prevention Data Sheet 1-49 – Perimeter Flashing.
5. National Association of Architectural Metal Manufacturers (NAAMM):
 - a. Architectural Metal Products Division (AMP):
 - 1) NAAMM AMP 500 – Metal Finishes Manual for Architectural and Metal Products.
6. The Sheet Metal and Air Conditioning Contractors' National Association (SMACNA):
 - a. SMACNA Architectural Sheet Metal Manual.
7. The Society for Protective Coatings (SSPC):
 - a. SSPC Steel Structures Painting Manual.
 - 1) SSPC-Paint 12 – Cold-Applied Asphalt Mastic (Extra Thick Film).
8. Institute for Sustainability Infrastructure (ISI)
 - a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the Work of this Section with interfacing and adjoining Work to insure proper sequencing of each installation.
 - a. Coordinate the installation of the sheet metal flashing and trim with interfacing and adjoining construction to provide a leakproof, secure, and noncorrosive installation.
 - b. Coordinate the installation of equipment support flashing with roofing and equipment installation.
 - c. Coordinate the installation of roof-penetration flashing with the installation of roofing and the items penetrating the roof.
 - d. Coordinate the installation of wall flashing with the installation of wall-opening components such as windows, doors, and louvers.

B. Pre-Installation Meetings:

1. Convene a pre-installation meeting one week prior to commencing the Work of this Section in accordance with the requirements of Section 01316, Project Meetings.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Construction Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Sheet Metal Flashing and Trim Materials.
 - 2) Concealed Through-Wall Sheet Metal Flashing.
 - 3) Reglets.
 - 4) Burning Rod for Lead.
 - 5) Solder.
 - 6) Fasteners.
 - 7) Bituminous Mastic.
 - 8) Mastic Sealant.
 - 9) Elastomeric Sealant.
 - 10) Epoxy Seam Sealer.
 - 11) Adhesives.
 - 12) Sheet metal clips, straps, anchoring devices, and similar accessory units.
 - b. Shop Drawings:
 - 1) Sheet Metal Flashing and Trim Materials.
 - 2) Concealed Through-Wall Sheet Metal Flashing.
 - 3) Reglets.
 - c. Samples:
 - 1) Samples for illustrating materials.

- 2) Samples for initial color selection.
 - 3) Samples for finish verification of sheet metal flashing.
 - 4) Samples for finish verification of trim.
 - 5) Samples for finish verification of accessories.
 - d. Qualification Statements:
 - 1) Fabricator qualifications.
 - 2) Installer qualifications.
- B. Informational Submittals:
 - 1. Submit the following to the Construction Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Installation instructions, and general recommendations for sheet metal flashing and trim materials.
 - 2) Installation instructions, and general recommendations for concealed through-wall sheet metal flashing.
 - 3) Installation instructions, and general recommendations for reglets.
 - 2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. ENVISION Credit RA1.3 – Use Recycled Material
 - 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.

1.05 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Fabricator Qualifications:
 - a. Employ a fabricator specializing in sheet metal work and having at least 2 years of documented experience in production of sheet metal flashing and trim of the type required by this Section.
 - b. Submit the fabricator's qualifications to the Program/Project Manager for approval.
 - 2. Installer Qualifications:
 - a. Employ an installer specializing in sheet metal work and having at least 2 years of documented experience installing sheet metal flashing and trim of the type required by this Section.
 - b. Submit the installer's qualifications to the Program/Project Manager for approval.
- B. Site Samples:
 - 1. Samples for Illustrating Materials:

- a. Submit two 9-inch by 9-inch Samples of flashing illustrating the material of a typical standing seam, bayonet seam, external corner, internal corner, valley condition, ridge condition, and junction to a vertical dissimilar surface to the Program/Project Manager for approval.
 2. Samples for Initial Color Selection:
 - a. For each type of sheet metal flashing and trim indicated to have factory-applied color finishes, submit two 3-inch by 3-inch flashing color Samples illustrating each metal finish color to the Program/Project Manager for approval.
 - 1) Include similar Samples of trim and accessories involving color selection.
 3. Samples for Finish Verification:
 - a. For each type of exposed finish required, submit finish Samples of the following sizes for verification to the Program/Project Manager for approval:
 - 1) Sheet Metal Flashing:
 - a) Submit 12-inch long sheet metal flashing Samples that include fasteners, cleats, clips, closures, and other attachments.
 - 2) Trim:
 - a) Submit 12-inch long trim Samples that include fasteners and other exposed accessories.
 - 3) Accessories:
 - a) Submit full-size Samples.
- C. Mock-Ups:
 1. After the Samples have been approved, build mockups in accordance with the requirements specified in Section 01454, Mock-Up Requirements, to demonstrate aesthetic effects and set quality standards for fabrication and installation..
 - a. Build the mockups in the location and of the size indicated or, if not indicated, as directed by Program/Project Manager.
 - b. Build mockup of typical roof copings, counterflashings, and roof drainage components including supporting construction cleats, seams, attachments, underlayment, and accessories, and using the methods to be used to install production Work.
 - 1) Construct coping and counterflashing sections not less than 96 inches long.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in the mockups unless such deviations are specifically approved by Program/Project Manager in writing.
 3. Approved mockups may become part of the completed Work if undisturbed at the time of Substantial Completion.
 - a. Approval of mockups is for other material and construction qualities specifically approved by Program/Project Manager in writing.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Protect sheet metal flashing and trim materials and fabrications during transportation and handling.
 - a. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 - 2. Deliver sheet metal flashing materials and fabrications undamaged.
- B. Storage and Handling Requirements:
 - 1. Unload and store install sheet metal flashing materials and fabrications in a manner that prevents bending, warping, twisting, and surface damage.
 - a. Stack the material in a manner that prevents twisting, bending, and abrasion of the material; and so that ventilation is provided around the material.
 - 1) Stack materials on platforms or pallets, covered with suitable weathertight and ventilated covering.
 - 2. Prevent contact with materials which may cause discoloration or staining.
 - a. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage.
 - b. Slope metal sheets to ensure drainage.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

- A. Ambient Conditions:
 - 1. When the ambient temperature at the time elastomeric sealant is installed is moderate, between 40 degrees Fahrenheit and 70 degrees Fahrenheit, set the joint members to allow 50 percent movement either way.
 - a. Adjust the setting proportionately for installation at higher ambient temperatures.
 - 2. Do not install sealant-type joints at temperatures below 40 degrees Fahrenheit.

PART 2 PRODUCTS

2.01 SHEET METAL FLASHING AND TRIM COMPONENTS

- A. Manufacturers:
 - 1. Manufacturer List:

- a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
- 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).
 - 2. Sustainability Requirements:
 - a. Recycled Content
 - 1) Provide Sheet Metal Flashing and Trim whose combined post-consumer recycled content and one-half pre-consumer recycled content is no less than 25 percent.
- C. Performance:
- 1. Provide sheet metal flashing and trim that fit the substrates, and that result in waterproof and weather-resistant performance once installed.
 - a. Ensure the best possible weather resistance, durability of the Work, and the protection of materials and finishes.
 - 2. Provide sheet metal flashing and trim capable of withstanding wind loads, structural movement, thermally induced movement, and exposure to weather without failing, rattling, leaking, and fastener disengagement.
 - a. Structural Requirements:
 - 1) Provide copings capable of resisting the following forces in accordance with the requirements for Class 1-75 and 1-90 (velocity pressures of 31 pounds-force per square foot to 45 pounds-force per square foot) specified in FMG Property Loss Prevention Data Sheet 1-49:
 - a) Perimeter Uplift Force: 90 pounds-force per square foot.
 - b) Corner Uplift Force: 120 pounds-force per square foot.
 - c) Outward Force: 45 pounds-force per square foot.
 - b. Thermal Movements:
 - 1) Provide sheet metal flashing and trim that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures to prevent buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects:
 - a) Temperature Change (Range): 120 degrees Fahrenheit for ambient temperatures, and 180 degrees Fahrenheit for material surface temperatures.

- 2) Provide clips that resist rotation and avoid shear stress as a result of sheet metal and trim thermal movements.
- 3) Base the engineering calculation on the surface temperatures of the materials due to both solar heat gain and nighttime-sky heat loss.
- c. Water Infiltration:
 - 1) Provide sheet metal flashing and trim that do not allow water infiltration to the building interior.
- 3. Appearance of Finished Work:
 - a. Variations in the appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples.
 - b. Noticeable variations in the same piece are unacceptable.
 - c. Variations in appearance of other components are acceptable if they are within the range of approved Samples, and are assembled or installed to minimize contrast.
- D. Design Criteria:
 - 1. Sheet Metal Flashing and Trim Standard:
 - a. Provide sheet metal flashing and trim complying with the recommendations that apply to the design, dimensions, metal, and other characteristics of the item indicated the SMACNA Architectural Sheet Metal Manual.
 - 1) Unless more stringent requirements are indicated in the Contract Documents, provide sheet metal flashing and trim conforming to the dimensions and profiles shown in the SMACNA Architectural Sheet Metal Manual.
 - 2. Provide the materials and types of fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required for a complete sheet metal flashing and trim installation.
 - 3. Provide sheet metal items fabricated from sheets of the thickness or weight needed to comply with performance requirements, but not less than the following requirements for each application and/or metal:
 - a. Roof-Drain Flashing:
 - 1) Provide roof-drain flashing fabricated from lead-coated copper weighing 12 ounces per square foot.
 - b. Scuppers:
 - 1) Provide scuppers fabricated from 0.0276-inch thick zinc coated steel.
 - c. Copings:
 - 1) Provide copings fabricated from aluminum-zinc alloy-coated steel having a fluoropolymer finish complying with the requirements specified in Section 09961, Fluoropolymer Coatings.
 - d. Base Flashing:
 - 1) Provide base flashing fabricated from lead-coated copper weighing 20 ounces per square foot.

- e. Counterflashing:
 - 1) Provide counterflashing fabricated from lead-coated copper weighing 16 ounces per square foot.
- f. Equipment Support Flashing:
 - 1) Provide equipment support flashing fabricated from lead-coated copper weighing 16 ounces per square foot.
- g. Roof-Penetration Flashing:
 - 1) Provide roof-penetration flashing fabricated from lead-coated copper weighing 16 ounces per square foot.
- 4. Expansion Provisions:
 - a. Space movement joints a maximum of 10 feet apart, with no joints allowed within 24 inches of a corner or intersection.
 - b. Where lapped or bayonet-type expansion provisions cannot be used, or would not be sufficiently weatherproof and waterproof, form expansion joints of intermeshing hooked flanges not less than 1 inch deep; and fill the expansion joints with mastic sealant, concealed within the joints.
- 5. Conceal fasteners and expansion provisions where possible.
 - a. Exposed fasteners are not allowed on sheet metal faces exposed to public view.
- 6. Incompatible Metal or Corrosive Substrates:
 - a. Separate metal from incompatible metal or corrosive substrates by coating concealed surfaces at locations of contact with asphalt mastic or other permanent separation as recommended by flashing or trim manufacturer.
- 7. Product Data:
 - a. Obtain the manufacturer's Product Data for each type of product proposed for the Work of this Section.
 - 1) Obtain the manufacturer's material descriptions, finish data, construction details, installation instructions, dimensions of individual components and profiles, and the general recommendations for each specified flashing material and fabricated product.
 - b. Submit the sheet metal flashing and trim Product Data to the Program/Project Manager for approval.
- 8. Shop Drawings:
 - a. Prepare Shop Drawings of each item specified showing layouts, profiles, methods of joining, and anchorage details.
 - 1) Show layouts of sheet metal flashing and trim, including plans and elevations.
 - a) Distinguish between shop- and field-assembled work.
 - 2) Identify the materials, thicknesses, weights, and finishes for each item and its location in Work.
 - 3) Include details for forming sheet metal flashing and trim, including profiles, shapes, seams, and dimensions.

- 4) Include details for fastening, joining, supporting, and anchoring the sheet metal flashing and trim, including fasteners, clips, cleats, and attachments to adjoining work.
- 5) Include details of expansion-joint covers, including showing the direction of expansion and contraction.
- b. Submit the Shop Drawings to the Program/Project Manager for approval.

E. Materials:

1. Sheet Metal Flashing and Trim Materials:

- a. Zinc Coated Steel Sheet:
 - 1) Provide Designation CS steel having a 0.25 percent copper composition as specified in ASTM A 653/A 653M, and manufactured to the tolerances specified in ASTM A 924/A 924M.
 - 2) Provide steel having hot-dip galvanized Coating Designation G90 as specified in ASTM A 653/A 653M.
 - 3) Where painting is indicated, provide mill phosphatized steel.
 - 4) Thickness: 0.0239-inch thick (24 gage), except as noted otherwise.
- b. Lead Sheet:
 - 1) Provide Type L51121 copper-bearing lead sheet as specified in ASTM B 749, and having a minimum thickness of 0.0625 inch, except for applications where burning (welding) is involved provide a minimum thickness of 0.0937 inch.
- c. Aluminum Sheet:
 - 1) Provide aluminum sheets complying with the requirements for Alloy 3003, 3004, 3105, or 5005 specified in ASTM B 209; having a temper suitable for the forming and structural performance required, but not less than H14; and having a thickness of 0.032 inch.
- d. Pre-Finished Aluminum Sheet:
 - 1) Provide pre-finished aluminum sheets complying with the requirements of ASTM B 209; and consisting of 0.032 inch thick plain finish aluminum shop pre coated with a fluoropolymer coating of the color as selected by the Program/Project Manager.
- e. Stainless-Steel Sheet:
 - 1) Provide stainless-steel sheet complying with the requirements for Type 304 stainless-steel specified in ASTM A 240/A 240M, and having a Number 2D (dull, cold rolled) finish.
- f. Copper:
 - 1) For fully concealed flashing, provide 10 ounce copper.
 - 2) For flashing not fully concealed, provide 16 ounce copper.
- g. Pre-Painted, Metallic-Coated Steel Sheet:
 - 1) Provide steel sheet metallically coated using the hot-dip process and, and pre-painted using the coil-coating process in accordance with the requirements specified in ASTM A 755/A 755M.

- 2) Zinc-Coated (Galvanized) Steel Sheet:
 - a) Provide zinc-coated (galvanized) steel sheet complying with the requirements for structural quality steel having a G90 coating designation specified in ASTM A 653/A 653M.
 - 3) Exposed Finishes:
 - a) High-Performance Organic Finish:
 - (1) Prepare, pretreat, and apply a coil coating to exposed metal surfaces in accordance with the coating and resin manufacturers' written instructions.
 - b) Fluoropolymer 3-Coat System:
 - (1) Provide the manufacturer's standard 3-coat, thermocured system consisting of specially formulated inhibitive primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight, with a minimum total dry film thickness of 1.5 mil; complying with physical properties and coating performance requirements of AAMA 2605, except as modified as follows:
 - (a) Humidity Resistance: 2000 hours.
 - (b) Salt-Spray Resistance: 2000 hours.
 - 4) Color:
 - a) Provide a color matching samples selected by the Program/Project Manager from the manufacturer's full range.
2. Underlayment Materials
- a. Polyethylene Sheet:
 - 1) Provide 6-mil thick polyethylene sheet complying with the requirements specified in ASTM D 4397.
 - b. Felts:
 - 1) Provide nonperforated felts complying with the requirements for Type II (No. 30) asphalt-saturated organic felt specified in ASTM D 226.
 - 2) Slip Sheets:
 - a) Provide rosin-sized paper slip sheets having a minimum 3 pounds per 100 square feet weight for use over felt underlayment.

F. Assemblies:

1. Concealed Through-Wall Sheet Metal Flashing:
 - a. Fabricate concealed through-wall metal flashings embedded in concrete or masonry from copper with ribs formed in a dovetail pattern at 3 inch intervals along the length of the flashing to provide a 3-way integral mortar bond and weep-hole drainage.
 - b. Manufacturers:
 - 1) Cheney Flashing Company, Inc., Cheney Flashing (Dovetail), www.cheneyflashing.com.

- 2) Keystone Flashing Company, Keystone Three-Way Interlocking Thruwall Flashing, www.keystoneflashing.com.
 - 3) Approved equal.
2. Reglets:
 - a. Provide reglet units of the type, material, and profile indicated on the Contract Drawings, formed to securely interlock the separate reglet and counterflashing pieces, and compatible with the flashing indicated.
 - b. Masonry Type:
 - 1) Provide masonry type reglets having offset top flanges for embedment in masonry mortar joints or concrete panels.
 - c. Flexible Flashing Retainer:
 - 1) Provide resilient plastic or rubber accessories designed to secure flexible flashing in reglets where the clearance does not permit using standard metal counterflashing, or where the Contract Drawings show reglets without metal counterflashing.
 - d. Counterflashing Wind-Restraint Clips:
 - 1) To prevent wind uplift of the lower edge of counterflashing, provide restraining clips to be installed before installing the counterflashing.
 - e. Manufacturers:
 - 1) Fry Reglet Corporation, www.fryreglet.com.
 - 2) W.P. Hickman Company, www.wphickman.com.
 - 3) Keystone Flashing Company, www.keystoneflashing.com.
 - 4) Approved equal.
3. Low-Slope Roof Sheet Metal Fabrications:
 - a. Copings:
 - 1) Provide copings fabricated of either 0.050-inch thick aluminum or 0.0396 inch thick pre-painted, metallic-coated steel; and in sections at least 96 inches long, but not exceeding 10-foot long.
 - 2) Fabricate joint plates the same thickness as the copings.
 - 3) Provide copings having continuous cleats to support the edge of the external leg, and drill elongated holes for fasteners on the interior leg.
 - 4) Miter the corners, and seal and solder or weld the copings so they are watertight.
 - b. Counterflashing:
 - 1) Provide counterflashing fabricated from either 0.0396-inch thick galvanized steel or 0.0396-inch thick prepainted, metallic-coated steel.
 - c. Roof Coping and Trim Coating System:
 - 1) Color:
 - a) Provide a prefinished coating color to match the prefinished roof system unless otherwise selected by the Program/Project Manager.

4. Wall Sheet Metal Fabrications:
 - a. Openings Flashing in Frame Construction:
 - 1) Provide head, sill, jamb, and similar flashings fabricated from 0.0396 inch thick galvanized steel and so they extend 4 inches beyond the wall openings.
 - 2) Form head and sill flashing with 2-inch high end dams.
5. Miscellaneous Sheet Metal Fabrications:
 - a. Equipment Support Flashing:
 - 1) Fabricate equipment support flashing from 0.0396 inch thick pre-painted, metallic-coated steel.

2.02 SHOP FABRICATION:

- A. Custom fabricate sheet metal flashing and trim to comply with recommendations in the SMACNA Architectural Sheet Metal Manual that apply to design, dimensions, metal, and other characteristics of the item indicated.
 1. Shop fabricate items where practicable.
 2. Fabricate sheet metal flashing and trim according to the details shown on the Contract Drawings, to fit the substrates true to the line and levels indicated.
 3. Form exposed sheet metal work without excessive oil canning, buckling, and tool marks; and with exposed edges folded back to form hems.
- B. Thicknesses:
 1. Fabricate the sheet metal flashing and trim to have the thickness or weight needed to comply with the performance requirements, but not less than that specified for each application and metal.
 2. Fabricate the sheet metal flashing and trim to have the thickness recommended for application in the SMACNA Architectural Sheet Metal Manual and FMG Property Loss Prevention Data Sheet 1-49, but not less than thickness of metal being secured.
- C. Seams:
 1. Fabricate nonmoving seams in aluminum and sheet metal with flat-lock seams.
 - a. In aluminum, form the seams, seal them with epoxy seam sealer, then rivet the joints for additional strength.
 - b. In sheet metal, tin the edges to be seamed, form the seams, and then solder the seams.
 2. Joint Type:
 - a. Provide butt joint assemblies having a 12-inch- wide concealed backup plate, filled with elastomeric sealant concealed within the joints.
 3. Sealed Joints:

- a. Form non-expansion, but movable, joints in the metal to accommodate elastomeric sealant as indicated in the SMACNA Architectural Sheet Metal Manual.

D. Cleats and Attachment Devices:

1. Fabricate cleats and attachment devices from same material as sheet metal component being anchored, or from compatible, noncorrosive metal as recommended by the sheet metal manufacturer.
2. Provide cleats and attachment devices sized as recommended by the SMACNA Architectural Sheet Metal Manual or the sheet metal manufacturer for the application, but never less than the thickness of the metal being secured.
3. Unless otherwise indicated in the Contract Documents, conceal fasteners and expansion provisions wherever possible on exposed-to-view sheet metal flashing and trim.

2.03 FINISH MATERIALS:

- A. For recommendations for applying and designating finishes, comply with the recommendations specified in NAAMM AMP 500.

B. Aluminum Finishes:

1. Finish designations prefixed by AA refer to finishes defined by the system for designating aluminum finishes established by the Aluminum Association and specified in AA DAF-45.
2. Anodized Finishes:
 - a. Clear Anodized Finish:
 - 1) Provide an AAMA 611 AA-M12C22A41 Class I clear anodic coating not less than 0.7 mils thick.
 - b. Color Anodized Finish:
 - 1) Provide an AAMA 611 AA-M12C22A42/44 Class I integrally or electrolytically [champagne][light bronze][medium bronze][black][dark bronze] colored anodic coating not less than 0.7 mils thick.
3. High-Performance Organic Finish:
 - a. Provide an AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating) finish.
 - 1) Prepare, pretreat, and apply the coating to exposed metal surfaces in accordance with coating and resin manufacturers' written instructions.
4. Fluoropolymer 3-Coat System:
 - a. Provide the manufacturer's standard 3-coat, thermo-cured system complying with the requirements specified in Section 09961, Fluoropolymer Coatings.
 - b. Color:

- 1) Provide a color matching samples selected by the Program/Project Manager from the manufacturer's full range.

2.04 ACCESSORIES

A. Asphalt Roofing Cement:

1. Provide asbestos free asphalt roofing cement complying with the requirements specified in ASTM D 4586, and of a consistency required for the application.

B. Burning Rod for Lead:

1. Provide burning rods for lead having the same composition as the lead sheet.

C. Solder:

1. Except for stainless steel, provide solder complying with the requirements for Grade Sn50 as specified in ASTM B 32.
 - a. Provide rosin flux for use with the solder.
2. For stainless steel, provide solder complying with the requirements for Grade Sn60 as specified in ASTM B 32, and having acid flux of the type recommended by the stainless-steel sheet manufacturer.

D. Fasteners:

1. Provide fasteners of the same metal as the flashing/sheet metal, or of other non-corrosive metal, as recommended by the sheet manufacturer.
2. Match the finish of exposed heads with the material being fastened.
3. Provide wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand the design loads.
 - a. Exposed Fasteners:
 - 1) For exposed fasteners, provide fasteners having plastic caps or factory-applied coating on their heads matching the color of the sheet metal.
 - b. Fasteners for Flashing and Trim:
 - 1) For fasteners for flashing and trim, provide gasketed, blind fasteners or self-drilling screws having a hex washer head.
 - c. Blind Fasteners:
 - 1) For blind fasteners, provide high-strength aluminum or stainless-steel rivets.

E. Bituminous Coating:

1. Provide cold-applied asphalt mastic complying with the requirements specified in SSPC-Paint 12, and compounded so it produces a per coat dry film thickness of 15 mils.
2. Provide an inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

- F. Bituminous Mastic:
 - 1. Provide solvent-type bituminous mastic complying with the requirements specified in SSPC-Paint 12, nominally free of sulfur, and containing no asbestos fibers.
 - 2. Compound the bituminous mastic so it produces a 15 mil dry film thickness for each coat.
- G. Mastic Sealant:
 - 1. Provide polyisobutylene; non-hardening, non-skinning, nondrying, non-migrating mastic sealant.
- H. Elastomeric Sealant:
 - 1. Provide elastomeric silicone polymer sealant complying with requirements for joint sealants of the type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and make them watertight specified in ASTM C 920 and Section 07920, Joint Sealants.
 - a. Provide a generic type of elastomeric sealant as recommended by the sheet metal manufacturer and fabricator of the components being sealed.
- I. Epoxy Seam Sealer:
 - 1. Provide a 2-part, noncorrosive, aluminum seam-cementing compound, recommended by the aluminum manufacturer for exterior and interior nonmoving joints, including riveted joints.
- J. Sealing Tape:
 - 1. Provide pressure-sensitive, 100 percent solids, polyisobutylene compound sealing tape having a release-paper backing.
 - 2. Provide permanently elastic, non-sag, nontoxic, non-staining tape.
- K. Adhesives:
 - 1. Provide adhesives of the type recommended by the flashing sheet metal manufacturer for waterproof and weather-resistant seaming, and adhesive application of flashing sheet metal.
- L. Metal Accessories:
 - 1. Provide sheet metal clips, straps, anchoring devices, and similar accessory units as required for installation of Work.
 - a. Provide metal accessories matching or compatible with the material being installed.
 - b. Provide noncorrosive metal accessories.
 - c. Provide metal accessories of the size and thickness required to produce the specified performance.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. With the sheet metal flashing and trim installer present, examine the substrates, areas, and conditions to verify the actual locations, dimensions, and other conditions affecting performance of Work.
 - a. Verify that the substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
 - b. Verify the shapes and dimensions of surfaces to be covered before fabricating sheet metal products.
 - c. Verify that roof openings, curbs, pipes, sleeves, ducts, and vents through the roof are solidly set; and that nailing strips are properly located.
 - d. Verify that roofing termination and base flashings are in place, sealed, and secure.
- B. Evaluation and Assessment:
 - 1. Proceed to install sheet metal flashing and trim only after unsatisfactory conditions have been corrected

3.02 PREPARATION

- A. Install the starter and edge strips and the cleats before starting to install sheet metal flashing and trim.
- B. Back paint concealed metal surfaces with protective backing paint to a minimum dry film thickness of 15 mils.

3.03 INSTALLATION

- A. Unless otherwise indicated, install sheet metal flashing and trim in compliance with the specified performance requirements, the manufacturer's installation instructions, and the SMACNA Architectural Sheet Metal Manual.
 - 1. Using the methods indicated in the referenced requirements, instructions, and standard, securely anchor the units for the Work of this Section in place.
 - 2. Set sheet metal flashing and trim true to line and level as indicated in the Contract Documents.
 - 3. Install sheet metal flashing and trim to fit the substrates, and so the result is watertight performance.
 - 4. Provide fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required to complete the sheet metal flashing and trim system.
 - 5. Install sheet metal flashing materials and fabrications in a manner that prevents bending, warping, twisting, and surface damage.

6. Install exposed sheet metal flashing and trim without producing excessive oil canning, buckling, and tool marks on the materials.
 7. Torch cutting of sheet metal flashing and trim is not permitted.
- B. Laps, Joints, and Seams:
1. Install the Work so the laps, joints, and seams will be permanently watertight and weatherproof.
 - a. Seal joints with elastomeric sealant to produce watertight construction.
 - 1) Prepare the joints, and apply sealants in accordance with the requirements specified in Section 07920, Joint Sealants.
 - b. Where sealant-filled joints are used, form the joints so the sealant is completely concealed.
 2. Provide uniform, neat seams having keeping exposure of solder, welds, and elastomeric sealant to a minimum.
 3. Aluminum Flashing:
 - a. Where it is necessary to produce the required strength in uncoated aluminum, rivet or weld the joints.
- C. Fastening:
1. Anchor the sheet metal flashing and trim and other components of the Work securely in place, with allowances for thermal and structural movement.
 2. Provide the size fastener that will penetrate the substrate not less than 1-1/4 inches for nails, and not less than 3/4 inch for wood screws.
 - a. Galvanized or Pre-painted, Metallic-Coated Steel:
 - 1) For galvanized or pre-painted metallic-coated steel, provide stainless-steel fasteners.
 - b. Aluminum:
 - 1) For aluminum, provide aluminum or stainless steel fasteners.
 - c. Stainless Steel:
 - 1) For stainless steel, provide stainless-steel fasteners.
 3. Where possible, conceal the fasteners.
 4. Space cleats not more than 12 inches apart.
 5. Anchor each cleat with two fasteners.
 6. Bend tabs over fasteners.
- D. Soldered Joints:
1. Do not solder pre-painted, metallic-coated steel and aluminum sheet.
 2. Clean the surfaces to be soldered to remove oils and foreign matter.
 3. Except where pre-tinned surface would show in finished Work, pre-tin the edges of the sheets to be soldered to a width of 1-1/2 inches.
 4. Do not use open-flame torches for soldering.
 - a. Heat the surfaces to receive solder, and flow solder into the joints.
 - b. Fill the joints completely.
 - c. Completely remove flux and spatter from exposed surfaces.
 5. Stainless-Steel Soldering:

- a. Pre-tin the edges of uncoated sheets to be soldered using the solder recommended for stainless steel and phosphoric acid flux.
 - b. Promptly wash off acid flux residue from the metal after soldering.
- E. Installing Reglets:
 1. Install reglets to accommodate counterflashing in manner and by using the methods indicated.
 2. Install surface mounted reglets true to lines and levels.
 3. Seal the top of the reglets with sealant.
- F. Installing Counterflashings:
 1. Install counterflashings in reglets and/or receivers.
 2. Securely snap counterflashings into place using sealant, cleats, and/or other attachment devices; and apply lead wedges and sealant, an interlocking folded seam, or blind rivets and sealant to produce a waterproof installation.
- G. Wall Flashing:
 1. Install sheet metal wall flashing to intercept and exclude penetrating moisture in accordance with the recommendations in the SMACNA Architectural Sheet Metal Manual and as indicated in the Contract Documents.
 2. Openings Flashing in Frame Construction:
 - a. Install continuous head, sill, jamb, and similar flashings to extend 4 inches beyond wall openings.
- H. Roof Flashing:
 1. Copings:
 - a. Anchor copings to resist uplift and outward forces in accordance with the recommendations for the specified wind zone in FMG Loss Prevention Data Sheet 1-49, and as indicated in the Contract Documents.
 - b. Interlock the exterior bottom edge of the coping with continuous cleats anchored to the substrate at 16-inch centers.
 - c. Anchor interior leg of coping using screw fasteners and washers at 18-inch centers.
 2. Counterflashing:
 - a. Coordinate the installation of counterflashing with the installation of the base flashing.
 - b. Insert counterflashing in reglets or receivers, and fit it tightly to the base flashing.
 - c. Extend counterflashing 4 inches over the base flashing.
 - d. Butt the counterflashing joints with a backing plate that is at least 12 inches wide, and bed the counterflashing joints using elastomeric sealant.

- e. Secure the counterflashing joints in a waterproof using anchors and washers at 36-inch centers.
- 3. Roof-Penetration Flashing:
 - a. Seal and clamp flashing to pipes penetrating the roof, except for lead flashing on vent piping.
- I. Roof-Drainage System:
 - 1. To drain the roof in the most efficient manner, install those drainage items fabricated from sheet metal using straps, adhesives, and/or anchors as recommended by the SMACNA Architectural Sheet Metal Manual or the item's manufacturer.
- J. Equipment Support Flashing:
 - 1. Weld or seal with elastomeric sealant the equipment support flashing to the equipment support member.
- K. Special Techniques:
 - 1. Expansion Provisions:
 - a. Provide thermal expansion provisions for exposed sheet metal Work as specified herein.
 - b. Space movement joints a maximum of 10 feet apart with no joints allowed within 24 inches of a corner or intersection.
 - 2. Metal Protection:
 - a. Where dissimilar metals will contact each other or corrosive substrates, protect the sheet metal flashing and trim against galvanic action by painting the contact surfaces with a bituminous coating or by other permanent separation as recommended by the fabricator or manufacturers of the dissimilar metals.
 - b. Coat the side of the uncoated aluminum and stainless-steel sheet metal flashing and trim where the flashing and trim will contact wood, ferrous metal, or cementitious construction with bituminous coating.
 - c. Underlayment:
 - 1) Where installing metal flashing directly on cementitious or wood substrates, install a course of felt underlayment and cover it with a slip sheet, or install a course of polyethylene underlayment.
 - d. Where required to furnish the required waterproof performance, bed the flanges in a thick coat of asphalt roofing cement.

3.04 REPAIR/RESTORATION

- A. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

3.05 CLEANING

- A. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed.
- B. Clean exposed metal surfaces to remove substances that might cause corrosion of the metal, interfere with uniform oxidation and weathering, or deterioration of the finishes.
 - 1. Clean and neutralize flux materials.
 - 2. Clean off excess solder and sealants.
- C. On completion of sheet metal flashing and trim installation, clean the finished surfaces, including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing.
 - 1. Maintain the sheet metal flashing and trim in a clean condition during construction.

3.06 PROTECTION

- A. During construction, provide protection and maintain the conditions that ensure that sheet metal flashing and trim Work is without damage or deterioration other than natural weathering at the time of Substantial Completion.

SECTION 07720

ROOF ACCESSORIES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following roof accessories:
 - a. Roof curbs.
 - b. Equipment supports.
 - c. Roof hatches.
 - d. Hatch-type heat and smoke vents.
 - e. Dropout-type heat and smoke vents.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 09960 - High-Performance Coatings.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. PVDF: Polyvinylidene fluoride.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Counterflashing: Formed metal sheeting secured to walls, curbs, or other surfaces, for use in protecting the top edge of base flashings from exposure to weather.
 - 3. Polyvinylidene Fluoride: A highly non-reactive and pure thermoplastic fluoropolymer, also known as Kynar, Hylar, or Sygef.
- C. Reference Standards:
 - 1. American Architectural Manufacturers Association (AAMA):
 - a. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum.
 - b. AAMA 620 - Voluntary Specifications for High Performance Organic Coatings on Coil Coated Architectural Aluminum Substrates.
 - c. AAMA 621 - Voluntary Specifications for High Performance Organic Coatings on Coil Coated Architectural Hot Dipped Galvanized (HDG) and Zinc-Aluminum Coated Steel Substrates.

- d. AAMA 2603 - Voluntary Specification, Performance Requirements and Test Procedures for Pigmented Organic Coatings on Aluminum Extrusions and Panels.
 2. American Wood Protection Association (AWPA):
 - a. AWPA T1 – Use Category System: Processing and Treatment Standard.
 - b. AWPA U1 – Use Category System: User Specification for Treated Wood.
 3. ASTM International (ASTM):
 - a. ASTM A 36/A 36M – Standard Specification for Carbon Structural Steel.
 - b. ASTM A 123/A 123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
 - c. ASTM A 240/A 240M - Standard Specification for Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
 - d. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - e. ASTM A 666 – Standard Specification for Annealed or Cold-Worked Austenitic Stainless-Steel Sheet, Strip, Plate, and Flat Bar.
 - f. ASTM A 780 – Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.
 - g. ASTM A 792/A 792M – Standard Specification for Steel Sheet, 55% Aluminum-Zinc Alloy-Coated by the Hot-Dip Process.
 - h. ASTM A 1011/A 1011M – Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.
 - i. ASTM B 209 – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
 - j. ASTM B 209M – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate [Metric].
 - k. ASTM B 221 – Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
 - l. ASTM B 221M – Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes [Metric].
 - m. ASTM D 256 – Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics.
 - n. ASTM D 4802 – Standard Specification for Poly(Methyl Methacrylate) Acrylic Plastic Sheet.
 4. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 5. FM Approvals LLC (FM):

- a. FM Class Number 2031 – Approval Standard for Heat Responsive Links for Fire Protection.
 - b. FM Class Number 4430 – Approval Standard for Heat and Smoke Vents.
 - c. The Approval Guide, www.approvalguide.com.
6. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
7. Underwriters Laboratories, Inc.® (UL):
 - a. UL Online Certifications Directory, <http://www.ul.com/regulators/quickguide.html>.
 - 1) UL Fire Resistance Directory (Fire Resistance Ratings).
 - b. UL 793 - Standard for Automatically Operated Roof Vents for Smoke and Heat.
 - c. UL 972 - Standard for Burglary Resisting Glazing Material.
8. United States Government:
 - a. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1910 - Occupational Health and Safety Standards.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
 2. Coordination Drawings:
 - a. Prepare and submit Coordination Drawings to the Program/Project Manager for approval.
 - 1) Show the following items for this Contract drawn to scale, and coordinate them with each other:
 - a) Roof plans.
 - b) Roof penetrations.
 - c) Roof-mounted items.
- B. Sequencing:
 1. Complete support framing for roof accessories and roof decking before commencing to install the roof accessories.
 2. Install counterflashing after the roofing has been installed.

1.04 SUBMITTALS

- A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Roof curbs.
 - 2) Equipment supports.
 - 3) Roof hatches.
 - 4) Hatch-type heat and smoke vents.
 - 5) Dropout-type heat and smoke vents.
 - b. Shop Drawings:
 - 1) Roof curbs.
 - 2) Equipment supports.
 - 3) Roof hatches.
 - 4) Hatch-type heat and smoke vents.
 - 5) Dropout-type heat and smoke vents.
 - 6) Coordination Drawings:
 - c. Samples:
 - 1) Samples of each exposed product provided under this Section.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Roof accessory manufacturers' written installation instructions.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for each roof accessory provided under this Section.
 - b. Warranty Documentation:
 - 1) Painted Finishes Warranty.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
2. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.

- b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved.
- c. Both continuous and periodic Special Inspections will be performed during the erection of unit masonry assemblies.
- 3. Testing and Inspection Agency:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.
 - b. Other qualified testing and inspecting agencies acceptable to the Authorities Having Jurisdiction, such as Underwriters Laboratories, Inc. (UL) and FM Approvals LLC, perform testing and follow-up inspections of systems.
 - 1) Underwriters Laboratories, Inc. (UL) Fire Resistance Directory:
 - a) Underwriters Laboratories, Inc. publishes a Fire Resistance Directory which lists all assemblies, systems, and devices UL has tested, and classifies them under Category Codes (CCN) in the UL Online Certifications Directory.
 - 2) FM Approvals LLC (FM) Listing:
 - a) FM Approvals LLC (FM) furnishes a free online service, The Approval Guide, listing approved assemblies complying with various FM Approval Standards.

B. Site Samples:

- 1. Submit Samples for each exposed product provided under this Section, and of each color and texture specified to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

- 1. Ensure materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.

B. Storage and Handling Requirements:

- 1. Store roof accessories on blocking or other supports to prevent contact with dirt, debris, and moisture.
 - a. Protect ferrous roof accessories from exposure to conditions that produce rust.
- 2. Handle roof accessories so no parts are bent, broken, or otherwise damaged; and avoid damage to other material and work.

- a. Exercise care to avoid scraping and over stressing the metal.
 - b. Replace bent or damaged pieces, unless the Program/Project Manager authorizes repairs.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

- A. Special Warranty:
 - 1. Painted Finishes Warranty:
 - a. Furnish a Painted Finishes Warranty on the manufacturer's standard form in which the manufacturer agrees to repair finishes or replace roof accessories that show evidence of the deterioration of factory-applied finishes within 20 years from the date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

- A. Description:
 - 1. Regulatory Requirements:
 - a. Roof Hatch Safety Railing Systems:
 - 1) For all roof hatches, provide a safety railing system complying with the requirements specified in 29 CFR 1910.23, Guarding Floor and Wall Openings and Holes, and with the requirements of the Authorities Having Jurisdiction.
- B. Design Criteria:
 - 1. Provide the materials, types of fasteners, protective coatings, sealants, and other miscellaneous items required by the roof accessory manufacturer to provide a complete installation.
 - 2. Heat and Smoke Vent Standard:
 - a. Provide heat and smoke vents that have been tested and UL-listed in the UL Fire Resistance Directory as complying with the requirements specified in UL 793 and are FM Approved in accordance with the requirements specified in FM Class Number 4430.
 - 3. Product Data:
 - a. Submit Product Data for each type of roof accessory provided under this Section to the Program/Project Manager for approval.
 - 4. Shop Drawings:
 - a. Submit Shop Drawings for the roof accessories provided under this Section to the Program/Project Manager for approval.

C. Materials:

1. Metal Materials:

a. Zinc-Coated (Galvanized) Steel Sheet:

- 1) Provide zinc-coated (galvanized) steel sheet complying with the requirements specified for the G90 (Z275) coating designation in ASTM A 653/A 653M; and having the finish indicated in the Contract Documents complying with the following:
 - a) Mill-Phosphatized Finish:
 - (1) Provide a mill-phosphatized finish in accordance with the manufacturer's standard for field painted galvanized steel sheet.
 - b) Factory Prime Coating:
 - (1) Where field painting is indicated in the Contract Documents, apply a pretreatment and a white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum 0.2 mil (0.005mm) dry film thickness.
 - c) Exposed Coil-Coated Finish:
 - (1) Provide a two-coat fluoropolymer finish system consisting of a primer and a fluoropolymer color topcoat complying with the requirements specified in AAMA 621; and containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight.
 - d) Baked-Enamel or Powder-Coat Finish:
 - (1) Provide the manufacturer's standard two-coat, baked-on finish consisting of a prime coat and a thermosetting topcoat, with a minimum 1 mil (0.025mm) topcoat dry film thickness.

b. Aluminum-Zinc Alloy-Coated Steel Sheet:

- 1) Provide aluminum-zinc alloy-coated steel sheet complying with the requirements for AZ50 (AZM150) coated material specified in ASTM A 792/A 792M; and having the finish indicated in the Contract Documents complying with the following:
 - a) Factory Prime Coating:
 - (1) Where field painting is indicated in the Contract Documents, apply a pretreatment and a white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum 0.2 mil (0.005mm) dry film thickness.
 - b) Exposed Coil-Coated Finish:
 - (1) Provide a two-coat fluoropolymer finish system consisting of a primer and a fluoropolymer color topcoat complying with the requirements specified in AAMA 621; and containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight.
 - c) Baked-Enamel or Powder-Coat Finish:

- (1) Provide the manufacturer's standard two-coat, baked-on finish consisting of a prime coat and a thermosetting topcoat, with a minimum 1 mil (0.025mm) topcoat dry film thickness.
- c. Aluminum Sheet:
 - 1) Provide aluminum sheet complying with the requirements specified in ASTM B 209 (ASTM B 209M), of the manufacturer's standard alloy for the finish required, having the temper to suit the forming operations and performance required; and having the finish indicated in the Contract Documents complying with the following:
 - a) Mill Finish:
 - (1) Provide aluminum sheet having the mill finish as Manufactured.
 - b) Factory Prime Coating:
 - (1) Where field painting is indicated in the Contract Documents, apply a pretreatment and a white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum 0.2 mil (0.005mm) dry film thickness.
 - c) Clear Anodic Finish:
 - (1) Provide aluminum sheet having a 0.010mm or thicker clear anodic finish complying with the requirements for a Class II finish specified in AAMA 611.
 - d) Color Anodic Finish:
 - (1) Provide aluminum sheet having a 0.010mm or thicker color anodic finish complying with the requirements for a Class II finish specified in AAMA 611.
 - e) Exposed Coil-Coated Finish:
 - (1) Provide a two-coat fluoropolymer finish system consisting of a primer and a fluoropolymer color topcoat complying with the requirements specified in AAMA 620; and containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight.
 - f) Baked-Enamel or Powder-Coat Finish:
 - (1) Provide a baked-enamel or powder-coat finish complying with the requirements specified in AAMA 2603, except having a minimum 1.5 mils (0.04mm) dry film thickness.
- d. Aluminum Extrusions and Tubes:
 - 1) Provide aluminum extrusions and tubes complying with the requirements specified in ASTM B 221 (ASTM B 221M), of the manufacturer's standard alloy and temper for the type of use; and finished to match the assembly where used
 - a) If aluminum extrusions and tubes are not finished to match the assembly where used, provide mill-finished extrusions and tubes.

- e. Stainless-Steel Sheet and Shapes:
 - 1) Provide stainless-steel sheet and shapes complying with the requirements specified in ASTM A 240/A 240M, or with the requirements for Type 304 stainless-steel specified in ASTM A 666.
- f. Steel Shapes:
 - 1) Provide steel shapes complying with the requirements specified in ASTM A 36/A 36M; and, unless otherwise indicated in the Contract Documents, hot-dip galvanized in accordance with the requirements specified in ASTM A 123/A 123M.
- 2. Glazing:
 - a. Acrylic Glazing:
 - 1) Provide the manufacturer's standard thermoformable, monolithic sheet, acrylic glazing complying with the requirements for Type UVA (formulated with UV absorber), Finish 1 (smooth or polished) acrylic sheet specified in ASTM D 4802.
 - b. Polycarbonate Glazing:
 - 1) Provide thermoformable, monolithic polycarbonate sheets manufactured using the extrusion process.
 - 2) Provide polycarbonate sheets rated burglar-resistant in accordance with the requirements specified in UL 972, and having an average impact strength of 12 to 16 pounds force per square inch (640J/m to 854J/m) of width when tested in accordance with Method A (Izod) specified in ASTM D 256.
- 3. Wood Nailers:
 - a. Provide softwood lumber wood nailers.
 - b. Preservative:
 - 1) Pressure treat the wood nailers with waterborne preservatives complying with the requirements specified in AWPA T1 and AWPA U1, acceptable to the Authorities Having Jurisdiction (AHJ) for aboveground use, and containing no arsenic or chromium.
 - c. Thickness:
 - 1) Provide wood nailers not less than 1-1/2 inches (38mm).
- 4. Security Grills:
 - a. Provide 3/4-inch (19-mm) diameter security grills complying with the requirements specified in ASTM A 1011/A 1011M, and consisting of steel bars spaced 6 inches (150mm) apart on center in one direction and 12 inches (300mm) apart on center in a direction at right angles to the first.
 - b. Factory-finish the security grills with the manufacturer's or fabricator's standard, universal shop primer compatible with the substrate and the field-applied finish paint system specified in Section 09960, High-Performance Coatings.
- 5. Fasteners:

- a. Provide the roof accessory manufacturer's recommended fasteners suitable for the application and the metals being fastened.
 - b. Match the finish of exposed fasteners with the finish of the material being fastened.
 - c. For exterior exposed fasteners, provide non-removable fastener heads.
6. Sealants:
- a. Provide sealants as recommended by the roof accessory manufacturer for the installation indicated in the Contract Documents.

D. Roof Curbs:

- 1. Provide internally reinforced roof-curb units capable of supporting superimposed live and dead loads, including equipment loads and other construction indicated on the Contract Drawings.
 - a. Provide roof-curb units having integral spring-type vibration isolators.
- 2. Provide roof-curb units fabricated from zinc-coated (galvanized) steel sheet, aluminum-zinc alloy-coated steel sheet, aluminum sheet, or stainless-steel sheet as follows:
 - a. Zinc-Coated (Galvanized) or Aluminum-Zinc Alloy-Coated Steel Sheet:
 - 1) Thickness: 0.079 inch (2.01mm).
 - 2) Finish: Two-coat fluoropolymer.
 - 3) Color: To be selected by the Program/Project Manager from the manufacturer's full range.
 - b. Aluminum Sheet:
 - 1) Thickness: 0.090 inch (2.28mm).
 - 2) Finish: Two-coat fluoropolymer.
 - 3) Color: To be selected by the Program/Project Manager from the manufacturer's full range.
 - c. Stainless-Steel Sheet:
 - 1) Thickness: 0.078 inch (1.98mm).
 - 2) Finish: Manufacturer's standard.
- 3. Roof Curb Construction:
 - a. Roof Curb Assembly:
 - 1) Weld or mechanically fasten and seal the corner joints, the stepped integral metal cant raised the thickness of the roof insulation, and the integrally formed deck-mounting flange at the perimeter bottom.
 - b. Top Surface:
 - 1) Provide a level top surface around the perimeter of the roof curb.
 - 2) Provide a continuous factory-installed wood nailer around the perimeter on the top of the curb.
 - c. Roof Curb Height:
 - 1) Unless otherwise indicated, fabricate roof curbs a minimum of 12 inches (300mm) high.
 - d. Insulation:

- 1) Provide factory-installed 1-1/2-inch (38mm) thick polyisocyanurate board insulation in the roof curb.
- e. Liner:
 - 1) Provide a liner of the same material as the curb, and having the manufacturer's standard thickness and finish.
- f. Roof Curbs for Ribbed or Fluted Roofs:
 - 1) For roof curbs to be installed on ribbed or fluted metal roofs, form the deck-mounting flange at perimeter of the bottom of the roof curb to conform to the roof profile.
- g. Roof Curbs for Sloping Roofs:
 - 1) Accommodate roof slopes by sloping the deck-mounting flange.
 - a) On the side of the unit that obstructs water flow, provide a water diverter or cricket.
 - 2) Where slope or roof deck exceeds 1:48, taper the curb height of the perimeter to accommodate the roof slope so the top perimeter surface of the curb is level.
- h. Security Grille:
 - 1) Provide a security grille where indicated in the Contract Drawings.
4. Manufacturers:
 - a. AES Industries, Inc., www.aescurb.com.
 - b. Curbs Plus, Inc., www.curbs-plus.com.
 - c. Custom Solution Roof and Metal Products, www.csroofmetalproducts.com.
 - d. Greenheck Fan Corporation, www.greenheck.com.
 - e. LM Curbs, www.lmcurbs.com.
 - f. Metallic Products Corp, www.mpvent.com.
 - g. Milcor Inc.; Commercial Products Group of Hart & Cooley, Inc, www.milcorinc.com.
 - h. Pate Company (The), www.patecurbs.com.
 - i. Roof Products, Inc, www.rpicurbs.com.
 - j. Safe Air of Illinois, www.safeair-dowco.com.
 - k. Thybar Corporation, www.thybar.com.
 - l. Vent Products Co., Inc, www.ventproducts.com.
 - m. Approved equal.
- E. Equipment Supports:
 1. Provide internally reinforced metal equipment supports capable of supporting the superimposed live and dead loads, including equipment loads and other construction indicated on the Contract Drawings.
 2. Provide equipment supports fabricated from zinc-coated (galvanized) steel sheet, aluminum-zinc alloy-coated steel sheet, aluminum sheet, or stainless-steel sheet as follows:
 - a. Zinc-Coated (Galvanized) or Aluminum-Zinc Alloy-Coated Steel Sheet:
 - 1) Thickness: 0.079 inch (2.01mm).
 - 2) Finish: Two-coat fluoropolymer.

- 3) Color: To be selected by the Program/Project Manager from the manufacturer's full range.
 - b. Aluminum Sheet:
 - 1) Thickness: 0.090 inch (2.28mm).
 - 2) Finish: Two-coat fluoropolymer.
 - 3) Color: To be selected by the Program/Project Manager from the manufacturer's full range.
 - c. Stainless-Steel Sheet:
 - 1) Thickness: 0.078 inch (1.98mm).
 - 2) Finish: Manufacturer's standard.
3. Equipment Support Construction:
 - a. Equipment Support Assembly:
 - 1) Weld or mechanically fasten and seal the corner joints the stepped integral metal cant raised the thickness of the roof insulation, and the integrally formed deck-mounting flange at the perimeter bottom.
 - b. Top Surface:
 - 1) Provide a factory-installed 5-1/2 inch (140mm) wide wood nailer continuously around the top of the equipment support.
 - c. Equipment Support Height:
 - 1) Unless otherwise indicated, fabricate equipment supports a minimum of 12 inches (300mm) high.
 - d. Insulation:
 - 1) Provide factory-installed 1-1/2-inch (38mm) thick polyisocyanurate board insulation in the roof curb.
 - e. Liner:
 - 1) Provide a liner of the same material as the equipment support, and having the manufacturer's standard thickness and finish.
 - f. Counterflashing:
 - 1) Provide the manufacturer's standard removable, metal counterflashing, fabricated of the same metal and having the same finish as the equipment support.
 - g. Equipment Supports for Ribbed or Fluted Roofs:
 - 1) For equipment supports to be installed on ribbed or fluted metal roofs, form the deck-mounting flange at perimeter of the bottom of each equipment support to conform to the roof profile.
 - h. Equipment Supports for Sloping Roofs:
 - 1) Where the slope or roof deck exceeds 1:48, fabricate each support to have a height accommodating the roof slope so that the tops of the supports are level with each other.
 - 2) On the side of the equipment support that obstructs water flow, provide a water diverter or cricket.
 - i. Security Grille:
 - 1) Provide security grilles where indicated in the Contract Drawings.
4. Manufacturers:

- a. AES Industries, Inc., www.aescurb.com.
- b. Curbs Plus, Inc, www.curbs-plus.com.
- c. Custom Solution Roof and Metal Products, www.csroofmetalproducts.com.
- d. Greenheck Fan Corporation, www.greenheck.com.
- e. LM Curbs, www.lmcurbs.com.
- f. Milcor Inc.; Commercial Products Group of Hart & Cooley, Inc, www.milcorinc.com.
- g. Pate Company (The), www.patecurbs.com.
- h. Roof Products, Inc, www.rpicurbs.com.
- i. Thybar Corporation, www.thybar.com.
- j. Vent Products Co., Inc, www.ventproducts.com.
- k. Approved Equal.

F. Roof Hatch:

- 1. Provide metal roof-hatches having lids and insulated single-walled curbs of the following type(s) and size(s):
 - a. Single-Leaf Lid:
 - 1) Size: 30 inches by 36 inches (750mm by 900mm).
 - 2) Size: 48 inches by 144 inches
 - b. Double-Leaf Lid:
 - 1) Size: 72 inches by 96 inches (1830mm by 2440mm).
- 2. Roof Hatch Loads:
 - a. External Live Load: 40 pounds force per square foot (1.9kPa).
 - b. Internal Uplift Load: 20 pounds force per square foot (0.95kPa).
 - c. Dome Glazing Loads:
 - 1) External Live Load: 40 pounds force per square foot (1.9kPa).
 - 2) Internal Uplift Load: 20 pounds force per square foot (0.95kPa).
- 3. Provide roof-hatches fabricated from zinc-coated (galvanized) steel sheet, aluminum-zinc alloy-coated steel sheet, aluminum sheet, or stainless-steel sheet as follows:
 - a. Zinc-Coated (Galvanized) or Aluminum-Zinc Alloy-Coated Steel Sheet:
 - 1) Thickness: 0.079 inch (2.01mm).
 - 2) Finish: Two-coat fluoropolymer.
 - 3) Color: To be selected by the Program/Project Manager from the manufacturer's full range.
 - b. Aluminum Sheet:
 - 1) Thickness: 0.090 inch (2.28mm).
 - 2) Finish: Two-coat fluoropolymer.
 - 3) Color: To be selected by the Program/Project Manager from the manufacturer's full range.
 - c. Stainless-Steel Sheet:
 - 1) Thickness: 0.078 inch (1.98mm).
 - 2) Finish: Manufacturer's standard.
- 4. Roof Hatch Construction:

- a. Roof Hatch Assembly:
 - 1) Weld or mechanically fasten and seal the corner joints, continuous lid-to-curb counterflashing and weathertight perimeter gasketing, the stepped integral metal cant raised the thickness of the roof insulation, and the integrally formed deck-mounting flange at the perimeter bottom.
- b. Roof Hatch Height:
 - 1) Unless otherwise indicated, fabricate curbs a minimum of 12 inches (300mm) high.
- c. Insulation:
 - 1) Provide polyisocyanurate board insulation.
- d. Roof Hatch Lid:
 - 1) Provide opaque, insulated, double walled roof hatch lids having the manufacturer's standard metal liner of the same material and finish as the outer metal lid.
- e. Curb Liner:
 - 1) Provide a curb liner of the same material as the metal curb, and having the manufacturer's standard thickness and finish.
- f. Roof Hatches for Ribbed or Fluted Roofs:
 - 1) For roof hatches to be installed on ribbed or fluted metal roofs, form the flange at the perimeter of the bottom of each roof hatch to conform to the roof profile.
- g. Roof Hatches for Sloping Roofs:
 - 1) Where the slope or roof deck exceeds 1:48, fabricate the curb to have a perimeter height tapered to accommodate the roof slope so that the top surfaces of perimeter curb are level.
 - 2) On the side of the equipment support that obstructs water flow, provide a water diverter or cricket.
- h. Roof Hatch Lid Glazing:
 - 1) Provide double hatch lid glazing having a thickness capable of resisting the loads indicated in the Contract Documents.
 - a) Single-Dome Color:
 - (1) Provide white, translucent single dome hatch lid glazing.
 - b) Outer Double-Dome Color:
 - (1) Provide white, translucent outer double-dome hatch lid glazing.
 - c) Inner Double-Dome Color:
 - (1) Provide white, translucent inner double-dome hatch lid glazing.
- i. Hardware:
 - 1) Provide hardware for the roof hatch lids having a galvanized-steel spring latch with turn handles, a butt- or pintle-type hinge system, and padlock hasps on both the inside and outside.
 - a) Provide a two-point latch on lids larger than 84 inches (2130mm).

- b) Provide remote-control operation for the roof hatch lid hardware.
 - j. Safety Railing System:
 - 1) Provide the roof-hatch manufacturer's standard safety railing system attached to the roof hatch, including the rails, clamps, fasteners, a safety barrier at the railing opening, and the other accessories required for a complete installation
 - k. Ladder-Assist Post:
 - 1) Provide the roof-hatch manufacturer's standard device for attachment to roof-access ladders.
 - 2) Provide post locks in place on the full ladder-assist post extension; and a release mechanism that returns the post to its closed position.
- 5. Manufacturers:
 - a. AES Industries, Inc., www.aescurb.com.
 - b. Babcock-Davis, www.babcockdavis.com.
 - c. Bilco Company (The), www.bilco.com.
 - d. Bristolite Skylights, www.bristolite.com.
 - e. Custom Solution Roof and Metal Products, www.csroofmetalproducts.com.
 - f. Dur-Red Products, www.dur-red.com.
 - g. Hi Pro International, Inc, <http://www.hiprintl.com>.
 - h. J.L. Industries, Inc, jindustries.com.
 - i. Metallic Products Corp, www.mpvent.com.
 - j. Milcor Inc.; Commercial Products Group of Hart & Cooley, Inc, www.milcorinc.com.
 - k. Naturalite Skylight Systems; Vistawall Group (The), www.vistawall.com.
 - l. Nystrom, nystrom.com.
 - m. O'Keeffe's Inc, www.okeeffes.com.
 - n. Pate Company (The), www.patecurbs.com.
 - o. Precision Ladders, LLC, precisionladders.com.
 - p. Approved Equal.
- G. Heat and Smoke Vents:
 - 1. Hatch-Type Heat and Smoke Vents:
 - a. Provide the manufacturer's standard hatch-type heat and smoke vents having double-walled insulated curbs, welded or mechanically fastened and sealed corner joints, an integral condensation gutter, and cap flashing.
 - b. Lids and Gaskets:
 - 1) Provide each hatch-type heat and smoke vent with an insulated double-walled lid having a continuous weathertight lid gasket around the perimeter of the lid, and of the following type(s) and size(s):
 - a) Single-Leaf Lid:

- (1) Size: 30 inches by 36 inches (750mm by 900mm).
 - b) Double-Leaf Lid:
 - (1) Size: 72 inches by 96 inches (1830mm by 2440mm).
 - 2) Equip the hatch-type heat and smoke vent with automatic self-lifting mechanisms and a UL-listed smoke-detection system.
- c. Hatch-Type Heat and Smoke Vent Loads:
 - 1) External Live Load: 40 pounds force per square foot (1.9kPa).
 - 2) Internal Uplift Load: 30 pounds force per square foot (1.4kPa).
 - 3) Hatch Release Loads:
 - a) When the hatch release is actuated, the lid must be capable of opening against a 10 pounds force per square foot (0.5kPa) snow or wind load, and of locking in position.
 - 4) Hatch Lid Glazing Loads:
 - a) External Live Load: 40 pounds force per square foot (1.9kPa).
 - b) Internal Uplift Load: 20 pounds force per square foot (0.95kPa).
- d. Provide hatch-type heat and smoke vent curbs, framing, and lids fabricated from zinc-coated (galvanized) steel sheet, aluminum-zinc alloy-coated steel sheet, aluminum sheet, or stainless-steel sheet as follows:
 - 1) Zinc-Coated (Galvanized) or Aluminum-Zinc Alloy-Coated Steel Sheet:
 - a) Thickness: 0.079 inch (2.01mm).
 - b) Finish: Two-coat fluoropolymer.
 - c) Color: To be selected by the Program/Project Manager from the manufacturer's full range.
 - 2) Aluminum Sheet:
 - a) Thickness: 0.090 inch (2.28mm).
 - b) Finish: Two-coat fluoropolymer.
 - c) Color: To be selected by the Program/Project Manager from the manufacturer's full range.
 - 3) Stainless-Steel Sheet:
 - a) Thickness: 0.078 inch (1.98mm).
 - b) Finish: Manufacturer's standard.
- e. Hatch-Type Heat and Smoke Vent Construction:
 - 1) Insulation:
 - a) Provide polyisocyanurate board insulation.
 - 2) Lids:
 - a) Provide opaque, insulated, double walled roof hatch lids having the manufacturer's standard metal liner of the same material and finish as the outer metal lid.
 - 3) Exterior Curb:
 - a) Liner:

- (1) Provide an exterior curb liner of the same material as the metal curb, and having the manufacturer's standard finish.
 - b) Height:
 - (1) Unless otherwise indicated, fabricate curbs a minimum of 12 inches (300mm) high.
 - 4) Hatch-Type Heat and Smoke Vents for Sloping Roofs:
 - a) Where the slope or roof deck exceeds 1:48, fabricate the curb to have a perimeter height tapered to accommodate the roof slope so that the top surfaces of perimeter curb are level.
 - b) On the side of the equipment support that obstructs water flow, provide a water diverter or cricket.
 - 5) Security Grille:
 - a) Provide security grilles where indicated in the Contract Drawings.
 - 6) Hatch-Type Heat and Smoke Vent Lid Glazing:
 - a) Provide double hatch lid glazing having a thickness capable of resisting the loads indicated in the Contract Documents.
 - b) Provide white, translucent hatch lid glazing.
 - 7) Hardware:
 - a) Provide hardware for the hatch-type heat and smoke vent consisting of corrosion resistant or hot-dip galvanized hinges, hold-open devices, and independent manual-release devices for inside and outside operation of lids.
- f. Manufacturers:
 - 1) Babcock-Davis, www.babcockdavis.com.
 - 2) Bilco Company (The), www.bilco.com.
 - 3) Bristolite Skylights, www.bristolite.com.
 - 4) Dur-Red Products, www.dur-red.com.
 - 5) Hi Pro International, Inc, <http://www.hiprointl.com>.
 - 6) J.L. Industries, Inc, jlintdustries.com.
 - 7) Milcor Inc.; Commercial Products Group of Hart & Cooley, Inc, www.milcorinc.com.
 - 8) Naturalite Skylight Systems; Vistawall Group (The), www.vistawall.com.
 - 9) Nystrom, nystrom.com.
 - 10) O'Keeffe's Inc, www.okeeffes.com.
 - 11) Pate Company (The), www.patecurbs.com.
 - 12) Western Canwell, www.westerncanwell.com.
 - 13) Approved Equal.
2. Dropout-Type Heat and Smoke Vents:
 - a. Provide the manufacturer's standard gravity operated, automatic dropout-type heat and smoke vents having double-walled insulated curbs and frame, welded or mechanically fastened and sealed corner joints, an integral condensation gutter, cap flashing, and heat-sensitive dome glazing that will deform and drop out of the vent opening

according to the heat and smoke vent standard indicated in Subparagraph 2.01.B.2.

- b. Dropout-Type Heat and Smoke Vent Loads:
 - 1) External Live Load: 40 pounds force per square foot (1.9kPa).
 - 2) Internal Uplift Load: 30 pounds force per square foot (1.4kPa).
 - 3) Dome Glazing Loads:
 - a) External Live Load: 40 pounds force per square foot (1.9kPa).
 - b) Internal Uplift Load: 20 pounds force per square foot (0.95kPa).
- c. Provide dropout -type heat and smoke vent curbs and framing fabricated from zinc-coated (galvanized) steel sheet, aluminum-zinc alloy-coated steel sheet, aluminum sheet, or stainless-steel sheet as follows:
 - 1) Zinc-Coated (Galvanized) or Aluminum-Zinc Alloy-Coated Steel Sheet:
 - a) Thickness: 0.079 inch (2.01mm).
 - b) Finish: Two-coat fluoropolymer.
 - c) Color: To be selected by the Program/Project Manager from the manufacturer's full range.
 - 2) Aluminum Sheet:
 - a) Thickness: 0.090 inch (2.28mm).
 - b) Finish: Two-coat fluoropolymer.
 - c) Color: To be selected by the Program/Project Manager from the manufacturer's full range.
 - 3) Stainless-Steel Sheet:
 - a) Thickness: 0.078 inch (1.98mm).
 - b) Finish: Manufacturer's standard.
- d. Dropout-Type Heat and Smoke Vent Construction:
 - 1) Insulation:
 - a) Provide polyisocyanurate board insulation.
 - 2) Exterior Curb:
 - a) Liner:
 - (1) Provide an exterior curb liner of the same material as the metal curb, and having the manufacturer's standard finish.
 - b) Height:
 - (1) Unless otherwise indicated, fabricate curbs a minimum of 12 inches (300mm) high.
 - 3) Dropout-Type Heat and Smoke Vents for Sloping Roofs:
 - a) Where the slope or roof deck exceeds 1:48, fabricate the curb to have a perimeter height tapered to accommodate the roof slope so that the top surfaces of perimeter curb are level.
 - b) On the side of the equipment support that obstructs water flow, provide a water diverter or cricket.
 - 4) Dropout-Type Heat and Smoke Vent Dome Glazing:

- a) Provide double polycarbonate glazing having a thickness capable of resisting the loads indicated in the Contract Documents.
 - (1) Single-Dome Color:
 - (a) Provide white, translucent, single-dome glazing.
 - (2) Outer Double-Dome Color:
 - (a) Provide white, translucent outer double-dome glazing.
 - (3) Inner Double-Dome Color:
 - (a) Provide white, translucent inner double-dome glazing.
- 5) Hardware:
 - a) Provide hardware for the dropout-type heat and smoke vent consisting of corrosion resistant or hot-dip galvanized hinges, hold-open devices, and independent manual-release devices for inside and outside] operation of lids.
- e. Manufacturers:
 - 1) Construction Specialties, Inc. www.c-sgroup.com
 - 2) Naturalite Skylight Systems; Vistawall Group (The), www.vistawall.com.
 - 3) Pate Company (The), www.patecurbs.com.
 - 4) Plasteco, Inc, www.plasteco.com.
 - 5) Approved Equal.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Verify that the dimensions of the roof openings for the roof accessories are adequate for installing the accessories.
- B. Evaluation and Assessment:
 - 1. Do not proceed with the Work of this Section until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install roof accessories in accordance with the manufacturer's written instructions.
 - 1. Use fasteners, separators, sealants, and other miscellaneous items as required for completing the installation of the roof accessories, and fit them to the substrates.
 - 2. Submit the roof accessory manufacturers' written installation instructions to the Program/Project Manager for information.
- B. Install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks.

- C. Anchor roof accessories securely in place so they are capable of resisting the loads specified.
- D. Install roof accessories so they are capable of being exposure to the weather without failing, rattling, leaking, or having fasteners and seals loosening.
- E. Seal joints with sealant as required by the roof accessory manufacturer.
- F. Special Techniques:
 - 1. Security Grilles:
 - a. Weld bar intersections and, either by welding or using tamper-resistant bolts, attach the ends of the bars to the structural frame or primary curb walls.
- G. Interface with Other Work:
 - 1. Metal Protection:
 - a. Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting the contact surfaces with a bituminous coating, or by using another permanent separation as recommended by manufacturer.
 - b. Coat the concealed side of uncoated aluminum and stainless-steel roof accessories with a bituminous coating where they are in contact with wood, ferrous metal, or cementitious construction.
 - 2. Underlayment:
 - a. Where installing roof accessories directly on cementitious or wood substrates, install a course of felt underlayment; and cover the underlayment with a slip sheet, or install a course of polyethylene sheet.

3.03 REPAIR/RESTORATION

- A. Galvanized Surface Repairs:
 - 1. Clean field welds, bolted connections, and abraded areas, and repair galvanizing, in accordance with the requirements specified in ASTM A 780.
- B. Touch up factory-primed surfaces with compatible primer so they are ready for field painting in accordance with the requirements specified in Section 09960, High-Performance Coatings.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. During the period after roof accessories have been installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing of the units.

- a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
2. Inspections:
- a. Smoke Control Systems:
 - 1) The Phoenix Building Construction Code and Amendments and Section 1704.14, Smoke Control Special Inspections, of the ICC International Building Code (IBC) as Amended by the City of Phoenix requires Special Inspections of heat and smoke vents to be performed.
- B. Non-Conforming Work
1. Remove roof accessories that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures, and replace them with roof accessories complying with the requirements specified.

3.05 CLEANING

- A. Waste Management:
1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 MAINTENANCE

- A. Submit operation and maintenance data for each roof accessory provided under this Section to the Program/Project Manager.

END OF SECTION

SECTION 07810

APPLIED FIREPROOFING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for furnishing and applying fireproofing onto structural steel members provided under Section 05120, Structural Steel, where indicated on the Contract Drawings.
 - 2. Requirements for furnishing and applying fireproofing onto the underside of steel decking provided under Section 05310, Steel Deck, where indicated on the Contract Drawings.
 - 3. Requirements for topcoats.
 - 4. Requirements for sealers.
- B. Related Requirements:
 - 1. Section 01316 - Project Meetings.
 - 2. Section 01330 - Submittal Procedures.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 05120 – Structural Steel.
 - 5. Section 05310 – Steel Deck.
 - 6. Section 07850 – Through Penetration Firestopping Systems.

1.02 REFERENCES

- A. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
- B. Reference Standards:
 - 1. ASTM International (ASTM):
 - a. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
 - b. ASTM E 136 - Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750°C.

- c. ASTM E 605 - Standard Test Methods for Thickness and Density of Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members.
- d. ASTM E 736 - Standard Test Method for Cohesion/Adhesion of Sprayed Fire-Resistive Materials Applied to Structural Members.
- e. ASTM E 759 - Standard Test Method for Effect of Deflection on Sprayed Fire-Resistive Material Applied to Structural Members.
- f. ASTM E 760 - Standard Test Method for Effect of Impact on Bonding of Sprayed Fire-Resistive Material Applied to Structural Members.
- g. ASTM E 761 - Standard Test Method for Compressive Strength of Sprayed Fire-Resistive Material Applied to Structural Members.
- h. ASTM E 859 - Standard Test Method for Air Erosion of Sprayed Fire-Resistive Materials (SFRM) Applied to Structural Members.
- i. ASTM E 937 - Standard Test Method for Corrosion of Steel by Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members.
- j. ASTM G 21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

 - a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate the application of sprayed fire-resistive material with other construction to minimize the need to cut or remove fire protection.
 - a. Coordinate the Work of this Section with the placement of ceiling hanger tabs, mechanical component hangers, and electrical components.
 - 2. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.

3. Coordinate the Work of this Section with the Work of Section 07850, Through Penetration Firestopping Systems.
- B. Pre-Installation Meetings:
 1. Convene a pre-installation meeting one week prior to commencing the Work of this Section in accordance with the requirements of Section 01316, Project Meetings.
- C. Sequencing:
 1. Sequence and coordinate application of sprayed fire-resistive materials with other related work specified in other Sections to comply with the following requirements:
 - a. Avoid unnecessary exposure of fire-resistive material to abrasion and other damage likely to occur during construction operations subsequent to its application.
 - b. Do not begin applying fire-resistive material until clips, hangers, supports, sleeves, and other items penetrating fire protection are in place.
 - c. Defer installing ducts, piping, and other items that would interfere with applying fire-resistive material until application of fire protection is completed.
 - d. Do not install enclosing or concealing construction until after fire-resistive material has been applied, inspected, and tested; and corrections have been made to defective applications.

1.04 SUBMITTALS

- A. Action Submittals:
 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Provide Data for each product provided under this Section.
 - b. Certificates:
 - 1) Fireproofing Manufacturer's Certification.
 - c. Special Procedure Submittals:
 - 1) Special procedures required to deliver, handle, and/or apply the fireproofing.
 - d. Qualification Statements:
 - 1) Applied fireproofing manufacturer's qualifications.
 - 2) Applied fireproofing applicator's qualifications.
- B. Informational Submittals:
 1. Submit the following to the Project/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:

- a. Test and Evaluation Reports:
 - 1) Bond strength test reports from reputable independent testing agencies.
 - 2) Bond impact test reports from reputable independent testing agencies.
 - 3) Compressive strength test reports from reputable independent testing agencies.
 - 4) Fire test reports from reputable independent testing agencies.
 - b. Manufacturer's Instructions:
 - 1) Bonding agent application instructions from the fireproofing manufacturer.
 - 2) Primer adhesive application instructions from the fireproofing manufacturer.
 - c. Site Quality Control Submittals:
 - 1) Environmental conditions under which fireproofing materials were applied.
2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
- a. ENVISION Credit RA 1.3 - Use Recycled Materials
 - 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
- C. Closeout Submittals:
- 1. Submit the following to the Project/Project Manager for approval in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Fireproofing Warranty.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - 2. Asbestos:

- a. Provide products containing no detectable asbestos as determined according to the method specified in 40 CFR 763, Subpart E, Appendix E, Section 1, "Polarized Light Microscopy".
- B. Qualifications:
 - 1. Manufacturer Qualifications:
 - a. Obtain the products for the Work of this Section from a company specializing in manufacturing applied fireproofing products and that has at least 3 years of documented experience producing applied fireproofing of the type required by this Section.
 - b. Submit the manufacturer's qualifications to the Program/Project Manager for approval.
 - 2. Applicator Qualifications:
 - a. Employ an applicator certified, licensed, or otherwise qualified by the applied fireproofing material manufacturer and who specializes in applying fireproofing products, has sufficient trained staff to install the manufacturer's products according to the requirements specified, and who has at least 3 years of documented experience applying fireproofing of the type required by this Section.
 - 1) Provide engineering services for designating restrained and unrestrained conditions.
 - b. Submit the applicator's qualifications to the Program/Project Manager for approval.
- C. Certifications:
 - 1. Fireproofing Manufacturer's Certification:
 - a. Submit a written Fireproofing Certification from the fireproofing manufacturer certifying that the sprayed-on fireproofing products provided under this Section meet or exceed the requirements specified herein.
- D. Mock-Ups:
 - 1. Fireproofing Mock-Up:
 - a. Construct a mock-up at least 3 feet long by 3 feet wide to illustrate the application and appearance of the fireproofing.
 - b. Conform the mock-up to Project requirements for fire ratings.
 - c. Locate the mock-up where directed by the Program/Project Manager.
 - d. Examine installation within 1 hour of application to determine variances from the specified requirements due to shrinkage, temperature, and humidity.
 - 1) Where shrinkage and cracking are evident, adjust the mixture and method of application as necessary.
 - 2) Remove defective materials, and re-construct the mock-up using acceptable materials.
 - e. An accepted mock-up may remain a part of the Work.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Deliver fireproofing material in the original unopened packages, fully identified as to manufacturer, brand, or other identifying data; date of manufacture; shelf life if applicable; and bearing the proper Underwriters Laboratories Inc. labels for Surface Burning Characteristic and Fire Resistance Classification.
- B. Storage and Handling Requirements:
 - 1. Store fireproofing material off the ground, under cover, and in a dry location until ready for use.
 - 2. Rotate the stock of fireproofing material, and use it prior to its expiration date.
 - a. Use materials having limited shelf life within the period indicated.
 - b. Discard materials whose shelf life has expired.
 - 3. Discard bags of fireproofing material exposed to water before use.

1.07 SITE CONDITIONS

- A. Ambient Conditions:
 - 1. Do not apply spray fireproofing when the temperature of the substrate material and surrounding air is below 40 degrees Fahrenheit, unless temporary protection is provided to maintain the temperature at or above this level for 24 hours before, during, and for 24 hours after applying the spray fireproofing.
 - a. Submit information to the Program/Project Manager indicating the environmental conditions under which fireproofing materials were applied.
 - 2. In those areas where dry applied material is to be applied, ventilate the areas during the application of the fireproofing and for a minimum of 24 hours afterward until the fire-resistive material dries thoroughly.

1.08 WARRANTY

- A. Extended Correction Period:
 - 1. Warrant the fireproofing to remain free from cracking, checking, dusting, flaking, peeling, spalling, separation, blistering, delaminating, and eroding in excess of specified requirements within the 5-year period after the Date of Substantial Completion.
 - a. Submit the written Fireproofing Warranty on the manufacturer's standard form signed by the Contractor and Applicator to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 FIREPROOFING ASSEMBLIES

- A. Manufacturers:
 - 1. Product Options:
 - a. Obtain the sprayed fire-resistive material (SFRM) through one source from one manufacturer.
- B. Regulatory Requirements:
 - 1. Provide fireproofing assemblies listed by Underwriters laboratories, Inc. (UL), Factory Mutual (FM), and/or Warnock Hersey (WH) as indicated and applicable.
- C. Sustainability Requirements:
 - 1. Recycled Content
 - a. Provide Fireproofing materials whose combined post-consumer recycled content and one-half pre-consumer recycled content is no less than 20 percent.
- D. Design Criteria:
 - 1. Provide applied fireproofing assemblies as indicated on the Contract Drawings
 - a. Submit Provide Data for each product provided under this Section indicating the product's characteristics.
 - b. Submit special procedures required to deliver, handle, and/or apply the fireproofing.
 - 2. For exterior applications of sprayed fire-resistive material, provide formulations approved for surfaces exposed to the exterior.
- E. Performance:
 - 1. Provide UL fire-rated assemblies designed to provide the hourly ratings as follow:
 - a. Interior columns: 3 Hours.
 - b. Interior girders: 3 hours.
 - c. Interior floors: 2 hours.
 - d. Interior roof deck: 0 hours.
 - e. Exterior roof columns: 2 hours.
 - f. Column hangers: 3 hours.
 - g. Truss members: 3 hours.
 - h. Beam girders: 3 hours.
 - i. Floor beams not connected to columns: 2 hours.
 - j. Floor beams having a direct connection to columns: 2 hours.
- F. Sprayed Fire-Resistive Material (SFRM):

1. Provide a factory-mixed, dry, cement aggregate formulation or a chloride-free formulation of gypsum or Portland cement binders, additives, and inorganic aggregates mixed with water at the Site to form a slurry or mortar for conveyance and application.
2. Very Low Compressive Strength Fire-Resistive Material:
 - a. Provide factory mixed very low compressive strength fire-resistive material, consisting of mineral fibers, fillers, and inorganic binders.
 - b. Provide very low compressive strength fire-resistive material complying with the following requirements:
 - 1) Bond Strength: 200 pounds per square foot when set and dry and tested in accordance with the requirements of ASTM E 736.
 - 2) Bond Impact: No cracking, spalling, or delamination when tested in accordance with the requirements of ASTM E 760.
 - 3) Dry Density, Minimum: 11 pounds per cubic foot when tested in accordance with the requirements of ASTM E 605.
 - 4) Compressive Strength, Minimum: 3.5 psi when tested in accordance with the requirements of ASTM E 761.
 - 5) Surface Burning Characteristics:
 - a) Maximum flame spread: 0 when tested in accordance with the requirements of ASTM E 84.
 - b) Maximum smoke developed: 0 when tested in accordance with the requirements of ASTM E 84.
3. Low Density Sprayed Fire-Resistive Material:
 - a. Provide factory mixed low density sprayed fire-resistive material consisting of cementitious material blended with vermiculite or lightweight synthetic aggregate to produce a uniform texture.
 - b. Provide low density sprayed fire-resistive material complying with the following requirements:
 - 1) Bond Strength: 200 pounds per square foot when set and dry and tested in accordance with the requirements of ASTM E 736.
 - 2) Bond Impact: No cracking, flaking, or delamination when tested in accordance with the requirements of ASTM E 760.
 - 3) Dry Density, Minimum: 14 pounds per cubic foot minimum average density when tested in accordance with the requirements of ASTM E 605, with the minimum individual density of any test sample equaling 13 pounds per cubic foot.
 - 4) Compressive Strength, Minimum: 7.0 psi when tested in accordance with the requirements of ASTM E 761.
 - 1) Surface Burning Characteristics:
 - a) Maximum flame spread: 0 when tested in accordance with the requirements of ASTM E 84.
 - b) Maximum smoke developed: 0 when tested in accordance with the requirements of ASTM E 84.
4. Medium Density Sprayed Fire-Resistive Material:

- a. Provide factory mixed medium density sprayed fire-resistive material consisting of Portland cement blended with mineral aggregates or mineral fibers and additives without chlorides to produce a uniform texture.
 - b. Provide medium density sprayed fire-resistive material approved for exterior use.
 - c. Provide medium density sprayed fire-resistive material complying with the following requirements:
 - 1) Bond Strength: 2000 pounds per square foot when set and dry and tested in accordance with the requirements of ASTM E 736.
 - 2) Bond Impact: No cracking, flaking, or delamination when tested in accordance with the requirements of ASTM E 760.
 - 3) Dry Density, Minimum: 14 pounds per cubic foot minimum average density when tested in accordance with the requirements of ASTM E 605, with the minimum individual density of any test sample equaling 21 pounds per cubic foot.
 - 4) Compressive Strength, Minimum: 65 psi when tested in accordance with the requirements of ASTM E 761.
 - 5) Surface Burning Characteristics:
 - a) Maximum flame spread: 0 when tested in accordance with the requirements of ASTM E 84.
 - b) Maximum smoke developed: 0 when tested in accordance with the requirements of ASTM E 84.
5. High Density Sprayed Fire-Resistive Material:
- a. Provide factory mixed high density cementitious sprayed fire-resistive material consisting of Portland cement blended with mineral aggregates and additives without chlorides to produce a uniform texture.
 - b. Provide high density sprayed fire-resistive material approved for exterior use.
 - c. Provide high density sprayed fire-resistive material complying with the following requirements:
 - 1) Bond Strength: 2000 pounds per square foot when set and dry and tested in accordance with the requirements of ASTM E 736.
 - 2) Bond Impact: No cracking, flaking, or delamination when tested in accordance with the requirements of ASTM E 760.
 - 3) Dry Density, Minimum: 39 pounds per cubic foot minimum average density when tested in accordance with the requirements of ASTM E 605, with the minimum individual density of any test sample equaling 21 pounds per cubic foot.
 - 4) Compressive Strength, Minimum: 300 psi when tested in accordance with the requirements of ASTM E 761.
 - 5) Surface Burning Characteristics:
 - a) Maximum flame spread: 0 when tested in accordance with the requirements of ASTM E 84.

- b) Maximum smoke developed: 0 when tested in accordance with the requirements of ASTM E 84.

2.02 ACCESSORIES

A. Primer Adhesive:

- 1. Provide a type of primer adhesive recommended by the fireproofing manufacturer and approved by Underwriters laboratories, Inc. or another testing and inspection agency acceptable to the Authorities Having Jurisdiction.
 - a. Provide primer having a bond strength complying with the requirements specified in the UL Fire Resistance Directory (Fire Resistance Ratings) for coating materials based on a series of bond test performed in accordance with the requirements specified in ASTM E 736.
 - b. Provide primer identical to primer used in assemblies tested for fire-test-response characteristics of sprayed fire-resistive material in accordance with the requirements specified in ASTM E 119 by Underwriters laboratories, Inc. or another testing and inspection agency acceptable to the Authorities Having Jurisdiction.

B. Overcoat:

- 1. Provide an overcoat as recommended by the manufacturer of the fireproofing material.

C. Metal Lathe:

- 1. Provide expanded galvanized metal lathe.
- 2. Weight: 3.4 pounds per square foot.

D. Water:

- 1. Provide clean, potable water.

2.03 SOURCE QUALITY CONTROL

A. Tests and Inspections:

- 1. Submit test reports from reputable independent testing agencies for tests conducted under conditions similar to those on this Contract for the products proposed for the Work of this Section, indicating compliance with the following special criteria:
 - a. Bond Strength Test:
 - 1) Test Procedure:
 - a) Determine the bond of the sprayed fire-resistive material in accordance with the requirements specified in ASTM E 736 and the UL Fire Resistance Directory (Fire Resistance Ratings).
 - 2) Acceptance Criteria:

- a) Bond strengths indicated in the referenced fire resistance design, but not less than the minimum value specified herein, are acceptable.
 - b) Verify that the material manufacturer, through its own laboratory testing or field experience, has not found primers or coatings to be incompatible with the sprayed fire-resistive material.
- b. Bond Impact Test:
 - 1) Test Procedure:
 - a) Determine the effect of impact on the bonding of the sprayed fire-resistive material in accordance with the requirements specified in ASTM E 760.
 - 2) Acceptance Criteria:
 - a) Fireproofing evidencing no cracking, spalling, or delamination is acceptable.
- c. Dry Density Test:
 - 1) Test Procedure:
 - a) Determine the dry density of the sprayed fire-resistive material in accordance with the requirements specified in ASTM E 605.
 - 2) Acceptance Criteria:
 - a) Dry densities indicated in the referenced fire resistance design, but not less than the minimum value specified herein, are acceptable.
- d. Compressive Strength Test:
 - 1) Test Procedure:
 - a) Determine the compressive strength of the sprayed fire-resistive material in accordance with the requirements specified in ASTM E 761.
 - 2) Acceptance Criteria:
 - a) Compressive strengths indicated in the referenced fire resistance design, but not less than the minimum value specified herein, are acceptable.
- e. Fire-Test-Response Characteristic Test:
 - 1) Test Procedure:
 - a) Determine the fire-test-response characteristic of the sprayed fire-resistive material in accordance with the requirements specified in ASTM E 84 by Underwriters Laboratories, Inc. or another testing and inspection agency acceptable the Authorities Having Jurisdiction.
 - b) Identify bags containing sprayed fire-resistive materials with the appropriate markings of the applicable testing and inspection agency.
 - 2) Acceptance Criteria:
 - a) Sprayed fire-resistive materials having the fire-test-response characteristic specified are acceptable.

- f. Corrosion Resistance Test:
 - 1) Test Procedure:
 - a) Determine the corrosion resistance of the sprayed fire-resistive material in accordance with the requirements specified in ASTM E 937.
 - 2) Acceptance Criteria:
 - a) Fireproofing evidencing no corrosion is acceptable.
 - g. Deflection Test:
 - 1) Test Procedure:
 - a) Determine the deflection of the sprayed fire-resistive material in accordance with the requirements specified in ASTM E 759.
 - 2) Acceptance Criteria:
 - a) Fireproofing evidencing no cracking, spalling, or delamination is acceptable.
 - h. Air Erosion Test:
 - 1) Test Procedure:
 - a) Determine the air erosion of the sprayed fire-resistive material in accordance with the requirements specified in ASTM E 859.
 - 2) Acceptance Criteria:
 - a) Fireproofing having a maximum weight loss of 0.025 grams per square foot is acceptable.
 - i. Fungal Resistance Test:
 - 1) Test Procedure:
 - a) Determine fungal resistance of the sprayed fire-resistive material in accordance with the requirements specified in ASTM G 21.
 - 2) Acceptance Criteria:
 - a) Fireproofing evidencing no observed growth on specimens is acceptable.
- B. Coordination of Other Tests and Inspections:
- 1. Notify the code-required Approved Agency responsible for performing special inspections when fireproofing for this Contract is being placed and/or tested.
 - 2. Cooperate with the code-required Approved Agency when they are performing required material verifications and other special inspections.
 - a. Provide full access to the Work.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
- 1. With the applicator present, verify the following at the Site:
 - a. The surfaces to receive fireproofing are ready and comply with the requirements specified for the substrate in other Sections.

- 1) Verify the substrates are free of oil, grease, rolling compounds, incompatible primers, loose mill scale, dirt, and other foreign substances capable of impairing the bond of fire-resistive materials with substrates under conditions of normal use or fire exposure.
 - b. The clips, hangers, supports, sleeves, and other items required to penetrate fireproofing are in place and securely attached to substrates.
 - c. The ducts, piping, equipment, or other items that would interfere with the application of fireproofing have not been installed.
 - d. The voids and cracks in the substrate have been filled.
 - e. Where fireproofing will be exposed to view as a finish material, the projections have been removed.
- B. Pre-Installation Testing:
1. For locations where adhesion of the fireproofing to the substrate is in question, perform tests as recommended by the fireproofing manufacturer to verify substrates are free of oil, rolling compounds, and other substances capable of interfering with the bond; and that proper adhesion will be achieved.
- C. Evaluation and Assessment:
1. Do not apply fireproofing until the non-conforming conditions that can interfere with applying the fireproofing have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
1. Protect equipment and surfaces not scheduled to receive fireproofing from damage by overspray, fall-out, and dusting.
 2. Prevent spray fireproofing from contaminating the air by providing temporary enclosures.
 - a. Cover other work subject to damage from fallout or overspray of fire-resistive materials during application.
- B. Surface Preparation:
1. Prior to applying the fireproofing material, complete placing the concrete in the metal decking.
 2. Prepare substrates to receive the fireproofing in strict accordance with the instructions of the fireproofing manufacturer.
 - a. Clean substrates of substances that could impair the bond of fire-resistive material, including oil, grease, release agents, rolling compounds, incompatible paints, primers, encapsulants, loose mill scale, and dirt.

- b. For exposed applications, repair substrates to remove surface imperfections that could affect uniformity of texture and thickness in the finished surface of the sprayed fire-resistive material.
 - 1) Remove minor projections and fill voids that would telegraph through the fire-resistive products after application.
 - c. Where recommended by the sprayed fire-resistive material manufacturer in writing, prime substrates unless compatible shop primer has been applied and is in satisfactory condition to receive the sprayed fire-resistive material.
 - 1) Apply primer adhesive in accordance with the primer adhesive manufacturer's instructions.
 - 2) Submit the primer adhesive application instructions from the fireproofing manufacturer to the Program/Project Manager for information.
 - d. Apply the fireproofing manufacturer's recommended bonding agent on primed steel.
 - 1) Submit the bonding agent application instructions from the fireproofing manufacturer to the Program/Project Manager for information.
 - 3. Close off and seal ductwork in areas where fireproofing will be applied.
- C. Demolition/Removal:
- 1. Remove incompatible materials that could affect the fireproofing material's bond by scraping, brushing, scrubbing, or sandblasting.

3.03 APPLICATION

- A. Install metal lathe over structural members as indicated on the Contract Drawings, or as required by the applicable UL Design Numbers for the assembly.
- B. Apply a sufficient thickness fireproofing to achieve the required ratings as specified, with as many passes as necessary produce a monolithic blanket cover having a uniform density and texture.
 - 1. Extend the full thickness of the fire-resistive material over the entire area of each substrate to be protected.
 - 2. Unless otherwise recommended by the sprayed fire-resistive material manufacturer in writing, apply the fire-resistive covering in a single course.
 - 3. For applications over encapsulant materials, including lockdown (post-removal) encapsulants, apply sprayed fire-resistive material differing in color from the color of the encapsulant over which it is applied.
 - 4. Where sealers are used, apply products tinted to differentiate them from the sprayed fire-resistive material over which they are applied.
- C. Spray-apply the fire-resistive materials to the maximum extent possible.

1. Following the spraying operation, use tools and procedures recommended by the fireproofing manufacturer to complete the coverage of the substrates in exposed locations.

~~a. Trowel the fireproofing surface smooth and form square edges.~~

- D. Apply an overcoat sealer at a rate recommended by the fireproofing manufacturer.

3.04 REPAIR/RESTORATION

- A. As other construction operations proceed, inspect the sprayed fire-resistive material, and patch damaged or removed areas.
 1. Repair or replace sprayed fire-resistive material that has not been successfully protected.
- B. Repair defective applied fireproofing discovered within the extended warranty period, or replace it with new acceptable fireproofing.

3.05 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 1. During the period when fireproofing is being placed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials or proportions requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
 2. Inspections:
 - a. After the fireproofing has been applied and cured but before concealing it, test and inspect the integrity of the fireproofing.
 - 1) Tested values must equal or exceed the values indicated and required for the approved fire-resistance design.
 - 2) Do not apply sprayed fire-resistive material for successive areas until the material of the preceding completed area has been shown to comply with the specified requirements.

- b. Verify that the actual thicknesses, densities, and bond strengths comply with the ratings specified.
 - c. If Work that may affect or disrupt the integrity of the fire protection provided by the applied fireproofing is performed after the fireproofing is applied, re-inspect the applied fireproofing to verify that its integrity remains intact.
- B. Non-Conforming Work
 - 1. If testing indicates that applications of the sprayed fire-resistive material are not in compliance with the specified requirements, additional random testing will be conducted to determine the extent of non-conformance.
 - 2. Remove and replace sprayed fire-resistive material not conforming to the requirements for cohesion and adhesion, for density, or for both.
 - 3. Where test results indicate the thickness does not comply with required thicknesses, apply additional sprayed fire-resistive material in accordance with the manufacturer's written instructions.
 - 4. The replaced or additional sprayed fire-resistive material will be tested for compliance with the specified requirements.

3.06 CLEANING

- A. Immediately after completing spraying operations in each containable area, remove excess fireproofing material, overspray, fallout, droppings, and debris.
 - 1. Clean exposed areas to remove evidence of soiling.
- B. Remove fireproofing from materials and surfaces not required to be fireproofed.
- C. At exposed fireproofing, clean surfaces that have become soiled or stained, using the fireproofing manufacturer's recommended procedures.

3.07 PROTECTION

- A. During the installation of fireproofing on roofs and during its drying period, do not allow foot traffic in that area of the roof.

SECTION 07842

FIRE-RESISTIVE JOINT SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for perimeter fire-resistive joint systems consisting of floor-to-wall joints between the perimeter edge of fire-resistance-rated floor assemblies and exterior curtain walls.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01732 - Cutting and Patching.
 - 4. Section 05810 - Expansion Joint Cover Assemblies.
 - 5. Section 07850 - Through Penetration Firestopping Systems.
 - 6. Section 07920 - Joint Sealants.

1.02 REFERENCES

- A. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. L-Rating: The L-Rating is a UL-rating that measures the amount of air that moves through an opening in cubic feet per minute per square foot of opening area, at ambient temperatures and 400 degrees Fahrenheit.
 - a. The 2 temperature levels simulate cold and hot smoke moving in a building.
 - 3. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
- B. Reference Standards:
 - 1. ASTM International (ASTM):
 - a. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
 - 2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.

3. FM Approvals LLC (FM):
 - a. FM Class Number 4991 – Approval Standard for Approval of Firestop Contractors.
 - b. The Approval Guide, www.approvalguide.com.
4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
5. ICC Evaluation Service, Inc. (ICC ES), <http://www.icc-es.org/reports/index>:
 - a. ICC-ES AC30 – Acceptable Criteria for Fire-Resistant Joint Systems.
 - b. ICC-ES ER-4976 – Legacy Report: SpecSeal Fire Stop Penetration Systems.
6. Underwriters Laboratories, Inc. (UL):
 - a. UL 2079 –Standard for Tests for Fire Resistance of Building Joint Systems.
 - b. UL Online Certifications Directory, <http://www.ul.com/regulators/quickguide.html>.
 - c. UL's "Fire Resistance Directory"
7. Institute for Sustainability Infrastructure (ISI)
 - a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. To ensure that the fire-resistive joint systems are installed in accordance with the specified requirements, coordinate the construction of joints.
 2. Coordinate the sizing of joints to accommodate the fire-resistive joint systems.
 3. Notify the Owner's inspecting agency at least 7 days in advance of the fire-resistive joint system installations.
 - a. Confirm the dates and times on days preceding each series of installations.
- B. Sequencing:
 1. Do not cover up the fire-resistive joint system installations that will become concealed behind other construction until the Owner's inspecting agency and the building inspector of the Authorities Having Jurisdiction have examined each installation.

1.04 SUBMITTALS

- A. Action Submittals:
 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Joints in or between fire-resistance-rated constructions.

- 2) Joints at the intersection of fire-resistance-rated floor or floor/ceiling assembly and an exterior curtain-wall assembly.
 - 3) Perimeter fire-resistive joint systems.
 - b. Shop Drawings:
 - 1) Fire-resistive joint system.
 - c. Certificates:
 - 1) Manufacturer's Certificate of Compliance for each type of fire-resistive joint system.
 - d. Special Procedure Submittals:
 - 1) Evidence of each fire-resistive joint system's compliance with the acceptance criteria specified in ICC-ES AC30.
 - e. Qualification Statements:
 - 1) Fire-resistive joint system installer's qualifications.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Evaluation Reports from the ICC Evaluation Service, Inc. (ICC ES) for each type of fire-resistive joint system.
 - b. Manufacturer's Instructions:
 - 1) Fire-resistive joint system manufacturer's written cleaning instructions.
 - 2) Fire-resistive joint system manufacturer's recommended priming products and methods.
 - 3) Fire-resistive joint system manufacturer's written installation instructions.
 - 2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. Adhesives and Sealants
 - 1) Submit product data highlighting the VOC content for any field applied sealant used.

1.05 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Fire-Resistive Joint System Installer's Qualifications:
 - a. Employ a firm that has been approved by FM Global in accordance with the requirements specified in FM Class Number 4991.
 - b. Assign the responsibility for installation of both the through-penetration firestopping systems specified in Section and fire-resistive joint systems provided under this Section 07850, Through Penetration Firestopping Systems, for this Contract to a single qualified installer.
 - c. Submit the fire-resistive joint system installer's qualifications to the Program/Project Manager for approval.

B. Certifications:

1. Fire-Resistive Joint System Manufacturer's Certificates of Compliance:

- a. Submit a manufacturer's Certificate of Compliance, signed by the fire-resistive joint system manufacturer, for each type of fire-resistive joint system provided for the Work of this Section certifying that the products comply with the specified requirements.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver fire-resistive joint system products to the Site in their original, unopened containers or packages marked with a qualified testing and inspecting agency's classification marking applicable to the Contract, and having intact and legible manufacturers' labels identifying the product and manufacturer, the date of manufacture, the lot number, the shelf life, the curing time, and the mixing instructions for multi-component materials.

B. Storage and Handling Requirements:

1. Store and handle materials for the fire-resistive joint systems so deterioration or damage due to moisture, temperature changes, contaminants, or other causes is prevented.

C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

A. Ambient Conditions:

1. Do not install the fire-resistive joint systems when the ambient or substrate temperatures are outside the limits permitted by the fire-resistive joint system manufacturers, or when the substrates are wet due to rain, frost, condensation, or other causes.
2. Ventilate the fire-resistive joint systems in accordance with the manufacturer's written instructions by natural means; or if this is inadequate, using forced-air circulation.

PART 2 PRODUCTS

2.01 FIRE-RESISTIVE JOINT SYSTEMS

A. Manufacturers:

1. Manufacturer List:

- a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.

2. Substitution Limitations:

- a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Only provide components specified by the fire-resistive joint system manufacturer and approved by the qualified testing and inspecting agency for the systems provided.
 - c. Source Limitations:
 - 1) For each kind of joint and construction condition indicated in the Contract Documents, obtain fire-resistive joint systems from one source and from a single manufacturer.
- B. Description:
- 1. Provide fire-resistive joint systems that resist the spread of fire in accordance with the requirements specified, resist the passage of smoke and other gases, and maintain the original fire-resistance rating of the assembly in which the fire-resistive joint systems are installed.
 - 2. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).
 - 3. Sustainability Requirements:
 - a. All fire-resistive joint system sealant and primers shall comply with the following limits for VOC content when calculated according to 40 CFR 50, Subpart D (EPA Method 24).
 - 1) Architectural Sealants: 250 g/L
 - 2) Sealant Primers for Nonporous Substrates: 250g/L
 - 3) Sealant Primers for Porous Substrates: 775g/L.
- C. Performance:
- 1. Joint Systems in and between Fire-Resistance-Rated Constructions:
 - a. Provide systems having assembly fire-resistance ratings equaling or exceeding the ratings of the construction that they join as determined in accordance with the methods specified in UL 2079.
 - 1) Determine the load-bearing capabilities of the assembly by evaluation during the time of the test.
 - 2. Perimeter Fire-Resistive Joint Systems:
 - a. For joints between the edges of fire-resistance-rated floor assemblies and exterior curtain walls, provide systems of the type and having the ratings indicated in the Contract Documents as determined in accordance with the methods specified in UL 2079.
 - b. UL-Listed, Perimeter Fire-Containment Systems:
 - 1) Provide integrity ratings equaling or exceeding the fire-resistance ratings of the floor or floor/ceiling assembly forming one side of the joint.
 - 3. Fire-Test-Response Characteristics:

- a. Qualified testing and inspecting agencies acceptable to the Authorities Having Jurisdiction, such as Underwriters Laboratories, Inc. (UL), perform qualification testing and follow-up inspections of fire-resistive joint systems.
 - 1) The fire-resistive joint systems to be provided under this Section must be identical to those tested by the qualified testing and inspecting agencies during qualification testing.
 - 2) Provide fire-resistive joint system products that bear the classification marking of the qualified testing and inspecting agency.
 - 3) Provide fire-resistive joint systems that correspond to those indicated by the referencing system designations of the qualified testing and inspecting agency specified for the Work of this Contract.
 - b. Surface-Burning Characteristics:
 - 1) Provide fire-resistive joint systems complying with the following surface-burning characteristic requirements when tested in accordance with the method specified in ASTM E 84:
 - a) Flame Spread Index: 25 or less.
 - b) Smoke-Developed Index: 450 or less.
 - 2) Identify the surface-burning characteristics of the ceiling components using the appropriate markings of the applicable testing and inspecting organization.
- D. Design Criteria:
- 1. Provide fire-resistive joint systems designed to meet the acceptance criteria specified in ICC-ES AC30.
 - a. Submit evidence of each fire-resistive joint system's compliance with the acceptance criteria specified in ICC-ES AC30 to the Program/Project Manager for approval.
 - 2. Provide fire-resistive joint systems that are compatible with the joint substrates under the conditions of service and application as demonstrated by fire-resistive joint system manufacturer based on testing and field experience.
 - 3. Product Data:
 - a. Obtain the fire-resistive joint system manufactures' Product Data for each type of product proposed for the Work of this Section.
 - b. Obtain Evaluation Reports from the ICC Evaluation Service, Inc. (ICC ES) for each type of fire-resistive joint system.
 - c. Submit the fire-resistive joint system manufactures' Product Data and the Evaluation Reports from the ICC Evaluation Service, Inc. (ICC ES) for each type of fire-resistive joint system to the Program/Project Manager for approval.
 - 4. Shop Drawings:
 - a. Prepare Shop Drawings for each fire-resistive joint system showing each kind of construction condition in which the joints will be installed.

- 1) Show the relationships to adjoining construction.
 - 2) Include the fire-resistive joint system design designation of the testing and inspecting agency acceptable to the Authorities Having Jurisdiction that demonstrates compliance with requirements for each condition indicated.
 - 3) Include documentation, including illustrations, from a qualified testing and inspecting agency that is applicable to each fire-resistive joint system configuration for construction and penetrating items.
 - b. Submit the Shop Drawings for each fire-resistive joint system to the Program/Project Manager for approval.
- E. Materials:
 1. Joints in or between Fire-Resistance-Rated Constructions:
 - a. For joints in or between fire-resistance-rated constructions, provide fire-resistive joint systems complying with the requirements specified for Category Code XHBN as listed in UL's "Fire Resistance Directory".
 - 1) Hilti Corporation, FS 657 Fire Block, <http://www.hilti.com>.
 - 2) Approved equal.
 2. Joints at the Intersection of Fire-Resistance-Rated Floor or Floor/Ceiling Assembly and an Exterior Curtain-Wall Assembly:
 - a. For joints at the intersection of fire-resistance-rated floor or floor/ceiling assembly and an exterior curtain-wall assembly, provide fire-resistive joint systems complying with the requirements specified for Category Code XHDB as listed in UL's "Fire Resistance Directory".
 3. Perimeter Fire-Resistive Joint Systems:
 - a. For perimeter fire-resistive joint systems, provide fire-resistive joint systems complying with the following requirements:
 - 1) Integrity Rating: 2 hours.
 - 2) Insulation Rating: 1/4 hour.
 - 3) Linear Opening Width: No more than indicated on the Contract Drawings.
 - 4) L-Rating at Ambient Temperature: Less than 1 cubic foot per minute per linear foot.
 - b. Manufacturers:
 - 1) Specified Technologies Inc., Basis of Design Product: Design No. CW-S-1011, <http://www.stifirestop.com>.
 - 2) Approved equal.

2.02 ACCESSORIES

- A. Provide the components of fire-resistive joint systems, including primers and forming materials, that are needed to install the fill materials and to comply with the specified performance requirements.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. With the installer present, examine substrates and conditions where fire-resistive joint systems will be installed for compliance with requirements for joint configurations, substrates, and other conditions affecting performance.
- B. Evaluation and Assessment:
 - 1. Proceed to install fire-resistive joint systems only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the fire-resistive joint systems.
 - a. Masking Tape:
 - 1) Provide masking tape to prevent fill materials of the fire-resistive joint system from contacting adjoining surfaces that will remain exposed on completion of the Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from fire-resistive joint system materials.
 - 2) Remove the masking tape as soon as possible without disturbing the fire-resistive joint system's seal with the substrates or damaging adjoining surfaces.
- B. Surface Preparation:
 - 1. Surface Cleaning:
 - a. Clean joints immediately before the installing fire-resistive joint systems in accordance with the fire-resistive joint system manufacturer's cleaning instructions and the following requirements:
 - 1) Remove foreign materials that could interfere with adhesion of fill materials from the surfaces of joint substrates.
 - 2) Clean joint substrates to produce clean, sound surfaces capable of developing the optimum bond with fill materials.
 - a) Remove loose particles remaining from the cleaning operation.
 - 3) Remove laitance and form-release agents from concrete.
 - b. Submit the fire-resistive joint system manufacturer's written cleaning instructions to the Program/Project Manager for information.
 - 2. Priming:

- a. Where recommended in writing by the fire-resistive joint system manufacturer, prime the substrates using that manufacturer's recommended products and methods.
 - 1) Submit the fire-resistive joint system manufacturer's recommended priming products and methods to the Program/Project Manager for information.
 - b. Confine primers to the areas of bond.
 - 1) Do not allow spillage and migration of the primers onto exposed surfaces.
- C. Demolition/Removal:
- 1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Install the fire-resistive joint systems so they comply with the specified performance requirements and the fire-resistive joint system manufacturer's installation instructions for the products and applications indicated in the Contract Documents.
 - 1. Submit the fire-resistive joint system manufacturer's written installation instructions to the Program/Project Manager for information.
- B. Forming, Packing, and Backing Materials:
 - 1. Install forming, packing, backing materials, and other accessories of the types required to support the fire-resistive joint system fill materials during their application; and in the position needed to produce the cross-sectional shapes and depths required to achieve the fire ratings indicated in the Contract Documents.
- C. Fill Materials:
 - 1. Install the fill materials for fire-resistive joint systems using proven techniques.
 - a. Fill voids and cavities formed by openings and forming, packing, and backing materials as required for achieving the fire-resistance ratings indicated in the Contract Documents.
 - b. Apply fill materials so they contact and adhere to the substrates formed by the joints.
 - c. Finish the fill materials that will remain exposed after the Work is completed so the finish is a smooth, uniform surface, flush with the adjoining finishes.
- D. Special Techniques:
 - 1. For fire-resistive joint systems consisting of metal frames and covers, comply with the requirements specified in Section 05810, Expansion Joint Cover Assemblies.

2. For systems installed in openings in walls and floors with and without penetrating items, comply with the requirements specified in Section 07850, Through Penetration Firestopping Systems.
3. For non-fire-resistive joint sealants, comply with the requirements specified in Section 07920, Joint Sealants.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. Inspecting Agency:
 - a. The Owner will engage a qualified independent inspecting agency to inspect the fire-resistive joint systems and to prepare inspection reports.
2. Inspections:
 - a. Inspections of completed fire-resistive joint system installations will take place in successive stages as the installation proceeds.
 - b. Do not proceed to install joint systems for the next area until the inspecting agency determines that the completed Work is in compliance with the specified requirements.
 - c. The inspecting agency will state in each report whether the inspected fire-resistive joint systems comply with or deviate from the specified requirements.
 - d. Proceed to enclose the fire-resistive joint systems with other construction only after the inspection reports are issued, and the fire-resistive joint systems have been determined to comply with the specified requirements.

B. Non-Conforming Work

1. Where the inspections indicate that the fire-resistive joint systems do not comply with the specified requirements, remove the non-conforming Work and replace it with acceptable replacement materials.
2. Additional inspections to determine the compliance of replaced or additional work with the specified requirements will be performed at the Contractor's expense.

3.05 CLEANING

- A. Clean off excess fill materials adjacent to joints as the Work progresses using methods and cleaning materials that are approved in writing by the fire-resistive joint system manufacturers, and that do not damage the materials in which the openings occur.
- B. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 PROTECTION

- A. Provide final protection, and maintain conditions, during and after installation that ensure the fire-resistive joint systems have not been damaged and have not deteriorated at the time of Substantial Completion.
1. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated fire-resistive joint systems immediately, and install new materials to produce fire-resistive joint systems complying with the specified requirements.

1	12/20/2017	N/A	1.02.A.3, 1.02.C.7, 1.04.B.2, 2.01.B.3	Add requirements for ENVISION Sustainability Rating System

SECTION 07850

THROUGH PENETRATION FIRESTOPPING SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for through penetration firestopping systems, including the following:
 - a. Through penetration firestopping in fire rated construction.
 - b. Construction-gap firestopping at connections of the same or different materials in fire-rated construction.
 - c. Construction-gap firestopping occurring within fire-rated wall, floor, or floor/ceiling assemblies.
 - d. Construction-gap firestopping occurring at the top of fire-rated walls.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 07210 – Building Insulation.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 2. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside and San Bernardino counties.
 - 3. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
- B. Definitions:
 - 1. Assembly: A particular arrangement of materials specific to a given type of construction described or detailed in the referenced documents.
 - 2. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public’s health, safety, and welfare.

3. Barriers: Time rated fire walls, smoke barrier walls, and time rated ceiling/floor assemblies and structural floors.
4. Firestopping: Methods and materials applied in penetrations and unprotected openings to limit spread of heat, fire, gasses, and smoke.
5. Penetration: An opening for foreign material passing through or into a barrier or structural floor such that full thickness of rated materials is not obtained.
6. Construction Gaps: Gaps between adjacent sections of walls, exterior walls, at wall tops between top of wall and ceiling, and structural floors or roof decks; and gaps between adjacent sections of structural floors.
7. System: Specific products and applications, classified and numbered by Underwriters Laboratories, Inc. or another qualified testing and inspection agency to close specific barrier penetrations.
8. Sleeve: A metal fabrication or pipe section extending through the thickness of a barrier, used to permanently guard the penetration. Sleeves are described as part of the penetrating system in other Sections, and may or may not be required at penetrations.

C. Reference Standards:

1. ASTM International (ASTM):
 - a. ASTM C 920 - Standard Specification for Elastomeric Joint Sealants.
 - b. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
 - c. ASTM E 119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
 - d. ASTM E 814 - Standard Test Method for Fire Tests of Through-Penetration Fire Stops.
 - e. ASTM E 1399 - Standard Test Method for Cyclic Movement and Measuring the Minimum and Maximum Joint Widths of Architectural Joint Systems.
2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
4. Intertek Group plc:
 - a. Intertek Directory of Listed Product Search,
<http://etlwhidirectory.etlsemko.com>
 - 1) Warnock Hersey Mark Directory.

6. Underwriters Laboratories, Inc. (UL):
 - a. UL Online Certifications Directory,
<http://www.ul.com/regulators/quickguide.html>
 - 1) UL Fire Resistance Directory (Fire Resistance Ratings).
 - b. UL 1479 – Standard for Fire Tests of Through-Penetration Firestops.

7. United States Government:
 - a. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.
 - 2) 40 CFR 763 - Asbestos.
 - b. Institute for Sustainability Infrastructure (ISI):
 - a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
 - a. Notify the Program/Project Manager at least 7 days in advance of through-penetration firestop system installations.
 - b. Confirm the dates and times on the days preceding each series of installations.
 2. Coordinating Work:
 - a. Coordinate construction of openings and penetrating items to ensure that designated through-penetration firestop systems are installed per specified requirements.
- B. Sequencing:
 1. Do not cover up through-penetration firestop system installations that will become concealed behind other construction until the Testing and Inspection Agency, the Approved Agency, and the City building inspector have examined each installation.

1.04 SUBMITTALS

- A. Action Submittals:
 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Fill Materials.
 - 2) Fire-Resistive Joint Sealants.
 - 3) Fill, Void, or Cavity Materials.
 - 4) Forming Materials.
 - 5) Manufacturer's full range of standard joint sealant colors.
 - b. Shop Drawings:

- 1) Through-penetration firestop systems.
 - c. Certificates:
 - 1) Through-Penetration Firestop System Manufacturer's Certification.
 - d. Qualification Statements:
 - 1) Installer Qualification from the Manufacturer.
 - 2) Installer's Experience.
- B. Informational Submittals:
- 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Product test reports from a qualified testing agency.
 - b. Manufacturer's Instructions:
 - 1) Manufacturer's written instructions for ventilation during installation of their through-penetration firestop systems.
 - 2) Manufacturer's written recommendations regarding priming.
 - 2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. Adhesives and Sealants
 - 1) Submit product data highlighting the VOC content for any field applied sealant used.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
- 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
 - 2. Code-Required Approved Agency for Performing Special Inspections:
 - a. To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - 3. Testing and Inspection Agency:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.
- B. Qualifications:
- 1. Installer's Qualifications:

- a. Employ an experienced installer who is qualified by having the necessary experience, staff, and training to install the manufacturer's products in accordance with the specified requirements.
 - 1) A manufacturer's willingness to sell its through-penetration firestop system products to the Contractor or to an installer engaged by the Contractor does not in itself confer qualification on the buyer.
 - 2) Installer Qualification from the Manufacturer:
 - a) Prior to installing fire stop assemblies, have the installer submit written proof of his qualification from the manufacturer of the fire stop material, certifying that the installer has satisfactorily completed technical and installation training for the specified products, to the Program/Project Manager for approval.
 - 3) Installer's Experience:
 - a) Submit the installer's experience to the Program/Project Manager for approval.
 - (1) Include lists of completed projects with the project names and addresses, and the names and addresses of architects and owners.
- C. Certifications:
 - 1. Through-Penetration Firestop System Manufacturer's Certification:
 - a. Submit a Manufacturer's Certification signed by the through-penetration firestop system manufacturer certifying that the products provided for the Work of this Section comply with the specified requirements.
 - 1) Include certification from the manufacturer that the products supplied comply with local regulations controlling use of volatile organic compounds (VOCs) and are nontoxic to building occupants.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Deliver through-penetration firestop system products to the Site in their original, unopened containers or packages with intact and legible manufacturers' labels identifying the product and manufacturer, date of manufacture, lot number, shelf life if applicable, applicable qualified testing and inspecting agency's classification marking, curing time, and for multi-component materials mixing instructions.
- B. Storage and Handling Requirements:
 - 1. Store and handle materials for through-penetration firestop systems to prevent their deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

1.07 SITE CONDITIONS

A. Ambient Conditions:

1. Do not install through-penetration firestop systems when ambient or substrate temperatures are outside limits permitted by through-penetration firestop system manufacturers, or when substrates are wet due to rain, frost, condensation, or other causes.
2. Ventilate through-penetration firestop systems in accordance with the manufacturer's written instructions by natural means or, where this is inadequate, forced-air circulation.
 - a. Submit the manufacturer's written instructions for ventilation during installation of their through-penetration firestop systems.

PART 2 PRODUCTS

2.01 MANUFACTURERS:

A. Manufacturer List:

1. Fill Material Manufacturers:
 - a. Non-Mortar Systems:
 - 1) Obtain products from manufacturers whose products for the applicable system, as shown on the Contract Drawings, are listed in UL's Fire Resistance Directory.
 - b. Mortar Systems:
 - 1) Obtain products from manufacturers whose products for the applicable system, as shown on the Contract Drawings, are approved by Warnock Hersey
2. Fire-Resistive Elastomeric Joint Sealant Manufacturers:
 - a. Obtain products from manufacturers whose products for the applicable system, as shown on the Contract Drawings, are listed in UL's Fire Resistance Directory.

B. Substitution Limitations:

1. Information on the Contract Drawings referring to specific design designations of through-penetration firestop systems is intended to establish the performance requirements based on the conditions that are expected to exist during installation.
2. Any changes in conditions and designated systems require the Program/Project Manager's prior approval.
3. Submit documentation showing that the performance of proposed substitutions equals or exceeds that of the systems they would replace and are acceptable to the Authorities Having Jurisdiction.

C. Product Options:

1. All firestopping products must be from a single manufacturer.

- a. For each different kind of penetration and construction condition required, obtain the through-penetration firestop systems from a single manufacturer.
- b. All trades must use products from the same manufacturer.
2. Submit Product Data for each type of product proposed for the through-penetration firestop systems to the Program/Project Manager for approval.

2.02 DESCRIPTION:

A. Regulatory Requirements:

1. Fire-Test-Response Characteristics:
 - a. Qualified testing and inspecting agencies acceptable to the Authorities Having Jurisdiction, such as Underwriters Laboratories, Inc. (UL) and Warnock Hersey, perform testing and follow-up inspections of firestopping systems.
 - 1) The through-penetration firestopping systems are tested in accordance with the requirements specified in ASTM E 814 under conditions where a positive furnace pressure differential of at least 0.01 inch of water is maintained at a distance of 0.78 inch below the fill materials surrounding the penetrating items in the test assembly.
 - 2) The fire-resistive joint sealant systems are tested for fire-response characteristics in accordance with the requirements specified in ASTM E 119 under conditions where the positive furnace pressure differential is at least 0.01 inch of water, as measured 0.78 inch from the face exposed to the furnace fire.
 - 3) Underwriters Laboratories, Inc. (UL) Fire Resistance Directory:
 - a) Underwriters Laboratories, Inc. publishes a Fire Resistance Directory which lists all assemblies, systems, and devices UL has tested, and classifies them under Category Codes (CCN) in the UL Online Certifications Directory, including the following applicable to the Work of this Section:
 - (1) Through-Penetration Firestop Devices (XHCR).
 - (2) Fire Resistance Ratings – ANSI/UL 263 (BXUV).
 - (3) Through-Penetration Firestop Systems (XHEZ).
 - (4) Fill, Void or Cavity Material (XHHW).
 - (5) Forming Materials (XHKU).
 - b. The through-penetration firestopping systems and fire-resistive joint sealant systems tested are identical to those to be provided under this Section.
 - 1) Provide fireproofing assemblies listed by Underwriters Laboratories, Inc. (UL), Factory Mutual (FM), and/or Warnock Hersey (WH) as applicable.
 - 2) Provide sealants having the fire-resistance ratings indicated in the applicable Design/System/Construction/Assembly listed in the UL

- Fire Resistance Directory, or by another qualified testing and inspecting agency.
- 3) Provide joint sealants, including their backing materials that bear the classification marking of the qualified testing and inspecting agency.
- c. Product Test Reports:
 - 1) Submit product test reports from a qualified testing agency indicating the through-penetration firestop systems comply with the specified requirements based on comprehensive testing of current products.
- 2. Asbestos:
 - a. Provide firestopping products containing no detectable asbestos as determined by the Polarized Light Microscopy Method specified in Subpart E, Appendix E, Section 1 of 40 CFR 763.
- 3. Volatile Organic Compounds (VOC) Content of Fire-Resistive Joint Sealants:
 - a. Provide sealants and sealant primers for the firestopping system of this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168:
 - 1) Sustainable Goal: VOC Limit for Fire-Resistive Joint Sealants: 250 grams per Liter.
- B. Sustainability Requirements:
 - 1. All firestopping sealant shall comply with the following limits for VOC content when calculated according to 40 CFR 50, Subpart D (EPA Method 24).
 - a. Architectural Sealants: 250 g/L

2.03 PERFORMANCE:

- A. Flame-Spread and Smoke-Developed Ratings:
 - 1. For through-penetration firestop systems exposed to view, provide products having flame-spread ratings of less than 25, and smoke-developed ratings of less than 450, as determined in accordance with the requirements specified in ASTM E 84.
 - a. For communications pathways, provide products having smoke development ratings of less than 50.
- B. Fire-Resistive Joint Sealants:
 - 1. Provide joint sealants with the fire-resistance ratings indicated on the Contract Drawings as determined in accordance with the requirements specified in ASTM E 119, but not less than the fire-resistance rating of the construction in which the joint occurs.

C. Durability:

1. Provide through-penetration firestop systems that during and after construction do not deteriorate when exposed to view, traffic, moisture, and/or physical damage after curing.

2.04 DESIGN CRITERIA:

A. Provide firestopping systems designed to resist the spread of fire and the passage of smoke and other gases according to the specified requirements.

1. Provide firestopping systems composed of the materials specified for the application and that comply with the system performance and other requirements.

B. F-Rated Systems:

1. Provide through-penetration firestop systems with the F-ratings indicated on the Contract Drawings, as determined in accordance with the requirements specified in ASTM E 814, but not less than that equaling or exceeding the fire-resistance rating of the constructions penetrated.

C. T-Rated Systems:

1. Where firestopping systems protect penetrating items exposed to potential contact with adjacent materials in occupiable floor areas, provide through-penetration firestop systems with both the T-ratings and the F-ratings indicated on the Contract Drawings, as determined in accordance with the requirements specified in ASTM E 814.

D. Product Compatibility:

1. Provide through-penetration firestop systems that are compatible with one another, with the substrates forming openings, and with items penetrating the through-penetration firestop systems, under the conditions of service and application indicated based on the testing and field experience of the through-penetration firestop system manufacturer.

E. Shop Drawings:

1. For each through-penetration firestop system, submit Shop Drawings showing each kind of construction condition penetrated, relationships to adjoining construction, and the kind of penetrating item.
 - a. Include the firestop design designation of the testing and inspecting agency acceptable to Authorities Having Jurisdiction that evidences compliance with the requirements for each condition indicated.
 - b. Submit documentation, including illustrations, from a qualified testing and inspecting agency that is applicable to each through-penetration firestop system configuration for construction and penetrating items.

2.05 MATERIALS

A. Fill Materials:

1. Provide systems or devices that are classified by UL under Category Codes (CCN) XHEZ in the UL Online Certifications Directory or XHCR in the UL Fire Resistance Directory, provided that the system or device conforms to the construction type, penetrant type, annular space requirements and fire rating involved in each separate instance.
 - a. For wall applications, provide symmetrical systems.
 - b. Provide asbestos-free systems or devices.
 - c. Mortar systems must be approved by Warnock Hersey.
2. Provide systems or devices capable of withstanding the passage of cold smoke, either as an inherent property of the system or by using a separate product included as a part of the UL system or device designed to perform this function.

B. Fire-Resistive Joint Sealants:

1. Provide the manufacturer's standard chemically curing, fire-resistive elastomeric joint sealants manufactured from the base polymer indicated; and complying with the requirements specified for the Type, Grade, Class, and Uses in ASTM C 920 and the requirements specified in this Section applicable to fire-resistive joint sealants.
 - a. Single-Component, Neutral-Curing Silicone Sealant:
 - 1) Provide Type S; Grade NS; Class 25; exposure-related Use NT and joint substrate-related Uses M, G, A, and if applicable to the joint substrates shown O.
 - b. Multi-Component; Nonsag, Urethane Sealant:
 - 1) Provide Type M; Grade NS; Class 25; exposure-related Use NT, and joint substrate-related Uses M, A, and if applicable to the joint substrates indicated O.
 - c. Single-Component, Nonsag, Urethane Sealant:
 - 1) Provide Type S; Grade NS; Class 25; and Uses NT, M, A, and joint substrate-related Uses M, G, A, and if applicable to the joint substrates indicated O.
2. Colors:
 - a. Provide fire-resistive joint sealants having the colors selected by the Program/Project Manager from the manufacturer's full range of standard colors for products of the type provided.
 - 1) Submit the manufacturer's full range of standard joint sealant colors to the Program/Project Manager for information.
 - b. Where fire-resistive joint sealants are exposed to view, match the color of the adjacent surface.

2.06 ACCESSORIES

- A. Provide the components for each through-penetration firestop system needed to install the fill materials and to comply with the specified performance requirements.

1. Provide only the components specified by the through-penetration firestop system manufacturer and approved by the qualified testing and inspecting agency for the applicable firestop systems.
- B. Fill, Void, or Cavity Materials:
 1. Provide fill, void, or cavity materials that are classified by UL under Category Code (CCN) XHHW in the UL Online Certifications Directory.
- C. Forming Materials:
 1. Provide forming materials that are classified by UL under Category Code (CCN) XHKU in the UL Online Certifications Directory.
- D. Safing Insulation:
 1. Provide safing insulation and accessories as specified in Section 07210, Building Insulation.

2.07 SOURCE QUALITY CONTROL

- A. Coordination of Other Tests and Inspections:
 1. Notify the code-required Approved Agency responsible for performing special inspections when firestopping for this Contract is being mixed, placed, and/or tested.
 2. Cooperate with the code-required Approved Agency when they are performing required material verifications and other special inspections.
 - a. Provide full access to the Work.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. With the installer present, examine the substrates and existing conditions for compliance with the requirements for the opening configurations, penetrating items, substrates, and other conditions affecting performance.
- B. Evaluation and Assessment:
 1. Install through-penetration firestop systems only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Apply masking tape to adjoining surfaces that will remain exposed on completion of the through-penetration firestop systems that would otherwise be permanently stained or damaged by contact with the firestop systems' materials.

2. Apply masking tape to adjoining surfaces that would otherwise be permanently stained or damaged by cleaning methods used to remove smears from the firestop system materials.

B. Surface Preparation:

1. Cleaning:

- a. Immediately before installing through-penetration firestop systems, clean out the openings to comply with the written recommendations of the firestop system manufacturer.
- b. Remove foreign materials that could interfere with the adhesion of the through-penetration firestop systems from the surfaces of the opening substrates and penetrating items.
- c. Clean the surfaces of the opening substrates and penetrating items so clean, sound surfaces capable of developing the optimum bond with the through-penetration firestop systems result.
- d. Remove loose particles remaining from the cleaning operation.
- e. Remove laitance and form-release agents from concrete.

2. Priming:

- a. If the through-penetration firestop system manufacturer recommends priming the substrate, use the manufacturer's recommended products and methods to prime the substrate.
- b. Confine primer to the area of the bond, and do not allow spillage and migration of primer onto exposed surfaces.
- c. Submit the manufacturer's written recommendations regarding priming to the Program/Project Manager for information.

3.03 INSTALLATION

A. Mixing:

1. For those products requiring mixing before application, comply with the through-penetration firestop system manufacturer's written instructions for accurate proportioning of materials, water if required, the type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for the application indicated on the Contract Drawings.

B. Installing Through Penetration Firestop Systems:

1. Install through-penetration firestop system products for the applications indicated on the Contract Drawings in accordance with the firestop system manufacturer's written installation instructions and published drawings.
2. Forming/Damming/Backing Materials:
 - a. Install forming/damming/backing materials and other accessories of the types required to support the fill materials during their application, and in the position needed to produce cross-sectional shapes and

depths required to achieve the fire ratings indicated on the Contract Drawings.

3. Fill Materials:

- a. Install fill materials for firestop systems using proven techniques to produce the following results:
 - 1) Fill voids and cavities formed by openings, forming materials, accessories, and penetrating items required to achieve the fire-resistance ratings indicated on the Contract Drawings.
 - 2) Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
 - 3) Finish fill materials that will remain exposed after completion of the Work to produce smooth, uniform surfaces that are flush with adjoining finishes.

C. Installing Fire-Resistive Joint Sealants:

1. Joint Fillers:

- a. Install joint fillers so the cross-sectional shapes and depths will allow optimum movement of the sealants subsequently installed and supported by the fillers, and so the fire-resistance rating required relative to the joint widths will be developed.

2. Sealants:

- a. Using proven techniques, apply sealants so they directly contact and fully wet joint substrates, completely fill the recesses provided for each joint configuration, and provide uniform, cross-sectional shapes and depths that allow optimum sealant movement relative to the joint widths.
 - 1) Apply sealants at the same time joint fillers are installed.
 - 2) Tool non-sag sealants immediately after applying the sealant, but prior to the time skinning or curing begins.
 - a) Do not use tooling agents that discolor the sealants or adjacent surfaces, or are not approved by sealant manufacturer.
 - 3) Form smooth, uniform sealant beads configured as indicated on the Contract Drawings, or as required to produce the specified fire-resistance rating, and to eliminate air pockets.
 - a) Ensure that the sealants contact and adhere to the sides of joint.
- b. Remove excess sealant from surfaces adjacent to joint.

3.04 REPAIR/RESTORATION

- A. If damage or deterioration to the through-penetration firestop system occurs, cut out and remove damaged or deteriorated elements immediately, and install new materials to produce through-penetration firestop systems complying with the specified requirements.

3.05 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. During the period when firestopping is being installed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials or proportions requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
 - 2. Inspections:
 - a. The Testing and Inspection Agency and code-required Approved Agency will prepare test reports stating whether inspected through-penetration firestop systems comply with or deviate from the specified requirements.
- B. Non-Conforming Work
 - 1. Where deficiencies are found in the through penetration firestop systems, repair or replace the systems so they comply with the specified requirements.
- C. Manufacturer Services:
 - 1. Have the manufacturer of the fire stop material perform sufficient inspections of the installed systems to assure that the acceptance criteria required by the Contract, the Code, and the minimum standards shown in each UL system installed are met.
 - a. These inspection requirements are in addition to any requirement and/or field inspection requirements requested by the local Authority Having Jurisdiction.

3.06 CLEANING

- A. Clean off excess fill materials adjacent to openings as the Work progresses by methods and with cleaning materials that are approved in writing by the through-penetration firestop system manufacturers, and that do not damage the materials in which the openings occur.

1. Remove masking tape used to protect surfaces adjoining through-penetration firestop systems as soon as possible after installing the firestop systems without disturbing the firestop systems' seals with the substrates.

3.07 PROTECTION

- A. During construction, provide protection and maintain the conditions that ensure that through-penetration firestop system Work is without damage or deterioration at the time of Substantial Completion.

SECTION 07920

JOINT SEALANTS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for joint sealants
- B. Related Requirements:
 - 1. Section 01316 - Project Meetings.
 - 2. Section 01330 - Submittal Procedures.
 - 3. Section 01400 - Quality Requirements.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 07844 - Fire-Resistant Joint Sealants.
 - 6. Section 08800 - Glazing.
 - 7. Section 09260 - Gypsum Board Assemblies.
 - 8. Section 09310 - Ceramic Tile.
 - 9. Section 09525 - Acoustical Panel Ceiling.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 2. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside, and San Bernardino counties in California.
 - 3. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
- B. Reference Standards:
 - 1. ASTM International (ASTM):
 - a. ASTM C 834 - Standard Specification for Latex Sealants.
 - b. ASTM C 919 - Standard Practice for Use of Sealants in Acoustical Applications.
 - c. ASTM C 920 - Standard Specification for Elastomeric Joint Sealants.

- d. ASTM C 1021 - Standard Practice for Laboratories Engaged in the Testing of Building Sealants.
- e. ASTM C 1087 - Standard Test Method for Determining Compatibility of Liquid-Applied Sealants with Accessories Used in Structural Glazing Systems.
- f. ASTM C 1193 - Standard Guide for Use of Joint Sealants.
- g. ASTM C 1248 – Standard Test Method for Staining Products of Porous Substrate by Joint Sealants.
- h. ASTM C 1330 - Standard Specification for Cylindrical Sealant Backing for Use with Cold Liquid Applied Sealants.
- i. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
- j. ASTM E 90 - Standard Test Method for Laboratory Measurement of Airborne Sound transmission Loss of Building Partitions and Elements.
- k. ASTM E 548 – Standard Guide for General Criteria Used for Evaluating Laboratory Competence.
- 2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
- 4. Sealant Waterproofing and Restoration Institute (SWR Institute):
 - a. SWR Institute Liquid Sealant Validation Program.
- 5. South Coast Air Quality Management District (SCAQMD):
 - a. SCAQMD Rule 1168 – Adhesive and Sealant Applications.
- 6. United States Government:
 - a. Food and Drug Administration (FDA):
 - 1) 21 CFR 177 – Indirect Food Additives: Polymers.
 - b. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.
- 7. Institute for Sustainability Infrastructure (ISI)
 - a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Pre-Installation Meetings:
 - 1. Pre-installation Conference:
 - a. Conduct a pre-installation conference at the Site in accordance with the requirements specified in Section 01316, Project Meetings.
- B. Sequencing:
 - 1. Unless otherwise indicated, sequence joint sealant installation to occur not less than 21 or more than 30 days after completion of waterproofing.

C. Scheduling:

1. Allow sufficient time to perform the Preconstruction Compatibility and Adhesion Testing specified in Subparagraph 1.05.D.2, and to analyze the results, to prevent delaying the Work.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Sealants, including a printed statement of VOC content.
 - a) Latex joint sealants.
 - b) Elastomeric joint sealants.
 - c) Acoustical joint sealants.
 - 2) Sealant primers, including a printed statement of VOC content.
 - 3) Plastic foam joint fillers.
 - 4) Bond-breaker tape.
 - 5) Cleaners for nonporous surfaces.
 - 6) Masking tape.
 - b. Samples:
 - 1) Color Charts.
 - 2) Joint sealant Samples for verification.
 - c. Certificates:
 - 1) Asbestos-Free Joint Sealant Certification.
 - 2) Compatibility Certification.
 - 3) Sealant Waterproofing and Restoration Institute (SWR Institute) Validation Certificates.
 - d. Qualification Statements:
 - 1) Joint sealant installer's qualifications.
 - 2) Testing and Inspection Agency's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Compatibility and Adhesion Test Reports.
 - 2) Preconstruction Field Test Reports.
 - b. Manufacturer's Instructions:
 - 1) Manufacturer's written installation instructions for the sealant products provided.
 - c. Source Quality Control Submittals:
 - 1) Product Test Reports.
 - d. Site Quality Control Submittals:

- 1) Field Test Report Log.
2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. Adhesives and Sealants
 - 1) Submit product data highlighting the VOC content for any field applied sealant used.
- C. Closeout Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Special Joint Sealant Installer's Warranty.
 - 2) Special Joint Sealant Manufacturer's Warranty.

1.05 QUALITY ASSURANCE

- A. Qualifications:
 1. Joint Sealant Installer's Qualifications:
 - a. Employ a manufacturer's authorized installer who is approved or licensed for installation of the elastomeric sealants required for this Contract.
 - b. Submit the joint sealant installer's qualifications to the Program/Project Manager for approval.
 2. Testing and Inspection Agency's Qualifications:
 - a. Employ an independent Testing and Inspection Agency qualified, in accordance with the requirements specified in Section 01400, Quality Requirements, and ASTM C 1021 to conduct the testing specified herein, as documented in accordance with the requirements specified in ASTM E 548.
 - b. Submit the independent testing agency's qualifications to the Program/Project Manager for approval.
- B. Certifications:
 1. Asbestos-Free Joint Sealant Certification:
 - a. Submit a certification from the joint sealant manufacturer certifying that the materials provided under this Section are 100 percent asbestos-free.
 2. Compatibility Certification:
 - a. Submit a letter from the manufacturer certifying all sealants are compatible with one another, and with the construction materials with which they will come in contact on the Contract.
 3. Sealant Waterproofing and Restoration Institute (SWR Institute) Validation Certificates:
 - a. Unless the manufacturer has already validated the elastomeric sealants proposed for the Work of this Section under the SWR Institute Liquid Sealant Validation Program, have the manufacturer

submit sealant samples of each elastomeric sealant to the SWR Institute for verification testing of sealant adhesion and cohesion under cyclic movement, adhesion-in-peel, and indentation hardness.

- b. Submit an SWR Institute Validation Certificate for each elastomeric sealant validated to the Program/Project Manager for information.

C. Sustainability Standards Certifications:

1. Adhesives and Sealants Submittal:

- a. For the sealants and sealant primers used within the weatherproofing system, submit Product Data, including a printed statement of volatile organic compound (VOC) content and chemical components, signed by the product manufacturer certifying that these products comply with SCAQMD Rule 1168.

D. Preconstruction Testing:

1. Perform preconstruction joint-sealant-substrate tests to determine the adhesion of the sealants to the joint substrates indicated, and whether or not primers may be required.
 - a. The preconstruction joint-sealant-substrate testing will not be required if the joint-sealant manufacturers submit joint preparation data that are based on previous testing of current sealant products for adhesion to, and compatibility with, joint substrates and other materials matching those that will contact or affect joint sealants.
2. Preconstruction Compatibility and Adhesion Testing:
 - a. Test Procedure:
 - 1) Submit Samples of the materials that will contact or affect joint sealants to the joint-sealant manufacturers for testing as indicated herein.
 - a) Submit not fewer than 8 pieces of each type of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
 - 2) Have the sealant manufacturers determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of the joint sealants to the joint substrates in accordance with the methods specified in ASTM C 1087.
 - 3) Compatibility and Adhesion Test Reports:
 - a) Have the sealant manufacturers prepare Compatibility and Adhesion Test Reports including the following:
 - (1) Verification that materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
 - (2) An interpretation of the test results, and written recommendations, for the primers and substrate preparation needed for adhesion.

- (a) Indicate which sealants and joint preparation methods resulted in optimum adhesion to joint substrates.
 - b) Submit the Compatibility and Adhesion Test Reports to the Program/Project Manager for Information.
 - b. Acceptance Criteria:
 - 1) Sealants that do not experience adhesive failure in accordance with the criteria specified in ASTM C 1087 pass the Preconstruction Compatibility and Adhesion Testing.
 - 2) For materials failing the Preconstruction Compatibility and Adhesion Testing, obtain the joint-sealant manufacturer's written instructions for corrective measures, including the use of specially formulated primers.
- E. Site Samples:
 - 1. Color Charts:
 - a. Submit the manufacturer's color charts, consisting of strips of cured sealants showing the full range of colors available for each product exposed to view, to the Program/Project Manager for information and initial color selection.
 - 2. Joint Sealant Samples for Verification:
 - a. For each type and color of joint sealant required, submit Samples of the joint sealants placed in 1/2-inch- wide joints formed between two 6-inch- long strips of material matching the appearance of the exposed surfaces adjacent to the joint sealants to the Program/Project Manager for approval.
- F. Mock-Ups:
 - 1. If mock-ups to verify the selections made from the sample submittals and to demonstrate the aesthetic effects and set quality standards for materials and execution are indicated on the Contract Drawings, incorporate the sealant joints specified in other Sections that are to receive joint sealants specified by reference to this Section in mock-ups of the assemblies at the location, of the size, and complying with other details of the mock-ups indicated on the Contract Drawings or by inserts.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Deliver materials to the Site in original unopened containers or bundles with labels indicating the manufacturer, product name and designation, color, expiration date, pot life, curing time, and mixing instructions for multi-component materials.
- B. Storage and Handling Requirements:

1. Store and handle materials in compliance with manufacturer's written instructions to prevent their deterioration or damage due to moisture, high or low temperatures, contaminants, or other causes.

1.07 SITE CONDITIONS

A. Ambient Conditions:

1. Environmental Limitations:

- a. Do not proceed with installation of joint sealants under the following conditions:
 - 1) When ambient and substrate temperature conditions are outside limits permitted by the joint sealant manufacturer.
 - 2) When joint substrates are wet.

1.08 WARRANTY

A. Special Joint Sealant Warranties:

1. Special Joint Sealant Installer's Warranty:

- a. Furnish a written Joint Sealant Installer's Warranty on the installer's standard form in which Installer agrees, at no increase in the Contract Price, to repair or replace joint sealants that do not comply with the performance and other requirements specified in this Section within a 3-year warranty period from the date of Substantial Completion; and to repair or replace exterior concrete pavement joint sealants within a 5-year warranty period from the date of Substantial Completion.
 - 1) Submit the Joint Sealant Installer's Warranty to the Program/Project Manager.

2. Special Joint Sealant Manufacturer's Warranty:

- a. Furnish a written Joint Sealant Manufacturer's Warranty in which elastomeric sealant manufacturer agrees, at no increase in the Contract Price, to furnish elastomeric joint sealants to repair or replace those that do not comply with performance and other requirements specified in this Section within a 10-year warranty period from the date of Substantial Completion
 - 1) Submit the Joint Sealant Manufacturer's Warranty to the Program/Project Manager.

3. Special Joint Sealant Warranty Exclusions:

- a. The special joint sealant warranties specified in this Section exclude deterioration or failure of joint sealants from the following:
 - 1) Movement of the structure resulting in stresses on the sealant exceeding the sealant manufacturer's written specifications for sealant elongation and compression caused by structural settlement or errors attributable to design or construction.
 - 2) Disintegration of joint substrates from natural causes exceeding the design criteria.

- 3) Mechanical damage caused by individuals, tools, or other outside agents.
- 4) Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 PRODUCTS

2.01 JOINT SEALANT SYSTEMS

- A. Manufacturers:
 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) For each different product required, obtain the joint sealants and accessories for the Work of this Section from a single source and from a single manufacturer to ensure that materials which come in contact with one another will be compatible.
 3. Product Options:
 - a. Colors of Exposed Joint Sealants:
 - 1) Unless otherwise indicated in the Contract Documents, provide materials having the colors selected by the Program/Project Manager from the manufacturer's Color Charts indicating the full range of available colors.
- B. Description:
 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).
 2. Sustainable Requirements:
 - a. Volatile Organic Compounds (VOC) Content of Interior Sealants:
 - 1) Provide interior sealants and sealant primers for this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168:
 - a) Architectural Sealants: Not more than 250 grams per Liter less water.

- b) Sealant Primers for Nonporous Substrates: Not more than 250 grams per Liter less water.
 - c) Sealant Primers for Porous Substrates: Not more than 775 grams per Liter less water.
- C. Performance:
 - 1. For exterior applications, provide joint sealants that establish and maintain continuous watertight and airtight joint seals.
 - 2. For interior applications, provide joint sealants that establish and maintain continuous water-resistant and airtight joint seals.
 - 3. Provide joint sealants that do not stain or deteriorate joint substrates.
- D. Design Criteria:
 - 1. Sealant Installation Standard:
 - a. Comply with the recommendations of ASTM C 1193 for the use of joint sealants as applicable to the materials, applications, and conditions indicated.
 - 2. Product Compatibility:
 - a. Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under the conditions of service and application indicated based on the testing and field experience of the sealant manufacturer.
 - 3. Sealant Backings:
 - a. Provide sealant backings of a type, and manufactured from a material, complying with the following requirements:
 - 1) Non-staining.
 - 2) Compatible with joint substrates, sealants, primers, and other joint fillers.
 - 3) Manufacturer-approved for the applications indicated based on field experience and laboratory testing.
 - 4. Stain-Test-Response Characteristics:
 - a. Where elastomeric sealants are specified to be non-staining to porous substrates, such as marble, limestone, granite, and sandstone; provide products that have undergone testing in accordance with the method specified in ASTM C 1248, and have not stained the porous joint substrates indicated in the Contract Documents.
 - 5. Suitability for Contact with Food:
 - a. Where elastomeric sealants are indicated to be used for joints that will come in repeated contact with food, provide products that comply with the requirements specified in 21 CFR 177.2600.
 - 6. Product Data:
 - a. Submit Product Data from the manufacturers for each type of product specified and provided under this Section to the Program/Project Manager for approval.
- E. Materials:

1. Latex Joint Sealants:
 - a. Acrylic Latex Joint Sealants
 - 1) Provide single-component acrylic latex sealants complying with the requirements specified in ASTM C 834.
 - a) Sealant #1:
 - (1) Provide acrylic latex caulk complying with the requirements for Type OP, Grade NF sealant specified in ASTM C 834.
 - (2) Manufacturers:
 - (a) Tremco, Inc.; Global Sealants Division; Acrylic Latex 834 Caulk; www.tremcosealants.com.
 - (b) Bostik, Inc., Chem-Calk 600, www.bostik-us.com.
 - (c) Pecora Corporation, AC-20+, www.pecora.com.
 - (d) Sonneborn, Division of BASF Construction Chemicals - Building Systems, Sonolac, www.buildingsystems.basf.com.
 - (e) Approved equal.
 - b. Acoustical Joint Sealants:
 - 1) Sealant #2:
 - a) For exposed and concealed joints, provide the manufacturer's standard non-sag, paintable, non-staining latex sealant complying with the requirements specified in ASTM C 834, and that effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies in accordance with the methods specified in ASTM E 90.
 - b) If required by the application, provide acoustical sealants having flame-spread and smoke-developed indexes of less than 25 in accordance with the requirements specified in ASTM E 84.
 - c) Manufacturers:
 - (1) Pecora Corporation; AC-20 FTR Acoustical and Insulation Sealant, www.pecora.com.
 - (2) United States Gypsum Co.; SHEETROCK Acoustical Sealant, www.usg.com.
 - (3) Approved equal.
 2. Elastomeric Joint Sealants:
 - a. Provide elastomeric joint sealants complying with the requirements specified in ASTM C 920 and other requirements indicated for each liquid-applied chemically curing sealant specified, including those referencing ASTM C 920 classifications for the type, grade, class, and uses related to its exposure and joint substrates.
 - b. Polyurethane Sealants:
 - 1) Provide multi-component polyurethane sealants complying with the requirements of ASTM C 920.

- a) Sealant #3:
 - (1) Provide Type M, Grade NS, Class 25, Use NT, M, A, and O polyurethane sealants capable of 50 percent extension and compression movement.
 - (2) Manufacturers:
 - (a) Tremco, Inc.; Global Sealants Division; Dymeric 240FC; www.tremcosealants.com.
 - (b) Approved equal.
- b) Sealant #4:
 - (1) Provide Type M, Grade P, Class 25, Use T, M, A and O polyurethane sealants.
 - (2) Manufacturers:
 - (a) Tremco, Inc.; Global Sealants Division; THC – 900/901; www.tremcosealants.com.
 - (b) Approved equal.
- c. Urethane Sealant:
 - 1) Sealant #5:
 - a) Provide single-component pourable Type S, Grade P, and Class 25, urethane sealants rated for the following uses:
 - (1) For uses related to exposure, provide urethane sealant rated for Uses T and NT.
 - (2) For uses related to joint substrate, provide urethane sealant rated for Uses M, A, and, as applicable to the joint substrates indicated, O.
 - (a) For galvanized steel and concrete joint substrates, provide Use O urethane sealants.
 - b) Manufacturers:
 - (1) Sika Corporation, Inc.; Sikaflex - 1CSL, www.sikaconstruction.com.
 - (2) Sonneborn, Division of BASF Construction Chemicals - Building Systems, SL 1, www.buildingsystems.basf.com.
 - (3) Tremco, Inc.; Global Sealants Division; Vulkem Nova 300 SSL; www.tremcosealants.com.
 - (4) Approved equal.
- d. Silicone Sealants:
 - 1) Provide single-component silicone sealants complying with the requirements of ASTM C 920.
 - a) Sealant #6:
 - (1) Provide Type S, Grade NS, Class 25, Use NT, M, G, A and O, silicone sealant capable of 50 percent extension and 50 percent compression movement.
 - (2) Manufacturers:
 - (a) Tremco, Inc.; Global Sealants Division; Spectrem 2; www.tremcosealants.com.
 - (b) Approved equal.

- b) Sealant #7:
 - (1) Provide Type S, Grade NS, Class 25, Use NT, M, G, A and O, silicone sealant capable of 100 percent extension and compression movement.
 - (2) Manufacturers:
 - (a) Tremco, Inc.; Global Sealants Division; Spectrem 1; www.tremcosealants.com.
 - (b) Approved equal.
- c) Sealant #8:
 - (1) Provide Type S, Grade NS, Class 25, Use T, A and O, mildew-resistant silicone sealant formulated with fungicide.
 - (2) Color: White.
 - (3) Manufacturers:
 - (a) Tremco, Inc.; Global Sealants Division; Tremsil 600; www.tremcosealants.com.
 - (b) Approved equal.
- d) Sealant #9:
 - (1) Provide Type S, Grade NS, Class 50, neutral-curing silicone sealant capable of 100 percent extension and compression movement.
 - (2) For use related to exposure, provide Use NT (non-traffic).
 - (3) For uses related to joint substrates, provide Uses M, G, A, and, as applicable to joint substrates indicated, O.
 - (a) For coated glass, color anodic aluminum, and galvanized steel joint substrates, provide Use O silicone sealants.
 - (4) Stain-Test-Response Characteristics:
 - (a) Provide silicone sealant that is non-staining to porous substrates in accordance with the requirements specified in ASTM C 1248.
 - (5) Manufacturers:
 - (a) Dow Corning Corporation, 795, www.dowcorning.com.
 - (b) GE Silicones, SilPruf NB SCS9000, www.geadvancedmaterials.com.
 - (c) Approved equal.
- e) Sealant #10:
 - (1) Provide Type S, Grade NS, Class 25, mildew-resistant, neutral-curing silicone sealant.
 - (2) For use related to exposure, provide Use NT (non-traffic).
 - (3) For uses related to joint substrates, provide Uses M, G, A, and, as applicable to joint substrates indicated, O.
 - (a) For ceramic tile, provide Use O silicone sealants.
 - (4) Manufacturers:

- (a) Pecora Corporation, 898, www.pecora.com.
 - (b) Tremco, Inc.; Global Sealants Division;
Tremsil 600 White; www.tremcosealants.com.
 - (c) Approved equal.
- 3. Sealant Primers.
 - a. Where required for the adhesion of the sealant to the joint substrates indicated, provide sealant primer material as recommended by the joint sealant manufacturer as determined from the preconstruction joint-sealant-substrate tests and field tests.
 - b. Provide sealant primers complying with the specified requirements for VOC content.

2.02 ACCESSORIES

- A. Plastic Foam Joint Fillers:
 - 1. Provide preformed, compressible, resilient, non-staining, non-waxing, non-extruding strips of flexible plastic foam of material of the size, shape, and density to control sealant depth and otherwise contribute to producing optimum sealant performance:
 - a. Cylindrical Sealant Backings:
 - 1) Provide cylindrical sealant backings complying with the requirements for Type C (closed-cell material with a surface skin) backing specified in ASTM C 1330, and of a size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.
 - 2. Provide closed-cell polyethylene foam that is nonabsorbent to liquid water and gas, and that is non-outgassing in its un-ruptured state.
 - a. Manufacturers:
 - 1) Horizontal Applications:
 - a) Industrial Thermo Polymers™ Limited, "HBR", www.tundrafoam.com.
 - b) Approved equal.
 - 2) Vertical Applications:
 - a) Industrial Thermo Polymers™ Limited, closed-cell or soft-type backer rod, www.tundrafoam.com.
 - b) Approved equal.
- B. Bond-Breaker Tape:
 - 1. Provide polyethylene or other plastic bond-breaker tape as recommended by the sealant manufacturer for preventing the sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at the back of the joint where such adhesion would result in sealant failure.
 - 2. Provide self-adhesive tape where applicable.
- C. Cleaners for Nonporous Surfaces:

1. Provide chemical cleaners acceptable to the sealant and sealant backing material manufacturers, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants with the joint substrates.

D. Masking Tape:

1. Provide masking tape manufactured from non-staining, nonabsorbent material compatible with the joint sealants and surfaces adjacent to the joints.

2.03 SOURCE QUALITY CONTROL

A. Tests and Inspections:

1. Within a 36-month period preceding the commencement of the Work, have the Testing and Inspection Agency test current sealant formulations for compliance with the requirements specified.
2. Elastomeric Joint Sealants Tests:
 - a. Test Procedure:
 - 1) Have the Testing and Inspection Agency test elastomeric joint sealants in accordance with the requirements specified in ASTM C 920, and if applicable in accordance other standard test methods, for compliance with the requirements specified.
 - 2) Elastomeric Joint Sealant Product Test Reports:
 - a) Submit Product Test Reports based on comprehensive testing of the product formulations performed by the Testing and Inspection Agency, indicating that the sealants comply with the requirements specified.
 - b. Acceptance Criteria:
 - 1) Elastomeric joint sealants complying with the requirements specified for the sealant Type, Grade, Class, and Use in ASTM C 920 pass the Elastomeric Joint Sealants Tests.
3. Latex Joint Sealant Tests:
 - a. Test Procedure:
 - 1) Have the Testing and Inspection Agency test latex joint sealants in accordance with the requirements specified in ASTM C 834, and if applicable in accordance ASTM E 84 and ASTM E 90, for compliance with the requirements specified.
 - 1) Latex Joint Sealant Product Test Reports:
 - a) Submit Product Test Reports based on comprehensive testing of the product formulations performed by the Testing and Inspection Agency, indicating that the sealants comply with the requirements specified.
 - b. Acceptance Criteria:
 - 1) Latex joint sealants complying with the requirements specified for the sealant Type and Grade in ASTM C 834, and if applicable with

the airborne sound transmission requirements specified in ASTM E 90 and exhibit the specified flame-spread and smoke-developed indexes when tested in accordance with ASTM E 84, pass the Latex Joint Sealants Tests.

- B. Non-Conforming Work:
 - 1. Do not provide sealants that do not pass the specified testing.
- C. Coordination of Other Tests and Inspections:
 - 1. Sealant tests performed under the SWR Institute Liquid Sealant Validation Program, and validated by the Sealant Waterproofing and Restoration Institute (SWR Institute) Validation Certificates do not need to be repeated.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. With the Installer present, examine the joints indicated to receive joint sealants for compliance with the requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.
- B. Pre-Installation Testing:
 - 1. Before installing sealants, perform field tests to determine the adhesion of the sealants to the joint substrates indicated for this Contract and whether or not primers may be required.
 - a. Locate the joints indicated on the Contract Drawings to be tested under this Contract; or, if they are not indicated there, locate joints as directed by the Program/Project Manager.
 - 1) Test each type of sealant and joint substrate indicated.
 - b. Notify the Program/Project Manager 7 days in advance of the dates and times when the joints to be tested will be erected.
 - c. Arrange for a technical representative from the joint-sealant manufacturer to witness the tests.
 - 2. Preconstruction Field-Adhesion Test:
 - a. Test Procedure:
 - 1) Test the joint sealants in accordance with the procedures of Method A, Field-Applied Sealant Joint Hand Pull Tab, specified in Appendix X1 of ASTM C 1193.
 - 2) For joints with dissimilar substrates, verify adhesion to each substrate separately.
 - 3) Extend the cut along one side, verifying adhesion to the opposite side; and repeat this procedure for the opposite side.
 - 4) Preconstruction Field Test Reports:

- a) Prepare a test report indicating whether the sealant in the joint connected to the pulled-out portion failed to adhere to the joint substrates or tore cohesively.
 - (1) Include data on the pull distance used to test each type of product and joint substrate.
 - b) Submit the Preconstruction Field Test Reports to the Program/Project Manager for information.
- b. Acceptance Criteria:
 - 1) Sealants not evidencing adhesive failure from this testing, in the absence of other indications of noncompliance with the specified requirements, will be considered satisfactory.
 - 2) Retest sealants that fail adhesively, until satisfactory adhesion is obtained.
- C. Evaluation and Assessment:
 - 1. Do not use sealants that fail to adhere to joint substrates during testing.
 - 2. Proceed with installation of joint sealants only after unsatisfactory conditions have been corrected.
 - a. Joint-Width Conditions:
 - 1) Do not proceed with installation of joint sealants where joint widths are less than those allowed by the joint sealant manufacturer for the applications indicated.
 - b. Joint-Substrate Conditions:
 - 1) Do not proceed with installation of joint sealants until contaminants capable of interfering with adhesion are removed from the joint substrates.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the joint sealants.
- B. Surface Preparation:
 - 1. Surface Cleaning of Joints:
 - a. Immediately before installing joint sealants, clean out the joints to comply with joint sealant manufacturer's written instructions and the following requirements:
 - 1) Remove all foreign material that could interfere with adhesion of the joint sealant from the joint substrates, including dust; paints except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by the sealant manufacturer; old joint sealants; oil; grease; waterproofing; water repellents; water; surface dirt; and frost.
 - 2) Clean porous joint substrate surfaces by brushing, grinding, blast cleaning, mechanical abrading, or a combination of these

- methods to produce a clean, sound substrate capable of developing an optimum bond with the joint sealants.
- a) Porous joint surfaces include the following:
 - (1) Concrete.
 - (2) Masonry.
 - (3) Unglazed surfaces of ceramic tile.
 - b) Remove loose particles remaining after cleaning the porous joint substrate surfaces by vacuuming or blowing out the joints with oil-free compressed air.
 - 3) Remove laitance and form-release agents from concrete.
 - 4) Clean nonporous surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with the adhesion of joint sealants.
 - a) Nonporous joint surfaces include the following:
 - (1) Metal.
 - (2) Glass.
 - (3) Porcelain enamel.
 - (4) Glazed surfaces of ceramic tile.
2. Joint Priming:
- a. Where recommended in writing by the joint-sealant manufacturer, based on preconstruction joint-sealant-substrate tests, or prior experience, prime joint substrates.
 - b. Apply primer in accordance with the joint-sealant manufacturer's written instructions.
 - c. Confine the primers to areas of the joint-sealant bond.
 - d. Do not allow spillage or migration of primer onto adjoining surfaces.
3. Masking Tape:
- a. Where required to prevent contact of sealant with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears, provide masking tape.
 - b. Remove masking tape immediately after tooling the joint without disturbing the joint seal.

3.03 INSTALLATION

- A. Comply with the joint-sealant manufacturer's written installation instructions for the products and applications indicated in the Contract Documents unless more stringent requirements apply.
 - 1. Submit the manufacturer's written installation instructions for the sealant products provided to the Program/Project Manager for information.
- B. Sealant Backing Installation:
 - 1. Install sealant backings of the type indicated to support the sealants during application and at the position required to produce the cross-

sectional shapes and depths of the installed sealants relative to joint widths that allow optimum sealant movement capability.

- a. Do not leave gaps between the ends of sealant backings.
- b. Do not stretch, twist, puncture, or tear sealant backings.
- c. Remove absorbent sealant backings that have become wet before sealant application, and replace them with dry materials.

C. Bond-Breaker Tape Installation:

1. Where sealant backings are not used between the sealants and the back of the joints, install bond-breaker tape behind the sealants.

D. Sealant Installation:

1. Provide sealants as specified in the Schedule 07920-1 in Article 3.08.
 - a. For the use of joint sealants, comply with the recommendations applicable to the materials, applications, and conditions specified in ASTM C 1193.
 - b. For joint sealants in acoustical applications, comply with the recommendations applicable to materials, applications, and conditions specified in ASTM C 919.
 - c. At sawcut joints that receive backer rod and sealant, provide the same sealant as indicated for use in the building.
2. At the same time the backings are installed, install the sealants using proven techniques complying with the following:
 - a. Place sealants so they directly contact and fully wet joint substrates.
 - b. Completely fill the recesses provided for each joint configuration.
 - c. Produce uniform, cross-sectional shapes and depths relative to the joint widths that allow optimum sealant movement capability.
3. Tooling of Non-Sag Sealants:
 - a. Immediately after applying sealants, but before skinning or curing begins, tool the sealants according to the requirements as specified herein to form smooth, uniform beads of the configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of the sealant with the sides of the joint.
 - 1) Unless otherwise indicated, provide concave joint configurations in accordance with Figure 5A in ASTM C 1193.
 - 2) Where indicated, provide flush joint configuration in accordance with Figure 5B in ASTM C 1193.
 - 3) Provide a recessed joint configuration in accordance with Figure 5C in ASTM C 1193, of the recess depth and at the locations indicated.
 - a) Use masking tape to protect the surfaces adjacent to recessed tooled joints.

E. Special Techniques:

1. To seal joints in fire-resistance-rated construction, comply with the requirements specified in Section 07844, Fire-Resistant Joint Sealants.

2. To seal glazing, comply with the requirements specified in Section 08800, Glazing.
3. To seal perimeter joints of gypsum board partitions to reduce sound transmission, comply with the requirements specified in Section 09260, Gypsum Board Assemblies.
4. To seal tile joints, comply with the requirements specified in Section 09310, Ceramic Tile.
5. To seal edge moldings at the perimeters of acoustical ceilings, comply with the requirements specified in Section 09525, Acoustical Panel Ceiling.

F. Interface with Other Work:

1. Joint Priming:
 - a. Prime joint substrates where required based on the written recommendations of the joint sealant manufacturer, preconstruction joint-sealant-substrate tests, or prior experience.
 - b. Apply primer in compliance with the joint sealant manufacturer's written instructions.
 - c. Confine primer to the areas of the joint sealant bond, and do not allow spillage or migration of the primer onto adjoining surfaces.
2. Masking Tape:
 - a. Where required to prevent sealant from contacting adjoining surfaces that would be permanently stained or damaged by such contact, or by cleaning methods required to remove sealant smears, use masking tape.
 - b. Immediately after tooling the sealant, remove the masking tape without disturbing the joint seal.

3.04 FIELD QUALITY CONTROL

A. Site Tests and Inspections:

1. Field-Adhesion Testing:
 - a. Test Procedure:
 - 1) Have the Testing and Inspection Agency test joint-sealant adhesion to joint substrates in accordance with Method A, Field-Applied Sealant Joint Hand Pull Tab, specified in Appendix X1 of ASTM C 1193.
 - a) Perform the testing appropriate for the type of joint-sealant application indicated in the Contract Documents.
 - b) For joints with dissimilar substrates, verify the adhesion to each substrate separately by extending the cut along one side, verifying adhesion to the opposite side, and repeating the procedure for the opposite side.
 - 2) Extent of Testing:

- a) For each type of elastomeric sealant and joint substrate, perform 10 tests of the first 1000 feet of joint length at locations determined by the Program/Project Manager.
 - b) For each 1000 feet of joint length for each type of elastomeric sealant and joint substrate thereafter, or for each floor elevation, perform 1 test.
 - 3) Inspect the sealant joints to verify the joints are completely filled, to verify voids are absence, to verify the joint configurations comply with the specified requirements, and to record the following information:
 - a) Whether the sealants in joints connected to a pulled-out portion failed to adhere to the joint substrates or tore cohesively.
 - (1) Include data on the pull distance used to test each type of product and joint substrate.
 - (2) Compare these results to determine if adhesion passes the sealant manufacturer's field-adhesion hand-pull test criteria.
 - b) Whether the sealants filled the joint cavities, and are free of voids.
 - c) Whether the sealant dimensions and configurations comply with the specified requirements.
 - 4) Field Test Report Log:
 - a) For each elastomeric sealant application, record the test and inspection results in a Field Test Report Log.
 - (1) Include the dates when the sealants were installed, the names of persons who installed sealants, test dates, test locations, whether the joints were primed, adhesion results and percent elongations, sealant fill, sealant configuration, and sealant dimensions.
 - b) Submit the Field Test Report Log to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Sealants not evidencing adhesive failure from the testing or noncompliance with other specified requirements will be considered to have satisfactorily passed the Field-Adhesion Testing.
 - a) Joint sealants failing cohesively as described in Method A specified in Appendix X1 of ASTM C 1193 are not considered to have failed adhesively.

B. Non-Conforming Work

1. Remove sealants that fail to adhere to the joint substrates during the testing or to that fail to comply with other requirements.
2. Repair the sealants pulled from the test area by applying new sealants following the same procedures used originally to seal the joints.

- a. Ensure that the original sealant surfaces are clean and that the new sealant contacts the original sealant.
- b. Retest the replacement applications until test results prove the sealants comply with the specified requirements.

3.05 REPAIR

- A. If damage or deterioration of the sealants occurs prior to Substantial Completion, immediately cut out and remove the damaged or deteriorated joint sealants, and replace the removed sealants with new sealant so the installations with repaired areas are indistinguishable from the original Work.

3.06 CLEANING

- A. As the Work progresses, clean off excess sealants or sealant smears adjacent to joints using methods and cleaning materials approved in writing by the manufacturers of the joint sealants and the products in which the joints occur.

3.07 PROTECTION

- A. During and after the sealant curing period, protect joint sealants from contact with contaminating substances, and from damage resulting from construction operations or other causes, so the sealants are not damaged and do not deteriorate by the time of Substantial Completion.

3.08 SCHEDULES

Schedule 07920-1 Sealant Schedule											
Location	Sealant Application	Sealant Number									
		1	2	3	4	5	6	7	8	9	10
Exterior	Joints bordered by glass.						X				
	Joints bordered by plastic.							X			
	Vertical and horizontal non-traffic construction joints in cast-in-place concrete.									X	
	Horizontal traffic joints in cast-in-place concrete.				X	X					
	Vertical control and expansion joints in unit masonry.			X						X	
	Butt joints between metal panels.									X	

Schedule 07920-1 Sealant Schedule											
Location	Sealant Application	Sealant Number									
		1	2	3	4	5	6	7	8	9	10
	Vertical joints between different materials.									X	
	Perimeter joints between concrete, unit masonry, and metal panels; and frames of doors, windows, and louvers.			X						X	
Interior	Vertical control and expansion joints on external walls.			X						X	
	Vertical joints in interior unit masonry and concrete walls and partitions.									X	
	Around plumbing fixtures and in wet areas.								X		X
	Static dry joints to dress appearance.	X									
	Sound control.	X	X								
	Concrete slabs abutting vertical surfaces.				X						
	Perimeter joints of openings to the exterior.									X	
	Expansion, control, contraction, and isolation joints in horizontal ceramic tile in traffic areas.					X					
Interior	Perimeter joints between interior wall surfaces and interior door and window frames, and elevator entrances.	X									
	Specialty perimeters for appearance or weathertightness.			X			X	X			
Exterior/ Interior	Joints between interior and exterior spaces, and other locations requiring an effective weatherproof barrier.			X

SECTION 08110

STEEL DOORS AND FRAMES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for steel doors and steel door and window frames.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 08211 – Flush Wood Doors.
 - 3. Section 08705 - Finish Hardware.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
- B. Reference Standards:
 - 1. American National Standards Institute (ANSI):
 - a. ANSI A115.1G – Installation Guide for Doors and Hardware.
 - b. ANSI A115.2 – Specifications for Preparation of 1-3/8” and 1-3/4” Standard Steel Doors and Frames for Series 4000 Bored Locks and Latches.
 - c. ANSI A115.4 - Specifications for Preparation of 1-3/4” Standard Steel Doors and Frames for Manually Operated Lever Extension Flush Bolts.
 - d. ANSI A115.6 - Preparation of 1-3/4” Standard Steel Doors and Steel Frames for Series 2000 Preassembled Door Locks.
 - e. ANSI A115.12 - Specifications for Preparation of 1-3/4” Standard Steel Doors and Steel Frames for Offset Intermediate Pivots.
 - f. ANSI A115.14 - Specifications for Preparation of 1-3/4” Standard Steel Doors for Open Back Strikes.
 - g. ANSI A115.15 - Specifications for Preparation of 1-3/4” Pre-hung Insulated Steel Doors and Steel Frames for Series 4000 Bored Locks and Latches.
 - h. ANSI A115.16 - Installation Guide for Doors and Hardware.

- i. ANSI A115.17 - Specifications for Preparation of 1-3/8" and 1-3/4" Standard Steel Doors and Frames For Double Type Locks.
- j. ANSI A115.18 - Specifications for Standard Steel Door and Steel Frame Preparation for Bored Locks and Latches with Lever Handles for 1-3/8" and 1-3/4" Doors.
- k. ANSI A250.6 – Hardware on Standard Steel Doors (Reinforcement-Application).
- 2. ASTM International (ASTM):
 - a. ASTM A 568/A 568M – Standard Specification for Steel, Sheet, Carbon, Structural, and High-Strength, Low-Allow, Hot-Rolled and Cold-Rolled, General Requirements for.
 - b. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - c. ASTM A 924/A 924M - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.
 - d. ASTM A 1008/A 1008M – Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Allow, High-Strength Low-Allow with Improved Formability, Solution Hardened, and Bake Hardenable.
 - e. ASTM A 1011/A 1011M – Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.
- 3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 4. Door and Hardware Institute (DHI):
 - a. Recommended Locations for Builder's Hardware on Standard Steel Doors and Frames.
- 5. National Fire Protection Association (NFPA):
 - a. NFPA 80 – Standard for Fire Doors and Other Opening Protectives.
 - b. NFPA 252 – Standard Methods of Fire Tests or Door Assemblies.
- 6. Steel Door Institute (SDI):
 - a. ANSI/SDI 100 – Recommended Specifications for Standard Steel Doors and Frames.
 - b. SDI 105 - Recommended Erection Instructions For Steel Frames.
 - c. SDI 112 – Zinc-Coated (Galvanized/Galvannealed) Standard Steel Doors and Frames.
 - d. SDI 117 – Manufacturing Tolerances Standard Steel Doors and Frames.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Sequencing:

1. Sequence the erection of the steel door frames provided as the Work of this Section to precede the construction of the adjacent walls.
2. Sequence the installation of steel frames for the wood doors provided under Section 08211, Flush Wood Doors, to precede the Work of that Section.
3. Sequence the installation of door hardware provided under Section 08705, Finish Hardware, for the steel doors provided as the Work of this Section, to follow the installation of the steel doors.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Construction Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Doors and frames.
 - b. Shop Drawings:
 - 1) Door and frame types.
 - c. Certificates:
 - 1) Steel Door Label Construction Certification.
 - d. Delegated Design Submittals:
 - 1) Schedule of doors and frames.

B. Informational Submittals:

1. Submit the following to the Construction Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Steel door and frame manufacturer's installation instructions.
2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. ENVISION Credit RA 1.3 – Use Recycled Materials
 - 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:
 - a. Obtain approval of the Work of this Section from the Authorities Having Jurisdiction (AHJ) in accordance with requirements of the Phoenix Building Construction Code and Amendments.

B. Certifications:

1. Steel Door Label Construction Certification:

- a. For steel door assemblies required to be fire-rated and exceeding the limitations of labeled assemblies, submit the manufacturer's certification that each door and frame assembly has been constructed to conform to the design, materials, and construction equivalent to the requirements for labeled construction.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Protect steel doors and frames during transit and storage at the Site by either crating the doors, or wrapping them with cardboard.
2. Provide additional protection to prevent damage to the finish of factory-finished doors and frames.
3. On delivery, inspect the steel doors and frames for damage, and notify the shipper and supplier if damage is found.
 - a. Minor damages may be repaired provided refinished items match new work and are acceptable to the Program/Project Manager
 - b. Remove damaged items that cannot be repaired and replace the removed items with new, undamaged replacements as directed.

B. Storage and Handling Requirements:

1. Store steel doors and frames under cover at the Site.
2. Place units on minimum 4-inch high wood blocking.
3. Avoid using non-vented plastic or canvas shelters that could create a humidity chamber.
4. If door packaging becomes wet, remove cartons immediately.
5. Provide minimum 1/4-inch spaces between stacked doors to permit air circulation.

PART 2 PRODUCTS

2.01 STEEL DOORS AND FRAMES

A. Description:

1. Regulatory Requirements:

- a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- b. Fire-Rated Door Assemblies:
 - 1) Where fire-protection ratings are indicated in the Contract Documents, provide door assemblies that comply with the requirements of NFPA 80, and that are listed and labeled, based

- on testing according to NFPA 252, by a testing and inspecting agency acceptable to the Authorities Having Jurisdiction.
2. ENVISION Requirements:
 - a. Recycled Content
 - 1) Provide Steel doors and Frames whose combined post-consumer recycled content and one-half pre-consumer recycled content is no less than 25 percent.
 - 2) Provide interior sealants and sealant primers for this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168.

B. Design Criteria:

1. Steel Door and Frame Standard:
 - a. Design the steel doors and frames in accordance with the requirements of ANSI/SDI 100 and the requirements specified herein.
2. Clearances:
 - a. At jambs and heads, provide a uniform 1/8 inch clearance, except between non-fire-rated pairs of doors provide not more than a 1/4-inch clearance.
 - b. At bottoms, provide not more than 3/ 4 inch clearance.
3. Exposed Fasteners:
 - a. Unless otherwise indicated in the Contract Documents, provide countersunk flat or oval heads for exposed screws and bolts.
4. Hardware Considerations:
 - a. Prepare doors and frames for hardware in accordance with the applicable requirements in ANSI A250.6 and the ANSI A115 Series specifications.
 - 1) Prepare steel doors and frames to receive mortised and concealed hardware according to the final door hardware schedule and templates provided by hardware supplier.
 - 2) Locate hardware as indicated on approved Shop Drawings, or if the hardware is not indicated, locate the hardware in accordance with the Door and Hardware Institute's "Recommended Locations for Builder's Hardware on Standard Steel Doors and Frames".
 - b. For concealed overhead door closers, provide space, cutouts, reinforcement, and provisions for fastening in top rail of doors or head of frames, as applicable.
5. Glazing:
 - a. Coordinate glazing frames and stops with glass and glazing requirements.
6. Security System Components:
 - a. For doors integrated into the facility security system, provide concealed internal conduit and junction boxes.
7. Product Data:

- a. Submit Product Data for each type of door and frame indicated to the Program/Project Manager for approval.
 - 1) Include the door designation, type, level and model, material description, core description, construction details, label compliance, sound and fire-resistance ratings, and finishes.
8. Shop Drawings:
 - a. Submit Shop Drawings showing the fabrication and installation of standard steel doors and frames to the Program/Project Manager for approval.
 - 1) Include details of each frame type, elevations of the door design types, conditions at the openings, details of the construction, location and installation requirements of door and frame hardware and reinforcements, and details of the joints and connections.
 - 2) Show the coordination of glass and glazing requirements with glazing frames and stops.
 - 3) Show the anchorage and accessory items.
9. Door and Frames Schedule:
 - a. Submit a schedule of doors and frames to the Program/Project Manager for approval.
 - 1) Use the same reference numbers for the details and openings as those on the Contract Drawings.

C. Materials

1. Hot-Rolled Steel Sheets and Strip:
 - a. Provide hot-rolled steel sheets and strip complying with the requirements for Type B Commercial Steel (CS) as specified in ASTM A 568/A 568M and ASTM A 924/A 924M; pickled and oiled; and free of scale, pitting, or surface defects.
2. Cold-Rolled Steel Sheets:
 - a. Provide cold-rolled steel sheets complying with the requirements for Type B Commercial Steel (CS) or Type B Drawing Steel (DS) as specified in ASTM A 1008/A 1008M, and supplied within the standard flatness tolerances as specified in ASTM A 568/A 568M.
3. Galvanized Steel Sheets:
 - a. Provide zinc-coated, mill phosphatized carbon steel sheets complying with the requirements for Type B Commercial Steel (CS) or Type A Deep Drawing Steel (DDS), and hot dip galvanized to Coating Designation G60, in accordance with the requirements specified in ASTM A 653/A 653M and ASTM A 924/A 924M.

D. Steel Doors

1. Provide steel doors of the types, styles, grades, and designs indicated on the Contract Drawings or schedules.
 - a. Provide metal doors complying with the requirements specified in ANSI/SDI-100, for Grade III, Extra Heavy Duty, Model 2, and having minimum 16 gauge steel faces.

- 1) Interior Doors: Cold-rolled sheet steel faces.
- 2) Exterior Doors: Galvanized steel faces.
2. Vertical Edges:
 - a. Fabricate vertical edges from minimum 16-gauge channels that have each face sheet wrapped around the channels to meet at the center of the edge; and with the resulting seam closed, welded shut, and ground smooth.
 - b. Other methods of fabricating edges are acceptable if they provide equivalent strength and concealed seams.
3. Top and Bottom Edges:
 - a. Fabricate top and bottom edges from 16 gauge steel channels.
 - b. Align the back of each channel flush with the top and bottom of the face sheets.
 - c. If inverted channels are used, provide filler caps.
 - d. Ensure that the tops are smooth and flush.
4. Undercut each door as required to clear floor finish.
 - a. Refer to Finish Schedule in the Contract Documents for specific requirements.
5. Hinge Reinforcement:
 - a. Provide 7-gauge steel hinge reinforcement.
6. Mineral-Fiber Insulation: ASTM C 665, Type 1.
 - a. Thermal-Rated (Insulated) Doors: R-value of not less than 12.3 deg F x h x sq. ft./Btu (2.166 K x sq.m/W) when tested according to ASTM C 1363.
7. Glazing: In accordance with the requirements of Section 08800, Glazing.
8. Glazing Stops:
 - a. On the outside of exterior doors and on the secure side of interior doors, provide non-removable stops for glass, louvers, and other panels in doors. Formed integral with hollow metal frames, a minimum of 5/8 inch (16mm) high unless otherwise noted.
 - b. On the inside of glass, louvers, and other panels in doors, provide screw-applied, removable, glazing stops.
 - c. Provide minimum 20 gage steel, or 0.040-inch-thick aluminum, glazing stops.
- E. Steel Door and Window Frames
 1. Provide steel frames for doors, transoms, sidelights, borrowed lights, and other openings, of the types and styles shown on the Contract Drawings and schedules.
 - a. Conceal fastenings, unless otherwise indicated.
 - b. Fabricate frames from minimum 14 gauge cold-rolled steel.
 - c. Fabricate frames with mitered and fully welded corners.
 - d. Form exterior frames from 14-gage galvanized steel.
 - 1) Knock-down frames are unacceptable.
 2. Door Silencers:

- a. Except on weather-stripped frames, fabricate stops to receive 3 silencers on the strike jambs of single-door frames, and 2 silencers on the heads of double-door frames.
- 3. Plaster Guards:
 - a. Provide minimum 24-gage steel sheet plaster guards or mortar boxes to close off the interior of openings.
 - 1) Place plaster guards or mortar boxes at the back of hardware cutouts where mortar or other materials might obstruct hardware operation.
- 4. Hinge Reinforcement:
 - a. Provide 7-gauge steel hinge reinforcement.

F. Fabrication

- 1. Fabricate steel door and frame units in accordance with ANSI/SDI-100.
 - a. If practical, fit and assemble the door and frame units in the manufacturer's plant.
 - 1) Clearly identify work that cannot be permanently factory assembled before shipment, to assure proper assembly at Site.
 - b. Internal Construction:
 - 1) Where appropriate, on the inside of the door's face sheets provide the manufacturer's standard honeycomb, polyurethane, polystyrene, unitized steel grid, vertical steel stiffeners, or rigid mineral fiber core with an internal sound deadener in accordance with the SDI standards.
- 2. Fabricate the exposed faces of doors and panels of non-flush units, including stiles and rails, only from cold-rolled steel.
- 3. Fabricate concealed stiffeners, reinforcement, edge channels, louvers, and moldings from either cold- or hot-rolled steel sheet.
- 4. Fabricate exterior doors, panels, and frames from galvanized sheet steel in accordance with SDI 112.
 - a. Close the top and bottom edges of exterior doors as an integral part of door construction, or by the addition of 16 gage minimum inverted steel channels.
- 5. Reinforce the steel doors and frames to receive surface-applied hardware.
 - a. Drilling and tapping for surface-applied hardware may be done at the Site.
- 6. All exterior doors shall be insulated.
- 7. Stops and Moldings: Provide stops and moldings around glazed lites where indicated. Form corners of stops and moldings with butted or mitered hairline joints.
 - a. Multiple Glazed Lites: Provide fixed and removable stops and moldings so that glazed lite is capable of being removed independently.
 - b. Provide loose stops and moldings on inside of hollow metal work.
 - c. Coordinate rabbet width between fixed and removable stops with type of glazing and type of installation indicated.

8. Fabrication Tolerances:
 - a. Fabricate steel doors and frames within the tolerances specified in SDI 117.

G. Shop Finishing Methods

1. Clean, treat, and paint exposed surfaces of steel door and frame units, including galvanized surfaces.
 - a. Clean steel surfaces of mill scale, rust, oil, grease, dirt, and other foreign materials before application of paint.
 - b. Apply a shop coat of prime paint of even consistency to provide a uniformly finished surface ready to receive finish paint.

2.02 ACCESSORIES

A. Astragals:

1. Provide astragals as required by NFPA 80 to provide the fire ratings indicated.

B. Wall Anchors:

1. Acceptable anchors include masonry wire anchors and masonry T-shaped anchors.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions:

1. Layout the steel door frame locations, and verify that each location is ready to receive the Work of this Section.
2. Examine the steel doors and frames for defects.

B. Evaluation and Assessment:

1. Provide rigid steel doors and frames, neat in appearance, and free from defects including warp and buckle.

3.02 INSTALLATION

A. Install steel doors, frames, and accessories according to the approved Shop Drawings, manufacturer's installation instructions, and as specified.

1. Submit the steel door and frame manufacturer's installation instructions to the Program/Project Manager for information.

B. Placing Frames:

1. Prior to the construction of enclosing new walls and ceilings, erect steel frames in accordance with the requirements of SDI 105, unless otherwise indicated.
 - a. Erect fire-rated frames in accordance with NFPA 80.

- b. Furnish temporary braces and spreaders to provide temporary support for the frames.
 2. On frames that will receive grout, field-apply a 1/8 inch thick asphaltic emulsion coating to the interior cavity of the frames.
 3. Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set.
 4. In masonry construction, provide 3 wall anchors per jamb; installed adjacent to the hinge location on the hinge jamb, and at corresponding heights on the strike jamb.
 5. After the wall construction is completed, remove the temporary braces and spreaders, leaving the surfaces smooth and undamaged.
- C. Installing Doors:
 1. Fit hollow-metal doors accurately in the frames, within the clearances specified in ANSI/SDI-100.
 2. Fire-Rated Doors:
 - a. Install fire-rated doors within clearances specified in NFPA 80.
- D. Glazing: In accordance with the requirements of Section 08800, Glazing and with hollow metal manufacturer's written instructions.
 1. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches (230 mm) o.c. and not more than 2 inches (50 mm) o.c. from each corner.

3.03 REPAIR/RESTORATION

- A. Prime Coat Touchup:
 1. Immediately after installation, sand any rusted or damaged areas of prime coat smooth, and apply compatible air-drying primer to touch up the finish.

3.04 PROTECTION

- A. Protect installed steel doors and frame from damage until Final Acceptance.
- B. Immediately before the final inspection, remove protective wrappings from doors and frames.

SECTION 08311

ACCESS DOORS AND FRAMES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for wall, floor, and ceiling access doors and frames, including fire-rated access doors and frames.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01732 - Cutting and Patching.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 09912 - Painting.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ABS: Acrylonitrile butadiene styrene.
 - 2. ITS: An acronym for Intertek testing and Inspection Services providing auditing, inspection, testing certification, and quality assurance.
 - 3. UV: Ultraviolet.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
- C. Reference Standards:
 - 1. American National Standards Association (ANSI):
 - a. ANSI H35.2 - Dimensional Tolerances for Aluminum Mill Products.
 - b. ANSI H35.2(M) - Dimensional Tolerances for Aluminum Mill Products (Metric).
 - 2. ASTM International (ASTM):
 - a. ASTM A 36/A 36M – Standard Specification for Carbon Structural Steel.
 - b. ASTM A 123/A 123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

- c. ASTM A 153/A 153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
 - d. ASTM A 276 - Standard Specification for Stainless Steel Bars and Shapes.
 - e. ASTM A 480/A 480M - Standard Specification for General Requirements for Flat-Rolled Stainless and Heat-Resisting Steel Plate, Sheet, and Strip.
 - f. ASTM A 568/A 568M - Standard Specification for Steel, Sheet, Carbon, Structural, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements for.
 - g. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - h. ASTM A 666 – Standard Specification for Annealed or Cold-Worked Austenitic Stainless-Steel Sheet, Strip, Plate, and Flat Bar.
 - i. ASTM A 780 – Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.
 - j. ASTM A 879/A 879M - Standard Specification for Steel Sheet, Zinc Coated by the Electrolytic Process for Applications Requiring Designation of the Coating Mass on Each Surface.
 - k. ASTM A 924/A 924M - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.
 - l. ASTM A 1008/A 1008M – Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Allow, High-Strength Low-Allow with Improved Formability, Solution Hardened, and Bake Hardenable.
 - m. ASTM A 1011/A 1011M – Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.
 - n. ASTM B 209 – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
 - o. ASTM B 221 – Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
 - p. ASTM E 119 – Standard Test Methods for Fire Tests of Building Construction and Materials.
3. National Association of Architectural Metal Manufacturers (NAAMM):
- a. Architectural Metal Products Division (AMP):
 - 1) NAAMM AMP 500 – Metal Finishes Manual for Architectural and Metal Products.

4. National Fire Protection Association (NFPA):
 - a. NFPA 80 – Standard for Fire Doors and Other Opening Protectives.
 - b. NFPA 251 –Standard Methods of Tests of Fire Endurance of Construction and Materials.
 - c. NFPA 252 – Standard Methods of Fire Tests of Door Assemblies.
 - d. NFPA 288 – Standard Methods of Fire Tests of Fire Door Assemblies Installed Horizontally in Fire-Resistant-Rated Floor Systems.
5. Underwriters Laboratory:
 - a. UL 10B – Standard for Fire Tests of Door Assemblies.
 - b. UL 263 - Standard for Fire Tests of Building Construction and Materials.
6. Society for Protective Coatings (SSPC):
 - a. SSPC-Paint 20 – Zinc-Rich Primers (Type I, “Inorganic,” and Type II, “Organic”).
 - b. SSPC-Paint 25 –Zinc Oxide, Alkyd, Linseed Oil Primer for Use Over Hand Cleaned Steel, Type I and Type II.
7. United States Government:
 - a. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1910 Occupational Health and Safety Standards.
 - 2) 29 CFR 1926 Safety and Health Regulations for Construction.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordination Drawings:
 - a. Prepare Coordination Drawings showing the following information:
 - 1) Reflected ceiling plans drawn to scale and coordinating penetrations and ceiling-mounted items with concealed framing, suspension systems, piping, ductwork and other construction.
 - 2) Method of attaching door frames to surrounding construction.
 - 3) Ceiling –mounted items including access doors and frames, lighting fixtures, diffusers, grilles, speakers, sprinklers, and special trim.
 - b. Submit the Coordination Drawings to the Program/Project manager for approval.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:

- a. Product Data:
 - 1) Doors and frames.
 - b. Shop Drawings:
 - 1) Customized doors and frames.
 - 2) Coordination Drawings.
 - c. Samples:
 - 1) Manufacturer's Samples of fire rated door assemblies.
- B. Informational Submittals:
- 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Certified Fire Rated Floor Door test report.
 - b. Manufacturer's Instructions:
 - 1) Access door manufacturer's written installation instructions.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
- 1. Fire-Rated Access Doors and Frames:
 - a. Provide units complying with NFPA 80 that are identical to access door and frame assemblies tested for fire-test-response characteristics in accordance with the following method(s); and that are labeled and listed by UL, ITS, or another testing and inspecting agency acceptable to the Authority Having Jurisdiction (AHJ):
 - 1) For vertical access doors: NFPA 252 or UL 10B.
 - 2) For horizontal access doors and frames: ASTM E 119 or UL 263.
- B. Site Samples:
- 1. Upon request, submit manufacturer's Samples of the fire rated door assemblies sized to adequately represent the fire rated door materials.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
- 1. Deliver the materials in the manufacturer's original packaging.
 - 2. Thoroughly inspect the materials upon receipt, and report damaged material to the delivering carrier.
 - a. Note damage on the carrier's freight bill of lading.
- B. Storage and Handling Requirements:
- 1. Store materials in dry, protected, well-vented areas.

- a. Protect fire rated floor doors from moisture prior to installation.

C. Packaging Waste Management:

1. Remove protective wrapping immediately after installation.
2. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

A. Manufacturer Warranty:

1. Access Door and Frame Warranty:
 - a. Warrant the access doors and frames against defects within the 5-year period after the Date of Substantial Completion:
 - 1) Submit an Access Door and Frame Warranty on the access door and frame manufacturer's standard or customized form, without monetary limitation, in which the access door and frame manufacturer agrees to replace access door and frame parts that fail in materials or workmanship within the specified warranty period to the Program/Project Manager for approval.
 - 2) Failures include, but are not limited to, the following:
 - a) Parts that fail to function in normal use.

PART 2 PRODUCTS

2.01 MANUFACTURERS:

A. Manufacturer List:

1. J.L. Industries, Inc., www.jlindustries.com.
2. Larsen's Manufacturing Company, www.larsensmfg.com.
3. Milco, Inc, www.milcorinc.com.
4. The Williams Brothers Corporation of America, <http://www.wbdoors.com>.
5. The Bilco Company, <http://www.bilco.com/home.asp>.
6. Approved equal.

B. Substitution Limitations:

1. Subject to compliance with the Contract requirements, provide access doors and frames from the manufacturers listed.

C. Description:

1. Regulatory Requirements:
 - a. Comply with the Occupational Safety and Health Administration (OSHA) requirements regarding access door installation.

D. Design Criteria:

1. Product Data:

- a. Obtain the manufacturer's Product Data for each type of door and frame proposed for the Work of this Section.
 - 1) Include construction details relative to the materials, individual components and profiles, finishes, and fire ratings (if required).
- b. Submit the Product Data to the Program/Project Manager for approval.

2. Shop Drawings:

- a. Prepare Shop Drawings for customized doors and frames.
 - 1) Show fabrication and installation details.
 - 2) Include plans, elevations, sections, details, and attachments to other Work.
 - 3) Show profiles, accessories, locations, and dimensions.
- b. Submit the Shop Drawings to the Program/Project Manager for approval.

E. Performance:

1. Fire Rated Floor Doors:

- a. Provide UL-listed (File R15197) fire rated floor doors having a 2-hour rating when exposed to fire from the underside when the door and frame assembly is tested in accordance with the methods specified in ASTM E 119, NFPA 251, and NFPA 288.
 - 1) In the closed position, the temperature on the unexposed surface of the door must not exceed 325 degrees Fahrenheit above ambient for the duration of the 2-hour period.
 - 2) Submit a certified Fire Rated Floor Door test report to certify that the fire rated floor doors proposed for the Work of this Section comply with the fire rating performance specified.

2.02 MANUFACTURED UNITS

A. Flush, Insulated, Fire-Rated Access Doors and Frames with Exposed Trim:

- 1. Fabricate flush, insulated, fire-rated access doors and frames with exposed trim from metallic coated steel sheet.
 - a. Fire-Resistance Rating: One hour.
 - b. Temperature Rise Rating: 250 degrees Fahrenheit at the end of 30 minutes.
 - c. Door: Flush panel with a core of mineral-fiber insulation enclosed in sheet metal with a minimum thickness of 0.036 inch
 - d. Frame: Minimum 0.060-inch- thick sheet metal with 1-inch-wide, surface-mounted trim.

- e. Hinges: Continuous piano hinge.
 - f. Automatic Closer: Spring type.
 - g. Latch: Self-latching bolt operated flush screwdriver with interior release.
 - 2. Locations:
 - a. Use flush, insulated, fire-rated access doors and frames in masonry at wall surfaces.
- B. Flush Access Doors and Frames with Exposed Trim:
- 1. Fabricate flush access doors and frames with exposed trim from metallic-coated steel sheet.
 - a. Door: Minimum 0.060-inch- thick sheet metal, set flush with exposed face flange of frame.
 - b. Frame: Minimum 0.060-inch- thick sheet metal with 1-inch- wide, surface-mounted trim.
 - c. Hinges: Spring-loaded concealed pin type.
 - d. Latch: Screwdriver-operated cam latch.
 - 2. Locations:
 - a. Use flush access doors and frames with exposed trim in masonry, gypsum board and ceramic-tile at wall and ceiling surfaces
- C. Exterior, Flush Access Doors and Frames:
- 1. Type 1 Exterior Access Doors
 - a. Provide weatherproof exterior, flush access doors and frames with an extruded door gasket.
 - 1) Door: Minimum 0.036-inch- thick, metallic-coated steel sheet; flush panel construction with 2-inch- thick fiberglass insulation.
 - 2) Frame: Minimum 0.060-inch extruded aluminum.
 - 3) Hinges: Continuous piano hinge, zinc plated.
 - 4) Latch: Dual-action handles.
 - b. Locations:
 - 1) Use Type 1 exterior, flush access doors and frames in masonry wall surfaces.
 - 2. Type 2 Exterior Access Doors:
 - a. Provide weather resistive exterior, flush access doors and frames with an open celled microcellular polyurethane gasket on the frame inside the closed door front, and a closed cell neoprene sponge striping gasket on the frame at the back of the closed door.
 - 1) Doors:
 - a) Provide at a minimum a zinc-dipped 16 gauge steel door having 1-1/2 inch wide trim and a baked grey enamel finish.
 - 2) Insulation:

- a) Provide a double layer of 1 inch thick extruded polystyrene insulation board having an R-value at a mean temperature of 75 degrees Fahrenheit of 5.0 time 2.
 - 3) Frame:
 - a) Provide a zinc-dipped 16 gauge steel frame having a depth of 2-3/8 inches.
 - 4) Hinges:
 - a) Provide continuous zinc plated piano hinges that allow the doors to open 180 degrees.
 - 5) Latches:
 - a) Provide chrome plated "T" type handles having a pivot rod 3-point latch with a keyed cylinder lock that opens only from the outside.
 - 6) Locations:
 - a) Use Type 1 exterior, flush access doors and frames in vertical surfaces at exterior gypsum sheathing assemblies.
 - b) Use Type 1 exterior, flush access doors and frames in vertical surfaces at Portland cement and plaster assemblies.
- D. Aluminum, Flush Access Doors and Frames:
- 1. Fabricate aluminum, flush access doors and frames from aluminum sheet and extruded-aluminum shapes with mill finish.
 - a. Door: Minimum 0.080-inch- thick aluminum sheet with 3/4-inch polystyrene insulation.
 - b. Frame: Minimum 0.060-inch extruded aluminum with 1-1/4-inch- wide rolled flange with foam weatherproof gasket.
 - c. Hinges: Concealed continuous aluminum.
 - d. Latch: Screwdriver-operated cam latch.
 - 2. Locations:
 - a. Use aluminum, flush access doors and frames in masonry and gypsum board wall and ceiling surfaces.
- E. Duct Access Doors:
- 1. Provide insulated, hinged, and gasketed duct access doors having a safety chain.
 - a. Insulation:
 - 1) Provide 1 inch thick fiberglass insulation.
 - b. Gaskets:
 - 1) Provide 1/4 inch thick by 1/2 inch wide gaskets that provide a positive seal.
 - c. Hinges:
 - 1) Provide full length hinges.

2. Construction:
 - a. Fabricate the duct access doors from die-formed 24 gauge steel having notched, knock-over edges; and fabricate the access door frame from die-formed 22 gauge steel.
 - b. Provide a mill galvanized finish for the doors and frames.
3. Fasteners:
 - a. Provide plated steel camlock fasteners.

F. Plastic Access Doors:

1. Provide removable panels locked to a return frame and having a snap friction catch.
2. Construction:
 - a. Fabricate the panels and their frames from high impact acrylonitrile butadiene styrene (ABS) plastic having ultraviolet (UV) stabilizers.
 - b. Provide a white textured finish for the doors and frames.

G. Fire Rated Floor Doors:

1. Provide smooth and easy operating single leaf fire rated vault access doors having controlled operation throughout the entire arc of the opening and closing that is not affected by temperature.
 - a. Provide fire rated floor doors having a fusible link activated closing system that will automatically close and latch the door leaf in the event of fire.
 - b. Lift Assistance:
 - 1) Provide engineered steel compression spring operators enclosed in composite telescopic tubes having an electrocoated acrylic finish.
 - 2) Provide a mechanical hold-open system with a release button that automatically holds the cover in the open position.
2. Covers and Frames:
 - a. Provide 1/4 inch (6mm) thick aluminum covers and frames.
 - b. Covers:
 - 1) Reinforce the aluminum plate so the covers are capable of supporting live loads of 150 pounds per square foot.
 - 2) Apply an intumescent coating to the underside of the covers.
 - 3) Provide covers having a 1-inch fillable pan designed for field installation of architectural flooring material up to 1/2 inch thick.
 - a) Fill the remaining depth with concrete to maintain the fire rating of the door assembly.
 - b) If a finish floor is not desired, fill the pan with 1 inch of concrete.

c. Frames:

- 1) Provide extruded aluminum frames having a built-in anchor flange around the perimeter.
 - a) Apply an intumescent coating to the interior surface of the frames.
3. Hinges:
 - a. Provide a continuous heavy-duty Type 316 stainless steel hinge for each cover.
4. Latches:
 - a. Provide pneumatic self-closing systems that automatically close the door in the event of a fire when heat parts a UL-listed 165 degree Fahrenheit fusible link.
5. Finishes:
 - a. Apply a bituminous coating to an aluminum mill finish on the exterior of the frame.
 - b. Hardware:
 - 1) Zinc plate/chromate seal all hardware other than engineered steel compression spring operators and tubes, and hinges.

2.03 MATERIALS:

- A. Steel Plates, Shapes, and Bars:
 1. Provide steel plates, shapes, and bars complying with the requirements specified in ASTM A 36/A 36M.
- B. Hot-Rolled Steel Sheets:
 1. Provide hot-rolled steel sheets complying with the requirements for Commercial Steel (CS), Type B steel specified in ASTM A 1011/A 1011M, free of scale, pitting, and surface defects; pickled and oiled; and having the minimum thickness indicated representing the specified nominal thickness according to ASTM A 568/A 568M.
- C. Cold-Rolled Steel Sheets:
 1. Provide cold-rolled steel sheets complying with the requirements for Commercial Steel (CS) steel specified in ASTM A 1008/A 1008M; having stretcher-leveled standard of flatness; and having the minimum thickness indicated representing the specified nominal thickness according to ASTM A 568/A 568M.
 - a. Electrolytic zinc-coated steel sheet having a coating complying with the requirements for Class C coating specified in ASTM A 879/A 879M may be substituted at fabricator's option.
- D. Electrolytic Zinc-Coated Steel Sheet:

1. Provide electrolytic zinc-coated steel sheet complying with the requirements for Commercial Steel (CS) steel specified in ASTM A 879/A 879M, with Class C coating and phosphate treatment to prepare surface for painting; and having the minimum thickness indicated representing the specified nominal thickness according to ASTM A 568/A 568M for uncoated base metal.
- E. Metallic-Coated Steel Sheet:
1. Provide metallic-coated steel sheet complying with the requirements for Commercial Steel (CS), Type B steel specified in ASTM A 653/A 653M, with A60 (ZF180) zinc-iron-alloy (galvannealed) coating or G60 (Z180) mill-phosphatized zinc coating; stretcher-leveled standard of flatness; and having the minimum thickness indicated representing the specified nominal thickness according to ASTM A 924/A 924M.
- F. Stainless-Steel Sheet, Strip, Plate, and Flat Bars:
1. Provide stainless-steel sheet, strip, plate, and flat bars complying with the requirements for Type 304 stainless steel specified in ASTM A 666; and having the minimum thickness indicated representing the specified nominal thickness according to ASTM A 480/A 480M.
- G. Aluminum Sheet:
1. Provide aluminum sheet complying with the requirements specified in ASTM B 209, having the alloy and temper recommended by the aluminum producer and finisher for the type of use and finish indicated, and with not less than the strength and durability properties of alloy 5005-H15; and having the minimum thickness indicated representing the specified nominal thickness according to ANSI H35.2 or ANSI H35.2(M).
- H. Stainless-Steel Bars and Shapes:
1. Provide stainless-steel bars and shapes complying with the requirements for Type 304 stainless steel specified in ASTM A 276.
- I. Aluminum Extrusions:
1. Provide aluminum extrusions complying with the requirements for alloy 6063-T6 specified in ASTM B 221.
- J. Drywall Beads:
1. Provide edge trim formed from 0.0299 inch (0.76mm) thick zinc-coated steel sheet formed to receive joint compound, and having the size to suit the thickness of the gypsum board.
- K. Plaster Bead:

1. Provide casing bead formed from 0.0299 inch (0.76mm) thick zinc-coated steel sheet with a flange formed out of expanded metal lath, and sized to suit the thickness of the plaster.

2.04 FINISHES:

A. Primer Materials:

1. Shop Primers:
 - a. Provide primers that comply with Section 09912, Painting.
2. Shop Primer for Ferrous Metal:
 - a. Provide fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with performance requirements in SSPC-Paint 25.
 - b. Selected shop primers for their good resistance to normal atmospheric corrosion, compatibility with the finish paint systems indicated, and having the capability to provide a sound foundation for field-applied topcoats despite prolonged exposure.

B. Finish Materials:

1. Metallic-Coated Steel Finishes:
 - a. Galvanizing of Steel Shapes and Plates:
 - 1) Provide hot-dip galvanize items indicated to comply with the following standard applicable:
 - a) For galvanizing steel and iron products:
ASTM A 123/A 123M.
 - b) For galvanizing steel and iron hardware:
ASTM A 153/A 153M.
 - b. Galvanizing Repair Paint:
 - 1) For re-galvanizing welds in steel, provide high-zinc-dust-content paint complying with the requirements specified in SSPC-Paint 20.

C. Shop Finishing Methods:

1. Comply with NAAMM AMP 500 for recommendations for applying and designating finishes.
2. Surface Preparation:
 - a. Clean surfaces with nonpetroleum solvent so surfaces are free of oil and other contaminants.
 - b. For galvanized surfaces, apply, after cleaning, a conversion coating suited to the organic coating to be applied over it.
 - c. For metallic-coated surfaces, clean welds, mechanical connections, and abraded areas, and apply galvanizing repair paint specified below to comply with ASTM A 780.
3. Factory Priming for Field-Painted Finish:

- a. Apply shop primer immediately after cleaning and pretreating.
4. Finish metal fabrications after assembly.

2.05 FABRICATION

- A. Provide access door assemblies manufactured as integral units ready for installation.
- B. Metal Surfaces:
 1. For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes.
 2. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.
- C. Steel Doors and Frames:
 1. Grind exposed welds smooth and flush with adjacent surfaces.
 - a. Furnish attachment devices and fasteners of the type required to secure the access panels to the types of supports indicated.
 2. Exposed Flanges:
 - a. Provide flanges, 1 to 1-1/2 inches wide nominal, around the perimeter of the frame.
 3. For trimless frames with drywall bead for installation in gypsum board assembly, provide edge trim for the gypsum board securely attached to the perimeter of the frames.
 4. For trimless frames with plaster bead for full-bed plaster applications, provide zinc-coated expanded metal lath and exposed casing bead welded to the perimeter of the frames.
 5. Provide mounting holes in the frames to attach the frames to metal or wood framing in plaster and drywall construction, and to attach masonry anchors in masonry construction.
 - a. Provide adjustable metal masonry anchors.
- D. Recessed Access Doors:
 1. Form the face of the panel to provide a recess for application of the applied finish.
 2. Reinforce the panel as required to prevent buckling.
- E. Latching Mechanisms:
 1. Furnish the number of latching mechanisms required to hold the doors in a flush, smooth plane when closed.
- F. Extruded Aluminum:

1. After fabrication, apply the manufacturer's standard protective coating on aluminum that will come in contact with concrete.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Verify that related Work has been completed before installing the access doors.
 2. Verify that mounting surfaces are straight and secure.
 3. Verify that substrates are of the proper width.
- B. Evaluation and Assessment:
 1. Prior to installing access doors, report defects to the Program/Project Manager, and correct the defects.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the access doors.
- B. Surface Preparation:
 1. Ensure that substrates are dry, clean, and free of foreign matter.
- C. Demolition / Removal:
 1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Comply with requirements of the Contract Documents, approved Shop Drawings, and the access door manufacturer's written instructions for installing access doors and frames.
 1. Submit the access door manufacturer's written installation instructions to the Program/Project Manager for information.
- B. Set frames accurately in position, and attach them securely to supports with the plane of the face panels aligned with adjacent finish surfaces.
 1. Furnish mechanical fasteners consistent with the fire rated floor door manufacturer's instructions.
- C. Special Techniques:

1. The specified fire rated floor doors are designed for installation in dry interior applications only.
 - a. Consult the manufacturer if fire rated floor doors are to be exposed to the exterior or to high moisture or humidity conditions.

3.04 REPAIR/RESTORATION

- A. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

3.05 ADJUSTING

- A. Adjust doors and hardware after installation for proper operation.

SECTION 08331

OVERHEAD COILING DOORS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for light duty and fire-rated overhead coiling service doors.
- B. Related Requirements:
 - 1. Section 01316 - Project Meetings.
 - 2. Section 01330 - Submittal Procedures.
 - 3. Section 01360 - Sustainable Design Requirements.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 05500 – Metal Fabrications.

1.02 REFERENCES

- A. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
- B. Reference Standards:
 - 1. American Society of Civil Engineers (ASCE):
 - a. ASCE/SEI 7 – Minimum Design Loads for Buildings and Other Structures.
 - 2. ASTM International (ASTM):
 - a. ASTM A 153/A 153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
 - 3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 4. FM Approvals LLC (FM):
 - a. The Approval Guide, www.approvalguide.com.
 - 5. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
 - 6. Intertek Group plc:
 - a. Intertek Directory of Listed Product Search, <http://etlwhidirectory.etlsemko.com>
 - 1) Warnock Hersey Mark Directory.
 - 7. National Fire Protection Association (NFPA):
 - a. NFPA 80 - Standard for Fire Doors and Other Opening Protectives.
 - b. NFPA 105 - Standard for the Installation of Smoke Door Assemblies and Other Opening Protectives.

- c. NFPA 252 - Standard Methods of Fire Tests or Door Assemblies.
- 8. Underwriters Laboratory:
 - a. UL Online Certifications Directory,
<http://www.ul.com/regulators/quickguide.html>.
 - 1) UL Fire Resistance Directory (Fire Resistance Ratings).
 - b. UL 10B – Standard for Fire Tests of Door Assemblies.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
 - 2. If other than manual door operators are provided for the overhead coiling doors, coordinate the power requirements of the door operators with the available power supply.
- B. Pre-Installation Meetings:
 - 1. Schedule and conduct a pre-installation conference at the Site in accordance with the requirements specified in Section 01316, Project Meetings, to establish procedures to maintain optimum working conditions, and to coordinate the Work of this Section with related and adjacent Work.
- C. Sequencing:
 - 1. Sequence the erection of overhead coiling doors to follow construction of supporting load bearing walls, and structure is under roof.
- D. Scheduling:
 - 1. Coordinate the overhead coiling door fabrication schedule with construction progress to avoid delaying the work.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Overhead coiling doors and accessories.
 - b. Shop Drawings:
 - 1) Overhead coiling door installations and special components.
 - 2) Wiring diagrams.

- c. Samples:
 - 1) Exposed overhead coiling door products.
 - d. Certificates:
 - 1) Seismic Qualification Certificates.
 - 2) Oversize Construction Certification.
 - e. Qualification Statements:
 - 1) Overhead coiling door installer's qualifications.
- B. Informational Submittals:
- 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Manufacturer's written installation instructions.
- C. Closeout Submittals:
- 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and Maintenance Manuals for the overhead coiling doors.
 - b. Warranty Documentation:
 - 1) Overhead Coiling Door Warranty.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
- 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - 2. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:
 - 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 - 3. Testing and Inspection Agency:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky harbor International Airport will employ

both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Qualifications:

1. Overhead Coiling Door Installer's Qualifications:

- a. Employ a manufacturer's authorized representative who has been trained and approved by the manufacturer to both install and maintain their overhead coiling door units provided under this Contract.
- b. Submit the overhead coiling door installer's qualifications to the Program/Project Manager for approval.

2. Overhead Coiling Door Manufacturer's Qualifications:

- a. Obtain overhead coiling doors that have been manufactured by a manufacturer who has at least 5 years' experience fabricating and installing overhead coiling doors.
- b. Submit the overhead coiling door manufacturer's qualifications, including a list of 5 projects similar in scope and complexity to the Work of this Contract and completed within the last 5 years, to the Program/Project Manager for approval.

C. Certifications:

1. Electrical Component, Device, and Accessory Certification:

- a. Provide products that are listed and labeled as defined in Article 100 of NFPA 70 by Underwriters Laboratory, approved by Factory Mutual, or certified as meeting the standards of UL by the Electrical Testing Laboratory (ETL) acceptable to the Authorities Having Jurisdiction (AHJ) for the location the product is installed in, and the application intended, unless products meeting the requirements of these nationally recognized testing laboratories are not available or unless standards do not exist for the products.
 - 1) Provide products marked with their intended use or classification.
 - 2) Submit evidence with the Product Data that the products represented meet testing agency quality verification requirements, including agency listing and labeling requirements.
 - a) Such evidence may consist of either a printed mark on the data or a separate listing card.
- b. Submit a written statement from those product manufacturers that do not provide evidence of the quality of their products that indicates why an item does not have quality assurance verification.
 - 1) Such statements provided in lieu of quality assurance verification are subject to the acceptance of the Owner and the Program/Project Manager.

2. Seismic Qualification Certificates:

- a. For the overhead coiling doors, accessories, and components provided under this Section, submit Seismic Qualification Certificates from manufacturer certifying these items comply with the requirements

specified for seismic performance to the Program/Project Manager for approval.

3. Oversize Construction Certification:
 - a. For door assemblies required to be fire-rated and that exceed the size limitations of labeled assemblies, submit the manufacturer's Oversize Construction Certification certifying that each door assembly has been constructed to conform to the design, materials, and construction equivalent to the requirements for labeled construction.

D. Site Samples:

1. Submit Samples of each exposed overhead coiling door product and of each color and texture to be provided under this Section to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver materials and products in labeled protective packaging.
 - a. Protect overhead coiling doors during transit and storage at the Site by either crating the doors, or wrapping them with cardboard.
2. Provide additional protection to prevent damage to the finish of factory-finished doors.
3. On delivery, inspect the overhead coiling doors for damage, and notify the shipper and supplier if damage is found.
 - a. Minor damages may be repaired provided refinished items match new work and are acceptable to the Program/Project Manager
 - b. Remove damaged items that cannot be repaired and replace the removed items with new, undamaged replacements as directed.

B. Storage and Handling Requirements:

1. Store overhead coiling doors under cover at the Site.
2. Place units on minimum 4-inch high wood blocking.
3. Avoid using non-vented plastic or canvas shelters that could create a humidity chamber.
4. If door packaging becomes wet, remove cartons immediately.

C. Packaging Waste Management:

1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

A. Extended Correction Period:

1. Warrant the overhead coiling door materials and workmanship against failures including, but not limited to, the following within the 5 year period after the Date of Substantial Completion:

- a. Water-tightness of the assembly.
2. Submit the written Overhead Coiling Door Warranty on the manufacturer's standard form in which the manufacturer agrees to repair or replace components of manufactured overhead coiling doors that fail in materials or workmanship within specified warranty period to the Program/Project Manager for approval.
 - a. Have the manufacturer's standard form signed by the Contractor and manufacturer.

PART 2 PRODUCTS

2.01 ASSEMBLIES

- A. Manufacturers:
 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 2. Substitution Limitations:
 - a. The Contract Drawings indicate the size, profiles, dimensional requirements, and aesthetic effects of the overhead coiling doors.
 - b. Subject to compliance with the requirements indicated in the Contract Documents, other overhead coiling door manufacturers whose products have equal performance characteristics may be considered.
 - c. Source Limitations:
 - 1) For each type of overhead coiling door, provide the doors, guides, motors, and related primary components from a single source from a single manufacturer.
- B. Description:
 1. Service Door:
 - a. Provide an overhead fire-rated coiling door formed with a door curtain of interlocking metal slats.
- C. Performance:
 1. Exterior Door Structural Performance:
 - a. For overhead coiling doors exposed to the exterior of the structure, provide doors capable of withstanding the wind loads, the effects of gravity loads, and loads and stresses within the limits and under the conditions specified in ASCE/SEI 7, and complying with the following requirement:
 - 1) Wind Loads:
 - a) Provide doors capable of withstanding a uniform pressure (velocity pressure) of 20 pounds force per square foot (960Pa), acting inward and outward.
 2. Light Duty Overhead Coiling Structural Performance:
 - a. Curtain/Counterbalance Deflection:

- 1) Provide a curtain/counterbalance mechanism having deflection limited to no more than 0.03 inch per foot.
 3. Seismic Performance:
 - a. Provide overhead coiling doors capable of withstanding the effects of earthquake motions within the limits and under the conditions determined in accordance with the requirements specified in ASCE/SEI 7.
- D. Design Criteria:
 1. Operation Cycles:
 - a. Provide overhead coiling doors designed for not less than 10,000 operation cycles.
 2. Fire Rating:
 - a. Provide fire-rated overhead coiling door assemblies complying with the requirements specified in NFPA 80, and that are listed and labeled by a qualified testing agency acceptable to the Authorities Having Jurisdiction, such as Underwriters Laboratories, Inc. (UL), for fire-protection rating(s) indicated, based on testing at as close to neutral pressure as possible in accordance with the methods specified in NFPA 252 or UL 10B.
 - 1) Fire Protection Rating: 1-1/2 hours.
 - b. Fire-Resistance Rating Approvals:
 - 1) FM Approvals LLC (FM) Listing:
 - a) FM Approvals LLC (FM) furnishes a free online service, The Approval Guide, listing approved assemblies complying with various FM Approval Standards.
 - 2) Intertek Directory of Listed Product Search:
 - a) Intertek Group plc furnishes a free online service listing Warnock Hersey approved assemblies in the Warnock Hersey Mark Directory.
 - 3) Underwriters Laboratories, Inc. (UL) Fire Resistance Directory:
 - a) Underwriters Laboratories, Inc. publishes and the UL Fire Resistance Directory which lists all assemblies, systems, and devices UL has tested, and classifies them under Category Codes (CCN) in the free UL Online Certifications Directory.
 3. Product Data:
 - a. Submit Product Data for each type and size of overhead coiling door and accessory provided under this Section to the Program/Project Manager for approval.
 4. Shop Drawings:
 - a. For each overhead coiling door installation and for special components not dimensioned or detailed in manufacturer's Product Data, submit Shop Drawings to the Program/Project Manager for approval.
 - 1) Include plans, elevations, sections, details, and attachments to other work.

- 2) Detail equipment assemblies, including framing members; and indicate the dimensions, weights, loads, required clearances, method of field assembly, components, accessories, anchors, and location and size of each field connection.
 - 3) Show the locations of replaceable fusible links.
 - 4) Show the relationship with adjacent materials.
 - b. Wiring Diagrams:
 - 1) For the overhead coiling doors' power, signal, and control wiring, submit wiring diagrams to the Program/Project Manager for approval.
- E. Operation:
1. Manual Door Operators:
 - a. Unless another type of door operator is indicated on the Contract Drawings to operate the door, provide a chain-hoist operator consisting of an endless hand chain, a chain-pocket wheel and guard, and a gear-reduction unit with a maximum force of 25 pounds-force (111N) for each overhead coiling door.
 - 1) Fabricate the hand chain from alloy-steel.
 - 2) Secure the chain holder to the operator guide.
 - 3) Provide an operator having through-wall shaft operation.
 - 4) Provide an operator having the manufacturer's standard removable operating arm.
- F. Door Assemblies:
1. Fire-Rated Overhead Coiling Service Doors:
 - a. Door Curtains:
 - 1) Provide overhead coiling door curtains fabricated from interlocking galvanized steel slats, and having interior curtain-slat facing fabricated from galvanized steel matching the curtain-slat face on the exterior.
 - a) Provide flat profile slats 2-1/4 inches high, center-to-center.
 - 2) Unless otherwise indicated in the Contract Documents, provide door curtain slats of the thickness and having the mechanical properties recommended by the door manufacturer for the performance, size, and type of door indicated on the Contract Drawings.
 - b. Bottom Bar for Service Doors:
 - 1) For service doors, provide a bottom bar fabricated from similar metal and finished to match the curtain slats, and consisting of 2 angles, each not less than 1-1/2 inches by 1-1/2 inches by 1/8 inch thick (38mm by 38mm by 3mm thick).
 - c. Curtain Jamb Guides:
 - 1) Unless otherwise indicated, provide galvanized steel curtain jamb guides consisting of the manufacturer's standard angles or channels and angles of same finish as the exposed curtain slats.

- 2) Provide curtain jamb guides having sufficient depth and strength to retain the curtain, to allow the curtain to operate smoothly, and to withstand loading.
- 3) Provide slotted bolt holes to allow adjustment of the guide.
- 4) Provide removable stops on the guides to prevent overtravel of the curtain.
- d. Hood:
 - 1) Provide hoods, formed from galvanized sheet steel, and mounted on the face of the interior wall at the opening head of the overhead coiling doors and attached to the end brackets to entirely enclose the coiled curtain and operating mechanism.
 - a) Contour the round shaped hoods to fit the end brackets.
 - b) Roll and reinforce the top and bottom edges of the hood to provide stiffness.
 - c) For surface-mounted hoods and fascia, form closed ends for portions mounted between the jambs that project beyond wall face.
 - 2) Equip the hoods with intermediate support brackets as required to prevent sagging.
 - 3) Provide an automatic drop baffle on fire-rated doors to guard against the passage of smoke or flame.
- e. Locking Devices:
 - 1) Equip the overhead coiling doors with side-locking bolts for padlocks, operable from the coil side; and designed to engage and slide through slots in the tracks to allow the door to be padlocked.
 - 2) Locate the locking device assembly on a single-jamb side.
- f. Counterbalancing Mechanism:
 - 1) Provide the manufacturer's standard mechanism to counterbalance the doors which consists of adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings.
 - 2) Provide grease-sealed bearings or self-lubricating graphite bearings for rotating members.
 - 3) Provide the manufacturer's standard mounting brackets fabricated from either cast iron or cold-rolled steel plate.
- g. Miscellaneous Metal Supports:
 - 1) Provide miscellaneous metal supports complying with the requirements specified in Section 05500, Metal Fabrications.
- h. Finishes:
 - 1) Provide a baked-enamel or powder-coated finish on the overhead coiling doors.
 - 2) Provide finish color as selected by the Program/Project Manager from the manufacturer's full color range.

- i. Manufacturers:
 - 1) Cookson Company, www.cooksondoor.com.
 - 2) Cornell Iron Works, Inc., www.cornelliron.com.
 - 3) Overhead Door Corporation, www.overheaddoor.com.
 - 4) Raynor, www.raynor.com.
 - 5) Southwestern Steel Rolling Door Co.
 - 6) Wayne-Dalton Corp., www.wayne-dalton.com.
 - 7) Approved equal.
- 2. Light Duty Overhead Coiling Service Doors:
 - a. Curtain:
 - 1) Provide roll-formed 26 gauge galvanized steel interlocking slats, each having its end locked from lateral movement by a galvanized steel staking lock system.
 - b. Weatherseals:
 - 1) Provide vinyl bottom seals.
 - c. Bottom Bar:
 - 1) Provide extruded aluminum bottom bars.
 - d. Guides:
 - 1) Provide roll-formed galvanized steel shapes attached to a continuous galvanized wall angle.
 - e. Brackets:
 - 1) Provide galvanized steel brackets to support the counterbalance and curtain.
 - f. Counterbalancing Mechanism:
 - 1) Provide a helical spring torsion spring type counterbalance housed in a steel tube or pipe barrel supporting the curtain.
 - 2) Provide a counterbalance having an adjustable spring tension.
 - g. Manual Operation:
 - 1) Provide doors operated by either a manual push up or chain hoist.
 - h. Locking:
 - 1) Provide an exterior slide lock; or for chain hoist operated doors, provide chain keeper locks.
 - i. Wall Mounting Condition:
 - 1) Provide light duty overhead coiling service doors mounted on the face of the wall.
 - j. Finishes:
 - 1) Provide curtain slats galvanized in accordance with the requirements specified in ASTM A 153/A 153M, and roll-coated with a rust-inhibitive 0.2-mil thick baked-on prime coat and a 0.6-mil thick baked-on polyester top coat.
 - 2) Apply a coat of rust-inhibitive primer to non-galvanized surfaces.
 - 3) Provide a finish color as selected by the Program/Project Manager from the manufacturer's full color range.
 - k. Manufacturers:
 - 1) Overhead Door Corporation, 600 Series, www.overheaddoor.com.

- 2) Approved equal.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Check overhead coiling door openings by taking field measurements before fabrication of the overhead coiling doors, and show the recorded field measurements on the Shop Drawings
 2. With the installer present, examine the substrates and existing conditions for compliance with the requirements for the opening configurations, penetrating items, substrates, supports, and other conditions affecting performance.
 - a. Inspect the overhead coiling door openings before installing the doors.
 - b. Verify that the rough or masonry opening is correct.
- B. Evaluation and Assessment:
 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Surface Preparation:
 1. Verify that masonry surfaces are visibly dry and free of excess mortar, sand, and other construction debris.

3.03 INSTALLATION

- A. Doors:
 1. Provide the overhead coiling doors and operating equipment with the hardware, anchors, inserts, hangers, and equipment supports necessary for a complete installation.
 - a. Install the overhead coiling doors and operating equipment according to manufacturer's installation instructions and as specified.
 - b. Submit the manufacturer's written installation instructions to the Program/Project Manager for information.
 2. Lubricate the bearings and sliding parts as recommended by the manufacturer.
- B. Special Techniques:
 1. Fire-Rated Doors:
 - a. Install fire-rated doors in accordance with the requirements specified in NFPA 80.
 2. Smoke-Control Doors:
 - a. Install smoke-control doors in accordance with the requirements specified in NFPA 80 and NFPA 105.

3.04 REPAIR/RESTORATION

- A. Touch-up damaged coatings and finishes, and repair minor damage.

3.05 ADJUSTING

- A. Adjust the overhead coiling doors' hardware and moving parts so they function smoothly, and the doors operate easily, and free of warp, twist, and distortion.
- B. Adjust the overhead coiling doors' seals so they provide a weathertight fit around the entire perimeter of the door.

3.06 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. During the period when concrete is being placed, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing of materials.
 - a. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 - b. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials or proportions requested by the Contractor or testing required due to failure of material to meet specified requirements.
 - c. Failure of the Testing and Inspection Agency or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
 - 2. Inspections:
 - a. Smoke-Control Doors:
 - 1) Smoke control systems are subject to Special Inspections under the ICC International Building Code (IBC) as Amended by the City of Phoenix.
 - 2) Smoke-control doors provided under this Section are included in the smoke control systems.

3.07 CLEANING

- A. Clean exposed surfaces using non-abrasive materials and methods recommended by the manufacturer of the material or product being cleaned.
- B. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.08 CLOSEOUT ACTIVITIES

- A. Training:
 - 1. Engage a factory-authorized service representative to train the Owner's maintenance personnel to be able to adjust, operate, and maintain the overhead coiling doors.

3.09 PROTECTION

- A. Protect installed the overhead coiling doors from damage until Final Acceptance.

3.10 MAINTENANCE

- A. Furnish maintenance data, including a maintenance schedule, for the fire-rated service doors in the Operation and Maintenance Manuals.
 - 1. Submit Operation and Maintenance Manuals for the overhead coiling doors to the Program/Project Manager.

SECTION 08411

ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for aluminum exterior entrance systems.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01454 - Mock-Up Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 07920 - Joint Sealants.
 - 5. Section 08705 – Finish Hardware
 - 6. Section 08800 – Glazing.

- c. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.

14. Institute for Sustainability Infrastructure (ISI):

- a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Scheduling:

- 1. Coordinate the entrance and storefront system fabrication schedule with construction progress to avoid delaying the work.

1.04 SUBMITTALS

A. Action Submittals:

- 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Exterior aluminum entrances.
 - 2) Hardware.
 - b. Shop Drawings:
 - 1) Entrance systems and storefront systems.
 - c. Samples:
 - 1) Color charts.
 - 2) Framing intersection Samples.
 - d. Certificates:
 - 1) Installer Certificates.
 - e. Qualification Statements:
 - 1) Aluminum entrance and storefront installer's qualifications.
 - 2) Entrance and Storefront Testing Agency's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Product Test Reports.
 - 2) Sealant compatibility and adhesion test reports.
 - b. Manufacturer's Instructions:
 - 1) Manufacturer's instructions for protecting and handling entrance and storefront systems.
 - 2) Manufacturer's instructions for installing entrance and storefront systems.
 - c. Sustainable Design Submittals:
 - 1) Low-Emitting Materials: Adhesives & Sealants, Submittal for the aluminum entrances and storefronts.
 - 2) ENVISION Credit RA 1.3 - Use Recycled Materials - Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - 3) ENVISION Credit RA 1.4 – Use Regional Materials - Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).
- C. Closeout Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Aluminum Entrance and Storefront Warranty.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 1. Testing and Inspection Agency:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ

both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Qualifications:

1. Installer's Qualifications:

- a. Engage an experienced installer who has specialized in installing entrance and storefront systems similar to those required for this Contract, and who is acceptable to manufacturer, to assume engineering responsibility for and to perform the Work of this Section.

1) Engineering Responsibility:

- a) Engineering responsibility includes preparing information for the entrance and storefront systems, including Shop Drawings, based on testing and engineering analysis of the manufacturer's standard units in assemblies similar to those indicated for this Contract.
- b. Submit the aluminum entrance and storefront installer's qualifications to the Program/Project Manager for approval.

2. Entrance and Storefront Testing Agency's Qualifications:

- a. To perform the entrance and storefront testing of the Work of this Section, employ the services of one or more independent certified testing laboratories having the following qualifications:

- 1) Each testing laboratory must be independent, certified, and comply with the quality standards for testing laboratories of the nationally recognized associations and agencies that promulgate the test standards specified and with the basic requirements of ASTM E 699.

- a) Each testing laboratory must have the experience and capability to satisfactorily perform the reviews, inspections, and testing required of them by this Contract, including but not limited to, inspecting, sampling, and testing proposed materials and systems as required by the Program/Project Manager for compliance with the Contract Documents.
- b) The testing laboratory must be approved by the Program/Project Manager, and must also be accepted by the local jurisdictions responsible for building inspection.
- b. Dismissal and replacement of any of these independent certified testing laboratories by the Contractor requires written notice to and the approval from the Program/Project Manager.
- c. Submit the qualifications and certifications of the proposed testing laboratories to the Program/Project Manager for approval.

C. Certifications:

1. Installer Certificates:

- a. Submit Installer Certificates, signed by the aluminum entrance and storefront manufacturer, certifying that the installer is acceptable to the manufacturer for installing their products.
- D. Sustainability Standards Certifications:
 - 1. Adhesives and Sealants Submittal:
 - a. For the sealants and sealant primers used within the aluminum entrances and storefronts, submit Product Data, including a printed statement of volatile organic compound (VOC) content and chemical components.
 - 1) Certify compliance with SCAQMD Rule 1168.
- E. Site Samples:
 - 1. Color Charts:
 - a. For units with factory-applied color finishes, submit the manufacturer's color charts showing the full range of colors available to the Program/Project Manager for approval.
 - 2. Framing Intersection Samples:
 - a. For each vertical-to-horizontal framing intersection of the systems, submit a cutaway Sample made from minimum 6 inch (150mm) lengths of the full-size components showing details of the following:
 - 1) Joinery.
 - 2) Anchorage.
 - 3) Expansion provisions.
 - 4) Glazing.
 - 5) Flashing and drainage.
- F. Mock-Ups:
 - 1. Build mockups in accordance with the requirements specified in Section 01454, Mock-Up Requirements.
 - a. Build the mockups in the location and of the size indicated or, if not indicated, as directed by Program/Project Manager.
 - b. Using the glazing methods to be used for production Work, build mockups having the kinds of glass installed as appropriate to match the glazing systems required under this Section:
 - 2. Approved mockups may become part of the completed Work if undisturbed at the time of Substantial Completion.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Storage and Handling Requirements:
 - 1. Comply with the manufacturer's written instructions for protecting and handling entrance and storefront systems.

- a. Submit the manufacturer's instructions for protecting and handling entrance and storefront systems to the Program/Project Manager for information.

1.07 WARRANTY

- A. Extended Correction Period:
 1. Warrant the entrance and storefront materials and workmanship against failures including, but not limited to, the following within the 5 year period after the Date of Substantial Completion:
 - a. Water-tightness of the assembly.
 2. Submit the written Aluminum Entrance and Storefront Warranty on the manufacturer's standard form in which the manufacturer agrees to repair or replace components of manufactured aluminum entrances and storefronts that fail in materials or workmanship within specified warranty period to the Program/Project Manager for approval.
 - a. Have the manufacturer's standard form signed by the Contractor and manufacturer.

PART 2 PRODUCTS

2.01 SYSTEMS

- A. Manufacturers:
 1. Manufacturer List:
 - a. Oldcastle Glass®, www.vistawall.com.
 - b. U.S. Aluminum, www.usalum.com.
 - c. Kawneer Company, Inc., www.kawneer.com.
 - d. Southwest Aluminum Systems.
 - e. Approved equal.
 2. Substitution Limitations:
 - a. The Contract Drawings indicate the size, profiles, and dimensional requirements of the entrance and storefront systems, and are based on the specific systems indicated.
 - 1) Except with the Program/Project Manager's approval, do not provide products modifying the intended aesthetic effect indicated in the Contract Documents as judged solely by the Program/Project Manager, and then only to the extent needed to comply with performance requirements.
 - 2) Where modifications to the intended aesthetic effect are proposed, submit comprehensive explanatory data to Program/Project Manager for review and approval.

- b. Subject to compliance with the requirements indicated in the Contract Documents, other manufacturers' systems with equal performance characteristics may be considered.
 - 3. Product Options:
 - a. Source Limitations:
 - 1) Obtain each type of entrance and storefront system through one source and from a single manufacturer.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).
 - 2. Sustainability Requirements:
 - 1) Volatile Organic Compounds (VOC) Content of liquid-type auxiliary materials:
 - a) Provide liquid-type auxiliary materials for the polyvinyl-chloride (PVC) roofing system having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, that comply with the volatile organic compounds (VOC) limits of the Authorities Having Jurisdiction, and that comply with SCAQMD Rule 1168.
 - b) Provide materials not exceeding the following volatile organic compound (VOC) limits for ENVISION:
 - (1) For structural glazing adhesives: Not more than 100 grams per Liter less water.
- C. Performance:
 - 1. Wind Loads:
 - a. Provide entrance and storefront systems, including anchorage, capable of withstanding the wind-load design pressures calculated according to requirements of the Authorities Having Jurisdiction or section 6.4.2, Analytical Procedure, in ASCE/SEI 7, whichever are more stringent.
 - 2. Air Infiltration:
 - a. Provide entrance and storefront systems having permanent resistance to air leakage through fixed glazing and frame areas of not more than 0.06 cubic feet per minute per square foot (0.3L/s/m²) of fixed wall

area when tested according to ASTM E 283 at a static-air-pressure difference of 1.57 pounds force per square foot (75.2Pa).

3. Water Penetration:
 - a. Provide entrance and storefront systems that do not evidence water leakage through fixed glazing and frame areas when tested according to ASTM E 331 at minimum differential pressure of 20 percent of the inward-acting wind-load design pressure as defined by ASCE/SEI 7, but not less than 6.24 pounds force per square foot (299Pa).
 - 1) Water leakage is defined as uncontrolled water infiltrating systems or appearing on the systems' normally exposed interior surfaces from sources other than condensation.
 - 2) Water controlled by flashing and gutters that is drained back to the exterior and cannot damage adjacent materials or finishes is not water leakage.
4. Thermal Movements
 - a. Provide entrance and storefront systems, including anchorage, that accommodate thermal movements of the systems and supporting elements resulting from the following maximum changes (ranges) in ambient and surface temperatures without buckling, damaging stresses on glazing, failure of joint sealants, damaging loads on fasteners, failure of doors or other operating units to function properly, and other detrimental effects:
 - 1) Ambient Temperature Change (Range): 120 degrees Fahrenheit (67 degrees Celsius).
 - 2) Material Surface Temperature Change (Range): 180 degrees Fahrenheit (100 degrees Celsius).
5. Condensation Resistance:
 - a. Provide storefront systems having a condensation resistance factor (CRF) of not less than 45 when tested according to AAMA 1503.

D. Design Criteria:

1. Dimensional Tolerances
 - a. Provide entrance and storefront systems that accommodate the dimensional tolerances of the building frame and other adjacent construction.
2. Structural-Support Movement:
 - a. Provide entrance and storefront systems that accommodate structural movements including, but not limited to, sway and deflection.
3. Deflection of Framing Members:
 - a. Unless otherwise indicated, allowable deflection of framing members in a direction normal to the wall plane is limited to $L/175$ of the clear span, or 3/4 inch (19 mm), whichever is smaller.

4. Dead Loads:
 - a. Provide entrance- and storefront-system members that do not deflect an amount which will reduce the glazing bite below 75 percent of the design dimension when carrying the full dead load.
 - 1) Provide a minimum 1/8-inch (3.18mm) clearance between the members and the top of the glazing or other fixed part immediately below.
5. Live Loads:
 - a. Provide entrance and storefront systems, including anchorage, that accommodate the supporting structures' deflection from the uniformly distributed and concentrated live loads indicated without failure of materials or permanent deformation.
6. Glazing:
 - a. Physically and thermally isolate glazing from framing members.
7. Thermally Broken Construction:
 - a. Provide systems that isolate aluminum exposed to the exterior from aluminum exposed to the interior with a material of low thermal conductance.
8. Drainage:
 - a. Design system components so water passing joints, condensation, and moisture occurring or migrating within the system will drain to the exterior.
9. Product Data:
 - a. Submit Product Data for the exterior aluminum entrances, and hardware proposed for the Work of this Section to the Program/Project Manager for approval.
10. Shop Drawings:
 - a. For each the entrance systems and storefront systems provided, submit Shop Drawings to the Program/Project Manager for approval.
 - 1) Show fabrication and installation details, including plans, elevations, sections, details of the components, provisions for expansion and contraction, and attachments to other work.
 - 2) For entrance systems, include the hardware schedule; and indicate operating hardware types, quantities, and locations.

E. Materials:

1. Aluminum:
 - a. Provide the aluminum alloy and temper recommended by the manufacturer for the type of use and finish indicated, and complying with the requirements of the following standards:
 - 1) Sheet and Plate: ASTM B 209 (ASTM B 209M).

- 2) Extruded Bars, Rods, Shapes, and Tubes: ASTM B 221 (ASTM B 221M).
- 3) Extruded Structural Pipe and Tubes: ASTM B 429/B 429M.
- 4) Bars, Rods, and Wire: ASTM B 211 (ASTM B 211M).
- 5) Welding Rods and Bare Electrodes: AWS A5.10/A5.10M.
2. Steel Reinforcement:
 - a. For structural shapes, plates, and bars, provide materials complying with the requirements specified in ASTM A 36/A 36M.
 - b. For cold-rolled sheet and strip; provide materials complying with the requirements specified in ASTM A 1008/A 1008M.
 - c. For hot-rolled sheet and strip; provide materials complying with the requirements specified in ASTM A 1011/A 1011M.
3. Glazing:
 - a. Provide glazing complying with the requirements specified in Section 08800, Glazing.
4. Glazing Gaskets:
 - a. Provide the manufacturer's standard pressure-glazing system of black, resilient glazing gaskets, setting blocks, and shims or spacers, fabricated from an elastomeric of type and in hardness recommended by system and gasket manufacturer to comply with system performance requirements.
 - b. Provide gasket assemblies that have corners sealed with sealant recommended by the gasket manufacturer.
- F. System Components:
 1. Doors:
 - a. Provide the manufacturer's standard 1-3/4 inch (44.5mm) thick glazed doors with extruded tubular rail and stile members a minimum of 0.125 inch (3.2mm) thick.
 - 1) Mechanically fasten the corners with reinforcing brackets that are deep penetration and fillet welded, or that incorporate concealed tie-rods.
 - b. Glazing Stops and Gaskets:
 - 1) Provide the manufacturer's standard snap-on extruded-aluminum glazing stops and preformed gaskets.
 - c. Stile Design:
 - 1) Provide a medium stile having a 3-1/2-inch (88.9mm) nominal width.
 2. Brackets and Reinforcements:
 - a. Provide the manufacturer's standard brackets and reinforcements that are compatible with adjacent materials.

- b. Provide non-staining, nonferrous shims for aligning system components.
 - 3. Fasteners and Accessories:
 - a. Provide the manufacturer's standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials.
 - b. Reinforce members as required to retain fastener threads.
 - c. Do not use exposed fasteners, except for hardware applications.
 - 1) For hardware applications, use countersunk Phillips flat-head machine screws finished to match the framing members or hardware being fastened unless otherwise indicated in the Contract Documents.
 - 4. Concrete and Masonry Inserts:
 - a. Provide hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with the requirements specified in either ASTM A 123/A 123M or ASTM A 153/A 153M.
 - 5. Concealed Flashing:
 - a. Provide the manufacturer's standard corrosion-resistant, non-staining, non-bleeding flashing, compatible with adjacent materials, and of a type recommended by manufacturer.
 - 6. Weather Stripping:
 - a. Provide the manufacturer's standard replaceable weather stripping as follows:
 - 1) For compression weather stripping, provide molded neoprene complying with the requirements specified in ASTM D 2000, or molded PVC complying with the requirements specified in ASTM D 2287.
 - 2) For sliding weather stripping, provide wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing complying with the requirements specified in AAMA 701/702.
- G. System Hardware:
 - 1. Provide heavy-duty hardware units of the sizes, number, and type recommended by the manufacturer for the entrances indicated in the Contract Documents.
 - a. Unless otherwise indicated, finish exposed parts to match the door finish.
 - 2. Ball-Bearing Butts:
 - a. Provide 5-knuckle, Grade 1 ball-bearing butts complying with the requirements specified in ANSI/BHMA A156.1.
 - 1) Provide ball-bearing butts sized 4-1/2 inches by 4 inches (101.6mm by 114.3mm).

- 2) Provide non-removable pins at hinges exposed to the door outside, and provide nonferrous hinges for applications exposed to weather.
 - 3) For doors up to 36 inches (914mm) wide and 80 inches (2032mm) tall, provide 3 hinges at each leaf.
 - 4) For doors taller than 80 inches (2032mm), provide 4 hinges at each leaf.
 3. Closers:
 - a. Provide closers complying with the manufacturer's recommendations for the closer size, depending on the door size, exposure to weather, and anticipated frequency of use.
 - 1) Closing Cycle:
 - a) Provide door closers having closing cycles complying with the requirements of the Authorities Having Jurisdiction or the Americans with Disabilities Act Accessibility Guidelines (ADAAG) for Buildings and Facilities, whichever are more stringent.
 - 2) Concealed Overhead Closers:
 - a) Provide Grade 2 concealed overhead closers complying with the requirements specified in ANSI/BHMA A156.4, and the following:
 - (1) Type:
 - (a) Provide the single acting, independently hung type closer, with a concealed arm and track.
 - (2) Hold Open:
 - (a) Provide a closer that automatically holds the door open at the angle selected by the Program/Project Manager from manufacturer's standard options.
 - (3) Back Check:
 - (a) Provide an adjustable back check mechanism.
 - (4) Positive Dead Stop:
 - (a) Provide a positive dead stop coordinated with the hold-open angle, if any, or at an angle selected by the Program/Project Manager from manufacturer's standard options.
 4. Door Stops:
 - a. Provide Grade 1 wall-mounted door stops with an integral rubber bumper complying with the requirements specified in ANSI/BHMA A156.16, as appropriate for the door location indicated in the Contract Documents.
 5. Cylinders:

- a. Have the finish hardware Supplier provide Sargent cylinders and cores as specified under Section 08705, Finish Hardware.
- b. On the interior side of the door, provide a panic release as specified under Section 08705, Finish Hardware.
6. Rim Cylinders:
 - a. On the exterior side of the door, provide the manufacturer's standard Grade 1 rim cylinders complying with the requirements specified in ANSI/BHMA A156.5 for installation in the exit devices.
7. Radius Face Strikes:
 - a. Provide the manufacturer's standard stainless-steel radiused face strike with a steel mounting plate and black-plastic dustbox.
8. Rim-Mounted Exit Devices:
 - a. Provide rim-type exit devices complying with the requirements specified in UL 305, and having one-point latching at the door-lock stile released by a full-width crash bar; or when locked down (dogged), by a lock cylinder or retracting screws beneath the housing.
9. Pull Handles:
 - a. Provide pull handles as selected by the Program/Project Manager from the manufacturer's full range of pull handles and plates.
10. Push Bars:
 - a. Provide push bars as selected by the Program/Project Manager from the manufacturer's full range of full-door-width, single-bar push bars.
 - b. Provide a push plate affixed to push bar.
11. Thresholds:
 - a. At exterior doors, provide the manufacturer's standard aluminum threshold with a mill finish, and having cutouts coordinated for the operating hardware, anchors and jamb clips not more than 1/2 inch (12.7mm) high, and beveled edges providing a floor level change with a slope of not more than 1:2.
12. Weather Sweeps:
 - a. Provide the manufacturer's standard weather sweeps suitable for installation on exterior door bottoms, and having concealed fasteners on mounting strips.

H. Fabrication:

1. Shop Fabrication:
 - a. Fabricate components that, when assembled, will have accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion.
 - 1) Fabricate the components for head- and sill-receptor frame construction, with shear-block construction at the intermediate horizontal components.

- b. Prepare components to receive concealed fasteners, anchor, and connection devices.
 - c. Forming:
 - 1) Form shapes with sharp profiles, straight and free of defects or deformations, prior to finishing the components.
 - d. Welding:
 - 1) Weld components in accordance with the applicable provisions of AWS D1.2/D1.2M.
 - 2) Perform welding operations prior to finishing the components to the greatest extent possible.
 - 3) Perform welding in concealed locations to greatest extent possible to minimize distortion or discoloration of the finish.
 - 4) Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
 - e. Entrances:
 - 1) Fabricate door framing of the profiles indicated in the Contract Drawings.
 - a) Reinforce the door framing as required to support the imposed loads.
 - b) Factory-assemble the door and frame units, and factory-install hardware to greatest extent possible.
 - c) Reinforce door and frame units as required for installing the hardware indicated in the Contract Documents.
 - d) Cut, drill, and tap for factory-installed hardware before finishing the components.
 - 2) Exterior Doors:
 - a) Provide compression weather stripping at fixed stops.
 - b) At other locations, provide sliding weather stripping retained in adjustable strip mortised into the door edge.
 - 3) Interior Doors:
 - a) Prevent metal to metal contact at stops by providing silencers complying with the requirements specified in ANSI/BHMA A156.16.
 - (1) Provide 3 silencers on the strike jamb of single-door frames, and 2 silencers on the head of double-door frames.
 - f. After fabricating components, clearly mark each component to identify its location in the Work according to the Shop Drawings.
2. Fabrication Tolerances:
- a. Glazing Channels:
 - 1) Provide the minimum clearances according to GANA Glazing Manual for the thickness and type of glass indicated.

- I. Finishes:
 1. Primer Materials:
 - a. Provide the manufacturer's standard corrosion-resistant primer.
 2. Finish Materials:
 - a. Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes in AA DAF-45.
 - b. High-Performance Organic Coating Finish AA-C12C42R1x:
 - 1) First Chemical Finish: Clean the substrate using inhibited chemicals.
 - 2) Second Chemical Finish: Apply an acid chromate-fluoride-phosphate conversion coating.
 - 3) Organic Coating: Apply the manufacturer's standard 2-coat, thermocured system composed of a specially formulated inhibitive primer and a fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with the requirements specified in AAMA 2605.
 - 4) Color and Gloss: Match the Program/Project Manager's Sample selection.
 3. Shop Finishing Methods:
 - a. Comply with NAAMM AMP 500 for recommendations relative to applying and designating finishes.
 - b. Surface Preparation:
 - 1) Perform the manufacturer's standard cleaning operations to remove dirt, oil, grease, or other contaminants that could impair the paint bond.
 - 2) Remove mill scale and rust, if present, from the uncoated steel.
 - c. Metal Protection:
 - 1) Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying a sealant or tape recommended by the manufacturer for this purpose.
 - 2) Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
 - d. Priming:
 - 1) Comply with NAAMM AMP 500 for recommendations relative to applying primer.
 - 2) Apply the primer immediately after surface preparation and pretreatment.
 - e. High-Performance Organic Coating Finish AA-C12C42R1x:

- 1) Prepare, pretreat, and apply the high-performance organic coating to exposed metal surfaces in accordance with the coating and resin manufacturer's written instructions.
- f. Appearance of Finished Work:
 - 1) Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples.
 - 2) Noticeable variations in the same piece are not acceptable.
 - 3) Variations in appearance of other components are acceptable if they are within the range of approved Samples, and are assembled or installed to minimize contrast.

2.02 SOURCE QUALITY CONTROL

A. Tests and Inspections:

1. Provide aluminum entrance and storefront systems capable of withstanding the loads and thermal and structural movement requirements indicated without failure, based on testing the manufacturer's standard units in assemblies similar to those indicated for this Contract.
 - a. Failure includes the following conditions:
 - 1) Air infiltration and water penetration exceeding the specified limits.
 - 2) Framing members transferring stresses, including those caused by thermal and structural movement, to glazing units.
2. Product Test Reports:
 - a. Based on evaluation of tests performed by the manufacturer, and witnessed by a qualified independent testing agency, submit test reports that indicate compliance of the entrance and storefront systems with the specified requirements based on comprehensive testing of current systems.
3. Static-Pressure Test:
 - a. Test Procedure:
 - 1) Test entrance and storefront systems in accordance with the requirements specified in ASTM E 330 at test pressures of 150 percent of the inward and outward wind-load design pressures.
 - b. Acceptance Criteria:
 - 1) Entrance and storefront systems that do not evidence material failures, structural distress, failure of operating components to function normally, or permanent deformation of main framing members exceeding 0.2 percent of the clear span are acceptable test results.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Verify dimensions in the field by taking field measurements before fabricating the entrance and storefront systems, and indicate measurements taken on the Shop Drawings.
 - 2. With the Installer present, examine areas to receive entrance and storefront systems for compliance with installation tolerance requirements and other conditions affecting performance.
- B. Pre-Installation Testing:
 - 1. Sealant Compatibility and Adhesion:
 - a. Submit sealant compatibility and adhesion test reports from the sealant manufacturers indicating that the materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with the sealants.
 - 1) Include the joint sealant manufacturers' written interpretation of the test results relative to the sealant performance, and recommendations for primers and substrate preparation needed to obtain adhesion.
- C. Evaluation and Assessment:
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Comply with the manufacturer's written instructions for installing entrance and storefront systems.
 - 1. Submit the manufacturer's instructions for installing entrance and storefront systems to the Program/Project Manager for information.
- B. Do not install damaged components.
- C. Install entrances plumb and true, in alignment with established lines and grades, and without warp or rack.
 - 1. Install framing components plumb and true, in alignment with established lines and grades, and without warping or racking framing members.
- D. Joints:
 - 1. Fit frame joints to produce hairline joints free of burrs and distortion.
 - 2. Rigidly secure non-movement joints.

3. Seal joints so they are watertight.
 - a. Apply sealant in accordance with the requirements specified in Section 07920, Joint Sealants.
 - b. Unless otherwise indicated in the Contract Documents, set continuous sill members and flashing in a full sealant bed to provide weather-tight construction.
 - c. Unless otherwise indicated in the Contract Documents, install perimeter sealant.
- E. Install components to drain water passing joints, condensation, and moisture occurring or migrating within the system to the exterior.
- F. Unless otherwise indicated in the Contract Documents, install glazing in accordance with the requirements specified in Section 08800, Glazing.
- G. Install surface-mounted hardware according to the manufacturer's written instructions using concealed fasteners to greatest extent possible.
 1. Lubricate operating hardware and other moving parts according to the hardware manufacturers' written instructions.
- H. Tolerances:
 1. Erection Tolerances:
 - a. Install entrance and storefront systems in accordance with the following maximum tolerances:
 - 1) Variation from Plane:
 - a) Limit variation from the plane or location shown to 1/8 inch in 12 feet (3mm in 3.7m), and 1/4 inch (6mm) over the total length.
 - 2) Alignment:
 - a) Where surfaces abut in line, limit the offset from true alignment to 1/16 inch (1.5mm).
 - b) Where surfaces meet at corners, limit the offset from true alignment to 1/32 inch (0.8mm).
 - 3) Diagonal Measurements:
 - a) Limit the difference between diagonal measurements to 1/8 inch (3mm).

3.03 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 1. Water Spray Test:
 - a. Test Procedure:

- 1) After the test areas indicated on the Contract Drawings have been installed, test the entrance/storefront system for water penetration in accordance with the requirements specified in AAMA 511.
- b. Acceptance Criteria:
 - 1) Entrance/storefront systems complying with the water penetration performance requirements, and the leakage criteria of AAMA 511 are acceptable.
- B. Non-Conforming Work
 1. Repair, or remove and replace, Work that does not meet the specified requirements, or that is damaged by testing.
 - a. Replace nonconforming work to conform to the specified requirements.

3.04 ADJUSTING

- A. Adjust doors and hardware to provide a tight fit at contact points and at weather stripping, smooth operation, and weather-tight closure.

3.05 CLEANING

- A. Remove excess sealant and glazing compounds, and dirt, from surfaces.

3.06 PROTECTION

- A. Provide final protection and maintain conditions, in a manner acceptable to the manufacturer and the installer, that ensure entrance and storefront systems are without damage or deterioration at the time of Substantial Completion.

SECTION 08415

ALUMINUM ENTRANCES AND STOREFRONTS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for aluminum exterior entrance systems.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01780 - Closeout Submittals.
 - 3. Section 07920 - Joint Sealants.
 - 4. Section 08705 – Finish Hardware
 - 5. Section 08800 – Glazing.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ADA: Americans with Disabilities Act.
 - 2. ADAAG: Americans with Disabilities Act Accessibility Guidelines.
 - 3. ANSI: American National Standards Institute.
 - 4. CRF: Condensation resistance factor.
 - 5. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public’s health, safety, and welfare.
- C. Reference Standards:
 - 1. Aluminum Association (AA):
 - a. DAF-45 – Designation System for Aluminum Finishes.
 - 2. American Architectural Manufacturer’s Association (AAMA):

- a. AAMA 511 - Voluntary Guideline for Forensic Water Leakage Testing of Fenestration Production.
- b. AAMA 701/702 - Voluntary Specifications for Pile Weatherstripping and Replaceable Fenestration Weatherseals.
- c. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections.
- d. AAMA 2605 - Voluntary Specifications, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels.
3. American Society of Civil Engineers (ASCE)/Structural Engineering Institute (SEI):
 - a. ASCE/SEI 7 - Minimum Design Loads for Buildings and Other Structures.
4. ASTM International (ASTM):
 - a. ASTM A 36/A 36M - Standard Specification for Carbon Structural Steel.
 - b. ASTM A 123/A 123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
 - c. ASTM A 153/A 153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
 - d. ASTM A 1008/A 1008M – Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Allow, High-Strength Low-Allow with Improved Formability, Solution Hardened, and Bake Hardenable.
 - e. ASTM A 1011/A 1011M – Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.
 - f. ASTM B 209 – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
 - g. ASTM B 209M – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate [Metric].
 - h. ASTM B 211 - Standard Specification for Aluminum and Aluminum-Alloy Bar, Rod, and Wire.
 - i. ASTM B 211M - Standard Specification for Aluminum and Aluminum-Alloy Bar, Rod, and Wire [Metric].
 - j. ASTM B 221 – Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
 - k. ASTM B 221M – Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes [Metric].

- l. ASTM B 429/B 429M - Standard Specification for Aluminum-Alloy Extruded Structural Pipe and Tube.
 - m. ASTM D 2000 - Standard Classification System for Rubber Products in Automotive Applications.
 - n. ASTM D 2287 – Standard Specification for Nonrigid Vinyl Chloride Polymer and Copolymer Molding and Extrusion Compounds.
 - o. ASTM E 283 – Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.
 - p. ASTM E 330 – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.
 - q. ASTM E 331 – Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.
 - r. ASTM E 699 - Standard Practice for Evaluation of Agencies Involved in Testing, Quality Assurance, and Evaluating of Building Components.
- 5. American Welding Society (AWS):
 - a. AWS A5.10/A5.10M – Specification for Bare Aluminum and Aluminum-Alloy Welding Electrodes and Rods.
 - b. AWS D1.2/D1.2M - Structural Welding Code-Aluminum.
- 6. Builders Hardware Manufacturers Association (BHMA):
 - a. ANSI/BHMA A156.1 –Butts and Hinges.
 - b. ANSI/BHMA A156.4 –Door Controls – Closers.
 - c. ANSI/BHMA A156.5 – Auxiliary Locks and Associated Products.
 - d. ANSI/BHMA A156.16 –Auxiliary Hardware.
- 7. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 8. Glass Association of North America (GANA):
 - a. GANA Glazing Manual.
- 9. National Association of Architectural Metal Manufacturers (NAAMM):
 - a. Architectural Metal Products Division (AMP):
 - 1) NAAMM AMP 500 – Metal Finishes Manual for Architectural and Metal Products.
- 10. South Coast Air Quality Management District (SCAQMD):
 - a. SCAQMD Rule #1168 – Adhesive and Sealant Applications.
- 11. Underwriter’s Laboratories, Inc. (UL):
 - a. UL 305 - Standard for Panic Hardware.
- 12. United States Government:

- a. Americans with Disabilities Act Accessibility Guidelines (ADAAG) for Buildings and Facilities [Federal Register Volume 56 Number 144 (1991)], <http://www.access-board.gov/adaag/html/adaag.htm>.
- b. Department of Justice:
 - 1) 28 CFR 36 – Nondiscrimination on the Basis of Disability by Public Accommodations and in Commercial Facilities.
- c. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Scheduling:
 - 1. Coordinate the entrance and storefront system fabrication schedule with construction progress to avoid delaying the work.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Exterior aluminum entrances.
 - 2) Hardware.
 - b. Shop Drawings:
 - 1) Entrance systems and storefront systems.
 - c. Samples:
 - 1) Color charts.
 - 2) Framing intersection Samples.
 - d. Certificates:
 - 1) Installer Certificates.
 - e. Qualification Statements:
 - 1) Aluminum entrance and storefront installer's qualifications.
 - 2) Entrance and Storefront Testing Agency's qualifications.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Product Test Reports.
 - 2) Sealant compatibility and adhesion test reports.

- b. Manufacturer's Instructions:
 - 1) Manufacturer's instructions for protecting and handling entrance and storefront systems.
 - 2) Manufacturer's instructions for installing entrance and storefront systems.
 - c. Sustainable Design Submittals:
 - 1) ENVISION Credit RA 1.3 - Use Recycled Materials - Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - 2) ENVISION Credit RA 1.4 – Use Regional Materials - Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).
- C. Closeout Submittals:
- 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Aluminum Entrance and Storefront Warranty.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
- 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
 - 2. Testing and Inspection Agency:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.
- B. Qualifications:
- 1. Installer's Qualifications:

- a. Engage an experienced installer who has specialized in installing entrance and storefront systems similar to those required for this Contract, and who is acceptable to manufacturer, to assume engineering responsibility for and to perform the Work of this Section.
 - 1) Engineering Responsibility:
 - a) Engineering responsibility includes preparing information for the entrance and storefront systems, including Shop Drawings, based on testing and engineering analysis of the manufacturer's standard units in assemblies similar to those indicated for this Contract.
 - b. Submit the aluminum entrance and storefront installer's qualifications to the Program/Project Manager for approval.
2. Entrance and Storefront Testing Agency's Qualifications:
 - a. To perform the entrance and storefront testing of the Work this Section, employ the services of one or more independent certified testing laboratories having the following qualifications:
 - 1) Each testing laboratory must be independent, certified, and comply with the quality standards for testing laboratories of the nationally recognized associations and agencies that promulgate the test standards specified and with the basic requirements of ASTM E 699.
 - a) Each testing laboratory must have the experience and capability to satisfactorily perform the reviews, inspections, and testing required of them by this Contract, including but not limited to, inspecting, sampling, and testing proposed materials and systems as required by the Program/Project Manager for compliance with the Contract Documents.
 - b) The testing laboratory must be approved by the Program/Project Manager, and must also be accepted by the local jurisdictions responsible for building inspection.
 - b. Dismissal and replacement of any of these independent certified testing laboratories by the Construction Manager at Risk requires written notice to and the approval from the Program/Project Manager.
 - c. Submit the qualifications and certifications of the proposed testing laboratories to the Program/Project Manager for approval.
- C. Certifications:
 1. Installer Certificates:
 - a. Submit Installer Certificates, signed by the aluminum entrance and storefront manufacturer, certifying that the installer is acceptable to the manufacturer for installing their products.

D. Sustainability Standards Certifications:

1. ENVISION Adhesives and Sealants Submittal:

- a. For the sealants and sealant primers used within the aluminum entrances and storefronts, submit Product Data, including a printed statement of volatile organic compound (VOC) content and chemical components, certifying that these products qualify as Low-Emitting Materials: Adhesives & Sealants.
 - 1) Certify compliance with SCAQMD Rule #1168.

E. Site Samples:

1. Color Charts:

- a. For units with factory-applied color finishes, submit the manufacturer's color charts showing the full range of colors available to the Program/Project Manager for approval.

2. Framing Intersection Samples:

- a. For each vertical-to-horizontal framing intersection of the systems, submit a cutaway Sample made from minimum 6 inch (150mm) lengths of the full-size components showing details of the following:
 - 1) Joinery.
 - 2) Anchorage.
 - 3) Expansion provisions.
 - 4) Glazing.
 - 5) Flashing and drainage.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Storage and Handling Requirements:

- 1. Comply with the manufacturer's written instructions for protecting and handling entrance and storefront systems.
 - a. Submit the manufacturer's instructions for protecting and handling entrance and storefront systems to the Program/Project Manager for information.

1.07 WARRANTY

A. Extended Correction Period:

- 1. Warrant the entrance and storefront materials and workmanship against failures including, but not limited to, the following within the 5 year period after the Date of Substantial Completion:
 - a. Water-tightness of the assembly.
- 2. Submit the written Aluminum Entrance and Storefront Warranty on the manufacturer's standard form in which the manufacturer agrees to repair or replace components of manufactured aluminum entrances and

storefronts that fail in materials or workmanship within specified warranty period to the Program/Project Manager for approval.

- a. Have the manufacturer's standard form signed by the Construction Manager at Risk and manufacturer.

PART 2 PRODUCTS

2.01 SYSTEMS

A. Manufacturers:

1. Manufacturer List:

- a. Oldcastle Glass®, www.vistawall.com.
- b. U.S. Aluminum, www.usalum.com.
- c. Kawneer Company, Inc., www.kawneer.com.
- d. Southwest Aluminum Systems.
- e. Approved equal.

2. Substitution Limitations:

- a. The Contract Drawings indicate the size, profiles, and dimensional requirements of the entrance and storefront systems, and are based on the specific systems indicated.
 - 1) Except with the Program/Project Manager's approval, do not provide products modifying the intended aesthetic effect indicated in the Contract Documents as judged solely by the Program/Project Manager, and then only to the extent needed to comply with performance requirements.
 - 2) Where modifications to the intended aesthetic effect are proposed, submit comprehensive explanatory data to Program/Project Manager for review and approval.
- b. Subject to compliance with the requirements indicated in the Contract Documents, other manufacturers' systems with equal performance characteristics may be considered.

3. Product Options:

a. Source Limitations:

- 1) Obtain each type of entrance and storefront system through one source and from a single manufacturer.

B. Sustainability Requirements:

1. ENVISION Credits:

- a. Volatile Organic Compounds (VOC) Content of liquid-type auxiliary materials:

- 1) Provide liquid-type auxiliary materials for the polyvinyl-chloride (PVC) roofing system having volatile organic compound content falling within the following limits when calculated according to

Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, that comply with the volatile organic compounds (VOC) limits of the Authorities Having Jurisdiction, and that comply with SCAQMD Rule #1168.

- 2) Provide materials not exceeding the following volatile organic compound (VOC) limits for ENVISION:
 - a) For structural glazing adhesives: Not more than 100 grams per Liter less water.

C. Performance:

1. Wind Loads:
 - a. Provide entrance and storefront systems, including anchorage, capable of withstanding the wind-load design pressures calculated according to requirements of the Authorities Having Jurisdiction or section 6.4.2, Analytical Procedure, in ASCE/SEI 7, whichever are more stringent.
2. Air Infiltration:
 - a. Provide entrance and storefront systems having permanent resistance to air leakage through fixed glazing and frame areas of not more than 0.06 cubic feet per minute per square foot (0.3L/s/m²) of fixed wall area when tested according to ASTM E 283 at a static-air-pressure difference of 1.57 pounds force per square foot (75.2Pa).
3. Water Penetration:
 - a. Provide entrance and storefront systems that do not evidence water leakage through fixed glazing and frame areas when tested according to ASTM E 331 at minimum differential pressure of 20 percent of the inward-acting wind-load design pressure as defined by ASCE/SEI 7, but not less than 6.24 pounds force per square foot (299Pa).
 - 1) Water leakage is defined as uncontrolled water infiltrating systems or appearing on the systems' normally exposed interior surfaces from sources other than condensation.
 - 2) Water controlled by flashing and gutters that is drained back to the exterior and cannot damage adjacent materials or finishes is not water leakage.
4. Thermal Movements
 - a. Provide entrance and storefront systems, including anchorage, that accommodate thermal movements of the systems and supporting elements resulting from the following maximum changes (ranges) in ambient and surface temperatures without buckling, damaging stresses on glazing, failure of joint sealants, damaging loads on fasteners, failure of doors or other operating units to function properly, and other detrimental effects:

- 1) Ambient Temperature Change (Range): 120 degrees Fahrenheit (67 degrees Celsius).
- 2) Material Surface Temperature Change (Range): 180 degrees Fahrenheit (100 degrees Celsius).
5. Condensation Resistance:
 - a. Provide storefront systems having a condensation resistance factor (CRF) of not less than 45 when tested according to AAMA 1503.

D. Design Criteria:

1. Dimensional Tolerances
 - a. Provide entrance and storefront systems that accommodate the dimensional tolerances of the building frame and other adjacent construction.
2. Structural-Support Movement:
 - a. Provide entrance and storefront systems that accommodate structural movements including, but not limited to, sway and deflection.
3. Deflection of Framing Members:
 - a. Unless otherwise indicated, allowable deflection of framing members in a direction normal to the wall plane is limited to $L/175$ of the clear span, or 3/4 inch (19 mm), whichever is smaller.
4. Dead Loads:
 - a. Provide entrance- and storefront-system members that do not deflect an amount which will reduce the glazing bite below 75 percent of the design dimension when carrying the full dead load.
 - 1) Provide a minimum 1/8-inch (3.18mm) clearance between the members and the top of the glazing or other fixed part immediately below.
5. Live Loads:
 - a. Provide entrance and storefront systems, including anchorage, that accommodate the supporting structures' deflection from the uniformly distributed and concentrated live loads indicated without failure of materials or permanent deformation.
6. Glazing:
 - a. Physically and thermally isolate glazing from framing members.
7. Thermally Broken Construction:
 - a. Provide systems that isolate aluminum exposed to the exterior from aluminum exposed to the interior with a material of low thermal conductance.
8. Drainage:
 - a. Design system components so water passing joints, condensation, and moisture occurring or migrating within the system will drain to the exterior.

9. Product Data:
 - a. Submit Product Data for the exterior aluminum entrances, and hardware proposed for the Work of this Section to the Program/Project Manager for approval.
10. Shop Drawings:
 - a. For each the entrance systems and storefront systems provided, submit Shop Drawings to the Program/Project Manager for approval.
 - 1) Show fabrication and installation details, including plans, elevations, sections, details of the components, provisions for expansion and contraction, and attachments to other work.
 - 2) For entrance systems, include the hardware schedule; and indicate operating hardware types, quantities, and locations.

E. Materials:

1. Aluminum:
 - a. Provide the aluminum alloy and temper recommended by the manufacturer for the type of use and finish indicated, and complying with the requirements of the following standards:
 - 1) Sheet and Plate: ASTM B 209 (ASTM B 209M).
 - 2) Extruded Bars, Rods, Shapes, and Tubes: ASTM B 221 (ASTM B 221M).
 - 3) Extruded Structural Pipe and Tubes: ASTM B 429/B 429M.
 - 4) Bars, Rods, and Wire: ASTM B 211 (ASTM B 211M).
 - 5) Welding Rods and Bare Electrodes: AWS A5.10/A5.10M.
2. Steel Reinforcement:
 - a. For structural shapes, plates, and bars, provide materials complying with the requirements specified in ASTM A 36/A 36M.
 - b. For cold-rolled sheet and strip; provide materials complying with the requirements specified in ASTM A 1008/A 1008M.
 - c. For hot-rolled sheet and strip; provide materials complying with the requirements specified in ASTM A 1011/A 1011M.
3. Glazing:
 - a. Provide glazing complying with the requirements specified in Section 08800, Glazing.
4. Glazing Gaskets:
 - a. Provide the manufacturer's standard pressure-glazing system of black, resilient glazing gaskets, setting blocks, and shims or spacers, fabricated from an elastomeric of type and in hardness recommended by system and gasket manufacturer to comply with system performance requirements.

- b. Provide gasket assemblies that have corners sealed with sealant recommended by the gasket manufacturer.

F. System Components:

1. Doors:

- a. Provide the manufacturer's standard 1-3/4 inch (44.5mm) thick glazed doors with extruded tubular rail and stile members a minimum of 0.125 inch (3.2mm) thick.
 - 1) Mechanically fasten the corners with reinforcing brackets that are deep penetration and fillet welded, or that incorporate concealed tie-rods.
- b. Glazing Stops and Gaskets:
 - 1) Provide the manufacturer's standard snap-on extruded-aluminum glazing stops and preformed gaskets.
- c. Stile Design:
 - 1) Provide a medium stile having a 3-1/2-inch (88.9mm) nominal width.

2. Brackets and Reinforcements:

- a. Provide the manufacturer's standard brackets and reinforcements that are compatible with adjacent materials.
- b. Provide non-staining, nonferrous shims for aligning system components.

3. Fasteners and Accessories:

- a. Provide the manufacturer's standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials.
- b. Reinforce members as required to retain fastener threads.
- c. Do not use exposed fasteners, except for hardware applications.
 - 1) For hardware applications, use countersunk Phillips flat-head machine screws finished to match the framing members or hardware being fastened unless otherwise indicated in the Contract Documents.

4. Concrete and Masonry Inserts:

- a. Provide hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with the requirements specified in either ASTM A 123/A 123M or ASTM A 153/A 153M.

5. Concealed Flashing:

- a. Provide the manufacturer's standard corrosion-resistant, non-staining, non-bleeding flashing, compatible with adjacent materials, and of a type recommended by manufacturer.

6. Weather Stripping:

- a. Provide the manufacturer's standard replaceable weather stripping as follows:
 - 1) For compression weather stripping, provide molded neoprene complying with the requirements specified in ASTM D 2000, or molded PVC complying with the requirements specified in ASTM D 2287.
 - 2) For sliding weather stripping, provide wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing complying with the requirements specified in AAMA 701/702.
- G. System Hardware:
 1. Provide heavy-duty hardware units of the sizes, number, and type recommended by the manufacturer for the entrances indicated in the Contract Documents.
 - a. Unless otherwise indicated, finish exposed parts to match the door finish.
 2. Ball-Bearing Butts:
 - a. Provide 5-knuckle, Grade 1 ball-bearing butts complying with the requirements specified in ANSI/BHMA A156.1.
 - 1) Provide ball-bearing butts sized 4-1/2 inches by 4 inches (101.6mm by 114.3mm).
 - 2) Provide non-removable pins at hinges exposed to the door outside, and provide nonferrous hinges for applications exposed to weather.
 - 3) For doors up to 36 inches (914mm) wide and 80 inches (2032mm) tall, provide 3 hinges at each leaf.
 - 4) For doors taller than 80 inches (2032mm), provide 4 hinges at each leaf.
 3. Closers:
 - a. Provide closers complying with the manufacturer's recommendations for the closer size, depending on the door size, exposure to weather, and anticipated frequency of use.
 - 1) Closing Cycle:
 - a) Provide door closers having closing cycles complying with the requirements of the Authorities Having Jurisdiction or the Americans with Disabilities Act Accessibility Guidelines (ADAAG) for Buildings and Facilities, whichever are more stringent.
 - 2) Concealed Overhead Closers:
 - a) Provide Grade 2 concealed overhead closers complying with the requirements specified in ANSI/BHMA A156.4, and the following:

- (1) Type:
 - (a) Provide the single acting, independently hung type closer, with a concealed arm and track.
 - (2) Hold Open:
 - (a) Provide a closer that automatically holds the door open at the angle selected by the Program/Project Manager from manufacturer's standard options.
 - (3) Back Check:
 - (a) Provide an adjustable back check mechanism.
 - (4) Positive Dead Stop:
 - (a) Provide a positive dead stop coordinated with the hold-open angle, if any, or at an angle selected by the Program/Project Manager from manufacturer's standard options.
4. Door Stops:
 - a. Provide Grade 1 wall-mounted door stops with an integral rubber bumper complying with the requirements specified in ANSI/BHMA A156.16, as appropriate for the door location indicated in the Contract Documents.
5. Cylinders:
 - a. Have the finish hardware Supplier provide Sargent cylinders and cores as specified under Section 08705, Finish Hardware.
 - b. On the interior side of the door, provide a panic release as specified under Section 08705, Finish Hardware.
6. Rim Cylinders:
 - a. On the exterior side of the door, provide the manufacturer's standard Grade 1 rim cylinders complying with the requirements specified in ANSI/BHMA A156.5 for installation in the exit devices.
7. Radius Face Strikes:
 - a. Provide the manufacturer's standard stainless-steel radiused face strike with a steel mounting plate and black-plastic dustbox.
8. Rim-Mounted Exit Devices:
 - a. Provide rim-type exit devices complying with the requirements specified in UL 305, and having one-point latching at the door-lock stile released by a full-width crash bar; or when locked down (dogged), by a lock cylinder or retracting screws beneath the housing.
9. Pull Handles:
 - a. Provide pull handles as selected by the Program/Project Manager from the manufacturer's full range of pull handles and plates.
10. Push Bars:
 - a. Provide push bars as selected by the Program/Project Manager from the manufacturer's full range of full-door-width, single-bar push bars.

- b. Provide a push plate affixed to push bar.
- 11. Thresholds:
 - a. At exterior doors, provide the manufacturer's standard aluminum threshold with a mill finish, and having cutouts coordinated for the operating hardware, anchors and jamb clips not more than 1/2 inch (12.7mm) high, and beveled edges providing a floor level change with a slope of not more than 1:2.
- 12. Weather Sweeps:
 - a. Provide the manufacturer's standard weather sweeps suitable for installation on exterior door bottoms, and having concealed fasteners on mounting strips.

H. Fabrication:

- 1. Shop Fabrication:
 - a. Fabricate components that, when assembled, will have accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion.
 - 1) Fabricate the components for head- and sill-receptor frame construction, with shear-block construction at the intermediate horizontal components.
 - b. Prepare components to receive concealed fasteners, anchor, and connection devices.
 - c. Forming:
 - 1) Form shapes with sharp profiles, straight and free of defects or deformations, prior to finishing the components.
 - d. Welding:
 - 1) Weld components in accordance with the applicable provisions of AWS D1.2/D1.2M.
 - 2) Perform welding operations prior to finishing the components to the greatest extent possible.
 - 3) Perform welding in concealed locations to greatest extent possible to minimize distortion or discoloration of the finish.
 - 4) Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
 - e. Entrances:
 - 1) Fabricate door framing of the profiles indicated in the Contract Drawings.
 - a) Reinforce the door framing as required to support the imposed loads.
 - b) Factory-assemble the door and frame units, and factory-install hardware to greatest extent possible.

- c) Reinforce door and frame units as required for installing the hardware indicated in the Contract Documents.
 - d) Cut, drill, and tap for factory-installed hardware before finishing the components.
 - 2) Exterior Doors:
 - a) Provide compression weather stripping at fixed stops.
 - b) At other locations, provide sliding weather stripping retained in adjustable strip mortised into the door edge.
 - 3) Interior Doors:
 - a) Prevent metal to metal contact at stops by providing silencers complying with the requirements specified in ANSI/BHMA A156.16.
 - (1) Provide 3 silencers on the strike jamb of single-door frames, and 2 silencers on the head of double-door frames.
 - f. After fabricating components, clearly mark each component to identify its location in the Work according to the Shop Drawings.
2. Fabrication Tolerances:
- a. Glazing Channels:
 - 1) Provide the minimum clearances according to GANA Glazing Manual for the thickness and type of glass indicated.
- I. Finishes:
- 1. Primer Materials:
 - a. Provide the manufacturer's standard corrosion-resistant primer.
 - 2. Finish Materials:
 - a. Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes in DAF-45.
 - b. High-Performance Organic Coating Finish AA-C12C42R1x:
 - 1) First Chemical Finish: Clean the substrate using inhibited chemicals.
 - 2) Second Chemical Finish: Apply an acid chromate-fluoride-phosphate conversion coating.
 - 3) Organic Coating: Apply the manufacturer's standard 2-coat, thermocured system composed of a specially formulated inhibitive primer and a fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with the requirements specified in AAMA 2605.
 - 4) Color and Gloss: Match the Program/Project Manager's Sample selection.
 - 3. Shop Finishing Methods:

- a. Comply with NAAMM AMP 500 for recommendations relative to applying and designating finishes.
- b. Surface Preparation:
 - 1) Perform the manufacturer's standard cleaning operations to remove dirt, oil, grease, or other contaminants that could impair the paint bond.
 - 2) Remove mill scale and rust, if present, from the uncoated steel.
- c. Metal Protection:
 - 1) Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying a sealant or tape recommended by the manufacturer for this purpose.
 - 2) Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- d. Priming:
 - 1) Comply with NAAMM AMP 500 for recommendations relative to applying primer.
 - 2) Apply the primer immediately after surface preparation and pretreatment.
- e. High-Performance Organic Coating Finish AA-C12C42R1x:
 - 1) Prepare, pretreat, and apply the high-performance organic coating to exposed metal surfaces in accordance with the coating and resin manufacturer's written instructions.
- f. Appearance of Finished Work:
 - 1) Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples.
 - 2) Noticeable variations in the same piece are not acceptable.
 - 3) Variations in appearance of other components are acceptable if they are within the range of approved Samples, and are assembled or installed to minimize contrast.

2.02 SOURCE QUALITY CONTROL

- A. Tests and Inspections:
 - 1. Provide aluminum entrance and storefront systems capable of withstanding the loads and thermal and structural movement requirements indicated without failure, based on testing the manufacturer's standard units in assemblies similar to those indicated for this Contract.
 - a. Failure includes the following conditions:
 - 1) Air infiltration and water penetration exceeding the specified limits.

- 2) Framing members transferring stresses, including those caused by thermal and structural movement, to glazing units.
2. Product Test Reports:
 - a. Based on evaluation of tests performed by the manufacturer, and witnessed by a qualified independent testing agency, submit test reports that indicate compliance of the entrance and storefront systems with the specified requirements based on comprehensive testing of current systems.
3. Static-Pressure Test:
 - a. Test Procedure:
 - 1) Test entrance and storefront systems in accordance with the requirements specified in ASTM E 330 at test pressures of 150 percent of the inward and outward wind-load design pressures.
 - b. Acceptance Criteria:
 - 1) Entrance and storefront systems that do not evidence material failures, structural distress, failure of operating components to function normally, or permanent deformation of main framing members exceeding 0.2 percent of the clear span are acceptable test results.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Verify dimensions in the field by taking field measurements before fabricating the entrance and storefront systems, and indicate measurements taken on the Shop Drawings.
 2. With the Installer present, examine areas to receive entrance and storefront systems for compliance with installation tolerance requirements and other conditions affecting performance.
- B. Pre-Installation Testing:
 1. Sealant Compatibility and Adhesion:
 - a. Submit sealant compatibility and adhesion test reports from the sealant manufacturers indicating that the materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with the sealants.
 - 1) Include the joint sealant manufacturers' written interpretation of the test results relative to the sealant performance, and recommendations for primers and substrate preparation needed to obtain adhesion.

C. Evaluation and Assessment:

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Comply with the manufacturer's written instructions for installing entrance and storefront systems.

1. Submit the manufacturer's instructions for installing entrance and storefront systems to the Program/Project Manager for information.

B. Do not install damaged components.

C. Install entrances plumb and true, in alignment with established lines and grades, and without warp or rack.

1. Install framing components plumb and true, in alignment with established lines and grades, and without warping or racking framing members.

D. Joints:

1. Fit frame joints to produce hairline joints free of burrs and distortion.
2. Rigidly secure non-movement joints.
3. Seal joints so they are watertight.
 - a. Apply sealant in accordance with the requirements specified in Section 07920, Joint Sealants.
 - b. Unless otherwise indicated in the Contract Documents, set continuous sill members and flashing in a full sealant bed to provide weather-tight construction.
 - c. Unless otherwise indicated in the Contract Documents, install perimeter sealant.

E. Install components to drain water passing joints, condensation, and moisture occurring or migrating within the system to the exterior.

F. Unless otherwise indicated in the Contract Documents, install glazing in accordance with the requirements specified in Section 08800, Glazing.

G. Install surface-mounted hardware according to the manufacturer's written instructions using concealed fasteners to greatest extent possible.

1. Lubricate operating hardware and other moving parts according to the hardware manufacturers' written instructions.

H. Tolerances:

1. Erection Tolerances:

- a. Install entrance and storefront systems in accordance with the following maximum tolerances:
 - 1) Variation from Plane:
 - a) Limit variation from the plane or location shown to 1/8 inch in 12 feet (3mm in 3.7m), and 1/4 inch (6mm) over the total length.
 - 2) Alignment:
 - a) Where surfaces abut in line, limit the offset from true alignment to 1/16 inch (1.5mm).
 - b) Where surfaces meet at corners, limit the offset from true alignment to 1/32 inch (0.8mm).
 - 3) Diagonal Measurements:
 - a) Limit the difference between diagonal measurements to 1/8 inch (3mm).

3.03 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. Water Spray Test:
 - a. Test Procedure:
 - 1) After the test areas indicated on the Contract Drawings have been installed, test the entrance/storefront system for water penetration in accordance with the requirements specified in AAMA 511.
 - b. Acceptance Criteria:
 - 1) Entrance/storefront systems complying with the water penetration performance requirements, and the leakage criteria of AAMA 511 are acceptable.
- B. Non-Conforming Work
 - 1. Repair, or remove and replace, Work that does not meet the specified requirements, or that is damaged by testing.
 - a. Replace nonconforming work to conform to the specified requirements.

3.04 ADJUSTING

- A. Adjust doors and hardware to provide a tight fit at contact points and at weather stripping, smooth operation, and weather-tight closure.

3.05 CLEANING

- A. Remove excess sealant and glazing compounds, and dirt, from surfaces.

3.06 PROTECTION

- A. Provide final protection and maintain conditions, in a manner acceptable to the manufacturer and the installer, that ensure entrance and storefront systems are without damage or deterioration at the time of Substantial Completion.

SECTION 08460

AUTOMATIC ENTRANCE DOORS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for exterior and interior, bi-parting and telescoping, sliding automatic entrances.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures
 - 2. Section 01780 - Closeout Submittals
 - 3. Section 07920 - Joint Sealants
 - 4. Section 08411 - Aluminum-Framed Entrances and Storefronts
 - 5. Section 08710 - Door Hardware
 - 6. Section 08800 - Glazing
 - 7. Division 16 Sections for electrical connections including conduit and wiring for power to sliding automatic entrances.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AC: Alternating electric current.
 - 2. DC: Direct electrical current.
 - 3. AAADM: American Association of Automatic Door Manufacturers
- B. Definitions:
 - 1. Activation Device: A device that, when actuated, sends an electrical signal to the door operator to open the door.
 - 2. Safety Device: A device that prevents a door from opening or closing, as appropriate.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Templates:

- a. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing automatic entrances to comply with indicated requirements.
2. Electrical System Roughing-in:
 - a. Coordinate layout and installation of automatic entrance door assemblies with connections to power supplies.

1.04 SUBMITTALS

- A. Action Submittals:
 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Shop Drawings:
 - 1) Include plans, elevations, sections, details, hardware mounting heights, and attachments to other work.
 - b. Samples:
 - 1) Provide Color Samples for selection of factory-applied color finishes.
- B. Closeout Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Provide Owner's Manual.
 - b. Warranty Documentation:
 - 1) Provide Warranty Documentation.

1.05 QUALITY ASSURANCE

- A. Qualifications:
 1. Installer Qualifications:
 - a. Manufacturer's authorized representative who is trained for installation and maintenance of units required for this Project.
 2. Manufacturer Qualifications:
 - a. A qualified manufacturer with a manufacturing facility certified under ISO 9001 and with company certificate issued by AAADM.
- B. Certifications:
 1. Automatic sliding door systems shall be certified by the manufacturer to meet performance design criteria in accordance with the following standards:
 - a. ANSI/BHMA A156.10.
 - b. NFPA 101.
 - c. Underwriter's Laboratories 325 (UL) listed.
 - d. IBC.

2. Electrical Components, Devices, and Accessories shall be listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
3. Emergency-Exit Door Requirements shall comply with requirements of authorities having jurisdiction for automatic entrances serving as a required means of egress.

C. Site Samples:

a. Samples:

- 1) Provide Color Samples for selection of factory-applied color finishes.

1.06 DELIVERY, STORAGE, AND HANDLING

1.07 WARRANTY

A. Manufacturer Warranty:

1. Automatic Entrances shall be free of defects in material and workmanship for a period of one (1) year from the date of substantial completion.
2. During the warranty period the Owner shall engage a factory-trained technician to perform service and affect repairs. A safety inspection shall be performed after each adjustment or repair and a completed inspection form shall be submitted to the Owner.
3. During the warranty period all warranty work, including but not limited to emergency service, shall be performed during normal working hours.

PART 2 PRODUCTS

2.01 MATERIALS

A. Manufacturers:

1. Manufacturer List:

a. Automatic Entrances:

- 1) Stanley Access Technologies; Dura-Glide™ 3000 Series sliding automatic entrances, www.stanleyaccesstechnologies.com.
- 2) Stanley Access Technologies; Dura-Glide™ 5300 Series 3-panel Telescopic Recessed sliding automatic entrances, with access control, www.stanleyaccesstechnologies.com.
- 3) Approved Equal.

2. Substitution Limitations:

- a. Source Limitations: Obtain automatic entrance door assemblies through one source from a single manufacturer.

3. Product Options:

- a. The Contract Drawings indicate sizes, profiles, and dimensional requirements of automatic entrance door assemblies and are based on the specific system indicated.

B. Design Criteria:

1. General:
 - a. Provide automatic entrance door assemblies capable of withstanding structural loads and thermal movements based on testing manufacturer's standard units in assemblies similar to those indicated for this Project.
2. Thermal Movements:
 - a. Provide automatic entrances that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1) Temperature Change (Range): 120 degrees F (67 degrees C), ambient; 180 degrees F (100 degrees C), material surfaces.
3. Operating Range:
 - a. Minus 30 degrees F (Minus 34 degrees C) to 130 degrees F (54 degrees C).
4. Opening-Force Requirements for Egress Doors:
 - a. Not more than 50 lbf (222 N) required to manually set door in motion if power fails, and not more than 15 lbf (67 N) required to open door to minimum required width.
5. Closing-Force Requirements:
 - a. Not more than 30 lbf (133 N) required to prevent door from closing.
6. Shop Drawings:
 - 1) Include plans, elevations, sections, details, hardware mounting heights, and attachments to other work.

C. Materials:

1. Automatic Entrance Door Assemblies:
 - a. Provide manufacturer's standard automatic entrance door assemblies including doors, sidelights, framing, headers, carrier assemblies, roller tracks, door operators, activation and safety devices, and accessories required for a complete installation.
 - b. Sliding Automatic Entrances:
 - 1) Configuration: Bi-parting to have Two sliding leaves and two full sidelights. Telescoping Door to have Two sliding leaves and one full sidelight.
 - 2) Traffic Pattern: Two-way.
 - 3) Emergency Breakaway Capability: Sliding leaves.
 - 4) Mounting: Between jambs, or Recessed.
2. Aluminum:
 - a. Alloy and temper recommended by manufacturer for type of use and finish indicated.
 - 1) Headers, stiles, rails, and frames: 6063-T6.

- 2) Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
- 3) Sheet and Plate: ASTM B 209.
3. Components:
 - a. Framing Members:
 - 1) Manufacturer's standard extruded aluminum reinforced as required to support imposed loads.
 - a) Nominal Size: 1 3/4 inch by 6 inch (45 by 150 mm).
 - b) Concealed Fastening: Framing shall incorporate a concealed fastening pocket, and continuous flush insert cover, extending full length of each framing member.
 - 2) Stile and Rail Doors and Sidelights:
 - a) Manufacturer's standard 1 3/4 inch (45 mm) thick glazed doors with extruded-aluminum tubular stile and rail members. Incorporate concealed tie-rods that span full length of top and bottom rails or mechanically fasten corners with reinforcing brackets that are welded.
 - (1) Glazing Stops and Gaskets: Snap-on, extruded-security aluminum stops and preformed gaskets.
 - (2) Stile Design: Medium stile; 2 inch (50 mm) nominal width.
 - (3) Bottom Rail Design: 12 inch (310 mm) nominal height.
 - (4) Muntin Bars: None.
 - 3) Glazing: Provide glazing for sliding automatic entrances as follows:
 - a) Provide safety glass complying with ANSI Z97.1 and 16 CFR 1201 for Category II materials.
 - b) Safety Glass: 1/4 inch (6 mm) clear, fully tempered, in all panels.
 - 4) Headers:
 - a) Fabricated from extruded aluminum and extending full width of automatic entrance door units to conceal door operators, carrier assemblies, and roller tracks. Provide hinged or removable access panels for service and adjustment of door operators and controls. Secure panels to prevent unauthorized access.
 - (1) Mounting: Concealed, with one side of header flush with framing.
 - (2) Capacity: Capable of supporting up to 220 lb (100 kg) per panel, up to four panels, over spans up to 14 feet (4.3 m) without intermediate supports.
 - 5) Carrier Assemblies and Overhead Roller Tracks:
 - a) Manufacturer's standard carrier assembly that allows vertical adjustment of at least 1/8 inch (3 mm); consisting of urethane with precision steel lubricated ball-bearing wheels, operating on a continuous roller track.

- b) Support panels from carrier assembly by 2 inch (51 mm) diameter anti-riser wheels with factory adjusted cantilever and pivot assembly.
 - c) Minimum two ball-bearing roller wheels and two anti-rise rollers for each active leaf.
 - d) Minimum load wheel diameter shall be 2 1/2 inch (64 mm).
 - 6) Thresholds: Manufacturer's standard thresholds as indicated below:
 - a) Continuous standard tapered extrusion double bevel.
 - b) All thresholds to conform to details and requirements for code compliance.
 - 7) Fasteners and Accessories:
 - a) Manufacturer's standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials.
 - 8) Signage: Provide signage in accordance with ANSI/BHMA A156.10.
- 4. Door Operators:
 - a. General:
 - 1) Provide door operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for long-term, operation under normal traffic load for type of occupancy indicated.
 - b. Electromechanical Operators:
 - 1) Self-contained overhead unit powered by a minimum of 1/4 horsepower, permanent-magnet DC motor with gear reduction drive, microprocessor controller; and encoder.
 - a) Operation: Power opening and power closing.
 - b) Features:
 - (1) Adjustable opening and closing speeds.
 - (2) Adjustable back-check and latching.
 - (3) Adjustable braking.
 - (4) Adjustable hold-open time between 0 and 30 seconds.
 - (5) Obstruction recycle.
 - (6) On/Off switch to control electric power to operator.
 - (7) Energy conservation switch that reduces door-opening width.
 - (8) Closed loop speed control with active braking and acceleration.
 - (9) Variable obstruction recycle time delay.
 - (10) Self-adjusting stop position.
 - (11) Self-adjusting closing compression force.
 - (12) Optional Switch to open/Switch to close operation.
 - c) Mounting: Concealed.
 - d) Drive System: Synchronous belt type.

- c. Electrical service to door operators shall be provided under Division 16 Electrical. Minimum service to be 120 Volts AC, 5 amps.
- 5. Electrical Controls:
 - a. Electrical Control System:
 - 1) Electrical control system shall include a microprocessor controller and position encoder. The encoder shall monitor revolutions of the operator shaft and send signals to microprocessor controller to define door position and speed. Systems utilizing external magnets and magnetic switches are not acceptable. A single controller shall be capable of controlling up to two (2) operators per entrance system.
 - b. Life Cycle Data Counter:
 - 1) The electrical control system shall incorporate a non-re-settable counter to track door operation cycles.
 - c. Controller Protection:
 - 1) The microprocessor controller shall incorporate the following features to ensure trouble free operation:
 - a) Automatic Reset Upon Power Up.
 - b) Main Fuse Protection.
 - c) Electronic Surge Protection.
 - d) Internal Power Supply Protection.
 - e) Resettable sensor supply fuse protection.
 - f) Motor Protection, over-current protection.
 - 2) Soft Start/Stop:
 - a) A "soft-start" "soft-stop" motor driving circuit shall be provided for smooth normal opening and recycling.
 - 3) Obstruction Recycle:
 - a) Provide system to recycle the sliding panels when an obstruction is encountered during the closing cycle. If an obstruction is detected, the system shall search for that object on the next closing cycle by reducing door closing speed prior to the previously encountered obstruction location, and will continue to close in check speed until doors are fully closed, at which time the doors will reset to normal speed. If obstruction is encountered again, the door will come to a full stop. The doors shall remain stopped until obstruction is removed and operate signal is given, resetting the door to normal operation.
 - 4) Programmable Controller:
 - a) Microprocessor controller shall be programmable and shall be designed for connection to a local configuration tool. Local configuration tool shall be software driven and shall be utilized via Palm® handheld interface. The following parameters may be adjusted via the configuration tool.

- (1) Operating speeds and forces as required to meet ANSI/BHMA A156.10.
 - (2) Adjustable and variable features as specified in Subparagraph 2.01.C.4.b.1.b.
 - (3) Reduced opening position.
 - (4) Fail Safe/Secure control.
 - (5) Firmware update.
 - (6) Trouble Shooting:
 - (a) I/O Status.
 - (b) Electrical component monitoring including parameter summary.
 - (7) Software for local configuration tool shall be available as a free download from the sliding automatic entrance manufacturer's internet site.
6. Activation and Safety Devices:
 - a. Motion Sensors:
 - 1) Motion sensors shall be mounted on each side of door header to detect pedestrians in the activating zone, and to provide a signal to open doors in accordance with ANSI/BHMA A156.10. Units shall be programmable for bi-directional or uni-directional operation and shall incorporate K-band microwave frequency to detect all motion in both directions.
 - b. Presence Sensors:
 - 1) Presence sensors shall be provided to sense people or objects in the threshold safety zone in accordance with ANSI/BHMA A156.10.
 - 2) Units shall be self-contained, fully adjustable, and shall function accordingly with motion sensors provided.
 - 3) The sensor shall be enabled simultaneously with the door-opening signal and shall emit an elliptical shaped infrared presence zone, centered on the doorway threshold line.
 - 4) Presence sensors shall be capable of selectively retuning to adjust for objects which may enter the safety zone; tuning out, or disregarding, the presence of small nuisance objects and not tuning out large objects regardless of the time the object is present in the safety zone.
 - 5) The door shall close only after all sensors detect a clear surveillance field.
 - c. Photoelectric Beams:
 - 1) In addition to the threshold sensor include a minimum of two (2) doorway holding beams. Photoelectric beams shall be pulsed infrared type, including sender receiver assemblies for recessed mounting.
7. Hardware:
 - a. General:

- 1) Provide units in sizes and types recommended by automatic entrance door and hardware manufacturers for entrances and uses indicated.
- b. Emergency Breakaway Feature:
 - 1) Provide release hardware that allows panel(s) to swing out in direction of egress to full 90 degrees from any position in sliding mode. Maximum force to open panel shall be 50 lbf (222 N) according to ANSI/BHMA A156.10. Interrupt powered operation of panel operator while in breakaway mode.
 - a) Emergency breakaway feature shall include at least one adjustable detent device mounted in the top of each breakaway panel to control panel breakaway force.
 - b) Limit Arms: Limit arms shall be provided to control swing of non-sliding panels on break-out; swing shall not exceed 90 degrees.
- c. Deadlocks:
 - 1) Manufacturer's standard deadbolt operated by exterior cylinder and interior thumb turn; with minimum 1 inch (25 mm) long throw bolt; ANSI/BHMA A156.5, Grade 1.
 - a) Cylinders: As specified in Division 8 Section "Door Hardware."
 - b) Hook Latch: Laminated-steel hook, mortise type, BHMA A156.5, Grade 1.
 - c) Two-Point Locking: Provide locking system that incorporates a device in the stile of active door leaves that automatically extends a flush bolt into overhead carrier assembly.
- d. Control Switch:
 - 1) Provide manufacturer's standard header mounted rocker switches and door position switch to allow for full control of the automatic entrance door. Controls to include, but are not limited to:
 - a) Power On/Off.
 - b) One-way traffic.
 - c) Reduced Opening.
 - d) Open/Closed/Automatic.
- e. Sliding Weather Stripping:
 - 1) Manufacturer's standard replaceable components complying with AAMA 701; made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.
- f. Weather Sweeps:
 - 1) Manufacturer's standard adjustable nylon brush sweep mounted to underside of door bottom.

D. Assembly:

1. Factory Assembly
 - a. General:

- 1) Factory fabricates automatic entrance door assembly components to designs, sizes, and thickness indicated and to comply with indicated standards.
 - a) Form aluminum shapes before finishing.
 - b) Use concealed fasteners to greatest extent possible.
 - (1) Where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
 - (2) Reinforce members as required to receive fastener threads.
 - b. Framing:
 - 1) Provide automatic entrances as prefabricated assemblies.
 - a) Fabricate tubular and channel frame assemblies with manufacturer's standard mechanical or welded joints. Provide sub-frames and reinforcement as required for a complete system to support required loads.
 - b) Perform fabrication operations in manner that prevents damage to exposed finish surfaces.
 - c) Form profiles that are sharp, straight, and free of defects or deformations.
 - d) Prepare components to receive concealed fasteners and anchor and connection devices.
 - e) Fabricate components with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion.
 - c. Doors:
 - 1) Factory fabricated and assembled in profiles indicated.
 - 2) Reinforce as required to support imposed loads and for installing hardware.
 - d. Door Operators:
 - 1) Factory fabricated and installed in headers, including adjusting and testing.
 - e. Glazing:
 - 1) Fabricate framing with minimum glazing edge clearances for thickness and type of glazing indicated.
 - f. Hardware:
 - 1) Factory install hardware to the greatest extent possible; remove only as required for final finishing operation and for delivery to and installation at Project site.
- E. Finishes:
1. Finish Materials:
 - a. Aluminum Finishes:
 - 1) General:
 - a) Comply with NAAMM Metal Finishes Manual for Architectural and Metal Products for recommendations for applying and designing

finishes. Finish designations prefixed by AA comply with system established by Aluminum Association for designing finishes.

- 2) Class II, Clear Anodic Finish: AA-M10C22A31 Mechanical Finish: as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.40 mils minimum complying with AAMA 611, and the following:
 - a) AAMA 607.1.
 - b) Applicator must be fully compliant with all applicable environmental regulations and permits, including wastewater and heavy metal discharge.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Examine conditions for compliance with requirements for installation tolerances, header support, and other conditions affecting performance of automatic entrances. Proceed with installation only after unsatisfactory conditions have been corrected.
 2. Field Measurements:
 - a. General Contractor shall verify openings to receive automatic entrance door assemblies by field measurements before fabrication and indicate measurements on Shop Drawings.
 3. Mounting Surfaces:
 - a. General Contractor shall verify all surfaces to be plumb, straight and secure; substrates to be of proper dimension and material.
 4. Other trades:
 - a. General Contractor shall advise of any inadequate conditions or equipment.

3.02 INSTALLATION

- A. General:
 1. Do not install damaged components.
 2. Fit frame joints to produce joints free of burrs and distortion.
 3. Rigidly secure non-movement joints.
- B. Entrances:
 1. Install automatic entrances plumb and true in alignment with established lines and grades without warp or rack of framing members and doors. Anchor securely in place.
 - a. Install surface-mounted hardware using concealed fasteners to greatest extent possible.
 - b. Set headers, carrier assemblies, tracks, operating brackets, and guides level and true to location with anchorage for permanent support.

- C. Door Operators:
 - 1. Connect door operators to electrical power distribution system as specified in Division 16 Sections.
- D. Glazing:
 - 1. Glaze sliding automatic entrance door panels in accordance with, the Glass Association of North America (GANA) Glazing Manual, published recommendations of glass product manufacturer, and sliding automatic entrance manufacturer's instructions.
- E. Sealants:
 - 1. Comply with requirements specified in Section 07920 - Joint Sealants to provide weather tight installation.

3.03 SITE QUALITY CONTROL

- 1. Inspections:
 - a. Testing Services: Factory Trained Installer shall test and inspect each automatic entrance door to determine compliance of installed systems with applicable ANSI standards.

3.04 ADJUSTING

- A. Adjust door operators, controls, and hardware for smooth and safe operation, for weather-tight closure, and complying with requirements in ANSI/BHMA A156.10.

3.05 CLEANING

- A. Clean glass and aluminum surfaces promptly after installation. Remove excess glazing and sealant compounds, dirt, and other substances. Repair damaged finish to match original finish. Comply with requirements in Section 08800 - Glazing for cleaning and maintaining glass.

3.06 MAINTENANCE

- a. Operation and Maintenance Data:
 - 1) Provide Owner's Manual.

SECTION 08520

ALUMINUM WINDOWS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for commercial grade aluminum windows of various performance classes.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01454 - Mock-Up Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 07920 - Joint Sealants.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. CRF: Condensation resistance factor.
 - 2. EPDM: An acronym for ethylene propylene diene M-class rubber used in the manufacture of various seals and membranes.
 - 3. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 4. PVC: An acronym for polyvinyl chloride, a chemical compound used in the manufacture of various plastic items.
 - 5. STC: Sound Transmission Class.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public’s health, safety, and welfare.
 - 2. British Thermal Unit or Btu: A measure of energy defined as the amount of heat required to raise the temperature of one pound of water one Fahrenheit degree.

3. Performance Class Number: The actual design pressure in pounds force per square foot (Pascals) used to determine the structural test pressure and water test pressure for the window, and included as part of the window designation system.
 - a. The structural test pressure for the wind load test is equivalent to 150 percent of the design pressure.
 - b. The water-leakage-resistance test pressure is equivalent to 15 percent of the design pressure with 2.86 pounds force per square foot (137Pa) as a minimum for Residential, Commercial, and Heavy-Commercial Grade windows.
4. Low-e: “Low emissivity” coatings are metal or metallic oxide layers deposited on a window or skylight glazing surface primarily to reduce the thermal conductivity by suppressing radiative heat flow.

C. Reference Standards:

1. American Architectural Manufacturer’s Association (AAMA):
 - a. AAMA/WDMA/CSA 101/I.S.2/A440 – Standard Specification for Windows, Doors, and Unit Skylights.
 - b. AAMA 511 - Voluntary Guideline for Forensic Water Leakage Testing of Fenestration Production.
 - c. AAMA 701/702 - Voluntary Specifications for Pile Weatherstripping and Replaceable Fenestration Weatherseals.
 - d. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections.
 - e. AAMA 2605 - Voluntary Specifications, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels.
2. ASTM International (ASTM):
 - a. ASTM B 633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel.
 - b. ASTM C 509 - Standard Specification for Elastomeric Cellular Preformed Gasket and Sealing Material.
 - c. ASTM D 2000 - Standard Classification System for Rubber Products in Automotive Applications.
 - d. ASTM D 2287 – Standard Specification for Nonrigid Vinyl Chloride Polymer and Copolymer Molding and Extrusion Compounds.
 - e. ASTM E 90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.

- f. ASTM E 283 – Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.
- g. ASTM E 330 – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.
- h. ASTM E 331 – Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.
- i. ASTM E 413 - Classification for Rating Sound Insulation.
- j. ASTM E 547 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Cyclic Static Air Pressure Difference.
- k. ASTM E 699 - Standard Practice for Evaluation of Agencies Involved in Testing, Quality Assurance, and Evaluating of Building Components.
- l. ASTM E 783 – Standard Test Method for Field Measurement of Air Leakage Through Installed Exterior Windows and Doors [*withdrawn 2002*].
- m. ASTM E 1105 - Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference.
- 3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 4. National Association of Architectural Metal Manufacturers (NAAMM):
 - a. Architectural Metal Products Division (AMP):
 - 1) NAAMM AMP 500 – Metal Finishes Manual for Architectural and Metal Products.
- 5. Institute for Sustainability Infrastructure (ISI):
 - a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Scheduling:
 - 1. Coordinate the aluminum window fabrication schedule with construction progress to avoid delaying the work.

1.04 SUBMITTALS

- A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Product Data for each type of window required.
 - b. Shop Drawings:
 - 1) Shop Drawings showing the fabrication and installation of each type of window required.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. ENVISION Credit RA 1.3 - Use Recycled Materials
 - 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - b. ENVISION Credit RA 1.4 – Use Regional Materials
 - 1) Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).
 - c. Adhesives and Sealants
 - 1) Submit product data highlighting the VOC content for any field applied sealants.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Aluminum Windows Warranty.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
2. Testing and Inspection Agency:

- a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Qualifications:

1. Aluminum Window Installer's Qualifications:
 - a. Engage an experienced installer who has specialized in installing aluminum windows similar in material, design, and extent to those required for this Contract, and with a record of successful in-service performance.
 - b. Submit the aluminum window installer's qualifications to the Program/Project Manager for approval.
2. Aluminum Window Testing Agency's Qualifications:
 - a. To perform the window testing of the Work this Section, employ the services of one or more independent certified testing laboratories having the following qualifications:
 - 1) Each testing laboratory must be independent, certified, and comply with the quality standards for testing laboratories of the nationally recognized associations and agencies that promulgate the test standards specified and with the basic requirements of ASTM E 699.
 - a) Each testing laboratory must have the experience and capability to satisfactorily perform the reviews, inspections, and testing required of them by this Contract, including but not limited to, inspecting, sampling, and testing proposed materials and systems as required by the Program/Project Manager for compliance with the Contract Documents.
 - b) The testing laboratory must be approved by the Program/Project Manager, and must also be accepted by the Authority Having Jurisdiction (AHJ) and responsible for building inspection.
 - b. Dismissal and replacement of any of these independent certified testing laboratories by the Contractor requires written notice to and the approval from the Program/Project Manager.
 - c. Submit the qualifications and certifications of the proposed testing laboratories to the Program/Project Manager for approval.

C. Mock-Ups:

1. Build mockups in accordance with the requirements specified in Section 01454, Mock-Up Requirements.

- a. Build the mockups in the location and of the size indicated or, if not indicated, as directed by Program/Project Manager.
 - b. Using the glazing methods to be used for production Work, build mockups having the kinds of glass installed as appropriate to match the glazing systems required under this Section:
2. Approved mockups may become part of the completed Work if undisturbed at the time of Substantial Completion.

1.06 WARRANTY

- A. Extended Correction Period:
 1. Warrant the aluminum window materials and workmanship against failures within the 3-year period after the Date of Substantial Completion:
 2. Submit the written Aluminum Windows Warranty on the manufacturer's standard form in which the manufacturer agrees to repair or replace components of manufactured aluminum windows that fail in materials or workmanship within specified warranty period to the Program/Project Manager for approval.
 - a. Have the manufacturer's standard form signed by the Contractor and manufacturer.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

- A. Manufacturers:
 1. Manufacturer List:
 - a. Alenco Commercial Division, www.alenco.com.
 - b. Capitol Products Corp.
 - c. Custom Window Company, www.customwindow.com.
 - d. DeSCo Windows, www.sescoarc.com.
 - e. EFCO Corporation, www.efcocorp.com.
 - f. International Window Corporation, www.intlwindow.com.
 - g. Peerless Products, Inc., www.peerlessproducts.com.
 - h. Approved equal.
 2. Substitution Limitations:
 - a. The Contract Drawings indicate the size, profiles, dimensional requirements, and aesthetic effects of aluminum windows, and are based on the window types and models indicated.
 - b. Subject to compliance with the requirements indicated in the Contract Documents, other aluminum window manufacturers whose products have equal performance characteristics may be considered.
 3. Product Options:

- a. Source Limitations:
 - 1) Obtain aluminum windows through one source and from a single manufacturer.
- B. ENVISION Requirements:
 - 1. Recycled Content
 - a. Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - 2. Low Emitting Materials – Adhesives and Sealants
 - a. Provide interior sealants and sealant primers for this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168.
 - 3. Low Emitting Materials – Paints and Coatings
 - a. Provide field applied primers whose VOC content is 100g/L or less.
- C. Performance:
 - 1. Provide aluminum windows engineered, fabricated, and installed to withstand normal thermal movement, wind loading, and impact loading without failure, as demonstrated by testing the manufacturer's standard window assemblies representing the types, grades, classes, and sizes required for this Contract according to the test methods indicated herein.
 - 2. Air-Infiltration Rate for Operating Units:
 - a. Provide operating window units allowing an air-infiltration rate of not more than 0.37 cubic feet per minute per foot (2.06m³/h/m) of operable sash joint for an inward test pressure of 1.57 pounds force per square foot (75Pa).
 - 3. Air-Infiltration Rate for Fixed Windows:
 - a. Provide fixed window units allowing an air-infiltration rate of not more than 0.15 cubic feet per minute per foot (2.74m³/h/m) of area for an inward test pressure of 1.57 pounds force per square foot (75Pa).
 - 4. Water Penetration:
 - a. Provide window units allowing no water penetration as defined in the test method at an inward test pressure of 15 percent of the design pressure.
 - 5. Condensation Resistance:
 - a. Where window units are indicated to be "thermally improved", provide units showing a condensation resistance factor (CRF) of 45 when

tested for thermal performance in accordance with the requirements specified in AAMA 1503.

6. Thermal Transmittance:
 - a. Provide window units with a maximum U-value of 0.75 British Thermal Unit per square foot·hour·degree Fahrenheit [$3.9\text{W}/(\text{m}^2 \times \text{K})$] at an exterior wind velocity of 15 miles per hour (24km/h), when tested according to AAMA 1503.
7. Thermal Movements:
 - a. Provide aluminum window units that accommodate thermal movements resulting from the following maximum changes (ranges) in ambient and surface temperatures when engineering, fabricating, and installing windows without causing buckling, opening of joints, and overstressing of components, connections, and other detrimental effects:
 - 1) Ambient Temperature Change (Range): 120 degrees Fahrenheit (67 degrees Celsius).
 - 2) Material Surface Temperature Change (Range): 180 degrees Fahrenheit (100 degrees Celsius).
 - b. Base engineering calculations on the actual surface temperatures of materials due to solar heat gain and nighttime sky heat loss.
8. Sound-Insulation Construction:
 - a. Provide window units certified to provide a Sound Transmission Class (STC) rating of at least 40 when tested according to ASTM E 90 and classified according to ASTM E 413.

D. Design Criteria:

1. Design the aluminum windows of the types, grades, classes, and sizes required for this Contract in accordance with the standards indicated herein to withstand normal thermal movement, wind loading, and impact loading without failure.
2. Window Grade and Class:
 - a. Provide fixed windows complying with the requirements for AAMA Grade and Performance Class F-DW-C20.
3. Thermally Improved Construction:
 - a. Design window units with an integral, concealed, low-conductance, thermal barrier, located between exterior materials and window members exposed on the interior, so direct metal-to-metal contact is eliminated.
 - b. Provide thermal-break construction that has been in use for not less than 3 years, has been tested to demonstrate resistance to thermal conductance and condensation, and has been tested to show adequate strength and security of glass retention.

4. Glazing:
 - a. Provide a tempered insulated glazing system with low-e grey glass.
 - b. Provide units that are reglazable without dismantling the sash or ventilator framing.
 - c. Prepare the window sash or ventilators for glazing, except where pre-glazing at the factory is indicated in the Contract Documents.
 - d. Product Data:
 - 1) Submit Product Data for each type of window required to the Program/Project Manager for approval, and include the following information:
 - a) Construction details and fabrication methods.
 - b) Profiles and dimensions of individual components.
 - c) Data on hardware, accessories, and finishes.
 - d) Recommendations for maintaining and cleaning exterior surfaces.
 - e. Shop Drawings:
 - 1) Submit Shop Drawings showing the fabrication and installation of each type of window required to the Program/Project Manager for approval, and include information not fully detailed in the manufacturer's standard Product Data including following:
 - a) Layout and installation details, including anchors.
 - b) Elevations at a scale of 1/4 inch = 1 foot (1:50) and typical window unit elevations at a scale of 3/4 inch = 1 foot (1:20).
 - c) Full-size section details of typical composite members, including reinforcement and stiffeners.
 - d) Location of weep holes.
 - e) Panning details.
 - f) Hardware, including operators.
 - g) Window cleaning provisions.
 - h) Glazing details.

E. Materials:

1. Aluminum Extrusions:
 - a. For main frame and sash members, provide aluminum extrusions of the alloy and temper recommended by the manufacturer for strength, corrosion resistance, and the application of the required finish, but not having an ultimate tensile strength of less than 22,000 psi (150MPa) and not less than 0.062 inch (1.6mm) thick at any location.
2. Fasteners:
 - a. Provide aluminum, nonmagnetic stainless steel, epoxy adhesive, or other materials warranted by the manufacturer to be noncorrosive and

- compatible with the aluminum window members, trim, hardware, anchors, and other components of the window units.
- b. Reinforcement:
 - 1) Where fasteners screw anchor into aluminum less than 0.125 inch (3.2mm) thick, reinforce the interior with aluminum or nonmagnetic stainless steel to receive screw threads or provide standard, noncorrosive, pressed-in, splined grommet nuts.
 - c. Exposed Fasteners:
 - 1) Except where it is unavoidable for the application of hardware, do not use exposed fasteners.
 - 2) For the application of hardware, use fasteners that match the finish of the member or hardware being fastened, as appropriate.
 - 3. Anchors, Clips, and Window Accessories:
 - a. Fabricate anchors, clips, and window accessories of aluminum, nonmagnetic stainless steel, or hot-dip zinc-coated steel or iron complying with requirements of ASTM B 633.
 - b. Provide anchors, clips, and window accessories of sufficient strength to withstand the design pressure indicated.
 - 4. Compression-Type Glazing Strips and Weatherstripping:
 - a. Unless otherwise indicated, and at the manufacturer's option, provide compressible stripping for glazing and weatherstripping, such as molded EPDM or neoprene gaskets complying with the requirements for Designation 2BC415 to 3BC620 specified in ASTM D 2000, or molded PVC gaskets complying with the requirements specified in ASTM D 2287, or molded expanded EPDM or neoprene gaskets complying with the requirements for Grade 4 specified in ASTM C 509.
 - 5. Glazing Stops:
 - a. Provide screw-applied or snap-on glazing stops, coordinated with glass selection and glazing system indicated.
 - b. Finish the glazing stops to match the window units.
 - 6. Sealant:
 - a. For sealants required within fabricated window units, provide the type recommended by the manufacturer for the joint size and movement.
 - b. Provide sealant that remains permanently elastic, non-shrinking, and non-migrating.
 - c. For the selection and installation of sealants, comply with the requirements specified in Section 07920, Joint Sealants.
- F. Shop Fabrication:
- 1. Fabricate aluminum window units in accordance with the standards indicated herein.

- a. Include a complete system for the assembly of components and the anchorage of window units.
2. Weep Holes:
 - a. Provide weep holes and internal passages to conduct infiltrating water to the exterior.
3. Provide water-shed members above side-hinged ventilators and similar lines of natural water penetration.

G. Finishes:

1. Primer Materials:
 - a. Provide the manufacturer's standard corrosion-resistant primer.
2. Finish Materials:
 - a. Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes in DAF-45.
 - b. High-Performance Organic Coating Finish AA-C12C42R1x:
 - 1) First Chemical Finish: Clean the substrate using inhibited chemicals.
 - 2) Second Chemical Finish: Apply an acid chromate-fluoride-phosphate conversion coating.
 - 3) Organic Coating: Apply the manufacturer's standard 2-coat, thermocured system composed of a specially formulated inhibitive primer and a fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with the requirements specified in AAMA 2605.
 - 4) Color and Gloss: Match the Program/Project Manager's Sample selection.
3. Shop Finishing Methods:
 - a. For recommendations relative to applying and designating finishes, comply with the requirements specified in NAAMM AMP 500.
 - b. Surface Preparation:
 - 1) Perform the manufacturer's standard cleaning operations to remove dirt, oil, grease, or other contaminants that could impair the paint bond.
 - 2) Remove mill scale and rust, if present, from the uncoated steel.
 - c. Metal Protection:
 - 1) Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying a sealant or tape recommended by the manufacturer for this purpose.
 - 2) Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

- d. Priming:
 - 1) Comply with NAAMM AMP 500 for recommendations relative to applying primer.
 - 2) Apply the primer immediately after surface preparation and pretreatment.
- e. High-Performance Organic Coating Finish AA-C12C42R1x:
 - 1) Prepare, pretreat, and apply the high-performance organic coating to exposed metal surfaces in accordance with the coating and resin manufacturer's written instructions.
- f. Appearance of Finished Work:
 - 1) Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples.
 - 2) Noticeable variations in the same piece are not acceptable.
 - 3) Variations in appearance of other components are acceptable if they are within the range of approved Samples, and are assembled or installed to minimize contrast.

2.02 SOURCE QUALITY CONTROL

- A. Tests and Inspections:
 - 1. The Testing and Inspection Agency will perform testing to demonstrate compliance with requirements indicated in AAMA/WDMA/CSA 101/I.S.2/A440 for air infiltration, water penetration, and structural performance for the type, grade, and performance class of window units required.
 - a. Design wind velocity at Site is 70 miles per hour (113km/h).
 - b. Where the required design pressure exceeds the minimum for the specified window grade, the requirements of Section 3, "Optional Performance Classes", of AAMA/WDMA/CSA 101/I.S.2/A440, will be complied with for higher than minimum performance class.
 - 2. Air Infiltration Test:
 - a. Test Procedure:
 - 1) Test window units according to the requirements specified in ASTM E 283 for air infiltration.
 - b. Acceptance Criteria:
 - 1) Window units complying with requirements indicated in AAMA/WDMA/CSA 101/I.S.2/A440 for air infiltration have acceptable test results.
 - 3. Water Penetration Test:
 - a. Test Procedure:
 - 1) Test window units according to the requirements specified in ASTM E 547 for water penetration.

- b. Acceptance Criteria:
 - 1) Window units complying with requirements indicated in AAMA/WDMA/CSA 101/I.S.2/A440 for water penetration have acceptable test results.
- 4. Structural Performance Test:
 - a. Test Procedure:
 - 1) Test window units according to the requirements specified in ASTM E 330 for structural performance.
 - b. Acceptance Criteria:
 - 1) Window units complying with requirements indicated in AAMA/WDMA/CSA 101/I.S.2/A440 for structural performance have acceptable test results.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Check window openings by taking field measurements before fabrication of the windows, and show the recorded field measurements on the Shop Drawings
 - 2. Inspect the window openings before installing the windows.
 - a. Verify that the rough or masonry opening is correct, and the sill plate is level.
 - b. Verify that masonry surfaces are visibly dry and free of excess mortar, sand, and other construction debris.
 - c. Verify that Metal surfaces are dry; clean; free of grease, oil, dirt, rust and corrosion, and welding slag; and are without sharp edges or offsets at joints.

3.02 INSTALLATION

- A. Install aluminum windows to withstand the normal thermal movement, wind loading, and impact loading without failure of the types, grades, classes, and sizes indicated for this Contract.
- B. Install sealants, joint fillers, and gaskets after installation of the window units as specified in Section 07920, Joint Sealants.

3.03 SITE QUALITY CONTROL

- A. Site Tests and Inspections:

1. The Testing and Inspection Agency will perform testing with the window manufacturer's representative present to demonstrate compliance with requirements indicated in the test acceptance criteria.
 - a. The Program/Project Manager will select the units to be tested.
 2. Air Infiltration Test:
 - a. Test Procedure:
 - 1) Test window units according to the requirements specified in ASTM E 783.
 - b. Acceptance Criteria:
 - 1) Window units having infiltration less than 1.5 times the amount indicated herein have acceptable test results.
 3. Water Resistance Test:
 - a. Test Procedure:
 - 1) Test window units according to the requirements specified in ASTM E 1105.
 - b. Acceptance Criteria:
 - 1) Window units having no water leakage have acceptable test results.
- B. Non-Conforming Work:
1. Correct windows whose tests do not meet the specified requirements and units having similar deficiencies at no increase in Contract Price.

3.04 ADJUSTING

- A. Adjust the operating sashes and hardware to provide a tight fit at contact points and at weatherstripping for smooth operation and a weathertight closure.

3.05 PROTECTION

- A. Provide protection and maintain conditions, in a manner acceptable to the aluminum window manufacturer, that ensure the window units are without damage or deterioration at the time of Substantial Completion.

FINISH HARDWARE

Hardware 24 revised
per RFI 1338

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for providing finish door hardware.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01780 - Closeout Submittals.
 - 3. Section 07920 - Joint Sealants.
 - 4. Section 08211 - Flush Wood Doors
 - 5. Section 08110 - Steel Doors and Frames.
 - 6. Section 09912 - Painting.
 - 7. Section 09960 - High-Performance Coatings.
 - 8. Section 16130 - Raceway and Boxes.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AC: Alternating electric current.
 - 2. ADA: Americans with Disabilities Act.
 - 3. dBA: Decibels, a weighted scale for measuring sound pressure in decibels that uses filters to reduce the contributions of low and high frequency sound.
 - 4. DC: Direct electrical current.
 - 5. SPDT: Single pole, double throw switch.
- B. Definitions:
 - 1. Bit: The wide portion at the end of an ordinary key that moves the bolt.
 - 2. Bitting: One of the indentations on the bit of a key.
 - 3. Butt Hinge or Butt: A hinge with rectangular leaves, usually of the same size, and multiple bearing contacts.
 - 4. Template (for Hardware): A precise detailed layout or pattern for providing the necessary preparation of a door or frame to receive hardware.
- C. Reference Standards:
 - 1. Builders Hardware Manufacturers Association (BHMA):
 - a. ANSI/BHMA A156.3 – American National Standard for Exit Devices.
 - b. ANSI/BHMA A156.4 - American National Standard for Door Controls-Closers.
 - c. ANSI/BHMA A156.16 - American National Standard for Auxiliary Hardware.
 - d. ANSI/BHMA A156.18 – American National Standard for Materials and Finishes.
 - e. BHMA Finish Matchplates.
 - 2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 3. Door and Hardware Institute (DHI):
 - a. Recommended Locations for Builder's Hardware on Standard Steel Doors and Frames.

4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
5. National Fire Protection Association (NFPA):
 - a. NFPA 80 – Standard for Fire Doors and Other Opening Protectives.
6. Steel Door Institute (SDI):
 - a. ANSI/SDI A250.6 – Hardware on Standard Steel Doors.
 - b. ANSI/SDI A250.8 - SDI 100 Recommended Specifications for Standard Steel Doors and Frames.
7. U. S. Government:
 - a. Department of Justice:
 - 1) 28 CFR 36 – Nondiscrimination on the Basis of Disability by Public Accommodations and in Commercial Facilities.
 - a) ADA Standards for Accessible Design.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Templates:
 - a. Upon receipt from the Program/Project Manager of the reviewed and approved Finish Hardware Schedule developed by the Contractor, send a copy of the approved schedule and a complete template list for all items requiring template information to the hollow metal manufacturers, aluminum door and frame Suppliers, or any other Supplier requiring this information.
 2. Factory-Installed Hardware:
 - a. If finish door hardware must be installed in the doors at the factory, have the hardware supplier send all hardware items required to the respective door manufacturer so it can be properly installed.
 3. Cylinder and Keying Schedule:
 - a. The Contractor cannot order the airport's unique locks and keys, or install the cylinders.
 - b. Shortly before the Certificate of Occupancy is to be issued, coordinate with the Program/Project Manager to have the Phoenix Aviation Lock Shop furnish and install the airport's unique cylinders, and to have the construction cylinders removed and returned with their keys to the Contractor.
 4. Bitting Schedule:
 - a. Arrange for delivery of the bitting schedule to the City of Phoenix's Locksmith.
 - 1) Properly tag the keys for easy identification, and deliver the keys to the City of Phoenix Locksmith or his representative.
 - b. The Contractor may not have the permanent keys for the Contract's permanent door hardware.
- B. Sequencing:
 1. Take responsibility for arranging the Work and issuing purchase orders to facilitate securing delivery of the hardware and related items, so the Work progresses without delay or interruption.

1.04 SUBMITTALS

- A. Action Submittals:
 1. Submit the following to the Construction Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:

- a. Product Data:
 - 1) Butt hinges.
 - 2) Electric hinges.
 - 3) Locks and latches.
 - 4) Keypads.
 - 5) Exit Devices
 - 6) Cylinders.
 - 7) Contacts.
 - 8) Closers.
 - 9) Door coordinators.
 - 10) Manual door bolts.
 - 11) Automatic door bolts.
 - 12) Kickplates.
 - 13) Thresholds.
 - 14) Door bottoms.
 - 15) Door gaskets.
 - 16) Wall type stops.
 - 17) Floor type stops.
 - 18) Local horns.
 - 19) Power supplies.
 - 20) Exit signs.
 - 21) Fasteners.
 - b. Certificates:
 - 1) Finish Hardware Certification.
 - c. Delegated Design Submittals:
 - 1) Finish Hardware Schedule.
- B. Informational Submittals:
- 1. Submit the following to the Construction Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Finish door hardware manufacturer's installation instructions for each type of product specified and provided.
 - b. Manufacturer's Reports:
 - 1) Finish Hardware Supplier Inspection Report.
- C. Closeout Submittals:
- 1. Submit the following to the Construction Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Finish Door Hardware Warranty.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
- 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
 - b. Exit Doors:
 - 1) Provide exit signs at exit doors as required by Section 1011 of the ICC International Building Code (IBC) as Amended by the City of Phoenix.

B. Certifications:

1. Finish Hardware Certification:
 - a. Certify the finish hardware as specified in Paragraph 3.04.A.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Package each item of hardware in original and individual containers, complete with all necessary fastenings, keys, instructions, and templates for spotting mortising tools.
 - a. Mark each container with its item number corresponding to the item number on the finish hardware schedule.
2. Check in and sign for all finish hardware delivered to the Site, and take responsibility for the material delivered thereafter.

B. Storage and Handling Requirements:

1. Provide a room with sufficient space and shelving in which to arrange, securely lockup, and store the finish hardware.
 - a. Lock this room with a lock furnished for this Contract.
2. Provide the following information, corresponding to that shown on the approved finish hardware schedule, on the containers holding keyed locks and cylinders:
 - a. Heading number.
 - b. Door number.
 - c. Hand of door, when required.
 - d. Keying symbol.

1.07 SPECIAL WARRANTY

A. Warrant all hardware for a period of 2 years from the date of acceptance of the Work.

1. Submit a written Finish Door Hardware Warranty to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 FINISH HARDWARE SYSTEMS

A. Manufacturers:

1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - 1) Note that no substitutions will be accepted for many of the finish hardware items when so specified herein.

B. Regulatory Requirements:

1. Phoenix Building Construction Code:

- a. Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).
 2. Door Closers:
 - a. Provide ADA-compatible door closers in compliance with the ADA Standards for Accessible Design.
- C. Design Criteria:
 1. Design Intent:
 - a. While the components listed herein are intended to cover all doors and establish a type and standard of quality, where the size and shape of members to be equipped with hardware prevents or makes unsuitable the use of the exact types specified, provide suitable types having as nearly as practicable the same operation, function, style, and quality as that listed.
 2. Finish Hardware Schedule:
 - a. After examining the Specifications and Contract Drawings, develop a Finish Hardware Schedule identifying all required finish hardware for all openings, whether listed or not; and prior to ordering the required hardware, submit the Finish Hardware Schedule to the Program/Project Manager for approval.
 - 1) Include hardware of sizes adequate for the service to which the individual items of hardware will be subjected in the course of normal usage.
 - 2) Indicate the following information in the Finish Hardware Schedule:
 - a) Door number and location.
 - b) Quantity.
 - c) Manufacturer's number and item number.
 - d) Size, finish, and all other pertinent information necessary for manufacturing and proper installation of the item.
 - e) Complete keying instructions and symbols.
 - b. If there are any omissions in the hardware groups for regular doors, notify the Program/Project Manager for direction.
 - c. Anticipate allowing at least 2 weeks for the Program/Project Manager to review and evaluate the Finish Hardware Schedule before being able to consider ordering the hardware from the Supplier.
 3. Exit Doors:
 - a. Provide exit doors designed to be operable from the inside without the use of keys or any special knowledge or effort during business hours
 - 1) Do not provide deadbolts, slide bolts, or similar devices on exit doors that may interfere with the intended operation of the doors.
 - 2) Provide signage as required by Section 1008.1.8, Door Operations, in the ICC International Building Code (IBC) as Amended by the City of Phoenix.
 4. Product Data:
 - a. Submit Product Data for each type of product specified and provided.
 - b. Where cylindrical locks are to be installed in hollow metal doors, have the door manufacturer provide lock reinforcing in the door when the door is manufactured.
- D. Components:
 1. Butt Hinges:
 - a. For exterior out-swinging doors and out-swinging corridor doors having locks, provide butt hinges having a pin that is non-removable when the door is closed.
 - 1) For 1-3/4-inch thick doors up to 40 inches wide, provide 4-1/2-inch butt hinges.

- 2) For 1-3/4-inch thick doors from 41 inches to 48 inches wide, provide 5-inch butt hinges.
 - b. For interior doors, provide butt hinges having a non-rising pin.
 - 1) For 1-3/4-inch thick doors up to 40 inches wide, provide 4-1/2-inch butt hinges.
 - 2) For 1-3/4-inch thick doors from 41 inches to 48 inches wide, provide 5-inch butt hinges.
 - c. Size butt hinges wide enough to clear all trim.
 - d. For doors with closers, provide ball bearing butt hinges.
 - e. Finish:
 - 1) Provide a BHMA 626 satin chromium plated (US26D) as specified in ANSI/BHMA A156.18 and the BHMA Finish Matchplates.
 - f. Manufacturers:
 - 1) The Stanley Works, Model CB179, www.stanleyhardware.com.
 - 2) McKinney Hinge, Division of Assa Abloy, www.mckinneyhinge.com.
 - 3) Hager Companies, www.hagerco.com.
 - 4) Approved equal.
2. Electrical Power Transfer:
 - a. Provide a two-wire electrical power transfer device, UL-listed for use on fire doors under UL Category GVUX, that is capable of transferring electrical power from a door frame to the edge off a swinging door.
 - 1) Provide wiring that is at least 18AWG, and capable of carrying up to 2 Amperes at 24 Volts DC with a maximum surge of 16 Amperes.
 - 2) Provide units that are completely concealed when the door is in the closed position.
 - b. Manufacturers:
 - 1) Von Duprin, Model EPT-10, <http://www.vonduprin.com>.
 - 2) Sargent, IN Series PoE compatible Ethernet Hinge.
 - 3) Approved equal.
3. Pivot Sets:
 - a. Provide offset type pivots complying with the requirements specified in A156.4, and designed for the door weight.
 - b. Manufacturers:
 - 1) Lockmart, ABH Door Hardware, Model ABH 0195, <http://www.abhdoorhardware.com>ANSI.
 - 2) Approved equal.
4. Locks and Latches:
 - a. Provide locksets manufactured by one manufacturer.
 - b. Finish:
 - 1) Provide a BHMA 626 satin chromium plated (US26D) as specified in ANSI/BHMA A156.18 and the BHMA Finish Matchplates.
 - c. Manufacturers:
 - 1) Sargent, Manufacturing Company, Division of Assa Abloy, DG2-Series, www.sargentlock.com.
 - a) For storeroom/closet doors, provide Model DG2-6300.
 - b) For entry/office doors.
 - c) For rated paired openings, provide 3/4-inch latch bolts.
 - 2) No substitutions will be accepted.
5. Keypads:
 - a. Provide keypads complying with the requirements specified by the Phoenix Aviation Lock Shop.

- b. Finish:
 - 1) Provide a BHMA 626 satin chromium plated (US26D) as specified in BHMA A156.18 and the BHMA Finish Matchplates.
- c. Manufacturers:
 - 1) Alarm Lock, Trilogy™, Model PDL3000IC/26D-R Trilogy Prox Digital Lock, www.alarmlock.com
 - 2) No substitutions will be accepted.
- 6. Intelligent IP-Enabled Access Control
 - a. Provide the following for the Intelligent IP-Enabled Access Control:
 - 1) Card Lock: DG264 28 IN220-10G77 BIPS B LL
 - 2) Concealed PoE Power Transfer: Securitron, CEPT-C5E.
 - 3) PoE Frame Wiring Harness: McKinney, PoE-C1500P with Custom Lengths
 - 4) PoE Wiring Harness: McKinney, PoE-CxxxRJ.
 - 5) IN-Series Cylindrical Lock Functions:
 - a) IN220 10 Line cylindrical locks UL certified and listed as part of an approved assembly.
 - b) Low battery request-to-exit (REX) and tamper signaling standard
 - c) Door Position Switch (DPS, P/N 52-5373) supplied with IN220 cylindrical locks
 - 6) Rose: Metal trim.
 - 7) Card Reader: Black reader, black trim.
 - 8) Lever: L-Style, 26D Satin Chrome (ANSI 626).
 - 9) Strike: 4-7/8" Strike #808. Lip Length 1-1/4.
 - 10) Degree Cylinders: DG2-64, Degree Level 2 Removable construction keyed LFIC.
- 7. Exit Devices:
 - a. Provide panic exit devices manufactured by one manufacturer.
 - b. Finish:
 - 1) Provide a BHMA 626 Satin chromium plated (US26D) as specified in ANSI/BHMA A156.18 and the BHMA Finish Matchplates.
 - c. Manufacturers:
 - 1) Sargent, Manufacturing Company, Division of Assa Abloy, Sargent 80 Series, www.sargentlock.com.
 - 2) Approved equal.
- 8. Lock Cylinders:
 - a. The hardware will need to be construction keyed with construction cylinders.
- 9. Door Position Switches:
 - a. Provide door position switches designed for monitoring applications for hollow metal doors and frames.
 - b. Provide door position switches designed operation using 0.3 Amperes at 30 Volts DC.
 - a. Manufacturers:
 - 1) Ingersoll Rand Company, Schlage Locknetics, 679-05HM, <http://www.locknetics.com>.
 - 2) Assa Abloy, Sargent, 52-5373 Supplied with IN220 cylindrical locks.
 - 3) Approved equal.
- 10. Keys and Keying:
 - a. Provide construction keys for the locks in accordance with factory pinning depth specifications and tolerances to ensure that all cylinders will operate smoothly when the keys are cut by the code machine.
 - b. Provide nickel silver construction keys with blank bows.

- c. Provide construction bitting of random depth cuts.
 - 1) Do not provide "0" or "1" bitted keying.
- 11. Closers:
 - a. Provide overhead; surface applied, parallel arm mounting ADA-compliant closers.
 - 1) Verify that the door has the proper door reinforcement/backing to support the operation of the closer provided.
 - b. Finish:
 - 1) Provide a sprayed finish to match the adjacent hardware.
 - c. Manufacturers:
 - 1) Sargent, Manufacturing Company, Division of Assa Abloy, 351Series, www.sargentlock.com.
 - 2) No substitutions will be accepted.
- 12. Concealed Closer:
 - a. Provide concealed door closers complying with the accessibility requirements of the ADA Standards for Accessible Design, and having the manufacturer's standard arm, track, mounting/finish plate, and mounting screws.
 - b. Provide concealed door closers complying with the requirements for Grade 1 door closers specified in ANSI/BHMA A156.4.
 - a. Manufacturers:
 - 1) LCN, Division of Ingersoll Rand, 2030 Series, <http://www.lcnclosers.com>.
 - 2) Approved equal.
- 13. Door Coordinators:
 - a. Provide steel door coordinators complying with the requirements specified in ANSI/BHMA A156.3, capable of holding the active door leaf open while the inactive door leaf closes, and consisting of the coordinator operating mechanism assembly, filler plates, strike plates, and mounting hardware.
 - 1) Provide door coordinators allowing door closing speeds to be adjusted.
 - b. Finish:
 - 1) Provide door coordinators having a USP, black prime coat, finish.
 - c. Manufacturers:
 - 1) Hager Companies, Model 279D with a filler piece, www.hagerco.com.
 - 2) Approved equal.
- 14. Door Bolts:
 - a. Manual Door Bolts:
 - 1) Provide Grade 1 manual flush door bolts complying with the requirements specified in ANSI/BHMA A156.16, and designed for mortising into door edge with dustproof strike.
 - 2) Manufacturers:
 - a) Hager Companies, Model 281D (install top only), www.hagerco.com
 - b) Approved equal.
 - b. Automatic Door Bolts:
 - 1) Provide stainless steel/brass automatic flush bolts, including the bolting mechanism assembly, strike plates, necessary shims, and mounting hardware complying with the requirements specified in ANSI/BHMA A156.3, and designed for two point latching of metal doors.
 - 1) Manufacturers:
 - a) Hager Companies, Model 292D, www.hagerco.com
 - b) Approved equal.
- 15. Kickplates:

- a. Provide UL-listed, stainless steel kickplates, 0.062 inch (1.6mm) thick, 12 inches high, beveled on 3 sides, and having counter sunk holes for screw mounting.
 - b. Finish:
 - 1) Provide kickplates having a US32D finish.
 - c. Manufacturers:
 - 1) Hager Companies, Model 223S, www.hagerco.com
 - 2) Approved equal.
16. Thresholds:
- a. Provide aluminum saddle type thresholds as indicated in the hardware groups.
 - b. Length: 36 inches, or 72 inches as required for a pair of doors
 - c. Finish:
 - 1) Provide a mill finish on the aluminum.
 - d. Manufacturers:
 - 1) Pemko, Division of Assa Abloy, Model 151A, 168A, 227A, www.pemko.com.
 - 2) Approved equal.
17. Door Bottoms:
- a. Provide surface mounted, exterior door style door bottoms with end plates to finish the ends.
 - b. Length: 36 inches.
 - c. Finish: Clear anodized aluminum.
 - d. Manufacturer:
 - 1) Pemko, Division of Assa Abloy, Model 430CRL or 4301_NBL as indicated on schedule, www.pemko.com.
 - 2) Approved equal.
18. Door Gasketing:
- a. Provide a compression bulb type gasket having an adhesive backing.
 - b. Color: Black.
 - c. Manufacturers:
 - 1) Pemko, a Division of Assa Abloy, Model S88BL (S88 Silicone Seal™), www.pemko.com.
 - 2) Approved equal.
19. Stops:
- a. Wall Type Stops:
 - 1) Provide concave, rimless rubber wall bumpers
 - a) Inside Diameter: 1-1/4 inches.
 - b) Outside Diameter: 1-7/8 inches.
 - c) Projection: 11/16 inch.
 - 2) Mounting Hardware:
 - a) Provide toggle bolts and wall sleeves.
 - 3) Manufacturers:
 - a) Triangle Brass Manufacturing Company, Trimco Model No.1271TB, www.trimcobbw.com.
 - b) Approved equal.
 - b. Floor Type Stops:
 - 1) Provide cast floor stops.
 - a) Base: 1-3/8 inches by 2-3/4 inches.
 - b) Height: 2-7/8 inches.
 - 2) Finish:
 - a) Provide floor stops having a BHMA 626 satin chromium plated (US26D) as specified in BHMA A156.18 and the BHMA Finish Matchplates.
 - 3) Mounting Hardware:

- a) Provide wood screws or machine screws and anchors as applicable.
- 4) Manufacturers:
 - a) Triangle Brass Manufacturing Company, Trimco Model No. 1233, www.trimcobbw.com.
 - b) Approved equal.
- 20. Power Supplies:
 - a. Provide power supplies designed for electromagnetic locks and electric strikes on single door applications, having field selectable power outputs of either 1 Ampere at 24 Volts DC or 2 Amperes at 12 Volts DC.
 - b. Enclosure:
 - 1) Provide power supply enclosures fabricated from at least 19 gauge steel, and having a hinged keylock cover and at least six 1/2-inch diameter knockouts.
 - 2) Provide pre-drilled holes for mounting screws or bolts.
 - c. Power Input:
 - 1) Provide power supplies designed to operate on 0.6 Amperes, 120 Volts AC, 60 Hertz input power.
 - 2) Provide a 2.5 Ampere slow-blow fuse to protect the unit.
 - d. Manufacturers:
 - 1) Securitron, Division of Assa Abloy, Model BPS 12/24-1, <http://www.securitron.com/en/site/securitron>.
 - 2) Approved equal.
- E. Fabrication:
 - 1. Metal Door and Jamb Hardware:
 - a. Fabricate the hardware for metal doors and jambs according to the templates for the hardware on the template list and approved Finish Hardware Schedule sent to the manufacturer.
 - b. Secure the hardware for metal doors and jambs to them using machine screws.

2.02 ACCESSORIES

- A. Exit Signs:
 - 1. Provide exit signs for exit doors as required by Section 1011 of the ICC International Building Code (IBC) as Amended by the City of Phoenix.
- B. Fasteners:
 - 1. With the finish hardware, provide screws, bolts, and/or other fasteners of the size, type, and quantity suitable and necessary for anchoring the hardware in position for heavy use and long life.
 - 2. Provide fasteners harmonized with the hardware material and finish.
 - 3. Where necessary, provide expansion shields, hex bolts, toggle bolts, and other approved anchors for the fastenings as recommended by the fastening manufacturer for the material to which it is applied.
 - 4. For fastening hardware to concrete, provide machine screws and tamp-ins.
 - 5. For closers on wood or mineral core doors, provide hex bolt type fasteners.

PART 3 EXECUTION

3.01 PREPARATION

A. Surface Preparation:

1. Onsite door preparation is restricted by NFPA 80 to that required for surface-applied door hardware, function holes for mortise locks, holes for labeled viewers, undercutting of doors, and protection plates.
2. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate the removal, storage, and reinstallation of surface protective trim units with the finishing work specified in Section 09912, Painting, and/or Section 09960, High-Performance Coatings.
 - a. Do not install surface-mounted items until finishes have been completed on substrates involved.

3.02 INSTALLATION

A. Install each door hardware item in compliance with the manufacturer's written instructions.

1. For each type of product specified and provided, submit the finish door hardware manufacturer's installation instructions to the Program/Project Manager for information.
2. Set units level, plumb, and true to line and location.
3. Adjust and reinforce the attachment substrates as necessary for proper installation and operation of the door hardware.
4. Space fasteners and anchors according to industry standards.
 - a. Drill and countersink units that are not factory prepared for anchorage fasteners.

B. Steel Doors and Frames:

1. For surface applied door hardware for steel doors and frames, drill and tap the doors and frames in accordance with the requirements of ANSI/SDI A250.6.

C. Wood Doors:

1. For wood doors, install finish hardware in accordance with the requirements of DHI-WDHS-5.

D. Mounting Heights:

1. Mount door hardware units at heights complying with the following unless otherwise indicated on the Contract Drawings or required to comply with governing regulations:
 - a. For standard steel doors and frames, comply with the mounting height requirements specified in ANSI/SDI A250.8.
 - b. For wood doors, comply with the mounting height requirements specified in DHI-WDHS-3.

E. Hinges:

1. Install the types and quantities of hinges indicated in the door hardware schedule, but not fewer than the number recommended by the manufacturer for the application indicated, or one hinge for every 30 inches (750mm) of door height, whichever is more stringent, unless other equivalent means of support for the door, such as spring hinges or pivots, are provided.

- F. Door Power Transfers:
 - 1. Install concealed power transfers.
 - 2. Run the number and size of conductors required between the door and wall.
- G. Lock Cylinders:
 - 1. Install construction cores to secure the building and other areas during the construction period.
 - a. Shortly before the Certificate of Occupancy is to be issued, the City of Phoenix Aviation Department's Locksmith will complete the door hardware keying.
- H. Thresholds:
 - 1. Set the thresholds for exterior doors, and for other doors indicated in the Finish Hardware Schedule or on the Contract Drawings to have thresholds placed in sealant, in a full bed of sealant complying with the requirements specified in Section 07920, Joint Sealants.
- I. Door Bottoms:
 - 1. Apply bottoms to the bottoms of the doors, to form a seal with the threshold when the door is closed.
- J. Perimeter Gasketing:
 - 1. Apply perimeter gasketing to the head and jamb, forming a seal between the door and frame.
- K. Meeting Stile Gasketing:
 - 1. Fasten gasketing to meeting stiles, to form a seal when the doors are closed.
- L. Stops:
 - 1. Unless wall or other type stops are indicated in Finish Hardware Schedule, on the Contract Drawings provide floor stops for doors.
 - 2. Do not mount floor stops where they will impede traffic.

3.03 REPAIR/RESTORATION

- A. Correct defects in materials and/or workmanship occurring during the warranty period at no increase in the Contract Price.

3.04 SITE QUALITY CONTROL

- A. Manufacturer Services:
 - 1. Require the finish hardware Supplier to visually inspect the installation of the finish hardware at the completion of the hardware installations.
 - a. Have the finish hardware supplier note all discrepancies or errors in the installation and operation of the hardware, and submit a Finish Hardware Supplier Inspection Report documenting his findings to the Program/Project Manager.
 - b. Upon completion of the inspection but before the final inspection, have the finish hardware Supplier submit a Finish Hardware Certification to the Program/Project Manager certifying that all hardware is properly installed according to the manufacturer's printed instructions, and is working properly.

- 1) Submit the letter of certification to the Program/Project Manager as soon as possible after installation of all hardware.

3.05 ADJUSTING

- A. Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit.
 1. Replace units that cannot be adjusted to operate as intended.
 2. Adjust the spacing of the door contacts for proper operation.
- B. Adjust door control devices to compensate for the final operation of heating and ventilating equipment, and to comply with referenced accessibility requirements.

3.06 CLOSEOUT ACTIVITIES

- A. Tag all keys, and turn them over to the Phoenix Sky Harbor International Airport upon completion of the Work.

3.07 PROTECTION

- A. Protect finish door hardware from damage, both prior to and after installation.

3.08 ATTACHMENTS – FINISH HARDWARE SCHEDULE

- A. The following attachments are appended to this Section following the “END OF SECTION” marker:
 1. Schedule 08705-1 Finish Hardware Schedule.

Schedule 08705-1 Finish Hardware Schedule

SECTION 08716

AUTOMATIC DOOR OPERATORS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Low-energy door operators for swinging doors.
 - 2. Power-assist door operators for swinging doors.
- B. Related Requirements:
 - 1. Section 08415 "Aluminum Entrances and Storefronts" for exterior aluminum entrance swinging doors and frames.
 - 2. Section 08460 "Automatic Entrance Doors" for bi-parting and telescoping, sliding automatic entrances packaged with automatic door operators.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ADA: Americans with Disabilities Act.
 - 2. ADAAG: Americans with Disabilities Act Accessibility Guidelines.
 - 3. ANSI: American National Standards Institute.
 - 4. CRF: Condensation resistance factor.
 - 5. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called "credits"—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. Activation Device: A control that, when actuated, sends an electrical signal to the door operator to open the door.
 - 3. Safety Device: A control that, to avoid injury, prevents a door from opening or closing.

C. Reference Standards:

1. Aluminum Association (AA):
 - a. DAF-45 – Designation System for Aluminum Finishes.
2. American Architectural Manufacturer's Association (AAMA):
 - a. AAMA 511 - Voluntary Guideline for Forensic Water Leakage Testing of Fenestration Production.
 - b. AAMA 701/702 - Voluntary Specifications for Pile Weatherstripping and Replaceable Fenestration Weatherseals.
 - c. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections.
 - d. AAMA 2605 - Voluntary Specifications, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels.
3. American Society of Civil Engineers (ASCE)/Structural Engineering Institute (SEI):
 - a. ASCE/SEI 7 - Minimum Design Loads for Buildings and Other Structures.
4. ASTM International (ASTM):
 - a. ASTM A 36/A 36M - Standard Specification for Carbon Structural Steel.
 - b. ASTM A 123/A 123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
 - c. ASTM A 153/A 153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
 - d. ASTM A 1008/A 1008M – Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Allow, High-Strength Low-Allow with Improved Formability, Solution Hardened, and Bake Hardenable.
 - e. ASTM A 1011/A 1011M – Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.
 - f. ASTM B 209 – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
 - g. ASTM B 209M – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate [Metric].
 - h. ASTM B 211 - Standard Specification for Aluminum and Aluminum-Alloy Bar, Rod, and Wire.
 - i. ASTM B 211M - Standard Specification for Aluminum and Aluminum-Alloy Bar, Rod, and Wire [Metric].

- j. ASTM B 221 – Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
- k. ASTM B 221M – Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes [Metric].
- l. ASTM B 429/B 429M - Standard Specification for Aluminum-Alloy Extruded Structural Pipe and Tube.
- m. ASTM D 2000 - Standard Classification System for Rubber Products in Automotive Applications.
- n. ASTM D 2287 – Standard Specification for Nonrigid Vinyl Chloride Polymer and Copolymer Molding and Extrusion Compounds.
- o. ASTM E 283 – Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.
- p. ASTM E 330 – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.
- q. ASTM E 331 – Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.
- r. ASTM E 699 - Standard Practice for Evaluation of Agencies Involved in Testing, Quality Assurance, and Evaluating of Building Components.
- 5. American Welding Society (AWS):
 - a. AWS A5.10/A5.10M – Specification for Bare Aluminum and Aluminum-Alloy Welding Electrodes and Rods.
 - b. AWS D1.2/D1.2M - Structural Welding Code-Aluminum.
- 6. Builders Hardware Manufacturers Association (BHMA):
 - a. ANSI/BHMA A156.1 –Butts and Hinges.
 - b. ANSI/BHMA A156.4 –Door Controls – Closers.
 - c. ANSI/BHMA A156.5 – Auxiliary Locks and Associated Products.
 - d. ANSI/BHMA A156.16 –Auxiliary Hardware.
 - e. ANSI/BHMA A156.19 – Power Assist and Low Energy Power Operated Doors
- 7. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 8. Glass Association of North America (GANA):
 - a. GANA Glazing Manual.
- 9. National Association of Architectural Metal Manufacturers (NAAMM):
 - a. Architectural Metal Products Division (AMP):
 - 1) NAAMM AMP 500 – Metal Finishes Manual for Architectural and Metal Products.

10. South Coast Air Quality Management District (SCAQMD):
 - a. SCAQMD Rule #1168 – Adhesive and Sealant Applications.
11. Underwriter's Laboratories, Inc. (UL):
 - a. UL 305 - Standard for Panic Hardware.
12. United States Government:
 - a. Americans with Disabilities Act Accessibility Guidelines (ADAAG) for Buildings and Facilities [Federal Register Volume 56 Number 144 (1991)], <http://www.access-board.gov/adaag/html/adaag.htm>.
 - b. Department of Justice:
 - 1) 28 CFR 36 – Nondiscrimination on the Basis of Disability by Public Accommodations and in Commercial Facilities.
 - c. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Templates:
 - a. Distribute for doors, frames, and other work specified to be factory prepared and reinforced for installing automatic door operators.
 2. Hardware:
 - a. Coordinate hardware for doors with operators to ensure proper size, thickness, hand, function, and finish.
 3. Electrical System Rough-in:
 - a. Coordinate layout and installation of automatic door operators with connections to power supplies and access-control system
- B. Scheduling:
 1. Coordinate the automatic door operator fabrication schedule with construction progress to avoid delaying the work.
- C. Maintenance Service:
 1. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of automatic door operator Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

- a. Engage a Certified Inspector to perform safety inspection after each adjustment or repair and at end of maintenance period. Furnish completed inspection reports to Owner.
 - b. Perform maintenance, including emergency callback service, during normal working hours.
 - c. Include 24-hour-per-day, 7-day-per-week, emergency callback service.
2. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain automatic door operators.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data: For each type of product.
 - 1) Automatic Door Operators.
 - 2) Hardware coordinated with Door and Operator.
 - 3) Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for automatic door operators.
 - 4) Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories
 - b. Shop Drawings:
 - 1) Automatic Door Operators.
 - 2) Include plans, elevations, sections, hardware mounting heights, and attachment details.
 - 3) Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 4) Indicate locations of activation and safety devices.
 - 5) Include diagrams for power, signal, and control wiring.
 - c. Samples:
 - 1) Color charts.
 - 2) For each exposed product and for each color and texture specified, manufacturer's standard size.
 - d. Certificates:
 - 1) Qualification Data: For Installer.

- a) An authorized representative who is trained and approved by manufacturer for installation and maintenance of units required for this Project.
 - b) Maintenance Proximity: Not more than two hours' normal travel time from Installer's place of business to Project site.
- 2) Product Certificates: For each type of automatic door operator. For each operator for fire-rated door assemblies, certify that operator is listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for use on types and sizes of labeled fire doors required.
- 3) Field quality-control reports.
- e. Qualification Statements:
 - 1) Certified by AAADM.

B. Closeout Submittals:

- 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Maintenance Data: For automatic door operators, safety devices, and control systems, to include in maintenance manuals.
 - b. Warranty Documentation:
 - 1) Automatic Door Operators.

1.05 PREINSTALLATION MEETINGS

- A. Coordinate a Preinstallation Conference with the Program/Project Manager, Architect, Engineers, Security Consultant, Hardware Consultant, and all vested Groups.
 - 1. Conduct conference at Project site.

1.06 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
 - 2. Testing and Inspection Agency:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

B. Qualifications:

1. Installer's Qualifications:
 - a. Engage an experienced installer who has specialized in installing automatic door operators similar to those required for this Contract, and who is acceptable to manufacturer, to assume responsibility for and to perform the Work of this Section.
 - b. Submit the automatic door operator installer's qualifications to the Program/Project Manager for approval.

C. Certifications:

1. Installer Certificates:
 - a. Submit Installer Certificates, signed by the aluminum entrance and storefront manufacturer, certifying that the installer is acceptable to the manufacturer for installing their products.
2. Product Certificates:
 - a. Provide product certificates for each type of automatic door operator.
 - b. Provide product certificates for each operator for fire-rated door assemblies, certify that operator is listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for use on types and sizes of labeled fire doors required.

1.07 WARRANTY

A. Special Warranty:

1. Warrant repair or replacement of the components of the automatic door operators that fail in materials or workmanship within specified warranty period.
 - a. Failures include, but are not limited to, the following:
 - 1) Faulty or sporadic operation of automatic door operator, including controls.
 - 2) Deterioration of metals, metal finishes, and other materials beyond normal weathering or use.
2. Warranty Period:
 - a. Two years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 SYSTEMS

A. Manufacturers:

1. Manufacturer List:
 - a. LCN Closers; an Allegion company, www.allegion.com
 - b. SARGENT Manufacturing Company; an ASSA ABLOY Group company, www.assaabloy.com

- c. Stanley Access Technologies, LLC; Div. of Stanley Security Solutions, www.stanleysecuritysolutions.com
 - d. Approved equal.
 - 2. Substitution Limitations:
 - a. The Contract Drawings indicate the size, profiles, and dimensional requirements of the entrance and storefront systems, and are based on the specific systems indicated.
 - 1) Except with the Program/Project Manager's approval, do not provide products modifying the intended aesthetic effect indicated in the Contract Documents as judged solely by the Program/Project Manager, and then only to the extent needed to comply with performance requirements.
 - 2) Where modifications to the intended aesthetic effect are proposed, submit comprehensive explanatory data to Program/Project Manager for review and approval.
 - b. Subject to compliance with the requirements indicated in the Contract Documents, other manufacturers' systems with equal performance characteristics may be considered.
 - 3. Product Options:
 - a. Source Limitations:
 - 1) Obtain each type of entrance and storefront system through one source and from a single manufacturer.
- B. Performance:
- 1. Opening Force
 - a. Opening Force if Power Fails: Not more than **15 lbf (67 N)** required to release latch if provided, not more than **30 lbf (133 N)** required to manually set door in motion, and not more than **15 lbf (67 N)** required to fully open door.
 - b. Accessible Interior Doors: Not more than **5 lbf (22 N)** to push or pull door to fully open position.
 - 2. Entrapment-Prevention Force: Not more than **15 lbf (67 N)** required to prevent stopped door from closing or opening.
- C. Design Criteria:
- 1. General
 - a. Provide operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for long-term, maintenance-free operation under normal traffic load for occupancy type indicated; and according to UL 325. Coordinate

operator mechanisms with door operation, hinges, and activation and safety devices.

- 1) Fire-Rated Doors: Provide door operators for fire-rated door assemblies that comply with NFPA 80 for fire-rated door components and are listed and labeled by a qualified testing agency.
- 2) Wind Load: Provide door operators on exterior doors that will open and close doors and maintain them in fully closed position when subjected to wind loads defined in the International Building Code.
- b. Electromechanical Operating System: Self-contained unit powered by permanent-magnet dc motor; with closing speed controlled mechanically by gear train and dynamically by braking action of electric motor, connections for power and activation- and safety-device wiring, and manual operation including spring closing when power is off.
- c. Hinges: See Section 08705 Finish Hardware for hinge type for each door that door operator shall accommodate.
- d. Cover for Surface-Mounted Operators: Fabricated from 0.125-inch-(3.2-mm-) thick, extruded or formed aluminum; continuous over full width of operator-controlled door opening with enclosed end caps, provision for maintenance access, and fasteners concealed when door is in closed position.
- e. Brackets and Reinforcements: Fabricated from aluminum with nonstaining, nonferrous shims for aligning system components.
- f. Fire-Door Package: Consisting of UL-listed latch mechanism, power-reset box, and caution signage for fire-rated doors. Latch mechanism shall allow door to swing free during automatic operation; when fire is detected, latch actuator shall cause exit hardware to latch when door closes. Provide latch actuators with fail-secure design.
- g. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Configuration: Operator to control single swinging door.
 - a. Traffic Pattern: One way.
 - b. Operator Mounting: Surface.
3. Configuration: Operator to control pair of swinging doors.
 - a. Traffic Patter: One way.
 - b. Operator Mounting: Surface.
4. Operation:

- a. Low-energy door operators: Power opening and power-assisted spring closing. Provide time delay for door to remain open before initiating closing cycle as required by BHMA A156.19. When not in automatic mode, door operator shall function as manual door closer, with or without electrical power.
 - b. Power-assist door operators: Power-assisted opening that reduces the force to open door and power-assisted spring closing. Pushing or pulling on door activates operator. Provide time delay for door to remain open before initiating closing cycle as required by BHMA A156.19. When not in automatic mode, door operator shall function as manual door closer, with or without electrical power.
5. Operating System:
 - a. Electromechanical.
6. Features:
 - a. Adjustable opening and closing speeds
 - b. Adjustable opening and closing forces.
 - c. Adjustable independent electronic adjustment.
 - d. Adjustable backcheck valve.
 - e. Adjustable time delay.
 - f. Selectively activated by external initiating device.
7. Activation device:
 - a. Push-plate switch on each side of door to activate door operator.
8. Exposed Finish: Stainless Steel.
 - a. Color: As selected by Architect from full range of industry colors and color densities.
 - b. Metal Cladding: No. 4, directional-satin-finish stainless steel.
9. Product Data:
 - a. Submit Product Data for the automatic door operators, and hardware proposed for the Work of this Section to the Program/Project Manager for approval.
10. Shop Drawings:
 - a. For the automatic door operators provided, submit Shop Drawings to the Program/Project Manager for approval.
 - 1) Show fabrication and installation details, including plans, elevations, sections, details of the components, and attachments to other work.
 - 2) Include with the hardware schedule; and indicate operating hardware types, quantities, and locations.

D. Materials:

1. Stainless-Steel Sheet:

- a. Provide ASTM A 240/A 240M or ASTM A 666, Type 304, stretcher-leveled standard of flatness, in manufacturer's standard thickness
 2. Polycarbonate Sheet:
 - a. Provide ASTM C 1349, Appendix X1, Type II, coated, mar-resistant, UV-stabilized polycarbonate with coating on both surfaces.
 3. Fasteners and Accessories:
 - a. Provide corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
- E. Accessories:
 1. Signage: As required by cited BHMA standard for type of door and its operation.
 - a. Application Process: Operator manufacturer's standard process.
 - b. Provide sign materials with instructions for field application when operators are installed.
- F. Controls
 1. General:
 - a. Provide controls, including activation and safety devices, according to BHMA standards; for condition of exposure; and for long-term, maintenance-free operation under normal traffic load for occupancy type indicated. Coordinate activation and safety devices with door operation and door operator mechanisms.
 2. Push-Plate Switch:
 - a. Momentary-contact door control switch with flat push-plate actuator with engraved message.
 - 1) Square Configuration:
 - a) Square push plate with 4-by-4-inch (100-by-100-mm) junction box
 - b) Mounting: Surface mounted on wall or post.
 - 2) Mullion Configuration:
 - a) Rectangular push plate with 2-by-4-inch (50-by-100-mm) junction box.
 - b) Mounting: As indicated on Drawings, Recess mounted in door jamb or mullion.
 - 3) Push-Plate Material: Stainless steel
 - 4) International symbol of accessibility and "Press to Open".
- G. Fabrication:
 1. Shop Fabrication:
 - a. Factory fabricate automatic door operators to comply with indicated standards.

2. Fabricate exterior components to drain condensation and water passing joints within operator enclosure to the exterior.
3. Use concealed fasteners to greatest extent possible. Where exposed fasteners are required, use countersunk Phillips flat-head machine screws, finished to match operator.
4. Provide metal cladding, completely covering visible surfaces before shipment to Project site. Fabricate cladding with concealed fasteners and connection devices, with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion, and with allowance for thermal expansion at exterior doors.
5. Shop Finishing Requirements:
 - a. Protect mechanical finishes on exposed surfaces from damage by applying strippable, temporary protective covering before shipping.
 - b. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.
 - c. Appearance of Finished Work:
 - 1) Noticeable variations in same piece are not acceptable.
 - 2) Variations in appearance of adjoining components are acceptable if they are within range of approved Samples and are assembled or installed to minimize contrast.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Examine conditions, with Installer present, for compliance with requirements for installation tolerances, door and frame preparation and reinforcements, and other conditions affecting performance of automatic door operators.
 2. Examine roughing-in for electrical systems to verify actual locations of power connections before automatic door operator installation.
 3. Verify that full-height finger guards are installed at each door with pivot hinges where door has a clearance at hinge side greater than **1/4 inch (6 mm)** and less than **3/4 inch (19 mm)** with door in any position.
- B. Evaluation and Assessment:
 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install automatic door operators according to manufacturer's written instructions and cited BHMA standard for type of door operation and direction of pedestrian travel, including signage, controls, wiring, remote power units if any, and connection to building's power supply.
 - 1. Do not install damaged components. Fit joints to produce hairline joints free of burrs and distortion.
 - 2. Install operators true in alignment with established lines and door geometry without warp or rack. Anchor securely in place.
- B. Controls:
 - 1. Install activation and safety devices according to manufacturer's written instructions and cited BHMA standard for operator type and direction of pedestrian travel. Connect control wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables".
- C. Access-Control System:
 - 1. Connect operators to access-control system as specified in Section 281300 "Access Control".
- D. Signage:
 - 1. Apply on both sides of each door as required by cited BHMA standard for type of door operator and direction of pedestrian travel.

3.03 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. Certified Inspector:
 - a. Engage a Certified Inspector to test and inspect components, assemblies, and installations, including connections.
 - 2. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - a. Test and inspect each automatic door operator installation, using AAADM inspection forms, to determine compliance of installed systems with applicable BHMA standards.
 - 3. Prepare test and inspection reports.

B. Non-Conforming Work

1. Automatic door operators will be considered defective if they do not pass tests and inspections
2. Repair, or remove and replace, Work that does not meet the specified requirements, or that is damaged by testing.
 - a. Replace nonconforming work to conform to the specified requirements.

3.04 ADJUSTING

- A. Adjust automatic door operators to function smoothly, and lubricate as recommended by manufacturer; comply with requirements of applicable BHMA standards.
 1. Adjust operators on exterior doors for weathertight closure.
- B. After completing installation of automatic door operators, inspect exposed finishes on doors and operators. Repair damaged finish to match original finish.
- C. Readjust automatic door operators and controls after repeated operation of completed installation equivalent to three days' use by normal traffic (100 to 300 cycles).
- D. Occupancy Adjustment: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.05 CLEANING

- A. Remove excess sealant and grease, and dirt, from surfaces.

Curtain Wall
Specification

SECTION 08800

GLAZING

PART 1 GENERAL

1.01 SUMMARY

Click hyperlink to see
the response
regarding a curtain
wall specification.

A. Section Includes:

1. Requirements for glazing at interior and exterior doors and windows, storefronts and entrances, borrowed lites, structural glass curtain walls, structural sealant glazed assemblies, and for glazing applications in other Sections where glazing requirements are specified by reference to this Section.

B. Related Requirements:

1. Section 01330 - Submittal Procedures.
2. Section 01360 - Sustainable Design Requirements.
3. Section 01454 - Mock-Up Requirements.
4. Section 01780 - Closeout Submittals.
5. Section 08411 - Aluminum-Framed Entrances and Storefronts.
6. Section 08520 - Aluminum Windows.
7. Section 08970 - Structural Glass Curtain Walls.
8. Section 08975 - Structural Sealant Glazed Assemblies.

1.02 REFERENCES

A. Abbreviations and Acronyms:

1. EPDM: Ethylene propylene diene terpolymer M-class rubber.
2. f. o. b.: Freight on board.
3. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
4. PVB: Polyvinyl butyral.
5. PVC: Polyvinyl-chloride.

6. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside, and San Bernardino counties in California.
7. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.

B. Definitions:

1. Standard glazing terms defined in the GANA Laminated Glazing Reference Manual, the GANA Glazing Manual, and IGMA TM-3000 apply to the Work of this Section.
2. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
3. Damaged Glass: Glass having edge damage or other imperfections that, when installed, could weaken the glass and impair its performance and appearance.
4. Deterioration of Coated Glass: Defects developed from normal use attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning coated glass contrary to manufacturer's written instructions.
 - a. Defects include peeling, cracking, and other indications of deterioration in the metallic coating.
5. Deterioration of Insulating Glass: Failure of the hermetic seal under normal use that is attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning insulating glass contrary to manufacturer's written instructions.
 - a. Evidence of failure is the obstruction of vision by dust, moisture, or film on the interior surfaces of the glass.
6. Deterioration of Laminated Glass: Defects developed from normal use attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning laminated glass contrary to manufacturer's written instructions.
 - a. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by the referenced laminated-glass standard.
7. Fire-Rated Door Assemblies: Assemblies complying with the requirements specified in NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to the Authorities Having Jurisdiction, for fire ratings indicated, based on testing in accordance with the methods specified in NFPA 252.

8. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.
9. Interspace: Space between lites of an insulating-glass unit that contains dehydrated air or a specified gas.
10. Low-E: Low-emissivity, a term used for a surface that radiates or emits, low levels of radiant energy.
11. Manufacturers of Glass Products: Firms that produce primary glass, fabricated glass, or both, as defined in the glazing publications referenced herein.
12. Safety Glass: Category II materials complying with testing requirements specified in 16 CFR 1201 and ANSI Z97.1.

C. Reference Standards:

1. American Architectural Manufacturers Association (AAMA):
 - a. AAMA 800 – Voluntary Specifications and Test Methods for Sealants.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Annealed float glass.
 - 2) Ultra-clear (low-iron) float glass.
 - 3) Heat-treated float glass.
 - 4) Sputter-coated float glass.
 - 5) Coated spandrel float glass.
 - 6) Laminated glass.
 - 7) Insulating-glass units.
 - 8) Fire-rated glazing.
 - 9) Glazing tapes.
 - 10) Glazing gaskets.
 - 11) Cleaners, primers, and sealers.
 - 12) Setting blocks.
 - 13) Spacers.
 - 14) Edge blocks.
 - 15) Cylindrical glazing sealant backing.
 - 16) Perimeter insulation for fire-resistive glazing.
 - 17) Frosted glass film.
 - 18) Opaque glazing film.
 - b. Shop Drawings:
 - 1) Glazing systems.
 - c. Samples:
 - 1) Sample of each color of tinted float glass.
 - 2) Samples of coated vision glass.
 - 3) Samples of coated spandrel glass.

- 4) Samples of fire-resistive glazing products.
 - 5) Sample of each type of laminated glass including the interlayer.
 - 6) Samples of insulating glass units for each designation indicated.
 - d. Delegated Design Submittals:
 - 1) Engineering analysis to determine the thicknesses of glazing for each application.
 - e. Certificates:
 - 1) Glazing manufacturer's Certificates of Compliance.
 - f. Qualification Statements:
 - 1) Glass installer's qualifications.
 - 2) Glass Testing and Inspection Agency's qualifications.
 - 3) Professional Engineer's qualifications.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Glass, sealant, gasket, and other glazing material manufacturers written installation instructions.
 - b. Site Quality Control Submittals:
 - 1) Coated float glass test reports.
 - 2) Insulating glass test reports.
 - 3) Glazing gasket test reports.
 - 2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. Adhesives and Sealants
 - 1) Submit product data highlighting the VOC content for any field applied sealant used.
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Glazing Installer's Warranty.
 - 2) Coated-Glass Products Manufacturer's Warranty.
 - 3) Laminated Glass Products Manufacturer's Warranty.
 - 4) Insulating Glass Products Manufacturer's Warranty.

1.04 QUALITY ASSURANCE

A. Qualifications:

1. Glass Installer Qualifications:
 - a. Employ an experienced Certified Glass Installer certified under the NGA Certification Program, and who has completed glazing similar in material, design, and extent to that indicated for this Contract, and whose work has resulted in construction with a record of successful in-service performance.
 - b. Submit the glass installer's qualifications to the Program/Project Manager for approval.
2. Glass Testing and Inspection Agency's Qualifications:
 - a. Employ an independent testing agency accredited according to the requirements of the National Fenestration Rating Council Incorporated (NFRC) Laboratory Accreditation Program as specified in NFRC 701.
 - b. Insulating-Glass Certification Testing and Inspection Agency Qualifications:
 - 1) Employ an independent testing agency accredited according to the requirements of the Insulating Glass Certification Council specified in IGMA TM-4000.
 - c. Submit the glass Testing and Inspection Agency's qualifications to the Program/Project Manager for approval.
3. Professional Engineer's Qualifications:
 - a. Employ an independent Professional Engineer, registered in the State of Arizona, who is qualified to perform the engineering analysis work required under this Section.
 - b. Submit the Professional Engineer's qualifications to the Program/Project Manager for approval.

B. Certifications:

1. Glazing Manufacturer's Certificates of Compliance:
 - a. Submit the glazing manufacturer's Certificates of Compliance, signed by the safety glass and glazing products manufacturer, and certifying that the safety glass and glazing products being provided comply with the specified requirements, to the Program/Project Manager for approval.
 - 1) For solar-control low-e-coated glass, submit documentation demonstrating that the manufacturer of the coated glass is certified by the coating manufacturer.
2. Safety Glazing Certification:
 - a. Subject to compliance with requirements specified, provide certified safety glass permanently marked with the certification label of the Safety Glazing Certification Council, Inc. (SGCC) or another certification agency acceptable to the Authorities Having Jurisdiction.
3. Insulating-Glass Certification:

- a. Provide insulating-glass that is certified by the Insulating Glass Certification Council (IGCC) to comply with the requirements specified in IGMA TM-3000, and permanently marked with the either on spacers or on at least one component lite of the units with the appropriate certification IGCC/IGMA mark of the Insulating Glass Certification Council (IGCC).
 - 1) The glass must be produced in an IGCC/IGMA Certified Fabrication Facilities plant, certified in accordance with the requirements specified in IGMA TM-4000.
- C. Preconstruction Testing:
 1. Where adhesion of sealants to substrates may be problematic, perform preconstruction sealant-substrate testing to determined compatibility and the need of primers to be applied to the joint surfaces.
- D. Site Samples:
 1. Obtain Samples of the following products, for glass in the form of 12-inch square Samples and for sealants in the form of 12-inch long Samples installed between 2 strips of material representative of the color of the adjoining framing system:
 - a. Each color of tinted float glass.
 - b. Coated vision glass.
 - c. Coated spandrel glass.
 - d. Fire-resistive glazing products.
 - e. Each type of laminated glass including the interlayer.
 - f. Insulating glass units for each designation indicated.
 2. Submit the Samples to the Program/Project Manager for approval.
- E. Mock-Ups:
 1. Build mockups in accordance with the requirements specified in Section 01454, Mock-Up Requirements.
 - a. Build the mockups in the location and of the size indicated or, if not indicated, as directed by Program/Project Manager.
 - b. Build glass mockups as specified in Section 08411, Aluminum-Framed Entrances and Storefronts, Section 08520, Aluminum Windows, Section 08970, Structural Glass Curtain Walls, and Section 08975, Structural Sealant Glazed Assemblies using the glazing methods to be used for production Work to install the following glass, matching the glazing systems required for this Contract, in the mockups:
 - 1) Heat-strengthened coated glass.
 - 2) Fully tempered glass.
 - 3) Spandrel glass.

- 4) Laminated glass.
2. Approved mockups may become part of the completed Work if undisturbed at the time of Substantial Completion.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. For insulating-glass units that will be exposed to substantial altitude changes, comply with insulating-glass manufacturer's written recommendations for venting and sealing the glass to avoid hermetic seal ruptures.
- B. Storage and Handling Requirements:
 1. Protect glazing materials in accordance with the manufacturer's written instructions and as needed to prevent damage to the glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
 - a. Protect glass edges from damage during handling and installation.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.06 SITE CONDITIONS

- A. Ambient Conditions:
 1. Environmental Limitations:
 - a. Do not proceed with glazing when the ambient and substrate temperature conditions are outside the limits permitted by the glazing material manufacturers, or when the glazing channel substrates are wet from rain, frost, condensation, or other causes.

1.07 WARRANTY

- A. Special Warranties:
 1. The warranties specified in this Paragraph do not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents; and are in addition to, and run concurrent with, other warranties made under other requirements of the Contract Documents.
 2. Glazing Installer's Special Warranty:
 - a. Furnish a written Glazing Installer's Warranty on the installer's standard form in which the glazing installer agrees, at no increase in

the Contract Price, to repair or replace glazing, including float glass, wire glass, and insulated glass, that does not comply with the performance and other requirements specified in this Section within a 5-year warranty period from the date of Substantial Completion.

- 1) Submit the Glazing Installer's Warranty to the Program/Project Manager.
3. Coated-Glass Products Manufacturer's Special Warranty:
 - a. Furnish a written Coated-Glass Products Manufacturer's Warranty made out to the Owner and signed by the coated-glass manufacturer in which the coated-glass products manufacturer agrees, at no increase in the Contract Price, to furnish coated-glass products to replace those that do not comply with performance and other requirements specified in this Section and/or that deteriorate as defined in Subparagraph 1.02.B.4 within a 10-year warranty period from the date of Substantial Completion, f.o.b. at the nearest shipping point to the Site.
 - 1) Submit the Coated-Glass Products Manufacturer's Warranty to the Program/Project Manager.
4. Laminated Glass Products Manufacturer's Special Warranty:
 - a. Furnish a written Laminated Glass Products Manufacturer's Warranty made out to the Owner and signed by the laminated glass manufacturer in which the laminated glass products manufacturer agrees, at no increase in the Contract Price, to furnish laminated glass products to replace those that do not comply with performance and other requirements specified in this Section and/or that deteriorate as defined in Subparagraph 1.02.B.6 within a 5-year warranty period from the date of Substantial Completion, f.o.b. at the nearest shipping point to the Site.
 - 1) Submit the Laminated Glass Products Manufacturer's Warranty to the Program/Project Manager.
5. Insulating Glass Products Manufacturer's Special Warranty:
 - a. Furnish a written Insulating Glass Products Manufacturer's Warranty made out to the Owner and signed by the insulating glass manufacturer in which the insulating glass products manufacturer agrees, at no increase in the Contract Price, to furnish insulating glass products to replace those that do not comply with performance and other requirements specified in this Section and/or that deteriorate as defined in Subparagraph 1.02.B.5 within a 10-year warranty period from the date of Substantial Completion, f.o.b. at the nearest shipping point to the Site.

- 1) Submit the Coated-Glass Products Manufacturer's Warranty to the Program/Project Manager.

PART 2 PRODUCTS

2.01 GLAZING SYSTEMS

A. Manufacturers:

1. Manufacturer List:
 - a. If manufacturers are listed for the products specified in this Section, subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations for Glass Sputter-Coated with Solar-Control Low-E Coatings:
 - 1) If solar-control low-e coatings are to be provided by a primary glass manufacturer that has established a certified fabricator program, obtain the sputter-coated solar-control low-e-coated glass in fabricated units from a manufacturer that is certified by the coated-glass manufacturer.
 - c. Source Limitations for Glazing Accessories:
 - 1) Obtain glazing accessories for each product and installation method indicated for the Work of this Section from one source and from a single manufacturer.

B. Description:

1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).
2. Sustainable Requirements:
 - a. Volatile Organic Compounds (VOC) Content of Interior Sealants:
 - 1) Provide interior sealants and sealant primers for this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168:

- a) Architectural Sealants: Not more than 250 grams per Liter less water.

C. Performance:

1. Provide glazing systems capable of withstanding normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to defective manufacture, fabrication, and installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
2. Thermal Movements:
 - a. Provide glazing that allows for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures acting on glass framing members and glazing components:
 - 1) Ambient Temperature Change (Range): 120 degrees Fahrenheit.
 - 2) Material Surfaces Temperature Change (Range): 180 degrees Fahrenheit.
 - a) Base the engineering calculations on the surface temperatures of the materials due to both the solar heat gain and the nighttime-sky heat loss.
3. Thermal and Optical Performance Properties:
 - a. Provide glass having the performance properties specified based on the manufacturer's published test data determined in accordance with the procedures indicated below:
 - 1) For laminated-glass lites, base properties on products of the construction indicated.
 - 2) For insulating-glass units, base properties on units having the thickness indicated for the overall unit and for each lite.
 - 3) Center-of-Glass Values:
 - a) Base center-of-glass values on using the LBNL WINDOW 5.2 computer program methodologies for the following:
 - (1) U-Factors:
 - (a) Base the center-of-glass U-factors on the NFRC 100 methodology expressed as Btu per square foot-hour-degree Fahrenheit.
 - (2) Solar Heat Gain Coefficient:
 - (a) Base the center-of-glass solar heat gain coefficient on the NFRC 200 methodology.
 - (3) Solar Optical Properties:
 - (a) Base the center-of-glass solar optical properties on the NFRC 300 methodology.

D. Design Criteria:

1. Provide glazing products of the material, size, and shape complying with the referenced glazing standards, the requirements of the manufacturers of glass and other glazing materials for the application indicated, and having a proven record of compatibility with the surfaces that will be contacted during installation.
2. Thicknesses:
 - a. Delegated Design Responsibility:
 - 1) The manufacturer is responsible for determining the required thicknesses of glazing for each application.
 - a) Provide the thicknesses required by engineering analysis, but not less than the minimum thicknesses indicated in the Contract Documents.
 - (1) Have the engineering analysis performed by a Professional Engineer.
 - (2) Submit the engineering analysis to determine the thicknesses of glazing for each application, certified by the Professional Engineer, to the Program/Project manager for information.
 - b) Prepare data for the system, including Shop Drawings, based on a testing and engineering analysis of the manufacturer's standard products applied to applications similar to those indicated for this Contract.
 - (1) Submit the Shop Drawings of the glazing systems to the Program/Project manager for approval.
 - 2) Provide glazing designed in accordance with the published recommendations of the glass product manufacturers and the following references, unless more stringent requirements are indicated in the Contract Documents.
 - a) GANA Laminated Glazing Reference Manual.
 - b) GANA Glazing Manual.
 - c) IGMA TM-3000.
 - b. The glass thickness designations indicated in the Contract Documents are minimums, and are only for detailing.
 - 1) Confirm the glass thicknesses by analyzing the Contract loads and in-service conditions.
 - 2) Provide glass lites of the thickness designations indicated for various size openings, but not less than the thicknesses and strengths (annealed or heat treated) required to meet or exceed the indicated criteria.

- c. Select minimum glass thicknesses complying with the requirements specified in ASTM E 1300, according to the following requirements:
 - 1) Design Wind Loads: As specified in the Contract Documents.
 - 2) Probability of Breakage for Vertical Glazing:
 - a) For lites set vertically or not more than 15 degrees off vertical and under wind action, use 8 lites per 1000.
 - b) Load Duration: 3 seconds.
 - 3) Maximum Lateral Deflection:
 - a) For the following types of glass supported on all 4 edges, provide the thickness required to limit the center deflection at the design wind pressure to 1/50 times the short side length or 1 inch, whichever is less.
 - (1) Monolithic-glass lites heat treated to resist wind loads.
 - (2) Insulating glass.
 - (3) Laminated-glass lites.
 - 4) Minimum Glass Thickness for Exterior and Interior Lites:
 - a) For exterior and interior lites, provide glass not less than 6.0mm thick.
- 3. Glazing for Fire-Rated Door Assemblies:
 - a. For fire-rated door assemblies, provide glazing that complies with the requirements specified in NFPA 80, and that is listed and labeled for the fire-protection ratings indicated in the Contract Documents by a Testing and Inspecting Agency acceptable to the Authorities Having Jurisdiction based on testing performed in accordance with the methods specified in NFPA 252.
- 4. Glazing for Fire-Rated Window Assemblies
 - a. For fire-rated window assemblies, provide glazing that complies with the requirements specified in NFPA 80, and that is listed and labeled for the fire-protection ratings indicated in the Contract Documents by a Testing and Inspecting Agency acceptable to the Authorities Having Jurisdiction based on testing performed in accordance with the methods specified in NFPA 257.
- 5. Safety Glazing Products:
 - a. Provide safety glazing products complying with the testing requirements specified in 16 CFR 1201.
 - 1) For glazing lites having an exposed surface area on one side of more than 9 square feet, including Kind FT glass and laminated glass, provide glazing products complying with the requirements for Category II materials specified in 16 CFR 1201.
 - 2) For glazing lites having an exposed surface area on one side of 9 square feet or less, provide glazing products complying with the

- requirements for Category I or II materials specified in 16 CFR 1201, except for hazardous locations where Category II materials are required by 16 CFR 1201 and the regulations of the Authorities Having Jurisdiction..
6. Elastomeric Glazing Sealants:
 - a. Provide elastomeric glazing sealant products of the type indicated, and complying with the following requirements:
 - 1) Compatibility:
 - a) Select glazing sealants that are compatible with one another and the other materials they will be in contact with under the conditions of service and application as demonstrated by the sealant manufacturer based on testing and field experience, including glass products, seals of insulating-glass units, and glazing channel substrates.
 - 2) Suitability:
 - a) Comply with the sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for the applications indicated in the Contract Documents and for the conditions existing at time of installation.
 - 3) Colors of Exposed Glazing Sealants:
 - a) Provide glazing sealants for exposed applications having the colors selected by the Program/Project Manager from the manufacturer's full range of colors.
 - b. Elastomeric Glazing Sealant Standard:
 - 1) For each liquid-applied, chemically curing sealant, provide elastomeric glazing sealants complying with the requirements for type, grade, class, and uses specified in ASTM C 920 and with other requirements indicated in the Contract Documents.
 - c. Glazing Sealant for Fire-Resistive Glazing Products:
 - 1) Provide glazing sealant for fire-resistive glazing products identical to the product used in the test assembly to obtain the fire-protection rating.
 7. Product Data:
 - a. Obtain Product Data for each glass product and glazing material indicated in the Contract Documents.
 - b. Submit the Product Data to the Program/Project Manager for approval.

E. Materials

1. Annealed Float Glass:

- a. Provide annealed float glass complying with the requirements for Type I (transparent flat glass), Quality-Q3, Class 1 (clear) glass specified in ASTM C 1036.
 - 1) Where heat strengthened glass is required to resist thermal stresses induced by differential shading of individual glass lites, and to comply with system performance requirements indicated in the Contract Documents, provide Kind HS (heat-strengthened) float glass or Kind FT (fully tempered) float glass.
- b. Thickness:
 - 1) Provide annealed float glass that is at least 6.0mm thick.
2. Ultra-Clear (Low-Iron) Float Glass:
 - a. Provide ultra-clear (low-iron) float glass complying with the requirements for Type I (transparent flat glass), Quality-Q3, Class 1 (clear) glass specified in ASTM C 1036, and having visible light transmission of at least 91 percent and a solar heat gain coefficient of at least 0.87.
 - b. Thickness:
 - 1) Provide ultra-clear (low-iron) float glass that is at least 6.0mm thick.
 - c. Manufacturers:
 - 1) AFG Industries Inc., Krystal Klear, <http://www.afgglass.com>.
 - 2) Pilkington Building Products North America, Optiwhite, <http://www.pilkington.com/the+americas/usa/english/pilkington+in+the+usa/default.htm>.
 - 3) PPG Industries, Inc., Starphire, <http://corporateportal.ppg.com/ppg>.
 - 4) Approved equal.
3. Heat-Treated Float Glass:
 - a. Provide heat-treated float glass complying with the requirements for Type I (transparent flat glass), Quality-Q3, Class 1 (clear) annealed glass specified in ASTM C 1048, and having the Condition indicated in the Contract Documents.
 - 1) For uncoated glass, provide glass complying with the requirements for Condition A (uncoated surfaces) specified in ASTM C 1048 unless otherwise indicated.
 - 2) For coated vision glass, provide glass complying with the requirements for Condition C (other coated glass) specified in ASTM C 1048 unless otherwise indicated.
 - b. Fabrication Process
 - 1) At the manufacturer's option, provide heat-treated float glass fabricated using either the vertical (tong-held) or horizontal (roller-

- hearth) process with the roll-wave distortion parallel to the bottom edge of the glass as installed, except where tongless or free of tong marks is indicated.
- c. Where heat strengthened glass is required to resist thermal stresses induced by differential shading of individual glass lites and to comply with glass design requirements, provide Kind FT (fully tempered) float glass.
 - 1) Color:
 - a) Unless otherwise indicated, provide grey glass having low-E values.
 - d. Where safety glass is required to comply with system performance requirements, provide Kind HS (heat-strengthened) float glass.
 - e. Thickness:
 - 1) Provide heat-treated float glass that is at least 6.0mm thick.
4. Sputter-Coated Float Glass:
- a. Provide sputter-coated float glass complying with the requirements for Class 1 (clear) annealed float glass specified in ASTM C 1036, and having metallic-oxide or metallic -nitride coating deposited by vacuum deposition process complying with the requirements specified in ASTM C 1376 after manufacture and heat treatment (if any).
 - 1) Where heat strengthening is required to resist thermal stresses induced by differential shading of individual glass lites and to comply with system performance requirements, provide Kind HS (heat-strengthened) sputter-coated float glass.
 - 2) Where indicated in the Contract Documents, provide Kind FT (fully tempered) sputter-coated float glass.
 - b. Thickness:
 - 1) Provide sputter-coated float glass that is at least 6.0mm thick.
 - c. Reflective Coating:
 - 1) Provide a reflective sputtered coating on the sputter-coated float glass.
 - d. Location:
 - 1) Provide sputter-coated float glass in insulating glazing units.
 - e. Manufacturers:
 - 1) Viracon, VE1-2M or VE1-48 as scheduled except as indicated otherwise, <http://www.viracon.com>.
 - 2) Approved equal.
5. Coated Spandrel Float Glass:
- a. Provide coated spandrel float glass complying with other requirements specified, and with the following additional requirements:
 - 1) Fallout Resistance:

- a) Provide spandrel units identical to those passing the fallout-resistance test for spandrel glass specified in ASTM C 1048.
- 2) Factory-apply the manufacturer's standard opacifier material to the coated second surface of the lites over the reflective coating so the resulting products comply with the requirements specified in Specification No. 89-1-6 "Opacifier Color" in the GANA Engineering Standards Manual.
 - a) Match the color of the Program/Project Manager's approved Sample.
- 6. Laminated Glass:
 - a. Provide laminated glass complying with the requirements for Kind LA having 2 lites of annealed float glass specified in ASTM C 1172, and complying with the following additional requirements:
 - 1) Outer Lite:
 - a) Provide an outer lite for laminated glass consisting of Class 1 (clear) float glass.
 - b) Thickness:
 - (1) Provide an outer lite for laminated glass that is 6.0mm thick.
 - 2) Plastic Interlayer:
 - a) Provide a polyvinyl butyral interlayer having a history of not bubbling, discoloring, or losing its physical and mechanical properties after laminating the glass lites and installation.
 - (1) For polyvinyl butyral (PVB) interlayers, laminate the lites in an autoclave using heat plus pressure.
 - b) Thickness:
 - (1) Provide an interlayer for laminated glass that is 0.030 inch thick, but not less than the thickness required to comply with the requirements specified for Type II safety glass material specified in 16 CFR 1201.
 - c) Interlayer Color:
 - (1) Provide an interlayer for laminated glass that is clear.
 - 3) Inner Lite:
 - a) Provide an inner lite for laminated glass consisting of Class 1 (clear) float glass.
 - b) Thickness:
 - (1) Provide an inner lite for laminated glass that is 6.0mm thick.
 - b. Laminating Process:
 - 1) Fabricate laminated glass to produce glass free of foreign substances and air or glass pockets.

7. Insulating-Glass Units:
 - a. Provide factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, and complying with the requirements for Class CBA units specified in ASTM E 774.
 - 1) Where heat strengthening is required to resist thermal stresses induced by differential shading of individual glass lites and to comply with glass design requirements, provide Kind HS (heat-strengthened) annealed insulating-glass.
 - 2) Where indicated in the Contract Documents, provide Kind FT (fully tempered) safety (tempered) glass.
 - b. Overall Unit Thickness and Thickness of Each Lite:
 - 1) Dimensions indicated for insulating-glass units in Schedule 08800-1 Exterior Glazing Units attached to the end of this Section are nominal, and the overall thicknesses of units are measured perpendicularly from the outer surfaces of the glass lites at the unit's edge.
 - c. Sealing System:
 - 1) Provide dual seal insulating-glass units that use primary and secondary sealants incorporating the manufacturer's standard sealants.
 - d. Spacer Specifications:
 - 1) Provide insulating-glass units that incorporate the manufacturer's standard spacer material and construction.
 - e. Color:
 - 1) Provide insulating-glass units fabricated using grey glass with low-E values.
8. Fire-Rated Glazing:
 - a. Laminated Glass Having Intumescent Interlayers:
 - 1) Provide proprietary laminated glass having intumescent interlayers that complies with the requirements specified for Category II safety glazing products in 16 CFR 1201, and for glazing having multiple lites of Condition A (uncoated surfaces), Type I (transparent glass, flat), Class 1 (clear), Kind FT (fully tempered) float glass specified in ASTM C 1036 and ASTM C 1048.
 - 2) Fire-Protection Rating:
 - a) Provide fire-rated glazing having the fire-protection rating indicated in the Contract Documents for the assembly in which the glazing material is installed, and permanently labeled by a testing and inspecting agency acceptable to the Authorities Having Jurisdiction.

- 3) Logo:
 - a) Label each piece of fire-rated glazing with a permanent logo that includes the name of the product, the manufacturer, the testing laboratory (UL), the fire rating period, the safety glazing standards, and the date of manufacture.
 - b. Manufacturers:
 - 1) Pilkington Building Products North America, distributed by Technical Glass Products, PyroStop,
<http://www.pilkington.com/the+americas/usa/english/pilkington+in+the+usa/default.htm>.
 - 2) Approved equal.
9. Glazing Tapes:
 - a. Back-Bedding Mastic Glazing Tape:
 - 1) Provide preformed, butyl-based elastomeric back-bedding mastic glazing tape having a solids content of 100 percent, packaged on rolls with a release paper backing, and complying with the requirements specified in ASTM C 1281 and in AAMA 800 for the following products:
 - a) Where indicated in the Contract Documents for less-severe back-bedding and drop-in glazing applications, provide back-bedding mastic glazing tapes complying with the requirements specified in AAMA 804.3 which is included in AAMA 800.
 - b) Where indicated in the Contract Documents for high-performance glazing applications involving continuous pressure from gaskets or pressure-generating stop designs, provide back-bedding mastic glazing tapes complying with the requirements specified in AAMA 806.3 which is included in AAMA 800.
 - c) Where indicated in the Contract Documents for glazing applications not involving continuous pressure from gaskets and stop designs, provide back-bedding mastic glazing tapes complying with the requirements specified in AAMA 807.3 which is included in AAMA 800.
 - 2) Provide back-bedding mastic glazing tape that is non-staining and non-migrating when in contact with nonporous surfaces.
 - 3) Provide back-bedding mastic glazing tape with or without spacer rod as recommended in writing by the tape and glass manufacturers for the application indicated in the Contract Documents.
 - b. Expanded Cellular Glazing Tape:

- 1) Provide closed-cell, polyvinyl-chloride (PVC) foam tape, factory-coated with adhesive on both surface, packaged on rolls with release liner protecting adhesive; and complying with the requirements specified in AAMA 800 for the following types:
 - a) Type 1, for glazing applications in which the tape acts as the primary sealant.
 - b) Type 2, for glazing applications in which the tape is used in combination with a full bead of liquid sealant.

10. Glazing Gaskets:

a. Lock-Strip Gaskets:

- 1) Provide black lock-strip gaskets complying with the requirements specified in ASTM C 542, and fabricated from neoprene extrusions of the size and shape indicated in the Contract Documents that have been placed into frames with molded corner units and zipper lock strips.

b. Dense Compression Gaskets:

- 1) Provide dense compression gaskets having the profile and hardness required to maintain a watertight seal, fabricated from the following molded or extruded gasket materials, and complying with the requirements specified in the standards referenced:
 - a) Neoprene:
 - (1) Provide gaskets fabricated from neoprene complying with the requirements specified in ASTM C 864.
 - b) Ethylene Propylene Diene Terpolymer M-Class Rubber (EPDM):
 - (1) Provide gaskets fabricated from ethylene propylene diene terpolymer M-class rubber (EPDM) complying with the requirements specified in ASTM C 864.
 - c) Silicone:
 - (1) Provide gaskets fabricated from silicone complying with the requirements specified in ASTM C 1115.
 - d) Thermoplastic polyolefin rubber:
 - (1) Provide gaskets fabricated from thermoplastic polyolefin rubber complying with the requirements specified in ASTM C 1115.

c. Soft Compression Gaskets:

- 1) Provide black soft compression gaskets having the profile and hardness required to maintain a watertight seal, fabricated from the following molded or extruded, closed-cell, integral-skinned gasket materials; and complying with the requirements for Type II gasket material specified in ASTM C 509:

- a) Neoprene.
 - b) Ethylene propylene diene terpolymer M-class rubber (EPDM).
 - c) Silicone.
 - d) Thermoplastic polyolefin rubber.
- F. Fabrication:
- 1. Fabricate glass and other glazing products of the sizes required to glaze the openings indicated in the Contract Documents, with edge and face clearances, edge and surface conditions, and bite complying with the written instructions of the product manufacturer and referenced glazing standard so they will comply with the system performance requirements.
 - 2. Grind smooth and polish exposed glass edges and corners.
 - 3. Clean-cut or flat-grind the vertical edges of butt-glazed monolithic lites to produce square edges with slight kerfs at the junctions with outdoor and indoor faces.

2.02 ACCESSORIES

- A. Cleaners, Primers, and Sealers:
- 1. Provide the types of cleaners, primers, and sealers recommended by the sealant or gasket manufacturer.
- B. Setting Blocks:
- 1. Provide setting blocks fabricated from elastomeric material having a Shore A durometer hardness of 85, plus or minus 5.
- C. Spacers:
- 1. Provide elastomeric spacer blocks or continuous extrusions having the Shore A durometer hardness required by the glass manufacturer to maintain the glass lites in place for the installation indicated in the Contract Documents.
- D. Edge Blocks:
- 1. Provide edge blocks fabricated from elastomeric material having the hardness needed to limit lateral movement of the glass (side walking).
- E. Cylindrical Glazing Sealant Backing:
- 1. Provide cylindrical glazing sealant backing complying with the requirements for Type O (open-cell material) backing material specified in ASTM C 1330, and having the size and density to control the glazing sealant depth and to otherwise produce optimum glazing sealant performance.

- F. Perimeter Insulation for Fire-Resistive Glazing:
1. Provide perimeter insulation for fire-resistive glazing that is identical to the product used in the test assembly to obtain the fire-resistance rating.
- G. Frosted Glazing Film:
1. To simulate an acid-etched appearance on the glass surface, provide 2mm-thick self-adhering frosted glazing film for application to the glass surface.
 2. Color:
 - a. Provide a color equivalent to "Dusted Crystal" as supplied by 3M.
 3. Manufacturers:
 - a. 3M™, Scotchcal™ ElectroCut Graphic Film 7725SE-314 "Dusted Crystal", <http://www.3m.com/product/information/Scotchcal-Film.html>.
 - b. Approved equal.
- H. Opaque Glazing Film:
1. To simulate an opaque appearance on the glass surface, provide 2mm-thick self-adhering opaque white glazing film for application to the glass surface complying with the following requirements:
 - a. Ultraviolet Radiation Rejected:
 - 1) Provide opaque glass film rejecting not less than 99 percent of the incident ultraviolet radiation when measured in accordance with the method specified in ASTM E 903.
 - b. Visible Light Transmission:
 - 1) Provide opaque glass film transmitting not more than 6 percent of the incident visible light when measured in accordance with the methods specified in ASTM E 308 and ASTM E 903.
 - c. Visible Light Rejected:
 - 1) Provide opaque glass film rejecting not less than 52 percent of the incident visible light when measured in accordance with the method specified in ASTM E 903.
 - d. Solar Heat Reduction:
 - 1) Provide opaque glass film reducing not less than 41 percent of the solar heat
 - e. Shading Coefficient at 90 Degrees (Normal Incidence):
 - 1) Provide opaque glass film having a shading coefficient at 90 degrees (normal incidence) not less than 0.29 when measured in accordance with the method specified in ASTM E 903.
 2. Manufacturers:
 - a. 3M™, Fasara™ Opaque White Decorative/Privacy Glazing Film, http://solutions.3m.com/en_US.
 - b. Approved equal.

- I. Ceramic Frit:
 1. Provide ceramic frit consisting of minute glass particles, pigment, and a medium mixed together to form an enamel.
 - a. Basis-of-Design Product: Viracon; Viraspan Design – Silk-screen Pattern: Dot/Hole Series, 5960: 50% Coverage ¼ inch Dots. Viraspan Ceramic Frit color: High-opacity white (V-175). www.viracon.com.
 - b. Product: Viracon; Viraspan Design – Silk screen Pattern: VE-48 screen #2125 #2: 80% coverage, Lines. Ceramic Frit Color: V1086 – Simulated Sandblast Viraspan #2.
 2. Using a silk screen process, apply the ceramic frit to the glass surface; then fire the enamel creating a permanent coating.
 3. Manufacturers:
 - a. Viracon, <http://www.viracon.com>.
 - b. Approved equal.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. With the glazing installer present, examine framing glazing to verify compliance with the following requirements:
 - a. Manufacturing and installation are within required tolerances, including the tolerances for size, squareness, and offsets at corners.
 - b. A weep system is present and properly functioning.
 - c. The minimum required face or edge clearances are present.
 - d. The joints between the glass-framing members have been effectively sealed.
- B. Evaluation and Assessment:
 1. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the glazing.
- B. Surface Preparation:
 1. Immediately before beginning glazing, clean the glazing channels and other framing members to receive the glass.
 - a. Remove coatings not firmly bonded to the substrates.

2. Where required for adhesion of sealants as determined by preconstruction sealant-substrate testing, apply primers to the joint surfaces.

3.03 INSTALLATION

A. Glazing

1. Comply with combined written instructions of the manufacturers of the glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in the referenced glazing publications.
 - a. Submit the glass, sealant, gasket, and other glazing material manufacturers written installation instructions to the Program/Project Manager for information.
2. Glazing channel dimensions, as indicated on the Contract Drawings, provide the necessary bite on the glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.
 - a. Adjust the glazing channel dimensions as required by Contract conditions during installation.
3. Unless otherwise required by the glass manufacturer, install setting blocks in the sill rabbets, sized and located to comply with the referenced glazing publications.
 - a. Set the blocks in a thin course of compatible sealant suitable for the heel bead.
4. Do not exceed the edge pressures stipulated by the glass manufacturers for installing the glass lites.
5. Where the length plus the width of the glazing is larger than 50 inches, provide spacers for glass lites as follows:
 - a. Locate the spacers directly opposite each other on both inside and outside faces of glass.
 - 1) Install the spacers of the correct size and at the correct spacing to preserve the required face clearances, unless gaskets and glazing tapes are used that have a demonstrated ability to maintain the required face clearances and to comply with the system performance requirements.
 - b. Provide 1/8-inch minimum bite of the spacers on the glass, and use the thickness equal to the sealant width.
 - c. If using glazing tape, use a thickness slightly less than the final compressed thickness of the tape.
6. Where indicated on the Contract Drawings or needed to prevent glass lites from moving sideways in the glazing channel, provide edge blocking, as

recommended by glass manufacturer in writing and according to the requirements in the referenced glazing publications.

7. Set glass lites in each series so they have a uniform pattern, draw, bow, and similar characteristics.
8. Where wedge-shaped gaskets are driven into one side of the channel to pressurize sealant or the gasket on opposite side, provide adequate anchorage so the gasket cannot walk out when the installation is subjected to movement.
9. Square cut wedge-shaped gaskets at corners, and install gaskets in a manner recommended by the gasket manufacturer to prevent the corners from pulling away.
 - a. Seal corner joints and butt joints with the sealant recommended by the gasket manufacturer.

B. Tape Glazing

1. Position tapes on fixed stops so that when the stops are compressed by the glass their exposed edges are flush with or protrude slightly above the sightline of stops.
2. Install tapes continuously, but not necessarily in one continuous length.
 - a. Do not stretch tapes to make them fit the opening.
3. Cover vertical framing joints by applying tapes to the heads and sills first, and then to jambs.
4. Cover horizontal framing joints by applying tapes to the jambs, and then to the heads and sills.
5. Locate the joints in tapes at the corners of the opening, and having the adjoining lengths butted together, not lapped.
 - a. Seal joints in tapes using compatible sealant approved by the tape manufacturer.
6. Do not remove release paper from the tape until just before each glazing unit is installed.
7. Apply a heel bead of elastomeric sealant.
8. Center glass lites in the openings on setting blocks, and press firmly against the tape by inserting dense compression gaskets formed and installed to lock in place against the faces of the removable stops.
 - a. Start gasket applications at the corners, and work toward the centers of openings.
9. Apply a cap bead of elastomeric sealant over the exposed edge of the tape.

C. Gasket Glazing (Dry):

1. Fabricate compression gaskets of the lengths recommended by the gasket manufacturer to fit the openings exactly, and include a stretch allowance for installation.
2. Insert soft compression gaskets between the glass and frame or fixed stop so it is securely in place, and miter-cut and bond joints together at corners.
3. Center glass lites in the openings on setting blocks, and press firmly against the soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against the faces of the removable stops.
 - a. Start gasket applications at corners, and work toward centers of openings.
 - b. Compress the gaskets to produce a weathertight seal without developing bending stresses in the glass.
 - c. Seal gasket joints using the sealant recommended by the gasket manufacturer.
4. Install gaskets so they protrude past the face of the glazing stops.

D. Sealant Glazing (Wet):

1. Install continuous spacers, or spacers combined with cylindrical sealant backing, between the glass lites and the glazing stops to maintain glass face clearances and to prevent sealant from extruding into the glass channel and blocking the weep systems until sealants cure.
 - a. Secure the spacers or spacers and backings in place and in position to control the depth of installed sealant relative to the edge clearance for optimum sealant performance.
2. Force sealants into the glazing channels to eliminate voids and to ensure complete wetting or bonding of the sealant to the glass and channel surfaces.
3. Tool exposed surfaces of the sealants to provide a substantial wash away from the glass.

E. Lock-Strip Gasket Glazing:

1. Install lock-strip gasket glazing in accordance with the requirements specified in ASTM C 716 and the gasket manufacturer's written instructions.
2. Provide a supplementary wet seal and weep system, unless otherwise indicated in the Contract Documents.

3.04 REPAIR/RESTORATION

- A. Remove glass that is broken, chipped, cracked, abraded, or damaged in any way, including damage resulting from natural causes, accidents, and

vandalism, during the construction period; and replace the damaged glass with new undamaged glass.

3.05 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. Have the Glass Testing and Inspection Agency perform tests on the following types of glass products to verify that they comply with the requirements specified herein, and have the Glass Testing and Inspection Agency submit certified test reports of the test results to the Program/Project Manager for information:
 - a. Coated float glass.
 - b. Insulating glass.
 - c. Glazing gaskets.

3.06 CLEANING

- A. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for build-up of dirt, scum, alkaline deposits, or stains.
 - 1. Remove the dirt, scum, alkaline deposits, and stains as recommended by the glass manufacturer.
- B. Not more than 4 days before the date scheduled for the inspections to establish the date of Substantial Completion in each area of the Contract, wash the glass on both exposed surfaces as recommended by the glass manufacturer.
 - 1. Remove nonpermanent labels, and clean the glass surfaces.
- C. Waste Management:
 - 1. Remove damaged glass from the Site, and legally dispose of it off the Site.
 - 2. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 PROTECTION

- A. To protect exterior glass from damage immediately after installation, attach crossed streamers to the framing and held away from glass.
 - 1. Do not apply markers to the glass surface.
- B. Protect glass from contact with contaminating substances resulting from construction operations, including weld splatter.

1. If, despite such protection, contaminating substances do come into contact with glass, remove them immediately as recommended by glass manufacturer.

3.08 ATTACHMENTS

- A. The following attachments are appended to this Section following the “END OF SECTION” marker:

1. Schedule 08800-1 Exterior Glazing Units.
2. Schedule 08800-2 Interior Glazing Units.

Schedule 08800-1 Exterior Glazing Units ⁽¹⁾							
Designation	Description	Thickness ⁽³⁾ (mm)	Minimum Visible Light Transmittance (Percent)	Maximum U-Factor		Maximum Solar Heat Gain Coefficient	Maximum Outdoor Visible Reflectance (Percent)
				Winter Nighttime	Summer Daytime

Provide units having the appropriate fire rating when tested as specified in NFPA 80 and NFPA 252 or NFPA 257 as appropriate.				

SECTION 08975

STRUCTURAL SEALANT GLAZED ASSEMBLIES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for factory-glazed, four-sided structural-sealant-glazed curtain-wall assemblies.
- B. Related Requirements:
 - 1. Section 01316 - Project Meetings.
 - 2. Section 01330 - Submittal Procedures.
 - 3. Section 01360 - Sustainable Design Requirements.
 - 4. Section 01454 - Mock-Up Requirements.
 - 5. Section 01780 - Closeout Submittals.
 - 6. Section 07920 - Joint Sealants.
 - 7. Section 08411 - Aluminum-Framed Entrances and Storefronts.
 - 8. Section 08800 - Glazing.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. CD-R: Compact disc - read only.
 - 2. CR: Condensation Resistance.
 - 3. PVDF: Polyvinylidene fluoride, a highly non-reactive and pure thermoplastic fluoropolymer.
 - 4. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside, and San Bernardino counties in California.
 - 5. SHGC: Solar Heat Gain Coefficient.
 - 6. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. British Thermal Unit or Btu: A measure of energy defined as the amount of heat required to raise the temperature of one pound of water one degree Fahrenheit.
 - 3. U-Factor: The overall heat transfer coefficient, U, for some area, A, is defined by the equation $q = UA(t_1 - t_2)$, where the $(t_1 - t_2)$ term represents

the temperature difference between the surfaces of a solid wall, and q is the steady state heat transfer from one fluid to another through the wall.

C. Reference Standards:

1. American Architectural Manufacturer's Association (AAMA):
 - a. AAMA 501.1 – Standard Test Method for Water Penetration of Windows, Curtain Walls and Doors Using Dynamic Pressure.
 - b. AAMA 501.2 – Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems.
 - c. AAMA 501.5 – Test Method for Thermal Cycling of Exterior Walls.
 - d. AAMA 2605 - Voluntary Specifications, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels.
2. American Society of Civil Engineers (ASCE)/Structural Engineering Institute (SEI):
 - a. ASCE/SEI 7 - Minimum Design Loads for Buildings and Other Structures.
3. American Welding Society (AWS):
 - a. AWS A5.10/A5.10M – Specification for Bare Aluminum and Aluminum-Alloy Welding Electrodes and Rods.
 - b. AWS D1.1/D1.1M - Structural Welding Code - Steel.
 - c. AWS D1.2/D1.2M - Structural Welding Code-Aluminum.
4. ASTM International (ASTM):
 - a. ASTM A 36/A 36M - Standard Specification for Carbon Structural Steel.
 - b. ASTM A 123/A 123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
 - c. ASTM A 153/A 153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
 - d. ASTM A 240/A 240M – Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
 - e. ASTM A 1008/A 1008M – Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Allow, High-Strength Low-Allow with Improved Formability, Solution Hardened, and Bake Hardenable.
 - f. ASTM A 1011/A 1011M – Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.
 - g. ASTM B 209 – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
 - h. ASTM B 209M – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate [Metric].

- i. ASTM B 221 – Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
- j. ASTM B 221M – Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes [Metric].
- k. ASTM B 308/B 308M – Standard Specification for Aluminum-Alloy 6061-T6 Standard Structural Profiles.
- l. ASTM B 429/B 429M – Standard Specification for Aluminum-Alloy Extruded Structural Pipe and Tube.
- m. ASTM C 920 – Standard Specification for Elastomeric Joint Sealants.
- n. ASTM C 1184 – Standard Specification for Structural Silicone Sealants.
- o. ASTM C 1401 – Standard Guide for Structural Sealant Glazing.
- p. ASTM D 2244 – Standard Practice for Calculation of Color Tolerances and Color Differences from Instrumentally Measured Color Coordinates.
- q. ASTM D 4214 – Standard Test Methods for Evaluating Degree of Chalking of Exterior Paint Films.
- r. ASTM E 90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.
- s. ASTM E 283 – Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.
- t. ASTM E 330 – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.
- u. ASTM E 331 – Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.
- v. ASTM E 699 - Standard Practice for Evaluation of Agencies Involved in Testing, Quality Assurance, and Evaluating of Building Components.
- w. ASTM E 783 - Standard Test Method for Field Measurement of Air Leakage Through Installed Exterior Windows and Doors [*withdrawn 2002*].
- x. ASTM E 1105 - Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference.
- y. ASTM E 1332 – Standard Classification for Determination of Outdoor-Indoor Transmission Class.
- 5. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 6. ICC Evaluation Service, Inc. (ICC ES), <http://www.icc-es.org/reports/index>:
- 7. International Code Council (ICC):

- a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
8. International Organization for Standardization/International Electrotechnical Commission (ISO/IEC):
 - a. ANSI/ISO/IEC 17025 – General Requirements for the Competence of Testing and Calibration Laboratories.
9. National Fenestration Rating Council Incorporated (NFRC):
 - a. NFRC 100 - Procedure for Determining Fenestration Product U-Factors.
 - b. NFRC 200 - Procedure for Determining Fenestration Product Solar Heat Gain Coefficient and Visible Transmittance at Normal Incidence.
 - c. NFRC 500 – Procedure for Determining Fenestration Product Condensation Resistance Values.
10. South Coast Air Quality Management District (SCAQMD):
 - a. SCAQMD Rule 1168 – Adhesive and Sealant Applications.
11. The Society for Protective Coatings (SSPC):
 - a. SSPC Steel Structures Painting Manual.
 - 1) SSPC-PS Guide 12.00 – Guide to Zinc-Rich Coating Systems.
 - 2) SSPC-Paint 33 – Coal Tar Mastic, Cold Applied.
 - 3) SSPC-SP COM – Surface Preparation Commentary for Steel and Concrete Substrates.
12. United States Government:
 - a. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Preconstruction Testing Agency, and the City, prior to incorporating items requiring testing by them into the Work.
 - a. Notify Program/Project Manager 7 days in advance of the dates and times when the laboratory mockups for Contract-specific preconstruction testing will be constructed.
 2. Coordinate the structural sealant glazed system fabrication schedule with construction progress so delays to the Work are avoided.
- B. Pre-Installation Meetings:
 1. Prior to the start of the structural sealant glazed system installation, convene a meeting at the Site in accordance with the requirements specified in Section 01316, Project Meetings, to review areas of potential interference and conflicts with the installers of other Work, and to review

Special Inspections that may be required by the Phoenix Building Construction Code and Amendments and ICC International Building Code (IBC) as Amended by the City of Phoenix.

C. Scheduling:

1. Time the delivery of structural sealant glazed system materials to the Site to ensure uninterrupted progress of the installation Work.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Glazing.
 - 2) Glazing gaskets, spacers, setting blocks, sealant backings, and bond breakers.
 - 3) Glazing sealants.
 - 4) Framing Members.
 - a) Aluminum.
 - b) Steel reinforcement.
 - c) Fasteners and accessories.
 - d) Anchors.
 - e) Concealed flashing.
 - f) Framing sealants.
 - 5) Operable units.
 - b. Shop Drawings:
 - 1) Structural-sealant-glazed curtain wall system.
 - c. Samples:
 - 1) Color finishes for Initial selection.
 - 2) Exposed finishes for verification of the finishes.
 - 3) Fabrication Samples.
 - d. Certificates:
 - 1) Seismic Qualification Certificates.
 - e. Delegated Design Submittals:
 - 1) Structural-sealant-glazed curtain wall system design.
 - f. Special Procedure Submittals:
 - 1) Preconstruction Testing Program.
 - g. Qualification Statements:
 - 1) Welding procedure specifications (WPS) test records.
 - 2) Welding Certificates.
 - 3) Preconstruction Testing Agency's qualifications.
 - 4) Professional Engineer's credentials.
 - 5) Structural sealant glazed assembly installer's qualifications.
 - 6) Approved by manufacturer for installation of sun shade system.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Product Test Reports from the Preconstruction Testing Agency.
 - 2) Preconstruction Test Reports from the Preconstruction Testing Agency.
 - b. Source Quality Control Submittals:
 - 1) Quality-Control Program for the fabrication and installation of structural sealant glazed assemblies.
2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. Adhesives and Sealants
 - 1) Submit product data highlighting the VOC content for any field applied sealant used.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance data for the structural-sealant-glazed curtain walls.
 - b. Warranty Documentation:
 - 1) Structural Sealant Glazed Assembly Warranty.
 - 2) Structural Sealant Glazed Assembly Finish Warranty.
 - c. Record Documentation:
 - 1) Preconstruction mockup photographs.
 - 2) Preconstruction mockup record drawings.

1.05 QUALITY ASSURANCE

A. Qualifications:

1. Testing and Inspection Agency Qualifications:
 - a. To perform testing and inspections, the Phoenix Sky Harbor International Airport will employ both the City of Phoenix Testing Laboratory and an independent Testing and Inspection Agency having the qualifications specified in Section 01400, Quality Requirements, and qualified in accordance with the requirements specified in ASTM E 699 for the testing required.
2. Preconstruction Testing Agency's Qualifications:
 - a. Engage a Preconstruction Testing Agency qualified according to the requirements specified in ANSI/ISO/IEC 17025 to perform preconstruction testing on laboratory mockups, and accredited by the ICC Evaluation Service, Inc. (ICC ES) for the preconstruction testing specified.

- b. Submit the Preconstruction Testing Agency's qualifications to the Program/Project Manager for approval.
 3. Professional Engineer's Qualifications:
 - a. Engage a qualified Professional Engineer registered in the State of Arizona to perform the comprehensive engineering analysis required for the structural sealant glazed assemblies.
 - b. Submit the Professional Engineer's credentials to the Program/Project Manager for information.
 4. Structural Sealant Glazed Assembly Installer's Qualifications:
 - a. Employ an installer that is an authorized representative of the manufacturer of the structural sealant glazed assemblies, and that is trained and approved for installation of the type of units required for this Contract.
 - b. Submit the structural sealant glazed assembly installer's qualifications to the Program/Project Manager for approval.
 5. Welding Qualifications:
 - a. Welding Procedure Specifications (WPS):
 - 1) Prior to beginning work that requires welding, submit the pre-qualifying welding procedures to the Program/Project Manager for approval.
 - 2) For all procedures, other than those set forth in AWS D1.1/D1.1M or AWS D1.2/D1.2M, submit a copy of the welding procedure specifications (WPS) test records to the Program/Project Manager for approval.
 - b. Welders' Qualifications:
 - 1) Prior to beginning work that requires welding, submit the procedures to be used for pre-qualifying welders to the Program/Project Manager for approval.
 - 2) Only use welders, tackers, and welding operators demonstrating they are qualified to perform the types of work required by having passed the qualification tests prescribed for the procedures AWS D1.1/D1.1M and AWS D1.2/D1.2M.
 - 3) Submit Welding Certificates certifying the welders employed to fabricate and to erect the Work of this Section have been certified by the American Welding Society (AWS) within the previous 12 months to the Program/Project Manager for approval.
 - a) Include certified copies of qualification test records and photographic identification indicating each welder, welding operator, and tacker employed to perform the Work has satisfactorily passed the AWS qualification tests for the required welding procedures and, if pertinent, has undergone recertification.

B. Certifications:

1. Energy-Performance Certificates:

- a. Provide structural-sealant-glazed curtain walls having energy performance ratings certified and labeled in accordance with the requirements of the National Fenestration Rating Council Incorporated (NFRC).
 - 1) For each structural-sealant-glazed curtain wall, have the manufacturer attach a label on the structural-sealant-glazed curtain walls, accessories, and components listing the National Fenestration Rating Council Incorporated (NFRC) certified energy-performance values for the item.
- 2. Seismic Qualification Certificates:
 - a. Prepare Seismic Qualification Certificates certifying that the structural sealant glazed curtain walls, accessories, and components will withstand the seismic forces defined in Section 16071, Seismic Controls.
 - 1) Indicate whether withstand certification is based on an actual test of the assembled components, or on calculations.
 - 2) Include a dimensioned outline drawing of each unit identifying the center of gravity, and locating and describing the mounting and anchorage provisions.
 - 3) Include a detailed description of the anchorage devices on which the certification is based, and their installation requirements.
 - b. Submit the Seismic Qualification Certificates to the Program/Project Manager for approval.
- C. Preconstruction Testing:
 - 1. Provide structural-sealant-glazed curtain walls that comply with the performance/test requirements indicated in Paragraph 2.01.C, as evidenced by reports based on Contract-specific preconstruction testing by a qualified Preconstruction Testing Agency.
 - 2. Build laboratory mockups at the Preconstruction Testing Agency facility in accordance with the requirements specified in Section 01454, Mock-Up Requirements, using the personnel, materials, and methods of construction that will be used at the Site.
 - 3. Preconstruction Testing Program:
 - a. Develop a Preconstruction Testing Program specifically for this Contract.
 - 1) Submit the Preconstruction Testing Program to the Program/Project Manager for approval.
 - b. Perform the performance tests specified in Paragraph 2.01.C on the laboratory mockups in the following order:
 - 1) Structural-performance preloading at 50 percent of the specified wind-load design pressure when measured in accordance with the method specified in ASTM E 330.
 - 2) Air infiltration when measured in accordance with the method specified in ASTM E 283.

- 3) Water penetration under static pressure when measured in accordance with the method specified in ASTM E 331.
- 4) Water penetration under dynamic pressure when measured in accordance with the method specified in AAMA 501.1.
- 5) Structural performance at the design load when measured in accordance with the method specified in ASTM E 330.
- 6) Repeat the air filtration test measured in accordance with the method specified in ASTM E 283.
- 7) Repeat the water penetration test under static pressure measured in accordance with the method specified in ASTM E 331.
- 8) Structural performance at maximum 150 percent of positive and negative wind-load design pressures when measured in accordance with the method specified in ASTM E 330.
- c. Preconstruction Sealant Testing:
 - 1) Perform the sealant manufacturer's standard tests for compatibility with and adhesion of each material that will come in contact with sealants and each condition.
 - a) Test a minimum of 5 production-run samples each of metal, glazing, and other material.
 - b) Prepare the samples using the techniques and primers required for the installed assemblies.
 - c) Perform tests under environmental conditions that duplicate those under which the assemblies will be installed.
 - d) For materials that fail tests, determine the corrective measures necessary to prepare each material to ensure compatibility with and adhesion of the sealants, including, but not limited to, specially formulated primers.
 - (1) After performing these corrective measures on the minimum number of samples required for each material, retest the materials.
4. Preconstruction Test Reports:
 - a. For structural-sealant-glazed curtain walls and elastomeric glazing sealants, have the qualified Preconstruction Testing Agency submit Preconstruction Test Reports for each mockup test directly to the Program/Project Manager for information.
5. Preconstruction Mockup Photographs:
 - a. Take a minimum of 30 photographs at locations and intervals as directed by the Program/Project Manager.
 - 1) Submit high-resolution digital color images on CD-R of the mockup before, during, and after the preconstruction testing.
6. Preconstruction Mockup Record Drawings:
 - a. Have the Preconstruction Testing Agency prepare record drawings of the preconstruction mockups.
 - b. Submit the Preconstruction Mockup Record Drawings to the Program/Project Manager for information.

- D. Site Samples:
 - 1. Samples for Initial Selection:
 - a. For units with factory-applied color finishes, submit Samples of the color finishes for Initial selection of the finishes.
 - 2. Samples for Verification:
 - a. For each type of exposed finish required, submit 12-inch Samples of the exposed finish required and of the manufacturer's standard sizes for verification of the finish.
- E. Mock-Ups:
 - 1. Build mockups to verify the selections made from Sample submittals, to demonstrate the aesthetic effects, and set the quality standards for fabrication and installation.
 - a. Build mockups of a typical wall area as shown on the Contract Drawings.
 - b. Perform field testing on mockups in accordance with the requirements in Article 3.05.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in the mockups unless the Program/Project Manager specifically approves such deviations in writing.
 - 3. Approved mockups may become part of the completed Work if they are undisturbed at the time of Substantial Completion.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Crate and ship the glass and structural steel components so they will be unscratched and undamaged when they are delivered to the Site.
 - 2. Upon delivery of the metal components, check them for dents, gouges, or other imperfections which may result in rejection of the appearance or reduce the strength of the structural glass curtain walls.
 - 3. Upon delivery of the glass panels, check them for scratches, imperfections, and edge damage.
 - a. Do not install damaged glass.
- B. Storage and Handling Requirements:
 - 1. Only lift structural sealant glazed assemblies at connections approved by the system's design engineer.
 - a. Handle, lift, and align pieces using padded slings, suction cups, and/or other protection required to maintain the appearance of the system throughout the installation process.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

- A. Structural Sealant Glazed Assembly Warranty:
 - 1. Warrant the structural sealant glazed assembly against defects within the 10-year period after the Date of Substantial Completion:
 - a. Submit a Structural Sealant Glazed Assembly Warranty on the structural sealant glazed assembly manufacturer's standard or customized form, without monetary limitation, in which the structural sealant glazed assembly manufacturer agrees to replace structural sealant glazed assemblies that do not comply with requirements or that fail in materials or workmanship within the specified warranty period to the Program/Project Manager for approval.
 - b. Failures include, but are not limited to, the following:
 - 1) Structural failures including, but not limited to, excessive deflection.
 - 2) Noise or vibration created by wind and thermal and structural movements.
 - 3) Deterioration of metals and other materials beyond normal weathering.
 - 4) Water penetration through fixed glazing and framing areas.
 - 5) Failure of operating components.
- B. Structural Sealant Glazed Assembly Finish Warranty:
 - 1. Warrant the structural sealant glazed assembly finishes against defects within the 20-year period after the Date of Substantial Completion:
 - a. Submit a Structural Sealant Glazed Assembly Finish Warranty on the structural sealant glazed assembly manufacturer's standard or customized form, without monetary limitation, in which the structural sealant glazed assembly manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within the specified warranty period to the Program/Project Manager for approval.
 - b. Deterioration includes, but is not limited to, the following:
 - 1) Color fading more than 5 Hunter units when measured in accordance with the method specified in ASTM D 2244.
 - 2) Chalking in excess of a No. 8 rating when measured in accordance with the method specified in ASTM D 4214.
 - 3) Cracking, checking, peeling, or failure of the paint to adhere to the bare metal.

PART 2 PRODUCTS

2.01 STRUCTURAL SEALANT GLAZED ASSEMBLIES

- A. Manufacturers:
 - 1. Manufacturer List:

- a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the following manufacturers:
 - 1) Arcadia, Inc., <http://www.arcadiaincorporated.com>.
 - 2) Arch Aluminum & Glass Co., Inc., <http://www.archaluminum.net>.
 - 3) EFCO Corporation, <http://www.efcocorp.com>.
 - 4) Kawneer North America; an Alcoa company, <http://www.kawneer.com>.
 - 5) United States Aluminum, <http://www.usalum.com>.
 - 6) Vistawall Architectural Products, Oldcastle Glass Engineered Products, <http://www.vistawall.com>.
 - 7) Wausau Window and Wall Systems, <http://www.wausauwindow.com>.
 - 8) Walters and Wolf, Inc., <http://www.waltersandwolf.com>
 - 9) Approved equal.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).
 2. Sustainable Requirements:
 - a. Volatile Organic Compounds (VOC) Content of Interior Sealants:
 - 1) Provide interior sealants and sealant primers for this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168:
 - a) Architectural Sealants: Not more than 250 grams per Liter less water.
- C. Performance:
1. Provide structural sealant glazed assemblies complying with the performance requirements specified herein, as established by preconstruction testing performed successfully on structural-sealant-glazed curtain wall mock-ups representing the structural-sealant-glazed curtain walls to be constructed under this Section without failure due to defective manufacture, fabrication, installation, or other defects in construction.
 - a. The structural-sealant-glazed curtain walls must withstand movements of the supporting structure, including but not limited to, story drift,

twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.

- b. Failures also include the following conditions:
 - 1) Thermal stresses transferred to the building structure.
 - 2) Glass breakage.
 - 3) Noise or vibration created by wind and by thermal and structural movements.
 - 4) Loosening or weakening of fasteners, attachments, and other components.
 - 5) Failure of operating units.
- 2. Structural Loads:
 - a. Provide structural sealant glazed assemblies capable of withstanding the following structural loading:
 - 1) Wind Loads:
 - a) Basic Wind Speed: 120 mph (40m/s).
 - b) Internal pressure Coefficient: $GC (pi) = 0.18 +/-$.
 - c) Exposure Category: C.
 - d) Components and Cladding Wind Pressure: As required by Chapter 30 of ASCE 7-10.
 - 2) Periodic Maintenance-Equipment Loads:
 - a) As indicated on the Contract Drawings.
 - b. Allowable Deflection of Framing Members at Design Wind Pressure:
 - 1) Deflection Normal to the Wall Plane:
 - a) The deflection is limited to $1/175$ of the clear span for spans up to 13 feet 6 inches (4.1m), and to $1/240$ of the clear span plus $1/4$ inch (6.35mm) for spans greater than 13 feet 6 inches (4.1m), or an amount that restricts the edge deflection of individual glazing lites to $3/4$ inch (19mm), whichever is less.
 - 2) Deflection Parallel to the Glazing Plane:
 - a) The deflection is limited to $L/360$ of the clear span, or $1/8$ inch (3.2mm), whichever is smaller.
 - b) Provide a minimum clearance of $1/16$ inch (1.6mm) between the framing members and operable units.
 - 3) Cantilever Deflection:
 - a) Where framing members overhang an anchor point, the deflection is limited to 2 times the length of the cantilevered member divided by 175.
 - c. Structural-Test Performance:
 - 1) Test Procedure:
 - a) Tested the structural-sealant-glazed curtain walls in accordance with the method specified in ASTM E 330.
 - b) Test Duration:
 - (1) Perform the test as required by the design wind velocity, but not less than 90 seconds.
 - 2) Acceptance Criteria:

- a) When tested at positive and negative wind-load design pressures, the assemblies cannot evidence deflection exceeding the specified limits.
 - b) When tested at 150 percent of positive and negative wind-load design pressures, the assemblies including anchorage cannot evidence material failures, structural distress, and permanent deformation of the main framing members exceeding 0.2 percent of the span.
3. Seismic Performance:
 - a. Provide structural-sealant-glazed curtain walls capable of withstanding the effects of earthquake motions determined in accordance with the method specified in ASCE/SEI 7 using a component importance factor of 1.5.
4. Water Penetration under Static Pressure:
 - a. Test Procedure:
 - 1) Test the water penetration of the structural-sealant-glazed curtain walls under static pressure in accordance with the methods specified in ASTM E 331 at a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 15 pounds per square foot (720Pa).
 - b. Acceptance Criteria:
 - 1) The structural-sealant-glazed curtain walls must show no evidence of water penetration through the fixed glazing and framing areas.
5. Water Penetration under Dynamic Pressure:
 - a. Test Procedure:
 - 1) Test the water penetration of the structural-sealant-glazed curtain walls under dynamic pressure in accordance with the methods specified in AAMA 501.1 at a dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 15 pounds per square foot (720Pa).
 - b. Acceptance Criteria:
 - 1) The structural-sealant-glazed curtain walls must show no evidence of water penetration through the fixed glazing and framing areas.
 - a) Water penetration is defined as uncontrolled water penetrating the assemblies, or water appearing on the normally exposed interior surfaces of the assemblies from sources other than condensation.
 - b) Water controlled by flashing and gutters that is drained to the exterior is not considered to be water leakage.
 - c) Up to 1/2 ounce. (15mL) of water may accumulate on an interior stop or stool integral to the assembly in a 15 minute period without causing the assembly to fail the test.
6. Thermal Movements:

- a. Provide structural-sealant-glazed curtain walls capable of accommodating thermal movements resulting from the following maximum changes (range) in ambient and surface temperatures:
 - 1) Temperature Change (Range): 120 degrees Fahrenheit (67 degrees Celsius), ambient; 180 degrees Fahrenheit (100 degrees Celsius), material surfaces.
 - 2) Test Interior Ambient-Air Temperature: Minimum 70 degrees Fahrenheit, maximum 75 degrees Fahrenheit (24 degrees Celsius).
- b. Test Procedure:
 - 1) Test the thermal movements of the structural-sealant-glazed curtain walls in accordance with the methods specified in AAMA 501.5.
- c. Acceptance Criteria:
 - 1) The structural-sealant-glazed curtain walls must show no buckling, stress on glass, sealant failure, or excess stress on framing, anchors, and fasteners and no reduction of performance.
- 7. Energy-Performance Standards:
 - a. For minimum standards of energy performance, materials, components, accessories, and fabrication, comply with the requirements specified by the National Fenestration Rating Council Incorporated (NFRC).
 - 1) If more stringent requirements are indicated in the Contract Documents, comply with the more stringent requirements.
 - b. Thermal Transmittance (U-Factor):
 - 1) Provide structural sealant glazed assemblies having thermal transmittance (U-factor) through the fixed glazing and framing areas of not more than 0.45 Btu per square foot per hour degree Fahrenheit ($2.55\text{W/m}^2/\text{K}$) when measured in accordance with the method specified in NFRC 100.
 - c. Solar Heat Gain Coefficient (SHGC):
 - 1) Provide structural sealant glazed assemblies having a solar heat gain coefficient (SHGC) through the fixed glazing and framing areas not greater than 0.40 when measured in accordance with the method specified in NFRC 200.
 - d. Air Infiltration:
 - 1) Provide structural sealant glazed assemblies having maximum air leakage through the fixed glazing and framing areas at a minimum static-air-pressure differential of 6.24 pounds-force per square foot (300 Pa) of 0.06 cubic feet per minute per square foot of fixed wall area when measured in accordance with the method specified in ASTM E 283.
 - e. Condensation Resistance (CR):
 - 1) Provide structural sealant glazed assemblies having a National Fenestration Rating Council Incorporated (NFRC) certified

- condensation resistance (CR) through the fixed glazing and framing areas of not less than 55 when measured in accordance with the method specified in NFRC 500.
8. Sound Transmission:
 - a. Provide structural sealant glazed assemblies having a minimum Outdoor-Indoor Sound Transmission Class through the fixed glazing and framing areas of 25 when the laboratory sound transmission loss is measured in accordance with the method specified in ASTM E 90 and determined by the method specified in ASTM E 1332.
 9. Structural Sealant:
 - a. Provide structural sealant capable of withstanding the tensile and shear stresses imposed by the structural-sealant-glazed curtain walls without failing adhesively or cohesively.
 - 1) Adhesive failure occurs when the sealant pulls away from the substrate cleanly, leaving no sealant material behind.
 - 2) Cohesive failure occurs when the sealant breaks or tears within itself, but does not separate from each substrate because the sealant-to-substrate bond strength exceeds sealant's internal strength.
 - b. When the structural sealant is tested for preconstruction adhesion and compatibility, cohesive failure of sealant must occur before adhesive failure.
- D. Design Criteria:
1. The information furnished in the Contract Documents establishes the requirements for the assemblies' aesthetic effects and performance characteristics.
 - a. The aesthetic effects are indicated by the dimensions, arrangements, alignment, and profiles of the components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
 - b. Do not revise the intended aesthetic effects, as judged solely by the Program/Project Manager, except with the Program/Project Manager's written approval.
 - 1) If revisions are proposed, submit comprehensive explanatory data to Program/Project Manager for review.
 2. Delegated Design:
 - a. Design the structural-sealant-glazed curtain walls, including having a qualified Professional Engineer perform a comprehensive engineering analysis, to comply with the performance requirements and design criteria specified in this Section.
 - b. Structural Sealant Glazed Curtain Wall System Design Submittal:
 - 1) Submit the structural-sealant-glazed curtain wall system design, including the analysis data signed and sealed by the qualified Professional Engineer responsible for its preparation, to the Program/Project Manager for approval.

- 2) Have the design reviewed and approved by the structural-sealant manufacturer.
3. Structural-Sealant Glazing:
 - a. Provide structural sealant glazing complying with the requirements for design and installation of structural-sealant-glazed curtain walls specified in ASTM C 1401.
 - b. Provide glazing having a minimum frame bite of 3/8 inches.
4. Structural-Sealant Joints:
 - a. Provide structural sealant joints designed to carry the gravity loads of the glazing.
 - b. Provide structural sealant joints designed produce tensile or shear stresses of less than 20 psi (138kPa).
5. Product Data:
 - a. Obtain the manufacturer's Product Data for each type of product specified, including construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - b. Submit the Product Data to the Program/Project Manager for approval.
6. Shop Drawings:
 - a. Prepare Shop Drawings for the structural-sealant-glazed curtain wall system, including plans, elevations, sections, full-size details, and attachments to other work.
 - 1) Include details of expansion and contraction provisions for the assembly, and provisions for draining moisture occurring within the assembly to the exterior.
 - 2) For each vertical-to-horizontal intersection of the structural sealant glazed curtain walls, include full-size isometric details showing the following:
 - a) Joinery, including concealed welds.
 - b) Anchorage.
 - c) Expansion provisions.
 - d) Glazing.
 - e) Flashing and drainage.
 - 3) Include laboratory mockup Shop Drawings, prepared by the qualified Preconstruction Testing Agency, showing details of the laboratory mockup.
 - a) Resubmit the laboratory mockup Shop Drawings if changes are made to the details of the structural-sealant-glazed curtain walls in order to successfully complete the preconstruction testing.
7. Product Test Reports:
 - a. Based on evaluation of the comprehensive tests performed by the qualified Preconstruction Testing Agency, have the Preconstruction Testing Agency submit Product Test Reports for the structural sealant

glazed curtain walls, indicating compliance with the performance requirements, to the Program/Project Manager for information.

E. Materials:

1. Glazing:

- a. Unless otherwise indicated in the Contract Drawings, provide glazing complying with the requirements for the glazing specified in Section 08800, Glazing.

2. Glazing Gaskets, Spacers, Setting Blocks, Sealant Backings, and Bond Breakers:

- a. Provide the manufacturer's standard permanent, non-migrating types of glazing gaskets, spacers, setting blocks, sealant backings, and bond breakers compatible with the sealants, and suitable for joint movement and assembly performance requirements.

3. Glazing Sealants:

- a. Provide glazing sealants for the structural sealant glazed curtain walls as recommended by the structural sealant glazed curtain wall manufacturer for the joint type, and as follows:

1) Structural Sealant:

- a) Provide structural sealant complying with the requirements specified in ASTM C 1184

- (1) Provide a chemically curing silicone formulation that is compatible with the system components with which it comes in contact.

- (2) Provide structural sealant specifically formulated and tested for use as a structural sealant, and approved by the structural-sealant manufacturer for use in the curtain wall assembly specified.

- b) Color:

- (1) Provide structural sealant colors as selected by the Program/Project Manager from the manufacturer's full range of colors

2) Weatherseal Sealant:

- a) Provide weatherseal sealant complying with the requirements for Type S; Grade NS; Class 25 sealant specified in ASTM C 920 for Uses NT, G, A, and O.

- (1) Provide a chemically curing silicone formulation that is compatible with structural sealant and other system components with which it comes in contact.

- (2) Provide a weatherseal sealant recommended by the structural sealant, weatherseal sealant, and structural sealant glazed curtain-wall manufacturers for this use.

- b) Color:

- (1) Provide weatherseal sealant having a color matching the structural sealant color.

4. Framing:

- a. Framing Members:
 - 1) Provide the manufacturer's standard formed-aluminum or extruded-aluminum framing members having the thickness required and reinforced as required to support the imposed loads.
 - 2) Aluminum:
 - a) Provide aluminum of the alloy and temper recommended by the structural sealant glazed curtain walls manufacturer for type of use and finish indicated in the Contract Documents.
 - (1) Sheet and Plate:
 - (a) Provide aluminum sheet and plate complying with the requirements specified in ASTM B 209 (ASTM B 209M).
 - (2) Extruded Bars, Rods, Profiles, and Tubes:
 - (a) Provide extruded aluminum bars, rods, profiles, and tubes complying with the requirements specified in ASTM B 221 (ASTM B 221M).
 - (3) Extruded Structural Pipe and Tubes:
 - (a) Provide extruded aluminum structural pipe and tubes complying with the requirements specified in ASTM B 429/B 429M.
 - (4) Structural Profiles:
 - (a) Provide aluminum structural profiles complying with the requirements specified in ASTM B 308/B 308M.
 - (5) Welding Rods and Bare Electrodes:
 - (a) Provide welding rods and bare electrodes for welding aluminum complying with the requirements specified in AWS A5.10/A5.10M.
 - 3) Steel Reinforcement:
 - a) Provide steel for reinforcement having the manufacturer's standard zinc-rich, corrosion-resistant primer complying with the requirements specified in SSPC-PS Guide 12.00.
 - (1) Apply the primer immediately after surface preparation and pretreatment of the steel.
 - (2) Select surface preparation methods in accordance with the recommendations in SSPC-SP COM, and prepare the surfaces according to applicable SSPC standard.
 - b) Structural Shapes, Plates, and Bars:
 - (1) Provide steel structural shapes, plates, and bars complying with the requirements specified in ASTM A 36/A 36M.
 - c) Cold-Rolled Sheet and Strip:
 - (1) Provide steel cold-rolled sheet and strip complying with the requirements specified in ASTM A 1008/A 1008M.
 - d) Hot-Rolled Sheet and Strip:

- (1) Provide steel hot-rolled sheet and strip complying with the requirements specified in ASTM A 1011/A 1011M.
 - b. Fasteners and Accessories:
 - 1) Provide the manufacturer's standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials.
 - 2) Where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration, provide self-locking devices.
 - 3) Reinforce members as required for receiving fastener threads.
 - 4) Provide exposed fasteners having countersunk Phillips screw heads finished to match the framing system or fabricated from Series 300 stainless steel.
 - c. Anchors:
 - 1) Provide three-way adjustable anchors having a minimum adjustment of 1 inch (25.4mm) to accommodate fabrication and installation tolerances in the material and finish, and that are compatible with the adjoining materials and recommended by the structural sealant glazed curtain wall manufacturer.
 - 2) Concrete and Masonry Inserts:
 - a) Provide hot-dip galvanized cast-iron, malleable-iron, or steel inserts for concrete and masonry complying with the requirements specified in ASTM A 123/A 123M or ASTM A 153/A 153M.
 - d. Concealed Flashing:
 - 1) Provide the manufacturer's standard corrosion-resistant, non-staining, non-bleeding flashing compatible with adjacent materials, or dead-soft, 0.018-inch (0.457mm) thick stainless-steel flashing, complying with the requirements specified in ASTM A 240/A 240M and of a type recommended by the structural sealant glazed curtain wall manufacturer.
 - e. Framing Sealants:
 - 1) Provide the structural sealant glazed curtain wall manufacturer's standard sealants.
 5. Operable Units:
 - a. Doors:
 - 1) Provide doors complying with the requirements specified in Section 08411, Aluminum-Framed Entrances and Storefronts.
- F. Fabrication:
1. Form or extrude aluminum shapes before finishing them.
 2. Perform welds in concealed locations to greatest extent possible to minimize distortion or discoloration of the finish.
 - a. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

3. Fabricate components so they have the following characteristics when they have been assembled:
 - a. Sharp, straight, profiles that are free of defects or deformations.
 - b. Accurately fitted joints having coped or mitered ends.
 - c. Glazing physically and thermally isolated from framing members.
 - d. Accommodation of thermal and mechanical movements of the glazing and framing to maintain the required glazing edge clearances.
 - e. Fasteners, anchors, and connection devices concealed from view to greatest extent possible.
 - f. Provisions for field replacement of the glazing from the exterior.
 - 1) Include accommodations for using temporary support devices (dutchman) to retain the glazing in place while the sealant cures.
 - g. Provisions mounting safety railings independently of the mullions.
 - h. Components curved to the radii indicated in the Contract Documents.
 - i. Internal guttering systems or other means to drain the water passing joints, condensation occurring within framing members, and moisture migrating within the structural sealant glazed curtain wall to the exterior.
4. Factory-Assembled Frame Units:
 - a. Rigidly secure non-movement joints.
 - b. Prepare surfaces that will contact the structural sealant in accordance with the sealant manufacturer's written instructions to ensure compatibility and adhesion.
 - 1) Preparation includes, but is not limited to, cleaning and priming the surfaces.
 - c. Unless otherwise indicated, seal joints so they are watertight.
 - d. Install glazing in accordance with the requirements specified in Section 08800, Glazing.
5. After fabrication, clearly mark the structural sealant glazed curtain wall components to identify their locations in the Work in accordance with the Shop Drawings.

G. Finishes:

1. Primer Materials:
 - a. Provide the high-performance organic finish manufacturer's specially formulated inhibitive primer.
2. Finish Materials:
 - a. Bituminous Paint:
 - 1) Provide cold-applied, coal tar mastic complying with the requirements specified in SSPC-Paint 33.
 - b. High-Performance Organic Finish:
 - 1) Provide a 3-coat fluoropolymer finish complying with the requirements specified in AAMA 2605 and containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both the color coat and the clear topcoat.

- 2) Provide the color and gloss as selected by the Program/Project Manager from the manufacturer's full range.
3. Shop Finishing Methods:
 - a. Aluminum:
 - 1) Prepare, pretreat, and apply the high-performance organic coating to exposed metal surfaces in accordance with the coating and resin manufacturers' written instructions.

2.02 ACCESSORIES

- A. Cleaning Agent and Cloth:
 1. Provide the cleaning agent and cloths recommended by the structural sealant manufacturer.

2.03 SOURCE QUALITY CONTROL

- A. Manufacturer Services:
 1. Quality-Control Program:
 - a. Develop a Quality-Control Program specifically for the fabrication and installation of structural sealant glazed assemblies for this Project in accordance with the recommendations in ASTM C 1401.
 - 1) Perform the quality control procedures in accordance with the recommendations in ASTM C 1401, including but not limited to, assembly material qualification procedures, sealant testing, and assembly fabrication reviews and checks.
 - 2) Prepare and maintain source quality control reports.
 - b. Submit the Quality-Control Program for the fabrication and installation of structural sealant glazed assemblies to the Program/Project Manager for information.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. With the structural sealant glazed assembly installer present, examine the areas and conditions where the structural sealant glazed assemblies will be installed for compliance with the requirements for installation tolerances and other conditions affecting the performance of the Work.
 2. Field Measurements:
 - a. Verify the actual locations of the structural supports for the structural sealant glazed curtain walls by taking field measurements before fabricating the structural sealant glazed curtain walls and include the measurements on the Shop Drawings.
- B. Evaluation and Assessment:

1. Proceed to install the structural sealant glazed curtain walls only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the structural sealant glazed assemblies.
- B. Surface Preparation:
 1. Provide connections for temporary shoring, bracing, and supports as noted on the installation drawings.

3.03 INSTALLATION

- A. Erect the structural sealant glazed curtain wall framing structure, structural glazing, and accessory items in strict accordance with the approved Shop Drawings, Installation Drawings, and installation procedures.
 1. Comply with the structural sealant glazed curtain wall manufacturer's written instructions.
 2. Do not install damaged components.
 3. Install anchors with separators and isolators to prevent metal corrosion, electrolytic deterioration, and impediments to movement of the joints.
 4. Fit joints to produce hairline joints free of burrs and distortion.
 5. Rigidly secure nonmoving joints.
 6. Weld components in concealed locations to minimize distortion or discoloration of the finish.
 - a. Protect glazing surfaces from welding damage.
 7. Unless otherwise indicated in the installation instructions, seal the joints so they are watertight.
- B. Metal Protection:
 1. Where aluminum will contact dissimilar metals, paint the contacting surfaces with primer, apply sealant or tape, or install nonconductive spacers to protect against galvanic action as recommended by the manufacturer for this purpose.
 2. Where aluminum will contact concrete or masonry, paint the contacting surfaces with bituminous paint to protect against corrosion.
- C. Install components so water passing joints, condensation occurring within framing members, and moisture migrating within structural-sealant-glazed curtain walls will be drained to the exterior.
- D. Install components plumb and true in alignment with established lines and grades.

- E. Install operable units level and plumb, securely anchored, and without distortion.
 - 1. Adjust weather-stripping contact and hardware movement to produce proper operation.
- F. Install the glazing as specified in Section 08800, Glazing.
 - 1. Prepare surfaces that will contact structural sealant in accordance with the sealant manufacturer's written instructions to ensure compatibility and adhesion.
 - a. Preparation includes, but is not limited to, cleaning and priming the surfaces.
- G. Install weatherseal sealant in accordance with the requirements specified in Section 07920, Joint Sealants, and in accordance with the sealant manufacturer's written instructions to produce weatherproof joints.
 - 1. Install joint filler behind the sealant as recommended by the sealant manufacturer.
- H. Tolerances:
 - 1. Erection Tolerances:
 - a. Install the structural sealant glazed curtain walls in accordance with the following non-accumulating maximum tolerances:
 - 1) Plumb: 1/8 inch in 10 feet (3mm in 3m).
 - 2) Level: 1/8 inch in 20 feet (3mm in 6m).
 - 3) Alignment:
 - a) Where surfaces abut in line or are separated by a reveal or protruding element up to 1/2 inch (12.7mm) wide, limit the offset from true alignment to 1/16 inch (1.6mm).
 - b) Where surfaces are separated by a reveal or protruding element from 1/2 inch to 1 inch (12.7mm to 25.4mm) wide, limit the offset from true alignment to 1/8 inch (3.2mm).
 - c) Where surfaces are separated by a reveal or protruding element of 1 inch (25.4mm) wide or more, limit the offset from true alignment to 1/4 inch (6mm).
 - 4) Location: Limit the variation from plane to 1/8 inch in 12 feet (3mm in 3.7m), and 1/2 inch (12.7mm) over the total length.

3.04 SITE QUALITY CONTROL

- A. During the period when structural sealant glazed assemblies are being installed, the Testing and Inspection Agency must perform routine and other testing of materials as installation proceeds to determine compliance of the installed assemblies with the specified requirements.
 - 1. Advise the Testing and Inspection Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.

2. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
3. Failure of the Testing and Inspection Agency or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.

B. Site Tests and Inspections:

1. Structural-Sealant Adhesion Test:
 - a. Test Procedure:
 - 1) The Testing and Inspection Agency will test the structural sealant in accordance with the recommendations of Destructive Test Method A, "Hand Pull Tab (Destructive)," in Appendix X2 of ASTM C 1401.
 - 2) A minimum of 6 areas on each building façade will be tested.
 - 3) Repair installed areas damaged by the testing.
 - b. Acceptance Criteria:
 - 1) Structural sealant that adheres as specified pass the Structural-Sealant Adhesion Test.
2. Air Infiltration Test:
 - a. Test Procedure:
 - 1) The Testing and Inspection Agency will test areas for air leakage in accordance with the requirements specified in ASTM E 783 at a minimum static-air-pressure differential of 6.24 pounds-force per square foot (300 Pa).
 - 2) Test Area:
 - a) The Testing and Inspection Agency will test an area 1 bay wide, but not less than 30 feet (9.1m), by 1 story of structural sealant glazed curtain wall.
 - 3) A minimum of 3 tests will be performed in the areas as directed by the Program/Project Manager.
 - b. Acceptance Criteria:
 - 1) Structural sealant glazed assemblies having air infiltration less than 1.5 times the rate specified for laboratory testing in Subparagraph 2.01.C.8.d, but not more than 0.50 cubic feet per minute per square foot (2.25L/s/m²) of fixed wall area pass the Air Infiltration Test
3. Water Penetration Test:
 - a. Test Procedure:
 - 1) The Testing and Inspection Agency will test areas for water penetration in accordance with the requirements specified in ASTM E 1105 at a minimum uniform and cyclic static-air-pressure differential of 0.67 times the static-air-pressure differential

- specified for laboratory testing in Subparagraphs 2.01.C.5.a.1 and 2.01.C.6.a.1, but not less than 6.24 pounds-force per square foot (300 Pa).
- 2) Test Area:
 - a) The Testing and Inspection Agency will test an area 1 bay wide, but not less than 30 feet (9.1m), by 1 story of structural sealant glazed curtain wall.
 - 3) A minimum of 3 tests will be performed in the areas as directed by the Program/Project Manager.
 - b. Acceptance Criteria:
 - 1) Structural sealant glazed assemblies that do not evidence water penetration pass the Water Penetration Test.
4. Water Spray Test:
- a. Test Procedure:
 - 1) Before installation of interior finishes has begun, the Testing and Inspection Agency will test areas designated by the Program/Project Manager in accordance with the requirements specified in AAMA 501.2.
 - 2) Test Area:
 - a) The Testing and Inspection Agency will test an area not less than 75 feet (23m) by 1 story of structural sealant glazed curtain wall.
 - b. Acceptance Criteria:
 - 1) Structural sealant glazed assemblies that do not evidence water penetration pass the Water Spray Test.
- C. Non-Conforming Work
- 1. The structural sealant glazed curtain walls will be considered defective if they do not pass the specified tests and inspections.

3.05 CLEANING

- A. Perform final cleaning prior to turning the Work of this Section over to the Owner.
- A. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 PROTECTION

- A. Protect the structural sealant glazed curtain walls and other items being supplied under this Section from damage by other trades whose Work follows installation of the structural sealant glazed curtain walls.

3.07 MAINTENANCE

A. Operation and Maintenance Data:

1. Furnish operation and maintenance data for the structural-sealant-glazed curtain walls for inclusion in maintenance manuals as specified in Section 01780, Closeout Submittals.
 - a. Include the recommendations for a post-installation-phase quality control program specified in ASTM C 1401.
2. Submit the operation and maintenance data for the structural-sealant-glazed curtain walls to the Program/Project Manager for information.

SECTION 09253

GYPSUM SHEATHING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for gypsum sheathing, sheathing joint-and-penetration treatment, and flexible flashing at openings in the sheathing.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 07275 – Fluid-Applied Membrane Air Barriers

1.02 REFERENCES

- A. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
 - 2. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
- B. Reference Standards:
 - 1. ASTM International (ASTM):
 - a. ASTM A 153/A 153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
 - b. ASTM B 117 - Standard Practice for Operating Salt Spray (Fog) Apparatus.
 - c. ASTM C 834 - Standard Specification for Latex Sealants.
 - d. ASTM C 954 - Standard Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs from 0.033 in. (0.84 mm) to 0.112 in. (2.84 mm) in Thickness.
 - e. ASTM C 1002 - Standard Specification for Steel Self-Piercing Tapping Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Wood Studs or Steel Studs.
 - f. ASTM C 1177/C 1177M - Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing.

- g. ASTM D 3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber.
 - h. ASTM E 119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
 - i. ASTM F 1667 - Standard Specification for Driven Fasteners: Nails, Spikes, and Staples.
- 2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 3. Gypsum Association (GA):
 - a. GA-253 – Application of Gypsum Sheathing.
 - b. GA-600 – Fire Resistance Design Manual.
- 4. ICC Evaluation Service, Inc. (ICC-ES):
 - a. ICC-ES Reports™ (ESRs), www.icc-es.org/Evaluation_Reports/index.
- 5. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
- 6. National Evaluation Service, Inc. (NES)
 - a. National Evaluation Report (NER):
 - 1) NES NER 272 – Power-Driven Staples and Nails for Use in All Types of Building Construction, https://www.bayarearetrofit.com/PDFs/NER_272.pdf
- 7. Underwriters Laboratories, Inc. (UL):
 - a. UL Online Certifications Directory, <https://www.ul.com/ul-databases-and-directories/>.
 - 1) UL Fire Resistance Directory (Fire Resistance Ratings).

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Sequencing:
 - 1. Coordinate the sheathing installation with the installation of materials installed over the sheathing so the sheathing is not exposed to precipitation or left exposed at the end of the workday when rain is forecast.
 - 2. Coordinate the wall sheathing installation with the flashing and joint-sealant installation so these materials are installed in a sequence and manner that prevent exterior moisture from passing through the completed assembly.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:

- 1) Glass-mat gypsum exterior sheathing.
- 2) Fasteners.
- 3) Sealant for glass-mat gypsum sheathing board.
- 4) Sheathing tape for glass-mat gypsum sheathing board.
- 5) Flexible flashing.
- 6) Primer for flexible flashing.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Fire-resistance rating test or evaluation reports from a qualified testing agency or evaluation service.
 - b. Manufacturer's Instructions:
 - 1) Gypsum sheathing manufacturer's written installation instructions.
 - 2) Flexible flashing manufacturer's written installation instructions.
2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. ENVISION Credit RA 1.3 - Use Recycled Materials
 - 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - b. ENVISION Credit RA 1.4 – Use Regional Materials
 - 1) Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Testing and Inspection Agency:
 - a. To perform approval testing and inspections, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver materials in their original packages, containers, or bundles bearing the brand name and identification of the manufacturer or supplier.
- B. Storage and Handling Requirements:
 1. Stack panels flat, with spacers between each bundle to provide air circulation.
 - a. Furnish air circulation around the stacks and under coverings.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 GYPSUM SHEATHING

- A. Manufacturers:
 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 3. Product Options:
 - a. Product Data:
 - 1) For each type of process and factory-fabricated product proposed for the Work of this Contract, obtain Product Data that includes the following.
 - a) Component materials and dimensions.
 - b) Construction and application details.
 - c) For building wrap, data on air-/moisture-infiltration protection based on testing according to the referenced standards.
 - 2) Submit the Product Data to the Program/Project Manager for approval.
- B. Description:
 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).
 2. ENVISION Requirements:
 - a. Recycled Content

- 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - b. Regional Content
 - 1) Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the
 - 2) distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).
- C. Performance:
1. Fire-Resistance Ratings:
 - a. Provide gypsum sheathing materials and construction identical to those of identical assemblies tested for fire resistance in accordance with the requirements specified in ASTM E 119 and that had the required fire-resistance ratings as indicated in the Contract Documents.
 - 1) Qualified testing and inspecting agencies acceptable to the Authorities Having Jurisdiction, such as Underwriters Laboratories, Inc. (UL), perform testing and follow-up inspections of gypsum sheathing.
 - a) Underwriters Laboratories, Inc. publishes a Fire Resistance Directory which lists all assemblies, systems, and devices UL has tested, and classifies them under Category Codes (CCN) in the UL Online Certifications Directory.
 - 2) The Gypsum Association (GA) lists design designations for designs having specific fire-resistance ratings in GA-600.
 - b. For gypsum sheathing requiring fire-resistance ratings, provide gypsum sheathing listed by Underwriters Laboratories, Inc. (UL), or another testing and inspecting agency acceptable to the Authorities Having Jurisdiction, for the application; or that has an evaluation report from ICC-ES or another evaluation service acceptable to the Authorities Having Jurisdiction showing the sheathing complies with fire rating requirements of the codes applicable to this Contract, or that has an acceptable design designation from GA-600.
 - 1) Submit product test or evaluation reports from a qualified testing agency or evaluation service that indicate the gypsum sheathing complies with the specified requirements based on comprehensive testing of current products to the Program/Project Manager for information.
 2. Mold and Mildew Resistance:

- a. Provide gypsum sheathing materials having properties identical to those of materials having a mold and mildew resistance rating of 10 when tested in accordance with the method specified in ASTM D 3273.
- D. Design Criteria:
 - 1. Fasteners:
 - a. Provide fasteners of the size and type indicated in the Contract Documents, and that comply with the requirements specified in this Section for the material and manufacture.
 - 1) Provide screws having the length recommended by the sheathing manufacturer for the thickness of the sheathing board to be attached.
 - 2) For roof and wall sheathing, provide fasteners having a hot-dip zinc coating complying with the requirements specified in ASTM A 153/A 153M.
- E. Materials:
 - 1. Exterior Sheathing:
 - a. Glass-Mat Gypsum Wall Sheathing:
 - 1) For vertical installations, provide 5/8-inch thick glass-mat gypsum wall sheathing complying with the requirements for Type X sheathing specified in ASTM C 1177/C 1177M, and in 48-inch wide by 120-inch long panels.
 - 2) Manufacturers:
 - a) Georgia-Pacific Gypsum LLC, DensGlass™ Exterior Sheathing, www.buildgyp.com.
 - b) CertainTeed Corporation, GlasRoc®, https://www.certainteed.com/resources/CTG-2355_GlasRoc_Sheathing_Brochure_Eng.pdf
 - c) Approved equal.
 - 2. Fasteners:
 - a. Nails, Brads, and Staples:
 - 1) Provide nails, brads, and staples complying with the requirements specified in ASTM F 1667.
 - b. Power-Driven Fasteners:
 - 1) Provide power-driven fasteners complying with the requirements specified in NES NER 272.
 - c. Screws:
 - 1) Provide steel drill screws having an organic-polymer or other corrosion-protective coating with a salt-spray resistance of more than 800 hours when measured in accordance with the requirements specified in ASTM B 117.
 - 3. Sheathing Joint-and-Penetration Treatment Materials:
 - a. Sealant for Glass-Mat Gypsum Sheathing Board:

- 1) Provide silicone emulsion sealant complying with the requirements specified in ASTM C 834, compatible with the sheathing tape and sheathing, and recommended by the tape and sheathing manufacturers for use with the glass-fiber sheathing tape and for covering exposed fasteners.
- b. Sheathing Tape for Glass-Mat Gypsum Sheathing Board:
 - 1) Provide self-adhering glass-fiber tape of a type recommended by the sheathing and tape manufacturers for use with silicone emulsion sealant for sealing joints in glass-mat gypsum sheathing board, and having a history of successful in-service use.
 - 2) Provide sheathing tape that is a minimum of 2 inches wide, and that has either 10 by 10 or 10 by 20 threads per inch.
4. Miscellaneous Materials:
 - a. Flexible Flashing:
 - 1) Provide composite, self-adhesive, flashing consisting of a pliable, rubberized-asphalt compound, bonded to a high-density, cross-laminated polyethylene film to produce an overall thickness of not less than 0.040 inch.
 - 2) Provide flexible flashing manufactured by the same firm that manufactures the fluid-applied membrane air barriers provided under Section 07275, Fluid-Applied Membrane Air Barriers.
 - 3) Manufacturers:
 - a) Carlisle Coatings and Waterproofing, CCW-705-TWF Thru-Wall Flashing, www.dpproducts.com/products/carlisle/ccw-705-twff.pdf.
 - b) Grace Construction Products, a unit of W. R. Grace and Company, Perm-A-Barrier Detail Membrane Flashing, www.graceathome.com/pages/flashingprod.
 - c) MFM Building Products Corp., Window Wrap, www.mfmbp.com/wintapes.
 - d) Approved equal.
 - b. Primer for Flexible Flashing:
 - 1) Provide primer for the flexible flashing as recommended by the manufacturer of the flexible flashing for the substrate.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. With the installer present, examine areas and substrates to receive gypsum board assemblies for compliance with requirements and other conditions affecting performance, including welded hollow-metal frames, cast-in anchors, and structural framing.
- B. Evaluation and Assessment:

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Protection of In-Place Conditions:

1. To prevent texture finishes from coming into contact with surfaces not indicated to receive texture finish, cover them with masking agents, polyethylene film, or other means.
 - a. If despite these precautions, the texture finishes contact the protected surfaces, immediately remove the droppings and overspray according to texture finish manufacturer's written recommendations to prevent damage.

B. Surface Preparation:

1. Prepare and apply primer to gypsum panels and other surfaces receiving texture finishes.
 - a. Ensure that the surfaces are clean, dry, and smooth when the primer is applied.

3.03 INSTALLATION

A. Gypsum Sheathing:

1. Install gypsum sheathing in accordance with the requirements specified in GA-253 and with the manufacturer's installation instructions.
 - a. Where non-load-bearing construction abuts structural elements, install the gypsum sheathing boards to have a 3/8-inch gap between the boards and the structural elements.
 - b. Where non-load-bearing construction abuts masonry or similar materials that might retain moisture, install the gypsum sheathing boards to have a 1/4-inch gap between the boards and the masonry or similar materials to prevent wicking.
 - c. Submit the gypsum sheathing manufacturer's written installation instructions to the Program/Project Manager for information.
2. Do not use materials with defects that impair the quality of the sheathing, or pieces that are too small to use with the minimum number of joints or optimum joint arrangement.
3. Cut gypsum sheathing panels at penetrations, edges, and other obstructions to the work.
 - a. Fit gypsum sheathing panels tightly against abutting construction, unless otherwise indicated herein.
4. Do not bridge building expansion joints.
 - a. Cut and space the edges of gypsum sheathing panels to match the spacing of the structural support elements.
5. Securely attach the gypsum sheathing to the substrate by fastening as indicated herein.

- a. Use common wire nails, unless otherwise indicated in the Contract Documents or referenced schedule.
 - 1) Where the opposite side will be exposed to view or will receive finish materials, select fasteners of a size that will not fully penetrate the members.
 - 2) Install fasteners without splitting the wood.
 - 3) Install fasteners in accordance with requirements indicated in "Table 2304.9.1 Fastening Schedule" in the ICC International Building Code (IBC) as Amended by the City of Phoenix.
 - 4) For power-driven fasteners, comply with the requirements specified in NES NER 272.
- b. Make tight connections.
 - 1) Apply fasteners so their heads bear tightly against the face of the sheathing boards, but do not cut into the sheathing board facing.
- c. Fasten gypsum sheathing to cold-formed metal framing using screws.
 - 1) For steel framing less than 0.0329 inch thick, attach sheathing in accordance with the requirements specified in ASTM C 1002.
 - 2) For steel framing from 0.033 to 0.112 inch thick, attach sheathing in accordance with the requirements specified in ASTM C 954.
- 6. Vertical Installation:
 - a. Install gypsum board sheathing so its vertical edges are centered over the studs.
 - 1) Abut the ends and edges of each gypsum board sheathing panel with those of adjacent boards.
 - b. Attach boards at their perimeter and within the field of the board to each stud.
 - 1) Space fasteners approximately 8 inches apart on center, and set back a minimum of 3/8 inch from the edges and ends of boards.
 - 2) For sheathing under stucco cladding, the boards may be initially tacked in place with screws if the overlying self-furring metal lath is screw-attached through the sheathing to studs immediately after the sheathing is installed.
- B. Sheathing Joint-and-Penetration Treatment:
 - 1. Seal the gypsum sheathing joints in accordance with the gypsum sheathing manufacturer's installation instructions.
 - a. Apply elastomeric sealant to the joints and fasteners, and trowel the sealant flat.
 - 1) Apply a sufficient quantity of sealant to completely cover the joints and fasteners after troweling.
 - 2) Seal other penetrations and openings.
 - b. Apply glass-fiber sheathing tape to glass-mat gypsum sheathing board joints, and apply and trowel silicone emulsion sealant to embed the entire face of tape in sealant.
 - 1) Apply sealant to exposed fasteners with a trowel so the fasteners are completely covered.

- 2) Seal other penetrations and openings.
 - c. Submit the gypsum sheathing manufacturer's written installation instructions to the Program/Project Manager for information.
- C. Flexible Flashing:
- 1. Apply flexible flashing where indicated in the Contract Documents and in accordance with the flexible flashing manufacturer's instructions.
 - a. Prime substrates as recommended by the flexible flashing manufacturer.
 - b. Lap the seams and junctures with other materials at least 4 inches, except the laps at the flashing flanges of other construction do not need to exceed the flange width.
 - c. At the bottom and sides of openings, lap the flexible flashing over weather-resistant building paper.
 - d. At the heads of openings, lap weather-resistant building paper over the flexible flashing.
 - e. After the flexible flashing has been applied, roll the surfaces with a hard rubber or metal roller to ensure that the flexible flashing is completely adhered to the substrates.
 - f. Submit the flexible flashing manufacturer's written installation instructions to the Program/Project Manager for information.

3.04 CLEANING

- A. Waste Management:
- 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.05 PROTECTION

- A. Take steps to insure that installed gypsum sheathing is protected during subsequent construction activities.

SECTION 09260

GYPSUM BOARD ASSEMBLIES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for providing gypsum board assemblies as indicated on the Contract Drawings and herein:
 - a. Framing installation.
 - b. Gypsum board panel application.
 - c. Trim installation.
 - d. Finishing of gypsum board assemblies, including texture finishes.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 07210 - Building Insulation.
 - 3. Section 07275 – Fluid Applied Membrane Air Barriers.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 2. SCAQMA: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside and San Bernardino counties.
 - 3. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
- B. Definitions:
 - 1. Standard definitions of terms for gypsum board assemblies that apply to the Work of this Section and not defined in this Section or in other referenced standards are defined in ASTM C 11.
 - 2. Cripple Studs: Short studs placed between the header/lintel and a top plate, or between a sill and bottom plate. A stud used above or below a

wall opening, and extending from the header to the top plate or from the sole plate to the rough sill.

C. Reference Standards:

1. American National Standards Association (ANSI):
 - a. ANSI A108.11 - Specifications for Interior Installations of Cementitious Backer Units.
 - b. ANSI A118.9 – Specifications for Cementitious Backer Units (included in AANSI A108.1)
2. ASTM International (ASTM):
 - a. ASTM A 641/A 641M - Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire.
 - b. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - c. ASTM B 221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
 - d. ASTM B 221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric).
 - e. ASTM C 11 – Standard Terminology Relating to Gypsum and Related Building Materials and Systems.
 - f. ASTM C 475/C 475M - Standard Specification for Joint Compound and Joint Tape for Finishing Gypsum Board.
 - g. ASTM C 645 - Standard Specification for Nonstructural Steel Framing Members.
 - h. ASTM C 665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing.
 - i. ASTM C 754 - Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products.
 - j. ASTM C 840 - Standard Specification for Application and Finishing of Gypsum Board.
 - k. ASTM C 1002 - Standard Specification for Steel Self-Piercing Tapping Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Wood Studs or Steel Studs.
 - l. ASTM C 1047 - Standard Specification for Accessories for Gypsum Wallboard and Gypsum Veneer Base.
 - m. ASTM C 1396/C 1396M - Standard Specification for Gypsum Board.
 - n. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.
 - o. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Suspended Ceilings:
 - a. Coordinate the installation of ceiling suspension systems with the installation of the overhead structure to ensure that inserts and other provisions for anchorage to the building structure have been properly installed to receive the ceiling hangers at the spacing required to support the ceilings, and that hangers will develop their full strength.
- B. Sequencing:
 - 1. Install sound attenuation blankets before installing gypsum panels, unless the blankets can be readily installed after the gypsum panels have been installed on one side of a partition.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Steel suspended ceiling and soffit framing components.
 - 2) Steel partition and soffit framing components.
 - 3) Interior gypsum wallboard.
 - 4) Exterior gypsum panels for ceilings and soffits.
 - 5) Tile backing panels.
 - 6) Trim accessories.
 - 7) Joint treatment materials.

- 8) Laminating adhesive.
- 9) Steel drill screws.
- 10) Isolation strip at exterior walls.
- 11) Sound attenuation blankets.
- 12) Polystyrene aggregate ceiling finish.
- b. Samples:
 - 1) Textured Finishes Samples.

B. Informational Submittals:

- 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. ENVISION Credit RA1.3 – Use Recycled Materials
 - 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - b. ENVISION Credit RA1.4 – Use Regional Materials
 - 1) Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).
 - c. Adhesives and Sealants
 - 1) Submit product data highlighting the VOC content for any field applied sealant used.

1.05 QUALITY ASSURANCE

A. Site Samples:

- 1. Textured Finishes Samples:
 - a. Submit 24-inch by 24-inch Samples of textured finishes.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

- 1. Deliver materials in their original packages, containers, or bundles bearing the brand name and identification of the manufacturer or supplier.

B. Storage and Handling Requirements:

- 1. Store materials inside under cover, and keep them dry and protected against damage from the weather, direct sunlight, surface contamination, corrosion, construction traffic, and other causes.

2. Stack gypsum panels flat on leveled supports off the ground and a protective covering to prevent sagging.
3. Handle gypsum boards so damage to edges, ends, and surfaces is prevented.
4. Protect metal corner beads and trim from being bent or otherwise damaged.

1.07 SITE CONDITIONS

A. Ambient Conditions:

1. Ventilation:
 - a. Ventilate building spaces as required to remove water in excess of that required for drying joint treatment material immediately after its application.
 - b. Avoid drafts during dry, hot weather to prevent too rapid drying.
2. Cold Weather Protection:
 - a. When ambient outdoor temperatures are below 55 degrees Fahrenheit, maintain continuous, uniform comfortable building working temperatures not less than 55 degrees Fahrenheit and not more than 70 degrees Fahrenheit for a minimum of 48 hours prior to, during, and following installation of gypsum board and joint treatment materials or bonding of adhesives.

B. Existing Conditions:

1. Comply with the installation requirements for the conditions existing at the Site as specified in ASTM C 840, or with the gypsum board manufacturer's written recommendations, whichever are more stringent.

PART 2 PRODUCTS

2.01 GYPSUM BOARD ASSEMBLIES

A. Manufacturers:

1. Manufacturer Lists:
 - a. Steel Framing and Furring Manufacturers:
 - 1) Dietrich Industries, Inc., www.dietrichmetalf framing.com.
 - 2) National Gypsum Company, www.nationalgypsum.com.
 - 3) Allied Studco, Inc., www.studco.com.
 - 4) California Expanded Metal Products Co., www.cemcosteel.com.
 - 5) ClarkWestern Building Systems, www.clarkwestern.com.
 - 6) Approved equal.
 - b. Gypsum Board and Related Products Manufacturers:
 - 1) American Gypsum Co., www.americangypsum.com.
 - 2) Georgia-Pacific Gypsum Corporation, <https://www.gp.com>.
 - 3) National Gypsum Company, www.nationalgypsum.com.
 - 4) United States Gypsum Company, www.usg.com.

- 5) Approved equal.
- c. Accessory Manufacturers:
 - 1) Fry Reglet Corp., www.fryreglet.com.
 - 2) National Gypsum Company, www.nationalgypsum.com.
 - 3) California Expanded Metal Products Co., www.cemcosteel.com.
 - 4) ClarkWestern Building Systems, www.clarkwestern.com.
 - 5) Approved equal.
- d. Texture Finish Manufacturers:
 - 1) Georgia-Pacific Gypsum Corporation; GyProc Ceiling Texture/Polystyrene, www.gp.com.
 - 2) National Gypsum Company; Gold Bond Perfect Spray, www.nationalgypsum.com.
 - 3) United States Gypsum Company, SHEETROCK Ceiling Spray Texture, QT Polystyrene, www.usg.com.
- e. Grid Suspension System for Interior Ceilings Manufacturers:
 - 1) Armstrong World Industries, Inc., Furring Systems/Drywall, www.armstrong.com.
 - 2) Chicago Metallic Corporation, www.chicagometallic.com.
 - 3) USG Interiors, Inc., Drywall Suspension System, www.usg.com.
- f. Tile Backing Manufacturers:
 - 1) Custom Building Products; Wonderboard, www.custombuildingproducts.com.
 - 2) United States Gypsum Co.; DUROCK Cement Board, www.usg.com.
- g. Aluminum Trim Manufacturers
 - 1) Fry Reglet Corporation, www.fryreglet.com.
 - 2) MM Systems Corporation, www.mmsystemscorp.com.
- h. Cementitious Backer Unit Manufacturers:
 - 1) Custom Building Products; Wonderboard, www.custombuildingproducts.com.
 - 2) United States Gypsum Co.; DUROCK Cement Board, www.usg.com.
- 2. Substitution Limitations:
 - a. The products specified establish standards for kind, quality, and function desired for this Contract.
 - b. The use of a manufacturer's proprietary product name to designate materials is not intended to imply that the products named are required to be used to the exclusion of equivalent products of other manufacturers.
 - c. Submit the manufacturer's material data and certificates of performance for proposed substitutions.
- 3. Product Options:
 - a. Submit the manufacturer's Product Data for each type of product indicated and provided.

B. Description:

1. Regulatory Requirements:

a. Phoenix Building Construction Code:

- 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).

2. ENVISION Requirements:

a. Recycled Content

- 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.

b. Regional Content

- 1) Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).

3. Sustainable Requirements

a. Volatile Organic Compounds (VOC) Content of Interior Sealants:

- 1) Provide sealants and sealant primers for the gypsum board assemblies of this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168:

- a) Drywall and panel adhesives: 50 grams per Liter less water.

C. Performance:

1. Fire-Test-Response Characteristics:

- a. For gypsum board assemblies required to have fire-resistance ratings, provide materials and construction identical to those of assemblies that have had their fire-resistance ratings determined by testing performed by an independent testing and inspecting agency acceptable to the Authorities Having Jurisdiction in accordance with the methods specified in ASTM E 119.

D. Materials:

1. Steel Suspended Ceiling and Soffit Framing:

- a. Provide components for the steel suspended ceiling and soffit framing system complying with the requirements specified in ASTM C 754 for the conditions indicated on the Contract Drawings.
- b. Tie Wire:

- 1) Provide tie wire complying with the requirements specified in ASTM A 641/A 641M, for soft temper, 0.0625-inch diameter wire, or a double strand of 0.0475-inch diameter wire, with a Class 1 zinc coating.
- c. Hangers:
 - 1) Provide hangers complying with the following requirements:
 - a) Wire Hangers:
 - (1) Provide soft temper, 0.162-inch diameter wire hangers with a Class 1 zinc coating complying with the requirements specified in ASTM A 641/A 641M.
 - b) Angle Hangers:
 - (1) Provide angle hangers complying with the requirements for hot-dip galvanized commercial-steel (CS) sheet with a G60 (Z180) Coating Designation as specified in ASTM A 653/A 653M.
 - (a) Minimum Base Metal Thickness: 0.0179 inch (0.45 mm).
 - (b) Size: 7/8 inch by 1-3/8 inches (22.2mm by 34.9mm) or 1-5/8 inches by 1-5/8 inches (41.3mm by 41.3mm).
- d. Carrying Channels:
 - 1) Provide carrying channels fabricated from 0.0538 inch (1.37mm) thick cold-rolled, hot-dip galvanized steel base metal and at least a 1/2-inch (12.7mm) wide flange complying with the requirements for commercial-steel (CS) sheet with a G60 (Z180) Coating Designation as specified in ASTM A 653/A 653M.
 - a) Depth: 2 inches.
- e. Furring Channels (Furring Members):
 - 1) Provide furring channels (furring members) fabricated from hot-dip galvanized steel complying with the requirements for commercial-steel (CS) sheet with a G60 (Z180) Coating Designation as specified in ASTM A 653/A 653M
 - a) Steel Studs:
 - (1) Provide steel studs fabricated from steel complying with the requirements specified in ASTM C 645.
 - (2) Depth: As indicated on the Contract Drawings.
- f. Grid Suspension System for Interior Ceilings:
 - 1) Provide a direct-hung grid suspension system for interior ceilings composed of interlocking main beams and cross-furring members complying with the requirements specified in ASTM C 645.
2. Steel Partition and Soffit Framing:
 - a. Provide components for the steel partition and soffit framing system complying with the requirements specified in ASTM C 754 for the conditions indicated on the Contract Drawings.
 - 1) Steel Sheet Components:

- a) Provide steel sheet components complying with the requirements of ASTM C 754 metal, and galvanized with a G60 (Z180) Coating Designation as specified in ASTM A 653/A 653M.
- b. Steel Studs and Runners:
 - 1) Provide steel studs and runners complying with the requirements of ASTM C 754.
 - 2) Minimum Base Metal Thickness: 0.027 inch (0.7mm).
 - 3) Depth: As indicated on the Contract Drawings.
- c. Deep-Leg Deflection Track:
 - 1) Provide deep-leg deflection track consisting of a top runner with 2-inch (50.8mm) deep flanges complying with the requirements of ASTM C 645.
- d. Flat Strap and Backing Plate:
 - 1) Provide a flat strap and backing plate consisting of steel sheet blocking and bracing.
 - 2) Length and Width: As indicated on the Contract Drawings.
 - 3) Minimum Base Metal Thickness: 0.027 inch (0.7mm).
- e. Cold-Rolled Channel Bridging:
 - 1) Provide cold-rolled channel bridging fabricated from 0.0538 inch (1.37mm) thick bare steel, with at least a 1/2 inch (12.7mm) wide flange.
 - a) Depth: 1-1/2 inches (38.1mm).
 - 2) Clip Angle:
 - a) Provide 1-1/2 inch by 1-1/2 inch (38.1mm by 38.1mm), 0.068-inch- (1.73mm) thick, galvanized steel clip angles.
- f. Hat-Shaped, Rigid Furring Channels:
 - 1) Provide hat-shaped, rigid furring channels complying with the requirements of ASTM C 645.
 - 2) Minimum Base Metal Thickness: 0.0179 inch (0.45mm).
 - 3) Depth: 1-1/2 inches (38.1mm).
- g. Resilient Furring Channels:
 - 1) Provide asymmetrical or hat shaped resilient furring channels, designed to reduce sound transmission, and consisting of 1/2-inch (12.7mm) deep steel sheet members with their faces attached to a single flange by a slotted leg (web), or attached to 2 flanges by slotted or expanded metal legs.
- h. Cold-Rolled Furring Channels:
 - 1) Provide cold-rolled furring channels fabricated from 0.0538 inch (1.37mm) thick bare steel, with at least a 1/2 inch (12.7mm) wide flange.
 - a) Depth: 3/4 inch (19.1mm).
 - 2) Furring Brackets:

- a) Provide furring brackets fabricated from adjustable, corrugated-edge steel sheet having a bare steel thickness of at least 0.0312 inch (0.79mm) thick.
 - 3) Tie Wire:
 - a) Provide tie wire complying with the requirements specified in ASTM A 641/A 641M, for soft temper, 0.0625-inch diameter wire, or a double strand of 0.0475-inch diameter wire, with a Class 1 zinc coating.
 - i. Z-Shaped Furring:
 - 1) Provide Z-shaped furring having slotted or non-slotted webs, 1-1/4-inch (31.8mm) face flanges, 7/8-inch (22.2mm) wall attachment flanges, at least 0.0179 inch (0.45mm) thick bare metal, and depths as required to accommodate the insulation thickness indicated on the Contract Drawings.
 - j. Fasteners for Metal Framing:
 - 1) Provide fasteners for metal framing of the type, material, size, corrosion resistance, holding power, and other properties required to fasten the steel members to the substrates.
- 3. Interior Gypsum Wallboard:
 - a. Panel Size:
 - 1) Provide interior gypsum wallboard of the maximum lengths and widths available that will minimize joints in each area, and correspond with the support system indicated on the Contract Drawings.
 - b. Gypsum Wallboard:
 - 1) Provide Type X gypsum wallboard complying with the requirements specified in ASTM C 1396/C 1396M.
 - a) Thickness: 5/8 inch (15.9mm), unless noted otherwise.
 - b) Long Edges: Tapered.
 - c. Abuse-Resistant Gypsum Wallboard:
 - 1) Provide Type X gypsum wallboard complying with the requirements specified in ASTM C 1396/C 1396M, and manufactured to produce greater resistance to surface indentation and through-penetration than standard gypsum panels.
 - a) Core: 5/8 inch (15.9mm), unless noted otherwise.
 - b) Long Edges: Tapered.
- 4. Exterior Gypsum Panels for Ceilings and Soffits:
 - a. Panel Size:
 - 1) Provide exterior gypsum panels for ceilings and soffits of the maximum lengths and widths available that will minimize joints in each area, and correspond with the support system indicated on the Contract Drawings.
 - b. Exterior Gypsum Soffit Board:
 - 1) Provide Type X exterior gypsum panels for ceilings and soffits complying with the requirements specified in

- ASTM C 1396/C 1396M, and having the manufacturer's standard edges.
- a) Core: 5/8 inch (15.9mm).
5. Tile Backing Panels:
- a. Panel Size:
 - 1) Provide tile backing panels of the maximum lengths and widths available that will minimize joints in each area, and correspond with the support system indicated on the Contract Drawings.
 - b. Water-Resistant Gypsum Backing Board:
 - 1) Provide Type X water-resistant gypsum backing board complying with the requirements specified in ASTM C 1396/C 1396M.
 - a) Core: 5/8 inch (15.9mm), unless noted otherwise.
 - c. Cementitious Backer Units:
 - 1) Provide cementitious backer units complying with the requirements specified in ANSI A118.9.
 - 2) Thickness: 5/8 inch (15.9mm).
6. Trim Accessories:
- a. Interior Trim:
 - 1) Provide interior trim complying with the requirements specified in ASTM C 1047.
 - 2) Material:
 - a) Provide interior trim fabricated from galvanized or aluminum-coated steel sheet, rolled zinc, plastic, or paper-faced galvanized steel sheet.
 - 3) Shapes:
 - a) Cornerbead:
 - b) Bullnose Bead:
 - c) LC-Bead:
 - (1) Provide J-shaped LC-bead.
 - d) L-Bead:
 - (1) Provide L-shaped L-bead.
 - e) U-Bead:
 - (1) Provide J-shaped U-bead.
 - f) Expansion (Control) Joint:
 - g) Curved-Edge Cornerbead:
 - (1) Provide curved-edge cornerbeads having notched or flexible flanges.
 - b. Exterior Trim:
 - 1) Provide exterior trim complying with the requirements specified in ASTM C 1047.
 - 2) Material:
 - a) Provide interior trim fabricated from hot-dip galvanized steel sheet or rolled zinc.
 - 3) Shapes:
 - a) Cornerbead:

- b) LC-Bead:
 - (1) Provide J-shaped LC-bead.
 - c) Expansion (Control) Joint:
 - (1) Provide one-piece, rolled zinc expansion (control) joints with a V-shaped slot and a removable strip for covering the slot opening.
 - c. Aluminum Trim:
 - 1) Provide extruded aluminum accessories having profiles and dimensions as indicated on the Contract Drawings.
 - 2) Aluminum:
 - a) Provide 6063-T5 aluminum with strength and durability properties not less than as specified in ASTM B 221 or ASTM B 221M.
 - 3) Finish:
 - a) Provide a corrosion-resistant primer compatible with the joint compound and finish materials specified.
- 7. Joint Treatment Materials:
 - a. Provide joint treatment materials complying with the requirements specified in ASTM C 475.
 - b. Joint Tape:
 - 1) Interior Gypsum Wallboard: Paper.
 - 2) Exterior Gypsum Soffit Board: Paper.
 - 3) Tile Backing Panels: As recommended by the panel manufacturer.
 - c. Joint Compound for Interior Gypsum Wallboard:
 - 1) For each coat, use a formulation that is compatible with other compounds applied on previous or for successive coats.
 - 2) Prefilling:
 - a) At open joints, rounded or beveled panel edges, and damaged surface areas, use setting-type taping compound.
 - 3) Embedding and First Coat:
 - a) For the embedding tape and first coat on joints, fasteners, and trim flanges, use setting-type taping compound or drying-type, all-purpose compound.
 - b) Use setting-type compound for installing paper-faced metal trim accessories.
 - 4) Fill Coat:
 - a) For the second coat, use either setting-type, sandable topping compound or drying-type, all-purpose compound.
 - 5) Finish Coat:
 - a) For the third coat, use either setting-type, sandable topping compound or drying-type, all-purpose compound.
 - 6) Skim Coat:

- a) For the final coat of a Level 5 finish, use either setting-type, sandable topping compound or drying-type, all-purpose compound.
- d. Joint Compound for Exterior Applications:
 - 1) Exterior Gypsum Soffit Board:
 - a) Use setting-type taping and setting-type, sandable topping compounds.
 - e. Joint Compound for Tile Backing Panels:
 - 1) Water-Resistant Gypsum Backing Board:
 - a) Use setting-type taping and setting-type, sandable topping compounds.
 - 2) Cementitious Backer Units:
 - a) Use joint compound as recommended by the cementitious backer unit manufacturer.

2.02 ACCESSORIES

- A. Laminating Adhesive:
 - 1. Provide adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.
- B. Steel Drill Screws:
 - 1. Unless otherwise indicated, provide steel drill screws complying with the requirements specified in ASTM C 1002.
 - 2. For fastening panels to steel members from 0.033 to 0.112 inch (0.84mm to 2.84mm) thick, provide screws complying with the requirements specified in ASTM C 954.
 - 3. For fastening cementitious backer units, provide screws of the type and size recommended by the panel manufacturer.
- C. Isolation Strip at Exterior Walls:
 - 1. Asphalt-Saturated Organic Felt:
 - a. Provide Type I (No. 15 asphalt felt), nonperforated asphalt-saturated organic felt complying with the requirements specified in ASTM D 226.
 - 2. Foam Gasket:
 - a. Provide 1/8 inch (3.2mm) thick, adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, in a width to suit the size of the steel stud.
- D. Sound Attenuation Blankets:
 - 1. Provide Type I sound attenuation blankets (blankets without membrane facing) complying with the requirements specified in ASTM C 665, and produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.
 - 2. Fire-Resistance-Rated Assemblies:

- a. Provide fire-resistance-rated assemblies complying with the mineral-fiber requirements of the assembly.
- E. Thermal Insulation:
 - 1. Provide thermal insulation as specified in Section 07210, Building Insulation.
- F. Polyethylene Vapor Retarder:
 - 1. Provide polyethylene vapor retarder as specified in Section 07275, Fluid-Applied Membrane Air Barriers.
- G. Texture Finishes:
 - 1. Polystyrene Aggregate Ceiling Finish:
 - a. Provide water-based, job-mixed polystyrene aggregate finish.
 - b. Texture: Fine.
 - c. Flame-Spread Index: No more than 25 when tested according to ASTM E 84.
 - d. Smoke-Developed Index: No more than 25 when tested according to ASTM E 84.
 - e. Primer:
 - 1) Provide a primer for the polystyrene aggregate finish as recommended by textured finish manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. With the installer present, examine areas and substrates to receive gypsum board assemblies for compliance with requirements and other conditions affecting performance, including welded hollow-metal frames, cast-in anchors, and structural framing.
- B. Evaluation and Assessment:
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. To prevent texture finishes from coming into contact with surfaces not indicated to receive texture finish, cover them with masking agents, polyethylene film, or other means.
 - a. If despite these precautions, the texture finishes contact the protected surfaces, immediately remove the droppings and overspray according

to texture finish manufacturer's written recommendations to prevent damage.

B. Surface Preparation:

1. Prepare and apply primer to gypsum panels and other surfaces receiving texture finishes.
 - a. Ensure that the surfaces are clean, dry, and smooth when the primer is applied.

3.03 FRAMING INSTALLATION

A. Installing Steel Framing:

1. Installation Standards:
 - a. Comply with the requirements that apply to framing installation as specified in ASTM C 754 and ASTM C 840.
2. Install supplementary framing, blocking, and bracing at terminations in gypsum board assemblies to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.
 - a. Comply with the details indicated on the Contract Drawings, and with the gypsum board manufacturer's written recommendations, or if none are available, then with United States Gypsum's *The Gypsum Construction Handbook*.
3. Isolate steel framing from the building structure at the locations indicated on the Contract Drawings to prevent transfer of loading imposed by structural movement.
 - a. Isolate ceiling assemblies where they abut or are penetrated by the building structure.
 - b. Isolate partition framing and wall furring where it abuts the structure, except at the floor.
 - 1) Install slip-type joints at the head of assemblies that avoid axial loading of the assembly, and laterally support assembly.
 - 2) Use deep-leg deflection track where indicated on the Contract Drawings.
4. Do not bridge building control and expansion joints with steel framing or furring members.
 - a. Frame both sides of joints independently.

B. Installing Steel Suspended Ceiling and Soffit Framing:

1. Suspend ceiling hangers from the building structure as follows:
 - a. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or ceiling suspension system.
 - 1) Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or using other equally effective means.

- b. Where the width of ducts and other construction within the ceiling plenum produces hanger spacings that interfere with the location of the hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.
 - 1) Size the supplemental suspension members and hangers to support the ceiling loads within performance limits established by the referenced standards.
- c. Secure wire hangers by looping and wire-tying, either directly to structures or to inserts, eyescrews, or other devices and fasteners that are secure and appropriate for the substrate, and in a manner that will not cause them to deteriorate or otherwise fail.
- d. Secure flat or angle hangers to the structure, including intermediate framing members, by attaching the hangers to inserts, eyescrews, or other devices and fasteners that are secure and appropriate for the structure and hanger, and in a manner that will not cause the hangers to deteriorate or otherwise fail.
- e. Do not attach hangers to steel roof deck.
- f. Attach hangers to structural members.
- g. Do not connect or suspend steel framing from ducts, pipes, or conduit.
- 2. Sway-brace suspended steel framing with the hangers or studs used for support.
- 3. For exterior soffits, install cross bracing and framing to resist wind uplift.
- 4. Wire-tie furring channels to supports, as required to comply with the requirements for the assemblies indicated on the Contract Drawings.
- 5. Install suspended steel framing components of the sizes and at the spacing as specified herein or indicated on the Contract Drawings, but not less than that required by the referenced steel framing and installation standards.
 - a. Hangers: 48 inches on center.
 - b. Carrying Channels (Main Runners): 48 inches on center.
 - c. Furring Channels (Furring Members): As indicated on the Contract Drawings.
- 6. Grid Suspension System:
 - a. Attach perimeter wall track or angle where the grid suspension system meets vertical surfaces.
 - b. Mechanically join the main beam and cross-furring members to each other, and butt-cut them to fit into the wall track.
- C. Installing Steel Partition and Soffit Framing:
 - 1. Where gypsum board assemblies abut other construction, install tracks (runners) at floors, ceilings, and structural walls and columns.
 - a. Where studs are installed directly against exterior walls, install an asphalt-felt or foam-gasket isolation strip between the studs and wall.

2. Except where partitions are indicated to terminate at suspended ceilings, extend partition framing the full height to the structural supports or substrates above suspended ceilings.
 - a. Continue the framing over the frames for doors and openings, and frame around ducts penetrating partitions above the ceiling to provide support for the gypsum board.
 - b. Cut studs 1/2 inch (13mm) short of the full height to provide perimeter relief.
 - c. For fire-resistance-rated partitions extending to the underside of floor/roof slabs and decks, or other continuous solid-structure surfaces, to obtain the required ratings, install the framing around structural and other members extending below the floor/roof slabs and decks, as needed to support the gypsum board closures and to make partitions continuous from the floor to the underside of the solid structure.
 - 1) Terminate partition framing at suspended ceilings where indicated on the Contract Drawings.
3. Space steel studs and furring as follows:
 - a. Single-Layer Construction: 24 inches apart on center, unless otherwise indicated on the Contract Drawings.
 - b. Cementitious Backer Units: 16 inches apart on center, unless otherwise indicated on the Contract Drawings.
4. Install steel studs so their flanges point in the same direction, and the leading edge or end of each panel can be attached to open (unsupported) edges of the stud flanges first.
5. Unless otherwise indicated on the Contract Drawings, frame door openings in accordance with the requirements of GA-600 and with gypsum board manufacturer's applicable written recommendations.
 - a. Screw the vertical studs at jambs to jamb anchor clips on the door frames.
 - b. Install the runner track section for cripple studs at its head, and secure it to jamb studs.
 - c. Unless otherwise indicated, install 2 studs at each jamb.
 - d. Install cripple studs at the head adjacent to each jamb stud, with a minimum clearance of 1/2-inch from the jamb stud to allow for installation of a control joint.
 - e. Extend jamb studs through suspended ceilings, and attach them to the underside of the floor or roof structure above.
6. Unless otherwise indicated on the Contract Drawings, frame openings, other than door openings, the same as required for the door openings.
 - a. Install framing below the sills of openings to match the framing required above door heads.
7. Z-Furring Members:
 - a. Erect insulation vertically and hold it in place with Z-furring members spaced 24 inches apart on center.

- b. Except at exterior corners, securely attach the narrow flanges of furring members to walls with concrete stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches (600mm) on center.
- c. At exterior corners, attach the wide flange of furring members to walls with the short flange extending beyond the corner; on the adjacent wall surface, screw-attach the short flange of the furring channel to the web of the attached channel.
- d. At interior corners, space the second member no more than 12 inches (300mm) from the corner, and cut the insulation to fit.

3.04 PANEL APPLICATION

- A. Gypsum Board Application and Finishing Standards:
 - 1. Comply with the requirements that apply to panel application as specified in ASTM C 840 and GA-216.
- B. Install interior gypsum wallboard at the locations indicated on the Contract Drawings.
- C. Install ceiling board panels across framing to minimize the number of abutting end joints, and to avoid abutting end joints in the central area of each ceiling.
 - 1. Stagger abutting end joints of adjacent panels not less than one framing member.
- D. Install gypsum panels with the face side out.
 - 1. Butt panels together to provide light contact at the edges and ends, with not more than 1/16 inch of open space between panels.
 - 2. Do not force panels into place.
- E. Locate the edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints.
 - 1. Do not place tapered edges against cut edges or ends.
 - 2. Stagger vertical joints on opposite sides of partitions.
 - 3. Other than control joints, do not make joints at the corners of framed openings.
- F. Attach gypsum panels to steel studs so the leading edge or end of each panel is attached to open (unsupported) edges of the stud flanges first.
- G. Attach gypsum panels to the framing provided at openings and cutouts.
- H. Form control and expansion joints with space between the edges of adjoining gypsum panels.

- I. Cover both faces of steel stud partition framing with gypsum panels in concealed spaces (above ceilings and similar concealed places), except in internally braced chases.
 - 1. Unless a concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps not less in area than 8 square feet.
 - 2. Fit gypsum panels around ducts, pipes, and conduits.
 - 3. Where partitions intersect open concrete coffers, concrete joists, and other structural members projecting below the underside of floor/roof slabs and decks, cut the gypsum panels to fit the profile formed by the coffers, joists, and other structural members.
 - a. To install sealant, provide joints 1/4 inch to 3/8 inch wide.
- J. Except at floors, isolate the perimeter of non-load-bearing gypsum board partitions at structural abutments.
 - 1. Provide spaces 1/4 inch to 1/2 inch wide at these locations, and trim the edges with U-bead edge trim where the edges of the gypsum panels are exposed.
 - 2. Seal joints between the edges and abutting structural surfaces with acoustical sealant.
- K. Space the fasteners in gypsum panels according to the referenced gypsum board application and finishing standard and the manufacturer's written recommendations.
- L. Space the fasteners in panels that are tile substrates a maximum of 8 inches apart on center.

3.05 PANEL APPLICATION METHODS

- A. Single-Layer Application:
 - 1. Apply the gypsum panels on ceilings before applying wall/partition board to the greatest extent possible, and at right angles to the framing unless otherwise indicated on the Contract Drawings.
 - 2. On partitions/walls, apply gypsum panels horizontally (perpendicular to the framing), unless otherwise indicated or required by a fire-resistance-rated assembly, and minimize end joints.
 - a. Stagger abutting end joints not less than one framing member in alternate courses of board.
 - 3. On Z-furring members, apply gypsum panels vertically (parallel to the framing) with no end joints.
 - a. Locate edge joints over furring members.
- B. Single-Layer Fastening Methods:
 - 1. Apply gypsum panels to supports with steel drill screws.

C. Laminating Panels to Substrates:

1. Where gypsum panels are indicated as directly adhered to a substrate other than studs, joists, furring members, or base layer of gypsum board, comply with the gypsum board manufacturer's written recommendations, and temporarily brace or fasten the gypsum panels until the fastening adhesive has set.

D. Exterior Soffits and Ceilings:

1. Apply exterior gypsum soffit board panels perpendicular to supports, with the end joints staggered and located over supports.
2. Install exterior gypsum soffit board panels to allow a 1/4-inch (6.4mm) open space where panels abut other construction or structural penetrations.
3. Fasten exterior gypsum soffit board panels with corrosion-resistant screws.

E. Tile Backing Panels:

1. Water-Resistant Gypsum Backing Board:
 - a. Install water-resistant gypsum backing board at showers, tubs, and where indicated on the Contract Drawings.
 - 1) Provide water-resistant gypsum backing board in ceilings only if indicated in the Room Finish Schedule on the Contract Drawings.
 - b. Install water-resistant gypsum backing board to allow a 1/4-inch gap where the panels abut other construction or penetrations.
2. Cementitious Backer Units:
 - a. Install cementitious backer units in accordance with the requirements specified in ANSI A108.11.
 - b. Provide cementitious backer units in the walls in showers, behind ceramic tile surfaces, and in other locations indicated on the Contract Drawings.

3.06 INSTALLING TRIM ACCESSORIES

A. Attachment Methods:

1. For trim with back flanges designed to accept fasteners, attach the trim to framing with the same fasteners used for attaching the panels.
2. For trim without back flanges, attach the trim according to manufacturer's written instructions.

B. Interior Trim:

1. Unless otherwise indicated, provide cornerbeads at outside corners.
2. Provide bullnose beads at outside corners.
3. Provide LC-beads at exposed panel edges.
 - a. Provide joint compound at the exposed long flanges.
4. Provide L-beads at exposed panel edges.
 - a. Provide joint compound at the exposed long leg.

5. Provide U-beads at exposed panel edges.
 - a. Do not provide joint compound at the exposed short flange.
6. Provide expansion (control) joints where required.
7. Provide curved-edge cornerbeads at curved openings.

C. Exterior Trim:

1. Provide cornerbeads at outside corners.
2. Provide LC-beads at exposed panel edges.
 - a. Provide joint compound at the exposed long flanges.
3. Provide expansion (control) joints where required.

3.07 FINISHING GYPSUM BOARD ASSEMBLIES

A. Surface Preparation:

1. Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and other conditions as required to prepare gypsum board surfaces for decoration.
2. Promptly remove residual joint compound from adjacent surfaces.
3. Prefill open joints, rounded or beveled edges, and damaged surface areas.
4. Apply joint tape over gypsum board joints, except those with trim having flanges not intended for tape.

B. Gypsum Board Finish Levels:

1. Where finish levels are indicated on the Contract Drawings, finish gypsum board panels to the indicated level(s) as specified in ASTM C 840:
 - a. Level 0:
 - 1) No taping, finishing or accessories are required.
 - b. Level 1:
 - 1) Embed tape in joint compound at joints and interior angles.
 - 2) The surface must be free of excess joint compound.
 - 3) Tool marks and ridges are acceptable.
 - c. Level 2:
 - 1) Embed tape in joint compound, and apply 1 separate coat of joint compound over the joints, angles, fastener heads, and accessories.
 - 2) The surface must be free of excess joint compound.
 - 3) Tool marks and ridges are acceptable.
 - d. Level 3:
 - 1) Embed tape in joint compound, and apply 2 separate coat of joint compound over the joints, angles, fastener heads, and accessories.
 - 2) The joint compound must be smooth and free of tool marks and ridges.
 - e. Level 4:

- 1) Embed tape in joint compound, and apply 3 separate coats of joint compound over all joints, angles, fastener heads, and accessories.
 - 2) The joint compound must be smooth and free of tool marks and ridges.
 - f. Level 5:
 - 1) Embed tape and apply separate first, fill, and finish coats of joint compound to the tape, fasteners, and trim flanges; and apply a skim coat of joint compound, or material manufactured especially for this purpose, over entire surface.
 - 2) The surface must be smooth and free of tool marks and ridges.
 2. Where no finish level is indicated on the Contract Drawings, provide a Level 4 finish.
- C. Cementitious Backer Units:
 1. Finish cementitious backer units according to backer unit manufacturer's written instructions.
- D. Texture Finish Application:
 1. Mix and apply the finish using powered spray equipment to produce a uniform texture free of starved spots or other evidence of thin application or application patterns.

3.08 TOLERANCES:

- A. Steel Framing Components for Suspended Ceilings:
 1. Install steel framing components for suspended ceilings so the members for panel attachment are level to within 1/8 inch in 12 feet measured lengthwise on each member and transversely between parallel members.
- B. Steel Partition and Soffit Framing:
 1. Install each steel framing and furring member so fastening surfaces vary not more than 1/8 inch (3mm) from the plane formed by the faces of adjacent framing.

3.09 SITE QUALITY CONTROL

- A. Inspections:
 1. Above-Ceiling Observation:
 - a. Before the Contractor installs gypsum board ceilings, the Program/Project Manager, or his designee, will conduct an above-ceiling observation and report deficiencies in the Work observed.
 - 1) Notify the Program/Project Manager 7 days in advance of the date and time when the Contract Work, or part of the Contract Work, will be ready for above-ceiling observation.

B. Non-Conforming Work

1. Do not proceed with installation of gypsum board to the ceiling support framing until deficiencies have been corrected.

1	12/20/2017	N/A	1.01.A.1, 1.02.C.7, 1.03.B.1, 2.01.B.2	Add requirements for ENVISION Sustainability Rating System

SECTION 09265

GYPSUM BOARD SHAFT-WALL ASSEMBLIES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for shaft wall and chase wall enclosures.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01732 - Cutting and Patching.
 - 4. Section 01780 - Closeout Submittals.
 - 5. Section 09253 - Gypsum Sheathing.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 2. SCAQMA: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside and San Bernardino counties.
 - 3. STC: Sound transmission class.
 - 4. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public’s health, safety, and welfare.

C. Reference Standards:

1. ASTM International (ASTM):
 - a. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - b. ASTM C 645 - Standard Specification for Nonstructural Steel Framing Members.
 - c. ASTM C 665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing.
 - d. ASTM C 754 - Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products.
 - e. ASTM C 840 - Standard Specification for Application and Finishing of Gypsum Board.
 - f. ASTM C 1002 - Standard Specification for Steel Self-Piercing Tapping Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Wood Studs or Steel Studs.
 - g. ASTM C 1396/C 1396M - Standard Specification for Gypsum Board.
 - h. ASTM E 90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.
 - i. ASTM E 119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
 - j. ASTM E 413 - Classification for Rating Sound Insulation.
 - k. ASTM E 488 – Standard Test Methods for Strength of Anchors in Concrete and Masonry Elements.
 - l. ASTM E 1190 – Standard Test Methods for Strength of Power-Actuated Fasteners Installed in Structural Members.
2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
4. South Coast Air Quality Management District (SCAQMD):
 - a. SCAQMD Rule 1168 – Adhesive and Sealant Applications.
5. United States Government:
 - a. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.
6. Institute for Sustainability Infrastructure (ISI):

- a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Sequencing:

- 1. Install sound attenuation blankets before installing gypsum panels, unless the blankets can be readily installed after the gypsum panels have been installed on one side of a partition.

1.04 SUBMITTALS

A. Action Submittals:

- 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Gypsum board shaft-wall assemblies.
 - 2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. ENVISION Credit RA 1.3 - Use Recycled Materials
 - 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - b. ENVISION Credit RA 1.4 – Use Regional Materials
 - 1) Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).
 - c. Adhesives and Sealants
 - 1) Submit product data highlighting the VOC content for any field applied sealant used.

B. Informational Submittals:

- 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:

- 1) Gypsum board shaft-wall assembly manufacturer's published installation instructions.
- b. Manufacturer's Reports:
 - 1) Gypsum board shaft-wall assembly manufacturer's written recommendations for auxiliary materials.
- C. Closeout Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:

1.05 QUALITY ASSURANCE

- A. Not Used

1.06 NOT USED DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver materials in their original packages, containers, or bundles bearing the brand name and identification of the manufacturer or supplier.
- B. Storage and Handling Requirements:
 1. Stack panels flat, with spacers between each bundle to provide air circulation.
 - a. Furnish air circulation around the stacks and under coverings.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

- A. Ambient Conditions:
 1. Ventilation:
 - a. Ventilate building spaces as required to remove water in excess of that required for drying joint treatment material immediately after its application.
 - b. Avoid drafts during dry, hot weather to prevent too rapid drying.
 2. Cold Weather Protection:
 - a. When ambient outdoor temperatures are below 55 degrees Fahrenheit, maintain continuous, uniform comfortable building working temperatures not less than 55 degrees Fahrenheit and not more than 70 degrees Fahrenheit for a minimum of 48 hours prior to, during, and

following installation of gypsum board and joint treatment materials or bonding of adhesives.

B. Existing Conditions:

1. Comply with the installation requirements for the conditions existing at the Site as specified in ASTM C 840, or with the gypsum board manufacturer's written recommendations, whichever are more stringent.

PART 2 PRODUCTS

2.01 GYPSUM BOARD SHAFT-WALL ASSEMBLIES

A. Manufacturers:

1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.

B. Description:

1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).
2. ENVISION Requirements:
 - a. Volatile Organic Compounds (VOC) Content of Interior Sealants:
 - 1) Provide sealants and sealant primers for the gypsum board assemblies of this Contract having volatile organic compound content falling at or below the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168:
 - a) Drywall and panel adhesives: 50 grams per Liter less water.
 - b. Recycled Content:
 - 1) Gypsum Panel Products:
 - a) Provide Gypsum board products that contain the maximum available recycled content that still comply with Regional Content requirements outlined in this section.

- 2) Steel Sheet:
 - a) Provide steel sheet having an average recycled content so the postconsumer recycled content plus one-half of pre-consumer recycled content is not less than 75 percent.
 - 3) Sound Attenuation Blankets:
 - a) Provide sound attenuation blankets having a recycled content so the postconsumer recycled content plus one-half of pre-consumer recycled content constitutes a minimum of 20 percent by weight.
 - b) All sound attenuation blankets shall contain no added urea formaldehyde.
 - c. Regional Content
 - 1) Provide Gypsum board products whose raw materials have been extracted, harvested, or recovered within 500 miles of the project site and have been manufactured within 500 miles of the project site.
- C. Performance:
- 1. Fire-Test-Response Characteristics:
 - a. For gypsum board shaft-wall assemblies required to have fire-resistance ratings, provide materials and construction identical to those of assemblies that have had their fire-resistance ratings determined by testing performed by an independent testing and inspecting agency acceptable to the Authorities Having Jurisdiction in accordance with the methods specified in ASTM E 119.
 - b. Fire-Resistance Rating:
 - 1) Provide gypsum board shaft-wall assemblies having the fire-resistance rating indicated on the Contract Drawings.
 - 2. Sound Transmission Class (STC) Rated Assemblies:
 - a. For gypsum board shaft-wall assemblies required to have sound transmission class (STC) ratings, provide materials and construction identical to those of assemblies that have had their sound transmission class (STC) ratings determined by testing performed by an independent testing and inspecting agency in accordance with the method specified in ASTM E 90 and classified in accordance with the method specified in ASTM E 413.
 - b. Sound Transmission Class (STC) Rating:
 - 1) Provide gypsum board shaft-wall assemblies having the sound transmission class (STC) rating indicated on the Contract Drawings.

D. Design Criteria:

1. Gypsum Board Shaft-Wall Assemblies:
 - a. Provide materials and components complying with requirements of the fire-resistance-rated gypsum board shaft-wall assemblies indicated on the Contract Drawings.
 - 1) Eliminate or minimize end-to-end butt joints by providing panels having the maximum lengths available.
 - 2) Provide auxiliary materials complying with the referenced product standards and the gypsum board shaft-wall assembly manufacturer's recommendations.
 - a) Submit the gypsum board shaft-wall assembly manufacturer's written recommendations for auxiliary materials to the Program/Project Manager for information.
2. Product Data:
 - a. Obtain the gypsum board shaft-wall assembly manufacturer's Product Data for each gypsum board shaft-wall assembly proposed for the Work of this Section.
 - b. Submit the Product Data for each gypsum board shaft-wall assembly to the Program/Project Manager for approval.

E. Materials:

1. Panel Products:
 - a. Gypsum Liner Panels:
 - 1) Provide gypsum liner panels complying with the requirements for Type X gypsum board specified in ASTM C 1396/C 1396M.
 - a) Provide the manufacturer's proprietary liner panels having moisture-resistant paper faces.
 - b) Core:
 - (1) Provide gypsum liner panels having a 1 inch (25.4mm) thick core.
 - c) Long Edges:
 - (1) Provide gypsum liner panels having a double bevel on their long edges.
 - b. Gypsum Board:
 - 1) Provide gypsum board complying with the requirements specified in Section 09253, Gypsum Sheathing.
 - c. Manufacturers:
 - 1) Georgia-Pacific Gypsum., <https://www.gp.com>.
 - 2) National Gypsum Company, <http://www.nationalgypsum.com>.
 - 3) PABCO Building Products LLC, PABCO® Gypsum, <http://www.pabco gypsum.com>.
 - 4) USG Corporation, <http://www.usg.com>.
 - 5) Approved equal.

2. Non-Load-Bearing Framing:
 - a. Framing Members:
 - 1) Provide non-load-bearing steel framing complying with the requirements specified in ASTM C 754 for the conditions indicated in the Contract Documents.
 - b. Steel Sheet Components:
 - 1) Unless otherwise indicated in the Contract Documents, provide steel sheet components complying with the requirements for metal and thicknesses specified in ASTM C 645.
 - 2) Protective Coating:
 - a) Unless otherwise indicated in the Contract Documents, provide steel sheet hot-dip galvanized in accordance with the requirements for G60 (Z180) protective coatings specified in ASTM A 653/A 653M.
 - c. Studs:
 - 1) For repetitive members, corner and end members, and the fire-resistance-rated assembly indicated in the Contract Documents, provide the manufacturer's standard profile studs having the depth and base-metal thickness indicated in the Contract Documents.
 - a) If no base-metal thickness is indicated in the Contract Documents, provide a base-metal thickness of at least 0.0220 inch (0.55mm).
 - d. Runner Tracks:
 - 1) Provide the manufacturer's standard J-profile track having the manufacturer's standard long-leg length, but not less than 2 inches (51mm) long and matching the depth of the studs and having a base-metal thickness at least as thick as the studs.
 - e. Firestop Tracks:
 - 1) To isolate the partition framing from the structure above in specific fire-resistance-rated assemblies, provide firestop tracks having a top runner manufactured to allow the partition heads to expand and contract with the movement of the structure while maintaining the continuity of fire-resistance-rated assembly indicated in the Contract Documents; and having a thickness not less than the thickness of the studs and a width to accommodate the depth of studs as indicated in the design designations of the assemblies on the Contract Drawings.
 - 2) Manufacturers:
 - a) Metal-Lite, Inc.[™], a Division of Perfect Wall.net, "The System[®]", <http://www.metal-lite.net>.

- b) Dietrich Metal Framing, SLP-TRK® Systems,
<http://www.dietrichmetalframing.com>.
 - c) Fire Trak Corp., Fire Trak attached to the studs with Fire Trak Slip Clips, <http://www.firetrak.com>.
 - d) Approved equal.
 - f. Jamb Struts:
 - 1) For framing elevator hoistway entrances, provide the manufacturer's standard J-profile strut having a long-leg length of 3 inches (76 mm), a depth matching the stud's depth, and a thickness of at least 0.0329 inch (0.84mm).
- 3. Auxiliary Materials:
 - a. Trim Accessories:
 - 1) Provide cornerbead, edge trim, and control joints fabricated from the material and of the shapes specified in Section 09253, Gypsum Sheathing, and that comply with gypsum board shaft-wall assembly manufacturer's written recommendations for the application indicated in the Contract Documents.
 - b. Gypsum Board Joint-Treatment Materials:
 - 1) Provide gypsum board joint-treatment materials complying with the requirements specified in Section 09253, Gypsum Sheathing.
 - c. Laminating Adhesive:
 - 1) Provide adhesive or joint compound recommended by the adhesive manufacturer for directly adhering gypsum face-layer panels to backing-layer panels in multilayer construction.
 - d. Steel Drill Screws:
 - 1) Unless otherwise indicated in the Contract Documents, provide steel drill screws complying with the requirements specified in ASTM C 1002.
 - e. Track Fasteners:
 - 1) Provide power-driven fasteners of the size and material required to withstand the loading conditions imposed on the shaft-wall assemblies without exceeding the allowable design stress of the track, fasteners, or structural substrates in which the anchors are embedded.
 - a) Expansion Anchors:
 - (1) Provide expansion anchors fabricated from corrosion-resistant materials; and having the capability to sustain, without failure, a load equal to 5 times the design load as determined by tests of the expansion anchors conducted by a qualified testing agency in accordance with the methods specified in ASTM E 488.

- b) Power-Actuated Anchors:
 - (1) Provide a power-actuated anchor fastener system of a type suitable for the application indicated in the Contract Documents; fabricated from corrosion-resistant materials; having the capability to sustain, without failure, a load equal to 10 times the design load as determined by tests of the power-actuated anchors conducted by a qualified testing agency in accordance with the methods specified in ASTM E 1190.
- f. Sound Attenuation Blankets:
 - 1) Provide sound attenuation blankets complying with the requirements for Type I blankets (blankets without membrane facing) specified in ASTM C 665, and produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.
 - 2) Fire-Resistance-Rated Assemblies:
 - a) Provide sound attenuation blankets complying with the fire-resistance requirements of the assembly for mineral-fibers.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. With the installer present, examine areas and substrates to receive gypsum board shaft-wall assemblies for compliance with requirements and other conditions affecting performance, including welded hollow-metal frames, cast-in anchors, and structural framing.
- B. Evaluation and Assessment:
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the gypsum board shaft-wall assemblies.
- B. Demolition/Removal:
 - 1. Perform cutting, drilling, and fitting as required to install the gypsum board shaft-wall assemblies.

- a. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Install gypsum board shaft-wall assemblies in accordance with the requirements for the fire-resistance-rated assemblies indicated in the Contract Documents and the gypsum board shaft-wall assembly manufacturer's installation instructions.
 1. For installing steel framing, comply with the requirements specified in ASTM C 754, except comply with the requirements for the framing spacing indicated in the Contract Documents.
 2. For applying and finishing gypsum board panels, comply with the requirements specified in Section 09253, Gypsum Sheathing.
 3. Submit the gypsum board shaft-wall assembly manufacturer's published installation instructions to the Program/Project Manager for information.
- B. Firestop Tracks:
 1. Where a fire-resistance-rated assembly is indicated and detailed on the Contract Drawings, install firestop tracks to maintain the continuity of the fire-resistance-rated assembly indicated.
- C. Control Joints:
 1. Install control joints at the locations indicated on the Contract Drawings, while maintaining the fire-resistance rating of the gypsum board shaft-wall assemblies and complying with the control joint spacing requirements specified in ASTM C 840.
- D. Insulation:
 1. Provide sound attenuation blankets to insulate the gypsum board shaft-wall assemblies.
- E. Finishes:
 1. Room-Side Finish:
 - a. Finish the room-side of the gypsum board shaft-wall assemblies as indicated on the Contract Drawings.
 2. Shaft-Side Finish:
 - a. Finish the shaft-side of the gypsum board shaft-wall assemblies as indicated on the Contract Drawings, or as required to produce the required fire resistive rating.
- F. Special Techniques:

1. In elevator shafts where the gypsum board shaft-wall assemblies cannot be positioned within 4 inches (102mm) of the shaft face of structural beams, floor edges, and similar projections into the shaft, install 1/2 inch (13mm) or 5/8 inch (16mm) thick gypsum board cants covering the tops of the projections.
 - a. No recesses are allowed, especially at steel beams.
 - b. Slope the cant panels at least 75 degrees from horizontal.
 - 1) Set the base edge of the panels in adhesive, and secure the top edges to the shaft walls using screws fastened to the shaft-wall framing at 24 inches (610mm) on center.
 - c. Where steel framing is required to support the gypsum board cants, install the framing at 24 inches (610mm) on center, and extend the studs from the projection to the shaft-wall framing.

G. Interface with Other Work:

1. Do not bridge architectural or building expansion joints with gypsum board shaft-wall assemblies.
 - a. Frame both sides of expansion joints with furring and other support as detailed on the Contract Drawings.
2. Install supplementary framing in the gypsum board shaft-wall assemblies around openings and as required to provide blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, and similar items that cannot be supported directly by the shaft-wall assembly framing.
 - a. At elevator hoistway entrance door frames, provide jamb struts on each side of door frame as detailed on the Contract Drawings.
 - b. Where handrails directly attach to the gypsum board shaft-wall assemblies, provide an accurately positioned galvanized steel reinforcing strip having a base (uncoated) metal thickness of at least 0.0312-inch (0.79mm), and secured behind at least 1 gypsum board face-layer panel.
3. At penetrations in the shaft wall, maintain the fire-resistance rating of the shaft-wall assembly by installing supplementary steel framing around the perimeter of the penetration; and fire protection behind boxes containing wiring devices, elevator call buttons, elevator floor indicators, and similar items; as detailed on the Contract Drawings.
4. Isolate the perimeter of gypsum board panels from the building structure to prevent cracking of the gypsum board panels, while maintaining the continuity of the fire-rated construction.

H. Tolerances:

1. Install each framing member so the fastening surfaces do not vary more than 1/8 inch (3mm) from the plane formed by the faces of the adjacent framing.

3.04 REPAIR/RESTORATION

- A. Remove gypsum board panels that are wet, moisture damaged, or mold damaged, and replace the damaged panels by providing new, undamaged panels.
 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

3.05 CLEANING

- A. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 PROTECTION

- A. During remainder of the construction period, protect installed gypsum board shaft-wall assemblies from damage due to the weather, condensation, direct sunlight, construction, and other causes.

SECTION 09300

TILE

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for ceramic tiling, including porcelain, non-porcelain tile and quarry tile.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 07920 - Joint Sealants.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside, and San Bernardino counties.
 - 2. construction, and operation of high performance green buildings.
 - 3. TCNA: An acronym for Tile Council of (North) America, Inc.
 - 4. VOC: An abbreviation for *volatile organic compounds*, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
- B. Definitions:
 - 1. Standard tiling terms defined in ASTM C242 apply to the Work of this Section.
 - 2. Ceramic Tile: Tiles made from clay or a mixture of clay and other materials, then kiln-fired; these tiles can be split into two groups, porcelain tiles and non-porcelain tiles.
 - 3. Coefficient of Friction: The ratio of the horizontal component of force required to overcome or have a tendency to overcome friction to the vertical component of the object weight or normal force applied through the object which tends to cause the friction.
 - 4. PEI Wear Rating: A testing system devised by the Porcelain Enamel Institute (PEI) to rate the strength of the glaze applied to tile against scratching and wearing using numbers (1 being the least scratch and wear resistant, thru 5 being the most scratch and wear resistant) to rate the strength of the glaze on tile.

5. Non-Porcelain Tile: Ceramic tile made by natural red or white clay, sand, and water; typically finished with a durable glaze, then baked in a kiln to remove most of the water; and generally softer and easier to cut than porcelain tile, and usually carrying a PEI wear rating of 0 to 3. Non-porcelain tiles are sometimes referred to as “ceramic tiles” by themselves, separate from porcelain tiles.
6. Porcelain Process: The method of producing glazed ware by which a ceramic body and glaze are matured together in the same firing operation.
7. Porcelain Tile: A strong, vitreous, translucent ceramic mosaic tile or paver that is generally made by the dust-pressed method from dense porcelain (kaolin) clays and fired to temperatures typically between 1200 degrees Centigrade (2192 degrees Fahrenheit) and 1400 degrees Centigrade (2552 degrees Fahrenheit) during the porcelain process to remove almost all water and result in a tile that is dense, fine-grained, and smooth with a sharply formed face, usually impervious, and having colors of the porcelain type which are usually of a clear, luminous type, or a granular blend thereof.

C. Reference Standards:

1. American National Standards Institute (ANSI):
 - a. ANSI A108/A118/A136.1 - American National Standards Specifications for the Installation of Ceramic Tile.
 - 1) ANSI A108.01 – General Requirements: Subsurfaces and Preparations by Other Trades.
 - 2) ANSI A108.1A – Installation of Ceramic Tile in the Wet-Set Method, with Portland Cement Mortar.
 - 3) ANSI A108.11 – Interior Installation of Cementitious Backer Units.
 - 4) ANSI A108.13 – Installation of Load Bearing, Bonded, Waterproof Membranes for Thin-Set Ceramic Tile and Dimension Stone.
 - 5) ANSI A118.7 - American National Standard Specifications for High Performance Cement Grouts for Tile Installation.
 - 6) ANSI A137.1 – American National Standard Specifications for Ceramic Tile.
2. ASTM International (ASTM):
 - a. ASTM C242 - Standard Terminology of Ceramic Whitewares and Related Products.
 - b. ASTM C648 - Standard Test Method for Breaking Strength of Ceramic Tile.
 - c. ASTM C1027 - Standard Test Method for Determining Visible Abrasion Resistance of Glazed Ceramic Tile.
 - d. ASTM C1028 - Standard Test Method for Determining the Static Coefficient of Friction of Ceramic Tile and Other Like Surfaces by the Horizontal Dynamometer Pull-Meter Method.
3. City of Phoenix (COP):
 - a. Phoenix Building Code and Amendments.

4. International Code Council (ICC):
 - a. International Building Code (IBC) As Amended by the City of Phoenix.
5. South Coast Air Quality Management District (AQMD):
 - a. AQMD Rules and Regulations:
 - 1) Rule 1168 – Adhesive and Sealant Applications.
6. Tile Council of North America, Inc. (TCNA):
 - a. TCNA Handbook for Ceramic, Glass, and Stone Tile Installation.
 - 1) TCNA Handbook Method Number F113 – On-Ground Concrete, Ceramic Tile.
 - 2) TCNA Handbook Method Number W245 – Coated Glass Mat Water-Resistant Gypsum Backer Board, Ceramic Tile.
7. United States Government:
 - a. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.

1.03 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Porcelain tile.
 - 2) Quarry tile.
 - 3) Setting materials.
 - 4) Grouting materials.
 - 5) Grout sealing materials.
 - 6) Elastomeric sealants.
 - b. Samples:
 - 1) Ceramic tile Samples
 - 2) Quarry tile Samples.
 - 3) Grout Samples.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Waterproofing manufacturer's written application instructions.
 - 2) Backer unit manufacturer's written installation instructions.
 - 3) Grout sealer manufacturer's written application instructions.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Sustainable Design Closeout Documentation:
 - 1) Low-Emitting Materials- Adhesives and Sealants, Submittal for ceramic tile.
- D. Maintenance Material Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Extra Stock Materials:
 - 1) Furnish extra tile materials that match and are from the same production runs as the products installed, and packaged for storage by having a protective coverings and labels identifying the contents.
 - a) Tile and Trim Units:
 - (1) For each type, composition, color, pattern, and size of tile and trim units installed, furnish a quantity of full-size tile and trim units equal to 3 percent of the amount installed.

1.04 QUALITY ASSURANCE

- A. Sustainability Standards Certifications:
 1. Sustainable Adhesives and Sealants Submittal:
 - a. For the ceramic tile adhesives used for installing the interior ceramic tile system, submit Product Data, including a printed statement of their chemical components and volatile organic compound (VOC) content, signed by the product manufacturer certifying that these products qualify the Project to claim Low-Emitting Materials-Adhesives and Sealants, to the Program/Project Manager for information.
 - 1) Certify compliance with volatile organic compound (VOC) content specified by Rule 1168 in the AQMD Rules and Regulations.
- B. Site Samples:
 1. Ceramic Tile Samples:
 - a. Submit Samples for each type and composition of tile and for each color and finish required under this Section to the Program/Project Manager for approval.
 2. Grout Samples:
 - a. Submit grout color Samples of the manufacturer's full standard range to the Program/Project Manager for selection and approval.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:

1. During delivery, provide a protective covering over dry mortar and grout materials to prevent moisture damage and contamination.
- B. Storage and Handling Requirements:
 1. Tile Grout:
 - a. During storage and handling, provide a protective covering over grout materials to prevent moisture damage and contamination.
 - b. Store and precondition grout and grout materials in accordance with the grout manufacturer's requirements.
 - 1) Provide air conditioned storage if required.
 - c. Store grout materials in undamaged condition with seals and labels intact as packaged by the manufacturer.
 2. Tile Mortar:
 - a. Store dry mortar in delivery containers on elevated platforms, under cover, and in a dry location.
 3. Do not use dry mortar or grout materials that have become damp.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 CERAMIC TILE

- A. Manufacturers:
 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 3. Product Options:
 - a. Product Data:
 - 1) Obtain Product Data for each type and size of ceramic tile, each type of grout and each type of sealer provided under this Section.
 - 2) Submit the Product Data to the Program/Project Manager for approval.
- B. Description:
 1. Regulatory Requirements:
 - a. Phoenix Building Code:

- 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Code and Amendments [International Building Code (IBC) As Amended by the City of Phoenix].
 2. Sustainability Requirements:
 - a. Volatile Organic Compounds (VOC) Content of Interior Sealants:
 - 1) Provide interior adhesives and sealers for this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, Subpart D; and that comply with Rule 1168 in the AQMD Rules and Regulations:
 - a) Ceramic Tile Adhesives: Not more than 65 grams per Liter less water.
 - b) Architectural Sealants: Not more than 250 grams per Liter less water.
 - c) Architectural Sealant Primers for Nonporous Substrates: Not more than 250 grams per Liter less water.
 - d) Architectural Sealant Primers for Porous Substrates: Not more than 775 grams per Liter less water.
 - b. Sustainability Credits:
 - 1) Provide adhesives for use within the ceramic tile system that are capable of qualifying the Project for Low-Emitting Materials-Adhesives and Sealants.
- C. Performance:
1. Abrasion Resistance:
 - a. Provide ceramic tile flooring having a Class III abrasion resistance when tested in accordance with the method specified in ASTM C1027.
 2. Breaking Strength:
 - a. Provide ceramic tile flooring having a breaking strength of at least 472 pounds•force when tested in accordance with the method specified in ASTM C648.
 3. Coefficient of Friction:
 - a. Provide ceramic tile flooring having the following average Coefficients of Friction when tested in accordance with the method specified in ASTM C1028 under the following test conditions:
 - 1) Using a Dry Neolite Surface: 0.69.
 - 2) Using a Wet Neolite Surface: 0.62.
 4. Scratch Hardness:
 - a. Provide ceramic tile flooring having a scratch resistance of 6 as measured on the Mohs scale.
- D. Design Criteria:
1. ANSI Ceramic Tile Standard:

- a. Provide Standard grade tile that complies with the requirements for the types, compositions, and other characteristics indicated herein as specified in ANSI A137.1.

E. Materials:

1. Unglazed Porcelain Ceramic Floor Tile (Tile Type CT-1):
 - a. Provide unglazed porcelain ceramic mosaic floor tile complying with the following requirements:
 - 1) Module Size:
 - a) Provide 12-inch by 24-inch (304.8mm by 609.6mm) ceramic floor tiles.
 - 2) Thickness:
 - a) Provide 2/5 inch (10.16mm) thick ceramic floor tile.
 - 3) Face:
 - a) Provide plain ceramic floor tile having cushion edges.
 - 4) Surface:
 - a) Provide slip-resistant ceramic floor tile having an abrasive admixture.
 - 5) Tile Color and Pattern:
 - a) Provide ceramic floor tile having the color and pattern selected by the Program/Project Manager from the manufacturer's full range.
 - 6) Grout Color:
 - a) Provide grout having the color selected by the Program/Project Manager from the manufacturer's full range.
 - 7) Trim Units:
 - a) Provide trim units coordinated with the sizes and coursing of the adjoining flat tile, where applicable, and matching the characteristics of the adjoining flat tile.
 - b) Provide shapes selected from the manufacturer's standard shapes as follow.
 - (1) Base Modules: Provide 3-inch by 12-inch modules.
 - (2) External Corners: For thin-set mortar installations, provide bullnose shapes the same size as the adjoining flat tile.
 - (3) Internal Corners:
 - (a) Provide field-buttet square corners.
 - (b) For coved base and cap applications, provide angle pieces designed to fit with the stretcher shapes.
 - b. Manufacturers:
 - 1) Basis-Of-Design: Emser Tile™ LLC, <http://www.emser.com/>.
 - a) Field tile and adjacent base:
 - (1) Style: Strand.
 - (2) Color: Biscuit.
 - b) Accent tile and adjacent base:

- (1) Style: Strand.
 - (2) Color: Olive.
 - 2) American Olean Corporation, <http://americanolean.com/>.
 - 3) Dal-Tile Corporation, Daltile®, <http://www.daltile.com>.
 - 4) Internacional de Cerámica S.A.B. de C.V. Derechos Reservados, Interceramic®, www.interceramicusa.com.
 - 5) Manufacturer providing an equivalent product approved by the Program/Project Manager.
2. Glazed Ceramic Wall Tiles – Stage 2 Only
 - a. Provide glazed, dry-pressed ceramic wall tiles with white body, in accordance with ANSI A137.1 class P4. Double-firing manufacturing process.
 - 1) Module Size: Provide 4-inch by 12-inch ceramic wall tiles.
 - 2) Thickness: Provide 0.31-inch thick ceramic wall tiles.
 - 3) Surface: Powdermatt
 - 4) Edge: Short, glazed edge
 - 5) Tile Color and Pattern:
 - a) Provide ceramic wall tile having the color and pattern selected by the Program / Project Manager from the manufacturer's full range.
 - 6) Grout Color:
 - a) Provide grout having the color selected by the Program / Project Manager from the manufacturer's full range.
 - b. Manufacturers:
 - 1) Basis-of-Design: Royal Mosa, www.mosa.com
 - a) Field tile
 - (1) Collection: Matt Collection
 - (2) Color: 15810 Plain Porcelain White
 - 2) Approved Equal.
3. Unglazed Quarry Floor Tile (Tile Type QT-1):
 - a. Provide unglazed quarry floor tile complying with the following requirements:
 - (1) External Corners: For thin-set mortar installations, provide bullnose shapes the same size as the adjoining flat tile.
 - (2) Internal Corners:
 - (a) Provide field-buttet square corners.
 - (b) For coved base and cap applications, provide angle pieces designed to fit with the stretcher shapes.
 - b. Manufacturers:
 - 1) Basis-Of-Design: Dal-Tile, <http://www.daltile.com/>.

- 2) Provide non-abrasive, smooth plain quarry floor tile and cove base in similar size, texture and color to match existing floor tile in the Dick Clark Kitchen area.
4. Setting Materials:
 - a. Primer:
 - 1) Provide one component VOC compliant primer.
 - 2) Manufacturers:
 - a) MAPEI Primer T by MAPEI Corporation, www.mapei.us.
 - b) Manufacturer providing an equivalent product approved by the Program/Project Manager.
 - b. Underlayment:
 - 1) Provide High Hydrated cement technology self-leveling underlayment.
 - 2) Manufacturers:
 - A) MAPEI Ultraplan Easy by MAPEI Corporation.
 - B) Manufacturer providing an equivalent product approved by the Program/Project Manager.
 - c. Cementitious Improved Adhesive:
 - 1) ISO 13007: Classification C2ES2P2 premium grade dry-set mortar.
 - 2) Manufacturers:
 - a) MAPEI Kerabond/Keralastic System by MAPEI Corporation.
 - b) Manufacturer providing an equivalent product approved by the Program/Project Manager.
5. Grout Materials:
 - a. Polymer-Modified Tile Grout:
 - 1) Provide polymer-modified tile grout complying with the requirements specified in ANSI A118.7 within ANSI A108/A118/A136.1.
 - 2) Manufacturers:
 - a) MAPEI Ultracolor Plus by MAPEI Corporation, www.mapei.us
 - b) Manufacturer providing an equivalent product approved by the Program/Project Manager.
 - b. Urethane Tile Grout:
 - 1) Provide pre-mixed, water based, urethane tile grout complying with the requirements specified in ANSI A118.3-UG epoxy standard.
 - 2) Manufacturers:
 - a) Bostik, Inc., Quartz Lock2®, www.bostik-us.com.
 - b) Manufacturer providing an equivalent product approved by the Program/Project Manager.
6. Grout Sealer Materials:

- a. Provide the manufacturer's standard silicone product for sealing grout joints that does not change the color or appearance of the grout.

2.02 ACCESSORIES

A. Elastomeric Sealants and Accessories:

1. Provide elastomeric sealants, primers, backer rods, and other sealant accessories complying with the following requirements and with the applicable requirements specified in Section 07920, Joint Sealants:
 - a. Provide sealants having a volatile organic compounds (VOC) content of 250 grams per Liter or less when calculated according to the method specified in 40 CFR 59, Subpart D (EPA Method 24).
 - b. Provide sealants approved by the tile manufacturer of the installed product.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions:

1. With the installer present, examine the substrates, areas, and conditions where ceramic tile will be installed for compliance with the requirements for installation tolerances and other conditions affecting the performance of installed tile.
 - a. Verify that the substrates for setting the tile are firm, dry, clean, free of coatings that are incompatible with tile-setting materials including curing compounds and other substances that contain soap, wax, oil, or silicone; and that comply with flatness tolerances required by ANSI A108.01 within ANSI A108/A118/A136.1 for the applications indicated in the Contract Documents.

B. Evaluation and Assessment:

1. Proceed with installation only after unsatisfactory conditions have been corrected.
2. Blending:
 - a. If the tile exhibits color variations, before installing the tile either provide factory blended tile or blend the tiles at the Site.

3.02 PREPARATION

A. Protection of In-Place Conditions:

1. Protect adjacent areas from damage resulting from installation of the ceramic tile.

B. Surface Preparation:

1. For tile floors installed with adhesives or thin-set mortar, fill the cracks, holes, uneven tile areas from tile demolition work and depressions in the concrete substrates with an underlayment material recommended by the setting material manufacturer.
2. Where the substrates are indicated to receive waterproofing, apply a reinforced mortar bed complying with the requirements specified in ANSI A108.1A within ANSI A108/A118/A136.1, and sloped 1/4 inch per foot (1:50) toward drains.
 - a. Produce a waterproof membrane of uniform thickness and bonded securely to the substrate by installing the waterproofing in accordance with the requirements specified in ANSI A108.13 within ANSI A108/A118/A136.1, and in accordance with the waterproofing manufacturer's application instructions.
 - 1) Submit the waterproofing manufacturer's written application instructions to the Program/Project Manager for information.
3. Field-Applied Temporary Protective Coating:
 - a. If specified for the tile type or required to prevent the grout from staining or adhering to the exposed tile surfaces, precoat the tiles with a continuous film of temporary protective coating, taking care not to coat unexposed tile surfaces.
4. Backer Units:
 - a. Where backer units are required, provide cementitious backer units, and treat the joints between the units in accordance with the requirements specified in ANSI A108.11 within ANSI A108/A118/A136.1, and in accordance with the manufacturer's written installation instructions for the indicated application.
 - 1) Submit the backer unit manufacturer's written installation instructions to the Program/Project Manager for information.

3.03 INSTALLATION

- A. Install ceramic tile in accordance with the requirements specified in the TCNA Handbook for Ceramic, Glass, and Stone Tile Installation for the Tile Council of North America, Inc. (TCNA) installation methods specified in tile installation schedules in the Contract Documents.
 1. Comply with the parts of the ANSI A108 Series in ANSI A108/A118/A136.1 that are referenced in Tile Council of North America, Inc. (TCNA) installation methods, specified in the tile installation schedule(s), and that apply to the types of setting and grouting materials provided.
- B. Unless otherwise indicated in the Contract Drawings, extend tile work into recesses and under or behind equipment and fixtures to form a complete covering without interruptions.

1. Terminate work neatly at obstructions, edges, and corners without disrupting the pattern or joint alignments.
- C. Accurately form intersections and returns.
 1. Cut and drill the tile without marring its visible surfaces.
 2. Carefully grind the cut edges of the tile abutting trim, finish, or built-in items for straight aligned joints.
 3. Fit the tile closely to electrical outlets, piping, fixtures, and other penetrations so their plates, collars, or covers will overlap the tile.
- D. Jointing Pattern:
 1. Unless otherwise indicated, lay the tile in a grid pattern.
 2. Lay out the tile work, and center the tile fields in both directions in each space or on each wall area.
 3. Lay out the tile work to minimize the use of pieces that are less than half of a tile.
 4. Unless otherwise indicated, provide uniform joint widths.
- E. Joint Widths:
 1. Unless otherwise indicated, install tile so the following joint widths are constructed as applicable:
 - a. Porcelain Wall and Floor Tile: 1/16 to 1/8 inch.
 - b. Porcelain Base: 1/16 to 1/8 inch.
 - c. Quarry Tile: 3/8 inch or match existing as required.
 - d. Lay out tile wainscots to the dimensions indicated, or to the next full tile beyond the dimensions indicated.
- F. Expansion Joints:
 1. Where indicated on the Contract Drawings, provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints.
 - a. Form the joints during installation of the setting materials, mortar beds, and ceramic tile.
 - b. Do not saw-cut joints after installing the ceramic tiles.
 2. Where joints occur in concrete substrates, provide joints in the tile surfaces directly above the joints in the substrates.
 3. Prepare the joints and apply sealants in accordance with the requirements specified in Section 07920, Joint Sealants.
- G. Grout Sealer:
 1. After applying cementitious grout to the joints in the ceramic tile floors, apply a grout sealer to the grouted joints in accordance with the grout-sealer manufacturer's application instructions.
 - a. Submit the grout sealer manufacturer's written application instructions to the Program/Project Manager for information.

2. As soon as grout sealer has penetrated the grout joints, remove excess grout sealer and the grout sealer on the ceramic tile faces by wiping with a soft cloth.

3.04 CLEANING

- A. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.05 PROTECTION

- A. Take steps to insure that installed ceramic tile is protected during subsequent construction activities.

3.06 ATTACHMENTS

- A. The following attachments are appended to this Section following the "END OF SECTION" marker:
 1. Schedule 09310-1 - Interior Floor Installation, Concrete Subfloor (Tile Type CT-1).
 2. Schedule 09310-1 - Interior Floor Installation, Concrete Subfloor (Tile Type QT-1).

END OF SECTION

Schedule 09310-1 - Interior Floor Installation, Concrete Subfloor (Tile Type CT-1)	
Tile Parameter	Requirement or Material
Tile Installation	For tile installed on a concrete subfloor with thin-set mortar comply with the requirements specified in TCNA F113 ⁽¹⁾ On-Ground Concrete Ceramic Tile.
Tile Type	Unglazed 12-inch by 24-inch texture finish porcelain floor tile.
Preparation	Waterproofing and anti-fracture membrane (MAPEI Primer T and Ultraplan Easy Underlayment).
Tile Mortar	Latex modified thin-set mortar (MAPEI Kerabond/Keralastic system).
Tile Grout	Polymer-modified grout (MAPEI Ultra color Plus).
1. TCNA Handbook for Ceramic, Glass, and Stone Tile Installation Method Number. 2. Basis-of Design: product by MAPEI Corporation	
Schedule 09310-1 - Interior Floor Installation, Concrete Subfloor (Tile Type QT-1) Dick Clark's	
Tile Parameter	Requirement or Material
Tile Installation	For tile installed on a concrete subfloor with thin-set mortar comply with the requirements specified in TCNA F113 ⁽¹⁾ On-Ground Concrete Ceramic Tile.
Tile Type	Unglazed 6-inch by 6-inch (match existing) quarry floor tile.
Preparation	Waterproofing and anti-fracture membrane (MAPEI Primer T and Ultraplan Easy Underlayment).
Tile Mortar	Latex modified thin-set mortar (MAPEI Kerabond/Keralastic system).
Tile Grout	Epoxy-modified grout (MAPEI Kerapoxy).
3. TCNA Handbook for Ceramic, Glass, and Stone Tile Installation Method Number. 4. Basis-of Design: product by MAPEI Corporation

SECTION 09450

RESINOUS MATRIX TERRAZZO FLOORING

PART 1 GENERAL

RFI Stations Terrazzo Updated
1917 Design Confirmation

Terrazzo Design has been
updated (see hyperlink)

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for thin set epoxy terrazzo flooring as shown on the Contract Drawings.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 2. MSDS: Material safety data sheets.
 - 3. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside, and San Bernardino counties in California.
 - 4. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
- B. Definitions:
 - 1. Standard terrazzo terms defined in the NTMA Terrazzo Specifications and Design Guide apply to the Work of this Section.
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public’s health, safety, and welfare.
 - 2. Matrix: The ingredient in a terrazzo floor which acts as a binder to hold marble chips in position.
 - 3. pH: A measure of the acidity or basicity of a solution, and defined as the cologarithm of the activity of dissolved hydrogen ions (H⁺).

4. Resinous Matrix: A two component thermal setting resinous material for use as the matrix in thin-set terrazzo.
5. Terrazzo: Marble, granite, onyx, or glass chips embedded in a resinous matrix.

C. Reference Standards:

1. American Concrete Institute (ACI):
 - a. ACI 408R – Bond and Development of Straight Reinforcing Bars in Tension.
 - b. ACI 503R - Use of Epoxy Compounds with Concrete.
2. ASTM International (ASTM):
 - a. ASTM C 190 - Standard Test Method for Tensile Strength Hydraulic Cement Mortars [*withdrawn*].
 - b. ASTM C 131 - Standard Test Method for Resistance to Degradation of Small-Size Coarse Aggregate by Abrasion and Impact in the Los Angeles Machine.
 - c. ASTM C 241 - Standard Test Method for Abrasion Resistance of Stone Subjected to Foot Traffic.
 - d. ASTM C 580 - Standard Test Method for Flexural Strength and Modulus of Elasticity of Chemical-Resistant Mortars, Grouts, Monolithic Surfacing and Polymer Concretes.
 - e. ASTM D 56 – Standard Test Method for Flash Point by Tag Closed Cup Tester.
 - f. ASTM D 412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers-Tension.
 - g. ASTM D 635 - Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Plastics in a Horizontal Position.
 - h. ASTM D 638 - Standard Test Method for Tensile Properties of Plastics.
 - i. ASTM D 695 - Standard Test Method for Compressive Properties of Rigid Plastics.
 - j. ASTM D 696 - Standard Test Method for Coefficient of Linear Thermal Expansion of Plastics Between -30C and 30C With a Vitreous Silica Dilatometer.
 - k. ASTM D 1308 - Standard Test Method for Effect of Household Chemicals on Clear and Pigmented Organic Finishes.
 - l. ASTM D 2240 - Standard Test Method for Rubber Property-Durometer Hardness.
3. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
5. National Terrazzo and Mosaic Association, Inc. (NTMA):
 - a. NTMA Terrazzo Specifications and Design Guide.
6. South Coast Air Quality Management District (SCAQMD):

- a. SCAQMD Rule 1168 – Adhesive and Sealant Applications.
7. Underwriters Laboratories, Inc. (UL):
 - a. UL Online Certifications Directory, <https://www.ul.com/ul-databases-and-directories/>
8. United States Government:
 - a. Department of Defense (DOD):
 - 1) Military Specifications:
 - a) MIL-D-3134 – Deck Covering Materials.
 - b. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.
9. Institute for Sustainability Infrastructure (ISI):
 - a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate the concrete mix design for areas to receive epoxy resin matrix flooring so it is compatible with the terrazzo materials.
 - a. Do not use curing agents or other additives which could prevent bonding of the resinous matrix terrazzo flooring.
 2. Coordinate the tolerances for concrete floors in areas to receive epoxy resin matrix flooring with the tolerances required for proper installation of the terrazzo.
 - a. Insure the concrete subfloor has a steel trowel finished surface, and is level having a maximum variation not exceeding 1/4 inch in a 10-foot span.
 - 1) Terrazzo is not intended to level the substrate and will only follow the contour of the concrete slab.
 - b. Saw cut control joints between 12 hours and 24 hours after the structural concrete has been placed.

1.04 SUBMITTALS

- A. Action Submittals:
 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Epoxy resin matrix flooring.
 - b. Shop Drawings:
 - 1) Epoxy resin matrix flooring.
 - c. Samples:
 - 1) Terrazzo Samples.
 - 2) Divider strip Samples.

- d. Certificates:
 - 1) Resinous Matrix Terrazzo Material Certificate of Compliance.
 - e. Qualification Statements:
 - 1) Terrazzo flooring installer's qualifications.
- B. Informational Submittals:
- 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Epoxy resin manufacturer's instructions and recommendations for substrate preparation.
 - 2) Epoxy resin manufacturer's instructions and recommendations for proportioning mixes, installing strips, and placing, curing, grinding, and finishing the resinous matrix terrazzo flooring.
 - 2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - 1) ENVISION Credit RA 1.3 - Use Recycled Materials
 - a) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - b. ENVISION Credit RA 1.4 – Use Regional Materials
 - 1) Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).
 - c. Floor Systems
 - 1) Submit product data highlighting the VOC content for any field applied floor sealants, stains or finishes used.
- C. Closeout Submittals:
- 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Instructions detailing the recommended periodic maintenance for each type of terrazzo.
 - b. Warranty Documentation:
 - 1) Resinous Matrix Terrazzo Flooring Materials Warranty
 - 2) Resinous Matrix Terrazzo Flooring Installation Warranty

1.05 QUALITY ASSURANCE

A. Qualifications:

1. Terrazzo Flooring Installer's Qualifications:

- a. Engage an experienced terrazzo flooring installer who is a member of the National Terrazzo and Mosaic Association, Inc. (NTMA), and has within the past 5 years completed terrazzo installations similar in material and extent to that required for this Contract.
- b. Submit the terrazzo flooring installer's qualifications to the Program/Project Manager for approval.

B. Certifications:

1. Supplier/Manufacturer's Certificates of Compliance:

- a. Resinous Matrix Terrazzo Material Certificate of Compliance:
 - 1) Submit a written resinous matrix terrazzo material Supplier/manufacturer's Certificate of Compliance, certifying that the resinous matrix terrazzo materials being provided meet or exceed the specified requirements and the properties specified by the National Terrazzo and Mosaic Association, Inc. (NTMA) in the NTMA Terrazzo Specifications and Design Guide, to the Program/Project Manager for approval.

C. Site Samples:

1. Terrazzo Samples:

- a. Submit 3 Samples of each color and type of terrazzo flooring specified, each terrazzo Sample sized 6 inches long by 6 inches wide by 3/8 inch thick, to the Program/Project Manager for approval.

2. Divider Strip Samples:

- a. Submit 2 Samples of each type and kind of divider strip specified, each divider strip Sample 6 inches in length, to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Furnish properly labeled Material Safety Data Sheets (MSDS) complying with the current requirements of the State and Federal regulations for the materials delivered at the time of delivery.

B. Storage and Handling Requirements:

1. Comply with the resinous matrix terrazzo manufacturer's requirements for storing resinous matrix terrazzo materials.
2. Store resinous matrix terrazzo flooring material in a clean, dry, heated location maintained at a minimum temperature of 50 degrees Fahrenheit.

C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

- A. Manufacturer Warranty:
 1. Warrant the resinous matrix terrazzo flooring materials against failures within the 2-year period after the Date of Substantial Completion:
 - a. Submit a Resinous Matrix Terrazzo Flooring Materials Warranty on the manufacturer's standard or customized form, without monetary limitation, in which the manufacturer agrees to replace resinous matrix terrazzo flooring materials that fail within the specified warranty period to the Program/Project Manager for approval.
- B. Special Warranty:
 1. Installer's Warranty:
 - a. Warrant the resinous matrix terrazzo flooring workmanship against failures within the 2-year period after the Date of Substantial Completion:
 - 1) Submit a Resinous Matrix Terrazzo Flooring Installation Warranty on the installer's standard or customized form, without monetary limitation, in which installer agrees to repair resinous matrix terrazzo flooring that fails within the specified warranty period to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 RESINOUS MATRIX TERRAZZO SYSTEMS

- A. Manufacturers:
 1. The following products shall be procured from one manufacturer to ensure a complete and compatible terrazzo system:
 - a. Epoxy Resin Matrix Terrazzo
 - b. Penetrating Sealer
 - c. Epoxy Terrazzo Resin Primer
 - d. Underlayment
 - e. Underlayment Primer/Moisture Barrier
 - f. Epoxy Resin Crack Isolation Membrane.
 2. Manufacturer List:
 - a. General Polymers
 - b. Key Resin
 - c. Terrazzo & Marble Supply
 - d. Approved Equal
 3. Substitution Limitations:

- a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.

B. Description:

1. Regulatory Requirements:

a. Phoenix Building Construction Code:

- 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).

2. Sustainability Requirements:

a. Recycled Content

- 1) Terrazzo Flooring – Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.

b. Regional Content

- 1) Terrazzo Flooring – Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).

c. Volatile Organic Compounds (VOC) Content of Floor Sealants, Stains and Finishes:

- 1) Provide sealants, stains and finishes for the Terrazzo Flooring of this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1113:
 - a) Drywall and panel adhesives: 50 grams per Liter less water.

C. Performance:

1. Epoxy Resin Matrix:

- a. Provide epoxy resin matrix having the following properties when mixed in accordance with the manufacturer's recommendations and tested without the aggregate added:

1) Flammability:

- a) Provide finished epoxy terrazzo that is self-extinguishing, and has a maximum extent of burning of 0.25 inches when tested in accordance with the method specified in ASTM D 635.

2) Thermal Coefficient of Linear Expansion:

- a) Provide finished epoxy terrazzo having a thermal coefficient of linear expansion within the temperature range between negative 12 degrees Fahrenheit to 140 degrees Fahrenheit of 25×10^{-6} inch-degree-Fahrenheit when tested in accordance with the method specified in ASTM D 696.
- 3) Bond Strength:
 - a) Provide finished epoxy terrazzo having a minimum tensile bond strength of 300 psi, with 100 percent concrete failure, when tested in accordance with the Field Test for Surface Soundness and Adhesion specified in Appendix A.1 of ACI 503R.

D. Design Criteria

- 1. Provide epoxy resin matrix flooring complying with the provisions and recommendations specified in the NTMA Terrazzo Specifications and Design Guide.
- 2. Terrazzo Selection:
 - a. Provide a matrix color and aggregate (sprinkle) blend to be selected by the Program/Project Manager.
- 3. Product Data:
 - a. Obtain Product Data for the resinous matrix terrazzo flooring, including the manufacturer's specifications, design data, and installation instructions.
 - b. Submit the epoxy resin matrix flooring Product Data to the Program/Project Manager for approval.
- 4. Shop Drawings:
 - a. Prepare Shop Drawings of the resinous matrix terrazzo flooring showing the layout of divider strips, control joint strips, and base and border strips, and typical strip details.
 - b. Submit the epoxy resin matrix flooring Shop Drawings to the Program/Project Manager for approval.

E. Materials:

- 1. Colorants:
 - a. Provide epoxy/urethane color-stable pigment colorants.
- 2. Epoxy Resin Matrix:
 - a. Provide epoxy resin matrix having the following properties when test samples are mixed in accordance with the manufacturer's recommendations, cured for 7 days prior to the test in an environment having a temperature maintained at 75 degrees Fahrenheit plus or minus 2 degrees Fahrenheit and having a relative humidity of 50 percent plus or minus 2 percent, and tested without aggregate added:
 - 1) Hardness:
 - a) Provide epoxy resin matrix having a hardness between 60 and 80 when measured with a Type D Durometer in accordance with the method specified in ASTM D 2240.

RFI
1878

Stations Terrazzo Grout
Confirmation

Clear Casting Epoxy
acceptable to use at
intricate detailing

- 2) Tensile Strength:
 - a) Provide epoxy resin matrix having a minimum tensile strength of 3000 psi when tested in accordance with the method specified in ASTM D 638 using a 0.2 inch thick test sample made using a Standard Dumbbell Die C complying with the requirements specified in ASTM D 412.
- 3) Compressive Strength:
 - a) Provide epoxy resin matrix having a minimum compressive strength of 10,000 psi when cylindrical test samples are tested in accordance with the method specified in ASTM D 695.
- 4) Chemical Resistance:
 - a) Provide epoxy resin matrix showing no deleterious effects when tested using the following contaminants in accordance with the method specified in ASTM D 1308:
 - (1) Distilled water.
 - (2) Mineral water.
 - (3) Isopropanol.
 - (4) Ethanol.
 - (5) A 0.025 percent detergent solution.
 - (6) A 1 percent soap solution.
 - (7) A 10 percent sodium hydroxide solution.
 - (8) A 10 percent hydrochloric acid.
 - (9) A 30 percent sulfuric acid solution.
 - (10) A 5 percent acetic acid solution.
3. Epoxy Resin Primer:
 - a. Provide the epoxy resin primer by a manufacturer in accordance with section 2.01.A.2.
4. Marble Chips:
 - a. Provide marble chips containing no deleterious or foreign matter, having dust content less than 1 percent by weight, and having the following additional properties:
 - 1) Size:
 - a) Provide marble chips graded in accordance with Table 09450-1 and the National Terrazzo and Mosaic Association, Inc. (NTMA) graduation standards.

Table 09450-1 Marble Chip Gradation for Terrazzo		
NTMA Number	Screen Size Passing Chips (Inch)	Screen Size Retaining Chips (Inch)
0	1/8	1/16
1	1/4	1/8
2	3/8	1/4

- b) For 1/4 inch thick epoxy terrazzo, provide NTMA Number 0 and NTMA Number 1 marble chips.
 - c) For 3/8 inch thick epoxy terrazzo, provide NTMA Number 0, NTMA Number 1, and NTMA Number 2 marble chips.
 - b. Absorption Rate:
 - 1) Provide marble chips having a 24-hour absorption rate not exceeding 0.75 percent.
 - c. Abrasive Hardness Value (H_a):
 - 1) Provide marble chips having a minimum abrasive hardness value of 10 when tested in accordance with the method specified in ASTM C 241.
- F. Mixes:
 - 1. Epoxy Resin Matrix Terrazzo:
 - a. Provide 1 volume of epoxy resin matrix mixed in accordance with the manufacturer's recommendations, and blend it with 3 volumes of aggregate.

2.02 ACCESSORIES

- A. Epoxy Resin Crack Isolation Membrane:
 - 1. Provide 100% coverage of the entire area to receive Epoxy Terrazzo Flooring with the epoxy resin crack isolation membrane and fiberglass scrim recommended by the epoxy terrazzo resin matrix Supplier.
 - 2. Manufacturers:
 - a. In accordance with section 2.01.A.2.
- B. Sealers:
 - 1. Provide sealers that will not discolor or amber, that have a pH factor between 7 and 10, and that have a minimum flash point of 80 degrees Fahrenheit when tested in accordance with the method specified in ASTM D 56.
 - 2. Provide sealers that are UL-listed as "slip resistant".
 - 3. Penetrating Sealer:
 - a. Provide a solvent based acrylic penetrating sealer.
 - b. Manufacturers:
 - 1) In accordance with section 2.01.A.2
 - 4. Hard Surface Seal:
 - a. Provide a water-based acrylic sealer for terrazzo floors.
 - b. Manufacturers:
 - 1) Key Resin Co., Key #801 Acrylic Sealer, www.keyresin.com.
 - 2) Crossfield Products, Dex-O-Tex Clearseal 14, www.dexotex.com
 - 3) Approved equal.
 - 5. Sealer/Finish:
 - a. Provide a synthetic polymer finisher.

- b. Manufacturers:
 - 1) Johnson Wax Professional, JohnsonDiversey, Inc., Plaza™ Plus, www.diversey.com.
 - 2) Approved equal.
- C. Divider Strips:
 - 1. For stop and divider strips, provide “L” divider strips fabricated from aluminum; and having a depth of 3/8 inch and a topping of 1/8 inch heavy top.
 - 2. For expansion joints, provide double 16 gauge “L” strips fabricated from a white alloy of aluminum, laid back-to-back 1/4 inch apart with a flexible sealant insert, and having a 3/8 inch depth.
- D. Terrazzo Cleaner:
 - 1. Provide biodegradable and phosphate free terrazzo cleaner having a pH factor between 7 and 10.
- E. Underlayment:
 - 1. Provide an epoxy fill material, that when mixed with the proper proportion of silica aggregate will produce a high strength slurry or dry-pack mortar suitable for installation as a flooring underlayment and leveling compound for both interior and exterior applications.
 - a. Provide sufficient underlayment material to achieve the required substrate flatness and ensure finished floor elevations will match contract drawings.
 - b. Provide Bid allowance for an average of 1/2” thick underlayment material for the entire terrazzo work area.
 - 1) Segregate the underlayment bid allowance as such:
 - a) Provide one bid allowance assuming an average 1/4” thick underlayment (1/2” max. thickness)
 - b) Provide a second bid allowance assuming an additional 1/4” thick underlayment for entire terrazzo work area.
 - 2. Provide an underlayment compound capable of being applied to produce underlayments, and capable of being feathered down to a near zero edge.
 - 3. Provide an underlayment compound capable of being applied at temperatures as low as 50 degrees Fahrenheit (10 degrees Celsius).
 - 4. Provide an underlayment compound having the physical properties at 75 degrees Fahrenheit (24 degrees Celsius) indicated in Table 09450-2.

Table 09450-2 Underlayment Properties		
Property	Test Method	Acceptable Result
Compressive Strength	ASTM C 109	8,210 psi
Tensile Strength	ASTM C 307	2,000 psi

Table 09450-2 Underlayment Properties		
Property	Test Method	Acceptable Result
Flexural Strength	ASTM C 580	1,200 psi
Water Absorption	ASTM D 570	0.010%
Bond Strength to Concrete	COMM #403	300-400 psi (100% concrete failure)

5. Manufacturers:

- a. In accordance with section 2.01.A.2

F. Underlayment Primer/Moisture Barrier:

1. For substrates having moisture vapor transmission greater than 15 pounds per 1000 square feet in a 24 hour period, provide an underlayment primer to eliminate the transmission that is compatible with the underlayment.
2. Manufacturers:
 - a. In accordance with section 2.01.A.2.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions:

1. Examine the concrete substrate to ensure that the surface level is within the terrazzo floor finished surface flatness tolerance range specified in the NTMA Terrazzo Specifications and Design Guide for the type of terrazzo application specified.

B. Evaluation and Assessment:

1. Notify the Program/Project Manager of unsatisfactory level tolerances.
2. Do not begin installing the resinous matrix terrazzo flooring until unsatisfactory tolerances have been corrected and are ready to receive terrazzo.

3.02 PREPARATION

A. Protection of In-Place Conditions:

1. Protect adjacent areas from damage that could otherwise result from installation of the resinous matrix terrazzo flooring.

B. Surface Preparation:

1. Comply with the resin manufacturer's instructions and recommendations for substrate preparation.

- a. Submit the resin manufacturer's instructions and recommendations for substrate preparation to the Program/Project Manager for information.
2. Modify or replace concrete that has not been properly placed and has excessive honeycombing, cracking, or other defects.
 - a. Provide materials to correct slab non-conformities that are compatible with the terrazzo system and approved by the terrazzo installer.
3. Clean and prepare the substrate in accordance with the requirements specified in the NTMA Terrazzo Specifications and Design Guide for the type of terrazzo being installed.
 - a. Broom-clean the substrate to remove loose chips, laitance, and foreign matter.
 - b. Clean and prepare concrete substrate using a shot blasting or grinding and polishing cleaning machine as applicable.
 - c. Crack Repair:
 - 1) After cleaning the concrete substrate, rout any cracks that are 1/16 inch or more wide to create a "V" shaped groove.
 - 2) Insert concrete pins to hold the cracks open.
 - 3) Pour self-leveling 100 percent solids epoxy into the cracks.
 - d. After crack repair epoxy has cured, apply anti-fracture membrane as required.
 - e. Fill holes in the floor with an epoxy filler as required.
4. Underlayment:
 - a. Provide underlayment in areas requiring additional leveling.
 - b. Clean the surface so it is free of dirt, grease, oil, curing agents, and other foreign matter.
 - c. Prime surfaces that do not meet the moisture vapor transmission limitations.
 - d. Trowel the properly proportioned and mixed underlayment into a tight smooth surface.
 - 1) For underlayments greater than 1/2 inch thick, apply multiple layers.
 - e. Allow the underlayment to cure for at least 12 to 18 hours per 1/2 inch of underlayment depth.

3.03 INSTALLATION

- A. Comply with the epoxy resin manufacturer's recommendations for proportioning mixes, installing strips, and placing, curing, grinding, and finishing the resinous matrix terrazzo flooring.
 1. Where required by Site conditions, apply a 40-mil thick crack isolation membrane in accordance with the manufacturer's instructions.
 2. Prime the subfloor in accordance with resinous matrix terrazzo flooring manufacturer's recommendations.
 3. Provide epoxy resin matrix mixed according to manufacturer's recommendations and blended with the marble chips.
 4. Place the terrazzo mixture into panels formed by divider strips.

5. Finish the terrazzo mixture to a nominal 3/8 inch thickness.
 - a. Trowel the mixture to the top of the divider strips.
 6. Submit the epoxy resin manufacturer's instructions and recommendations for proportioning mixes, installing strips, and placing, curing, grinding, and finishing the resinous matrix terrazzo flooring to the Program/Project Manager for information.
- B. Divider Strips:
1. Provide divider strips installed using construction adhesive as shown on the Contract Drawings directly above control joints in the sub-floor, and where necessary to prevent irregular cracking.
 2. Provide control joints for the resinous matrix terrazzo flooring directly over control joints in the subfloor by placing angle-type divider strips back-to-back 1/4 inch apart, and provide flexible filler between the divider strips, flush with the finish floor.
- C. Curing:
1. Cure the terrazzo in accordance with the epoxy resin manufacturer's recommendations.
 2. Allow a 24 hours cure time before finishing the terrazzo.
- D. Finishing:
1. Rough Grinding:
 - a. Grind the terrazzo using 24-grit or finer stones, or with comparable diamond plugs.
 - b. Follow-up the initial grind by grinding the terrazzo using 80-grit or finer stones.
 2. Grouting:
 - a. Clean the terrazzo with clean water, rinse, and allow the terrazzo to dry.
 - b. Apply grout having the identical color used in the epoxy colored matrix topping, insuring that all voids are filled.
 - c. Allow the grout to cure for a minimum of 24 hours.
 3. Fine Grinding:
 - a. Grind the grouted terrazzo using 80-grit or finer stones until all of the grout is removed from the surface.
 - b. Upon completion of the fine grinding, verify that the terrazzo shows a minimum of 70 percent of marble chips.
- E. Cleaning and Sealing:
1. Wash the terrazzo surfaces using a neutral cleaner.
 2. Rinse the terrazzo with clean water, and allow the surfaces to dry.
 3. Apply sealer in accordance with sealer manufacturer's recommendations.
 4. After the initial sealing operations are completed, clean the terrazzo in accordance with the sealer manufacturer's recommendations.

5. Apply 2 coats of acrylic hard surface seal in accordance with the hard surface seal manufacturer's recommendations.
6. Apply 2 coats of deep gloss acrylic liquid finisher to cleaned terrazzo surfaces in accordance with the deep gloss acrylic liquid finisher manufacturer's instructions, and buff the resinous matrix terrazzo flooring to obtain the desired sheen.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. Inspections:
 - a. Upon completion of the resinous matrix terrazzo flooring Work, notify the Program/Project Manager that the work is ready for final inspection and acceptance.

3.05 CLEANING

A. Final Cleaning:

1. When the building is ready for occupancy, clean the terrazzo as recommended by the manufacturer of the sealer, and machine buff the terrazzo floor as required.

B. Waste Management:

1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 PROTECTION

- #### A. Protect the finished floor from damage and wear from the time that the terrazzo installer completes the work until the building is ready for occupancy.

3.07 MAINTENANCE

A. Maintenance Data:

1. Submit written instructions detailing the recommended periodic maintenance for each type of terrazzo to the Program/Project Manager.

SECTION 09514

ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes acoustical panels and exposed suspension systems for ceilings.

1.2 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. ENVISION Submittal:
 - 1. ENVISION Credit RA 1.3 - Use Recycled Materials
 - a. Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials
 - 2. ENVISION Credit RA 1.4 – Use Regional Materials
 - a. Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).
- C. Product test reports.
- D. Research/evaluation reports.
- E. Maintenance data.

1.3 QUALITY ASSURANCE

- A. Acoustical Testing Agency Qualifications: An independent testing laboratory or an NVLAP-accredited laboratory.
- B. Fire-Test-Response Characteristics:

1. Surface-Burning Characteristics: Acoustical panels complying with ASTM E 1264 for Class **B** materials, when tested per ASTM E 84.
 - a. Smoke-Developed Index: 450 or less.

C. Seismic Standard: Comply with the following:

1. Standard for Ceiling Suspension Systems Requiring Seismic Restraint: Comply with ASTM E 580.

1.4 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Acoustical Ceiling Panels: Full-size panels equal to 5 percent of quantity installed.

PART 2 - PRODUCTS

2.1 ACOUSTICAL PANEL CEILINGS, GENERAL

A. Acoustical Panel Standard: Comply with ASTM E 1264.

1. Recycled Content: Provide acoustical panels with recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content constitutes a minimum of 25 percent by weight.

B. Metal Suspension System Standard: Comply with ASTM C 635.

1. Recycled Content: Provide products made from steel sheet with average recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content is not less than **25** percent.

C. Attachment Devices: Size for five times the design load indicated in ASTM C 635, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.

D. Wire Hangers, Braces, and Ties: Zinc-coated carbon-steel wire; ASTM A 641/A 641M, Class 1 zinc coating, soft temper.

1. Size: Select wire diameter so its stress at 3 times hanger design load (ASTM C 635, Table 1, "Direct Hung") will be less than yield stress of wire, but provide not less than 0.106-inch- (2.69mm-) diameter wire.

E. Seismic perimeter stabilizer bars, seismic struts, and seismic clips.

F. Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with

seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension system runners.

2.2 ACOUSTICAL PANELS FOR ACOUSTICAL PANEL CEILING

Basis-of-Design Product: Subject to compliance with requirements, provide:

APC #1 Typical Perforated and Fissured Pattern: Units fitting ASTM E 1264 pattern designation CD, with other panel characteristics as follows:

1. Item Number: Armstrong #704 Cortega
2. Color/Light Reflectance Coefficient: White/LR 0.80
3. Noise Reduction Coefficient: NRC 0.55
4. Edge Detail: Angled tegular lay-in.
5. Size: 24" x 24" x 5/8"

2.3 METAL SUSPENSION SYSTEM FOR ACOUSTICAL PANEL CEILING

A. Basis-of-Design Product: Subject to compliance with requirements, provide a comparable product by one of the following:

1. Armstrong Prelude XL 15/16" Exposed Tee System, Seismic Rx

B. Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, prepainted, electrolytically zinc coated, or hot-dip galvanized according to ASTM A 653/A 653M, not less than G30 (Z90) coating designation, with prefinished 15/16-inch- (24mm-) wide metal caps on flanges.

1. Structural Classification: **Heavy**-duty system.
2. End Condition of Cross Runners: Override (stepped) or butt-edge type.
3. Color: White

PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with ASTM C 636 and seismic design requirements indicated, per manufacturer's written instructions and Cisca's "Ceiling Systems Handbook."

B. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders.

C. Suspend ceiling hangers from building's structural members, plumb and free from contact with insulation or other objects within ceiling plenum. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means. Where

width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers, use trapezes or equivalent devices. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.

1. Do not attach hangers to steel deck tabs or to steel roof deck.
- D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels. Screw attach moldings to substrate at intervals not more than 16 inches (400mm) on center and not more than 3 inches (75mm) from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3.2mm in 3.6m). Miter corners accurately and connect securely.
- E. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
- F. Install acoustical panels with undamaged edges and fit accurately into suspension system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.

SECTION 09515

ACOUSTICAL METAL PAN CEILINGS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for acoustical metal pan ceilings, including the following:
 - a. Metal ceiling panels.
 - b. Exposed grid suspension system.
 - c. Wire hangers, fasteners, main runners, cross tees, wall angle moldings and accessories.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01732 - Cutting and Patching.
 - 4. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AC: Articulation class.
 - 2. CAC: Ceiling attenuation class.
 - 3. HVAC: Heating, Ventilating, and Air-Conditioning.
 - 4. NRC: Noise reflection coefficient.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
- C. Reference Standards:
 - 1. ASTM International (ASTM):
 - a. ASTM A 641/A 641M – Standard Specification for Zinc-Coated (Galvannealed) Carbon Steel Wire.
 - b. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - c. ASTM C 423 – Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.
 - d. ASTM C 635 – Standard Specification for the Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings.

- e. ASTM C 636/C 636M – Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels.
- f. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
- g. ASTM E 580/E 580M - Standard Practice for Installation of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Subject to Earthquake Ground Motions.
- h. ASTM E 1111 - Standard Test Method for Measuring the Interzone Attenuation of Open Office Components.
- i. ASTM E 1264 - Standard Classification for Acoustical Ceiling Products.
- j. ASTM E 1414 - Standard Test Method for Airborne Sound Attenuation Between Rooms Sharing a Common Ceiling Plenum.
- k. ASTM E 1477 - Standard Test Method for Luminous Reflectance Factor of Acoustical Materials by Use of Integrating-Sphere Reflectometers.
- 2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 3. Ceilings and Interior Systems Construction Association (CISCA):
 - a. CISCA Guidelines for Seismic Restraint for Direct-hung Suspended Ceiling Assemblies (zones 3-4).
 - b. CISCA Recommendations for Direct-hung Acoustical tile and Lay-in Panel Ceilings (zones 0-2).
- 4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
- 5. FM Approvals LLC (FM):
 - a. The Approval Guide, www.approvalguide.com.
- 6. United States Government:
 - a. United States Department of Commerce:
 - 1) National Institute of Standards and Technology (NIST):
 - a) NIST Handbook 150 – National Voluntary Laboratory Accreditation Program (NVLAP) Procedures and General Requirements.
 - b) NIST Handbook 150-8 – National Voluntary Laboratory Accreditation Program (NVLAP) Acoustical Testing Services.
- 7. Underwriters Laboratories, Inc.® (UL):
 - a. UL Online Certifications Directory, <http://www.ul.com/regulators/quickguide.html>.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

- 1. Coordinate the ceiling Work of this Section with the installers of related work, including, but not limited to, building insulation, gypsum board, light

fixtures, mechanical systems, electrical systems, and fire suppression sprinklers.

- a. Coordinate the panel layout with mechanical and electrical fixtures.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Metal pan ceiling panels.
 - 2) Suspension system.
 - 3) Infill panels.
 - b. Shop Drawings:
 - 1) Layout drawings and details of acoustical metal pan ceilings.
 - c. Samples:
 - 1) Samples of the specified acoustical panel.
 - 2) Samples of the exposed wall molding and suspension system.
 - d. Certificates:
 - 1) Acoustical metal pan ceiling system manufacturer's Certificates of Compliance.
 - e. Qualification Statements:
 - 1) Qualifications of the Testing and Inspection Agency for verifying acoustical performance.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Acoustical metal pan ceiling system manufacturer's written installation instructions.
2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. ENVISION Credit RA 1.3 - Use Recycled Materials
 - 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating at least 20% (by weight or volume) of materials used are from reclaimed or recycled materials.
 - b. Certified Wood
 - 1) Submit Chain of Custody (COC) certificates' indicating that new wood provided complies with Forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include

statement indicating cost for each certified wood product. If product is a mix of recycled content and new wood, provide breakdown by weight of each component and material values for each separately.

c. ENVISION Credit RA 1.4 – Use Regional Materials

- 1) Submit product data indicating location and distance from Project of material manufacture and point of extraction or harvest for each raw material. Include statement indicating at least 60% of all materials, plants, and soils are sourced within the
- 2) distances specified: soils (50 mi, 80 km), aggregate (50 mi, 80 km), concrete (100 mi, 160 km), plants (250 mi, 400 km), and all other materials (500 mi, 800 km).

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:

a. Warranty Documentation:

- 1) Acoustical Metal Pan Ceiling Warranty.

b. Sustainable Design Closeout Documentation:

- 1) Construction Waste Management: Divert 50% From Disposal, Submittal for acoustical metal pan ceilings.
- 2) Construction Waste Management: Divert 75% From Disposal, Submittal for acoustical metal pan ceilings.
- 3) Recycled Content: 10% (post-consumer + 1/2 pre-consumer), Submittal for acoustical metal pan ceilings.
- 4) Recycled Content: 20% (post-consumer + 1/2 pre-consumer), Submittal for acoustical metal pan ceilings.

D. Maintenance Material Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:

a. Extra Stock Materials:

- 1) Furnish spare acoustical metal pan ceiling units that match the products installed, and packaged for storage by having a protective coverings and labels identifying the contents.

a) Ceiling Units:

- (1) Furnish a spare quantity of full-size acoustical metal pan ceiling units equal to 5 percent of the quantity of acoustical metal pan ceiling units installed.

b) Exposed Suspension System Components:

- (1) Furnish a spare quantity of each exposed suspension component equal to 2 percent of the quantity of exposed suspension components installed.

1.05 QUALITY ASSURANCE

A. Qualifications:

1. Testing and Inspection Agency's Qualifications:

- a. If required to perform acoustical performance testing, employ an independent laboratory certified under the National Institute of Standards and Technology (NIST) National Voluntary Laboratory Accreditation Program (NVLAP) to conduct the testing indicated.
 - 1) The Testing and Inspection Agency to perform the acoustical performance testing required must comply with the requirements specified in NIST Handbook 150 and NIST Handbook 150-8.
 - 2) The independent Testing and Inspection Agency must be acceptable to the Authorities Having Jurisdiction.
- b. Submit the qualifications of the Testing and Inspection Agency for verifying acoustical performance to the Program/Project Manager for approval.

B. Certifications:

1. Acoustical Performance Certification:

- a. Each carton of material must carry an approved independent laboratory classification of the material's noise reflection coefficient (NRC), ceiling attenuation class (CAC), and articulation class (AC) for acoustical performance.
 - 1) Either provide materials having the Underwriters Laboratories, Inc. or Factory Mutual classification of its acoustical performance on every carton; or at the Program/Project Manager's discretion, send material from every production run appearing on the Site to an independent Testing and Inspection Agency for acoustical performance testing.
 - 2) Remove and dispose of products not conforming to manufacturer's current published values, and replace the removed materials with products complying with the specified requirements at no increase in the Contract Price.

2. Acoustical Metal Pan Ceiling System Manufacturer's Certificates of Compliance:

- a. Submit the acoustical metal pan ceiling system manufacturer's Certificates of Compliance, signed by the acoustical metal pan ceiling system manufacturer, and certifying that the acoustical metal pan ceiling system materials and finishes being provided comply with the specified requirements, to the Program/Project Manager for approval.
 - 1) Provide evidence, including laboratory reports, of the acoustical metal pan ceiling system's compliance with the specified tests and standards.

C. Site Samples:

1. Submit 6 inch by 6 inch Samples of the specified acoustical panel to the Program/Project Manager for approval.
2. Submit 8 inch long Samples of the exposed wall molding and suspension system, including a main runner and 4 foot cross tees, to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver system components in the manufacturer's original unopened, clearly labeled packages.
- B. Storage and Handling Requirements:
 1. Store the ceiling panels in a dry, interior location; and keep the ceiling panels in cartons prior to their installation to avoid damage.
 2. Exercise care in moving and opening cartons to prevent damage to the panel faces.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

- A. Ambient Conditions:
 1. Do not install acoustical metal pan ceiling products with humidity resistant and hot-dipped galvanized steel, aluminum, or stainless steel suspension systems when the temperature exceeds 120 degrees Fahrenheit (49 degrees Celsius), or before the building is enclosed in spaces where heating, ventilating, and air-conditioning (HVAC) systems are cycled or not operating.

1.08 WARRANTY

- A. Manufacturer Warranty:
 1. Warrant the acoustical metal pan ceiling materials and workmanship against failures during the warranty period specified, including but not limited to the following:
 - a. Ceiling Panels:
 - 1) Warrant the acoustical metal pan ceiling panels against sagging and warping during the warranty period within 1 year from the Date of Substantial Completion.
 - b. Grid:
 - 1) Warrant the acoustical metal pan ceiling grid against rusting and manufacturer's defects during the warranty period within 10 years from the Date of Substantial Completion.

- c. Humidity Resistance:
 - 1) Warrant the acoustical metal pan ceiling system supplied by one source manufacturer against damage from humidity during the warranty period within 15 years from the Date of Substantial Completion.
- 2. Submit the written Acoustical Metal Pan Ceiling Warranty on the manufacturer's standard form in which the manufacturer agrees to repair or replace components of acoustical metal pan ceiling that fail in materials or workmanship within specified warranty period to the Program/Project Manager for approval.
 - a. Have the manufacturer's standard form signed by the Contractor and manufacturer.
 - b. The Acoustical Metal Pan Ceiling Warranty will be in addition to and run concurrently with other warranties made by the Contractor under the requirements of the Contract Documents.
 - c. The Acoustical Metal Pan Ceiling Warranty does not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents

PART 2 PRODUCTS

2.01 ACOUSTICAL METAL PAN CEILING SYSTEMS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain ceiling panel units and grid components from a single source from single manufacturer having the resources to provide products of consistent quality in appearance and physical properties without delaying the progress of the Work.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).
 - 2. ENVISION Requirements:
 - a. Recycled Content

- 1) Provide Ceiling panels with combined post-consumer recycled content and one-half pre-consumer recycled content that is no less than 70 percent.
 - b. FSC Certification
 - 1) Provide wood materials that are procured through an FSC chain of custody from sustainably managed forests.
 - c. Volatile Organic Compounds (VOC) Content of Interior Sealants:
 - 1) Provide adhesives and sealants for the gypsum board assemblies of this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168:
 - a) Adhesives: 50 grams per Liter less water.
- C. Performance:
 1. Fire-Test-Response Characteristics:
 - a. Surface-Burning Characteristics:
 - 1) Provide acoustical metal pan ceilings complying with the requirements for Fire Class A materials specified in ASTM E 1264, and complying with the following requirements when tested in accordance with the method specified in ASTM E 84:
 - a) Flame Spread Index: 25 or less.
 - b) Smoke-Developed Index: 50 or less.
 - 2) Identify the surface-burning characteristics of the ceiling components using the appropriate markings of the applicable testing and inspecting organization.
 - a. Provide ceiling suspension systems complying with the seismic restraint requirements specified in ASTM E 580/E 580M, CISCA Guidelines for Seismic Restraint for Direct-hung Suspended Ceiling Assemblies (zones 3-4), and CISCA Recommendations for Direct-hung Acoustical tile and Lay-in Panel Ceilings (zones 0-2).
 2. Seismic Performance:
 3. Structural Performance: Exterior snap-in metal pan ceilings shall withstand exterior exposure and the effects of gravity loads and the following loads and stresses without showing permanent deformation of ceiling system components including pans and suspension system; noise or metal fatigue caused by vibration, deflection, and displacement of ceiling units; or permanent damage to fasteners and anchors.
 - a. Wind Load: Uniform pressure as indicated on Drawings per the Building Code and SEI/ ASCE 7 criteria, acting inward or outward.
- D. Design Criteria:
 1. Acoustical Panels:
 - a. Provide acoustical panels complying with the requirements specified in ASTM E 1264.

- b. Do not provide acoustical metal pan ceiling products for exterior applications where standing water is present or where moisture will come in direct contact with the ceiling.
 - 2. Suspension System:
 - a. Structural Classification:
 - 1) Provide a double-web, metal suspension system complying with the requirements for the intermediate duty structural classification specified in ASTM C 635, and having a null type exposed flange design.
 - b. Attachment Devices:
 - 1) Unless otherwise indicated in the Contract Documents, size attachment devices for 5 times the design load indicated in "Table 1 - Direct Hung" in ASTM C 635.
 - 2) Comply with the specified seismic performance requirements.
 - a) Provide seismic perimeter stabilizer bars, seismic struts, and seismic clips.
 - c. Wire Hangers, Braces, and Ties:
 - 1) Select the wire diameter so its yield stress is at least 3 times the hanger design load, but do not provide wire having a diameters less than 12 gage.
 - d. Edge Moldings and Trim:
 - 1) Provide the type and profile of metal edge moldings and trim for edges and penetrations indicated in the Contract Documents; or, if the edge moldings and trim are not indicated, provide the manufacturer's standard moldings that comply with the seismic performance requirements.
 - a) Provide metal edge moldings having exposed flanges the same width as the exposed runners.
- 3. Product Data:
 - a. Obtain the manufacturer's technical Product Data for each type of ceiling unit and suspension system required.
 - b. Submit the Product Data to the Program/Project Manager for approval.
- 4. Shop Drawings:
 - a. Prepare layout drawings and details of acoustical metal pan ceilings.
 - 1) Show the locations of items which are to be coordinated with, or supported by the ceilings.
 - b. Submit the Shop Drawings to the Program/Project Manager for approval.

E. Materials:

- 1. Metal Pan Ceiling Panels:
 - a. Provide smooth acoustical metal pan ceiling panels complying with the following requirements:
 - 1) Color/Light Reflectance Coefficient:

- a) Provide white acoustical metal pan ceiling panels having a light reflectance coefficient (LR) of 0.77 when measured in accordance with the method specified in ASTM E 1477.
- 2) Noise Reduction Coefficient (NRC):
 - a) Provide acoustical metal pan ceiling panels having a noise reduction coefficient (NRC) of 0.10 when measured in accordance with the method specified in ASTM C 423.
 - (1) Affix the acoustical metal pan ceiling panel's Underwriters Laboratories, Inc. classification label on product cartons.
- 3) Edge Profile:
 - a) Provide acoustical metal pan ceiling panels having flush tegular edge profiles for the interface with exposed tees.
- 4) Size:
 - a) Provide acoustical metal pan ceiling panels sized 24 inches by 24 inches by 5/8 inch.
- 5) Ceiling Attenuation Class (CAC):
 - a) Provide acoustical metal pan ceiling panels having a ceiling attenuation Class (CAC) of 36 when measured in accordance with the method specified in ASTM E 1414.
 - (1) Affix the acoustical metal pan ceiling panel's Underwriters Laboratories, Inc. classification label on product cartons.
- b. Manufacturers:
 - 1) Armstrong World Industries, Inc., basis of design MetalWorks Flush Tegular 9442U6A1, and Vector Exterior 6466M2SG2 <http://www.armstrong.com>
 - 2) Approved equal.
- 2. Suspension System:
 - a. Main Beams and Cross Tees:
 - 1) Provide commercial quality hot-dipped galvanized steel, aluminum, or stainless steel main beams and cross tees complying with the requirements specified in ASTM A 653/A 653M.
 - 2) Chemically cleanse exposed surfaces, and cap pre-finished galvanized steel, aluminum, or stainless steel in baked polyester paint.
 - 3) Except for extruded aluminum or stainless steel main beams and cross tees, rotary stitch the main beams and cross tees.
 - 4) Color:
 - a) Unless otherwise noted in the Contract Documents, provide white main beams and cross tees matching the actual color of the selected ceiling tile.
 - b. Wire Hangers, Braces, and Ties:
 - 1) Provide pre-stretched zinc-coated carbon-steel wire complying with the requirements specified for Class 1 zinc coating, soft temper wire in ASTM A 641/A 641M.

- c. Manufacturers:
 - 1) Armstrong World Industries, Inc., basis of design Prelude XL 15/16 inch Exposed Tee, and Prelude XL for Exterior Applications 15/16 inch Exposed Tee <http://www.armstrong.com>
 - 2) Approved equal.

2.02 ACCESSORIES

- A. Infill Panels:
 - 1. Provide a poly-wrapped fiberglass infill panel.
 - 2. Manufacturers:
 - a. Armstrong World Industries, Inc., basis of design Fiberflax Infill 8200100, <http://www.armstrong.com>
 - b. Approved equal.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Examine areas receiving the acoustical metal pan ceiling system for conditions that might adversely affect the installation.
 - a. Verify that building areas to receive the ceilings are free of construction dust and debris.
 - b. Verify that all work above the ceiling system has been satisfactorily completed prior to beginning to install the ceiling.
 - 2. Measure each ceiling area, and establish the layout of the acoustical metal pan panels to balance the border widths at opposite edges of each ceiling.
 - a. Avoid using less-than-half-width panels at borders, and comply with the layouts on the approved reflected ceiling plans.
- B. Evaluation and Assessment:
 - 1. Do not begin to install the ceiling until unsatisfactory conditions affecting the ceiling systems have been corrected.
 - 2. Do not begin to install the ceiling until all wet work, such as concrete, terrazzo, plastering, and painting, has been completed and thoroughly dried out.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the acoustical panel ceilings.
- B. Demolition/Removal:

1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Provide the suspension system and panels in accordance with the requirements specified in ASTM C 636/C 636M and the manufacturer's installation instructions, and with the requirements of the Authorities Having Jurisdiction.
 1. Submit the acoustical metal pan ceiling system manufacturer's written installation instructions to the Program/Project Manager for information.
- B. Suspension System:
 1. Hangers:
 - a. Suspend the main beams from the overhead construction using hanger wires spaced 4 feet on center along the length of the main runner.
 - 1) Install the hanger wires plumb and straight.
 - 2) Install the cross tees.
 2. Edge Moldings and Trim:
 - a. Install wall moldings at the intersections of the suspended ceiling and vertical surfaces.
 - b. Where wall moldings intersect, miter the corners or install corner caps.
- C. Acoustical Panels:
 1. Provide acoustical panels with undamaged edges, and fit them accurately into the suspension system main beams, cross tees, and edge moldings.
 2. Cut panels at the borders and penetrations to provide a neat, precise fit.

3.04 REPAIR/RESTORATION

- A. Replace damaged and broken ceiling panels with new undamaged panels.
- B. Clean and touch up minor damage to finishes in accordance with the manufacturer's instructions.
 1. Remove and replace ceiling panel Work that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

3.05 CLEANING

- A. Clean the exposed surfaces of the ceilings panels, including the trim, edge moldings, and suspension members.
- A. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 PROTECTION

- A. Take steps to insure that installed acoustical panel ceilings are protected during subsequent construction activities.

SECTION 09525

ACOUSTICAL PANEL CEILINGS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for acoustical panels and exposed suspension systems for ceilings.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01732 - Cutting and Patching.
 - 4. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. LR: Light reflectance coefficient.
 - 2. NRC: Noise reduction coefficient.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.

 - c. CISCA Recommendations for Direct-hung Acoustical tile and Lay-in Panel Ceilings (zones 0-2).
- 4. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
- 5. United States Government:
 - a. United States Department of Commerce:
 - 1) National Institute of Standards and Technology (NIST):
 - a) NIST Handbook 150 – National Voluntary Laboratory Accreditation Program (NVLAP) Procedures and General Requirements.
 - b) NIST Handbook 150-8 – National Voluntary Laboratory Accreditation Program (NVLAP) Acoustical Testing Services.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate the ceiling Work of this Section with the installers of related work, including, but not limited to, building insulation, gypsum board, light fixtures, mechanical systems, electrical systems, and fire suppression sprinklers.
 - a. Coordinate the panel layout with mechanical and electrical fixtures.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Acoustical ceiling panels.
 - 2) Metal suspension system.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:

- 1) Acoustical panel ceiling manufacturer's written installation
2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. Recycled Content
 - 1) Submit product data for recycled content indicating post-consumer recycled content and one-half pre-consumer recycled content for those products having recycled content. Include statement indicating material cost for each product and the fraction by weight that is considered recycled.
- C. Maintenance Material Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Spare Parts:
 - 1) Furnish spare acoustical ceiling panels that match the products installed, and packaged for storage by having a protective coverings and labels identifying the contents.
 - a) Acoustical Ceiling Panels:
 - (1) Furnish a quantity of spare acoustical ceiling panels equal to 5 percent of the quantity of acoustical ceiling panels installed.

1.05 QUALITY ASSURANCE

- A. Qualifications:
 1. Testing and Inspection Agency's Qualifications:
 - a. If required to perform acoustical performance testing, employ an independent laboratory certified under the National Institute of Standards and Technology (NIST) National Voluntary Laboratory Accreditation Program (NVLAP) to conduct the testing indicated.
 - 1) The Testing and Inspection Agency to perform the acoustical performance testing required must comply with the requirements specified in NIST Handbook 150 and NIST Handbook 150-8.
 - 2) The independent Testing and Inspection Agency must be acceptable to the Authorities Having Jurisdiction.
 - b. Submit the qualifications of the Testing and Inspection Agency for verifying acoustical performance to the Program/Project Manager for approval.
- B. Certifications:
 1. Acoustical Performance Certification:
 - a. Each carton of material must carry an approved independent laboratory classification of the material's noise reflection coefficient (NRC), ceiling attenuation class (CAC), and articulation class (AC) for acoustical performance.

- 1) Either provide materials having the Underwriters Laboratories, Inc. or Factory Mutual classification of its acoustical performance on every carton; or at the Program/Project Manager's discretion, send material from every production run appearing on the Site to an independent Testing and Inspection Agency for acoustical performance testing.
- 2) Remove and dispose of products not conforming to manufacturer's current published values, and replace the removed materials with products complying with the specified requirements at no increase in the Contract Price.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver system components in the manufacturer's original unopened, clearly labeled packages.
- B. Storage and Handling Requirements:
 1. Store the ceiling panels in a dry, interior location; and keep the ceiling panels in cartons prior to their installation to avoid damage.
 2. Exercise care in moving and opening cartons to prevent damage to the panel faces.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 ACOUSTICAL PANEL CEILING SYSTEMS

- A. Manufacturers:
 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and

- Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).
2. Sustainability Requirements:
 - a. Recycled Content:
 - 1) Acoustical Panels:
 - a) Provide acoustical panels with recycled content such that the postconsumer recycled content plus one-half of the preconsumer recycled content constitutes a minimum of 25 percent by weight.
 - 2) Metal Suspension System:
 - a) Provide products made from steel sheet with average recycled content such that the postconsumer recycled content plus one-half of the preconsumer recycled content is not less than 25 percent.
- C. Performance:
1. Fire-Test-Response Characteristics:
 - a. Surface-Burning Characteristics:
 - 1) Flame Spread Index:
 - a) Provide acoustical panels complying with the requirements for Fire Class B materials specified in ASTM E 1264 when tested in accordance with the method specified in ASTM E 84, which requires a Flame Spread Index of less than 75 on the face side.
 - 2) Smoke-Developed Index:
 - a) Provide acoustical panels having a Smoke-Developed Index of 450 or less when tested in accordance with the method specified in ASTM E 84.
 2. Seismic Performance:
 - a. Provide ceiling suspension systems complying with the seismic restraint requirements specified in ASTM E 580/E 580M, CISCA Guidelines for Seismic Restraint for Direct-hung Suspended Ceiling Assemblies (zones 3-4), and CISCA Recommendations for Direct-hung Acoustical tile and Lay-in Panel Ceilings (zones 0-2).
- D. Design Criteria:
1. Acoustical Panels:
 - a. Provide acoustical panels complying with the requirements specified in ASTM E 1264.
 2. Suspension Systems:
 - a. Structural Classification:
 - 1) Provide a double-web, steel suspension system classified as a Heavy-Duty System in accordance with the requirements specified in ASTM C 635.
 - b. Attachment Devices:

- 1) Unless otherwise indicated in the Contract Documents, size attachment devices for 5 times the design load indicated in "Table 1 - Direct Hung" in ASTM C 635.
- 2) Comply with the specified seismic performance requirements.
 - a) Provide seismic perimeter stabilizer bars, seismic struts, and seismic clips.
- c. Wire Hangers, Braces, and Ties:
 - 1) Select the wire diameter so its stress at 3 times the hanger design load indicated in "Table 1 - Direct Hung" in ASTM C 635 will be less than the yield stress of the wire, but do not provide wire having a diameters less than 0.106 inch (2.69mm).
3. Product Data:
 - a. Obtain Product Data for each type of acoustical ceiling panel and metal suspension system provided under this Section.
 - b. Submit the Product Data to the Program/Project Manager for approval.

E. Materials:

1. Acoustical Panel Ceilings:
 - a. Provide acoustical ceiling panels complying with the requirements for pattern designation CD (perforated with small holes and fissured) specified in ASTM E 126, and complying with the following requirements:
 - 1) Color/Light Reflectance Coefficient: White/LR 0.83.
 - 2) Noise Reduction Coefficient (NRC): 0.50.
 - 3) Edge Detail: Angled tegular lay-in.
 - 4) Size: ~~48~~ inches by 24 inches by 5/8 inch.
 - b. Manufacturers: **24 inches per RFI 1349**
 - 1) Armstrong World Industries, Inc., basis of design product Armstrong #703 and 704 Cortega, www.armstrong.com
 - 2) Armstrong #1774 Dune (for Stage 2), www.armstrong.com
 - 3) USG Corporation, www.usg.com. Product Radar #2320.
 - 4) Approved equal.
2. Metal Suspension System:
 - a. Main and Cross Runners:
 - 1) Provide pre-painted white main and cross runners that have been roll formed from cold-rolled steel sheet, and electrolytically zinc coated or hot-dip galvanized in accordance with the requirements for at least a G30 (Z90) coating designation specified in ASTM A 653/A 653M.
 - 2) Provide prefinished 15/16 inch (24mm) wide metal caps on the flanges.
 - 3) End Condition of Cross Runners:
 - a) Provide cross runners having either override (stepped) or butt-edge type ends.
 - b. Wire Hangers, Braces, and Ties:

- 1) Provide zinc-coated carbon-steel wire complying with the requirements specified for Class 1 zinc coating, soft temper wire in ASTM A 641/A 641M.
- c. Edge Moldings and Trim:
 - 1) Provide the type and profile of metal edge moldings and trim for edges and penetrations indicated in the Contract Documents; or, if the edge moldings and trim are not indicated, provide the manufacturer's standard moldings that comply with the seismic performance requirements
 - a) Provide metal edge moldings and trim formed from sheet metal of the same material, finish, and color used for the exposed flanges of the suspension system runners.
- d. Manufacturers:
 - 1) Armstrong World Industries, Inc., basis of design product Prelude XL 15/16 inch Exposed Tee System, Seismic Rx, www.armstrong.com
 - 2) USG Corporation, www.usg.com. Product Donn DX/DXL 15/16 inch Tee System.
 - 3) Approved equal.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Examine areas receiving the acoustical panel ceiling system for conditions that might adversely affect the installation.
 - a. Verify that building areas to receive the ceilings are free of construction dust and debris.
 - b. Verify that all work above the ceiling system has been satisfactorily completed prior to beginning to install the ceiling.
 2. Measure each ceiling area, and establish the layout of the acoustical panels to balance the border widths at opposite edges of each ceiling.
 - a. Avoid using less-than-half-width panels at borders.
- B. Evaluation and Assessment:
 1. Do not begin to install the ceiling until unsatisfactory conditions affecting the ceiling systems have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the acoustical panel ceilings.
- B. Demolition/Removal:

1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Provide acoustical panel ceilings complying with the requirements specified in ASTM C 636/C 636M, the seismic performance requirements specified, the manufacturer's installation instructions, and the Cisca Ceiling Systems Handbook.

1. Submit the acoustical panel ceiling manufacturer's written installation instructions to the Program/Project Manager for information.

- B. Suspension System:

1. Hangers:

- a. Suspend the ceiling hangers from the building's structural members, plumb and free from contact with insulation or other objects within the ceiling plenum.
- b. Splay hangers only where required to miss obstructions.
 - 1) Offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
- c. Where the width of ducts and other construction within the ceiling plenum produces hanger spacing that interferes with the location of hangers, provide trapezes or equivalent devices.
- d. When steel framing does not permit the installation of hanger wires at the spacing required, install carrying channels or other supplemental supports for attachment of the hanger wires.
- e. Do not attach hangers to steel deck tabs or to steel roof deck.

2. Edge Moldings and Trim:

- a. Provide edge moldings and trim of the type specified at the perimeter of the acoustical ceiling area, and where necessary to conceal edges of acoustical panels.
- b. Screw attach the moldings to the substrate at intervals not more than 16 inches (400mm) on center, and not more than 3 inches (75mm) from the ends.
- c. Miter the corners of the edge moldings and trim accurately, and connect the edge moldings and trim securely.

3. Suspension System Runners:

- a. Install the suspension system runners so they are square and securely interlocked with one another.
- b. Remove and replace dented, bent, or kinked members.

- C. Acoustical Panels:

1. Provide acoustical panels with undamaged edges, and fit them accurately into the suspension system runners and edge moldings.
2. Scribe and cut panels at the borders and penetrations to provide a neat, precise fit.

D. Tolerances:

1. Level the edge moldings and trim with the ceiling suspension system to within a tolerance of 1/8 inch in 12 feet (3.2mm in 3.6m).

3.04 CLEANING

A. Waste Management:

1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.05 PROTECTION

- A. Take steps to ensure that installed acoustical panel ceilings are protected during subsequent construction activities.

SECTION 09548

TORSIONAL SPRING CEILINGS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for torsional spring ceilings including suspension systems and accessories.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01454 - Mock-Up Requirements.
 - 4. Section 01732 - Cutting and Patching.
 - 5. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. HVAC: Heating, Ventilating, and Air-Conditioning.
 - 2. NRC: Noise reduction coefficient.
- B. Reference Standards:
 - 1. ASTM International (ASTM):
 - a. ASTM B 221 – Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
 - b. ASTM C 635 – Standard Specification for the Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings.
 - c. ASTM C 636/C 636M – Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels.
 - d. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
 - e. ASTM E 1264 - Standard Classification for Acoustical Ceiling Products.
 - 2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate the proper installation of inserts and related items with other trades.

- a. Provide layouts for inserts, clips, and other support items required to be installed by other trades.
- b. Furnish inserts, clips and related items to other trades in a timely manner to preclude construction delays.
2. Coordinate Work that penetrates planks.

B. Pre-Installation Meetings:

1. Pre-installation Conference:

- a. Prior to the start of installation of the torsional spring ceilings, schedule and conduct a pre-installation conference to review system requirements, Shop Drawings, and all coordination requirements.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:

- a. Product Data:
 - 1) Torsion spring panels.
 - 2) Torsion spring ceiling suspension system.
 - 3) Acoustic backer.
 - 4) Access panels.
 - 5) Polywrapped acoustical infill Insulation
- b. Shop Drawings:
 - 1) Reflected ceiling plans.
 - 2) Layout of the suspension system and components.
 - 3) Details of the system assembly, and connections to building components.
- c. Samples:
 - 1) Torsional spring ceiling panel Samples.
 - 2) Color Samples.
 - 3) Samples of torsional spring ceiling suspension system components.
 - 4) Acoustical material Samples.
- d. Certificates:
 - 1) Certified data attesting that fire rated materials comply with fire-test-response characteristics specified.
- e. Qualification Statements:
 - 1) Torsional spring ceiling and suspension system installer's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:

- 1) Torsional spring ceiling manufacturer's printed installation instructions.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Sustainable Design Closeout Documentation:
 - 1) Recycled Content: 10% (post-consumer + 1/2 pre-consumer), Submittal for torsional spring ceilings.
 - 2) Recycled Content: 20% (post-consumer + 1/2 pre-consumer), Submittal for torsional spring ceilings.

D. Maintenance Material Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Extra Stock Materials:
 - 1) Furnish spare torsional spring ceiling units that match the products installed, packaged in the manufacturer's original packages for storage, and having a protective coverings and labels identifying the contents.
 - 2) Ceiling Units:
 - a) Furnish a spare quantity of full-size torsional spring ceiling units equal to one carton of each type of torsional spring ceiling unit installed.
 - b. Tools:
 - 1) Furnish access tools for the torsional spring ceilings.

1.05 QUALITY ASSURANCE

A. Qualifications:

1. Torsional Spring Ceiling Installer's Qualifications:
 - a. To install the torsional spring ceiling components and suspension system, retain the services of a firm that will employ installers having not less than 3 years of successful experience installing similar ceiling systems to that required under this Section on projects of similar size and scope as required by this Contract.
 - b. Submit the torsional spring ceiling and suspension system installer's qualifications to the Program/Project Manager for approval.

B. Sustainability Standards Certifications:

1. Recycled Content Submittals:
 - a. For torsional spring ceilings containing recycled content, submit Product Data, including documentation indicating percentages by weight of post-consumer and pre-consumer recycled content, certifying that these products qualify the Project to claim, Recycled Content: 10% (post-consumer + 1/2 pre-consumer).
 - b. For torsional spring ceilings containing recycled content in addition to the amount qualifying to submit Product Data, including

documentation indicating percentages by weight of post-consumer and pre-consumer recycled content, certifying that these products qualify the Project to claim 20% (post-consumer + 1/2 pre-consumer).

- c. Because these credits are based on costs, include a statement indicating the costs for each product having recycled content.

C. Site Samples:

1. Torsional Spring Ceiling Panel Samples:

- a. Submit Samples of each type and finish of torsional spring ceiling panel consisting of pieces of panel that are at least 8 inches (200mm) long to the Program/Project Manager for approval.

2. Color Samples:

- a. Submit Samples of the manufacturer's standard colors (finishes) to the Program/Project Manager for selection of the colors and finishes required for the Work of this section.

3. Samples of Torsional Spring Ceiling Suspension System Components:

- a. Submit Samples of the proposed suspension system components and moldings/trim to the Program/Project Manager for approval.

4. Acoustical Material Samples:

- a. Submit Samples of the proposed acoustical material to the Program/Project Manager for approval.

D. Mock-Ups:

- 1. Construct a mockup of the typical torsional spring ceiling system as indicated on the Contract Drawings and in accordance with the requirements specified in Section 01454, Mock-Up Requirements, to verify the selections made under the Sample submittals, for the selection of the metal panel perforation pattern by the Program/Project Manager, and to demonstrate the aesthetic effects and set the quality standards for fabrication and installation of the torsional spring ceilings:

- a. After the Samples have been approved, but prior to beginning to install the torsional spring ceilings, construct a mockup that is at least 12 feet by 20 feet in size where directed by the Program/Project Manager.
 - 1) Include all of the types of components required by the system and that match the system's components and use the same installation methods to construct the mock-ups that will be used to install the production Work.
- b. Include 1 bay having perforated metal panels with 0.28-inch diameter round perforations in a straight pattern producing a 1.5 percent open area.
- c. Include 1 bay having perforated metal panels with 0.059-inch diameter round perforations in a diagonal pattern producing an 18.4 percent open area.

- d. Include 1 bay having perforated metal panels with 0.063-inch diameter round perforations in a staggered pattern at 60-degrees producing a 25 percent open area. This applies for Stage 2 only.
 - e. Set the perforated panel options contiguous within the same suspension system as specified for the torsional spring ceiling system.
 2. Approval of the mockups does not constitute approval of deviations from the Contract Documents contained in the mockups unless the Program/Project Manager specifically approves such deviations in writing.
 - a. Approved mockups may become part of the completed Work if undisturbed at the time of Substantial Completion.

1.06 WARRANTY

- A. Manufacturer Warranty:
 1. Provide manufacturer's warranty against defects in workmanship, discoloration, or other defects considered undesirable by the Architect or Program/Project Manager.
 2. This warranty shall remain in effect for a minimum period of one (1) year from date of substantial completion.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver system components in the manufacturer's original unopened, clearly labeled packages.
- B. Storage and Handling Requirements:
 1. Store the torsional spring ceiling components in a fully enclosed dry space.
 2. Place the torsional spring ceiling components on skids, to prevent damage from moisture and other construction activities.
 3. Handle the torsional spring ceiling components so damage to surfaces and edges, and distortion and other physical damage, are prevented.
- C. Packaging Waste Management:
 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.08 SITE CONDITIONS

- A. Ambient Conditions:
 1. Prior to starting to install the torsional spring ceilings, allow the torsional spring ceiling system materials to reach the ambient room temperature and humidity intended to be maintained for occupancy in the space.

PART 2 PRODUCTS

2.01 METAL TORSION SPRING (SEGMENTED) PANEL CEILING SYSTEM

- A. Manufacturers:

1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain metal panel components from a single source from single manufacturer having the resources to provide products of consistent quality in appearance and physical properties without delaying the progress of the Work.
 - 2) Obtain suspension system components from a single source from single manufacturer having the resources to provide products of consistent quality in appearance and physical properties without delaying the progress of the Work.
- B. Description:
1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with the requirements of the Phoenix Building Construction Code and Amendments (ICC International Building Code (IBC) as Amended by the City of Phoenix).
 2. Sustainability Requirements:
 - a. Sustainable Credits:
 - 1) Provide products for torsion spring ceilings that are capable of qualifying the Project for Recycled Content: 10% (post-consumer + 1/2 pre-consumer), Recycled Content: 20% (post-consumer + 1/2 pre-consumer), and Low-Emitting Materials: Adhesives & Sealants.
 - b. Recycled Content:
 - 1) Acoustical Panels:
 - a) Provide torsion spring ceiling panels with recycled content such that the postconsumer recycled content plus one-half of the pre-consumer recycled content constitutes a minimum of 25 percent by weight.
 - 2) Suspension System:
 - a) Provide suspension system products made from materials with average recycled content such that the postconsumer recycled content plus one-half of the pre-consumer recycled content is not less than 25 percent.
- C. Performance:
1. Provide the torsion spring ceiling manufacturer's standard system which when installed will comply with the following minimum requirements:

- a. Fire-Test-Response Performance:
 - 1) Surface-Burning Characteristics:
 - a) Provide torsion spring ceilings complying with the requirements for Fire Class A materials specified in ASTM E 1264, and complying with the following requirements when tested in accordance with the method specified in ASTM E 84:
 - (1) Flame Spread Index: 25 or less.
 - (2) Smoke-Developed Index: 50 or less.
 - b) Submit certified data attesting that fire rated materials comply with fire-test-response characteristics specified to the Program/Project Manager for information.
 - b. Structural Performance:
 - 1) Provide torsion spring ceiling and suspension system materials that comply with the requirements for the Heavy-Duty Systems classification specified in ASTM C 635.
 - 2) Submit certified test reports from an independent testing agency substantiating compliance of the torsion spring ceiling system with the structural requirements and other governing requirements.
 - 3) Install and certify system to comply with structural and wind load requirements of governing codes.
 - c. Acoustical Performance:
 - 1) Provide torsion spring ceiling panels having noise reduction coefficient (NRC) of 0.85 (Type E-400 Mount).
- D. Design Criteria:
 - 1. Provide a metal torsional spring (segmented) panel ceiling system designed for exposed interior and exterior installations, and to form closed butt joints between panels.
 - 2. Accessibility:
 - a. Provide ceiling panels having a minimum of 4 torsion springs that support each panel as it is lowered downward to furnish access to the area above the panel.
 - b. Provide the manufacturer's standard hinged style access panels at the locations indicated on the Contract Drawings.
 - 3. Product Data:
 - a. Obtain the manufacturer's Product Data for the torsion spring ceiling system.
 - b. Submit the Product Data of the torsion spring ceiling system to the Program/Project Manager for approval.
 - 4. Shop Drawings:
 - a. Prepare Shop Drawings of the torsion spring ceiling system that include the following items:
 - 1) Reflected ceiling plans that indicate the metal panel ceiling layout, ceiling mounted items, and penetration locations.
 - 2) Layout of the suspension system and components.

- 3) Details of the system assembly, and connections to building components.
 - b. Submit the Shop Drawings of the torsion spring ceiling system to the Program/Project Manager for approval.
- E. Materials:
1. Metal Torsion Spring (Segmented) Panel Ceiling System:
 - a. Torsion Spring Panels:
 - 1) Panel Type:
 - a) Provide 0.032-inch (0.8mm) thick aluminum torsion spring ceiling panels having a square edge profile with 2 die formed side legs, and 2 die formed end legs that have been punched to receive the torsion springs.
 - b) Provide 0.63-inch thick aluminum torsion spring ceiling panels having a square edge profile with 2 die formed side legs, and 2 die formed end legs that have been punched to receive the torsion springs, for exterior and oversized applications.
 - c) On each end of each panel, provide 2 torsion springs that securely engage into tee grid main runners that have been factory-punched to receive the springs.
 - 2) Width/Length:
 - a) Provide 16-inch (406mm) wide by 60-inch (1524mm) long ceiling panels.
 - b) Provide 48-inch wide by 120-inch long ceiling panels, at Stage 2.
 - c) Provide 48-inch wide by 120-inch long exterior ceiling panels, at Stage 2.
 - 3) Perforations:
 - a) Provide metal planks having 1/4 inch (6.4mm) nominal solid border, and a perforation pattern to be determined by the Program/Project Manager.
 - b) Provide metal planks having 1/4 inch (6.4mm) nominal solid border, and perforation pattern, Hunter Douglas pattern #127, or approved equal, for Stage 2 only.
 - 4) Color and Finish:
 - a) Provide a torsion spring ceiling panel system having a white baked-on polyester enamel finish.
 - b) Provide an exterior torsion spring ceiling panel system having a one-color wood veneer baked-on polyester enamel finish.
 - b. Torsion Spring Ceiling Suspension System:
 - 1) Provide a concealed suspension system that is segmented so the ceiling supported can be curved.
 - 2) Main Runners:
 - a) Provide 1-1/2 inch (38mm) deep by 12'-0" long, inverted T-section main runners having factory-punched flanges designed to receive the torsion spring assembly.

- b) Provide main tee on center spacing that matches the panel length.
 - c) Provide main tee that have been factory-segmented to have the radius indicated on the Contract Drawings.
 - 3) Cross Runners:
 - a) Provide 1-1/2 inch (38mm) deep, inverted T-section cross runners designed to interlock at a designated spacing into the web of the main tee sections.
 - b) Provide cross tee having a length matching the panel length.
 - c) Space cross tees no more than 48 inches apart on center.
 - 4) Hanger wire:
 - a) Provide 12 gage, pre-stretched galvanized steel hanger wire.
 - b) Space the hanger wires no more than 48 inches apart on center.
 - c. Acoustic Fabric:
 - 1) Do not provide non-woven acoustic fabric backer between the perforated metal pans and acoustical fiberglass infill for Stage 2 interior ceilings only.
 - d. Acoustic Backer:
 - 1) Provide 2-inch thick 3-pound fiberglass infill panels sized to completely fill the ceiling panel.
 - 2) Provide 1-inch thick 1.5 pcf polywrapped fiberglass infill panels sized to completely fill the ceiling panel. Provide at Stage 2 interior ceilings only.
 - e. Access Panels:
 - 1) Provide the manufacturer's standard hinged style access panels.
 - f. Manufacturers:
 - 1) Hunter Douglas Architectural Products, Inc., <http://www.hunterdouglascontract.com>.
 - 2) Armstrong World Industries, Inc., <http://www.armstrong.com>.
 - 3) USG Corporation. www.usgdesignstudio.com
 - 4) Approved equal.
2. Perimeter Trim:
- a. Provide perimeter trim for the segmented torsion spring panel ceiling system fabricated from extruded aluminum complying with the requirements for aluminum Alloy 6063 specified in ASTM B 221, and factory-finished with a baked-on polyester paint having a color matching the panel finish.
 - 1) To join perimeter ceiling panels flush with adjacent construction, provide channel trim having a height of 4 inches and a 3/4-inch flange.
 - 2) Provide other trim and corner assemblies that have been fabricated in lengths of 16 feet.

- b. Provide integral splice clips, corner clips, and suspension clips for attaching the perimeter trim to the ceiling suspension system as required.
 - 1) Provide straight splice clips having set screws.
 - 2) Provide corner brackets having set screws.
 - 3) Provide T-bar connector clips.
 - 4) Provide factory-assembled corners
- c. Manufacturers:
 - 1) Hunter Douglas Architectural Products, Edgeline Trim Systems, <http://www.hunterdouglascontract.com>.
 - 2) Armstrong World Industries, Inc., <http://www.armstrong.com>.
 - 3) Approved equal.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Examine areas receiving the torsional spring ceiling system for conditions that might adversely affect the installation.
 - a. Verify that all work above the ceiling system has been satisfactorily completed prior to beginning to install the ceiling.
 - 2. Measure each ceiling area and establish the layout of the torsional spring ceiling to balance the borders and minimize out-of-square conditions.
- B. Evaluation and Assessment:
 - 1. Do not begin to install the ceiling until unsatisfactory conditions affecting the ceiling systems have been corrected.
 - 2. Do not begin installing the torsional spring system until the spaces are enclosed and weather tight, and all wet work and overhead work have been completed.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the torsional spring ceilings.
- B. Demolition/Removal:
 - 1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Install the torsion spring panel system in accordance with the requirements specified in ASTM C 636/C 636M, the torsional spring ceiling manufacturer's installation instructions, approved torsional spring ceiling submittals, and in accordance with local building codes and practices.

1. Submit the torsional spring ceiling manufacturer's printed installation instructions to the Program/Project Manager for approval.
- B. Suspension System:
 1. Hangers:
 - a. Suspend the ceiling hangers from the building's structural members, plumb and free from contact with insulation or other objects within the ceiling plenum.
 - b. Splay hangers only where required to miss obstructions.
 - 1) Offset resulting horizontal forces by bracing, counter-splaying, or other equally effective means.
 - c. Where the width of ducts and other construction within the ceiling plenum produces hanger spacing that interferes with the location of hangers, provide trapezes or equivalent devices.
 - d. When steel framing does not permit the installation of hanger wires at the spacing required, install carrying channels or other supplemental supports for attachment of the hanger wires.
 - e. Do not attach hangers to steel deck tabs or to steel roof deck.
 2. Edge Moldings and Trim:
 - a. Provide edge moldings and trim of the type specified at the perimeter of the torsional spring ceiling area, and where necessary to conceal edges of torsional spring ceiling panels.
 - b. Screw-attach the moldings to the substrate at intervals not more than 16 inches (400mm) on center, and not more than 3 inches (75mm) from the ends.
 - c. Miter the corners of the edge moldings, trim accurately, and connect the edge moldings and trim securely.
 3. Suspension System Runners:
 - a. Install the suspension system runners so they are square and securely interlocked with one another.
 - b. Assemble the tee grid suspension system by connecting the cross runners to suspended main runners to form a mounting grid for the ceiling panels.
 - c. Main runners:
 - 1) Install the main runners at the spacing matching the panel length.
 - 2) Suspend the main runners using hanger wires spaced on maximum 48 inches (1219mm) centers, and within 12 inches (305mm) of walls.
 - d. Remove and replace dented, bent, or kinked members.
- C. Torsion Spring Panels
 1. Install the torsion spring ceiling panels by lifting the panel and inserting the free ends of torsion springs into the factory-punched slots in the flanges of the T-shaped, segmented main runners.

2. After the free ends of all torsion springs on a single panel are in the main tee slots, raise the panel up against the bottom flange of the main tee until the springs expand, securing the panels firmly in place.

D. Interface with Other Work:

1. Coordinate and provide accommodation for the fire suppression system components; heating, ventilating, and air-conditioning (HVAC) components; and lighting fixtures in the area of the torsional spring ceiling system installation.

3.04 CLEANING

A. Waste Management:

1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.05 PROTECTION

- A. Take steps to ensure that installed torsional spring ceilings are protected during subsequent construction activities.

END OF SECTION

SECTION 09653

RESILIENT BASE AND ACCESSORIES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for resilient wall base.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. VCT: Vinyl Composition Tile.
 - 2. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside and San Bernardino counties.
- B. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
- C. Reference Standards:
 - 1. ASTM International (ASTM):
 - ASTM E 648 - Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source.
 - ASTM E 662 - Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials.
 - ASTM F 1861 – Standard Specification for Resilient Wall Base.
 - 2. City of Phoenix (COP):
 - Phoenix Building Construction Code and Amendments.
 - 3. South Coast Air Quality Management District (SCAQMD):

 - Environmental Protection Agency (EPA):
 - a. 40 CFR 59 National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.
 - 5. Institute for Sustainability Infrastructure (ISI)
 - a. ENVISION Rating System For Sustainable Infrastructure - 2015 ISI, Inc.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate resilient product installation with other construction to minimize the possibility of damage and soiling during the remainder of the construction period.
- B. Sequencing:
 - 1. Install resilient products after other finishing operations, including painting, have been completed.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - a. Rubber wall base.
 - b. Vinyl wall base.
 - c. Trowelable leveling and patching compounds.
 - d. Adhesives.
 - b. Samples:
 - e. Verification Samples.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - a. Resilient wall base manufacturer's written installation instructions.
 - 2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. Adhesives and Sealants
 - 1. Submit product data highlighting the VOC content for any field applied adhesive or sealant used.
 - 2. Flooring Systems
 - 1. Submit Floorscore certificates for each resilient base or flooring product provided.
- C. Maintenance Material Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Extra Stock Materials:
 - a. Furnish the following extra materials that match the products installed, are packaged with protective covering for storage, and

are identified with labels describing contents, and deliver them to the Owner:

- a) Not less than 10 linear feet for each 500 linear feet or fraction thereof, of each different type, color, pattern, and size of resilient product installed.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
- B. Sustainability Standards Certifications:
 1. Low-Emitting Materials Submittal:
 - a. For the adhesives used for the wall base and accessories, submit Product Data, including a printed statement of volatile organic compound (VOC) content and chemical components, certifying that these products comply with SCAQMD Rule #1168.
- C. Site Samples:
 1. Verification Samples:
 - a. Provide verification Samples for each product color and pattern specified of the manufacturer's standard sizes, but not less than 12 inches long.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver products to Site in the manufacturer's original, unopened cartons and containers, each bearing the names of the product and manufacturer, Project and Contract identification, and shipping and handling instructions.
- B. Storage and Handling Requirements:
 1. Store products in dry spaces protected from the weather, with ambient temperatures maintained between 50 degrees Fahrenheit and 90 degrees Fahrenheit.
 2. Move products into spaces where they will be installed at least 48 hours before installation, unless a longer conditioning period is recommended by manufacturer in writing.

1.07 SITE CONDITIONS

- A. Ambient Conditions:
 1. In the spaces to receive resilient products, maintain a temperature of not less than 70 degrees Fahrenheit or more than 95 deg F for at least 48 hours before installation, during installation, and for at least 48 hours after

installation, unless manufacturer's written recommendations specify longer time periods.

2. Following installation of the resilient products, maintain a temperature of not less than 55 degrees Fahrenheit or more than 95 degrees Fahrenheit.

PART 2 PRODUCTS

2.01 MANUFACTURERS:

A. Manufacturer List:

1. Roppe, www.roppe.com.
2. Johnsonite, www.johnsonite.com.
3. Burke, www.endura-flooring.com.

B. Product Options:

1. Subject to compliance with the Contract requirements, provide one of the products specified for each designation.
 - (a) Color:
 - (i) Provide colors to be selected by the Program/Project Manager from the manufacturer's standard colors.
 - (b) Source Limitations:
 - (i) Obtain each type and color of product specified from one source with resources to provide products of consistent quality in appearance and physical properties without delaying the Work.
 - (c) Product Data
 - (i) Submit Product Data for each type of product specified herein.

2.02 SUSTAINABILITY REQUIREMENTS:

A. Volatile Organic Compounds (VOC) Content of Interior Sealants:

1. Provide sealants and sealant primers for the interior architectural woodwork of this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule #1168:
 - (a) Vinyl Composition Tile (VCT) and Asphalt Tile Adhesives: Not more than 50 grams per Liter less water
 - (b) Rubber Floor Adhesives: Not more than 60 grams per Liter less water.

B. All Resilient flooring and base products must be certified under Floorscore.

2.03 PERFORMANCE

A. Fire-Test-Response Characteristics:

1. Provide products having the following fire-test-response characteristics determined by a testing and inspecting agency acceptable to Authorities

Having Jurisdiction testing identical products in accordance with the test method specified:

- (a) Critical Radiant Flux: 0.45 Watts per square centimeter or greater when tested in accordance with the requirements of ASTM E 648.
- (b) Smoke Density: Specific optical density of 450 or less when tested in accordance with the requirements of ASTM E 662

2.04 MATERIALS:

A. Resilient Wall Base:

1. Rubber Wall Base:

- (a) Where the "RB" designation is indicated on the Contract Drawings, provide rubber wall base.
- (b) Provide either Type TS, rubber, vulcanized thermoset, or TP, rubber, thermoplastic, resilient wall base as specified in ASTM F 1861 having a cove with a top-set toe.
- (c) Minimum Nominal Thickness: 1/8 inch.
- (d) Height: 4 inches except where 6 inches is indicated on the Contract Drawings.
- (e) Lengths: Coils of the manufacturer's standard lengths, but not less than 100 feet.
- (f) Exterior Corners: Premolded.
- (g) Interior Corners: Mitered.

2. Vinyl Wall Base:

- (a) Provide Type TV, vinyl, thermoplastic, resilient wall base as specified in ASTM F 1861, and having a cove base.
- (b) Height: 4 inches except where 6 inches is indicated on the Contract Drawings.
- (c) Lengths: Coils of the manufacturer's standard lengths, but not less than 100 feet.
- (d) Exterior Corners: Premolded.
- (e) Interior Corners: Mitered.

2.05 ACCESSORIES

A. Trowelable Leveling and Patching Compounds:

- 1. Provide a latex-modified, Portland-cement-based formulation supplied or approved by the resilient product manufacturer for the applications indicated on the Contract Drawings.

B. Adhesives:

- 1. Provide water-resistant type adhesives recommended by the resilient product manufacturer to suit the resilient products and substrate conditions indicated on the Contract Drawings, and meeting the specified requirements for volatile organic compounds (VOC) content.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. With the installer present, examine substrates, areas, and conditions where resilient products will be installed for compliance with the manufacturer's requirements, including those for maximum moisture content.
 - 2. Verify that substrates and conditions are satisfactory for installing resilient products, and comply with the requirements specified.
- B. Evaluation and Assessment:
 - 1. Do not install resilient products until they are at the same temperature as the space where they are to be installed.
 - 2. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Surface Preparation:
 - 1. Comply with resilient product manufacturer's written installation instructions for preparing substrates indicated to receive resilient products.
 - 2. To fill cracks, holes, and depressions in substrates, provide trowelable leveling and patching compounds applied according to the compound manufacturer's written instructions.
 - 3. Immediately before installing resilient products, broom and vacuum clean the substrates to be covered.
 - a. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust.
 - b. Do not proceed with installation until unsatisfactory conditions have been corrected.
- B. Demolition/Removal:
 - 1. Using mechanical methods recommended by the adhesive manufacturer, remove coatings, including curing compounds and other substances that are incompatible with the adhesives, and that contain soap, wax, oil, or silicone.
 - a. Do not use solvents.

3.03 INSTALLATION

- A. Install resilient wall base and accessories according to the manufacturer's written installation instructions.
 - 1. Submit the resilient wall base manufacturer's written installation instructions to the Program/Project Manager for information.

- B. Apply resilient wall base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.
 - 1. Install wall base in lengths as long as practicable without gaps at seams, and with tops of adjacent pieces aligned.
 - 2. Adhere the wall base tightly to the substrate throughout the length of each piece, with the base in continuous contact with horizontal and vertical substrates.
 - 3. Do not stretch the base during installation.
 - 4. On masonry surfaces or other similar irregular substrates, fill voids along the top edge of the resilient wall base with the manufacturer's recommended adhesive filler material.
 - 5. Install premolded outside corners before installing straight pieces.
- C. Place resilient products so they are butted to adjacent materials, and bond the resilient products to substrates with adhesive.
 - 1. Install reducer strips at the edges of flooring that would otherwise be exposed.

3.04 CLEANING

- A. Immediately after installing resilient products, perform the following tasks:
 - 1. Remove visible adhesive and other surface blemishes from the resilient wall base using a cleaner recommended by the resilient product manufacturer.
 - 2. Thoroughly sweep or vacuum the floor and base surfaces.
 - 3. Do not wash resilient products until after the time period recommended by the resilient product manufacturer.
 - 4. Damp-mop or sponge the resilient products to remove marks and soil.
- B. Clean resilient products no more than 4 days before inspections intended to establish the date of Substantial Completion in each area of the Site.
 - 1. Clean products according to manufacturer's written recommendations.

3.05 PROTECTION

- A. For resilient products installed on traffic surfaces, close the spaces to traffic during installation, and for the period after installation recommended by manufacturer in writing.
- B. Protect resilient products against mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during the remainder of construction period.
- C. Use protection methods indicated or recommended by the resilient product manufacturer in writing.

 - b. ASTM F 710 – Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.
 - c. ASTM F 1066 - Standard Specification for Vinyl Composition Floor Tile.
 - d. ASTM F 1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.
 - 2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 3. National Fire Protection Association (NFPA):

- a. NFPA 253 – Standard Method of Test for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source.
- 4. South Coast Air Quality Management District (SCAQMD):
 - a. SCAQMD Rule #1168 – Adhesive and Sealant Applications.
- 5. U. S. Government:
 - a. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.
- 6. United States Green Building Council (USGBC):
 - a. LEED® for New Construction and Major Renovations, Version 2009.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Sequencing:
 - 1. Install floor tile after other finishing operations, including painting, have been completed.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Vinyl composition floor tile.
 - 2) Trowelable leveling and patching compounds.
 - 3) Adhesives.
 - 4) Floor polish.
 - b. Shop Drawings:
 - 1) Shop Drawings for each type of resilient floor tile.
 - c. Samples:
 - 1) Floor tile Samples.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Resilient tile flooring manufacturer's written installation instructions.
 - 2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. Adhesives and Sealants
 - 1) Submit product data highlighting the VOC content for any field applied adhesive or sealant used.
 - b. Flooring Systems

- 1) Submit Floorscore certificates for each resilient base or flooring product provided.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Resilient floor tile maintenance data.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.

B. Site Samples:

1. Floor Tile Samples:
 - a. Provide full-size Samples of each color and pattern of the floor tile specified and proposed for the Work of this Contract.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver products to Site in the manufacturer's original, unopened cartons and containers, each bearing the names of the product and manufacturer, Project and Contract identification, and shipping and handling instructions.

B. Storage and Handling Requirements:

1. Store products in dry spaces protected from the weather, with ambient temperatures maintained within the range recommended by manufacturer.

1.07 SITE CONDITIONS

A. Ambient Conditions:

1. Maintain ambient temperatures within the range recommended by manufacturer in spaces to receive floor tile.
2. Maintain ambient temperatures within the range recommended by the resilient tile flooring manufacturer until Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS:

A. Manufacturer List:

1. Armstrong World Industries, Inc., Premium Excelon Tile,
www.armstrong.com.

B. Product Options:

1. Subject to compliance with the Contract requirements, provide the products specified from available sources.
 - a. Color:
 - 1) Provide materials having the colors and patterns selected by the Program/Project Manager from the full range of available industry colors.
 - b. Product Data:
 - 1) Submit Product Data from the manufacturers for each type of product specified and provided under this Section.

2.02 DESCRIPTION:

A. Regulatory Requirements:

1. Volatile Organic Compounds (VOC) Content of Adhesives:
 - a. Provide adhesives for the resilient tile flooring of this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59:
 - 1) Vinyl Composition Tile (VCT) and Asphalt Tile Adhesives: Not more than 50 grams per Liter.
 - 2) Rubber Floor Adhesives: Not more than 60 grams per Liter.

B. Sustainability Requirements:

1. All Resilient flooring and base products must be certified under Floorscore.
2. Volatile Organic Compounds (VOC) Content of Interior Sealants:
 - a. Provide adhesives, sealants, and sealant primers for the resilient tile flooring of this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule #1168:
 - 1) Vinyl composition tile and asphalt adhesives: Not more than 60 grams per Liter less water.

2.03 PERFORMANCE

A. Fire-Test-Response Characteristics:

1. Provide products having the following fire-test-response characteristics determined by a testing and inspecting agency acceptable to Authorities Having Jurisdiction testing identical products in accordance with the test method specified:
 - a. Critical Radiant Flux Classification: Class I, 0.45 Watts per square centimeter or greater when tested in accordance with the requirements of ASTM E 648 or NFPA 253.

2.04 DESIGN CRITERIA

- A. Shop Drawings:
 - 1. Submit Shop Drawings for each type of resilient floor tile.
 - a. Include floor tile layouts, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.

2.05 MATERIALS

- A. Vinyl Composition Floor Tile (VCT-1):
 - 1. Provide Class 2 solid vinyl composition floor tile complying with the requirements specified in ASTM F 1066.
 - 2. Wearing Surface: Smooth.
 - 3. Thickness: 0.125 inch (3.2mm).
 - 4. Size: 12 inches by 12 inches (305mm by 305mm).

2.06 ACCESSORIES

- A. Trowelable Leveling and Patching Compounds:
 - 1. Provide a latex-modified, Portland-cement-based or blended hydraulic-cement-based formulation supplied or approved by the resilient product manufacturer for the applications indicated on the Contract Drawings.
- B. Adhesives:
 - 1. Provide water-resistant type adhesives recommended by the resilient product manufacturer to suit the floor tile and substrate conditions indicated on the Contract Drawings, and meeting the specified requirements for volatile organic compounds (VOC) content.
- C. Floor Polish:
 - 1. Provide protective liquid floor polish products as recommended by resilient floor tile manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Verify that the spaces where resilient tile flooring is to be installed are at the required ambient temperatures, and otherwise ready to receive resilient tile flooring.
- B. Pre-Installation Testing:
 - 1. Alkalinity and Adhesion Testing:
 - a. Perform alkalinity and adhesion tests recommended by the floor covering manufacturer.
 - 2. Moisture Testing:

- a. Perform moisture tests recommended by the floor covering manufacturer.
 - b. Perform the anhydrous calcium chloride test, as specified in ASTM F 1869.
- C. Evaluation and Assessment:
 - 1. Proceed with installation only after substrates pass the alkalinity, adhesion, and moisture testing.
 - a. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of [3] pounds of water per 1000 square feet ([1.36] kg of water per 92.9 square meters) in 24 hours.
 - 2. Do not install floor tiles until they are same temperature as the space where they are to be installed.
 - a. Move resilient products and installation materials into spaces where they will be installed at least 48 hours in advance of installation.

3.02 PREPARATION

- A. Surface Preparation:
 - 1. Prepare substrates according to the resilient tile flooring manufacturer's written instructions to ensure adhesion of the resilient products.
 - a. Concrete Substrates:
 - 1) Prepare the substrates according to the requirements specified in ASTM F 710.
 - 2) Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 - 2. To fill cracks, holes, and depressions in substrates and remove bumps and ridges to produce a uniform and smooth substrate, provide trowelable leveling and patching compounds applied according to the compound manufacturer's written instructions.
 - 3. Immediately before installing resilient products, sweep and vacuum clean the substrates to be covered.
 - a. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust.
 - b. Do not proceed with installation until unsatisfactory conditions have been corrected.
- B. Demolition/Removal:
 - 1. Using mechanical methods recommended by resilient tile flooring manufacturer, remove substrate coatings and other substances that are incompatible with the adhesives, and that contain soap, wax, oil, or silicone.
 - a. Do not use solvents.

3.03 INSTALLATION

- A. Install resilient tile flooring according to the manufacturer's written installation instructions.
 - 1. Submit the resilient tile flooring manufacturer's written installation instructions to the Program/Project Manager for information.
- B. Layout:
 - 1. Lay out floor tiles from center marks established from the principal walls, discounting minor offsets, so the tiles at opposite edges of the room are of equal width.
 - 2. Make adjustments as necessary to avoid using cut widths that equal less than one-half tile at the perimeter.
 - 3. Lay tiles square with room axis.
- C. Color and Pattern Matching:
 - 1. Match floor tiles for color and pattern by selecting tiles from cartons in the same sequence as they were manufactured and packaged, if numbered in sequence.
 - 2. Discard broken, cracked, chipped, or deformed tiles.
 - 3. Lay tiles in a basket-weave pattern with the grain direction alternating in adjacent tiles.
- D. Fitting and Installing Tile:
 - 1. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures, including built-in furniture, cabinets, pipes, outlets, and door frames.
 - 2. Extend floor tiles into toe spaces, door reveals, closets, and similar openings.
 - 3. Extend floor tiles to the center of door openings.
 - 4. Adhere floor tile to the flooring substrates using a full spread of adhesive applied to the substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.
- E. Recording In-Place Markers, Holes, and Openings:
 - 1. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating the reference markers on the floor tiles as marked on substrates.
 - 2. Use chalk or other nonpermanent, non-staining marking devices to repeat the markers.

3.04 CLEANING

- A. Clean and protect the resilient floor tile in accordance with the manufacturer's written instructions.

3.05 PROTECTION

- A. Close spaces to traffic during floor tile installation.
- B. Close spaces to traffic for 48 hours after floor tile installation.
- C. Floor Polish:
 - 1. Remove soil, visible adhesives, and surface blemishes from the floor tile surfaces before applying liquid floor polish.
 - 2. Apply 3 coats of floor polish.
- D. Cover installed floor tile until Substantial Completion.

3.06 MAINTENANCE

- A. Maintenance Data:
 - 1. Submit maintenance data for the resilient floor tile provided.

SECTION 09912

PAINTING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the surface preparation and field painting of the following:
 - a. Exposed exterior items and surfaces.
 - b. Exposed interior items and surfaces.
 - 2. The surface preparation, priming, and finish coats specified in this Section are in addition to shop priming and surface treatment specified in other Sections.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 09960 - High-Performance Coatings.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AESS: Architecturally Exposed Structural Steel.
 - 2. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 3. FM: Factory Mutual FM.
 - 4. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside, and San Bernardino counties in California.
 - 5. UL: Underwriters Laboratories.
- B. Definitions:
 - 1. Standard coating terms defined in ASTM D 16 apply to the Work of this Section.
 - 2. Benchmark Sample: A sample that serves as a standard by which other Work may be measured or judged.

3. Exposed Surfaces: Areas visible when permanent or built-in fixtures, convector covers, covers for finned-tube radiation, grilles, and similar components are in place.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Review other Specification Sections in which primers or other coatings are provided to ensure compatibility of the total systems for various substrates.
 - a. Upon request, furnish information on the characteristics of specified finish materials to ensure compatible primers.

- b. Notify the Program/Project Manager of problems anticipated using the materials specified.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal

Procedures:

- a. Product Data:
 - 1) Exterior latex block filler.
 - 2) Exterior acrylic masonry primer/sealer.
 - 3) Exterior acrylic semigloss enamel.
 - 4) Interior pigmented latex sealer.
 - 5) Interior acrylic semi-gloss enamel.
 - 6) Interior acrylic enamel undercoater.
 - 7) Interior/exterior acrylic gloss paint.
 - 8) Interior acrylic multi-purpose primer.
- b. Samples:
 - 1) Verification Samples.
- c. Certificates:
 - 1) Paint Manufacturer's Certification.
- d. Delegated Design Submittals:
 - 1) Paint Material List.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal

Procedures:

- a. Manufacturer's Instructions:
 - 1) Manufacturer's Information.
- b. Manufacturer's Reports:
 - 1) Manufacturer's color charts.
 - 2) Manufacturer's material data and certificates of performance for proposed substitutions.
 - 3) Manufacturer's or distributor's numbered invoices.
2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. Paints and Coatings
 - 1) Submit product data highlighting the VOC content for any field applied coating within the buildings weather barrier.

C. Maintenance Material Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Extra Stock Materials:

- 1) Furnish an additional 5 gallons of paint, as appropriate, of each type and color applied to the Owner.
 - a) Furnish paint from the same production run as materials applied.
 - b) Package this paint in unopened, factory-sealed containers suitable for storage, and identify the containers with labels describing the contents of each.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 1. Comply with the Occupational Safety and Health Administration (OSHA) regulations stipulated in 29 CFR 1910 and 29 CFR 1926.
 2. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
- B. Certifications:
 1. Paint Manufacturer's Certification:
 - a. Submit a Paint Manufacturer's Certification from the manufacturer certifying that the products supplied comply with local regulations controlling use of volatile organic compounds (VOCs) as specified herein.
- C. Site Samples:
 1. Benchmark Finish Sample:
 - a. Provide a full-coat benchmark finish sample of each type of coating and substrate required for the Contract to the Program/Project Manager for approval.
 - 1) Comply with the procedures specified in PDCA P5.
 - 2) Duplicate finish of approved prepared samples.
 - b. The Program/Project Manager will select one room or surface to represent the surfaces and conditions for each type of coating and substrate to be painted.
 - c. Apply the coatings in this room or surface in accordance with the schedule or as specified.
 - d. After the finishes are accepted, this room or surface will be used for evaluation of coating systems of a similar nature.
 1. Verification Samples:
 - a. Submit Verification Samples of each color and material to be applied, on representative Samples of the actual substrate with a texture to simulate actual conditions to the Program/Project Manager for approval.
 - 1) Provide Samples of each color defining each separate coat, including block fillers and primers.
 - 2) Use representative colors when preparing Samples for review.

- 3) Resubmit Verification Samples until the required sheen, color, and texture are achieved.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver materials to the Site in the manufacturer's original, unopened packages and containers bearing manufacturer's name and label.
 2. Paint material containers not displaying manufacturer's product identification are unacceptable.
- B. Storage and Handling Requirements:
 1. Store paint not in use in tightly covered containers in a well-ventilated area at a minimum ambient temperature of 45 degrees Fahrenheit.
 2. Store opened containers of high-performance coating in a clean condition, free of foreign materials and residue.
 3. Keep the storage area neat and orderly.
 - a. Remove oily rags and waste daily.

1.07 SITE CONDITIONS

- A. Ambient Conditions:
 1. Apply water-based paints only when temperature of surfaces to be painted and the surrounding air temperatures are between 50 and 90 degrees Fahrenheit (10 and 32 degrees Celsius).
 2. Apply solvent-thinned paints only when temperature of surfaces to be painted and the surrounding air temperatures are between 45 and 95 degrees Fahrenheit (7.2 and 35 degrees Celsius).
 3. Do not apply paint under the following conditions:
 - a. When it is snowing, raining, foggy, or misty where the coating operation is occurring.
 - b. When the relative humidity exceeds 85 percent.
 - c. When temperatures are less than 5 degrees Fahrenheit (3 degrees Celsius) above the dew point.
 - d. When the surfaces are damp or wet.
 4. Painting may continue during inclement weather if the surfaces and areas to be painted are enclosed and heated within temperature limits specified by the manufacturer during the application and drying periods.
 5. Protect materials from freezing.

PART 2 PRODUCTS

2.01 PAINT SYSTEMS

- A. Manufacturers:
 1. Manufacturer List:
 - a. Dunn-Edwards Corporation, <https://www.dunnedwards.com/>.

- b. The Sherwin-Williams Company, www.sherwin-williams.com.
 - c. International Protective Coatings; International Paint, Inc. distributed by Dunn-Edwards Paints, www.international-pc.com.
 - d. Carboline Company, an RPM Company, <http://www.carboline.com>.
 - 2. Substitution Limitations:
 - a. This Specification is written naming products manufactured or distributed by Dunn-Edwards Corporation.
 - 1) The products specified establish standards for kind, quality, sheen, and function desired for this Contract.
 - 2) The use of a manufacturer's proprietary product names to designate colors or materials is not intended to imply that the products named are required to be used to the exclusion of equivalent products of other manufacturers.
 - b. Submit the manufacturer's material data and certificates of performance for proposed substitutions to the Program/Project Manager for approval.
 - 3. Product Options:
 - a. Subject to compliance with the Contract requirements, provide one of the products indicated in the paint schedules.
 - b. Obtain block fillers, primers, and undercoat materials for each coating system from the same manufacturer as the finish coats.
- B. Sustainability Requirements:
 - 1. Volatile Organic Compounds (VOC) Content of Field-Applied Interior Paints and Coatings:
 - a. Provide paint products having volatile organic compound content, exclusive of colorants added to a tint base, not greater than the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59:
 - 1) Flat, Non-Flat and High-gloss Paints and Coatings: Not more than 50 grams per Liter.
 - 2) Primers, Sealer and Undercoats: Not more than 100 grams per Liter.
 - 3) Anti-Corrosive and Anti-Rust Paints Applied to Ferrous Metals: Not more than 100 grams per Liter.
 - 4) Floor Coatings: Not more than 50 grams per Liter.
 - b. Refer to Section 01360 - Sustainable Design Requirements for complete list of VOC limits for this project.
- C. Design Criteria:
 - 1. Material Compatibility:
 - a. Provide block fillers, primers, undercoats, and finish-coat materials that are compatible with one another and the substrates indicated in the Contract Documents under the conditions of service and application, as demonstrated by the manufacturer based on testing and field experience.

2. Material Quality:
 - a. Provide the best quality, top of the line paint material of the various coating types specified.
3. Colors:
 - a. Provide colors as selected by the Program/Project Manager from the manufacturer's full range.
 - b. Submit the manufacturer's color charts showing the full range of colors available for each type of finish-coat material indicated herein to the Program/Project Manager for information.
4. Minimum Coating Thickness:
 - a. Apply paint materials no thinner than the manufacturer recommended spreading rate.
 - b. Provide the total dry film thickness of the entire system as recommended by the manufacturer.
5. Product Data:
 - a. Submit Product Data for each paint system specified, including block fillers and primers, to the Program/Project Manager for approval.
 - b. Paint Material List:
 - 1) Submit an inclusive Paint Material List of the required coating materials to the Program/Project Manager for approval.
 - a) Indicate each material, and cross-reference the specific coating, finish system, and application.
 - b) Identify each material by the manufacturer's catalog number and general classification.
 - c. Manufacturer's Information:
 - 1) Submit the manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each coating material proposed for use to the Program/Project Manager for information.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. With the Applicator present, examine the substrates and conditions under which the paint will be applied for compliance with coating application requirements.
- B. Evaluation and Assessment:
 1. Do not apply paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to forming a durable paint film.
 2. Apply coatings only after unsatisfactory conditions have been corrected and surfaces to receive paint are thoroughly dry.
 - a. The start of painting will be construed as the applicator's acceptance of the surfaces within that particular area.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect the Work of other trades, whether being coated or not, against damage from painting.
 - 2. Take the necessary measures to ensure that workers and work areas are protected from fire and health hazards resulting from handling, mixing, and applying the coatings.
- B. Surface Preparation:
 - 1. For each particular substrate condition, clean and prepare the surfaces to be painted according to the manufacturer's written instructions and as specified herein.
 - a. Provide barrier coats over incompatible primers, or remove the incompatible primers and re-prime the substrate.
 - 2. Before applying paint or other surface treatments, clean the substrates of substances that could impair the bond of the coatings.
 - a. Remove oil and grease before cleaning.
 - b. Schedule the cleaning and painting so dust and other contaminants from the cleaning process will not fall on wet, newly coated surfaces.
 - 3. Cementitious Materials:
 - a. Prepare concrete, concrete masonry block, cement plaster, and mineral-fiber-reinforced cement panel surfaces to be painted.
 - 1) Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents.
 - 2) Roughen the surfaces as required to remove glaze.
 - 3) If hardeners or sealers have been used to improve curing, use mechanical methods of surface preparation.
 - a) Use abrasive blast-cleaning methods if recommended by the paint manufacturer.
 - 4) Determine the alkalinity and moisture content of the surfaces by performing appropriate tests.
 - a) If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before applying the paint.
 - b) Do not paint surfaces where the moisture content exceeds that permitted in the manufacturer's written instructions.
 - 4. Ferrous-Metal Substrates:
 - a. Clean ungalvanized ferrous-metal surfaces that have not been shop coated.
 - 1) Remove oil, grease, dirt, loose mill scale, and other foreign substances.
 - b. Use solvent or mechanical cleaning methods that comply with recommendations provided in the SSPC Steel Structures Painting Manual.

- 1) Treat bare and sandblasted or pickled clean metal with a metal treatment wash coat before priming.
- 2) Touch up bare areas and shop-applied prime coats that have been damaged.
 - a) Wire-brush, clean with solvents recommended by paint manufacturer, and touch up these areas with the same primer as the shop coat.
5. Galvanized Surfaces:
 - a. Clean galvanized surfaces with nonpetroleum-based solvents so the surface is free of oil and surface contaminants.
 - b. Remove pretreatment from galvanized sheet metal fabricated from coil stock by mechanical methods.

C. Demolition/Removal:

1. Remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and similar items already installed that are not to be painted.
 - a. If removal of these items is impractical or impossible because of the size or weight of the items, provide surface-applied protection before initiating surface preparation and coating.

3.03 SURFACES AND SUBSTRATES

A. Exposed Surfaces:

1. Paint exposed surfaces, except where the paint schedules indicate that a surface or material is not to be painted or is to remain natural.
2. If the paint schedules do not specifically mention an item or a surface, paint the item or surface the same as similar adjacent materials or surfaces whether or not schedules indicate colors.
3. If the schedules do not indicate color or finish, the Program/Project Manager will select the color or finish from the standard colors and finishes available.
 - a. Painting includes field painting of exposed bare and covered pipes and ducts (including color coding), hangers, exposed steel and iron work, and primed metal surfaces of mechanical and electrical equipment.

B. Concealed Surfaces:

1. Do not paint concealed surfaces.
2. Concealed surfaces include walls or ceilings in the following generally inaccessible spaces:
 - a. Furred areas.
 - b. Ceiling plenums.
 - c. Utility tunnels.
 - d. Pipe spaces.
 - e. Duct shafts.

- C. Finished Metal Surfaces and Prefinished Items:
 - 1. Do not paint finished metal surfaces and prefinished items.
 - 2. Prefinished items include the following factory-finished components:
 - a. Acoustical wall panels.
 - b. Metal toilet enclosures.
 - c. Finished mechanical and electrical equipment.
 - d. Light fixtures.
 - e. Distribution cabinets.
 - 3. Finished metal surfaces include the following:
 - a. Anodized aluminum.
 - b. Stainless steel.
 - c. Chromium plate.
 - d. Copper.
 - e. Bronze and brass.
- D. Operating Parts:
 - 1. Do not paint operating parts.
 - 2. Operating parts include the moving parts of operating equipment and the following:
 - a. Valve and damper operators.
 - b. Linkages.
 - c. Sensing devices.
 - d. Motor and fan shafts.
- E. Labels:
 - 1. Do not paint over Underwriters Laboratories (UL), Factory Mutual (FM), or other code-required labels, or name, identification, performance rating, or nomenclature plates on equipment.

3.04 APPLICATION

- A. Coating Material Preparation:
 - 1. Mix and prepare coating materials according to manufacturer's written instructions.
 - 2. Keep containers used for mixing and applying coatings clean and free of foreign materials and residue.
 - 3. Before applying paint, stir the materials to produce a mixture of uniform density.
 - a. Stir the material as required during application.
 - b. Do not stir surface film into the material.
 - c. If necessary, remove film and strain the coating material before use.
 - 4. Use only the type of thinners approved by manufacturer and only within recommended limits.
- B. Applying Paint:

1. Paint colors are identified on the Contract Drawings or will be selected during the Shop Drawing process by the Program/Project Manager from the manufacturer's standard colors.
2. Finishes are indicated in the Paint Schedules at the end of this Section.
3. Apply paint according to the manufacturer's written instructions.
4. Use applicators and techniques best suited for substrate and type of material being applied.
5. The number of coats and film thickness required is the same regardless of the application method.
 - a. Apply the first coat to surfaces that have been cleaned, pretreated, or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.
 - b. Provide finish coats that are compatible with primers used.
 - c. Do not apply succeeding coats until the previous coat has cured as recommended by the manufacturer.
 - d. Where sanding is required to produce an even smooth surface, sand between applications in accordance with the manufacturer's directions.
 - e. Ensure that surfaces, including edges, corners, crevices, welds, and exposed fasteners, receive a dry film thickness equivalent to that of flat surfaces.
6. Apply additional coats when undercoats, stains, or other conditions show through the final coat of paint until the paint film is of uniform finish, color, and appearance.
 - a. Extend coatings on exposed surfaces as required to maintain the coating system integrity and provide the desired protection.

C. Special Techniques:

1. Prime Coats:
 - a. Before applying finish coats, apply a prime coat of material, as recommended by the manufacturer, to material that is required to be painted or finished and that has not been prime coated by others.
 - b. Recoat primed and sealed surfaces where evidence of suction spots or unsealed areas in the first coat appears to ensure a finish coat with no burn through or other defects due to insufficient sealing.
2. Pigmented (Opaque) Finishes:
 - a. Completely cover surfaces as necessary to provide a smooth, opaque surface of uniform finish, color, appearance, and coverage.
 - b. Cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections are unacceptable.
3. Stipple Enamel Finish:
 - a. Roll and redistribute paint to an even and fine texture.
 - b. Leave no evidence of rolling, such as laps, irregularity in texture, skid marks, or other surface imperfections.
4. Block Fillers:

- a. Apply block fillers to concrete masonry block at a rate ensuring complete coverage that fills the pores.
 - b. Levels of CMU Block Filling:
 - 1) PDCA Technical Paper AZP-P07-89 defines 4 levels of CMU Block Filling as follow:
 - a) Level 1 – Regular Fill:
 - (1) Reduces quantity of paint required.
 - (2) Eliminates seemingly bottomless holes in masonry, reduces irregularity in masonry profile, one coat spray applied. (minimum block fill)
 - b) Level 2 – Medium Full Fill:
 - (1) Sufficiently fills and seals masonry to provide solid continuous surface for paint.
 - (2) Masonry profile slightly reduced, one coat spray applied and back rolled.
 - (3) Joints read natural.
 - c) Level 3 – Full Fill:
 - (1) Coats as required to conceal most of masonry texture, produce easy cleaning surface for to meet health regulations.
 - (2) Minimum fill for semi and high gloss finish, spray applied and backrolled.
 - d) Level 4 – High Density Fill:
 - (1) Minimum of 3 coats.
 - (2) First coat massaged and forced into the masonry texture to assure uniform high density.
 - (3) Second coat, with build sufficient to fully conceal masonry texture and joints.
 - (4) Additional coats as required to level.
 - (5) Squeegee for smooth, sand added to achieve light sand texture.
 - (6) Nominal thickness: 1/16 inch.
- D. Interface with Other Work:
- 1. Equipment and Furniture:
 - a. Paint surfaces behind movable equipment and furniture the same as similar exposed surfaces.
 - b. Paint surfaces behind permanently fixed equipment or furniture before installing the equipment only with a prime coat.
 - c. Paint the backs of access panels and removable or hinged covers to match exposed surfaces.
 - 2. Doors:
 - a. Finish the tops, bottoms, and side edges of exterior doors the same as their exterior faces.
 - 3. Mechanical and Electrical Work:

- a. Limit painting mechanical and electrical work to exposed items in equipment rooms and in occupied spaces.
- b. Mechanical items to be painted include, but are not limited to, the following:
 - 1) Piping, pipe hangers, and supports.
 - 2) Heat exchangers.
 - 3) Tanks.
 - 4) Ductwork.
 - a) Paint interior surfaces of ducts visible through registers or grilles with a flat, nonspecular, black paint.
 - 5) Insulation.
 - 6) Motors and mechanical equipment.
 - 7) Accessory items.
- c. Electrical items to be painted include, but are not limited to, the following:
 - 1) Conduit and fittings.
 - 2) Switchgear.
 - 3) Panelboards.

3.05 REPAIR/RESTORATION

- A. Correct damage to paint by cleaning, repairing, replacing, and repainting as approved by Program/Project Manager; and leave the paint in an undamaged condition.
 - 1. At the completion of construction activities performed by other trades, touch up and restore damaged or defaced painted surfaces.
 - 2. Comply with the procedures specified in PDCA P1.

3.06 RE-INSTALLATION

- A. After completing painting operations in each space or area, reinstall items that were removed to facilitate the painting operations using workers skilled in the trades involved.

3.07 SITE QUALITY CONTROL

- A. Inspections:
 - 1. Inspect the completed Work to insure it matches the approved samples for color, texture, and coverage.
- B. Non-Conforming Work
 - 1. Remove, refinish, or repaint work not in compliance with specified requirements.
- C. Manufacturer Services:
 - 1. At the completion of the Work of this Section, submit either the manufacturer's or distributor's numbered invoices showing the type and

quantity of products used on this Contract to the Program/Project Manager for information.

3.08 CLEANING

- A. After completing painting, clean glass and paint-spattered surfaces.
 - 1. Remove spattered coatings by washing, scraping, or other methods.
 - 2. Do not scratch or damage adjacent finished surfaces.
- B. After completing coating operations, remove temporary protective wrappings provided by others to protect their Work.
- C. Waste Management:
 - 1. At the end of each workday, remove rubbish, empty cans, rags, and other discarded materials from the Site.

3.09 PROTECTION

- A. Provide "Wet Paint" signs to protect newly painted finishes.

3.10 ATTACHMENTS

- A. The following attachments are appended to this Section following the "END OF SECTION" marker:
 - 1. Table 09912-1 Exterior Paint Schedule.
 - 2. Table 09912-2 Interior Paint Schedule.

END OF SECTION

Table 09912-1 Exterior Paint Schedule ¹		
Substrate	System	Dunn-Edwards Corp. No.
Ferrous Metals	Refer to Section 09960, High-Performance Coatings	
Galvanized Metals	Refer to Section 09960, High-Performance Coatings	
Exterior Masonry	100% Acrylic Semi-Gloss Enamel	
Filler Coat(s) – Level 2 (PDCA)	BLOC-FIL latex block filler	W305
Primer Coat	EFF STOP acrylic masonry primer/sealer	W709
Two Coats	PERMASHEEN acrylic semigloss enamel	W901

**Table 09912-1 Exterior Paint Schedule¹**

Substrate	System	Dunn-Edwards Corp. No.
Exterior Gypsum Ceilings	100% Acrylic Copolymer Eggshell	
Primer Coat	Multi-purpose Primer	W713
Two Coats	Versawall latex flat enamel	W6230
1. Colors: Standard colors to be selected by the Program/Project Manager.		

Table 09912-2 Interior Paint Schedule¹

Substrate	System	Dunn-Edwards Corp. No.
Interior Drywall Surfaces, including ceilings		
Semi-Gloss		
Primer Coat	Self-priming first coat	
Two Coats	Spartawall acrylic semi-gloss paint	SWLL50-1
Flat		
Primer Coat	Self-priming first coat	
Two Coats	Spartawall acrylic flat paint	SWLL10-1
Eggshell		
Primer Coat	Self-priming first coat	
Two Coats	Spartawall acrylic eggshell paint	SWLL30-1
Interior Solid Core Doors and Woodwork	Acrylic Gloss Enamel	
Primer Coat	INTER-KOTE, Acrylic Enamel Undercoater	W 6325
Two Coats	SPARTAGLOSS, Interior/Exterior Acrylic Gloss Paint	W 7600
Interior Architecturally Exposed Structural Steel (AESS)		
Spot Prime	Organic zinc rich primer as required	-

SECTION 09960

HIGH-PERFORMANCE COATINGS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for high-performance exterior coatings.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 09912 – Painting.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
 - 2. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
- B. Definitions:
 - 1. Standard coating terms defined in ASTM D 16 apply to the Work of this Section.
- C. Reference Standards:
 - 1. ASTM International (ASTM):
 - a. ASTM D 16 – Terminology for Paint, Related Coatings, Materials, and Applications.
 - 2. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 3. Painting and Decorating Contractors of America (PDCA):
 - a. PDCA P1 – Touch-Up Painting And Damage Repair: Financial Responsibility.
 - 4. Steel Structures Painting Council (SSPC):

- a. SSPC-SP 6/NACE No. 3 - Surface Preparation Specification No. 6 Commercial Blast Cleaning.
- b. SSPC Steel Structures Painting Manual – Good Painting Practice.
- c. SSPC Steel Structures Painting Manual – Systems and Specifications.
- 5. U. S. Government:
 - a. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1910 Occupational Health and Safety Standards.
 - 2) 29 CFR 1926 Safety and Health Regulations for Construction.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Review other Specification Sections in which primers or other coatings are provided to ensure compatibility of the total systems for various substrates.
 - a. Upon request, furnish information on the characteristics of specified finish materials to ensure compatible primers.
 - b. Notify the Program/Project Manager of problems anticipated using the materials specified.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) High/Build Surface Tolerant Epoxy Primer for ferrous metal.
 - 2) Acrylic Polyurethane Enamel for ferrous metal.
 - 3) High/Build Surface Tolerant Epoxy Primer for non-ferrous and galvanized metal.
 - 4) Acrylic Polyurethane Enamel for non-ferrous and galvanized metal.
 - 5) Manufacturer's material data and certificates of performance for proposed substitutions.
 - b. Samples:
 - 1) Substrate Samples.
 - c. Certificates:
 - 1) High-Performance Coating Manufacturer's Certification.
 - d. Delegated Design Submittals:
 - 1) High-Performance Coating Material List.
 - e. Qualification Statements:
 - 1) Applicator's Qualifications.

- B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each material.
 - b. Manufacturer's Reports:
 - 1) Manufacturer's color charts.
 2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. Paints and Coatings
 - 1) Submit product data highlighting the VOC content for any field applied coating within the building's weather barrier.
- C. Maintenance Material Submittals:
1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Extra Stock Materials:
 - 1) Furnish an additional 10 gallons of high-performance coating materials, as appropriate, of each material and color applied.
 - a) Furnish extra high-performance coating materials from the same production run as materials applied.
 - b) Package these coating materials in unopened, factory-sealed containers suitable for storage, and identify the containers with labels describing the contents of each.
 - c) In addition to the instructions attached to paint containers, submit 2 copies of the mixing formula to the Program/Project Manager.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
1. Comply with the Occupational Safety and Health Administration (OSHA) regulations stipulated in 29 CFR 1910 and 29 CFR 1926.
 2. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
- B. Qualifications:
1. Applicator's Qualifications:
 - a. Engage an experienced applicator who has completed high-performance coating system applications similar in extent to that required for this Contract, and applying materials similar to those indicated for this Contract and having a record of successful in-service performance.

- b. Submit the applicator's qualifications to the Program/Project Manager for approval.
 - C. Certifications:
 - 1. High-Performance Coating Manufacturer's Certification:
 - a. Submit a High-Performance Coating Manufacturer's Certification from the manufacturer certifying that the products supplied comply with requirements specified that limit the amount of VOCs in the high-performance coating products.
 - D. Site Samples:
 - 1. Substrate Samples:
 - a. Submit Samples for each type of finish-coat material specified on the following substrates for the Program/Project Manager's review of color and texture:
 - 1) Ferrous metal.
 - a) Provide Samples of each type of topcoat product specified for final selection of the type of product to apply by the Program/Project Manager
 - 2) Nonferrous metal.
 - b. Provide two 4-inch square samples of flat metal and two 8-inch long samples of solid metal for each color and finish.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Deliver materials to the Site in the manufacturer's original, unopened packages and containers bearing manufacturer's name and label.
 - 2. Materials not displaying manufacturer's product identification are unacceptable.
- B. Storage and Handling Requirements:
 - 1. Store high-performance coating materials not in use in tightly covered containers in a well-ventilated area at a minimum ambient temperature of 45 degrees Fahrenheit.
 - 2. Store opened containers of high-performance coating in a clean condition, free of foreign materials and residue.
 - 3. Keep the storage area neat and orderly.
 - a. Remove oily rags and waste daily.

1.07 SITE CONDITIONS

- A. Ambient Conditions:
 - 1. Apply high-performance coatings only when temperature of surfaces to be coated and the surrounding air temperatures are between 45 and 95

degrees Fahrenheit, or in accordance with the manufacturer's published recommendations.

2. Do not apply coatings under the following conditions:
 - a. When it is snowing, raining, foggy, or misty where the coating operation is occurring.
 - b. When the relative humidity exceeds 85 percent.
 - c. When temperatures are less than 5 degrees Fahrenheit above the dew point.
 - d. When the surfaces are damp or wet.
3. Allow wet surfaces to dry thoroughly and attain the temperature and conditions specified before proceeding with or continuing the coating operation.
4. Protect materials from freezing.

PART 2 PRODUCTS

2.01 EXTERIOR HIGH-PERFORMANCE COATING SYSTEMS

A. Manufacturers:

1. Manufacturer List:

- a. Dunn-Edwards Corporation, <https://www.dunnedwards.com/>.
- b. ICI Dulux Paints; Devoe Coatings, www.dulux.com.
- c. International Protective Coatings; International Paint, Inc. distributed by Akzo Noble N. V., www.international-pc.com.
- d. Pittsburgh Paint; PPG Industries, Inc., www.pittsburghpaints.com.
- e. Tnemec Company, Inc., www.tnemec.com.
- f. Approved equal.

2. Substitution Limitations:

- a. This Specification is written naming products manufactured by International Coatings distributed by Dunn-Edwards Paints.
 - 1) The use of a manufacturer's proprietary product names to designate colors or materials is not intended to imply that the products named are required to be used to the exclusion of equivalent products of other manufacturers.
- b. Submit the manufacturer's material data and certificates of performance for proposed substitutions.

3. Product Options:

- a. Subject to compliance with the Contract requirements, provide one of the products indicated in the coating system descriptions.
- b. Obtain primers and undercoat materials for each coating system from the same manufacturer as the finish coats.

B. Sustainable Requirements:

1. Volatile Organic Compounds (VOC) Content of Field-Applied Interior Paints and Coatings:

- a. Provide paint products having volatile organic compound content, exclusive of colorants added to a tint base, not greater than the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59:
 - 1) Flat, Non-Flat and High-gloss Paints and Coatings: Not more than 50 grams per Liter.
 - 2) Primers, Sealers and Undercoats: Not more than 100 grams per Liter.
 - 3) Anti-Corrosive and Anti-Rust Paints Applied to Ferrous Metals: Not more than 100 grams per Liter.
 - 4) Floor Coatings: Not more than 50 grams per Liter.
 - b. Refer to Section 01360 of this specification for a complete list of VOC limits for this project.
- C. Design Criteria:
 - 1. Material Compatibility:
 - a. Provide primers, undercoats, and finish-coat materials that are compatible with one another and the substrates indicated in the Contract Documents under the conditions of service and application, as demonstrated by the manufacturer based on testing and field experience.
 - 2. Material Quality:
 - a. Provide the manufacturer's highest grade of the various high-performance coatings specified.
 - 3. VOC Classification:
 - a. Provide high-performance coating materials, including primers, undercoats, and finish-coat materials, that have a VOC classification of 100 grams per Liter or less.
 - 4. Colors:
 - a. Provide colors as selected by the Program/Project Manager from the manufacturer's full range.
 - 1) For specific colors of special coatings, refer to Section 09912, Painting.
 - b. Submit the manufacturer's color charts showing the full range of colors available for each type of finish-coat material indicated herein to the Program/Project Manager for information.
 - 5. Product Data:
 - a. Submit Product Data for each coating system specified, including block fillers and primers, to the Program/Project Manager for approval.
 - b. High-Performance Coating Material List:
 - 1) Submit an inclusive High-Performance Coating Material List of the required coating materials to the Program/Project Manager for approval.
 - a) Indicate each material, and cross-reference the specific coating, finish system, and application.

- b) Identify each material by the manufacturer's catalog number and general classification.
 - c. Manufacturer's Information:
 - 1) Submit the manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each material specified to the Program/Project Manager for information.
- D. Materials:
 - 1. High-Performance Coatings for Ferrous Metal:
 - a. Provide the following finish systems over exterior ferrous-metal surfaces:
 - 1) Primer: Bloc-Rust Premium BRPR00 Series White or Red Oxide (depends on color of topcoat – light colors use white dark colors use red).
 - 2) 2 coats Evershield Ext. 100% Acrylic Velvet Paint: EVSH20
 - 2. High-Performance Coatings for Non-Ferrous and Galvanized Metal:
 - a. Provide the following finish systems over exterior non-ferrous-metal surfaces:
 - 1) Primer: Ultrashield Galvanized Metal Primer ULGM00
 - 2) 2 coats Evershield Ext. 100% Acrylic Velvet Paint: EVSH20

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. With the Applicator present, examine the substrates and conditions under which the high-performance coatings will be applied for compliance with coating application requirements.
- B. Evaluation and Assessment:
 - 1. Do not apply high-performance coatings over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to forming a durable coating film.
 - 2. Apply coatings only after unsatisfactory conditions have been corrected and surfaces to receive coatings are thoroughly dry.
 - a. The start of coating application is construed as the Applicator's acceptance of the surfaces within that particular area.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect the Work of other trades, whether being coated or not, against damage from coating operations.

2. Take the necessary measures to ensure that workers and work areas are protected from fire and health hazards resulting from handling, mixing, and applying the coatings.

B. Surface Preparation:

1. For each substrate condition, clean and prepare the surfaces to be coated according to the manufacturer's written instructions and as specified herein.
2. Before applying high-performance coatings, clean the substrates of substances that could impair the bond of the coatings.
 - a. Remove oil and grease before cleaning.
 - b. Schedule the cleaning and coating application so dust and other contaminants from the cleaning process will not fall on wet, newly coated surfaces.
3. Ferrous-Metal Substrates:
 - a. Clean ungalvanized ferrous-metal surfaces that have not been shop coated.
 - 1) Remove oil, grease, dirt, loose mill scale, and other foreign substances.
 - 2) Use solvent or mechanical cleaning methods that comply with recommendations provided in the SSPC Steel Structures Painting Manual.
 - b. Blast Cleaning:
 - 1) Blast clean the ferrous-metal substrates in accordance with the requirements specified in SSPC-SP 6/NACE No. 3.
4. Nonferrous-Metal Substrates:
 - a. Clean nonferrous and galvanized surfaces according to the manufacturer's written instructions for the type of service, metal substrate, and application required.
 - b. Blast Cleaning:
 - 1) Blast clean the nonferrous-metal substrates in accordance with the requirements specified in SSPC-SP 6/NACE No. 3.

C. Demolition/Removal:

1. Remove plates, machined surfaces, and similar items already in place that are not to be coated.
 - a. If removal of these items is impractical or impossible because of the size or weight of the items, provide surface-applied protection before initiating surface preparation and coating.

3.03 APPLICATION

A. Material Preparation:

1. Carefully mix and prepare coating materials according to manufacturer's written instructions.

2. Keep containers used for mixing and applying coatings clean and free of foreign materials and residue.
 3. Before applying coating materials, stir the materials to produce a mixture of uniform density.
 - a. Stir the material as required during application.
 - b. Do not stir surface film into the material.
 - c. Remove film and, if necessary, strain the coating material before use.
 4. Use only the type of thinners approved by manufacturer and only within recommended limits.
- B. Paint all exterior exposed metals (ferrous and non-ferrous) using the products specified herein.
1. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of the same material are to be applied.
 2. Tint undercoats to match the color of finish coat, but provide a sufficient difference in the shade of undercoats to distinguish each separate coat.
- C. Apply high-performance coatings according to the manufacturer's written application instructions.
1. Use applicators and techniques best suited for the material being applied.
 2. Apply a second coat only after the first coat is thoroughly dry.

3.04 REPAIR/RESTORATION

- A. Correct damage to high-performance coatings by cleaning, repairing, replacing, and recoating as approved by Program/Project Manager; and leave the coatings in an undamaged condition.
1. At the completion of construction activities performed by other trades, touch up and restore damaged or defaced coated surfaces.
 2. Comply with the procedures specified in PDCA P1.

3.05 RE-INSTALLATION

- A. After completing coating operations, reinstall items that were removed to facilitate the coating operations using workers skilled in the trades involved.

3.06 CLEANING

- A. After completing the coating application, clean spattered surfaces.
1. Remove spattered coatings by washing, scraping, or other methods.
 2. Do not scratch or damage adjacent finished surfaces.
- B. After completing coating operations, remove temporary protective wrappings provided by others to protect their Work.
- C. Waste Management:

1. At the end of each workday, remove rubbish, empty cans, rags, and other discarded materials from the Site.

3.07 PROTECTION

- A. Provide "Wet Paint" signs to protect newly coated finishes.

END OF SECTION

SECTION 09961

FLUOROPOLYMER COATING

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for high performance, baked on fluorocarbon finishes.
- B. Products Supplied But Not Installed Under This Section:
 - 1. This Section specifies fluorocarbon finishes to be applied to items provided under other Sections which may or may not include, and are not limited to, the following:
 - a. Metal fabrications.
 - b. Expansion joint cover assemblies.
 - c. Manufactured wall panels.
 - d. Sliding automatic entrance doors.
 - e. Aluminum curtainwall systems.
- C. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 07920 – Joint Sealants.

1.02 REFERENCES

- A. Definitions:
 - 1. Standard coating terms defined in ASTM D 16 apply to the Work of this Section.
 - 2. NBS Unit: Short for the National Bureau of Standards (NBS) Unit of Color Difference, a unit to describe the size of the difference, ΔE , between 2 colors of tristimulus specifications based on Equation 13 in the now obsolete NBS Circular C429, Photoelectric Tristimulus Colorimetry with Three Filters.
 - 3. Specular Gloss: The relative luminous reflectance factor of a specimen in the mirror direction.
- B. Reference Standards:
 - 1. Aluminum Association (AA):
 - a. AA DAF-45 – Designation System for Aluminum Finishes.
 - 2. American Architectural Manufacturer's Association (AAMA):

- a. AAMA 609 & 610 – Cleaning and Maintenance Guide for Architecturally Finished Aluminum (Combined Document).
- b. AAMA 2604 – Voluntary Specification, Performance Requirements and Test Procedures for High Performance Organic Coatings on Aluminum Extrusions and Panels.
3. ASTM International (ASTM):
 - a. ASTM B 117 - Standard Practice for Operating Salt Spray (Fog) Apparatus.
 - b. ASTM B 244 - Standard Test Method for Measurement of Thickness of Anodic Coatings on Aluminum and of Other Nonconductive Coatings on Nonmagnetic Basis Metals with Eddy Current Instruments.
 - c. ASTM D 16 – Standard Terminology for Paint, Related Coatings, Materials, and Applications.
 - d. ASTM D 523 - Standard Test Method for Specular Gloss.
 - e. ASTM D 714 - Standard Test Method for Evaluating Degree of Blistering of Paints.
 - f. ASTM D 968 - Standard Test Methods for Abrasion Resistance of Organic Coatings by Falling Abrasive.
 - g. ASTM D 1308 - Standard Test Method for Effect of Household Chemicals on Clear and Pigmented Organic Finishes.
 - h. ASTM D 2244 - Standard Practice for Calculation of Color Tolerance and Color Differences from Instrumentally Measured Color Coordinates.
 - i. ASTM D 2247 - Standard Practice for Testing Water Resistance of Coatings in 100 % Relative Humidity.
 - j. ASTM D 3363 - Standard Test Method for Film Hardness by Pencil Test.
 - k. ASTM D 4214 - Standard Test Methods for Evaluating Degree of Chalking of Exterior Paint Films.
 - l. ASTM D 7091 - Standard Practice for Nondestructive Measurement of Dry Film Thickness of Nonmagnetic Coatings Applied to Ferrous Metals and Nonmagnetic, Nonconductive Coatings Applied to Non-Ferrous Metals.
4. International Organization for Standardization (ISO):
 - a. ISO 9001 – Quality Management System – Requirements.
5. United States Government:
 - a. United States General Services Administration (GSA):
 - 1) Federal Standards:
 - a) FED-STD-595 – Colors Used in Government Procurement.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the application, shipping, handling, inspection, repair, cleaning, and warranty requirements specified under this Section with the requirements specified for the fluoropolymer coated items provided under other Sections.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Thermo-cured fluorocarbon system.
 - b. Samples:
 - 1) Samples representing the degree of specular gloss and color of the finishes.
 - c. Certificates:
 - 1) Fluoropolymer Coating Certificate of Compliance.

B. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Instructions for cleaning the finishes, and for repairing damaged finishes.
 - b. Warranty Documentation:
 - 1) Applicator's Warranty.

C. Maintenance Material Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Extra Stock Materials:
 - 1) Touchup Materials:
 - a) For each finish provided, furnish 1 quart of air drying type touch-up material matching the finish, and packaged for storage by having protective coverings and labels identifying the contents and indicating they are maintenance material for the Owner.
 - (1) Spray cans are acceptable only if they are standard with the coating manufacturer.

1.05 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer's Qualifications:

- a. Unless accepted otherwise by the Program/Project Manager, obtain products from manufacturers that employ a Quality Management System complying with the program described in ISO 9001, or a similar system.
- b. Submit proof on the manufacturer's qualifications to the Program/Project Manager for approval.

2. Applicator's Qualifications:

- a. Unless accepted otherwise by the Program/Project Manager, employ applicators that have in-place a Quality Management System complying with the program described in ISO 9001, or a similar system.
- b. Only factory-apply and oven cure fluorocarbon finishes in plants of applicators approved by the licensed formulators.
- c. Submit the applicator's qualifications to the Program/Project Manager for approval.

B. Certifications:

1. Fluoropolymer Coating Certificate of Compliance:

- a. Submit the fluoropolymer coating manufacturer's Certificate of Compliance certifying that the fluoropolymer coating products comply with the specified requirements.

C. Site Samples:

1. For each fluoropolymer coating finish, submit a Sample representing the degree of specular gloss and color of the finish to the Program/Project Manager for approval.
 - a. Prepare the Samples in accordance with the manufacturer's printed instructions.
 - b. Provide 3 samples, each not less than 150mm square, applied on the same type of metal which will be used in the finished system.
 - c. If more than one applicator is employed, provide the required Samples from each applicator providing the special metal finishes.
 - d. Provide custom color Samples, to match the Program/Project Manager's samples, for approval in coordination with the requirements of the construction schedules.
 - e. For items finished by a given applicator and finishes applied by different applicators, the color and gloss will be required to match.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Package, ship, and unload the finished product in accordance with the requirements specified in AAMA 2604.
 - 2. Wrap coated units in protective corrugated board containers.
- B. Storage and Handling Requirements:
 - 1. Store the finished product onsite in accordance with the requirements specified in AAMA 2604.
 - 2. Do not remove the corrugated board containers until the units are ready for installation.
 - 3. Install the finished product within 6 months from the date of shipment from the manufacturer.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 WARRANTY

- A. Special Warranty:
 - 1. Applicator's Warranty:
 - a. Furnish an Applicator's Warranty for the quality and maintenance of the fluoropolymer coating finishes on the applicator's standard form in which the applicator agrees to repair finishes or replace items that show evidence of the deterioration of factory-applied finishes within 10 years from the date of Substantial Completion.
 - b. Submit the Applicator's Warranty to the Program/Project Manager.

PART 2 PRODUCTS

2.01 FLUOROPOLYMER COATING SYSTEM

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified and approval by the Program/Project Manager, products from other manufacturers may be provided.

B. Description:

1. Provide a fluoropolymer coating system consisting of the primer and finish coats, each spray-applied by an approved applicator at the factory, and force-cured in accordance with the coating manufacturer's current printed instructions.

C. Performance:

1. Provide a fluoropolymer coating system having or exceeding the following characteristics as determined in accordance with the requirements specified in AAMA 2604 and herein:
 - a. Specular Gloss: 25 to 35 (medium) when measured in accordance with the methods specified in ASTM D 523 using the 60-degree geometry.
 - b. Dry Film Thickness:
 - 1) Provide a fluoropolymer coating system having the following dry film thicknesses when measured in accordance with the requirements specified in ASTM D 1400:
 - a) Primer: 0.25 mil, plus or minus 0.05 mil.
 - b) Barrier Coat, if required: 1.0 mil, minimum.
 - c) Color Coat: 1.0 mil, minimum.
 - d) Clear Top Coat: 0.6 mil, plus or minus 0.2 mil.
 - c. Pencil Hardness: Complies with or exceeds the requirements for F lead scratch hardness when measured in accordance with the method specified in ASTM D 3363.
 - d. Cross Hatch Adhesion: No removal with crosshatch, 1/16 inch wet and dry.
 - e. Direct Impact: No removal with direct impact, 0.10 inch distortion.
 - f. Abrasion Resistance: Has an abrasion resistance value equal to 40 to 80 liters per mil when tested in accordance with the method specified in ASTM D 968.
 - g. Salt Spray Resistance: 1/16 inch maximum undercutting when exposed to a 5 percent salt solution at 100 degrees Fahrenheit for 4000 hours in accordance with the method specified in ASTM B 117.
 - h. Humidity Resistance: Exhibiting a maximum of a few number 8 blisters when exposed to 100 percent relative humidity at 100 degrees Fahrenheit for 4000 hours in accordance with the methods specified in ASTM D 714 and ASTM D 2247.
 - i. Acid Resistance: Exhibiting no effects of attack when exposed to a 10 percent solution of muriatic acid for 15 minutes in accordance with the Spot Test specified in ASTM D 1308.

- j. Alkali Resistance: Exhibiting no effects of attack when exposed to alkali for 24 hours in accordance with the requirements of the Mortar Pat Test.
- k. Detergent Resistance: Exhibiting no effects of attack when immersed in a 3 percent detergent solution at 100 degrees Fahrenheit for 72 hours.
- l. Resistance to Acid Pollutants: Exhibiting a maximum NBS color difference of 5 NBS Units.
- m. Weathering Color Retention: Exhibiting a maximum color difference of 5E after exposure in accordance with the requirements specified in ASTM D 2244 at 45 degrees for period of 10 years.
- n. Chalk Resistance: Exhibiting a maximum Chalk Rating of 8.0 after exposure in accordance with the requirements specified in ASTM D 4214 at 45 degrees for a period of 10 years.
- o. Erosion: Exhibiting a maximum film loss of 5 percent after exposure in accordance with the requirements specified in ASTM B 244 at 45 degrees for a period of 10 years.

D. Design Criteria:

- 1. Provide a thermo-cured fluorocarbon system complying with the requirements specified in AAMA 2604, and consisting of a specially formulated inhibitive primer, fluorocarbon color coat, and clear topcoat designed for application on exposed to view metal surfaces.
 - a. Provide a fluorocarbon system containing not less than 70 percent polyvinylidene fluoride resin by weight.
- 2. Colors:
 - a. Provide colors as selected by the Program/Project Manager from the manufacturers standard color range.
- 3. Product Data:
 - a. Prepare Product Data for the thermo-cured fluorocarbon system including the finish formulator's technical information.
 - 1) Include a basic materials analysis for each material specified.
 - 2) List each material, and cross-reference the material to the specific coating and finish system and application.
 - 3) Identify the system by the manufacturer's catalog number and general classification.
 - 4) List coating-compatible sealants acceptable to the system manufacturer, and meeting or exceeding the requirements of Section 07920, Joint Sealants, for adhesion.

E. Factory Assembly

- 1. Fabricate and assemble the products finished in accordance with the requirements specified in AAMA 2604.

F. Finishes:

1. Provide an AA-C12C42R1x finish.
 - a. Finish designations prefixed by AA refer to finishes defined by the system for designating aluminum finishes established by the Aluminum Association and specified in AA DAF-45.
 - b. An AA-C12C42R1x finish is defined to have the following components:
 - 1) Chemical Finish: Cleaned with inhibited chemicals.
 - 2) Chemical Finish: Chemical conversion coating, acid chromate-fluoride-phosphate pretreatment.
 - 3) Organic Coating:
 - a) Provide an organic coating as specified herein.
 - b) The basis of design system and standard of quality is PPG Industries, Inc. Duranar® XL, a 3-coat fluoropolymer finish system.
2. Primer Materials:
 - a. Provide the manufacturer's specially formulated inhibitive primer.
3. Finish Materials:
 - a. Organic Coating:
 - 1) Provide a first color coat consisting of a fluoropolymer with metallic flakes containing not less than 70 percent polyvinylidene fluoride resin by weight, and complying with the requirements specified in AAMA 2604.
 - a) Provide a fluorocarbon top finish color coating having a minimum baking cycle of 232 degrees Celsius for 20 minutes, and a minimum dry film thickness of 0.025mm.
 - 2) Provide a second clear fluorocarbon topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight, and complying with the requirements specified in AAMA 2604.
 - 3) Manufacturers:
 - a) Arkema in North America, (Kynar 500®), <https://arkema-america.com>.
 - b) PPG Industries, Inc., Duranar® XL (Kynar 500®), <http://corporate.ppg.com/Home.aspx>.
 - c) Solvay Solexis, Hylar® 5000, <https://www.solvay.com/en/markets-and-products/featured-products/hylar.html>.
 - d) Valspar, (Kynar 500®), <https://www.kynar500.com/en/consistency-through-licensing/americas-licensees/valspar-corporation/>.
 - e) Approved equal.
4. Shop Finishing Methods:

- a. Remove hardware, hardware accessories, machined surfaces, plates, and similar items which are not to be coated, or provide surface-applied protection prior to surface preparation and coating operations.
 - 1) If exposed fasteners have been approved, factory-finish the fasteners to match the other surfaces.
- b. Prepare, pretreat, and apply the coating to exposed metal surfaces in accordance with the coating and resin manufacturer's instructions.
 - 1) Prepare and clean the surfaces to receive the fluoropolymer castings in accordance with the coating manufacturer's instructions for the substrate conditions involved.
 - a) Before beginning to apply the coating, remove pronounced die markings on extruded aluminum by using mechanical finishing techniques.
 - 2) Chemical Finish:
 - a) Prior to applying the primer, thoroughly clean the metal, and provide a chromate conversion coating pretreatment.
 - (1) Clean the substrate with inhibited chemicals.
 - (2) Provide an acid chromate-fluoride-phosphate pretreatment and chemical conversion coating.
 - 3) Fluoropolymer Coating System:
 - a) After fabrication of the base unit, spray-apply an acid resistant primer and top coatings.
 - (1) Apply a 3-coat fluoropolymer coating system consisting of the primer, a color coat, and a clear coat.
- c. After the base unit and adjacent surfaces are completely coated, replace the hardware, hardware accessories, machined surfaces, plates, and similar items removed to keep them from being coated.

2.02 ACCESSORIES

- A. Sealants:
 - 1. Provide coating-compatible sealants complying with or exceeding the requirements for adhesion specified in Section 07920, Joint Sealants.

2.03 SOURCE QUALITY CONTROL

- A. Tests and Inspections:
 - 1. Quality Control Test:
 - a. Test Procedure:
 - 1) The applicator must follow the manufacturer's guidelines for quality control testing on a prescribed schedule during production.
 - b. Acceptance Criteria:

- 1) Coatings, when cured, must be visibly free of dust, dirt, flow lines, streaks, sags, holidays, blisters, pinholes, runs, curtains, and other surface imperfections.

B. Non-Conforming Work:

1. Do not ship items failing the Quality Control Test to the Site.

PART 3 EXECUTION

3.01 APPLICATORS

A. Applicator List:

1. Hylar 5000 Licensees, <https://www.solvay.com/en/markets-and-products/featured-products/hylar.html>.
2. PPG Certified Applicators, http://corporateportal.ppg.com/NA/IdeaScapes/sourcing/CAP_Locations.htm.
3. Valspar Approved Applicators, <https://www.valsparcoilextrusion.com/en/resources/applicators/>.
4. Approved equal.

B. Substitution Limitations:

1. Subject to compliance with the coating manufacturer's licensing agreements, and approval by the Program/Project Manager, other applicators may be employed.

3.02 REPAIR

A. Field Touch-Up and Repair:

1. If minor touch-up Work is allowed by Program/Project Manager, touch-up installed units that, in the opinion of the Program/Project Manager, are scratched, abraded or otherwise damaged in the field.
 - a. Repair those surfaces showing minor defects by spray-applying an air-drying maintenance coating recommended by the fluorocarbon coating manufacturer, supplied by the licensed formulator, and having the same color as the installed unit, onto the surfaces.
 - b. Do not use the Owner's maintenance stock for touch-up Work.

3.03 SITE QUALITY CONTROL

A. Site Inspections:

1. Correct repair and touch-up work that is unacceptable to the Program/Project Manager, and request a final inspection for acceptance of the Work by the Program/Project Manager.

B. Non-Conforming Work

1. Unacceptable Finishes:

- a. Unacceptable color, film characteristics, or damage, as determined by the Program/Project Manager, are cause for rejection of the entire coated section.
 - 1) Unacceptable Film Characteristics:
 - a) The coating cannot exhibit checking, crazing, chipping, or reticulation.
 - 2) Fading:
 - a) The coating cannot exhibit fading from the original color sample greater than 7 units as measured by an IDL color eye Model D.
 - 3) Non-Uniformity:
 - a) The coating cannot exhibit a non-uniformity discernible from a 3m distance, including smutting and chalking.
 - 4) Pitting and corrosion:
 - a) The coating cannot exhibit pitting and corrosion discernible from a 3m distance.
- b. If the Program/Project Manager decides that touch-up repairs will not sufficiently remedy the defects or damage, replace the defective or damaged unit with an undamaged factory-finished unit at no increase in the Contract Price.

3.04 CLEANING

- A. Clean installed items coated with fluoropolymer in accordance with the requirements specified in AAMA 609 and AAMA 610 (Combined Document).

3.05 PROTECTION

- A. Take steps to ensure that installed fluoropolymer coated items are protected during subsequent construction activities.

3.06 MAINTENANCE

- A. Operation and Maintenance Data:
 - 1. Submit instructions for cleaning the finishes, and for repairing damaged finishes, to the Program/Project Manager.

SECTION 09967

INTUMESCENT PAINTS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for epoxy intumescent fire protection applied to steel structures and supports at the locations indicated on the Contract Drawings.
- B. Products Supplied But Not Applied Under This Section:
 - 1. Primer Coating:
 - a. The shop primer coating furnished under this Section will be applied to structural steel and framing under Section 05120, Structural Steel.
- C. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 05120 - Structural Steel.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. DFT: Dry film thickness.
 - 2. ENVISION: The Envision sustainable infrastructure rating system is a comprehensive framework of 60 sustainability criteria that address the full range of environmental, social, and economic impacts to sustainability in project design, construction, and operation. These criteria—called “credits”—are arranged in five categories: Quality of Life, Leadership, Resource Allocation, Natural World, and Climate and Risk. The full Envision guidance manual detailing the credits is provided at no cost to users.
 - 3. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
 - 4. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside, and San Bernardino counties in California.
 - 5. WFT: Wet film thickness.
- B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
2. Intumescent: A substance that swells as a result of heat exposure, thus increasing its volume and decreasing its density.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate with the Program/Project Manager and the Phoenix Sky Harbor International Airport to insure notification is received sufficiently early to allow them ample time to schedule and perform the required testing performed by the Testing and Inspection Agency, the Approved Agency, and the City, prior to incorporating items requiring testing by them into the Work.
2. Review other Specification Sections in which primers or other coatings are provided for various substrates to ensure compatibility of the various elements of the total systems.
 - a. Upon request, information on the characteristics of specified finish materials will be furnished to ensure compatible primers.
 - b. Primer coating and decorative topcoats must be approved by the intumescent fireproofing manufacturer, and must be applied in accordance with the primer coating and topcoat manufacturers' documented instructions respectively.
 - c. Notify the Program/Project Manager if problems using the materials specified are anticipated.

B. Sequencing:

1. Sequence and coordinate the application of the epoxy intumescent fireproofing Work of this Section with the Work of other Sections which would otherwise interfere with the efficient application of the fireproofing provided under this Section.
2. Do not commence the Work related to installation of piping, ducts, conduit, or other suspended equipment in an area until the application of epoxy intumescent material is complete in that area.
3. Do not apply epoxy intumescent materials to supporting structural steel until concrete toppings and/or roofing applications have been completed and are substantially dry.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Shop primer.
 - 2) Tie coat.
 - 3) Intumescent fireproofing.
 - 4) Top coat.
 - b. Shop Drawings:
 - 1) Intumescent fireproofing system.

- c. Samples:
 - 1) Samples of each finish product specified.
 - 2) Sets of color chips.
 - d. Certificates:
 - 1) Manufacturer's Conformance Certificates.
 - e. Qualification Statements:
 - 1) Manufacturer's qualifications.
 - 2) Applicator's qualifications.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) UL design listings.
 - b. Manufacturer's Instructions:
 - 1) Intumescent fireproofing manufacturer's documented storage instructions.
 - 2) Primer coating manufacturer's documented application instructions.
 - 3) Intumescent fireproofing manufacturer's written requirements and application instructions.
 - 4) Top coat manufacturer's documented application instructions.
 - c. Site Quality Control Submittals:
 - 1) Random, pre-determined liquid samples of Component A and Component B.
 - 2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.
 - a. Paints and Coatings
 - 1) Submit product data highlighting the VOC content for any field applied coating within the building's weather barrier.
- C. Closeout Submittals:
 - 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Intumescent Paint Warranty.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Special Inspections:
 - a. Under the ICC International Building Code (IBC) as Amended by the City of Phoenix, special inspections by the code-required Approved Agency are necessary to obtain approval of the Work of this Section.
 - b. Code-Required Approved Agency for Performing Special Inspections:

- 1) To perform the special inspections required by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Program/Project Manager acting as the Phoenix Sky Harbor International Airport's agent will employ an independent Approved Agency.
 2. Testing and Inspection Agency:
 - a. To perform testing and inspections not considered special inspections by the ICC International Building Code (IBC) as Amended by the City of Phoenix, the Phoenix Sky Harbor International Airport will employ both an independent Testing and Inspection Agency and the City of Phoenix Testing Laboratory.
- B. Qualifications:
1. Manufacturer's Qualifications:
 - a. Procure intumescent paint products from a company specializing in manufacturing products similar to those listed in this Section, and that has a minimum of 10 years documented experience producing products similar to those required for the Work of this Section.
 - b. The manufacturer's quality management system must be assessed and registered by an independent registrar as conforming to the requirements of ISO 9001.
 - c. Submit the manufacturer's qualifications to the Program/Project Manager for approval.
 2. Applicator's Qualifications:
 - a. Employ a coating applicator specializing in applying the coatings similar to those required as the Work of this Section, and that has a minimum of 3 years documented experience and that is certified by the intumescent paint manufacturer.
 - b. Submit the applicator's qualifications, including current certification as a manufacturer trained and approved applicator, to the Program/Project Manager for approval.
- C. Certifications:
1. Manufacturer's Conformance Certificates:
 - a. Submit the intumescent fireproofing Manufacturer's Certificates, certifying that the intumescent fireproofing system being provided complies with the specified requirements, to the Program/Project Manager for approval.
 - 1) Include evidence of the complete intumescent paint system's compliance with the specified performance requirements.
 2. Fire Test Evidence:
 - a. Provide intumescent paint products that are manufactured under the appropriate follow-up service provided by an independent testing agency acceptable to the Authorities Having Jurisdiction (AHJ), with each container bearing the certified label (mark) for the application intended.

- b. Submit published UL design listings for the fire resistance ratings and product thicknesses required.
 - 1) Include evidence that the fire testing was sponsored by the manufacturer and that the material tested was produced at the manufacturers facility under the supervision of Underwriters Laboratories, Inc personnel.
 - 2) The UL Classification required is Mastic and Intumescent Coatings (CDWZ).
- D. Site Samples:
 - 1. Submit Samples of each finish product specified, and 2 complete sets of color chips representing the manufacturer's full range of available materials, to the Program/Project Manager for approval and finish selection.
- E. Mock-Ups:
 - 1. Provide a mock-up for evaluation of surface preparation techniques and application workmanship.
 - a. Before proceeding with the production Work provided under this Section, have the Program/Project Manager witness the applicator apply the primer, intumescent fireproofing, and decorative top coat to a representative 100 square-foot section of the substrate in a location designated by the Program/Project Manager.
 - b. Apply the materials in accordance with the Contract requirements for fire rating thickness, finish texture, and color.
 - c. For the Stage 1A Terminal 3 Station, provide a mock-up of a minimum two foot high tube column using specified product and in accordance with the project requirements for fire rating thickness, manufacturer's recommended installation methods, for Architect's approval of finish color, texture, pattern and work standards. Before proceeding with work, observe final finish of Terminal 4 Station columns and requirements notes in Section 2.01.E.3.c.1.
 - 2. The mock-up is subject to the Program/Project Manager's approval, and once approved in writing will serve as a guide for the finished Work.
 - a. Do not proceed with remaining work until the workmanship, color, and sheen are approved by the Program/Project Manager.
 - b. Refinish the mock-up area as required to produce acceptable Work.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Deliver the intumescent fireproofing materials in the manufacturer's original, sealed, undamaged container having its identification label intact.
 - a. Packaged materials must bear the appropriate labels, seals, and UL label (mark) indicating the fire resistive ratings.
 - 2. Documentation:

- a. Record all batch numbers, product identification, and quantities on appropriate Quality Control documents.
 - b. Attach a copy of the transport document and the Manufacturer's Conformance Certificate to the material delivery Quality Control form.
- B. Storage and Handling Requirements:
 - 1. Store the intumescent fireproofing materials in strict accordance with manufacturers documented instructions.
 - a. Submit the intumescent fireproofing manufacturer's documented storage instructions to the Program/Project Manager for information.
 - 2. Store and dispose of hazardous materials, and materials contaminated by hazardous materials, in accordance with requirements of the local Authorities Having Jurisdiction.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

- A. Ambient Conditions:
 - 1. Contamination Protection:
 - a. Protect the work area where intumescent fireproofing products will be applied from windblown dust and rain.
 - 2. Temperature, Humidity, and Ventilation Requirements:
 - a. In the areas where intumescent fireproofing products will be applied, maintain the air temperature and relative humidity before, during, and after application of these products in accordance with the manufacturer's requirements for a time period as recommended by the manufacturer.
 - b. Ventilate the areas where intumescent fireproofing products are being applied both during the application of the material, and for a minimum of 24 hours afterwards.
 - c. Starting 24 hours before application of the intumescent fireproofing material, and continuing until 24 hours after the material was applied, maintain temporary a temperature of at least 41 degrees Fahrenheit (5 degrees Celsius) in the work area.
 - 1) When the temperatures of the substrate and/or the surrounding ambient air temperature are below this minimum temperature, do not apply the epoxy intumescent fireproofing.
 - 2) For steel substrates, maintain the substrate temperature a minimum of 5 degrees Fahrenheit (3 degrees Celsius) above the dew point of the surrounding air for the 24-hour period prior to application and during the application of the material.

- d. Starting 24 hours before application of the intumescent fireproofing material, and continuing until 24 hours after the material was applied, maintain the relative humidity in the application area at 85 percent or less.
 - e. If necessary for keeping the Contract on schedule, furnish and maintain temporary enclosures, heat, and protection to maintain proper temperatures and humidity levels in the application areas.
- B. Existing Conditions:
 - 1. The surfaces to receive the intumescent fireproofing will have previously been shop-primed under other Sections.

1.08 WARRANTY

- A. Special Warranty:
 - 1. Warrant the intumescent paint materials and workmanship against failures within the 2 year period after the Date of Substantial Completion:
 - a. Submit this written Intumescent Paint Warranty on the manufacturer's standard form in which the manufacturer warrants the material against manufacturing defect, outlining its terms, conditions, and exclusions from coverage within the specified warranty period to the Program/Project Manager for approval.
 - b. Have the manufacturer's standard form signed by the Contractor and manufacturer.

PART 2 PRODUCTS

2.01 INTUMESCENT FIRE PROTECTION SYSTEM

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) Obtain a complete intumescent fire protection system consisting of primer, tie coat, epoxy intumescent fireproofing, and topcoat from a single source and from a single manufacturer.
- B. Description:
 - 1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:

- 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. Supplement the requirements of this Section with the requirements of the insurance rating organizations and other Authorities Having Jurisdiction.
 2. Sustainability Requirements:
 - a. Volatile Organic Compounds (VOC) Content of Field-Applied Interior Paints and Coatings:
 - 1) Provide paint products having volatile organic compound content, exclusive of colorants added to a tint base, not greater than the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59:
 - a) Primers, sealers and undercoaters: Not more than 100 grams per Liter.
 - b) Intumescent fireproof coating-clear: Not more than 350 grams per Liter.
 - c) Intumescent fireproof coating – pigmented: Not more than 650 grams per Liter.
 - d) Anti-Corrosive and Anti-Rust Paints Applied to Ferrous Metals: Not more than 100 grams per Liter.
 - b. Refer to Section 01360 – Sustainability Design Requirements for a complete list of VOC limits for this project.
- C. Performance:
 1. Provide an intumescent paint system complying with the following performance requirements:
 - a. Bond Strength:
 - 1) Provide an intumescent paint system having minimum bond strength of 1440 psi when measured in accordance with the method specified in ISO 4624.
 - b. Tensile Strength:
 - 1) Provide an intumescent paint system having minimum tensile strength of 1640 psi when measured in accordance with the method specified in ASTM D 638.
 - c. Compressive Strength:
 - 1) Provide an intumescent paint system having minimum compressive strength of 1500 psi when measured in accordance with the method specified in ASTM D 695.
 - d. Flexural Strength:
 - 1) Provide an intumescent paint system having minimum flexural strength of 1400 psi when measured in accordance with the method specified in ASTM D 790.
 - e. Durometer Hardness:

- 1) Provide an intumescent paint system having minimum durometer hardness of 60 Shore D when measured in accordance with the method specified in ASTM D 2240.
 - f. Surface Burning Characteristics:
 - 1) Provide an intumescent paint system having a Class A rating as defined in NFPA 101 when measured in accordance with the method specified in ASTM E 84.
 - g. Moisture Absorbance:
 - 1) Provide an intumescent paint system having less than 1 percent water uptake when measured in accordance with the method specified in ISO 2812-1.
 - h. Chemical Resistance:
 - 1) Provide an intumescent paint system passing the chemical resistance test performed in accordance with the method specified in ISO 2812-2.
 - i. Corrosion Resistance:
 - 1) Provide an intumescent paint system complying with the requirements for coatings used in corrosivity category C5-I environments as specified in the ISO 12944 series of standards.
 - j. Fireproofing:
 - 1) Provide an intumescent paint system tested by an independent testing agency, acceptable to the Authorities Having Jurisdiction (AHJ), in accordance with ASTM E 119/UL 263; and complying with the following fire resistance ratings:
 - a) Structural Steel Columns:
 - (1) Fire Resistance Rating: 2 hours.
 - (2) Design Number: BXUV.X678.
 - b) Structural Steel Beams:
 - (1) Fire Resistance Rating: 2 hours.
 - (2) Design Number: BXUV.X678.
 - c) Structural Concrete:
 - (1) Fire Resistance Rating: 3 hours.
- D. Design Criteria:
- 1. Provide a complete intumescent paint system consisting of a primer, tie coat, epoxy intumescent fireproofing, and a topcoat.
 - 2. Provide an intumescent fireproofing system capable of being exposed to moisture and not susceptible to microbial contamination.
 - 3. Product Data:
 - a. For each intumescent fireproofing system component indicated in the Contract Documents, submit Product Data to the Program/Project Manager for approval.
 - 1) Include the manufacturer's technical information indicating product performance characteristics, performance, and limitation criteria.
 - 4. Shop Drawings:

- a. For the intumescent fireproofing system, submit Shop Drawings to the Program/Project Manager for approval.
 - 1) Include plans, sections, elevations, and perspective drawings as necessary to depict the system configuration, design considerations, and application procedures.
- E. Finishes:
1. Primer Materials:
 - a. Shop Primer:
 - 1) Provide a zinc epoxy primer approved by the intumescent fireproofing manufacturer.
 2. Finish Materials:
 - a. Tie Coat:
 - 1) Provide a two-component epoxy primer suitable for overcoating a zinc silicate primed substrate after prolonged periods of weathering, and capable of preventing zinc salt formation on weathering and pinholing of subsequent high build topcoats.
 - 2) Manufacturers:
 - a) International Paint, LLC, Intergard 269, www.international-pc.com.
 - b) Approved equal.
 - b. Intumescent Fireproofing:
 - 1) Provide a plural component, 100 percent solids, zero volatile organic compounds (VOC) intumescent fire resistive coating system.
 - a) Provide a coating system listed by FM Approvals LLC (FM), Intertek Group plc (Warnock Hersey Mark Directory), or Underwriters Laboratories, Inc. (UL).
 - 2) Manufacturers:
 - a) International Paint, LLC, Interchar 212, www.international-pc.com.
 - b) Approved equal.
 - c. Top Coat:
 - 1) Provide a decorative topcoat approved by the intumescent fireproofing manufacturer.
 - 2) Manufacturers:
 - a) International Paint, LLC, Interthane 990HS, www.international-pc.com.
 - b) Approved equal.
 3. Shop Finishing Methods:
 - a. Surface Preparation:
 - 1) Clean the substrate so it is free of dust, dirt, grease, and other foreign substances that would impair with the bond of the primer coating material.

- 2) At a minimum, prepare the substrate surface in accordance with the Commercial Blast Cleaning requirements specified in SSPC-SP 6/NACE No. 3.
- 3) Prior to applying the primer coating, grind weld spatter and other defects smooth.
- b. Primer Application:
 - 1) Shop-apply the approved primer coating to properly cleaned substrate at the steel fabricators shop in accordance with the primer manufacturer's documented application instructions and with the provisions specified in Section 05120, Structural Steel.
 - a) Provide primer cut back areas a minimum of 3 inches (76mm) from bolted connections, and a minimum of 12 inches (305mm) from welded connections.
 - b) Submit the primer coating manufacturer's documented application instructions to the Program/Project Manager for information.
- c. Finish Standard:
 - 1) Provide a spray applied and back rolled application of intumescent paint product. Troweled application of material is acceptable where additional material is required to fill pits and voids to maintain required material thickness. Entire surface is to be sanded with consecutively finer grit papers, with the final sand using 120 grit papers or finer. Finished surface is to be a high decorative finish such that all pitting, orange peel or other texture is completely removed and all visible portions of the painted member are uniformly smooth. Match existing Terminal 4 Station Intumescent/High Performance Coating finished columns and approved mock-up for Stage 1A Terminal 3 Station. In matching the Terminal 4 Station columns, note that the high performance coating produced added texture on the finished columns, which will not be acceptable in the intumescent paint finish. Stage 2, 24th Street Station and Rental Car Center Station Intumescent/ High Performance Coating finished columns to be coordinated with the Architect, as per the approved mock-up.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Verify that substrate and workspace temperature and humidity conditions are in accordance with requirements of this Section.
 2. Verify that all clip hangers, piping, ducts, equipment, and other items which would interfere with application of the fireproofing are not positioned or installed until the fireproofing application is complete.

3. All surfaces to receive intumescent fireproofing material must be clean, dry and free of oil, grease, loose mill scale, dirt, dust, and other foreign substances which would impair bond of the intumescent fireproofing material to the substrate.

B. Evaluation and Assessment:

1. Do not begin to apply the intumescent fireproofing until the Contractor's applicator and Program/Project Manager have examined the surfaces to receive this coating, and determined the surfaces are acceptable to receive the intumescent fireproofing material.
2. Beginning application will be construed as acceptance of the substrate by the Contractor.

3.02 PREPARATION

A. Protection of In-Place Conditions:

1. Protect adjacent areas from the over spray of fireproofing material.
 - a. Furnish masking, drop cloths, and/or other suitable coverings to prevent overspray onto surfaces not intended to be affected by Work in this Section.

B. Surface Preparation:

1. Where cleaning and other corrections of the surfaces to receive the intumescent fireproofing are necessary, this Work is the responsibility of the installer of the incompatible substrate.
2. Clean the substrate so it is free of dust, dirt, grease, and other foreign substances that would impair with the bond of the intumescent fireproofing material.
3. At a minimum, prepare the substrate surface in accordance with the Commercial Blast Cleaning requirements specified in SSPC-SP 6/NACE No. 3.

C. Demolition/Removal:

1. Prior to applying the fireproofing material, grind weld spatter and other defects smooth.

3.03 APPLICATION

A. Application Equipment and Procedures:

1. Application equipment and procedures must comply with the intumescent fireproofing manufacturer's requirements and application instructions.
 - a. Submit intumescent fireproofing manufacturer's written requirements and application instructions to the Program/Project Manager for information.
 - b. Apply intumescent fireproofing material only to primed surfaces in accordance with the manufacturer's application instructions.

2. Apply the tie coat in accordance with the tie coat manufacturer's documented application instructions.
3. Apply the fireproofing material to the required dry film thickness in accordance with the appropriate UL design listing.
 - a. Apply the intumescent fireproofing material to a maximum wet film thickness (WFT) of 250 mils per coat.
 - b. Apply subsequent coats until the final dry film thickness (DFT) is achieved for the required fire resistance rating.
4. Prior to applying the decorative top coat, complete the final texturing and finishing of the intumescent fireproofing surface in accordance with the intumescent fireproofing manufacturer's requirements.
5. Apply the decorative top coat in accordance with the top coat manufacturer's documented application instructions.
 - a. The final color, gloss, and finish will be determined and approved by the Program/Project Manager.
 - b. Submit the top coat manufacturer's documented application instructions to the Program/Project Manager for information.

3.04 REPAIR/RESTORATION

- A. Patch and repair intumescent fireproofing material damaged by other trades.
 1. The patching must be performed by applicators certified by the intumescent fireproofing manufacturer, and must be applied in accordance with the manufacturer's application instructions.
- B. Touch-up, repair, or replace damaged products before the date of Substantial Completion.

3.05 SITE QUALITY CONTROL

- A. During the period when intumescent fireproofing material is being applied, the Testing and Inspection Agency and the code-required Approved Agency must perform routine and other testing of materials.
 1. Advise the Testing and Inspection Agency and code-required Approved Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.
 2. The Testing and Inspection Agency and the code-required Approved Agency will perform additional materials testing due to changes in materials or proportions requested by the Contractor or testing required due to failure of material to meet specified requirements.
 3. Failure of the Testing and Inspection Agency or the code-required Approved Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.

B. Site Tests and Inspections:

1. Material Characterization Test:

a. Test Procedure:

- 1) Prior to mixing Component A and Component B of the intumescent fireproofing material together in preparation for application of the material, submit random, pre-determined liquid samples of Component A and Component B to the Program/Project Manager for material characterization (fingerprinting) in accordance with the procedures detailed in the ISO 20340.
- a) The Sample frequency will be pre-determined by the Program/Project Manager, and testing will be performed by an independent Testing and Inspection Agency employed by the Owner.

b. Acceptance Criteria:

- 1) Samples complying with the performance requirements of ISO 20340 will pass the Material Characterization Test.
- 2) The test results will be made available to all parties at the completion of testing for each pre-designated area, and must be approved prior to the application of the top-coat.

2. Inspections:

- a. The application of the intumescent fireproofing material will be inspected and verified in accordance with the provisions of AWC1 Technical Manual 12-B.
 - 1) The final dry film thickness (DFT) will be measured using a dry film thickness gauge.
- b. Prior to application of the decorative top coat, an intumescent fireproofing material inspection will be performed.

C. Non-Conforming Work

1. In-place intumescent fireproofing not in compliance with the specified requirements must be corrected prior to the application of the decorative top coat.

3.06 CLEANING

A. Remove intumescent fireproofing materials from surfaces not required to be fireproofed.

B. Waste Management:

1. After completing application of the intumescent fireproofing system, clear and remove all excess material, overspray, and debris from the Site.
2. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 PROTECTION

- A. Protect applied intumescent fireproofing products until completion of the Contract.

SECTION 09980

Specifications Required for
Station Finishes

RFI
0313

COATINGS FOR CONCRETE AND MASONRY

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for the following coatings for concrete and masonry:
 - a. Sealers/densifiers for interior concrete and masonry surfaces.
 - b. Surface hardeners for exterior concrete and masonry surfaces.
 - c. Floor coating and cove base for interior concrete and masonry surfaces.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. MSDS: Material Safety Data Sheets.
 - 2. SCAQMD: An acronym for South Coast Air Quality Management District, the pollution control agency for Los Angeles, Riverside, and San Bernardino counties in California.
 - 3. VOC: An acronym for volatile organic compounds, generally meant to refer to organic chemical compounds that have high enough vapor pressures under normal conditions to significantly vaporize and enter the atmosphere.
- B. Definitions:
 - 1. pH: A measure of the acidity or basicity of a solution, and defined as the cologarithm of the activity of dissolved hydrogen ions (H^+).
- C. Reference Standards:
 - 1. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 2. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
 - 3. South Coast Air Quality Management District (SCAQMD):
 - a. SCAQMD Rule 1168 – Adhesive and Sealant Applications.
 - 4. United States Government:
 - a. Environmental Protection Agency (EPA):

- 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Sequencing:

1. Interior Cementitious Substrates:

- a. Verify that new cementitious surfaces have aged at least 30 days, and that they have a pH below 10 before applying the sealer/densifier coating.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:

a. Product Data:

- 1) Interior concrete and masonry sealer/densifier.
- 2) Exterior concrete and masonry surface hardener.

b. Qualification Statements:

- 1) Exterior concrete and masonry surface hardener applicator's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:

a. Manufacturer's Instructions:

- 1) Concrete and masonry coating manufacturer's written application instructions.

2. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01360, Sustainable Design Requirements.

a. Paints and Coatings

- 1) Submit product data highlighting the VOC content for any field applied coating within the building's weather barrier.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:

a. Operation and Maintenance Data:

- 1) Written instructions detailing the recommended periodic maintenance for each type of concrete and masonry coating.

b. Warranty Documentation:

- 1) Concrete and Masonry Coating Materials Warranties.
- 2) Concrete and Masonry Coating Installation Warranties.

1.05 QUALITY ASSURANCE

A. Qualifications:

1. Exterior Concrete and Masonry Surface Hardener Applicator's Qualifications:
 - a. Employ an authorized applicator or licensed field service specialist having the necessary experience and technical capability to apply the concrete and masonry surface hardener.
 - b. Submit the exterior concrete and masonry surface hardener applicator's qualifications to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver material to the Site in unopened containers clearly labeled by the manufacturer with the trade name, type, grade, shelf life, and other identifying data.

B. Storage and Handling Requirements:

1. Store materials in air tight containers protected from the weather.
2. Discard materials that have exceeded their shelf life without use.

C. Packaging Waste Management:

1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.07 SITE CONDITIONS

A. Ambient Conditions:

1. Interior Concrete and Masonry Sealer/Densifier:
 - a. Do not apply interior concrete and masonry sealer/densifier when the indoor or surface temperatures are below 55 degrees Fahrenheit.
 - b. Do not apply interior concrete and masonry sealer/densifier where it will be immersed in water, such as a fountain, pool, or below grade area.
2. Exterior Concrete and Masonry Surface Hardener:
 - a. Avoid application during cool, humid conditions.

1.08 WARRANTY

A. Manufacturer Warranty:

1. Warrant the concrete and masonry coatings against defects in materials within the 1-year period after the Date of Substantial Completion:
 - a. The manufacturer's liability does not include variable factors out of the manufacturer's control, such as environmental conditions, application

techniques, and surface conditions which are critical to the results obtained.

- b. Submit a Concrete and Masonry Coating Materials Warranty on the concrete and masonry coating manufacturer's standard or customized form, without monetary limitation, in which the concrete and masonry coating manufacturer agrees to replace properly applied concrete and masonry coatings that fail in materials within the specified warranty period to the Program/Project Manager for approval.
 - 1) Have the manufacturer's standard form signed by the Contractor and manufacturer.

B. Special Warranty:

1. Installer's Warranty:

- a. Warrant the concrete and masonry coatings workmanship against failures within the 3-year period after the Date of Substantial Completion:
 - 1) Submit a Concrete and Masonry Coating Installation Warranty on the installer's standard or customized form, without monetary limitation, in which installer agrees to repair concrete and masonry coatings that fail within the specified warranty period to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 CONCRETE AND MASONRY COATING SYSTEMS

A. Manufacturers:

1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.

B. Description:

1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
2. Sustainability Requirements:
 - a. Volatile Organic Compounds (VOC) Content of Field-Applied Interior Paints and Coatings:

- 1) Provide paint products having volatile organic compound content, exclusive of colorants added to a tint base, not greater than the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59:
 - a) Concrete curing compounds: Not more than 100 g/L
 - b) Floor coatings: Not more than 50 g/L
- 2) Refer to Section 01360 of this specification for a complete list of VOC limits for this project.

C. Performance:

1. Interior Concrete and Masonry Sealer/Densifier:
 - a. Provide a sealer/densifier exhibiting the following qualities:
 - 1) Low odor.
 - 2) Slip and scuff resistant.
 - 3) Suitable for use on porous interior tile or masonry surfaces where oil and water repellency are desired.
 - 4) Seals in the outgassing from the substrate.
2. Exterior Concrete and Masonry Surface Hardener:
 - a. Provide an exterior surface hardener that forms an insoluble permanent bond with concrete surfaces; that is resistant to ultraviolet radiation, stains, strong cleaning compounds, alkalis, solvents, oils, and many acids; and that does not support mildew or fungi growth.
3. Material Compatibility:
 - a. Materials for use within each paint/coating system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
 - b. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.
 - c. Products shall be of same manufacturer for each coat in a coating system.

D. Design Criteria:

1. Product Data:
 - a. Obtain the manufacturer's Product Data for the concrete and masonry coatings.
 - b. Submit the Product Data for the concrete and masonry coatings to the Program/Project Manager for approval.

E. Materials:

1. Interior Concrete and Masonry Sealer/Densifier:
 - a. Provide a water-based, medium gloss, clear acrylic polymer emulsion sealer/densifier that contains no formaldehyde.
 - b. Manufacturers:

- 1) American Formulation and Manufacturing (AFM), Safecoat MexeSeal, www.info@afmsafecoat.com.
- 2) Approved equal.
2. Exterior Concrete and Masonry Surface Hardener:
 - a. Provide a micro film forming hybrid inorganic/organic exterior surface hardening and protective clear coat suitable for application on exterior concrete and masonry surfaces.
 - b. Thickness:
 - 1) Provide an exterior surface hardener that forms a 2-mil to 3-mil protective surface film.
 - 2) Provide an exterior surface hardener that penetrates the surface to a depth of between 2mm and 8mm.
 - c. Curing:
 - 1) Provide a rapid curing exterior surface hardener that is dry to the touch 30 to 60 minutes after application.
 - d. Manufacturers:
 - 1) Convergent Group S.A., Pentra-Guard™ (EXT), <http://www.convergent-group.com/homepage.html>.
 - 2) Approved equal.
3. Interior Concrete and Masonry Floor Coating and cove base:
 - a. Provide an Epoxy Non-Slip Deck Coating System MPI EXT 3.2C.
 - 1) Prime Coat: As recommended in writing by topcoat manufacturer.
 - 2) Intermediate Coat: As recommended in writing by topcoat manufacturer.
 - 3) Topcoat: Epoxy deck coating (slip resistant), MPI #82
 - a) Sherwin-Williams Company; www.sherwin-williams.com

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. With the concrete and masonry coating applicator present, examine the substrates for conditions that would affect the performance of the applied concrete and masonry coatings.
- B. Pre-Installation Testing:
 1. Interior Concrete and Masonry Sealer/Densifier:
 - a. Test the surface porosity and profile by dropping water onto the dry surface.
 - 1) If the water drops fail to penetrate quickly, the surface may need additional remediation to create the proper surface profile.
 2. Exterior Concrete and Masonry Surface Hardener:
 - a. Test each concrete surface for its suitability and to verify that the desired results will be obtained.

C. Evaluation and Assessment:

1. Report unsatisfactory conditions to the Program/Project Manager in writing.
2. Proceed to apply the concrete and masonry coatings only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Protection of In-Place Conditions:

1. Mask off and otherwise protect adjacent areas from splatters, splashes, and overspray.

B. Surface Preparation:

1. Interior Concrete and Masonry Sealer/Densifier:

- a. All surfaces to receive the sealer/densifier must be clean, sound, dry, and free of any dirt, dust, oil, wax, grease, mildew, mold, and other contaminants and debris.
 - 1) Remove loose or peeling paint, and scuff sand the surface to create the proper surface profile.
 - 2) Remove all mildew prior to applying the coating.
 - 3) Scrub the surface with a product and solution mix recommended by the sealer/densifier manufacturer.
 - a) Triple rinse the surface to ensure that the cleaner has been completely removed.
 - 4) Test for surface cleanliness by applying a strong tape, such as duct tape, to the cleaned areas and pull it back up.
 - a) If the tape is free of any concrete dust or dirt, the surface is clean.
 - b) If particles or a white residue are still present, remove them completely with additional scrubbing, rinsing, and possibly etching.
- b. For the best adhesion on smooth surfaces with no surface profile, acid-etching may be required, followed by completely neutralizing the surface.
 - 1) Use extreme caution when working with acid, and comply with the requirements on the label and with Material Safety Data Sheet (MSDS) precautions.
 - 2) Remove all acid residual prior to applying the coating.
 - 3) The surface must have a pH between 7 and 10 for the best results.

2. Exterior Concrete and Masonry Surface Hardener:

- a. Prior to applying the exterior surface hardener, fill cracks and repair honeycombed and structurally unsound surfaces.
- b. Thoroughly clean the substrates to receive the surface hardener with a black (light abrasive) scrubbing pad and a neutral pH detergent to remove membrane forming compounds, sealers, oil, grease, dirt, dust, drywall residue, and other contaminants.

- 1) The substrate may be sanded using a 60-grit to 100-grit sanding screen or diamond abrasive pad.
- a) Remove dust and residue using a riding or walk-behind scrubber with water or broom, and then rinse and squeegee the surface until it is dry.

3.03 APPLICATION

- A. Apply the concrete and masonry coatings in accordance with the coating manufacturer's application instructions.
 1. Coverage:
 - a. Apply the material at the coverage rate recommended by the manufacturer.
 2. Submit the concrete and masonry coating manufacturer's written application instructions to the Program/Project Manager for information.
- B. Interior Concrete and Masonry Sealer/Densifier:
 1. Prior to applying the interior concrete and masonry sealer/densifier, stir the material thoroughly but gently without excessive agitation so air bubbles are avoided.
 - a. Do not be reduce the material.
 2. Apply the interior concrete and masonry sealer/densifier using a squeegee brush, roller, sponge, or appropriate spray equipment in thin coats.
 - a. Apply the sealer/densifier only to a completely dry substrate.
 - b. Two or more coats may be needed depending on porosity of concrete or masonry.
 3. Drying/Curing:
 - a. To facilitate quick drying/curing, furnish adequate ventilation and air flow to the work area.
 - b. Normal drying/curing conditions require a clean, dry surface, access to a fresh air flow, a dust free environment, moderate humidity, and temperatures above 55 degrees Fahrenheit.
 - c. Allow at least 2 hours for drying between coats.
 - 1) Thick applications, high humidity, or conditions other than normal will cause the sealer/densifier to dry and cure more slowly.
- C. Exterior Concrete and Masonry Surface Hardener:
 1. Before applying the surface hardener to the substrates, thoroughly agitate it by mixing, shaking, or stirring.
 2. Do not apply the exterior concrete and masonry surface hardener to non-porous surfaces.
 3. Spray-apply the surface hardener to the substrates, and immediately distribute pooling material using a soft broom.
 4. Where a second coat is required to achieve the specified results, allow 60 minutes after applying the first coat before applying the second coat.

D. Special Techniques:

1. To enhance slip and stain resistance, burnish the completed sealed exterior concrete or masonry surface area using a 400-grit pad using equipment its own dust collection system.

3.04 CLEANING

A. Interior Concrete and Masonry Sealer/Densifier:

1. Periodically mop the protected floors with clean water or an odorless, dye-free, non-volatile all purpose cleaner.
2. The protected floors may be scrubbed with a white pad and a floor machine operating at 175 revolutions per minute before recoating.

B. Exterior Concrete and Masonry Surface Hardener:

1. Sweep, mop, wash, and mechanically scrub the protected floors with water and neutral pH cleaners.
2. Do not sand or polish the protected floors.

C. Waste Management:

1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.05 PROTECTION

A. Interior Concrete and Masonry Sealer/Densifier:

1. Do not allow any traffic on the protected surfaces for 8 hours to 24 hours after application of the sealer/densifier, depending on conditions.

B. Exterior Concrete and Masonry Surface Hardener:

1. Protect the curing surface hardener from standing water.
2. Do not allow any traffic on the protected surfaces for 60 minutes after application of the surface hardener.
3. Light pedestrian traffic is allowed on the protected surfaces 60 minutes after application of the surface hardener.
4. Vehicular traffic is allowed on the protected surfaces 2 hours after application of the surface hardener.

3.06 MAINTENANCE

A. Maintenance Data:

1. Submit written instructions detailing the recommended periodic maintenance for each type of concrete and masonry coating to the Program/Project Manager.

 - c. AMCA 511 - Certified Ratings Program – Product Rating Manual for Air Control Devices.
 - 4. ASTM International (ASTM):
 - a. ASTM B 209 - Standard Specification for Aluminum and Aluminum Alloy Sheet and Plate.

- b. ASTM B 221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
- c. ASTM D 822 - Standard Practice for Filtered Open-Flame Carbon-Arc Exposures of Paint and Related Coatings.
- d. ASTM D 2244 - Standard Practice for Calculation of Color Tolerances and Color Differences from Instrumentally Measured Color Coordinates.
- e. ASTM D 4214 - Standard Test Methods for Evaluating Degree of Chalking of Exterior Paint Films.
- 5. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
- 6. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.

1.03 SUBMITTALS

A. Action Submittals:

- 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:

- a. Product Data:
 - 1) Drainable louvers.
 - 2) Non-drainable sight-proof louvers.
 - 3) Blank-off panels.
 - 4) Hinged frames.
 - 5) Security bars.
 - 6) Filter racks.
 - 7) Bird screens.
 - 8) Insect screens.
 - 9) Extended sills.
 - 10) Visible mullions.
- b. Shop Drawings:
 - 1) Louvers and vents.
- c. Samples:
 - 1) Samples of each style of louver.

B. Informational Submittals:

- 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:

- a. Manufacturer's Instructions:
 - 1) Louver and vent manufacturers' written installation instructions.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Louver and Vent Manufacturer's Warranty.
 - 2) Louver and Vent Finish Warranty.

1.04 QUALITY ASSURANCE

- A. Certifications:
 1. Air Movement and Control Association International, Inc. (AMCA)
Licensed Products:
 - a. Louvers and Vents:
 - 1) Provide only louvers and vents that have been licensed to bear the AMCA air performance and water penetration seals by having participated in the AMCA Certified Ratings Program.
 - a) Comply with the procedures and testing requirements for performance rating louvers and vents specified in AMCA 11, AMCA 511, and ANSI/AMCA 500-L.
 - b) Provide only louvers labeled with the AMCA air performance and water penetration Certified Ratings Seals.
- B. Site Samples:
 1. Submit Samples of each style of louver to show the frame, blades, bird screen, gutters, downspouts, vertical supports, sill, accessories, finish, and color to the Program/Project Manager for approval.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver materials to site in the manufacturer's original, unopened containers and packaging, with labels clearly indicating the manufacturer and material.
- B. Storage and Handling Requirements:
 1. Store materials in a dry area indoors, protected from damage and in accordance with the manufacturer's instructions.
 - a. Store the products in the manufacturer's unopened packaging until it is time to install the products.
 2. During handling and installation, protect materials and finishes so damage is prevented.
 3. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with the requirements of the local Authorities Having Jurisdiction.
- C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.06 SITE CONDITIONS

A. Ambient Conditions:

1. Do not install louvers and vents when the ambient temperature, humidity, and ventilation are not within the environmental limits recommended by the manufacturer for optimum results.

1.07 WARRANTY

A. Manufacturer Warranty:

1. Warrant the louver and vent materials and workmanship against failures within the 1 year period after the Date of Substantial Completion.
2. No more than 18 months after shipment of the louver and vent materials from manufacturing plant, submit the Louver and Vent Manufacturer's Warranty on the manufacturer's standard form in which the manufacturer agrees to repair or replace components of manufactured louvers and vents that fail in materials or workmanship within specified warranty period to the Program/Project Manager.
 - a. Have the manufacturer's standard form signed by the Contractor and manufacturer.
 - b. When notified in writing of a manufacturing defect in louver and/or vent materials by the Owner, have the manufacturer promptly correct the deficiencies at no increase in Contract Price.

B. Special Warranty:

1. Warrant the fluoropolymer-based finish on extruded aluminum substrates of louvers and vents against the following defects within the 20 year period after the Date of Substantial Completion:
 - a. Peeling, blistering, chipping, cracking, or checking of the finish coating.
 - b. Chalking of the finish coating in excess of 8 numerical ratings when measured in accordance with the methods specified in ASTM D 4214.
 - c. Changes in color or fading of the finish coating in excess of 5 NBS units as determined in accordance with the methods specified in ASTM D 822 and ASTM D 2244.
 - d. Erosion of the finish coating in excess of at a rate in excess of 0.01 mils per year as determined by a Florida test sample.
2. Submit the Louver and Vent Finish Warranty to the Program/Project Manager.

PART 2 PRODUCTS

2.01 LOUVER AND VENT ASSEMBLIES

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 - 1. Performance and design data presented herein is based on testing a 48 inches by 48 inches (1219mm by 1219mm) size unit in accordance with the methods specified in ANSI/AMCA 500-L.
 - 2. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
- C. Performance:
 - 1. Pressure Drop:
 - a. Provide drainable louvers having a maximum pressure drop of 0.15 inches w. g. (3.8mm w. g.).
 - b. Provide non-drainable sight-proof louvers having a maximum pressure drop (intake) of 0.10 inches w. g. (0.03kPa).
 - 2. Water Penetration:
 - a. Provide drainable louvers having a maximum water penetration of 0.01 ounces per square foot (3.1g/m²) of free area at an air flow of 1,023 feet per minute (312m/min) free area velocity when tested for 15 minutes.
 - b. Provide non-drainable sight-proof louvers having a maximum water penetration of 0.01 ounces per square foot (3.1g/m²) of free area at an air flow of 660 feet per minute (201m/min) free area velocity when tested for 15 minutes.
- D. Design Criteria:
 - 1. Design Loads:
 - a. Wind Loads:
 - 1) Unless more stringent requirements are specified in the applicable Codes, incorporate structural supports in the louvers and vents

- designed to withstand a wind load of 20 pounds per square foot (0.96kPa).
- b. Seismic Loads:
 - 1) Factory-engineer the louvers and vents to withstand the seismic loads specified in ASCE/SEI 7, or local requirements of Authority Having Jurisdiction, whichever is more stringent.
 - 2. Free Area:
 - a. Provide drainable louvers designed to have a nominal free area of 57 percent.
 - 1) Provide drainable louvers having a free area size of 9.08 square feet (0.84m²).
 - b. Provide non-drainable sight-proof louvers designed to have a nominal free area of 56 percent.
 - 3. Air Flow through Free Area:
 - a. Provide drainable louvers designed to have a maximum recommended air flow through the free area of 1,023 feet per minute (312m/min).
 - 1) Provide drainable louvers designed to have an air flow of 9289 cubic feet per minute (263m³/min).
 - b. Provide non-drainable sight-proof louvers designed to have a maximum recommended air flow through the free area of 660 feet per minute (201m/min).
 - 1) Provide non-drainable sight-proof louvers designed to have an air flow of 5887 cubic feet per minute (167m³/min).
 - 4. Product Data:
 - a. Obtain Product Data for each product proposed for the Work of this Section, including the following information:
 - 1) Performance data.
 - 2) Instructions and recommendations for preparation, and installation methods.
 - 3) Storage and handling requirements and recommendations.
 - b. Submit the Product Data to the Program/Project Manager for approval.
 - 5. Shop Drawings:
 - a. Prepare Shop Drawings for the louvers and vents that indicate the louver and vent materials, construction, dimensions, accessories, and installation details.
 - b. Submit the Shop Drawings to the Program/Project Manager for approval.
- E. Materials:
- 1. Drainable Louvers:
 - a. Provide stationary drainable louvers fabricated from extruded aluminum Alloy 6063-T5.
 - b. Frames:

- 1) Provide aluminum frames having a 0.081 inch (2.1mm) nominal material wall thickness, and a louver depth of 6 inches (152mm).
 - 2) Provide downspouts and caulking surfaces in the frames.
- c. Blades:
 - 1) Provide aluminum blades having a 0.081 inch (2.1mm) nominal material wall thickness, a blade angle of 37.5 degrees, and spaced approximately 5-29/32 inches apart on center.
- d. Bird Screen:
 - 1) Provide bird screens fabricated from expanded, flattened $\frac{3}{4}$ inch by 0.051 inch (9mm x 1.3mm) aluminum bars, a $\frac{1}{2}$ inch (13mm) mesh of 0.063 (1.6mm) intercrimped aluminum in a removable, rewirable frame.
- e. Drainage:
 - 1) Provide a drain gutter in each head frame and in each blade, and provide downspouts in the jambs designed to drain water from the louver and minimize water cascading from blade to blade.
- f. Vertical Supports:
 - 1) Provide hidden vertical supports that allow the appearance of a continuous line up to 120 inches (3048mm) long.
- g. Sills:
 - 1) Provide a steeply angled integral sill for each louver or vent that eliminates areas of standing or trapped moisture where mold or mildew could thrive and effect indoor air quality.
- h. Manufacturers:
 - 1) Ruskin Manufacturing, Model ELF6375DX, <http://www.ruskin.com>.
 - 2) Construction Specialties, Model A6177, <http://www.c-sgroup.com>
 - 3) Approved equal.
2. Non-Drainable Sight-Proof Louvers:
 - a. Provide stationary non-drainable sight-proof continuous blade louvers fabricated from extruded aluminum Alloy 6063-T5.
 - 1) Provide mullion style louvers having visible mullions or frames at the perimeter of the louver and also at certain intervals within the louver perimeter to support the louver blades.
 - a) Louver blade sightlines may be interrupted at the mullion locations.
 - 2) Do not use rear-mounted blade supports.
 - b. Frames:
 - 1) Provide aluminum frames having a 0.081 inch (2.1mm) nominal material wall thickness, and a louver depth of 3 inches (76mm).
 - c. Blades:
 - 1) Provide formed aluminum Alloy 6063-T5 horizontal chevron style blades having a 0.081 inch (2.1mm) nominal material wall thickness, a blade angle of 45 degrees, and spaced approximately 1-7/16 inches (36mm) apart on center.
 - d. Manufacturers:

- 1) Ruskin Manufacturing, Model ELF30V, <http://www.ruskin.com>.
- 2) Approved equal.

F. Shop Fabrication:

1. Factory-assemble the stationary drainable louvers by welding all louver components together.
2. Factory-assembled stationary non-drainable sight-proof louvers by mechanically fastening the louver components together.

G. Finishes:

1. Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes in AA DAF-45.
2. Primer Materials:
 - a. For field finished surfaces, provide alkyd, epoxy, vinyl, urethane, or other heavy-duty primer materials compatible with the topcoats.
 - b. For shop-finished surfaces, provide the manufacturers recommended primer materials compatible with the topcoats.
3. Finish Materials:
 - a. Fluoropolymer Coatings:
 - 1) Provide a fluoropolymer coating system complying with the requirements specified for a 3-coat system specified in Section 09961, Fluoropolymer Coatings.
 - 2) Color for Fluoropolymer Coating:
 - a) Unless custom fluoropolymer coating colors are indicated on the Contract Drawings, provide colors as selected by the Program/Project Manager from the manufacturers standard paint system specified.
 - b. Anodized Finishes:
 - 1) Class 1 Clear Anodized Finish.
 - a) Chemically etch and pretreat the substrate to be anodized in accordance with the requirements specified for an AA-C22A31 finish.
 - b) Following the chemical etching and pretreatment, apply a 204-R1 clear anodize finish having at a minimum a 0.4 mil (0.01mm), thickness after a 30 minute anodizing process.
 - 2) Class 2 Clear Anodized Finish:
 - a) Chemically etch and pretreat the substrate to be anodized in accordance with the requirements specified for an AA-C22A41 finish.
 - b) Following the chemical etching and pretreatment, apply a 215-R1 clear anodize finish having at a minimum a 0.7 mil (0.018mm), thickness after a 60 minute anodizing process.
 - 3) Class 1 Color Anodized Finish:

- a) Chemically etch and pretreat the substrate to be anodized in accordance with the requirements specified for an AA-C22A44 finish.
 - b) Following the chemical etching and pretreatment, apply one of the following color anodize finishes as indicated on the Contract Drawings; and having, at a minimum, a 0.7 mil (0.018mm) thickness after a 60 minute anodizing process.
 - (1) Champagne.
 - (2) Light Bronze.
 - (3) Medium Bronze.
 - (4) Dark Bronze.
 - (5) Black.
- 4. Shop Finishing Methods:
 - a. Provide louvers and vents having a standard mill finish.
 - b. For louvers to be painted in the field, apply an alkyd primer in the shop.
 - a. Fluoropolymer Coatings:
 - 1) For louvers to receive a fluoropolymer coating or modified fluoropolymer coating, apply the finish to the louvers and vents in the shop:
 - a) Chemically clean and pre-treat the louvers in accordance with the requirements specified for the AA-C12C42R1X finish in AA DAF-45.
 - b) Following chemical cleaning and pretreatment, apply an alkyd prime coat the louvers in preparation for field painting.
 - c) Dry the louvers before applying the final finish.
 - d) Provide fluoropolymer coatings complying with the requirements specified in AAMA 2605, and modified fluoropolymer coatings complying with the requirements specified in AAMA 2604.
 - e) Total Dry Film Thickness:
 - (1) Apply the coating so the approximate total dry film thickness (DFT) is 1.2 mils (0.03mm) after the coating is baked at 450 degrees Fahrenheit (232 degrees Celsius) for 10 minutes.
 - b. Apply a Class 1 clear anodized finish.
 - c. Apply a Class 1 color anodized finish.

2.02 ACCESSORIES

- A. Blank-Off Panels:
 - 1. Insulated Blank-Off Panels:
 - a. Provide insulated aluminum blank-off panels having a 1 inch (25mm) insulation core, factory-installed with removable screws and neoprene gaskets, in an aluminum skin.
 - 2. Un-Insulated Blank-Off Panels:

- a. Provide aluminum blank-off panels fabricated from 0.040 inch (1mm) aluminum sheet.
- B. Hinged Frames:
 - 1. Provide a continuous piano hinge attached to an angle or channel subframe.
- C. Security Bars:
 - 1. Front Security Bars:
 - a. Provide front security bars fabricated from 3/4 inch by 1/2 inch (19mm by 13mm) aluminum bar stock.
 - 2. Rear Security Bars:
 - a. Provide rear security bars fabricated from 1/2 inch by 1/2 inch (13mm by 13mm) galvanized steel, 3/4 inch by 1/2 inch (19mm by 13mm) galvanized steel, 3/4 inch by 1/2 inch (19mm by 13mm) aluminum bar stock.
- D. Filter Racks:
 - 1. Provide formed aluminum channel filter racks designed to accept standard [1 inch (25 mm)][2 inch (51 mm)] thick filters.
 - 2. Blank off the unused bottom portions of the racks using 0.040 inch (1mm) aluminum sheet.
- E. Bird Screens:
 - 1. Provide bird screens fabricated from 3/4 inch by 0.051 inch (19mm by 1.3mm) expanded, flattened aluminum assembled in removable, rewirable frames.
 - 1. Provide bird screens fabricated from 0.063 inch (1.6mm) aluminum inter-crimped into a 1/2 inch (13mm) mesh assembled in removable, rewirable frames.
- F. Insect Screens:
 - 1. Provide fine mesh insect screens.
- G. Extended Sills:
 - 1. Provide extended sills fabricated from extruded aluminum Alloy 6063-T5 having a minimum nominal wall thickness of 0.060 inch (1.5mm), 0.081 inch (2.1mm).
- H. Visible Mullions:
 - 1. Where indicated on the Contract Drawings for an architectural accent, provide the manufacturer's standard horizontal or vertical visible mullions.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Inspect the areas to receive louvers.
 - 2. Verify that the preparation of openings to receive the louvers is satisfactory.
- B. Evaluation and Assessment:
 - 1. Notify the Program/Project Manager of conditions that would adversely affect the installation or subsequent utilization of the louvers.
 - 2. Do not proceed with installation until unsatisfactory conditions are corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the louvers and vents.
- B. Surface Preparation:
 - 1. Clean the openings to receive louvers thoroughly prior to installing the louvers.
 - 2. Prepare surfaces using the methods recommended by the manufacturer for the substrate to achieve the best result under the prevailing conditions.

3.03 INSTALLATION

- A. Install louvers and vents at the locations indicated on the Contract Drawings and in accordance with the manufacturer's installation instructions.
 - 1. Submit the louver and vent manufacturers' written installation instructions to the Program/Project Manager for information.
- B. Install the louvers plumb, level, in the plane of the wall, and in alignment with adjacent work.
- C. Install joint sealants in accordance with the requirements specified in Section 07920, Joint Sealants.
- D. If a louver is to be painted in the field, within 6 months of the application of the shop prime coat apply its topcoat in accordance with the requirements specified in Section 09960, High-Performance Coatings.

3.04 REPAIR

- A. Repair minor damaged surfaces as directed by the Program/Project Manager.

- B. Touch-up, repair, or replace damaged products before Substantial Completion.

3.05 CLEANING

- A. Clean the louver surfaces in accordance with the manufacturer's instructions.
- B. Waste Management:
 - 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 PROTECTION

- A. Provide protection and maintain conditions, in a manner acceptable to the louver and vent manufacturer, that ensure the louver and vent units are without damage or deterioration at the time of Substantial Completion.

END OF SECTION

Rev. No.	Rev. Date	RFC/CN/CO	Section(s) Affected	Comments
0	12/01/2017	N/A	All	First edition.

SECTION 10290

PEST CONTROL

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for pest controls, including bird-net netting, bird netting hardware, and a surface cleaning system, at the locations indicated in the Contract Documents.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 02361 - Termite Control.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. HDPE: High density polyethylene.
 - 2. PPE: Personal protection equipment.
 - 3. UV: Ultraviolet.
- B. Reference Standards:
 - 1. United States Government:
 - a. Occupational Safety and Health Administration (OSHA):
 - 1) 29 CFR 1926 Safety and Health Regulations for Construction.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Bird netting.
 - 2) Bird netting hardware.
 - 3) Surface cleaning system.
 - b. Shop Drawings:
 - 1) Pest control systems.
 - c. Samples:
 - 1) Bird netting.
- B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Pest control manufacturer's installation and application guidelines.

C. Maintenance Material Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Tools:
 - 1) Furnish a setting tool for the machine screw anchors.
 - 2) Furnish a driver socket for installing the sidewinders.

1.04 QUALITY ASSURANCE

A. Site Samples:

1. Bird Netting:
 - a. Submit a Sample of the bird netting proposed for the Work of this Section that is at least 6 inches (152mm) square to the Program/Project Manager for approval.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver the pest control materials in their original unopened packages, containers, or bundles bearing the brand name and identification of the manufacturer or Supplier.
 - a. Include Material Safety Data Sheets for the surface disinfectants and deodorizers that indicate proper handling and disposal methods for each material.

B. Storage and Handling Requirements:

1. Store the netting and netting hardware shipping boxes so they will be kept dry, clean, and undamaged.
2. Do not stack or place other packaging or objects on the bird netting shipping boxes.
3. Keep bird-net bird netting, installation hardware and surface cleaning systems in their original packaging until the time they are installed.

C. Packaging Waste Management:

1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 PEST CONTROL SYSTEMS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. ABC Advanced Bird Control, Division of Nixalite of America, Inc., <http://www.abcbirdcontrol.com>.
 - b. Bird-X, <http://www.bird-x.com>.
 - c. Approved equal.
 - 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 - 1. This Section provides pest controls consisting of bird netting capable of keeping out a wide variety of pest birds, bats, and most critters and larger rodents.
 - 2. For termite control, comply with the requirements specified in Section 02361, Termite Control.
 - 3. Regulatory Requirements:
 - a. Comply with all local, State, and Federal regulations regarding the proper removal and disposal of bird droppings.
- C. Performance:
 - 1. Bird Netting:
 - a. Provide bird netting capable of keeping out a wide variety of pest birds, bats, and most critters and larger rodents.
- D. Design Criteria:
 - 1. Bird Netting:
 - a. Contact the bird netting manufacturer and obtain up-to-date information and recommendations for bird netting hardware applications, item combinations, and new items and procedures that may be pertinent to the planning and procedures for, and installation of, the bird netting.
 - b. Mesh Sizes and Applications:
 - 1) For small and large pest birds, provide 3/4-inch (19mm) square mesh.
 - 2) For medium to large pest bird species, provide 1-1/8-inch (28mm) square mesh.
 - 3) For large bird species only, provide 2-inch (51mm) square mesh
 - 2. Bird Netting Hardware:

- a. Provide bird netting hardware as required for efficiently fastening the bird netting to the types of surface shapes and materials encountered during the performance of the Work of this Section.
 - 1) The hardware spacing determines the maximum net cable run lengths.
- b. Provide a hardware system, which may be a hybrid system that combines methods from different fastening procedures, that best suits the netting installation and Site conditions.
 - 1) Hardware combinations can be mixed to suit changing surface materials and conditions.
- c. Provide appropriate netting accessories to allow access behind the installed netting system.
- d. Cable Run Connections:
 - 1) Wire rope clamps are the recommended connection for all cable runs.
 - 2) Wire rope clamps are mandatory for connecting cable runs over 25 feet (7.6m).
- e. Maximum Hardware Spacing:
 - 1) Eyebolts:
 - a) Large Eyebolts:
 - (1) Space large eyebolts no more than 50 feet (15.2m) apart.
 - b) Small Eyebolts:
 - (1) Space small eyebolts no more than 24 inches (610mm) apart on center.
 - 2) Screw Eyes:
 - a) Large Screw Eyes:
 - (1) Space large screw eyes no more than 50 feet (15.2m) apart.
 - b) Small Screw Eyes:
 - (1) Space small screw eyes no more than 24 inches (610mm) apart on center.
 - 3) Cotter Pins and Anchors:
 - a) Space anchors with cotter pins no more than 24 inches (610mm) apart on center.
 - 4) Sidewinders:
 - a) Space sidewinders no more than 24 inches (610mm) apart on center.
 - 5) Clips:
 - a) Space clips no more than 12 inches (305mm) apart on center.
 - 6) Net Rings:
 - a) Provide the following numbers of net rings for each of the attachment applications indicated:
 - (1) Netting to Cable:
 - (a) For each size of netting mesh, provide 16 net rings per foot.

- (2) Lapped Seams:
 - (a) Provide 32 net rings per foot, but for each mesh ensure that 1 net ring is on each side of the seam.
 - (3) Zipper Installations:
 - (a) Provide 32 net rings per foot, but for each mesh ensure that 1 net ring is on each side of the zipper.
 - 7) Twist Locks:
 - a) Space twist locks no more than 3 inches (76mm) apart on center.
 - 3. Surface Cleaning System:
 - a. Provide surface disinfectants and deodorizers formulated to properly prepare the surface for installation and to neutralize potentially hazardous bird and/or animal wastes.
 - 4. Product Data:
 - a. Obtain Product Data for the pest controls, including the bird netting, bird netting hardware, and surface cleaning system manufacturers' specification literature and installation and application guidelines.
 - b. Submit the manufacturers' Product Data to the Program/Project Manager for approval.
 - 5. Shop Drawings:
 - a. Prepare Shop Drawings for the pest control systems detailing the scope of the bird netting enclosure, and the type, location, and spacing of the mounting hardware.
 - b. Submit the Shop Drawings to the Program/Project Manager for approval.
- E. Materials:
- 1. Bird-Net Bird Netting:
 - a. Provide seamless, knotted bird netting fabricated from abrasion-resistant, flame-resistant, rot-resistant, and UV radiation-resistant high density polyethylene (HDPE).
 - b. Thermal Properties:
 - 1) Provide bird netting having a melting point of at least 250 degrees Fahrenheit (145 degrees Celsius).
 - 2) Provide bird netting that will remain flexible at very low temperatures.
 - c. Physical Properties:
 - 1) Specific Gravity:
 - a) Provide bird netting having a specific gravity of 0.96.
 - 2) Water Absorption:
 - a) Provide waterproof bird netting that will not absorb water.
 - 3) Chemical Properties:
 - a) Provide bird netting that is chemically inert.
 - b) Provide bird netting that is resistant to acids and alkalis at room temperature.

- 4) Color:
 - a) Provide black or stone (tan) bird netting.
- 2. Bird Netting Hardware:
 - a. Tensioned Cable Hardware:
 - 1) Connection Hardware:
 - a) Net Cable:
 - (1) Provide aircraft grade, Type 302 or Type 304 stainless steel, 7x7 49-strand, 3/32 inch (2.2mm) diameter cable having a 900 pound (407kg) breaking strength.
 - b) Turnbuckles:
 - (1) Provide stainless steel hook and eye turnbuckles appropriately sized for the cable run lengths and safe working loads recommended by the manufacturer.
 - c) Cable Thimbles:
 - (1) Provide stainless steel cable thimbles designed for 3/32-inch (2.2mm) diameter cable, and designed to prevent cable fraying and creasing when the cable system is tensioned.
 - d) Ferrules:
 - (1) Provide zinc plated copper ferrules designed for 3/32-inch (2.2mm) cable, and capable of connecting cable runs up to 25 feet (7.6m).
 - (a) Provide 2 ferrules per connection.
 - (b) Provide cable thimbles for use in conjunction with ferrules.
 - e) Wire Rope Clamps:
 - (1) Provide galvanized or stainless steel wire rope clamps designed for 3/32-inch (2.2mm) diameter cable.
 - (a) Provide 2 wire rope clamps per connection.
 - (b) Provide cable thimbles for use in conjunction with wire rope clamps.
 - 2) Cable Anchoring Hardware:
 - a) Large Eyebolts:
 - (1) For steel, iron, and heavy gauge sheet metal substrates, provide extreme duty, stainless steel, large eyebolts.
 - (a) Provide 2-inch (51mm) long large eyebolts having a 9/16 inch (14.2mm) inside diameter and a 1/4-20 stainless steel hex nut.
 - b) Large Screw Eyes:
 - (1) For wood beams, heavy to medium gauge sheet metal, and wood core substrates, provide extreme duty, stainless steel, large screw eyes.
 - (a) Provide 2-inch (51mm) long eyebolts having a 17/32 inch (13.5mm) inside diameter.
 - c) Eyebolts and Machine Screw Anchors:

- (1) For concrete, stone, masonry block, brick, and pre-cast substrates, provide stainless steel eyebolts and machine screw anchors.
 - (a) Provide 2-inch (51mm) long eyebolts having a 9/16 inch (14.2mm) inside diameter and a 1/4-20 threads outside.
 - (2) Machine Screw Anchor:
 - (a) Provide 1/2-inch (12.7mm) diameter by 1 inch (25.4mm) deep zinc plated machine screw anchors having 1/4-20 threads inside.
- 3) Cable Guide Hardware:
 - a) Cotter Pins and Anchors:
 - (1) For concrete, masonry block, brick, and pre-cast substrates, provide cotter pin and nylon anchors.
 - (a) Provide 1/8 inch by 1 inch (3mm by 25.4mm) Type 302 stainless steel cotter pins.
 - (b) Provide 1/4-inch by 1 inch (6.3mm by 25.4mm) nylon expansion anchors.
 - b) Small Screw Eyes:
 - (1) For wood, medium/light gauge sheet metal, and wood core substrates, provide small, 1-3/16-inch (31mm) long heavy duty, stainless steel screw eyes having a 7/32-inch (5.3mm) inside diameter.
 - c) Small Eye Bolts:
 - (1) For steel, iron, and heavy gauge sheet metal substrates, provide small, heavy duty, stainless steel, 1-3/8-inch long eyebolts having a 9/32-inch (7.1mm) inside diameter:
 - d) Sidewinders:
 - (1) For heavy gauge sheet metal, structural steel up to 1/2 inch thick, and solid concrete substrates, provide sidewinders.
 - (a) For steel substrates, provide self-drilling, self-tapping sidewinders that do not require pilot holes.
 - (b) For concrete substrates, provide sidewinders that require pilot holes.
- 4) Finishing Hardware:
 - a) Net Rings:
 - (1) Provide stainless steel net rings designed for installation using either a manual ring tool or a pneumatic ring tool.
 - b) Net Zippers:
 - (1) Provide black heavy duty, marine-grade, net zippers consisting of a 3/4-inch (19mm) fabric tape, an open top, and an automatic lock slider.
- b. Polypropylene Hardware:
 - 1) Clips:

- a) Provide clips fabricated from black ultraviolet-stabilized polypropylene.
- 2) Twist Locks:
 - a) Provide twist locks fabricated from black ultraviolet-stabilized polypropylene.
- 3) Net Ties:
 - a) Provide net ties fabricated from black ultraviolet-stabilized polypropylene.
- 4) Quick Tie Chains:
 - a) Provide 24-inch (610mm) long quick tie chains fabricated from black ultraviolet-stabilized polypropylene.
- 5) Cords:
 - a) Provide cords fabricated from black ultraviolet-stabilized polypropylene.

2.02 ACCESSORIES

A. Surface Disinfectants:

- 1. Bird Dropping Remover:
 - a. Provide a non-toxic, biodegradable bird dropping remover capable of instantly, safely, and effectively dissolving bird droppings, both wet and dry, in or out of a marine environment.
 - b. Manufacturers:
 - 1) ABC Advanced Bird Control, Division of Nixalite of America, Inc., Steri-Fab, <http://www.abcbirdcontrol.com>.
 - 2) Approved equal.
- 2. Surface Disinfectant and Bactericide:
 - a. Provide a surface disinfectant and bactericide capable of neutralizing bird waste germs.
 - b. Manufacturers:
 - 1) ABC Advanced Bird Control, Division of Nixalite of America, Inc., Steri-Fab, <http://www.abcbirdcontrol.com>.
 - 2) Approved equal.
- 3. Surface Cleaner and Deodorizer:
 - a. Provide a non-toxic, biodegradable surface cleaner and deodorizer that is safe and effective for both wet and dry environments, and capable of sanitizing the surface and removing residual odors and stains from bird inhabitation.
 - b. Manufacturers:
 - 1) ABC Advanced Bird Control, Division of Nixalite of America, Inc., Microcide-SQ, <http://www.abcbirdcontrol.com>.
 - 2) Approved equal.
- 4. Anti-bacterial soap and lotion
 - a. To compliment the use of personal protection equipment (PPE) by the installers, provide anti-bacterial soap and lotion capable of preventing

disease transmission in the installers after they have worked around surfaces contaminated with bird and animal wastes.

- b. Manufacturers:
 - 1) ABC Advanced Bird Control, Division of Nixalite of America, Inc., Microsan, <http://www.abcbirdcontrol.com>.
 - 2) Approved equal.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Make a thorough examination of the areas to receive the Work of this Section to verify there are ready for the installation of the pest controls.
 - a. Visually inspect the surfaces that will receive the bird netting hardware and the areas that will end up behind or inside the bird netting installation.
 - b. Note damaged surfaces or incomplete construction that could compromise the bird netting installation.
 - c. Note areas, surfaces, or objects that may require maintenance or periodic replacement after the bird netting is installed, such as lights, electrical equipment, and similar items.
 - d. Note objects or conditions that could damage the installed bird netting.
 - 2. Field Measurements:
 - a. Verify the dimensions of the areas to be enclosed.
- B. Evaluation and Assessment:
 - 1. Prior to installing the pest controls, notify the Program/Project Manager in writing of defects discovered which could affect the satisfactory completion and/or performance of the Work of this Section.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the pest controls.
- B. Surface Preparation:
 - 1. Prior to installing pest controls, ensure that all surfaces are clean, dry, and free of obstructions.
 - 2. Use surface cleaning products to neutralize bird droppings, nests, and related waste materials that may be present.
 - a. Allow all surfaces to air dry completely, and then reapply surface cleaning products to sanitize and deodorize the surface before proceeding.

- b. Strictly comply with the treatment instructions provided with the surface cleaning products.

C. Demolition/Removal:

1. Treat, neutralize, and safely remove all bird waste from the installation surfaces.

3.03 INSTALLATION

A. Install the bird netting hardware as recommended by the manufacturer.

1. Obtain the bird netting and bird netting hardware installation guidelines, and review and become completely familiar with the proper installation procedures for the bird netting.
2. Ensure that a sufficient quantity of bird netting, netting hardware, and surface cleaning products are available to properly install the bird netting system.
3. In all surface types where large screw eyes are to be installed, drill pilot holes.
4. In concrete where sidewinders are to be installed, drill pilot holes.
5. Secure clips to the perimeter using the hardware recommended by clip manufacturer.

B. Install bird netting as recommended by the bird netting manufacturer.

1. Install perimeter and support hardware first, then attach the bird netting to the installed hardware, and finally install access or additional support hardware as required.
2. Stretch open the bird netting, which comes in collapsed mesh form, to the specified size
 - a. If necessary, cut the bird netting to fit the area.
 - b. If multiple pieces are needed, join the pieces together with the recommended seam fastening hardware.
3. Fasten the bird netting to the types of surface shapes and materials occurring in the area where the bird netting is to be installed.
 - a. For fastening the netting fabric to all types of objects, provide multi-purpose fastener net ties.
 - 1) Provide net ties to prevent netting sag or loose fitting nets by securing the netting to objects above or behind netting installation.
 - b. For attaching the bird netting mesh to the cables, for closing seams, and for fastening the “net zippers” to the bird netting mesh, provide net rings.
 - 1) When attaching bird netting to the cable system, clips can be used in place of net rings.
4. Ensure that the installed bird netting is taught, and free of wrinkles, gaps and openings.
 - a. To prevent net sag, provide quick tie chains for fastening the bird net to objects above or behind netting installation.

5. Seam Fastening:
 - a. To join 2 overlapped pieces of netting together at a seam, provide twist locks.
 - b. To reinforce seams, patch tears, close circular openings, provide overhead support, and for similar applications, provide cords as multi-purpose fasteners.
6. Install the bird netting so objects or conditions that could damage the bird netting are avoided.
 - a. Install the bird netting so contact with machinery, vehicles, extreme heat, tree branches, and similar problematic items are avoided.
 - b. Make the adjustments necessary to keep the netting a sufficient distance from problematic objects or conditions.
7. To allow access to the areas behind the bird netting installation, provide net zippers.

3.04 SITE QUALITY CONTROL

- A. Inspections:
 1. Inspect the finished bird netting installation for compliance with the specified requirements.
- B. Non-Conforming Work
 1. Bird netting that is not taut, and free of wrinkles, gaps and openings is unacceptable; and must be corrected.

3.05 ADJUSTING

- A. Make the adjustments needed so the installed bird netting conforms to the manufacturer's installation guidelines.

3.06 CLEANING

- A. Waste Management:
 1. Remove debris and waste materials from the Site.
 2. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 PROTECTION

- A. Use anti-bacterial personal protection equipment (PPE) and products complying with the requirements specified in 29 CFR 1926 to help prevent disease transmittal when working around surfaces contaminated with bird droppings.

END OF SECTION

REV. NO.	REV. DATE	RFC/CN/CO	Section(s) Affected	Comments
0	12/01/2017	N/A	All	First edition.

SECTION 10451

DETECTION AND COUNTING DEVICES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Requirements for automatic passenger counters (APC). ← Scope Deletion of APC RFI
0302

B. Related Requirements:

1. Section 01330 - Submittal Procedures.
2. Section 01360 - Sustainable Design Requirements.
3. Section 01732 - Cutting and Patching.
4. Section 01780 - Closeout Submittals.
5. Section 01810 – Commissioning.
6. Section 16061 - Electrical Grounding and Bonding.
7. Section 16120 - Conductors and Cables.
8. Section 16123 - Control-Voltage Power Cables.
9. Section 16130 - Raceway and Boxes.
10. Section 16134 - Cable Trays.
11. Section 16995 - Commissioning of Electrical Systems.

1.02 REFERENCES

A. Abbreviations and Acronyms:

1. AC: Alternating electric current.
2. APC: Automatic passenger counter.
3. CAN: Controller area network.
4. DC: Direct electrical current.
5. EMC: Electromagnetic compatibility.
6. IDF: Intermediate Distribution Frame.
7. LAN: Local area network.
8. LED: Light emitting diode.
9. MTBF: Mean time between failures.
10. PC: Personal computer.
11. UIP: Universal IRIS Protocol.

B. Definitions:

1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
2. Enclosure: Control panel, console, cabinet, or instrument housing.

3. Ethernet: A family of frame-based computer networking technologies for local area networks (LANs).
4. RS-232: A Telecommunications Industry Association (TIA) recommended standard for asynchronous serial data communications between terminal devices that complies with the requirements specified in ANSI/TIA 232-F.

C. Reference Standards:

1. British Standards Institute (BSI):

1.03 SUBMITTALS

A. Action Submittals:

- 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:

- a. Product Data:
 - 1) Hardware data.
 - 2) Software data.
 - 3) Sequence of Operation Narratives.
 - b. Shop Drawings:
 - 1) System documents.
 - 2) System schematics.
 - 3) Communication system architectures.
 - 4) Panel Installation and Block Diagram.
 - 5) System Drawing Index.
 - c. Delegated Design Submittals:
 - 1) Detection and Counting Equipment Functional Design Manual.
 - d. Special Procedure Submittals:
 - 1) Passenger Detection and Counting System Commissioning Report.
 - 2) System Performance Verification Test Procedures.
- B. Informational Submittals:
- 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) System Performance Verification Test Report.
 - b. Manufacturer's Instructions:
 - 1) Passenger detection and counting system manufacturer's printed installation instructions.
- C. Closeout Submittals:
- 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Passenger Detection and Counting System Operation and Maintenance Manuals.
 - 2) Passenger Detection and Counting System Hardware Manual.
 - 3) Passenger Detection and Counting System Software Manual
 - b. Warranty Documentation:
 - 1) Detection and Counting Device Materials Warranty.
 - 2) Detection and Counting Device Installation Warranty:
 - c. Record Documentation:
 - 1) Passenger Detection and Counting System Record Drawings.
 - d. Software:
 - 1) Final detection and counting system software electronic files.

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Ensure materials are delivered to the Site at times and intervals that facilitate uninterrupted progress of the Work and continuity of installation.
 - 2. Inspect materials and equipment for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.
- B. Storage and Handling Requirements:
 - 1. Handle materials and equipment in accordance with the manufacturer's written instructions.
 - 2. Follow the manufacturer's written instructions for storing the items.
 - a. Maintain the temperature around sensors between minus 40 degrees Fahrenheit and 176 degrees Fahrenheit (minus 40 degrees Celsius and 80 degrees Celsius) during storage and transport.
 - b. Maintain the relative humidity around sensors at no more than 95 percent, non-condensing, during storage and transport.
- C. Packaging Waste Management:
 - 1. Dispose of packaging waste in accordance with the requirements of the Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

1.05 WARRANTY/BOND

- A. Manufacturer Warranty:
 - 1. Detection and Counting Device Materials Warranty:
 - a. Warrant the detection and counting device equipment against defects within the 1-year period after the Date of Substantial Completion:
 - 1) Submit a Detection and Counting Device Materials Warranty on the detection and counting device manufacturer's standard or customized form, without monetary limitation, in which the detection and counting device manufacturer agrees to replace detection and counting device equipment that fails under normal operating conditions within the specified warranty period to the Program/Project Manager for approval.
- B. Special Warranty:
 - 1. Detection and Counting Device Installation Warranty:
 - a. Warrant the detection and counting device equipments' installation workmanship against failures under normal operating conditions

beginning at the Date of Substantial Completion and extending until 1 year after the Date of Substantial Completion:

- 1) Include the removal and reinstallation, maintenance, and support of the detection and counting device equipment in the Warranty.
- 2) Submit a Detection and Counting Device Installation Warranty on the detection and counting device manufacturer's standard or customized form, without monetary limitation, in which installer agrees to repair detection and counting device equipment that fails within the specified warranty period to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 DETECTION AND COUNTING SYSTEMS EQUIPMENT

A. Manufacturers:

1. Manufacturer List:

- a. Iris-GmbH Infrared and Intelligent Sensors, IRMA InfraRed Motion Analyzer Automatic Passenger Counter (APC) System, https://www.irisgmbh.de/wp-content/uploads/DB_dist4_08-rev2_3-e.pdf.
- b. Manufacturer providing an equivalent product approved by the Program/Project Manager.

2. Substitution Limitations:

- a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.

3. Product Options:

a. Product Data:

- 1) Obtain Product Data for the products proposed for the detection and counting device equipment provided under this Section as follows:

a) Hardware Data:

- (1) Obtain hardware Product Data consisting of, but not limited to, data sheets and catalog cuts which document compliance of the devices and components with the requirements specified in this Section.
 - (a) Any exceptions taken to the specified requirements must be noted and addressed.
- (2) Prepare a Bill of Materials for the detection and counting system, which will then function as the Table of Contents for the detection and counting system hardware Product Data submittal.

- (a) Include each device's unique identifier, the device function, its manufacturer, and its model/part/catalog number used for ordering.
 - b) Software Data:
 - (1) Obtain software Product Data consisting of descriptions of the operation and capability of the proposed software, which document compliance with all aspects of the operation and capabilities specified.
 - (a) Any exceptions taken to the specified requirements must be noted and addressed.
 - (2) Furnish a description of any modification or custom design required to meet the Contract requirements that are not covered by the standard software.
 - c) Sequence of Operation Narratives:
 - (1) Furnish a sequence of operation that reflects the language and format of this Section, and that refers to the devices by their unique identifiers as shown on the Contract Drawings.
 - (a) Furnish a sequence of operation for each sub-system.
 - 2) Submit the detection and counting device equipment Product Data for the products proposed for the Work of this Section to the Program/Project Manager for approval.
- B. Description:
- 1. Provide a complete turnkey automatic passenger counting system capable of counting and analyzing the movement of passengers at 3 PHX Sky Train stations.
 - a. The Work at each station consists of providing counters at 8 berths, each berth having 2 doors; and each door requiring 3 sensors.
 - b. The Work includes providing the door contacts, analyzers, conduit, cable trays, wiring, panels, software, and other equipment required to produce a complete operational and functional automatic passenger counting and analysis system.
 - 2. Regulatory Requirements:
 - a. Phoenix Building Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].
 - b. National Electrical Code (NEC):
 - 1) Provide products and installation complying with requirements specified in NFPA 70.

C. Performance:

1. Mean Time Between Failures (MTBF):
 - a. Provide an automatic passenger counting system capable of 300,000 hours of continuous operation at 77 degrees Fahrenheit (25 degrees Celsius) on average between failures.
2. Sensors:
 - a. Temperature Range:
 - 1) Provide infrared distance sensors capable of operating in the temperature range from minus 13 degrees Fahrenheit (minus 25 degrees Celsius) to 158 degrees Fahrenheit (70 degrees Celsius).
 - b. Relative Humidity:
 - 1) Provide infrared distance sensors capable of operating in relative humidity up to 95 percent, non-condensing.
3. Analyzer:
 - a. Accuracy:
 - 1) Provide an analyzer capable of reliably distinguishing people from other objects using the raw data generated by the system with an accuracy of at least 96 percent.

D. Design Criteria:

1. Electromagnetic Compatibility (EMC):
 - a. Design the passenger detection and counting system to comply with the electromagnetic compatibility (EMC) requirements specified in BS EN 61000-6-2 and BS EN 61000-6-3.
2. Sensors:
 - a. Provide infrared distance sensors designed to measure laser impulse runtime to measure the distance between the sensor and the object whose distance is being measured.
 - 1) Provide sensors designed to emit high frequency modulated light, and sense the light reflected from the object whose distance is being measured.
 - 2) Provide sensors designed to emit class 1 laser light complying with the requirements in the range safe for the eye.
 - 3) Provide sensors designed to evaluate the three-dimensional direction of the reflected light received, by evaluating distance signals received from a 2 by 2 matrix of receptors via 4 channels.
 - 4) Provide sensors designed to be configured for a sensor specific baud rate up to 1000 kilobits per second, sensor address, and sensor priority as master or slave.
 - b. Laser Beam:

- 1) Provide sensors having a laser diode that emits a laser beam through a transmitter lens which is capable of splitting the laser beam into 4 “spots”.
 - 2) Offset the source point of the transmitter and the optical axis of the receiver optics laterally so superimposition of the transmitter and receiver fields exists only from a certain minimum distance from the sensor.
 - c. Measurement Distances and Digital Image Resolution:
 - 1) Provide sensors designed to measure distance in 2 height ranges, A and B:
 - a) Height Range A:
 - (1) For Height Range A, provide sensors designed to measure distances 0 cm to 250 cm from the housing cover surface.
 - (2) For Height Range A, provide sensors designed to measure distance from the housing cover surface in digits from 0 to 250.
 - (3) To determine the proper digital image exposure for Height Range A, provide sensors designed to have a resolution of 136 digits when measured according to the KODAK Gray Card / R-27 system.
 - b) Height Range B:
 - (1) For Height Range B, provide sensors designed to measure distances 50 cm to 350 cm from the housing cover surface.
 - (2) For Height Range B, provide sensors designed to measure distance from the housing cover surface in digits from 0 to 250.
 - (3) To determine the proper digital image exposure for Height Range B, provide sensors designed to have a resolution of 176 digits when measured according to the KODAK Gray Card / R-27 system.
 - d. Duration of Measurements:
 - 1) Provide sensors designed to take 4 serial measurements in 4 milliseconds, taking 1 millisecond for each measurement.
 - e. Provide infrared distance sensors designed to operate on a 12-Volt DC power supply.
 3. Door Contacts:
 - a. Provide potential-free door contacts designed to detect the open/closed status of the doors, and of interfacing with switching inputs on the analyzer.
 4. Analyzer:

- a. Provide infrared motion analyzers designed to record and process the raw sensor signal data generated when the sensors detect passengers exiting and entering doors, and calculate the number of passengers exiting and entering.
 - b. Provide infrared motion analyzers designed to be connected by a common shielded cable to the infrared distance sensors across the integrated controller area network (CAN) interface.
 - 1) Storage Protocol:
 - a) Provide an analyzer designed to reduce and store raw data received from the sensors until the analyzer is queried by an application residing on a remote server to furnish the data.
 - 2) Communications Protocol:
 - a) Provide an analyzer designed to send and receive serial data to and from a server in RS232 data format as defined in ANSI/TIA 232-F.
 - c. Analyzer Interface:
 - 1) Between the analyzer and storage and communications systems, provide a Wireless Modem or an Ethernet interface connection designed to transmit system prompts to store data, or extract and send the stored data.
 - d. Provide an analyzer designed to operate on a 12-Volt or 24-Volt power supply.
5. Controller Area Network (CAN):
- a. Provide a linear wiring scheme wherein the sensors are connected via distributors or wiring boxes, and short or extended branch lines.
 - b. Transceiver:
 - 1) As the interface between the Controller Area Network (CAN) and the physical bus, provide a high speed transceiver.
 - c. Data Bus:
 - 1) Provide a modular and flexible data bus system designed to send data in RS232 serial format from the analyzer to the computer (PC) when a door in the system closes.
 - 2) Provide an electric bus that is at least 30 meters long, depending on the type of cable used, the number of sensors, and the bit rate.
 - a) The physically allowable bus length is shorter than the electrical bus length because the electrical bus length must take into account branch lines, which count as double.
6. Noise Filter:
- a. Provide a noise filter capable of designed to reduce normal mode transients to plus or minus 2 Volts, and to have a surge current capacity up to 45,000 Amperes.
7. Software:

- a. Provide a software application capable of capturing the data from multiple berths simultaneously, time stamping the data, storing it to a database, and having a user interface allowing controllers to access the data.
 - b. Provide a software application having the capability to generate built-in reports and extensive query and selection criteria, including at a minimum the following:
 - 1) Passenger traffic counts.
 - 2) Boardings by station.
 - c. Provide software tools that facilitate configuration and visualization.
 - d. 30 days before the date scheduled for the training course, submit 2 sets of the final passenger detection and counting system software electronic files on compact discs having read only memory (CD-ROM) to the Program/Project Manager.
8. Shop Drawings:
- a. Prepare Shop Drawings of the passenger detection and counting device equipment, including system documents illustrating the proposed system design, and data related to the products proposed for the Work of this Section.
 - 1) System Documents:
 - a) Use the same abbreviations, symbols, nomenclature and identifiers used in the Contract Documents.
 - b) Furnish each system element shown on a system drawing with a unique identifier as shown on Contract Drawings.
 - c) Submit system documents that include all or part the following as applicable:
 - (1) Analysis of system requirements:
 - (a) Include system descriptions, analyses, and calculations that were used to size the equipment specified.
 - (b) Furnish descriptions and calculations that show how the equipment will operate as a system to furnish the specified performance.
 - (c) Include an analysis of start-up operations.
 - (d) Include expansion capability and a method of implementation.
 - (e) Include a sample copy of each report specified.
 - (f) Include a color print representative of typical graphics.
 - 2) System Schematics:
 - a) Furnish system schematics that shows the control and mechanical devices associated with the system.
 - b) Include a system schematic drawing for each sub-system.

- 3) Communication System Architectures:
 - a) Furnish complete communication-system architectures.
- 4) Panel Installation and Block Diagram:
 - a) Furnish a panel installation and block diagram.
- 5) System Drawing Index:
 - a) Furnish a system drawing index that shows the name and number of the building or other similar designation; and that lists the system drawings, including the drawing number, sheet number, drawing title, and computer filename when used.
 - b) Furnish a system legend on the system drawings that shows generic symbols and the name of the devices shown.
- b. Within the 2 months after the official Notice to Proceed (NTP), submit the passenger detection and counting device equipment Shop Drawings to the Program/Project Manager for approval.
 - 1) Submit the system drawings together as a complete submittal.
9. Passenger Detection and Counting Equipment Functional Design Manual:
 - a. Prepare a Passenger Detection and Counting Equipment Functional Design Manual for the entire passenger detection and counting system that identifies the operational requirements for the system, and explains the theory of operation, design philosophy, and specific functions.
 - 1) Include a description of the hardware and software functions, interfaces, and requirements for all system operating modes.
 - b. 30 days before the training course, submit the Functional Design Manual to the Program/Project Manager for approval.

E. Components:

1. Sensors:
 - a. Provide three-dimensional, 4-channel, high frequency infrared laser distance sensors.
 - b. Housing:
 - 1) Provide a die cast zinc sensor housing having a removable polycarbonate cover, which serves as an infrared daylight elimination filter, fastened to the housing with screws.
 - 2) Provide a rated enclosure complying with the requirements for protection class IP64 specified in IEC 60529.
 - c. Interface with Controller Area Network (CAN):
 - 1) Provide each sensor with a shielded cable and connector interface across which the sensor communicates with the rest of the detection and counting system, and over which direct current electrical power is supplied to the sensor through the analyzer.

- 2) Cables:
 - a) Provide flexible 2 X 2 X 0.14mm² (26AWG) twisted pair shielded data cables having stranded copper conductors, an overall tinned copper screen, and halogen-free insulation with improved fire retarding performance.
- 3) Cable Connectors:
 - a) Provide D-subminiature (D-Sub) plug connectors having 9-pin layouts complying with the requirements specified in the DIN 41652 series of standards.
2. Door Contacts:
 - a. Provide potential-free door contacts capable of detecting the open/closed status of a door, and of interfacing with 3 galvanically separated switching inputs on the analyzer.
3. Analyzer:
 - a. Provide a modular analyzer having its components mounted in a stainless steel housing.
 - 1) Include a central power supply, a processing kernel consisting of a microcontroller and memory, the Controller Area Network (CAN) line driver, an RS232 service interface containing the operating data interface to the computer and signal inputs, and a data logger memory with a real time clock.
 - 2) Include a custom-designed firmware device that controls the interaction between the components by accounting for aspects such as communications protocols, data shaping, and routine adjustment.
 - b. Switching Inputs:
 - 1) Provide an analyzer having switching inputs capable of receiving sensor input which starts and stops the system to count
 - a) For use as door signal inputs, provide 3 galvanically separated switching inputs that are potential-free, opto-coupled, digital control units.
 - b) Furnish a short-circuit-proof and galvanically separated auxiliary voltage to control the switching inputs.
 - c. Data Lines:
 - 1) Provide an analyzer having a 2-wire data port interface for serial communication with the computer.
 - 2) Provide data lines designed to separate potentials, and to be short-circuit-proof and protected from inadvertent connection to other voltages.
 - d. Service Interface:

- 1) Provide an analyzer having a RS232 serial communication service interface to the computer via shielded lines for starting up, configuring, and maintaining the analyzer.
 - a) Provide a serial communication interface capable of handling a baud rate in the range between 300 Baud and 115,200 Baud.
 - b) To supply current to interface converter devices, furnish an auxiliary 12-Volt voltage output protected against over-current in accordance with the requirements specified in ANSI/TIA 232-F.
- 2) Provide a service interface having data lines, handshake lines to signal to request or send data, control lines for signaling and switching between counter and boot modes, and an auxiliary voltage output.
- 3) Provide a service interface capable of configuring the system and downloading software as required, but not used during normal operations.
- e. Sensor Interface:
 - 1) Provide an analyzer having a four-wire shielded Controller Area Network (CAN) bus system, using 2 wires for power and 2 wires for signals for connecting sensors to the analyzer.
- f. Operating Interface:
 - 1) Provide an analyzer having switching inputs connected to the auxiliary "door" voltage of the analyzer for registering door status signals.
 - 2) Provide an analyzer having a galvanically separated data interface for transmitting counter data to the computer via shielded or unshielded wires stranded in pairs.
- g. DC-DC Transformer:
 - 1) Provide an analyzer having a DC-DC transformer that furnishes the electric power required by the complete system, including internal logic voltage and sensor supply voltage.
 - a) Provide a DC-DC transformer capable of supplying the required voltage levels under galvanic separation.
 - b) Equip the DC-DC transformer with an input power limiter and thermal overload protection.
 - c) Equip the DC-DC transformer with a time-lag fuse to safeguard the input in the event the transformer is defective.
 - 2) Provide polarity protection for the inputs.
- h. Indicator Lights:
 - 1) Provide a red LED indicator light to indicate reset mode during voltage connection and initialization.

- 2) Provide a yellow LED indicator light to indicate configuration mode, the initial boot mode..
 - 3) Provide a green LED indicator light to indicate operational readiness mode and counting method.
 - i. Provide an analyzer capable of either processing the data acquired immediately by use of a computer, or of logging the data for processing by use of a computer at a later stage.
4. Wireless Modem/Ethernet Switch/Computer (PC):
 - a. Provide a wireless modem or Ethernet switch, and a computer capable of summing the numbers of passengers entering and exiting each door at each station.
5. Controller Area Network (CAN):
 - a. Transceiver:
 - 1) Between the Controller Area Network (CAN) controller and the physical bus, provide a pin compatible, high speed transceiver having 2 modes of operation; a normal mode in which the differential capability to transmit and receive data via the bus at rates up to 1 Megabaud is present, and a passive standby mode in which the transmitter and receiver are switched off.
 - a) Provide a transceiver having excellent electromagnetic compatibility (EMC) performance, capable of passive behavior when the supply voltage is off, using low current when in standby mode, and having remote wake-up capability via the bus.
6. Noise Filter:
 - a. Provide a connected high-frequency noise filter complying with the requirements specified in UL 1283.
 - b. Manufacturers:
 - 1) Emerson Network Power, Islatrol®+102,
<http://emersonnetworkpower.com/en-US/Products/SurgeProtection/Plug-in/Pages/IslatrolICSeries.aspx>.
 - 2) Manufacturer providing an equivalent product approved by the Program/Project Manager.
7. AC/DC Converter:
 - a. Provide an AC/DC converter capable of converting alternating current supply line voltage to the direct current voltage required by the system for operation.
8. Antenna:
 - a. Provide a communications antenna.
 - b. Manufacturers:
 - 1) CalAmp, RM1353-TB-04.

- 2) Manufacturer providing an equivalent product approved by the Program/Project Manager.
9. Enclosures:
 - a. If required, provide enclosures for the system components.

2.02 ACCESSORIES

- A. Electrical Conduit:
 1. Provide electrical conduit complying with the requirements specified in Section 16130, Raceway and Boxes.
- B. Cable Trays:
 1. Provide electrical conduit complying with the requirements specified in Section 16134, Cable Trays.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Although the Contract Drawings are generally indicative of the Work, take field measurements to verify actual conditions.
 2. Verify that the installed conduit and wire quantities, sizes, and types are suitable for the detection and counting system equipment being provided under this Contract.
 - a. Verify that conduit stub-ups to be mated with the detection and counting system equipment are the correct type and size, and are at the proper location.
 - b. Inspect the condition of the existing conduit that is required for the Work of this Section.
- B. Evaluation and Assessment:
 1. Proceed to install the detection and counting system devices only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Protect adjacent areas from damage resulting from installation of the passenger detection and counting system devices.
- B. Demolition / Removal:
 1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 DETECTION AND COUNTING DEVICE INSTALLATION

- A. Sensors:
 - 1. In accordance with the passenger detection and counting system manufacturer's printed installation instructions, flush mount the sensors in the header beam above the doors where indicated on the Contract Drawings.
- B. Analyzer;
 - 1. In accordance with the passenger detection and counting system manufacturer's printed installation instructions, do not mount the device in areas where dust or abrasive particles may accumulate, where humid air streams may produce condensation, or on vibrating components or on components subject to shock.
- C. Antenna:
 - 1. Locate the antenna at least 20 cm away from passengers, bystanders, and other personnel in order to comply with FCC regulations.
- D. Electrical Wiring:
 - 1. Connect the passenger detection and counting system power wiring in accordance with the requirements specified in Section 16120, Conductors and Cables.
 - 2. Connect the passenger detection and counting system control wiring in accordance with the requirements specified in Section 16123, Control-Voltage Power Cables.
 - 3. Electrical Grounding:
 - a. Ground the passenger detection and counting system in accordance with the requirements specified in Section 16061, Electrical Grounding and Bonding.
 - 4. Controller Area Network (CAN):
 - a. Provide a linear wiring scheme wherein the sensors are connected via distributors and short branch lines.
 - b. Connect sensors to the analyzer via a common shielded cable.
- E. Submit the passenger detection and counting system manufacturer's printed installation instructions to the Program/Project Manager for information.

3.04 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 - 1. Site Tests:
 - a. The passenger detection and counting system must be tested by the manufacturer of the system equipment.

- 1) Upon completion of each portal, conduct a Functional Acceptance Test of the portal system for the Program/Project Manager.
2. Site Inspections:
 - a. Passenger Detection and Counting System Panels:
 - 1) Have the passenger detection and counting system manufacturer inspect the following control panel components to verify their proper installation:
 - a) Wire labeling.
 - b) Panel schedule accuracy.
- B. Non-Conforming Work
 1. Correct the discrepancies or problems identified during each test at no increase in Contract Price.
- C. Manufacturer Services:
 1. Employ a manufacturer's representatives to provide installation certificates and to assist with the system startup.

3.05 SYSTEM STARTUP

- A. Commissioning:
 1. Have the Commissioning Authority (CA) perform the startup and checkout activities listed in Section 01810, Commissioning, and Section 16995, Commissioning of Electrical Systems, for the pertinent passenger detection and counting systems Work of this Section.
 2. Conclude the commissioning period by conducting the Performance Verification and Acceptance Tests.
 3. System Commissioning Report:
 - a. Prepare a Passenger Detection and Counting System Commissioning Report that includes the data collected during the system commissioning procedures, and that follows the format of the commissioning procedures.
 - 1) Include all configuration check sheets with the final values listed for all parameters, set points, time delays, constants, calibration data for all devices, results of adjustments, and results of testing.
 - b. Submit the System Commissioning Report to the Program/Project Manager within the 30 days after completion of system commissioning.
- B. After the passenger detection and counting system manufacturers' installation certificates for active devices have been received by the Program/Project manager, provide the initial power to the system.
 1. Perform the initial operational testing during this period.

2. Correct defects as they are detected to put the system into operation.
- C. System Performance Verification and Acceptance Tests:
 1. 30 days before the scheduled System Performance Verification Test date, submit the System Performance Verification Test Procedures to the Program/Project Manager and the City of Phoenix Aviation Department for approval.
 - a. In the performance verification test procedures, refer to the devices by their unique identifiers; and explain, step-by-step, the actions and expected results that will demonstrate that the system performs in accordance with the specified sequences of operation, and other Contract requirements.
 - b. Submit a system performance verification test equipment list that lists the test equipment to be used during the performance verification testing to the Program/Project Manager for approval.
 - 1) Include the test equipment manufacturer's name, the test equipment's model number, the test equipment's function, the date of the test equipment's latest calibration, and the results of the test equipment's latest calibration.
 - c. Within the 30 days after completion of the System Performance Verification Test, submit the System Performance Verification Test Report to the Program/Project Manager and the City of Phoenix Aviation Department for approval.
 - 1) Include the data collected during the system performance verification test in System Performance Verification Test Report.
- D. If the system does not pass the Performance Verification and Acceptance Tests due to deficiencies, continue the commissioning period until the Performance Verification and Acceptance Tests are completed and the system is accepted.

3.06 CLEANING

- A. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 CLOSEOUT ACTIVITIES

- A. Training:
 1. In accordance with the requirements specified in Section 01770, Closeout Procedures, employ a representative from the detection and counting device equipment manufacturer who is fully qualified, trained, and

thoroughly knowledgeable regarding the specific equipment installed under this Contract to train the Owner's personnel responsible for operating the system and representatives of Operations to adjust, operate, and maintain the system.

- a. The Phoenix Sky Harbor International Airport will provide adequate training facilities for each training session.
- b. Furnish training consisting of not less than four 8-hour sessions.

B. Record Documentation:

1. The Phoenix Sky Harbor International Airport will provide electronic background drawings to be used to prepare Record Drawing submittals.
2. Legibly mark the electronic background drawings to create Record Drawings that record the final and actual "As-Built" passenger detection and counting system installation.
 - a. Mark each edited electronic as-built drawing with the words "Record Document".
 - b. Include all noted and design changes pertaining to the passenger detection and counting system "as built" conditions on a set of permitted construction documents for the City of Phoenix Aviation Department's records.
 - c. Include field changes of dimensions and details, changes in details from those indicated on the Contract Drawings, details not on the original Contract Drawings, the make and model of the actual products installed, and the following additional information:
 - 1) Drawing Index and a System Legend.
 - 2) A system schematic and equipment schedule.
 - 3) The Sequence of Operation.
 - 4) Complete communication-system architectures, including information on applicable network addressing, DIP switches, and jumpers.
 - 5) Floor plans showing the location of key system components, and the routing of the communications lines.
 - 6) Enclosure drawings, segregated by enclosure, and having the following details:
 - a) Bill of material, including required spares.
 - b) Component layout plans.
 - c) Complete wiring schematics.
 - d) Port/connector layout plans for cross-patch termination assemblies.
 - 7) An input and output (I/O) point listing, including all software and hardware points, and complete with configuration details for each point, segregated by enclosures.

- d. Include schedules and related drawings documenting the usage/assignments of each assembly.
 - e. Include cable lists specifying the cable, wire pair, and connector and pin assignments for all signal, power, and ground leads.
 - f. Include the operating parameters of individual devices.
 - g. Include a tabulation of node addresses for the local area network (LAN), and for other network addressing where applicable; and for locations where fixed communication is configured among system nodes in pairs/groups include the tabulation of node addresses of all members of each pair/group.
3. 30 days before the date scheduled for the training course, submit the Passenger Detection and Counting System Record Drawings to the Program/Project Manager for review.
 - a. Should additional information or revisions be required, the reviewed documents will be returned to the Contractor for correction and re-submittal to the Program/Project Manager.

3.08 PROTECTION

- A. Take steps to insure that installed detection and counting system devices are protected during subsequent construction activities.

3.09 MAINTENANCE

- A. Operation and Maintenance Data:
 1. Operation and Maintenance (O&M) Manuals:
 - a. Prepare Operation and Maintenance (O&M) Manuals for the passenger detection and counting system provided under this Section.
 - b. In the maintenance portion of the manual, include descriptions of maintenance for the passenger detection and counting system equipment, including inspection, periodic preventive maintenance, fault diagnosis, and repair or replacement of defective components.
 - c. In the operation portion of the manual, fully explain the procedures and instructions for the operation of the passenger detection and counting system, including the following items:
 - 1) Computers and peripherals.
 - 2) System start-up and shutdown procedures.
 - 3) Use of the system and applications software.
 - 4) Recovery and restart procedures.
 - 5) Use of the report generator, and the generation of reports.
 - 6) Data entry.
 - 7) Operator commands.
 - 8) System entry requirements.

- 9) Color prints of the software screens on 8-1/2-inch by 11-inch paper.
 - 10) Scripts developed for the screen displays.
 - 11) Diagram showing how the screens are linked together.
 - d. 30 days before the date scheduled for the training course, submit 3 copies of the printed Passenger Detection and Counting System Operation and Maintenance Manuals to the Program/Project Manager for approval.
2. Passenger Detection and Counting System Hardware Manual:
 - a. Prepare hardware manuals for the passenger detection and counting system provided under this Section.
 - b. In the hardware manuals, describe all equipment furnished for the passenger detection and counting system, and include the following items:
 - 1) A general description and specifications of the hardware.
 - 2) Installation and checkout procedures.
 - 3) Equipment electrical schematics and layout drawings.
 - 4) System schematics and layout drawings.
 - 5) Alignment and calibration procedures.
 - 6) The equipment manufacturer's repair parts list indicating sources of supply.
 - 7) Interface definition.
 - c. Submit the Passenger Detection and Counting System Hardware Manuals to the Program/Project Manager for approval.
3. Passenger Detection and Counting System Software Manual:
 - a. Prepare software manuals for the passenger detection and counting system provided under this Section.
 - b. In the software manuals, describe the functions of all software furnished for the passenger detection and counting system, and furnish all other information necessary to enable proper loading, testing, and operation of the software including the following items:
 - 1) Definition of terms and functions.
 - 2) Use of system and applications software.
 - 3) Procedures for system initialization, start-up, and shutdown.
 - 4) Alarm reports.
 - 5) Reports generation.
 - 6) Directory of the disk files.
 - 7) Description of the communication protocols, including data formats, command characters, and a sample of each type of data transfer.
 - c. Submit the Passenger Detection and Counting System Software Manuals to the Program/Project Manager for approval.

SECTION 10520

FIRE PROTECTION SPECIALTIES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for fire extinguishers and fire extinguisher cabinets.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Definitions:
 - 1. Authority Having Jurisdiction (AHJ): Building Code officials, zoning officials, inspectors, and government and regulatory agencies given the authority to protect the public's health, safety, and welfare.
- B. Reference Standards:
 - 1. ASTM International (ASTM):
 - a. ASTM E 814 - Standard Test Method for Fire Tests of Through-Penetration Fire Stops.
 - 2. City of Phoenix (COP):
 - a. International Building Code – 2012 with City of Phoenix amendments (IBC)
 - b. International Fire Code – 2012 with City of Phoenix amendments (IFC)
 - 3. FM Approvals LLC (FM):
 - a. FM Class Number 5420 – Carbon Dioxide Extinguishing Systems.
 - 4. National Association of Architectural Metal Manufacturers (NAAMM):
 - a. Architectural Metal Products Division (AMP):
 - 1) NAAMM AMP 500 – Metal Finishes Manual for Architectural and Metal Products.
 - 5. National Fire Protection Association (NFPA):
 - a. NFPA 10 - 2010 Standard for Portable Fire Extinguishers.
 - 6. Underwriter's Laboratories, Inc. (UL):
 - a. UL Guide No. 100 X0 - Extinguishers and Extinguishing System Units.

1.03 SUBMITTALS

- A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal

Procedures:

- a. Product Data:
 - 1) Portable fire extinguishers.
 - 2) Fire-protection cabinets.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal

Procedures:

- a. Manufacturer's Instructions:
 - 1) Portable fire extinguisher manufacturer's written instructions.
 - 2) Fire-protection cabinet manufacturer's written instructions.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:

- a. Warranty Documentation:
 - 1) Portable fire extinguisher manufacturers' standard warranty.
 - 2) Fire-protection cabinet manufacturer's standard warranty.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. NFPA Compliance:
 - a. Provide fire extinguishers fabricated and labeled in accordance with the requirements specified in NFPA 10.
2. Fire Extinguishers:
 - a. Provide fire extinguishers listed and labeled for type, rating, and classification by an independent testing agency acceptable to the Authorities Having Jurisdiction.
 - b. Provide extinguishers Underwriter's Laboratory Listed and FM Approved.
3. International Building Code – 2012 with City of Phoenix amendments
 - a. Perform the Work of this Section in accordance with requirements of the IBC.

1.06 WARRANTY

- A. Provide the fire protection specialty manufacturers' standard warranties, and submit them to the Program/Project Manager.

PART 2 PRODUCTS

2.01 EQUIPMENT

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. J.L. Industries, Inc., www.buyjlinindustriesonline.com.
 - b. Larsen's Manufacturing Company, www.larsensmfg.com.
 - c. Potter-Roemer; Div. of Smith Industries, Inc., www.potterroemer.com.
 - d. Pre-approved equal.
 - 2. Product Options:
 - a. Submit the manufacturers' Product Data for each type of product specified and provided under this Section to the Program/Project Manager for approval.
 - 1) Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for fire-protection specialties.
 - 2) For fire extinguishers, include the rating and classification of each.
 - 3) For cabinets, include roughing-in dimensions, details showing mounting methods, relationships of box and trim to surrounding construction, door hardware, cabinet type, trim style, and panel style
- B. Materials:
 - 1. Portable Fire Extinguishers:
 - a. Provide fire extinguishers of the type, size, and capacity as indicated in the Contract Documents for each cabinet and other locations.
 - b. Multipurpose Dry-Chemical Types:
 - 1) Provide UL-Listed 2-A:10:B:C, 5-pound nominal capacity portable dry-chemical fire extinguishers in an enameled-steel container.
 - 2) Provide UL-Listed 20-A:120:B:C, 20-pound nominal capacity portable dry-chemical fire extinguishers in an enameled-steel container.
 - 2. Fire-Protection Cabinets:
 - a. Cabinet Boxes:
 - 1) Provide semi-recessed cabinet boxes designed to be partially recessed in shallow depth walls, and suitable for encasing fire extinguishers of the size(s) provided.

- 2) Provide the manufacturer's standard enameled steel sheet box (tub) cabinet suiting the trim style, and having enameled steel sheet trim, frames, doors, and hardware.
 - a) Weld the cabinet's joints, and grind the welds smooth.
 - b) Miter and weld the cabinet perimeter at the door frame.
 - b. Cabinet Doors and Frames:
 - 1) Provide a combination door frame and perimeter trim piece having an exposed trim face that overlaps the surrounding wall surface and a 2-1/2-inch (64mm) deep wall return at the outer edge (backbend) with a rolled edge.
 - a) Fabricate hollow-metal door frames from a minimum of 1/2 inch (13mm) thick tubular stiles and rails.
 - 2) Fabricate solid cabinet doors according to manufacturer's standard design without glazing, and coordinate the door design with the cabinet type and trim style selected.
 - a) Provide a solid fire-protection cabinet door style having a lock similar to J.L. Industries, Inc. Ambassador Series Model 1017L22, or Model 1017L22FX for rated walls.
 - b) Pre-approved equal.
 - 3) Apply the words "FIRE EXTINGUISHER" to the door to indicate that there is a fire extinguisher in the cabinet.
 - c. Door Hardware:
 - 1) Provide the manufacturer's standard door-operating hardware, proper for the type of cabinet, trim style, door material, and style.
 - 2) Provide a cylinder lock for each cabinet.
 - 3) Provide a concealed or continuous-type hinge that permits the door to open 180 degrees.
 - d. Fire-Rated Cabinets:
 - 1) Provide cabinets listed and labeled to meet requirements of ASTM E 814 for the fire-resistance rating of wall where it will be installed.
 - 2) Fabricate fire-rated cabinets to have double 0.0478 inch (1.2mm) thick, cold-rolled steel sheet walls lined with 5/8 inch (16mm) thick, minimum, fire-barrier material.
 - e. Cabinet Mounting:
 - 1) Provide factory-drilled mounting holes for wall mounting hardware.
- C. Shop Finishing Methods:
 1. For recommendations for applying and designating finishes, comply with the requirements specified in NAAMM AMP 500.
 2. Colors and Textures:

- a. Provide the colors and textures selected by the Program/Project Manager from the manufacturer's full range for these characteristics.

2.02 ACCESSORIES

- A. Door Locks:
 1. Provide cylinder locks, with all cabinets keyed alike.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Examine walls and partitions to verify that suitable framing depths and blocking have been provided where recessed and semi-recessed cabinets are to be installed.
 2. Examine fire extinguishers to verify that they have been properly charged and tagged.

3.02 INSTALLATION

- A. Comply with the manufacturer's written instructions for installing fire-protection specialties.
 1. Submit the fire-protection specialty manufacturer's written instructions to the Program/Project Manager for information.
- B. Install fire-protection specialties in the locations and at the mounting heights indicated on the Contract Drawings, or if not indicated, at the heights acceptable to the Authority Having Jurisdiction (AHJ).
 1. Prepare recesses for the cabinets as required by the type and size of the cabinet and trim style.
 2. Fasten mounting brackets to the structure and cabinets, square and plumb.
 3. Fasten cabinets to the structure, square and plumb.

SECTION 10801

TOILET AND BATH ACCESSORIES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Requirements for toilet and bath accessories.

B. Related Requirements:

1. Section 01330 - Submittal Procedures.
2. Section 01360 - Sustainable Design Requirements.
3. Section 01732 - Cutting and Patching.
4. Section 01780 - Closeout Submittals.

1.02 REFERENCES

A. Reference Standards:

1. ASTM International (ASTM):
 - a. ASTM A 153/A 153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
 - b. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - c. ASTM A 666 – Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.
 - d. ASTM A 1008/A 1008M – Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Allow, High-Strength Low-Allow with Improved Formability, Solution Hardened, and Bake Hardenable.
 - e. ASTM B 16/B 16M - Standard Specification for Free-Cutting Brass Rod, Bar and Shapes for Use in Screw Machines.
 - f. ASTM B 19 - Standard Specification for Cartridge Brass Sheet, Strip, Plate, Bar, and Disks.
 - g. ASTM B 30 - Standard Specification for Copper Alloys in Ingot Form.
 - h. ASTM B 456 - Standard Specification for Electrodeposited Coatings of Copper Plus Nickel Plus Chromium and Nickel Plus Chromium.
 - i. ASTM C 1036 - Standard Specification for Flat Glass.
 - j. ASTM F 446 - Standard Consumer Safety Specification for Grab Bars and Accessories Installed in the Bathing Area.
2. City of Phoenix (COP):

- a. Phoenix Building Construction Code and Amendments.
3. International Code Council (ICC):
 - a. ICC International Building Code (IBC) as Amended by the City of Phoenix.
4. South Coast Air Quality Management District (SCAQMD):
 - a. SCAQMD Rule 1168 – Adhesive and Sealant Applications.
5. United States Government:
 - a. Environmental Protection Agency (EPA):
 - 1) 40 CFR 59 – National Volatile Organic Compound Emission Standards for Consumer and Commercial Products.
 - b. United States General Services Administration (GSA):
 - 1) Commercial Item Descriptions:
 - a) Commercial Item Description A-A-3002 – Mirrors, Glass.

1.03 INSTITUTE FOR SUSTAINABILITY INFRASTRUCTURE (ISI)

A. ENVISION RATING SYSTEM FOR SUSTAINABLE INFRASTRUCTURE - 2015 ISI, INC. ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the accessory locations with other Work to prevent interference with the clearances required for access by disabled persons, proper installation, adjustment, operation, cleaning, and servicing of the accessories.
2. Deliver inserts and anchoring devices set into concrete or masonry as required so delays to the Work are prevented.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Paper towel dispensers.
 - 2) Jumbo roll toilet tissue dispensers.
 - 3) Grab bars.
 - 4) Sanitary napkin disposal units.
 - 5) Wall-mounted soap dispensers.
 - 6) Counter-mounted soap dispensers.
 - 7) Seat-cover dispensers.
 - 8) Mirrors.
 - 9) Folding utility shelves.

- 10) Waste receptacles.
- 11) Seat-cover and toilet tissue dispensers.
- 12) Combination seat-cover dispenser, sanitary napkin disposal, and toilet tissue dispenser units.
- 13) Napkin/tampon vendors.
- 14) Hand dryers.
- 15) Keys.
- b. Shop Drawings:
 - 1) Toilet and bath accessories.

B. Closeout Submittals:

- 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Maintenance data for the toilet and bath accessories.
 - b. Warranty Documentation:
 - 1) Mirror Warranty.
 - c. Sustainable Design Closeout Documentation:
 - 1) Low-Emitting Materials: Adhesives & Sealants, Submittal for toilet and bath accessories.

1.05 QUALITY ASSURANCE

A. Sustainability Standards Certifications:

- 1. Adhesives and Sealants Submittal:
 - a. For the sealants and sealant primers used within the mirrors, submit Product Data, including a printed statement of volatile organic compound (VOC) content and chemical components, signed by the product manufacturer certifying that these products comply with SCAQMD Rule 1168.

1.06 WARRANTY

A. Manufacturer Warranty:

- 1. Mirror Warranty:
 - a. Warrant the mirrors against failures within the 15-year period after the Date of Substantial Completion:
 - 1) Submit a Mirror Warranty on the mirror manufacturer's standard or customized form, without monetary limitation, in which the mirror manufacturer agrees to replace mirrors that fail or deteriorate in materials or workmanship within the specified warranty period to the Program/Project Manager for approval.

- 2) Failures include, but are not limited to, the following:
 - a) Visible silver spoilage defects, including discoloration, black spots, and clouding of the silver film.

PART 2 PRODUCTS

2.01 TOILET AND BATH ACCESSORIES

A. Manufacturers:

1. Manufacturer List:
 - a. The basis of design products is listed in Schedule 10801-1 Basis of Design Toilet and Bath Accessories appearing at the end of this Section.
 - b. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed:
 - 1) American Specialties, Inc., www.americanspecialties.com.
 - 2) Bobrick Washroom Equipment, Inc., www.bobrick.com.
 - 3) Bradley Corporation, www.bradleycorp.com.
 - 4) Dyson Airblade, www.dysonairblade.com.
 - 5) General Accessory Manufacturing Co. (GAMCO), www.gamcousa.com.
 - 6) Georgia-Pacific Professional, www.gppro.com.
 - 7) McKinney/Parker Washroom Accessories Corp., www.americanspecialties.com.
 - 8) Waxie Sanitary Supply, www.waxie.com.
 - 9) Approved equal.
2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
 - b. Source Limitations:
 - 1) For each type of accessory unit and for units exposed to view in the same areas, provide products of the same manufacturer unless otherwise approved by Program/Project Manager.

B. Description:

1. Regulatory Requirements:
 - a. Phoenix Building Construction Code:
 - 1) Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments [ICC International Building Code (IBC) as Amended by the City of Phoenix].

C. Sustainability Standards Certifications:

- a. Volatile Organic Compounds (VOC) Content of Interior Sealants:
 - 1) Provide interior adhesives for this Contract having volatile organic compound content falling within the following limits when calculated according to Environmental Protection Agency (EPA) Method 24 as described in 40 CFR 59, and that comply with SCAQMD Rule 1168:
 - a) Multipurpose Construction Adhesives: Not more than 70 grams per Liter less water.
 - b) Structural Glazing Adhesives: Not more than 100 grams per Liter less water.
 - c) Contact Adhesives: Not more than 80 grams per Liter less water.
 - d) Special Purpose Contact Adhesives: Not more than 250 grams per Liter less water.

D. Performance:

- 1. Grab Bars:
 - a. Provide grab bars capable of withstand a downward load of at least 250 pounds-force (1112N) after installation when tested in accordance with the method specified in ASTM F 446.
- 2. Mirrors:
 - a. Provide mirrors that will not fail under normal usage from glass breakage and deterioration attributable to defective manufacture, fabrication, or installation.
 - 1) Deterioration of mirrors includes discoloration, black spots, and clouding of the silver film.

E. Design Criteria:

- 1. Labels:
 - a. Do not place names or labels on the exposed faces of accessories.
 - 1) On the interior surfaces not exposed to view, or on the back surface of each accessory, provide a printed, waterproof label or stamped nameplate indicating the manufacturer's name and the product model number.
- 2. Product Data:
 - a. Obtain the manufacturer's Product Data for the toilet and bath accessories, including construction details, material descriptions and thicknesses, dimensions, profiles, fastening and mounting methods, specified options, substrate preparation instructions, directions for preparing cutouts and installing anchoring devices, and the finishes for each type of accessory specified.

- b. Submit the manufacturer's Product Data for the toilet and bath accessories to the Program/Project Manager for approval.
- 3. Shop Drawings:
 - a. Prepare Shop Drawings for the toilet and bath accessories, including setting drawings and templates for the cutouts required in other work.

F. Materials:

- 1. Stainless Steel:
 - a. Unless otherwise indicated in the Contract Documents, provide stainless steel complying with the requirements for Type 304 having a No. 4 finish (satin) specified in ASTM A 666, and having a nominal thickness of at least 0.0312 inch (0.8mm).
- 2. Brass:
 - a. Provide brass complying with the requirements for leaded and unleaded flat products specified in ASTM B 19; for rods, shapes, forgings, and flat products with finished edges specified in ASTM B 16 (ASTM B 16M); and for castings specified in ASTM B 30.
- 3. Un-Galvanized Sheet Steel:
 - a. Provide un-galvanized sheet steel complying with the requirements for cold rolled, commercial quality steel specified in ASTM A 366/A 366M, and having a nominal thickness of at least 0.0359inch (0.9mm).
 - b. Provide un-galvanized sheet steel having prepared surfaces and metal pretreatments as required for the finish to be applied.
- 4. Galvanized Steel Sheet:
 - a. Provide galvanized steel sheet complying with the requirements for G60 (Z180) coatings specified in ASTM A 653/A 653M.
- 5. Chromium Plating:
 - a. Provide chromium plating complying with the requirements for nickel plus chromium electrodeposited on base metal specified for Service Condition Number SC 2 (moderate service) in ASTM B 456.
- 6. Baked-Enamel Finishes:
 - a. Provide factory-applied, gloss-white, baked-acrylic-enamel coatings.
- 7. Mirror Glass:
 - a. Provide mirror glass complying with the requirements specified in Commercial Item Description A-A-3002; and consisting of glass complying with the requirements for Type I (transparent flat glass), Class 1 (clear), Quality Q2 mirror glass specified in ASTM C 1036 with silvering, an electroplated copper coating, and a protective organic coating.
 - b. Provide annealed monolithic, silvered flat mirror glass having a nominal thickness of 6.0mm.
- 8. Mounting Devices:

- a. Provide steel mounting devices hot-dip galvanized after fabrication in accordance with the requirements specified in ASTM A 153/A 153M.
- 9. Fasteners:
 - a. Provide Screws, bolts, and other fastening devices fabricated from the same material as the accessory unit, that for exposed locations are tamper and theft resistant, and that for concealed locations are galvanized steel.

G. Equipment:

- 1. Paper Towel Dispensers (Tag Numbers PT and TA-46):
 - a. Provide a surface-mounted rolled paper towel dispenser fabricated using all welded construction from Type 304 stainless steel.
 - b. Provide a lever-less paper towel dispenser having a dispensing mechanism that dispenses a 12-onch length of towel each time the lever is pulled.
- 2. Jumbo Roll Toilet Tissue Dispensers - 9-Inch (Tag Number TP):
 - a. Provide surface mounted toilet tissue dispensers fabricated from high-impact, see through plastic, and having concealed anchorages.
 - b. Provide 9-Inch, one roll type toilet tissue dispensers designed to dispense toilet tissue from non-controlled 9-inch or 10-inch diameter-core jumbo tissue rolls mounted on the manufacturer's standard spindle.
- 3. Jumbo Roll Toilet Tissue Dispensers - 12-inch (Tag Number TA-44):
 - a. Provide surface mounted toilet tissue dispensers fabricated from stainless steel, and having concealed anchorages.
 - b. Provide 12-Inch, one roll type toilet tissue dispensers designed to dispense toilet tissue from non-controlled jumbo tissue rolls up to 12 inches in diameter mounted on the manufacturer's standard spindle.
- 4. Grab Bars - 1-1/4- Inch (Tag Numbers TA-01 through TA-06):
 - a. Provide stainless steel grab bars fabricated from 18 gauge, Type 304 stainless steel having a 1-1/4-inch outside diameter and a smooth, satin finish gripping surface.
 - b. Provide grab bars that are mounted using the manufacturer's standard anchors concealed by snap flange covers.
- 5. Grab Bars - 1-1/2- Inch (Tag Number GB):
 - a. For heavy-duty applications, provide stainless steel grab bars fabricated from Type 304 stainless steel that is at least 0.05 inch thick, has a 1-1/2-inch outside diameter, and a smooth, satin finish gripping surface.
 - b. Provide grab bars that are mounted using the manufacturer's standard anchors concealed by snap flange covers.
- 6. Sanitary Napkin Disposal Units (Tag Numbers SND):

- a. Partition-Mounted, Dual-Access Type (Tag Number SND):
 - 1) Provide stainless-steel sanitary napkin disposal units having adjustable flanges for partition mounting to serve two toilet compartments, a self-closing door, and a reusable receptacle that is removable from one side.
- b. Surface-Mounted Type (Tag Numbers SND and TA-45):
 - 1) Provide stainless-steel sanitary napkin disposal units having seamless exposed walls; a self-closing top cover; a locking bottom panel having a continuous stainless-steel hinge; and a removable, reusable receptacle.
7. Wall-Mounted Soap Dispensers (Tag Number SD):
 - a. Provide vandal resistant, wall-mounted, soap dispensers fabricated from stainless steel having a satin finish.
 - b. Provide soap dispensers having a vertical tank with at least a 40 fluid ounce capacity, and a corrosion-resistant valve that dispenses liquid and lotion soaps, and synthetic detergents.
 - c. Provide soap dispensers having hinged filler-tops that require a special key to open them.
8. Counter-Mounted Soap Dispensers (Tag Number TA-49):
 - a. Provide counter-mounted, touch-free, automatic soap dispensers that dispense one shot of soap from the dispenser when activated by sensors.
 - b. Provide counter-mounted soap dispensers that have a chrome finish.
9. Seat-Cover Dispensers (Tag Numbers SCD and TA-43):
 - a. Provide surface-mounted, stainless steel seat-cover dispensers having a concealed opening for filling at the bottom, and a capacity to hold at least 250 seat covers.
10. Mirrors (Tag Numbers MR and TA-71):
 - a. Provide mirror units having a frame fabricated from stainless steel angles having a nominal thickness of 0.05 inch, and capable of accommodating glass edge protection material.
 - b. Provide mirror units having square corners that are mitered, welded, and ground smooth.
 - c. Provide a mirror backing and support system that permits rigid, tamper-resistant glass installation, and prevents moisture accumulation.
 - 1) Provide galvanized steel backing sheet, not less than 0.034 inch (0.85mm) thick, and the full size of the mirror.
 - 2) Provide non-absorptive filler material; corrugated cardboard is not an acceptable filler material.
11. Mirror-Unit Hangers:

- 1) Provide a mirror-unit mounting system that permits rigid, tamper-resistant and theft-resistant installation as follows:
 - a) Provide one-piece, galvanized steel, wall-hanger devices having a spring-action locking mechanism that holds the mirror unit in position without exposed screws or bolts.
12. Folding Utility Shelves (Tag Number US):
 - a. Provide folding utility shelves having a spring loaded hinged shelf capable of automatically returning to the vertical position.
 - b. Provide folding utility shelves fabricated from stainless steel having a No. 4 finish (satin), and having a 15-inch long by 5-1/2-inch wide nominal size.
13. Waste Receptacles (Tag Number TA-47):
 - a. Provide surface-mounted waste receptacles fabricated from stainless steel with a satin finish, and having a removable heavy-gauge vinyl liner.
14. Seat-Cover and Toilet Tissue Dispensers (Tag Number TA-42):
 - a. Provide recessed type combination seat-cover and toilet tissue dispensers fabricated from stainless steel with a satin finish, and having a lockable door.
15. Combination Seat-Cover Dispenser, Sanitary Napkin Disposal, and Toilet Tissue Dispenser Units (Tag Number TA-40):
 - a. Provide recessed type combination seat-cover dispenser, sanitary napkin disposal, and toilet tissue dispenser fabricated from stainless steel with a satin finish, and having a lockable door.
16. Napkin/Tampon Vendors (Tag Number TA-41):
 - a. Provide recessed type sanitary napkin/tampon dispensers fabricated from stainless steel with a satin finish, and having a coin operated operating mechanism.
17. Hand Dryers (Tag Number TA-48):
 - a. Provide die-cast aluminum hand dryers having an anti-microbial scuff resistant lacquer coating on the exterior surfaces; and touch-free, infra-red activation.
18. Keys:
 - a. Provide universal keys that permit internal access to the accessories for servicing and resupplying.
 - b. Provide at least 6 keys to the Program/Project Manager for the Owner.

H. Fabrication:

1. Shop Fabrication:
 - a. Surface-Mounted Toilet Accessories:

- 1) Unless otherwise indicated in the Contract Documents, fabricate the toilet and bath accessory units so the seams and joints are tight, and the exposed edges are rolled.
- 2) Hang toilet and bath accessory doors and access panels using a continuous stainless-steel hinge.
- 3) Provide concealed anchorages where possible.
- b. Recessed Toilet Accessories:
 - 1) Unless otherwise indicated in the Contract Documents, fabricate toilet and bath accessory units using all-welded construction, without mitered corners.
 - 2) Hang toilet and bath accessory doors and access panels using full-length, stainless steel hinges.
 - 3) Provide anchorages that are fully concealed when the unit is closed.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions:

1. Verify the dimensions, tolerances, and method of attachment for the toilet and bath accessories with the other Work onsite.

B. Evaluation and Assessment:

1. Do not begin to install toilet and bath accessory until the openings and substrates have been properly prepared to receive the products provided under this Section.
2. If the substrate preparation is the responsibility of another installer, notify the Program/Project Manager of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Protection of In-Place Conditions:

1. Protect adjacent areas from damage resulting from installation of the toilet and bath accessories.

B. Surface Preparation:

1. Prepare the substrate surfaces using the methods recommended by the toilet and bath accessory manufacturer for achieving the best result for the substrate under the Contract conditions.

C. Demolition/Removal:

1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Install toilet and bath accessories in accordance with the manufacturers' written instructions, using fasteners recommended by the unit manufacturer and appropriate for the substrates encountered.
 1. Install toilet and bath accessories level, plumb, and firmly anchored in the locations and at the heights indicated in the Contract Documents.
- B. Mirrors:
 1. Secure mirrors to the walls using special concealed, tamper-resistant hangers, toggle bolts, or screws.
 2. Set mirror units level, plumb, and square at the locations indicated in the Contract Documents in accordance with the manufacturer's written instructions for the substrate encountered.

3.04 REPAIR/RESTORATION

- A. Replace damaged or defective toilet and bath accessory items with new undamaged toilet and bath accessories.

3.05 ADJUSTING

- A. Adjust the toilet and bath accessories so their operation is unencumbered and smooth, and verify that the mechanisms function properly.

3.06 CLEANING

- A. Remove temporary labels and protective coatings.
- B. Clean and polish exposed surfaces in accordance with the toilet and bath accessory manufacturer's written cleaning recommendations.
 1. Submit the toilet and bath accessory manufacturer's written cleaning recommendations to the Program/Project Manager for information.
- C. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.07 PROTECTION

- A. Protect installed toilet and bath accessory products until the Work of the Contract is completed.

3.08 MAINTENANCE

- A. Operation and Maintenance Data:
1. Furnish detailed maintenance data for the toilet and bath accessories, including lists of replacement parts and service recommendations, for inclusion in operation and maintenance manuals as specified in Section 01780, Closeout Submittals.
 2. Submit the maintenance data for the toilet and bath accessories to the Program/Project Manager for information.

3.09 ATTACHMENTS

- A. The following attachments are appended to this Section following the "END OF SECTION" marker:
1. Schedule 10801-1 Basis of Design Toilet and Bath Accessories.

END OF SECTION

SECTION 11150

PARKING CONTROL EQUIPMENT

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for modifications to the Phoenix Sky Harbor International Airport's Parking Revenue Control System (PRCS).
- B. Products Under This Section:
 - 1. Cashier booths, cashier fee computes, universal card devices, patron interface devices (PID), lane status lights, proximity card readers and their pedestals, ticket issuing machines, and parking barrier gate equipment on the Site, and indicated on the Contract Drawings, is to be installed or removed, relocated, and reinstalled under this Contract at the locations shown on the Contract Drawings.
- C. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01555 - Traffic Control.
 - 3. Section 10432 - Exterior Electronic Message Signage.
 - 4. Section 11152 - Express Exit Stations.
 - 5. Section 11153 - Proximity Card Readers.
 - 6. Section 11154 - Embedded Preformed Loop Sensors.
 - 7. Section 11155 - Parking Barrier Gates.
 - 8. Section 11157 - License Plate Recognition Cameras.
 - 9. Section 13135 - Fabricated Tollbooths.
 - 10. Section 16120 - Conductors and Cables.
 - 11. Section 16123 - Control-Voltage Power Cables.
 - 12. Section 16712 - Communications Backbone Cabling.
 - 13. Section 16713 - Communications Horizontal Cabling.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AVI: Automated vehicle identification.
 - 2. CCI/CCO: Credit card in/credit card out.
 - 3. DIP: Dual In-line Package.
 - 4. ISF: Insufficient funds.
 - 5. LAT: Lane acceptance test.

6. LCIP: Lane control interface processor.
7. LPI: License plate inventory.
8. LPN: License plate number.
9. LPR: License plate recognition.
10. ODT: Operational demonstration test.
11. PC: Personal computer.
12. PID: Patron interface device.
13. PRCS: Parking revenue control system.
14. RFID: Radio frequency identification.
15. SAT: Site acceptance test.
16. TIM: Ticket issuing machine.

B. Definitions:

1. Automated Vehicle Identification (AVI): A technology whereby an RFID reader, focused on a specific drive lane, can detect and record passing vehicles that are equipped with an associated RFID transponder, such as a toll tag.
 - a. AVI technology can be integrated with other entry or exit lane equipment as a subsystem to a PRCS.
2. Cashier Station or Cashier Terminal: A PC-based PRCS device located in a staffed cashier booth at an exit lane that facilitates multiple methods of exit from a parking facility including ingesting and reading a magnetically encoded parking ticket, ingesting and reading a magnetically encoded access card or credit card, or reading a proximity access card or contactless credit card.
 - a. The Cashier Station uses the data from the inserted or detected media to validate exit privileges or calculate and process the associated parking fee.
 - b. Fees can be paid via cash, check, validation, credit card, or contactless credit card; or exit may be granted via access card or validated/pre-paid magnetically encoded ticket.
3. Credit Card Keyfob: A keychain tag issued by credit card companies as a replacement for traditional credit cards.
4. Credit Card In/Credit Card Out (CCI/CCO): An express parking transaction whereby a patron inserts a credit card into an Entry Station to gain access into a parking facility, and upon exit the patron inserts the same credit card; the system matches the entry event with the exit event, calculates the appropriate parking fee, charges the credit card, and upon positive authorization of the credit card, the barrier gate raises and the patron exits the facility.
5. DIP Switches: A bank of miniature on-off switches mounted in computer hardware, such as on a circuit board or other device, and that holds

- configuration or setup information for that device. DIP switches are used to set the DMX address and mode of operation of electronic equipment.
6. Emergency Services Maintenance: Those maintenance services that are performed in response to specific events, and are usually intended to return equipment or an application to an operational status following such an event.
 7. Entry Station or Ticket Issuing Machine (TIM): A computerized PRCS device located in an entry lane that facilitates multiple methods of entry including issuing a magnetically encoded parking ticket, ingesting and reading a magnetically encoded access card or credit card, receiving signals from an AVI antenna, reading a proximity access card, or reading a contactless credit card; commonly referred to as ticket issuing machine or TIM.
 8. Express Exit Station or Express Exit Terminal or Exit Verifier: A PC-based PRCS device located in an express exit lane that facilitates multiple methods of exit from a parking facility, including ingesting and reading a magnetically encoded parking ticket, ingesting and reading a magnetically encoded access card or credit card, or reading a proximity access card or credit card fob via RFID.
 - a. The Exit Station uses the data from the inserted or detected media to validate exit privileges or calculate and process the associated parking fee.
 - b. Fees can be paid via credit card, or exit is granted via access card or validated/pre-paid magnetically encoded ticket.
 9. Insufficient Funds (ISF): An exception transaction that occurs when a patron does not have the means to satisfy payment of their parking fee.
 10. Keyfob: A plastic device, roughly the size of a car key, that works like a card having electronic circuitry that works with proximity card readers.
 11. Lane Acceptance Test (LAT): A test of a Contractor's installed equipment at the lane level to ensure that the equipment meets the intent of the Contract.
 12. Lane Control Interface Processor (LCIP): The processor used for communication between the parking revenue control system (PRCS) server and the lane equipment.
 13. License Plate Inventory (LPI): A combination of manual or automated processes that result in the accurate collection of the license plate numbers of all vehicles parked within a facility at the time the inventory is performed; a subsystem to a PRCS.
 14. Major Deviation: Any deviation or failure of a LAT, SAT, or ODT test procedure that affects fee calculation accuracy, transaction count

- accuracy, exception count accuracy, active ticket inventory accuracy (system vs. actual), revenue processing, calculations, or reporting.
15. Minor Deviation: Any deviation or failure of a LAT, SAT, or ODT test procedure that does not affect fee calculation accuracy, transaction count accuracy, exception count accuracy, active ticket inventory accuracy (system vs. actual), revenue processing, calculations, or reporting.
 16. Normal Conditions: Equipment malfunctions, parts usage under normal wear and tear, and performance of scheduled maintenance services.
 17. Normal Weather Conditions: Normal weather conditions are applicable to weather conditions that are common to the region such as rain, driving rain, strong thunderstorms, snow, sleet, or high winds.
 18. Operational Demonstration Test (ODT): A test of a fully installed PRCS to monitor the system during normal operating conditions, and ensure that the system is functional over a defined period of time in a manner consistent with the intent of the Contract.
 19. Operational Level Emergency Services Maintenance: Those emergency services maintenance procedures defined herein to be performed by the Owner's maintenance personnel.
 20. Operational Level Preventative Maintenance: Those preventative maintenance services defined herein to be performed by the Owner's maintenance personnel.
 21. Parking Revenue Control System (PRCS): A combination of equipment, software, subsystems, and supporting infrastructure that allows an entity to accurately calculate, collect, track, and report revenues for parking within one or more facilities.
 - a. A PRCS also monitors and controls ingress and egress to and from those facilities.
 22. Patron Interface Device (PID): A device installed on the sidewall of a cashier booth that facilitates multiple methods of exit from a parking facility including ingesting and reading a magnetically encoded parking ticket, ingesting and reading a magnetically encoded access card or credit card, issuing credit card receipts, or reading a proximity access card or contactless credit card.
 - a. The PID also contains a screen which displays various messages to the patron to aid in their transaction as well as a ring-down, hands-free phone to communicate with parking operator personnel.
 23. Preventative Maintenance: Maintenance including but not limited to scheduled inspection, testing, necessary adjustment, alignments, lubrication, parts cleaning, replacement of consumables, communication system maintenance, server administration, database administration, and application support of the PRCS hardware and software.

24. Technician Level Emergency Services Maintenance: Those emergency services maintenance procedures defined herein to be performed by the Contractor.
25. Technician Level Preventative Maintenance: Those preventative maintenance services defined herein to be performed by the Contractor.

C. Reference Standards:

1. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
2. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code (NEC).

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate installation of the Work of this Section with the contractor performing the work under Construction Package H03, and with the Program/Project Manager.
2. Coordinate with the Phoenix Sky Harbor International Airport as necessary to increase the available bandwidth to allow credit card authorizations for the parking revenue control system (PRCS) to be sent and returned as specified herein.

B. Sequencing:

1. Perform the Work of this Section in accordance with the Parking Revenue Control System (PRCS) Phasing sequence indicated on the Contract Drawings.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Shop Drawings:
 - 1) Modified Parking Revenue Control System (PRCS).
 - 2) Gate Equipment Layout

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:

- 1) Parking control equipment startup test records.
- b. Manufacturer's Instructions:
 - 1) Parking revenue control equipment manufacturers' instructions and recommendations.
- c. Source Quality Control Submittals:
 - 1) Copies of the manufacturers' performance, materials quality, and/or workmanship test records.
 - 2) Copies of the manufacturers' quality assurance inspection records.
- d. Site Quality Control Submittals:
 - 1) Parking control equipment startup test records.
- e. Manufacturer's Reports:
 - 1) Copies of the manufacturers' performance, materials quality, and/or workmanship test records.
 - 2) Copies of the manufacturers' quality assurance inspection records.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. Comply with the requirements specified in the Phoenix Building Construction Code and Amendments and NFPA 70.
- B. Certifications:
 - 1. Electrostatic and Electromagnetic Force Certification:
 - a. Provide equipment that is UL-approved for use as part of a master labeled lightning protection system, and marked in accordance with UL procedures.
- C. Site Samples:
 - 1. Submit Sample photographs of the ticket issuing machine's active color matrix message screen to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 - 1. Deliver materials and equipment in a clean condition.
 - 2. Inspect materials and equipment for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.
- B. Storage and Handling Requirements:

1. Handle materials and equipment in accordance with the manufacturer's written instructions.
2. Follow the manufacturer's written instructions for storing the items.

1.07 SITE CONDITIONS

A. Ambient Conditions:

1. Provide equipment whose operation is not effected in any way by Normal Weather Conditions, and capable of normal operation under the following conditions:
 - a. Ambient Temperatures:
 - 1) Temperatures between -10 degrees Fahrenheit and 120 degrees Fahrenheit with the addition of solar loading.
 - b. Humidity:
 - 1) Humidity between 0 percent and 100 percent, non-condensing.
 - c. Rain:
 - 1) Blowing rain with 120 mph gusts of wind.
 - d. Dust:
 - 1) Blowing dust and fine sand
 - e. Radio Frequency Interference/Electromagnetic Interference (RFI/EMI):
 - 1) Provide equipment not affected by the standard RFI/EMI environment at the Phoenix Sky Harbor International Airport, and electromagnetically compatible with other equipment at the Airport, including radio frequency emissions.
 - a) Provide equipment not be susceptible to noise induced from the emissions of Electro Magnetic Interference (EMI) from high power radar, navigation aids, and radio equipment normally utilized at the Airport.

B. Existing Conditions:

1. An existing Parking Revenue Control System (PRCS) is in place at the Phoenix Sky Harbor International Airport, including a combination of equipment, software, subsystems, and supporting infrastructure that allows accurate calculation, collection, tracking, and reporting of parking revenues at the facility.
 - a. The PRCS monitors and controls ingress and egress to and from the facility parking areas.
 - b. The PRCS tracks revenue collection at parking areas.
 - c. Existing PRCS host servers may be inadequate to handle the additional parking control equipment provided under this Contract, and may need to be upgraded.

PART 2 PRODUCTS

2.01 PARKING CONTROL EQUIPMENT

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Scheidt & Bachmann, www.scheidt-bachmann.com.
 - b. Approved equal.
- B. Equipment Products:
 - 1. Owner-furnished cashier booths, cashier fee computes, universal card devices, patron interface devices (PID), lane status lights, proximity card readers and their pedestals, ticket issuing machines (TIM), and parking barrier gate equipment indicated in the Contract Documents to be removed, relocated, and reinstalled under this Contract are currently installed and functioning on the Site at the locations indicated on the Contract Drawings.
 - 2. Fabricated Tollbooths:
 - a. The fabricated tollbooths shall be furnished under Section 13135, Fabricated Tollbooths.
 - 3. Ticket Issuing Machine (TIM):
 - a. The PC-based ticket issuing machines (TIM) shall have the following features, components, and capabilities:
 - 1) Push-button ticket issue.
 - 2) Single-slot technology with the capability to provide all ticketing and card reading from a single slot in the Entry Station's face.
 - a) Capability to issue one credit card-sized, side-striped or center striped, magnetically encoded parking ticket for each entry transaction.
 - b) Capability to issue parking tickets uniquely encoded and printed for each specific parking area.
 - c) Ticket slots capable of reading International Standards Organization (ISO) standard side-stripe magnetically encoded cards, such as credit cards.
 - d) Mechanism capable of retracting tickets.
 - 3) A contactless credit card reader.
 - 4) A ring-down, hands-free intercom integrated into the face of the ticket issuing machine (TIM).
 - 5) An active color matrix message screen having a 6-inch minimum diagonal display that is easily readable under all ambient lighting conditions.
 - 6) A unique machine identification number.

- 7) A PC-based lane control interface processor (LCIP) to control equipment component communications within the lane and to the parking revenue control system (PRCS) server.
- 8) In the event that network communication is lost, capability to perform the following stand-alone functions:
 - a) Capable of storing all transactional information for a minimum of 1,800 offline transactions.
 - b) Capable of automatically shutting down in the event that the 1,800 transaction threshold is reached, and of remaining closed until the reestablishment of online communications.
 - c) Capable of automatically uploading all stored transaction information to the parking revenue control system (PRCS) server once communication is restored.
4. Lane Status Light:
 - a. The lane status lights shall be capable of displaying either the message "OPEN" or "CLOSED".
5. Cashier Fee Computer:
 - a. The cashier fee computers shall include a cashier drawer for transactions that require cashier intervention and a cashier terminal receipt printer.
6. Universal Card Device:
 - a. The universal card device is listed as "SL20", and shall perform similar functions to the express exit stations provided under Section 11152, Express Exit Stations.
7. Proximity Card Reader:
 - a. The proximity card readers shall be furnished under Section 11153, Proximity Card Readers.

2.02 SYSTEMS

A. Performance:

1. Entry Lane Equipment:
 - a. At the locations indicated on the Contract Drawings, provide or relocate entry lane equipment consisting of a lane status light indicating lane status; a parking barrier gate capable of providing or denying access to the parking area; embedded detector loops capable of detecting vehicular presence and acting as lane arming loops, license plate recognition (LPR) trigger loops, and barrier gate closing detectors; a license plate recognition camera capable of obtaining an image of a vehicle's license plate number; and a PC-based entry station consisting of a ticket issuing machine and a proximity card reader that are capable of facilitating multiple methods of entry

including issuing a magnetically encoded parking ticket, ingesting and reading a magnetically encoded access card or credit card, receiving signals from an automated vehicle identification (AVI) antenna, reading a proximity access card, or reading a contactless credit card.

2. Express Exit Lane Equipment:

- a. At the locations indicated on the Contract Drawings, provide or relocate express exit equipment consisting of a dynamic message sign capable of displaying various lane and toll information; a parking barrier gate capable of providing or denying access to the parking area; embedded detector loops capable of detecting vehicular presence and acting as lane arming loops, license plate recognition (LPR) trigger loops, and barrier gate closing detectors; a license plate recognition camera capable of obtaining an image of a vehicle's license plate number; and a PC-based exit station consisting of a express exit station and a proximity card reader that are capable of facilitating multiple methods of exit from the parking facility, including ingesting and reading a magnetically encoded parking ticket, ingesting and reading a magnetically encoded access card or credit card, reading a proximity access card, or reading a contactless credit card.
 - 1) Provide Express Exit Stations capable of using data from the inserted or detected media to validate exit privileges, or to calculate and process the associated parking fee.
 - 2) Provide Express Exit Stations capable of receiving parking fees paid via credit card, or granting exit via access card or validated/pre-paid magnetically encoded ticket.

3. Cashiered and ADA Cashiered Exit Lane Equipment:

- a. At the locations indicated on the Contract Drawings, provide or relocate cashiered and ADA cashiered exit equipment consisting of a dynamic message sign capable of displaying various lane and toll information; a parking barrier gate capable of providing or denying access to the parking area; embedded detector loops capable of detecting vehicular presence and acting as lane arming loops, license plate recognition (LPR) trigger loops, and barrier gate closing detectors; a license plate recognition camera capable of obtaining an image of a vehicle's license plate number; and a cashier booth containing a cashier fee computer and universal card reader that are capable of facilitating multiple methods of exit from the parking facility, including facilitating lost ticket exits, payment of cash or check fees, ingesting and reading a magnetically encoded parking ticket, or ingesting and reading a magnetically encoded access card or credit

card; and a proximity card reader capable of reading a proximity access card or credit card keyfob via RFID.

- 1) Cashiered toll booths additionally contain a patron interface device (PID).
 4. Parking Revenue Control System (PRCS) Processing Times:
 - a. Provide parking control equipment and subsystems capable of achieving the following allowable processing times:
 - 1) Report Generation:
 - a) For Data Less Than 6 Months Old: Less than 5 seconds.
 - b) For Data 6 Months or Older: Less than 15 seconds.
 - 2) Credit Card Authorizations:
 - a) Provide a system having a speed of connection capable of sending and returning authorizations in 4 seconds or less, even at peak times and accounting for a 150 percent increase in transactions.
 5. Parking Revenue Control System (PRCS) Accuracy:
 - a. Provide parking control equipment and subsystems that deliver the following accuracy:
 - 1) Fee Calculation: 100.0 percent accurate.
 - 2) Transaction Counts: 100.0 percent accurate.
 - 3) Exception Counts: 100.0 percent accurate.
 - 4) Active Ticket Inventory (System Versus Actual): 100.0 percent accurate.
 - 5) Revenue Processing: 100.0 percent accurate.
 - 6) Calculations: 100.0 percent accurate.
 - 7) Reporting: 100.0 percent accurate.
- B. Design Criteria:
1. Design the Parking Revenue Control System (PRCS) to not only use the industry's latest technological advancements to control access and revenue for the parking facilities, but to improve the overall management, system efficiency, revenue accounting, revenue security, and customer service aspects of the parking operations at the Phoenix Sky Harbor International Airport (PSHIA).
 - a. Except where otherwise indicated in the Contract Documents, provide only newly manufactured equipment and associated materials for the Parking Revenue Control System (PRCS).
 - 1) Do not provide used or refurbished equipment and associated materials unless otherwise indicated in the Contract Documents.
 - b. For all lane equipment that performs a like function, provide similar equipment having the same part number and that is fully

- interchangeable without needing physical modifications other than setting DIP switches to select a specific function.
2. Implement hardware and application software that will meet or exceed the PSHIA's Parking Revenue Control System (PRCS) needs for at least 10 years after the system's final acceptance.
 3. Provide a parking control system designed to calculate parking fees based upon the different parking facilities, lengths of stay, time increments, and rate structures.
 4. Provide equipment that supports remote monitoring of distributed units.
 5. Design the Parking Revenue Control System (PRCS) so environmental conditions do not inhibit the PRCS from performing in accordance with the Contract requirements.
 - a. Provide a system so environmental conditions in a cabinet do not cause failure of the installed electronics.
 - b. Provide external heating and/or cooling devices necessary to achieve the required operability.
 - c. Design individual units so they shut down in the event that temperatures become too extreme so damage to the unit's electronics would otherwise result.
 6. Design the Parking Revenue Control System (PRCS) so electrostatic and electromagnetic forces within the environment, such as non-direct lightning strikes, or other types of power interference, have no effect upon the integrity or operation of the PRCS.
 - a. Provide lightning protection through surge arrestors or earthen ground rods or a combination thereof for the PRCS.
 - b. Based upon system requirements, determine the appropriate lightning protection method to use for the location where the equipment is installed.
 - c. Prior to implementing the proposed solution for preventing power interference, submit the design, including Product Data and Shop Drawings, to the Program/Project Manager for approval.
 7. Shop Drawings:
 - a. Provide Shop Drawings of the modified Parking Revenue Control System (PRCS) provided under this Contract, including wiring diagrams, control sequences, and dimensioned equipment location drawings.
 - 1) Indicate how the new and relocated equipment will be integrated into the existing system.

C. Operation:

1. Operators:

- a. Provide equipment operators as specified in Section 10432, Exterior Electronic Message Signage, Section 11152, Express Exit Stations, Section 11153, Proximity Card Readers, Section 11154, Embedded Preformed Loop Sensors, Section 11155, Parking Barrier Gates, Section 11157, License Plate Recognition Cameras, and Section 13135, Fabricated Tollbooths.
2. Controls:
 - a. Provide controls as specified in Section 10432, Exterior Electronic Message Signage; Section 11152, Express Exit Stations; Section 11153, Proximity Card Readers; Section 11154, Embedded Preformed Loop Sensors; Section 11155, Parking Barrier Gates; Section 11157, License Plate Recognition Cameras; Section 13135, Fabricated Tollbooths; and .as exist in the existing parking revenue control system (PRCS).
3. Operation Sequences:
 - a. Public Entry Procedure for All Entry Events:
 - 1) The following operation sequence applies to all public entry events:
 - a) As a vehicle approaches an entry lane, a lane status light indicates the lane's status as either "OPEN" or "CLOSED".
 - b) When the entry lane arming loops are not activated, the Entry Station's ticket issuing machine displays the message, "Phoenix Sky Harbor International Airport", and displays the time.
 - c) When the vehicle activates the arming loops, the Entry Station's ticket issuing machine displays the message "Press Button for Ticket or Insert/Swipe Credit Card".
 - d) After each valid entry, the entry barrier gate's closing detector device detects the presence of the vehicle.
 - (1) The lane's license plate recognition camera takes an image of the vehicle's license plate, and submits it to the parking revenue control system (PRCS) for processing and subsequent storage in the system license plate inventory (LPI).
 - (2) Upon clearing the barrier gate's closing detector, the barrier gate arm lowers to the closed position and the lane's equipment is automatically reset for a subsequent transaction.
 - e) The entry event is validated, and the data associated with the entry event is stored.
 - b. Public Entry Procedures That Are Transaction Specific:

- 1) In addition to the public entry procedures listed in Subparagraph 2.02.C.3.a, the following transaction specific procedures also apply when the specific circumstances indicated are to occur:
 - a) Normal Entry with a Ticket:
 - (1) When a patron presses the ticket issue button on the ticket issuing machine, no other entry method will then be allowed, and the Entry Station ticket issuing machine issues a uniquely numbered parking ticket while an audible signal is sounded.
 - (a) In this case, the Entry Station ticket issuing machine magnetically encodes and prints the year, month, date, entry time (hour/minute/second), facility code, lane number, entry sequence number, unique transaction number, and unique machine number on the ticket.
 - (b) Abbreviations are acceptable.
 - (c) Time stamps must be encoded and printed in 24-hour, military time.
 - (2) When the printed/encoded ticket is extracted from the Entry Station ticket issuing machine, the audible signal ceases, the ticket issuing machine display reads "Welcome to Phoenix Sky Harbor International Airport", and the barrier gate rises to the open position to allow the vehicle to enter the parking facility.
 - b) Normal Entry with a Credit Card:
 - (1) When a patron inserts or swipes a credit card as their entry credential, no other entry method will then be allowed, and the Entry Station ticket issuing machine must read the credit card and verify that the card is valid.
 - (2) After a standard credit card is inserted, the card must be returned to the patron through the ticket issuing machine's ticket throat while an audible signal is sounded.
 - (3) After the patron retrieves their credit card, the audible signal must cease, the ticket issuing machine display must read "Welcome to Phoenix Sky Harbor International Airport", and the barrier gate must rise to the open position to allow the vehicle to enter the parking facility.
 - c) Back Out at Entry:
 - (1) If a patron pushes the ticket issue button on the ticket issuing machine and backs out of the lane without retrieving the ticket, the barrier gate must remain closed

- and the ticket must be retracted and retained in the ticket issuing machine.
- (a) The back out entry event must be stored in the system, and the lane must automatically reset for a subsequent transaction.
 - (b) The ticket must be invalidated within the system.
- d) Stolen Ticket at Entry:
- (1) If a patron pushes the ticket issue button on the ticket issuing machine, retrieves the ticket, and then backs out of the lane the barrier gate must automatically return to the closed position, the ticket must be invalidated in the system, and an alarm must be generated.
 - (a) The stolen ticket entry event must be stored in the system.
 - (b) The ticket must be electronically invalidated and must not be allowed to be processed at any exit.
- c. Public Exit Procedures for Express Exit Lanes:
- 1) The following operation sequence applies to public exit events at Express Exit Lanes:
 - a) As the vehicle approaches the Express Exit Lane at the common exit plaza, the overhead dynamic message signage displays the appropriate message and/or graphics.
 - b) When the Express Exit Lane arming loops are not activated, the Express Exit Lane Station's display reads, "Phoenix Sky Harbor International Airport", and displays the time; or displays an alternate, Owner-approved message.
 - c) When the vehicle activates the arming loops, the Express Exit Lane Station's display alternates between the showing the messages, "Insert Ticket" and "Or Insert/Swipe Credit Card Used at Entry"; or displays an alternate, Owner-approved message.
 - (1) The lane's license plate recognition camera takes an image of the vehicle's license plate, and submits it to the parking revenue control system (PRCS) for processing and comparison with the system license plate inventory (LPI).
 - d) After the appropriate exit credential is either inserted into or swiped at the express exit station, the express exit lane's dynamic message signage displays the message, "Processing, Please Wait"; or displays an alternate, Owner-approved message.

- (1) Once positive verification of the entry and exit data occurs, the display shows the fee due.
 - (a) For credit card in/credit card out (CCI/CCO) transactions, the credit card authorization automatically begins.
 - (b) For ticket transactions, the display shows the message, "Insert/Swipe Credit Card for Payment"; or displays an alternate, Owner-approved message
- (2) During credit card authorization, the display shows the message "Processing, Please Wait"; or displays an alternate, Owner-approved message.
- e) Once the credit card is inserted and if payment is obtained, the credit card is returned through the ticket slot and the display shows the message "Please Take Credit Card"; or displays an alternate, Owner-approved message.
- f) When the credit card is removed, the station prints the patron's receipt, the display shows the message, "Please Take Receipt" or displays an alternate, Owner-approved message, and the station produces an audible "beep".
- g) After the receipt is taken, the audible "beep" ceases and the barrier gate rises.
- h) After the vehicle crosses the closing loop, the barrier gate closes and the lane resets for the next transaction.
- i) The ticket is moved from active ticket inventory to inactive ticket inventory, and the associated license plate recognition (LPR) image is moved from active to inactive inventory.
- d. Public Exit Procedures for Express Exit Lanes That Are Transaction Specific, or for Abnormal or Unique Events:
 - 1) In addition to the public exit procedures listed in Subparagraph 2.02.C.3.c, the following transaction specific procedures also apply when the specific circumstances indicated are to occur:
 - a) Invalid Credit Card Presented for Payment:
 - (1) After the fee is displayed and an invalid credit card is swiped at the express exit station, the express exit lane displays the message, "Processing, Please Wait" or displays an alternate, Owner-approved message.
 - (2) Once authorization of the credit card is declined, the credit card is returned through the ticket slot and the display shows the message "Card Not Approved, Please Try a Different Credit Card" or displays an alternate, Owner-approved message.

- (3) After the invalid credit card is removed, the ticket remains in the express exit station and the display alternates between showing the fee and the message "Insert/Swipe Credit Card for Payment" or displays an alternate, Owner-approved message.
- (4) Once the patron presents a valid credit card for payment, the transaction continues as a normal exit transaction.
- (5) If the patron does not have a valid credit card, the patron must push the ring-down, hands-free phone for assistance.
- b) Exit Within Grace:
 - (1) If positive verification of the ticket data occurs, a zero dollar fee is displayed and the barrier gate rises.
 - (2) Once the gate rises, the transaction continues as a normal exit transaction.
- c) Lost Ticket Transaction:
 - (1) Patrons losing their parking tickets must proceed to an attended cashier lane to inform the cashier that the patron's parking ticket has been lost.
 - (2) After the patron informs the cashier that the ticket has been lost, the cashier retrieves the patron's entry information based on the license plate recognition (LPR) data.
 - (a) If the patron's entry data can be determined, then the cashier manually enters the entry date and time; and the correct fee is calculated, displayed, and collected.
 - (b) If no entry data can be found, then the patron is charged a lost ticket fee.
- d) Unreadable Ticket Transaction:
 - (1) If after the parking ticket is inserted into the express exit station the ticket cannot be read by the express exit station, then the parking ticket is returned to the patron through the ticket slot.
 - (2) The Express Exit Lane displays the message, "Ticket Unreadable, Please Proceed to a Cashiered Lane for Assistance" or displays an alternate, Owner-approved message.
 - (3) Patrons having unreadable parking tickets must proceed to an attended cashier lane for assistance.
- e) Attempt to Exit with Stolen Ticket:

- (1) If after the parking ticket is inserted into the express exit station the ticket is identified as a stolen ticket, the system generates an appropriate alarm and the express exit lane displays the message, "Ticket Invalid, Please Proceed to a Cashiered Lane for Assistance" or displays an alternate, Owner-approved message.
- (2) Patrons having stolen parking tickets must proceed to an attended cashier lane for assistance.
- f) Exit with Validation:
 - (1) After the Express Exit Lane displays the parking fee, a validation is inserted into the ticket slot of the express exit station.
 - (2) Based on the type of validation, the express exit station applies the discount to the parking fee due, and updates the Express Exit Lane's display to show the reduced fee due.
 - (a) If the entire parking fee due is validated, then the barrier gate rises and the transaction continues as a normal transaction.
 - (b) If the validation does not satisfy the entire parking fee, the patron must present a credit card for payment and the transaction continues as a normal transaction.
- e. Public Exit Procedures for Cashiered Exit Lanes:
 - 1) Transactions processed at an unmanned Cashiered Exit Lane follow the same procedures as those for transactions at an Express Exit Station as specified herein.
 - 2) At manned Cashiered Exit Lanes, the cashier drawer must only open for those transactions that require cashier intervention such as cash transactions, check transactions, and similar operations.
 - a) For transactions at manned Cashiered Exit Lanes that do not require cashier intervention, such as credit card transactions, grace tickets, validation transactions, and other similar transactions, the cashier drawer must remain closed.
 - 3) For normal transactions at manned Cashiered Exit Lanes, the following operation sequences and procedures apply:
 - a) As a vehicle approaches the Cashiered Exit Lane the dynamic message signage display shows the appropriate message and/or graphics.
 - (1) When the Cashiered Exit Lane arming loops are not activated, the Cashiered Exit Lane's display shows the message, "Phoenix Sky Harbor International Airport", and

- displays the time, or displays an alternate, Owner-approved message.
- (2) When the vehicle activates the arming loops, the Cashiered Exit Lane alternately displays "Insert Ticket" and "Or Insert/Swipe Credit Card Used at Entry", or displays an alternate, Owner-approved message.
 - (a) The lane's license plate recognition camera takes an image of the vehicle's license plate, and submits it to the parking revenue control system (PRCS) for processing and comparison with the system license plate inventory (LPI).
 - b) After the appropriate exit credential is either inserted into or swiped at the Cashiered Exit Lane's patron interface device (PID), verification of the entry time takes place and the message, "Processing, Please Wait" or an alternate, Owner-approved message, is displayed on the Cashiered Exit Lane's patron interface device (PID) and on the cashier terminal.
 - (1) Once positive verification of the entry data occurs, the patron interface device (PID) and the cashier terminal display the parking fee due.
 - (2) After the parking fee is satisfied, the patron's receipt is printed through the cashier terminal receipt printer and given to the patron, and the barrier gate rises.
 - c) When the vehicle crosses the closing loop, the barrier gate closes and the station resets for the next transaction.
 - d) The ticket is moved from the active ticket inventory to the inactive ticket inventory, and the associated license plate recognition (LPR) image is moved from active to inactive inventory.
- 4) Public Exit Procedures for Cashiered Exit Lanes That Are Transaction Specific:
- a) Exit with a Ticket and Credit Card Payment:
 - (1) After the patron interface device (PID) and the cashier terminal display the parking fee due, the patron inserts a credit card in the patron interface device (PID) ticket slot or swipes a credit card over the contactless credit card reader, and the screen on the Cashiered Exit Lane's patron interface device (PID) displays the message "Processing, Please Wait" or displays an alternate, Owner-approved message.

- (2) Once the credit card is inserted and if payment is authorized, the credit card is returned through the ticket slot and the patron interface device (PID) displays the message "Please Take Credit Card" or displays an alternate, Owner-approved message.
 - (a) A message is displayed on the cashier terminal to inform the cashier that the payment was successfully processed.
- (3) When the credit card is removed, the cashier terminal receipt printer prints the patron's receipt, and a button appears on the cashier terminal to confirm that the patron has received their receipt.
- (4) The cashier gives the patron the receipt, and presses a button confirming that the patron has received their receipt.
- (5) After the cashier presses the button confirming that the patron has received their receipt, the barrier gate rises and the transaction continues as a normal transaction.
- b) Exit with a Ticket and Check Payment:
 - (1) After the patron interface device (PID) and the cashier terminal display the parking fee due, the cashier presses the check button on the cashier terminal, then the cash drawer opens.
 - (2) The cashier places the check in the drawer and closes the cash drawer.
- c) Exit with a Ticket and Cash Payment:
 - (1) After the patron interface device (PID) and the cashier terminal display the parking fee due, the cashier presses the cash button on the cashier terminal and inputs the amount received from the patron, then the cash drawer opens and the change due to the patron is displayed on the PID and the cashier terminal.
 - (2) The cashier places the cash received in the drawer and makes change, the receipt is printed on the cashier terminal, and the cashier gives the receipt to the patron and closes the cash drawer.
 - (3) After the cash drawer is closed, the barrier gate rises and the transaction continues as a normal transaction.
- d) Exit with a Credit Card (CCI/CCO):
 - (1) After approaching the patron interface device (PID), the patron inserts or swipes the same credit card used at

- entry, and the license plate recognition (LPR) system verifies the ticket information.
- (a) While entry verification is taking place, the cashier terminal and the patron interface device (PID) display the message "Processing, Please Wait" or displays an alternate, Owner-approved message.
 - (b) Once ticket data is matched, the correct fee is displayed on the PID and the cashier terminal.
- (2) While the credit card authorization is taking place, the patron interface device (PID) displays the message "Processing, Please Wait" and the fee due, or displays an alternate, Owner-approved message.
- (3) Once credit card authorization is obtained, the credit card is returned through the ticket slot and the patron interface device (PID) displays the message, "Please Take Credit Card" or displays an alternate, Owner-approved message.
- (a) A message is displayed on the cashier terminal to inform the cashier that the payment was successfully processed.
- (4) When the credit card is removed, the cashier terminal receipt printer prints the patron's receipt, and a button appears on the cashier terminal to confirm that the patron has received their receipt.
- (5) The cashier gives the patron the receipt, and presses a button confirming that the patron has received their receipt.
- (6) After the cashier presses the button confirming that the patron has received their receipt, the barrier gate rises and the transaction continues as a normal transaction.
- e) Invalid Credit Card Presented for Payment:
- (1) After approaching the patron interface device (PID), the patron inserts or swipes the same credit card used at entry, and the license plate recognition (LPR) system verifies the ticket information.
 - (a) While entry verification is taking place, the cashier terminal and the patron interface device (PID) display the message "Processing, Please Wait" or displays an alternate, Owner-approved message.
 - (b) Once ticket data is matched, the correct fee is displayed on the PID and the cashier terminal.

- (2) While credit card authorization is being requested, the patron interface device (PID) must display the message "Processing, Please Wait" and the fee due, or displays an alternate, Owner-approved message.
 - (3) Once authorization is declined, the credit card is returned through the ticket slot and the patron interface device (PID) displays the message "Card Not Approved, Please Try a Different Credit Card" and the parking fee due or displays an alternate, Owner-approved message.
 - (4) Once the patron inserts a valid credit card for payment, the transaction continues as a normal exit transaction.
- f) Exit Within Grace:
- (1) If positive verification of the ticket data occurs, a zero dollar fee is displayed on the patron interface device (PID) and the cashier terminal.
 - (2) A message is displayed on the cashier terminal to inform the cashier that the ticket is a grace ticket, and a button appears for the cashier to confirm the transaction.
 - (3) After the cashier presses the button confirming the transaction, the barrier gate rises.
 - (4) Once the gate rises, the transaction continues as a normal exit transaction.
- g) Lost Ticket Transaction:
- (1) After the patron informs the cashier that he or she has lost his or her ticket, the cashier presses a lost ticket button on the cashier terminal.
 - (a) A supervisor, able to use the license plate recognition (LPR) system, attempts to verify the patron's entry information based on the LPI data.
 - (b) While the supervisor's license plate recognition (LPR) system license plate verification is taking place, the message, "Processing, Please Wait", or an alternate, Owner-approved message is displayed on the patron interface device (PID).
 - (2) If the entry information can be determined, then the cashier enters the entry information into the Cashier Station, the correct fee is calculated and displayed on the patron interface device (PID) and cashier terminal, and the transaction continues as a normal transaction.
 - (3) If the entry information cannot be determined, then the patron is charged a lost ticket fee.

- (4) An exception ticket is generated for the lost ticket, and is retained for audit purposes.
- h) Unreadable Ticket Transaction:
 - (1) If after the parking ticket is inserted into the patron interface device (PID) the ticket cannot be read, then the parking ticket is returned to the patron through the ticket slot.
 - (2) The patron interface device (PID) and cashier terminal display the message, "Ticket Unreadable" or displays an alternate, Owner-approved message.
 - (3) The cashier presses an unreadable ticket button on the cashier terminal, and is then prompted to manually enter the entry information from the parking ticket.
 - (4) After the entry information is manually entered, the correct fee is calculated and displayed on both the patron interface device (PID) and the cashier terminal, and the transaction continues as a normal transaction.
 - (5) The system generates an exception ticket for the unreadable ticket, which is retained along with the original unreadable ticket for audit purposes.
- i) Insufficient Funds (ISF) Transaction:
 - (1) If, after the parking fee is displayed, the patron informs the cashier that he or she does not have sufficient funds to satisfy the parking fee, the cashier presses the insufficient funds (ISF) button on the cashier station, and a screen mask appears.
 - (2) If the patron is able to pay part of the parking fee, then that amount is collected by the cashier and deducted from the outstanding fee due.
 - (3) The cashier requests identification credentials from the patron; and at a minimum enters the patron's first name, last name, driver's license number, home address, and vehicle license plate number (LPN).
 - (4) The receipt printer prints an insufficient funds (ISF) form, and the patron must sign and return it to the cashier.
 - (5) Upon acknowledgement that the insufficient funds (ISF) form is received, the receipt printer prints a copy of the ISF form for the patron and the transaction continues as a normal transaction.
- j) Attempt to Exit with Stolen Ticket:

- (1) If after the parking ticket is inserted into the patron interface device (PID) the ticket is identified as a stolen ticket, then an appropriate alarm is generated by the system, and the message "Invalid Ticket" or displays an alternate, Owner-approved message is displayed on the patron interface device (PID) and cashier terminal.
 - (2) The cashier presses an invalid ticket button on the cashier terminal.
 - (a) A supervisor, alerted by the stolen ticket alarm, verifies that the transaction is a stolen ticket.
 - (3) The stolen ticket transaction is then processed as a lost ticket transaction.
 - (4) The system generates an exception ticket, which is retained with the stolen ticket for audit purposes.
 - (5) After payment is received, the transaction continues as a normal transaction.
- k) Exit with a Validation:
- (1) If after the patron interface device (PID) and the cashier terminal display the parking fee due a validation is inserted into the ticket slot, then the appropriate discount is applied to the parking fee due based on type of validation.
 - (2) The patron interface device (PID) and the cashier terminal displays update to show the reduced fee due.
 - (3) If the entire fee due is validated, then the barrier gate rises and the transaction continues as a normal transaction.
 - (4) If the validation does not satisfy the entire parking fee, the patron must present an acceptable form of payment and the transaction continues as a normal transaction.

D. Materials:

1. Dynamic Message Signage:
 - a. Provide dynamic message signage complying with the requirements specified in Section 10432, Exterior Electronic Message Signage.
2. Express Exit Stations:
 - a. At the locations indicated on the Contract Drawings, provide PC-based Express Exit Stations complying with the requirements specified in Section 11152, Express Exit Stations.
3. Fabricated Tollbooths:
 - a. Provide fabricated tollbooths complying with the requirements specified in Section 13135, Fabricated Tollbooths.

4. License Plate Recognition Cameras:
 - a. Provide license plate recognition cameras complying with the requirements specified in Section 11157, License Plate Recognition Cameras.
5. Loop Sensors:
 - a. Provide loop sensors complying with the requirements specified in Section 11154, Embedded Preformed Loop Sensors.
6. Parking Barrier Gates:
 - a. Provide new parking barrier gates complying with the requirements specified in Section 11155, Parking Barrier Gates.
7. Proximity Card Readers:
 - a. At the locations indicated on the Contract Drawings, provide proximity card readers and associated pedestals complying with the requirements specified in Section 11153, Proximity Card Readers.

2.03 SOURCE QUALITY CONTROL

- A. Tests and Inspections:
 1. Manufacturer's Tests:
 - a. Test Procedure:
 - 1) Prior to the start of installation, the parking control equipment must undergo the manufacturer's formal product testing.
 - 2) Maintain records of the manufacturers' performance, materials quality, and/or workmanship tests.
 - b. Acceptance Criteria:
 - 1) The parking control equipment must successfully pass the manufacturer's formal testing and quality assurance inspections to validate compliance with this Contract.
 - a) Prior to the start of installation, submit copies of the manufacturers' performance, materials quality, and/or workmanship test records to the Program/Project Manager for approval.
 2. Inspections:
 - a. The parking control equipment must undergo and pass the manufacturer's quality assurance inspections.
 - 1) Prior to the start of installation, submit copies of the manufacturers' quality assurance inspection records to the Program/Project Manager for approval.
- B. Non-Conforming Work:
 1. Should reliability become a problem at any time from the beginning of installation testing through the final operational test period, submit proof of

product reliability analysis and testing to the Program/Project Manager for approval

- a. Due to the importance of maintaining the system in an operational status and financial management, product reliability is of significant importance.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Verify that the areas to receive the parking control equipment have been properly prepared to receive the equipment.
- B. Evaluation and Assessment:
 1. Prior to installing the Work of this Section, verify that the work performed under Construction Package H03 related to installation of the parking control equipment provided under this Contract has been satisfactorily completed.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Maintain and protect traffic on active streets and roads in accordance with the requirements specified in Section 01555, Traffic Control.
- B. Surface Preparation:
 1. Properly level the areas to receive the fabricated tollbooths.
- C. Demolition/Removal:
 1. Remove, relocate, and reinstall the existing Parking Revenue Control System (PRCS) equipment as indicated on the Contract Drawings.

3.03 INSTALLATION

- A. Install and/or remove, relocate, and reinstall the parking control equipment at the locations and in accordance with the Phasing indicated on the Contract Drawings to provide fully functional and operational equipment integrated into the Phoenix Sky Harbor International Airport's Parking Revenue Control System (PRCS).
 1. Lane Arming Loops, License Plate Recognition (LPR) Trigger Loops, and Barrier Gate Closing Detectors:

- a. Install embedded preformed loop sensors to perform as lane arming loops, license plate recognition (LPR) trigger loops, and barrier gate closing detectors.
- B. Install the parking revenue control equipment in accordance with the manufactures instructions and recommendations.
 - 1. Submit the parking revenue control equipment manufacturers' instructions and recommendations not provided under other Sections for equipment to the Program/Project Manager for information.
- C. Entry Stations:
 - 1. At the locations indicated on the Contract Drawings, install PC-based entry lane equipment consisting of a lane status lights, ticket issuing machines (TIM) , loop sensors to perform as lane arming loops, license plate recognition (LPR) trigger loops, and barrier gate closing detectors, proximity card readers, parking barrier gates, and infrared license plate recognition cameras.
 - a. Entry Lane Vehicle Detection:
 - 1) Provide entry lane vehicle detectors capable of detecting vehicular presence, legal entry, illegal exit, and back-out.
 - b. Install the equipment indicated as Owner-furnished equipment to be relocated on the Contract Drawings.
 - c. Furnish and install the new equipment that is not indicated as Owner-furnished on the Contract Drawings.
- D. Express Exit Lanes:
 - 1. At the locations indicated on the Contract Drawings, provide dynamic message signs and PC-based express exit lane equipment consisting of express exit stations; loop sensors to perform as lane arming loops, license plate recognition (LPR) trigger loops, and barrier gate closing detectors; proximity card readers; parking barrier gates; and infrared license plate recognition cameras:
 - a. Exit Lane Vehicle Detection:
 - 1) Provide exit lane vehicle detectors capable of detecting vehicular presence, legal exit, illegal exit, and back-out.
 - b. Install the equipment indicated as Owner-furnished equipment to be relocated on the Contract Drawings.
 - c. Furnish and install the new equipment indicated as not Owner-furnished on the Contract Drawings.

E. Cashiered Exit Lanes:

1. At the locations indicated on the Contract Drawings, provide dynamic message signs and PC-based cashiered exit lane equipment consisting of cashier booths; cashier fee computers; universal card devices; loop sensors to perform as lane arming loops, license plate recognition (LPR) trigger loops, and barrier gate closing detectors; proximity card readers; parking barrier gates; patron interface devices (PID); and infrared license plate recognition cameras:
 - a. Exit Lane Vehicle Detection:
 - 1) Provide exit lane vehicle detectors capable of detecting vehicular presence, legal exit, illegal exit, and back-out.
 - b. Install the equipment indicated as Owner-furnished equipment to be relocated on the Contract Drawings.
 - c. Furnish and install the new equipment indicated as not Owner-furnished on the Contract Drawings.

F. ADA Cashiered Exit Lanes:

1. At the locations indicated on the Contract Drawings, provide dynamic message signs and PC-based ADA cashiered exit lane equipment consisting of cashier booths; cashier fee computers; universal card devices; loop sensors to perform as lane arming loops, license plate recognition (LPR) trigger loops, and barrier gate closing detectors; proximity card readers; parking barrier gates; and infrared license plate recognition cameras:
 - a. Exit Lane Vehicle Detection:
 - 1) Provide exit lane vehicle detectors capable of detecting vehicular presence, legal exit, illegal exit, and back-out.
 - b. Install the equipment indicated as Owner-furnished equipment to be relocated on the Contract Drawings.
 - c. Furnish and install the new equipment indicated as not Owner-furnished on the Contract Drawings.

G. Interface with Other Work:

1. Make the electrical and control connections required to provide complete and operational Parking Revenue Control System (PRCS).
 - a. Provide electrical and control conductors and cables complying with the requirements specified in Section 16120, Conductors and Cables, Section 16123, Control-Voltage Power Cables, Section 16712, Communications Backbone Cabling, and Section 16713, Communications Horizontal Cabling.

H. Systems Integration:

1. Integrate the parking revenue control equipment provided and/or installed under this Contract with the existing Parking Revenue Control System (PRCS) is in place at the Phoenix Sky Harbor International Airport.
 - a. Connect the status lights to the loop detector circuits.
 - b. Connect the ticket issuing machines (TIM) to the Parking Revenue Control System (PRCS) host server conductors.
 - c. Connect the cashier booths to the Parking Revenue Control System (PRCS) host server conductors.
 - d. Connect the cashier fee computers to the Parking Revenue Control System (PRCS) host server conductors.
 - e. Connect the universal card devices to the Parking Revenue Control System (PRCS) host server conductors.
 - f. Connect the express exit stations to the Parking Revenue Control System (PRCS) host server conductors.
 - g. Connect the express exit stations to the Parking Revenue Control System (PRCS) intercom system.
 - h. Connect the proximity card readers to the Parking Revenue Control System (PRCS) host server conductors.
 - i. Connect the license plate recognition cameras to the Parking Revenue Control System (PRCS) host server conductors.
 - 1) Install the license plate recognition software on the parking revenue control system (PRCS) host servers as required to provide the license plate inventory (LPI) as defined herein.
 - j. Connect the exterior dynamic message signs to the appropriate host server conductors.
 - 1) Install the exterior dynamic message sign software on the appropriate host servers or workstation as required to provide the functionality specified in Section 10432, Exterior Electronic Message Signage.
 - k. Make the control connections required to provide complete and operational parking barrier gate systems.

3.04 REPAIR/RESTORATION

- A. Repair or replace Parking Revenue Control System (PRCS) equipment and dynamic signs damaged during removal, salvage, transport, installation, and/or re-installation.
- B. Restore the areas where existing Parking Revenue Control System (PRCS) equipment has been removed, and leave these areas in a safe condition.
 1. De-energize abandoned power lines.

2. Fill open excavations.

3.05 RE-INSTALLATION

- A. Relocate and reinstall the salvaged Owner-furnished Parking Revenue Control System (PRCS) equipment on the Site at the locations shown and according to the Phasing information indicated on the Contract Drawings,.

3.06 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 1. Perform startup testing and inspections as specified in Article 3.07.
- B. Non-Conforming Work
 1. Parking Revenue Control System (PRCS) equipment that is not properly connected, and in working order, is unacceptable.
- C. Manufacturer Services:
 1. After installation of the parking revenue control equipment, arrange for technical personnel from the manufacturer to be onsite to verify that the equipment is functioning properly by testing the equipment.

3.07 SYSTEM STARTUP

- A. After all of the Parking Revenue Control System (PRCS) equipment, whether new or relocated, has been installed or reinstalled, startup the various completed systems to verify that the complete system is operational and functions as specified herein.
 1. Ensure that the Operation and Maintenance manuals for the equipment to be tested have been submitted to the Program/Project Manager prior to the testing.
- B. Perform the following startup testing, record all minor and major deviations, and submit the parking control equipment startup test records to the Program/Project manager for information:
 1. Lane Acceptance Test (LAT):
 - a. Test the Contractor's installed PRCS equipment at the lane level to ensure that the equipment meets the intent of the Contract as indicated in the operational sequences specified herein and revenue considerations.
 2. Operational Demonstration Test (ODT):
 - a. Test the fully installed Parking Revenue Control System (PRCS) to monitor the system during normal operating conditions to ensure the

system is functional over a defined period of time in a manner consistent with the intent of the Contract as indicated in the operational sequences specified herein and revenue considerations.

3.08 ADJUSTING

- A. Adjust noncompliant Parking Revenue Control System (PRCS) subsystems so the PRCS functions properly.

3.09 CLEANING

- A. Remove dirt and debris resulting from demolition and salvaging operations from the Site, and legally dispose of it.

3.10 PROTECTION

- A. Protect installed Parking Revenue Control System (PRCS) until it is placed into revenue service or until Final Completion, whichever comes first.

3.11 MAINTENANCE

- A. Emergency Services Maintenance:
 - 1. Operational Level Emergency Services Maintenance:
 - a. Ensure that the Owner's personnel have the operations and maintenance information to perform operational level emergency servicing of the parking control equipment.
 - 2. Technician Level Emergency Services Maintenance:
 - a. Provide technician level maintenance services to maintain the parking control equipment during emergency situations.
- B. Preventative Maintenance:
 - 1. Operational Level Preventative Maintenance:
 - a. Ensure that the Owner's personnel have the operations and maintenance information to perform operational level preventive maintenance of the parking control equipment.
 - 2. Technician Level Preventative Maintenance:
 - a. Provide technician level preventive maintenance services to maintain the parking control equipment.

SECTION 11152

EXPRESS EXIT STATIONS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for express exit stations.
- B. Products Installed But Not Supplied Under This Section:
 - 1. Existing express exit stations on the Site, and indicated to be relocated on the Contract Drawings, are to be removed, relocated, and reinstalled under this Contract at the locations shown on the Contract Drawings.
- C. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01555 - Traffic Control.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 11150 - Parking Control Equipment.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ISO: International Standards Organization.
 - 2. LAN: Local area network.
 - 3. LCIP: Lane control interface processor.
 - 4. LON: Local network.
 - 5. PC: Personal computer.
 - 6. PRCS: Parking revenue control system.
- B. Definitions:
 - 1. Emergency Services Maintenance: Those maintenance services that are performed in response to specific events, and are usually intended to return equipment or an application to an operational status following such an event.
 - 2. Express Exit Station or Express Exit Terminal or Exit Verifier: A PC-based PRCS device located in an express exit lane that facilitates multiple methods of exit from a parking facility, including ingesting and reading a magnetically encoded parking ticket, ingesting and reading a magnetically encoded access card or credit card, or reading a proximity access card or credit card fob via RFID.
 - a. The Exit Station uses the data from the inserted or detected media to validate exit privileges or calculate and process the associated parking fee.

- b. Fees can be paid via credit card, or exit is granted via access card or validated/pre-paid magnetically encoded ticket.
 - 3. Lane Control Interface Processor (LCIP): The processor used for communication between the parking revenue control system (PRCS) server and the lane equipment.
 - 4. Parking Revenue Control System (PRCS): A combination of equipment, software, subsystems, and supporting infrastructure that allows an entity to accurately calculate, collect, track, and report revenues for parking within one or more facilities.
 - a. A PRCS also monitors and controls ingress and egress to and from those facilities.
- C. Reference Standards:
 - 1. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
 - 2. International Electrotechnical Commission (IEC):
 - a. IEC 529 – Classification of Degrees of Protection by Enclosures.
 - 3. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code (NEC).
 - 4. Underwriters Laboratories, Inc. (UL):
 - a. UL Online Certifications Directory, <https://www.ul.com/ul-databases-and-directories/>.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate installation of the Work of this Section with the contractor performing the work under East Economy Lot Toll Plaza Construction Package C05, and with the Program/Project Manager.
 - 2. Coordinate the installation and functions of the express exit stations with the Parking Revenue Control System (PRCS) requirements, including server requirements.
- B. Sequencing:
 - 1. Perform the Work of this Section in accordance with the Phasing sequence indicated on the Contract Drawings.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Express exit stations.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Express exit station manufacturer's installation instructions and recommendations.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance manuals for each express exit station provided under this Section.
 - 2) Documentation that maintenance and repair service for the express exit stations is available for emergency situations.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Comply with the requirements specified in the Phoenix Building Construction Code and Amendments.

B. Certifications:

1. Provide UL-listed express exit stations.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver materials and equipment in a clean condition.
2. Inspect materials and equipment for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.

B. Storage and Handling Requirements:

1. Handle materials and equipment in accordance with the manufacturer's written instructions.
2. Follow the manufacturer's written instructions for storing the items.
3. Store the express exit stations under cover in heated warehouses or in enclosed buildings that provide protection from the weather on all sides and are equipped with auxiliary heat.

PART 2 PRODUCTS

2.01 OWNER-FURNISHED PRODUCTS

A. Existing Products:

1. Existing Owner-furnished express exit stations indicated in the Contract Documents to be removed, relocated, and reinstalled under this Contract are currently installed and functioning on the Site at the locations indicated on the Contract Drawings.

2.02 EQUIPMENT

A. Manufacturers:

1. Manufacturer List:
 - a. Scheidt & Bachmann, PL30/S Exit and Transit Controller, www.scheidt-bachmann.com.
 - b. Approved equal.
2. Substitution Limitations:
 - a. The use of trade names within the Contract Documents is intended to establish the basis of design and to illustrate the constructability and level of quality required.
 - b. The use of trade names is not intended to exclude other manufacturers whose products are equivalent to those named, subject to compliance with the Contract requirements.
3. Product Options:
 - a. Provide express exit stations including the following product options:
 - 1) Graphic color monitor with 5.7 inch, 1/4-VGA (320x240 Pixel).
 - 2) Audio output.
 - 3) Paint with P effect.
 - 4) Wiegand interface for third-party season parker card reader.
 - 5) Dry contacts, such as for roller gate control.
 - 6) Rain shielding as additional protection for the ticket tray.
 - 7) Cooling unit.
 - b. Product Data:
 - 1) Submit Product Data for the express exit stations proposed for the Work of this Section to the Program/Project Manager for approval, including a system description and an equipment list.

B. Regulatory Requirements:

1. Comply with the requirements specified in NFPA 70, the National Electrical Code.

C. Design Criteria:

1. Provide express exit stations designed for use outdoors as a ticket reader/validator, and having a PC-based lane control interface processor (LCIP) designed to control equipment component communications within the lane and to the parking revenue control system (PRCS) server.
 - a. In the event that network communication is lost, design the unit with the capability to perform the following stand-alone functions:
 - 1) Storing all transactional information for a minimum of 1,800 offline transactions.

- 2) Automatically shutting down in the event that the 1800 transaction threshold is reached and remaining closed until the reestablishment of online communications.
 - 3) Automatically uploading all stored transaction information to the parking revenue control system (PRCS) server once communication is restored.
 2. Magnetic Card Processing and Printer:
 - a. Provide a card terminal designed to accept and process parking tickets including ISO standard readable cards, magnetic stripe parking tickets, validations, and credit cards through a single slot that also has the capability to print a patron receipt and/or a credit card voucher that requires no signature.
 3. Cancel Button:
 - a. Provide a cancel button designed to allow a patron to cancel a transaction once a parking ticket has been inserted.
 4. Intercom:
 - a. Design the express exit station to have a ring-down, hands-free intercom integrated into the face of the unit.
 5. Operating Temperature:
 - a. Design the express exit stations to operate in the temperature range from minus 68 degrees Fahrenheit to 122 degrees Fahrenheit (minus 20 degrees Celsius to plus 50 degrees Celsius).
 6. Operating Humidity:
 - a. Design the express exit stations to operate in the range from 0 percent to 95 percent relative humidity.
 7. Power Supply:
 - a. Design the express exit stations to operate on a 120 Volt AC, 60 Hz single phase power supply.
- D. Materials:
 1. Housing:
 - a. Provide a stainless steel housing having a structure effect lacquer finish in a color selected by the Program/Project Manager.
 - b. International Protection:
 - 1) Provide an IPX3 rated enclosure complying with the requirements specified in IEC 529.
 2. Cooling Unit:
 - a. Provide an externally mounted cooling unit capable of protecting temperature sensitive internal components and maintaining optimal operating temperatures inside the express exit station housing.
 - b. Provide a cooling unit designed to be mounted on the housing.
 3. Computer and Control Unit:
 - a. For self-sufficient device control, provide an industrial personal computer (PC) having the following features:
 - 1) RS232 Serial Interfaces: 5.
 - 2) Inputs: 6 free binary inputs (including 2 x turnstile).

- 3) Outputs: 11 free binary outputs (including 2 x turnstile).
- b. Provide a computer capable of maintaining the basic functions of the device even in the case of network failure.
4. Display:
 - a. Provide an active color matrix display that is easily readable under all lighting conditions.
 - b. Provide an active color matrix display having a 6-inch minimum diagonal dimension.
 - c. Provide an alphanumeric display having 4 lines with 20 characters each.
5. Power Consumption:
 - a. Provide express exit stations consuming 60 VA to 120 VA for quiescent/working current and an additional 700 VA for heating/ventilation.
6. Connections:
 - a. Provide the following electrical/electronic connections for the express exit stations:
 - 1) Power supply.
 - 2) Network (LAN, LON).
 - 3) Intercom.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Verify that the area to receive each express exit station has been properly prepared to receive the equipment.
- B. Evaluation and Assessment:
 1. Do not install the express exit station equipment until the areas to receive the equipment are ready to receive the equipment.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Maintain and protect traffic on active streets and roads in accordance with the requirements specified in Section 01555, Traffic Control.
- B. Demolition / Removal:
 1. Remove and salvage existing express exit stations for relocation and reinstallation as indicated on the Contract Drawings.

3.03 INSTALLATION

- A. Install the express exit stations in accordance with the manufacturer's installation instructions and recommendations.

1. Submit the express exit station manufacturer's installation instructions and recommendations to the Program/Project Manager for information.
- B. Interface with Other Work:
 1. Connect the express exit stations to the electrical power supply.
- C. Systems Integration:
 1. Connect the express exit stations to the Parking Revenue Control System (PRCS) host server conductors.
 2. Connect the express exit stations to the Parking Revenue Control System (PRCS) intercom system.

3.04 RE-INSTALLATION

- A. Relocate and reinstall the Owner-furnished express exit stations on the Site at the locations shown on the Contract Drawings.

3.05 SYSTEM STARTUP

- A. Startup for express exit stations will be included in Parking Revenue Control System (PRCS) startup as specified in Section 11150, Parking Control Equipment.

3.06 PROTECTION

- A. Protect installed express exit stations until they are placed into revenue service or until Final Completion, whichever comes first.

3.07 MAINTENANCE

- A. Operation and Maintenance Manuals:
 1. Prepare operation and maintenance manuals for the express exit stations, including wiring diagrams.
 - a. Submit 2 copies of the operation and maintenance manuals for each product provided under this Section to the Program/Project Manager.
 - b. Submit 2 copies of the riser, layout, and special wiring diagrams to the Program/Project Manager showing any changes to the standard drawings.
- B. Maintenance and Repair Service:
 1. Verify that maintenance and repair service for the express exit stations is available for emergency situations.
 - a. Submit documentation that maintenance and repair service is available for emergency situations to the Program/Project Manager.

END OF SECTION

SECTION 11153

PROXIMITY CARD READERS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for 125 kHz proximity card readers for indoor and outdoor parking and access control applications.
- B. Products Installed But Not Supplied Under This Section:
 - 1. Existing Owner-furnished proximity card readers and their pedestals on the Site, and indicated to be relocated on the Contract Drawings, are to be removed, relocated, and reinstalled under this Contract at the locations shown on the Contract Drawings.
- C. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01555 - Traffic Control.
 - 3. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AVI: Automated vehicle identification.
 - 2. DIP: Dual In-line Package.
 - 3. PRCS: Parking revenue control system.
- B. Definitions:
 - 1. Automated Vehicle Identification (AVI): A technology whereby an RFID reader, focused on a specific drive lane, can detect and record passing vehicles that are equipped with an associated RFID transponder, such as a toll tag.
 - a. AVI technology can be integrated with other entry or exit lane equipment as a subsystem to the Parking Revenue Control System (PRCS).
 - 2. DIP Switches: A bank of miniature on-off switches mounted in computer hardware, such as on a circuit board or other device, and that holds configuration or setup information for that device. DIP switches are used to set the DMX address and mode of operation of electronic equipment.
 - 3. Keyfob: A plastic device, roughly the size of a car key, that works like a card having electronic circuitry that works with proximity card readers.
 - 4. Light Emitting Diode (LED): A type of light fixture commonly used for dynamic signage.

5. Radio Frequency Identification (RFID): The technology utilized by AVI systems and proximity card systems, for identifying a patron's credential.
 - a. An RFID system consists of an antenna, a transceiver which reads the radio frequency and transfers the information to a processing device, and a transponder, also called a tag which is an integrated circuit containing the RF circuitry and information to be transmitted.
6. Radio Frequency Interference/Electromagnetic Interference (RFI/EMI): Phenomena that occur when the radio frequency of the electromagnetic field of one device disrupts, degrades, or impedes another device.

C. Reference Standards:

1. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
2. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code (NEC).
3. Underwriters Laboratories, Inc. (UL):
 - a. UL Online Certifications Directory, <https://www.ul.com/ul-databases-and-directories/>.
 - b. UL 294 – Standard for Access Control System Units.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the installation and functions of the proximity card readers with the Phoenix Sky Harbor International Airport access requirements, including server requirements.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Proximity card readers.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) Proximity card reader test results.
 - b. Manufacturer's Instructions:
 - 1) Proximity card reader manufacturer's installation instructions and recommendations.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance manuals for each proximity card reader provided under this Section.
 - 2) Documentation that maintenance and repair service for the proximity card readers is available for emergency situations.
 - b. Warranty Documentation:
 - 1) Proximity card reader manufacturer's standard lifetime warranty.

1.05 QUALITY ASSURANCE

A. Regulatory Agency Sustainability Approvals:

1. Comply with the requirements specified in the Phoenix Building Construction Code and Amendments and NFPA 70.
2. Provide proximity card readers complying with the RFI/EMI certification requirements of the Federal Communications Commission (FCC).

B. Certifications:

1. Provide proximity card readers complying with the requirements specified in UL 294, and UL-listed.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver materials and equipment in a clean condition.
2. Inspect materials and equipment for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.

B. Storage and Handling Requirements:

1. Handle materials and equipment in accordance with the manufacturer's written instructions.
2. Follow the manufacturer's written instructions for storing the items.
3. Store the proximity card readers under cover in heated warehouses or in enclosed buildings that provide protection from the weather on all sides and are equipped with auxiliary heat.

1.07 WARRANTY

A. Manufacturer Warranty:

1. Provide the proximity card reader manufacturer's standard lifetime warranty against defects in materials and workmanship.
2. Submit the proximity card reader manufacturer's standard lifetime warranty to the Program/Project Manager.

PART 2 PRODUCTS

2.01 OWNER-FURNISHED PRODUCTS

- A. Existing Products:
 - 1. Existing Owner-furnished proximity card readers and their pedestals indicated in the Contract Documents to be removed, relocated, and reinstalled under this Contract are currently installed and functioning on the Site at the locations indicated on the Contract Drawings.

2.02 EQUIPMENT

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. HID Global, an ASSA ABLOY Group brand, MaxiProx 5375, www.hidglobal.com
 - b. Approved equal.
 - 2. Substitution Limitations:
 - a. The use of trade names within the Contract Documents is intended to establish the basis of design and to illustrate the constructability and level of quality required.
 - b. The use of trade names is not intended to exclude other manufacturers whose products are equivalent to those named, subject to compliance with the Contract requirements.
 - 3. Product Options:
 - a. Product Data:
 - 1) Submit Product Data for the proximity card readers proposed for the Work of this Section to the Program/Project Manager for approval, including a system description and an equipment list.
- B. Performance:
 - 1. Provide proximity card readers capable of read range distances of up to 20 inches, and allowing read ranges to be maintained within 4 inches of metal.
 - 2. Baud Rates:
 - a. Provide proximity card readers having serial interfaces capable of supporting baud rates of 1200, 2400, 4800, and 9600 baud.
 - 3. Provide proximity card readers capable of recognizing card formats up to 85 bits.
- C. Design Criteria:
 - 1. Provide self-contained proximity card readers designed read properly configured cards manufactured by HID Global, designed to connect to a loop detector to ensure accurate detection of vehicles in vehicle lanes, and designed to have internal or host control of a multicolor LED and beeper.

- a. Provide internal DIP switches and jumpers capable of configuring the outputs, audible tone, and LED control options.
 2. Outputs:
 - a. Provide configurable open collector data outputs for providing data to the host server and/or parking control equipment.
 3. Transmit Frequency:
 - a. Provide proximity card readers designed to transmit at a frequency of 125 kilohertz.
 4. Operating Temperature:
 - a. Provide proximity card readers designed to operate in the temperature range from minus 22 degrees Fahrenheit to 150 degrees Fahrenheit.
 5. Operating Humidity:
 - a. Provide proximity card readers designed to operate in the range from 0 percent to 95 percent relative humidity.
 6. Access Protocol Systems:
 - a. Provide proximity card readers capable of interfacing with the following existing access protocol systems selectable in the field via configurable DIP switches and jumpers:
 - 1) Wiegand.
 - 2) Clock-and Data.
 - 3) RS-232.
 - 4) RS-422.
 - 5) RS-485.
 7. Security:
 - a. Provide proximity card readers having a tamper switch designed to provide electronic notification of reader tampering to the host server when the enclosure is opened.
- D. Operation:
 1. Operation Sequences:
 - a. When the proximity card reader is powered up, an internal self-test routine is initiated to check and verify the setup configuration, to determine the interior or external control of the LED and beeper, and to initialize the reader's operation.
 - b. When a proximity card (transponder) is presented to the proximity card reader, the red LED flashes green for approximately 250 milliseconds (unless under host control), a beeper sounds, and appropriate electronic outputs are generated as indicated in Section 11150, Parking Control Equipment.
 - c. After the LED returns to red, the proximity card reader is reset and ready to read another proximity card (transponder).
- E. Materials:
 1. Enclosure:

- a. Provide a rugged, vandal-resistant, weatherproof two-piece polycarbonate proximity card reader enclosure designed to withstand harsh environments.
 - 1) Provide O-ring gasket to weather seal the enclosure together, and a cable fitting to seal the cable entry.
 - 2) Provide an enclosure mountable on a single gang electrical box.
 - b. Provide a pedestal for supporting the enclosure.
2. Pedestal:
 - a. Provide a mounting pedestal designed for mounting the enclosure.
3. Power Supply:
 - a. Provide a linear regulated power supply configurable to either 12 or 24 Volts DC, and rated at 2.0 Amperes.
 - 1) Do not provide switching type supplies.
 - b. Current Requirements:
 - 1) 12-Volt DC Supply:
 - a) Average Current: 200 milliamperes.
 - b) Peak Current: 700 milliamperes.
 - 2) 24-Volt DC Supply:
 - a) Average Current: 260 milliamperes.
 - b) Peak Current: 1.2 Amperes.
4. User Feedback:
 - a. Provide a bi-color LED and audible tone beeper.
 - b. The beeper may either be controlled internally or by the host server.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Verify that the area to receive each proximity card reader has been properly prepared to receive the equipment.
- B. Evaluation and Assessment:
 1. Do not install the proximity card reader equipment until the areas to receive the equipment are ready to receive the equipment.
 2. Avoid mounting areas having radio frequency interference/electromagnetic interference (RFI/EMI) whenever possible.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 1. Maintain and protect traffic on active streets and roads in accordance with the requirements specified in Section 01555, Traffic Control.
- B. Demolition/Removal:

1. Remove and salvage existing proximity card readers for relocation and reinstallation as indicated on the Contract Drawings.

3.03 INSTALLATION

- A. Install the proximity card readers in accordance with the manufacturer's installation instructions and recommendations.
 1. Mount the proximity card readers at least 4 inches away from metallic surfaces 12 inches by 12 inches and larger using non-metal spacers if required.
 2. Do not provide metallic fasteners larger than a number 6 screw.
 3. Submit the proximity card reader manufacturer's installation instructions and recommendations to the Program/Project Manager for information.
- B. Provide an electrical box and mounting pedestal to mount the proximity card reader adjacent to the other lane equipment as shown on the Contract Drawings.
- C. Interface with Other Work:
 1. Connect the proximity card reader power input to an external DC power supply.
 - a. If 5-conductor cable is provided, the power supply and host server must have a common ground.
- D. Systems Integration:
 1. Connect the proximity card readers to the Phoenix Sky Harbor International Airport access host server conductors.
 - a. For Wiegand interface cable, the maximum length is 500 feet.
 - b. For RS232 interface cable, the maximum length is 50 feet.
 - c. For RS422 interface cable, the maximum length is 4000 feet.

3.04 RE-INSTALLATION

- A. Relocate and reinstall the Owner-furnished proximity card reader on the Site at the locations shown on the Contract Drawings.

3.05 SITE QUALITY CONTROL

- A. Site Tests and Inspections:
 1. Reader Tests:
 - a. Test Procedure:
 - 1) Perform the testing recommended by the manufacturer in the manufacturer's installation guide.
 - 2) Record and submit proximity card reader test results to the Program/Project Manager for information.
 - b. Acceptance Criteria:

- 1) Installed proximity card readers complying with the acceptance requirements of the manufacturer are acceptable.

B. Non-Conforming Work

1. Proximity card reader components and accessories that are not properly connected, and in working order, are unacceptable.

3.06 ADJUSTING

- A. Once each proximity card reader is mounted, tune the reader for best performance.

1. The two antennas furnished with the proximity card readers, one to generate the excite field and the other to receive card transmission data, must be “nulled” to keep them from interfering with each other.

3.07 PROTECTION

- A. Protect installed proximity card readers until they are placed into revenue service or until Final Completion, whichever comes first.

3.08 MAINTENANCE

- A. Operation and Maintenance Manuals:

1. Prepare operation and maintenance manuals for the proximity card readers, including wiring diagrams.
 - a. Submit 2 copies of the operation and maintenance manuals for each product provided under this Section to the Program/Project Manager.
 - b. Submit 2 copies of the riser, layout, and special wiring diagrams to the Program/Project Manager showing any changes to the standard drawings.

- B. Maintenance and Repair Service:

1. Verify that maintenance and repair service for the proximity card readers is available for emergency services maintenance during emergency situations.
 - a. Submit documentation that maintenance and repair service is available for emergency situations to the Program/Project Manager.

END OF SECTION

REV. NO.	REV. DATE	RFC/CN/CO	Section(s) Affected	Comments
0	12/01/2017	N/A	All	First edition.

SECTION 11154

EMBEDDED PREFORMED LOOP SENSORS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for providing embedded preformed loop sensors for the access control equipment at the locations indicated on the Contract Drawings.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01555 - Traffic Control.

1.02 SUBMITTALS

- A. Action Submittals:
 - 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Loop detectors.
- B. Informational Submittals:
 - 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Manufacturer's loop detector preparation instructions and recommendations.
 - 2) Manufacturer's loop detector installation instructions.

1.03 DELIVERY, STORAGE, AND HANDLING

- A. Storage and Handling Requirements:
 - 1. Store and handle the preformed loop sensors in accordance with the manufacturer's loop detector storage and handling requirements and recommendations.
 - a. Submit manufacturer's loop detector storage and handling requirements and recommendations to the Program/Project Manager for information.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Never-Fail Loop Systems, Inc., Model C, www.neverfail.com.
 - b. Approved equal.
- B. Substitution Limitations:
 - 1. The products specified establish standards for kind, quality, and function desired for this Contract.
 - 2. The use of a manufacturer's proprietary product name to designate materials is not intended to imply that the products named are required to be used to the exclusion of equivalent products of other manufacturers.
 - 3. Submit the manufacturer's material data and certificates of performance for proposed substitutions.
- C. Product Options:
 - 1. Submit the manufacturer's Product Data for each type of product indicated and provided.
- D. Performance:
 - 1. Provide inductive loop sensors installed in embedded conduits, and capable of detecting vehicular presence.
 - 2. Lead-In Flex Hose Strength:
 - a. Provide lead-in flex hoses capable of withstanding 250 psi without failure.
- E. Design Criteria:
 - 1. Provide preformed loop detectors compatible with the access control systems for which they will be integrated.
 - 2. Provide preformed loop detectors designed for installation in concrete, concrete overlay, or bridge decks.
- F. Materials:
 - 1. Loop Detectors:
 - a. Provide preformed, un-spliced loop detectors consisting of copper loop wires sealed in rubber asphalt filled polypropylene conduit.
 - 1) Loop Size:
 - a) Provide rectangular loops 6 feet long by 2 feet 6 inches wide.
 - 2) Conduit Nominal Sizes:
 - a) Provide 3/8-inch and 5/8-inch conduit.
 - 3) Wire:
 - a) Provide 16-gauge TFFN or THHN stranded single conductor wire with PVC insulation and a nylon exterior jacket.

- b) Provide loops having one continuous wire through the loop head, 5 wire turns, and the lead-in to prevent malfunctions due to splicing.
 - b. Lead-Ins:
 - 1) Encase the lead-in wire in a non-conductive flex hose consisting of seamless extruded polyester fiber braid reinforcement and a non-conductive, seamless extruded urethane non-perforated jacket.
 - 2) Completely fill the lead-in hose with hot rubberized asphalt.
 - 3) Twist the lead-in wire in the flex hoses minimum of 3 turns per foot for the entire length of the lead-in.
 - c. Expansion/Contraction Joints:
 - 1) To allow for movement of the pavement and to prevent breakage of the wire and/or conduit due to this movement, provide expansion/contraction joints at intervals along the loop.
 - 2) Expansion/Contraction Joint Length: 9 inches.
 - d. Lead-In/Loop Head Connections:
 - 1) Attach lead-ins to the loop heads using a schedule 80 CPVC tee.
- G. Fabrication:
 - 1. Factory Assembly:
 - a. Fill the conduit encasing the wire with hot rubberized asphalt which allows the wire loop to remain flexible once the asphalt cools, prevents incursion of moisture, and sets the turns of wire firmly in place.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Unfold the preformed loop sensor, and verify the loop and lead-in dimensions.
- B. Pre-Installation Testing:
 - 1. Test the preformed loop sensor prior to installation to verify that it has not been damaged.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Maintain and protect traffic on active streets and roads in accordance with the requirements specified in Section 01555, Traffic Control.
- B. Demolition / Removal:
 - 1. If installing loops in existing concrete/asphalt subbase, provide channels or grooves in the subbase properly sized to receive the loops.

3.03 INSTALLATION

- A. Install the embedded preformed loop sensors in accordance with the manufacturer's instructions and recommendations.
 - 1. Submit manufacturer's instructions and recommendations to the Program/Project Manager for information, including at a minimum the following:
 - a. Manufacturer's loop detector preparation instructions and recommendations.
 - b. Manufacturer's loop detector installation instructions.
- B. Lay out the loop on the surface or rebar in the future slab.
- C. Slide sleeves over the expansion/contraction joints, and secure the sleeves to the loop using electrical tape to prevent premature movement of the sleeves during the subsequent concrete pour.
- D. Install the loops prior to laying pavement.
 - 1. Secure the loops directly on top of the reinforcing steel using ty raps.
 - 2. Secure the lead-in underneath the reinforcing steel using ty raps.
- E. Systems Integration:
 - 1. Connect the lead-in to the appropriate system as indicated in the Contract Documents.

3.04 PROTECTION

- A. Avoid contact between the loops and installation equipment.

END OF SECTION

SECTION 11155

PARKING BARRIER GATES

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for parking barrier gates and controllers.
- B. Products Installed But Not Supplied Under This Section:
 - 1. Existing parking barrier gate equipment on the Site, and indicated to be relocated on the Contract Drawings, is to be removed, relocated, and reinstalled under this Contract at the locations shown on the Contract Drawings.
- C. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01555 - Traffic Control.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 16075 - Electrical Identification.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. A/D: Analog-to-digital.
 - 2. PRCS: Parking revenue control system.
 - 3. SPC: Statistical process control.
- B. Definitions:
 - 1. Emergency Services Maintenance: Those maintenance services that are performed in response to specific events, and are usually intended to return equipment or an application to an operational status following such an event.
- C. Reference Standards:
 - 1. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code (NEC).

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:

1. Coordinate installation of the Work of this Section with the contractor performing the work under East Economy Lot Toll Plaza Construction Package C05, and with the Program/Project Manager.

B. Sequencing:

1. Perform the Work of this Section in accordance with the Phasing sequence indicated on the Contract Drawings.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Parking barrier gate equipment.
 - b. Shop Drawings:
 - 1) Parking barrier gate equipment.
 - c. Qualification Statements:
 - 1) Parking gate installer's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Manufacturer's parking barrier gate equipment preparation instructions and recommendations.
 - 2) Manufacturer's parking barrier gate equipment storage and handling requirements and recommendations.
 - 3) Manufacturer's parking barrier gate equipment installation methods.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance manuals for each parking barrier gate provided under this Section.
 - 2) Documentation that maintenance and repair service for the parking barrier gates is available for emergency situations.
 - b. Warranty Documentation:

- 1) Parking Barrier Gate Equipment Warranty.
- c. Record Documentation:
 - 1) Automatic gate fire permit.
 - 2) Automatic gate electrical permit.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 - 1. City of Phoenix Fire Department Requirements:
 - a. Obtain a fire permit from the City of Phoenix Fire Department, pay the permit fees, and submit copies of the permit to the Program/Project Manager for information.
 - 2. City of Phoenix Development Services Department Requirements:
 - a. Obtain a separate electrical permit from the City of Phoenix Development Services Department for each automatic vehicle parking barrier gate, pay the permit fees, and submit copies of the permit to the Program/Project Manager for information.
- B. Qualifications:
 - 1. Parking Gate Installer Qualifications:
 - a. Employ a factory-authorized parking gate installer trained to install gates and operation systems of the type specified under this Contract.
 - b. Submit the parking gate installer's qualifications, including a qualification statement from manufacturer, to the Program/Project Manager for approval.
- C. Certifications:
 - 1. Provide products that are listed and labeled by Underwriters Laboratory, for the location installed in, and listed and labeled or approved for the application intended as indicated or specified, unless products meeting the requirements of this testing laboratory are not readily available, or unless standards do not exist for the products.
 - a. Provide products that are approved, listed, and labeled for the short circuit currents, voltages, and currents indicated or specified to be applied.
 - 2. Submit evidence of testing agency/quality verification, listing, and labeling for each product with the submitted Product Data, either by providing a printed mark on the data or by attaching a separate listing card.
 - a. For items without such evidence, submit a written statement from the product manufacturer that indicates why it does not have quality assurance verification.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Storage and Handling Requirements:

1. Store and handle parking barrier gate equipment in accordance with the manufacturer's requirements and recommendations.
 - a. Submit the parking barrier gate equipment manufacturer's storage and handling requirements and recommendations for each product provided to the Program/Project Manager for information.

1.07 WARRANTY

A. Manufacturer Warranty:

1. Warrant the parking barrier gate equipment materials or workmanship in accordance with the manufacturer's standard warranty.
 - a. Submit a written Parking Barrier Gate Equipment Warranty on the manufacturer's standard form in which the manufacturer agrees to repair or replace components of manufactured parking barrier gate equipment that fail in materials or workmanship within specified warranty period to the Program/Project Manager for approval.
 - b. Have the manufacturer's standard form signed by the Contractor and manufacturer.

PART 2 PRODUCTS

2.01 OWNER-FURNISHED PRODUCTS

A. Existing Products:

1. Existing Owner-furnished parking barrier gate equipment indicated in the Contract Documents to be removed, relocated, and reinstalled under this Contract is currently installed and functioning on the Site at the locations indicated on the Contract Drawings.

2.02 EQUIPMENT

A. Manufacturers:

1. Manufacturer List:
 - a. Scheidt & Bachmann, www.scheidt-bachmann.com.
 - b. Approved equal.
2. Substitution Limitations:
 - a. The use of trade names within the Contract Documents is intended to establish the basis of design and to illustrate the constructability and level of quality required.

- b. The use of trade names is not intended to exclude other manufacturers whose products are equivalent to those named, subject to compliance with the Contract requirements.
- 3. Product Options:
 - a. Provide parking barrier gate equipment having the following product options:
 - 1) "Barrier Open" function in case of power failure.
 - 2) Auto-reverse function upon detection of an obstruction.
 - 3) Statistical process control (SPC) module for special functions.
 - 4) Key-operated switch.
 - 1) Non-resettable gate movement counter.
 - b. Product Data:
 - 1) Submit Product Data for the parking barrier gate equipment proposed for the Work of this Section to the Program/Project Manager for approval, including a system description and an equipment list.

B. Description:

- 1. Regulatory Requirements:
 - a. Comply with the requirements of the City of Phoenix Fire Department regarding automatic vehicle access gates.

C. Performance:

- 1. Opening and Closing Criteria:
 - a. Provide parking barrier arms that open or clear in approximately 2 seconds.
 - b. Provide parking barrier gates complying with the following minimum opening and closing criteria:
 - 1) Open from 0 degrees to 80 degrees in approximately 1.2 seconds.
 - 2) Open from 0 degrees to 90 degrees in approximately 2.3 seconds.
 - 3) Close from 90 degrees to 25 degrees in approximately 1.2 seconds.
 - 4) Close from 90 degrees to 0 degrees in approximately 2.4 seconds.
- 2. Operating Temperature Range:
 - a. Provide parking barrier gates capable of operating within a temperature range from minus 4 degrees Fahrenheit (minus 20 degrees Celsius) to plus 122 degrees Fahrenheit (plus 50 degrees Celsius).

3. Operating Humidity Range:
 - a. Provide parking barrier gates capable of operating within a humidity range from plus or minus 0 percent to 95 percent.

D. Design Criteria:

1. Provide parking barrier gate equipment designed for exterior applications, and that are capable of accepting vehicle detection signals from loop detectors and other detection equipment that activate the gate's barrier beam.
2. Provide parking barrier gate equipment designed to be powered from an individual 20 Ampere minimum branch-circuit run to each gate.
 - a. Provide a minimum 3/4-inch raceway for the branch-circuit wiring.
3. Design the parking barrier gate to have a micro-switch that provides recognition of broken barrier beam shafts.
4. Shop Drawings:
 - a. Prepare Shop Drawings, including wiring diagrams, showing installation of the parking barrier gate equipment, and submit the Shop Drawings to the Program/Project Manager for approval.

E. Operation:

1. Operators:
 - a. Provide a barrier gate operator for each unit provided and capable of raising and lowering the swing-up barrier beam associated with the unit as specified herein.
 - 1) Provide an Analog/Digital (A/D) converter capable of facilitating degree-exact positioning of the barrier beam.
 - b. Motor:
 - 1) Provide a 1330 rpm, three-phase motor with integrated internal overload protection.
 - c. Power Supply:
 - 1) Provide equipment capable of operating on a 120 Volt, 60 Hertz power supply.
2. Controls:
 - a. Control and Acknowledge Signals:
 - 1) Provide controls capable of generating the following control and acknowledge signals:
 - a) Control Signals (Inputs):
 - (1) Open barrier.
 - (2) Closed barrier.
 - b) Acknowledge Signals (Outputs):
 - (1) Barrier beam broken.
 - (2) Barrier beam in final position "open".

- (3) Barrier beam in final position “closed”.
- b. Knox Key Switch:
 - 1) For each automatic gate, provide a City of Phoenix approved Knox key switch capable of allowing the Fire Department 24-hour access to the Site, and located 5-1/2 feet above grade on both entrance and exit sides of the gate.
- c. Emergency Gate Switch and Battery Backup:
 - 1) Install an emergency gate switch on both entrance and exit gates.
 - 2) The emergency gate switch must bypass all free access loop systems.
- 3. Operation Sequences:
 - 1) Under normal operating conditions the gate remains closed until either an “open barrier” signal activates the gate or the emergency gate switch is activated.
 - 2) Once the Knox key switch has activated the parking barrier gate, the gate must open and remain in the open position until deactivated by the Fire Department.
 - a) Only when the Knox key switch has been deactivated can the gate resume normal operation.

F. Materials:

- 1. Barrier Beam:
 - a. Provide a straight barrier beam having the following features:
 - 1) Profile: Octagonal.
 - 2) Length: 9.83 feet (3.00m).
 - 3) Color Scheme: Red/white.
- 2. Cabinet Housing:
 - a. Provide a stainless steel cabinet with a baked-on powder coat finish having a color selected by the Owner.
- 3. Fire Department Sign:
 - a. Provide a 0.080 thick aluminum sign, 8 inches wide and 4 inches high with rounded corners, and having a white reflective sheeting sign face.
 - 1) Apply DG3 4090 series or equivalent diamond grade reflective sheeting as manufactured by 3M Corporation to the aluminum plate as a background.
 - b. Provide an inverse legend that allows the reflective sheeting underneath to show through, and reading “FD ACCESS”.
 - 1) Apply inverse legends that are either cut from red 1172 series 3M Scotchlite acrylic, transparent, electronic cuttable film, or screen-printed using traffic sign red 3M Corporation 8801 or 880-00 series translucent ink.

PART 3 EXECUTION

3.01 OWNER-FURNISHED PRODUCTS

- A. Existing Products:
 - 1. Existing Owner-furnished parking barrier gates indicated in the Contract Documents to be removed, relocated, and reinstalled under this Contract are currently installed and functioning on the Site at the locations indicated on the Contract Drawings.

3.02 EXAMINATION

- A. Verification of Conditions:
 - 1. Examine the concrete pad(s) to receive the parking barrier gate equipment to verify they are ready to receive the equipment.
- B. Evaluation and Assessment:
 - 1. Do not install the parking barrier gate equipment until the areas to receive the equipment are ready to receive the equipment.
 - 2. Examine existing parking barrier gate equipment to be relocated and reinstalled as indicated on the Contract Drawings to verify that it is in a condition acceptable for reinstallation.

3.03 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Maintain and protect traffic on active streets and roads in accordance with the requirements specified in Section 01555, Traffic Control.
- B. Surface Preparation:
 - 1. Prior to installing parking barrier gate equipment, thoroughly clean the surfaces of the concrete pad(s) to receive the equipment.
 - 2. Prepare the surfaces using the methods recommended by the manufacturer.
 - a. Submit the parking barrier gate equipment manufacturer's preparation instructions and recommendations for each product provided to the Program/Project Manager for information.
 - 3. Do not begin installation of the parking barrier gate equipment until the substrates have been properly prepared.

C. Demolition/Removal:

1. Remove and salvage existing parking barrier gate equipment for relocation and reinstallation as indicated on the Contract Drawings.

3.04 INSTALLATION

1. Install the parking barrier gate equipment in accordance with manufacturer's instructions.
 - a. Submit the manufacturer's installation methods for each product provided to the Program/Project Manager for information.
2. Mount the parking barrier gate equipment directly to the concrete pad(s), plumb, level, and firmly secured.
3. Wire the parking barrier gate equipment in accordance with the requirements specified in NFPA 70, the National Electric Code.
 - a. Enclose splices in easily accessible junction boxes, or provide terminal boards.
 - b. Tag and identify the cable runs in the junction boxes in accordance with the requirements specified in Section 16075, Electrical Identification.

B. Interface with Other Work:

1. Make the electrical and control connections required to provide complete and operational parking barrier gate systems.

3.05 REPAIR/RESTORATION

- A. Touch-up or repair parking barrier gate equipment damaged before Final Completion, or replace the damaged equipment with new undamaged equipment.

3.06 RE-INSTALLATION

- A. Relocate and reinstall the Owner-furnished parking barrier gate equipment on the Site at the locations shown on the Contract Drawings.

3.07 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. Site Tests:
 - a. Parking Barrier Gate Systems Test:
 - 1) Test Procedure:

- a) Test the parking barrier gate systems to assure the components and accessories are properly connected and in working order.
 - 2) Acceptance Criteria:
 - a) Properly functioning parking barrier gate equipment is acceptable.
- 2. Inspections:
 - a. City of Phoenix Development Services Department Inspection:
 - 1) Prior to the final inspection for the parking barrier gates by the City of Phoenix Fire Department, have the Development Services Department inspect the depths of the conduit for gate operators and the Knox key switches in order to obtain a “rough electrical green tag” that reads “Underground Electric for Gates”.
 - 2) After gate installation and modifications are completed, have the Development Services Department perform a final electrical inspection of the gate operators in order to obtain an electrical green tag that reads “Final Electrical for Gates”.
 - b. *City of Phoenix Fire Department Inspection:*
 - 1) *Prior to the final gate inspection by the City of Phoenix Fire Department, obtain the electrical green tag for the gate operators.*
 - 2) *Ensure that stamped plans approved by the City of Phoenix Fire Department and the required permits are onsite at the time of the final gate field inspection by the City of Phoenix Fire Department.*
 - 3) *After gate installation and modifications are completed, have the Fire Department perform a final inspection of the gates.*
- B. Non-Conforming Work:
 - 1. Parking barrier gate components and accessories that are not properly connected, and in working order, are unacceptable.

3.08 ADJUSTING

- A. Make adjustments to non-conforming Work to assure the components and accessories are properly connected and in working order.

3.09 PROTECTION

- A. Protect installed parking barrier gate equipment until it is placed into revenue service or until Final Completion, whichever comes first.

3.10 MAINTENANCE

- A. Operation and Maintenance Manuals:

1. Prepare operation and maintenance manuals for the parking barrier gate equipment, including wiring diagrams.
 - a. Submit 2 copies of the operation and maintenance manuals for each product provided under this Section to the Program/Project Manager.
 - b. Submit 2 copies of the riser, layout, and special wiring diagrams to the Program/Project Manager showing any changes to the standard drawings.
- B. Maintenance and Repair Service:
 1. Verify that maintenance and repair service for the parking barrier gate equipment is available for emergency services maintenance during emergency situations.
 - a. Submit documentation that maintenance and repair service is available for emergency situations to the Program/Project Manager.

END OF SECTION

REV. NO.	REV. DATE	RFC/CN/CO	Section(s) Affected	Comments

SECTION 11157

LICENSE PLATE RECOGNITION CAMERAS

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for infrared license plate recognition cameras and software.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01555 - Traffic Control.
 - 3. Section 01780 - Closeout Submittals.
 - 4. Section 11150 - Parking Control Equipment.
 - 5. Section 11154 - Embedded Preformed Loop Sensors.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. ALPR: Automatic license plate recognition.
 - 2. ANPR: Automatic number plate recognition.
 - 3. AVI: Automated vehicle identification.
 - 4. CCD: Charged coupled device.
 - 5. CPR: Car plate recognition.
 - 6. TVL: Television lines.
 - 7. IR: Infrared wavelength.
 - 8. LED: Light emitting diode.
 - 9. LPI: License plate inventory.
 - 10. LPN: License plate number.
 - 11. LPR: License plate recognition.
 - 12. PRCS: Parking revenue control system.
 - 13. RFID: Radio frequency identification.
- B. Definitions:
 - 1. Automated Vehicle Identification (AVI): A technology whereby an RFID reader, focused on a specific drive lane, can detect and record passing vehicles that are equipped with an associated RFID transponder, such as a toll tag.
 - a. The term automated vehicle identification (AVI) is also sometimes used interchangeably with the term automatic number plate recognition (ANPR) to indicate a surveillance method to read the license plates on vehicles, but has the definition above under this Contract.

2. Automatic Number Plate Recognition (ANPR): A mass surveillance method that uses optical character recognition on images to read the license plates on vehicles.
 - a. ANPR is also referred to by other terminology including automatic license plate recognition (ALPR), automated vehicle identification (AVI), car plate recognition (CPR), and license plate recognition (LPR).
3. Charged Coupled Device (CCD): A light-sensitive image device used in many digital cameras consisting of a large integrated circuit that contains hundreds of thousands of photo-sites (pixels) that convert light energy into electronic signals.
 - a. Its size is measured diagonally, and can be 1/4 inch, 1/3 inch, 1/2 inch, or 2/3 inch.
4. Emergency Services Maintenance: Those maintenance services that are performed in response to specific events, and are usually intended to return equipment or an application to an operational status following such an event.
5. License Plate Inventory (LPI): A combination of manual or automated processes that result in the accurate collection of the license plate numbers of all vehicles parked within a facility at the time the inventory is performed; a subsystem to a PRCS.
6. Parking Revenue Control System (PRCS): A combination of equipment, software, subsystems, and supporting infrastructure that allows an entity to accurately calculate, collect, track, and report revenues for parking within one or more facilities.
 - a. A PRCS also monitors and controls ingress and egress to and from those facilities.
7. Pixel: Short for picture element, a single point in a graphic image.
 - a. Graphics monitors display pictures by dividing the display screen into a large number of pixels arranged in rows and columns that are so close together that the pixels appear to be connected to form a continuous image.
8. Television Lines (TVL): A measure of image resolution, usually given in horizontal lines, and approximated by multiplying the number of pixels by 0.7.

C. Reference Standards:

1. City of Phoenix (COP):
 - a. Phoenix Building Construction Code and Amendments.
2. National Fire Protection Association (NFPA):
 - a. NFPA 70 – National Electrical Code (NEC).

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the installation and functions of the each license plate recognition cameras with the Parking Revenue Control System (PRCS) requirements, including server requirements.

B. Sequencing:

1. Perform the Work of this Section in accordance with the Phasing sequence indicated on the Contract Drawings.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) License plate recognition cameras and accessories.
 - b. Shop Drawings:
 - 1) License plate recognition cameras and accessories.
 - c. Qualification Statements:
 - 1) License plate recognition camera installer's qualifications.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Test and Evaluation Reports:
 - 1) License plate recognition camera test results.
 - b. Manufacturer's Instructions:
 - 1) License plate recognition camera manufacturer's installation instructions and recommendations.
 - 2) License plate recognition camera manufacturer's preparation instructions and recommendations.
 - 3) License plate recognition camera manufacturer's storage and handling requirements and recommendations.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and maintenance manuals for each license plate recognition camera product provided under this Section.
 - 2) Documentation that maintenance and repair service for the license plate recognition cameras is available for emergency situations.
 - b. Warranty Documentation:

- 1) License plate recognition camera manufacturer's standard warranty.
- c. Software:
 - 1) Backup copies of the license plate recognition software.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 1. Comply with the requirements specified in the Phoenix Building Construction Code and Amendments and NFPA 70.
- B. Qualifications:
 1. License Plate Recognition Camera Installer Qualifications:
 - a. Employ a factory-authorized license plate recognition camera installer trained to install license plate recognition camera systems of the type specified under this Contract.
 - b. Submit the license plate recognition camera installer's qualifications, including a qualification statement from manufacturer, to the Program/Project Manager for approval.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Delivery and Acceptance Requirements:
 1. Deliver materials and equipment in a clean condition.
 2. Inspect materials and equipment for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.
- B. Storage and Handling Requirements:
 1. Store and handle license plate recognition camera equipment in accordance with the manufacturer's requirements and recommendations.
 - a. Submit the license plate recognition camera manufacturer's requirements and recommendations to the Program/Project Manager for information.
 2. Store the license plate recognition cameras and accessories under cover in heated warehouses or in enclosed buildings that provide protection from the weather on all sides and are equipped with auxiliary heat.

1.07 WARRANTY

- A. Manufacturer Warranty:
 1. Provide the license plate recognition camera manufacturer's standard warranty against defects in materials and workmanship.
 2. Submit the license plate recognition camera manufacturer's standard warranty to the Program/Project Manager.

PART 2 PRODUCTS

2.01 INFRARED LICENSE PLATE RECOGNITION CAMERAS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. Derwent Systems, Ltd., REG-L1,
<https://www.securityinformed.com/derwent-reg-technical-details.html>.
 - b. Approved equal.
 - 2. Substitution Limitations:
 - a. The use of trade names within the Contract Documents is intended to establish the basis of design and to illustrate the constructability and level of quality required.
 - b. The use of trade names is not intended to exclude other manufacturers whose products are equivalent to those named, subject to compliance with the Contract requirements.
 - 3. Product Options:
 - a. Provide license plate recognition cameras having the following product options:
 - 1) Lens.
 - a) For a 3m to 6m range, provide a 12mm lens.
 - b) For a 5m to 8m range, provide a 16mm lens.
 - 2) Mounting Bracket:
 - a) Provide a yellow pole top mount bracket, or a yellow side pole mount bracket.
 - 3) Power Supply Unit:
 - a) Provide a power supply unit capable of supplying power as specified herein from power mains.
 - b) Manufacturers:
 - (1) Derwent Systems, Ltd., Model PSU230-24-75W,
<https://www.securityinformed.com/derwent-reg-technical-details.html>.
 - (2) Approved equal.
 - b. Product Data:
 - 1) Submit Product Data for the parking barrier gate equipment proposed for the Work of this Section to the Program/Project Manager for approval, including a system description, an equipment list, and available housing colors to be selected by the Owner.
- B. Regulatory Requirements:
 - 1. Comply with the requirements specified in NFPA 70, the National Electrical Code.
- C. Performance:

1. Provide license plate recognition cameras having the following characteristics:
 - a. Resolution:
 - 1) Provide high resolution license plate recognition cameras having 600 television lines (TVL).
 - b. Operational (Capture) Range:
 - 1) Provide license plate recognition cameras having an operational (capture) range from 1.5m (5 feet) to 8m (26 feet).
 - 2) Provide license plate recognition cameras having the high speed optical synchronization to capture plate images from vehicles moving at speeds of up to 20 miles per hour (32kph).
 - c. Average Illuminator Life:
 - 1) Provide illuminators for the license plate recognition cameras having an average illuminator life greater than 5 years.
 - d. Temperature Range:
 - 1) Provide license plate recognition cameras capable of operating within the temperature range from plus 50 degrees Celsius (122 degrees Fahrenheit) to minus 50 degrees Celsius (minus 58 degrees Fahrenheit).

D. Design Criteria:

1. Provide license plate recognition cameras designed to generate high contrast images of retro-reflective license plates across the complete spectrum of ambient lighting conditions from total darkness to direct glare from sunlight and headlights; to work on a stand-alone basis with VCRs, DVDs, and specifically with third party automatic number plate recognition (ANPR) software; and to comply with the following additional design parameters:
 - a. Camera Sensor:
 - 1) Provide license plate recognition cameras having 1/2-inch LXR charged coupled device (CCD) sensors.
 - b. Infrared Wavelength (IR) Illumination:
 - 1) Provide license plate recognition cameras having a high resolution array of metaphase LEDs producing 850nm wavelength infrared illumination.
 - c. Electrical Power:
 - 1) Electrical Input:
 - a) Provide license plate recognition cameras capable of operating with an electrical input of 12 Volts - 24 Volts AC/DC.
 - 2) Power Consumption:
 - a) Provide license plate recognition cameras that have a power consumption of 30 Watts.
2. Shop Drawings:
 - a. Prepare Shop Drawings of the license plate recognition camera equipment, including mounting bracket diagrams and wiring diagrams,

showing installation of the equipment; and submit the Shop Drawings to the Program/Project Manager for approval.

E. Operation:

1. Operators:
 - a. Embedded loop detectors provided under Section 11154, Embedded Preformed Loop Sensors, activate the license plate recognition cameras via the parking revenue control system (PRCS).
2. Controls:
 - a. The parking revenue control system (PRCS) host servers control the processing and storage of images created by the license plate recognition cameras as indicated in Section 11150, Parking Control Equipment.
3. Operation Sequences:
 - a. When vehicles traveling in a license plate recognition camera's lane activate embedded loop detectors provided under Section 11154, Embedded Preformed Loop Sensors, appropriate signals are generated and are relayed to the license plate recognition cameras by the parking revenue control system (PRCS) as indicated in Section 11150, Parking Control Equipment.
 - b. The license plate recognition camera uses an integral infrared illuminator to illuminate the vehicle's license plate number (LPN) and takes an electronic infrared image of the LPN.
 - c. Parking revenue control system (PRCS) software uses image manipulation techniques to detect, normalize, and enhance the image of the number plate, applies optical character recognition (OCR) to extract the alphanumerics of the license plate, and stores it in the parking revenue control system (PRCS) license plate inventory (LPI) for future retrieval.

F. Materials:

1. Camera Housings:
 - a. Provide license plate recognition cameras that have weatherproof aluminum castings and extrusion housings.
 - b. Dimensions: 250mm by 154mm by 165mm.
 - c. Color: Owner selectable.
 - d. Weight: 2.8kg.
2. Camera Mounting Pedestal:
 - a. Provide camera mounting pedestals sized according to the camera manufacturer's recommendations for the locations indicated on the Contract Drawings.
3. License Plate Recognition Cameras:
 - a. Provide license plate recognition cameras having the design and performance characteristics specified herein.

2.02 ACCESSORIES

- A. License Plate Recognition Software:
 - 1. Provide license plate recognition software compatible with the parking revenue control system (PRCS) host servers, and capable of using image manipulation techniques to detect, normalize, and enhance the images of the number plates taken by the license plate recognition cameras, apply optical character recognition (OCR) to extract the alphanumerics of all types of Arizona license plates, and stores them in the parking revenue control system (PRCS) license plate inventory (LPI) for future retrieval.
 - a. Submit backup copies of the license plate recognition software to the Program/Project Manager.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. Verify that the area to receive each license plate recognition camera has been properly prepared to receive the equipment.
- B. Evaluation and Assessment:
 - 1. Do not install the license plate recognition camera equipment until the areas to receive the equipment are ready to receive the equipment.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Maintain and protect traffic on active streets and roads in accordance with the requirements specified in Section 01555, Traffic Control.
- B. Surface Preparation:
 - 1. Prepare the surfaces to receive the license plate recognition cameras in accordance with the manufacturer's preparation instructions and recommendations.
 - a. Submit the license plate recognition camera manufacturer's preparation instructions and recommendations to the Program/Project Manager for information.
- C. Demolition / Removal:
 - 1. Demolish and remove existing license plate recognition cameras indicated to be removed on the Contract Drawings.

3.03 INSTALLATION

- A. Furnish and install the license plate recognition cameras and mounting pedestals at the locations indicated on the Contract Drawings and in

accordance with the manufacturer's installation instructions and recommendations.

1. Submit the license plate recognition camera manufacturer's installation instructions and recommendations to the Program/Project Manager for information.

B. Interface with Other Work:

1. Make the electrical and control connections required to provide complete and operational license plate recognition camera systems.

C. Systems Integration:

1. Integrate the license plate recognition camera equipment with other parking control equipment provided and/or installed under this Contract as specified in Section 11150, Parking Control Equipment.
 - a. Connect the license plate recognition cameras to the Parking Revenue Control System (PRCS) host server conductors.
 - b. Install compatible license plate recognition software on the parking revenue control system (PRCS) host servers as required to provide the license plate inventory (LPI) as defined herein.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. License Plate Recognition Cameras Tests:
 - a. Test Procedure:
 - 1) Perform the testing recommended by the equipment manufacturer in the manufacturer's installation guide, and diagnostic testing recommended by the software vendor.
 - 2) Record and submit license plate recognition camera test results to the Program/Project Manager for information.
 - b. Acceptance Criteria:
 - 1) Installed license plate recognition cameras complying with the acceptance requirements of the manufacturer and software vendor are acceptable.

B. Non-Conforming Work

1. License plate recognition camera components and accessories that are not properly connected, and in working order, are unacceptable.

3.05 SYSTEM STARTUP

- A. Startup for license plate recognition cameras will be included in Parking Revenue Control System (PRCS) startup as specified in Section 11150, Parking Control Equipment.

3.06 ADJUSTING

- A. Adjust the license plate recognition camera mounting and angles as required to capture the images of the license plates of the vehicles traveling in the camera's lane at the time when triggered by the embedded sensors.

3.07 PROTECTION

- A. Protect installed license plate recognition cameras until they are placed into revenue service or until Final Completion, whichever comes first.

3.08 MAINTENANCE

- A. Operation and Maintenance Manuals:
 - 1. Prepare operation and maintenance manuals for the license plate recognition cameras, including wiring diagrams.
 - a. Submit 2 copies of the operation and maintenance manuals for each product provided under this Section to the Program/Project Manager.
 - b. Submit 2 copies of the riser, layout, and special wiring diagrams to the Program/Project Manager showing any changes to the standard drawings.
- B. Maintenance and Repair Service:
 - 1. Verify that maintenance and repair service for the license plate recognition cameras is available for emergency services maintenance during emergency situations.
 - a. Submit documentation that maintenance and repair service is available for emergency situations to the Program/Project Manager.

END OF SECTION

SECTION 11735

AUTOMATED EXTERNAL DEFIBRILLATORS (AED)

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for automated external defibrillators (AEDs).
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01360 - Sustainable Design Requirements.
 - 3. Section 01732 - Cutting and Patching.
 - 4. Section 01770 - Closeout Procedures.
 - 5. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. AED: Automated external defibrillator.
- B. Reference Standards:
 - 1. Association for the Advancement of Medical Instrumentation (AAMI):
 - a. ANSI/AAMI DF80 – Medical Electrical Equipment--Part 2-4: Particular Requirements for the Safety of Cardiac Defibrillators (Including Automated External Defibrillators).
 - 2. United States Government:
 - a. Department of Justice:
 - 1) 28 CFR 36 Nondiscrimination on the Basis of Disability by Public Accommodations and in Commercial Facilities.
 - b. Office of the Secretary of Transportation:
 - 1) 49 CFR 37 Transportation Services for Individuals with Disabilities (ADA).
 - c. Parks, Forests, and Public Property:
 - 1) 36 CFR 1192 Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities; Architectural Barriers Act (ABA) Accessibility Guidelines.
 - d. United States Code (U.S.C.):
 - 1) 42 U.S.C. Section 4151 et seq.
 - a) Architectural Barriers Act, Public Law 90-480.
 - 2) 42 U.S.C. Section 12101 et seq.
 - a) Americans with Disabilities Act (ADA), Public Law 101-336.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the acquisition, delivery, and installation of the automated external defibrillator (AED) equipment with the Program/Project Manager.
 - a. Coordinate installation of the automated external defibrillator (AED) devices with the Program/Project Manager and Phoenix Sky Harbor International Airport's locksmith.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Automated external defibrillators (AEDs) cabinets.
 - 2) Automated external defibrillator (AED) custom pedestal mounts.
 - b. Shop Drawings:
 - 1) Automated external defibrillator (AED) custom pedestal mounts.

B. Informational Submittals:

1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Manufacturer's Instructions:
 - 1) Automated external defibrillator (AED) component manufacturers' written instructions for handling and storing their products.

C. Closeout Submittals:

1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Operation and Maintenance Manuals for the automated external defibrillators (AEDs).
 - b. Record Documentation:
 - 1) Record Drawing documents and as-built Shop Drawings for the automated external defibrillators (AEDs).

1.05 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Deliver automated external defibrillator (AED) components in a clean, undamaged condition.

2. Inspect automated external defibrillator (AED) components for signs of damage prior to accepting delivery of those items at the Site; and reject, segregate, and remove damaged items.
- B. Storage and Handling Requirements:
 1. Handle automated external defibrillator (AED) components in accordance with their manufacturer's written instructions.
 2. Follow the manufacturer's written instructions for storing the automated external defibrillator (AED) components.
 3. Submit the automated external defibrillator (AED) component manufacturers' written instructions for handling and storing their products to the Project/Project Manager for information.
- C. Packaging Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

PART 2 PRODUCTS

2.01 AUTOMATED EXTERNAL DEFIBRILLATORS (AED) EQUIPMENT

- A. Manufacturers:
 1. Manufacturer List:
 - a. Subject to compliance with the requirements specified herein, provide products manufactured by one of the manufacturers listed.
 2. Substitution Limitations:
 - a. Subject to compliance with the requirements specified, products approved by the Program/Project Manager from manufacturers other than those listed herein may be provided.
- B. Description:
 1. Regulatory Requirements:
 - a. Accessibility and ADA Requirements
 - 1) Provide automated external defibrillators (AEDs), cabinets, and custom AED pedestal mounts that at a minimum comply with the requirements specified in the American with Disabilities Act (ADA) Accessibility Guideline, and with the following criteria:
 - a) Provide automated external defibrillators (AEDs), cabinets, and custom AED pedestal mounts that are highly visible and easily identifiable to the traveling public, and wherever possible have 360 degree visibility.
 - b) Mount the bottom of the cabinets 27 inches from the finished floor level.
 - (1) Take measures to ensure that the cabinets are not obstructions.

C. Performance:

1. Automated External Defibrillators (AEDs):

- a. The automated external defibrillators (AEDs) will be battery-powered Heartstream FR2 semi-automatic automated external defibrillators (AEDs) manufactured by Agilent Technologies, Inc., will comply with the requirements specified in ANSI/AAMI DF80, and will be designed to operate within the following ranges:

- 1) Temperature Range:

- a) The automated external defibrillators (AEDs) are capable of functioning within the operating temperature range from 32 degrees Fahrenheit (0 degrees Celsius) to 122 degrees Fahrenheit (50 degrees Celsius).

- 2) Humidity Range:

- a) The automated external defibrillators (AEDs) are capable of functioning within the non-condensing relative humidity range from 0 percent to 95 percent.

D. Design Criteria:

1. Automated External Defibrillators (AEDs):

- a. At the locations indicated in the Contract Documents, provide automated external defibrillators (AEDs), cabinets, and custom pedestals.
 - 1) The automated external defibrillators (AEDs) must be purchased from the City of Phoenix Fire Department for installation under this Contract.
- b. Size:
 - 1) The automated external defibrillators (AEDs) are approximately 2.6 inches high by 8.6 inches wide by 8.6 inches deep.
- c. Weight:
 - 1) The automated external defibrillators (AEDs) weigh approximately 4.7 pounds with the battery installed.

2. Product Data:

- a. Obtain the manufacturers' Product Data for the automated external defibrillator (AED) cabinets and custom AED pedestal mounts.
- b. Submit the automated external defibrillator (AED) cabinet and custom AED pedestal mount manufacturers' Product Data to the Program/Project Manager for approval.

3. Shop Drawings:

- a. Prepare Shop Drawings for the automated external defibrillator (AED) custom pedestal mounts showing the fabrication, conduit knockouts, and installation of the pedestal mounts to be provided under this Section including mounting templates; and showing the location and type of mounting, wall or pedestal, for the automated external defibrillators (AEDs) based on the results of the Contractor's Site survey.

- b. Submit the automated external defibrillator (AED) custom pedestal mount Shop Drawings to the Program/Project Manager for approval.

E. Components:

- 1. Automated External Defibrillators (AEDs):
 - a. Purchase Agilent Technologies, Incorporated's Heartstream automated external defibrillators (AEDs) from the City of Phoenix Fire Department.
 - b. Manufacturer:
 - 1) Koninklijke Philips Electronics N.V., Phillips Healthcare, Heartstream, <http://www.healthcare.philips.com/main/index.wpd>.
 - a) In 2001 Heartstream became part of Philips Medical Systems, when Philips purchased Agilent Technologies, Incorporated's entire Medical Group.
 - b) In 2002, all Philips defibrillators were rebranded as HeartStart Defibrillators, and Philips introduced the HeartStart HS1 family of AEDs, including the Philips and Laerdal HeartStart, and Philips HeartStart Home, and Philips HeartStart OnSite defibrillators.
- 2. Automated External Defibrillator (AED) Cabinets:
 - a. Provide automated external defibrillator (AED) cabinets fabricated from welded 16 gauge steel, and having an impact resistant 3/16-inch thick acrylic window.
 - b. Provide fully alarmed automated external defibrillator (AED) cabinets having a security tie-in to the security system, a pressure switch, and a 12-Volt lithium battery pack to power alarms.
 - 1) Provide audible alarms that deliver a 120 decibel high output alarm for 30 seconds followed by an intermittent voice tone.
 - 2) Provide high intensity strobe lights.
 - c. Theft Deterrence:
 - 1) Provide automated external defibrillator (AED) cabinets having a theft deterrence system.
 - d. Monitoring:
 - 1) Provide automated external defibrillator (AED) cabinets having continual self-monitoring circuitry powered by a 9-Volt battery.
 - e. Hardware:
 - 1) Provide automated external defibrillator (AED) cabinets having flush, industrial strength hardware.
 - 2) Provide security tie-in and lock shall be H2523.
 - 3) The Phoenix Sky Harbor International Airport's locksmith will provide keying in accordance with the Airport's keying system.
 - f. Finish:
 - 1) Provide powder coated automated external defibrillator (AED) cabinets having protection from damage caused by ultraviolet light.
 - a) Cabinet shall be stainless steel.

- g. Manufacturers:
 - 1) HeartStation, Basis-of Design: Model RC5000RSPB, <http://www.heartstation.com>.
 - 2) Approved equal.
- 3. Automated External Defibrillator (AED) Custom Pedestal Mounts:
 - a. Provide sturdy automated external defibrillator (AED) custom pedestal mounts fabricated as detailed on the Contract Drawings from welded 16 gauge steel.
 - a. Finish:
 - 1) Provide finishes for the automated external defibrillator (AED) custom pedestal mounts matching the finishes on the automated external defibrillator (AED) cabinets.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 - 1. After receiving the Notice to Proceed, conduct a Site survey of the automated external defibrillator (AED) locations defined in the Contract Documents to validate the placement of the automated external defibrillator (AED) devices and directional signage in accordance with requirements specified.
 - a. Based on the results of this Site survey, recommend the automated external defibrillator's (AED's) final locations, and update the Record Documentation specified in Paragraph 3.06.B accordingly.
- B. Evaluation and Assessment:
 - 1. Proceed installing the automated external defibrillators (AEDs) only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Protection of In-Place Conditions:
 - 1. Protect adjacent areas from damage resulting from installation of the automated external defibrillators (AEDs).
- B. Demolition/Removal:
 - 1. Perform cutting and patching, if required, as specified in Section 01732, Cutting and Patching.

3.03 INSTALLATION

- A. Automated External Defibrillator (AED) Cabinets:
 - 1. Install the automated external defibrillator (AED) cabinets in Terminal 4 Station, the 44th Street Station, and the East Economy Lot Station in the locations indicated in the Contract Documents.

2. Ensure that the automated external defibrillator (AED) cabinets are properly installed in all respects, including, but not limited to, their form, fit, and function.
 - a. The installed automated external defibrillator (AED) cabinets must satisfy not only the specified location requirements for the cabinets, but must be fully compliant with the American with Disabilities Act (ADA) requirements specified.
 - b. Connect the automated external defibrillator (AED) cabinets to the Phoenix Sky Harbor International Airport phone switch.

B. Systems Integration:

1. Phoenix Sky Harbor International Airport Responsibilities:
 - a. The Phoenix Sky Harbor International Airport is responsible for providing conduit, cabling, and cable terminations for the automated external defibrillator (AED) cabinet's security tie-in and pressure switch provided under this Section.
 - b. Implementation of the following functions is the responsibility of the Phoenix Sky Harbor International Airport:
 - 1) Upon activation of a closed circuit television (CCTV) camera by a signal from an automated external defibrillator (AED) cabinet's security signal or pressure switch, the video display of the camera must automatically be displayed on the monitor selected, and the location information of the automated external defibrillator (AED) must be displayed at the bottom of the monitor.
 - a) If more than one automated external defibrillator (AED) cabinet's security or pressure switch signal is activated, multiple monitors will be used, and/or split screen features will be activated.
 - 2) Archiving the video of the activated cameras' images until the activating automated external defibrillator (AED) cabinet's security or pressure switch signal is deactivated.
 - 3) Upon activation of an automated external defibrillator (AED) cabinet's security or pressure switch signal, sending location information through the existing phone switch, and displaying the location information on the operator phones.

3.04 SITE QUALITY CONTROL

A. Site Tests and Inspections:

1. During the period when the automated external defibrillators (AEDs) are being installed, the Testing and Inspection Agency must perform routine and other testing and inspection of materials.
 - a. Advise the Testing and Inspection Agency sufficiently in advance of operations to allow testing personnel to be assigned and to provide sufficient time for quality tests to be performed and completed.

- 1) The Phoenix Sky Harbor International Airport will coordinate integrated test requirements.
- b. The Testing and Inspection Agency will perform additional materials testing due to changes in materials requested by the Contractor or testing required due to failure of material to meet specified requirements.
- c. Failure of the Testing and Inspection Agency to detect defective work will not prevent its rejection later when the defect is discovered, neither does it obligate the Program/Project Manager or Phoenix Sky Harbor International Airport to grant final acceptance of the Work.
2. Inspections:
 - a. Ensure that all connections to the automated external defibrillators (AEDs) are completed properly.
- B. Non-Conforming Work
 1. Correct the discrepancies or problems discovered during these inspections at no increase in Contract Price.

3.05 CLEANING

- A. Waste Management:
 1. Comply with the requirements of the approved Waste Management Plan specified in Section 01360, Sustainable Design Requirements.

3.06 CLOSEOUT ACTIVITIES

- A. Training:
 1. Train the Owner's maintenance personnel to adjust, operate, and maintain the automated external defibrillators (AEDs) in accordance with the requirements specified in Section 01770, Closeout Procedures.
 - a. The Phoenix Sky Harbor International Airport will provide adequate training facilities for each training session.
- B. Record Documentation:
 1. The Phoenix Sky Harbor International Airport will provide electronic background drawings to be used to prepare Record Drawing submittals.
 2. Legibly mark the Record Drawing documents and as-built Shop Drawings to record the actual automated external defibrillators (AEDs) installation, including communication conduit, cabling and pathways used, field changes of dimensions and details, changes in details from those indicated on the Contract Drawings, details not on the original Contract Drawings, and the make and model of the actual products installed.
 - a. Base the as-built locations of the call stations on the final installation.
 3. Submit the Record Drawing documents and as-built Shop Drawings for the automated external defibrillators (AEDs) to the Program/Project Manager for review.

- a. Should additional information or revisions be required, the reviewed documents will be returned to the Contractor for correction and re-submittal to the Program/Project Manager.

3.07 MAINTENANCE

- A. Operation and Maintenance Data:
 1. Prepare Operation and Maintenance Manuals for the automated external defibrillators (AEDs).
 2. Submit the Operation and Maintenance Manuals for the automated external defibrillators (AEDs) to the Project/Project Manager.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate installation of the entrance floor mat and frame with the placement of the floor to ensure that embedments are installed properly

1.04 SUBMITTALS

- A. Action Submittals:
 1. Submit the following to the Program/Project Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Floor mats.
 - 2) Recessed frames.
 - b. Shop Drawings:
 - 1) Shop Drawings of the entrance floor mats and frames.
 - c. Samples:
Entrance floor mat Samples.
- B. Informational Submittals:
 1. Submit the following to the Program/Project Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Sustainable Design Submittals:
 - 1) Indoor Chemical & Pollutant Source Control, Submittal for entrance floor mats and frames.
- C. Closeout Submittals:
 1. Submit the following to the Program/Project Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Operation and Maintenance Data:
 - 1) Maintenance data for the entrance floor mats and frames.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 1. Phoenix Building Construction Code:
 - a. Perform the Work of this Section in accordance with requirements of the Phoenix Building Construction Code and Amendments.
 2. Accessibility Requirements:

- a. Comply with the requirements of Section 4.5 in the U.S. Architectural and Transportation Barriers Compliance Board's "Americans with Disabilities Act Accessibility Guidelines (ADAAG) for Buildings and Facilities".
- B. Sustainability Standards Certifications:
 - 1. Indoor Chemical & Pollutant Source Control Submittal:
 - a. For permanent entrance floor mats and frames at least 10 feet long in the primary direction of travel at regular entry points for building users, submit Product Data noting that these products qualify the Project to claim Indoor Chemical & Pollutant Source Control.
- C. Site Samples:
 - 1. Entrance Floor Mat Samples:
 - a. Submit Samples for each floor mat, tread rail, and frame member to the Program/Project Manager for approval.

PART 2 PRODUCTS

2.01 COMPONENTS

- A. Manufacturers:
 - 1. Manufacturer List:
 - a. JL Industries, Inc., www.jlindustries.com.
 - b. American Floor Products Company, Inc., www.afco-usa.com.
 - c. Arden Architectural Specialties, Inc., <http://www.designguide.com/profileDetail.aspx?lid=50917>.
 - d. Balco, Inc., www.balcousa.com.
 - e. Flexco, www.flexcofloors.com.
 - 2. Substitution Limitations:
 - a. Basis-of-Design Product:
 - 1) JL Industries, Inc., Model JL-906P Serrated Top Rail Surface Grating in 900 series JL-L.
 - b. Subject to compliance with the Contract requirements, provide entrance floor mats and frames equivalent in size, function, and quality to the basis of design product specified from the manufacturers listed.
 - 3. Product Options:
 - a. Product Data:
 - 1) Submit Product Data for each type of product specified and proposed for the Work of this Section.
- B. Regulatory Requirements:
 - 1. Accessibility Requirements:

- a. Provide installed floor mats that comply with Section 4.5 in the United States Access Board's Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG).

C. Design Criteria:

1. Shop Drawings:

- a. Submit Shop Drawings of the entrance floor mats and frames to the Program/Project Manager for approval, and showing the following:
 - 1) Items penetrating floor mats and frames.
 - 2) Divisions between mat sections.
 - 3) Perimeter floor moldings.

D. Materials:

1. Extruded Aluminum Treads:

- a. Provide full length extruded aluminum rails with serrated treads assembled with keylock bars spaced 3 inches apart on center and extruded vinyl cushions spaced 24 inches apart on center.
- b. Tread Width: 5/8 inch.
- c. Rail Spacing: 1/8 inch.
- d. Rail Finish: Mill finish.
- e. Wheel Load: 1500 pounds.

2. Recessed Frames:

- a. Provide recessed frames fabricated from extruded aluminum Alloy 6061-T6 or Alloy 6063-T5, T6, or T52 complying with the requirements specified in ASTM B 221 or ASTM B 221M.

2.02 SHOP FABRICATION:

A. Floor Mats:

1. Fabricate the floor mat units in the shop to the greatest extent possible.
2. Unless otherwise indicated, provide a single unit of the size indicated on the Contract Drawings for each mat installation.
 - a. Do not exceed the manufacturer's recommended maximum sizes for units that are removed for maintenance and cleaning.
3. Where joints in mats are necessary, space the joints symmetrically and away from normal traffic lanes.

B. Recessed Frames:

1. Fabricate the floor mat frames for permanent recessed installation as indicated on the Contract Drawings, complete with corner pins or reinforcement and anchorage devices.
2. Fabricate edge-frame members in single lengths or, where the frame dimensions exceed the maximum available lengths, provide the minimum number of pieces possible, with hairline joints equally spaced and pieces spliced together by straight connecting pins.

3. Miter corner joints in framing elements with hairline joints, or provide prefabricated corner units without joints.

2.03 FINISHES:

- A. Coat the surfaces of aluminum frames that will come into contact with cementitious material with the manufacturer's standard protective coating.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verification of Conditions:
 1. Verify that the entrance floor mat frame installation has been properly coordinated with placement of the floor.

3.02 INSTALLATION

- A. Install recessed mat frames according to the manufacturer's written installation instructions.
 1. Submit the entrance floor mat and frame manufacturer's written installation instructions to the Program/Project Manager for information.
- B. Set the mat tops at the height recommended by the manufacturer for the most effective cleaning action.
- C. Coordinate the top of the mat surfaces with the bottoms of the doors that swing across the mats to provide clearance between the door and mat.

3.03 PROTECTION

- A. After completing installing the frame and concrete work, provide a temporary filler of plywood or fiberboard in the recesses, and cover the frames with plywood protective flooring.
- B. Maintain protection until construction traffic has ended and Contract is near Substantial Completion.

3.04 MAINTENANCE

- A. Maintenance Data:
 1. Submit maintenance data for the entrance floor mats and frames provided.
 2. Maintenance Service:
 - a. Roll-out mats will only qualify the Project for Indoor Chemical & Pollutant Source Control when maintained weekly by a contracted service organization.

SECTION 13100

LIGHTNING PROTECTION

PART 1 GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Requirements for providing the lightning protection system for buildings or structures as indicated on the Contract Drawings and attachments to this Section.
 - a. The work covered under this Section of the specifications consists of furnishing the labor, materials, and services required for the completion of this portion of the PHX Sky Train Project's lightning protection system.
- B. Related Requirements:
 - 1. Section 01330 - Submittal Procedures.
 - 2. Section 01780 - Closeout Submittals.

1.02 REFERENCES

- A. Abbreviations and Acronyms:
 - 1. LPI: Lightning Protection Institute.
 - 2. PHX/LRT: PHX Sky Train/Light Rail Transit.
 - 3. NRTL: National recognized testing laboratory.
- B. Reference Standards:
 - 1. Lightning Protection Institute (LPI):
 - a. LPI 175 - Lightning Protection Institute Installation Code.
 - 2. National Fire Protection Association (NFPA):
 - a. NFPA 780 - Standard for the Installation of Lightning Protection Systems.
 - 3. NSF International (NSF):
 - a. ANSI/NSF 60 Drinking Water Treatment Chemicals – Health Effects.
 - 4. Underwriters Laboratories, Inc. (UL):
 - a. UL 96 - Standard for Lightning Protection Components.
 - b. UL 96A - Standard for Standard for Installation Requirements for Lightning Protection Systems.
 - c. UL 467 - Standard for Grounding and Bonding Equipment.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate installation of lightning protection system with the installation of other building systems and components, including electrical wiring,

supporting structures and building materials, metal bodies requiring bonding to lightning protection components, and building finishes.

B. Sequencing:

1. Portions of the lightning protection system's uppermost down conductor to air terminals will be left incomplete until the future completion of the uppermost portion of the buildings or structures.

1.04 SUBMITTALS

A. Action Submittals:

1. Submit the following to the Construction Manager for approval in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Product Data:
 - 1) Backfill for chemical ground rods.
 - 2) Concrete-encased electrodes.
 - 3) Exo-thermionic welded connectors.
 - 4) Ground loop conductors.
 - 5) Ground rods.
 - 6) Inspection well enclosures.
 - 7) Lightning down conductor.
 - 8) Warning tape.
 - b. Shop Drawings:
 - 1) Lightning protection system.
 - c. Certificates:
 - 1) Evidence of UL Master Label Certification for the System.
 - 2) Evidence of Lightning Protection Institute (LPI) Master Certification for the System.
 - d. Qualification Statements:
 - 1) Qualifications of the lightning protection system installer firms and personnel.

B. Informational Submittals:

1. Submit the following to the Construction Manager for information in accordance with the requirements of Section 01330, Submittal Procedures:
 - a. Site Quality Control Submittals:
 - 1) Copy of the LPI Certified System Application form.

C. Closeout Submittals:

1. Submit the following to the Construction Manager in accordance with the requirements of Section 01780, Closeout Submittals:
 - a. Warranty Documentation:
 - 1) Manufacturer's warranty for the chemical ground rods.
 - b. Record Documentation:

- 1) As-built drawings for the lightning protections system.

1.05 QUALITY ASSURANCE

- A. Regulatory Agency Sustainability Approvals:
 1. Listing and Labeling:
 - a. Obtain the listing and labeling for the system as defined in the "Definitions" Article in NFPA 780.
- B. Qualifications:
 1. Installer Qualifications:
 - a. Engage an experienced installer who is a nationally recognized testing laboratory (NRTL), or who is certified by the Lightning Protection Institute (LPI) as a Master Installer Designer.
 - b. The installing Subcontractor must be UL-listed as a Lightning Protection Installer.
 - c. Submit the qualifications of the lightning protection system installer firms and personnel demonstrating their capabilities and experience to the Program Manager for approval.
 - 1) Include listing or certification data by an NRTL or by LPI.
- C. Certifications:
 1. UL Master Label Certification:
 - a. Upon completion of the Work, obtain a UL Master Label System "C" Certification.
 - b. Submit evidence of obtaining the UL Master Label for the System to the Program Manager for approval.
 2. Lightning Protection Institute (LPI) Master Certification:
 - a. After the system receives a UL Master Label System "C" Certification, obtain a LPI-177 System Master Certification for the system.
 - b. Submit evidence of obtaining the LPI-177 System Master Certification for the System to the Program Manager for approval.

1.06 WARRANTY

- A. Manufacturer Warranty:
 1. Provide a 30-year maintenance free manufacturer's warranty for the chemical ground rods.
 2. Submit the warranty documents to the Program Manager as part of Contract closeout.

PART 2 PRODUCTS

2.01 MANUFACTURERS:

- A. Manufacturer List:

1. Harger Lightning Protection, Inc., www.harger.com.
2. Heary Bros. Lightning Protection Co. Inc., www.hearybros.com.
3. National Lightning Protection Corporation, www.theprotectionsource.com.
4. Thompson Lightning Protection, Inc., www.tlpinc.com.
5. Lyncole Industries, Inc., www.lyncol.com.
6. Erico® International Corporation, www.erico.com.

B. Substitution Limitations:

1. Subject to compliance with the requirements specified herein, other manufacturers' products may be incorporated into the Work.

2.02 DESIGN CRITERIA:

- A. Design the entire lightning protection system in accordance with LPI 175, NFPA 780, and UL 96A.
- B. Provide components for the lightning protection system that comply with the requirements specified in UL 96.
 1. Provide only UL approved materials listed for Lightning Protection Systems.
 2. Do not combine materials that can form an electrolytic couple that will accelerate corrosion in the presence of moisture, unless moisture is permanently excluded from the junction of such materials.
- C. Prepare and submit Shop Drawings of the lightning protection system to the Program manager for approval.

2.03 MATERIALS:

Propulsion Building Ground Rod

- A. Chemical Ground Rods:
 1. Provide UL-listed chemical ground rods complying with the requirements of UL 467, consisting of Type K copper tubes filled with non-hazardous self-moisturizing salts (Calsolyte), and having a minimum life expectancy of 50 years.
 - a. Nominal Tube Wall Thickness: 0.083 inch.
 2. Provide chemical ground rods having either straight configurations as detailed in the "Straight Shaft Grounding System Detail" shown on sheet GND-2, or L-shaped configurations as detailed in the "L-Shaped Shaft Grounding Detail" shown on sheet GND-3, both attached to the end of this Section.
 3. Backfill for Chemical Ground Rods:
 - a. Provide an electrically conductive, natural clay backfill material based on volcanic action, which when mixed with water becomes a slurry capable of being pumped or poured around the electrodes installed within enclosures in the ground.
 - b. Provide backfill that is approved by and listed in ANSI/NSF 60.

4. Manufacturers:
 - a. Lyncole Industries, Inc., XIT™ Grounding System, www.lyncol.com.
 - b. Approved equal.
- B. Exo-Thermionic Welded Connectors:
 1. Provide molds, thermite packages, and other material for exo-thermionic welds that are full-rated to carry 100 percent of the cable rating, and which are letter-coded exo-thermionic welded type.
 - a. Provide the exo-thermionic welding materials from a single manufacturer throughout the Project.
 2. Provide items for connections of cable to ground-rod.
 3. Manufacturers:
 - a. Erico® International Corporation, Cadweld®, www.erico.com.
 - b. Approved equal.
- C. Ground Rods, Ground Loop Conductors, and Concrete-Encased Electrodes:
 1. Provide ground rods, ground loop conductors, and concrete-encased electrodes complying with the requirements specified in NFPA 780.
 2. Provide conductors with protective coatings for use where conditions would cause deterioration or corrosion of conductors.
- D. Lightning Down Conductor:
 1. Provide NFPA Class I copper lightning down conductors.
 2. Provide conductors with protective coatings for use where conditions would cause deterioration or corrosion of conductors.

2.04 ACCESSORIES

- A. Inspection Well Enclosure:
 1. Provide a high density reinforced polymer concrete inspection well enclosure rated for a maximum load of 10,000 pounds.
 2. Provide a bolt-down cover for the inspection well enclosure.
 3. Manufacturer:
 - a. Erico® International Corporation, Eritech®, No. T416A, www.erico.com.
 - b. Approved equal.
- B. Warning Tape:
 1. Provide 4-mil thick, minimum, polyethylene plastic warning tape overcoated with printed graphics that read, "CAUTION-BURIED ELECTRIC LINE".
 2. Provide red colored tape in accordance with the APWA Uniform Color Code as described in the APWA Public Works Management Practices Manual.
 3. Manufacturers:
 - a. Brady Worldwide, Inc., No. 11296, www.bradyid.com.
 - b. Seton Identification Products, www.seton.com.

- c. Approved equal.

PART 3 EXECUTION

3.01 INSTALLATION

- A. Install lightning protection components and systems according to UL 96A, LPI 175, and NFPA 780 standards for lightning protection systems.
- B. Install conductors with direct paths from air terminals to ground connections.
 - 1. Avoid sharp bends and narrow loops.
- C. Conceal the following conductors.
 - 1. System conductors.
 - 2. Down conductors.
 - 3. Interior conductors.
 - 4. Conductors normally within view from exterior locations at grade that are within 200 feet of buildings, platforms, and walkways.
- D. Cable Connections:
 - 1. Use approved exothermic-welded connections for all conductor splices and connections between conductors and other components, except those above single-ply membrane roofing.
- E. Bond the extremities of vertical metal bodies exceeding 60 feet in length to lightning protection components.
- F. Install down conductors in the vertical pre-cast vertical columns, and bond the conductors to the reinforcing steel at the uppermost and lowermost points of the column reinforcing steel.
- G. Install the ground grid cable as detailed in the "Ground Grid Cable Trench" detail shown on sheet GND-8 attached to the end of this Section; and install chemical ground rods as detailed in the "Straight Shaft Grounding System Detail" shown on sheet GND-2 attached to the end of this Section.
- H. Where practical, interconnect ground loop conductors for adjacent columns using approved connection methods.
- I. Special Techniques:
 - 1. The ground loop required by NFPA 780 may be a counterpoise installation provided the counterpoise conductor meets or exceeds the minimum requirements stipulated in NFPA 780.
 - a. Bond ground terminals to the counterpoise conductor.
 - b. Bond grounded metal bodies on the building or structure that are within 12 feet of ground to the counterpoise conductor.

3.02 FIELD QUALITY CONTROL

- A. Inspections:
 - 1. Inspect the lightning protection system as required by the referenced standards and the Program Manager.
 - a. Arrange the UL inspections required to obtain the UL Master Label System "C" Certification.
 - b. Prepare and submit the LPI Certified System Application form to LPI to obtain system certification, and submit a copy to the Program Manager for information.
 - 2. Prepare and submit as-built drawings of the lightning protection system as installed to the Program Manager for approval.

3.03 PROTECTION

- A. Provide protection for the down conductor tails or stubs provided for the future completion of the uppermost portion of structures so the down conductors will be accessible and usable at that future time.

3.04 ATTACHMENTS

- A. The following attachments are appended to this Section following the "END OF SECTION" marker:
 - 1. GND-1 Automated Train Stage Two Design]- Cable to Ground Rod Connection.
 - 2. GND-2 Automated Train Stage Two Design – Straight Shaft Grounding System Detail.
 - 3. GND-3 Automated Train Stage Two Design – L-Shaped Shaft Grounding Detail.
 - 4. GND-4 Automated Train Stage Two Design – Air Terminal Mounting Detail.
 - 5. GND-5 Automated Train Stage Two Design – Cable to Ground Rod Connection.
 - 6. GND-6 Automated Train Stage Two Design –Ground Test Well Detail.
 - 7. GND-7 Automated Train Stage Two Design – Grounding Detail.
 - 8. GND-8 Automated Train Stage Two Design – Ground Grid Cable Trench.
 - 9. GND-9 Automated Train Stage Two Design – Grounding Cable to Ground Rod Connection.
 - 10. GND-10 Automated Train Stage Two Design – Grounding Detail.
 - 11. GND-11 Automated Train Stage Two Design – Grounding Detail.
 - 12. GND-12 Automated Train Stage Two Design – Grounding Detail.
 - 13. GND-13 Automated Train Stage Two Design – Grounding Detail.

SECTION 13453

SUPERVISORY CONTROL AND DATA ACQUISITION (SCADA)

PART 1 - GENERAL

1.01 SUMMARY

- A. Section includes the following for monitoring and control of electrical power system:
 - 1. PC-based workstation(s) and software.
 - 2. Communication network and interface modules for RS-232 data transmission protocols.
- B. Related Sections:
 - 1. Division 16 Section "Electricity Metering" for equipment to meter electricity consumption and demand for tenant submetering.

1.02 DEFINITIONS

- A. Ethernet: Local area network based on IEEE 802.3 standards.
- B. Firmware: Software (programs or data) that has been written onto read-only memory (ROM). Firmware is a combination of software and hardware. Storage media with ROMs that have data or programs recorded on them are firmware.
- C. HTML: Hypertext markup language.
- D. I/O: Input/output.
- E. KY Pulse: A term used by the metering industry to describe a method of measuring consumption of electricity that is based on a relay changing status in response to the rotation of the disk in the meter.
- F. LAN: Local area network; sometimes plural as "LANs."
- G. LCD: Liquid crystal display.
- H. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or remote-control, signaling and power-limited circuits.
- I. Modbus TCP/IP: An open protocol for exchange of process data.

- J. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.
- K. PC: Personal computer; sometimes plural as "PCs."
- L. rms: Root-mean-square value of alternating voltage, which is the square root of the mean value of the square of the voltage values during a complete cycle.
- M. RS-232: A TIA standard for asynchronous serial data communications between terminal devices.
- N. RS-485: A TIA standard for multipoint communications using two twisted-pairs.
- O. TCP/IP: Transport control protocol/Internet protocol incorporated into Microsoft Windows.
- P. THD: Total harmonic distortion.
- Q. UPS: Uninterruptible power supply; used both in singular and plural context.
- R. WAN: Wide area network.

1.03 SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Attach copies of approved Product Data submittals for products (such as switchboards and switchgear) that describe power monitoring and control features to illustrate coordination among related equipment and power monitoring and control.
- B. Shop Drawings: For power monitoring and control equipment. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Outline Drawings: Indicate arrangement of components and clearance and access requirements.
 - 2. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.
 - 3. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 4. Wiring Diagrams: For power, signal, and control wiring. Coordinate nomenclature and presentation with a block diagram.
 - 5. UPS sizing calculations for workstation.
 - 6. Surge suppressors: Data for each device used and where applied.

- C. Software and Firmware Operational Documentation:
 - 1. Self-study guide describing the process for setting equipment's network address; setting Owner's options; procedures to ensure data access from any PC on the network, using a standard Web browser; and recommended firewall setup.
 - 2. Software operating and upgrade manuals.
 - 3. Software Backup: On a magnetic media or compact disc, complete with Owner-selected options.
 - 4. Device address list and the set point of each device and operator option, as set in applications software.
 - 5. Graphic file and printout of graphic screens and related icons, with legend.
- D. Software Upgrade Kit: For Owner to use in modifying software to suit future power system revisions or power monitoring and control revisions.
- E. Software licenses and upgrades required by and installed for operating and programming digital and analog devices.
- F. Qualification Data: For qualified manufacturer.
- G. Field quality-control reports.
- H. Operation and Maintenance Data: For power monitoring and control units, to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 1 Section "Operation and Maintenance Data," include the following:
 - 1. Operating and applications software documentation.
 - 2. Software licenses.
 - 3. Software service agreement.
 - 4. PC installation and operating documentation, manuals, and software for the PC and all installed peripherals. Software shall include system restore, emergency boot diskettes, and drivers for all installed hardware. Provide separately for each PC.
 - 5. Hard copies of manufacturer's specification sheets, operating specifications, design guides, user's guides for software and hardware, and PDF files on CD-ROM of the hard-copy submittal.
- I. Other Informational Submittals:
 - 1. Manufacturer's system installation and setup guides, with data forms to plan and record options and setup decisions.

1.04 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.

- B. Manufacturer Qualifications: A firm experienced in manufacturing power monitoring and control equipment similar to that indicated for this Project and with a record of successful in-service performance.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.05 COORDINATION

- A. Coordinate features of distribution equipment and power monitoring and control components to form an integrated interconnection of compatible components.
 - 1. Match components and interconnections for optimum performance of specified functions.
- B. Coordinate Work of this Section with those in Sections specifying distribution components that are monitored or controlled by power monitoring and control equipment.

1.06 SOFTWARE SERVICE AGREEMENT

- A. Technical Support: Beginning with Substantial Completion, provide software support for two years.
- B. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include the operating systems. Upgrade shall include new or revised licenses for use of software.
 - 1. Provide 30 days' notice to Owner to allow scheduling and access to system and to allow Owner to upgrade computer equipment if necessary.

1.07 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Addressable Relays: One for every 10 installed. Furnish at least one of each type.
 - 2. Data Line Surge Suppressors: One for every 10 of each type installed. Furnish at least one of each type.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by Schweitzer Engineering Laboratories, Inc (SEL) or equivalent.

2.02 FUNCTIONAL DESCRIPTION

- A. Instrumentation and Recording Devices: Monitor and record load profiles and chart energy consumption patterns.
 - 1. Calculate and Record the Following:
 - a. Load factor.
 - b. Peak demand periods.
 - 2. Measure and Record Metering Data for the Following:
 - a. Electricity.
- B. Power Quality Monitoring: Identify power system anomalies and measure, display, and record trends and alarms of the following power quality parameters:
 - 1. Voltage regulation and unbalance.
 - 2. Continuous three-phase rms voltage.
 - 3. Periodic max./min./avg. voltage samples.
 - 4. Harmonics.
 - 5. Voltage excursions.
 - 6. Current excursions.
- C. Emergency Load Shedding. Preserve critical loads or avoid total shutdown due to unforeseen loss of power sources according to the following logic:
 - 1. Determine system topology.
 - 2. Evaluate remaining loads and sources.
 - 3. Shed loads in less than 100 ms.
- D. Demand Management:
 - 1. Peaking or co-generator control.
 - 2. Load interlocking.
 - 3. Load shedding.
 - 4. Load trimming.
- E. System: Report equipment status and power system control.

2.03 SYSTEM REQUIREMENTS

- A. Monitoring and Control System: Include multiple PC-based workstations with graphics capability and Web access, with its operating system and application software, connected to data transmission network.

- B. Surge Protection: For external wiring of each conductor entry connection to components to protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads.
 - 1. Minimum Protection for Power Lines 120 V and More: Auxiliary panel suppressors complying with requirements in Division 16 Section "Transient Voltage Suppression."
 - 2. Minimum Protection for Communication, Signal, Control, and Low-Voltage Power Lines: Comply with requirements as recommended by manufacturer for type of line being protected.
- C. Addressable Devices: All transmitters and receivers shall communicate unique device identification and status reports to monitoring and control clients.
- D. BAS Interface: Provide factory-installed hardware and software to enable the BAS to monitor, display, and record data for use in processing reports.
 - 1. Hardwired Monitoring Points: Electrical power demand (kilowatts), electrical power consumption (kilowatt-hours), power factor, voltage, and current.
 - 2. Industry-accepted, open-protocol communication interface with the BAS shall enable the BAS operator to remotely monitor meter information from a BAS operator workstation. Control features and monitoring points displayed locally at metering panel shall be available through the BAS.

2.04 OPERATING SYSTEM

- A. Software: Configured to run on a portable laptop computer, a single PC, or a palm computer, with capability for accessing a single meter at a time. System is not connected to a LAN. Modbus TCP/IP, RS-232, and RS-485 digital communications.
- B. Software: Configured to run on a single PC, with capability for accessing multiple devices simultaneously. Modbus TCP/IP, RS-232, and RS-485 digital communications.
- C. Software: Configured for a server and multiple client PCs, each with capability for accessing multiple devices simultaneously. Ethernet, Modbus TCP/IP, RS-232, and RS-485 digital communications.
- D. Software: Configured for a server and multiple client PCs, each with capability for accessing multiple devices simultaneously. Software shall include interactive graphics client and shall be Web enabled. Workstations and portable computers shall not require any software except for an Internet browser to provide connectivity and full functionality. Include a firewall recommended by manufacturer. 100 Base-T Ethernet, Modbus TCP/IP RS-232, and RS-485 digital communications.

- E. Operating System Software: Based on 32-bit, Microsoft Windows workstation operating system. Software shall have the following features:
 - 1. Multiuser and multitasking to allow independent activities and monitoring to occur simultaneously at different workstations.
 - 2. Graphical user interface to show pull-down menus and a menu tree format.
 - 3. Capability for future additions within the indicated system size limits.

2.05 APPLICATIONS SOFTWARE

- A. Basic Requirements:
 - 1. Fully compatible with and based on the approved operating system.
 - 2. Password-protected operator login and access; three levels, minimum.
 - 3. Password-protected setup functions.
 - 4. Context-sensitive online help.
 - 5. Capability of creating, deleting, and copying files; and automatically maintaining a directory of all files, including size and location of each sequential and random-ordered record.
 - 6. Capability for importing custom icons into graphic views to represent alarms and I/O devices.
 - 7. Automatic and encrypted backups for database and history; automatically stored at central control PC and encrypted with a nine-character alphanumeric password, which must be used to restore or read data contained in backup.
 - 8. Operator audit trail for recording and reporting all changes made to user-defined system options.
- B. Workstation Server Functions:
 - 1. Support other client PCs on the LAN.
 - 2. Maintain recorded data in databases accessible from other PCs on the LAN.
- C. Data Formats:
 - 1. User-programmable export and import of data to and from commonly used Microsoft Windows spreadsheet, database, billing, and other applications; using dynamic data exchange technology.
 - 2. Option to convert reports and graphics to HTML format.
 - 3. Interactive graphics.
 - 4. Option to send preprogrammed or operator designed e-mail reports.
- D. Metered Data: Display metered values in real time.
- E. Remote Control:
 - 1. Display circuit-breaker status and allow breaker control.
 - 2. User defined with load-shedding automatically initiated and executed schemes responding to programmed time schedules, set points of

metered demands, utility contracted load shedding, or combinations of these.

- F. Equipment Documentation: Database for recording of equipment ratings and characteristics; with capability for graphic display on monitors.
- G. Graphics: Interactive color-graphics platform with pull-down menus and mouse-driven generation of power system graphics, in formats widely used for such drafting; to include the following:
 - 1. Site plan.
 - 2. Floor plans.
 - 3. Equipment elevations.
 - 4. Single-line diagrams.
- H. User-Defined Monitoring and Control Events: Display and record with date and time stamps accurate to 0.1 second, and including the following:
 - 1. Operator log on/off.
 - 2. Attempted operator log on/off.
 - 3. All alarms.
 - 4. Equipment operation counters.
 - 5. Out-of-limit, pickup, trip, and no-response events.
- I. Trending Reports: Display data acquired in real-time from different meters or devices, in historical format over user-defined time; unlimited as to interval, duration, or quantity of trends.
 - 1. Spreadsheet functions of sum, delta, percent, average, mean, standard deviation, and related functions applied to recorded data.
 - 2. Charting, statistical, and display functions of standard Windows-based spreadsheet.
- J. Alarms: Display and record alarm messages from discrete input and controls outputs, according to user programmable protocol.
 - 1. Functions requiring user acknowledgment shall run in background during computer use for other applications and override other presentations when they occur.
- K. Waveform Data: Display and record waveforms on demand or automatically on an alarm or programmed event. Include the graphic displays of the following, based on user-specified criteria:
 - 1. Phase voltages, phase currents, and residual current.
 - 2. Overlay of three-phase currents, and overlay each phase voltage and current.
 - 3. Waveforms ranging in length from 2 cycles to 5 minutes.
 - 4. Disturbance and steady-state waveforms up to 512 points per cycle.
 - 5. Transient waveforms up to 83,333 points per cycle on 60-Hz base.

6. Calculated waveform, based on recorded data, on a minimum of four cycles of data of the following:
 - a. THD.
 - b. rms magnitudes.
 - c. Peak values.
 - d. Crest factors.
 - e. Magnitude of individual harmonics.
- L. Data Sharing: Allow export of recorded displays and tabular data to third-party applications software.
 1. Tabular data shall be in the comma-separated values.
- M. Reporting: User commands initiate the reporting of a list of current alarm, supervisory, and trouble conditions in system or a log of past events.
 1. Print a record of user-defined alarm, supervisory, and trouble events on workstation printer.
 2. Sort and report by device name and by function.
 3. Report type of signal (alarm, supervisory, or trouble), description, date, and time of occurrence.
 4. Differentiate alarm signals from other indications.
 5. When system is reset, report reset event with same information concerning device, location, date, and time.

2.06 COMMUNICATION COMPONENTS AND NETWORKS

- A. Network Configuration: High-speed, multi-access, open nonproprietary, industry standard communication protocol; LANs complying with EIA 485, 100 Base-T Ethernet, and Modbus TCP/IP.

2.07 POWER MONITORS

- A. Separately mounted, permanently installed instrument for power monitoring and control, complying with UL 1244.
 1. Enclosure: NEMA 250, Type 3R.
- B. Environmental Conditions: System components shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:
 1. Indoor installation in spaces that have environmental controls to maintain ambient conditions of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and 20 to 90 percent relative humidity, noncondensing.
- C. rms Real-Time Measurements:
 1. Current: Each phase, neutral, average of three phases, percent unbalance.

2. Voltage: Line-to-line each phase, line-to-line average of three phases, line-to-neutral each phase, line-to-neutral average of three phases, line-to-neutral percent unbalance.
 3. Power: Per phase and three-phase total.
 4. Reactive Power: Per phase and three-phase total.
 5. Apparent Power: Per phase and three-phase total.
 6. Power Factor: Per phase and three-phase total.
 7. Displacement Power Factor: Per phase and three-phase total.
 8. Frequency.
 9. THD: Current and voltage.
 10. Accumulated Energy: Real kWh, reactive kVARh, apparent kVAh (signed/absolute).
 11. Incremental Energy: Real kWh, reactive kVARh, apparent kVAh (signed/absolute).
 12. Conditional Energy: Real kWh, reactive kVARh, apparent kVAh (signed/absolute).
- D. Demand Current Calculations, per Phase, Three-Phase Average and Neutral:
1. Present.
 2. Running average.
 3. Last completed interval.
 4. Peak.
- E. Demand Real Power Calculations, Three-Phase Total:
1. Present.
 2. Running average.
 3. Last completed interval.
 4. Predicted.
 5. Peak.
 6. Coincident with peak kVA demand.
 7. Coincident with kVAR demand.
- F. Demand Reactive Power Calculations, Three-Phase Total:
1. Present.
 2. Running average.
 3. Last completed interval.
 4. Predicted.
 5. Peak.
 6. Coincident with peak kVA demand.
 7. Coincident with kVAR demand.
- G. Demand Apparent Power Calculations, Three-Phase Total:
1. Present.
 2. Running average.
 3. Last completed interval.
 4. Predicted.

5. Peak.
 6. Coincident with peak kVA demand.
 7. Coincident with kVAR demand.
- H. Average Power Factor Calculations, Demand Coincident, Three-Phase Total:
1. Last completed interval.
 2. Coincident with kW peak.
 3. Coincident with kVAR peak.
 4. Coincident with kVA peak.
- I. Power Analysis Values:
1. THD, Voltage and Current: Per phase, three phase, and neutral.
 2. Displacement Power Factor: Per phase, three phase.
 3. Fundamental Voltage, Magnitude and Angle: Per phase.
 4. Fundamental Currents, Magnitude and Angle: Per phase.
 5. Fundamental Real Power: Per phase, three phase.
 6. Fundamental Reactive Power: Per phase.
 7. Harmonic Power: Per phase, three phase.
 8. Phase rotation.
 9. Unbalance: Current and voltage.
 10. Harmonic Magnitudes and Angles for Current and Voltages: Per phase, up to 31st harmonic.
- J. Power Demand Calculations: According to one of the following calculation methods, selectable by the user:
1. Thermal Demand: Sliding window updated every second for the present demand and at end of the interval for the last interval. Adjustable window that can be set in 1-minute intervals, from 1 to 60 minutes.
 2. Block Interval with Optional Subintervals: Adjustable for 1-minute intervals, from 1 to 60 minutes. User-defined parameters for the following block intervals:
 - a. Sliding block that calculates demand every second, with intervals less than 15 minutes, and every 15 seconds with an interval between 15 and 60 minutes.
 - b. Fixed block that calculates demand at end of the interval.
 - c. Rolling block subinterval that calculates demand at end of each subinterval and displays it at end of the interval.
 3. Demand Calculation Initiated by a Synchronization Signal:
 - a. Signal is a pulse from an external source. Demand period begins with every pulse. Calculation shall be configurable as either a block or rolling block calculation.
 - b. Signal is a communication signal. Calculation shall be configurable as either a block or rolling block calculation.
 - c. Demand can be synchronized with clock in the power meter.

- K. Sampling:
1. Current and voltage shall be digitally sampled at a rate high enough to provide accuracy to 63rd harmonic of 60-Hz fundamental.
 2. Power monitor shall provide continuous sampling at a rate of 128 samples per cycle on all voltage and current channels in the meter.
- L. Minimum and Maximum Values: Record monthly minimum and maximum values, including date and time of record. For three-phase measurements, identify phase of recorded value. Record the following parameters:
1. Line-to-line voltage.
 2. Line-to-neutral voltage.
 3. Current per phase.
 4. Line-to-line voltage unbalance.
 5. Line-to-neutral voltage unbalance.
 6. Power factor.
 7. Displacement power factor.
 8. Total power.
 9. Total reactive power.
 10. Total apparent power.
 11. THD voltage L-L.
 12. THD voltage L-N.
 13. THD current.
 14. Frequency.
- M. Harmonic Calculation: Display and record the following:
1. Harmonic magnitudes and angles for each phase voltage and current through 31st harmonic. Calculate for all three phases, current and voltage, and residual current. Current and voltage information for all phases shall be obtained simultaneously from same cycle.
 2. Harmonic magnitude reported as a percentage of the fundamental or as a percentage of rms values, as selected by user.
- N. Current and Voltage Ratings:
1. Designed for use with current inputs from standard instrument current transformers with 5-A secondary and shall have a metering range of 0-10 A.
 2. Withstand ratings shall not be less than 15 A, continuous; 50 A, lasting over 10 seconds, no more frequently than once per hour; 500 A, lasting 1 second, no more frequently than once per hour.
 3. Designed for use with voltage inputs from standard instrument potential transformers with a 120-V secondary.
- O. Accuracy:
1. Comply with ANSI C12.20, Class 0.5; and IEC 60687, Class 0.5 for revenue meters. Accuracy from Light to Full Rating shall meet the following criteria:

- a. Power: Accurate to 0.25 percent of reading, plus 0.025 percent of full scale.
 - b. Voltage and Current: Accurate to 0.075 percent of reading, plus 0.025 percent of full scale.
 - c. Power Factor: Plus or minus 0.002, from 0.5 leading to 0.5 lagging.
 - d. Frequency: Plus or minus 0.01 Hz at 45 to 67 Hz.
 2. For meters that are circuit-breaker accessories, metering accuracy at full-scale shall not be less than the following:
 - a. Current: Plus or minus 2.5 percent.
 - b. Voltage: Plus or minus 1.5 percent.
 - c. Energy, Demand, and Power: Plus or minus 4.0 percent.
 - d. Frequency: Plus or minus 1 Hz.
- P. Waveform Capture:
1. Capture and store steady-state waveforms of voltage and current channels; initiated manually. Each capture shall be for 3 cycles, 128 data points for each cycle, allowing resolution of harmonics to 31st harmonic of basic 60 Hz.
 2. Store captured waveforms in internal nonvolatile memory; available for PC display, archiving, and analysis.
- Q. Input: One digital input signal(s).
1. Normal mode for on/off signal.
 2. Demand interval synchronization pulse, accepting a demand synchronization pulse from a utility demand meter.
 3. Conditional energy signal to control conditional energy accumulation.
- R. Outputs:
1. Operated either by user command sent via communication link, or set to operate in response to user-defined alarm or event.
 2. Closed in either a momentary or latched mode as defined by user.
 3. Each output relay used in a momentary contact mode shall have an independent timer that can be set by user.
 4. One digital KY pulse to a user-definable increment of energy measurement. Output ratings shall be up to 120-V ac, 300-V dc, 50 mA, and provide 3500-V rms isolation.
 5. One relay output module(s), providing a load voltage range from 20- to 240-V ac or from 20- to 30-V dc, supporting a load current of 2 A.
 6. Output Relay Control:
 - a. Relay outputs shall operate either by user command sent via communication link or in response to user-defined alarm or event.
 - b. Normally open and normally closed contacts, field configured to operate as follows:
 - 1) Normal contact closure where contacts change state for as long as signal exists.

- 2) Latched mode when contacts change state on receipts of a pickup signal; changed state is held until a dropout signal is received.
- 3) Timed mode when contacts change state on receipt of a pickup signal; changed state is held for a preprogrammed duration.
- 4) End of power demand interval when relay operates as synchronization pulse for other devices.
- 5) Energy Pulse Output: Relay pulses quantities used for absolute kWh, absolute kVARh, kVAh, kWh In, kVARh In, kWh Out, and kVARh Out.
- 6) Output controlled by multiple alarms using Boolean-type logic.

S. Onboard Data Logging:

1. Store logged data, alarms, events, and waveforms in 800 KB of onboard nonvolatile memory.
2. Stored Data:
 - a. Billing Log: User configurable; data shall be recorded every 15 minutes, identified by month, day, and 15-minute interval. Accumulate 24 months of monthly data, 32 days of daily data, and between 2 and 52 days of 15-minute interval data, depending on number of quantities selected.
 - b. Custom Data Logs: One user-defined log(s) holding up to 96 parameters. Date and time stamp each entry to the second and include the following user definitions:
 - 1) Schedule interval.
 - 2) Event definition.
 - 3) Configured as "fill-and-hold" or "circular, first-in first-out."
 - c. Alarm Log: Include time, date, event information, and coincident information for each defined alarm or event.
 - d. Waveform Log: Store captured waveforms configured as "fill-and-hold" or "circular, first-in first-out."
3. Default values for all logs shall be initially set at factory, with logging to begin on device power up.

T. Alarms.

1. User Options:
 - a. Define pickup, dropout, and delay.
 - b. Assign one of four severity levels to make it easier for user to respond to the most important events first.
 - c. Allow for combining up to four alarms using Boolean-type logic statements for outputting a single alarm.
2. Alarm Events:
 - a. Over/undercurrent.
 - b. Over/undervoltage.
 - c. Current imbalance.

- d. Phase loss, current.
- e. Phase loss, voltage.
- f. Voltage imbalance.
- g. Over kW demand.
- h. Phase reversal.
- i. Digital input off/on.
- j. End of incremental energy interval.
- k. End of demand interval.

U. Control Power: 90- to 457-V ac or 100- to 300-V dc.

V. Communications:

- 1. Power monitor shall be permanently connected to communicate via Modbus TCP via a 100 Base-T Ethernet.
- 2. Local plug-in connections shall be for RS-232 and 100 Base-T Ethernet.

2.08 STANDALONE, WEB-ENABLED MONITORING AND CONTROL INSTRUMENT

- A. Separately mounted, permanently installed instrument for power monitoring and control.
 - 1. Enclosure: NEMA 250, Type 3R.
- B. Environmental Conditions: System components shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability.
 - 1. Indoor installation in spaces that have environmental controls to maintain ambient conditions of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and 20 to 90 percent relative humidity, noncondensing.
- C. Power-Distribution Equipment Monitor: Web enabled, with integral network port and embedded Web server with factory-configured firmware and HTML-formatted Web pages for viewing of power monitoring and equipment status information from connected devices equipped with digital communication ports.
- D. LAN Connectivity: Multipoint, RS-485 Modbus serial communication network, interconnecting all breaker trip units, protective relays, drives, and metering devices equipped with communications. Serial communication network connected to Ethernet server that functions as a gateway and server, providing data access via LAN.
- E. Communication Devices within the Equipment: Addressed at factory and tested to verify reliable communication with network server.
- F. Server Configuration:

1. Initial network parameters set using a standard Web browser. Connect via a local operator interface, or an RJ-45 port accessible from front of equipment.
 2. Network server shall be factory programmed with embedded HTML-formatted Web pages that are user configurable and that provide detailed communication diagnostic information for serial and Ethernet ports as status of RS-485 network; with internal memory management information pages for viewing using a standard Web browser.
 3. Login: Password protected; password administration accessible from the LAN using a standard Web browser.
 4. Operating Software: Suitable for local access; firewall protected.
- G. Data Access:
1. Network server shall include embedded HTML pages providing real-time information from devices connected to RS-485 network ports via a standard Web browser.
- H. Equipment Monitoring Options: Login shall be followed by a main menu for selecting summary Web pages that follow.
- I. Summary Web pages shall be factory configured to display the following information for each communicating device within the power equipment lineup:
1. User-Configured Custom Home Page: Provide for the lineup, showing status-at-a-glance of key operating values.
 2. Circuit Summary Page: Circuit name, three-phase average rms current, power (kW), power factor, and breaker status.
 3. Load Current Summary Page: Circuit name, Phase A, B, and C rms current values.
 4. Demand Current Summary Page: Circuit name, Phase A, B, and C average demand current values.
 5. Power Summary Page: Circuit name, present demand power (kW), peak demand power (kW), and recorded time and date.
 6. Energy Summary Page: Circuit name, energy (kWh), reactive energy (kVARh), and time/date of last reset.
 7. Transformer Status Page: Transformer tag, coil temperatures, and cooling fan status.
 8. Motor-Control Center Status Page: Circuit name, three-phase average rms current, thermal capacity (percentage), and drive output frequency (Hz) contactor status.
 9. Specific Device Pages: Each individual communicating device shall display detailed, real-time information, as appropriate for device type.
 - a. Display historical energy data that shall be logged automatically for each device, as appropriate for device type.
 - b. Display historical data logged from each device in graphical time-trend plots. Value to be displayed on time-trend plot shall be user

selectable. Time interval to be displayed on scale shall be for previous day or week.

10. Export historical energy data to a PC or workstation through network using FTP (File Transfer Protocol). Format exported data in a CSV (Comma Separated Variable) file format for importing into spreadsheet applications.

J. Communications:

1. Power monitor: Permanently connected to communicate via Modbus TCP via a 100 Base-T Ethernet.
2. Local Plug-in Connections: RS-232 and 100 Base-T Ethernet.

2.09 WORKSTATION HARDWARE

A. Environmental Conditions: System components shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. Indoor installation in spaces that have environmental controls to maintain ambient conditions of 36 to 122 deg F (2 to 50 deg C) dry bulb and 20 to 90 percent relative humidity, noncondensing.

B. Computer: Standard unmodified PC of modular design, designed for the latest version of Windows operating system.

1. Memory: minimum of 1 GB of usable installed memory.
2. Real-Time Clock. Automatic time correction once every 24 hours by synchronizing clock with the Time Service Department of the U.S. Naval Observatory.
3. Ports: Two RS-232-F serial ports for general use; one parallel port; four USB ports
4. Replaceable graphics board.
5. LAN Adapter Card.
6. Sound Card: For playback and recording of digital WAV sound files associated with audible warning and alarm functions.
7. Color Monitor: WXGA TFT, not less than 18 inches (455 mm), LCD type.
8. Keyboard: US English.
9. Mouse: Standard.
10. Minimum Disk Storage: 100 GB, 7200 rpm hard drive.
11. CD-RW/DVD-ROM Drive.
12. Report Printer: Minimum resolution 600 dpi laser printer.
 - a. Connected to central station and designated workstations.
 - b. RAM: 2 MB, minimum.
 - c. Printing Speed: Minimum 12 pages per minute.
 - d. Paper Handling: Automatic sheet feeder with 250-sheet paper cassette and with automatic feed.

C. Redundant Central Computer: Connected in a hot standby, peer configuration; automatically maintains copies of system software, application software, and

data files. System transactions and other activities that alter system data files shall be updated to system files of redundant computer in near real-time. If central computer fails, redundant computer shall assume control immediately and automatically.

- D. UPS: Self-contained; complying with requirements in Division 16 Section "Static Uninterruptible Power Supply."
 - 1. Size: Provide a minimum of 6 hours of operation of workstation station equipment.
 - 2. Batteries: Sealed, valve regulated, recombinant, lead calcium.
 - 3. Accessories:
 - a. Transient voltage suppression.
 - b. Input-harmonics reduction.
 - c. Rectifier/charger.
 - d. Battery disconnect device.
 - e. Static bypass transfer switch.
 - f. Internal maintenance bypass/isolation switch.
 - g. External maintenance bypass/isolation switch.
 - h. Output isolation transformer.
 - i. Remote UPS monitoring.
 - j. Battery monitoring.
 - k. Remote battery monitoring.

2.10 RS-232 ASCII INTERFACE

- A. ASCII interface shall allow RS-232 connections to be made between a meter or circuit monitor operating as the host PC and any equipment that will accept RS-232 ASCII command strings, such as local display panels, dial-up modems, and alarm transmitters.
- B. Pager System Interface: Alarms shall be able to activate a pager system with customized message for each input alarm.
 - 1. RS-232 output shall be capable of connection to a pager interface that can be used to call a paging system or service and send a signal to a portable pager. System shall allow an individual alphanumeric message per alarm input to be sent to paging system. This interface shall support both numeric and alphanumeric pagers.
- C. Alarm System Interface:
 - 1. RS-232 output shall be capable of transmitting alarms from other monitoring and alarm systems to workstation software.
- D. Cables:
 - 1. PVC-Jacketed, RS-232 Cable: Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, polypropylene insulation, and individual aluminum foil-polyester tape shielded pairs with 100 percent shield

coverage; PVC jacket. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.

- a. NFPA 70, Type CMR.
 - b. Flame Resistance: UL 1581, Vertical Tray.
2. Plenum-Type, RS-232 Cable: Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, plastic insulation, and individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage; plastic jacket. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
 - a. NFPA 70, Type CMP.
 - b. Flame Resistance: NFPA 262, Flame Test.

2.11 LAN CABLES

- A. Comply with Division 16 Section "Communications Horizontal Cabling."
- B. RS-485 Cable:
 1. PVC-Jacketed, RS-485 Cable: Paired, 2 pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors, PVC insulation, unshielded, PVC jacket, and NFPA 70, Type CMR.
 2. Plenum-Type, RS-485 Cable: Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, fluorinated-ethylene-propylene insulation, unshielded, and fluorinated-ethylene-propylene jacket, and NFPA 70, Type CMP.
- C. Unshielded Twisted Pair Cables: As specified for horizontal cable for data service in Division 16 Section "Communications Horizontal Cabling."

2.12 LOW-VOLTAGE WIRING

- A. Comply with Division 16 Section "Control-Voltage Electrical Power Cables."
- B. Low-Voltage Control Cable: Multiple conductor, color-coded, No. 20 AWG copper, minimum.
 1. Sheath: PVC; except in plenum-type spaces, use sheath listed for plenums.
 2. Ordinary Switching Circuits: Three conductors unless otherwise indicated.
 3. Switching Circuits with Pilot Lights or Locator Feature: Five conductors unless otherwise indicated.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine pathway elements intended for cables. Check raceways, cable trays, and other elements for compliance with space allocations, installation

tolerances, hazards to cable installation, and other conditions affecting installation.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 CABLING

- A. Comply with NECA 1.
- B. Install cables and wiring according to requirements in Division 16 Section "Communications Horizontal Cabling."
- C. Wiring Method: Install wiring in raceway and cable tray except within consoles, cabinets, desks, and counters. Conceal raceway and wiring except in unfinished spaces.
- D. Wiring Method: Install wiring in raceway and cable tray except within consoles, cabinets, desks, and counters and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Use NRTL-listed plenum cable in environmental air spaces, including plenum ceilings. Conceal raceway and cables except in unfinished spaces.
- E. Install LAN cables using techniques, practices, and methods that are consistent with specified category rating of components and that ensure specified category performance of completed and linked signal paths, end to end.
- F. Install cables without damaging conductors, shield, or jacket.

3.03 IDENTIFICATION

- A. Identify components and power and control wiring according to Division 16 Section "Electrical Identification."
- B. Label each power monitoring and control module with a unique designation.

3.04 GROUNDING

- A. Comply with IEEE 1100, "Recommended Practice for Powering and Grounding Electronic Equipment."

3.05 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Tests and Inspections:
 - 1. Electrical Tests: Use caution when testing devices containing solid-state components.
 - 2. Continuity tests of circuits.
 - 3. Operational Tests: Set and operate controls at workstation and at monitored and controlled devices to demonstrate their functions and capabilities. Use a methodical sequence that cues and reproduces actual operating functions as recommended by manufacturer. Submit sequences for approval. Note response to each test command and operation. Note time intervals between initiation of alarm conditions and registration of alarms at central-processing workstation.
 - a. Coordinate testing required by this Section with that required by Sections specifying equipment being monitored and controlled.
 - b. Test LANs according to requirements in Division 16 Section "Communications Horizontal Cabling."
 - c. System components with battery backup shall be operated on battery power for a period of not less than 10 percent of calculated battery operating time.
 - d. Verify accuracy of graphic screens and icons.
 - e. Metering Test: Load feeders, measure loads on feeder conductor with an rms reading clamp-on ammeter, and simultaneously read indicated current on the same phase at central-processing workstation. Record and compare values measured at the two locations. Resolve discrepancies greater than 5 percent and record resolution method and results.
 - f. Record metered values, control settings, operations, cues, time intervals, and functional observations and submit test reports printed by workstation printer.
- E. Power monitoring and control equipment will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.
- G. Correct deficiencies, make necessary adjustments, and retest. Verify that specified requirements are met.

- H. Test Labeling: After satisfactory completion of tests and inspections, apply a label to tested components indicating test results, date, and responsible agency and representative.
- I. Reports: Written reports of tests and observations. Record defective materials and workmanship and unsatisfactory test results. Record repairs and adjustments.
- J. Remove and replace malfunctioning devices and circuits and retest as specified above.

3.06 DEMONSTRATION

- A. Train owner's maintenance personnel to adjust, operate, and maintain systems. See Division 1 Section "Demonstration and Training."
 - 1. Train Owner's management and maintenance personnel in interpreting and using monitoring displays and in configuring and using software and reports. Include troubleshooting, servicing, adjusting, and maintaining equipment. Provide a minimum of 12 hours' training.
 - 2. Training Aid: Use approved final versions of software and maintenance manuals as training aids.

3.07 ON-SITE ASSISTANCE

- A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to three visits to Project during other-than-normal occupancy hours for this purpose.

SECTION 13852

DIGITAL, ADDRESSABLE FIRE-ALARM SYSTEM

PART 1 - GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Fire-alarm control unit.
 - 2. System smoke detectors.
 - 3. Heat detectors.
 - 4. Notification appliances.
 - 5. Magnetic door holders.
 - 6. Remote annunciator.
 - 7. Addressable interface device.
 - 8. Network Connection.

1.02 GENERAL DESCRIPTION

- A. This section covers addressable fire alarm systems as they relate to building detection, alarm, and notification; as well as interconnection with wet pipe automatic sprinkler systems, and other building features.

1.03 RELATED WORK

- A. It is the contractor's responsibility to consult other specification sections, determine the extent and character of related work, and properly coordinate work specified herein with that specified elsewhere to produce a complete operational installation.

1.04 DEFINITIONS

- A. LED: Light-emitting diode.
- B. NICET: National Institute for Certification in Engineering Technologies.

1.05 REFERENCES

- A. NFPA 70, National Electric Code – 2011
- B. NFPA 72, National Fire Alarm and Signaling Code – 2013
- C. International Building Code (IBC) – 2012 with City of Phoenix amendments
- D. International Fire Code (IFC) – 2012 with City of Phoenix amendments

1.06 QUALIFICATIONS

- A. Designer Qualifications: Shop drawings and calculations must be prepared and submitted for approval by a minimum NICET Level III certified technician.
- B. Installer Qualifications: Project Manager or Office Superintendent must be a minimum NICET Level II certified technician.
- C. All design work shall be performed by a NICET Level III or IV certified fire alarm technician or a registered Fire Protection Engineer.
- D. The installing contractor shall be a firm with a minimum three years documented experience installing fire alarm systems and providing contract maintenance service as a part of their business.

1.07 SCOPE OF WORK

- A. The work includes the installation of necessary Signaling Line Circuits (SLC), Notification Appliance Circuits (NAC), data gathering panels and interconnection to the emergency communication system, for an operational fire detection, alarm, and emergency communication system.
- B. Install audio racks as necessary.
- C. Furnish and install all automatic and manual detection equipment.
- D. Interface the new XLS 3000 FACU with all Releasing Control Units supervising double interlock pre-action systems.
- E. The scope of work also includes training City of Phoenix personnel on the operation of the system, required maintenance tasks and frequencies, and the locations of all equipment necessary to maintain and operate the fire alarm system.
- F. The scope of work includes open discussion and frequent updates on the equipment progress with HAJV and the Owner.
- G. The Designer's scope of work includes the submission of a Designer's Narrative Report that includes the following minimum content. The Narrative Report is a project- specific statement of how the designer has captured the project requirements for a fire alarm system. minimum content in the Narrative Report is:
 - 1. Basis of Design
 - 2. Sequence of Operations
 - 3. Matrix of Operations
 - 4. Specialized FP Equipment (including sequence of operation)
 - 5. System Testing Requirements

- H. Fire detection and alarm systems shall be configured using the XLS 3000 Honeywell system.
- I. Install the necessary digital and voice contact closures for each PA system amplifier.
- J. Install the necessary equipment to supervise the Processor “house PA” system amplifier power and signal outputs for each amplifier.
- K. Furnish and install all necessary control modules for the automatic operation of the fire/smoke dampers, elevator recall, elevator power shunt trip, HVAC dampers, and HVAC shutdown.
- L. Furnish and install all necessary monitor modules for supervision of the emergency generator, duct detectors and double interlock preaction system alarm, supervisory, and trouble signals.
- M. Furnish and install monitor modules to supervise the emergency generator: on-off-auto, low fuel, battery fault, generator fault, generator run, ATS.
- N. All duct detectors shall be supervised by the fire alarm system. Contractor shall consult the mechanical drawings for the number of duct detectors.
- O. Include in the shop drawing development the functional description of the audible and visual alerting signals as detailed in the Risk Analysis.
- P. The audio portion of the Emergency Communications Systems is being used to function similar to an emergency voice/alarm communications system (EVACS), which is required by the 2012 IBC, including City of Phoenix Amendments, for high-occupancy assembly buildings [2012 IBC, 907.2.1.1 & 907.5.2.2]. The operational requirements for EVACS by NFPA 72 will provide the necessary levels of protection, reliability, and functionality commensurate with other fire alarm equipment, and will improve upon the level of protection currently afforded the system. Furnish and install all the necessary control and monitor modules for the “house PA” system monitoring by the FACU to indicate status, off normal conditions, operation, and power availability.
- Q. Furnish and install the necessary equipment so that the visual strobe notification appliances have the capability of being manual activated from the Comm Center or the FCC. The system shall have the capability of activating the strobe visual notification appliances without the broadcast of an alarm signal from the FACU or a manual voice message. The visual strobe notification appliances shall be able to be activated independently of any alarm, trouble, or supervisory signal.
- R. Interface the XLS3000 FACU to the smoke control system and fire fighter’s smoke control override panel.

1.08 SUBMITTALS

- A. Prior to performing any work, the contractor shall include the following documentation in addition to those documents required elsewhere in this specification:
1. A schedule indicating the delivery dates of the equipment to be supplied, installation sequence, time frame and the total amount of on-site technical assistance time (in man-hours per phase), and final acceptance test dates to meet the scheduled project completion dates.
 2. A preliminary equipment list identifying the type, quantity, make, and model number of each piece of equipment to be provided under this submittal. The equipment list shall include the type, quantity, make and model of spare equipment, as specified in this specification. Types and quantities of equipment submitted shall coincide with the types and quantities of equipment used in the battery calculations and those shown on the shop drawings. A final equipment list shall be submitted with the Operating and Maintenance (O&M) manual, as specified in this specification.
 3. If the contractor is also the designer of the fire alarm system, provide a sequence of operation that describes how the system responds during alarm, supervisory, and trouble conditions. The description shall include FACP LEDs, audible, and visible indications; as well as initiating devices, notification appliances, and auxiliary functions (such as HVAC fan unit shutdown, etc.). The description shall provide sufficient information so that the exact function of each installed device and appliance is known.
 4. Manufacturer's original product datasheets, specifications, installation instruction sheets, and descriptive information for all major components of the system shall be provided. Copies are not acceptable. All equipment and devices to be furnished under this contract shall be clearly marked (highlighted) on the product datasheets.
 5. Submit manufacturer's specification sheets for the type of conductor and/or wiring planned for use.
 6. Provide data sheets for the manufacturer of the UL listed through-penetration fire stop assembly.
 7. A complete list of amperage requirements during normal, supervisory, trouble, and alarm conditions for each component of the system.
 8. Preliminary battery calculations showing total standby power and total alarm power required meeting the specified system requirements. Final battery calculations shall be submitted with the O&M manual, as specified in this specification.

9. Preliminary system voltage drop calculations to assure that the system shall operate per the prescribed backup time periods and under all voltage conditions per UL and NFPA standards. Final voltage drop calculations shall be submitted with the O&M manual and as-built drawings.
 - a. Voltage drop calculations can be performed with negligible inductance.
 - b. The voltage drop calculations shall take into consideration the resistance in ohms of one circular mil foot of conductor in the calculations. Information on this can be found in Chapter 9, Table 8 of NFPA 70.
 10. Test Plan must be submitted three weeks prior to the scheduled date of the Acceptance Test for review and approval by the project manager.
 11. Smoke control system panel layout.
- B. Shop Drawings: For fire-alarm system. Include plans, elevations, sections, details, and attachments to other work.
1. Comply with recommendations in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter in NFPA 72.
 2. Clear and concise description of operation, with input/output matrix similar to that shown in NFPA 72, Appendix A-7.5.2.2, and complete listing of software required.
 3. Include performance parameters and installation details for each detector, verifying that each detector is listed for complete range of air velocity, temperature, and humidity possible when air-handling system is operating.
 4. Include plans, sections, and elevations of heating, ventilating, and air-conditioning ducts, drawn to scale and coordinating installation of duct smoke detectors and access to them. Show critical dimensions that relate to placement and support of sampling tubes, detector housing, and remote status and alarm indicators. Locate detectors according to manufacturer's written recommendations.
 5. Include floor plans to indicate final outlet locations showing address of each addressable device. Show size and route of cable and conduits.
 6. Circuits layouts; number, size, and type of raceways and conductors; conduit fill calculations; spare capacity calculations; and notification appliance circuit drop calculations.
 7. List of all devices on each signaling line circuit, with spare capacity indicated
- C. Field quality-control reports.
- 1.09 AS-BUILT DRAWINGS
- A. Any changes to the designed location of notification appliances and detection devices shall be approved prior to installation. Additionally, the as-built drawings shall show how the cable and conduit has been routed and the location of all

terminal and junction boxes. The as-builts shall account for all field changes that were made during the installation.

- B. The contractor shall develop a matrix of operations for each detection device (point), grouped for each building, which shows the device address, location, and function.
- C. The contractor shall show the equipment and addresses associated with each device, as listed in this specification, on a separate layer and provide copies of only this layer shown on the floor plans as part of the set of as-built drawings.
- D. Upon completion of the installation of the system and a minimum of one week prior to the Acceptance Test, the contractor shall deliver two complete sets of reproducible, full-size, appropriately scaled, as-built drawings to the project manager.
- E. One set of red line as-built drawings will be maintained at the main FACP at all times. Drawings shall indicate True North and Plan North.

1.010 TEST PLAN

- A. Upon completion of the installation of each system and a minimum of two weeks prior to the Acceptance Test, the contractor shall deliver two complete sets of the Test Plan, which shall describe how the system shall be tested. This shall include a systematic description of all tests and shall indicate type and location of test apparatus to be employed. All tests shall be conducted in the presence of the project manager and other parties identified by the owner or owner's representative and shall not be conducted until the Test Plan is approved.

1.011 OPERATION AND MAINTENANCE MANUALS

- A. The following shall be provided to the owner:
 - 1. Comply with the Records Section of the Inspection, Testing and Maintenance Chapter of NFPA 72.
 - 2. Provide Record of Completion Documents according to NFPA 72, *Permanent Records* in the Records Section of the *Inspection, Testing and Maintenance* chapter.
 - 3. Record copy of site-specific software.
 - a. Program Software Backup: On magnetic media or compact disk, complete with data files.
 - b. Software operating and upgrade manuals.
 - c. Device address list.
 - d. Printout of software application
 - 4. Provide Maintenance, Inspection and Testing Records according to NFPA 72 and include the following:
 - a. Software operating and upgrade manuals.

- b. Frequency of testing of installed components.
 - c. Frequency of inspection of installed components.
 - d. Requirements and recommendations related to results of maintenance.
 - e. Manufacturer's user training manuals
 - 5. Manufacturer's required maintenance related to system warranty requirements.
 - 6. Abbreviated operating instructions for mounting at FACP.
- B. Software and Firmware Operational Documentation:
- 1. Software operating and upgrade manuals.
 - 2. Program Software Backup: On magnetic media or compact disk, complete with data files.
 - 3. Device address list.
 - 4. Printout of software application and graphic screens.

1.012 QUALITY ASSURANCE

- A. Installer Qualifications: Personnel shall be trained and certified by manufacturer for installation of units required for this Project.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.013 SOFTWARE SERVICE AGREEMENT

- A. Comply with UL 864.
- B. Technical Support: Beginning with Substantial Completion, provide software support for two years.
- C. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include operating system. Upgrade shall include new or revised licenses for use of software.
 - 1. Provide 30 days' notice to Owner to allow scheduling and access to system and to allow Owner to upgrade computer equipment if necessary.

1.014 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Lamps for Remote Indicating Lamp Units: Quantity equal to 10 percent of amount installed, but no less than 1 unit.
 - 2. Lamps for Strobe Units: Quantity equal to 10 percent of amount installed, but no less than 1 unit.

3. Smoke Detectors, Fire Detectors: Quantity equal to 10 percent of amount of each type installed, but no less than 1 unit of each type.
4. Detector Bases: Quantity equal to 2 percent of amount of each type installed, but no less than 1 unit of each type.
5. Keys and Tools: One extra set for access to lock and tamper proofed components.
6. Audible and Visual Notification Appliances: One of each type installed.
7. Fuses: Two of each type installed in the system.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS

- A. This specification identifies the essential functional requirements of the automatic networked fire alarm system(s) for installation. The manufacturer's equipment (hardware and software) and system configuration shall comply with or exceed the functional intent of this specification.
- B. Any case of error, omission, discrepancy, inconsistency or lack of clarity in the specifications or drawings shall be promptly identified to the Owner in the form of an RFI.

2.02 QUALIFICATION OF MANUFACTURERS

- A. Acceptable manufacturers:
 1. Honeywell – no equal.
 2. Listed and compatible peripheral devices and appliances.

2.03 QUALITY ASSURANCE

- A. Each component of the networked fire alarm system shall be listed as a product of a single fire alarm system manufacturer under the appropriate category for the intended use by Underwriters Laboratories, Inc. (UL) and shall bear the "UL label". All control equipment shall be listed under UL category UOJZ FACUs System as a single unit. Partial listings, or multiple listings for various major sections of the control equipment, shall not be acceptable. Electrical components, devices, and accessories shall be listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to the AHJ.
- B. All control equipment shall have transient protection devices that comply with the requirements outlined in UL 864, Standard for FACUs for Fire-Protective Signaling Systems.
- C. All materials and equipment supplied shall be new, first quality and the manufacturer's best type and latest model capable of complying with all

requirements of this specification and shall have been in continuous production and in continuous service in commercial applications for at least one year. Obsolete equipment shall not be used.

2.04 FUNCTIONAL DESCRIPTION OF THE SYSTEM

A. Alarm Condition

1. The FACU shall have a SYSTEM ALARM LED and an alarm signal ACKNOWLEDGE switch.
 - a. An alarm signal shall cause the transmission of an alarm signal from the control unit to the Central Command Center.

B. Supervisory Condition

1. The FACU shall have a SYSTEM SUPERVISORY LED and a supervisory signal ACKNOWLEDGE switch.
 - a. An off-normal operation condition shall cause the transmission of a supervisory signal from the valve to the building fire alarm control unit.

C. Trouble Condition

1. The FACU shall have a SYSTEM TROUBLE LED and a trouble signal ACKNOWLEDGE switch.
2. Unacknowledged alarm messages shall have priority over trouble messages, and, if such an alarm occurs during a trouble sequence, the alarm condition shall have display priority.
 - a. A circuit ground or short condition shall cause the transmission of a trouble signal from the valve to the building fire alarm control unit

D. System Supervision

1. All wiring extending from the FACU shall be supervised for opens, shorts, and grounds. Systems containing unsupervised wiring of any type shall not be acceptable.
2. The occurrence of any fault shall activate the system trouble circuitry, but shall not interfere with the proper operation of any circuit that does not have a fault condition.

E. Signal Transmission

1. All signals shall annunciate at the remote alarm annunciator and the FACU.
2. All signals shall be transmitted via network connection to the Airport Command Center.

2.05 MINIMUM COMPONENTS

- A. The automatic fire detection and alarm system relocation and installation shall consist of, but not be limited to:
 1. Addressable monitor modules and control relay output modules.

2. Addressable smoke detectors over control equipment. Where the environment is not suitable for a smoke detector, replace with an addressable heat detector.
3. Monitoring of tamper and flow switches on all fire protection systems.
4. Monitoring of alarm, supervision and trouble for all releasing control panels.
5. Annunciation at the fire command center.
6. New XLS3000 FACU and audio racks.
7. Interface to the Emergency Communication System (PA).
8. Output modules for the voice recorded message and for manual voice override.

2.06 SYSTEM FIELD DEVICES - GENERAL

- A. Connection of initiating devices and notification appliances to appropriate signaling line circuits and notification appliance circuits from each zone.
- B. Devices shall operate under the following ranges of environmental conditions:
 1. Ambient Temperature: 32-100 degrees Fahrenheit.
 2. Relative humidity: 0-93 percent, non-condensing.
 3. Air velocity: 300 feet per minute.
- C. Each addressable device shall include a means to assign a unique address code to the device in the field. This address code shall serve as the means by which the system program recognizes the device.
- D. The address of each addressable device shall be clearly and permanently indicated on the base of each detector or on the face of monitor modules, control relay output modules, and manual fire alarm boxes.
- E. Failure of any single device shall not hinder the operation of any other devices connected to the signaling line circuit.
- F. Failure of the FACU to properly communicate with any addressable device shall initiate the proper trouble sequence. While in this trouble condition, the FACU shall cause actual alarm input from devices to override trouble alarm.

2.07 AUTOMATIC DETECTORS - GENERAL

- A. Automatic smoke detectors located over control equipment shall be of the addressable, analog photoelectric type and shall be interchangeably mounted into a common twist-lock base.
- B. Make safe automatic detectors located in the construction area shall be conventional 136 degree Rate of Rise heat detectors.

2.08 ADDRESSABLE PHOTOELECTRIC SMOKE DETECTORS

- A. Comply with UL 268; operating at 24-V dc, nominal.
- B. Photoelectric smoke detectors shall have a general alarm setting in all common spaces of 3.0% - 4.0% per foot obscuration.
- C. The detectors shall provide a combination alarm/power LED. The LED shall flash under normal conditions, indicating that the detector is operational and in regular communication with the FACU. The LED shall be placed into steady illumination under an alarm condition. An output connection shall also be provided in the base to connect an external remote alarm LED.

2.09 ADDRESSABLE SMOKE DETECTORS

- A. Detectors shall have a general alarm setting in all common spaces of medium sensitivity.
- B. The detectors shall provide a combination alarm/power LED. The LED shall flash under normal conditions, indicating that the detector is operational and in regular communication with the FACU. The LED shall be placed into steady illumination under an alarm condition. An output connection shall also be provided in the base to connect an external remote alarm LED.
- C. Beam Detectors
 - 1. Xtralis OSID or pre-approved equal

2.010 ADDRESSABLE DUCT SMOKE DETECTORS

- A. Photoelectric type complying with UL 268A.
- B. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
- C. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector.
- D. Each sensor shall have multiple levels of detection sensitivity.
- E. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied.
- F. Relay Fan Shutdown: Rated to interrupt fan motor-control circuit

2.011 HEAT DETECTORS

- A. Comply with UL 521.
- B. Heat Detector, Rate of Rise-Temperature Type: Actuated by temperature that exceeds a fixed temperature of 190 deg F

2.012 DETECTOR BASES

- A. Automatic detectors shall utilize a common, plug-in, twist-lock, tamper-resistant type base that accommodates photoelectric and thermal detectors. Detectors shall be interchangeable to simplify field conversion.
- B. Removal of the detector from the base shall cause a trouble indication at the FACU. Removal of the detector shall not disrupt the alarm circuit wiring or prevent the receipt of alarms from other devices operating in the circuit.

2.013 ADDRESSABLE MONITOR MODULES

- A. Furnish and install addressable monitor modules to supervise and monitor the status of each non-addressable device, such as the make safe heat detectors.
- B. Each addressable monitor module shall be able to support any number of normally open (N/O) devices. Wiring to the device(s) being monitored shall be Class B. Module status (normal, alarm, supervisory, trouble) shall be transmitted to the FACU.
- C. An LED shall be provided which shall flash under normal conditions, indicating that the monitor module is operational and in regular communication with the FACU.

2.014 ADDRESSABLE CONTROL MODULES

- A. Furnish, install, and relocate addressable control modules for auxiliary control of fire protection equipment.
- B. An LED shall be provided which shall flash under normal conditions, indicating that the control module is operational and in regular communication with the FACU.

2.015 WIRE GAUGE

- A. Unless otherwise indicated on the design drawings or manufacturer's specifications, the following minimum sizes of conductors shall be used for all new wiring:

- | | |
|--|------------|
| 1. Power Supply Conductors (Primary and Secondary) | No. 12 AWG |
| 2. Signaling Line Circuit Conductors | No. 14 AWG |
| 3. Notification Appliance Circuit Conductors | No. 14 AWG |
| 4. LCD Remote Alarm Annunciators | No. 14 AWG |

- B. All Conductors shall be plenum rated as described in NFPA 70.

2.016 VISUAL STROBE NOTIFICATION APPLIANCES

- A. Provide UL-listed visible (Strobe) notification appliances complying with the requirements specified in NFPA 72, UL 1971, Americans with Disabilities Act Accessibility Guidelines (ADAAG), and the Uniform Federal Accessibility Standards (UFAS).
- B. All visual strobe notification appliances will be marked with the word "ALERT" on the body. The text shall either be in the color red or white depending upon the selection of the appliance color by the architect.

2.017 REMOTE ANNUNCIATOR

- A. Annunciator functions shall match those of fire-alarm control unit for alarm, supervisory, and trouble indications. Manual switching functions shall match those of fire-alarm control unit, including acknowledging, silencing, resetting, and testing.
- B. Mounting: Flush cabinet, NEMA 250, Type 1

PART 3 - EXECUTION

3.01 INSTALLATION

- A. The supervisory work of the qualified manufacturer's technical representative shall include, but not necessarily be limited to, checking all the system wiring connections; advising the contractor regarding technical details of the installation; and the adjustment and testing of all components of the system in order to ensure a complete and satisfactorily operable system. The manufacturer's technical representative shall be on site, during the entire installation and connection of the new control equipment. The technical representative shall monitor all wiring changes and assist the contractor to ensure a smooth transition to the new control equipment. The cost of the technical representative shall be paid by the contractor and shall be included in the bid price.
- B. All relays for control devices shall be located within 36" of the device.

- C. Smoke detectors shall not be installed until after the construction clean-up of all trades is complete and final.
- D. Automatic Detectors
 - 1. In general, automatic detectors shall be mounted on the structural ceiling or finished ceiling and not on the bottom or side of any type of construction or structure, which extends down from the ceiling unless otherwise shown on the contract drawings.
 - 2. Automatic detectors shall be located near points where air currents normally intersect. Detectors shall not be located in the direct path of the draft from an HVAC air supply grille, a door, window, or hallway. Detectors shall be installed a minimum of three feet from an HVAC air supply diffuser, in accordance with NFPA 72.
- E. Addressable Photoelectric Smoke Detectors
 - 1. Addressable analog photoelectric smoke detectors shall be spaced at maximum of 30 foot on center and in accordance with NFPA 72 and the manufacturer's installation instructions. Smoke detectors shall only be installed in those environments suitable for proper smoke detector operation.
 - 2. Install detectors over control equipment. The detectors shall be installed no more than 48-inches above the panels.
- F. Addressable Monitor Modules
 - 1. Addressable monitor modules shall include a mounting plate for installation in a junction box or shall be mounted in a locked cabinet or approved box, as shown on the manufacturers recommended specifications.
- G. Addressable Control Modules
 - 1. Addressable control modules shall include a mounting plate for installation in a junction box or shall be mounted in a locked cabinet or approved box, as shown on the manufacturers recommended specifications. Install in a weather proof backbox in exterior locations.

3.02 WIRING

- A. All wiring shall comply with this section.
- B. The entire wiring and raceway system for the networked fire alarm systems shall be in full accordance with NFPA 70.
- C. The contractor shall furnish all metal raceway, wiring, outlet boxes, junction boxes, cabinets, labels and similar devices necessary for the complete installation of the fire alarm systems. All wiring shall be of the type as specified herein and recommended by the manufacturer and shall be installed in metal raceway throughout in accordance with NFPA70.

- D. Raceways containing conductors identified as Fire Alarm System conductors shall not contain any other conductors, and no AC carrying conductors shall be allowed in the same raceway with the DC fire alarm detection and signaling conductors.
- E. Where a circuit is modified, the conductor shall be installed terminal to terminal. No splicing permitted.
- F. All existing wiring shall be tested for abnormal conditions (grounds, shorts, opens, etc.) prior to reuse. In general, existing initiating device circuits shall be reused as signaling line circuits if the circuit is not loaded to more than 80% of the available circuit loading and the distance limitations as set forth by the manufacturer's recommended specifications are not exceeded. In the event that a signaling line circuit or a notification appliance circuit load exceeds 80% of the available circuit loading, new circuits shall be installed.
- G. All wiring shall test free from grounds and short circuit faults. No connections to the FACU shall be made until the system wiring has been accepted by the Owner.
- H. Unless otherwise indicated, the color code for all fire alarm conductors shall be as follows:
 - 1. Signaling line circuits and initiating device circuits shall be red and black. Red shall be positive and black shall be negative.
 - 2. Sprinkler/standpipe circuits shall be red and black. Red shall be positive and black shall be negative.
 - 3. Detector and monitor module power circuits shall be brown and violet. Violet shall be positive and brown shall be negative.
- I. All fire alarm conductors shall be installed per NFPA 70. Minimum conduit size, if used, is $\frac{3}{4}$ ". All conduits in occupied areas shall be concealed, unless otherwise approved in writing by the Owner.
- J. All junction and pull box covers shall be red. Label all conduits at 20-foot increments, Fire Alarm or approved equal, in red letters. Alternatively, install red colored EMT.
- K. Exposed raceways shall be run parallel and perpendicular to the walls and ceilings. Wherever practical, exposed raceways shall be run on the ceiling as close as possible to a wall or as high as possible on a wall. Where exposed raceways shall cross under a structural beam or rib, they shall be run down on one side of the beam or rib, across its bottom, and up to the ceiling on the other side of the beam or rib. No spanning from beam to beam or rib to rib shall be permitted. The use of a raceway body on one side of a beam or rib shall be permitted provided it shall be readily accessible. Where metal raceway is installed exposed, it shall be painted to match the walls and/or ceilings on which it is installed, as instructed by the Owner. The method and location of all exposed raceways shall be approved by the Owner prior to start of any installation work.

- L. The power employed to operate the fire alarm systems shall have a high degree of reliability and capacity for the intended service. Connections to this power service shall be made on a dedicated branch circuit(s). The circuit shall be mechanically protected and identified as "Fire Alarm".
- M. All wiring within the FACU shall be neatly served in the panel gutters and be secured by approved means.
- N. All conductors and EMT shall be installed in a neat and workman-like manner. Vertically and horizontally positioned EMT and/or conductors shall be supported in accordance with good tradesman practices and including, but not limited to, the NEC Sections 376 and 378.
- O. Where penetrations of floor slabs, fire-resistance rated walls, or smoke barrier walls are made; the wiring shall be sleeved in metal raceway and the penetrations shall be fire-stopped with approved or UL listed through-penetration firestop assembly material acceptable to the Owner.
- P. Each SLC and NAC emanating from the FACU shall be installed in a Class B configuration.
- Q. Arrange and zone each detection and supervision device to annunciate the floor in which it is located upon actuation.

3.03 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Division 16 Section "Electrical Identification."
- B. Install framed instructions in a location visible from fire-alarm control unit.

3.04 GROUNDING

- A. Ground fire-alarm control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to fire-alarm control unit.

3.05 ACCEPTANCE TESTING

- A. Prerequisites to the Acceptance Test:
 - 1. Submittal of a Test Plan for approval by the Owner (three weeks prior to proposed test date).
 - 2. Completion of tests on all components in accordance with the Test Plan by contractor and manufacturers' reps.
 - 3. Submittal of as-built drawings.

- B. Before the installation will be considered complete and acceptable by the Owner, the entire system must pass a Pre-Acceptance Test. This test shall be coordinated and performed by the contractor, in the presence of a representative of the manufacturer, and the Owner. The test shall not be conducted until all parties agree on the scheduled test date.
 - 1. The pre-acceptance test shall be performed on all detection devices and notification appliances. The pre-acceptance testing shall be performed in accordance with the applicable sections of NFPA 72.
- C. The contractor shall provide all the necessary personnel and equipment to conduct the tests.
- D. The Contractor shall schedule the Pre-Acceptance test at least one week in advance. The Contractor shall not perform the test without the required parties. The required parties are the Owner, and the AHJs.
- E. At a minimum, the contractor shall perform the following:
 - 1. Operate every building fire alarm device to ensure proper operation, correct annunciation at each remote annunciator (as shown on the drawings) and at the FACU, and proper operation of all supervisory and alarm functions.
 - 2. The signaling line circuits shall be opened in at least two locations per floor to check for the presence of correct supervisory circuitry.
 - 3. One-half of all tests shall be performed on battery/emergency generator standby power.
- F. Once the Pre-Acceptance test has been completed and results accepted by the Owner, the Contractor shall schedule a Final Acceptance Test.
 - 1. The final acceptance test shall be performed on all detection devices and notification appliances. The final acceptance testing shall be performed in accordance with the applicable sections of NFPA 72.
- G. The contractor shall provide all the necessary personnel and equipment to conduct the tests.
- H. The Contractor shall schedule the Pre-Acceptance test at least one week in advance. The Contractor shall not perform the test without the required parties. The required parties are the Owner, and the AHJs.
- I. At a minimum, the contractor shall perform the following:
 - 1. Operate 100% of the building fire alarm devices to ensure proper operation, correct annunciation at each remote annunciator and at the FACU, and proper operation of all supervisory and alarm functions
 - 2. The signaling line circuits shall be opened in at least two locations per floor to check for the presence of correct supervisory circuitry.
- J. One-half of all tests shall be performed on battery standby power.

- K. If the Final Acceptance Test fails, the contractor shall pay all costs incurred to the Owner for any and all reacceptance testing.
- L. Upon satisfactory completion of the tests, the contractor shall leave the fire alarm systems (if installed) in proper working order and without additional expense to the Owner, shall replace any defective materials or equipment provided by the contractor under this contract within two years from the date of final acceptance by the awarding authority.

3.06 TRAINING REQUIREMENTS

- A. After final acceptance of the fire alarm system, the contractor and supplier shall provide operation training to City of Phoenix Aviation Department personnel. Each training session shall be a minimum of one hour and shall be conducted on shift or at a time acceptable to the building's operators. Each session shall include an overview of the system and the devices connected to it, emergency procedures (including alarm, trouble and supervisory condition procedures), FACU operation, and safety requirements. Each session shall include a complete demonstration of the system. Dates and times of each training period shall be coordinated through the Owner, not less than two weeks prior to the training session.

3.07 CLEANING AND ADJUSTING

- A. Remove paint splatters and other spots, dirt, and debris. Touch up scratches and marred finish to match original finish. Clean unit(s) internally using methods and materials recommended by manufacturer.

SECTION 13859

INTERIOR FIRE ALARM AND MASS NOTIFICATION SYSTEM

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. This section covers the minimum requirements for the mass notification and emergency communications systems to be installed and interfaced with station SCADA and FACP systems at the 24th Street Station and the Rental Car Center Station, including, but not limited to the following:
 - a. Evacuation and mass notification loudspeakers
 - b. Ambient sense microphones
 - c. Audio digital signal processors
 - d. Loudspeaker amplifiers
 - e. Amplifier switchers

B. Related Sections:

1. Section 01325 – Progress Schedules and Reports
2. Section 01330 – Submittal Procedures
3. Section 01780 – Closeout Submittals
4. Section 13453 – Supervisory Control and Data Acquisition (SCADA)
5. Section 13852 – Digital, Addressable Fire-Alarm System

- 2. References to codes and standards called for in the Specifications refer to the latest edition, amendments, and revisions to the codes and standards in effect on the date of these Specifications.
- 3. System installation and construction practices shall conform to standard industry practices as defined by the AV Installation Handbook (InfoComm, publisher), Sound System Engineering (Don and Carolyn Davis), Audio Systems Design and Installation (Philip Giddings, PE.)

1.03 SCOPE OF WORK

- A. This work includes completion of design and providing a new, complete mass notification system as described herein and on the contract drawings for the 24th Street Station and the Rental Car Center Station.
- B. The Contractor shall include in the Bid all labor, materials, tools, plant, transportation, storage costs, training, equipment, insurance, temporary protection, permits, inspections, taxes and all necessary and related items required to provide complete and operational system shown and described in the Specification.
- C. The Contractor is responsible for providing and coordinating final equipment arrangements, locations, phased activities and construction methods that minimize disruption to station operations and provide complete and operational system.
- D. The Contractor shall coordinate with electrical contractor for provisions of horizontal conduit and field boxes required to accommodate cabling of all loudspeakers, microphones and other system equipment.
- E. The Contractor shall coordinate specialty electronic, Information Technology (IT) data networks and any other IT infrastructure system necessary for transport of audio or data information.
- F. Refer to Construction Drawings for device locations and details.
- G. The scope of work also includes training City of Phoenix personnel on the operation of the system, required maintenance tasks and frequencies, and the locations of all equipment necessary to maintain and operate the fire alarm system.

1.04 SUBMITTALS

- A. All submittals shall be in accordance with the general provisions of the Contract, including General and Supplementary conditions and other Division 1 Specification Sections.
 - 1. Consultant will not review partial submittals.
 - 2. Consultant will review up to two (2) submittals of any submittal topic.
 - 3. The cost of Consultant's time for additional submittal reviews due to non-conformance with the requirements listed herein will be borne completely by the Contractor.

- B. Pre-Award Submittal: The submittal must justify in the judgement of the Consultant, the Architect, and the Owner that the Bidder meets the requirements, that they have capability to perform the specified work for a project of this size and scope, and that they are capable of the necessary business and technical arrangements for this installation and the pursuant warranty service. The Owner reserves the right to evaluate and, if desired, waive certain of the below criteria and requirements if it is deemed to be in the best interest of the project. In all cases, the Contractor should submit all applicable criteria regarding their qualifications for evaluation. Submit the following as applicable:
 - 1. A detailed brochure describing its capabilities in terms of facilities, personnel, experience background, examples of similar installations, distribution arrangements with manufacturers and financial capability (including satisfaction of the project bonding requirements).
 - 2. Proof that contracting firm has at least five (5) years' experience in the fabrication, assembly, and installation of audiovisual system of similar magnitude and quality as specified herein.
 - 3. Information identifying all local agents and/or subcontractors assisting in the work.
 - 4. Identification of all sources of labor for all fabrication and installation throughout the duration of the project.
 - 5. Evidence of all necessary licenses and approvals to perform the specified work.
 - 6. Information on how, and by whom, it will fulfill the requirements of the warranty period.
 - 7. Information about two (2) representative projects, similar in scope to this project, completed within the past five (5) years. Include the Project Name, Project Locations, Owner's Name, Owner's Address, Owner's Phone, and a contact person employed by the Owners familiar with the Audiovisual system.
 - 8. Regarding equipment to be furnished, per Part 2, "Products" below:
 - a. Submit a statement of subcontractors, franchises, distributorship, dealerships, arrangements and agreements with manufacturers of equipment to be used for this work.

- b. Submit a complete bill of quantities, including all material, components, devices and equipment required for this work. The bill of quantities shall be tabulated respective of each and every system as specified, in the order of the specification section 2 below, and shall contain the following information for each item listed:
 - 1) Quantity.
 - 2) Description.
 - 3) Manufacturer's name.
 - 4) Manufacturer's model number.
 - c. Substitutions of equal equipment beyond the alternatives listed will be permitted only in accordance with Division 1. If an alternative listed is discontinued prior to installation, the Contractor shall submit a substitution request to provide the manufacturer's replacement model. The Consultant shall be the final judge of the acceptability of substitutions.
- 9. Credentials if its project engineer for review and approval. This person shall:
 - a. Either be a university graduate engineer in electrical or electronic engineering of physics and have at least five years' experience with similar electronic and optical specialty systems or have other experience and educational background appropriate for the Work as approved by the Consultant and the Owner.
 - b. Observe at all times a good working relation with the Architect's and Owner's representatives and cooperate with engineers and technicians assigned by the Owner, who are charged with the operation and maintenance of the system.
 - c. Provide all technical liaisons between the Contractor, the Architect, the Owner and the Consultant(s). This shall include participation in meetings and conferences. They will be required to be present at the project site for final inspection, approve the operating and maintenance manuals, and provide the specified instruction to designated members of the Owner's staff.
 - d. Be responsible for supervision of all technical work that is part of the contract. This supervision includes the following:
 - e. Preparation of all construction Drawings from information within the specifications and the Drawings, including approval and signing of all shop Drawings.
 - f. Supervision of shop fabrication and field installation work to assure conformance with the contract Drawings, the specifications, and the approved shop Drawings to assure workmanship of the highest quality. They shall oversee the testing of all assemblies and sub-assemblies prior to delivery to the project site.
 - g. Take a leading role in the specified testing of the completed installation to assure themselves for the Contractor that all specifications are met. Work with and assist the Consultant in their final testing for approval and acceptance of the system for the Owner.

10. Proof of the firm's current membership in (or at least two (2) supporting staff members in) two (2) or more of the following professional Audiovisual organizations for two (2) or more years:
 - a. NSCA: National Systems Contracting Association
 - b. ICIA: International Communications Industries Association
 - c. AES: Audio Engineering Society
 - d. USITT: United States Institute for Theatre Technology
 11. Credentials of supporting staff who have received current factory certifications from any/all equipment manufacturers whose franchise agreements require it and who meet the following qualifications:
 - a. The supervisor of the work of this section shall have at least five (5) years direct professional experience with devices, equipment, and system installation of the type and scope specified herein.
 - b. All personnel engaged in the installation of this Section shall have at least three (3) years direct experience with devices, equipment, and system installations of the type and scope specified herein.
 - c. In addition, submit proof of at least two (2) current staff member certifications in two (2) or more of the following:
 - 1) NICET-II (Certification by National Systems Contractor's Association)
 - 2) NICET-III (Certification by National Systems Contractor's Association)
 - 3) C-EST (Certification by National Systems Contractor's Association)
 - 4) R-ESI (Certification by National Systems Contractor's Association)
 - 5) CTS-D (Certification by International Communications Industries Association)
 - 6) CTS-I (Certification by International Communications Industries Association)
- C. Post Award Submittals: Submit within 30 days of award.
1. Submit four (4) copies and one (1) reproducible (CD-ROM [drawings as .dwg; documents as .pdf; software as per manufacturer's directions]) of the following:
 - a. A statement of subcontractors, franchises, distributorship, dealerships, arrangements and agreements with manufacturers of equipment to be used for this work.
 - b. Complete bill of quantities, including all material, components, devices and equipment required for this work. The bill of quantities shall be tabulated respective of each and every system as specified, in the order of the specification section 2 below, and shall contain the following information for each item listed:
 - 1) Quantity
 - 2) Description
 - 3) Manufacturer's name and model number
 - 4) Manufacturer's specification sheet

2. Schedule: Within thirty (30) calendar days of the receipt of the notice to proceed the Contractor shall prepare and submit for approval, in accordance with the General Conditions, a schedule which shall include, but is not limited to, the following:
 - a. Submission of shop drawings, samples and layouts for all items described herein.
 - b. Start and Completion date(s) for field installation work.
 - 1) Installation date(s) of all wires and cables in conduits and required cable trays.
 - 2) Date when fully-operational equipment racks will be fully tested and ready for Consultant's observation.
 - 3) Delivery date(s) of all systems and subsystems to the project site.
 - c. Start and Completion date(s) for shop fabrication work.
