

ADDENDUM #5

New Belgium Brewery has decided to exclude the 4 beer storage tanks and any future beer storage loading from design.

Design Build Team to provide plan/approach to incorporate a method for supply/return of finished product (beer) from existing brew house to bottling via piping as well as all power being supplied from current manufacturing facilities. Allow in the design for the supply / return of product and future growth/expansion of approximately 2X of the current brewery production.

Also, allow in design for (2) 1" conduits as future power supply required for any expansion of the facility.
